UGC CARE LISTED JOURNAL

FROM THE EDITOR'S DESK

"If I have seen further than others, it is by standing upon the shoulders of giants."

-Isaac Newton

Hyderabad, the centre of technology, is a hub of culture and progress. Located on the lush banks of the Musi River, this metropolitan paradise is a favourite with tourists, educators, scientists and poets. The magnificent city of pearls comes alive with its ancient history and contemporary technology. This Hi-Tech city, as it is aptly and affectionately named, is the perfect spot for research in various disciplines and the crown jewel of education in Hyderabad is Osmania University.

Founded in 1918, Osmania University has opened its doors to over 3,700 international researchers from more than 80 countries. The alma mater of prominent icons like the 9th Prime Minister of India Shri P.V. Narashimha Rao and cosmonaut Shri Rakesh Sharma, the University continues to cater to the research ambitions of the best in India. The Department of History has been contributing to teaching and research for over a century. Eminent scholars have added feathers to the hat of this department. The 39th Annual Session of South Indian History Congress was hosted during 8th – 10th February 2019. The administration had made the stay and the sessions beyond memorable.

As the Editor, I take pride in mentioning that the Proceedings of the South Indian History Congress has been recognized by UGC with CARE status. Hence, it is time to embrace originality and authenticity in research. Quality research with sound evidence goes a long way towards standing on the shoulders of giants in the field. I urge the scholars to concentrate on original research.

I express my gratitude to Prof. G. Sethuraman, Dr. P. Sivadasan, Dr. Sheik Masthan, Dr. M. Geetha, Dr. R. Jaganath and Dr. S.Nagaraj for their help in editing the volume. I also thank peer review committee members i.e. Dr. D. Daniel, Dr. K. Gopalankutty, Dr. B.S. Chandrababu, Dr. A. Pasilithil, Dr. R.C. Misro, Dr. P. Chenna Reddy and Dr. E. Sudha Rani for their help. I sincerely thank Mr. N. Jeyaraman for undertaking the task of page making. I also thank Mr. Titus of Sathiyam Printers, Madurai for neatly executing printing work on time.

GENERAL SECRETARY'S REPORT, 2019

The Department of History, Osmania University, Hyderabad hosted the 39th Session of South Indian History Congress on 08-10 February 2019 at the School of Distance Education building in the campus. Prof. K. Arjun Rao, Head of the Department of History and the Local Secretary, and his team did laborious effort to the success of the event. The wholehearted support of the Honourable Vice Chancellor, Dr. S. Ramachandram, acted as a key factor in the successful completion of the three day event. The members of the staff of the University, especially those in the guest house, hostels, electricity, and finance lend their helping hands for the success of the Session. The dedication, hard work and sincerity of the teaching faculties, non-teaching staff, researchers and students of the department are the central factor for the grand success of the Session. I use this opportunity to congratulate them all.

The inaugural ceremony of the annual session of SIHC was held at Tagore Auditorium in the Campus on 8th February 2019. Mr. Anjani Kumar, Commissioner of Police, Hyderabad inaugurated the Session. Prof. Badri Narayan, Cultural Anthropologist and Professor of Allahabad University delivered the special address. Prof. Sivadasan.P, the General Secretary of SIHC, Dr. S. Ramachandram, Honourable Vice Chancellor of Osmania University, Prof. Mahabaleswarappa, the outgoing President, Prof. C. Somasundara Rao, the upcoming President, and other office bearers and Executive Committee members were part of the inaugural function. GENERAL PRESIDENT'S ADDRESS

ANDHRA HISTORY 300-600 A.D.: OPPORTUNITIES FOR FURTHER RESEARCH

Dr. C. Somasundara Rao

I am grateful to the Executive Committee of the South Indian History Congress for having elected me as the President of the thirty-ninth session being held at Hyderabad. While I am elated by this honour, I am aware of my limitations, as my field of interest relates to Andhra History, and, that too confined to ancient and medieval history.

The subject is so vast that one cannot review the progress in South Indian History Studies in recent times. Hence, I have selected a topic in Andhra History, which is generally ignored, but which contains some significant information. That is to say, the period from circa 300 A.D. to circa 600 A. D. The first date refers to the fall of the Ikshvaku power and the second to the rise of the Chalukya power in Andhra. As is well-known, the Ikshvaku rule is a continuation of the Satavahana culture (1st century B.C. -225 A.D.). What Dhanakataka-Amaravati was to the Satavahanas, Vijayapuri-Sripavata was to the Ikshvakus. The continuation of the matronymics by rulers and the Buddhist patronage extended by the Ikshvakus would only remind us of the Satavahana times. After the Satavahana-Ikshvaku phase, one would immediately go to the Chalukya phase in Andhra in circa 624 A.D. The Satavahanas ruled at least for three hundred years; and the Chalukyas for not less than four centuries and a half. Therefore, the history of the intervening period, featuring the small ruling families such as the Salankayanas, Anandas, Vishnukundis and that of the Early Pallavas (of Prakrit and Sanskrit charters) is considered as non-significant. The Pallava history, from the Great Pallavas onwards assumes more importance in South Indian history. But the early part relates to Andhra history, though the Pallavas ruled from Kanchi.

I

The period from 300 A. D.-600 AD. did not receive appropriate attention from scholars. Yet, eminent scholars such as D. C. Sircar

[*Successors of Satavahanas in Lower Deccan* (Calcutta, 1939)], K. Gopalachari [*Early History of the Andhra Country* (Madras, 1941)], B. V. Krishna Rao [*History of the Early Dynasties of Andhradesa* (Madras, 1942)], M. Ramarao [*Studies in the Early History of Andhradesa* (Madras, 1971)], O. Ramachandrayya [*Satavahanas and their successors* (Madras, 1978)], N. Venkataramanayya [*The Vishnukundins* (Madras, 1975)] and S. Sankaranarayanan [*The Vishnukundis and their times* (Delhi, 1977)] produced some of the significant works that have come out, as I have indicated just now.

Among these publications, many deal with the problems in the political history. It was Sankaranarayanan's work which stands out by discussing the socio-cultural issues, along with those in political history. But, it is confined to the Vishnukundi period only. Leaving out the problems in political history, I shall focus on economic and religious issues and share with you my thoughts.

It is not out of place to indicate to this august audience that the inscriptions of this period, having been written in the Prakrit and Sanskrit languages, could be taken up for study by non-Telugu scholars as well.

II

Before taking up the various issues, it is necessary to highlight the dominant features of this period (300-600 A. D.)

- (i) Issue of copper-plate inscriptions is the most significant feature of this period. But for them, these royal families would have remained largely unknown to us. The stone inscriptions registering gifts to Buddhist/Brahmanical institutions are few and far between. During the Satavahana-Ikshvaku periods (1st century B.C.-3rd century A.D.), it is all the stone records, and none of the copper-plates is available

(except the Patagandigudem plates of Chantamula II, which however seem to be a later copy)¹. Except a few royal records of the Satavahana times, many of them are label inscriptions, just mentioning the name of the donor and the object of the donation. The records of the Ikshvakus give more details about the donors.

Now, the purpose of the copper-plate grants was to register the gifts of villages/lands to Brahmana scholars as *agraharas*/ *brahmadeyas* to scholars in Vedas, Vedangas, Itihasa, Purana, Sastras, etc². The YajnavalkyaSmriti of 2nd - 3rd century A.D. says that a copper-plate grant should be given to Brahmana scholars in order to encourage learning and provide Vedic ritualists for officiating in sacrifices. This is in contrast to Buddhist patronage of the preceding period. The villages were gifted with exemptions from payment of taxes, tribute and other obligations. We shall refer to this problem in Section III (a).

- (ii) Having stated that the number of copper-plate records increased during this period, it is to be noted that the kings of different dynasties claim the performance of the *asvamedha* sacrifice. It is true that earlier, Satakarni of the Nanaghat inscription³ and Chantamula I, the founder of the Ikshvaku dynasty⁴, are described as having performed *asvamedha*, in addition to *vajapeya*, *agnishtoma* and minor sacrifices. But now onwards, the founders of the ruling families/great rulers of families mention this achievement. Devavarman, probably the founder of the Salankayana family⁵, Sivaskandavarman of the Pallavas⁶ and Madhavavarman II of the Vishnukundis⁷ are described as performers of *asvamedha*. It should refer to either the declaration of independence from the suzerainty of the master in the case of the founder or success scored by the king in battles, after which the sacrifice should have been performed.

Out of these dynasties, it was the Early Pallavas who describe the king invariably as a performer of *asvamedha*⁸, though the rulers concerned did not separately claim that epithet. It was more a conventional

praise on the king that he was interested in maintaining the Vedic dharma.

The Vishnukundi ruler Madhavavarman II performed eleven *asvamedhas* and one thousand *kratus*⁹. This is a very great achievement, which was remembered by his successors, who invariably attribute this title, along with an enumeration of some sacrifices such as *paundarika*, *purushamedha*, *vajapeya*, *rajasuya*, *prajapatya* etc¹⁰. He was mentioned as performer of *sarvamedha*, *bahusuvarna* and *paundarika* eleven times each, besides the usual eleven *asvamedhas* and one thousand *kratus*¹¹. In some of the grants, he was described as the performer of *hiranyagarbha*¹².

The above examples show how Vedic rituals, apart from *asvamedha*, had dominated in the cultural life of the times. While referring to the qualifications of the donees, certain terms such as *asiti*, *sahasra* and *tri-sahasra* occur whose significance will be brought out later (See Section III (b)).

- (iii) The records of the times show that, not only the Vedic rituals, but the Puranic deities such as Siva and Vishnu also received attention. Some ruling families have a *prasasti*, wherein their tutelary deity is presented. E.g. The Salankayana inscriptions state that they were the worshippers of the Chitrarathasvami (Surya)¹³; the Vishnukundis were devoted to Sriparvatasvami¹⁴, and the Eastern Gangas were worshippers of Gokarnasvami established on the Mahendramountain¹⁵. Besides these, inscriptions record gifts to Siva, Vishnu and Ganapati. The Sriparvatasvami of the Vishnukundi records is identified differently by scholars, which will be discussed in Section III (c).
- (iv) It may be noted that there was an upheaval of Brahmanism during this period. This does not necessarily mean the disappearance of Buddhism in Andhra. It is true that Amravati, Nagarjunakonda, Ghantasala and other Buddhist sites have not yielded any evidence of royal patronage. It was only Amravati that seems to have survived for

a few centuries. Guntupalli, known from the inscriptions of Sada of the Mahameghavahana family¹⁶ continued to have some encouragement because of an inscription of Nandivarman II of the Salankayana family. Inscriptions like the Tummalagudemplates of GovindavarmanI and Vikramendra II¹⁷; the Chaitanyapuri inscription of Govindavarman¹⁸; the Patagandigudem plates of Vikramendra¹⁹; the Kondavidu plates of Prithvimula²⁰and the Kattucheruvu plates of Harivarman²¹ are indicators of royal patronage to Buddhism but compared to the donations to *agraharas*, they are very small in nature.

These go to show that Buddhism received some attention, though not of the level that it had attained during the Ikshvaku-Satavahana period.

III

a) Taxes And Exemptions:

I have pointed out that copper-plate grants appear, for the first time during this period and that they happen to be the only sources of information for some royal families. In this connection, I may state that in the Deccan, if not in the whole country, copper-plate grants appear first in Andhra-Karnataka region. I say this, because the Brihatphalayanans (290-300 A.D.), Salankayanas (300-450 A.D.) and the Early Pallavas (300-575 A.D.), who ruled in the Andhra region issued these grants. The Hirehadagalli plates from Karnataka also attest to this, though it was a grant of the Pallava ruler. It could be the work of the Pallava rulers as well, ruling from Kanchi.

The significance of these records, particularly the Prakrit grants of the Salankayanas and Early Pallavas is the drafting of the Charters, which have become a model to the composers of later copper-plate inscriptions. The name of the ruler who was the donor of the grant, with the details of the names and achievements of his father, grandfather and occasionally great grandfather; the genealogy of the three generations of the donee along with their scholarship; the details relating to the division in which the gift land lay- all form part of a copper-plate record. Sometimes the allotment of shares among the donees in the concerned village is also mentioned. This has

formed the main theme which was amplified in later grants which spoke of mythical genealogies and allotment of shares to more donees which increased both the number and size of the copper-plates.

Generally inscriptions do not mention the share of the state from the cultivators. Though legal texts state that one-sixth or one-fourth of the total produce could have been collected, it is not known whether this was collected in cash or kind. In a rare instance in the inscriptions, the Vilasa grant of Prolaya Nayaka states that the cultivators paid one-sixth of their yield to the king, just as seers parted with one-sixth of the fruits of their religious merit to the king, obviously for the protection that the king provided to them and to the people in general. Verse 38 of the inscription states as follows²²:

*KrishivalaschapiKrishehphalanam
Yathoditambhagamadahprahrishtah/
Tapasvinashshashtam-
ivaprabhagamprithvibhuje'smaitapasahphalana
m//*

(i) Exemption from Payment of Taxes:

We have also one rare instance- this time, of a list of taxes paid by the people to the king in the Vilavatti grant of Simhavarman II of the Pallavas of Sanskrit grants²³. While a general statement of eighteen kinds of *pariharas* were given to the *agraharikas*, as found in the Uruvupalli grant of Yuvamaharaja Vishnugopa²⁴. These find a very rare mention. The list contains the following:

1. Metal-workers (*Loha-karas*)
2. Leather-workers (*Charma-karas*)
3. Shopkeeping cloth-dealers (*Apana-pattakaras*)
4. Licensed spies (*Pravaranchara*)
5. Jugglers (*Rajju-pratihara*)
6. Shops in general (*Apana*)
7. Jain mendicants (*Ajivikas*)
8. Barbarians (*Nahala*)
9. Masked actors (*Mukhadharakas*)
10. Water diviners (*Kupa-darsakas*)
11. Weavers (*Tantravaya*)
12. Gamblers (*Dyuta*)
13. Marriage Ceremony (*Vivaha*)
14. Barbers (*Napita*)

To this list can be added the classes of people who find mention in the medieval inscriptions namely, *kumbhakara* (potter), *tailakara* (oil-monger), *takshaka* (carpenter) and *gollakara* (shepherd). These eighteen may definitely be considered as professional groups, though we cannot justify the inclusion of *Ajivikas*. Instead, some medieval inscriptions, particularly of the Vijayanagara period, refer to the *talarikam* (policeman) which may be included as a profession. So, whatever these eighteen professionals group paid to the state should now have to be paid to the Brahmanadonees.

What is interesting in the above list is the marriage (*vivaha*) tax; this is not an isolated instance, as marriage-tax (*pendli-sunkamu*), is frequently mentioned in the Tuluva inscriptions. Krishnadevaraya waived this tax soon after his accession; in the same way, tax on barbers (*mangali-sunkamu*) was waived on a large scale in different parts of the Vijayanagara Kingdom by Aliya Ramaraya, who was pleased with the services of one Kondoju, a member of this caste.

(ii) **Exemption from Royal Control:**

Besides exempting the gift-village from taxes and tribute (*Kara*), the village was permitted to have an independent authority of its own, devoid of State control. The administration of the village was entrusted to the donees themselves, who had now become masters of the land. The people in the village were expected to obey the commands of their new masters, just as it was customary for them to do so for the State earlier. The king, from his side, respected the authority of the donees by renouncing his claims over the village. A number of terms indicative of non-interference by the king and his staff are referred to in the grants. Some of them are specified, while others are left out, while generally assuring the donees that the old custom would prevail.

The waiving of the royal claims was not new to this period. The Satavahana ruler, Gautamiputra Satakarni, made gifts of land near Nasik to the Buddhist monks in his 18th and 24th years²⁵, where reference is made for the first time in the inscriptions, to the renunciation of royal claim over the village in four ways:

(1) *A-pavesam* (non-entry)

(2) *A-noma* (non-interference in the village affairs)

(3) *A-lona-khadakam* (no digging for salt)

(4) *A-ratha-savinayikam* (no administrative control)

These four are referred to in the Kondamudi plates of Brihatphalayana Jayavarman²⁶ and the Kanukollu plates of Salankayana Nandivarman. The first one is ignored in the Hirehadagalli plates, while it is mentioned as *a-bhata-pravesam* (non-entry of soldiers) in the Mayidavolu plates of Sivaskandavarman of the Pallava family²⁸ and the same as *a-chata-bhata-pravesyam* of later records. Royal officers were not allowed to enter the village without the permission of the donees. *Anoma* is ignored in the Hirehadagalli plates. The village was exempt from being dug for salt or any metals over which the king would normally have monopoly. *Vishti* means services by people without receiving any remuneration. It is the same as *vetti-venmala* of the Vijayanagara inscriptions. The village was to supply labourers on royal farms or irrigation or construction works, etc. for certain days in a year for which no payment was made. Even now, the word survives in Telugu as *vetti-chakiri*, the service for which no payment is made.

Again, the villagers had to attend on touring officers of the king usually. Such services were²⁹:

(5) *A-kura-chullaka-vinasi-khatva-samvasa* (not to supply boiled rice, pots, cots and provide accommodation)

(6) *A-parampara-balivarda* (not to supply bullocks to touring officials)

(7) *A-harita-pamna-saka-puppa-phala-duddha-dadhi-ghata-takka-ggahana* (not to supply grass, leaves, vegetables, flowers, fruits, curds, milk, ghee, butter-milk).

These seven constitute a part of the list of *pariharas*, which number eighteen. E.g. The Hirehadagalli plates³⁰ say that "with these and other immunities of eighteen kinds, the village must be exempted and caused to be exempted" by the people and the officers concerned. In the

same vein, the Kanukollu plates of Nandivarman also state that, “with these immunities and others that have been either not written down or even otherwise stated to be included”, all classes of immunities are granted to the donees³¹. Therefore, even if all the eighteen are not categorically mentioned, they are deemed to have been granted. These customary services to touring officials to provide accommodation and necessary provisions for food and transport facilities to reach the next place of visit in the itinerary of government officials are common in pre-Independent India (and particularly in the native states, according to Dr. G. Buhler).

The above account relates how so many remissions were granted to a village, which would mean that other villages were subject to all these impositions. The masters of *agrahara* /*devadanā* villages thus became intermediaries between the king and cultivators, though the gift-villages granted by the king are a few, compared to the vast areas held by him. A comparison of the exemptions given in these inscriptions can be made with those figuring in the Vakataka and other inscriptions of the post-Gupta period.

(iii) Thirty-six Exemptions:

It has already been stated that the villages/lands were given tax-free, along with immunities. In this context, some inscriptions refer to *sarva-pida-vivarjitam* or *sarva-badha-vivarjitam*, which show that there were troubles and obstacles which were removed by the State. It is possible that people felt a heavy burden, when these impositions were made. Now, I refer to some Gajapati and Vijayanagara inscriptions where there is a term *avedana*, which means ‘worry’. This may be the same as *badha* or *pida* of the early inscriptions. For instance, the Veligalani grant of Kapilesvara Gajapati dated 1458 A.D.³² states that the King had renounced the thirty-six *avedanas* (*avedanani shat-trimsattvaktva*). In the Oriya part of the inscription, the same is mentioned as *Chatisiavedana*. Thus, the *avedana* number thirty-six which is *Chatis* (*Chhatis=36*). What the *avedanas* were, it is not known. However, these could be no different from the *pariharas* (exemptions) mentioned in the early grants of the Salankayanas and Early Pallavas.

The term *Chhatisais* also mentioned in two Vijayanagara inscriptions at Chezerla (Guntur district) dated 1517 and 1518 of the time of Krishnadevaraya. The first one was issued by Saluva Timma, the Prime Minister of the king and mentions that the *Chhattis* included *asabavalu, gollakaralu, katnam, kanike*³³. The second issued by Rayasam Kondamarasu, the governor, refers to *sunka, talarikalu, gollakaralu, kanika, gadayalu and veti-vemula (vetti-vemula)*³⁴. I have already mentioned that *talarikalu* (tax on policeman) and *gollakaralu* (taxes on shepherds) could be included among the taxes on professionals, though they were not mentioned in the early grants. *Vetti* (*vishti* of the Sanskrit records meaning forced labour) is already known from the early inscriptions. *Gadayalu*, derived from *gada* (meaning pole in Telugu) should refer to some tax on measuring land. *Katnam* and *Kanike* refer to gifts given to higher officials or dignitaries and frequently mentioned in the Vijayanagara records.

From the fact that inscriptions in Andhra of 15th and 16th centuries mention *avedanas* numbering thirty-six, one may be tempted to identify them with the same number, which occurs in the inscriptions of Early Kalinga of 4th-5th century A.D. It is common knowledge that the Matharas, Vasishthas and Pitribhaktas ruled in Kalinga prior to the establishment of the Eastern Ganga power in 498 A.D. In three grants, viz., the Brihatproshtha grant of Umavarman³⁵, the Bobbili plates of Chandavarman³⁶ and the Ragolu plates of Nanda Prabhanjanavarman³⁷, we have the phrase *Shat-trimsad = agrapha-samanyamkritva* which is taken by some scholars to refer to 36-*agraharas*. Since the number of taxes and enjoyment of privileges of the State are said to be thirty-six in the late inscriptions, it can safely be interpreted that the taxes and enjoyments numbering thirty-six were now to be enjoyed by the donees receiving the *agrahara*.

It may be observed from the above, that the State enjoyed thirty-six privileges inclusive of imposing taxes on and demanding services of the people in the village. The donees, whether Brahmanas who obtained *agraharas* or the temple authorities who received the villages, seem to have obtained these privileges from the State and were entitled to receive the taxes in

cash and kind and to get the services from the people on various counts from about 4th-5th century A.D. onwards.

(a) Qualifications of the Donees:

An interesting feature that does not figure in the inscriptions outside Andhra is the reference to some qualifications of the scholars or their forefathers with the numerical terms, *asiti*, *sahasra* and *tri-sahasra* (Eg. *Asiti-tarkaka*, *grithita-sahasra* and *tri-sahasravidya*)³⁸. What these numbers indicate is not made clear. These inscriptions belong to 6th - 7th century A.D. only. In late inscriptions only, *sahasra*s mentioned, and not the other terms. Different explanations have been given by scholars.

Inscriptions make clear that *asiti* (eighty) refers to *tarka*. It is not known whether there are *tarkas* of that number. It is pointed out that it probably relates to *nyaya*, which deals with sixteen categories, which were sub-divided into 45 by Gautama and to *vaiseshikān* which the categories were divided into 35 by Kanada. The combination would come to eighty³⁹.

Again, with reference to *sahasra* (one thousand), some take it to be a reference to Sama Veda, which is said to contain one thousand branches. But, the problem is that it is mentioned in addition to the scholarship in two Vedas. The donee could as well have been described as an expert in three Vedas, instead of two Vedas and *Sahasra*. Another explanation is that they could relate to 893 *adhikaranas* in Sabarasvamin's commentary on Purva-mimamsa, in addition to 27 categories of *yoga* and 80 of *nyaya* and *vaiseshika*, which add upto one thousand⁴⁰. This term occurs in the late inscriptions and literary works. E.g. The Pithapuram plates of Vira-Choda refer to 67 donees with the suffix *sahasra*⁴¹. If we refer to Palkuriki Somanatha's *Panditaradhya-Charita* of 12th-13th century A.D.⁴², we have a passage saying that merit accrues by reciting the Panchakshari mantra, instead of studying the thousand *nyayas* authored by Bhatta (*Bhatta-krita-sahasra-nyaya-vidhulu*). This Bhatta could be none other than Kumarila-bhatta, the proponent of Purva-mimamsa.

It may be noted that scholars in *tarka* and *mimamsa* received bigger shares in the *agraharas*, compared to the reciters of Vedas. It is also common in medieval Andhra inscriptions to get

the suffixes to the names of these scholars as *ghatasasin* (scholar in *tarka*) and *bhattopadhyaya* (scholar in *Bhatta-mimamsa*). This specific reference to thousand along with the name of Bhatta (Kumarila-bhatta) should amply testify that the concerned donee had specialized in Kumarila-bhatta's work. In a like manner, *tri-sahasra* should refer to the specialization in the *darsanas*.

(b) Identification of Sriparvatasvami:

I have stated that during this period reference is made in some inscriptions to the tutelary deity of the family to which the kings belonged. Among them the Vishnukundi records speak of Sriparvatasvami as the god whom they worshipped⁴³. For a long time the God was identified with Mallikarjuna Siva of Srisailam. The availability of the records of the Vishnukundis in relation to their patronage of Buddhism like the Tummalagudem plates of Govindavarman and Vikramendra II⁴⁴, and the Chaitanyapuri inscription⁴⁵ have led some scholars to doubt the view that the tutelary deity was Siva Mallikarjuna⁴⁶. They question the identity of Sriparvatha with Srisailam.

It is argued that this Sriparvata could be the Nagarjunakonda area which was ruled by the Ikshvakus; and the junior Andhras, who were vassals of the main Andhra family, were called as Sriparvatiyas in the Puranas (*Andhrah Sriparvatiyascha*). We know that the Ikshvakus ruled as the successors of the Satavahanas in Andhra with Vijayapuri-Sriparvata region as the centre. If this identity is accepted, then who was the tutelary deity of the Vishnukundis in this Sriparvata? This area is not known to be a great Saivaite centre but as a Buddhist centre, though the Sarvadeva and Pushpabhadrasvami temples had existed and the Karthikeya sculptures were discovered in the area. Moreover, the Nagarjunakonda excavations had not yielded any habitation after the Ikshvakus.

It is, of course, true that no inscription of the Vishnukundis comes from Srisailam, or, for that matter, from the entire Kurnool district itself. But it is not far from the Guntur district over which the rulers had effective authority, though in some intervals the Ananda-gottrins and the Early Pallavas had a share.

It is also true that there is no clear evidence about the existence of the temple at

Srisailamin the 5th-6th century A.D. The literary work *Malati-madhava* authored by Bhavabhuti and assigned to the late 7th century A.D., speaks of the practices of the Kapalikas at Sripavata⁴⁷. Sripavata also finds mention in the Talagunda inscription⁴⁸, which speaks of

the extent of political authority of Mayurasarman of the Kadamba family as early as the 4th century A.D. Tentatively, Mallikarjuna Siva may be taken to be the tutelary deity the Vishnukundis.

SECTIONAL PRESIDENT ADDRESS - POLITICAL HISTORY SECTION
DISCOURSES ON NATIONALISM, CASTE AND RELIGION IN
TWENTIETH CENTURY KERALA, SOUTH INDIA

M.P. Mujeebu Rehiman

Most respected historians, scholars, Professors, office bearers of the SIHC, researchers, students and dear fellow delegates...

For me, it is a privilege and a moment of great honour to stand before you to deliver the Presidential address of the Political History Section of the 39th Session of South Indian History Congress held at the Ozmania University campus, which is at the helm of its service to the humanity, spanning one hundred years. I am very much indebted to the executive committee for nominating me to this position and extend deep sense of gratitude to it.

Introduction

Time and again, nationalism appears to be an unsettled issue even with regard to the everyday life of an average citizen of contemporary India. It is a fact that from the status of a binding force of the folk, nationalism appears to be a tool of manufacturing discord in social fabric in varied occasions. Several major challenges that our country face today, to a certain extent, are really owed to the distorted ways of understanding and practicing of nationalism. The present paper is an outcome of my recent enquiries with regard to the functioning of nationalism in the everyday life in the present scenario and in that way it was worth to explore, how the idea of nationalism was perceived by the different sections of society in Kerala in the past and the way in which it came in to practice in the region. The available source materials induce one to believe that nationalism among the various sections of Indian people worked in different ways and for the depressed classes, it was not at all an idea to enthuse them by any means, because it could not offer any ray hope to them. This paper is organized in two sections, where the first section forays into the theoretical aspects of the phenomenon of nationalism with special reference to India, whereas, the second section deals with the discourses on nationalism and functioning of religion and caste in the context of twentieth century Kerala.

SECTION I

Nationalism in Theory and Practice: the Indian Experiences

In an attempt to define the very idea of nation, Benedict Anderson in his magnum opus *Imagined Communities*, explains that 'it is an imagined political community- and imagined as both inherently limited and sovereign'¹. What Anderson emphasizes is the imagination of a nation, in a limited space and so that a finite though elastic, boundaries beyond which begins the land of other nation(s). The most significant contention from him is that, 'no nation imagines itself coterminous with mankind'² is somewhat a hard reality, which illustrates the limitations of a nation. Significantly, this project of imagination was actually materialized by the emerging print capitalism in the context of Europe. For Anderson, 'the convergence of capitalism and print technology on the fatal diversity of human language created the possibility of a new form of imagined community, which in its basic morphology set the stage for the modern nation'³. The role of imagination is emphasized by another eminent scholar Sudipta Kaviraj, to whom, nationalism is viewed as an 'imaginary institution'⁴. The element of imagination and narration are highlighted by Homi K. Bhabha who rightly calls, 'imagi-nation', where the nation is represented as an idea whose cultural compulsion lies in the impossible unity of the nation as a symbolic force⁵.

Interestingly, as a historical reality, nationalism itself had to create a narrative of its own by which it could avoid the great chaos of varying ideological events in a single thread and as Sudipta Kaviraj cautions, in order to understand nationalism, one has to step outside the history that nationalism gives to itself⁶. Partha Chatterjee also is of the conviction that, history, or nationalism's autobiography, is fundamentally flawed⁷. Nationalism as a modern phenomenon was introduced by and among the western educated Indian middle

class, where the society per se was the same having not departed with the pre-modern structures. According to Sudipta, the nation in India as much as in Italy, is a thing without past. It is radically modern. It can only look for subterfuges of antiquity⁸. And also it is probable to see whether a national community existed before 19th century. Looking back to history, nationalism as an idea was accepted not in the uniform way at least in the case of our country. So the nation was not a given thing, though geographically speaking, it was there. Thus, the idea of nation and nationalism are the by-products of modernity and so that any claim of its antiquity proves to be baseless.

In India too, especially in Bengal, from the second half of the 19th century, the new elite had started to take the lead in mobilizing a “national” effort to start schools in every part of the province and then to produce a suitable educational literature⁹. The project of Indian nationalism was the brain child of the Indian nationalist elite and so that, for Partha Chatterjee, it was ‘in principle a hegemonic project’¹⁰. The foundation of nationalism is built upon the ideals of modernity and the inherent nature of which is exclusion, where a section of people is represented as the other. It was none other than Rabindranath Tagore, the first prominent figure to critically engage with nationalism, who firmly believed that Indian nationalism is nothing but a menace¹¹. He was having the concern that how far it would be functional within the Hindu society, for Hindu society to unify the many castes and races in to nation in the European style¹². Tagore made it clear as early as 1908 that, “I will never allow patriotism to triumph over humanity as long as I live”. He offered the idea of humanity in the place of nationalism. In the similar vein was H.H. Risely, the British ethnographer cum administrator, shared the apprehension that how far is it possible to go hand in hand the regime of caste and modern idea of Indian nationality, and for him the two things appear to be antagonistic and incompatible¹³.

The exclusive nature of the very idea of nationalism seeks to expel those who are not suitable to the nation since they are inferior or having the secondary positions. Considering nationalism, we see the centrality of caste and religion [class also] in nationalism, where all

such identities had to be washed away by the high tides of modernity. However, the process of rationalization and secularization mediated through colonial modernity was obstructed by the saviors of the tradition in disguise of social reform, actually a project to revive the Hindu/brahmanic values. It was in the course of time that a self-defence to save the emerging so called ‘Hindu’ religious formation in the backdrop of Missionary critique. It was in 19th century that modern Hinduism was originated and developed, which later found manifestation in, what G. Aloysius calls, ‘Pan-Indian political-national Hinduism’¹⁴. So much so, that nationalism was the continuity of the ‘renaissance,’ which stood against the emerging trends of missionary criticism on the one way and also the resistance against the British colonial state on the other.

In such a way, nationalism is interpreted to be contradictory that, it is a mission to get the power transferred to preserve the pre-nation form of differential power realization within the society¹⁵. The most plausible identities such as religion and caste were actively working within the Indian National Congress, as the instrument of Indian nationalism. In several occasions the objectives of the Congress was declared to be preservation of Hindu/ Brahmin values. The writings and speeches of the prominent nationalist leaders proved to be reflective of their predominant upper caste Hindu identity than the Congress identity. For example, G. Subrahmanya Iyer, who along with five other Brahmins launched the first issue of *The Hindu* weekly newspaper (1878), wrote a book entitled, *Arya Jana Ikiyam Allathu Congress Mahasabhai* (Unity of the Aryan People or the Congress Party). Travelling from the past to present, Iyer argues that the basic aim of the Indian National Congress was ‘to create unity and brotherhood among the Hindu people’¹⁶. Obviously, the objective of such writings essentially was identifying the Indian nationalism with *savarna* (Brahminical) Hinduism. There were also instances of caste bias with regard to the nationalist newspaper, *The Hindu*, which was trying to shut out the non-brahmin from its pages, though was proved to be short lived¹⁷.

Such incidents cannot be argued to be solitary, because some other cases were also

found how the caste was dominant in the Congress party. The description of a journey of the Brahmin delegates to attend the annual conference of INC from Madras to Calcutta by a steam engine is indeed a thought provoking as well as a curious story. In the five-day journey, a Brahmin delegate on board had a Brahmin cook and had wrested special permission to cook food in 'the brahminical way at certain hour of the noon and evening'. These 'special Brahmin meals' were served in the rooms of Brahmin delegates- obviously to avoid the polluting gaze of others while they ate¹⁸. Surprisingly, the reception committee members were in great troubles when the Brahmin delegates from South India demanded caste based boarding and separate dining. Even the delegates had nervously enquired about the availability of Tamil Brahmin hotels around the Congress venue. This issue was later to be settled by the Congress as limiting only two kitchens, one for vegetarians and other for non-vegetarians. Indeed, the Congress was not at all supporting inter-dining. It was because of this reason that the Tamil newspaper of Justice Party, the *Dravidian* compared the INC to an agraharam, 'an exclusive residential enclave of Brahmins'. Admittedly, the Congress itself did proudly endorse such an exclusive identity of religion and caste in the course of time.

SECTION II

Nationalism, Caste and Religion: Beyond Discourses

In Kerala, the germs of nationalism found crystalized in the early decades of twentieth century. It is interesting to see how the Congress was functional with regard to caste and religion in Kerala. As a matter of fact, the educated middle class were the active members of the Congress as elsewhere in India. Naturally, the upper class/ caste people started to join the Congress and started functioning in nationalist way. Naturally, the lower castes' entry into the INC was not at all a concern. Initially, it was the kings such as Samutiri Raja, Kollamkode Raja and other local rajas¹⁹ were organisers of the conferences. When the issues of the *Kutiyans* (tenant-cultivator) were raised, it was suppressed scrupulously²⁰. When the young M.P. Narayana Menon raised the issue of *Kutiyans* in Ottappalam session of Indian National Congress, he was fiercely criticized by all other

members with elitist leanings. Similarly, when the tenant cultivators, lower caste agricultural labourers and Mappilas were assembled in the Manjeri session of Indian National Congress of 1920, the elitist leaders raised their eyebrows and asked, 'why were these people with smell of dirt entered into the pavilion?'. It was none other than the theosophist and Congressman Manjeri Rama Iyyer shared the apprehension of the upper castes²¹. Significantly, in the Manjeri conference, the representatives included big landlords and the Rajas such as Cheriyyettan Raja of Calicut, Ilaya Raja of Nilambur Mooppil Nayar of Mannarkkad, Udaya Varma Raja of Mankada, K. C. Veerarayan Raja etc. When a resolution demanding the redressal of the tenants' sufferings was presented, it was challenged by the said representatives of the landlords²², though it was passed subsequently.

Likewise, M. P. Narayana Menon, [M. P. N.] the great nationalist leader very much close to the lower castes and the Mappilas, was often criticized by the Congress leaders for his habit of inter-dining and associating with the Mappila Muslims. He used to have food with the Mappilas, which was a taboo for the people belonging to the Nair caste, and he was the first Nair to wear a lungi, which was considered to be the typical dress of Malabar Mappila folk, so that upper castes never wore it. [During his student days, M. P. N. had used to wear a Turkey cap, for which he was penalized by the British principal]. In such a way he was considered to be an out-caste among the nationalists. Strangely enough, for the same reasons, caste Hindu Congress leaders were never preferred to stay at his residence. Rajagopalachari and Kasturi Ranga Iyengar refused to stay with M. P. N. when he was the Congress secretary of Eranad. M.P.S. Menon, the biographer of M. P. N., taps his memories like this, "...They used to stay with K.P. Kesava Menon, who was not polluted (like me) by the presence of Moplahs and Cherumas at my dining halls..."²³ This sort of caste prejudice of the Congress leaders caused to spread the image that it was a party of upper caste Nairs. And the term 'Chalappuram Congress' also was illustrative of its caste leanings.

Indeed, the attitude of the leaders actually caused the people belonging to lower castes keep aloof from the INC. As rightly observed by

M.P. Narayana Menon, the ordinary people of Malabar, the peasant, the labourer, the small shop keeper and artisan, were kept away from the fold of the Congress by the higher caste Hindus.²⁴ For instance, Ezhavas (Thiyyas), one of the major lower castes of Kerala, were not at all co-operating with the Indian National Movement. The great social reformer and leader of SNDP Yogam, Sree Narayana Guru had declared that, 'The British are like our guru: it is they who gave us *Sanyas*, recalling the age-old denial of the right to ascetic practice to the lower caste in Hindu society²⁵, which in another way was an approval of the British government towards its emancipatory policies. Similarly, the great poet and SNDP Yogam general secretary, Kumaran Asan, in one of his *Vivekodayam* editorials shared the apprehensions of his caste towards nationalism in this manner: "Presently there has not been preparedness for a united Indian *swaraj*. If we start to rule ourselves, we have to go back to 150 years, and will undo all reforms initiated by the British. The Indians will not be capable of *swaraj* without anybody's help until the caste differences ends... So that those people who have suffered the inhumaneness of the caste for centuries cannot join the side of the swarajists" [read nationalists/ Congressmen]²⁶. Apart from that, Asan had accepted *Pattum Valayum*, [literally silk and bangle. One of the most coveted awards in those days] from the then government and he was highly eulogistic of the British while speaking their reforms with regard to the depressed castes in India. Another Ezhava leader and beloved disciple of Sree Narayana Guru, Sahodaran Ayyappan, never felt wrong in accepting the 'Raja Bahadur' title of honour from the British government. For him it was a memento for his political stand point and campaign against social inequality²⁷.

An influential Ezhava leader of Malabar, *Mithavadi* C. Krishnan (He was the president of SNDP Yogam and Tiyyar Malabar Yogam), had severely criticized the Congress ideology and programmes. In one of his articles titled, 'Indiyayile Aswaasthyam' (Indian Unrest), published in *Kerala Pathrika* (edited by Moorkoth Kumaran) on 18th May 1907, Krishnan was severely criticizing Congress' political strategies²⁸. It was in the context of his scathing attack on nationalism that Dr. Ayyathan Gopalan, a physician and Ezhava

activist, prompted Krishnan to start a newspaper supporting the [British] government. In response to which, Krishnan launched *Mithavadi*, (weekly) in October 1907, with Moorkoth Kumaran as the editor. Krishnan had recognized the fact that thousands of his men's voice was remained unheard in the cacophony of the Congress workers and caste Hindus. He was having an intention of laying foundation of *Swathanthra Samudayam* (independent community), which declared that the Ezhavas would abandon the caste Hinduism and by which they could be free from caste oppressions²⁹. He had also made severe attack on Gandhi and INC on the ground that 'the destructive' Civil Disobedience Movement and Non co-operation Movement could only contribute miseries to the people of India³⁰. He firmly believed that when the British crown transfers its power to the dominant class of this land, the depressed classes will have to endure the oppressive force of that ruling class, means INC³¹.

Murkoth Kumaran, a Tiyya intellectual and editor from North Malabar, is reported to have spoken thus in a meeting of the Tiyya community in North Malabar during the period of non-cooperation movement: "Congress is the organization of the upper castes who should take a bath if they touch us. If the Congress gets political power from the British, our country would be ruled by the upper caste... It is the British who have done us good... It is our duty to oppose in the interest of our community, those who try to end the rule of the British, who are the only well-wishers of the lower classes"³². Interestingly, such apprehensions were common among the lower castes and communities of other parts of India as well. For instance, in Bengal, the Namasudras were alienated from the national movement because they could in no way identify themselves with the aims and aspirations of the high-caste bhadralok fighting against the British³³. It was because during the times of their needs they could find to get support from the local officials of the British government. As the nationalists demanded the self-government, the educated members of this caste apprehended that if more power was transferred, it would only be monopolized by the more privileged upper castes³⁴.

It was during the time of Khilafath movement that even the ordinary Ezhavas started to ridicule the Congress leaders of Malabar calling them “Kilapath, Kilapath” [Khilafath], states Moyyarath Sankaran. Lining with the British police, they were directly scolding and ridiculing at the Congress leaders³⁵. When Madhava Menon, one of the Congress leaders reached in the locality of Moyyarath to visit him, the Ezhavas mocked at him calling ‘the absconding Moyilyar [Mulla] from Eranad’. In another occasion, the followers of Moorkoth Kumaran had started to question the Congress leaders. When K. Kelappan, popularly known as ‘Kerala Gandhi’ started to speak at a function held at Thalasseri, some obstructed him and asked how could be the problems of the *avarnas* of Kerala get solved, when the *savarna* Congress leaders come to power. They had apprehensions that even Mahatma Gandhi believed in *Varnasramadharmā*³⁶. It was the reflection of the feelings shared by the great E. V. Ramaswami Naicker, who had rhetorically asked: “Is Brahman’s rule *swarajya* for the Paraya? Is the cat’s rule *swarajya* for the rats?”³⁷.

It doesn’t mean that every Ezhava was hostile to the Indian National Congress. T. K. Madhavan was a great Ezhava leader who joined INC. However, Madhavan was not beyond the criticism of his fellow leaders from the community. It was C. Kesavan, another influential Ezhava intellectual and leader also having almost similar views and critical of T.K. Madhavan. Kesavan wrote that all other Ezhava leaders except T.K. Madhavan, simply looked at the INC as an all India organization of those who wish to sustain the worst tradition of *savarna* Hinduism³⁸. He goes on to explain that, Ezhavas were having the impression that unless the British had established suzerainty over India, the six crores of depressed castes of India could not have seen the rays of light at all³⁹. Thus, nationalism in the perspectives of the depressed castes was a non-sense or an obstacle in the way to the development of *avarnas*.

T. K. Madhavan, the only Ezhava Congress leader during that time had explained what prompted him to join and work in the INC. Like many other Ezhava philanthropists,

Madhavan also was having high praise for colonial administration, for its reforms and sympathetic attitude to the depressed castes. He was also thankful to the British for that matter. At the same time, he had realized that the impact of colonial administration on Indian economy and society was disastrous and so that those who are suffering under the British rule are highly wished for *swaraj*⁴⁰. His justification for joining the Congress was interesting, that Gandhiji as the leader of the Congress had started to introduce anti-untouchability movement in the political agenda of the Congress, which naturally gave him great expectations. And also he was not in the fold of activists who argued that political freedom is to be assured only after resolving the social disparities. Whereas, he was in the belief that, action towards social and political emancipation should be done simultaneously⁴¹. Eventually, he decided to associate with the INC and got a chance to present a resolution on untouchability in Kakinada session in 1923, which was passed by the Congress. Still he was having the apprehension that, whether this would be put in to practice by the leaders and workers of the INC in the future.

The occurrences that came up during the Vaikom satyagraha of 1924 proved that the afore-mentioned anti-Congress stream of thought was absolutely right and nationalism in Kerala was not at all devoid of predilections of caste or religion. Vaikom Satyagraha was a peaceful Gandhian mode of struggle to get the roads adjoining the Vaikom temple opened for *avarnas*. Those were not temple roads, but public roads which were restricted to the untouchables. In this case, we can see that inside the INC, it was not only caste but the religion also did matter. For instance, the experiences of the convener of the Satyagraha, and great leader of INC, George Joseph had bitter experiences simply due to his religious identity. When he reached Vaikom to organise satyagraha, Gandhi’s letter in the course of the satyagraha addressed to George Joseph was unbelievable to a Congressman such as him. The letter continued to read as follows: “as to Vykam, you should let the Hindus do the work. It is they who have to purify themselves. You can help by your sympathy and by your pen but not by organizing the movement and certainly not by offering satyagraha. If you refer to the

Congress resolution of Nagpur, it calls upon the Hindu members to remove the curse of untouchability. I was surprised to learn that the disease has infected the Syriyan Christians⁴². The message of advice of Gandhiji in the last sentence was very much obvious, that if he wished to take part in the campaign against untouchability, he should work within his own community, but never among the Hindus.

Gandhiji had clarified his stance that Vaikom satyagraha should be restricted exclusively to the Hindus, for him, where the sacrifices done by Joseph, Sebastian and Abdu Rahiman had little worth. Similarly, for him, the kitchen house maintained by the Akalis from Punjab was having 'shattering effect on the pride of the Malayalis'⁴³. Surprisingly, Gandhiji had also demanded the Christian and Muslim sympathisers to apologize before the authority that they had done was a grave mistake⁴⁴. This sort of a stance from the part of Gandhiji had shocked many of his own followers. E.V. Ramaswami Naicker, who was then the President of Tamilnadu Congress committee, had participated Vaikom satyagraha in response to the invitation by K.P. Kesava Menon and Barister George Joseph. According to E.V. Ramaswami Naicker, who later wrote about this incident, Gandhi had strongly prohibited the Muslims, Christians, Sikhs and others from taking part in Vaikom satyagraha. In response to his appeal, the Muslims, the Christians and the Sikhs were withdrawn from the agitation. However, George Joseph declined to accept Gandhiji's advice. Instead, he declared that he would not lose self-respect⁴⁵. EVR believed that, 'as a matter of fact, Gandhi has not done even a molecule of service to untouchables. Referring to the book of Ambedkar, *What Congress and Gandhi have done to the Untouchables*, he underscores that Congress and Gandhi could do no social reforms⁴⁶.

One can observe the deliberate exclusivism in the whole course of satyagraha which was begun by the pledge itself. The opening line of the pledge was defining one as "I am a Hindu"; which was followed by "I strongly believe that the unapproachability and untouchability are to be eliminated. And I will attempt to ensure the freedom of travelling to the avarnas"⁴⁷. The connotation of this

Gandhian strategy was nothing but integrating the Congress with Savarna Hindu values. While one volunteer who declares himself as Hindu and will try to eradicate unapproachability, it means that he is a savarna Hindu. Presumably, it was a premeditated satyagraha sponsored by savarnas for the avarnas⁴⁸. Interestingly, the idea of satyagraha was snowballed in the context of the declaration of the Ezhavas who were planning to convert to Christianity and Buddhism.

And more importantly, one of the great mistakes with regard to Vaikom satyagraha was that it was aimed at getting travel rights on Vaikom temple road. It is actually misleading and ahistorical. The phrase that the 'Vaikom Temple Road' found mentioned in the pledge is totally wrong. In fact, the road was a public one and it was maintained by Travancore government and it was on the basis of this argument that a savarna temple existed on the side of this road, the avarnas were restricted to walk on. T.K. Madhavan had raised this issue in the assembly that, those roads were not owned and maintained by the temple but by the government⁴⁹. As the roads were under the control of the government, it was the duty of the government to provide rights to everyone the rights to travel. In such a sense, Vaikom satyagraha was essentially a political one. It was the fault of Gandhiji and Congress that the satyagraha was integrating it to the savarna Hindu predilections. It is pathetic that Gandhiji and Congress kept the avarnas aloof from such a historic political movement; it was simply because political rights were only eligible for savarnas. And significantly, sustenance of Hinduism was the all-time agenda of the Congress.

Accordingly, the Congress enterprise in Malabar sought to remove caste difference, simply because it was presumably a hindrance in the attempt to create a unified Hindu identity⁵⁰. Likewise, the Congress started to move for fighting temple entry at Guruvayur with an objective of both a revitalization of Hinduism as well as purging of inequality from the religion. It was reflected in one of the public speeches delivered by K. Kelappan titled, 'A Twentieth century version of Hinduism is an immediate Necessity', during the second phase of Civil Disobedience in the year 1931⁵¹.

Significantly, the Guruvayur satyagraha, launched in response to the advice of Gandhiji on 1st November 1931 was continued in 1932, with K. Kelappan's fast unto death. Unfortunately, all of a sudden Gandhiji informed the Congress to stop the satyagraha⁵² on the ground that neither himself nor the temple authorities were informed about himself⁵³, which is considered to be Gandhiji's surrender to the upper castes. Apart from this, after the Malabar rebellion, the Mappilas began to recognize the Congress with the Hindus, which was mainly due to many Congress leaders' participation in the deliberations of the Hindu Conference held at Thirunnavaya in May 1929⁵⁴. As mentioned previously, certain programmes of the Congress such as temple entry Satyagrahas had excluded the participation of the Muslims and other non-Hindus as well which further alienated them from the National Movement. And also, there were some instances of attributing communally sensitive propaganda about nationalist Muslim leaders by the upper caste Congress leaders. For instance, in the election to the Malabar District Board held in 1939, Muhammed Abdurahiman Sahib contested from Wandoor *farqa* on Congress ticket. During the campaign, the Chalappuram gang had distributed pamphlets in the Hindu houses branding the Sahib a 'Muslim fanatic'⁵⁵.

Similarly, the nationalist movement failed to educate its leaders and workers to think and act beyond the boundaries of caste and religion. The biographical sketches of great nationalists of Kerala shed light to this fact. For instance, if we go through the autobiography of Mozhikkunnath Brahmattan Nambuthirippad, who was a secular, nationalist and sympathizer of Mappilas, but was not free from the caste and religious taboos during his imprisonment in connection with non-cooperation movement. Like several nationalist leaders, Nambuthirippad also was against the brutalities in the name of Malabar rebellion, and his prejudice against Mappilas reflects through the words like this: 'What the Mappilas expresses now is gratitude for the Calicut king Samutiri, who provided the facilities to the Arabs to settle on the land. Those Arabs are the progenitors of the Mappilas'⁵⁶. He goes on to describe that, 'the arrest of Ali Musliar, the leader of Rebellion is very difficult, and the collector Thomas could

have followed the strategy in which the Mampuram Syed Alavi Thangal was exiled by the then collector Connolly'. Otherwise, a large number of forces had to be sent to surrender the thousands of mob⁵⁷. The author himself is critical of the Congress that it had not protested against the police atrocities. His own writings are evidences to prove that though the Jallianwalla bagh and Chauri Chaura incidents were having several similarities with Malabar rebellion, the Congress followed a step-motherly attitude towards it⁵⁸. While Congress considered the Jallianwalla bagh incident as dreadful one, the incident such as Wagon tragedy was overlooked by the Congress⁵⁹. Here comes the religious bent of the Congress out, which was termed by Gandhi as 'madness of the Mappilas'⁶⁰.

The Nambuthirippad presents a picture of his arrest and the eventual custodial stay at a police station in his locality. He was in agony that though he was trying to pacify the rebels and persuade them to stay away from atrocities, he was arrested and charged a case against him. In the police station, where he was brought in, the police had arranged the lunch and it was distributed by a Muslim woman ['Umma'-mother, as the author calls], so that he refused to accept it by saying that, 'I am pleased to starve than having this food'⁶¹. Realizing his pathetic situation, one policeman assured him bringing Brahmin food [from Ayyar's hotel] in the next day. An interesting story of performing of Suddhi karma (reconversion) by the Hindus including the Nambuthirippad on the just converted Abdulla alias Parangodan in the prison is also narrated by the author⁶². They made him Hindu by shaving his beard and head and wore him a loin-cloth. Nambuthirippad do feel nothing uncommon in this act. What we can understand from these is the religion and caste could not be blurred under the influence of nationalism and it worked even in a place such as jail.

Swami Ananda Theertha, a disciple of Sree Narayana Guru, a committed nationalist and above all, a Gandhian from Malabar, was a man who dedicated his life to the cause of caste and tried to synchronise the anti-caste movement with the activities of the INC. He was a great social activist who fought legally and politically against all sort of discriminations in

the name of caste. He staunchly fought against untouchability and for the rights of the untouchables. He persuaded the dalits not to offer prayers at the temples where the depressed castes are segregated. He had served in several parts of South India in association with Harijan Seva Sanghom, founded by Gandhiji. But later he had to divorce the movement because of his realization that the Sanghom's political and ideological objective was to keep the depressed castes within the fold of Hinduism. Swami later understood that his and Gandhiji's ways to the objective of eradication of untouchability were diametrically opposed, that Gandhiji believed in the mental transformation of the upper castes and eventual annihilation of untouchability, whereas Swami found recourse to the agitations by the oppressed castes.

The experiences from the Congress with regard to caste issues forced him to keep away from the Congress. For instance, in 1931 when the Guruvayur Satyagraha was launched, the leaders such as A. K. Gopalan and K. A. Keraleeyan had started a *jadha* in order to get some volunteers recruited to satyagraha. When the *jadha* was passing in front of a Tiyya temple near Payyannur, the Congress boycotted the same⁶³. From this incident he realized that though India gets political freedom, the depressed castes would not get the actual freedom and thereafter he decided to abstain from politics in order to actively engage in activities to eradicate untouchability. For the national movement, caste was not a very serious problem to be meted out. Because, 'Gandhi and the Congress defined problem of caste inequality in terms of an opposition between cleanliness and the lack of it, locating the whole issue not in terms of economic or social realities but a physical state'⁶⁴. While Ambedkar stressed on the need for political power for the dalits, Gandhi insisted on reform

and protection from above, since the problem of untouchability was, for him, a problem of self, the collective Hindu self⁶⁵. The nation itself was not emerged as Ambedkar visualized it as a 'new form of social and societal relationship built on the principles of equality, liberty and fraternity. Nationalism is the call given to abolish the brahminic ideology of privileges and discrimination embodied in the tradition and religion as reinvented by the cultural nationalists'⁶⁶.

Conclusion

To conclude, Nationalism in India was exclusive rather inclusive. The caste and religion were determining factors throughout its course of formation and growth. Though the nationalist leaders were trying to entertain the people on the margin on the one side, the forms of caste and religion worked in the direct or in disguised manner. The nation we were making could not provide any place to those who were struggling hard for centuries. Our nationalism was one that was dropped from the above. In the imagination of the frame of a nation, the majority of the population was destined to remain in the margin. The imbalances in the national imagination can be identified as the root cause of the cardinal issues that face our nation today. It is a fact that, the power and resources of the nation is unevenly distributed. Thus the power after independence was transferred to the stake holders of nationalist movement, where the absence of the powerless was apparent. As Ambedkar declared, 'Nationality is a social feeling. It is a feeling of oneness which makes those who are charged with it, feel that they are kith and kin'⁶⁷. It is a time to rethink how far we have attempted to make the large section of the people feel the nation is also theirs. The instances we came across earlier are ostensible evidences to pose questions regarding the influence caste over this feeling of nation and nationalism.

KERALA MUSLIMS: FROM FREEDOM STRUGGLE TO THE POLITICAL FORMATION

P.A. Ajmal

INTRODUCTION

During the period immediately following the end of the Malabar Rebellion political activity in Kerala especially in Malabar had practically come to a standstill. Everywhere there were a strong feeling of hostility against the Congressmen. The British authorities believed that it was the Khilafat work that inspired such serious disturbance as those of 1921. Several sections of Hindu community also believed it. The Mappilas on the other hand nursed a grievance against the Congress. As they left that Congressmen, after persuading them to join the Congress organization, deserted the field and left them to the mercy of the Police and the military. Hence the political atmosphere in Kerala and in Malabar in the post rebellion period was not congenial to any kind of activity under the favourable of the Congress. Moreover those of the Congress leaders who had not been arrested during the rebellion were then prevented by the authorities from moving about freely and carrying on their works.

Muhammad Abdu Rahman Sahib participated in the annual conference of the Indian National Congress held at Kakkinada in Andhra Pradesh in December 1923. In the conference he presented the serious condition of the people of Kerala and especially Malabar in the post-war period. Soon a Malabar relief committee was formed under the chairmanship of Shoukath Ali.¹ The decision of the Kakkinada Congress gave once again a driving force to the work in Kerala and in Malabar. Soon after the session, an enthusiastic meeting of the KPCC was held at Ernakulam on 24 January 1924. A committee consisting of messes, K.P. Kesavamenon, A.K. Pillai, Hassan Koya Molla and K. Neelakandan Namboothiri was appointed to tour Kerala organize the Congress work. Soon after the meeting two important events side tracked the attention of all Congress workers in Malabar for a considerable time causing a setback to the political work and propaganda. The first great event was the Vaikom Temple Entry Sathyagraha organized by the KPCC in Travancore which lasted for a few months. Muhammad Abdu Rahman also

participated in the Vaikom Sathyagraha for the freedom of walk through the surroundings streets of Vaikom Temple. He was arrested on 17 May 1924 along with others. M.K. Gandhi had expressed dislike in the participation of non-Hindus like Muhammad Abdu Rahman and George Joseph in the Vaikom Sathyagraha.²

At the Palakkad conference on 6 May which was the second KPCC session, Biyumma the mother of Ali brothers counsel the audience the necessity of freedom and Hindu Muslim unity for the attainment of Swaraj. She ridiculed communal tensions and pleaded for communal harmony among the people of India.³ Al-Ameen raised the voice in support of the common people and it fought against conservatism and retrogrades, and also some bureaucrats and influential citizens opposed it.

The Simon Commission

The Congress had divided to boycott the commission. There were no Indians in the seven member committee. The most important resolution passed at the conference was to resolve to organize Simon Commission boycott demonstration throughout Kerala and especially in Malabar. Al-Ameen also published articles exhorting hartal and processions against the Simon Commission. The speech delivered by Abdu Rahman in the Calicut beach inspired thousands of audience in connection with the boycott of this Commission. On the day of the landing in Bombay of the Commission on 3 February 1928, in spite of the police activities, a very successful hartal was observed in every nook and corner of Malabar.

Payyanur Conference of KPCC

The demand for 'Purna Swaraj' made by the Congress had created fresh enthusiasm among a large section of Muslim young men. They expressed their vigorous opposition to Simon Commission throughout Malabar. This enthusiasm in the nationalist cause pleased Jawaharlal Nehru tremendously while presiding over the fourth KPCC conference held at Payyanur, Kannur in May 1928.⁴ The resolution

for complete independence passed in the Payyanur conference was recognized by the Indian National Congress in the Lahore session as follows:

- Kerala must be constituted into a separate province.
- Protest against the action of the Andaman's to live with the Mappila prisoners.
- Responsible Governments in the Native states.
- Complete Independence.

These four important points were posed at this conference. Throughout Malabar there were hartals, protest meetings and black flag procession when news of arrest of Gandhi on 4 May. Muhammad Abdu Rahman, E. Moidu Moulavi and other Muslim leaders of Malabar accompanied by a band of Yuvak Sangh volunteers in uniform under their leader E.C. Kunjikannan Nair went to Payyanur on 4 May. They were accorded a huge reception at the railway station, and the entire town was decorated. The procession ended in a big meeting. Both the Muslim leaders and E.C. Kunjikannan Nair made inspiring speeches. A purse was presented on the night of the 5 May, when the news of Gandhi arrest reached Payyanur, the whole town observed hartal. On 6 May huge procession with the photo of Gandhi started from the Sathyagraha camp at 4 pm and it a mammoth public meeting leaders addressed the people. Nehru was very much enthusiastic when he saw the nationalist spirit of the Kerala Muslims in the Payyanur Congress session in 1928.⁵ The lead given by the Payyanur conference generated great enthusiasm among the masses and gave fresh spirit to Congress activity in Malabar.

Civil Disobedience Movement and the Muslims

The Civil Disobedient Movement which was launched by Gandhi on 12 March 1930 had its echoes in Kerala when national week celebrations were held all over the Malabar district. For the first time in connection with 1930, movement Muslim leaders of Calicut appeared at a public meeting at Calicut beach held on 27 April 1930. Among others Muhammad Abdu Rahman and Moidu Moulavi, delivered speeches and appealed Muslims not

to hesitate to join the struggle against the alien rulers.

On 13 May 1930 four Sathyagrahis, Mustafa, M. M. Menon, Kunjikannan Nair and C. Achutha Kurup witnessed by a huge crowd of spectators went to Calicut beach and began to boil sea water. Police had broken the mud parts with the lathies. By March 1931 more than 500 people were in Jail and thousands, including women and children, had been beaten up. But with the release of Mahatma Gandhi on 26 January 1931 and the Gandhi Irwin Pact on 4 May 1931 the civil disobedience movement was withdrawn.

Publications of Muslims

The article of Muhammad Abdu Rahman Sahib, which he had written from jail, entitled 'Jihad-ul-Akbar' (the great holy war) was published with Al-Ameen as its editor on 6 July 1930. He wrote it; 'Patriotism' is an article of Islamic faith if Islam proclaimed the idea of freedom.

K.M. Seethi Sahib, advocate and editor of 'Aikyam' a Malayalam journal published from Cochin state, in its editorial called upon Muslims of Kerala to awake and to enter the field of battle to face the motherland. After saying that the Islam religion has always opposed slavery of any kind, the paper emphasised that fight for freedom is Muslims' duty and therefore it was disgraceful on the part of Muslims of Kerala to keep idle on at that juncture. Citing various atrocities committed by Government on Mappilas during and after the Malabar Rebellion, the paper assumed the Malabar Muslims that the Sathyagraha was intended to set free all those poor victims who were suffering in the far-off Andaman and other places as convicts and finally the paper called upon Muslims of Kerala to join as Sathyagraha volunteers and especially appealed to nationalist Muslim leaders like Abdu Rahman Sahib, E. Moidu Moulavi, etc. to give a lead to the Muslims of Malabar.⁶

Procession from Travancore to Calicut

A grand reception was accorded to the uniformed volunteer 'jatha' or 'march' from Travancore on their arrival at Calicut railway station on 16 May 1930. After reception at railway station, the volunteers marched

information, followed by a large procession from the station to the Sathyagaraha camp. In the evening there was a road march by the volunteers and a huge procession which terminated at the beach.

Muslim Conference at Calicut

On May 12 to 13 the All Kerala Muslim Conference and the Kerala Muslim Youth conference were held at Calicut. The former presided over by Muhammad Habeebullah. The withdrawal of the Civil Disobedience movement cast a gloom in Congress Circles all over the country. The younger section of the Congressmen began to show sign of importance with the old leadership and look elsewhere for a new and militant leadership in Kerala. The month of May 1934 saw the birth of the Congress socialist party in India and with this there came about a definite cleavage between the Right and left within the Congress. Gradually the leadership of the Congress in Kerala passed into the hands of the Congress Socialist group and an extremist group of Nationalist Muslims under the leadership of Muhammad Abdu Rahman. '*Al-Ameen*', '*Mathrubhumi*', '*Kerala Kesari*' and '*Swadeshbhimani*' played an important role in fostering nationalist ideas in Kerala society.

Resolution of Kerala Muslim Conference

The Kerala Muslim Conference which was held at Cannanore on 28 May 1936 passed a resolution, unanimously, requesting the Government of Madras to repeal the Mappila Outrages Act which was passed in 1859 and held in force even up to in 1936, after the Mappila Rebellion of 1921. The conference declared that it was antiquated and uncivilized procedure and its application to the Mappila community was an outrage on their self-respect and religious susceptibilities. Even before the conference passed this resolution attempts were made in the Madras Legislative Assembly in 1921 and in 1928 to move resolution for the repeal of the Act. But the Government always decided that it should be retained in Malabar for the sake of public order and peace.

Malabar Muslims and the Congress

On the invitation of 20 leading Muslims of Malabar, a conference of the Muslims of Malabar was held at Cannanore on the 21 May

1937. It was an unprecedented vast assemblage, held for the specific purpose of considering the position of the Muslims in the Indian political scenario. It was quite evident at the very outset that it was a conference held to advocate the case of the Indian Muslim League and support Muhammad Ali Jinnah, K.M. Seethe Sahib.

The important resolution passed said that there should be adequate safeguards for protecting the religious, cultural and political interest of the Muslims in the Indian Constitution, which attempts of the Congress to persuade Muslims to join the Congress before a proper agreement was arrived at between the Muslim League and the Congress were dangerous for the Muslims, and that they fully endorsed the decision of the Muslim League and Muhammad Ali Jinnah to bring the Muslims of India within an organized Muslim body. It was also decided to form branches of the League all over the state and districts.

A well-attended public meeting of Nationalists was held at Calicut on 31 May with Kattilassery Kunjahamad Musliyar, vice-President of the Malabar District Board in the chair to consider the Muslim Mass contact scheme of Nehru. Which it may be remembered was one of the important causes that made Jinnah and his League furious against the Congress and Nehru.

Formation of Muslim League in Malabar

The All Indian Muslim League was formed in Deccan on 30 December 1906. The Madras Presidency Muslim League as provincial unit of the All Indian Muslim league, was formed in 1916, Malabar was at that time part of the Madras Presidency. B. Pocker Sahib was one of the founders of the Malabar Muslim League and a practicing lawyer at Madras. The victory of Muslim League candidate Abdul Sathar Sait in the elections to the central legislative assembly (1934) from the South Canara Constituency defeating the Congress leader, Muhammad Abdu Rahman.⁷ On 21 May 1936, a unit of the All India Muslim League was formally established in Malabar at a meeting held at Cannanore.⁸ In the conference Seethi Sahib exhorted his Muslim brothers to join the Muslim League and make it a strong national organization of Muslims. It was in that meeting

that the Malabar district unit of the All India Muslim League was organised. Muhammad Ismail was the leader of Muslim League in the Madras Assembly and a close friend of Mappilas. He was later elected to the National Parliament from the constituency of Manjeri in Malabar. Abdu Rahman Ali Raja of Cannanore was elected in 1937, the first President of the Malabar League.⁹ The meeting of the Muslim League were held at Calicut in 1940 and Palakkad in 1941.

Another all India organization of the Muslims, the All India Muslim Majlis, was organized to contact the growing influence of the Muslim League. It was a concept based organization. A unit of the Majlis was constituted in Malabar, in a meeting held at Calicut on 20 May 1945. The meeting was presided over by Moulana Abdullah Mistry, General Secretary of the All India Muslim Majlis. In the election of the Central Assembly in December 1945 and to the Madras Legislative Assembly in March 1945, the Majlis candidates opposed Muslim League candidate everywhere. The Mathrubhumi, mouthpiece of the Congress in an editorial on the eve of the election pointed out "in the Muslim Constituency the contest is between the Majlis candidate and the Muslim League candidate. The public of this country especially the Muslims first realize that this struggle between two ideologies, that will affect the future prospectus of India.¹⁰ But when the results were declared it was found that the Majlis candidates Palat Kunjikoya who fought against Abdul Sathar Sait of the Muslim League had even forfeited on all Majlis candidates.

The failure of the Majlis candidates would be evaluated as the lack of propaganda of the ideologies of the Majlis. In 1945 the AICC session held at Bombay, Muhammad Abdu

Rahman participated in the session accordance with the invitation of K.M. Ashraf, an AICC member introduced the resolution supporting the Pakistan and he tried for the support of Muhammad Abdu Rahman. After the Bombay AICC, Sahib went to Delhi, in order to give leadership to all India conference of the nationalist Muslims, who did not support Pakistan. Afterwards he went to Bombay in order to discuss with Sardar Patel the necessary of strengthening the people's political consciousness and curbing the Muslim League in gaining strength in the Muslim constituency in South India.

CONCLUSION

The political belief of Abdu Rahman sahib and his activities in connection with the National movement had prepared the ground work for the evolution of secular politics of the leftist Character in Kerala and this had given much fillip to growth and development of the peasant and workers movement in Malabar and in Kerala. It is significant to note that Moidu Moulavi took an adamant anti-communal stand in his political views till his death.

The service which the Chandrika rendered to the propagation of the Muslim League ideology was immense. The Chandrika is an independent news weekly started publication in 1932 from Tellichehry. In 1932 the Chandrika became daily, but it was reverted to a weekly again. In the elections to Madras Legislative Assembly in March 1946, all the Muslim League candidates from Malabar (8 members), were elected, fighting against the Congress and the Majlis candidates who fought the League jointly.¹¹ During the period immediately following the achievement of Indian Independence in 15 August 1947, Malabar continued as a district of Madras state.¹²

THE COCHIN LEGISLATURE AND THE DEVELOPMENT OF INDUSTRIES IN COCHIN

Alankumar. A, & Dr. Pratheep. PS

Introduction

The Cochin Legislative Council was inaugurated in April 1925 under the Cochin Legislative Council Regulation promulgated in 1923. The Cochin Legislative Council played a significant role in the all-round development of Cochin. Detailed discussions were held in the legislative council on various issues relating to the people of Cochi and tried to find solutions for the grievances of the people of Cochi. The high educational standard and the far-sightedness of the council members helped to take decisions that are suitable for the entire development of the state. The Cochin Legislative Council took up several important legislations and reforms during its existence. A series of constitutional and administrative reforms were introduced in the Council which helped the modernisation of Cochi. The study examines the role legislative council in the development of industry in Cochin.

Cochin had various industrial resources. In addition to natural facilities, Cochin also had an abundant capacity of labor. New industries began in Cochin, intended to use State resources. The expansion of indigenous markets improved financial stability revealed new possibilities for the flow of goods across the state. The Cochin government was very enthusiastic about developing roads, railways, canals and communication networks to improve the pace of industrial development. The Cochin government adopted a policy of promoting industries in the state and provided all possible help for its growth. Improving transport and communication, promoting cottage industries, providing financial assistance to industrialists, providing technical education, organizing industrial exhibitions and introducing various administrative and legislative measures have helped Cochin's industrial development.

Department of Industries and Commerce.

In 1925, the Department of industries was amalgamated with the department of education and the Director of Public Instruction began to function the duties of superintendent of

industries also. The Honorable Member responsible for education also looked after the state industries. He could hardly find time to look at the development of the state industries. He faced important problems related to primary education, high school education, college education, etc. The question of organizing a department of industries and commerce has been pending before the Government for a long time. The commercial class in Mattancheri is pressing to organize such a department. K. T. Mathew stated that "I frankly concede, Sir that the two big departments of education and industry in the State cannot be dealt with both of them equally efficiently by a single head. An educationist beginning to tamper with the department of industry however well-intentioned he may be is bound to be somewhat amateurish."¹

By quoting the Census Report K. T. Mathew stressed the need for organizing a department of industries and commerce in Cochin. "I find that a large proportion of our population - 1 may say more than in Travancore, Mysore Baroda and Madras are the employed in industry transport trade. It is stated in census report that, those who and are engaged in our State in industry is 17.6 per cent, in Travancore 14.6 per cent, in Mysore 7.9 per cent, in Baroda 10.7 per cent and in Madras 8.7 per cent, In transport Cochin State records 2.4 per cent, Travancore 1.6 per cent, Mysore 8 per cent, Baroda 1.3 per cent and Madras 1.2 per cent. Again take for instance trade and compare : Cochin 6.8 per cent, Travancore 6.5 per cent, Mysore 4.5 per cent, Baroda 5.5 per cent and Madras 4 per cent. Comparing the above figures the Census Commissioner writes: — "17.6 per cent of earners and working dependents are to be found in Sub-class iii (Industry), 2.4 per cent of the working population in Sub-class iv (Transport) and 6.8 per cent in Sub-class v (Trade). It is interesting to note from the marginal statement that, in all the three Sub-classes, and particularly in Sub-classes iii and iv, Cochin returns a much larger proportion of population than the other States and Provinces"²

The above figures stated that 25 percent of the working population employed in industry, transport and trade. In 1936, at the meeting of the Advisory Committee, the question of organizing a separate Department of Commerce and Industry was discussed in order to give more attention and energy to trade and industry issues. The Advisory Committee attached to the Commerce and Industries Departments recommended that a separate Department for Commerce and Industries should be constituted. In 1936 a separate department of Industries and Commerce was constituted in Cochin with a Director of Industries and Commerce in charge.

Training In Cottage Industries

Mr. A.Sankara Puduval stressed the need for introducing compulsory training in cottage industries and household arts. "The majority of pupils attending primary and secondary schools, but only a small percentage, go to higher education, which is why compulsory training in the cottage and household arts is necessary." Mr.Raman Menon argued for the introduction of subjects such as agriculture, carpentry, carving, pottery, mat-making, metalworking, lace-making and carpet making in schools. Mr. K. Raman Menon stated that "even in the schools the taste for agriculture, Household Arts and Industries must be stimulated and some instruction of these arts and industries will help the students of the coming generation in making a proper living for themselves, because we have seen that the great evil is the unemployment of the educated class and such people must be drawn to other walks of life and objects in view than enter into the service of the Government." ³

Rao Sahib Mr. Matthai stated in the council that the Cochin government had introduced optional subjects such as Weaving, Smithery and Foundry, Mat- making, Carpentry and Rattan work; and for girls dress-making, lace-work, embroidery and mat making. "In order to encourage the vocational training of boys and girls any one of these industrial subjects would be counted as equivalent to two optional, for, to complete the School Final a student should take two literary optional. In order to provide an incentive to take these subjects they have been given this concession, and so far as secondary schools are concerned,

it is quite gratifying to find that several of our boys and girls are taking these subjects as optional." ⁴

Pupils attended these industrial schools during their leisure time, where they were taught weaving or carpentry or other crafts, such as in Kunnmamkulam and Nemmara. In Ollur cookery was also introduced to the Convent High School, Trichur. Another useful subject is housekeeping and nursing. A batch of lady graduates were sent to the Ernakulam General Hospital and trained in nursing and housekeeping. They also received theoretical and practical instruction. These girls were taken to the nearest hospital, where actual demonstration was given in Nursing. There was a Girls ' Industrial School in Trichur where Nursing and House-keeping, Cookery, Sewing, Knitting, Lace work and Embroidery and other industrial subjects were taught and girls from high school were allowed to attend these classes and study these subjects. Fine arts, such as painting, drawing, music, etc. were taught at the Girl's High School in Trichur.

A Committee was appointed for imparting technical and industrial education in Cochin. The Committee recommended the government "to start Mat-making, Spinning, Weaving, Toy-making, etc. These are some of the industries, suggested and then there is Type-writing, making of coir yarn, making articles by this coir yarn, etc. Each of these will have to be taught by trained teachers. The subjects may vary in the case of localities. These are industries suggested, and then there are House-hold Arts to make a start to reach the desired goal, with the following minimum subjects.- Cooking, suited also for invalids, Domestic Economy, suited to Indian conditions, Hygiene and Sanitation, First-aid, Nursing, Domestic gardening, Management of domestic animals, Sewing, Dressmaking, Embroidery, Lace work, treating infants according to Ayurvedic system (*Bala Ckikalsa*), etc. These are the various subjects recommended for adoption in Girls' schools".⁵

The Government of Cochin formulated a policy of industrial development through industrial education. The Government decided to impart technical and industrial education to the people.

Separation of Industrial and Technological Institute

C. J. Mathew moved the resolution "that this Council recommends to the Government that a Director of Industries be appointed at once to look after the industrial concerns of the State. C. J. Mathew quoted the report of the Industrial Commission (p.66) and stated as follows " Their most important conclusions were that the headship of a technological institute should be separated from the Directorship of Industries owing to the fact that a scientist was required for the former and a man of general industrial and economic knowledge with a business instinct for the latter, and the truth that the science of directing and organising industrial concerns can only be learned by experience and not in technological institutes however elaborate their equipment may be"⁶ It is stated in the industrial commission report that no town can thrive in industries unless there is a director for that work with good experience in business.

State Aided Industrial Bank

In the Legislative Council, Mr. Joseph Pettah requested the establishment of a State aided industrial bank in Cochin "Cochin has so far been an agricultural country but we have great scope of industrial development. We have all the necessaries for industrial growth, such as a plentiful supply of raw materials, very cheap labour, etc. The only handicap to industrial development here in Cochin is the paucity of capital. If we have an industrial bank, especially a State Aided Industrial Bank, it would be quite easy to borrow foreign capital at very low rates of interest, but that could not be done by any industrial concern."⁷

The Economic Development Committee

Mr. K.T. Mathew proposed a resolution in favor of the establishment of the Economic Development Committee. "This Council recommends that the Economic Development Committee shall be so constituted as to have at least two-thirds of its members elected by the non-official members of the Legislative Council"⁸ It was realised that it would be more profitable if the activities of the several departments were co-ordinated. The Industrial Advisory Board remedied this defect to some extent. But a wider organization with a larger

sphere of activity was considered desirable and an Economic Development Committee was constituted in 1926 to formulate suggestions for the improvement of the economic resources of the State.⁹

Development of Industries in Cochin

The Government had to take up the initiative in the matter of starting and organising a few new industries in the State. Of the large-scale industries flourishing in the State of private enterprises, the weaving and spinning industry were the most outstanding. The Sita Ram Spinning and Weaving Mills at Pushpagiri, Trichur, was the oldest. By the end of 1116 M.E. (1940-41), the Mills started working all the twenty-four hours of the day and in 1944, employing on an average 2,800 people of whom about 1,000 were females.¹⁰

The Joint Stock Concern, the Cochin Textiles at Pudukkad, was another important industrial concern. Dr. Alagappa Chettiar was its founder. The Mill was declared open in February 1938. The concern was wound up and the factory in 1945 was owned by a private limited company with a registered capital of Rs.10 lakh. In 1945, a new company, the Alagappa Textiles, was registered in Trichur.¹¹

Coconut oil pressing is an important organized industry. The increasing demand for the oil and the consequent increased prices has stimulated the activity of the people in planting trees and in expressing oil. Malabar *copra* (dried kernal of the cocoanut) in general yields high quality oil and, under the trade name of 'Cochin oil', it has always commanded a good price in the world's markets. Oil pressing was a cottage industry from time immemorial. The different oils expressed in the State can serve as raw materials for the manufacture of soaps. The Tatas have already taken to this industry and their soaps have begun to command markets. The manufacture of coir has always been a domestic occupation in the coastal districts. With the increasing demand for coir products factories are springing up. There are many other fibrous plants growing wild in the State, out of which ropes of varying thickness, intensity and strength, mats and mats mattings being manufactured. In 1930-31, 570842 square yards of such mats and mattings were shipped

from the port of Cochin. The geology of the State is such that it provides materials for building purposes and for the successful conduct of a ceramic industry. The red clay deposits in certain parts of the State have been tested and found to be highly suitable for the manufacture of bricks, terracotta and tiles, and an expanding industry in the manufacture of tiles and bricks have already been built up. The Government Stoneware Factory at Chalakkudi was started with the object of manufacturing glazed wares. Metal industries remind us of Moosaris, the hereditary bell-metal workers of Cochin. There are about 1,500 of them in the State.

Electrification of Trichur and Ernakulam

During the tenure of Sir Shanmukham Chetty, a major step was taken to make electricity available at a favorable rate in the State for industrial purposes. The availability of cheap power in the State made it easy to organize industrial concerns. He took steps to electrify Trichur and Ernakulam for the development of industry. Sir Shanmukham Chetty discussed the matter with the promoters and then addressed His Highness the Maharaja of Cochin. As a result of the license granted for the electrification of Trichur and Ernakulam, proposals were made for the start of textile mills in these places.

ROLE OF THUH FAT AL - MUJAHIDHEEN IN THE CONSTRUCTION OF COMMUNITY IDENTITY OF MUSLIMS IN COLONIAL MALABAR

Dr. P.K. Aneesudheen

In Kerala, like the other places, people identify, recognise and understand others on the basis of their identities.¹ That means each and every individual in a society is the reflection of various kinds of identities such as religion,

Industrial Exhibitions

The influence of industrial and agricultural exhibitions in promoting industrial expansion was kept in view and various exhibitions were organized by the Dewan in the State. The State also participated in many outside exhibitions, the chief of them being the Salem Municipal Exhibition, Park Fair Exhibition, Madras, All India Khadi and Swadeshi Exhibition and Mysore Dasara Exhibition.¹²

A series of legislative measures were introduced in the Council which helped the development of industries in the state. Industries Dispute Bill, Industrial Statistics Bill, Factories Act, Sale of Goods Act, Rubber Control Act, Trade Marks Bill, Trade Dispute Act, State Aid to Industries Amendment Act, The Cochin Minimum Wages Bill etc. were introduced in the Council. The members of the legislative council presented various suggestions for the development of Cochin and also used the platform of legislative council for criticising the indifferent attitude of the government towards the problems of industrial development of the State. Thus the Cochin Legislative Council played an important role in the industrial development of Cochin.

culture and region, ethnic, politics and so on. Moreover identity, whether it is ascribed or assumed, is a crucial factor in the process of identification of an individual. That is why Dilip M. Menon says "Every individual is the sum of

different identities - religious, ethnic, regional and so on - each of which is contextual and constantly shifting".² It indicates that identity of an individual is a dynamic one that undergoes the process of re-definition and reformulation. It affirms Ghanshyam Shah "Identity formation which is often, but not always, a cultural construct, is a process of 'inclusion and exclusion' of values and symbols defining *we* and *they* or *us* and *others*".³

In the context of modern Kerala religion, caste, language, occupation, geographical divisions are some of the common factors on which people generally construct or derive their identities. Identity may also be assigned to an individual by administrative mechanisms like census enumerations, historians, social scientists, writers, social or political leaders and overtime may be imbibed by a community and its members. In this context the present paper makes an attempt to unveil the fact how far the writings, from 15th century onwards, were responsible for the articulation and establishment of social and community identities of the Muslims, better known as Mappila⁴ Muslims, in the erstwhile Malabar district of the British Madras Presidency. For the purpose it takes the writing of Sheikh Zainudheen Makhdum's *Tuhfat al Mujahidheen*⁵ as a case to illustrate the process of articulation and establishment of community identity of a community - Mappila Muslims of Malabar.

Sheikh Ahmed Zainudheen bin Sheikh Abdul Azeez grandson of Sheikh Zainudheen Makhdum Kabeer, was the writer, orator, historian, jurist and spiritual leader and widely known as Zainudheen Makhdum II or Zainudheen Makhdum Al Sageer was born to the Makhdum family in the early months of Hijra 938 (c. 1531 CE) at Chombal, near Mahe. His family originated from Ma'bar Yemen.⁶ He inherited the legacy of his grandfather and received religious instruction under the supervision of his grandfather. He completed his primary education under his father Muhammed Gazzali and his uncle Abdul Azeez Bin Sheikh Makhdum Al Avval and left for Makkah for further study. He performed the Hajj and settled there for ten years imbibing Islamic knowledge from exponents of Islamic law and other branches of knowledge. He received the guidance of famous scholars such as Al Hafiz

Shihabudheen bin Al Hajr Al Haithemi, Grand Mufti of Haramain (chief jurisprudent of Makkah and Madina) and commentator in Hadith and Fiqh, Izzuddeen bin Abdul Azeez al Zamzami, Shiekh Abdul Rahman bin Ziyad and Sayyid Abdul Rahman Al Safwi. He gained the Tassawwuf (Sufi spiritual knowledge) from Kutub Zaban Zain Ul Arifeen Muhammed Bin Sheikh Ul Arif Abu Hasan Al Bakri and was honoured with eleven Khirkath, symbol of grade in Tareeqath. Within a short period he was hailed as the Sheikh of Qadriya Tareeqath. After the decade-long stay in Makkah, he returned to Kerala and took charge as Chief Mufti in the grand Masjid of Ponnani, a position he occupied for the next thirty-six years. A historian recorded that his mentor Ibn Hajar Hithami had come to Ponnani and stayed there for a short period.⁷

Sheikh Zainudheen Makhdum's *Tuhfat al Mujahidheen* is a brief narrative history of the Muslims of Kerala - during the fifteenth and sixteenth centuries A.D, their relationship with the native rulers and their epic struggle against the Portuguese.⁸ Actually Zainudheen Makhdum wrote the work in classical Arabic in 1583, and it gives an account of the geography of Southern India, also. It has been translated into more than 36 languages. The original of *Tuhfat* was published by Dr. Shyamsullah Qadiri in 1931 from Hyderabad. The first English translation of *Tuhfat* was done by Lt N. J. Rawlandson.⁹

Tuhfat is divided into four Sections; the first part calls the Muslims for Jihad against the Portuguese by citing from Quran and Hadith. Section two deals with the advent and spread of Islam in Malabar. Third section highlights the strange customs and practices of Hindus in Malabar. The major portion of the work i.e., the fourth section gives the entire historical account of the Portuguese contacts from the time of their first arrival to Malabar in 1498 A D right up to 1583 A D, covering a period about eighty five years.¹⁰ The main thrust of the work was that Shaykh Zainudheen wanted to raise the whole Muslims of Kerala against the atrocities and miseries inflicted by the Portuguese upon them, in particular, and up on Kerala, in general.¹¹ In order to wake up the Muslims against the oppressors he calls for a *Jihad*¹². In fact it is clear that Sheikh Zainudheen wrote the work to

raise the morale and self-confidence of the Muslims. For that he widely quotes the *Quranic* verses and *Hadith*¹³ and continuously reminds the Muslims about the offerings of the Almighty if one becomes martyr in His path.¹⁴

In the beginning Shaykh Zainudheen clearly shows how a Muslim should be. Then he writes that by leading a life based upon religion a true Muslim can fulfil his duties on the earth, which entrusted upon him by the Almighty, Holy Quran and *Hadith*, by leading a religious life. Zainudheen writes “Allah made the religion of Islam superior to all other religions and raised its adherents in dignity by stages over time”.¹⁵ He continues “Allah has conferred on us Muslims a special honour that other communities do not enjoy”. To further substantiate the arguments Zainudheen quotes the Holy Quran “You are the best community that has been raised up for mankind”.¹⁶

Makhdam writes “The Portuguese invaded the Muslim abodes and subjected them to all kinds of oppressions. The abominable atrocities and cruelties the Portuguese openly unleashed on the Muslims were countless. This Portuguese reign lasted for more than eighty years. By that time, the condition of the Muslims had become extremely pathetic. They could not find a way to get out of this wretched hole... so I am giving inspiration to the believers to wage *Jihad* against the cross-worshipping Portuguese”.¹⁷

In this manner Sheikh Zainudheen was trying to exemplify how a true Muslim should be. He himself believes and tries to believe others that Muslims are the superior people on the earth, they are the best religious people in the world and Islam is the supreme religion on the earth. This very understanding and expression, may, empower or enable the Muslims to believe that they and their religion are supreme and the other religions and religionists are below them. More over it also helps the Muslims as well as the non-Muslims to construct and ascribe an exclusive identity to the Muslims. At the same time Zainudheen never tried to deride and belittle the other religions of Kerala. Even though, when reading *Tuhfat al Mujahidheen* one thing is very vivid that the other religions of the world, especially in Kerala are below or inferior to Islam. Because, Zainudheen believed that, the Almighty Allah created Muslims of all over the

world as the best community of mankind in the world.¹⁸

This kind of messages are enough powerful to create a clear cut demarcation among the different religions of Kerala. And by the reading of the text there is every possibility for an understanding that Muslims are above of the others and they have a better position in the social hierarchy. At the same time the other religionists may have the feeling of inferior and they look the Muslims indifferently.

In a word, the *Tuhfat al Mujahidheen* was/is influential and responsible for the creation of community identity and communal stereotype in Kerala, at least among the Muslims. Thus with the passage of time, the community/communal consciousness of the Muslims further strengthened and consolidated by the colonial administrative machineries and other non administrative writings. These resulted in the emergence of exclusive community identity, mentality and attitude among the Muslims of Kerala. So it is sure that the writings of Shaykh Zainudheen Makhdam are responsible and liable for the creation of community/communal identity and communal stereotypes in the society or at least among the Muslims of Kerala.

Gradually these notions or usages were became the accepted norms of the social identity of the Muslims of Malabar. Gyanendra Pandey's argument ‘communal identity is the production of colonial modernity’¹⁹ is very relevant in this context, because with the advent of the foreigners there started an era of denoting various communities on the basis of foreign concepts and categories. This became more effective with the arrival of the British.

The British colonial construction was discursive and non- discursive and through this process Hindu and Muslim communities became viable and congruous subjects.²⁰ Administrative and semi-administrative writings and the new method of classification and ordering were imposed on a population, creating new groups that became real in course of time. Hereafter Government records, writings and classifications of people were on the basis of his/her religion or created stereotypes.

To conclude, the present paper argues that *Tuhfat* was/is very influential in the creation/

construction of community identity of the Muslims in the Colonial Malabar. But at the same time it is clear that this identity was not like religious bigot or religious fanatic one instead it is a secular and patriotic one. Because *Tuhfat* urged the Muslims to unite and fight against the colonialists to save the land at the

time of nationalism or national feeling was totally absent in India. May be that is why Malabar did not become a Portuguese colony. Historian KKN Kurup writes "If Communist Manifesto is a sword to the poor; *Tuhfat* is a sword to the fighting gentry against colonialism".²¹

NOTES AND REFERENCES

1. *Identity* is an omnipresent and pervasive concept in popular culture. Broadly speaking, identity refers to the overall character or personality of an individual or group. At the same time, the very concept *Identity* itself is a matter of controversy and still the academic and intellectual world are not unanimous about the meaning, nature and perception of the concept.

SITUATING THE FORT IN THE URBAN SPACE OF PALAKKAD:1800-1930

P. Anitha

In this paper, an endeavour is made to understand how a fort is being situated in the urban space of Palakkad, how the colonial power took over its possession, its strategic importance, different utilities of fort, the deteriorating condition of the fort, measures undertaken by the colonial government to dispose it off, how they refrained from doing so and the present condition of the fort.

Understanding the strategic importance of Palghat, Haider Ali started the construction of a fort which was completed by his son Tipu

Sultan. The British understood its importance and established their dominance over it as a result of the Seringapatnam treaty in 1782¹. This Palakkad fort was situated in the taluk of Palghat amshom and deshom is Yakkara, its length is 487 ft and breadth is 487 ft. As far as its construction was concerned, rampart and bastions are built of granite and laterite contains embrasures for canons. The fort was surrounded by a deep moat and a trench on the southern side and also a bridge on the eastern side. It has two gates, one with doors and one without. Inside there was a small tank having

steps. The fort had also ditched building for arsenal magazine and dispensary. There was also a well of most excellent drinking water.²

Logan who was the Acting as Assistant Collector makes enquires to the concerned officials to ascertain the condition of the Fort and also, whether the fort was to be permanently converted into a jail, and instructs that Palghat Tahsildar should be provided with a new building. It was hot during the summer and impossible to work in the monsoon season and enquires about what further arrangement can be made and also regarding the finances.³ Acting Secretary⁴ informs that the Palghat Tahsildar's office was removed from the buildings in the fort to make room for convicts. The present building in which Tahsildar and other clerks were relocated was a very inconvenient building in the bazaar. The

As on 31 st Dec. 1870 ⁶				
Year	Chinese	Malaya	Burmese	Total
1870	64	39	40	143
1871	45	32	69	146
1872	28	21	116	175
1873	41	16	137	194
1874	36	15	155	206
1875	32	14	181	227
1876	27	14	197	238
1877	13	6	202	221
1878	12	2	233	247

From the above table it could be understood that, of the total 247 foreign convicts 215 were under sentence of transportation for life and 32 are term transportation convicts. As a matter of economic measure, permanent jail buildings should be constructed within the fort at Palghat. It was also further communicated to the revenue department that it was not likely that Palghat fort would cease to be occupied by the Jail department.⁷

Meanwhile the condition of the fort deteriorated greatly and in order to avoid unwanted expenses permission was sought to close down the jail at Palghat.

Revenue Department directed, that it may be ascertained from Inspector General of Jails what it was proposing to do with Palghat fort. This was being referred to IG⁵ of Jails for report, to which it was replied that it does not recommend the closure of the fort jails in Palghat. He furnishes the statistics i.e. the Central and District jails in this Presidency were constructed to contain 11,860 prisoners, but there were 22,090 prisoners (almost double) if remission was carried out the number of prisoners may decrease. Thus a series of correspondences were done between the officials to know the exact position of the fort and what to do with it in future

In Palghat, number of prisoners in the fort jail were increasing, as there was restriction on the deportation to Port Blair. The numbers of foreign convicts were also increasing.

Jail consists of three substantially built blocks constructed of pise⁸ and fitted with strong iron barred doors and windows. Each of the 3 blocks was divided into 7 wards for 63 prisoners in each block. The blocks were built of pise work by convict labour under the direction of the Superintendent. The cost of doors, windows, fittings etc has been Rs. 2,530/-.⁹ The Collector will resume the charge of the fort and buildings in it and the sanction to close is temporary. Hearing this news of temporary closure of the fort, Head Master of Palghat High School enquires if certain buildings in the fort at Palghat could be used as class rooms, as new classrooms are under erection. It was felt to be a good time-being arrangement.¹⁰

Collector of Malabar reports that he had taken charge of the fort jail and forwarded a statement of it.

Some jail stores are still left in the fort, disposal considered only after the instruction from IG of jails. There are 6 blocks of permanent buildings within fort, 5 of which used as offices and 6th as a subjail. Of these 2 can be used as taluk Cutchery and Treasury room, one as a Sub Registers room, one taluk police station, one as Assistant Police Superintendent office and last as subjail. Other small buildings can be used as kitchen for subjail prisoners and tiffin rooms for officers located in the fort. Another permanent structure

inside the fort was formerly used as a magazine room, when a garrison was stationed at Palakkad. Now it could be converted into an office. Records of certain repair works which were undertaken in the fort is also available, of the room where arsenal is kept in Palghat by the military department. The materials and workmanship supplied in repairing the flooring, doorway and whitewashing of the arsenal, occupied as regimental storehouse in the fort at Palghatcherry executed by the order of the Chief Engineer dated 20th May 1866. The details of materials used were bricks, gallnut, jaggery, measures of shells, bricklayers. Workers are given total rupees amounting to Rs 72 - 1 - 8. The building was also whitewashed on April 1854. The work was supposed to be started on 23rd March and completed on 7th April 1859. I.W. Douglas was the lieutenant in Corps of 21st regiment also makes a declaration as to the amount used and says that rate charged for are the best to his knowledge which is the lowest procurable of the station.¹¹ Of the 3 temporary blocks of building of pise work which was constructed by the jail department, one was required by the Inspector of schools, for accommodating students of 6th division, High school in Palghat, till their construction of new building is completed. Regarding the proposal of the IG of jails to dismantle them and sell the materials by public auction in the event of their not being required by any department, it was hereby proposed to keep them as they were for the present, to be utilized as mentioned above and early orders were sought on the subject to avoid further payment of office rent for the private buildings now occupied by several department.

But the Head Assistant Collector, Palghat on 4th May 1882 writes to the Collector of Malabar that the Tahsildar reports that if the thatched building in the fort are not disposed off, these buildings will fall down and materials would be destroyed during monsoon. Jail has to be removed as many buildings were under repair, an early sale of materials is sought and that there is no possibility of jail being again established in the fort.

This discussion goes on as to the relevance of the existences of the fort, as it is in a dilapidated condition and to repair it was very expensive and unworthy. Fort dates back,

though not in its present form to 1766 when Haider Ali built it to secure his communication between Coimbatore and West coast. Subsequently it was completely rebuilt on approved European principle. Colonel Fullerton who had captured it describes it as a 'place of first strength in India'. Square in shape with walls of immense thickness and strong bastions at four corners and in the centre, the fort must be seen to be impregnable in those days. A deep moat was to be crossed by a single draw bridge which can be reached by a covered way through the glacis. Col.Fullerton stormed the fort on 15th November 1784 after a siege which lasted for eleven days, along with Captain Maitland took advantage of the heavy rainfall to drive the enemy. It was said that when the English evacuated the fort and it was taken over by the Zamorins troops. Later by about 1790 it was finally recaptured by the English.¹²

A tiffin stall started functioning in the old sub jail cells which was abandoned when a new sub-jail was built at Palghat. The rooms were in a state of disuse for several years and PWD had done some minor works to make it usable. Rs 10/ is a reasonable rent to be charged from the tiffin vendor. The stall was intended mainly for the convenience of the Government officials employed in the fort.¹³

A small issue cropped up between the Executive Engineer and the Tahasildar over the coffee stall within the fort. The Executive Engineer inspected the fort and said that there was no need to keep two rooms for PWD, and one room can be utilised for preparing the food and the other one for serving it. Only a door will be needed and that would not cost much. The Tahasildar was against the whole idea as according to him the whole place would get dirty and rats would breed leading to plague. It was then pointed out that as Tahasildar could not keep his surroundings and compound clean, it is not likely that he would keep the taluk in much order. He was instructed to keep the surroundings clean. Meanwhile the Municipal Chairman issued an order that he would not give the license to the highest bidder as this place was unfit to be used as an coffee shop. A letter from Malabar Collector, requesting Executive Engineer to furnish him with the estimate for the construction of coffee shop in the fort can be seen. The approval of

the Archaeological Survey would also be necessary for the erection of the building within the fort. A memorandum by Chief Engineer Coimbatore Circle dated 30th January, 1928, that the proposed building to be treated as a tiffin shed for the use of the members of several offices located in the fort, to be auctioned every year. Therefore the sanction of the Government would not be necessary provided the cost does not exceed the powers of the Collector. The Superintending Engineer was required to arrange for the preparation of plans and estimate after obtaining the approval of Superintendent, Archaeological Department and forward it to Collector. An estimate of Rs 2700/

was forwarded and in the proposed construction two stalls, one for Hindus and other for Christians and Mohammedans was detailed.¹⁴ The fort was put to number of uses. School building, offices, prisons, even a tiffin stall was also opened. In the tea stall opened we find separate rooms for the Hindus, Christians as well as Mohammedans.¹⁵ In the beginning, the authorities had plans to demolish it but later changed their decisions. Thus the fort and the surrounding areas always posed a strong symbol of dominance and power of the British rule in India. It is still maintained in good condition by the Archaeological Survey of India.

THE CRUCIAL ROLE OF DISABILITY STATISTICS: A CRITIQUE ON COLONIAL CENSUS IN INDIA

N.V. Baby Rizwana

Introduction

Traditionally, Disability Statistics is the information which counts the blinds, the deaf and the loco motor disabled into different groups to decide who deserves several kinds of disability benefits of the existing policies¹. This categorization and statistical - numerical strategy has got only a limited purpose. Because, this strategy convinces society that disabled fits neatly into certain categories with

clear boundaries. But the new studies suggest that this categorization of the Disability Statistics has a lot to provide for the disability welfare plan of the state². A deep understanding of the Disability Statistics provides an important role in the welfare policy making of the state. This set of information can be an asset from the very stage of planning and implementation, in checking the objectives, monitoring the impacts and analyzing cost effectiveness of the policy. Disability welfare policies are incomplete

without valid data. The effectiveness of these policies can be brought out only by ensuring solid data collection which is provided by the census.

The Important Role of Census Disability Statistics

There is a scarcity and poor quality of information on people with disabilities in most of the countries. Census is the biggest as well as the most appropriate tool to collect the information on people with disabilities. The census takes a broad approach while dealing with disability considering not only disabilities but also its causes and social impacts³. "Conducting the census, and sharing its feedback with civil society, provided an opportunity not only to deliver the results, but also to position the disability paradigm and the new way of measuring disability"⁴. A nationwide household survey census can accurately estimate disability. "It is critical for countries to be able to identify the number of people who experience disability, as well as the unmet needs, barriers and inequalities they face. By doing so, governments are better placed to provide the services people with disability need"⁵ and census can be an open door to do so.

The role of disability statistics in the census plays an important role in the matters of state. Protection and promotion policies for the disabled should be monitored and assessed continuously. This job cannot be done without a sound and updated statistics of the conditions of the disabled in a locality. The assessment of these statistical data can give a clear picture of how close are they to their goals. "Information about functional status is integral to identify needs since two individuals with the same impairment may face different types of difficulties in undertaking certain activities, and so have different needs that require different kinds of interventions"⁶. These functional data of the disability statistics also help the state to understand the social needs of a person with disabilities. The functional data can give an insight to the need of different assistive technologies which are to be provided by the state policies in the field of employment and education"⁷. Population disability data is essential for monitoring the quality and outcomes of policies for persons with

disabilities. In particular, these data help to identify policy outcomes that maximize the participation of persons with disabilities in all areas of social life from transportation and communication, to participation in religious and community life. With valid and complete disability statistics, state agencies will have the tools for assessing the cost-effectiveness of policies for persons with disabilities, which in turn can provide the evidence to persuade governments of their ultimate benefit for all citizens"⁸.

The idea of disability is multidimensional. It is defined as an interaction between certain conditions of the disabled along with their physical and social barriers⁹. Disability as an idea cannot stand alone¹⁰. It is important to see the medical, individual, social and environmental influence of disability and disabled. Careful examination of the disability statistics in the census and surveys can give us information on these influences. Disability statistics in census should include of the factors like levels of functions which are the combination of body functions and structures, activities and participation, impairment and activity limitations and participation restrictions. The census includes an understanding of the functional levels of the disabled in the levels of body, person, society and environment. This information give us an insight regarding the need of availability of assistive devices, family and community support, supportive services and policies and attitudes of different people to the disabled and their health conditions such as diseases, disorders and injuries¹¹. Census also helps the state to formulate welfare reform initiatives. Even though colonial policies cannot be addressed as welfare policies, census numbers gave colonial policy makers an overall picture of the population they should be dealing with. This helped them to provide special education and the medical care to needed disabled, especially among the categories of insane and blind. The disability data also can provide other information like trained manpower available for the care of disabled. This analysis gives an idea regarding the number of special schools both governments and private. Information on different facilities which are already available as well as those that are required for them can also be estimated through this analysis. Census data can also

provide valuable assessment of the Disabilities Act. The legal acts of colonial India on infirmities were strongly supported by the census numbers. The potential of the value of data in defending the civil rights of disabled has been realized in general after the introduction of disabilities in the census¹². Without the backing of a strong legal rights forum one cannot assume disabled can easily access to their promised clause in the welfare programs. Census can also be helpful in realizing the role of the state in the devolution and reinvention of the welfare policies.

The main advantage of disability information in the colonial census is that the data can be tabulated for small, local areas and usually, census detailed descriptive cross-tabulations are not subject to sampling errors. If disability questions remain comparable, they can be useful analysis of disability rates across time. The census can also provide a useful sampling frame for research on persons with disabilities who are otherwise difficult to find, the same way colonial census data became an important source for this particular research. Census can also provide information on the population of people with disabilities and its diversity. It includes the frail elderly, persons with mental retardation or other developmental disabilities (MR/DD), adults with physical disabilities or mental illness and children with disabilities. While the specific needs of these groups vary, they share common concerns and aspirations.

The main purpose of the disability statistics is to form actions concerning the disabled. The data provided can help authorities to understand the needs of a disabled, both individually as well as socially. The Disability Statistics also helps the authorities to uplift the disabled with equality in different sectors of the society. In 2001, The Washington Group on Disability Statistics¹³ was formed according to the suggestion of the UN for the measurement of disabilities. The purpose of the group is to bring together scholars specialized in research methodologies and form an International Co-operation Body to improve the methodology for recording disability data. The main job of the group was to form general questions and enquiries regarding disability which could be used in the census and surveys all over the

world¹⁴. The group divided the purpose of the disability data in to two sections; the general purpose and the particular purpose¹⁵. The general purpose of the disability data is to assist the development and evaluation of programs and policies, to monitor the level of functioning of the disabled population and to assess equalization of opportunities. Unfortunately, the colonial census only realized the half of this general purpose. Their purpose was to collect the information and hand it over to the government. The enumerators didn't try to suggest anything new or to monitor the already existed policies.

Different types of data tools are used in the census to collect the information of the disabled¹⁶. The tools are selected and implemented based on the objectives of the census. Information about the levels of organs and structures, activity limitations and participation restrictions are different. They serve different purposes in the census. Each of these requires different tools for collection¹⁷. It is possible to classify the information on activity limitation and data of participation restriction. But it is important to know that this process doesn't create a greater social impact because it represents a distorted data on disability. This data can be the "one that ignores the role of environmental factors in the actual lived experienced of a person with health decrements that affect capacity"¹⁸. In order to create a better social impact of the census of disabled the details regarding the factors like assistive technology, accommodations, accessibility, transportation, accommodations policies in social policy and unaccommodating physical environment should also be included¹⁹. These factors weren't taken into consideration in the colonial census.

The inclusion of the disability in the census is the result of the recognition that disability is first and foremost a human rights issue. This status of human right issue was given to disability in 1981 was observed as the International Year of Disabled²⁰. In 1989 the Convention on the Rights of the Child by UN was held. It was after this convention India started recognizing disability issues as human right issues. Inclusion of disability statistics in the census may reduce the lack of concern for the disabled. Whenever the census commission

defines disability, it should be broad enough to cover the interests of the disabled which were never the case of colonial India. The program administrators should have an awareness about the groups they deal with. The census organizers also should understand the meaning of the different terms associated with disability. The confusions with local terms of disability were the biggest challenge colonial enumerators faced in India.

A census must have the definition and the model of disability checked before further deciding the strategies. Colonial India's understanding of disability was different. They did not believe in the theory of karma in the discourse on disability. Even though colonial understanding was deeply rooted in the Christian ideologies, they didn't look at disability as a curse. They incorporated moral model²¹ in to medical model²². Today, bio-psycho-social model are the accepted model to define disability. The bio-psycho-social model follows multidimensional approach. According to this model disability is the result of the interaction between a person's health conditions, environment factors (social attitude social structure) and personal factors like age, gender, social background and education²³. The psycho social model understands disability as a phenomenon which has both medical and social dimensions. This model looks at medical and rehabilitation intervention with a greater role in the development of disabled and addresses the body label aspects of disability.

Whenever there is a need for census data on disability, four things should be remembered. Universality should be ensured. This means function and disability should be applicable to all people and census should not a tool for labeling disabled as a separate group. Parity should be assured to the disabled. The language used should be neutral and the classification should express both positive and negative aspects of functioning and disability. The language used by the colonial census was not neutral, especially when it comes to the insanity. As it mentioned earlier terms like insanity and idiots are used to show disability in a negative way and today these considered as unprofessional to use. There must be a consideration for the environment factors especially for the factors such as terrain, climate,

institutions, social attitude and laws²⁴ which was noted by the colonial census. Standardized concepts and terminologies should be used in the disability measurement.

The standard terms and concepts in census should be accepted in terms of three things; function at the body level, function at the level of whole persons and the person as a whole in the social context. Health condition, functions, disability, body functions, body structures and impairment are the standardized terms disability census data. 'Health condition' is an umbrella term for disease (acute or chronic) injury, disorder, pregnancy, congenital anomaly and ageing in census. 'Functioning' is an umbrella term for activities, participation, body structures and body functions. 'Disability' means impairment, activity limitations and participation restrictions. 'Body functions' are the functions of human organism as a whole including brain which is considered as mind or psychological. 'Body structures' are the anatomical parts of human body such as organs, limbs and other components. 'Impairment' means the loss of the function of a body structure or physiological function. Activity limitations are the difficulties a person face when executing an activity. 'Participation restrictions' are the problems an individual may face in involvement of a situation. 'Barriers' are factors in a person's environment that, through their absence or presence, limit functioning and create disability. Colonial census lacks all these terms in their section of infirmities except impairment. It is a given fact that these terms are developed in the 21st century.

The differences in the vernacular languages and disabilities related terms were a main challenge before the colonial enumerators. There were different terms to denote white leprosy and black leprosy. In some provinces, one term denoted both conditions. The same problem was encountered in case of blindness as well. Same terms were employed to denote both full and partially blind. For example, the word for one eyed in the whole of upper India was applied to the Brahmaputra valley as totally blind. In some census operations, the disability was not at all specified in the tabulation process. They only mentioned whether one is suffering from the infirmity or not. There was also a serious issue related to diagnosis.

Temporary attacks which looked like infirmities were included in the census. For example, insanity was confused with hallucinations caused by high fever and leprosy was confused with Lukoderma.

Capacity is a construct that should be understood by the census enumerators. It means the highest probable level of functioning that a person may reach in a domain in the activities and participation list at a given moment. The collection of the data should be based on approaches. There are three kinds of approaches; Impairment approach, Activity and participation approach and Environment and factor approach. Impairment approach is based on the body structures and functions and referred to the physiological, psychological, structural and anatomical functions of the body. The impairment approach is used to collect the data of the direct impacts of the diseases and disorders. Such data can be beneficial for the implementation of medical and rehabilitative services. The impairment approach is the common approach which is straight forward. This approach was adopted by the colonial authorities in their census. They tried to collect information on four impairments and its direct impact on life. The real challenge of this approach is to include even the minute disability. But lack of careful use of this data can lead to distorted picture of disability in the population level. Under this method the day to day life of the disabled and the social impact of disability may get under reported. Activity approach gives data on the health related functional limitations of a person's ability to perform actions. This information is important to assess the role of training, assistive devices, and modification of the environment and also give information on the day to day life of the disabled.

Whenever the census includes questions about disability it should be in simple form and attract simple answers too. It can be multiple choice questions and single response questions. A question should include single concept and one question should involve one impairment. It is also important to get information on the degree of disability, instead of a mere yes or no response. The level of disability can be stated from no difficulty to mild difficulty and from moderate difficulty to severe difficulty and

complete difficulty. Colonial census question lacks this kind of categorization.

There are a number of procedures to do between the finalization of the question paper and the actual field work. The first is the publicity campaign to raise the awareness about the role of disability survey in the census which will introduce the agency responsible for the census to the public. But these procedures weren't done in colonial India as the yearly census started as a social experiment. Another step is to recruit the interviewers and supervisors to do the census. It is important to train interviewers, because it can help ensuring the application of the tools, motivate them and it can provide practical suggestions.

Before collecting the information and deciding the questions in the census a set of questions are to be answered so that it can give clarity on what kind of questions should be addressed. The following questions such as what should be the scope and coverage? And how should disability be operationalised were addressed in colonial census. But questions like should there be different questions or questionnaires for different sub-populations, how do we solve issues with the language and terminology we use, how do we solve basic methodology issues of sample design, sample frame, sample unit, stratification, weighting and so on were hardly caught any place in the colonial census.

Collecting data about the disabled is difficult. Two important things to be noted during the data collection are the data collection tools and unit of measurement of disability. Census and sample survey are the important tools to collect the data on persons with disabilities. Census is the wholesome study that aims the entire population data that provides facts which are important to the government planning, policy and administration. Sample survey is a "study that collects planned information from a sample of individuals about their history, habits, knowledge, attitudes or behavior in order to estimate particular population characteristics"²⁵. Administrative data bases is that stored information collected for the purpose dealing with health care system. This information is stored by hospitals and insurers. The Population census certainly has the "advantage of providing complete

population coverage. Unfortunately, it is difficult to collect accurate information about disability in a census since time constraints make it unlikely that more than 4 to 6 general disability questions can be asked. Censuses, in some instances, also undercount children with disabilities and people with mild or moderate disabilities (in cases where the response categories are limited to 'Yes' or 'No' options only).

There were significant issues and gaps in coverage when disability data is incorporated in the colonial census. So it is the job of the census department to decide the area of coverage. Improved coordination and planning and priority are needed to make the best use of the data bases. It is also difficult to use longitude data bases on the disabled population. The other problem of disability census data is that it is very difficult to associate medical care information to the data bases. Census should include findings on disability along with other demographic variables of age, sex and income. The main disadvantage of the census data is that data collection is infrequent since it is conducted every 10 years. The time between data collection and data dissemination can be considerable. In some censuses, populations in institutions with disabilities may not be included. Census is subject to high non-response rates and under-enumeration because of the complexity and sensitivity of the question. It is costly and time-consuming to identify a relative small population of the disabled by asking questions of the entire population. It may be too costly to train enumerators in the specific guidelines required for disability questions.

A Critique on Colonial Census Data of Disability

The change in terminology in different colonial census also shows that colonial understanding of the illnesses and disabilities were evolving into a more inclusive one. For example, when the first census addressed insane in a vague manner, the second census titled the particular section as persons with 'unsound mind' which included both insane and imbeciles, report state²⁶. Thus, the colonial understanding of the situation was evolved to the point where they started realizing insanes are not the only category those who were with unsound mind. Census records tried to

eliminate these people in the calculations but the trend was not universal. Moreover, there was no universal definition to the term of insanes at that time. Some provinces included congenitally weak minded in the records while some provinces avoided this. Certain other provinces even went on to add idiots and imbecile to the records while some others did not. Such a non-universality helped congenital weak minded to get a place in the records. The multiple disabilities were also started to be taken into account at this time. It is a fact that multi disabilities were prone to happen to those who are mentally disabled. This trend was seen among the children who born with mental impairments. These children were more likely to develop or born blind and deaf. Those who were born with mental disability won't be able to articulate and communicate with in the social system like normal people. Their lack of skills in communication led to speech problems in future. Muteness and speech disabilities were also likely to be developed in the future with kids with mental disabilities. Thus, taking this factor into consideration for the census records was a big step. The colonial census failed to collect the information on acquired and continues nature of the disabilities. Hence the background and environment of the disabled always deserve to be a really important matter of concern. Disabled face difficulties in daily life due to their environment or impairment which eventually lead in to permanent disability²⁷. Many of these situations can be avoided if the census records can include precise information on their conditions and the government can execute welfare programs.

Cognitive disability was not well defined as physical disability when it is entered in the colonial census. Cognitive disabilities are hard to explain and according to the severity it can be developmental too. Whether to consider cognitive disabilities as physical disabilities or not is of huge concern and it can also change estimation number in totality. Many of the causes of the infirmities explained in the colonial census were absurd. Lack of the deep understanding of the scientific and genetic reasons behind these infirmities were not discussed. Instead the over emphasis on terrain, climate and alcoholism deviated colonial authorities' understanding of the reasons from scientific to speculation and assumptions. When

it comes to the problem of deafness, census enumerators looked at old age deafness than congenital which is the real criteria of deafness as disability. The insanity was considered as violent and in reality, this will not be violent in most cases. Interestingly, some people were omitted from the insane census because colonial enumerators consider them not mad enough to be taken as insane. The role of hereditary was not discussed fully as the reason for infirmities and they over emphasized on the use of ganja as the reason for insanity and other infirmities.

The colonial census enumerators were non-professional persons who weren't really familiar with the methodology and understanding of both census and disability. This created a lot of confusion when it came to the collection of the data. The willful concealment of the disabilities from the public also created problems in creating correct tabulation. This understatement was also caused by the exclusion of some provinces in some census. For instance, in 1881, Rajaputana and Travancore was excluded from the census.

Conclusion

THE ROLE OF PATEL -PATWARIS IN THE VILLAGE ADMINISTRATION UNDER THE NIZAM STATE

Bandi Srinivas

The offices of the Patel (village headman) and the Karnam (village accountant) had been very old and hereditary institutions' indispensable for the local administrator. They discharged multifarious duties and enjoyed considerable power and position. Every village had within itself a complete establishment of hereditary revenue servants, a Patel to direct the cultivation, realise the rent, maintain peace and order and manage its affairs in general a Karnam to keep the accounts and the land records of the village. The state felt the necessity of a literate person who could keep accounts. This accounts for the existence of the office of the Karnam of the two as the Patel continued to possess some magisterial powers and various duties of police and protection, he remained atleast nominally superior to Karnam. Normally a Patel was a landed person of wealth and his position was more or less of an honour. Both the offices of Patel and Karnam were remunerated by lands or very favourable terms.

The office of the Patel had its origin in the olden days when certain persons helped the government in clearing up forests and establishing new villages. As a reward the Patel's rights on the territories cleared by them were left undistributed provided they agreed to pay an annual sum fixed by the political authority. Naturally, therefore the office became hereditary and most of the Patels became big landholders. The Patels were responsible for assessing and collecting land revenue, paying it to the government treasury and maintaining law and order in the village. As the managers of the affairs of the village they had to safeguard the

rights of ryots or cultivators on one hand and the interest of the government on the other. A Patel was helped by two key officials. The Havaldar helped him perform his police functions and collect rent, whereas the Talati was responsible for keeping accounts. Keeping in view of the key position of Patel, patwaris and their nefarious activities, and their involvement in land confiscation, one scholar of Hyderabad commented these village officials as "Hyderabad on 21,697 rulers. They are Patel and Patwaris. They acquire such vast influence over the villages. There is one proverb in Telangana about the nefarious activities of Patwaris i.e., when Patwari's She buffalo died entire village come to see the dead animal but when Patwari died nobody came to see his body. 1) These offices are hereditary posts and therefore power and influence has gone on accumulating in one and the same family. 2) The Telugu officials instead of exercising vigilant control over the work of the Patels and patwaris were themselves controlled and guided by them from obvious reasons with the result that the Patels and patwaris ruled over their villages more despotically than ever confident of the backing and support of their superiors.

These village officers were paid by the government as well as the village community. The cash remuneration allowed to the Patels and patwaris was calculated according to a progressively decreasing scale fixed by government, i.e., the larger the collection, the smaller the rate at which remuneration was calculated. Besides this fixed scale, they were

also paid at the rate of 2 piece cash out of one anna from the village service fund constituted with a money collected one anna per rupee on land of revenue for village development. Their salaries were increased 50 percent in the closing forties. The Patel and patwaris though their salaries are nominal and rather meager, had due to their landed property and local background, commended considerable influence in rural administration. In many places where desh mukh are not vested with Patel or patwari powers, these people confronted with wealthy desh mukh for the superiority on village, which often became a serious problem for innocent villagers and crushed among these village dominant power mongers. But they never interfered in others atrocities on people even in killings they cooperated among themselves.

The ignorance of the illiterate farmers in understanding the complex revenue regulations that applied to them was fully exploited by village officials and revenue inspectors to their advantage. Patel and Patwaris using their official position besides their land power, indulged in different excess like collection of excess amounts of land revenue, demanding of gratis for entry of cultivation and land revenue payment details in Pahani Patrika improper and caught dealings in the conduct of land auctions and allotment of laoni land caused much heart burning and misery to the cultivating farmers and tenants. The Patels and patwaris collected the revenue at their own discretion very much out of proportion to the size of the fields and receipts were given for smaller sums than they actually collected.

Patwaris are more powerful because land survey settlement, taxation policy and Jilla Bandi are all depended on them. They had every chance to create problems. All peasants had to depend upon Patwaris. The enmity with Patwari is loss to the peasant. So all the peasants always tried to appease the patwari's with nazaranas like vegetables, fruits, ghee good quality bullock, etc., were given to Patwaris. In course of time educated Patels came on the picture who came on conflict with patwaris for the power of village as a result the power of patwaris some extent reduced and Patel, Patwaris co-ordinated their power on village. As a result triangle power centre, Dora, Patel,

Patwari emerged in the villages. The Patels, and patwaris collected Rs.10 for Rs.100 as gifts on Jamabandi. These ten rupees were shared among Patel, Patwari, Tahsildar and his staff, deputy collector and his staff.

Dethroning of the Patels and patwaris should be the very first item on the agenda of programme of rural reconstruction and should therefore the village officials be divested of their extraordinary influence. This could be done effectively by abolishing the prevailing system of making Patelship and Patwarship hereditary, permanent and non-transferable posts. Like all other officers, Patel and patwaris should be paid servants of the government, not permanently attached to any village but liable to be transferred to any other village. Patel-Patwari System was more cruel in tribal areas than in plain areas because as Patwaris cannot be transferred or dismissed few aboriginals dare to complain against them to higher officials, for they know that they and their families had to live all their lives under the rule of the same patwari family. Another disadvantage is the long-standing connection between patwaris and merchants who work to their mutual benefit at the expense of the aboriginals.

The peasants of that time had no education. In the beginning of the 20th century a new generation of educated people emerged as Patwaris and Patels. Consequently the Patel, Patwaris became more powerful and gained total power on villages, so the peasants were under their grip. Although some desh mukhs, desh pandes took the Patel, patwari posts the traditional Watandars did not maintain matrimonial relations with the present Patel, Patwaris although they belonged to same community with property, they felt it as below to their dignity and status.

These village officials were the money-lenders in the villages, taxes are too heavy, the people resigned to their lands due to burden of taxes. To pay the taxes, to clear the debts for the maintenance of the family, peasants sold out their lands to the lowest rates. By the end of the economic crisis lakhs of acres were concentrated in very few hands. Village officers who did money lending business had gradually become large landlords as in the case of Diwani villages. The notable mischief's of Patel, patwaris regarding their exploitation was

writing of one crop land as of two crops declaring dry land as wet, joining plots that were being cultivated into Bancherai. Giving Bancherai land on Patta fixing of wet rate for those lands where the agriculturist at his own expense dug a new well and took the water by mote acts were some of them.

The apportionment of the demand among the several cultivators of the village was left to the Patels and patwaris, who as often as not had any samples in making their own shares and those of persons in whom they were interested. Lighter at the cost of others less fortunate. To reform this objectionable state of affairs was injurious alike to the interests of government and the ryots. The introduction of the ryotwari system which had been successfully tried in the adjoining British presidencies was decided upon. Mandumula Narasinga Rao stated that three-fourth of the land of his village was in the hands of his father, Patel and Patwari. The remaining one fourth was in other landlords of the village. In almost all villages the village officers (especially patwaris) have got large areas of land as Pattedars. They are also often money-lenders which give them an opportunity to acquire land from their agriculturist debtors, this is a standing complaint and can be removed only when the village Patwaris can become transferable, as their hereditary Watan gives them under advantage in a village of illiterate and extravagant kunbis.

They could take any amount of waste lands in their own names directly from the amildar on the fixed rent and were permitted to give that for their own advantage at a higher rate to ryots, grant them pattas specifying the quantity of the land and the rent. The government would not demand anything extra except the rates specified in the Kaulnamah. So this was not only an extra source of income, but it proved to be a great boost to their position.

The exploitation by Patel, Patwaris was so severe in tribal areas. The uniform application to the whole state as the system of watandari village officers and separation of the judicial and the executive powers might have been sound in the state as a whole but in some respects proved harmful in the tribal areas. The non-aboriginal watandar had time and time again been responsible for gradual expropriation of

aboriginals from their land. In another way the Watandars system had failed in tribal areas. Often non-aboriginals had secured the Watans, not of a single village but of a score or more villages, occasionally even of whole taluqs. Then they had not themselves worked as Patels or Patwaris but have had the work done by underpaid and untrained gumasthas working for 6 or 7 villages and residing in none of them. These absentee gumasthas had supplemented their earnings by extracting money or land from the ryots. Their village returns had often been compiled without spot inspections and they had failed to inform either their watandar masters or the district authorities about village conditions.

The Patwaris in whose hands the collection of revenue rested usually did not collect the land revenue directly from the tribals, but from their employers most of whom lived on or came from the British side of the Godavari. A great number of tribals were quite unable to say how much revenue they paid, they only know that the timber merchants for whom they worked debit their accounts with the revenue. As a rule they themselves were not given receipts and those few receipts found in the possession of tribals did not give any details as to the size of the fields. This state of affairs was exploited by the merchants who made the tribals work for them the whole year for negligible payment in the form of millet under the pretext of debts incurred by the payment of tribals' land revenue.

Patwaris also indulged in other methods of profiting on the collection of land revenue, one of these was to give receipts for smaller sums than they actually collect where the revenue was paid by the merchants, who usually kept the receipts, and no control was possible. But some Koyas had acquired receipt books into which the Patwari ought to enter the particulars of their fields and the amount collected. Haimendorf saw some of these books and found that none of the columns referring to the size and character of fields were filled in, but only the amount of the total revenue. There was usually a considerable discrepancy between the sums paid and that acknowledged.

In villages like Koinda or Katkur where there was a considerable area of flat cultivable land including fields suitable for the cultivation of rain-fed paddy. The position was different

until about one generation ago here too all the land was in the hands of tribals, but much land had recently changed hands and was more in the hands of the family of the Patwari and of merchants who cultivated it by employing tribals as daily labourers or hire it out against 50% crop. If a tribal died without a son and had any land that was cultivable, the patwari often succeeded in acquiring it himself or in allotting it to a merchant, who paid him a certain gratification. A favourite method by which Patwari come into possession of fertile lands was to demand exorbitant revenue from the owner, if he was unable to pay the Patwari offers to pay it himself and after a few years takes over the land. Thus the alienation of land from the original owners appeared to be one of the effects of the imposition of the watandari system on tribal areas.

Geram Kaur of Jawra told to Haimendorf that his mother had a patta and eleven years ago she hired out half of the land to Sahukar in payment of a debt for a period of ten years. But now the Sahukar refuses to return it and Kaur tried to cultivate the whole land sahukar complained to the police, the police gave Kaur a good beating backed up by the police the Sahukar now threatens Kaur that unless he keeps quiet he will take over the remaining land.

The Gond Patel of Siram Karo of Rajum inherited 650 acres of Patta land. From his father's time he paid Rs.203/- as land revenue. He cultivated a small part by himself and led the rest to other villagers but 3 years ago some forest officials came and drew a line along the village right through the Patta land where crops were standing and included half of it in the reserve. He showed his Patta papers they said that they paid Rs.100/- they move the line further away from the village so he paid the amount from borrowing Sowcar where they pay the amount they left the village and left the line from where it is. He is still paying the revenue Rs.203/- for his Patta but on half of it he was not allowed to cultivate.

One great obstacle in the way of podu cultivation is the regulation which compels a tribal who wants to cut a new podu field to make two applications. One to relinquish his old field, and one to cut a new plot of land. In theory this rule should cause no undue

inconvenience for the application can be made through the Patel or Patwari to the Tahsildar office. However it is the general custom of Patwari to demand Re.1 and one fourth, one chicken and one seer of rice for accepting any such application. Thus a man whoever two or three years want to change his podu fields has to pay Rs.2/- for the petitions to give up the old and to cut a new field. Since the revenue for Podu fields is only Re.1/- per biga and few fields have more than two bigas, this expenditure means practically a doubling of the revenue. Moreover the Patwaris usually demand an additional fee of Re.1/- for measuring podu fields and in many cases the forest guards demand also for agreeing to the cutting a new field even though it is outside the reserved forest. Many tribals have therefore given up Podu cultivation and subsist only on their income from forest labour.

In Sudimalla of Yellandu Taluk the cultivated area is 5,994 acres and these 1750 are held by Koyas on Patta the member of Koya pattadars being 150 out of 2000 Koyas the population and about 4000 acres are owned by Brahmins, Marwaris and Komtis and Muslims. Two generations ago all the lands belonged to Koyas but some 30 years ago outsiders began to acquire and mainly Sahukars to whom the koyas became indebted. These Koyas who cultivate as tenants pay to the Pattadar one half of the total produce of wet land and one third of the produce of the dry land. In Koyagudem a hamlet of Singhabhupalem 8 miles from Kothagudem held originally most of the land, but lost it within the last 25 years. Among about 100 householders only there sum land altogether 17 acres, 60 cultivate on hire and 20 as daily labourers whose hire land have to pay for one acre of dry land one bag of Jowari which amounts to about half the produce.

The Brahmin patwaris turned into podu cultivators and worked up to 40 acres of such podu land with many ploughs and hired labour, the crops on the new land being of course excellent and the assessment purely nominal. It was observed in the course of these investigations that in all districts generally even in districts, in which a record of land rights was compiled some time ago, information available with village officers was incomplete with regard to actual occupants of land.

When Haimendorf asked “the Patwaris clerk the particulars about how much had been paid by tribals, his records contained the names of three men who had never lived in the village and one who had not cultivated this year. The clerk had no idea of the sizes of the fields and mainly remarked that since the land was measured 4 years ago by the settlement officers there was no need to measure the fields again not realising that in the meantime all the Podu fields had been shifted”.

Above all the things about the Patel, Patwaris in the villages, Madiraju Rama Koteswara Rao proposed a resolution in seventh Andhra Maha Sabha regarding Patel, Patwaris of the villages for the hereditary rights for them, to enhance the remuneration traveling, and dearness allowances. Moreover he promised to the Maha Sabha as advisory member of Warangal Subedar to request for recommendations. One member named

Polakampalli Venkata Rama Rao objected on this resolution had deserved the Patel, Patwaris as traitors, so there was no necessity to pass a resolution for their benefits. So the proposer of the resolution and Konda Venkat Ranga Reddy convinced him privately to withdraw his objections, so the resolution was passed. In the same period, some scholars like Syed Abid Hassan, in his book *Whither Hyderabad*, demanded for the abolition of Patel, patwari system if not possible atleast for introduction of transfer system and to abolish the hereditary system.

The checks on oppression by the collectors of revenue gradually lessened their authorities increased considerably. When the Nizams administration and his control or administration was weak all the exploiters of the agrarian system took an advantage to them and highly benefited from it.

COURT SYSTEM IN SOUTH INDIA - A LEGAL AND HISTORICAL PERSPECTIVE

M. Britto Stalin

Introduction

Civilizations played an important role in the evolution of modern society. Modern society has profound impact from the ancient times in the form of civilizations. The important part of modern society is the evolution of modern legal system. It is important to know the process of formation of modern legal system. The law and the legal systems followed by the ancient civilizations around the world have an impact on the modern legal system. So, it is necessary to know the legal system followed by the past civilizations. The evolution of modern legal system of a particular country can be studied by knowing about the legal systems of that country followed in the past. The modern legal system of India is evolved over a period of time in the past. The evolution of modern law in India can be traced particularly from the legal system followed in the ancient India.

The modern law is derived from many sources such as customs and civilizations. The law in modern India is made by keeping an eye on the legal systems followed by the Hindus and Muslims in India. The law of India is mainly derived from the law followed by the Hindus in ancient India. It is necessary to know the law followed by the ancient India to understand well about the legal system prevailing in modern India.

Legal History and Legal System

History is education and enlightenment. To the legal community, history is the very process of understanding law in context. Without history, law is a set of bare principles devoid of social meaning and cultural orientation.¹ Law is a rule of life. It is founded on the dogmas and experiences of life; and life's dogmas and experiences are recorded in a vastly wider library than the covers of the law books comprise. The great function of the law as follows

- *The maintenance of fundamental order with which men will find security and the common conditions of opportunity and*

- *The adjustment of those conflicts of interest between individuals and groups, which they cannot settle for themselves or in setting which, they encroach upon the interests of others.²*

Spencer defined law as “*mainly an embodiment of ancestral injunctions*”. But he also recognized that legal institutions develop as other social institutions develop and that law is not merely a body of formal rules possessing objective validity but is an institution the development of which is an inseparable part of the social process.

Some have argued, perhaps rightly, that the legal historian must be a lawyer. The utilitarian connection between his subject and the law is as clear as the daylight. Precedents play in the courts of law of most countries a part to which it is entitled nowhere else, that of a norm that stands almost above discussion. In Great Britain, where the memory of the law goes back further than in any other country, the story of the enactments of Parliament and their application by the courts of the Realm is a matter of considerable practical importance as well as a subject asking for the most radical specialization. Yet the legal historian must not exclusively dwell in a world of his own; he must refer to the advances made by certain other branches, such as, political, social and economic history.³ Bereft of the knowledge of history it may not be possible for the historian to get a better into issues involved necessitating enactment, which alone will enable him to perceive its true import. Therefore, history and law are mutually dependent on one another.

What is a legal system? A legal system encompasses a set of legal principles and norms to protect and promote a secure living to its subjects in a cultured society. It recognizes rights, prescribes duties of people and provides the ways and means of enforcing the same. To achieve this particular objective, the legal system considering the sociological, economic and political conditions in the society designs its own goals and evolves a set of principles / rules / laws which help the society to attain its

identified goals. A system connotes a coherent whole. It is animated by a philosophy or ideas which connect its different parts leading to a harmonious working. The corpus of the system is its variable elements. Changes in the laws may result from legislation and judicial decision. But the concepts and methods of the system are its constant elements.⁴

Court and Legal System during the *Sangam* Age

The elaborate legal system instituted, developed and sustained by the *Chera, Chola and Pandya* dynasties of the Tamil country or better known as *Tamilakam*, dates back to the *Sangam* age. The *Sangam* literature which is generally ascribable to a long period from 5th century B.C to 2nd A.D. Century furnishes the details of the rulers of the *Tamilakam*, their well-established legal framework and the mechanisms of its dispensation. The King was the final court of appeal and strictly operated on cardinal principles of law i.e., *Aram*,⁵ *Maram*,⁶ *Pazhi*⁷ and *Nar*.⁸ The poets during that time served as an integral part of the king's court and played a vital role by giving counsel to the kings which is recorded in the *Purananuru*,⁹ one of the eight anthologies of *Sangam* literature. The courts were referred as *Avai* and *Pothi ill* in urban centers and *Ambalam* and *Mandram* in villages. The judicial administration was carried out under the trees and hence the names of various courts are associated with trees as referred in *Tolkapiam*¹⁰ of *Sangam* literature:

<i>Vila Mara Mandram</i> ¹¹	-	Court
under the wood apple tree		
<i>Pala Mara Mandram</i> ¹²	-	Court
under the Jackfruit tree		
<i>Vembu Mara Mandram</i> ¹³	-	Court
under the Neem tree		

Arakkalam was the place where judgment was dispensed, which was served like the present day High Court or higher courts of appeal. In view of historian K.A. Neelakanda Sastri, *Mandram* was palace and *Pothi ill* was a public place. He further believed that *Pothi ill* derived from *Pothu Illam* which means public house. This adds to the argument of the prominent sociologist of law Upendra Baxi, who argues that in India, *systems of people's law and systems of state law* developed together and

Tamilakam was unique in terms of its contribution of de-centralized, people oriented and democratic judicial systems

The reference to the *Manuneethi Chozan* killing his own son under the wheels of his chariot to provide victim justice to a cow whose calf was killed by the prince under his chariot, is a classic example of trends and issues in victimology of *Sangam* age. This sequence is sculptured as a monument on the eastern periphery of the temple complex where the *Manu Needhi Cholan Ther Mandapam* is situated. The exquisitely carved wheel of the chariot is portrayed as monument at Tiruvarur. There is also the lingam worshipped by the characters installed on the temple premises and is referred to as Sri Bhakteswarar. The icon of Manu Needhi Cholan has been installed in one of the inner prakarams¹⁴ of the Thiyagara Swamy temple at Tiruvarur¹⁵. Although the practices of ordeals to establish innocence, calling of witnesses in criminal cases and severity of punishments to reduce crimes reveal to us the repressive laws of the *Tamilakam*, it also accommodated the changing normative framework of the society and eventually became the precursor for English courts establishment in 18th century in Madras Presidency.

Court under the Pallavas

The *Pallavas* had followed the system of monarchy. The king was the head of the kingdom. Hereditary succession to the throne had been in practice. The *Pallava* kings had considered themselves as the representatives of God. They had assumed many titles like *Maharaja, Maharajathi Raja* and *Dharma Rajathiraja*. These titles indicate the imperial power of the *Pallava* kings. The king is the fountain head for administering justice. The *Pallava* kings had also claimed a divine origin.

There were three types of courts in the *Pallava* kingdom. The highest judicial organization was called *Dharmasena*. The king acted as its head. The courts in the towns were known as *Adikarnas*¹⁶. The village courts were called as *Karnas*. The village Sabhas also acted as courts in settling the civil disputes in the villages. The existence and the functioning of the local bodies constitute an important aspect of the *Pallava* judicial administration. Already

mention is made about the administrative units called *Nadu* and *Oor*. The respective committees had administered these divisions. The committee of Nadu was known as *Naattar*. They carried out the king's orders and looked after the administration of Nadu. The Sabha or Committee in each *Oor* or Village was in charge of the village administration. The members of *Oor Sabha*¹⁷ were known as *Perumakkal*. Each Sabha was divided into separate committees called *Vaariyams*. Each *Vaariyams* had looked after the administration of temple, irrigation tanks and village gardens. Thus, the village administration was well organized during the Pallava rule. The village administration also played an important role. It can be said that the Pallavas had laid the foundation for the future expansion of village administration during the Later Cholas. Punishments were not cruel and harsh. Fines were also imposed along with punishment.

Court system of Imperial Cholas

The Chola king was the Chief Justice. The Chola kings gave enough care for the judicial administration. Justice was mostly a local matter in the Chola Empire, where minor disputes were settled at the village level. The village level judicial administration was carried on by the village assembly. Minor disputes were heard by the village assembly. Disputes were settled with proper evidences. Punishments were awarded by the judicial officers. The trial of serious offences and major cases were conducted by the king himself. Every village was a self-governing unit. An area of empire *Kurram*, *Nadu* or *Kottam*¹⁸ depending on the area, a number of *Kurrams* constituted a *valanadu*¹⁹. These structures underwent constant change and refinement throughout the Chola period. Village assemblies exercised large powers in deciding local disputes. Small committees called *Nyayattar* heard matters that did not come under the jurisdiction of the voluntary village committees. The punishments in most cases were in the form of donations to the temples or other endowments. The convicted person would remit their fines at a place called *Darmaasana*. There is no much information available on the judicial procedures or court records. Justice was mostly a local matter in the Chola Empire; minor disputes were settled at the village level.

The punishments for minor crimes were in the form of fines or a direction for the offender to donate to some charitable endowment²⁰. Even crimes such as manslaughter or murder were punished by fines²¹. Crimes of the state such as treason were heard and decided by the king himself and the typical punishment in such cases was either execution or confiscation of property. The people had to agree to the king in these situations, no matter what. There was no distinction between civil and criminal offences. Sometimes civil disputes were allowed to drag on until time offered the solution. Crimes such as theft, adultery and forgery were considered serious offences. In most cases the punishment was in the order of the offender having to maintain a perpetual lamp at a temple. Even murder was punished with a fine. In one instance a man had stabbed an army commander. Rajendra Chola II ordered the culprit to endow 96 sheep for a lamp at a neighbouring temple. Capital punishment was uncommon even in the cases of first-degree murder. Only one solitary instance of capital punishment is found in all the records available so far.

Chalukyas' Legal System

It may be mentioned here that at least one early *Chalukya* king, *Pulakeshin I*, who founded the dynasty, is said to have good knowledge of the Laws of Manu, an early compendium of writings dealing with justice and forming part of the *dharmashastra* corpus. Additionally he is credited with sound knowledge of the art of politics, the *Puranas* and the *Ramayana* and *Mahabharata*²². King was the highest appellate authority of the state. But undoubtedly it can be said that most of the *Chalukya* kings worked for the welfare of the people. The king also acted as head of the administrative council. Kings ruled in accordance with the rules of their dynasties. Kings seek the advice of other experienced persons in matter of administration of justice.

The king also appointed the council of ministers for administering his kingdom. The council of ministers advises the king and also help him in administration. The chief of the council of ministers was called *Mahamatya*. Apart from ministers, there were other officers who helped the king in administration of the state. The administration

of Mandal was called *Mahamandaleshwara*²³. The chief of the army was called *Dandadhipatya*. The heads of the village and law department were called *Visayika* and *Adhishthanaka*. *Kanaka*, *Dandanayaka*, *Sandhivigrahika*, *Dutaka*, *Mahakshapatalika* were other officers as well. The entire empire of Chalukyas was divided into provinces and other units. Mandal was the unit of the empire and its administrator was called *Mahamandaleshwara*. He supervised and controlled his subordinate officials. He had also the power to either punish or promote them. Village was called *Visha* and its head was called *Vishayaka*. There were other officials under him. A special official called *Pattaiika* was appointed for the realization of revenue. The villages were administered by *gram sabha*. Its head was called *vishayaka*. Like villages, city councils were also entitled for local and self-administration.

Aside from these expectations and symbolic duties vested in the king the inscriptions of the *Chalukyas* give some information about the king's administrative duties. He was the ultimate arbiter of justice. According to the *Godachi* plates of Kirtivarma I dispensing justice (*nyaya*) was a primary task of the king. However *Chalukya* inscriptions are not clear on how the justice system functioned and how appointments were made to such positions. Moreover there are no formal officer titles mentioned who could be regarded as judges. But we know from many *Chalukya* inscriptions that justice was dispensed at a local level by eminent elders at the level of a city or village (*mahajanas*) and may also have been dispensed in consultation with merchant guilds (*shreni*).²⁴

There were separate military and civil courts during the reign of Chalukyas. King was the highest judicial authority and gave his decision in accordance with conventions and on the advice of his ministers. All sorts of punishments such as imprisonment, exile, fines and sentence to death etc. were prevalent in his period. *Vichapati* and *adhishthanayka* were important officials in the field of justice.

Court System during the reign of Vijayanagar Empire

Robert Sewell, a civil servant in India, wrote *A Forgotten Empire*, in 1900, a historical

narrative on the Vijayanagara Empire. Owing to its framework of colonial discourse (*Vijayanagara: Hindu bulwark against Islamic onslaught*) and his emotive language (*"Never perhaps in the history of the world has such havoc been wrought, and wrought so suddenly, on so splendid a city"*) the book became very influential. Literally, scores of stories, novels and plays in Kannada and Telugu were written faithfully following Sewell's model²⁵. However, after Sewell, since new sources and *bakhairs* came to light / got translated into English, historians and scholars in the post-colonial period began to have a re-look at the Medieval period. Girish Karnad's latest play, *Rakshasa-Tangadi*, belongs to this tradition of post-colonial discourse. The brilliant play not only offers a new perspective on the battle of Rakkasa Tangadi but also does away with popular myths and legends about the decisive battle²⁶.

The Vijayanagar kings held the court in very grand and pompous style. Vijayanagar court splendour, affluence, dignity made such a deep impression on Ceaser Frederic, the Portuguese traveller, that he rated it to be matchless one among all the courts he had seen.²⁷ His view was shared by many other visitors. Earlier kings held *Sabha* (assembly) in forty pillard hall described by Abdur Razak.²⁸ Krishnadevraya shifted the vanue to *Bhuvan Vijay* or house of victory which he had built to commemorate his victories against Gajapatis. Similarly *Sabha* was also held in *Anand Mahal* that was located at *Jasti Chavadi* and *Hasar Chavdi*²⁹ Vijayanagar durbar was a very big affair. It was attended by *Amarnayakas* and their representatives, chiefs of subordinate states, princes, *dalwayas*, merchants, ambassadors from the foreign countries, *pandits*, poets, who depended on the court for their livelihood. Bukka is said to have held the court with his relatives, ministers, *kshatriyas*, wise men etc. Vir Narasimha's durbar was attended by seventy-two *niyogas*, his sons, son-in-law, officers, chiefs, lords, *palaigars*, *amarnayakas*, well-wishers, dependents, learned men, *purohit*, *acharyas*, *jiyangars*, ascetics, astrologers, physicians, cavaliers, *mahuts*, police officers, -tributory chiefs, *vandies*, *vaitalikas*, singers, *pathanikas*, scientists, play wrights, rhetoricians artistes and *vahikas*.³⁰

The court had strict procedures among which was compulsory attendance of the courtiers. Presence of the nobles added to the strength of the king which ensured loyalty and support to the royal family. Two hundred *Nayakas* were obliged to be present with the king always and were to maintain full strength of the soldiers. Negligence on any account was punishable with their dismissal and confiscation of their properties.³¹ All such *nayakas* can be grouped in first category and there was second category of the *nayakas* who were exempted from the rule about the court attendance. In that category fell the chiefs of Bankapur, Bhatakai, Girsappa³². They attended the court only when they were summoned by the king to do so and they sent their tributes from their own *jagirs* or estates. However, the exemption was mostly because the presence of these *nayakas* was essential in their regions for security reasons and as such it did not confer on such nobles any special status distinguishing them from the rest. The kings treated all the *nayakas* with equal consideration. Similarly, all the *nayakas* who attended the court and who were exempted from it all the same posted each a secretary at the court and kept themselves acquainted through them of the happenings at the court³³. For other members, too, the attendance was a must which is quite obvious from the instance that *Chandrayya* the reader in the verses in Krishnadevraya I's court sent his son to the court when it was not possible for him to attend in person.

In the court the king was 'a court of appeal'. One who wanted to seek justice from the king would lie on the ground till he was attended by some *nayaka* and inquired about his grievances. Usually the justice was dispensed by the *Dandanayaka* and *Pradhani*, but the criminal cases involving high dignitaries must have been tried before the king. *Naras Nayak* though a de facto ruler could do little when the young king did not punish the noble responsible for his brother's (king's) murder. In the Vijayanagar code murder of a king was treated as treason and the guilty was awarded with death punishment. Capital punishment awarded for other crimes was subjected to two mercy appeals but not the one awarded for the assassination of the king. There was instant decision in the court on the cases. If it were to be the case of robbery the *nayaka* of the

concerned region would retrieve the stolen goods within stipulated period or would run the risk of confiscation of his property by the state.

The Vijayanagar king met in a small court assembly with his ministers for transacting the state business. Barbosa mentions the existence of house that was meant only for that purpose whereas Paes described it as a porch without walls, with many pillars hung with the clothes handsomely painted³⁴. *Achutaraya's* small assembly was called *Venkatavilas mantap*³⁵.

This assembly was a body comprising king, ministers and important nobles held in great esteem by the king and it was distinct from the royal assembly which was a larger body comprising all the nobles, citizens, merchants, feudatories etc. Generally only the ministers would attend the small assembly, but the king could summon any noble to this assembly and discuss any important matter with him. However, it was not obligatory on the part of the king that he should discuss such matters with all³⁶. *Sabhanayak* or *Sabhapati* presided over such meetings. Krishnadevraya describes the *Sabhapati* as a person who surrounds himself with the subordinate kings³⁷. This indicates *Sabhapati's* importance only as next to the king. *Teyyad Naganna* was *Sabhanayak* of Bukka I. King himself presided over the *Sabha* when serious questions were to be discussed by it and its deliberations were held in secrecy. In Vijayanagar court a specific code was followed towards the ambassadors. The kings were expected to receive them with much courtesy and cordiality. Krishnadevraya discusses at length in *Amuktamalya* the treatment ought to be given to the ambassadors. The king should not use harsh words for he might require their services in concluding treaties. The king should convey his intentions about their masters without giving them any offence.³⁸

Conclusion

The ancient legal system played an important role in the evolution of modern law in South India. India is a country where Hindu is the majority. So, the law followed in the ancient time can be applied to the modern time in some aspects. The law followed in the ancient time is mainly derived from the Hindu religion and is popularly known as Hindu law. The family law

in South India is mainly derived from the different personal laws for different religions. The Hindu personal law came up for the Hindu population. This Hindu law is mainly derived from the ancient legal texts such as *Smritis*, *Dharmashastras* and commentaries such as

Mitakshara and *Dayabhaga*. These two commentaries became the two different schools from which the Hindu law has been derived. Further study also can be made on the court procedures of ancient and medieval court systems in South India.

ANGLO-FRENCH STRUGGLE IN CUDDALORE DURING THE CARNATIC WARS (1746 A.D. - 1761 A.D.)

Dr. S. Chinnappan

La Bourdonnais captured Madras on 21st September 1746. Anwaruddin waited for a whole month in the hope that Madras would be handed over to him, for on 26th September 1746, Dupleix had assured him.² Mahfuz Khan, the eldest son of Anwaruddin who had visited Pondicherry in February 1746³ became impatient of the delay in the implementation of the promise and threatened to act against the

French. On 4 November 1746 Paradis charged his opponents only to find Mahfuzkhan and the 10,000 Strong army of Arcot in headlong flight. Skirmishes before its walls and on the Adyar provided the first concrete evidence of that greatly increased superiority of European arms and tactics which was to prove decisive in Indian politics during the next fifty years.⁴

Dupleix received a conciliatory gesture when Hussain Tahir, his old-time ally in Arcot and now a courtier of Anwaruddin⁵ informed him that Gosse and Kerjean had been released by Mahfuz Khan and that Dupleix should on his part keep his word and hand over Madras to the Nawab. The intriguing idea then occurred to Dupleix that he could capture Fort St. David or Cuddalore and present it to the Nawab to assuage his disappointment over Madras. He accordingly wrote to Hussain Tahir and started his campaign against Fort St. David.⁶

For different attempts were made by Dupleix on Fort St. David.⁷ The first occurred on the 8th December, 1746, when the French, after seizing the Company's Garden House at Manjakuppam, were repulsed with loss. The Nawab kept army under his sons Mahfuz Khan and Muhammad Ali in the vicinity of Fort St. David for three Months, after which he made terms with the French and withdrew. On 19 December 1746, 1700 French soldiers under de Bury initiated the attack but they were suppressed and put to flight at Majakuppam by an Arcot force of 6000 horses sent to help the English. Mahfuz Khan had combined forces with his younger brother Muhammed Ali after having "readily engaged to send his army to Fort St. David on condition that the English would furnish part of the expense"⁸ On 10 January 1747, Dupleix staged an attack by sea with 500 men embarked on boats but it turned out to be an utter failure. Dupleix then attempted to divert the Nawab's troops by ordering a campaign of military ravage⁹ and incited the Polygars (Palayakars) of Vettavalam and Alattur by sending them arms and money to "invade and burn... attack and destroy".¹⁰ The campaign of ravage compelled the Nawab to cease his involvement in the hostilities. On 15 February 1747 Dupleix invited Mahfuz Khan to Pondicherry.¹¹ An agreement was initialled at Pondicherry on 19 February 1747 by which the Nawab agreed to withdraw his troops from the English side in return for the symbolic surrender of Madras to the Nawab to be signified by flying the Nawab's flag on Fort St. George for eight consecutive days.

The most important attack was delivered on the 1st and 2nd March, 1747 by Paradis. Dupleix managed to buy off Mahfuz Khan, but when on 3 March 1747 Paradis marched with

a considerable force finally to subjugate Fort St. David, as he thrust a feeble British covering force aside and came within sight of the ramparts of the Fort he beheld the mortifying sight of British sails rising up over the horizon. Soon the British naval squadron anchored off Fort St. David, and as Griffin started ferrying sailors and marines to the shore Paradis had no recourse but to beat a hasty retreat. Griffin landed 500 sailors and 150 marines as a temporary reinforcement to the garrison, and put one of his captains, captain Gibson, in charge of the fort. With nothing much else to do, Robert Clive appealed for a commission, being granted on dated 16 March 1747 into the 2nd Company of Foot Soldiers at Fort St. David. Edmund Maskelyne also took a commission about this time.¹²

On the 16th June 1748, the French made an attack on Cuddalore, but they were again repulsed with loss.¹³ It was not long before his little army had an opportunity to prove its worth. In May 1748, in answer to Dupleix's prayers, a French squadron arrived in Indian waters. Too weak to challenge Commodore Griffin, the French admiral yet managed to lure the British squadron away from its station off Fort St. David. Dupleix struck at once. Suddenly French troops appeared almost under the walls of Cuddalore. It was obvious to the French that the British were alarmed, as they could be seen hauling back guns and stores from the town to Fort St. David, clearly intending to move out at once. After dark however, Lawrence stealthily re-occupied the town walls. At midnight the French confidently marched up to take over what they presumed to be an empty town, only to be greeted by a totally unexpected blast of musketry. The surprise was complete, and in the darkness all control broke down. The disheartened fugitives could barely take advantage that they were nearly out of range of the French artillery, but the British guns, were unlikely to be more effective. On one occasion when the guns had been run up on to their platforms in a battery, it was found that, owing to regrettable miscalculation, a wood completely obscured the French fortifications. As blunder succeeded blunder, sickness began to exact an ever heavier toll, and the morale of the besiegers steadily declined. Robert Clive observed, 'a strong detachment was sent to possess the French bounds which was effected

with little opposition, but so prevailing was the panic among the men that in the night time the advanced sentries were continually firing without seeing anybody and very often at one another; this kept the whole detachment in alarm, and I am persuaded that the appearance of 50 of the enemy would have put us to flight.¹⁴

The French, however, were not without their misfortunes. Paradis, upon whose inspiring leadership much depended, fell mortally wounded while organizing a sally. During the same sally Clive had an opportunity to display his powers; as some French, headed by a grenadier company, approached the trench he was holding, the platoons on his right and left though fit to make a hasty departure, but Clive's platoon some thirty men, stayed firm. They exchanged fire with the French grenadiers at a range of ten yards; the grenadiers tried to form up for a charge, but their line fell to pieces before a storm of bullets, and they ran back leaving some thirty of their comrades on the ground. Eight of Clive's men had been hit.¹⁵

Dupleix's third attempt on Fort St. David was entrusted to Paradis; he has started the attack when the arrival of an English fleet at Cuddalore on 14th March 1747 forced him to fall back. The last attempt by Dupleix on Fort St. David on 27 June 1748 was also a sad failure. For nearly three years from the 30th October, 1746, the date of the repudiation of the treaty of ransom, interest centres at Fort St. David.¹⁶

II. ANGLO - FRENCH STRUGGLE IN CUDDALORE DURING COMTE DE LALLY'S PERIOD (1758 A.D. - 1761 A.D)

Comte de Lally was appointed King's Commissaire and Commandant General of all French establishments in India on 31st December 1756. He arrived in Pondicherry on 28th April 1758.¹⁷ Lally was given clear instructions before leaving France: "Seize first the English places on the coast, Fort St. David, Madras without commitment of forces to the interior". Lally himself had proclaimed the war cry: "No more English in the Peninsula". In one of his early letters to Bussy, he declared is prophetic mission: "The King and Company have sent me to India to chase away the English. When I have exterminated the English

from this entire coast I will undertake without getting out of my room, those other operations which so far have cost many men to the King and much money to the Company."¹⁸

Lally tried to make up for the time lost in transit by deciding to carry out an immediate assault upon Fort St. David. The soldiers who had disembarked after a year at sea were ordered to march to Fort. St. David the next day and to start a siege after capturing Cuddalore. When he found that his order to march the army to Fort St. David at once could not be implemented for lack of transport arrangements, he ordered the bullocks to be seized from the villagers and pressed into service; when their number proved insufficient he ordered the inhabitants to be forcibly enlisted as porters and non-combatants. In vain did de Leyrit represent the difficulties that would arise from alienating the attachment of the inhabitants. Lally rejected the seasoned advice of the mature **Conseillers** of Pondicherry and behaved as imperiously as an aristocrat of pre-revolutionary France.

Count d'Estaing, one of Lally's brigadiers led the march to Cuddalore; he was soon joined by de Soupire and then by Lally himself. On 4 May 1758, Major Polier surrendered Cuddalore and withdrew to Fort St. David. In the meanwhile there was a minor naval engagement off Cuddalore in which neither d'Ache nor Admiral Pocock emerged respectable, but in any case, the command of the sea remained with the French. The siege of Fort St. David started in great earnest under the personal command of Lally. After 17 days, Lally reduced it and the French occupied it on 2 June 1758. Lally preened himself that within a fortnight of his arrival, he had captured the strongest English fort on the Coromandel Coast which had defied Dupleix on four different occasions. He refused to admit that the sudden appearance of d'Achi's ships before Fort St. David on 31 May 1758 without any challenge from Admiral Pocock was the crucial factor that persuaded the English to surrender the fort. Lally ordered the fort to be razed to the ground. The same circumstances led to the surrender of Devakottai when d'Estaing appeared before the place on 43 June 1758; like a great victor, Lally entered Pondicherry amidst great fanfare and festivity.

The battle of Vandavasi fought on 22 January 1760 proved decisive indeed; Lally was routed and Bussy captured prisoner. There only remained the reductions of Pondicherry. On 18 August 1760 an 'Assemblée Nationale' was held in an attempt to unify the forces for the defence of Pondicherry. But nothing fruitful resulted due to Lally's hatred for the town, its officers and inhabitants. The irascible Lally upon capturing Fort St. David had razed it to the ground; now that the tables had been turned, Lord Pigot in revenge ordered the total destruction of the white town, the European settlement of Pondicherry. After eight months of blockade, endured gallantly but in an atmosphere tense with recrimination, Lally surrendered on 16 January 1761.¹⁹ The French power in India was at an end.

It was again taken by the French but if finally came under British after the Treaty of Paris, 1783.²⁰ Though Dupleix attempted to capture Fort St. David which was the last British strong hold on the Coromandel coast, it was restored to the British in 1785, and with the end of the French threat, it was abandoned and fell into ruins.

Though Dupleix attempted to capture Fort St. David, the strongest fort on the Coromandel coast, he could not succeed. Comte de Lally was more successful as he was able to capture the fort and completely destroy it. Despite this success, they failed to establish the French empire in India.

TELANGANA ARMED STRUGGLE - A MISNOMER

Dr. Chiranjeevi Kolluri

The much orchestrated Telangana Armed struggle is neither Telangana nor armed nor even struggle. The Nizam ruled 16 districts, not just Warangal and Nalgonda, which are geographically contiguous to Krishna and Guntur Districts. If the Nizam's rule was so oppressive the armed struggle should have broken out in all the 16 districts. Why was it confined to Warangal and Nalgonda only? These two districts do not form even the entire Telangana. Telangana region comprises

of 8 districts *viz.*, 1.Warangal 2. Nalgonda 3. Mahabubnagar 4. Atraf Balda (present Hyderabad dist) 5. Medak 6. Nizamabad 7. Adilabad 8. Karimnagar. At that time Khammam was part of the Warangal district. It was carved out as a separate district in 1953.

The Communist Party of Hyderabad was established in 1941 at the R.B.V.R. Reddy Hostel, Hyderabad. It was Ravi Narayan Reddy who played a stellar role in its inception.

However, they were under the hegemony of Andhra leaders, and their high command was located at Bezawada (present Vijayawada). The Communist Party was dominated by Kammas, and it is a dominant caste in the Coastal Andhra. Even B.T. Ranadevi Political Bureau Member from West Bengal also made serious comments on Andhra Communist Party basing on the caste factor. The seminal formulation of dominant caste is a numerically preponderant caste fairly high on the hierarchical caste school with considerable landholding. As the Indian National Congress was dominated by both Brahmins and Reddys in the erstwhile composite Madras Province, consequently Kammas did not have much say in it. This community as a propertied class hardly believes in communism in its pure form.

WHY IN TELANGANA?

Owing to demographic changes and commercialization of agriculture there was tremendous pressure in Andhra area. It was during this time many irrigation projects were built in Hyderabad State. This made them to make inroads into Telangana in the guise of Communists. In addition to this in India's freedom struggle, Brahmins were in forefront of the movement. Subsequently Reddys had joined the movement. The other dominant community from Coastal Andhra the Kamma community was forced to join the Communist party as it could not be accommodated in the Congress.¹ This community as a propertied class hardly believes in Communism in its pure form. Selig Harrison's well-known thesis is that the main factor determining the strength of the Communists in Andhra is the caste homogeneity of the Andhra Communist leadership. He argues that "since the founding of the Andhra Communist Party in 1934, the party leadership has been the property of a single caste, the kamma land-lords."² Economic theories about political violence and terrorism are preposterous. Nowhere in the world has terrorism been, or is, a produce of economic distress. It springs solely from racial or class hatred. This is seen more clearly than ever before in our age. Andhra Communists had their headquarters at Bezawada (presently it is called as Vijayawada) in the Krishna district, which is geographically contiguous to

Nalgonda and Warangal districts of Hyderabad State. In Nalgonda there is a Mungala enclave. Although Mungala is physically located in the dominions of the Nizam, it was under the control of Government of India. The Krishna district Collector used to administer it. Owing to its location being far away from the administrative headquarters, Mungala almost became autonomous and there was no law enforcing machinery. It was a bolt hole for fugitives from Indian justice. Communists took advantage of the vacuum and established themselves. They made Mungala as their operational base and made inroads into Nalgonda and Warangal districts.³ In Nalgonda for instance, the district headquarters was without railway and telegraphic communications. In addition to this the terrain also, with its outlying forests and lack of communication, was ideally suited for guerilla warfare. The Communists exploited to great advantage.

REDS UNDER BEDS:

The Government of India banned the Communist Party in 1940, they made inroads to Mungala Enclave.⁴ They took advantage of the impecunious, indigence, ignorance and illiteracy of the people and they created mayhem. They were aided and abetted in their endeavours by the Andhra Ministers of the Madras Province. Even the Government of India connived at it, because Communists were the protégés of Madras Province, Hyderabad State Congress by itself was divided and weak and it could not do much to embarrass the State authorities, and the Communists activity in Telangana was therefore the only alternative means left to weaken the Nizam's regime.⁵

The trendy slogan is what 'One man's terrorist is another person's guerilla freedom fighter.' It is true that many people in applauded them when they killed landlords and burned their houses as a part of struggle against landlordism. However, a Communist in those days is between a common criminal and a guerilla. However guerillas fight by the rules of war. Communists killed civilians in order to so terror in support of their political struggle. By contrast common criminals have no political motives, while guerillas do not

intentionally kill civilians. Communists were violently opposed the existing order. They resorted to terror because they were too weak and Hyderabad State too strong to be challenged in more conventional guerilla warfare.

Communists' temerity was evidence of the ineptitude and malevolence of the Nizam's administration. The Nizam's 'army' was fit only for ceremonials and officered by sinecurists, the countryside was cowed by the retinues of landed gentry and Muslim plutocracy gangs of toughs and braves, licensed by authority, like the *rurales* pre-revolutionary Mexico. The Nizam army's apathy, police forces' inertia and administration's callousness enabled the Communists to raid village after village and pillaged. It is not out of place to mention, that Communists killed only Hindu landlords did not touch Muslim Jagirdars. Interestingly Communists occupied the lands of Hindu landlords but scrupulously avoided the lands of Muslim Nawabs. Those Andhra-led Communists ostensible goal was to wrest land from Deshmukhs and Jagirdars but their real aim was to occupy everybody's land and distribute among their toadies and collect the money in the name of party fund. In this bid, they did not spare even Konda Venkat Ranga Reddy. He was a Congress leader and later on became Dy.Chief Minister of Andhra Pradesh. His lands at Sarajipeta of Nalgonda District were occupied. He was not a cruel Deshmukh who perpetrated miseries among common people. Interestingly, Reddy had a pen of 200 sheep. Communists made off with them to their hideout and made a feast of them.⁶ It was during this period many Andhra Kammas with the help of Communists could become owners of the fertile lands in Telangana. Andhra Communist leaders also facilitated their co-casteists to migrate to Telangana districts, particularly where irrigated lands were available and even helped to occupy tribal lands without any qualms.⁷ Communists also helped the new migrants to occupy government lands and to buy private lands at a throw away price.⁸ Some leaders even coerced big land lords in Khammam and Warangal districts to sell off their lands to migrants at some price, lest their land should be occupied.⁹ Exodus of Kammas to Khammam Taluqa of Warangal district

changed the demography of the area, consequently government made it a district.¹⁰ The lowest of all flatteries is the flattery of the common people.

COMMUNISTS AND THE NIZAM:

In Telangana, the Communists claimed to have 'liberated' at least 2,000 villages and set up : People's Independent committees (village soviets) were set up, and actually took over the running of a very extensive area: landlord and police control was broken, and peasant tribunals "liquidated" many of the old functionaries.¹¹ Andhra leaders, systematically and brilliantly controlled by the Communist Party, distributed land, cancelled debt, seized stocks of food, and generally won firm peasant backing. The Delhi Government afraid of Communism generally, was undoubtedly perturbed by the uprising.¹²

Communists took advantage of the lifting of the ban on their party within Nizam's dominions to make Hyderabad territory as the base for their operations in Indian Territory. The Govt. of Madras particularly Andhra ministers were responsible for the serious situation that had arisen in Hyderabad. They were not only tolerant to Communists but also supportive as long as they confined their activities to Hyderabad State.¹³

Laik Ali, the Prime Minister of Hyderabad State utilized the hostility of the Communist Party of India towards the Nehru Govt. and resentment of local Communists towards the Standstill Agreement. He began to send feelers to Telangana Communist leaders, representing to them the advantages of an alliance against their common Indian enemy who was reported to be preparing for a military intervention. Makhdoom Mohiuddin, Raj Bhahadur Gour and Ravi Narayan Reddy two leading Communist figures from Telangana, who were underground, were contacted.¹⁴ Although the Communist ranks were divided on the issue, the deal was struck on 4th May 1943.¹⁵ The Nizam lifted ban on the Communist Party in Hyderabad. The year 1943 was a climacteric year in the history of Hyderabad, because that year saw the Communists joining hands with the Frankenstein organization of Razakars.¹⁶ The Razakars which later proved itself Frankenstein, and they wanted to establish a

Muslim oligarchy in the State, the Communists' purpose was to exploit the turmoil and confusion so that they could spread their tentacles to the rest of India. Each wanted to use the other for its own ends. The tables had thus turned, and it was India which was now hampered in its fight against the Communists of the Madras region by Hyderabad State. There was no doubt that this turn of events weighed adversely in the conduct of negotiations between Hyderabad and India. Similarly, it is arcane information as to why 15th August was chosen for India's independence and transfer of power in the midnight. The Nizam seems to have figured that the Communists' success threatened India more than it did him; he tried to divert rather than to suppress their activities. He ascribed his loss of control to India's refusal to supply his state with arms; and claimed the emergency as vindicating the necessity of the Razakars. The Nizam's government, the Indian Government, and the Communists each at some point accused the other two of working together. And to each was a measure of truth.

THE RED TERROR

In the Telangana districts of Hyderabad, and particularly in Nalgonda and Warangal, a menace was growing which, if allowed to continue, would have brought upon the people of Hyderabad the same tribulations and sufferings as had been heaped upon them by the Razakars. It was popularly known as "Communism". But nothing would be more wrong than to confuse what has been happening in these "Communist" districts with a fight between opposing ideological forces. The only "ideology" of these anti-social elements of Hyderabad who go by the name of "Communists" is to exploit a confused situation for their own ends. The adoption of the Marxian jargon and unorthodox, violent methods of agitation does not convert a body of gangsters into the liberators of workers and peasants. In one district alone the "Communists" of Telangana have murdered more than 200 persons and have looted or destroyed 37,000 maunds of grains worth a crore of rupees.¹⁷

These activities can hardly be described as being in furtherance of a social objective!

Moreover, the morale of the State Police, who feared the anger of the people in view of the past repressions against them by the force as a whole, was of doubtful quality. It was apparent that they could not be relied upon entirely to deal effectively with the "Communists". In fact, there was reason to believe that it was from them that the "Communists" had acquired automatics, sten guns, rifles and muzzle loaders at a low price. It was therefore decided to draft special armed police from the Indian Union into the affected areas to supplement the troops already operating there.

The dislocation following the Police Action was quickly turned by these individuals to their own advantage. They went about "distributing" land and dispensing with law and justice. Rightful owners of land were driven away or done to death, and their lands were given to others, who were told that the good earth belonged to them. They were not told, however, how long it would remain in their possession. In return for these benefactions handed out by them, the "Communists" thought themselves free to indulge in orgies of arson, loot and murder. They destroyed houses, mowed down smiling crops, seized cattle, and murdered in cold blood those who dared refuse to subscribe to their creed. In some cases even murder did not meet their idea of sadistic delight, and they cut up the bodies of their victims and left them to suffer pain and agony. At a time when it was most important to build, they burned. At a time when food was precious, they destroyed it. At a time when order and peace were of supreme importance, they deliberately created disorder and confusion. **And all this they called "Communism".** In this process, they could not help doing some good to themselves. To save the ignorant people from being robbed by the landowners and the Government, they appropriated their money by collecting funds out of their hard-earned annas. It was of course an accident that many of them after amassing large fortunes abandoned the movement and tried to live under false names. Thus Kamma Sesayya, the popular 'Communist' leader who was arrested in a nursing home in Madras, along with seven lakhs rupees.¹⁸ It was his plan to leave Hyderabad State for good and

live a luxurious life in Madras. But destiny shaped the end even of this defiant personage. Communists' religion is sedition, whose creed is violence, whose weapon is sabotage, and whose end is anarchy. History hangs heavy on Government of India. It is of paramount importance to note that while counting the trees one should not lose the sight of wood. Similarly, in a bid to weaken the Nizam's government, Andhra ministers of Madras province aided and abetted Andhra-led Communists and Govt. of India connived at it. Interestingly, Communists before the so called Police Action masqueraded as Razakars in day time and Communists in nights. However, after the Police Action they camouflaged as Congress workers in day time and Communists in night.¹⁹

DISTORTIONS:

It was a deliberate attempt to falsify history, in a bid to promote selfish interests and denigrate political adversaries. However, neither the Nizam nor the officials of that period were alive to defend the allegations. Similarly, BJP and Hindutva elements were not there during that time, but they are now fore runners in denigrating the Nizam. It is a paradox that more than 4,000 Communists were killed and another 10,000 kept in concentration camps for more than one year, after the so called Police Action, however, the present Communist leadership joined the hand of BJP in their vicious campaign.

Another distorted version of history is the lyric "*Bandi enuka bandi katt*", which was written by one Yadagiri.²⁰ This lyric aimed at the excesses of the landlords of Nalgonda District especially of Janna Reddy Pratap Reddy. However, this was fudged to lampoon the Nizam in the cinema by name "*Maa Bhoomi*" directed by Gautam Ghosh in 1979. This picture was based on the stage-play written by Sunkara Satyanarayana at the behest of the Congress.

COMMUNIST SCRIBBLERS:

The Andhra Communist leaders like Putchalapalli Sundaraiah (Sunder Rami Reddy), Makineni Basava Punnaiah, Chandra Rajeshwar Rao, Chandra Pulla Reddy, sunkara and others did not visit Telangana let alone participating in the movement. However,

ensconcing themselves in Bezwada (now Vijayawada), wrote expositions in defence of Communists activities in Telangana. In this category comes oft-quoted Putchalapalli Sundaraiah written '*Vishalandhralo Praja Rajyam*'.²¹ In this book there is no mention of phrase 'Telangana Armed Struggle'. It is only after thought, when Indira Gandhi declared political pensions in 1972, they started writing books and in a bid to give respectability to the movement, they used the phrase of Telangana Armed Struggle. Even for that matter the communist party published the newspapers like '*Swathantra Bharathi*' and '*Praja Shakthi*' did not use the phrase 'Telangana Sayudha Poratam'. It was only in 1972 for getting political pension this phrase was coined. It should be known that no contemporary daily newspaper either in English or in vernacular has ever mentioned the movement as Telangana Armed Struggle especially from 1943-1951. However, sordid deeds of senior Andhra Communist leaders can be gleaned from the book '*Communist Agranayakula Nagna Satyalu*' by Chadalavada Pitchaiah, who was none other than the Secretary of the Communist party.²²

Andhra Communist writers adopted double standards in writing books. When the Naxalbari movement was not called as 'Bengal Armed Struggle', and the Srikakulam Poratam as 'Andhra Armed Struggle', it is not proper to call Nalgonda and Warangal districts Poratam as Telangana Armed Struggle.

THE TRUE COLOURS OF THE COMMUNIST REVISIONISTS:

The Communists also misread the situation. Initially as they were aided and abetted by the Government of India to stir up violence in Hyderabad and they assumed that bonhomie would continue further. Major General J.N.Choudhary who became the Military Governor of Hyderabad after the Police Action took a wrong decision to disarm the Hyderabad Police and the Army. All had to surrender weapons.²³ However, the Razakars handed over the weapons to Andhra-led Communists. This gave impetus to the armed struggle. The Communists dalams (gangs) spread out from Nalgonda and Warangal, demolished armless police

stations, killed so-called '*class enemies*' and set up their rule over the area. The Communists boasted that Nalgonda and Warangal districts were liberated and called them as '*Indian Yennari*'. Most of the Communist leaders of Andhra belonged to one of the two dominant communities and other one was in the Congress. The affluent of them would normally suffix honorific '*Choudhary*' to their names. The Communist leaders conjured up an apocryphal that Major General Choudhary also belonged to that dominant community and their forefathers moved from Andhra to Calcutta in search of green pastures. They started disseminating this apocryphal not only amongst their cadres so that they would resort to arsons, plunders and pillages with apparent impunity and without qualms but also in the administration so that it would connive at their shady dealings. It should also be noted that, the real beneficiaries of the Communist depredations were the coastal Kammas and Telangana Reddys, not the dalits. In reality, they became cannon fodder.

Another recondite information is that on 17th September 1948 the Nizam sent a cable to the Security Council (UNO) to the effect that he would be withdrawing the case of Hyderabad. However, the Chairman of the Security Council, Lord Congdon (British) did not accept and said that it was sent under the duress. There was an international opprobrium about the military invasion. Keeping in view, the Government of India directed the Military Governor Maj. Genl. J.N. Choudhary to concentrate only on establishing peace and tranquillity and provide good governance. The army should be confined to only barracks and not to be visible outside. The Communists took advantage of the discomfiture of the Government of India from 17th September 1948 to 1st December 1949 and started occupying lands and distributing them. They created mayhem in Nalgonda and Warangal districts.

By aiding the Communists in Hyderabad, the Government of India hoisted its own petard. As the situation was going out of hand, Vallabhai Patel, the Home Minister replaced the Military Governor with a civil administrator K.M. Vellodi, a senior ICS officer of Madras cadre. He was designated as a

Chief Minister of Hyderabad and launched an operation of liquidation of the Communists. This was done only to give an impression to the world that Hyderabad administration was establishing peace and tranquillity. Patel replaced I.G. Police of Hyderabad with Monappa, an I.P. officer of Madras cadre and also caused to deploy ten battalions of CRP and placed under the command of a second world war veteran Captain Nanjappa, who was seconded to the police. These two police officers bore down upon the Communists in full force. The heat of the LMGs and rocket launchers forced the Communists to capitulate and begged for mercy. Their mercy petitions are still there in Telangana archives. Now they have been posing as apostles of freedom fighters and drawing pensions.

As things are getting hot, the Communist leaders Basava Ponnaiah and Chandra Rajeshwar Rao badgered their central leadership in Calcutta to send a delegation to Russia and solicit its army support. Having yielded to their pesterings, the Central Committee constituted a delegation of four members - S.A. Dange, Joshi, Basava Ponnaiah and Rajeshwar Rao. They visited Russia and had an audience with Joseph Stalin. Having heard the plea of the delegation and did not see any merit in their demand and he bluntly blurred big NO. They were crestfallen and returned empty handed to India. As the whole cadre in Telangana was already liquidated and most of them begged for the mercy, the Andhra Communist leaders, to save their faces, gave a statement of ceasefire.

THE COMMUNISTS - ANTI-NATIONAL:

When the Second World War broke out in 1939, the Communists were against India taking part in the '*imperialist war*'. As this was also the Congress view, the Communists could then pretend only to be giving active effect to the Congress policy. But with the entry of the Soviets into the war, the Communist attitude had perforce to change. The imperialist's war became overnight transformed into the anti-fascist struggle and the Communists became active supporters of India participating wholeheartedly in the war on the side of the Allies. Here they had to part with the Congress and worked against the Quit India Movement. As

per the directives from Moscow, Communists started anti-Congress propaganda. M N. Roy, a leading Communist leader accepted money from the British Indian Government for propaganda against the Congress.²⁴

In addition to that when the Cabinet Mission came to India to negotiate the withdrawal of British authority from India, the Communists urged that there should be no united India but the country should be split into 15 states on the model of Balkans. The Communists also demanded separate constituent assemblies for fifteen states in India and to that effect submitted a memorandum both to the Cabinet Mission and the Prime Minister of India.

With the help of Andhra Ministers of Madras Province the Communists occupied lands in the Princely State of Hyderabad and declared as a 'liberated area'. Similarly, their demand for 15 countries of which many were Princely states, would enable them to make Communist counties.

The Communists unabashedly importuned Soviet Russia to extend help to them to continue skirmishes in Telangana after the merger of Hyderabad into Indian Union on 26th January 1950.

SKULLDUGGERY:

In a bid to stir up violence in Hyderabad State, Andhra ministers of Madras government had no qualms about it and had certain lurid dramas written up and got them enacted in the border districts of Nalgonda and Warangal. More often than not, those dramas were punctuated with naughty limericks, and pandered to masses. That's why those dramas had a large clientele. One of the dramas which became very popular was '*Maa Bhoomi*'. After formation of Andhra State in 1953, Andhra Communists enacted the same '*Maa Bhoomi*' drama in Andhra districts as well. However, Government of Andhra State banned the drama. Andhra Communists MLAs raised the issue of ban in the Andhra Legislative Assembly at Kurnool in 1955. While replying to the question, N. Sanjeeva Reddy, the then Home Minister of Andhra State averred that '*Maa Bhoomi*' was intended to run passions high and set one

section of society against other, thereby create troubles for the Government of Hyderabad. That's why, Congress ministers of Madras State patronized those dramas. As this drama had potential to paralyze dissensions within society and caused law and order problem, the fledging Andhra State could not afford it.²⁶ That's why it was proscribed. The trouble is that Andhra ministers find it very easy to strew noble little homilies far and wide but considerably less easy to follow those homilies themselves.

POLITICAL PENSIONS:

It is interesting to note that as all political parties were not having any role whatsoever in the police action they had rightly kept aloof from it, until Indira Gandhi Prime Minister of India declared to introduce political pensions in 1972. It was from that year, all political parties especially Communists had started eulogizing it as a freedom struggle and started claiming political pensions. Especially agitprop writers became very busy to strut their wares at every conceivable place. Since there was a split in the Congress Party, Indira Gandhi's minority Government depended on the support of the left parties. It was during this time the Naxalite movement started in Srikakulam District of Andhra Pradesh. It was denounced by Andhra communists. They averred that they had already experimented this type of militant movement in Telangana, however, they could not achieve much. Government of India wanted this sort of statement from the Communists against the Naxalites. Consequently, she connived at the ruse. Another important thing is that all the Hindu convicts who were incarcerated during 1944 to 1951 for any crime got political pensions. Of course, the Government of Andhra Pradesh as its wont had not considered the claims of even the genuine Muslims who fought against the atrocities of the Razakars and jailed during this period. Andhra Communists leaders left them high and dry. Few people practice what they preach and no one less so than Communists leaders. Few are more capable of having the best of everything both ways. Their spiritual home is no doubt earlier in Russia now in China, their native land is Coastal Andhra, but they live in comfortable

Telangana. They are at once acquisitive capitalists and sincere communists. It is a paradox that, the Communists who opposed the accession of Hyderabad into Indian Union and declared "Azad Hyderabad" and fought against the Government of India between 1948 to 1951 and yet have been recognized as Freedom Fighters. The Government of India granted Communists (Revisionists) leaders with monthly pension of Rs.26,000/-, 10 Acres of land, free medical

aid, house sites and all India first class railway pass.

It is not out of place to mention that our founding father of the Indian Constitution Dr.B.R.Ambedkar said that communism would not flourish in India similar to that of Soviet Russia and Kuomintang, because the leadership of the Communist Party of India was in the hands of upper cast boys epically the Brahmins, who do not need a change in India.

HISTORY OF RAYA VELLORE

Dr. G. Devaraj

It is an event of immense pleasure to make a study of early History of Tamil country. Every part of the Tamil Country had been a great center of human activity. Many of the sub-regions here were historic centers which by their dynamic impulses made significant impact on the Tamil Country. Each region and sub-

region had played a remarkable role which had been less understood by posterity.

Innumerable sources are available to trace the history of South India. Yet in the reconstruction of early history, epigraphy plays a vital role. The numerous inscriptions that are found in and around of Vellore. They are of two

kind's viz. those engraved on stones and those written on copper plates, supported by literary and secondary sources.

It was a vast region in the northern part of the Tamil country. Early Vellore district consisted Kalastri, Karuvattu Nagar, Vengupattakur, Chanyanthapuri, Kannakudi and Krishnagiri. In fact eight taluks of Vellore district, six taluks of Thiruvannamalai district, two taluks of Villupuram district and two taluks of Chingelput district were the solid units in Vellore of the Mediaeval period. Thiruvannamalai district was bifurcated on 01.10.1989. These eighteen taluks formed and functioned more or less as a single unit.

The citadel city Vellore was the capital city of the Vijayanagar rulers. Vellore was mentioned as a small village inhabited mostly by hospitable huntsmen in an ancient classical literature of Sirupannattrupaddai¹

Vellore is known as "Raya Vellore" to distinguish it from Eluru in Godavari district, it is also known as "Uppu Vellore"² Vellore Fort's architecture resembles the Madura ruler's architecture. The Original settlement was Velappadi now a suburb which derived its name from the circumstances of its being situated in the midst of a forest of vela or boboo tree. Vellore similarly signifies the village of boboo trees and prefix Raya was added in consequences of its becoming a stronghold of the Rayas of Vijayanagar³

The river Palar, route cause for the district fertile originates at Nandidurgam in Karnataka state and flowing through Eastern Ghats, Javad hills entering into the Vellore district, passing several historical towns Vaniyambadi, Ambur, Pallikonda, Gudiyattam and vellore the famous historical towns. It has its tributaries of Cheyyar, Poondi, Goddar, Koundianadi some minor tributaries and empties its water in to the Bay of Bengal.⁴ Some of the important towns which exist on the banks of the river Palar are Tirupattur, Vaniyambadi, Ambur, Gudiyatam, Pallikonda, Virinjipuram, Katpadi, Brahmapuram, Sevoor, Serkadu, Ammundi, Thiruvalem, Arcot, Puduppadi, Kaveripakkam, Takkolam and Arakkonam.

Vellore consists Madras and Chengaleput. Villupuram districts formed two divisions -

Aruvanadu and Aruvadatalainadu and further divided Aruvava south, Aruvava North.⁵ Ptolemy has noted this territory which was roughly extending between the South Pennar and North Pennar as Aruvarnai or Arvarnaio.⁶

These two divisions Aruvanadu and Arvavdathalai-nadu combinedly came to be called as Tondaimandalam or Tondai-nadu perhaps after the conquest of this place by Tondaiman- llamTirayan who ruled from Kanchi. However according to the collections of Mackenzie the earliest settlers who ruled over this area before it was conquered by llam-Triayan were the Kurumbas and the region was then known as "Kurumba Boomi". It is said that they divided the country into twenty-four divisions or Kottams and these each had a fort⁷

The occupations of the Vellore district by the Kurumba is proved by the extensive but ruined forts in Padavedu near Polur.⁸ Again traces of these old fortifications have been further discovered in Mahendravadi, Ambur, Narayanavaram and Vallimalai. During that time certain parts of Vellore region was known as RajakambiraRajyam. After the rule of Tondaiman-llanthirayan the portions of Vellore had been ruled by almost all the emperors of South India- Pallavas, Cholas, Rashtrakutas, Pandiyas, Hoysalas and the Vijayanagaras.

During the sangam age this region was a part of Tondai Mandalam. It was ruled by Perumbanas whose king lladirayan was immortalized in Perumpanarruppadai.⁹ Malaipadu Kadam one of the poems in pathupattu reveals the rich life pattern of the people of Vellore. It is believed that the Kalabhras who overran the entire Tamil country about fourth century A.D did not fail to cause damage to Vellore. Their rule brought darkness on the historical scene. When the political darkness vanished this region came to be ruled by the Banas. The Banas were minor chieftains of South India. The rule of the Banas came to an end when they were defeated by the rising Pallava power.¹⁰

Mahendravarman (590-630 A.D) one of the great Pallava kings held away over Vellore. A good number of epigraphical evidences that are found in different places of Vellore give evidences to the rule of Mahendraverman. A cave temple was built by Mahendraverman at

Mahendravadi of Arokkonam taluk in Vellore. An inscription in this temple give the name of the place Mahendrapuramu.

Nandivarman II (731- 795 A.D) his general Udayachandran famous for his Valour defeated successfully the Pallava dominions from the enemies. In his honour Udayendram a town near Vaniyambadi, on the bank of the river palar was founded at Gudiyattam in Vellore.¹² Nandiverman III founded alliances with the Gangan the Rastrakutas and defeated the Pandiyas at Thellaur he was called "Thellaru Erintha Nandivarman."¹³ After Nandhivarman, Nirupatungan and Aparajita the two pallavan princes engaged themselves in fratricidal wars to establish their claim to the throne. Since the battle of Tirupurambiyam in 885 A.D.

The Cholas under Aditya I steadily rose in strength.¹⁴ He invaded Tondaimandalam in the battle of Tirupurambiyam that ensured he defeated the remnants of the pallava power and put an end to the pallava rule completely. After the death of Aditya I his son and successor Parantaka I inherited not only the throne but also the enmity of the Rashtrakutas. The Rashtrakutas under the leadership of Krishna II met the Cholas in the battle at Vallam in 910 A.D. which is the modern Tiruvalam¹⁵ in the Vellore district and inflicted a defeat on Krishna II and his allies.

The Rashtrakutas ruler Krishna III occupied the major parts of Tondaimandalam and strengthened his position in the PadaividuRajyam, one of the administrative units of vijayanagara in Vellore district. The Chola s power was revived worth the ascension of sundrachola who extended his power not only in the south but also in the north. Rajaraja I completely put an end to the Rashtrakuta rule. By 985 A.D. the whole of Vellore was reconquered by the Cholas.¹⁶

The decline that set in the Chola Empire encouraged the remaining rulers of the Tamil country viz, the pandyas and other chieftains like Sambuvarayas to clamour for independence. After the rule of the second Pandya the Hoysalas rose to prominence in South India during the later half of the thirteenth century. In 1322A.D. the Hoysalas ruler Ballala III moved into unnamable the very

important town in North Arcot, which later came to be known as Tiruvannamalai. According to "Koil-olagu" when the Brahmanas were celebrating a festival in Sri Rangam a Muslim army had come in and after occupying a few parts of Tondaimandalam, Vellore, Tiruvanamalai and Chingleput marched towards Srirangam.¹⁷

After the decline of the Hoysalas, the Sambuvarayas became the ruling class of this region. They were the chieftains under the imperial Cholas and later under the Pandya's. They gradually developed their power, position in and around PadaividuRajyam from 1264 A.D. to 1310 A.D. till the assassination of Kulasekarapandya, the Sambuvarayas were in the service of the Pandya Kingdom. "Virasamban or EthirileCholaSambuvarayan" (1306-1317 A.D) was the most important chieftain during this period.¹⁸

Ekambaranatha Kulasekara Sambuvara was the important chieftains.¹⁹ He was succeeded by his ablest son Tirumallinathan who carried the titles "verumankondan" and "Sakalaloka-Chakravarth."²⁰ He ruled from 1322 to 1339 A.D. He extended his rule from Vellore to parts of Chingleput and Villupuram. His Son Rajanarayana I ruled from 1337 to 1363 A.D. Raja narayana II, Sambuvaraya ruler was defeated by kumarakampana, the ablest son and successor of Bukka I, the Vijayanagar ruler in the year 1362 A.D. The Rajyam was elevated as one of the provinces in the vijayanagar empire existed in the palar river basin²¹ He saved the Tamil country from the hands of the Muslims. He reorganized the temple and the judicial administration and brought them under his direct control through subordinate officers.

After Kumara Kampana, his son Jammana Udaiyar became the second Mahamandalesvara and ruled from 1374 to 1377 A.D. He gave the gift of land to ternples.²² Virupanna udaiyar became the next Mahamandalesvara, governed it from 1377 to 1400 A.D.²³ After virupanna udaiyar prince Bukka II acted as governor for few years, probably between 1400 to 1405 A.D.²⁴ Prince vira vijaya Bhupatiraya was the Mahamandalesvara of the Padaividu Rajyam

from 1406 to 1421 A.D.²⁵ He concentrated mostly on economic and religious activities.

Saluva Narasimha was the another Mahamandalesvara of the region from 1452 to 1485 A.D.²⁶ The Samgama dynasty of Vijayanagar came to end in 1486 A.D. He usurped the throne and founded the Saluva dynasty.²⁷ Krishnadeva Raya 1509 to 1530 A.D. was the greatest ruler among the Vijayanagar emperors. He sent an army to control the Nayaks. The army encamped near Vellore in the Palar basin, all the chief of the Tondaimandalam met, and arranged to pay the tributes to the emperor.²⁸

For administrative convenience Krishnadevaraya divided the whole Tamil country into three divisions under three Nayaks or viceroys. The first was Gingee Nayaka whose jurisdiction extended along the seacoast from the river palar on the north to the river Coleroon on the south. Gingee Nayakship was under the control of Tubaki Krishnappa Nayaka, Tanjore under Vijayaraghava Nayaka and Madura under Venkatappa Nayaka.²⁹ According to father pimento, a Portuguese Jesuit' the Gingee Nayakship was further subdivided into three smaller Nayakships, viz, Vellore Nayaka, Thiruvadigai Nayaka and Salavacha Nayaka.

Among these the Nayakship of the Vellore was most prominent. Major parts of the Vellore flourished on the banks of the river Palar.

Bommu Nayaka, the founder of the Vellore Nayakship ruled as vassal from 1526 to 1595 A.D.³⁰ Chinna Bommu Nayaka built a famous historical rock fort Vellore still enlighting the architecture style of Vijayanagar. Recently the Govt of Tamilnadu erected the monument pillar of first war of independence which to place in the fort of Vellore on 10th July 1806 A.D. He paid annual tribute till the outbreak of the Battle of Talaikotta at 1565 A.D. After the battle of Talaikotta, the capital was transferred to Penukonda.

Lingama Nayaka, governed the region from 1595 to 1604 A.D. He rebelled against the emperor Venkata II. Consequently he was deprived from his possessions and Vellore was captured from him. Vellore became the capital of Vijayanagar Empire in the year 1605 A.D., the ruler Venkathathi Raya governed the kingdom from the city of Vellore in the palar river basin. Sri Ranga II a weak successor was fought against the Bijapur Sultan Mustaba Khan, defeated by him at Virinjipuram on 4th April 1646 A.D. Sri Ranga lost his territory and Vellore was Beseiged by Bijapur Sultan.³¹

TERRORISM IN INDIA WITH SPECIAL REFERENCE TO DEENDAR ANJUMAN'S INVOLVEMENT IN THE BANGALORE CHURCH BLAST IN A HISTORICAL PERSPECTIVE (2000CE)

Drishti V. Baliga

Terrorism is a problem that has been experienced by almost every country in the world in the form of shootings, bomb blasts, etc. It is an act that has brought to the fore the humanity and cooperation we humans are capable of when threatened by a physical evil. When speaking about terrorism, it also becomes very important to define it- "Terrorism is a special form of political violence. It is not a philosophy or a political movement. Terrorism is a weapon or method which has been used throughout history by both states and sub-state organizations for a whole variety of political causes or purposes".¹ But terrorism could have not only political aims but religious as well.

India too has been suffering from the evil of terrorism for a very long time especially since independence. Terrorist activities have increased significantly due to our western neighbour, ever since 1989. Not only have these terrorist attacks resulted in loss of human life, they have also rendered innumerable people homeless. Pakistan resorted to this form of warfare because the defeat it suffered in the 1971 war and the non-gains it made in the first 2 years, convinced it that it could not get India to bend to its will through such conventional warfare. But, India has suffered from terrorism not only due to Pakistan, but other sources as well. It has had the problem of the LTTE in the south, insurgency in the north-east as well as Maoist insurgency issues.²

DEENDAR ANJUMAN ASSOCIATION:

The Deendar Anjuman Association was an organisation that was founded by late Hazrath Moulana Syed Siddique Kibla, who later came to be known as 'Deendar Anjuman Channabasaveshwara'. He was born on June 7, 1886, to a remarried widow in Balampet near Gurimitkal in Gulbarga district of Karnataka. After completing his primary education at Gulbarga, he went to Madras to pursue higher education at the Mohammadan College. Deendar Anjuman was a learned man well-versed in religious texts. He had studied the

Hindu epics, Ramayana and Mahabharatha, the Bible, the Quran, Vachana Sahitya among many others. He was an excellent orator with good people skills, able to talk and establish contact with people from different religions, but had a particular affinity for the Lingayat community and was closely attached to them.³

Deendar Anjuman propagated the belief in 'Eko Dharma, Eko Jagadguru and Eko Jagadeeshwara'. But, in reality, Eko Dharma was Islam, Eko Jagadguru was Mohammad Paigambar and Eko Jagadeeshwara was Allah. His aim was to islamise India and the world at large. For this very purpose, he wrote several books titled, 'Lingayata', 'Pancha Shanti Marga', 'Hindu Muslim Ikamathya', etc. He interpreted the Bible, the Quran, Vachana Sahitya and other religious texts and published them in different languages like Telugu, Arabic, English, Urdu, Tamil and Kannada.⁴

Deendar Channabasaveshwara above all, believed that he was a reincarnation of Channabasaveshwara, one of the most revered saints among the Lingayats. He established himself as a 'Jagadguru' as well, to try and win over the Lingayats living in Karnataka, Andhra Pradesh, Goa and Maharashtra. To further this aim, he concocted a theory that the Lingayats were originally from the Arab country and resided near Egypt but migrated to south India when Egypt was about to flourish. He said that, 2,000 years ago, Hindus would whole-heartedly consume meat and a Hindu that did not eat meat was considered to be an outcast. The Lingayats were forced to give up their habit of eating beef and were asked to change their religious beliefs by the Aryan rulers, according to him.⁵

Deendar Channabasaveshwara gained a following and he continued propagating his ideas. His son, Zia-Ul-Hassan, later became the guru of the Deendar Anjuman Ashram, which had its headquarters at Asifnagar, Hyderabad in the then state of Andhra Pradesh.⁶

BLASTS ACROSS INDIA:

The Deendar Anjuman Association became notorious for bomb blasts across south India. Its members in the year 2000, bombed several places of worship in three states, namely, in the then Andhra Pradesh, Karnataka and Goa. In Andhra Pradesh, explosions took place at Machilipatnam, Ongole and Tadepalligudem.⁷ Churches at Medak and Vikarabad were targeted. At Machilipatnam, a Christian congregation of around 3,000 people was bombed and around 21 were injured.⁸ At Ongole, the Gewett Memorial Baptist Church and at Tadepalligudem, the Mother Vannini Catholic Church, were bombed. The former injured 3 persons.⁹ Crude bombs were found at a church belonging to the Church of South India at Medak¹⁰ and a bomb that was found, was immediately defused at Vikarabad. There has not been any news of blasts.¹¹ IEDs were also planted at the Kodandarama Temple at Vijayawada and at the Markaz Mosque at Guntur.¹² In Goa, the St. Andrew's Church at Vasco, underwent mild destruction thanks to a crude, low-intensity bomb. There was no report of any casualty though.¹³

BLASTS IN KARNATAKA:

Karnataka was one of the states to fall prey to the blasts orchestrated by The Deendar Anjuman Association. Three places in the state were bombed:

1. Wadi, Gulbarga- Two crude bombs at the St. Ann's Catholic Church ended up damaging the church and injuring two people.¹⁴
2. Hubli- A low-intensity bomb exploded at the St. John Lutheran Church in the Keshavapura area causing damage to the church but no injuries.¹⁵
3. Bangalore- The St. Peter and Paul Church at Jagjivanramnagar (JJ Nagar) witnessed a blast at 10:15 PM in the night. Before this, a Maruti van carrying bombs for another church exploded at Minerva Mills around 8:30 PM killing 2 of the Deendaris and causing grievous injuries to a third man.¹⁶

THE BANGALORE CHURCH BLAST:

The successors of Deendar Anjuman Channabasaveshwara, who were ever trusting of their leader and had blind faith in him, in order to realise his dream, carried out numerous bombings. As per the prosecution, some of the conspirators got together to prepare the bombs. One of them, Zia-Ul-Hassan, along with 4 of his sons, in October 1999, met at Deendar Anjuman Ashram in Hyderabad to begin devising their heinous plan of the bomb blasts. This was followed by more meetings at various places in Bangalore. After that, 4 of the members of the Deendar Anjuman Association, set about putting their plan into action. Bombs were prepared at the house of Sheik Hashim Ali in Hyderabad and the same were transported by another member to Bangalore. Syed Abdul Khadar Jilani, who was specially trained in the preparation of time-bombs, prepared them and transported the same to different places. On July 9, 2000, a month after the blast at Gulbarga, around 7:30 PM in the evening, four of the Deendaris placed highly explosive substances and bombs including an Improvised Explosive Device (IED) near the rear window of St. Peter and Paul Church that can be found on the JJ Nagar Main Road in Bangalore. The time set for the explosion of the bomb was 10:15 PM and without disappointing the plotters, the bomb exploded causing heavy damage to the church building.¹⁷

Sometime before the blast at the church, as three of the men, Zakir, Siddiqui and S M Ibrahim were transporting a few bombs to another location in a Maruti van, the bombs exploded accidentally near Minerva Mills, killing Zakir and Siddiqui instantly and leaving Ibrahim with severe injuries.¹⁸ While the St. Peter and Paul blast resulted in no physical harm to anyone, it did result in significant emotional injuries- the Christians who were not at all pleased with the incident, in retaliation, resorted to large scale destruction of public property. This led to 17 vehicles being damaged and the situation became so tense that it required the deployment of additional forces.¹⁹

INITIATIVES BY THE STATE AND CENTRAL GOVERNMENTS TO PUNISH THE PERPETRATORS:

The state governments of the respective states along with the Government of India, worked together to catch and punish the

perpetrators. The case that was initially handled by the local police, was later handed over to a team of Corps of Detectives (CoD) which comprised DSPs, V S D'Souza, M B Appanna, G R Hiremath and Manthesh who also filed chargesheets against the accused.²⁰

The Chief Ministers of Andhra Pradesh and Karnataka pacified their people and assured them that the criminals would be caught. Mr. N. Chandrababu Naidu, the then Chief Minister of Andhra Pradesh, soon upon hearing of the blasts at Ongole and Tadepalligudem rushed to the places and promised to the Christian community that justice would be served and stringent action would be taken. He even advised Christian leaders to be vigilant and sensitive and the community to be watchful. The then Karnataka Chief Minister, Mr. S M Krishna and Mr. N. Chandrababu Naidu showed remarkable cooperation and exchanged notes on the ongoing investigation regarding the blasts. Mr. S M Krishna also spoke with the then Union Home Minister, Mr. L K Advani and briefed him on the investigation that was underway. The Karnataka CM arranged a trip to Delhi as well, to appraise the Centre and the Congress high command (which was the ruling party), as the then Party President, Ms. Sonia Gandhi, had reportedly taken a serious note of the attacks on the churches in Karnataka.²¹

The Central Government issued a notification on April 28, 2001, declaring the Deendar Anjuman Association as an unlawful association under The Unlawful Activities (Prevention) Act, 1957.²² The Supreme Court also refused to lift the ban and upheld the Centre's decision when a petition was filed by Deendar Anjuman challenging the decision of a Special Tribunal justifying the ban.²³

SPECIAL COURT AND HIGH COURT'S VERDICT:

There were two judgements passed in Karnataka regarding these blasts. The first was in 2008 by a special court whose judge was The Hon'ble Mr. Justice S M Shivana Gowdar. He tried 27 people belonging to the Deendar Anjuman Association of which 23 were convicted and 4 were acquitted. The criminals were booked under Sections 121 and 121 (A) of the Indian Penal Code.²⁴ Of them, 11 were

given the death sentence and 12 were given life imprisonment.²⁵

A second judgement was passed in 2014 by the High Court of Karnataka presided by The Hon'ble Mr. Justice N. Kumar and The Hon'ble Mrs. Justice Rathnakala. Seven of the accused people were absconding and as a result, the cases against them were split up. Two of the accused died in the van when the bombs exploded and two more died before the verdict could be passed. 4 were acquitted. Many more were either given the death sentence for offences under Section 121 of the IPC or were awarded rigorous life imprisonment.²⁶

OBJECTIVES OR MOTIVES BEHIND THE BLASTS:

As mentioned earlier, as per the High Court verdict, the main goal of Deendar Anjuman Channabasaveshwara was to islamise India and the world at large. His son, Zia-Ul-Hassan, who later became the guru of the Deendar Anjuman Ashram and migrated to Pakistan, was of the same mentality. He said that when he had gone to Mecca and Madina in 1998, he got a prophecy which said that India would become an Islamic country within 2 years, there would be a war between India and Pakistan, north India would suffer 70-75% loss and all arms and ammunition would be exhausted. He would then enter India with 9 lakh followers and after setting foot in Punjab, they would create havoc in south India, paving the way for his easy entry into the south. The Deendaris, in order to achieve their objective, needed support. Therefore, they tried to attract young Muslims and held secret meetings every year, after the celebration of Urs in the month of Rajab and encouraged the youngsters to train in activities of Jihad, Nifaaq and Siria. For this, they went to Pakistan and were trained in the preparation of explosive substances, bombs, blasting of bombs, operation of arms and ammunition, etc. Along with all this, the members of the Deendar Anjuman Association were also enraged by the conversion of poor Muslims to Christianity by the Missionaries and therefore conspired to create disharmony, feelings of enmity, hatred and ill-will between two major Indian communities i.e., the Hindus and the Christians, so that India would face the wrath of the western world and would no longer be able to project itself as a secular

nation. In other words, they hatched a plan to make the Christian dominated western countries condemn India and hate the government established by law in the country.²⁷

After these attacks, as mentioned, the Deendar Anjuman Association was banned. But, the terrorist attacks on Bangalore and India

are far from over. Bangalore witnessed around 5 more attacks and India has also bore the brunt of several attacks in various places such as Mumbai, Srinagar, Delhi, etc. But, our nation has not bent its head to any of these terrorist attacks and has fought against them ferociously and continues to do so to this day.

SENSE OF KINSHIP: A RE-READING OF SIXTEENTH CENTURY SPIRITUAL TEXTS OF MALABAR

T.K. Faizal

The sixteenth century witnessed the beginning of new epoch in the history of Malabar. It is the period of colonial intervention to the Malabar Coast. The contact between

Malabar and Portuguese, which was opened through the first voyages of Vasco Da Gama in 1498, was a unique event in the history of both Malabar Muslims and Portuguese. It was the

success of the Portuguese journey in search of Christians and the spices. The arrival of the Portuguese on the coast of the Malabar at the turn of the sixteenth century was undoubtedly a critical moment for the long establishment Muslim community. It was drastically changed the existing society of Malabar.

The main intent of the study is the critical analysis of the influence of spiritual texts among the Muslims in Malabar during the sixteenth century. It attempts to examine the problems of Muslims after the advent of Portuguese in Malabar and the religious tensions among the Muslims during the period of Portuguese encountering. To analyse the nature of the Muslim resistance against the Portuguese in the Malabar Coast. And also the spirit of the Muslim emerged the sixteenth century against the marginalized atrocities of Portuguese. The study follow that the Muslims of Malabar were the first community of India resist the colonial domination with the religious and national spirit in India.

Problematization is the foremost steps in any research works. A study begin questions are arising. This study is an attempt to find out answer of the research question derived during the time of choosing this particular topic. The research questions are how did Muslims who were not a military force in Malabar fought against the Portuguese? And what was the basic reason of the Muslims defense against the Portuguese power?

For the study I have chosen contemporary Arabic texts like *Tahrid Ahlil Iman Ala Jihadi Abadati al Sulban* [rousing in the people of faith to struggle against the Portuguese], *Al Fath ul Mubeen li Samriyyi Alladhi yuhibbu al Muslimeen* [the manifest conquest], *Al Kuthubat Ul Jihadiya* and *Al Qaseedat Ul Jihadiya*. All these texts show an ideological resistance against the Portuguese atrocities in Malabar. It created a circumstantial situation for the formulation of Muslim community against general enemy.

Tahrid Ahlil Iman Ala Jihadi Abadati al Sulban

The best known work from this period in Arabic literature is *Tahrid Ahlil Iman Ala Jihadi Abadati al Sulban*. The title itself means 'rousing the people of faith to struggle against the Portuguese'¹. It was written by Abu Yahia Zain

al-Din bin Ali in 1515 AD, who was grandfather of Zain al Din Mabari. He was a well-known leader of the Muslim community and a prolific writer on various Islamic topics. It is an ideological poem; the poet suggested a jihadi or holy war against Portuguese. The poem was printed in Abdul Rasheed edited Arabic work, the *Turas al Muqawama Zid allsti amarin* 2008. The poem has 135 verses². It can be divided into several sections. The first seven lines starts with the plea to the Muslim rulers and kings for their support against the Portuguese. It followed twenty nine lines of the poem details the atrocities committed by the Portuguese against the Muslims are obliged to fight against them. Then the author explain the principles of jihad as prescribed by the prophet Muhammad in the holy Quran and the divine rewards that the martyrs receive after their death in forty five lines of the poem. The next then warn the Muslim umma of the punishment awaiting those who trade with the Portuguese, accept their domination and are afraid to fight them. The poem ends by encouraging the Muslim to fight the Christians and describing the state of eternal life in Paradise after this holy war³.

Zayn-ud-din Ibn Ali tries to sensitize the believers of the true situation with a view to awaken their spirit. The atrocities committed by the Portuguese have been well described by him. He witnessed the landing of the Portuguese in Malabar. He says that the Portuguese invaded the home land of the Islamic umma and imprisoned the people of its shari'a⁴. He comments, demolishing their cities enslaving the believers, adorning their women only for seducing them Preventing Muslims from the Holy Haj pilgrimage, canceling the journey to the best of the lands, and killing the Hajjis and other believers with various types of tortures and different ways of mutilation. He narrates that flogging and isolating those chanting the name of 'Muhammed' and abusing the Prophet without any scruples. Taking the captives and putting them in narrow rooms like sheds for senseless cattle, ridiculing Islam and those Muslims who pass by them, and openly laughing at them. The texts of Zayn-ud-din Ibn Ali created a sense of kinship among the Muslims against Portuguese. He was ideologically against the Portuguese conquest. He even suggested a jihad or holy war against them in his famous poem. The content of the

books spread through the Friday prayer sermon in the Malabar.

Al Fath ul Mubeen li Samriyyi Alladhi yuhibbu al Muslimeen

Qazi Muhammad Ibn Abdul Aziz was a renowned philosopher, poet and sufi in sixteenth century Malabar. He had composed more than 12 works and contributed in the growth of Arabi-Malayalam literature. The most important work of qadi Muhammad was *al Fath ul Mubeen*, which is on a historic theme and it seems that he was an eyewitness of Portuguese atrocity and chaliyam war in 1571. The full title of the poem *Al Fath ul Mubeen li Samriyyi Alladhi yuhibbu al Muslimeen* [the manifest conquest], it dedicated to Zamorin who love Muslims. The poem has 537 lines. Which start the narration of zamorins as Muslim friendly. He goes to describing the virtues and noble qualities of Zamorin. Then he pray for the zamorins's welfare and proclaim that it is the duty of every muslim to pray like that. The author then narrates the events that started the arrival of Vasco da Gama in the Malabar and which lasted by few decades, followed by description of the events that took place until the capture of the Chaliyam fort.

Qazi Muhammad Ibn Abdul Aziz was one of the leaders of the Mappilas in the holywar. He described how people came from far off lands to take part in the battle. He described that due to the Portuguese destruction of coastal settlements and the constant bombardments of Mappila centers, people began to walk along the mountains. But they walk in perpetual fear (of the Portuguese)⁵. And also the poem provides a spirit of kinship among the muslims against portuguese atrocities. Qazi Muhammed had been very actively involved in the Chaliyam battle of 1571 with the other Qazis, Sayyids and Yogis. He described how people came from far off lands to take part in the battle. "Men came like ants from far off places" says the author of *Fath-al-Mubin*, "the carpenters, blacksmiths, weavers and laborers with what all arms and provisions they could carry"⁶.

As he was the Qadi of Calicut, the poem also reflected his loyalty and patriotism in favor of the ruler, the Zamorin. Qadi Muhammad says that it is incumbent upon each and every

Muslim to pray for this Zamorin king, he is not a Muslim; he had still fought for the Muslim and protects them from their enemies unlike certain Muslim kings who strike truces with the infidels⁷. Qadi Muhammad reiterates a picture of a united force of Muslim and Nayar soldiers who carry out their attack under the command of the zamorin. In the final verses, the author says, the chaliyam war is famous but I have versified the story as a plea that would benefit me; calling it *Al Fath al Mubeen* of the Zamorin who loves the Muslims. Here national and religious spirit of kinship workout among the Muslims against Portuguese.

Al khutuba al Jihadiya [jihadic sermon] and *Al Qaseeda al Jihadiya* [jihadic poem]

Qazi Muhammad, a well-known sufi who wrote two jihadic works, *Al khutuba al Jihadiya* [jihadic sermon] and *Al Qaseeda al Jihadiya* [jihadic poem]⁸. The manuscripts of the text have been founded in two private collections of Malabar, one at pankil ahamad kutty musaliyar and other ahamad koya saliyath kutubkhana. In the first has 9 pages and second has 7 pages. Both manuscripts are followed three page poem title *qaseedath ul jihadiya*. The style of this text is also worth commenting on. As with any known texts of Islamic sermons, it addresses its Muslim audience repeatedly. This sermon used several quoting from holly Quran and hadith for explain the duty of original believers. *Al kutubat ul jihadiya*, in the form of kutuba prepared by him and send to Chaliyam fortress and neighboring masjid during the war narrated in *Al Fath ul Mubeen*⁹. It is highly instigative speech in written form composed with a view to stimulate the faithful towards a hard battle against the Portuguese till the achievement of total victory. *Al Qaseedat ul Jihadya* is a 43 lines of poem, composed in the context of the war for capturing the Chaliyam Fort. It provides some ethical advice for those mujahids who were active participant during the Chaliyam war. In the poem he congratulates the Muslim fighters for winning this decisive victory over the Portuguese and celebrates their courage, dedication and heroism.

Khutuba provides us an opportunity to understand the complimentary and contradictory aspects of an Indian Ocean sermon in the sixteenth century. It also would help to us realize the political and intellectual

connotation that a sermon could invoke and the way in which the pulpit could become a space for social and political mobilization. The qadi of the masjid or religious leader used the Qaseeda for explain the Portuguese atrocities against the Muslims in Malabar.

The kutubat Al jihadiya reveal on certain emotional background of the indo Portuguese conflict during the period of sixteenth century. This brief text helps to understand how the local community primarily the Mappila Muslims of Malabar, were inspired to the counter the Portuguese ventures in the Indian Ocean. The style of this text is also worth commenting on. As with any known texts of Islamic sermons, it addresses its Muslim audience repeatedly. This sermon used several quoting from holly Quran and hadith for explain the duty of original believers. In this sermon, o people for those who intend jihad this is the right time. For those who desire the highest success, this is the right occasion. The image worshipping idolatory Christian [Portuguese] have entered in to every region in the Malabar provinces. They were executed Muslims and demolished the Islamic establishment. They dominated the Muslims like a master over the slave, ridiculed the powerful Sultan and kings, captured the sovereignty of their land, and guarded themselves with fortification and cannons, even if our forts did not have tactics or cannons¹⁰.

In the kutubha, sermon deals with the Portuguese massacres, they have frontier of the country, shattered the livelihoods of inhabitants; obstructed travel and trade, substitute their profit losses, how many Muslims have been sacked in the prisons! How many vessels have they burned with fire! How many Muslims have been forcibly converted to their religion! And they burnt Quran and masjid etc. o servant of god, are you awake or sleep? Are you distracted away from this matter? Don't you see the ages are passing year by year? There is nothing between you and death but some days. If this is the condition of Adam's children, then good for

those who have spent their blood and soul for jihad, which is the best deed and good for spend the wealth for Islamic methods¹¹.

O believers, get ready for jihad with whatever you can. Don't lose your hearts. Be not as the unbelievers who say to their brothers, when they journey in the land, or are upon expeditions, 'if they had been with us, they would not have died and not been slain'. I encourage you to fight at sea. A military expedition by sea is more meritious than 10 expeditions by land. For the superiority of the war at sea, suffice prophetic saying: whoever missed a war with me, he may fight at sea. Whoever crossed the sea [for war] is equal to one who crossed the sea for hajj.

O the prepare for war against the enemy, you must stay steadfast when the feet waver. Be cautious about the withdrawal, o fighters in the cause of Allah- may He blessed you. O belivers when you encounter the unbelievers marching to battle turn not your back to them. Anyone turn back he is laden with the burden of God's anger. May God include me and you among those who enlivened his religion with their hand, and He inscribes victory on their forelocks. Prophet has said, Allah will empower this religion with bad mannered group¹².

Conclusion

This paper has attempted to indicate the Muslim response against the Portuguese, within the learned to the way of spiritual tests during the sixteenth century in Malabar. Some of the Arabic literary work influenced the Muslims for the fighting against the Portuguese. This entire works concerned to the religious ideas for explaining and inspiring of the Muslim youth for the fighting. It created a sense of kinship among the Muslims against their enemy. This spirit helps to provide a cohesive together resistance against the Portuguese in Malabar. The ideas spread through the Friday prayer religious speech.

ANDHRA LUMINARIES AT RASHTRA PATHI BHAVAN-With Special Reference to Varaha GIRI Venkata Giri (Labor house to Rashtra Pathi Bhavan)

B. Gangadhar & I. Nageswara Reddy

It was the task of the Indian National Congress, which acted as the pioneer of the Freedom Movement for about six decades to overthrow the British and free the motherland from the clutches of the foreign yoke. But the responsibility fell on the shoulders of the Indians after obtaining Independence in 1947. Thousands of Indians lost their lives and many persons had taken great strain to give proper shape to the New Democratic Republic Government of India. Leaders from different parts of the country played a vital role to strengthen Modern India. Prominent among them were Pandit Jawaharlal Nehru, Sardar Vallabhai Patel, C. Rajagopalachari, Rajendra Prasad, Krishna Menon, B.R. Ambedkar, and Acharya Prapalani.

Being a very important state in Modern India, Andhra Pradesh has contributed many outstanding stalwarts apart from its service rendered during the Freedom Movement. In this connection it will be appropriate to have a bird's eye view on **Andhra's Participation in Contemporary Indian History**. Andhra Pradesh is fortunate enough in having a glorious heritage that dates back to prehistoric times—heritage that has been continuously enriched through the ages by a succession of great men and women. Andhra Pradesh was the first state to be carved out on the linguistic map of free India. Its birth was a significant landmark in the history of modern India accelerating the process of division on linguistic basis.

In this article we are tried to highlight the circumstance led to the Congress split in 1969 and how differences within Congress party led to the V.V. Giri election as the president of India. Before he became Vice President of India in 1967, he assumed various positions in the Government of India.

The Presidents of Indian Republic belong to different regions of India. Andhra Pradesh has led the privilege of having three Telugu speaking stalwarts as presidents. Telugu is the second largest linguistic group in India. It is interesting to know that these three presidents S. Radhakrishnan, V.V. Giri and N. Sanjeeva Reddy belong to three different fields of activity. Radhakrishnan who became the president of India on 13th May 1962 had a different background from his predecessor Rajendra Prasad. He was not a politician, but a scholar, a religious philosopher of wide repute, well versed in Indian culture. Thus we can say that his journey from **Education House to Rashtra Pathi Bhavan**. V.V. Giri's path to the presidency in 1969 was different from that of his predecessor i.e., S. Radhakrishnan. He started his career as agitator especially organized B.N. Railway strike successfully, which in turn elevated to position of first rank labour leader of the country. Thus we can say that his **journey from labour house to Rashtra Pathi Bhavan**. Neelam Sanjeeva Reddy, the sixth President of India and the third from Andhra region is one of the front ranking politician and statesmen of

Modern India. His background to become president of India is totally different from those of his two ancestral presidents from Andhra Pradesh. He roused to highest position from the humble position of a village Munisif who was virtually did the job of farmer proving that his journey “from farm house to Rashtra Pathi Bhavan” was correct.

Thus Giri was elected president of India on 20th, August, 1969 as independent candidate in a keenly contested election which evoked not only national but international interest. President elections held so far four times, it was only in this election that the count of second preference votes became necessary. In fact this was a unique election inasmuch as no party candidate won since Giri stood as an independent and perhaps for the first time in electoral history he won as an Indian President.

V.V. Giri, who was elected India's president, is the oldest person to be elected to the nation's highest office at 75, after K.R. Narayanan who was 77. Though he was 75, full of energy and vigour. He used to receive all those who sought interview from 7.A.M to 6.P.M. As soon as he occupied the presidentship he had to face great challenge for this unbending nature. The Congress internal politics from which he benefited, led to open struggle and virtually split in December, 1969. The congress president NijaLingappa expelled the Prime Minister from the congress party itself, inturn working committee of congress party led by Smt. Indira Gandhi elected her as president and finally split in to two. Thus political conditions in India were became turbulence. Being a head of state V.V.Giri carefully watched and maintained neutrality, since, those developments did not affect the smooth running of Government. Missionary and upheld the dignity of the office of India. Of course in the changed scenario, parliament had a new appearance for the first time since independence especially after Smt. Indira Gandhi Government was fall in minority and advised the president to dissolve the parliament. This was one of the most crucial movements in Giri's presidential career. He used his experience and acumen to avoid test by following constitutional procedure and on the advice of the prime minister he dissolved the Lok Sabha.

V.V. Giri's period witnessed yet another epoch making event when a new country, Bangladesh wanted to emerge as the independent country from Pakistan. Almost ten million men, women, children Muslims, Hindus were started to enter into Bengal State in India. No civilized state could turn back persons feeling from that kind of terror from Pakistan, the boundary simply gave away and the refugees flooded into Bengal. The tide was on a scale that was unheard in human society. They were all poor, hungry, sick and wounded accounting about 10 million people. At the critical juncture president using his powers advised the prime minister to undertake relief and rehabilitation measures immediately to meet this unexpected burden, and prime minister responded in an exemplary fashion and acclaimed worldwide appreciation.

When the question of imposing president's rule in various states, came to the president notice, Giri acted as the constitutional head of the state and acted on the advice of the council of ministries. He signed dissolution notification of U.P Assembly in 1970, Orissa Assembly in 1973 and Gujarat State. Of course his signing emergency proclamation in the case of U.P while he was on a foreign soil created much cry in the opposition. But there are some occasions where president Giri didn't act on the advice of the council of ministers i.e. in the case of Manipur Assembly in 1973.

Once again our arch rival Pakistan invaded India on 3rd December 1971, and President Giri immediately called for Cabinet Meeting and declared internal emergency. The whole nation stood as solid rock behind the government decision to give a be-fitting reply to the invaders. Of course, the Government of India came out with glories success by crushing Pakistan armed forces in just Fourteen days.

Though Giri maintained cordial relations with the Prime Minister at the beginning of his tenure, but as the time passed the president became critical of the Government. He openly criticised the politicians and said that there was corruption, nepotism, and communalism had been increase in the country. While addressing the gathering at Chandigarh about Indian society he said that **there was politics without principles**, wealth without work, knowledge without character, pleasure without conscience,

commerce without sacrifice. He also said that "I feel we walk too much every project seems to be on paper. Our Great leaders should not talk much but instead doing some constructive work for the less privileged people".

V.V.giri also played an important role in exploding a nuclear device underground in the Rajasthan desert on 18th may 1979. It supported the everyone in the country and elsewhere cutting across all political party lines. India had become the Sixth Nuclear Power in the world after all five permanent members of UNO Security Council i.e., USA, USSR, China, Britain and France. It seemed to be a matter of special pride that India should be the first to break into that close nuclear arena. Many an important Amendments which were focussed both national and International attention was passed during V.V.Giri tenure. They includes 24th Amendment which was aimed at abolish the Privy purses and privileges of the former rulers of Indian States, 27th Amendment which was meant for the creation of new state of Mizoram, 28th Amendment which was aimed at providing special privileges to Indian Civil service Officers.

The 31st Amendment Act which was enacted in the twenty fourth year of the Republic of India which rises Upper limit for the representation of States in the House of the people from 500 to 525 members and reduces the upper limit for the representation of the Union Territories from 25 to 20 members in the House of people Lok Sabha. The Act which was given effect to the sixth point formula to the Andhra Pradesh State was also enacted during his period. Thus, about 20 such laws were included in schedule IX of the constitution.

Thus, V.V.Giri successfully completed his tenure of five years. He said about the position of the president on 18th, August 1974, just a few days before laying down his august office, still holds true about the position of the president to quote him "having contested successfully as an independent, he had tried to maintain his position throughout his five year tenure. That's why he believe not only congress men but also leaders of the opposition parties had come to him so often to represent their views on matters of national concern and importance. Emphasising the importance of the relationship between the prime minister and the

president under the Indian system of Government V.V.Giri said "the President could play a useful role by exchanging views frankly and freely concerning the government constitutionally as I and Prime Minister done".

When one correspondent asked V.V.Giri about the criticism that the president is mere rubber stamp, he replied that the rubber stamp idea is a political non-sense. We functioned under a written constitution. The essence of this constitution is a harmonious relationship between different organs under it. They have to function not in competition with each other but in mutual trust and esteem, so that the traditions of constitutional government are observed and maintained. The concept of a president functioning in opposition to the government will be a distortion of our constitution. But this idea does not take away the right of the president to insist on strict adherence to well-understood principles of democratic functioning. V.V.Gir further said that "acting on advice of the Council of Ministers does not mean a ready acceptance of such advice. The president has right to tell a Minister or Ministry that the advice tendered is wrong and should be reconsidered. In the ultimate analysis, the Ministers view may prevail because that view will have the sanction of parliament to which it is responsible. The president does not function in competition with his council of Ministers. Even when he expressed his views publicly on matters of common concern, he does not do so to embarrass the government but to strengthen their hands in leading with them.

So, the president Giri proved that through he was frank and criticise government openly he should stand above party politics. He is a sort of umpire who sees that great game of politics is played well and according to rules. He is ceremonial head of state and the nation looks to him for guidance and support, for he is not a leader of particular group of majority party but the representative of the whole nation. Indeed Giri followed Radhakrishanan's example and in public speeches blamed the congress government for mal administration and for its failure to check black marketing, hoarding etc. He openly advised the government to give a sympathetic treatment to the railwaymen after their unsuccessful general strike of 1974. In September 1973, on his annual visit to

Hyderabad he spoke on the condition of the Harijans in India. He was reported to have called for death penalty for any person who practised untouchability. Some eyebrows were raised at this outburst, but nothing more was

done to challenge the president's right or functions to speak out his mind. No doubt, within the limits of the constitutional position as head of state, it remained open for the president to question, encourage, exhort and to warn.

QUIT INDIA MOVEMENT IN MADRAS PRESIDENCY: A STUDY OF ORGANIZATION AND LEADERSHIP

R. Gopinath

Introduction

Madras Presidency was quite often called a 'benighted' presidency in political parlance but from the beginning of the 20th Century there were many struggles in the presidency to dispel that notion. Various forms of freedom struggles were waged against the English domination in Madras Presidency, more particularly in Tamil Nadu which was part of that Presidency. Among the various movements, study of Quit India Movement acquires a considerable significance as it was considered a final militant and violent movement against the British. It was the movement planned to be launched on 9th August, 1942 by Mahatma Gandhi. But the movement began without leadership as the prominent leaders were arrested. The movement spread throughout the country. In interior regions of Tamil Nadu the leaders actively participated in the movement, the people indulged in violent activities questioning the legitimacy of the British rule, agitated and courted arrest. In Tamil Nadu the Movement was organized and led by many prominent leaders like V.V. Giri, Satyamurti, Kamaraj and

M.P. Sivagnanam. The participation of the women, students and the marginalised in the movement was notable. An attempt is made in this paper to discuss this aspect of the movement with focus on role of leadership.

Gandhi and Quit India Movement

The Quit India Movement of 1942 is a landmark in India's freedom struggle. It was the last and undoubtedly, the bitterest fight for freedom ever waged against the British in India. It surpassed all the earlier movements in its dimensions and intensity. It was spontaneous movement against British and foremost leaders participated in it. It spread over almost all the provinces from the Himalayas to Cape Comorin (Kanniya Kumari).¹ The violent upsurge of the masses and people ready to sacrifice everything for the emancipation of the motherland showed their grim determination to throw off the foreign yoke. It warned the British that they were not wanted in India and all section of people were opposed to the British rule.¹¹

After several rounds of discussion with All India Congress Committee, Gandhi introduced

the slogan of 'Do or Die', there was not a word addressed specifically to the workers or to the peasants. He made his appeal fervently to journalists, to the princes, to government servants, even soldiers and to the students, telling them separately what they should do to help the struggle.² No particular role was allotted to the workers and the peasants; instead they were expected simply to line up in the manner directed by their superiors. A 'draft of instructions' had been prepared by Gandhi for the working committee. The draft called for a day of hartal, like the one in 1920 with which non-cooperation was first inaugurated, but in case the hartal went beyond bounds, it laid down that on the day of the hartal no processions should be taken out nor meetings held in the cities, and all people should observe a twenty four-hour fast and offer prayers. Meetings and processions were allowed only in villages 'where there is no fear of violence or disturbance'. Obviously, the 1942 movement, as envisaged by Gandhi, was to bear all the usual marks of his non-violent struggle and every precaution was counseled against militant demonstrations and mass action.³

Quit India Movement in the Indian Context

In India freedom Movement is viewed uniquely as Political Revolution in England, or Revolution in France and Revolution in Russia.⁴ But Indian Freedom struggle had its own uniqueness for its ahimsa in all its battles. We cannot see anywhere in world history which is neither equal nor parallel to Satyagraha in winning the Independence of the Country. Such is the uniqueness that India possesses in Freedom Struggle.⁵ In this perception several extended periods of non-cooperation and civil disobedience against the British rule in India from 1920-22, 1930-32, 1942-44, when the Congress entered upon open defiance of the Government. The last of these rebellions, from early August from 1942 through September 1944, was the most serious. This was the so-called Quit India Movement; many important leaders worked clandestinely against the British rule accepting the leadership of Mahatma Gandhi.

Quit India Movement in Madras Presidency

The AICC organized a meeting in Bombay on 7th August, 1942 to review the

political situation in India and to adopt a course of action to be followed for the liberation of India. On behalf of the TNCC, Bhaktavatchalam, Satyamurthi, Muthuranga Mudaliyar and a few others went to Bombay to attend the meetings.⁶

After a prolonged discussion on 7th August, the committee reassembled at Gowalic Tank Maidan on 8th August, 1942 at 3 p.m. Nearly 250 members of the AICC and 10,000 visitors attended this historic session wherein the famous 'Quit India' resolution was passed. The resolution had been drafted earlier by Jawaharlal Nehru, who moved the resolution and Patel seconded it. The historic Quit India resolution was passed with only 13 members voting against it thereby unfurling a flag to be upheld, indicating a mission to be fulfilled and declaring a nation to be born.⁷

President of the Congress explained the meaning of the resolution thus: "Let us not depend on promises. Let us have a declaration of independence forthwith... the slogan Quit India means nothing more and nothing less than the complete transfer of power into Indian hands."⁸

The AICC appealed to the people of India, to face the dangers and hardship will fall to their lot with courage and endurance and to carry out. Gandhiji stated, "... from this moment onwards consider yourself a free man or woman and act as if you are free and we are no longer under the heel of imperialism ... Do or Die, we shall either free India or die in the attempt. We shall not see the perpetuation of our slavery." On 9th August 1942 Congress leaders like Gandhiji, Nehru, Patel, Azad and twenty other Congressmen were arrested in Bombay and taken to unknown destination. Rajendra Prasad was arrested at Patna. The Congress organisation was declared illegal forthwith. As a result of this, meetings, procession, hartals and demonstration took place all over the Tamil districts.⁹

At Bombay, before his arrested Gandhiji had left a written message with his wife who in turn revealed the message to Satyamurthi. He at once called a meeting of all the remaining members of the AICC, numbering about 70. After arranging the dispatch of cyclostyled message of Gandhiji, Satyamurthi left for Madras by train on 10th August 1942. Other Tamil

Nadu Congress members like Kamaraj, Bhakthavatchalam, Muthuranga Mudaliar and others also travelled in the same train to Madras.¹⁰

The British had already drawn up a list of the leaders who attended Bombay session for arrest. The police were already deployed at every station. Apprehending the intelligence reports, Kamaraj, the President of Tamil Nadu Congress Committee decided not to go straight to Madras. While coming to Madras Kamaraj had got down through back door at Arakonam station. As advised by Gandhiji to Kamaraj went underground and helped pass the message to all and organize the movement to the extent possible.¹¹

But others like Muthuranga Mudaliar, Bhakthavatchalam, etc., reached the Central railway station and were arrested by police. Satyamurti was arrested earlier at Arakonam junction and was taken him to Vellore jail and was detained therebefore transported to another place.

Organizational efforts by Kamaraj during this period were of great significance. Unnoticed by police, he went to the house of a veteran congress leader Kalyanarama Iyer. Along with him Kamaraj went to Tanjore and met congress leader T.R.V. Narayanasamy. From whence they visited some other places in Tamil Nadu organizing and meeting the congress workers. Constant police vigilance cut short the organizational activities of Kamaraj and he was arrested on 16th August, 1942 and detained under D.I.R.¹²

Other Congress leaders carried the message of Gandhiji to the people in Madras very secretly in all the districts in the State, and they started the vigorous campaign against the British. A large number of people and students eagerly participated in the movement.

The August movement broke out immediately after the news of the arrest of Gandhiji and other leaders reached people. Initially it was marked by non-violent popular demonstrations in the form of meetings, hartals, processions and strikes all over Tamil districts.¹³ In course of time as the police started repressive measures the movement turned violent more particularly in the southern parts of Tamil Nadu. The distinguishing feature of the movement was the participation of the women

students from Queen Mary's College. In South Arcot district, a protest meeting was held at Cuddalore and passed the resolution condemning the action of the Government in arresting the congress leaders.¹⁴

A public meeting was held at Tanjore on 9th evening at Tilak ground under the auspices of the Town Congress Committee. It was addressed by T.K. Srinivasa Iyer and Chockalinga Pattar. Nearly 2,000 people had assembled for the meeting, but they were dispersed by the police and the leaders were arrested. In Trichy town and Karur, hartal was observed. Here a majority of the students in the college boycotted their classes.

In Ramnad district, about 1,000 people took out a procession. The crowd raised congress slogans and in the meeting the Government action was condemned. In Vellore, the congress workers organized hartals and in Tirunelveli district on 9th August some college students went out without taking dinner and marched in procession. A public meeting was held at Tuticorin.¹⁵

From 11th August, 1942 the movement was directed against the symbols of tyrannical government as programmed in the secret circular of the TNCC. The instruments of police administration and magistracy were hated and attacked. The system of communication and transport were the main targets of attack of the people. The government on its part enacted a number of ordinances like Penalties Enhancement Ordinance, the Special Court Ordinance, and the Wrapping Ordinance etc., to crush the movement. Arrest, lathi-charge, shooting became very common during this movement.¹⁶ Madurai, Ramanad, and Dindugal became violent centers of political activity.

Conclusion

The movement marked the climax of the freedom struggle. It was the last, yet the most important mass movement for complete emancipation of India. The earlier Congress movements were restricted to activities like hartals, processions, demonstrations, public meetings, picketing, boycotts and the refusal to pay taxes. But, the 1942 movement was the open rebellion. The crowd chose as their targets of attack, trains, railway stations, post-offices, police stations, telephone and telegraph lines, public buildings and property because they

were the outward symbols of British rule. The movement in fact prepared the ground for the transfer of power. The slogan of 'Do or Die' entered the souls of the people, shaking the British rule to its roots in India. Even the Englishmen had to admit and that if the British failed to find soon a way of handing over power smoothly, there was likelihood of a greater revolution to drive them out.

There was a complete breakdown of law and order in many parts of the country and the setting up of parallel independent governments by the people made them realize that they could not hold their sway over India for long. The violent mass upsurge of 1942, the enthusiastic response of the people from one end of the country to the other, many instances of

individuals and collective heroism and bravery in the face of heavy odds their untold sufferings and sacrifices hastened the British decision to quit India.

In so far as Tamil Nadu was concerned, organizationally the Indian National Congress made preparations for any kind of movement as it was led by a group of young dedicated leaders, more particularly, K. Kamaraj, who were all trained in leadership under the congress veteran S Satyamoorthy. Their organisational skills were already demonstrated in the 1937 elections when they defeated the Justice Party. Quit India Movement amply demonstrated the spirit of nationalism that was sweeping across the Tamil region.

"THE COLONIAL REACTIONS TO THE QUIT INDIA MOVEMENT."

Dr. M. K. Gurulingaiah

The Quit India Movement of 1942 launched by the Congress under the leadership of Gandhiji is significant in the history of India's struggle for freedom. It is interesting to study the British government reactions and attitudes to the "Quit India Movement" by the Congress. Here an attempt has been made to examine the reaction of that contemporary leaders and its impact on British policy towards India.

The British war time British government headed by Winston Churchill made a futile attempt to solve the Indian constitutional deadlock by sending sir stafford cripps in March 1942 with an offer to effect constitutional changes at the end of the war. The cripps

mission failed. Indian nationalists were bitter and had no hope of a settlement with Britain and they wanted to show their anguish in action. The Congress working committee meeting at wardha in July 1942, urged the British to withdraw from India. The resolution declared that frustration in India over British intransigence give rise to ill will against Britain and the Congress would change the ill will against Britain into good will it India felt the "glow of freedom" on the withdrawal of the Congress it decided on the formation of a provisional government representative of all important sections of the people of India. The provisional government would then confer with

the British for the adjustment of relations and co-operation in the common task of meeting aggression.¹

The Congress working committee pleaded with the British for the acceptance of its demands. If the demands were not accepted, it decided to utilise all its nonviolent strength for the Vindication of the political rights and liberty of India under the stewardship of Gandhiji. The Congress working committees Quit India Resolution was to be ratified by the All India Congress committee a month later. We can understand the Limited objectives of America and the motives of the British towards India and their collaboration by reviewing the British and American reaction to the Congress demand for the withdrawal of the British from India.

The general impression was that America was favourable to Indian demands and that the British had sent the Cripps mission largely due to the pressure of President Roosevelt of America. American influence was one of the several factors which had influenced the British authorities to despatch the Cripps mission to India. Soon after Roosevelt came to know that the Cripps mission had failed, He sent a message to Churchill pleading with him to postpone Cripps departure from India until one more final effort has been made to prevent air breakdown in the negotiations. He did not agree with the Churchill that negotiations failed on broad general issues, but expressed the feeling Universally held that the deadlock was caused by the unwillingness of the British government to concede the right of self government to India.² Churchill did not accept the point of view of Roosevelt and threatened that he could not take responsibility for the defence of India if everything has again to be thrown into the Melting Pot at this critical juncture. finally Churchill attempted to pacify Roosevelt without changing his attitude to India and pointed out that a serious difference between them would injure both our countries at the height of this terrible struggle. Thus Churchill cleverly laid emphasis on Anglo-American friendship and indirectly Persuaded Roosevelt not to interfere in Indian affairs.

The viceroy Lord Linlithgow was relieved after the failure of the Cripps mission and he held that even a satisfactory solution would not have improved the war effort. He thought that

failure made it clear that Congress was irreconcilable for the edification of the world at large and in particular of the United States and of certain circles at home. There was a unanimous feeling in the cabinet and a very general feeling in Parliament and outside that Cripps did the best he could that Congress was supremely unreasonable but that on the whole the after effects of the mission may be good in India and immediate effect excellent in America.³ The secretary of state for India Leopold Amery was happy that Congress was unpopular and held that nothing could be of greater benefit to India, or better help her future self-government, than that Congress should disintegrate and be replaced by more realist statesmanship. Amery emphasized the importance of publicity both internally as organ for studying morale of Indian public and extremely for putting across India's view of affairs particularly in the United States and China.

The Government of India wanted to have their plans ready and they held it to be of primary importance that public opinion in England and even more in America should be prepared well in advance for any strong action. Linlithgow suggested to take the press and American correspondents into confidence. when the authorities knew that Gandhiji might start civil disobedience movement, as early as June 1942 itself the war cabinet emphasized that quick decision and decisive action should be taken as soon as it was clear that Gandhiji activities must be repressed.

Indian nationalists were planning to launch mass civil disobedience movement. Gandhiji wanted to wage the final struggle for Indian Freedom. He wanted recognition of India's Independence immediately as reality and formness could be introduced in defence on that basis. He did not intend to start the movement unless, he was forced to do by the British policy. though Congress and Gandhiji disassociated with the British war effort they did not obstruct military operations. Gandhiji made it clear that he was anxious to help China but British government and policy stood in the way of effective Indian help. He emphasised that Indian Independence was the only way for utilizing India's great resources in the cause of world freedom.⁴ In his Letter to Chiang Kaishek

of China, Gandhiji pointed out that it was not his intention to weaken India's defence against the Japanese when you wanted the British to withdraw from India.

Jawaharlal Nehru addressed a letter to Roosevelt (sent through Col. Johnson personal representative of president in India) requesting him to do his best to give them an opportunity to organise a real national and popular resistance against the Japanese. He stated that negotiations were possible only if the British government acknowledged the independence of India and requested to all parties to get together and form a provisional government.

He wanted underwriting of British promise by United Nations or by Roosevelt to reassure the Indian public. Maulana Abdul Kalam Azad also proposed that Roosevelt should guarantee the fulfilment of the promise of Independence to India and submit an arrangement for an interim government. The American officer in New Delhi wrote to Roosevelt that the situation in India has deteriorated and the government was not helpful and Indian nationalists were planning to launch mass civil disobedience movement.

Chiang Kaishek of China sympathized with the aspiration of the people of India for freedom and believed that the Congress represented the desire of the Indian people.⁵ He was convinced that India was considered a test case by other Asian nations and held that question was of utmost importance and the outcome might determine the outcome of the war in the Far East. In a letter to Roosevelt (July 25th 1942), Chiang Kaishek wanted the United Nations to do their best for the sake of our common victory, the United Nations must seek to stabilize the Indians situations and to secure the Indian people's participation in the joint war effort. He said that the only way to make the Indians reconsider their course of action was for the United Nations and especially the United States which they had always admired as third parties and offer them sympathy and consolation he pleaded with the American president to intervene and avert the crises. The British authorities told the Americans that if the AICC approved the resolution the government would take a strong position and arrest Gandhiji and other political leaders. Roosevelt in his letter to Chiang Kaishek pointed out that the British government felt that suggestions

from other members of the United Nations would undermine the authority of the only existing government in India would tend to create that very crises in India which it is your hope and my hope may yet to be averted.⁶

As early as June itself the British authorities had made preparations to meet the eventual threat of the Congress under Gandhiji. It wanted the Government of India to deport Congress leaders including Gandhiji to Uganda or some other African state. But important British officials in India opposed deportation of Congress leaders. The War cabinet regretted the decision of the viceroy against deportation of leaders but wanted an assurance that they would not in any circumstances apply the cat-and-mouse procedure and that they were determined if Gandhi fasted while under detention in India to continue his detention whatever the consequences.

The AICC approved the Quit India resolution and the Congress leaders were arrested in the early hours of 9th August 1942. The British carried on a regular propaganda against the Congress opponents to criticize Congress party.⁷ He emphasized and in China. In propaganda, the authorities wanted prominence to be given to these points action was supported by this viceroy's executive Council. The Congress resolution was the beginning of a for reaching scheme designed to undermine India's co-operation in the war effort, action taken in the interests of the UN as a whole and not merely for the protection of British interests in India. The speeches of persons and articles in the press critical of the Congress were all reprinted and circulated widely in Britain and America.

Clement Atlee, acting prime minister in the absence of Churchill sent a message to Roosevelt and pointed out that the government of India would take most vigorous steps, The intention was that as soon as the AICC approved the resolution to order the detention of Gandhiji and other members of the working committee under the defence of India rules and the more prominent of them would be deported from India. All bodies would be made unlawful. The main object of this action will be to be to render the movement abortive by removing and detaining its leaders. Thus Roosevelt knew

about the impending arrest of Congress leaders. But he did not reply to that letter.⁸

Only Chiang Kaishek of China was realistic and addressed another letter to Roosevelt. He held that developments in India were set - back to UN and wanted the UN should demonstrate to the world by their action the sincerity of their protest the principle of ensuring freedom and justice for man of all races. He appealed to him to take effective measures Roosevelt in his reply pointed out that they could exert their influence and efforts more effectively in the matter by refraining from offering active mediation to either side in the controversy. Roosevelt had been influenced by the British propaganda and was not anxious to support the cause of Indian Nationalists. Though American government favoured independence of all people, Roosevelt held that

the successful winning of the war was superior to every other consideration. He felt that his intervention would not be conducive to the military objectives which he had uppermost in mind.⁹

Thus it is evident that American people in general were sympathetic to the aspirations of Indian nationalists and were critical of the British rule in India. But the president and the administration were interested only in the war and never cared to view the Indian problems in its proper perspectives. Roosevelt was mortally afraid of Churchill and the way in which he replied Chiang Kai-shek is indicative of his timid and unhelpful attitude to India's freedom. He wanted to help Indians gain their freedom but not at the risk of disrupting his military coalition with Britain.

RELIGION VERSES RELIABILITY: POLICY OF THE BRITISH EAST INDIA COMPANY IN MALABAR 1792-1858

V. Haridasan

Introduction

British East India Company, established in 1600, had got political control over Malabar in 1792. It was through the treaty of Sreerangapattanam of 1792 after the defeat of Tipu Sultan in the Third Anglo-Mysore War. The Company rule continued in the district till 1858. When the Company assumed the authority of Malabar, the region was crawling in its political infancy. The centuries old socio-political relations of Malabar region was shook by the revenue and political reforms of the Mysore rulers. When protests and counter-protests were going on, the Company came as the political master of Malabar. Immediately after the peace treaty, the district was put under the Bombay Presidency and a Commission with members from both Bombay

and Bengal Presidencies was constituted for making administrative arrangements with local powers. The Joint Commission, as it was called, concluded temporary settlements with the local rajas and chieftains of Malabar and reported it to the government. During the visit of the members of the Joint Commission in Malabar, they collected information about the social, political, religious and cultural aspects of Malabar. Their report was the basis of the early administrative reforms of the Company in Malabar. Besides, special commissions were constituted in different times for studying and reporting particular subjects and they also were based for future reforms. In 1800, Malabar was transferred to the control of the Madras Presidency. This paper is an analysis of the attitude of the

Company towards different religions of the district and the influence of it on their administrative policy.

Caste Distribution of Malabar

When the British came to Malabar, Hindus¹ and Muslims were the two dominant religions in the district. Hindus were the rulers and land owners of Malabar. Among the Hindus, Nairs were the leading caste. They served as the assistants to the local rulers and Namboothiri landlords. In actual practice they were the proprietors of land. The Nair militia was the most important force to protect the property and territory of the landlords and local chiefs. They were experts in martial arts and in the use of traditional weapons of Malabar. The Muslims were came to Malabar along with Arab traders and settled in the coastal regions of Malabar. By the advent of the Europeans the Arabs lost their domination in the Malabar Coast and the Muslims their job opportunities. Gradually they migrated to the interior parts of Malabar through the river routes and settled in the plains of the district. They resorted in agriculture and petty trade activities for their livelihood. The Malabar Muslims were known as Mappilas. When Mappilas became tenants under the Hindu land lords the religious harmony hitherto existed was disturbed and it took a serious nature during the Mysorean rule over Malabar. The migration of Hindu land lords and chiefs of Malabar to Travancore facilitated the Mysore revenue officers to conclude settlements with the Mappilas, the actual cultivators. Thus the new reform raised the status of the cultivators as the owners of land.

Previous Experiences of the Company

The policy of the East India Company towards different castes of Malabar was evolved on the background of its experiences from the region before the Sreerangapattanam treaty. Before the Company became the political master of Malabar, it had trade settlement at Tellichery. The Muslims of the coastal area and inland regions acted as barrier to the Company for their smooth trade activities. In many occasions the local Hindu rulers supplied their forces to the Company in their campaigns against the Muslims. In 1768, one such expedition was conducted against Ali Raja of

Cannanore. The detachment of Captain Thomas Henry consisted of 80 Nairs, and 175 Thiyyas. Besides, the prince of Kolathunad and the raja of Kottayam joined in the detachment with 1700 Nairs.² When Malabar was conquered by the Mysore rulers, new revenue reforms were introduced. The Nairs and Namboothiris lost their proprietorship over land and the actual cultivators became the owners of land. So the Hindu landlords and chiefs rose in revolt against the new government. The Muslims supported the Mysore rulers. The British exploited the situation. In 1790, the governor General of Bengal directed the Bombay governor to encourage the Nairs to throw off their dependence on Tipu Sultan and to engage them on the part of the Company.³ When the rivalry between the English and Mysore rulers started the polarization of Hindus and Muslims was witnessed with few exemptions. The Nair militia of North Malabar was an important instrument to support the Company army. During the time of the third Anglo-Mysore war the Company troops under Major Dow was assisted by 1500 Kottayam Nairs and 1300 Chirakkal troops.⁴ So it is evident that the Company had, in many occasions, assisted by the Local Hindu chiefs and their Nair militia.

Settlement of the Joint Commissioners

Immediately after the treaty of 1792, the Company sent a Commission with members from both Bombay and Bengal to settle the revenue collection of Malabar. The Joint Commissioners tried to reinstate the Nairs and Namboothiris in their old position and it created tension in the district. The British system of revenue administration forced the cultivators to share the products of the land between the tenants, the *Janmis* and the government. The latter two were the beneficiaries of the system. Naturally, the cultivators, majority of them were Mappilas, revolted against the system. In many areas the collection of revenue was paralyzed. Due to the protest of the Mappila peasants, the Raja of Walluvanad failed to collect the revenue and so his territory was taken back by the Company in 1793.⁵ The Mappila protest was very serious in many villages of Ernad, Walluvanad and Ponnani taluks. The British

administrators described these areas as 'Mappila districts' and the Mappilas as 'jungle Mappilas'.⁷ During the outbreaks, the British troops sought the assistance of the local chiefs and rajas and their Nair militia contributed much to suppress the outbreaks. It was a great experience to the British for their future recruitments of the natives to the Company service.

To pacify the Muslims, the British at first followed a policy of conciliation. Some important leaders of the rebels were appointed as *Darogahs*⁸ and *Adhikaris*.⁹ But that experiment was not successful. Major Dow, one of the members of the Joint Commission proposed for the formation of a Mappila militia to suppress the disturbances, but it was not implemented.¹⁰ The continuous disturbances under the initiative of Mappila leaders influenced the policy of the Company administrators towards the Muslims of Malabar. They followed policy of avoiding the Mappilas in all levels of government. While recruitments were made for the posts in the revenue police and judicial establishments the Mappilas were exempted.

Recruitments during the Pazhassi Revolt

The revolt of Kerala Varma Pazhassi Raja of Wynad was the most important threat faced by the Company immediately after its accession of power in Malabar. His revolt had the support of the native inhabitants including the Mappilas and tribals. The geography and climate of Wynad acted as a barrier to the Company troops for successful operations against the rebels. The troops had many setbacks from the rebels. They had lost many men, weapons and money. Many troopers were suffering out of epidemics and illnesses due to bad climate. As a partial solution to the problem, the Company decided to recruit locals to the revenue, and police establishments. Sibandi Corps of Nairs and Mappilas were formed during the first phase of the Pazhassi rebellion. But it did not bring peace in the district. According to the proposal of the Special Commission of 1797, a levy of irregular troops was raised under the Kootali Nair of Payyurmala, to harass Pazhassi Raja.¹¹ Till the defeat and death of Tipu Sultan, the Company depended local rajas and Nair chiefs for assistance suppressing the revolts

and rebellions. But the forces supplied by them were ill-disciplined and ill-trained. So the government decided to raise a trained force of the natives. The decision for raising a trained native force resulted in the formation of the Kolkar force under Captain Watson. It was a new police force trained and equipped on the model of the constabulary force later formed in London.¹² Watson's Kolkars was the chief instrument for the suppressions of the rebellions of Malabar at the beginning of the nineteenth century. Collector Innes gave the full credit of the suppression of the Pazhassi rebellion to Baber and the police Kolkars founded by Watson.¹³ Baber included 100 selected Kolkars in his final operation against Pazhassi Raja. The representation of the Mappilas in this team was below 25 per cent.¹⁴

Changes after 1815

At the beginning of the Company's rule police, revenue and judicial departments were not watertight compartments. Revenue officers had police and judicial duties besides the collection of revenue. The primary aim of the administrators was to collect maximum revenue. Native inhabitants were widely recruited to these departments as Tahsildars, Sheristadars, *Adhikaris*, Menons and Kolkars. When functions of the government expanded number of natives recruited was also increased. But the proportion of the Muslims in various establishments was very less. After 1815, the Cornwallis system was given way to the Munro system in Malabar. Thomas Munro in his proposals for judicial reforms in Malabar recommended appointing Naduvazhis and Desavazhis as heads of villages.¹⁵ He also recommended appointing Mappila *Adhikaris* in predominantly Mappila areas. The Hindus of Ernad, Walluvanad and Shernad taluks complained to Collector Canolly that there were too many Mappila officials in these taluks. From the 1830s outbreaks of Mappilas were started in different parts of the district. The agrarian discontent of the Mappila peasants was the major reason for these outbreaks. Major instruments for the suppression of these outbreaks were the Tehsildars and the police Kolkars under their control. Majority of the police Kolkars and Tehsildars were from Hindu communities.

Developments after 1850

In 1852 a commission was appointed under T L Strange to investigate the nature and causes of the Mappila outbreaks. The Commission submitted its report with the conclusion that the basic reason for the outbreaks was religious fanaticism of the Mappilas. He reported that there were 31 such revolts in different parts of Malabar between 1836 and 1852.¹⁶ He proposed certain measures including the establishment of a special police force, prevention of the use of arms by the Mappilas and putting responsibility of the loss of property and money to the entire villagers where the rebels belonged. The frequent revolts by the Mappilas were reason for the Company to keep the entire community away from the government establishments and dub them as untrustworthy and enemies of the government.

The recommendations of T.L.Strange were implemented by the Company government in Malabar. A police force of 31 native officers and 150 men under the Command of 2 military officers was sanctioned for Malabar in 1854.¹⁷ Act XXIII was passed in 1854 to fine the entire Mappilas of the villages disturbed. Through this Act the government branded all the Mappilas of a locality as rebels. Thousands of peace loving innocent people became suspicious in the eyes of the government officers. They were closely observed by the colonial government. The observation and surveillance duties were mostly done by the native non-Muslim revenue and police servants of the Company. The payment of fine was an additional burden to the Mappila peasants. T. L. Strange proposed to use the money collected through fine for the expense of the new police force. Act XXIV was also passed in 1854 to prevent the use of war knives by the Mappilas. It empowered the District Magistrate of Malabar to conduct search by his police force to any place suspected to be kept the *Ayudha Kathi* or war knife. The persons who were found to be kept such weapons can be punished with a fine not more than fifty rupees or imprisonment of six months or both.¹⁸

In spite of severe repressive measures, the outbreaks and rebel activities of the Mappilas

continued in Malabar. In 1855, Mr. Canolly, the Collector of Malabar was barbarously murdered by four Mappila convicts.¹⁹ The convicts were shot dead by the British force after a few days. The Mappila Outrages Act was renewed frequently by the government as the rebellion was a continuous phenomenon. It was because of this condition of Malabar that the Mappilas were deliberately excluded from the government services. In 1852, the total population of the district was 15,14,909. Out of this 27 per cent were Mappilas. Out of the 3,277 native servants under the Company there were only 221 Mappilas. It comes nearly 7 per cent of the total strength.²⁰ In the revenue and police establishment, there were 1581 native inhabitants. The strength of the Mappilas was 126. This statistics was the best example to expose the attitude of the Company government to the Mappilas of Malabar.

Conclusion

In all throughout the history of the British rule in Malabar, they preferred the Hindus than the Mappilas for serving their government. The British administrators had positive impression about different castes of Hindu religion. Many of them spent a lot of pages in their writings to describe the qualities of Namboothiris, Nairs and Thiyyas of Malabar. John W. Wye, in a report stated that the Nairs of Malabar were hereditary military nobility, who already proceeded, whether on business or pleasure, with arms in their hands.²¹ In southern division of Malabar, he continued, the Namboothiris, Nairs and Thiyyas were the best and quietest subjects and he had never found any difficulty in managing them. They were obedient and pay the dues to the government without trouble.²² He had opposite opinions about the Mappilas of Malabar. The hostile attitude of the British government towards the Mappilas was the root cause for the outbreaks initiated by them. It continued more or less in magnitude till the end of the colonial rule. The real reason for these revolts was the failure of the foreign government in identifying and solving the basic issues. It was a general and deliberate policy of colonial governments followed in other parts also. Instead of solving real problems they always attempt to divide the people and keep their side riskless. In reality the colonial government was the common

enemy of the people of Malabar. But they won in creating a notion among the Mappilas of Malabar that they were not the common enemy, but only one along with the Hindus. By developing this notion they could easily kept the Hindus of the district on their side.

THE ELEPHANT IN THE STATECRAFT: THE CASE OF NILAMBUR FEUDATORY IN COLONIAL INDIA

V.M. Haseena

The elephants have attracted kings as valuable resources for royal projects virtually from the beginning of kinship. This is particularly applicable in the case of Indian history. Where kings had access to elephant locally, the attraction was magnetic. Earlier the war against elephants was fought on three levels. First is the clearing of forests for farming, second the defense of farmer's crop, through the extermination or capture and third, the hunting of elephant for their ivory and trunks.

The technique of capturing wild adult elephant and training them for warfare were created in India.¹ In early period elephant was used for war purpose, after the emergence of the state formation in India. The *Gajpati* kings of Orissa took the elephant as their dynastic

symbol. The word *gajpati* literally means lord of elephant or the protector of elephant.

The evidence of use of elephants in Indian history can be traced back to the Indus valley civilization. The Indus seal having elephants shows that the Indus people were familiar with elephants. Kings, *naduvazhikal*, *deshavazhikal*, wealthy *nair* families, other *jenmimar* etc., owned elephants as a symbol of status and wealth. They used these elephants mainly for temple processions, festivals and rituals in the shrines. *Anamala* was an amount paid for selling and capturing elephant, it was one of the sources of revenue to the *samutiri* kings of Kozhikode.² Francis Day has noticed that the people of Kerala captured elephants by making huge pits under the leadership of trained labourers.³ In certain cases the

elephants were resources for ancient Indian kings long before the war elephants were invented, the war elephants served ever after as the standard and all other function became secondary and derivative.⁴

The ancient practice of capturing elephant, training and caring them is continued today, but the modern use of elephant is dominated, rather by timber extractions and other practices. In the nineteenth century, there was increased use of elephants in the local and international human activities mainly because of the demand for tropical hardwood. This was due to the popularity of rail road, which needed an enormous number of sleepers, and steamships which needed hardwood decks. The result was a rapid increase in the use of elephant for extraction of timber from the native forests.⁵ Following the demise of war elephants, the timber elephants occupied the place. The feudal families in Kerala depended upon various sources of income in the colonial period. Linked to that, the Nilambur landlord family was depending largely upon elephants as the chief source of income.

The Nilambur *kovilagan*⁶ is an old landlord family in the Ernad *taluk* of colonial Malabar. The important source of revenue of the family or the *kovilagam* was income from the forest and elephants. The palace of Nilambur was maintaining elephants for a variety of purposes. The management of elephant capture, taming, training and imparting medical care was major activity of palace. The *kovilagam* held large tracts of forest land and that virtually meant control over the resources of the forest including elephants.

Records say that in 1927, there were seventeen trained elephants under the *kovilagam* for timber and other operations. These elephants were named after human names and cost of these animals were recorded in the records as property of the state. Some names are *gopalan* aged 35 which had the cost of nine thousand rupees, *ganapati* aged twenty five with a cost of eight thousand rupees and elephants called *kartyayani*, *karumbayi* etc.⁷ There were special camps opened for elephants in various places under *kovilagam*. There were fourteen elephants in the camp at Edakkara in February 1934.⁸ They were *gopalan*, *ganapathi*, *mozhasakaran*, *kombathiri*, *chandrasekharan*,

vettaikkaran, *ayyappan*, *neelandan*, *narayani*, *devaki*, *ramachandran*, *seetha*, *gaurama*, *malathi*⁹

The *kovilagam* had deployed an administrative machinery to collect its forest resources. For the effective tapping of the resources, the forest was divided into *beats*, namely *pothukallubeat*, *edakkara*, *kallenthodubeat* etc¹⁰. There was a separate department for the maintenance of elephants. The forest department was headed by a forest officer and the *jamedar* looked after the elephant at various elephant camps. The revenue, income and expenditure, maintenance of elephant, training of elephant were maintained by the elephant *jamedar*. The *jamedar* was in charge of the elephant camps. Chief elephant camps in the territorial jurisdiction were at Nilambur, Edakkara, Neerpuzhamukkam and Eyyamkuzhi.¹¹

The elephant *jamedar* was assisted by a forest inspector who inspected the site for elephant pits. The assistant forest Inspector also helped him in finding place for new elephant pits. One forest inspector named Ravunni Nair had inspected newly digging elephant pits at Maradi on 23rd December 1927¹² and 17th July 1928. He also inspected a pit dug at Vazhikkavadu.¹³ The forester and the chief forester prepared the estimate for digging the elephant pit and supervised the pit works. One forester called, UnniRarichan Vellody inspected elephant pits dug at Karakkodu along with the forest inspector.¹⁴

The pit watcher inspected various elephant pits and reported to the *jamedar* of the elephant camp. When there was the presence of elephant in the pit, the *jamedar* with mahouts attended the pit to capture the elephant. The *jamedar* maintained various elephant camps for feeding the elephant, providing training and treatment. The forest officer and the *jamedar* were controlled by the superior officer of the state called the *diwan*.¹⁵

The forest dwellers were certainly associated with the capture of wild elephants and appeared as mahouts and riders. They were also appointed to the *kovilagam* service. The forest people like *paniyas* were skilled elephant hunters. This helped the *kovilagam* to capture and tame the elephants in a quick

manner. The pit watcher was expert in identifying the walking ways of elephant and he directed the arrangement of digging large elephant pits to capture the elephant. The *paniyar* could identify the presence and the smell of elephants and they informed the same to the *jamedar*.¹⁶ These captured elephants were carried to the elephant camps. The legendary tusker of Kerala, *gurutayurkesavan* was captured from the Nilambur forest and trained at the Edakkara elephant camp.¹⁷ Later *gurutayurkesavan* was donated to the Guruvayur Temple by *Manavedanraja* of the Nilambur *kovilagam* in 1922.

The number of elephant capture increased after 1922. This was to meet the increased expenses of the *kovilagam*. There were twenty five new elephant pits dug in Marutha and *karakodebeat* in 1927¹⁸. K. Ramunni Nair, a forest inspector reported that he inspected fifteen pits at Marutha and ten pits in the *karakkodubeat*¹⁹ This shows that after the peasant revolt of 1921 in Malabar, the Nilambur feudatory was attempting to increase its revenue and this was necessitated by the economic problems after the World War.

The field examiners reported to the *kovilagam* forest the cost of twenty five pits dug for the purpose was three hundred and fifty *para* of paddy and the charge for purchase digging materials like baskets, pickaxes, etc., was thirty five rupees. It meant that twenty five elephant pit costs of fourteen *para* of paddy each.²⁰ The *diwan* ordered the *karyasthan*, Kizhakkummuri Cherikal to give three hundred and fifty *para* of paddy to the forest Inspector for digging the elephant pits.²¹ The maintenance of the elephant pits was the responsibility of the *jamedar*, forest inspector and forester. They regularly reported the condition of the pits prepared to the higher authorities.

Every year, the forest department of the *kovilagam* was digging new pits in every *beat*. In 1945, when the country was passing through the miseries of World War, the *kovilagam* was maintaining two hundred pits.²² In addition to them, about one hundred and twenty were under repair and each of the elephant pit costed of three *para* of paddy for maintenance.²³ Besides this, there were plans for digging 20 new pits on a cost of fifteen *para*

of paddy for each pit. The *kovilagam* forester also reported to the *diwan* the plan to dig twenty more elephant pits in February 1945.²⁴ In the reply the *diwan* ordered to repair the existing one hundred and twenty elephant pits and to dig twenty new pits²⁵. This shows the increased interest of tapping of elephants from the forest at the time of desire for additional revenue.

There are references to the passage of information regarding the fall of elephants in pits. This was happy news to the treasury of the palace. On 2nd January 1938, one pit watcher called Kandan reported to the elephant camp at Edakara that a new elephant had felled in the pit at Pothukallu. Elephants named *ganapati*, *mozhassekharan*, *padmanabhan* were sent to drag and bring the new one to the camp. The new elephant had five feet and five inch height and the cost of capture recorded was thirty rupees. Chathan and Kuttivellan were appointed as mahouts of this new elephant on a salary of two and half rupees. The *jamedar* requested the *diwan* to name the elephant²⁶ and the elephant was named as *seetha*.²⁷ It is interesting to know the way elephants were managed by the state in the camps. The newly captured *seetha* was fed with four *edangazhi* of boiled rice daily. In *kanjirapuzha beat*, seventeen old pits got repaired and eight new pits were dug in 1929 for a cost of fifty rupees.²⁸ Ten new elephant pits were dug in Churulimunda in 1945. One Nayakkamaran was appointed as elephant pit watcher with a salary of twelve rupees in this *beat* division.²⁹ The *diwan* accepted the report of *jamedar* and approved the appointment.

All these shows that elephant was the chief source of income of this feudal state. In addition to the sale of these elephants, hiring them to temples and individuals was also practiced. It was one of the main sources of income of the Nilambur *kovilagam* when elephants were kept in the camps for sale in future. Elephants were hired out for various purposes. The *kovilagam* elephants like *kombathiri*, *payi*, *karimpayi* were hired out to a person called Imbichi Mammed who was a timber merchant at Kozhikode. It is seen that four hundred and twenty rupees was collected for one month for renting out of these elephants. These elephants remained with him for about one year.³⁰

Charge for hiring elephant called *pattam* was applicable to all families linked to the *kovilagam*. In 1927, Kochunni Thirumulpad requested two elephants, *payi ganapathi* for timber work and he paid seventy five rupees for five days of the use of elephants as *pattam*.³¹ Besides this, the *kovilagam* elephants were also given for temple processions. The *kovilagam* elephants were sent to the Tripuranthaka Temple of Pokkottur*cherikkal* for temple procession in 1930.³² This also brought income to the treasury. The Trikkalangodu Temple, belongs to the *samutirikovilagam* had requested the *diwan* of Nilambur *kovilagam* to give an elephant for temple procession.³³ An elephant named *kalyani* was sent to the Trikkalayur Temple as per this request. It is seen that instructions were given regarding the maintenance of these elephants under the *pattakkaran*.

The elephant was to be fed four *edangazhi* boiled rice per day and the daily expense of mahouts was also to be met by the temple under the supervision of *Urgattiricherikkal karyastan*.³⁴ The *Urgattiri karyastan* reported that the elephant had only fed two *edangazhi* of rice paddy.³⁵ Then the *jamedar* requested not to hire the elephant to this person next year because the elephant was not fed properly. The *kovilagam* also hired the elephant to other landlords for dragging out elephants from the pits. They were paid *pattam* for the use of elephants. P.M. Tirumulpad of the Manjeri *kovilagam* requested the *jamedar* of Nilambur *kovilagam* to send two elephants to capture the elephant from the pit in the territory of Manjeri *kovilagam* located at the Pannipparamalavaram.³⁶ The *diwan* ordered to send two elephants *paru* and *padmanabhan* to Majerikovilagam for a *pattam* of fifty four rupees for two days.³⁷ Likewise, V.K. Unnikammu also requested the *jamedar* to allot two elephants to drag out an elephant from a pit in Chakkikuzhimalavaram and elephants *kombathiri* and *payi* were sent to him with a *pattam* for two days.³⁸ The elephant of other landlords were also permitted to treat at the elephant camp of the *kovilagam* at Edakkara with a fee. Ahmed KuttyHajee's tusker had permitted to get treated at Edakkara camp for a week.³⁹ When the elephant of P.C. Imbichi Ahmed got injured, the *kovilagam* permitted him to treat the elephant at the Edakkara

camp.⁴⁰ The *kovilagam* also earned income from Grazing License of the elephant. Nicholas, a retired forest ranger had requested the permission to keep of two elephants at Pookottumanna during the rest season. The *kovilagam* permitted him to keep his elephant at Pookottumanna near Chungathara for about two months and they allowed to be grazed in *kovilagam* forest on a charge of five rupees for each elephant for one month. He paid ten rupees as grazing fee and permitted to rest at the *kovilagam* forest from 4th June 1928.⁴¹

The *kovilagam* also sold their elephants by auctions. In 1922, the *kovilagam* conducted auction of elephants. It is seen that twenty four well trained elephants of Nilambur palace were sold in auction on 27th April 1922 at Thrissur.⁴² In 1949, six elephants were sold in an auction conducted at Edakkara.⁴³ In 1954, four elephant were sold by auction at the Nilambur Palace Office.⁴⁴

The captive elephant was to be fed ration of higher energy food to be enable the heavier workload. The Board of Revenue, Civil Supplies had considered arrangements for the issue of ration to elephants after the introduction of rationing system in Malabar. As a result, special rationing for elephants belonging to the Nilambur *kovilagam* was granted by the Taluk Rationing Officer of Ernad.⁴⁵ Each elephant was given ration of fifteen lbs of rice and five lbs of wheat, ragi or *cholam* per day.⁴⁶ In 1944, seventeen elephants got 6910 units per week as per the ration card issued by the Taluk Rationing Officer.⁴⁷

The important source of revenue of the *kovilagam* was the forest elephant. The land lord of Nilambur *kovilagam* who preferred to call himself *raja*, had the elephant as state emblem. It was embalmed on all documents and communication letters of the palace. We can assume that, the elephant was symbol of the state income and existence. When the system of private ownership of elephant begun and free sale of elephants in the markets began to happen, the landlord state began to lose its right over the animal. The nationalisation of the forest also turned against the interest of the Nilambur Kovilagam. The arrival of machines, roads, cranes and railways affected the use of elephants in the timber trade of Malabar and the fortune of the *kovilagam*

SMT. J. ESHWARIBAI: THE GOLDEN WOMAN AND MAKER OF MODERN TELANGANA, 20TH CENTURY

Dr. Indira

Smt. J. Eashwaribai shines bright among the golden women and the maker of Modern Telangana in 20th Century. Telangana state celebrated her Birthday Centenary Celebrations 1918-2018 as pati of state celebrations. She is

the role model for women empowerment and leadership qualities. She played multifaceted roles as Teacher, National President of Republican Party of India, Political Leader, Legislator, philanthropist, Municipal Corporator,

Counselor, Social Reformer and Activist, Woman Leader of Telangana Movement, Chairman of Women and Child welfare and holder of other positions. She made immense contributions for industries, tourism, irrigation, agriculture, etc.

Her contributions in multiple ways to the society were great and such woman leaders and their role are the need of the hour to move towards the modern Telangana. Therefore the objective of the paper is to highlight Smt. J. Eashwaribai's role and her contributions in making modern Telangana.

Key Words: woman, role, leader, contributions, empowerment ...

Smt. J. Eashwaribai was born on 1st December 1918 to the parents Ramaswamy who was in the service of Nizam Railways as goods Master and mother Ramulamma in Secunderabad and married to Dr. J. Lakshminarayana, prosperous doctor from Pune and survived with only daughter Dr. Smt. J. Geeta Reddy, honorable former minister of Telangana and breathed last on 24th February 1994.

Under the guidance of parents and family members she joined as a school teacher in Paropakarini School, Secunderabad. This was the first step of her self empowerment. She had this spark from the beginning. She never looked back. It is from here her remarkable journey of self-reliance and determination began. Her valor as a woman leader from the downtrodden community is unparalleled, especially in those days when women in general were at a disadvantageous position in society.

POLITICAL LEADER:

Smt. J. Eashwari Bai as 'Fire Brand Lady' and 'Lady Tiger' of Telangana never compromised her stand when it comes to the welfare of the downtrodden people. She served the State with the highest dedication as a legislator. Her services shall always be a source of inspiration in our struggle for a just and egalitarian social order. In AP Legislative Assembly during 1967-78 she occupied a prominent front seat in the row of the opposition benches and her voice was

commendable which is still unbeaten by any Legislator.

AMBEDKARITE:

She walked on the path showed by Baba Saheb Dr.B.R.Ambedkar, Great humanist, Philosopher, and Maker of Modern India. She protected Democracy, fought for Constitutional Rights and Creation of Telangana State, raised her voice for social-economic and political justice of downtrodden people and educated them to represent in politics. She was the cause for Unveiling the Statue of Dr. B.R.Ambedkar on Tank Bund. She installed many statues of Baba Saheb in the two cities in 1970's and 1980's.

ADMINISTRATION:

She supported administration by giving valuable suggestion to the government in bringing administration and economic measures during critical financial position in the state as opposition leader to save the state and its people. Her suggestions for transfer of IAS officers to avoid corruption and to bring honest officers to increase revenues to the state are unforgettable.

She also raised her voice for permanent buildings of government offices, and appealed to the treasury benches and the chief Minister to rise from the above problems and cooperate with the opposition in accepting their constructive suggestions in the larger interests of the state.

She is known for daring leader which we saw in the 1969 Telangana Movement. She raised her voice for Telangana state in and outside the Assembly and fought for it for the progress and prosperity of its people. We followed her path in the last phase of the movement to achieve the state.

ROLE IN THE DEVELOPMENT OF EDUCATION:

Smt. J. Eashwari Bai gave importance to education especially for girls and downtrodden also supported with scholarships for them and educated her daughter as Doctor. She started in a humble way with her own funds a primary school named "Geeta Vidyalaya" at Chinta Bai in Chilkalguda, Secunderabad in 1950's, the most thickly populated locality during those

times by downtrodden and backward classes. The school served much needed necessity of this residential area. With this objective and will power she moved ahead to fulfill her endeavours. It was a commendable and unimaginable task she undertook in those days.

As Chairperson for the Women and Child Welfare Corporation she visited several villages and town in Telangana area of erstwhile A.P. to know the problems faced by women and children with regard to their education. She suggested reforms in this direction to benefit them. She was instrumental in bringing legislation for free education of girl students up to the college level.

REFORMER:

As a Reformer, she brought important reforms for downtrodden people and women through education, economic empowerment, family planning, healthy and hygiene habits, sports and through many ways. Her

contribution for police and prisoners reforms is unforgettable.

WELFARE STATE:

She made immense contributions for industries, tourism, irrigation, agriculture, etc., and told Telangana is having unexploited potential tourist destinations to generate economy. Her idea of town planning in the city was in such a way that everybody irrespective of caste and religion can stay together in the society to keep alive secularism

CONCLUSION:

Her contributions in multiple ways to the society were great and many more. Such woman leaders and their role are the need of the hour for the society to move towards the modern Telangana. Remembering Smt. J. Eshwari Bai, The Golden Woman and The Maker of Modern Telangana on the eve of Birthday Centenary Celebrations, 1918-2018 is our privilege.

UNKNOWN SWADESHI NATIONALISTS OF TAMILNADU

Dr. R. Jaganath

The Swadeshi Movement and the emergence of the extremist leaders like Bipin Chandra Pal, B.G.Tilak, Lala Lajpat Rai and Feroz Shah Mehta impinged a great change in the history of freedom struggle. It gave concrete and determined objectives which comprised of economic and political ideology. Swadeshi and its boycott programmes were clarified definite shape to freedom struggle. The British Government did not expect such an agitation and alarmed at the success of the Swadeshi

Movement, the government took strong measures to suppress the movement. It passed series of Acts such as Public Meeting Act, the Criminal Law (Amendment) Act, the Seditious Meeting Act (1907), the Explosive Substance Act (1908), the Newspaper (Incitement and Offence Act 1908) and the Indian Press Act (1910) were passed to suppress extremist activities. The Swadeshi Movement spread throughout India. The word 'Swadeshi' implies use of goods made in one's own country. The

boycott of foreign made goods and the promotion of swadeshi enterprise the twin pillars of the Swadeshi movement saw various activities in Madras Presidency. G.Subrahmania Iyer played a key role in spreading the ideas of Swadeshi. His lectures in Madurai aroused powerful nationalist feelings among the students of Madurai Native College in 1906.¹ In November 1897, Hawett, Seceretary to the Government of India, Home Department instructed the Chief Secretary of Madras to forward any information "regarding matters of political or administrative importance or events which have excited public interest".² During the anti-partition agitation of Bengal, the Madras Government closely watched the activities of its servants. In 1907, Parameswaran Iyer, a Government Chemical Examiner was asked to explain his 'inflammatory speech on the subject of Swadeshi'.³ Thus, the Madras Government made it clear that it did not approve of government servants attending political meetings.⁴

CHAKKARAI CHETTIAR

Chakkarai Chettiar, the man who created first labour union was born on 12th December 1878 in Chennai. His ancestors were from the village of Vengal near Thiruvallur which is adjacent to Chennai. He was born to Kesava Chettiar and Andal Ammal. In his young age, Chakkarai Chettiar was taught by his grandmother to affiliate to religion, be disciplined and respect their culture.

He started his public life by joining the Congress party. He worked as the secretary of the Madras city's congress committee. In 1907 he attended the Surat session of Congress with V.O.Chidambaram, Subramaniya Iyer and Bharathi. In this session, there arose difference between the Moderates and Extremists on the issue of choosing the leader. The extremists headed by Thilak put forth Lala Lajpat Rai as the leader. But the moderates headed by Dadabhai Naoroji elected Raj Bihari Ghosh of Kolkata as their leader. Men from Chennai- Chakkarai Chettiar, V.O.C, and Bharathiyar joined Thilak's faction in this session.⁵

When Gandhi started his Non Cooperation movement Chakkarai Chettiar worked with Rajaji, E.V.R. Krishnasamy Sharma and Thiru.V.Kalyanasundaram for this cause. Chakkarai Chettiar took active part in organizing

the protests in Chennai against the Rowlatt Act, Jallianwala Bagh massacre and the boycott the visit of Prince of Wales. As he was also the leader of the labour union he was able to mobilize the workers for the Non cooperation movement.

Thiru.V. Kalyanasundaram and Chakkarai Chettiar approached B.P.Wadia of the Theosophical Society. Soon the Madras Labour Union was started with B.P.Wadia as the President, Thiru.V.Kalyanasundaram and Chakkarai Chettiar as Vice Presidents and Selvapathi Chettiar and Ramanajalu as Secretaries. Following this MSM Railway Workers Union, Tramway Workers Union and kerosene workers Union were formed in 1919. The leaders who guided these Unions were mostly Congress Party leaders. Thiru. V. Kalyanasundaram, Chakkarai Chettiar, E.L. Ayyar, V.O.Chidambaram, Kasturi Renga Ayyangar and M.S.Subramaniya Ayyar were all men who had worked with the Congress party. Therefore the protests headed by these men were not merely for the demands of the workers but were also nationalist protests against the British colonialism.⁶ Chakkarai Chettiar was a person who learnt law, was well versed in Tamil and English, one who fought for the welfare of workers, member of the corporation, Mayor, Upper House Member and so on. He struggled for the working population throughout his life. Chakkarai Chettiar died on June 1958 at the age of 82. The life of Chakkarai Chettiar stands as an example for all those who fight for the rights of the proletariat.

PARALI SNELLAYAPPAR

Nellayappar was born on 18th September 1889 at Parali Kottai a small town of Tirunelveli District. His father was Subramania Pillai, and mother was Muthu Vadivu. Nellayappar was unmarried till his death.⁷ The main occupation of Nellayappar was writing editorials, articles and editing and publishing books on Tamil literature. He was a close friend of Bharathi. In the beginning stage, Bharathi called Nellayappar as 'Mapillai'.⁸ But later he called Nellayappar as 'Thambi'(brother). Nellayappar worked in V.O.C's Swadeshi Steam Navigation Company in his early days. His brothers also worked in same company. He met Bharathi in 1908 at V.O.C's house.⁹

In 1909, V.O.Chidambaram Pillai was arrested and the court sentenced him to double transportation imprisonment. Nelayappar vehemently condemned the judgment. Meanwhile, Neelakanta Brahmachari called Nelayappar at Puducherry. At that time, Bharathi wrote articles and editorials in the news papers of the *Vijaya* and the *Suryodayam*. The owner of the *Suryodayam* was Neelakanta Brahmachari. The salary of Bharathi was 35 rupees, and the salary of Nelayappar was Rs.15 only.¹⁰ In the meantime, Nelayappar met Aravinda Ghose, and discussed the situation of Tamil province. Meanwhile, *Suryodayam* stopped its publications. At that time, Nelayappar joined in Bharathi's *Karmayogi*. Bharathi's translation work of Bhagavat Geetha was published in the *Karmayogi*. The young daughter of Bharathi namely Sakuntalai called Nelayappar as *uncle*. In 1912, V.O.C.Pillai released from jail. At that time, V.O.C completed his works namely, 'Manam Pol Valvu' and his autobiography with the help of Nelayappar.¹¹

Nelayappar served as the sub-editor of newspapers namely *Bharathi*, *Narathar*, *Desabakthan* and *Dravidan* newspapers. In 1922, he purchased the newspaper namely, *Lokopakari*.¹² Nelayappar created simple style of Tamil articles. At that time he edited by Bharathi's *Kannan Pattu*, *Papa Pattu* and *Nattu Pattu* (Folk songs). While Bharathi was in jail, Nelayappar met Bharathi.¹³ Nelayappar also published Bharathi's songs and plays. Most of the songs of Tamil namely, *Parukkulle Nalla Nadu* and *Sentamil Nadenum podhinile* were first published by Nelayappar in his newspaper.¹⁴ Apart from that, *Lokopakari* was also in favour of Gandhian ideals. The historians call Nelayappar, as "the originality of Bharathi was visualized throughout the world". Nelayappar passed away in 1971.¹⁵

S.V. ALAGAPPA PILLAI

Alagappa Pillai was born on April 15, 1893. He was well-versed in Tamil literature. His main occupation was agriculture. He joined the Swadeshi Movement in 1907.¹⁶ He was one of the accused in the Ashe Murder Case 1911, and got imprisonment in 1911-12 and imprisoned in Madras jail for 9 months and was treated by the government as a dangerous political suspect.¹⁷

BABU PILLAI

Babu Pillai was otherwise called as Ramaswami Pillai. He belonged to Vellalar community. His main occupation was agriculture. He took part in the Tirunelveli conspiracy and was accused in Ash murder case, in 1911. He was arrested at the age of 24 and sentenced to one year rigorous imprisonment.¹⁸

CHAVADI ARUNACHALAM PILLAI

Chavadi Arunachalam Pillai, a native of Shencottah was born in 1892. He was a Medical Practitioner (Doctor) and one of the active members of Bharatha Matha Association.¹⁹ He was convicted in the Ash murder case. He died in April, 1973 at Shencottah.²⁰

MUTHUKUMARASAMI PILLAI

Muthukumarasami Pillai was otherwise called as Muthusami Pillai. He belonged to the Vellalar community. His occupation was selling pots. He took part in the Tirunelveli Conspiracy and was accused in the Ashe Murder Case in 1911.²¹ He was arrested at the age of 45 and sentenced to one year rigorous imprisonment.²²

MADASAMI PILLAI

Madasami Pillai was born in 1886. He was a scholar in Tamil literature. He was a member of Bharatha Matha Association.²³ He had close contact with V.O.Chidambaram Pillai and Neelakanta Brahmachari.²⁴ He was one of the accused in the Ash Murder Case but he escaped to Paris, France in 1912 and his whereabouts was not known.²⁵

JAGANATHA IYENGAR

Jaganatha Iyengar was a good look and hailed from Brahmin community. He was a participant in Tirunelveli conspiracy and was accused in the Ashe Murder Case in 1911. He was convicted under section 121A of I.P.C and sentenced to one year rigorous imprisonment.²⁶

HARIHARA IYER

Harihara Iyer was one of the merchants of the Brahmin community. He was a member of the Bharatha Matha Association. He took part in Tirunelveli Conspiracy and was accused in the Ash murder case in 1911.²⁷ He was convicted under Section 181A of I.P.C and sentenced to three years rigorous imprisonment.²⁸

MADATHUKADAI CHIDAMBARAM PILLAI

Madathukadai Chidambaram Pillai a native of Tuticorin was one of the members of Bharatha Matha Association. He belonged to the Vellala community. He was a grocer. He took part in the Tirunelveli conspiracy and was accused in the Ash murder case in 1911. He was sentenced to two years rigorous imprisonment.²⁹

SANKARA KRISHNA IYER

Sankara Krishna Iyer, a native of Krishnapuram at Kadayanallur in Tirunelveli district was one of the member of Bharatha Matha Association. His occupation was agriculture.³⁰ He belonged to Brahmin community and participated in the Tirunelveli conspiracy and was accused in the Ash murder case in 1911. He was sentenced to four years rigorous imprisonment.³¹

SUBBAYYA PILLAI

Subbayya Pillai was otherwise called as Subramania Pillai. He belonged to Vellala community and he was a Vakil Gumastha (clerk to a lawyer) by profession. He took part in the Tirunelveli conspiracy and was accused in the Ash murder case in 1911.³² He was convicted under section 121A of I.P.C and sentenced to one year rigorous imprisonment.³³

GURUNATHA IYER

Gurunatha Iyer was one of the Head Constables in Tuticorin district. He was closely associated with V.O.Chidambaram Pillai. He was one of main accused in Tinnevely riots.³⁴ At that time of arrest of V.O.Chidambaram Pillai, the Tinnevely district was totally collapsed by revolutionaries.³⁵ The government buildings were set on fire. The police arrested Gurunatha Iyer charged of setting fire on government

buildings of Tiunnevely.³⁶ He got four years rigorous imprisonment. After release the jail, he went to Berlin. While he was in Berlin, he supported the revolutionaries of India.

Dr.SENBAGARAMAN PILLAI

Dr.Senbagaraman belongs to Nanjil country. He was one of NRI (Non-Resident Indian). He disseminated the status of India throughout the western countries. He created some organizations against British in Europe. He started a newspaper called 'PRO INDIA'.³⁷ Apart from English, some other newspapers were run by Senbagaraman. He was in favour of Kaiser William II of Germany. Senbagaraman sought the help of Germany to abolish the British rule in India. In 1914, he threw a bomb at Madras High Court with help of 'Emton' water steamer. The Indian revolutionaries created a new organ in Afghanistan namely, "Temporary Republic of India". Senbagaraman was one of the Ambassadors of this organ. He dedicated his life for India's Independence. He firmly believed that armed revolutionary was the only way to abolish the alien rule in India.³⁸

Tamil Nadu played a significant role in the Swadeshi Movement from 1905 to 1912. The prominent swadeshi leaders like V.O.C., Subramania Bharathi, Subramania Siva, V.V.S.Iyer Vanchi Iyer involved themselves in a consistent way during the Swadeshi Movement. Apart from these prominent leaders, the leaders like Neelakandan, Parali Nellaiappar, Madasamy Pillai, Madathukadai Chidambaram Pillai, Sankara Krishna Iyer, Padmanabha Iyengar, Harihara Iyer and others also exhibited their anti-British sentiments in a deep way by participating each and every activities of the Swadeshi leaders.

EVOLUTION OF CONSTITUTIONAL EXPERIMENTS IN THE MADRAS PRESIDENCY

Dr. P. Jayachitra

The Growth of Legislature in Madras Presidency

An administration is assessed through its outcome. If the outcome is beneficial and welfare oriented it is appreciated by all. Democracy and Political parties play vital roles in the formulation of a legislature. It Paves the way for a person to exhibit his or her skill and ability in administration. Legislatures have both the elected and nominated representatives and whichever political party commands the majority it forms a ministry. Each and every political party has its own socio-economic and political policies. When a political party gains power it strives to policies through the ministry it forms. Without legislature, there is no ministry in democracy. It will be appreciated if the growth of legislature is dealt with, in this research work.

Administration under British Rule

In the early decades of its origin, Fort Saint George in Madras, no less than Fort William, had a strong fortification with support of a Navy. Behind this fortification, the foreign merchants with their accountant, writers and packers lived a life connected with their business and not minding with what was happening around. But the patterns of things were changing since the **Carnatak Wars (1746 to 1763)**. However, till the in implementation of the **Regulating Act (1773)**, administration of the company in the province was nothing more than a robber state whose main object was to extract as much as possible from the territories it was supposed to

bead ministered. It was the **first Mysore war (1767 to 1769)** that strained the company's exchequer and consequently the Company's requestor loan ultimately paved the way for the enactment of Regulating Act, which came into operation in 1773. This Act was the first step in the direction of consolidation of British rule and centralization of administration in India. Thereby, the first seed was sown for the genesis of a legislature through this Act. Though it was criticized as "an infringement of national rights, national faith and national justice by **Edmund Burke**, its importance in the Constitutional Development in India call not be minimized.

The Justice Party in Madras Presidency

The birth of the Justice Party constitutes a landmark in the history of South India. The long shouldering discontent, hatred and suspicion of the elite non-Brahmins of the Madras Presidency towards Brahmins "to promote the political interest of the non-Brahmin caste". The leaders of the Justice Party were "all men of substance and standing, highly educated, and conscious of the direction and goal of their endeavour. They were not mere idealists, but practical politicians. They accepted diarchy with a view to employ the available power of the government for the upliftment of the non-Brahmin communities.

The Act made provisions for the council of members. The council consisted of four members to assist the Governor-General in the day-to-day administration of the company. **Lord Warren Hastings** was the first Governor-

General and his four Councilors were General Slaving, **Richard Barwell**, **Cl. Monson** and **Phillip Francis**. The term of office for the Governor-General and the Councilors were five years. The salary of Governor-General was to be Rs.25,000 per annum while each Councilor was to get Rs.10,000 a year.¹ The Governor-General of Bengal was bound by the decision of the majority of the Council. He was given a casting vote in case of tie. The Governor-General in Council was given the power to control the subordinate presidencies of Bombay and Madras in all their activities with natives states. The Court of Directors were required to lay before the Treasury and Secretary of State for all the correspondence dealing with the revenue, and with the civil and military affairs of the company.²

The Act created a Supreme Court consisting of the Chief Justice and three puisne judges. **Sir Elijah Impey** was its Chief Justice. The King appointed the Barrister of England as puisne Judges of the Supreme Court to hold office at the king's pleasure. They can enforce the law equally to that of the Judges of King's Bench in England. The Judges were empowered to appoint subordinate office, but their salaries were fixed by the Governor-General and Council. The Judges can regulate the court fees with the consent of the Governor-General.³ The powers of the Supreme Court were wide in character. The court possessed both the original and appellate jurisdiction. According to this Act the Governor-General and Council were empowered to act as Justices of Peace and able to hold quarter sessions. The court was given ecclesiastical, civil and criminal jurisdiction over the British subjects in Bengal, Bihar and Orissa and also over the persons who were in the service of the company the Supreme Court empowered to punish the treasons, murders, and piracies committed under its jurisdiction. The salary of the Chief Justice was fixed at Rs.8,000 a year, and that of a judge was to be Rs.6,000 annually.⁴

In January 1784 Pitt brought a new Bill for India and that was known as **Pitt's India Act of 1784**.⁵ This Act made the East India Company a subordinate department. The civil and Military matters were controlled by six commissioners known as the "Commissioners for the affairs of India" otherwise known as the

"Board of Control".⁶ It consisted of a chancellor, a Secretary of State, and six privy councillor appointed by the Crown. All real powers were vested with the President of the Board of Control. The Board of Control transmitted the orders through a secret committee of the Director of India. The court of proprietors were deprived from the right to suspend and resolution approved by the Board of Directors. The Government of India was placed in the hands of the Governor-General and a Council of three members. The presidencies were subordinate to Bengal in all matters of wars, revenue and diplomacy.⁷ The Act of 1784 remodeled the Councils at Madras and Bombay on the basis of Bengal Council.⁸ The important amendment of Pitt's India Act was made in 1786. **Lord Cornwallis** became the Governor-General to override the majority of his council.⁹

By the **Charter Act of 1793** the company's monopoly of trade in the East were renewed for another twenty years.¹⁰ Through this Act, **Lord Cornwallis** made arrangements to improve the existing judicial system. His first intention was to separate the departments of revenue and judiciary. Therefore the collection of revenue separated from the justice.¹¹ **The Charter Act of 1813** renewed its monopoly of trade for twenty years. The Act enlarged the powers of the Board of Control and restricted the powers of Directors regarding the appointments of the Governor-General, Governor and Commander-in-Chief. The company's territorial position was retained for another twenty years through the **Charter Act of 1833**. The Governor-General of Bengal was shifted as Governor-General of India. The Act extended the Legislative authority of the Governor-General in Council.¹² It was also strengthened by the additional member called Law members to the Executive Council. The Governor-General was empowered to make laws for all places.

The Act of 1853 was the last Charter Act. The number of Directors were reduced from twenty-four to eighteen in which six were nominated by the Crown. The tenure of Directors were reduced from thirteen years to ten years.¹³ The Governor-General in Council was enlarged and he was empowered to manage the territories which was under the possession of the company with the sanction of Director and Board of Control. The chief

commissioner empowered to exercise the powers in Central Province and they were under the direct control of the Governor-General in Council.

After the **revolt of 1857**, the British Parliament passed an Act and that was known as Queen's proclamation. With this Act East India Company's rule came to an end in the British India. Hence forth India came to be governed directly in the name of Queen or king and through one of the Secretaries of State. In the same year the Queen assumed the title of Empress of India.¹⁴

Queen Victoria's Proclamation

On November 1st 1858, the Queen's Proclamation was read by **Lord Canning**, the First Viceroy at Allahabad.¹⁵ The lower officials were the agents and they were entirely responsible to higher officials. The Secretary of State for India was assisted by a Council of fifteen members among them eight were nominated by the Crown and remaining were elected by the Board of Directors of the East India Company. The Act abolished the Board of Control.¹⁶

The next constitutional measure after the Act of 1858, was the council Act of 1861.¹⁷ The Act amalgamated the two judicial systems, that of the Crown and of the East India Company.¹⁸ The Act introduced certain changes during the time of Lord Canning. The provisions of the Act provided the additional member to the Executive Council of Viceroy. It also defined the functions of the legislative council and the council could legislate on all subjects. Every Bill passed by the council needed the assent of the Viceroy to become an Act. The Secretary of State could disallow the laws with the assent of the Crown. The new members were added to the Central Executive Council.¹⁹

The Indian National Congress

The Indian National Congress was founded by **A.O.Hume** and **Surendra Nath Bannerjee** in the year 1885. The leaders of the Indian National Congress made resolutions and petitions to the British Parliament for more representative element in the enlarged Legislative Councils. In 1892, the Council Act of 1861 was repealed by a new Amending Act

of 1892. The Act of 1892 was a decisive step forward in the direction of constitutional progress in India. The Act made provision for an increase in the number of additional members in the Central and Provincial Councils. In the central councils the additional members were raised from eight to ten and maximum limit from twelve to sixteen. Out of sixteen additional members in the central council ten were non-officials of whom four were nominated on the recommendations of the non-official members of the provincial legislatures. On the remaining, one on there commendation of the Calcutta Chamber of Commerce and others were represented by landlords, and other interests in the country.²⁰

The Act provided for a maximum of nine officials in addition to the Governor and two Executive Councillors made the official strength twelve. The officials were always expected to vote only on the side of the Government, there was no question of any non-official move at anytime in the Council. All the members could hold the position for a period of two years and they were eligible for re-election or re-nomination. The presidency election held from 1893 to 1909 in that eight elections thirty eight non-officials were elected. Under the Act of 1892 the members had more powers. The non-official members had no right to vote on the budget. But they had the opportunity during their '**Budget Speeches**', to focus the attention of the officials on the grievances of the people and to suggest remedial actions.²¹

The Annual Financial Statement of Madras was explained in Council every year and printed copies supplied to each member. Questions were in the form of a request for information and should not be argumentative, hypothetic or defamatory. The press and political associations also demanded for reforms. Hence in 1905 **Lord Curzon** the Viceroy partitioned Bengal into East and West which made a hue and cry among the nationalist who launched an agitation in the form of **Swadeshi movement**. The leaders like **V.O.Chidambaram Pillai**, **Subramanya Siva**, **G.Subramanya Iyer**, **Subramanya Bharati** launched the Swadeshi movement by which they boycotted foreign commodities. Thus the nationalists gathered all over the country against the British Government.²² The

Government announced the third Indian Council Act (1909) commonly called as the **Minto-Morley Reforms**. The Councils were enlarged both in central and provincial. For the legislative purposes the additional members were added to the Viceroy's Executive Council. The Act retained the majority of official members in the Imperial Legislative Council. The members of the Central Legislature were raised to sixty nine and it was divided as thirty seven officials, five nominated non-officials and twenty seven elected members.²³

The remaining forty three seats were given to the Provincial Legislative Councils. The term of the office were fixed for three years. The seats were allotted on the basis of communal interest. In the central officials. In the provincial legislature the majority of non-officials were non-officials. The preponderance of official majority in the central Legislature and Pro-Government bloc in the Provincial Councils were continued. The Madras Legislative Council had twenty one elected members and equal number of nominated members. In that members, sixteen were nominated as officials by Governors and five members were generally filled with persons who were submissive to the Government. The additional rights gained under the new Act were the right to move resolutions on matters of public interest and right to ask supplementary questions. Most of the resolutions were defeated in the Council on account of the negative votes of the officials and of nominated members. But the debates on these resolutions show the determination of the nationalist against the colonial power in the Legislative Council.²⁴

Although Government officials may, under the rules, be qualified as candidates for election to the Legislative Council by Constituencies other than those consisting of Local Boards and Municipalities, such officials shall not, on grounds of public policy be permitted to offer themselves candidates. Under the new councils Scheme the elective constituencies are primarily intended for non-official representations. The Governor could nominate any Government officer to the Legislative Council.²⁵

The Act of 1909 did not satisfy the Indians in all respects. There was absence of specific changes in the Government. The Act introduced the communal electorates for

Muslims. So it created the political barriers between the Muslims and the non-Muslims. The Act had not given any Parliamentary form of Government. Franchise was limited and only the privileged classes were allowed to vote.²⁶ The provisions given by the 1909 was less compared to that of which it was retaken by the Government. The members of the councils were not satisfied with the powers given through the Act. The non-officials in the provincial councils were not effective. Among them some of them were nominated non-officials. The Act developed the dissatisfaction and discontentment among the Indians. The Indians were allowed only to enter into the Executive Councils and other powers of the members were totally discriminated. Under these circumstances the enactment of Government **India Act of 1919** was passed.²⁷

The first election to the **Madras Legislature under the Act of 1935** was held in February 1937. For the first time in the history of Madras, Madras had a fully elected legislative body. The Ministry was formed under the **Premiership of Rajagopalachari** on 14th July 1937.²⁸ The necessity arose for setting problems of a multi-lingual and multi-racial character and welding together diverse communities living over a vast areas into a single, and for compact Governmental system federation alone offered a possible solution. That is why the framers of the Constitution tuned to federalism as a solution for number of problem they confronted in their attempt to frame a Constitution for a new, United India.²⁹

The choice of federalism as a Constitutional form as the basis of a national Government in India was not a sudden development upon the transfer of power on **15th August 1947**. It was there for many years and in a Constitution envisaged a strong centre after the pattern of the Government of India Act. The provided for the federal system of Government, distribution of powers between the centre and state, division of subjects into three separate lists, emergency powers of the president and special powers of the Governor.³⁰

Conclusion

For the first time popular Government was made in Madras by the Justice Party in 1920, The Hindu Religious Endowment Act, the

Madras Suppression of Immoral Traffic Act and Local Board Act were the note worthy contributions made by the Justice Ministry in the Madras Presidency. Thus the modern Administrative System Prevalent in India owes its origin to the British rule which was ensured

by the East India Company and by the Crown of England. The unity of the Country emphasized by the Constitution. We the people of India must be grateful to them for giving us such an wonderful and remarkable Constitutional System.

DUTCH ARCHITECTURE IN KERALA WITH SPECIAL REFERENCE TO DEFENSIVE STRUCTURES

M.U. Jidhu

The arrival of the European powers has resulted in drastic changes in all walks of our society. Architecture is of no exception. They made lasting impressions and many new styles and features were introduced in architecture. The balconies¹, arches, cast iron grill works, large windows, pillars, forts, churches and bungalows² are all related to the Europeans.

Changes also came forth in the technology of construction. Their architecture took into consideration the indigenous elements.

The architecture of the Europeans was greatly influenced by certain factors. One was climate. They had to modify their buildings so as to cope with the hot climate. Features high roofs, large windows and verandhas are related

to this. The Europeans gave prime importance to trade and hence the location and building of ware houses and factories was in such a manner that satisfied the availability of goods, its transportation. The European powers were in Kerala- the Portuguese, Dutch, English and French were in competition with each other and also their relation with the local rulers was not always cordial. In such a case protection and safety became central aspect of the structures they made. Thus forts became crucial and were strategic points. They were centers of power and efforts were made to protect them at any cost. Capture of the enemy's fort or its destruction was marked as victory. Here attempt is made to look into the Dutch architecture in Kerala, how it was related to the above mentioned idea of defense and protection and how much importance they had given to the defensive structures.

Dutch were present in Kerala for a comparatively short period but still had considerable influence on Kerala's culture. They had more hold in Cochin than Calicut. It is said that, whenever a settlement was in charge of a Governor or Commander, the Dutch maintained forts and an armed force and exercised some sort of sovereign powers. The Dutch records even say that fortifications were necessary so long as India possessed no settled government and that the greatest expense of the Dutch were under the heads garrison and fortifications.³

The Zamorin had allowed the Dutch to build a fort at Calicut in 1604 AD, but soon the relation between the Zamorin and the Dutch worsened and the Dutch were left without any permanent establishment at Calicut. The Dutch moved on to Cochin, which was another important trading centre. Cochin was under the control of Portuguese at that time and the Dutch realized that in order to make strong hold at Cochin they will have to defeat Portuguese. The Dutch had captured the Portuguese fort at Kannur in 1663 AD.⁴ They built a fort on Vypeen islands and from this island Cochin could be bombarded.⁵ This fort is said to be a small one with four bastions and was called 'new orange'.⁶ The Dutch used this fort to start attacks on the Portuguese fort at Cochin.⁷ There were many temporary forts too. For example the church called Nossasradi Bova Esperance at Vypeen was converted to a fort by the Dutch

during their attacks on Cochin.⁸ The Dutch had made strong and constant efforts to capture the Portuguese fort at Cochin and the Portuguese made efforts to protect it at any cost.⁹

Cochin was captured by the Dutch from the Portuguese in 1663 AD. After that a fort was constructed by them at Cochin. It was a large fort with more than five bastions. A wall about one and a half miles in length was built with a bastion called Gelderland on the sea-front. The fort no longer exists. The present Thakur house at Cochin is built on the site of the Gelderland bastion of the Old Dutch fort. Along with forts the Dutch also built godowns to store products like pepper. These structures were built of stone.¹⁰ The Dutch records speak of the artisans in service and mentions that about thirty-four Europeans were assigned for works related to fortifications, thirty-two related to armoury and about forty-seven to ship building yard. They had a good team of masons, smiths and carpenters.¹¹ After the capture of Cochin, the Portuguese schools and other institutions were turned into godowns by the Dutch.¹² The Portuguese fort at Quilon was captured by the Dutch in 1659. This strong fort was of strategic importance since Quilon was an important centre of pepper trade. The wall of this fort was made of mud and wood and there was a moat surrounding it.¹³

Bastion Bungalow at Cochin, which exists even today is said to have followed the Dutch architectural style. It is one of the oldest buildings in Kerala and the site earlier used to be a fort called fort Immanuel built by the Portuguese in the sixteenth century. The Dutch captured it in 1663 AD and they destroyed most of the fort. The Bastion bungalow is said to be established in 1667 AD and got the name Bastion as it was situated on the site of the Stromsburg Bastion of the old fort. The bungalow is spherical in shape and has tiled roof with a long open verandah on the first floor and is a perfect example of Dutch architecture. It is made of brick, laterite and wood. It is also believed that the bungalow has secret tunnels underneath, but is yet to be discovered. The building began to be called as 'Bastion bungalow' during the British period and was used as office residence for government officials.

The Dutch had another fort at a place called Chettuvai. The place was famous for the availability of pepper and the Dutch realized the importance of the place and decided to build a fort there. A fort at such a place would give enough protection for their trade and would mark their boundary. But the zamorin of Calicut knew that the fort would make the Dutch more powerful and will be a threat to his power. The Zamorin attacked the place but was defeated. The Dutch finished the construction of the fort and it was named Fort William. It was made of laterite and the foundation was made strong using thick teak wood. The walls were high and strong. The Dutch records speak of special lime mixture that was used to make the fort walls strong. Guns were kept on the bastions. It was one of the strongest forts in Malabar at that time.¹⁴

Apart from forts there are few other buildings which are related to the Dutch. The Mattanchery palace or the Dutch palace was actually built by the Portuguese for the ruler of Cochin, Vira Kerala Varma. Later when the Dutch gained control over Cochin, in order to please the Raja of Cochin; they rebuilt the palace on a large scale and thus came to be known as the Dutch palace.¹⁵ It is a two-storied long quadrangular building. The architecture of the palace is a blend of traditional Kerala architecture and European style. The palace has a courtyard which is central to the indigenous architecture whereas the presence of arches shows the colonial influence. The Bolghatty

THE RISE AND FALL OF ANNIE BESANT IN NATIONALIST POLITICS IN TAMIL NADU

M. Kalaiselvi

“The greatest woman in the world”, said George Bernard Shaw. The greatest orator of the world”, wrote W.T. Stead. “Her radiant spirit” observed Sarojini Naidu.¹ Annie Besant is one of those foreign personalities who inspired the love of the country among Indians. Besant made India her home from November, 1893. Before she came to India, Besant passed through several phases of life-housewife, propagator of atheism, trade unionist, feminist leader and Fabian socialist. Besant started the Home Rule League in India to attain freedom and independence of India from the yoke of the alien British rule. She started newspapers such as *New India* and *Commonweal*. She attended the 1914 session of the Indian National Congress and presided over it in 1917.

End of Married Life

Annie Besant was born in Clapham London on 1st October 1847. Besant gained good education and in 1867, aged only 19, she married a clergyman, Frank Besant. Besant acquired radicalized views on social and political life sooner. She supported the rights of workers and poor farmers.² Therefore, the marriage soon experienced difficulties because her husband was a conservative person. Besant began to question the religious tracts and, in 1873, she stopped receiving Communion because of her views against religious beliefs. This was the final knock of their marriage and the couple filed for separation.

Theosophical Society

Besant joined the Theosophical Society and came to India in 1893. During her early years in Theosophical society, Besant actively participated in its activities. She lectured on behalf of the Theosophical society and attended various meetings. She wanted to spread social reforms but hated politics. Besant became the President of Theosophical Society in 1907 after the death of its founder-president Colonel Henry Steele Olcott.³ In several years following that, Besant was absorbed in the Theosophical issues. But she became fully involved in politics through a series of eight lectures (later

published as *Wake Up India*) released in 1913. The lectures were on the subjects of social reform, industrial growth, and education for women. Though they were very vague, they gave clear understanding of Besant’s view of politics.

Besant’s Journals

Besant found the idea of new governance from Indian *panchayats* which practiced self-governance through local indigenous government.⁴ The economical and educational reforms suggested by her were replicated from Moderates of India such as Dadabhai Naoroji. In 1914, Besant delivered a speech in England’s Queen’s Hall on the topic of India’s politics and wrote many letters to newspapers demanding “justice for India”. Besant started a weekly in Madras called *Commonweal* on 2nd January 1914. *Commonweal* had articles written by many English and Indian people on politics and religious topics of India. In July 1914, Besant acquired an old English newspaper, *Madras Standard*. She renamed it as *New India*, its first copy was issued on 14th July. Her political ideas were all propagated through the *New India*.⁵ *New India* soon became widely read as it turned out to be a battle weapon for Indian Home Rule. According to Besant, *New India* was a “deeply loved child”.

Home Rule League

The intention of Annie Besant to launch a Home Rule league was revealed through her daily, *New India* in September 1915. Besant wrote in *New India* thus: “It has been decided to start a Home Rule League with ‘Home Rule in India’ as its only object, as an auxiliary of the National Congress here and its British Committee in England, the special function of the League being to educate the English in democracy in relation to India”. She had asked Dadabhai Naoroji to lead the proposed organization. She also sought the support of Indian National Congress in December 1915. Because of her efforts, two resolutions were passed by the Congress. The resolutions were related to the constitutional reforms needed by the Congress.⁶ However, the Congress did not

immediately agree to the idea of Home Rule. Though Annie Besant was let down by the delay, she continued her propagandist work. Due to her propagandist work and her condemnations of the British government in her journal, *New India*, there were charges against her and the journal to pay high securities under the Press Act of 1910. Because of this, the public began to support Besant.

On 3rd September 1916 the Home Rule League became an actuality. Besant poured all her time, effort and money into spreading the Home Rule league.⁷ The President of the League was decided as Annie Besant; G. S. Arundale became its organizing secretary, C. P. Ramaswamy Iyer as General Secretary and B. P. Wadia as Treasurer. The Manifesto of the League stated its aim is to be "strong, steady and sustained agitation". Many lectures were given on behalf of the Home Rule League on the issues of Swadeshi notions, boycott of foreign goods, resistance, national education, labour welfare and reliable government.

Besant became a prominent national leader since the inception and propagation of the Home Rule League. Other than journals, Besant also published books and pamphlets in the favor of self-rule in India and condemning the existing British rule. She thus earned the wrath of the Government.

Opposition by Non-Brahmins

Since Besant was a foreigner and her companions were mostly Brahmins, her campaigns focused on a complete Brahmin conquest of political power.⁸ Due to the fear of Brahmins' capture of political authority, a non-Brahmin party was formed in 20th November 1916 led by Theagaraya Chetty and T M Nair.⁹ The announcement of the party's formation was published in *Hindu* and *New India*. The organization was called the South Indian Liberation Federation (S.I.L.F) and later called as Justice Party after its journal, *Justice*. It became a chronic rival of Annie Besant and her ideas. She was also targeted by the other two Tamil and Telugu journals of the party, the *Dravidan* and *Andhra Patrika*. The *Justice* released many contentious articles about Besant and Theosophical society. T M Nair, the editor of *Justice* wrote a series of articles condemning the actions of Besant compiling them as *The*

Evolution of Annie Besant. He described Besant in his papers saying "a white woman particularly immune from the risks of Government action" used the Home Rule movement to promote her own self.¹⁰ Annie Besant replied to the attacks of *Justice* as "they injure justice, not me". She also described T M Nair as "a writer with a savage pen".

In addition to journalistic attacks, the Justice Party held many conferences against the Home Rule League and self government. Since Besant gave an agitational style to the political affairs of the Madras Presidency, it was chastised by the non-Brahmins. Instead, Besant characterized the Non-Brahmin movement as 'mischievous and unpatriotic'. She failed to notice the growing force of the non-Brahmin cause and its expansion as a remarkable political adversary.

Charges by British and Imprisonment

While expanding the Home Rule Movement, Annie Besant made herself the enemy of the British authorities. Her significant books about India's independence were *How India wrought for freedom* and *India - A Nation*. She also issued 10,000 copies of leaflets on "Self Government". Because of her continuous attacks on British government, the British authority made her pay high securities for *New India* under the wartime Defense of India Act. Besant described the act as a part of a poor system misusing powers. She wrote about this as:

*The Act was meant to strike at treason; it strikes me, and I am branded as a traitor. I repel these monstrous accusations made against me; never a word of violence, or treason, of sedition, has stained these pages. I feel insulted at being herded with traitors and assassins, and so long as this security is imposed on me, so long this insult remains.*¹¹

This dictatorial action of British Government was chided by public and the press. Besant challenged the action of the government in the High Court but her petition was dismissed. Yet the Home Rule movement was not disturbed by the restraint. It rather gained much support from the public including the students of educational institutions in the Presidency. Dreading that the students would become the fortitude of the Home Rule

Agitation, the Imperial government passed a government order forbidding the students involving in politics. Governor Pentland also notified that if Besant and her companions don't give up the Home Rule Movement, he would resort to harsh and strict measures.

The Home Rule League garnered large amount of support from people of Madras Presidency.¹² She also propagated the Congress League Scheme. Feared by this and her popularity, she was suppressed and imprisoned by the government on 16th June 1917 for doing an educative propaganda about the Congress League scheme. She was persecuted by the then Governor of Madras, Pentland.¹³ About her internment, she wrote to her followers as: "I write plainly, for this is my last word, I go into enforced silence and imprisonment, because I love India and have striven to arouse her before it was too late. It is better to lose liberty than to lose honor. I am old, but I believe, that I shall see India win Home Rule before I die. If I have helped ever so little to the realization of that glorious hope, I am more than satisfied. God save India! *Vande Mataram*".

After much effort by many leaders and Besant's associates, Besant was released on 17th September 1917. Besant had given assurance that she would help to attain a calming atmosphere in Madras Presidency.

Annie Besant emerged as a 'national champion' after her release. In December 1917, she was elected as the President of the Indian National Congress. But, after her internment and release there was a drastic change in the attitude of Annie Besant. She became

inconsistent in her temperament towards the British government. The 24th session of the Madras Provincial Conference marked the degeneration of Besant. In this session, Besant moved a resolution petitioning India's absolute participation in war efforts.¹⁴

The final descend of Annie Besant came when she supported the Rowlatt Act. Because of this, Besant faced opposition from almost all the Indians. She also opposed the Satyagraha movement and eventually Gandhi. She blamed Gandhi for the shooting incident at Delhi during the "Protest against Rowlatt Act". Ultimately in 1920, the Home Rule League declined her as President and elected Mahatma Gandhi on 28 April. The League was renamed to Swaraj Sabha. By the time Gandhi had launched the Non-Cooperation movement, Besant totally became pro-British. This marked the end of Besant who played a major role in Indian politics.¹⁵

An excellent orator and writer with poetic disposition, Besant was an absolute whirlwind of power and passion. By her elegant way of oration and expressiveness and sincerity she garnered the support of the people of Madras Presidency. She declared in 1918 in *New India* "I love the Indian people as I love none other, and... my heart and my mind... have long been laid on the altar of the Motherland." Though there were many inconsistencies and oppositions, Besant was responsible for creating a political and social awareness in Madras Presidency. From her social reform lectures in 1913 until her tenure as Indian National Congress's President, the Madras Presidency remained as the epicenter of Home Rule agitation.

WOMEN AND WORK MOBILITY. SOME DISQUIETING EVIDENCE FROM FISHER FOLK COMMUNITY IN KERALA

Dr. M.L. Lekha Rani

Introduction

The fisher Folk community in Kerala state is rich in custom, tradition and local knowledge, reflecting this in its communities, their established beliefs and practices. The vicinity to the natural resource base has a dominating influence on the culture and thinking of the fishing community. This paper documents the work mobility of traditional fisherwomen in Kerala based on a questionnaire survey conducted in 17 fishing villages. The social mobility of Mukkuvar community is quite a different one from other agrarian, tribal, and caste communities due to their occupational nature as marine fisheries. Their social relations and behaviors are developed from their occupation. Their primary occupation, fishing, had a pivotal place in the early stages of the progress of humankind as it evolved as a chief economic activity and preceded even agriculture and farming.¹ Fishing has naturally been the major occupation of the inhabitants of the coastal belt of Kerala from time immemorial. The Sangam works like *Akanannooru* and *Kurumthogai* gave references to fishermen communities especially about their economic, social, religious and cultural life. The keenness of it was more felt during the stages of emergence of civilizations than during the recent centuries or present.

Socio-economic organisation of traditional fisher folk women

Kerala state in South India has an elongated coastal line of 590 km on the western part of the state sharing the border with Arabian Sea and decorated with world famous beaches. This area, known as the low lying areas or coastal areas is situated 10 m below sea level.² Fisher folk form an important segment of the population of the state. Kerala has the eighth position, with regard to the population of fisher folk among the fourteen coastal states. The total populace of fisher folk residing in the state of Kerala is estimated to be 11.114 lakh, which includes 8.55 lakh in the marine sector and 2.55 lakh in the inland sector. Out of this, the number of active

fishermen is 2.28 lakh (1.90 lakh in marine sector and 0.42 in the inland sector).³

Out of the two types of fishermen, the marine and the inland, the concentration of marine fishermen is more in Trivandrum district, followed by Allapuzha, and then by Kollam and Kozhikode districts, while the inland fishermen are concentrated in Ernakulum, Allapuzha and Kollam districts respectively.⁴

Fisher folk in Kerala come from three different religious groups - the Hindus, Muslims and the Christians. Each of the groups has its own social organisation and mostly occupies separate places in a typical fishing village, although they do share some commonalities. The distribution of the three religious groups varies according to regions.⁵

Problems

The natural hazards, including the increasing problems of coastal erosion, cyclones, the climate change, especially, floods, tsunami, sea-wave formations etc. seriously affects the livelihoods of the coastal communities in Kerala. Recently, the coastal regions of Kerala, had experienced the major problems caused by the devastating cyclone called Okhi during November and December 2017, which had resulted in the loss of life of a large number of fishermen, destabilizing their families.⁶ In this backdrop, this paper examines the major livelihood challenges facing the fisher communities in the seaside regions of Kerala, with a case study of mobility of fisher folk women. The case study was focused on the empowerment status of fisherwomen in Kerala.

Fishing has been a survival support base for traditional fish workers especially women. But when fishing activities are expanded and mechanized, the production is taken over by men. Modern technological facilities are also controlled by men. In fisheries sector the activity is broadly classified based on gender. As men are only engaged in fishing and unraveling the marine wealth using different type of gear, women are active in shore based activities and marketing of fish. Mechanization has drastically

limited the role of women and men in the fishing business.⁷ Big contractors and merchants run most fish markets. The reduction of human resource means that men are losing their jobs and for some, are indulging in irresponsible activities like drinking liquor and gambling. . This forced the women to take the role of an earning member in the family to satisfy the domestic needs and other unexpected expenses. Big corporations likewise pose a threat to the traditional fish sellers. With their huge capital and technological resources, they can easily manage the fisheries business quite fast. Because of the policy of indifference the fisher folk men in due course became heavily addicted to alcohol and gambling which had adverse effect on family relationships and the position of women along with overall social decline.

All these factors forced the women to wake up much earlier in the morning and to travel miles and miles for their fishes, rushing through one catch center to another.⁸ The routine is also dependent on the supplier they are obliged to patronize. With the prices dictated by the contractors and the resources they invest to access these goods, these women feel a greater pressure to sell these goods in the market. Men have access to most technological gadgets like mobile phones, two-wheelers, boxes to carry fish, among others. Through their mobile phones, they obtain quick information about the availability of fish and price rates from any coast at any time. Meanwhile women have no access to the modern facilities and tools due to economic and cultural reasons. Although the conditions in the markets became better, gender discrimination still exists as modern technological facilities and freedom of movement are accessible only to men even in ideal markets.

Majority of the women in Kerala sell their fish outside the markets or on a door-to-door delivery system. Organizing women and other members of fishing communities has been a key in checking the industrial aggression against the small fishing communities as well as the seas. The Kerala fish workers federation, Kerala Swathanthra Matsya Thozhilali (KSMT), has actively worked for the rights of fish workers for decades. By the end of 1980s, its women members decided to form a women's

wing of the federation: the Theeradesa Mahila Vedi (TMV). TMV has been actively involved in various women's issues, spearheading many historical agitations that have influenced and changed government policies.⁹

These main issues include the discrimination against fisherwomen in transportation; the lack of basic market and sanitary facilities for women; and the gender based violence from a skewed fish trading system. The lack of transportation was a major impediment for women selling fish. As they were not allowed to travel on public transportation with their fish baskets and other utensils, women had to walk miles to reach the market with a heavy load on their shoulders and their homes late in the evening. Their business is a story of fluctuating fortunes.¹⁰

Violence and sexual harassment against fisherwomen are on the rise. Much of domestic violence is not even considered as violence against women while sexual harassment is not reported due to fear of social stigma. Even reported cases are not given serious attention, that culprits can escape using political influence or threatening the survivors with dire consequences.

Gender discrimination and women's marginalisation are also intense in disaster and emergency situations. The tsunami that swept coastal South India in December 2004, shelter became a major issue for women. The temporary shelters had no privacy while the sanitation facilities are not satisfactory. Life in the relief camps was cause of trauma for women. Separate toilets, place for drying clothes and space for cleaning kitchen utensils were among the major concerns for women. But with the dominant norms of socialization fisher folk, women were too hesitant to insist or even express their needs. Instead, they silently cope with several problems, including sexual and physical harassment by men in the camps, particularly near the toilets. During disaster and emergency situations, pregnant and lactating mothers also failed to obtain adequate nutrition and access healthcare facilities. Inadequate supplies of water and sanitation made women susceptible to reproductive and urinary tract infections. Women and girls often opt not to avail of medical services which are organised in the relief camps as the doctors are all male and

the facilities lack privacy. Because of their loss of income and inability to access cash, women are at risk of sexual exploitation and dependency. The fisherwomen were politically empowered and less empowered legally. Perishable commodity like fish in most of the coastal villages where chilling and freezing facilities are least available.¹¹ Their business is a story of fluctuating fortunes.

The vulnerability of women is further accentuated by gender-insensitive relief and rehabilitation policies. Women's work is also not recognised in most rehabilitation programmes. Livelihood rehabilitation measures focused more on the loss of boats, thus ignoring the livelihood issues of women who are involved in processing and marketing of fish. It is widely known that women's earnings generally go directly towards meeting the basic needs of their families, while a substantial proportion of many men's earnings is often spent on personal habits such as drinking, smoking and gambling. As households are usually registered under a man's name, women encountered problems in accessing rations and compensations for assets that were lost. Experience shows that it is vital to collect gender-disaggregated information before determining relief and rehabilitation packages.

In a fisher's family, the responsibility of household management-food, childcare, education, health, sanitation, financial management and the responsibility of getting and repaying debts will be mostly on the women's shoulders.¹² The burden of her responsibilities doubles in the off-season. After mechanization and intensification of multi-day fishing, the household responsibility of fisherwomen has increased to a greater extent.

The indirect role women play are concerning decision making, financial management, family welfare, net making, running petty shops and mobile food supply for the workers at the landing centres and fish markets. The more direct involvement of women are in post-harvest related activities viz. peeling, fish trading, export oriented works, making value - added products, small scale

In order to examine the various vulnerability issues faced by the coastal communities, a small survey was undertaken

among the coastal communities, covering a small sample size of 25 households. The major problems were identified based on a rapid assessment survey and included: (a) drinking waters supply and availability problems; (b) health related problems caused by poor water supply provisions;(c) the amount spent for treatment during rainy season due to drinking contaminated or poor quality water; and (d) sanitation situation in the households, etc. The households were selected from three areas in Thiruvananthapuram city suburbs, viz. Poovar, Beemapally, Anjutengu. It is known facts that in Coastal communities' majority of fishermen families depend on marine fishing. No one can ensure daily minimum income to fisherman families in Kerala. Often poor families who depend on marine fishing activity buy their daily food grains after returning from fishing. If there is no fishing there is no income for that day. Poor families dependent on marine fishing suffer from insufficient nutritive food.

Conclusion

Fisher folk women form an important segment in Kerala society, but remain neglected and marginalized in spite of the higher socio-economic progress the state has made as a whole. They are truly the subaltern class in Kerala. When most of the people of Kerala got organized and politicized the fisher folk women have remained one of the most unorganised groups in the state. The process of coastal erosion increased with human activities such as urbanization, building and expansion of harbors etc. Hence, the coastal state has been facing serious issues and challenges in terms of declining fish stock along with various climate change related problems impacting the livelihoods of the coastal communities. This paper examines some of the important challenges afflicting the coastal communities in Kerala in the larger context of the depletion in the stock of fisheries resources alongside the threats emanating from climate change induced impacts. The paper suggests the importance of protecting the marine resources and the environment in order to sustain the economic and social well-being of the marine communities besides protecting the fishery resources from the point of view of maintaining inter-generational equity in the access to the use of fishery resources.

SALARIES OF THE KHODADAD SARKAR OF TIPU SULTAN

Dr. Madhabi Roy

Responding to Sipahdar Syed Ghaffar's enquiry about the salary of his brother, recently promoted to the rank of risaladar, Tipu Sultan says

It is written in the earlier memorandum from the jaish kachari that the monthly salary (*darmahe*) of that rank is ten hoons and the receipt for each person (mustered by him) is twelve annas falami. In conformity therewith, allowance and salary should be given, agreeably to the number of men musterred.¹

The hukmnama for the citadel of Seringapatam, the capital of the Khodadad Sarkar, in the process of comprehensively describing the layout of the fort and the functioning of the garrison of nine thousand eight hundred and forty-four, from the killadar to the humblest employee, carefully specifies that the women beating rice in the husk (*shah*) and crushing whole wheat into powder for the central storehouse, shall receive monthly salary and provisions. In addition, each of them will get half a dek of rice gleanings from the storehouse as a gift.²

Who received what?

In his written compact (*iqramnama*) with his master, Mir Muhammad Sadiq of the Mir Asaf kachari (Revenue Department), one of the top-ranking officers of the sarkar, states his salary to be 1200 rupees a month.³ At the other end of the scale, a khalasi serving in Seringapatnam fort received 8 rupees.⁴ A monthly pay of 125 rupees was settled on Venkaji Pandit, second Diwan of Bangalore.⁵ The Harkaras (messengers) Tolaram and Bhauh received 10 rupees each, whereas 9 rupees were paid to Mahadji, Kishnaji, Santaji and Humaji.⁶ Tipu Sultan's letters and Hukmnamas give plentiful evidence of the government's policy of exact specification and disbursement of salaries and perquisites, from the most exalted of its servants to the lowest. Thus, Huzur instructs Raja Ramchandra to employ a sweeper at 10 or 12 falams a month, a coolie at 15 falams, one Farsinavis Munshi at 35 rupees and settle 4½ hoons on a European chela.⁷ Detailed information regarding salaries were incorporated in the Mukmnamas given to officers who was in charge of distributing them. For instance, Badruzzaman Khan is told that "the salaries of the serishtadars and gomashas must be given in accordance with what is written in your Hukmnama."⁸

Salaries were generally stated in monetary units of hoon, rupee and falam. A hoon equalled 3 rupees or 10 falams.⁹ Some of the more extended hukmnamas, such as the one issued to the Mir Yam kachari (navy/marine department), give very detailed information about salaries and emoluments.¹⁰ The department was headed by 11 mir yams, with 40 mir bahrs, divided into two groups of serving and trainee officers, being next in command. For example, the land establishment of the kachari consisted of 3 mirza-e daftars, 3 hindavi writers, 12 gomashatas, 1 qazi, 2 naqibs, 11 sharbasharans (scouts), 11 hazirbashes, 1 farrash (in charge of carpets and camp equipage), 1 mashalchi (torch bearer) and 1 sarban (camel driver). The first two ranks drew monthly salaries of 20 hoons including an allowance for horse. A gomashata received 15 hoons, the qazi and naqibs 12 hoons each. A sharbasharan got 10 hoons and a hazirbashi 3 hoons and 3 falams. Three hoons each were earmarked for the farrash and sarban. The mashalchi received 2 hoons.

In addition to cash payment, certain allowances such as money for recruiting and maintaining full compliments for troops, upkeep of horses, and food rations were frequently given, as were supplements to regular wages for special circumstances such as temporary out of station posting, injuries sustained and the like. The hukmnama for Seringapatam fort mentions that financial assistance (*musaada*) must be given to jauqdars to recruit new jawans.¹¹ When Sheikh Ali was unable to enlist soldiers, Tipu Sultan ordered his superior officer Ahsanullah Khan to reduce his salary and taking back his *musaada* of 100 hoons, to give it to whoever could successfully raise the required troops.² On the other hand, the enterprising Syed Ahmad Jauqdar was promoted to the position of Risaladar, in consequence of his procurement of recruits, even without *musaada*.¹³ Such allowances appear to have been calculated on the basis of the number of people newly enlisted or supervised by an official. As a typical example, the total salary of a jamadar of the gunners on a battleship in the navy was 4 hoons and 4 falams per month, of which 3 hoons 6 falams was the base amount and the remaining 8 falams computed on the calculation of 1 falam per head for the 8 men serving under him.¹⁴

Food rations were usually dispensed on a daily basis. The hukmnamas issued to the amils of the districts of Raicottah and Waumlloor give a list of items to be supplied to the garrisons of the forts in their districts. Each person received twelve items, in specified quantities. These were rice, flour, pulses (daal), salt, tamarind, ghee (clarified butter), onions, tobacco, garlic, betelnut, chillies (pepper) and turmeric.¹⁵ This tallies very closely with the provisions given to those serving in the Mir Yam department with the addition of a daily allowance of meat for some officers and prepared kabab every two weeks for one and all.¹⁶

Special situations called for special measures. Keenly aware of the difficulties faced by men serving away from their regular place of work, coupled with the necessity of keeping up the health and morale of forces engaged in combat, Tipu Sultan writes to Burhanuddin Sipahdar: "The sarkar's piadas from the taluks who are stationed with you are suffering from want (of money) for expenses. Therefore, it is being written that you give to each of those piadas ten falams per month...so their difficulties are removed."¹⁷

Zakhm-patti or compensation for the wounded was a common feature of Indian armies in this period and the Khodadad Sarkar was no exception. The hukmnama for Seringapatam fort states that 107 individuals were receiving rations for injuries sustained and the like.¹⁸ In his letters to army commanders, Tipu Sultan directs them to make the payments in the customary manner.

"An order has been issued to the bakhshi of jaish for (sending you) 1000 hoons as zakhmpatti... you must write and obtain the regulations (qaeda) of zakhmpatti from the treasury (toshakkhana) and give out (the money) in accordance with it."¹⁹

Ranks and rates

At the top of the military-administrative structure of the sarkar were the heads of the central departments. In 1796, there were 6 departments - Mir Miran (Army), Mir Khazan (Treasury), Mir Yam (Navy/Marine), Mir Asaf (Revenue), Mir Sudur (Forts) and Malikul Tujar (Commerce).²⁰ The hukmnama for the Mir Yam kachari states that the salaries of Mir Yams would be fixed on a case by case basis and

probably the same was true for the heads of the other departments.²¹ Mir Muhammad Sadiq's salary of 1200 rupees/month (about 400 hoons) gives some indication of the remunerations drawn by Tipu Sultan's seniormost officials.

In the army, the salaries of sipahdars, who were the highest ranking military commanding officers, were most likely determined on an individual basis, but those of the subsequent ranks of risaladar (later called teepdar), jauqdar (later called yoozdar), sarkhail, jamadar, dafadar and yzakdar (ordinary soldier) were given according to established rates. Leading a teep of 346 men, a teepdar of the first and second orders respectively received 30 and 27 hoons in all, including base pay and allowance for per person supervised. A teepdar of the Asad Ilahi corps earned only 25 hoons, which, however, was probably augmented by rations.²² In the navy, the mir bahrs, who were the seniormost officers serving on the ships, were paid at a fixed rate of 150 rupees a month (about 50 hoons). Further down the line, a teepdar of the musketeers in a battleship received a base pay of 7 hoons 8 falam together with an allowance of 12 hoons calculated at the rate of 1 falam each for 120 men under him, making a total of 19 hoons 8 falams per month. A teepdar serving with the gunners got 16 hoons 9½ falams in all. These are comparable to an army teepdar's (risaladar) base salary of 10 hoons and 12 annas (¾ falam) for each underling, as cited in Tipu Sultan's letter above. Army jawans received 5 hoons and 1 falam.²³ Approximately the same amounts were earmarked for troops serving in the garrisons of the sarkar's forts. In a letter to Raja Ramchandra, Diwan of Bangalore, Tipu Sultan acknowledges his report of retaining 50 piadas at a monthly salary of 5 hoons for the fort of Cherkal.²⁴ Similar uniformity in salary scales appear to have been maintained for employees other than soldiers and their commanding officers. A gomashta of the navy received 15 hoons a month, while his counterpart in the army earned between 16 and 18 hoons. A navy farrash got 3 hoons and an army one 2 hoons and 7 falams. Twelve hoons were earmarked for a naqib in either department.

Going beyond the army and navy, the same pattern of standardized salary rates can be observed in other departments of the sarkar with the exception, as before, of those serving in the higher echelons of the administration. Khalasies in Seringapatam fort were paid 8 rupees a month and 7 rupees were earmarked for new recruits in far away Muscat.²⁵ Raja Ramchandra was told to pay Yenkat Rao, serishtadar for kandachar, at the same rate as the serishtadar of the mahals and gomashtas for kandachar the same wage as gomashtas of ahsham.²⁶ He was also authorized to employ a new hindavinavis munshi at the same salary as the munshi already serving under him and two coolies for work in the kulari at the same pay as those in the toshakkhana.²⁷

Some employees in the provinces were paid once in two months. Lower order servants such as kahmatis (laborers) as well as peons serving in the kandachar (local militia) belonged to this category.²⁸

The Khodadad Sarkar preferred to pay salaries in cash, to the extent possible. Half of Mir Sadiq's salary of 1200 rupees was paid in cash and a jagir was assigned for the other half. The administrative manual *Zawabit-e Sultani* lists only three jagirdars in 1796 and British records after the fall of Seringapatam name six in the sarkar's revenue rolls from 1797-8. Additionally, four princes held jagirs.²⁹ At the other end of the spectrum, locals such as kandachar militiamen were sometimes given land, with a view to bringing fallow land under the plough.

Progressively, the state took measures to standardize coinage and keep only specific kinds in circulation. An idea of the bewildering variety of currencies in use in eighteenth century India and more specifically in Mysore can be formed from the fact that no less than 25 different types of the gold hoon and 9 kinds of the silver rupee are listed in the revenue regulations for the amils of Raicottah and Waumloor districts.³⁰ The sarkar took the Kanterai coinage as its preferred currency and cash components of salaries are consistently stated in Kanterai units. Raja Ramchandra was directed to make "an inventory of Haidari and Kanterai falams in all the taluks in the jurisdiction of Bangalore et cetera and put into circulation the said falams so that no other

falams except these are in circulation.”³¹ Further, jamabandi of taluks was to be done only in Kanterai in future.³²

Along with specification of salaries and allowances in precise detail, the Khodadad Sarkar placed great emphasis on disbursement in time while meticulously following procedures established for the purpose. Senior officials in charge of dealing with the matter were constantly enjoined by Tipu Sultan to carefully maintain attendance registers and prepare accounts, hand out the money themselves without delegating the matter to others, and closely cooperate with fellow officers and the central departments to ensure that wages were given in a timely and transparent fashion. When Mah Mirza Khan was sent to join Sheikh Omar to seize the recalcitrant poligar Chakra Mall, ensconced in Oalpilly fort, Tipu Sultan gave him detailed instructions about undertaking the siege.

Finally, while keeping a tight rein on fixing salary rates and avoiding excess expenditure, Tipu Sultan left room for accommodation and special concessions, all with a view to entice the best talent to his standard. On a deputation to the Maratha court, Muhammad Ghiyas and Noor Muhammad Khan conveyed to their master their wish to employ one Pir Muhammad Munshi. However, he was unwilling to accept a salary of 40 rupees only as he was getting 60 rupees elsewhere.

When Chishti Yar Khan, Diwan of Farkh Yab Hisar (Chitaldurg) wrote to Huzur saying

that good tarafdars were not procurable for only one hoon a month, he was given permission to decide their salary as he judged “proper and necessary for their subsistence (*be qadr-e guzaran-e anha monaseb didē*) so that the work of the sarkar may be performed in the best manner (*bayin-e bihin*).”³³ Going further, the state undertook to create a favorable environment for its prospective and current employees, in order to attract and retain good people for the smooth running of its affairs. Housing was made available to officers, house servants were provided and assistance such as advances on salary given to help them to settle down in comfort and concentrate on their work.

Salary and service

That Tipu Sultan was considerably successful in drawing faithful and competent people to himself and running an efficient administration is an issue on which contemporaries and modern historians are in substantial agreement. Tales of treachery and betrayal, meandering through popular belief and especially centered on the final British assault and capture of Seringapatam, are now thought to be quite groundless.³⁴ Compensation for service, in the form of clearly enunciated and properly executed regulations regarding salary and emoluments, lay at the heart of transactions between the Khodadad Sarkar and its employees and formed the basis on which an entire ideology of loyalty to the state and sovereign was built up.

CONTRIBUTION OF CHRISTIAN MISSIONARIES IN HEALTH SECTOR : A STUDY OF KERALA

S. Malavika

In the middle of the 19th century protestant missionaries such as the London missionary society, the American foreign mission board, and the free church of Scotland opened medical mission centers in different parts of India. The arrival of colonialism in India European missionaries particularly protestant missionaries, their religious motives were mixed with the colonial principles and commercial spirit.

The missionaries believed that the medical mission was the prominent way to reach the mind of the rural poor people. They are highly influenced by common people especially lower caste people. In later period women are highly involved with the mission activities. The major mission of the Christian missionaries, which would publicize the humanizing aspects of Christianity amongst a heathen population.

Christian missionaries spread rapidly in all over India. The missionaries characterized for the people in two divisions for the base of the cultural terrain known as Christian and Heathen. The Heathen people were subdivided into two categories known as 'the cultural people and savages.'

The introduction of western medicine was not smooth and easy; the Christian missionaries had propagated it very well since 1811. The missionaries known themselves with Western medicines 'empirical and rational approach' and through it required to counter the authority of their rivals, the 'witchdoctors'. Medical work brought missionaries some conversions, though not a few of those they tended and cured took the missionaries' medicine without surrounding their own religious beliefs and their theories of disease causation.

Christian mission is an organized effort for the propagation of the Christian faith. Mission often involves sending individuals and groups, called "missionaries," to foreign countries and to places in their homeland for the purpose of proselytism (conversion to Christianity, or from one Christian tradition to another). This involves evangelism (preaching a set of beliefs for the purpose of conversion), and humanitarian work, especially among the poor and disadvantaged. There are a few different kinds of mission trips: short-term, long-term, and relational and the one meant simply for helping people in need. Some might choose to dedicate their whole lives to missions as well. Missionaries have the authority to preach the Christian faith (and

sometimes to administer sacraments), and provide humanitarian work to improve economic development, literacy, education, health care, and orphanages. Christian doctrines (such as the "Doctrine of Love" professed by many missions) permit the provision of aid without requiring religious conversion.

Allopathic medicine was introduced by the British during the mid- 18th century to cater to the needs of their civilian and military population. The medical missions entered the Indian subcontinent during the late 18th century mainly in those regions which were directly British rule. The pioneers of Christian missionary work belonged to both British and American medical missions. The earliest among them was the London Missionary Society which started work in late 18th century in the Madras presidency. Some of the other major groups included the English Baptist Missionary Society and the Argot Mission which was founded by Scudder who later established the Christian Medical College at Vellore.¹

During the mid-19th century, the American Baptist Mission and the American Presbyterian Mission started medical relief work² Prominent among them were John Steele in Madurai, Rev John Newton of the American Presbyterian mission in Punjab and the American Methodist Episcopal Board in Neonatal and Pithoragarh in Uttar Pradesh.³ During the same period Zenana missionaries consisting of women doctors set up a number of hospitals for women and children. Women who trained as doctors in UK and US had few employment opportunities in their respective countries hence they opted to work in Africa and Asia with the missionaries.⁴

The early women missionaries came to India during the late 19th century. There was an equal representation of both British and American missionaries who were largely located in the north.

Women medical missionaries were largely limited in providing maternity and child health services which they perceived as a major need of Indian women. The efforts of the pioneers led to the establishment of the Lady Duffer in Fund which aided hospitals and dispensaries for women and children in Uttar Pradesh, Madhya Pradesh and West Bengal.⁵

In 1937, 25 percent of the mission hospitals were located in the Madras presidency followed by the Bombay presidency which had 13 per cent of the hospitals.⁶ this trend continued through the 1940s and is seen even to the present day. Between 1937 and 1947 there was a decline in the number of institutions from 246 hospitals to 131.⁷ the decline was partly due to the partitioning of the Indian subcontinent whereby parts of Punjab and Bengal became a part of Pakistan and Bangladesh respectively. However this could not explain the sharp decline of institutions in the Madras Presidency from 62 in 1937 to 38 in 1947.⁸ The decline between 1937-47 was barely restored by the marginal growth of institutions from 1947-96 with 249 hospitals.⁹ This was approximately the figure for the late 1930s.

CHRISTIAN MISSIONARY WORK TODAY

Right from the late 1930s it is evident that there are regional variations in the distribution of mission hospitals and dispensaries. Under the Christian Medical Network which includes several denominations like Protestants, Methodists, etc, the dominant forms of provisioning are hospitals which outnumber dispensaries with a ratio of 3: 1. There were 250 hospitals and 37 dispensaries under this network in 1996.¹⁰ Questionnaires were mailed to all member institutions under the Christian Medical Network in order to elicit data, is regarding date of establishment, bed strength and services offered. On the basis of the responses from different states. The bed strength of these institutions was calculated. There was a differential response rate across states. The percentage of institutions who responded in Gujarat was 60 per cent, 47 per cent in Uttar Pradesh, 40 per cent in Kerala, 39 per cent in Tamil Nadu. 36 per cent in Bihar and for the remaining states it was below 30 per cent. Based on the response the bed strength was 7,642.¹¹ the dominant form of provisioning under this network was hospitals which outnumbered the dispensaries with a ratio of 7:1.

The institutions were unevenly distributed across the country. Kerala had the largest percentage of hospitals (32 per cent) followed by Tamil Nadu with 15.3 per cent and Andhra Pradesh with 12 per cent.¹² There has not been

much growth of Christian medical institutions in recent times. In a recent review, the CMAI (Christen Medical Association of India) has stated that at the time of independence there were approximately 400 institutions in its network and by 1988 there were 2,500 institutions.¹³ These were mainly small hospitals, health centers and dispensaries located in rural areas. The CHAI (The catholic health association of India) data on their member reveals that there are 459 hospitals with bed strength of 23,323 and 1,300 dispensaries with bed strength of 2,394.¹⁴ Unlike the CMAI; the dominant form of provisioning under the CHAI is the dispensaries which outnumber the hospitals with a ratio of 3:1. As far as distribution of these institutions across states is concerned it is skewed in favor of the southern states, viz, Kerala and Tamil Nadu - 46 per cent of the hospitals are located in Kerala, followed by Tamil Nadu which has 18 per cent of the hospitals. In the case of dispensaries, Tamil Nadu has 22.4 per cent of the dispensaries, followed by Kerala with 16 per cent and Andhra Pradesh with 15 percent.¹⁵ the institutional forms vary in the two networks, CHAI and CMAI. While hospitals dominate the Christian medical network, it is the dispensaries and health centers which predominate in the Catholic missionary network.

Kerala, which has the highest bed strength in the voluntary sector, the ratio of private beds to voluntary is 3:1. In Tamil Nadu this ratio is 2:1 and Andhra Pradesh it is 6:1. However, in Maharashtra and Gujarat where the missionary presence is low, the ratio of private to voluntary beds is 25:1 in the former and 76:1 in the later. Clearly the strength of missionary services relative to both the public and private sector is marginal. However, the trends in distribution of the mission institutions aggravates the regional inequalities between the richer and poorer regions since their activities are restricted to those states which are better developed in terms of institutional and infrastructural inputs.

Given the trends in the characteristics and distribution of missionary hospitals and dispensaries ever important issues emerged consideration. Firstly, the issue of regional variations in the distribution of institutions needs to be addressed by these networks especially if they want to serve poorer regions

where the public sector is weak and the private sector will not want to invest. Secondly, the source and means of financial institutions in these networks is extremely important. This issue had surfaced way back in the late 1920s and was probably an important reason why several hospitals were forced to close down. Many mission hospitals were forced to charge fees which affected their voluntary status and hampered charitable work. Very often it became difficult to make a distinction between private and voluntary services since both provided services at a cost. Here, the respective networks have to debate this issue with their member institutions so that they can evolve some way of ensuring that the poor are not denied care. The identity of voluntary hospitals has been further eroded with increasing privatization as a result of which they are forced to compete with the growing private sector. This is bound to have an effect on the type of services the voluntary sector will provide. Since the private sector largely provides curative services which are dependent on high technology medical equipment, very often mission hospitals are also doing the same. High technology medical care results in increased costs which then needs to be recovered through user fees. Therefore very often mission hospitals are providing care which is a far cry from rational medical care which was the emphasis during the early part of this century.

At last, most mission hospitals have a lower recurring expenditure compared to private hospitals because they pay their doctors and specially the paramedics less than other institutions. They draw their paramedics from religious orders and hence are expected to volunteer their time for a good cause. Given the changing scenario, the mission hospitals may increasingly face a situation where many doctors and paramedical workers may not work in these hospitals for low wages especially when the private sector may be willing to pay higher wages.

The missionary activities of India were evaluated in two ways. First one was the progress and glory of missionaries. In another one was the negative side. Many people accepted the faith to escape from the social evils and to raise their standard of living. The people noticed that the new converts found it

easier to get education and jobs at the missionary establishments. So people got converted in order to get the physical and financial benefits of being a Christian without any change of the heart. This latter on lead to the labeling of many Christians as 'Rice Christians' because the missionaries gave food to the starving converts and many got converted to get the food. The missionaries could not succeed in establishing a new culture. They adapted the local culture after making some essential changes. The lack of a Judeo-Christian culture becomes very apparent at the present efforts to evangelize Kerala. Some missionaries spent almost all their time and energy for education and social reformation instead of preaching the Gospel. Although it was a great asset to the missionaries who came later, their work was limited. Along with the Bible and Christian books the missionaries printed some Hindu literature also. This helped to spread the Hindu theology and philosophy which was later used to stop the growth of

Christianity. It is doubtful whether such open-mindedness was really necessary among the missionaries who were here in the purpose of propagating Christianity. The missionaries were not successful in making disciples capable of continuing their work. Such local leaders were rare in Kerala history. Although there are people like K V Simon, Sadhu, Kochu, Kunju, Upadesi, etc. the vast majority of the people were followers rather than leaders. The lack of leaders was a serious limitation to further mission programs.

The Missionaries concentrated in converting the lower class people. The ignored upper class people were a hindrance to future missions. Christianity was also labeled as a religion of the lower class in many parts of India due to this reason. The Missionaries naturally supported the British rule in India. Due to this the new converts were labeled unpatriotic and anti-Indian. This caused many troubles in the spread of Gospel in the independent India.

SHANTHAVERI GOPALAGOWDA THE SOCIALIST

K.N. Manjunath

Shanthaveri Gopalagowda was a great socialist and an honest politician of Karnataka. He who was known for his simplicity and his principles, he fought for social justice. Though his family was not well enough he completed his lower secondary education and developed his interests during his childhood days. Later he became a great associate of freedom fighters like Bhashyam and others. He believed that freedom would be incomplete without eradicating some evils of his time and bringing socialism in the society would be a dream forever unless caste and varna systems were abolished. Hence he worked for the eradication of untouchability and involved in the Kagodu Satyagraha movement. As a politician he got elected for the state assembly for three times. When he was the leader of the opposition party, he worked for maintaining the sanctity of politics. At a juncture when he was asked to be the Chief Minister, he politely rejected the offer as he had been hospitalised during that time. He never wanted to fool people by giving false promises because socialism was his life time goal to achieve.

Shanthaveri Gopalagowda played a very significant role in the Karnataka politics. As an associate of Lohiya, he fought for social justice to everyone. Leading a simple and honest life and adopting certain principles, he became a rare politician of Karnataka.

He was born at Shanthaveri near Araga in Thirthahalli taluk, Shivamogga district. He was born into a tenant family on 14th March 1923. Kolluraiah and Sheshamma were his parents. Though his ancestors were rich, poverty was troubling his family. He completed his primary and higher primary education in Araga and Agrahara. He completed his lower secondary education in 1941 along with his brother.

He was very much interested in reading stories and poems, art, literature and cultural activities during his childhood days. He participated in freedom struggle when he was a student and addressed a gathering at Ramamandira in Thirthahalli. This was his first public speech which made him popular.

Getting involved in freedom struggle, he along with his friends destroyed post boxes and cut down the telegraph wires. Though he tried to escape from the police, he was caught and put in Shimogga jail. There he got the chance of serving the freedom fighters like K.T.Bhasyam, Siddaiah, Kumarn and K.C. Reddy and discussed the freedom struggle with them. They were inspired by Karl Mark, Leo Tolstoy, Jayaprakash Narayan, M.K. Gandhi and Lohia. The influence of Basavarajashastri and Kamagodu Narasimha shastri changed Gopalagowda's life style.

Doing social service was his goal besides being a freedom fighter. He believed that freedom would be incomplete without eradicating some social evils. He tried to enter a temple along with untouchables in Shivamogga. He ran evening schools for untouchables at virakthimat in Araga. He also concentrated on running schools for adults, self-employment, etc. As he used to say socialists should become secular, he gave his consent to inter-caste marriage and married Kadidal Manjappa's friend's daughter Sonakka from Dharwad.

If we want to talk about socialism at this juncture, we must be on the way to eradicate class and varna systems, otherwise bringing socialism in the society would be a dream forever. There is slavery in our state even today. Eradicating caste system and untouchability is just a paper work. They are not allowed to public places and temples. The movements started by Buddha, Basavanna and Mahatma Gandhi to eradicate these systems remain unchanged. Gopalagowda often felt that this system is there somewhere in minds and souls of Hindus and this should be eradicated. Gopalagowda involved in this social reformation with the main of bringing in socialism in the society. Hence he involved in the Kagodu Satyagraha movement. After this struggle a new development took place in the Karnataka politics. This movement spread across the nation and attracted nationwide socialists like Ram Manohara lohia and made him involved in the Kagodu Satyagraha which took place under Gopalagowda's leadership.

Gopalagowda wanted to create socially respectable situation for the poor. He was open-minded. He always thought about socialism and spoke about it in the assemblies and public gatherings. Though Gopalagowda became a state and national level leader, he did not make any money or property. When he came back to his village, he mingled with everyone. When he was the leader of the opposition party, he put the party in power in trouble. Unable to tolerate the Congress Party offered him the post of minister. But he flatly refused it. This shows his political honesty.

When Veerendra Patil from Congress resigned the post of Chief Minister in 1971, remaining parties came together to form government offering the post of Chief Minister to Gopalagowda. Then Gopalagowda was in hospital due to his ill-health. When he was asked to accept the offer, Gopalagowda very politely rejected their offer saying that it would be a foolish act because it was not the right time for him to be so. Such an honest politician can't be seen today.

Shanthaveri Gopalagowda was elected to state assembly for three times (1952, 1962 and 1967). He discussed many important matters of society in the assembly. He spoke about economic, political, religious, educational problems of the state. He discussed all these problems from the point of view of socialism. He also discussed other issues like abolition royalty, land army, equal pay, nationalisation of banks, nationalised transport, system of levy industries, taxation, burden of tax, irrigation, problems of drought, rights of farmers, farmers' rights on water, co-operation, decentralisation of power, abolition of liquor, forest land, Kolar gold mines, consistency of prices, direct election, Vihdana Soudha, Vidhana Parishath, Rajabhavana, police system, jail system, problems of tenants, Bhoodan Movement, revolution, land reformations, abolition of Inam system, village officials, national holidays, prescribed textbooks, malnad area, border areas of Karnataka, religious institutions, caste system, education, culture, religion, Khadi, unification of Karnataka, etc. in the assembly.

In the name of caste, religious fundamentalism and economic equality violence is propagated in our liberal society. These are disturbing the very conducive nature

of our society and are misleading the youth. Therefore, the study of Shanthaveri Gopalagowda helps us to get social justice according to our constitution and its implementation in order to make the youth of India rethink about socialism.

The Congress party in power at the centre nationalised all private banks in 1962. It was a historical decision in the history of Indian banking system and its economic transactions. The government did not do it on its own. It did it in the interest of people and labourers. In the backdrop of nationalisation of banks, Gopalagowda spoke about it in the assembly on April 9th 1964. How to implement socialism in the society was the main aim and principle of political socialism. Can we implement socialism in the society by lessening the disparity between the rich and the poor by bringing money or food grains from the rich countries? Of course he said that it was impossible. He emphasized this point in the assembly. The main aim and desire of the Communists was to bring in social equality in the society. Therefore they organised political revolutions in different countries of the world. But Indian socialists did not like this; so they thought of the other better ways to implement socialism in the society. As a result of this political thinking, the main aim of Indian and Karnataka socialists was to nationalise private financial institutions and private banks. Having these ideas Gopalagowda discussed in the state assembly.

India got independence in 1947 and became republic in 1950. These two political developments made Indians dream of implementation of socialism in their social and political life. The Centre and the State governments should have made an attempt to create such an environment in the country. After independence farmers, labourers and communists came forward to protest against inequality in the society. During this time state governments tried to bring some private industries into their custody. As a result, in the last part of 1960s and the beginning of 1970s these developments were clearly seen. With what socialistic idea Gopalagowda spoke about nationalisation of banks in the assembly, in the same way he demanded nationalisation of private transport.

Transport department was run by the public money given by the farmers in the form of tax. The management was in the hands of private people. Therefore, they did not satisfy the needs of passengers. Having observed this very keenly Gopalagowda demanded nationalisation of private transport in the state assembly. He also expressed his desire with the central government to think of doing it.

Now transport system has been divided into government and private sectors in the state. Which sector the people use according to their economic standard and other conveniences is a different matter. But we need to look into is the reason behind the statements made by Gopalagowda in the assembly. Carrying people from one place to another is an important work of a transport system. But people had to wait for buses hours together at the bus stands. So their many hours of work went in vain. Many times the time spent on waiting for busses was longer than the time the passengers spent on their journey. Whether they could produce something if they spent the time that they had to spend on waiting for buses at the bus stands? Even today it appears to be very realistic. Therefore, Gopalagowda spoke about nationalisation of transport in the state assembly forty years ago. If he had been alive today and had seen private bus stands in Bengaluru or in some other parts of the state, his words in the assembly today would have been very emotional. Many years ago the farmers in Malnad area should give some part their paddy production to local farmers' co-operative societies based on the area of their production. In turn, these societies paid money to the farmers according to government prices. The societies which collected paddy from farmers supplied to people in the form of rice through ration cards without much profit. In this system both were benefitted. This system was called levy. The farmers who produced paddy gave compulsorily some part of their production to levy. There were categories among the farmers

who were producing paddy. They were highly rich landlords, middleclass landlords and small farmers. Among these categories of farmers rich landlords and middleclass landlords did not have any interest and necessity to give some part of their production to levy. Because they were getting more benefit by selling their production to private people than giving to levy. Because of this reason the government decided to abolish this levy system. During this time Gopalagowda spoke about the usefulness of the levy system to common people.

Even after his marriage, Gopalagowda did not own any house in Bengaluru, instead he used to stay in Legislative house for some years. As an MLA he spent much of his time on societal development. The amount he spent on his travelling and stay in Bengaluru was usually borne by his followers. He had his food in the houses of his followers without any caste difference. He used to fast when he could not get any food. He washed his own clothes because did not have money to pay the washer man.

When Gopalagowda contested for elections four times, only his followers paid his election amount. He did most his election campaign walking from village to village. Sometimes he used one or two vehicles given by his followers.

He was completely against taking bribe. Whenever he found any officers or politicians got involved in corruption, then and there he enquired about it. If anybody spoke badly about the facilities given to the poor, he immediately reacted and said that they had crossed the lake, but the poor were still to cross it. In this condition if they put race competition for them how they could do it. In this way he expressed his displeasure over the inequality between the rich and the poor. In this way he spent his life time for the development the under privileged and finally he died on 9th June 1972 at the age of 49.

THE UNFADED COUP OF BHIMA KOREGAON

(Revisiting Indian history through Dr.B.R.Ambedkar Perspective)

Matta Krishnaiah

The Bhima Koregaon Battle

This battle is significant for many reasons. First, British army fought this battle with a minuscule army expecting the worst. Secondly, the battle of Koregaon was one of the most important events which helped British to tear down the Peshwa Empire and subsequently the Peshwa had to abdicate. Thirdly and most importantly, it was an attempt by the untouchables of Maharashtra to break the shackles of the age-old caste order.

This new treaty formally sought to end the Peshwa's titular overlordship over other Maratha chiefs. Stung, the Peshwa put together an army, burnt down the British Residency at Pune in an attempt to assert his importance, but was defeated in the Battle of Khadki near Pune on November 5, 1817. The Peshwa then fled to Satara, and the Company forces took complete control of Pune. Towards the end of December, the British received news that the Peshwa intended to attack Pune and asked the Company troops stationed at Shirur for help. The troops dispatched from Shirur then came across the Peshwa forces en route to Pune, resulting in the Battle of Bhima-Koregaon on January 1, 1818.

Bhima Koregaon in Pune, Maharashtra, the seat of unrest now, is a tiny village, but is associated with an extraordinary phase of Maratha history. Two hundred years ago, on January 1, 1818, a few hundred Mahar soldiers of the East India Company, led by the British, defeated the massive Peshwa army, led by Peshwa Bajirao II, in Koregaon. Near the banks of Bhima River in Koregaon (north-west of Pune) between few hundred mahar soldiers from the British regiment of a Bombay Native Light Infantry and the Peshwa army that constituted 20,000 horsemen and 8,000 infantry soldiers. After marching down for more than 27 miles, from Shirur to Bhima Koregaon without food and water, the untouchable warriors fought the Peshwas army for next 12 hours and by the end of the day defeated them completely.

The Peshwa had the larger force (the numbers are disputed, but were between 20,000 and 25,000). The Company Army was admittedly much smaller (about 900 soldiers, including Mahars, Marathas, Rajputs, Muslims, and Jews), but the battle was decisively won by Company forces. The dead Company soldiers of Indian origin included 22 Mahars, 16 Marathas, 8 Rajputs, 2 Muslims, and 2 Jews. Maratha power (effectively Brahmin power embodied in the Peshwa), which was anyway on its last legs, was now effectively finished. And, ironically, Mahars were involved in its final battle.

The Memorable History

The men of the Bombay Native Infantry, who fought in this battle, were honored for their bravery. The official report to the British Residents at Poona recalls the "heroic valour and enduring fortitude" of the soldiers, the "disciplined intrepidity" and "devoted courage and admirable consistency" of their actions.

Much praise was showered on the untouchable soldiers, who endured the rigours of difficult marches when rations were low and diseases were high among men and animals. Whether they were charging ahead or were besieged or taken prisoner-of-war, whether they were storming fortresses or making tactical withdrawals, they always stood steadfast by their officers and comrades, never letting down the honour of their Regiments." The saga of the bravery of mahar soldiers was commemorated by the British in 1851, when they erected a Pillar (Vijay Stambh) at Koregaon inscribing the names of 22 mahar soldiers who were martyred in this battle. The pillar still stands today reminding all of us about the bravery of our forefathers and as an inspiration for our struggle against caste-system.

Dr. Babasaheb Ambedkar also used to visit Koregaon every year on 1st January to pay homage to the untouchable soldiers and to exhort Dalits to show similar courage and determination to end brahminism from the entire country. On 1st January, 1927, he

organised a big convention in Koregaon and brought the memories of bravery of the untouchable soldiers in public knowledge. Honouring the Bravery of Untouchable Soldiers A stamp was issued by Indian Government in 1981.

On this and every New Year eve, rather than indulging ourselves in mindless rivalry let all of us pay rich tributes to our heroic forefathers who, through their bravery and courage, tore down the powerful Peshwai and brought freedom for untouchables from the fanatic brahmin rulers who ruled the land according to the diktat from Manusmriti. It is also a powerful occasion for all of us to become little more aware towards our rich history.

Another History of Bhima Koregao

A recent, and crucial history of this was at Wadhu Budruk, a village not far from Bhima Koregaon. Vadhu Budruk is where Sambhaji, the eldest son of the Maratha ruler Shivaji, was cremated after being killed by the Mughals in 1689. As the legend goes, Sambhaji's body was mutilated and thrown into a river by Aurangzeb. It was Govind Mahar (Gaikwad), a Dalit resident of Vadhu Budruk, who then gathered the body parts together and made arrangements for the last rites. Sambhaji's memorial was said to have been erected by the Mahars of that village. Consequently, Govind Mahar's tomb was also erected in the village after his death.

Brahmanism Forces are Worried by the Conspicuous Politicisation of Dalits

This battle has attained legendary stature in Dalit history. Ambedkarite Dalits do not see this from the narrow lens of Nationalism versus Imperialism. Over the years, as the battle came to be seen as a victory of the Dalits against the injustices perpetuated by the Brahminical Peshwas, thousands of Ambedkarites have been gathering in Bhima Koregaon on January 1, 1927 to pay their respect at the Vijay Sthamb (victory pillar). The pillar was erected by the East India Company in memory of those who fought the battle and includes the names of the Mahar soldiers who unknowingly brought an end to the Peshwa rule in 1818.

Dalits are unanimous in drawing inspiration from the victory. In recent years, particularly in Maharashtra, since the Bhima-

Koregaon Ranstambh Seva Sangh (BKRSS) was formed, Dalits regard the pillar as a site of positive memory of their valour and a symbol of their renewed political aspiration. Their denunciation of the Peshwas is strategic; it helps them relate to their social and political marginalisation in contemporary times. The debate here, however, is whether such invoking history is effective in hoisting Dalit politics to a new level.

21st Century Peshwas

Being the 200th anniversary (01.01.2018), that gathering in Bhima Koregaon this year was much larger than usual. Many Dalit and Bahujan groups collectively organised a big public conference in the name of Elgar Parishad at Shaniwar Wada, which was the seat of the Peshwas until 1818. The agenda of this conference was evidently against Hindutva politics which was powerfully manifested by projecting Hindutva politics as the neo-peshwa (new Peshwas). Jignesh Mevani and Prakash Ambedkar were invited.

What happened on the day of the battle's 200th anniversary which led to the death of one Prakash Ambedkar, the grandson of B.R. Ambedkar and a prominent Dalit leader from Maharashtra, has said that a few Hindutva organisations planned and perpetuated violence against the Dalits in Bhima Koregaon. He has named Sambhaji Bhide and Milind Ekbote, prominent Maharashtrian leaders who have been actively promoting organisations that advance the cause of Hindutva, as being responsible for bringing the State to a halt. These organisations have been polarising the political landscape on religious and caste lines, particularly against Ambedkarite Dalits who are seen as impediments to their political project.

A few days ago, upper caste Marathas, who refuse to acknowledge the role played by Govind Gaikwad and other Mahars in the last rites of Sambhaji, objected to a sign at the site that recounted the story. Complaints were filed with the police by both sides. In Maharashtra, there has been a consistent effort to situate Maratha history within the anti-Muslim Hindutva framework - in fact, this even predates the rise of the political right-wing in the State. Maratha youth, who are facing unemployment and a lack of educational opportunities, are now

being easily pulled into these conflicts by Hindutva organisations that are consequently built by invoking past Maratha glory. The violent clashes in Bhima Koregaon were an extension of the conflict in Wadhu Budruk. All indications are that this was a pre-planned attack.

The conspicuous politicisation of Dalits against Hindutva, particularly after the Una violence in Gujarat, has been a cause of concern for those who propagate the latter. The Elgar Parishad helped consolidate their apprehensions against the politicised Dalits. The new political articulation of the Dalits (by equating Hindutva with the Peshwai) has annoyed the right-wing forces and exposed the fault lines we are seeing today.

Conclusion

If a nation has to be truly democratic, it cannot be constructed through selective and deliberate historical erasures. Historical events, that hold symbolic value, are important in

constructing an alternative identity for subalterns, crucial in reclaiming their space in mainstream discourses on Indian nationhood. The Brahminical upper caste feels threatened by such assertions of the subalterns and thus tries to marginalise them. Especially after 2014, Hindutva nationalism has unabashedly targeted Muslims, Dalits and Christians. The violence at Bhima Koregaon is a reflection of this tension between divisive Hindutva nationalism on the one hand, and subaltern politics on the other, that has carried on an unrelenting struggle to seek justice. Branding them as “anti-national” is an act of political debauchery, which the movement has to resist. Historical events that hold symbolic value are important in constructing an alternative identity for the subaltern. The Brahminical upper caste feels threatened by such assertions of the subaltern and thus, tries to marginalise them. The violence at Bhima Koregaon is a reflection of this tension between divisive Hindutva nationalism and resilient Dalit politics that seeks justice.

FORTS OF THE SĀTAVĀHANĀS AND THEIR SUCCESSORS

Dr. D. Mercy Ratna Rani

The present paper deals with the forts constructed by Sātavāhanās and their successors in early Andhradāsā. The period from third century A.D. is important for a study of the method that led to the transformation of tribal chiefdom into the creation of early state in Āndhradāsā. The finding of some coins issued by the kings named Gobhada, Samagopa,

Kamvaya, or Narana from Karimnagar region attest to the pre Sātavāhana rule.¹ The Sātavāhanās who established their control first over the western Deccan have gradually spread their dominion to Krishna-Godavari valley as testified by their inscriptions and coins. By the third century A.D. the fall of the Sātavāhanās from political power resulted in the

dismemberment of the Empire into a number of smaller principalities occupied by independent chiefs. Among them the Ikshvākūs who exercised their authority over the fertile area in the Krishna valley with Vijayapuri (Nāgārjunakonda) as their capital, continued their suzerainty not very much different from those of the Sātavāhanās. The downfall of the Ikshvākūs resulted in the rise of many small families like Brihatphalāyanās, Sālankāyanās, Ānandās, Vishnukundis and the early Pallavas in the region of the river Krishna.²

The term fort denotes; defence from the hazards of nature like rain and sun and attacks from outside. Forts are built in times of peace, designed to defend political, industrial, transportation and communication centres.³ Their importance is chiefly strategic, erected for the purpose of strengthening a place or position. According to G.T. Data in times of yore, the fortress, was a capital means defence. Defence is the major characteristic feature of the fort. The growth of the fort as a defensive structure depended to a large extent upon the contemporary trends of warfare i.e. the methods of attack and defence, the weapons used and the military organisation of the various kingdoms in different periods. In the opinion of B.P. Sinha, fort grew as a corollary to the existing trends of warfare, which one of the oldest aspects human existence.⁴ He also remarks that the art of warfare evolved from the earliest times with attention paid to both offensive and defensive weapons and it continued to be the most dominant and persistent features of Indian history. The concept of fort, as a military structure, has undergone several changes from time to time in its size, methods of construction, disposition of various structures, additional defensive equipment, etc., depending on the contemporary trends of warfare viz., the methods of attack, defence, weapons and implements used.

The Vedic literature mentioned the forts and fortifications made of stone and iron. While *pura* is a word of common occurrence meaning town or city, enclosed by a rampart or strong hold, *durga* is another word, which occurs frequently meaning hard to approach or inaccessible. The two Epics like *Mahābhārata* and *Rāmāyana* also refer to contemporary forts and fortifications (Indrastha and Ajodhya).

Buddhist Jātaka and *Nikaya* literature also refer to forts and fortifications. According to Panini, the most important parts of a city are, moat (*parikha*), rampart (*prakara*) and gates (*dvarah*), which served as the main defences. The plan of the fortified city was usually square, but also rectangular, pierced with four gates; one in the middle of each wall facing the four quarters.⁵

In Kautilya's *Arthasāstra* also we find four kinds of fortifications viz., the water-fortification (*audaka*) such as an island in the midst of a river, a plain one surrounded by low ground; the mountainous fortification such as a rocky track or a cave; desert such as a wide track, devoid of water and over-grown with thickest in barren soil; the forest fortification (*vanadurga*), full of wagtail (*khajana*) water and thickets. Kautilya gives his prominence to hill forts and considers them as the most indisputable. A fort on a hill or mountain is of a self-defensive nature, and not easy to siege or to ascent.⁶ He also mentioned that, a fortress known as *sthaniya* shall be set up in the centre of 800 villages, a *drone mukha* in the centre of 400 villages, a *kharvatika* in the centre of 200 villages and *sangrahana* in the midst of a cluster of 10 villages.⁷ A series of rules governing the construction and maintenance of forts given by Kautilya.

The *vāstu vidyāchāryās* or expert architects were requisitioned for testing the sites. The *Arthasastra* prescribes the digging of ditches (*parikha*) as the first item in the construction of forts (*durga-vidhana*). The moat was first built so that the earth so obtained was utilised for constructing the mud rampart (*pamsu prakāra*) or moulding bricks for the city wall. It also refers to the digging of three moats round the fort, having an intermediate space of *danda* (six feet) between each other. The *Udaya Jātaka* mentioned three types of moats, viz., *udaka* (water), *kaddama* (mud), and *sukha* (dry). Panini suggests a *dāvapatha* or passage above the ramparts. According to Kautilya the wide moat on the top of the parapet built along the line of battlement was called *dāvapatha*. The height of the brick wall above the mud rampart (*prakāra*) is stated to be 11m. from the ground level, on which the battlements were built. The *Manusmṛiti* and the *Purānās* like *Matsya*, *Vāyu*, *Brahmanda*, *Agni* and *Vishnudharmottara*, all of which ascribe a place of importance to the

institution of fort, and insist upon its possession by a king. For instance, *Manusmriti* says that a king should have a fort, equipped with a spacious palace, habitable in every season and well supplied with water, weapons, money, grains and Brāhmans, artisans, and engines, fodder, etc. It considers that a bowman placed on a rampart is a match for 100 foes and 100 bowmen for 10,000 foes.⁸

In ancient Āndhrad̥sa, we understand through archaeological investigations that habitations in the Palaeolithic period were constructed on the river-banks, forest areas and in natural caves. It is revealed that these natural caves served both as habitation areas and were also used for defence purposes. The excavations at Mucchatlachintamanugavi exposed the sub terranean caves by Mesolithic men. In the next stage the Neolithic man chosen mostly to settle the terraces of the hills. In course of time, they lived in pits, probably to protect themselves from wild animals.⁹ Excavations at Utnoor¹⁰ and Nāgārjunakonda¹¹ attest evidence for this, in the form of post holes mean for planting stockades, suggesting the existence of barricades for small cattle pens. Similar structures were built around habitations and burial complexes at Chinnamarur and Veligonda, clearly show that not only the Neolithic occupancy but also Megalithic culture. So, we find that defence was one of the considerations for pre-historic dwellings; it may be a cave, rock-shelter or hut, which in turn led to the construction of houses, formation of villages, towns and cities. Thus, the beginning of fort as a structure lay in pre-historic period. In Deccan, the earliest mud fortification can be dated between 1500-1200 B.C. in the Jorwe phase, as site of Daimabad and Inamgoan.

The earliest mention of forts or fortified towns occurs in the accounts of Megasthenes followed by Pliny. Pliny mentions the Āndhra territory in the eastern Deccan as including thirty walled towns, besides numerous villages, and as maintaining an army of one lakh infantry, two thousand cavalry, and one thousand elephants. From this we learn that the strategy of the Āndhras who had defended their settlements with fortified walls. These monumental structures also speak for the planning of the towns that were situated in the Deccan. Several attempts have been made to

locate and identify the towns mentioned by Pliny. Archaeological excavations revealed a good number of early historic sites such as Dhulikatta, Kotalingāla, Bodhan, Satānikota, Dharanikota, and Nāgārjunakonda brought to light well developed fortified towns. The forts in early Āndhrad̥sa were mainly built of perishable materials like mud and brick, as against stone, which became the chief material of later times. The architecture of forts depends, to a large extent, upon the building materials and methods of construction in vogue in a particular period. The earliest phase of fort architecture built of mud, morrum and brick represented by the forts of Sātavāhanās and their successors at Dhulikatta, Dharanikota, Nāgārjunakonda, Kotilingāla, Keesaragutta, etc.

Dhulikatta: Dhukatta is a small village in Peddpalli taluk of Karimnagar district of Telangana region, lays a huge mound extending over an area of about thirty six acres of land. Excavations revealed a mud fortification and brick wall, over rubble foundation with six courses running in north-south direction. Four gateways were traced at the four cardinal points. At the southern gateway bringing out the plan of the guard-rooms, prefaces by a gate-house, to light. The plan of both the buildings is enigmatical as nothing more than the foundations has survived. However, it appears that the guard-rooms comprised two rectangular halls, with a middle path-way and with an outside measurement of 15.13m. north-south by 14m. east west. There is a gap of 4.40m. in the middle for the path-way. While building the guard-rooms, it appears that large chunks of the rampart were cut off on either side of the building for accommodating the structure in the width of the rampart. The flooring inside the halls was paved the brick (56X27X7 cm.).The middle path-way was initially strengthened with rubble and veneered with morrum and silt. The plan of the gate-house, prefacing the guard-room, is uncertain as it was not found in it's entirety. It constitutes a broad gateway outside and stuffed in the middle, which again widens towards the guard-rooms. The central part of the gate-house with space adequate only for the path-way, had casemates or ambush niches on either side. The only existing casemate on the west (1.20X0.90 m.) was actually carved into the mass of the wall. A flight of steps was provided to the

casement. Obviously a room of such small dimensions with a flight of steps could only serve as an ambush niche to post arm-guards, who would not be noticeable to the incoming and outgoing people. At present the *niche* appears like a cistern which was filled up at a later period with coarse red conical bowls, dishes and animal bones. The facade of the gateway must have had one or many storeys with a terraced roof, railings and pillars. Entrance to these storeys might have been provided with stair-case. The representation of the city gates of *Kusinara*, as seen in the lowest architrave of the south gateway of the Sanchi stupa, may be a replica of the city gates during the period under review.¹² The rampart of a height of 5m. was built of the earth dug out side. Traces of the trenches, which once served as moats are visible. The lower portion of the rampart consisted of hard yellowish morrum overlaid by a layer of black soil, which was capped by another layer of disintegrated morrum. Adjoining the mud fortification inside was traces a rubble foundation, super structure of which is now completely ruined. This must have been a brick fort-wall as the super structure and the battlements were built above it. The height of the brick fort-wall above the ramparts was arranged to be 11m. rising from ground level, but we do not have an idea of the height of the brick wall at Dhulikatta. Thus, it clears that Dhulikatta came into existence in the pre-Sātavāhana period and transformed into a nucleus of political activity during the Sātavāhana period.¹³

Budigapalli: It is located in Karimnagar district. The fortification around the early historical mound appeared like a bund of a tank rising to a height of 3m. from the surface. The fortress is in combination of a range of hills, known as Valasagattu on one side.¹⁴

Satānikota: Satānikota¹⁵ is situated in Nandikotkur taluk of Kurnool district, on the right bank of river Tungabhadra, the tributary of Krishna river. The name Satānikota appears to be a alter form of Sātavāhanikota, which indicates that, it was a fortified place during the Sātavāhana period. Excavations brought to light a fortified township of the Sātavāhana period (middle of the third century A.D.). Cuttings lay in different parts of the western mound, namely SKT-1 yielded a huge fortification wall and

moat. Similarly, trenches in SKT-3 and 4 laid in the western and southern periphery of the mound revealed an elaborate gate complex, and the extension of the fortification wall and the moat. Stratigraphically the fortification activity belonged to the middle of first century B.C. to middle of third century A.D. which represents the chief occupational period which falls into three main phases; I, II A, and II B. According to M.C. Ghosh, the fortification wall, together with the moat and the gate, form the main structural activities of phase I. It was also observed that the buildings of the fort followed, in medieval times, the shape of the natural elevated ground, while the existence of the fortification wall could be well established, partially on the western and eastern periphery. On the southern side was exposed a considerable stretch of the wall with a gateway. It was also found that the steep and inaccessible escarpment on the riverside rising to a height of 9 mts. From its bed on the north-east effectively utilised for defence. However, no bastions were noticed. The main fortification wall was built of Cuddapah slabs of irregular dimensions laid in mud mortar. It measures 3.20 mts. In width is with about 10 to 13 courses. It is raised immediately over the red paginated gravels, and provided with backed brick farming rising to an existing height of 5 courses. The bricks measure 56x25x6 cms. On the outside, the fortification wall is skirted by a rock-cut moat cut into the natural bed-rock, as evidenced by chisel marks. The gateway complex on the south is the most outstanding architectural part of the entire fortification complex. It is characterised by a flight of steps, with a width of 3 mts. flanked by a 0.45 mts. wide, north-south running parapet wall, partly of baked bricks and stones. There is also evidence of two sockets on either side of the outer edge of the gateway complex and almost balanced on the inner edge of the moat. This according to the excavations, was meant for heavy posts of a draw bridge used for crossing the moat.¹⁶

Nāgārjunakonda: Nāgārjunakonda is a historical town, now an island located near Nāgārjunasāgar in Guntur district. It is one of the India's richest Buddhist sites and now lies almost entirely under the Nāgārjunasāgar dam. It is named after Nāgārjuna, a southern Indian master of *Mahāyāna Buddhism* who lived in the second century B.C., who is believed to have been responsible for the Buddhist activity in the

area. Nāgārjunakonda rose to prominence after the decline of Sātavāhanās, in the first quarter of the third century A.D., when the Ikshvāku king Vāshishthiputra Sāntamula established his capital Vijayapuri here. Enclosing a trapesoidal area about 900 m. 600 m. the citadel wall ran along the right bank of the Krishna river, on the west at an average distance of 105 m. from it, while on the south, it overlay the summit of the 51 m. high Peddakundellagutta hill, its maximum extant height on the plains being about 4.80 m. above the outside groundlevel. Trenches lay across the wall, both on the east and west showed that it had been built in two phases; the first or lower phase was presented by a rampart of morrum or mud above 24 m. wide at the base, resting on the natural soil, except on the western (river) side, where it overlay an earlier occupational deposit represented by a floor and a few hearths; the second phase was represented by a burnt brick wall 2.75 m to 4.27 m. thick, generally built either directly on the existing rampart or on a secondary filling over it, but on naturally high grounds directly on the bare rock surface. The fortification wall was surmounted by a ditch on all the three sides, 3.65 m. in depth and varying 22.20 m. in width. Two main gateways, one each on the eastern and western sides, and a narrow postern gate, on the eastern, and possibly serving as an emergency exit were exposed; close to the eastern gateway were barracks including stables and a nicely plastered masonry cistern. The western gateway is with a minimum width of 5.10 m. lay near the *asvamādhā* site excavated.¹⁷

Pedavāgi: Pedavāgi is situated near Ellore in West Godavari district; it was the capital of the Sālinkāyanās, who flourished in fourth century A.D. It is referred to as Benagouron situated in the country of Salekenoi by Ptolemy in second century A.D. We also find its mention in the Allahabad *prasasti* of Harisena, while relating the southern expeditions of Samudragupta in the latter half of fourth century A.D. Since then Vāgi continued to enjoy a place of political importance in the history of Āndhrādīsa and even a dynasty that ruled over it latter, i.e. Eastern Chālukyās of Vāngi. The fact that it still contains some antiquarian remains of interest points evidence to its being a fortified city. Excavations carried out by I.K. Sarma, at Kotadibbalu, revealed wide-

ranging ruins including a fortified township surrounding the nearby hamlets to an extent of roughly 6 sq. Kms. They also exposed gravel fortifications adjoining an area of one square km. Trenches cut across the gravel fortifications cut out in the western part, brought to light a moat with silt and water. Brick alignments representing postern gateways were traced on the surface of the north-west and southern sides of the fortifications. The brick size and ceramic ware clearly indicate that the fortifications were used during the Sālinkāyana period and continued to be in use, perhaps strengthened, during the succeeding phases.¹⁸

Kudura: It is located in Krishna district. Ptolemy calls it as Kodura. From the Kondamudi plates of Jayavarman, we learn that, it was the capital city of the Brihatphalāyanās, who ruled over the kingdom, comprising the region on either side of the river Krishna near its mouth, related to modern Gudivada and Bandar taluks of Krishna district and Rapalle and Tenali taluks of Guntur district.

Pithapuram: Pithapuram in East Godavary district is yet another fortified town in early Āndhrādīsa. The fort also mentioned for the first time in the Allahabad pillar inscription of Pulakīsin II refers to the existence of a Jaladurga there. Its continued existence even during the following period i.e. medieval period is known through the Chelluru plates of Chālukya Chola king Kulottunga II dated 1134 A.D. where it is referred to as Sarasipuri of Kolanu, whose chief as the time was Kātamanāyaka.

Tummalagudem: Tummalagudem is a village in Ramannapet taluk of Nalgonda district, eight kilometres away from Ramannapet, on Bhuvanagiri- Nalgonda road. Ruined temples, votive shrines, brick structures, basements, show that it was a great city which flourished by the name Tummalagudem and adjacent to the river Musi. There is a hillock called Indrapalagutta extending one k.m. in length and half k.m. in breadth. There is an ancient fort on this hillock belonging to the Vishnukundi period.¹⁹ The fort has twelve turrets. The fortification has gates and towers.

Keesaragutta: Keesaragutta was the capital of the Vishnukundis (fourth-fifth centuries) about 40 kms. east of Hyderabad. It is an example of

brick construction over 3mts. broad dressed rubble stone foundation. Keesaragutta has a wide-ranging fortification wall around the hills surrounding an estimated area of 3 to 4 sq.km. The bricks are measuring 46x25x7cms. used for raising superstructure, is still able to be seen all along the fortification wall in remains and at some places intact. The fort was provided with three main gates on the east, the west and the north, prefaced by strategic secondary walls in the shape of crescent bulge; some water gates were also provided at the water ponds for fetching water to the fort. Such numerous ponds are noticeable today. There is a huge tank at the foot of the fort on the west which much have served as a source of drinking water as well as a deep water difficulty for protection of the fort. Similarly, there is a big tank on the eastern side below the fortification. Traces of guards-rooms were found near the main gates and the entire fort is situated with brick structures.²⁰ Further, the site also yielded immeasurable Vishnukundi coins, bearing squatting lion on the obverse and *poornaghata* motif flanked by two lamp stands on the reverse.

A study of the military organisation of various kingdoms and the depiction of arms and weapons in the sculptural carvings of various periods help us to understand the warfare. An Amarāvati rail pillar²¹ shows clearly that the art of warfare and military organisation of these times. Cities were well protected with high walls, ramparts, and gates, walls and gateways were surmounted by *toranās* as at Sānchi.²² Warfare in ancient Āndhra appears to have been based on the conventional form of *chadurangabala*, i.e. four fold division of army into infantry, cavalry, elephant, and chariots. During this period, infantry played a major role forming the front line of attack. Hence, the wide prevalence of field warfare, or land battles, fought at a chosen site or terrain, between the two warring factions, far away from their capital cities, the idea behind which was not to disturb or cause hindrance to the civilian population. The main weapons of warfare, as seen from

the sculptural carvings at Amarāvati and Nāgārjunakonda, are stones, sticks, clubs and mace which are called as crushing or stunning weapons.²³ Kautilya prescribes a series of rules governing the construction and maintenance of forts. He mentioned the office of *Antapāla*²⁴ to command a fort, and refers to revenue from forts²⁵ and lists a series of toll duties, as coming under the head of forts. It is not known, to what extent, the above rules were followed by the Sātavahānās and their successors.²⁶

To conclude, it is clear, that the study of a few sites of the Sātavāhanās and their successors we understand that the art of fortification was well known in early Āndhras. Although the evidences to these forts and fortification of towns are missing in the literature and epigraphs of the period, the evidence of archaeological excavations prove the point. Further testimony is provided by the writings of foreign travellers like Megasthenes, Pliny and Ptolemy. The terms fort and town were one and the same, i.e. every town or city of importance was invariably fortified. The forts in their first phase were constructed of massive mud ramparts which were strengthened and perfected by brick walls. Some of these forts were provided with moats, gates and guard-rooms. Guard-rooms were noticed at Dharanikota and Keesaragutta. Dhulikatta, Kotilingāla, Dhranikota, Satānikota and Nāgārjunakonda are situated both on plains and hills, in close proximity to perennial water sources, which also offered natural protection. Habitation and public utility structures were systematically planned as observed at Dhulikatta, Nāgārjunakonda, and Keesaragutta. Several water ponds are noticeable even today. Almost all the settlements well fortified either by mud or brick walls, surrounded by deep moats. The evidence of bastions appears during period for the first time at Kotalingāla. The forts both earthen and brick have also been reported from Kotalingāla, Dhulikatta, Satānikota, Dhranikota, Nāgārjunakonda, etc.

COMRADE P.SUNDARAYYA ROLE IN THE TELANGANA STRUGGLE

M. Muniraju

Puchhalapalli sundarayya, or PS as he is popularly known, was born into a landlord family in Alaganipadu village of Nellore district, Andhra Pradesh, on 1 May 1913. His parents had seven children. The eldest was Venkatarami Reddy, followed by four girls, then Sundarayya, and the youngest was Ramachandra Reddy who went on to become known as a people's doctor. Sundarayya's father, who owned almost 50 acres of land in the village, was an influential man and respected by all for his skills as an agriculturist. He died in 1919-when PS was only 6 years old - after which his wife Seshamma took on the responsibility of looking after the family with the help of her eldest son.

The years between 1946 and 1951 were a watershed in the history of the communist movement in Andhra Pradesh, when comrade sundarayya, along with comrades M. Basavapunniah, C. Rajeswara Rao, Ravi Narayana Reddy, Baddam Yella Reddy, B. Narasimha Reddy, Devulapalli Venkateswara Rao and other leaders, organized the resistance of the Telangana peasantry in opposition to the feudal landlords and their hated patron, the Nizam.

One day, towards the closing days of the year 1946, when the guerrillas were training in the Kondapalli forests as a prelude to the heroic revolutionary struggle of Telangana, Sundarayya suddenly appeared amidst them as they lay in wait behind the bushes with their

guns, taking everyone by surprise. The purpose of his visit was not to give them political instructions or deliver a lecture, but to personally participate in the training. He became one of the guerrillas that day. He discussed with them the problems related to their training sessions, helped to solve these, and then, having delivered an inspiring political message, cycled back 30 miles all the way to Vijayawada.

Sundarayya volunteered to take up the responsibility of leading the Telangana movement during these four to five years with great determination. He and his colleagues not only gave guidance to the struggle, but also spent time with the guerrillas sharing their joys and hardships. The people of Telangana had to face not only the Nizam's army and the Razakar bands of the landlords, but also the Indian army, which committed untold atrocities and inflicted brutalities on the Telangana peasants. PS kept the guerrillas regularly apprised of changes in the political scenario. He informed them of the new situation that arose when the union government entered the scene, and discussed with them as to how the liberation struggle against feudal rule had to be advanced in such a situation.

He instilled confidence in the guerrillas caught in the encirclement of the Indian army and showed them the way to move ahead. He talked to them for long hour about the pros and cons, and the new tactics to be employed in

continuing armed resistance in self-defence. He participated in the training sessions that were conducted after decisions had been taken regarding new tactics. Dressed in a half-sleeved shirt and shorts, and with gun in hand, he trained hard in the dense forest all day long, in step with the guerrillas.

PS breathed fire on the battlefield, and was equally stern and disciplined in his daily life. Around 40 years old then, he would wake up at 4 in the morning and go through a routine of rigorous physical exercise for about an hour, after which he was ready for the day's work. In those days of "shoot at sight" order, PS moved around on a bicycle, always armed with a small weapon in his pocket; he also operated through countries, passing on message about further courses of action.

Different member of the guerrilla squad used to take turns to keep guard over the squad, day and night. One night, it was decided that there would be a change of guard every hour. Although the comrades had worked out this rotation system of guard duty among themselves, Sundarayya made it a point to wake up on the hour through the night to see to the change of guard before going back to sleep.

The he did despite a long, hard day of discussions, meeting, writing, reading and training. And then, by the time the comrades were up in the morning, however early, he was

already fully awake, had completed his daily exercise and was listening to the radio. He had kept himself awake every hour throughout the night, and was still up and about before any of them! Sundarayya's capacity for tireless work was a source of inspiration to everyday.

He would read the morning newspaper at the same time as he was listening to the radio. Once a comrade asked him what exactly he was doing, reading or listening. Sundarayya replied with a smile that he was doing both. He proceeded to give him the gist of what was in the paper as well as what he had heard over the radio. Not just that-he said he had also overhead the comrades whispering amongst themselves about him. They were wonderstruck at his ability to do so many things simultaneously.

Then the time came when it was not possible to carry on the struggle any longer, for the lives of hundreds of comrades were at stake. The question was how to retreat with minimum losses. No step could be taken without consulting the partisan squads and without their approval. This resulted in a huge ideological battle. PS had to argue for two whole days and nights to unify the squad leaders in agreement on the strategy to be adopted. The tremendous confidence he had been able to gain from them during the period of struggle was an important element in clinching the issue of withdrawal in 1951.

A CRITICAL ANALYSIS OF THE ARGUMENTS ADVANCED BY THE OPPONENTS AGAINST HOME RULE

K.L.N. Murthy

The year 1916 was one of the most momentous year for India, as the movement for Home Rule was launched by the two most fiery leaders, Tilak and Besant. The movement drastically influenced the people of India and played a pivotal role in strengthening the roots of the Indian Nationalism. In a very short span of time the movement made an expeditious

headway and it became the most dominant political force in India. Its meteoric progress was witnessed throughout India and the whole of Western, Central, Northern, and Southern India were under its sway.¹ The stalwarts of Home Rule made a strong appeal to the people through their vivid metaphors and emphatically justified their claim for Home Rule. Although the

movement witnessed a fervent support, it had to confront a strong opposition from different sections of the Indian society. The strata of society which heatedly opposed the demand comprised of Christians, orthodox Muslims, Non-Brahmins, Anglo-Indians, Zamindars, landowners, Sikhs and Parsis.² Different groups averse to the concept of Home Rule had their own particular views and their apprehensions, which made them resist the demand in unison.

As far as opposition is concerned, it is a veracity that any successful movement has to withstand an opposition. They were not in compliance with the Home Rule ideals of the different sections of the community whether they were Muslims or Christian or non-Brahmin possessed their cogent reasons, keeping in view the sectional interest and the political advancement of their community, in particular. The British Rulers were coherent in their argument. They aspired to achieve Representative Government for the Provinces, which explicitly meant that the Executive would be under the elected representatives of the people. The people who were transparently securing support from the British rule realized that their communal sectional interest would suffer an eclipse and also the political advancement of their community would be impeded. It was in respect to these views that the opponents unmitigatedly countered the Home Rule demand.

There are specific reasons advanced by the different communities for their disapproval of the grant of Home Rule.

1. The Christian community's perspective regarding Home Rule was that the time was yet not ripe and was inappropriate for the Indians to take the governance of the country into their own hands.³ They were apprehensive that, if Home Rule was acceded to in India its condition would be similar to that of Russia. They reckoned that for the proper functioning of the Government of the country unity was a prerequisite and Indians did not fulfill this criteria.⁴ According to them India lacked homogeneity,⁵ and the movement was confined to few politically- educated persons. They were convinced that India lacked universality and was "unfit" to govern her own internal affairs.⁶

2. The orthodox Muslims who posed a vehement challenge to the demand reckoned that the acceptance of Home Rule would only mean the establishment of the Hindu Rule.⁷ They contemplated that Besant was all for Hindus and this would place the Muslim minority under the "iron heels of the unsympathetic Hindu majority."⁸ The Aligarh School of Thought was acutely against the Home Rule creed⁹ and believed that it would result in the destruction of the country.¹⁰

3. Fear of Brahmin predominance was a potent factor in shaping the views of the non-Brahmins.¹¹ They felt apprehensive that the grant of Home Rule would result in the entrenchment of the Brahmins in the administration and lead to Brahmin Rule.¹² They were convinced that Besant was all for Brahmins and regarded her as an "Irish Brahmini."¹³

4. The Anglo-Indians who belonged to an affluent society and were endowed with great power and privileges, feared their future in India was uncertain.¹⁴ They were in support of the existing bureaucratic form of government and desired to maintain their influence, which otherwise, with the grant of Home Rule would either be little or diminish.¹⁵

5. The Zamindars, landowners, Sikhs and Parsis lent credence to the fact that the rise and prosperity of their community was entirely due to the British rule and Home Rule would only result in monopolizing their benefits.¹⁶ They thought on that Hindus would only work for the advancement of their own community, and as far as their community was concerned it would suffer a great setback.¹⁷

When we closely examine the arguments put forth by the opponents, their desire for the peculiarity which we observe is the continuance of the British rule. They displayed a remarkable unanimity on the point that their community's interest would flourish only when the power rested in the British hands, otherwise, they feared the political advancement of their community would suffer an eclipse, and would result in incalculable loss.

Both Tilak and Besant expounded that India was ruled by bureaucrats and that the government of this country must be solely responsible to its own people and not to any

other country or its rulers. It is certainly true that bureaucrats can never identify themselves with the dominated country's interest. The policy makers and decision makers who dominated the administration were generally foreigners, whose allegiance lay with their country rather than the country they came to rule. So how was it possible for Indians to support the English bureaucratic rule. When their country's interests were overlooked and the problems confronted by their people were disregarded. The only viable alternative which the Home Rulers discerned to this problem was the immediate grant of self-government. They regarded self-government as the only panacea to such a problem because this was the only form of government which could provide the national atmosphere for the indigenous development. By self-government the leaders of the Home Rule movement meant Representative Government where the aspirations of the people were valued and respected¹⁸ They lent credence to the fact that there should be a Viceroy who should act in accordance With the counsel of the representatives of the people and the expenditure should be with the consent of the people¹⁹ They claimed that good government; howsoever good it may be, can never be better than the worst self-government ²⁰ and emphatically denounced the bureaucratic form of government,²¹

The opponents attributed the existing peace and progress of their community to the British rule, and feared that Home Rule if granted would eventually lead to the destruction of the country. One fails to comprehend how the British rule could prove to be beneficial for the subject country? The truth is this that a foreign government can more appropriately have cognizance of its own country's requirements rather than a subject country. For any successful government, co-operation and participation of the people is the pre-requisite. A foreign government in case of any conflict of interest between the home and the subject country cannot give preference to the subject country. Besant explicitly discussed the pros and cons of efficiency in her Presidential address at the Calcutta Congress in 1907. She applied Gokhale's Four Tests of Efficiency to judge whether the government was progressive and expressed, that the bureaucracy had failed to improve the moral and material conditions of

life. ²² She remarked — "The British administration while efficient in those matters which concern the British interest is inefficient in the greater matters- on which the healthy life and happiness of the people depend."²³

The opponents inferred that their community's representation would be adversely affected and Home Rule would result in the entrenchment of the Hindus in the administration. In fact the Home Rulers held an adverse opinion for the conviction of their. During the Lucknow Congress, Tilak expressed his willingness to accede to 35% representation of the UP Mohammedans. ²⁴ at a time when Mohammedans themselves were demanding for a 30% representation.²⁵ It was Tilak who immensely found a key to the most perplexing question of the Hindu-Muslim settlement. Tilak was of the view that in order to "gain the desired end there is no objection to accede a greater percentage to the Muslims."²⁶

Presidency	Population	Representation
Karnataka	13%	25%
Bombay	20%	33 1/3 %
Madras	7%	15%
Central Province	4%	10%

The above-mentioned table apparently displays the preference given to the Muslim community, and therefore there should have been no apprehension amongst the Muslims for the entrenchment of the Hindus in the administration, inspite of Tilak's avowed assurance of higher percentage of representation in the Provincial Legislature, which was, indubitably not commensurate with the percentage of their population. As compared to the population of these provinces, the representation accorded to the Muslims was too high.

The opponents were convinced that the demand lacked universal aspiration and was confined only to the politically educated class. Though their claim was right, the fact cannot be shunned that it was only this microscopic minority, which was representing Indian society. It was only their English education that brought

them to a position where their demands could reach the ears of the British upper echelon. To put a cloak over the demand and to say that the movement lacked universal aspiration would be unfair as the claim for Home Rule was put forth by them on behalf of the Indian people. If they lacked the desire then it would have never been possible to establish branches of the Home Rule League in provinces, districts, and villages.

The opponents contemplated that the movement was not mass-based and it lacked unity. Although there is some truth in the statement that the movement was not mass-based, but their opinion that the masses were not ready for Home Rule, cannot be accepted. Those who stayed away from the movement were not so much against the demand as the leadership of an Irish lady. Besant possessed a tremendous following of the educated classes. They had a firm belief both in her pen and tongue. One can never expect the involvement of the illiterate masses in a constitutional struggle. Within a very short span of time when Gandhi launched the Non-Cooperation movement in 1920, there 'as tremendous mass following which was only because he was man of Indian soil and the movement launched by him was not a constitutional struggle. If we converse of the non-involvement of the masses then how was it possible to launch a movement during the World War when Britain was passing through its most crucial time? The answer to this question lies in the participation of the people who made the movement a living gospel. The movement was launched and the whole of Western, Central, Northern and Southern India were under its sway.

The Critics of Home Rule believed that India was not fit for self-government, and conditions would worsen if it was granted. They explained that the Home Rule demand involved neither the denial of the British sovereignty nor changes of catastrophic nature in the existing political relation between India and England²⁷ They drew a demarcation line between fitness for Home Rule and fitness for independence. "When people are fit for independence they do not argue about it; they simply win it—snatch it for themselves. But, the agitation for Home Rule was not for independence, but for the demand

of Home Rule, which clearly meant that we agree to remain within the British Empire and have internal autonomy."²⁸ Tilak neither wanted any change in the Empire nor any change in the relation of India with England.²⁹ He regarded that India should be allowed to determine for herself the form of Government best suited to her conditions as no civilized nation should be governed by any other nation.³⁰ He said without freedom it is impossible for us to attain that position to which we are entitled as a birthright³¹

"Swaraj means the power to rule our homes and hence it is called in short Home Rule. It is your birth-right to govern your house or home; nobody else can claim to do it, unless you are a minor or lunatic. Home Rule is our Jh'ai'ma, you cannot separate it from us, as you cannot separate the quality of heat from fire; both are inseparably bound up."³²

Conclusion

The Home Rulers made it clear that Home Rule was the struggle for obtaining control over the management of their internal affairs only. The term Home Rule itself implies, "a Home to Rule." The Home Rulers explained that demanding for Home Rule does not mean that it is a revolt against the British King and the Parliament, but it means constitutional and orderly changes in the existing system of administration suited to India. They argued that Home Rule was a constitutional aspiration of Indians. The Home Rulers took the view that Indians had a Constitutional right to urge a change in the visible form of the government for the better administration of the country.³³ The logic given by the Home Rulers in justification of their demand made it apparent that their claim for Home Rule was not seditious. With their impressive mass of evidence they successfully proved that India was legitimately entitled for Home Rule. Undoubtedly the movement had to confront opposition, but unity was utterly lacking among the opponents of Home Rule and therefore, it became possible for the Home Rulers to withstand pressure and carry out their demand expeditiously. The ardent zeal of the Home Rulers to attain their object with every passing day solidified.

HISTORY OF FREEDOM MOVEMENT IN AYYAMPALAYAM

Dr. S. Nagaraj

Ayyampalayam is a panchayat town in Dindigul district in the state of Tamil Nadu.¹ This village is located eighteen miles south-west of Dindigul, lies in a valley of the Lower Palani and is watered by a river of the same name. Its temple of Ayyanar is well known. It does a great trade with the Lower Palani in the hill products of that range.² This town deserves special

mention in the history of freedom movement. The unsung patriots of this region created a niche for themselves in the history of anti-colonial resistance right from the eighteenth century. When the freedom struggle started in an organised manner from the inception of the Indian National Congress in 1885, the Satyagrahies of Ayyampalayam town took an

active part in it. Hundreds of people in this town had taken part in the freedom struggle. They participated in the movement without any fear of imprisonment, lathi charge and conviction. Many of them had courted arrests by the British Government. There are 22 names of those who suffered imprisonment for their participation in the freedom movement in this town available in Volume I of *Who's Who of Freedom Fighters*, published by the Government of Tamil Nadu in 1973.³ Civil Disobedience Movement, Individual Satyagraha, Anti-war activities and Quit India Movement were observed in this town vigorously in several places. An attempt is made in this paper to identify such patriots who took part in these movements and sacrificed their all.

Raja Mavalial was born at Ayyampalayam village in 1922. His parents were Palchamy Mavalial and Nagammal. He was married to Nagarathinam and had a son and a Daughter. Mavalial became an active worker of the Congress in his school days. He studied upto eighth standard in the local primary school at Ayyampalayam. Due to the national spirit in his mind he cut short his school. Mavalial devoted his energy to freedom movement by associating himself to Indian National Congress. He started to take part in the national movement when he was 17.⁴

He became a Congress volunteer even of the age of Seventeen. In 1939 he enrolled his name in the Congress Committee Office at Anguvilas in Dindigul Taluk. He carried on the freedom task with utmost sincerity and realised that hard work was the key to his success. So from his young age, he developed a personal honesty pursued through hard work with a passion to serve his fellowmen.⁵

Raja Mavalial was an ardent follower of Mahatma Gandhi. Individual Satyagraha is a salient feature of freedom struggle. Sale of khadi goods, anti-war propaganda and untouchability were the chief objects of Individual Satyagraha. He strictly adhered these with the sense of devotion and sacrifice.

The Congress Working Committee met at Bombay on August 8, 1942 and passed the famous Quit India Resolution. Gandhi gave the call to the people either *Do or Die*. In 1942, he joined the freedom movement by participating

in the Quit India Movement. Mavalial along with his five friends stick a posture with vulgar words and also set fire on Kannivadi Zamindar Office. Police resorted to firing on the freedom fighters. Mavalial organised meetings and promoted patriotism. As he had revolted against the English Government, he was arrested and convicted for two months and put at Palayamkottai Jail. He was then released in 1942.⁶

During 1944, he met Gandhiji when he visited Palani and the meeting proved to be turning point in his life. He also met Jawaharlal Nehru at Hyderabad after independence. On the advice of Gandhiji, Mavalial began to take interest in the politics.⁷ He was the President of Ayyampalayam Municipality from 1956 to 1958. He always tried for the development of roads, Bus Stand and schools in the village.⁸ Mavalial stood very boldly for the cause of common man and rendered his selfless services for the uplift of the village. As he was a great person, he took keen interest in the welfare of the people. He took leading part in the political and social awakening of the village. Being a dedicated social worker, his only aim was to serve the people and help them in their upliftment. During the Golden Jubilee year of Quit India Movement Raja Mavalial was honoured with a memento on 8th August 1992 in Chennai.

Movement wise number of Ayyampalayam town freedom fighters who courted arrest and suffered imprisonment⁹

1	Civil Disobedience Movement	
2	Individual Satyagraha	2
3	Quit India Movement	8
	Total	2

The table will make us understand how vigorous the Quit India Movement was observed in Ayyampalayam. Satyagrahies who had participated in the freedom movement in Ayyampalayam town were:

Alagarsamy, P.V.: He was born in 1910. He joined the national movement in 1925 and had taken active part in toddy shop picketing in 1930; foreign cloth boycott in 1932; individual

satyagraha in 1941 and Quit India Movement in 1942. He was courted imprisonment and kept in madras jail for two months.

Anandapadman, T.V.: He was an important hero of the Quit India Movement. He was born in 1925 and was educated upto primary standard. He joined the national movement in 1942. He took an active part in August Movement of 1942. He set a fire to a Toddy shop at Nilakkottai. He along with other patriots damaged the Post office at Kannivadi. He was courted imprisonment and kept in Madurai and Alipuram Jails for 11 months.

Chianna Vellan : He joined the national movement in 1929 and took part in the salt satyagraha agitation in 1930. Chinna Vellan was arrested and tried by the government and awarded 6 month imprisonment and kept in Madurai jail. **Manickam :** He was son of Muthuveerappa Pillai, born in 1920. He was joined the movement in 1934 and took part in individual satyagraha in 1941 and Quit India Movement protest in 1942. He was arrested for that and awarded courted imprisonment and kept in Madras, Papanasam and Dindigul jails for 7 months and a week.

Servai Karruppiah: He was a son of Muthian Servai. He was a literate who joined the national movement in 1940. He took an active part in Quit India Movement procession in 1942. He was courted imprisonment in 1942 and kept in Kumbakonam and Madurai jails for 1 ½ months.

Raju Ambalam: He was the son of Alagu Ambalam and a native of Ayyampalayam village. He was born in 1912 and was a literate. He became a member of Tamil nadu Congress Committee. He was a fourannas Congress Member of Dindigul.

He was an active participant in the national movement. He joined the national movement in 1930. He observed toddy shop picketing in 1930; foreign cloth boycott in 1932 and Individual Satyagraha in 1941. Again he took part in Quit India Movement in 1942. He was arrested for that and awarded ten months Rigorous Imprisonment in Madras and Alipuram Jails.¹⁰

Other patriots who participated in the Quit India Movement are listed in the below table. They were courted arrested and imprisonment at various jail located in Tamil Nadu.¹¹

S.No.	Name	Imprisoned at	Duration
1	Ambalam	Nilakkottai Sub-Jail	3 months
2	Ananda Padmanabhan	Alipuram	6 months
3	Jayaraman Chettiar	Alipuram	2 months
4	Erulan	Alipuram	2 months
5	Irulappan	Alipuram	4 months
6	Koozh Pandi	Alipuram	6 months
7	Padmanabhan	Madurai and Alipuram	4 months
8	Marimuthu Paliavarayar	Ramnad	1 month
9	Natarajan, V. S.	Ramnad	17 days
10	Ramlingam, L	Ramnad	2 weeks
11	Ramanathan	Madurai and Alipuram	17 days
12	Sadayandi M.K	Dindigul	2 months
13	Servai Koolu	Madurai and Alipuram	4 months
14	Thangavel A.B	Madurai	2 months

MAKARA MOTIF IN INDIAN ART

Dr. V.G. Natarajan

Makara is a sea-creature in *Hindu* culture. It is generally depicted in the art as half terrestrial animal in the frontal part and half aquatic animal in the hind part usually a fish or seal tail, snake tail though sometimes a peacock or even a floral tail is depicted. Even though *Makara* may take many different forms throughout *Hindu* culture, in today's modern world, its form is always related to the Marsh crocodile or a water Monitor. In *Hindu* astrology, *Makara* is equalent to the sign of Capricorn, teeth of the twelve symbols of the zodiac.¹

Makara appears as 'the *vahana* (vehicle) of the river goddess *Ganga*, *Narmada* and of the sea god *Varuna*. *Makara* is considered as guardian of gateways and thresholds, protecting throne rooms as well as entryways to temples; it is the most commonly recurring creature in *Hindu* and Buddhist temple iconography, and also frequently appears as a *Gargoyle* or as a spout attached to a natural spring. *Makara* shaped earrings called *Makara Kundalas* are sometimes worn by the *Hindu* gods, for example *Shiva*, the Destroyer, or the preserver god *Vishnu*, the sun god *Swya* and the mother goddess *Chandi*. *Makara* is also the 'Insignia of the love god *Kamadeva*, who has no dedicated temples and is also known as *Makardhvaja* "one whose flag depicts a, *Makara*²

Makara is a Sanskrit word which means "sea dragon" or "water - monster". It is the origin of the Hindi word for crocodile (magar), which has in turn been loaned into English as the name of the *Mugger* crocodile, the most common crocodile in India³

During the Vedic times when *Indra* was the God of heaven, *Varuna* (the vedic water god) became the god of the seas and rode on *Makara*, which was called "the water monster vehicle.

Traditionally, a *Makara* is considered to be an aquatic mythical creature. *Makara* has been depicted typically as half mammal and half fish. Some traditional accounts identify it with a crocodile, specifically Marsh Crocodile because of its etymological roots. It is depicted with the forequarters of an elephant and the

hindquarters as a fish tail. Crocodile was also a form which was used in the earlier days. as shown with human body⁵

Thus composite figure occurs commonly in Indian art. The sculptures of Bharhut Amaravati, Mathura and the paintings of Ajanta represent this mythical animal impeccably.

It is clear that the crocodile and the fish go into the make-up of the Indian *Makara* has the head of the crocodile and the body of a fish with its scales, tail and fins. Sometimes, a pair of legs is added to this and horns are stuck above the eyes. Such a *Makara* gradually acquires a snout resembling the curled trunk of an elephant and the crocodile lower lip slowly disappears.⁶

In early Amaravati sculpture the *makara* is partly a crocodile and partly a fish with the scales and fins emphasized, the horns absent and the ear fin-shaped. In the later Amaravati sculptures the horns are those of the ram. The tips of the horns are sometimes shaped like a fish tail suggesting that the inspiration was from *Jasha* which is a horned fish. Sometimes a pair of legs like those of a crocodile are added. Slowly, the crocodile jaws lose their length but the animal still approximates to the crocodile after whom his ancestor was made. The teeth are prominent⁷

In medieval times the teeth curve up beside the mouth like the side-tusks of a bear while the body shows it is that of a land animal with short legs like that of a rhinoceros and a tail spread like foliage into a descriptive appendage. It is in this strange animal in Chalukyan and contemporaneous temples that we meet the descendant of the original *Makara* although completely transformed beyond recognition. The curling snout of the crocodile that resembles the elephant's trunk is a later development. Cousins thinks that it may be the result of the influence of the snout of the tapir which it resembles. But it is clearly the elephant whose influence we can see on the *makara* as both the *makara* and the elephant as animals of India. Thus, the following animals have lent their contribution in the composition of the *makara*. elephant, bear, rhinoceros, ram, fish and crocodile.⁸

In early Sanskrit literature we get the earliest reference to *makara* in the *yajurveda samhitas* in connection with the *asvamedha* sacrifice but the exact type of animal is not referred to foot note According to *Coomaraswamy*, the general type of *makara* is crocodilian, quite distinguishable from the water elephant. But in spite of their different nomenclature both *makara* and the water elephant are representations of the same animal but each with a special emphasis on different characteristics of the animal. The earliest extant figures of the *makara* are representations of it in the spandril of the Lomasa RSI cave of the Maurya period and are undoubtedly composite figures of an elephant, a crocodile and a fish

Evidently, therefore, the Indian artists took much liberty in representing this hybrid creature in various ways.

The *makara* is primarily a conjoint sexual symbol such as we find in the Shiva Linga, the base of which is a female genital within which stands the phallus. Here, the *makara-baktra* indicates the former and its body the latter. We thus find that both these elements have been imagined in the *makara's* body to indicate a symbol of continuous co-habitation. Naturally, the *makara* is represented on the banner of *Pradyumna-Kamadeva* whose constant epithet, synonyms (or) attribute is *makara-dhvaja*, *makara-ketu* (or) *mina-ketu*¹⁰ and the same is referred to in the *kadambart*.

Makara with Elephant Forequarters and Fishtail Behind

This type of composite figures get their representation in early Indian sculpture. The sculptures of Sanchi, Bharhut Mathura and Murals of Ajanta depict them realistically. Apart from the sculptural representations, an exactly similar mythical animal in bronze is reported to have been discovered from the recent excavations at Nagarjunakonda". It may be identified as *Gajavaktrajasha* mentioned in the *Mahabharata*. *Kalidasa*" calls it *Matanganakara*, *Coomaraswamy* points out the similarity of the *gajavaktrajashas* with the *Jalebha*. *Grunwedel* calls this animal a sea-elephant and defines it as "a creature formed of the foreparts of an elephant with the body and tail of a fish". It is a common practice to compare crocodiles and fishes in a flowing river to elephants and horses on land. The *Diggajas* which guard the

quarters reside in *patala*, which is a water region. As fish symbolised water, the elephant with the fishtail was probably the design that most appealed to the sculptor when preparing tills type, *gajavaktrajasha*.¹¹

The crocodile appears as a decorative motif mainly. The crocodile has been conventionally associated with sanctity. In the *Bhagavadgita* while speaking about purifiers Sri Krishna says to Arjuna that he was the *Makara* among the fish. It is one of the signs of the Hindu Zodiac, the vahana of goddess Ganga. The *makara* finds a place in *Bhagavata purana*, *Amarakosa*, *Lalitavistara* and *Panchatantra* in which it is treated not only as a aquatic but also an amphibious animal. The *makara* is featured prominently in Vijayanagara art. It is depicted as the vehicle of Varuna, of Yakshas, Yakshanis, and the river deity Ganga. It occurs profusely in the early Indian art motif, and is seen in the *Maradarsana* scene as one of his attendants at *Saranath*, on spandrels of early tympanums, on the architraves of early *toranas*, on throne backs, in jewellery, on medallions of pillars or as gargoyles.

The *makara-torana* is another decorative motif found in the temples under review. Generally, in the Vijayanagara temple. This is carved as a copy (if the cult images sculptured on the pillars of the *kalyana* and hundred *pillared-mandapas* and on the exterior walls.

In all the examples the arch is composed of multi-stringed floral bands. The top portion either left blank or is occupied by a boldly designed *kirtimukha* motif or a floral design. Generally multiple floral strings are shown flowing out freely from the mouth of *kirtimukha*. The *makaras* are carved below, on either sides of the floral arch. The upraised trunks of the *makaras* are shown touching the floral scrolls shown above¹³

In the Vijayanagara temples, the *makara*, like the elephant, is depicted on the sides of the door steps the shrines. It is presented as a well-built, powerful and fierce creature, with a bushy tail and its mouth raised over its back though it is going to eat something¹⁴ The *salabhanjika* figures depicted on the door-jambes of *gopura* gateways, in the Vedanarayail Iswalpi temple at Nagalapuram and Govindarajaswami temple at Tirupati' are shown as standing on *makara*,

probably representing as Ganga figures. *Makara-torana motifs*:

The *makara-torana* is the other important device that is found in the Vijayanagar Temples. The Vijayanagara sculptors used this motif very sparingly. It is found as a canopy of the cult images-sculptured on the pillars and the exterior walls. Excellent examples of this type are found on the pillars of the *Natya* and *kalyanamandapas* of the Virabhadraswami temple at Lepakshi and on the exterior walls of the temples at Pushpagiri.

It is also observed that the Vijayanagara sculptors used the *makara-toranas* to decorate the door-way lintels and the front side of the *mahanasikas* of the *vimanas*. The *makara-torana* found on the lintel of the door-way of the Siva temple at Vallur and a semi-way has a semi-circular floral arch emerging from the jaws of the *makaras*, arranged on either side of the lower section of the *torana*. The curved trunks, the gaping mouth, short and shapely legs and the floral plumage of the *makaras* are meticulously represented. A very interesting example of a *makara-torana* is noticed on the front side of the *mahanasika* of the *vimana* of the Hazara Rama temple at Hampi. The *torana* is shown emerging from the mouth of the *makaras* placed on either side of the bottom and it is surmounted by a huge *kirtimukha* head.

The *makara-torana* is noticed in the Mathura school of art and several species of this ornamental motif are preserved in the Mathura and Lucknow museum. It is likely that these are the earliest representations of the *makara-toranas* in the plastic art of India. But by taking into consideration the reference to *simsumara-sirah* in the Mahabharata, V.S. Agarwala observes "The literary tradition of the *makara-torana* or *simsumara-sirah* ante dates our knowledge of it in the *lithic* art of the *Sunga* period by several centuries, it is believed that the patterns executed in stone were preceded by work in wood. ¹⁶ A graceful *makara-torana* is noticed in the Saiva temple at Derra, datable to the early Gupta period. An intricately designed floral *torana* is shown emerging from the mouth of a *makara*. This mythical animal has scally body and an upraised trunk and head.¹⁷ in the Deccan region the *makara-torana* ornamented device was used by the early

Chalukyas. It is possible that they might have got inspiration and guidance from the Guptas. One of the best examples of this motif is found in the Virupaksha temple at Pattadakal. The Rashtrakutas inherited the tradition of employing the *makara-torana* as an ornamental device from the Early Chalukyas. It is found prominently on the top of the niches and doorways. The top section of the door-way of the *Nandi-mandapa* in the Kailasa temple at Ellora is adorned with an exquisitely designed *makara-toranda*.¹⁹

In another case a triforium arch is emerging from the mouth of the *makaras* on the top of a niche housing the graceful river goddess, Yamuna.²⁰ Similar *makara-toranas* are also found in the Indra Sabha cave at Ellora.²¹

Eastern Chalukyan and the Later Chalukyan sculptors also profusely patronized this ornamental device. Regarding the *makara-torana* found in the Eastern *torana* decoration over the niches in the early Pallava temples and compare then with the Eastern Chalukyan at Biccavolu we can understand the parallel development to the north and south of the river Krishna

In the first place the ornamental floral plumage of the *makaras* in both the cases is shown flowing down freely along with the pilasters. Secondly the *makaras* are provided with dwarfish riders on their backs. Finally a combination of two *makara* heads with upraised trunks in opposite directions are found on the summit of the *toranas*. The *makara-torana* reached its climax of grace and charm at the hands of the Later Chalukyan and the Hoyasala sculptors. H. Cousens observes: "One of the most frequently occurring decorative forms upon the medieval Hindu temples and more especially in the Chalukyan work of the Canarese districts, is the conventional and highly ornate Makara²³ The *makara-torana* also found a place of prominence in the Kakatiya temples and in main this is very closely akin to the later Chalukyan examples.²⁴

In the extreme south India, the *makara-torana* found favour at the hands of the Pallava and Chola sculptors. An excellent early Pallava example is noticed in a cave at Dalavanur. In this example, a floral scroll is springing from *makaras*. But it is curious to note that apart

from representing two *makaras*, they are shown on the summit of the arch. The *makaras* are provided with dwarfish *gana* riders²⁵ Similar *makara-toranas* are found in plenty on the storeyed pyramidal superstructure of the Vethuvan koil at Kalugamalai.²⁶ The ornamental *makara-toranas* are also noticed on the top of the niches in the Kailasanathaswami, Vaikunta Perumal temples at Kanchipuram.²⁷ The Pallava sculptors took very keen interest in introducing certain innovations in the very composition of the *makara-torana*. Firstly they have inserted human figures in various postures in the flowing plumage of the *makara-fart*.²⁸ It may be mentioned in this connection that the plumage of the *makaras* without human figures are also found in many cases. In the second Chalukyan Art C.Sivaramamurti observes that when we serve the *makara*-Place human figures and the *kirtimukhas* are shown springing from the jaws of the makaras instead of floral semi-circular scrolls Goals and goddesses are sculptured in the central circular portion of these *toranas*. The makara-torana is used by Chola sculptors for the decoration of the riches, and also the top section of the *kudus* that are found on the storeyed and the domical crowing member of the *vimanas* of the Chola-temples³⁰

Conclusion

The Makara-torana, which was introduced by the Buddhist Sculptor, gradually crept into the realm of Hindu art. It is the most commonly recurring creature in Hindu and Buddhist Iconography. Its earliest representation are found in the structures erected during the Gupta Period. In the Deccan region the makara-torana ornamental device was used by the early Chalukyan. It is possible that they might have got inspiration and guidance from the Guptas. The Rashtrakutas inherited the tradition of employing the makara-torana as an ornamental device from the early Chalukyas. The composite figure of Makara with crocodile forequarters and fishtail behind occurs commonly in Indian art. The Makara-torana also found its place of prominence in the Kakatiya temples and in main this is very closely akin to the later Chalukyan examples. In the extreme South India, the Makara-torana found at the hands of the Pallava and Chola sculptors. The Vijayanagara sculptors used the makara-torana motif very sparingly is the canopy of the cult images. The Vijayanagara sculptors also used this motif to decorate the door way lintels and the front side of the mahanasikas of the Vimanas. The makara-torana found in the Vijayanagara temples though in many betrays the influence of Deccan and South Indian traditions.

THE POLITICAL CAREER OF OMANDUR RAMASAMY REDDIYAR - A STUDY

P. Pandiyan

Early life of Omandur Ramaswamy

Omandur Ramaswamy Reddy was born at Omandur near Tindivanam district on 01st February 1895. His father was Muththuram Reddiyar was an important leader Omandur village and village administrative officer for the growth of Omandur village. OPR meaning for OPR In the third letter O is name of the Omandur village name P is the name of the big curve and the name R is Ramasamy. Omandurar Ramasamy had his high school education from Madras Hindu School and worked the village administration officer (maniya karar), Omandur village.¹

Freedom Struggle

In 1923 villages went to the villages and implemented the construction of Gandhids. Bharat Madham's film and the Gandhian image of the neck were stuck on the neck and carrying the katthani bundle on his head and went to the city to sell the karthr. Gandhians ordered him to go back to the village again and stir up before the thief, and he told the people of alcohol. In this case, his only son, Sundaram, who was studying in Bengal, had heard of his death, and he began to take up the struggle again, feeling his mind more than selfishness,

The Government of India made arrangements for Congress congress in Samawur next to New Delhi. The Government of Tamil Nadu decided not to build a tree nut tree in the pit and tied the flags at the top of the palm trees that grew up with the following O.P.R. In the towns of Tindivanam, many conferences were convened to feed the freedom of expression among the people. He spoke to the leaders of Kamaraj, Jeevanandam, Somayajilu.²

Political Career of O.P. Ramasamy

Omandur Perivalaivu Ramasamy Reddiar (O.P.R.), a veteran Congress leader, contributed much for strengthening the Congress Party in Madras Presidency and devoted his sole attention to the progress of the people. His close contacts with R.K. Shanmugam Chettiar and Venkathur Ganapathy Sastri made him to join in the National Movement.³

Entry of Congress Party

O.P. Ramasamy was joined the Congress Party in 1920 and worked incessantly to liberate the people from the clutches of the foreign rule. He conducted the District Political Conference at Villupuram in 1920, with the support of Villupuram Chidambaram Iyer and Sudarsana Naidu. He also attended the Nagpur Congress Session in 1920, which was presided over by Salem C. Vijayaraghavachariyar. In 1921, he organized a Theosophical Conference at Cuddalore which was presided over by Annie Besant.⁴

As the Secretary of the South Arcot District Congress Committee, he participated in the Salt March in 1930 and he was arrested. He also took part in the Foreign Cloth Boycott Movement in South District. His patriotic fervor led to his involvement in the Civil Disobedience Movement in 1932. As a humble and dedicated worker of the Congress Party, he became the Vice President of the Madras Provincial Congress Committee in 1932. In 1934, he invited Rajendra Prasad to Thiruvannamalai and introduced him to Ramana Maharashi. In 1935, he was nominated by S. Sathyamurthi, as a member of the Committee, to select party candidates for the local elections. Because of his sincerity and hard work, the party could capture majority of seats. He invited Jawharlal Nehru to Villapuram, to lay the foundation stone at Kamala Nagar. In 1937, O.P. Ramasamy was included in the Executive Committee of the Madras Provincial Committee for which Rajaji was the President. He was responsible for the success of the Congress Party in the elections in Cuddalore, Chidambaram and Vilupuram. The people appreciated his devoted work for the Party and helped him in defeating the Justice Party Candidates.⁵

1937 Congress Assembly

He did not contest in any election with a view to making Congress strong in the State and campaigned for the party candidates. Due to his hectic election tour, the Congress had gained a majority in the assembly election in 1937. In 1938, O.P. Ramasamy Kumarasami Raja and M. Bhaktavatsalam under took

extensive tour, in all the Districts, explaining the ideals and programmes of the Congress. He expressed his anguish at the plight of the agriculturists and requested the Madras Premier, Rajaji, to pass debt relief act for the farmers.⁶ O.P. Ramasamy persistent demand, to grant long term loan to the farmers, had yielded good results. He was instrumental in passing the Rural Insolvency Act and Money Lenders Act. He was imprisoned for his active role in the Quit India Movement in 1942. Dissatisfaction arose among the Congress men, with the Prakasam Ministry, which was sworn in 1946. K.Kamaraj met Rajaji at Delhi and installed O.P.R. as the Premier of Madras.⁷

As a Chief Minister

O.P. Ramasamy was elected as the leader of Congress Legislature Party, on 11th March 1947, by 116 votes. He held portfolios like Public works, Hindu Religious Endowments, Legislation, Courts etc., He was the first leader to hoist the Indian National Flag, replacing the Union Jack at St. George Fort at Madras, on 15th August 1947. After his assumption of office as the Premier of Madras Presidency, O.P. Ramasamy initiated measures of far reaching significance. He took steps to remove illiteracy, to improve public health and to promote agriculture and industry. Under the Chairmanship of O.P.R, a Re-organisation Committee was constituted on 6th November 1947, to streamline the entire administration of the Province. O.P. Ramasamy strictly implemented the Prohibition Act in 1947. The scheme was initially imposed in eight Districts on 1st October 1947. Afterwards it was gradually extended to other Districts. Thus he

fulfilled the objectives of Ghandhi's prohibition policy. He passed the Temple Entry Act in 1947 and allowed the general Hindu public to offer their worship in the temples, without any discrimination.⁸ He led the Harijan people to Tirupathi Venkateswara Temple, on 15th June 1947.

Merging of states into Indian union

O.P.R. had maintained cordial relations with Sardar Vallabhai Patel, which resulted in the Joint Action against the Hyderabad State.⁹ He set up a special police force in the Madras Presidency. Due to the efforts of O.P.R, the State of Banganapally was merged with Madras on 20th February 1948. He also persuaded the Raja of Pudukkottai to merge his State with Madras, on 3rd March 1948. Thus O.P.R. had acted as the "Right Hand" to Sardar Patel in merging Hyderabad with the Indian Union.⁹

Devadasi System

O.P.R. abolished the age old Devadasi System, He sanctioned a loan of Rs. 43 lakhs for the construction of 220 Harijan colonies, with 20 houses in each colony. The post of District Harijan Welfare Officer was created, to look into the grievances of the Harijans¹⁰

Conclusion

Hence O.P.R.'s services to the people of Madras Presidency is noteworthy. His whole tenure office was marked by progress and development. During the last days of his life, he founded Jothi Ramalinga Samarasa Sanmarga Sangam and bequeathed all his property to that Sangam.

A HERO'S FORGOTTEN HISTORY - "SARDAR SARVAI PAPANNA"

Ponnam Muthyam Goud

Introduction

"There is no effect on attacking a bilge or attacking a village, attack Golconda if you can" - This was the slogan of a great warrior Sardar Sarvai Papanna (1650-1709) who established the first ever Bahujana kingdom on the land of Telangana during the 17th century AD. He was the first king from depressed and backward classes, born in a common caste, who fought against the dominance of elite castes in the sociological system and slavery. After the decade 1960, there was a huge shift in recording history in newer paths. During this period, an enthusiasm came to record alternative history in giving light to the persons, places, theories that were forget in the past. In this backdrop, the history of Sardar Sarvai Papanna, his background with reference to caste, fighting spirit came to light. He was forgot in the dominant history, day by day his existence and heroics are coming to light and this is the right time to have a research paper on the leadership of such a great warrior. Unfortunately, history was written about the victorious only and those won, had written their own history. Kings from elite castes, upper caste feudalists, their invasions, attacks, loots were mentioned in the history showing them as great rulers. But, in this upper caste dominant history, Sardar Sarvai Papanna was portrayed as a robber and thief. It is high time to analyze the history of Sardar Papanna in the context of the statements of Sri Mallampalli Somasekhara Sarma, who said that Sardar Papanna was a king and not a thief as he had built and attained forts, tried to expand the boundaries of his ruling area. Sardar Papanna during his life span of 59 years, uphold the areas Kilashapuram, Shapuram, Kolanupaka and Bhongir, attacked Golconda, which was the main base of Mughal empire in Southern India, to establish the first ever kingdom from backward castes. The historian of upper caste nobles buried the history of this warrior who established an alternative and horizontal Government on the land of Telangana. It is the need to give a text form to the history being protected through oral literature from centuries together, in the process of reconstruction of our history.

On realization of separate Telangana state, the history of Telangana Armed Struggle and the history of dalits and backward classes are being re-written. The history of backward caste leaders and fighters, their competitiveness, the heroics that made them to political power are now subjected to discussion. It is now necessary to study the history of Sardar Sarvai Papanna in the context of establishing a ruling class with the dalits and depressed classes on this land. During the recent present only, the history is coming out of the shadows and the statues of the great hero are being erected in every village. Sardar Sarvai Papanna fought against the despotic feudal dictatorships, an adventurer broken open the Golconda fort of Mughal Rulers and a kind administrator who took the responsibility of protecting the people from the atrocities of Mughal viceroy at Golconda.

The heroics of Sardar Sarvai Papanna had a special mention, by the western writers like JA Boyel, Richard Eaten, while the extraordinary personality from a common gouda family who carried on to establish a kingdom was ignored by the local historians. What is the reason for ignorance of Papanna's prowess, administration and expansion of kingdom in the history books? The history of the Maratha warrior Chatrapathi Shivaji (1627-1680), a contemporary of Sardar Sarvai Papanna (1650-1709), was well saved in the historical texts. In war strategies, guerilla attacks and breaking the forts, both have the same strategies. Both maintained their activities against the dominating Brahmin caste ideology. But, the heroics of Sardar Sarvai Papanna, wars, extension of kingdom were not recorded as text in the books of historians.

History and Background of Papanna

The rule of Kakatiyas lasted long in 1323 AD, who ruled the south. The Kakatiya empire seized by the Delhi Sultanate due to the homicide of Prataparudra, who plunging into Narmada river as he was not interest to be a slave to the Sultanate. From the year 1687 to 1700 the major areas in the country came into rule of Mughals. In 1589, Mohammed Quli Qutub Shah, started building Golconda on the

banks of river Musi. By 1630, Hyderabad was changed as the wealthiest area in the country. Owing to this wealthiness, Mughal empire had a glimpse on Hyderabad which resulted Sultan Quli Qutub Shah to have an agreement with Mughals. As per the agreement a tax of two lakhs muns (currency) per year had to be paid and the Mughal Emperor Shah Jahan's name to be proclaimed in the masjids on Friday. After many developments, a viceroy from Mughal appointed to Golconda. From 1658, the name of Sardar Sarvai Papanna fulfilled as emperor.

Papanna - Wars and Forts

During 1702, the Mughal Deputy Governor, Rusdur Khan hiked tax extensively on the toddy trees. Papanna opposed this move, which led to attacks on each other. Papanna had the upper hand and Khan ran away to Hyderabad. Khan while making a representation to Mughal Government, requested for strong additional force to contain the bandit named Papanna. With a strong force, Khan came to capture Papanna. Papanna with his guerilla tactics made the army of Khan run away. In this backdrop, consolidating the instability in Mughal empire after the death of Aurangzeb, Papanna attacked the enemy states around him and occupied them looting exchequers and breaking forts.

At the age of 25 years, in 1675, Sardar Papanna proclaimed freedom duly establishing a kingdom by building a strong fort with 12 acres area at Sarvaipeta with the money looted from the Mughal deputies and fauzdars and expanded his kingdom. In 1698, he built a strong fort with four barbicans admeasuring 50 acres. It is learnt that he built a fort at Shapurkota from the year 1700 and completed in 1705. He had established defensive bases at Bhuvanagiri, Bhairanpalli, Husnabad and continued to be in battles and expansion of his kingdom for 25 years. His history and fighting spirit were nowhere written in the text of history. In Indian society, history was written by the one who won, from ancient history to the modern history. Sardar Papanna fought against the autocratic dominance of Mughal viceroys, Brahmin ideology and took the responsibility to look after and to protect the people. While Sardar Sarvai Papanna fought against the Mughal on Telangana land, at the same time the Maratha fighter continued his battle against the autocratic Mughal rule.

Papanna in History

Papanna, at the age of 26 in 1675 AD, built a strong Fort at Sarvaipeta, now in Karimnagar District, duly establishing his kingdom and expanded it. He, at the above age, concentrated against the Mughal government, Viceroys, Sardars, Landlords. On having a glance at the life history of Sardar Papanna, historians portrayed him as a robber. His personal life and family life were portrayed on the probabilities. As part of this probabilities, Papanna's history was personified and attributed as having quarreled with his mother Sarvayamma, asking money from his sisters for weapons, when they refused to give looting the money from them. But, in reality, on examining his background in sociological point of view, we can ascertain many things. His leadership skills, discipline can be ascertain for having constituted a big army and kingdom at a small age of 25 on his own. Building a fort at a small age, he established a village during the year 1675 in the name of his mother. We can see a spacious fort and village in the same names in Karimnagar District. This shows his love for his mother. In addition, he included his mother's name before his name Papanna and became famous with Sarvai Papanna, which indicates his love and affection for his mother. As his father expired during the childhood of Papanna, his mother looked after him in great discipline even after undergoing many difficulties. He paid his gratitude to his mother in this way. There were only two persons in Telangana history, who were famous with the names of their mothers. One was Gautamiputra Satakarni and the other was Sarvai Papanna. Historians stated that he captured his mother and sisters and persecuted them for money. These statements are against the reality, which are known on having a glance on the life style and history of Papanna.

He built a taller and stronger fort with the entrance doors of 30 feet high, barbicans over the height of 80 feet on all four sides to watch the moment of enemies. He had good interest in building forts with the expansion of his kingdom. He built a fort with an area of 50 acres in Tatikonda during 1698. He built a fort at Shapurkota during 1700-1705. On 31st March, 1708, a army of three thousand well trained soldiers, he besieged the Orugallu fort.

He conquered seven strong forts on a row and gave freedom to many people who were captured in the Orugallu fort. He further expanded his kingdom by occupying Mandapuram, Dhanikonda, Tungaturthi, Bhairanpalli areas and constructing forts there. He finally captured the Golconda fort and got control over it. His whole life went on like a battle with his bravery and power.

Whatever the reasons, the history of Papanna and his heroic revolts were not entered into the history books. Born in a very common gouda family, Sardar Sarvai Papanna went on to tremble the Mughal empire. Being born in a depressed caste, it is not a simple thing of having made continuous attacks on forts without being captured by enemies, expanding his kingdom and building strong forts for his administrative convenience and for protection. On examining the history of this land, from the ancient times to the modern period, this Telangana land is ruled by the non locals beginning from Satavahanas, Salankayanas, Vishnukundinas, Kakatiyas and the non-resident Andhra Rulers prior to the formation of state. Sardar Sarvai Papanna was a brave leader having conquered the Golconda fort which was considered as a great peak in the history of south India and the local man having presented a people's kingdom with pride, on the Talangana land which was full of bittersweet and bloody history behind it.

Why the history of Papanna not recorded as in the case of other rulers?

After the rule of Shivaji, his son Shambhaji became king and recorded the history of his father. The heirs of Shivaji ruled the kingdom after Shambhaji also placed Chatrapathi Shivaji in history with good honor and respect. On the other hand, after Papanna, no one from his family conquered as king and no heirs of Papanna travelled in the direction of political power. Even no one from the castes of depressed classes came into the purview of

political power. Thus, Papanna's history was not texted in history books and the upper caste Brahmin ideological historians buried the history of Papanns who was born in a *Sudra* caste. They had also connoted wrong commentary to the happened history. The heroics, strength, power, adventurous nature, his steps towards power, opposing the feudal dominance were ridiculed and stamped as robber, thief and inhuman. This ideology was continued for centuries in traditional Hindu Brahmin culture and there is no concession for Papanna's history. The historians tried to subdue the heroics of Papanna to utmost possible by portraying him as loot, cruel bandit opposed rich and feudal rulers. The historians improved the histories of rulers and people of their sects by portraying new colors in their lives and made the ordinary as extraordinary persons in history.

Conclusion

History was recorded basing on the information provided by the muslim rulers, landlords, their associates and no doubt, they had communicated about Papanna in the wrong way. It is pertinent to note that European historians contemporary to Papanna recorded the history of Papanna close to the reality. They played a helping hand in giving light to the history of Papanna in the recent past. The capturing of main forts under Mughal rule such as Orugallu, Bhuavanagiri, Golconda etc. his war strategies, men in his army, dates on which Papanna conquered the forts with time also recorded in the history books. Thus, it is proved that Papanna was wrongly portrayed as thief by the upper castes in hate, jealous and envious. The strong forts, temples built; ponds and villages constructed show the historical eminence of Papanna. There are clear evidences for the lustful history of Papanna in having expanding his kingdom, building a well trained army in this process, attacks on neighboring kingdoms, leading from front in the rides, like any other ruler in the history.

BANNED YEARS OF COMMUNISTS IN TAMIL NADU (1948 -1951) - A HISTORICAL STUDY

V. Prabhakaran

Introduction

The Communist Movement has been in the forefront of unjust criticism, calumnies, repressions, tortures and ban as no other political movement in history suffered. In 1947 at the time of country's freedom the Communists viewed that the attainment of Independence was the end of the first phase of Revolution against alien rule and the beginning of second phase of Revolution against feudal landlordism, capitalist bourgeoisie and labour exploitation. They prolonged their struggle for uphold their ideology in all possible means and faced severe repressions which lead to ban by the Government. This paper is a modest attempt to bring to limelight the banned years of Communist Movement in Tamil Nadu.

Policy Divide

Ever since India's Independence, two trends arose inside the Communist Party of India. P.C. Joshi, the National Secretary of the party viewed that the country was not ready for a full scale proletarian revolution and that the old policy of restraining mass action should be continued. On the Vice versa another trend was represented by B.T. Ranadive, who held the view that the old policy should be radically changed in view of the situation that a militant policy of "violent action" should be followed in India¹.

In this scenario, The Second Congress of the Communist Party of India met in Calcutta between 28 February 1948 and 7 March 1948 and adopted a "Political Thesis" saying that although independence had been won "the freedom struggle has been betrayed and the national leadership has struck a treacherous deal behind the back of the starving people,

betraying every slogan of the democratic revolution" The resolution made it clear that the India's Independence is mockery and Britain continued to dominate India. Utilizing the growing dissatisfaction with the P.C. Joshi leadership, B.T. Ranadive took over as General Secretary and decided to organize a "democratic front" of all militant and revolutionary elements "to win real freedom and democracy" and engineering the " final revolution" on the lines of the " October 1917 Revolution" in Russia

The Central Government was watching these developments with great concern. Within a month of the Calcutta Conference, the Government of India declared Communist Party of India was an unlawful organization² and raided the offices of CPI across the country. Hundreds and thousands of Communists and active workers were arrested and kept in detention without trial throughout the country. In Tamil Nadu, a large number of Communists were taken into custody and a considerable number of Communists went underground. P.Ramamurthi, M. Kalyana Sundaram, Srinivasa Rao and some others took a stern action and started underground centers in Madras to guide the party.

At the public point of view, the fortnightly reports of the Home Department of Madras stated that the actions against the Communists were generally welcomed. Meetings were held in several places by the Congress party to condemn the violent activities of the Communists and appeal to the public to co-operate with the Government in putting down this menace. In contrast Communist sympathizers held meeting all over the Province to protest against this action³.

Communist Reaction

The Communists had been active as they possibly could with most of their leaders under detention. Leaflets appeared in several districts condemning the Central and Provincial Government for their capitalist and fascist outlook. The Madras Committee of the Communist Party reacted that all the pledges made by the Congress were now forgotten and that the Congress Ministry were out to crush the working classes and the Kisans⁴.

Communists who went underground continued their propaganda against the Government. They alleged that the Government's policy of retrenchment was being adopted everywhere in the province with a view to create unemployment and forcing the unemployed to accept lower wages. At meetings held in various places in the Province, they criticized the Government for the ban on their volunteer organizations and demanded the release of all the Communists arrested in this connection. They remarked that if the present Government followed the repressive policy of British, a movement similar to that launched in 1942 would extricate the present Government⁵.

In due course, Government banned the Communist Publications. So the party's journal Jana Sakthi, was kept in abeyance. Copies which were supposed to have been sent through couriers to the District Committee in Madurai and distributed to the underground Secretaries were seized⁶. Consequently, the Madras branch of the CPI sold the machinery of the Jana Sakthi press for a sum of Rs 24000/- as they had received a notice of eviction from the owner of the premises⁷.

Secret Activities of the Communists

Fortnightly reports state that underground Communists were found it difficult to maintain themselves for lack of funds from the party. Therefore the headquarters of the party had issued instructions to important underground front line Communists to issue statements dissociating themselves so that they might come out of their hiding and carry on party work under the guise of trade union activity⁸.

Communists continued their activities by means of secret meetings; unauthorized pamphlets etc., The Madras Committee of the

Party proposed to train two workers in every Communist controlled union to succeed the office bearers in case they were arrested, as they fear that Government was tightening their measures against the party. Communists disguised as public issued pamphlets and pasted wall posters against Government of Madras.

Impact of Chinese Revolution

Communist Revolution in China in 1949 made a tremendous impact during the course of the movement in this period. In China, the Communists under the leadership of Ma- Tse-Tung rose in rebellion to overthrow the Chiang - Kai - Sheik Government and succeeded eventually. It caused repercussion in other Asian countries. As a result of victories of the Communist forces in China, Communist Party of India welcomed it and made propaganda of its success. In a notice affixed near the party office in Madras pointing out that the events in China should prove a lesson for the Indian Government and that the leaders would meet with the same fate as Chiang - Kai - Sheik⁹. The Communist celebrated "Victory day" in connection with the success of Communists in China at a meeting held at Tiruppur in Coimbatore district. They referred to the same at other meeting held at Vikramasingapuram in Tirunelveli district, at Namakkal in Salem district and at Madurai¹⁰. In the meantime Thirty Malayan Communists, who had repatriated by that Government and also have been closely connected with communist activities in Singapore, particularly marked for its violence arrived at Madras on the 19th of November by a ship named S.S. Vasna. All of them were arrested when the ship shored at Nagapattinam¹¹.

Policy on Armed Revolution

Meanwhile a new trend blew inside the CPI, In June 1948, the Andhra Unit of CPI asserted that the Mao's concept of new Democracy should be followed in India. C. Rajeshwara Rao, the leader of Andhra unit advocated that the Chinese method of struggle would be suitable in India. The same was suggested at a Trade Union conference of Asian countries which met in Peking in November 1949. At this conference Liu - Shao-Chi the Chinese Communist leader declared

that Chinese method of four class alliance and armed revolution was the best strategy for the Colonial and Semi-colonial countries.

Accordingly in West Bengal, Communists launched a determined armed attacks resulting in serious disorders. They indulged in strikes, riots, attacked the police, landlords, burnt trams and buses and threw bombs in Calcutta and in countryside against the Government. Besides West Bengal, the violent activities of Communists spread to Telengana region of Hyderabad, They seized the Government machinery. About 2,000 villages passed under Communist hold and there they undertook land reforms, held courts and passed judgments¹². For five years, Telengana became a miniature Red state.

With the International support Rajeshwar Rao replaced Ranadive in May 1950 as Secretary of the Party. Rajeshwar Rao avowed that the armed struggle was a necessary concomitant on the Chinese path of revolution. The struggle would be waged to achieve Red state by means of armed guerrilla warfare by the formation of liberation army in the country side and that the struggle would culminate with the seizure of power all over the country.

Madras Criminal Law Amendment Act on Communists

The activities of Communists caused serious concern by the Government of India. On 29 September 1949, the Central Government released a White paper titled "Communist Violence in India" containing documented charges against the CPI and enumerating details of its activities mainly in West Bengal and Hyderabad. "The Communists of India" the White Paper said "have preached and planned violence on a wide scale and are still practicing it in defiance of ethics and decency and in complete disregard of the value of social life and institutions" Nehru Government to avoid drastic action against Communist to impose ban at national level instructed the state government to deal them at local level.

In the wake of the publication of this White paper, the Madras Government imposed ban on the local Communist parties and other Communist sponsored organizations. The Madras Government stated in a order that "After considerable patience and a careful watch on

the activities of the Communists, the Provincial Government has been compelled to declare the Communist Party and the other organizations under its control in the Province unlawful under the Criminal Law Amendment Act¹³.

In pursuance of the ban on the Communist Party and a number of important Organizations under its control, the records, books, registers and several other articles were sealed throughout the province. Over 300 persons were arrested under the Preventive sections. The reactions to the ban were noticed in various places. A wall poster jeering at Gandhiji's creed of non-violence was found exhibited. Public meetings were held in Madras by various unions passed a resolution criticizing the ban. In jails throughout the province, the communists raised anti-Government slogans, conducted hunger strikes and created disturbances.

The notable incident on actions against Communists took place in Madurai. Two Communists were shot dead in a road by the police on a house in Narimedu, a sub urban area of the town. These two persons had tried to escape by rushing out of the house and throwing country bombs at the police. One of the deceased, Manavalan Pillai, is reported to have been responsible for the series of murders which had been reported from the town. As a result of the raid, five other communists were arrested. The weapons like 22 live country bombs, 2 long aruvals and a dagger were seized¹⁴. This raid increased the confidence of the local public and it is held that the sporadic acts of violence noticed in the town would be checked.

Salem Jail Incident

The most significant event of the Communist movement in Tamil Nadu which drew greater attention politically was an incident occurred in Salem during the period of ban. In pursuance of the ban on the Communist Party, number of Communist cadres was lodged in prisons across Tamil Nadu. In Salem jail about 200 convicted Communist Prisoners were incarcerated. On 11 February 1950¹⁵ some of them refused to comply with the directions of the Head Warden, who insisted jail discipline and regulations and ordered their wearing the usual head dress and breast bands.

The Salem District Gazetteer report that the Communist prisoners as a body disobeyed the discipline in the jail and attacked the Jailor and Deputy Jailor.¹⁶ Uttamalingam, a communist prisoner reported that the jailor Krishnan Nair tortured the communists to fetch water from well for a longer time on February 7, 1950 which irritated the Communist prisoners much¹⁷. In due course a deputy jailor was manhandled. The jailor who tried to intervene was also attacked and as the situation became uncontrollable, he requisitioned firearms. By the time the armed party arrived, the Jailor and the Deputy Jailor had been seriously beaten and they had fallen down unconscious. The Head Warden, with considerable presence of mind, ordered the opening of fire but on account of the large number of prisoners taking part in the attack and the narrowness of the enclosure, this unfortunately resulted in 22 deaths on the spot, besides injured to over 100 prisoners. The condition of the Jailor was precarious at the time and the Deputy Jailor and the Wardens sustained serious injuries.

The Government appointed a committee headed by a retired High Court Judge to enquire into the circumstances of the firing. Communist sympathizers carried on propaganda against the Government with regard to the incident. Under the support of the Madras Provincial Trade Union Congress, the Students organizations and the Progressive Writers Association, a public meeting was held and speeches criticizing the Government were made. At an all party meeting on the 26th February, Socialist Leaders Anthony Pillai and Siva Swami, as well as some leaders of the DMK condemned the firing in the Salem jail. The Provincial Trade Union Congress had appealed for a "One day Strike" on the 25th February 1950 to protest against the firing. But all voices raised against this incident went in vain.

Salem Conspiracy Case

In January 1950, Salem Conspiracy case was filed against the Communists. The background of the case was that a goods train was derailed between Dhottampatti and Kallavi railway stations in Salem - Jollarpet main railway line. The Police charged that the Communists were behind this incident. Charge sheets were filed against 33 Communists

including P. Ramamurthi, M. Kalyanasundaram, K. Anandam Nambiar, M.R. Venkatraman and others¹⁸. Party Office was raided and Communist literature and other materials were seized. It appeared that Salem had been functioning as the Provincial Headquarters of the Communists¹⁹. After two years of legal process Local Communists A. Munusamy, P. Srinivasan, Damodaran and Theerthan were sentenced to Seven years rigorous imprisonment.

Nellai Conspiracy Case

Nellai alias Tirunelveli Conspiracy case was filed against communists in connection with a plot on damaging railway lines to derailment, scratching telegraphic lines, causing damage to public property and producing country bombs with the intention to overthrow the present Government. During the period the party had an agenda on conducting mass struggle like Telengana Communists, by organizing peasants to carry out arm struggle to uphold their rights²⁰. The case was filed in 1949 but began in 1952 in which 97 communists were convicted. The Final judgment pronounced 14 Communists including R. Nallakannu, I. Mayandi Bharathi as convicts and they were given life imprisonment. Later Baladhandayutham, Meenatchinathan and Bailvan Arunachalam were connected with the case and were sentenced with life imprisonment. Various agitations were conducted across the state demanding the government to get back the cases to release the communists. On continuous pressure from the communists Government rolled back the cases and released the convicted Communists but R. Nalla Kannu had to be in prison for some more years as he was convicted in another case that he was involved in fabricated country bombs²¹. In his personal Interview he said that he undergone serious of repressions by jail authorities. During his days in jail he studied many Communist books. Later he was released on 13 December 1956, a grand reception was arranged by communists to welcome him.

The People Education Society and the lift of ban

Many left oriented organizations emphasized Government to set free Communist prisoners. The People's Education Society, a Communist backed association which was

suspected to be carrying Communist propaganda was banned by the Government²²; the society was being controlled by the top ranking Communists. The ban on “The Peoples Education Society” was challenged in the Madras High Court as contravening the Fundamental Rights of the association granted by the new Constitution of Free India on 26 January 1950. The Court delivered the judgment that the Government revision on the Criminal Law Amendment Act by guaranteeing the Fundamental Rights given to the citizen as which the communists were detained was against the Constitution. As a result of this judgment the ban ceased to exist. An appeal was made in the Supreme Court against this judgment. Supreme Court turned down the appeal in similar to the High court. So the ban imposed on the Communist Party and the allied organizations in this state had become ineffective²³ and the Communist Party became lawful.

Conclusion

The Communists by the authoritarian attitude of some comrades against the wish of moderate comrades chose the policy on ‘violence struggle’ lead to hostile attitude against government which eventually took them to ban. The Communists faced number of attacks and police firings created an impression on common people that they were “violent rebels”. The Salem Jail Incident, The Salem Conspiracy case, The Nellai Conspiracy cases were blood-stained events in their history. The Communists regarded Salem jail killings as Jallianwala bagh incident in the history of Communist movement in Tamilnadu. On the contrary, these incidents had controversial view by other political parties and common people labeling them as “rebels” that led to defame them. It took long years to come out and proved others that they were selfless person working firmly for the toiling masses and egalitarian society.

NAME CHANGE AND KALA PANI : A REVISIT TO THE BOSE VISIT TO THE ANDAMANS

Dr. GSV Prasad

The change of names of places is not new to Indian society. In various political regimes and at various times in order to justify their hegemony and political domination, the rulers changed the name of places as a part of their political ideology. It also happened that in

olden times, the rulers constructed new cities next to popular old cities and named them differently there by the name of old city has been slowly disappeared giving place to the new one. With the arrival of the Europeans from the beginning of fifteenth century, the

change in the names of places had become a common phenomenon. Indians speak different languages and their general accents are different from that of the Europeans. The Europeans had some difficulties in pronouncing Indian names and they renamed some Indian places so that it was easy for them to pronounce.¹ For Europeans, the change in the name was more of phonetic comfort than establishing a political hegemony. For example, Alleppey, Broach, Madras, Bombay, Cape Comorin, Cochin, Trichy, Baroda etc.

The revert was bound to happen sometime after Independence. But it took longer time as for a long time national parties dominated in the states and were not really into sing local language pride for gathering votes. But with the rise of regional parties, the linguistic pride became an important element in galvanizing votes. The change of names of place became part of this new regional identities. For example, Bangalore/Bengaluru: Just an alternate spelling to reflect the correct local pronunciation. It was always Bengaluru in the Kannada language, similarly Hubballi (Hubli), Chennai (Madras) etc.

In the wake of present government's policy of changing names of places, the Andaman & Nicobar Islands are also not left behind. Proposals have come from some sections of society and academicians to change the names of Andamans & Nicobar Islands as 'Swaraj' and 'Shaheed' respectively. The history of changing the names of these islands goes back to the period of World War II when Netaji Subash Chandra Bose visited these islands as an ally of the Axis powers. In this background, my paper tries to examine the visit of Netaji to these islands and his understanding about the people, Japanese atrocities and above all the perception of locals towards the visit of Netaji. The paper also focuses on as how far the locals were benefited from the visit of Subash Bose.

Subhas Chandra Bose, one of the venerated, brave and dynamic freedom fighter of India, joined Indian National Congress fascinated by Gandhi and due to his passion for the liberation of the country. Over a period of time he found it was not possible to achieve his goal of liberating the country in his own way by being in the Congress due to ideological and radical difference with main leaders.

Subsequently he chose the other path by seeking help from Germany, Italy and Russia, in which he was not quite successful. Finally Subash joined hands with Japan which helped him in reshaping the Indian National Army and made successful efforts to enter the North East and Andamans with Japanese collaboration. During the mid of the World War II, Subhas Chandra Bose took a highly risky decision of leaving for Japan from Germany in the Japanese submarine I-29. The submarine passed to South of India on its way to Southeast Asia outside the British Patrolling radius. On 6th May 1943, the I-29 was safely docked in the harbour at Sabang². Subsequently, Bose took over INA (Indian National Army) and reshaped the force to prepare them to occupy the British India. In order to give the status of the Head of Indian Province, Tojo, the Japanese General decided to place the territory of Andaman and Nicobar Islands being part of Indian sub-continent under Bose³. This happened after Bose refused to take part in Southeast Asian conference in November 1943 Tokyo⁴.

During World War II, perhaps Andaman and Nicobar Islands were the only part of British India which were occupied and controlled by the Japanese forces for about three years. Japanese forces entered these islands in March 1942 and carried out their atrocities over the people till October 1945. In the morning of 23 March 1942, the Japanese troops under Colonel Bucho, landed in Port Blair and Bucho was appointed as civil governor of the islands. The British Chief Commissioner and other Europeans were made prisoners and convicts in Cellular jail were released⁵. On the third day of the arrival, the Japanese addressed a general meeting in which Col Bucho and Dr Diwan Singh⁵ spoke. In his speech, Dr Diwan Singh retained the promise to help the Indians in their fight against the British for freedom and at the same time warned the gathering that freedom with others' help was meaningless and, therefore, they should be ready to sacrifice all for the freedom of their country⁶. This speech perhaps made the Japanese suspect Dr Diwan Singh and obviously they could not have appreciated it. From the beginning, the Japanese tried to pose as champions of the freedom of Indians. They even established a branch of Indian

Independence League in the Andamans⁷. For a short period the Japanese were quite friendly to the people. But after some time they began to show their true colours and misbehaving with local people. In the name of spying, the Japanese started torturing people. When Dr Diwan Singh Strongly protested the Japanese atrocities, he was also arrested and tortured in the Cellular Jail to make him confess that he was being a British Spy⁸.

On October 29, 1943, the Provisional Indian Government was installed at Singapore under the leadership of Netaji. Welcoming the gesture shown by General Tojo of placing Andaman and Nicobar Islands under Netaji, he declared that the transfer of these islands to his government was of a symbolic significance as the islands were used for imprisoning a large number of freedom fighters. The proposal of Netaji to send a battalion of the Indian National Army to these islands as a symbolic gesture was not approved by the Japanese government⁹. History shall record that a trick more sinister than this was never played by any nation. Events that followed in the Andamans after this declaration by the Japanese Government showed, in the course of time, that their declaration was a mere mockery. Followed by the refusal of Netaji's proposal to send the battalion, he decided to visit the Andamans and landed in Port Blair in a Japanese Air Force Aircraft on 29 December, 1943. He was received at the airport by Ishikawa, the Admiral in charge of the Islands. The Japanese administration in the Andamans took various precautions to obliterate the abnormality prevailing in the Islands to keep Netaji in the 'dark' about the Japanese torture of Indians. On Bose's arrival at the aerodrome, a select band of officials were made to stand in two rows at the aerodrome. This was the party which had ostensibly gone to welcome Bose. They were all picked up overnight as the news of Bose's arrival was kept off from the public on account of the war exigencies. He met them without speaking to any one of them as though he was inspecting a guard of honour. He, with his staff, after landing, was carried to the erstwhile Chief Commissioner's residence at Ross Island. The road from the aerodrome to Aberdeen Jetty, from which a crossing by boat is made to reach Ross Island, was ordered to be lined up by men, women and children. Of this

order, Bose was unaware. If he thought that this entire crowd had come to pay him homage, no one dared dispel the wrong impression. The Japanese were mortally afraid of the leakage of the news of the torture that they were perpetrating there¹⁰. By the time Japanese arrived at the Islands, the Ross Island was abandoned by the British authorities. But Netaji was taken there to isolate him on the unpopulated surface of the islands in the garb of security measures. There was no one on this island to give him news about the conditions prevailing in the Andamans. Their objective to keep Bose marooned, so to say, for so long as he was here, was achieved. Bose, being a casual visitor who saw the islands for the first time and who was quite unaware of the facts of torture and maltreatment meted out to Indians on grounds of espionage, took everything here as normal and never suspected that the Japanese officials would deliberately hoodwink him. He was very cautiously taken out of Ross Island on two occasions, once, on a prearranged tour of outlying villages after visiting the Jail and the second time, ceremoniously to a crowded meeting at the only Maidan of Port Blair. In fact the total visit of Netaji was fabricated by the Japanese without the knowledge of the former.

He was taken to a certain village with a number of army and naval officers surrounding him. When the news reached villages that Bose was coming to them, the general feeling was that they would get a chance to speak to him face to face and tell him or his staff about some of their sufferings; but to the disappointment of all, surrounded as he was, that chance never came. At places he was made to meet some villagers in a crowd. Things were so arranged that he heard no one from the crowd but spoke himself to the crowd. The moment the Japanese thought that someone would stand up to talk to him; the meeting abruptly came to a close without anyone realizing what the next move was. All vehicles of transport being under Japanese control, no Indian could accompany him. In other words, he spoke to public, but actually he spoke to no one in particular nor did he hear anyone¹¹. A public meeting was arranged on the only maidan of Port Blair on 30th December 1943, in which a large number of people were ordered to attend. Bose came from Ross and reached the maidan in a

ceremonial procession made up of Japanese officers in a number of cars. As usual no Indians from the Andamans were included in this procession. On arrival, he went up the rostrum and unfurled the Indian National flag, the first one to be hoisted on an Indian territory and renamed the islands as *Shahid* (Martyr) and *Swaraj* (Independence). The Chairman of the Andaman branch of the Indian Independence League, Mr Rama Krishna, gave a welcome address and presented a purse for the INA, after which Bose addressed the gathering. Without meeting any of the residents, he was again very ceremoniously driven back to Ross¹².

As a part of tailor made itinerary, Netaji visited Cellular Jail. But he was shown only a score of persons who were actual prisoners and were at various jobs such as cleaning the garden, planting vegetables, sweeping the compound and cooking for the prisoners and such other routine jail work. But actual people who were imprisoned in the six wings of the jail on the grounds of espionage, were not shown to Netaji. He was taken to jail and shown only selected places, so that when news reached him by some chance from some source, he might be perplexed and even say that he had seen nothing wrong there in the jail. But Mushtaq Ali, who was one of the five young men arranged by the Japanese as a translator, claimed that he found some time to talk to Netaji. He informed Netaji about the happenings in the Andamans, particularly about the condition of Dr Diwan Singh and others in the Cellular Jail. He requested Netaji to visit the sixth wing of the Jail. But according to Subha Singh, who was member of the Provisional Government, visited the islands shortly after the visit of Netaji; he said Netaji was not aware of the tortures in the jail, there by declining the claim by Mushtaq Ali.¹³ According to Iqbal Singh, Netaji knew about the conditions in the jail because, later on at the time of sending a five member commission under the leadership of Lt Col Loganathan, Netaji had instructed the Colonel to look into the alleged case of espionage as a result of which Dr Diwan Singh and others were imprisoned and to submit a report to him¹⁴. Whatever the arguments were, Netaji visited these islands after Tojo's statement of handing over them to him, keeping in view the conditions under which he was taken to various places in and around Port Blair; Netaji could

have sensed something foul. For his stature, he would have definitely got a doubt about the situation in the Andamans. If that is so, why didn't he speak or at least raise this issue elsewhere? Why didn't he ask or mention in his public speech about Dr Diwan Singh, the popular leader of the Islands? Had he compromised over the conditions in the Andamans over the larger interest of the nation?

After visiting the Jail, Netaji said: "—For Indians the return of the Andamans represents the first territory to be liberated from British yoke...The liberation of the Andamans has symbolic significance because the Andamans was always used by British as a prison for political prisoners. Most of the political prisoners sentenced to penal servitude for conspiracies to overthrow the British Government, and there have been hundreds of them, were locked up in this Island...Like the Bastille in Paris which was liberated first in the French Revolution setting free political prisoners, the Andamans where our patriots suffered, is the first to be liberated in the India's fight for Independence."¹⁵ In his speech, Netaji was speaking about liberation of the Andamans from British rule, but never imagined the conditions of the islands under the Japanese yoke as he believed in the Japanese administration and had to prove a point of loyalty to them. During his stay in the Andamans, Netaji talked with Admiral Ishikawa regarding the appointment of a Chief Commissioner of the Andaman and Nicobar Islands on behalf of the Provisional Government. The Admiral gave his consent to this proposal, but told Netaji that for cogent strategic reasons there would be no complete handover of administration to his government during the war. Only some departments of the civil administration would be transferred to him.¹⁶ Bose's visit to the Islands gave people certain amount of consolation. They considered that there was someone who would extend his protective hand in their hour of adversity. Soon after his departure came the Chief Commissioner and his staff from Singapore. People were now doubly assured by the progress of events and felt certain that the administration having come into the hands of Indians, the conditions would improve and the reign of cruelty and terror would cease. Although Col. Loganathan, the Chief

Commissioner, appointed by the Provisional Government of India established at Singapore, arrived in Port Blair in the beginning of 1944, up to the middle of the year there were no changes in the administration. The Chief Commissioner made several attempts to elicit information about his position and that of his staff, but no clarification was ever made. However, the Japanese never gave over the charge of the islands to Col. Loganathan and his coming here was a mere farce, as there was no record of any Commission of inquiry.¹⁷ It was very clear that the Japanese had no intention of handing over the effective power to the provisional government. It is asserted that these Islands were never handed over either to Bose or on his behalf to his appointed Chief Commissioner Col. Loganathan, who actually went there later with his staff to take over the charge of the Islands. From the point of Bose launching an attack on British India, these islands were of no consequence. So the only

importance that this seat of his government had for him was a symbolic one and probably he knew it.

Prime Minister Shri Narendra Modi on Sunday December 30, 2018 renamed three islands during his visit to the Andamans and Nicobar Islands. Ross Island, Neil Island and Havelock Island will now be called Netaji Subhash Chandra Bose Island, Shaheed Dweep Island and Swaraj Dweep Island respectively, announced Modi."From today, the three islands in Andaman and Nicobar- Ross Island will be known with the name of Netaji Subhas Chandra Bose Island, Neil Island as Shaheed Dweep and Havelock Island as Swaraj Dweep," he said. Earlier in the day, the prime minister hoisted a 150-foot national flag at Port Blair to mark the 75th anniversary of freedom fighter Subhash Chandra Bose's announcement regarding the formation of Azad Hind government in 1943.¹⁸

THE SPLIT OF INDIAN NATIONAL CONGRESS IN 1969 AND IT'S IMPACT ON MYSORE STATE

Prathima M Bidarimath

Impact of Division of Congress on Mysore State

On the threshold of Congress division, on 05.11.1969 CM of Karnataka Sri. Veerendra Patil went to Delhi to compromise between Indira & Nijalingappa and got assurance from

her to attend a get-together meeting of both the parties on 07.11.1969¹⁰. However it was not materialized due to adherence and stickup to their own thoughts, principles and ideology which differed from each other. On 12th of November S Nijalingappa expelled Smt Indira

Gandhi from the congress party.16.11.1969 Indian National Congress was divided into Congress (R) and Congress (O). Congress (R) called as ruling headed by Smt Indira Gandhi and Congress (O) means Organasation headed by S. Nijalingappa. On 27.11.1969 C. Subramanyam the President of Indira Congress suspended Mysore Congress and made Eleven members committee under Devaraj Urs leaderships which was formed in the following way: Devaraj Urs, Dayanand Sagar, A. R. Badarinaraya, P. Venkataraman, K. N. Veerappagoud, K. G. Timmegoud, M. N. Krishnappa, Kollur Mallappa, R. M. Patil, S. R. Patil, K. S. Nagaratnamma¹¹

The above said Member's committee was led by Devaraj Urs, but the then Chief Minister Veerendra Patil rejected its formation and stated his cabinet was safe and secure. When Praja Samajwadi Party merged into Indira Congress, Chief Minister Veerendra Patil had put his resignation on 18.03.1971 after losing his confidence in the Assembly. Devaraj Urs group decided not to form the government and they became opposition party¹². For the first time the Governor imposed president rule on March 19, 1971, lasted till March 20, 1972. Many leaders like Mohammed Ali, K.Puttaswamy, V.L.Patil, K. Prabhakar, N.Rachaiah, adopted Smt. Indira Congress's principles and they joined Congress (R) party.

Both S Nijalingappa and his successor- his own protégé -Veerendra Patil realized very early in their office that, their continuance in power was possible only by a carefully structured policy of accommodating some elements of the vokkaliga and lingayat community in political offices. Thus the dominant Communities-politics linkage in Karnataka continued till 1969 by which time the congress Party at the national level underwent transformation. The 1969 Split in congress and the rise to preeminence of Mrs. Indira Gandhi resulted in a situation where the ruling elite in Kamataka which was in the opposite group of the congress, referred to as the Syndicate, found it difficult to continue in the office. Devaraj Urs, who was till then a light - weight in Karnataka politics ,in view of his belonging to the minority arasu (Kshatriya) community, supported Mrs. Gandhi and her Congress (R) Strong campaigning by Devaraaj Urs and Indira Gandhi's charisma, the Congress

emerged victorious at the 1972 Assembly election ,for the first time, in the history of Karnataka a ministry headed by a person belonging to a minority community ended a dominance of the Vokkaliga and Lingayata communities after 12 years as per the will and wish and the revenge taken against Nijalingappa lingayat community leader and other vokkaliga community eminent. Urs espoused the causes of poor and ushered in a "silent social revolution" in Karnataka. He was the voice of the poor and stood for the cause of the downtrodden in society. Urs was elected continuously from Hunsur as an MLA for 28 years, from 1952 to 1980 and is one of the longest serving Chief Ministers of Karnataka. (Nine years)

Conclusion

On principle and ethics two groups said to be one of seniors and other of youngsters - have had difference. After S. Nijalingappa took over Presidentship of INC - the smoke division busted. One and the most probable aim of Smt. Indira Gandhi was to be free from the clutches of the Senior Congressmen and supported youth leaders likewise - immediate and cause of action was emerged on sudden death of president Jakir Hussain the election movements plunged into the hands of old lions of congress and young turks headed by Indira Gandhi - both adhering to their own ego and principles.

However the legendary division of the Congress - which brought freedom to Nation was inevitably divided - despite of telling that was correct. The Congress was killed brutally by these two groups - one cannot forget when we read History of Congress in India, and its impact on Political Life of Karnataka. S. Nijalingappa continued as President of divided Congress (O) till 1974. He resigned and kept away from political scene and a new party named "Janata Paksha" emerged as new National Party, Congress (O) merged in Janata Paksha and fought in 1978 Lok Sabha Elections.In Karnataka ,Under the leadership of Prime minister Indira Gandhi, Devaraj Urs came to power under the slogan of bringing about radical forms in the political and social structures of the Karnataka society. Due to split in Indian national congress, the new political era giving birth to the various political parties and regional parties in India

DEVIKUNTE FORT OF CHIKKABALLAPURA DISTRICT: A HISTORICAL STUDY

Dr. M.N. Raghu

Introduction

When Muslim rule became established in this region there was a renewed interest in the military technology and new principles adopted by the builders in this fort. With the development of the firearms towards the end of the 15th century and the general use of artillery in the following centuries, significant progress took place, though in this place engineers stuck to the old methods until the end of 18th century.

Chikkaballapura is a district headquarter in the Karnataka state. Historical evidences traced from the Neolithic period in this district. There are 11 kingdoms ruled in this area. Most prominent rulers are local chieftains. These local Chieftains contributed a lot towards development of socio economic, political, cultural, Science and technology. They constructed many forts and fortifications where they ruled. There are 25 small and big forts and fortifications in the Chikkaballapura district. Some of the forts are in good condition and most of the forts are ruined.

The present study is focussed on Devikunte fort of Bagepalli taluk. A village called Devikunte situated in Marganakunte hobali of Bagepalli taluk, Chikkaballapura District. It is surrounded by hills and not so easy to enter in to the village and so it is safest place. A lake very near to the village caters water to the people called Devikunte/Devikere or Akkamma kere.

This fort built by local Governors according to the old system of fortification in order to control strategic points and road crossings. In the inscriptions of this fort find that Durga has also the meaning of territory depending on a fort and the title given to the governors of provinces was Durga Dannaik or head of the fort.

This place was famous not only in Karnataka and also in Andhra Pradesh. Because of influence of Andhra Pradesh, this place also called Udayagiridurgam. The Paleyagars used bricks to construct the fort and therefore it was called Ittikal Durga. The word Durga establishes the influence of Marathas at this place.

This fort was built on hill top. It is spread over an area of 25 acres. The roughly oval cast oriented fortification veneered with dressed masonry has as many as 11 circular bastions at regular intervals. A wide battlement is provided towards the inner side of the fortification. The fort has one entrance decorated with cut plaster work at the north side of the fort. This entrance is a quite small, comfortable enough for the horses of yore. The bastions are provided with gun points built with lime and bricks.

Utilizing local materials for the construction of this fort is the special feature here. It seems much money is not spent for their construction. In nutshell, forts and marsams continue local cultural tradition. Narasimhanayaka was the founder of this

paleya Samsthana. The palayagar Narasimha Nayaka and the queen Yashodhadevi have two male children, Prathama Nayaka and Pratha Vinayaka.

Important Monuments of the Fort

There are many historically important spots at the fort. They are as follows:

Ballston's, Watch Towers, residence of horses and elephants, Kannirayappa temple, Sule Gundu, Main Entrance of the fort Gate, Enquiry centre, Madigara Bhavi, Giligala goodu, Idol of Anjaneyaswamy, Eleven Watch Towers, Ranabande Entrance Gate, Hero Stone, Granary, Room to collect butter, Explosive room, Justice bench, Siva Parvathi Temple, Akkamma boat, Akkamma temple and inscriptions.

War Training to Royal Family Children

Rahul Nayaka was appointed as a teacher to give War training to their children. The two sons of palayagara, Prathapa Nayaka and Pruthvi Nayaka were good at horse raiding, sword fighting and in using rifles. Now, they are well matured to face any war along with his father.

Trade

The business of Gold and other precious stones were done through Devikunte. The palayagars loot the gold and other precious stones from the business people. The accumulated wealth was used to construct the fort, temples, distribution of salaries to the soldiers and remaining wealth was kept inside the fort. The palayagars gives shelter to other people viz. Akkasaliga, Badiga, Guru, fort builders and jeweler designers.

Important Festival of Devikunte

The people of Devikunte worship goddess Devi. The goddess Devi means Akkamma resides at the hill top near to the lake. The people of this place celebrate Jatra in the name of Devi and they carry golden torch during the jatra.

Agriculture and Food Grains

The people of Devikunte have been doing agriculture in the eastern part of it. Wells were constructed to do agriculture for the people. Paddy was the main crop and was stored in the top surface of the fort.

Manufacture of War Weapons

Self made pistols were used by the people to protect themselves and to loot the wealth of business people. They were used charcoal to prepare explosives. The evidence for this can be seen in the fort. The self made pistols were also used to hunt the wild animals.

Animal Husbandry

In this fort, a group of people were appointed to look after cows and buffalos, so that will get milk, curd, butter and cow dug. They used butter in preparing medicine for horses and elephants. The evidence for this can be seen in this fort.

Watch Towers

The Palayagars established information centers in all directions viz. north, south, east and west to look after the business people, thieves and enemies who tries to enter the fort. These information centers housed secretly, so that nobody can access this place.

Rain Goddess Akkamma

The people of Devikunte worship goddess Akkamma for good rains every year. This was the custom followed by the people of this place. Therefore they constructed a temple and placed an idol of the goddess Akkamma Devi to worship. They used to scarifies the animals for the sake of wellbeingness of the people of Devikunte. During jathra, many people's from other villages participate in sports and cultural events. All religious people reside at Devarakota and Paleyapattu and this shows that all people are equally treated. The people of Devikunte lived harmoniously. There was a separate place for Muslims to do prayers. And this gives evidence of importance given to other religion of Devikunte.

Secrete Route: Cave

There is a small tunnel which connects the fort and Marganakunte. In emergency time, the people who reside inside the fort, soldiers and the members of royal family used this route to escape safely. Also, this tunnel was used to preserve the food grains, food items and explosives. There are evidences to establish the existence of tunnel between Margana kunte and this fort. Still people believe that a lot of valuables were present in these tunnels and many people searched for this. Since a women

called Mallamma was used to live in this cave like tunnel, it was called Mukkandi Mallamma cave.

Inscriptions of the Fort

There are 4 inscriptions in the hill fort. Among these inscriptions one of the inscription found near Goddess Akkamma temple. This inscription reveals that the construction of steps towards the Akkamma temple on Ittigedurga fort. Kuyaralagutta inscription gives information about boundaries of the fort. One inscription found at Gajalapalli of Bagepalli taluk. This inscription deals with that a Land grant given by the administrator of Ittigedurga Ummari

Saheb to Timma Reddy in the year 1696. Another inscription found at north gate of the fort on Ittigedurga.

Conclusion

This fort is not in a good condition. The thieves in and around the villages digging for gold and other valuable things and some of the important monuments demolished. This can be seen in many places of the fort. There is a need to protect this fort and this fort has to be protected so that the important monument is preserved. Therefore it is the responsibility of all of us to protect and preserve them for future generations.

THE CROWD AND LEFT POLITICS IN MALABAR: THE CASE OF THE ANTI-REPRESSION DAY AGITATIONS, 1940.

RAHUL M RAMESH

The presence of crowd was one among the key factors which decided the success of all major agitations in Malabar from the days of the rebellion of 1921. For the case of Malabar, the role of crowd, though small but politically motivated was decisive also in the Simon Boycott Agitation in February 1928¹ When the police had adopted repressive measures against the *satyagrahis* in the Civil Disobedience Movement, the common people made even the act of watching lathi charge as a way of participation in the struggle. The Sub district Magistrate of Malabar was said to have attacked by a crowd during the Civil Disobedience Movement² The Crowd became more violent and fearless at the new political juncture starting from 1939. This was noticeable in the Anti-Repression Day agitations of September 15,

1940 and in the peasant movements in the subsequent years.

Vinita Damodaran's study on nationalism and the congress party in Bihar, from 1935 to 1946 has enumerated a number of incidents of violence by mobs armed with local weapons.³ In Bihar, during the 1940s police firing at the crowd became a very common thing.⁴ It was the publication of the work. *The crowd in the French Revolution*, by George Rude initiated debates among historians on the role of the crowd in the revolutionary politics.⁵ The present paper is an attempt to find out the presence of an uncontrollable crowd in the Anti-Repression Day agitations by using the characteristic features of the crowd as prescribed by George Rude. *The Oxford Advanced Learners*

Dictionary defines a crowd as “a large number of people gathered together in a public place, for example in the streets or at a sports game.”⁶ According to the same dictionary a mob is “a large crowd of people, especially one that may become violent or cause trouble.”⁷

The Kerala Pradesh congress Committee (K.P.C.C) decided to observe an Anti-Repression Day on September 15, 1940. An order issued by the District Magistrate immediately banning meetings, processions, or assemblies throughout the district of Malabar.⁸ But the order of prohibition had been violated in five places. A Police inspector was killed at Morazha. A Sub inspector and five constables got injured at Mattannur. The crowd hurled stones on the joint magistrate and the police.⁹ To George Rude, the activities of the crowd should be seen as a result of spontaneous outburst and the revolutionary crowd was no by means drawn from identical social group. Even though, he added that, there is certain uniformity of pattern in the social composition of the participants of the movement.¹⁰ Rude further argued that the political leaders directing the demonstrators were generally drawn from commercial bourgeoisie or the liberal aristocracy.¹¹ The leaders of the Anti-Repression Day agitations, K.P.R.Gopalan and Vishnu Bharateeyan belonged to high castes.¹² The incidents during the Anti-Repression Day were not pre-planned. These were sudden and spontaneous. The Sub Divisional Magistrate P.Ramakrishnan issued an order by prohibiting demonstrations and meetings with five or more participants under the section 144. The public meeting held at Jawaharghat, Thalassery, became violent. The *Mathrubhumi* when reporting the incidents of Thalassery noticed that the two died in the police firing is not yet identified. The same report speculated that, they were not congress workers but mere visitors in the meeting. But later they had been identified as Abu, a teacher in the local mappila school and Chathukutty, a *beedi* worker.¹³

The difficulties of identifying the dead could be viewed as a pointer to the complex nature of the social composition of the crowd. The police had to encounter with a confusion to decide the convicts in law and order problem created by a crowd. This confusion was manifested in the decision the court to set free

many convicts of the Kayyur case. The court decided so on the conclusion that they were not participated in the *jatha* responsible for the death of the policeman rather the acquitted convicts were not related with the incident. Among the acquitted in the Kayyur Case including Koran Master, Vannan Kannan, and Cherootta Ambu Nair.¹⁴ During the Anti-Repression Day agitations Kuttikrishna Menon, Valapattanam Sub Inspector was killed by a crowd gathered at Morazha. The rally of Chirakkal taluk as part of the Day decided to be held at Keecheri, near Kallisseri. But the place changed to Morazha because Kuttikrishna Menon issued a prohibition order in Keecheri under the section 144. So the people collected at Keecheri went to Morazha by forming into *jathas*. The last *jatha* reached Morazha led by Arakkal Kunjiraman.¹⁵

Kuttikrishna Menon asked the people to leave Morazha. But Vishnu Bharateeyan, who presided over the meeting of Morazha refused to take orders from Menon and was not willing to disperse the meeting. Finally, the police resorted to the lathi charge and the people confronted it. The police retaliated and started to fire.¹⁶ The people resisted the police by all means and Kuttikrishna Menon was killed by the crowd. Vishnu Bharateeyan made a desperate attempt to control the crowd, but he failed.¹⁷ However, K.P.R.Gopalan stood firm with the crowd.¹⁸ Kuttikrishna Menon was notorious for his lathi charges against the workers, who went on strikes in the Aron mills. The crowd including the people subjected for the brutal assault by him during the Aron mill strikes.¹⁹ So the makers of the Morazha incident not represented a single social group but shared a common feeling, enmity towards Kuttikrishna Menon, an agent of the colonial state. The experience of Vishnu Bharateeyan demonstrates that a crowd is not controllable even by its leader.

George Rude observed that the revolutionary crowds absorbed and adopted the ideas and slogans of political groups. The demonstrations, to Rude, were transformed in to a call of action of poor against the rich. The new ideas of liberty of man were also gaining ground among the people. Popular opinion formed the main body of the revolutionary crowds. Another feature of the crowd was the

adoption of slogans.²⁰ The Anti-repression Day was observed at the direction of the left dominated K.P.C.C, When K.Damodaran, one of the founders of the communist party in Kerala serving as its secretary.²¹ So the influence of the socialist ideas on the crowd was clear. The crowd assembled at Morazha shouted the slogan *Long Live Revolution*.²²

Rude identified looting played a far more substantial part in shaping the motives of revolutionary crowds. Food shops and markets were more obvious centres of revolution. Rude, concluded that the constant motive of the revolutionary crowds during the period of French Revolution was the concern for the provision of cheap and plentiful food. He noticed the presence of women in the crowd.²³ One of the demands of the peasants and workers took part in the Anti-Repression Day agitations had to open cheap grain shops. They also asked the government to for allowances to neutralize their cost of living.²⁴ The agrarian struggles in Karivellur and Kavumabayi had been initially organized for the procurement of paddy. Many ordinary women participated in these struggles.²⁵

The state was always obscure on the nature, composition, and activities of the crowd. The police had registered cases against about 210 people for the clashes at Koothuparambu, Mattannur, Morazha and Thalassery. The list of accused including the people of different age groups like an old man who regarded by the communist leaders with respect as Moola Pokkettan and boys like V.Ananthan.²⁶ Vishnu Bharateeyan, the prime accused in the Morazha

case not identified by some witnesses against him.²⁷ There were enough lines in the judgement clarifying that the murder of Kuttikrishna Menon was not committed, consciously.²⁸ As the main suspect in these cases was a crowd in an ambiguous nature, the police got an opportunity to fabricate cases against many. E.Narayanan Nayanar instead of E.K.Nayanar, his younger brother had included in the list of accused in the Morazha case.²⁹ It was alleged that the police had dragged the name of E.Narayanan Nayanar into the case to trap him at the instance of Samuel Aron, the owner of the Aron Mills, Pappinisseri. Samuel Aron was a leader of the congress right wing and E.Narayanan Nayanar had Contested in the District Board elections of 1939 against the wish of Aron.³⁰ However, E.Narayanan Nayanar had to undergo several years of rigorous imprisonment in this case and he remained in prison for 6 years until 1946.³¹

The collective mentality of the crowd corresponds closely to the of individuals forming it.³² The outbreak of the Second World War led to a huge rise in food prices. People started to starve. The colonial state already suffered badly from the war, failed to reduce the pressure of inflation. The people felt that the British is about to leave the country. The same feeling along with hunger decided the mentalities of the crowd in the political movements in Malabar. The crowd started to revolt against the land lords, the police and the capitalists. In short, the crowd appeared in the peasant and other struggles in Malabar consists of the subaltern people resorted rioting to fill their stomachs.

LAJPAT RAI - FIGHTER AND PHILOSOPHER

N. Rajagopala Reddy & K. Mallikarjuna Reddy

Introduction

Lajpat Rai was philosopher, fighter and he was a great scholar. He gave his own philosophy to this country. He was born in 1865 and died in 1928 after receiving serious injuries in movement against simoom commission. His life was full of sacrifices.

Lajpat Rai did not accept the view that religion could be the basis of a Nation. The history of the several European countries showed that they had all to face such situations as India faced sometime or the other in the process of their national evolution. What helped them to become nations was a decisive refusal on their part to give in before the claims of religion. As a fundamental principle of their

policy they recognized the supremacy of state over religion, and gradually removed all religious distinctions so far as they affected the constitution of the state. Lajpat Rai deprecated the acceptance of the principle of communal representation which was a Concession to religion and the negation of nationalism. He emphatically stated that:

"No one can be a true Nationalist who is not an Indian from first to last. He may be an Indian Hindu or an Indian Mussalman, but if he is prepared to sacrifice the freedom of India for the freedom of Jazirat-ul-Arab cannot be an Indian nationalist."¹

Discussing the question of communal representation with separate electorates in all

the legislatures, local bodies, universities and other official or semi-official bodies, Lajpat Rai asserted that once India accepted communal representation with separate electorates there was no chance of its being ever abolished without a civil war. A civil war would end the supremacy of one of the communities over the others. He warned that Muslim demand for communal representation with separate electorates strengthened the position of 'anti-Swarajists' both among the Hindus and the Muslims. It was an effective report to the contention that India was ripe for 'Swaraj'.² It provided for a complete division of India, as it were, into two sections : a Muslim India and a non-muslim India.

The remedy was that the Muslims, wherever they were in a compact majority, should form their government without forcing a division of the country on the principle of separate electorate. His suggestion was that Punjab should be partitioned into two provinces, the Western Punjab with a large Muslims majority to be a Muslim-governed Province; and the Eastern Punjab with a large Hindu Sikh majority, to be a non-Muslim governed Province.

The Muslims would have four Muslim states : (1) The Pathan Province or the North-East Frontier, (2) Western Punjab, (3) Sindh, and (4) East Bengal. If there were compact Muslim communities in any other parts of India, sufficiently large to form a province they could be similarly constituted. But he left no doubt, whatever, that it was not a united India. It meant a clear partition of India into a Muslim-India and a non-Muslim India.³

In order to contain the hold of religion over politics, Lajpat Rai opposed the system of separate electorate as it implied the supremacy of the religion over the state.⁴ He was opposed not only to the Muslim demand for communal representation but also to the caste Hindu demand for separate representation.⁵ Nevertheless, he was willing to concede adequate representation to the minorities in the elected bodies through proportional representation.⁶ So Lajpat Rai was strong supporter of reconciliation between communities constituting a nation. He differed with other Indian leaders in his approach to the communal problem. He disapproved of

Gandhi's doctrine of "mutual surrender." He urged a co-relation of interests sustaining a community of all classes and sections in the nation, in the development of a national ethics, a national will, the self-evolving of a higher loyalty.⁷

Lajpat Rai's concept of nationhood, however, rested on fundamental equality of all constituting a nation. It implied that no member of a nation be considered as inferior on the ground of religion or race.⁸ His concept of nationhood was democratic. Any idea of practice of untouchability was repugnant to the solidarity of a nation. The eradication of untouchability in India was essential for the healthy growth of the Indian nation. He reminded his people that all programmes for the removal of untouchability or for ameliorating the conditions of untouchables were not acts of patronage towards the 'untouchables,' but were steps in self-education, a preparation for 'Swarajya', and the preliminaries of democracy.⁹

Nevertheless, Lajpat Rai was fully aware of the sectarian, religious, racial and linguistic differences amongst Indians which could make any observer sceptical about India's claim to be a nation. Hindu-Muslim differences generated so much tension among the Indians that it became impossible for them to speak with one voice about their political and economic rights. He tried to compose their differences and made valuable suggestions for national integration. In a series of articles which he wrote at different times, he made a penetrating analysis of the communal situation. Unity could not be achieved by the total annihilation of identity of any community. All communities should be brought together in a free and equal association removing all social and legal barriers imposing segregation.¹⁰

There is no denying fact that Lajpat Rai was keen to ensure the inner strength and efficiency of the Hindu community as a part of united and self-governing Indian Nation. But, it would be wrong to accuse him of communalism. He was always anxious to achieve a rapprochement with the Muslims and forge a united front.¹¹ He deprecated the introduction of religion into politics. In August 1926, he contended that "It was the greatest mistake of our times to reintroduce religious

dogmas and doctrines into politics.¹² He stressed the importance of subordinating all non-vital communal differences to the needs of nation-building. He envisaged in the future constitution of India religious liberty to all religious denominations subject only to such restrictions as were inevitable for the maintenance of general law and order. To this, he thought, must be added the absolute religious neutrality of the future state. In this respect, Lajpat Rai was, perhaps, the earliest exponent of the idea of secular state¹³

Lajpat Rai disparaged all separatist tendencies. The Hindu Mahasabha that he tried to build was not a political body. He threw his weight about in preventing Hindu Maha Saba from standing as a rival to the Congress and participating in political activity contesting elections. He advocated that in the interest of national solidarity all 'Sangathans' and Anjuthans and communities merged themselves into National Congress Movement. He proclaimed:

"We should have only one national organization, one flag, and one platform in order to be able to free our selves not only from foreign yoke, but also from disintegrating force at home."¹⁴

The object of the Hindu Maha Sabha, according to him, was to crystalize, articulate and defend the exclusive interests of the Hindus because the Congress being the common organization of all communities would not perform this task. The Hindu Maha Sabha did not aim at jeopardizing the just rights of other communities. Nor was it to divert the attention of the Hindus from their primary and foremost objective of liberating their country from the bonds of political servility. So long as it was associated with Hindu Maha Sabha, he saved it from falling into the hands of such self-seeking Hindu leaders who were hammering into the heads of the Hindus that their interest lay in co operating with the British. Similarly, he kept subdued the extremist political current in Hindu community that gave rise to a separatist approach spearheaded by leaders like Bhai Parmanand and Savarkar. In fact, Lajpat Rai's association with Hindu Maha Sabha followed from his awareness of the weaknesses of Hindu community which were a stumbling block to Hindu-Muslim unity, because these encouraged

a militant section amongst the Muslims of humble Hindus into submission through violence and aggressiveness, particularly in areas and regions where they were in a majority. It was this situation that Lajpat Rai faced in his own Punjab of his own Province. There was hardly any Hindu leader in the Punjab of his stature who could restore confidence among Hindus in the face of aggressive designs of the Muslim educated classes under the leadership of Fazl-i-Husain and his tribe. Lajpat Rai, therefore, upheld the cause of Hindus even at the risk of compromising his nationalist ideals and commitments. Explaining his position he said :

"The Muslims insist on communal representation all along the political line and also on organizing their separate communal entity so completely as to become the dominating communal entity in India Under the circumstances it becomes absolutely essential for the Hindus to organize themselves in order to avert these consequences. Communal organization has thus been thrust upon us. . . ."¹⁵

One of the reason for his withdrawal from the Swaraj party was that he did not like the walkout policy of the Swarajist leaders and believed :

"The sort of 'Hindu interests' I have named above cannot adequately be taken care of if the Hindus keep out. To that extent I am a communalist and I do not feel ashamed of that, for it in no way soils my nationalism."¹⁶

Gandhiji very well understood the difficult position of Lajpat Rai and appreciated his commitment to Hindu-Muslim unity and unadulterated nationalism. Lajpat Rai clarified his stand on 'Shuddhi movement' thus:

"The activities of the Christians and Islamic missionaries and propagandists have led the Hindu entering the field of active proselytism. Legally and morally they have every right to do so. It is difficult to blame them yet it is not my role and I do not propose to lend my active support to such work even if I may be supposed to some extent to have done so in the past."

In his anxiety to settle the difference between two communities which had become

almost irreconcilable after the collapse of non-co-operation movement, Lajpat Rai was even had to accept the idea of the partition of Punjab. This was not a concession to divisive or disruptive forces but only a recognition of genuine aspirations of the parties in the dispute. He was guided by the principle of federalism which sought to reconcile different loyalties in a national community composed of several sub-communities having a variety of language, culture and religion.

Notwithstanding the intense love for the motherland, Lajpat Rai never lost sight of the wider interests of humanity. His devotion to Hinduism sprang from his conviction that it taught equal respect for all religion despite the fact that he was deeply involved in religious as well as political interests of his community; he was opposed to the introduction of religion into politics. In this respect he was a secularist. His

commitment to democracy was thoroughgoing. He, however, turned to it for the solution of many a pressing problem of his community, his country, or humanity at large.

One discovers at times a certain confusing dichotomy between Lajpat Rai's profession and practice. This may partly be explained by the fact that he was deeply involved with the current social and political problems and that he was no arm-chair thinker. The demands of a particular situation considerably influenced his actions. Situation and context are very important for understanding his attitudes and actions in public life. An ambivalence that haunted him stemmed from his inability to reconcile the interest of his own community in his province with the wider national interest. At times he could succeed in it but the quick pace of the events in Punjab offset his precarious successes.

8. To quote Lajpat Rai : "Every human being who has his home in India, whatever his race or religion or occupation, is an Indian, a member of the Indian nation and entitled to be treated as an equal among equals." (Ibid., p. 29).
9. Lajpat Rai said : "To evolve a democracy, to constitute a free state, to develop a Government of 'Swaraj' is impossible unless all parts of the nation are in a position to make their contribution to the common purpose, the common will and common work." (Ibid., p. 31).
10. Lajpat Rai said : "The ignoring of differences is the most fatal mistake in politics, or industry or international life : every difference that is swept up feeds and enriches society; every difference which is ignored feeds on society and eventually corrupts it . . . The unifying of differences is the eternal process of life-the creative synthesis; the highest act of creation, the atonement." (Lajpat Rai, Ideals of Non-Co-operation, (Madras, 1924), pp. 16-17)
11. In his Presidential Address to the Bombay Hindu Conference held in December, 1925, Lajpat Rai said : "The conference would promote good feelings between the Hindus and other communities in India and to act in a friendly way with them with a view to evolve a united and self-governing Indian Nation." (Ibid., p. 4).
12. To quote Lajpat Rai : "Recognition of religious differences in the field of politics is hardly the correct way of reaching the ideal . . . I do not believe in a unity based on hatred . . . The introduction of religion in the non-cooperation programme was in my judgment a great blunder." (The People, Lahore, July 26, 1925).
13. Lajpat Rai wrote : "The future 'Swarajya' Government should not be at liberty to use public funds for any religious or denominational purpose whatsoever, in a land of many religions and many cults. This, to my view, is the best safeguard against religious or denominational partisanship. With this provision the risks of the majority rule are very much lessened." SAHEED JAYEE RAJGURU - THE PIONEER OF THE PAIK REBILLION (1804 A.D) IN ODISHA

Dr. Rajendra Kumar Bisoyi

The Khurda Kingdom in Odisha gave a strong resistance to the alien English rule in 1804 A.D. just after the British Occupation of Odisha under Jayee Rajguru. Unlike Buxi Jagabandhu who remained silent and revolted only in 1817 A.D, this brave and gallant hero reacted immediately to the unjust work of the British rule. Not only did he organize the *Paiks*, he also gave them martial training by strengthening the '*Paik Akhadas*'. He became the first martyr of Odisha who revolted against the British and left behind a grand legacy of patriotism & selfless sacrifice for one's own country. However, he has not been received his due place in the pages of history either probably due to lack of authentic documents to corroborate his historic struggle and martyrdom or due to apathetic attitude by the historians towards this freedom fighter which is definitely a historical blunder.

H.K Mahatab in his "*History of Orissa*" Vol-ii; K.N.Mohapatra in his "*Khurda Itihasa*" (Odiya); J.Pattanaik in his "*Feudatory States of Orissa*" Vol-I and others have thrown some light upon Jayee Rajguru. B.C Roy in his authentic works has highlighted Buxi Jagabandhu neglecting Jayee Rajguru. P.K Pattanayak in his "*A Forgotten Chapter of Orissan History*"; R.C.Mishra in his scholastic paper on Jayee Rajguru; J.Choudhury in his paper have done some Justice. P.K.Jena, Jatadhari Mishra and others have inclined to bring this great personalities into the forefront. Sudhakar Pattanaik's "*Chakada Pothi Chaini Chakada*" (Odiya); Bipra Madhusudan's "*Firingi Kali Bharat*" (Odiya); Fakir Harichandan's "*Khurda Itihasa Antarale*" (Odiya) are some other works which put some light on this great historical personality. However, the latest works like Narayan Rao's *Jayle Rajguru (A Profile of a Great Patriot of Odisha)*; B.K Rath's *Jayee Rajguru and Anti-Colonial Resistance in Khurda*" have highlighted the activities of Rajguru on various points. Still then, the projection of this profound patriot's personality has not been portrayed in its true perspective. After a due acknowledgement to these previous works, a

small attempt has been made to highlight the great personality of this first martyr who remained loyal to the king till his last breath and gave his dear life for the cause of the motherland.

Jayakrushna Rajguru Mohapatra, popularly known as Jayee Rajguru was born at Bira Harekrishnapur Sasana near Puri on 29-10-1739. His father was Chand Rajguru and mother was Hiramani. Jayee maintained the family tradition as he was adopted in the *Shastras* and Sanskrit knowledge. He also became a renowned *Tantra Sadhaka*. Besides he knew from his father the techniques of wrestling, horse riding and sword fighting. Along with these martial practices, he was also performing daily different rites and rituals for the propitiation of the gods and goddesses. Thus he built himself as a multitalented personality. That was probably the reason for which Gajapati Divyasimha Deva appointed him as the *Rajguru* and the minister in his court in the year 1780(1) at the age of 41. His personality, style of functioning, scholarship, integrity had attracted to the attention of other native rulers and some of them invited him to join their courts. Dhananjaya Harichandan Jagdev, the then ruler of Athagarh tried with all possible means to have him in his court but could not succeed (Jayee remained loyal to Khurda Kingdom. He remained as confirmed bachelor (*brahmachari*) and dedicated himself to the cause of the motherland till his last breath.

This was a time of critical situation on Odisha. Smaller kingdoms in the region were fighting among themselves and the region was afflicted by severe drought. The militia was disorganized and the morale of the *Paiks* was at the lowest ebb. Soon after assuming power, Jayee Rajguru concentrated in law and order and to ensure political stability and economic prosperity of the kingdom. Due to his efforts, the frequent plunders of the *Marahatta* Burgees were reduced a lot. The *Paik* soldiers were trained in various military skills at *Akhadagharas* and *Jagaghars* located in each village. The *Paiks* or the peasant militia with great devotion to duty were ferocious and

valiant in nature. They included all castes and classes, chiefly the *Khandayats*, the *Chasis* or the cultivating tribe. Occasionally individuals of the lower caste, remote hilly tribes (*Kondhs*) and also Muslims were found among them. They were paid by service lands (*Paika/i Jagir*) which they used to cultivate in time of peace subject to the discharge of military and police duties as and when required. He also organized the four divisions of the *Paik* soldiers such as (1) *pahadi* (2) *banua* (3) *dhenkiya* and (4) *gorilla*. He gave special emphasis for strengthening the Guerilla division. This branch of the army was otherwise known as '*Chheka*' as they used to fight with the strategy of hide and seek. They always fought from the back of the opponent and never appeared in the frontal fight. He also took great care to make the spy system effective. In this system, the *Vedua* has to pass secret information to the king. Use of firearms and cannons was encouraged. Specially in the *Sasan* villages the firearms were prepared and used for experiment during the festive occasions. The technique and skills used for the preparation and production of arms and canons have been preserved in palm leaf manuscripts even today.

In the meantime, King Divyasingha Deva II died resulting in a bitter race for succession. Jayee Rajguru ensured that the late king's minor son Mukunda Deva II ascended to the throne of Khurda. As the king was minor, Jayee Rajguru became his regent i.e. guardian ruler in year 1798 A.D. Meanwhile the East India Company captured Ganjam and Lt. Col. Harcourt wanted a free passage to the English soldiers from Ganjam to Calcutta through Khurda region. He made an agreement with Mukunda Deva II of Khurda by which the English would give one lakh cash and cede four Parganas—Lumbai, Rahanga, Serai and Chabiskud—that were under Maratha control since 1760 to the king and restore the king's right on Sri Jagannath temple. Jayee Rajguru was kept in the dark about the deal. The British occupied Puri on 18th Sept 1803 and the Barabati fort on 14th Oct 1803. The Lumbai, Serai, Rahanga and Chabiskuda Parganas were released and taken over by the Britishers instead of delivering to the king of Khurda. The condition for payment of one lakh was also not fulfilled by the Britishers. This betrayal shocked the king and Jayee Rajguru. On March 11, 1804 Jayee

marched with 2000 *Paiks* to Cuttack in a show of strength to persuade the British Collector to stick to the deal. The British paid RS.40,000 but refused to cede the promised *Pargana*. Jayee distributed the money among the *Paiks* towards the settlement of their dues.

The British attempted to remove Jayee from his post but failed. Jayee now made an elaborate plan to give armed resistance to the British in order to protect the independence of Khurda kingdom. The kings of Kanika, Kujanga came forward to help the king against the British. The Zamindars of Bishanpur, Harishpur and Marichpur also gave their support to the king. One Sambhu Bharati, a mendicant and Mahajan fed up with the British helped the king secretly mobilizing public opinion in favour of the king. Jayee also sent envoys to the Marathas for help but as one of them was captured at Sambalpur, the plan failed.

The internal defence was improved by repairing of roads. He increased the number of troops and appointed Maratha Sardars for this purpose. In July 1804, Jayee sent tax collectors to Lumbai, Rahanga, Serai and Chabiskud *parganas*. The British regarded Jayee as their arch enemy. Harcourt advised the king to remove Jayee from the office, but the king refused. On Nov. 22, 1804, Jayee's forces once again attacked British-occupied Pipili causing huge losses to the enemy. To strengthen the Khurda fort, Paik Troops were posted at Delange in the east, Taratua in the west and Gangapada in the North as the first line of defence reinforced by an additional 300 guards and two cannons!?) The Raja was also planning for a safe retreat and he often went to the hills in search of a place of safety to which he could resort in time of need.

Ruins of Khurda Fort in Gada Khurda

In Nov. 1804, military operations were undertaken against the Raja and war started. The British ordered Major Fletcher to attack the Fort. He was given command of 120 men of Madras European Regiment and two flank companies of 2nd Battalion of the 1st Bengal Native Infantry. The British troops which proceeded to occupy Khurda were resisted at several places by the *Paiks*, *Diwan*, *Bakshis*, *Sardars*, gunners and archers of the Raja.

Jayee Rajguru as the head priest and the prime minister of the king, was steering the war. War-continued for about three weeks. The nephew of Major Fletcher was killed in the battle. The British force finally surrounded the fort of Khurda near the Barunei Hills in the first week of December 1804. The outer wall of the fort was damaged. Then, Major Fletchor proceeded to the fort followed by his party. The fort was occupied. But the British had to play divide and rule policy. The Raja Mukunda Deva II managed to escape to the nearby forest along with his guards. It is said that Jayee made all arrangements for his escape. The king was sent to *Gangamatta Math* near Swetaganga in Puri. Jayee instructed the *Mahanta* of the *matha* Narottam Das through a letter to keep the king in utmost care and secret. The *Matha* still bears the secret passage to the temple which had been used by the king. The British set a price on the head of Jayee Rajguru who was steering the war and managed to capture him when the fort fell. In this way, on Dec. 04, 1804 the British troops occupied the last independent fort of Khurda. On Dec. 5, 1804 they declared that Mukunda Deva II was no longer the king of Khurda. By a proclamation issued on 07 Dec 1804, the Raja of Khurda was deposed and his territories were annexed to British Odisha. At last, The Raja was captured and was taken as Prisoner.

***Gangamata Math* in Puri and Secret Passage and paintings**

After the imprisonment of the Raja, others who opposed the British also surrendered. Balabhadra Bhanja, the Raja of Kanika was taken as a prisoner and sent to Midnapur in July 1805; Chandradhwaja Sendha, the Raja of Kujanga was dethroned and the British recognized his elder brother Madhusudan Sendha as the new Raja of Kujanga. The British kept Mukunda Deva as a prisoner in Barabati fort. Soon he was sent to Midrapura. However, he was released from the Jail in 1807, but the estate of Khurda was not restored to him. He was made the Superintendent of the Jagannath Temple in Puri with a *Malikana* amounting to Rs.2133-5-4 of the revenue of his estate by the Regulation of 1809. The successors of Mukunda Deva II was not allowed to stay at Khurda. Their residence was shifted to Puri and

than after they came to be known as the Raja of Puri but not the Raja of Khurda.

Jayee Rajaguru did not escape and resisted the British forces inside the fort bravely. Finally, he was over powered and captured. He was regarded as the mastermind behind the rebellion and so treated as the arch-enemy of the British. He was taken to Midnapore near Balasore. His trial conducted at a place called Baghitota in mednapore. In the trial, Jayee Rajguru took all the responsibility, just only to the save the king and his Kingdom. Therefore, he was held responsible. He was sentenced death punishment. He was brutally killed on 6th Dec. 1806-at Baghitota in the Chasakhanda Panchayat near Mednapore. His legs was tied separately to forked boughs of two banyan trees and the branches released splitting his body in two.

This Bhagitota is located just about 3kms. of Medinapore in the District of Balasore in Odisha. Still now some *Paik* inhabitants descended from Khurda and Bal "tanta area are found in and around the area. These *Paiks* were perhaps not allowed by the British to return home as the British feared another revolt due to the martyrdom of Jayee Rajguru.

In this way ended the life of Jayee Rajaguru. However he left behind a strong saga osupremce. Although he was defeated, he remained victories in the hearts of millions and millions of people as he proved himself as the worthy son of the soil by becoming the first martyr of Odisha on the alter of the motherland. His selfless sacrifice, his profound patriotism, his challenge to the colonial authority, his loyalty to the land of Gajapati Raja, his courage and chivalry, his bravery and boldness, his heroism and horrible punishment will remain in golden letter in the pages of history. His revolt against the British was more surcharged with Patriotic zeal and it is more glorious and more gall- antic than any other revolt of India. In comparison to the so called *Paik* Rebellion of 1817 under Buxi Jagabandhu, the revolt of 1804 under Jayee Rajguru was filled with thrilling patriotism. While Jayee went to the gallon bravely and smilingly, Buxi ended his life with British pension. He was truly a nationalist and martyr of first order. Unlike Buxi, Jayee reacted immediately against the alien rule and did not prefer to wait and observe policy of Buxi Jagabandhu who

revolted only in 1817, i.e. 14 years of the British occupation of Odisha. He had no self interest as he was a confirmed bachelor. His only interest was the protection of the motherland and prestige of the king who had been regarded as *Chalanti Vishnu* (moving God) and *Lakhyerajaramoudamani* by the Odiyas. His bold answer to Coi.Harcourt at the time trial demonstrates his strength of character. He knew the superiority of the British power but he gave dogged resistance which shows his courage and strength in both mind and body.

It is a matter of shame that his contribution against the alien rule have been neglected by the historians. He should be given deserving place in the pages of Indian Freedom Struggle. The Khurda Fort, the last independent fort of Odisha which defended boldly for three weeks, is in a utter neglected condition filled with wild

grass and open field toilet. This is surely a heartless vandalism. Protection, preservation and promotion of Khurda Fort with Light and Sound programme will help both the revenue generation and spreading the message of patriotism for the future generation. It should be free from modern encroachment. Installation of a life size statue of *Saheed Jayee Rajguru* at the main gate of the fort would be a proper respect. Naming any important educational institution will do some justice to this great martyr. Bira Harekrushnapur village, the birth place of Jayee should be named after him. As Jayee Rajguru initiated the revolt against the British, as he organized the *Paiks* against them, as he is a role model for the nationalists, he should be recognized as the leader and pioneer of the *Paik* Rebellion which started in 1804 A.D and which reached in its climax under Buxi Jagabandhu in 1817.

POLITICAL AWAKENING IN HYDERABAD STATE

THE ROLE OF ALL HYDERABAD STUDENTS UNION - A STUDY

Dr. P. Ramesh

In this study an attempt has been made to survey briefly the student movement with their Political and Social background covering a period of more than fifteen years from the formation of Hyderabad State congress (1938) and Comrades Association (1939) to 1956. These fifteen years have been an epoch making period in the recent history of Hyderabad State, which witnessed many significant and for

reaching events changing the very course of history in this part of Indian sub-continent.¹

It began with the formation of the State Congress and the subsequent Satyagraha and Vandemataram Movements, the emergence of the Ictehadul - Muslimeen as the spread of communal politics, the formation of Comrades Association and All Hyderabad Students Union,

the birth of the Communist Party in Hyderabad, the Historic "Quit India Movement of 1942, the development of trade union movements, the revolutionary peoples upsurge during the Indian National Army and Royal Indian Navy revolts, the end of hated British rule and the emergence of an Independent India, the unfortunate partition of our country the dark and obnoxious period of Razakars in Hyderabad the glorious armed struggle of Telangana people and with the police action the end of the despotic rule of the Asafjahi dynasty on the basis of adult franchise and finally the reorganisation of the states on linguistic basis and the formation of Andhra Pradesh.²

The student and youth movements, along with the democratic and progressive people's movements, played a very important and decisive role in bringing about these revolutionary changes. This organisation was the rolling points for the students and youth men imbued with a sense of patriotism and anti-imperialism who in course of time joined one or the other political movements like communist, congress and socialist. It would be no exaggeration to say that that intellectual and political awakening in Hyderabad State owes a great deal to them and this study tries to portray these very movements and trends with the hope that it will serve as a historical record of the recent past and will also provide an opportunity for the present generation of students and youth to evaluate them in their proper perspective.³

The students and youth movement of erstwhile Hyderabad State had played a very significant role as an integral part of the glorious student movement of the whole country, and had also played an important role in the people's struggle against the autocratic regime of the Nizam. In order to view the student and youth movement in its proper perspective it seems to be necessary to keep in mind some of the important features of the National Movement during the decade beginning from 1936.

The decade of 1936-46 was very crucial and decisive for the freedom movement of our country and especially for the youth and students. During this period the national movement, under the leadership of Pandit Jawaharlal Nehru, was given international

orientation and also a clarion call to wage a determined struggle against imperialism and Fascism, which was raising its ugly head in the European countries.

This was the period when a section of our national leadership under the impact of the October revolution of 1917, started feeling that socialism can serve as the key for solving the political, economic and social problems of our country as well. This progressive orientation of our national movement, and the success of the newly formed socialist state in USSR, were the factors that led to the radicalisation of the consciousness of Indian masses particularly the younger generation. In this background and under the impact of fast changing national and international situation, the foundation of All Indian student Federation (AISF) was laid in 1936- Hyderabad also did not lag behind. Sometime between 1936-37 a group meeting of the progressive minded students was called by Sibte Hassan, a well-known journalist and critic of urdu literature, to form a branch of AISF in Hyderabad which was attended by Mirza Hyder Hussian, Omkar Prasad, Narender Dutt, and Noor-ul-Hassan Jaffaeri. At the same time a reading room was opened near Abids which functioned for about a year. This was the first brick in the edifice of the student movement of Hyderabad which was given a form and shape in 1940.⁴

POLITICAL AND EDUCATIONAL CONDITIONS OF HYDERABAD STATE DURING 1930-46:

The people of erstwhile Hyderabad State were groaning under the double yoke of slavery, that of the most powerful and cunning British imperialism and faithful ally of Nizam. This artificially created autocratic regime of Nizam, was a prison house of three different linguistic groups, i.e. Telugu, Marathi and Kannada speaking people, who were forcibly separated from their brother across the border. The state was ruled at the top by Nizam and his trusted Nawabs and by the Jagirdars and Zamindars etc, feudal landlords at the lower level in the villages was the naked, brutal and most powerful rule and arrogant bureaucracy.⁵

The common people, workers, peasants and the middle classes were not only the worst victims of the feudal exploitation, but they were

deprived of their rights to get education in their mother tongue, to run the administration in their respective regional languages, to held public meetings for ventilating their grievances and to publish books and journals for the upliftment of their culture. Thus all the avenues for educational, cultural and social development of the common people were completely barred. Poor educational facilities that too through the medium of Urdu and English and heavy restriction on civil liberties created an atmosphere of discontent and revulsion among the middle classes in general and youth and students in particular.

There was only one university for the whole dominion of Hyderabad with five affiliated Intermediate colleges and one degree college, and the Nizam College, which was affiliated to Madras University. Besides there were 31 high schools 105 middle schools and about 4000 primary schools throughout the State. The medium of instruction in middle and high school and the University level was Urdu.

It was a right and bold step on the part of the Osmania University to introduce one of the local languages, Urdu, as the Medium of instruction at the University level. But it was totally wrong and most undemocratic for the Nizam's government to impose Urdu a language which was spoken by ten to twelve percent of the population, on the majority of the students whose mother-tongues were Telugu, Marathi, and Kannada. These languages should also have been made the medium of institution at all levels of education as it was done in the case of Urdu. It may seem ridiculous to know that the number of students in the two degree colleges were about 1600 and total number of students at the primary level was 3 lakhs in 1937-38 when the population of Hyderabad State during the period was about $16\frac{1}{2}$ millions.⁶ The position of girl's education was still worse. In 1937-38 there were only 766 girl's schools with a total strength of 57,000 girl students.

The cultural and social development of the people of a particular area or region is not only gauged by their educational level but also determined by the numerical strength and standard of the libraries and the services they render, the publication of the vernacular magazines, journals and the existence of social

and cultural organisations and political organisations like, Nizam Rastrandhra Mahasabha 1930, Maharashtra Parishad 1937 Kannada Parishad 1936, Hyderabad State Congress 1938, Majlis-e-Ittehad-ul-Muslimeen 1929, Arya Samaj 1892, Comrades Association 1939, Adi-Hindu Social Service League 1929, Anzuman Qawathin Deccan 1925, Andhra Mahila Sabha 1930, Hyderabad State Communist Party 1939, Student Popular Front 1939, Radical Students League 1940 and All Hyderabad Students Union 1942.

THE LACK OF CIVIL LIBERTIES IN HYDERABAD STATE:

There was a complete absence of civil liberties in the Nizam's autocratic regime. Almost all the political parties were banned, except Majlis-Ittehadul-Muslimeen which was being given a new life as a political party, national leaders were not allowed to enter the territory of the state, public meetings of any type could not be held without the prior permission of the government which was never given, even the condolence meetings on the death of Pandit Motilal Nehru and Dr. Ansari were not allowed. There were several restrictions on student activities they were not supposed to participate in any political and even in student movement. The conduct rules of the Osmania University prohibited the University students from joining any political, social and cultural organisations, from delivering speeches from any public platform, without the prior permission of the university authorities. Thus a total lack of civil liberties, intolerable conditions and suffocating atmosphere was bound to invite friction between the democratic minded youth and the despotic government.⁷

The first but a strong protest against the suppression of civil liberties was launched by the students of Osmania University when they started the famous Vandemataram Movement in 1938. The Vandemataram students at Nagpur came in contact with top ranking leaders of the congress and the other left leaders like Jawaharlal Nehru, Narendra Dev, M.N. Roy and others. Study circles were organised and many of the Vandemataram students imbibed left ideologies. They were firm with their view that the Vandemataram Movement was part of anti-Nizam struggle though the Nizam's government tried to give it a communal colour.

In the month of June, 1939, VandeMataram Students Association was formed at Nagpur with Sri. Atchuta Reddi as president and V.D. Deshpande youth leader of the State Congress, as General Secretary. This Association (students) had taken inspiration directly from the Satyagraha Movement of Hyderabad State Congress. At the same time Arya Samaj was also conducting massive satyagraha movement against restrictions on its religious activities and civil liberties which galvanised a big section of the people. The students made this issue into a symbol of their anti-imperialist and anti-Nizam struggle.

STUDENT MOVEMENT AND BACK GROUND:

The Vandemataram Movement created a stir not only among the Hindu students but also influenced a section of democratic and progressive minded Muslim students and served as one of the contribution factors in the formation of Comrades Association which with a radical leadership consistently fought the anti-people policies in the Nizam's rule, stood firmly with the people in their struggle and was instrumental in organising workers and the middle classes in their respective class organisations.⁸

But at the same time, the liberal minded leadership of the State Congress didnot allow the Vandemataram Movement to assume militant forms and direction, in fact, they forced the Vandematram Strikers who were weak financially , to give up the singing of Vandemataram and tender written apologies to the Osmania University authorities for their past action and thus seek re-admission. The effect of such a compromising policy was very demoralising and a section of radical - minded students refused to adopt such a course of action. They not only decided to appear as private candidates at the Nagpur University, but a section of them led by Narendra Dutt and others held a public meeting to protest against such an action forced upon them by the State Congress leadership and in a pamphlet issued by the "Radical Student League", under the title "Student Popular Front, they expressed their anger thus, you are aware of the abrupt unexpected, may undignified ending of our movement by the people at the top. Need we say that it was a total betrayal of the cause so

dear to us "date of 29th November 1939. Such was the state of affairs after the withdrawal of the Satyagraha by the State Congress and the Vande Mataram Movement of the Osmania University.

EARLY EFFORTS FOR THE FORMATION OF STUDENT ORGANISATIONS:

In these circumstances, the student community under the influence of different political parties and groups was struggling hard to find a way out of the situation, to unite their ranks and to give some organisational shape to their movement. To give this usage of the students a reformist turn, an attempt was the formation of "All Hyderabad Students Association", in October, 1939. The first public meeting of this association was held at the Reddy Hostel on 12th October, 1939. The meeting was presided over by Laxman Rao Ganu and the Chief Speaker on the occasion was Dr. Radha Kumud Mukerji, Head of the Department of History, Lucknow University. Almost all the prominent leaders of the State Congress attended the meeting. It issued an appeal which spelt out the "aims and objective of the Association which could be summarised thus.⁹

At the same time another student organisation "Radical Student's League" also came into existence. Mr Narendra Dutt was the moving spirit of this organisation and Mr. D.H. Desai was the secretary of the league. A meeting of students was held under the auspices of the league at Devi Deen Bagh on 29th November, 1939, with Swami Ramananda Tirtha in the chair.¹⁰

Whatever it may be, above mentioned these organisations were failed to reflect the aspirations and demands of the students community could only be a temporary phenomenon and were not able to take the shape of a stable student organisation and a real for their activities. So the students have need to another one commitment student's organisation in immediately.

FORMATION OF ALL HYDERABAD STUDENTS UNION - 1942:

A group of progressive minded students, who were leaders of the Vandamataram Movement. Which who anxious to form a united

students organisation and were making efforts to contact likeminded students. Notable figures of this group were Omkar Prasad, B.S. Paranjipe, K.B. Deshpande. Ambadas Wadwalkar and others.

Along with there was also a big group of students and youth in the city who were already working in the Comrades Association, prominent among them were Alam Khundmiri, Ibrahim, Qutb-e-Alam, Dilawar Alikhan, Raj Bahadur Gour, Jawad Razvi and Hussaini Shahid. And a small group of progressive minded Muslim students had come from Aurangabad and were staying in the Osmania University hostels. Aquil Ali Khan Ayub Ahmed Kirmani and Yousuf Nazim. When different groups of students felt the need of a united student organisation and where moving in that direction, the initiative was taken by the communists and a meeting was held at Reddy hostel in 1940, and a decision was taken to form a broad-based student organisations on an all Hyderabad basis, under the banner of Freedom; Peace and Progress. This meeting was affected by Ravi Narayana Reddy, Baddam Yella Reddy, Maqdoom Mohiuddin, Raj Bahadur Gour and Jawad Razvi and others.

Thus, to bring together the different groups working in the same directions of a secular and united student organisation on an all Hyderabad basis, a provisional committee was formed sometime in June, 1941. The most

important task before the newly formed provisional committee was make the proposed organisation as broad based as possible and to embrace in its fold all those students Hindu and Muslim, who may such democratic minded students who were not attached to any political party keeping this objective in view a manifesto of All Hyderabad Study Union (AHSU) was issued jointly signed by Aquil Ali Khan, as General Secretary and Omkar Prasad and Ayub Ahmed Kirmani as organising secretaries of the provisional committee.¹¹

CONCLUSION:

During its existence for over 15 years, the AHSU, stood out as the most representative organisation of the students in the State of Hyderabad. It was initiated and organised a variety of social and cultural movements and carried on educative work for the spread of secular, democratic and socialist thought. It resisted the communal and autocratic rule of Nizam, fought for the integration of Hyderabad with the rest of India and actively supported peoples cause from time to time. It represented a whole generation and its social and political development. Indeed, the recent history of Hyderabad State would be incomplete without taking into account the prominence role played by students in all walks of life, as reflected in the multifarious activities of the All Hyderabad Students Union.

ENVIRONMENTAL HYGIENE AND PUBLIC HEALTH IN COLONIAL TOWN: KOZHIKODE UNDER BRITISH PERIOD

M.P. Riswana

In the history of the evolution of social life, human beings have considered health and hygiene as interrelated factors for the survival of

the species and inevitable for its civilized life. Hygiene, both personal and environmental is important in the maintenance of health. From

ancient time onwards, the relationship between disease and the environment and the role of hygiene ensuring healthy existence have been recorded in various traditions and discourses of human history and they have contributed significantly to the social and medical understanding of human body and disease. Ancient Indian tradition through its various customs and rituals stressed the significance of environmental health and need to maintain proper public hygiene. The excavation of Indus Valley civilization reveals that Indians possessed a high sense of health and sanitation and Vedic scriptures stress personal hygiene.¹

This paper tries to reveal the unhygienic surroundings that existed in Calicut (herein after Kozhikode), a city in northern Kerala, and find out some measures adopted by colonial authority to maintain hygienic city culture. The Hippocratic nosography of fever and the idea that health has much to do with geographical, climatic and environmental factors provided an important tool for medical and sanitary investigations by European physicians in different parts of the world.² But the benefits of these investigation and inventions were revolving around colonial and imperial interest. Any examination of sanitary facilities, hygiene and public health facilities provides an opportunity to assess the nature of the imperial interest and gradation of British administration in colonized cities and towns.

The establishment of colonial rule in India associated with the recurrent occurrence of various epidemics as such cholera, small pox, and fever. But the complaints imputed to the lack of a sense of sanitation and hygiene among Indians.³ In fact, urbanisation programmes that started in the colony by colonial administration made both favourable and unfavourable results, tended to spread certain fatal contagious disease. High rate of population increase, densification of urban living space, insufficient water supply and massive drainage, and sewage difficulties were the major urban problems in colonial India. It resulted in frequent episode of various sorts of epidemics as like cholera, malaria, plague, smallpox and fever. Medical specialists, military experts and other professionals, to counter the problems of urban growth referred to European politics of health, hygiene and society which

were part of sanitation. It was remedy to reduce the evil effects of urbanisation in English cities. Consequently, without any environmental related modifications the principles of European sanitation were transferred to India.⁴

Initially, during the colonial period the sanitation facilities and hygienic environment were restricted to the needs of military personnel and elite class of administration and natives were denied these progresses. But gradually they were forced to change their approach and incorporated the native population within the project for sanitary reforms. The history of sanitation work in British India started with the reports of the royal commission of 1859. The contributions made by Florence Nightingale to the setting up of this commission was noteworthy.⁵ She observed the sanitary conditions of the three presidency towns, "Bombay had water supply but no drainage, while Calcutta had drainage but no water, and Madras had neither".⁶ The royal commission identified, inadequate sewerages and water supply, poor and ill ventilated and overcrowded barracks were the reasons for the high rate of mortality among troops. The military cantonment Act of 1864 provided for the creation of a new cantonment authorities and it provided healthy environs for the soldiers.⁷ It resulted the isolation of British officials and the army by relocating them to newly built barracks and residencies that were detached from native's dense areas. As part of commenting the bad health of the troops the royal commission laid stress on the insanitary condition of the general population. In accordance with their advice, in 1864 sanitary boards were appointed in each presidency, mainly for army but it extended up to public health.⁸ In 1866 sanitary board was replaced by sanitary commission and in 1888 the sanitary Board was set up in every province which controlled and supervised the work of the District Boards and Municipalities in connection with water supply and drainage schemes.⁹ On the basis of the function and utility, the sanitary board had been varied considerably from time to time and province to province.

Many western scholars considered cleanliness as a European virtue, but Gunnar Myrdal, who attributed poor sanitation to the cause of several contagious disease.¹⁰ He noted

that British administration was indifferent in providing budgetary allocation for sanitation and health programmes in the colony.¹¹ Hesitations in the allocation of adequate fund badly affected the duty of lower grade staff in the local administration who were appointed to keep the street and latrines clean. He explained that people could not keep themselves clean in the unclean environment and the poor sanitation of the people in British India was largely apparent in their individual habits and domestic system, like unhygienic food and drinking water, clothes and homestead, open sewer and inadequate sewage disposal.¹²

Good sanitation and proper drainage are most essential for the healthy development of a town. The absence of these facilities makes the region a centre of various epidemics and affects the social life of citizens. The history of Kozhikode in colonial times gives us a picture of this kind. The nature of this urban space made this region a centre of epidemics. Because the streets in this urban space were so congested and narrow and could not meet the requirements of the population. Many parts of this city were an extension of the medieval structures, so it developed as an unplanned town with unhygienic and unhealthy for the settlement. This kind of urbanization produced negative impacts on life as people suffered from deficiency of clean drinking water, lack of proper drainage and lack of facilities for night soil disposal. These physical conditions led to various epidemics that broke out at regular interval throughout colonial period in the Kozhikode. Apart from these factors, the reluctant attitude of the rulers to spend much income to maintain public health made this region abode of epidemics. It is to be noted that frequent occurrence of various contagious diseases in the town showed that the colonial authority could not succeed in establishing a constant hygienic system in the city.

Just like other urban areas, drains played a major role in maintaining unhygienic atmosphere in the city and creating health problems of the public in Kozhikode.¹³ Unclean drains filled sludge provided breeding beds for mosquitoes and heaps of solid waste dumped on the road more worsened the situation. During the rainy seasons, the degenerated garbage made the entire area filthy. Lumps of

these decayed pieces of waste slipped into the drainages and blocked the flow of water. These drainage with stagnant water bred increased number of mosquitos and acted as a carrier of epidemics. Enough sweepers were not appointed by the district administration. As per the government records, each sweeper had to attend seventy houses which was a number far beyond their ability to cope with¹⁴. As per the municipality administrative reports of 1943 drainage scheme for this region was a complete failure for the previous six years.¹⁵

Another issue that phased by the people in Kozhikode was the dispersion of night soil. Incinerators were used to burn rubbish and night soil and the ashes were sold to private individuals for making manure.¹⁶ Public latrines were constructed adjacent to the market places and at the slum areas of the city. British regarded latrines as a means of a long-lasting British civilizing mission in India, as many other European intuitions. It seems to be alike reasonable and politic to look rather to the gradual enlightenment of the people for an improvement in their social and domestic habits than to the authoritarian interference of government.¹⁷ The entire municipality had only three incinerators to burn the night soil into ashes and disperse of as manure.¹⁸ Shortage of funds and inadequacy of men and carts to take out the human excrement from residence to the incinerators worsened the situation. The residents' complaints from these area forced municipal authority to make changes in the existed methods to get rid of the human excreta from houses and roadsides. One of the suggestions made in this regard was to make trenches and fill the filth in them. The municipality found places for trenching ground at Puthiyara but the awful stink from these grounds often polluted the surrounding atmosphere.¹⁹ Because of the complaints received from the urban dwellers the council decided to move the trenching ground outside the city. Thus, the people living in the suburbia became the victims of this awful stink and later when the town limits were extended people found that their wells were becoming contaminated. The land chosen for trenching ground was a plot named Vadakke Ekkalya paramba under survey number 97/A of cheruvannur Desom.²⁰

The second method was to dump it in the incinerator to burn with saw dust and sell the ashes. But the saw dust was not available abundantly for this purpose because it was commonly used for domestic cooking fire. The third method was to make an amalgam of carbolic acid and kerosene oil to burn the night soil and due to high cost, this method had to be discarded.²¹ Later, Municipality promoted the construction of private latrines with septic tank.²² Before that, a separate group of people called thottis(scavengers) used to collect night soil pots from each locality and they carried it on their head to the incinerators.

Private scavenging was also practiced inside the city because of the shortage of scavengers. This was paid service and household had to bear the payment. The Municipality announced the payment for service, "scavenging fees be made to some extent proportionate to the municipal tax paid, namely that they should be somewhat raised for the richer and lowered for the poorer classes".²³ Official reports shows that there were complaints, though some of the household deposited the requisite money with the municipality and even after five years, no private scavengers visited their houses.²⁴ People lived in such households fell victims to contagious infections carried by fleas living on the night soil

Administrative reports of colonial rule reveal that the authority had not paid attention to the massive suffering of people. In the report submitted by the sanitary officer of the refugee camp opened at the outbreak of the epidemics in Kozhikode, it was mentioned that there were no arrangements for the collection, storage, purification, and distribution of water. So, water had to be pulled from shallow well by means of ropes and buckets. Lack of sufficient latrines and scarcity of sweepers employed to deal with the excreta resulted in the camp ground was being fouled by excreta and urine, which would easily seep into the wells. There was no sufficient supervision of the protection of cooking place and disposal of waste water. This again shows that the reluctance of the colonial rulers to spend income to maintain sanitation and environmental hygiene even in the refugee camp.²⁵

The extent of sanitary reforms in any locality depended greatly on local circumstances, such as availability of funds and enthusiasm of the municipal government. This was especially true in the case of large sanitary works in the form of drainage and sewage schemes for which local authorities were usually depend on loans from government. In Kozhikode, the municipal system of government came into existence on July 3 1866. From then onwards, the construction dispensaries and drains, maintenance and cleaning of wells, tanks, street, etc were assigned to the municipality and repair of hospitals. With the setting up of municipality, sanitary legislation was introduced and enforced accordingly. As Madhuri Sharma opined that the municipalization of the space, gave an opportunity to the 'colonizer' to intervene in everyday life of the natives.²⁶ It gave power to the authority to formulate sanitary rules for the assessment and collection of drainage tax, house tax etc.

While this was the general sanitary conditions that existed in the town, the white race enjoyed a privileged life in residencies of high hygienic environment kept aloof from the natives. They lived in residentially segregated areas with good environmental hygiene and improved sanitation facilities. To protect the British from the harmful effect of Indian environment the colonial cities were rebuilt and transformed.²⁷ In Kozhikode, as in other colonial space the cantonment area and the residential areas segregated and protected from the natives. The colonial authorities also insisted the Municipal councillors to keep the locality in good sanitary condition. The incinerator at west hill was condemned and later at the time of its reconstruction, strong objection came on pointing to its proximity to the West Hill Barracks.²⁸

Kozhikode was considered as the capital city of Malabar district under Madras presidency. It was the continuation of the pre-colonial urban centre. As already mentioned, streets were congested and narrow, Municipality council attempted to renovate these areas. The council acquired number of old and dilapidated buildings on the narrow road from the beach to the Alva street to improve the sanitary conditions of the Gujarati quarters.²⁹

Numerous tanks that existed during the time of Zamorin's period were used for water supply, filled up as a result of the rapid growth of urbanization. Many plans and estimates were submitted for better drainage, but the unplanned growth of the city made it difficult to implement them.³⁰ Further, the indifferent colonial attitude prevented any governmental or state intervention in addressing the problem of sanitation in towns. There were legislative measures to improve the sanitary conditions of the town. As the Madras District Municipality 1871, in which general sanitary rules and regulations were issued, regular sweeping and cleansing of the street, regular removal of night soil from latrine and private houses, managing corpus of animals and other offensive materials, regular collection of dust, ashes and kitchen refuse from dustbin and private house.³¹ But often these measures were not strictly enforced. Penalties were imposed to protect the rules from violation. The success of these rules and regulations mainly depended upon the execution of the policies. Often, the disputes between sanitary and medical officers and lack of administrative efficiency and coordination with each department in municipal government slowed the process of maintaining sanitation in the town.

All possible steps were taken whenever the health or residential environment of the colonizer was challenged and authority was more concerned to execute the rules and regulations strictly to maintain good sanitary condition. One such instance was the introduction of mass graveyard by colonial authorities.³² When cholera appeared in its virulent form in 1858 and 1890, it shook the city space and took innumerable lives. Robinson, the Madras magistrate noted the reasons for this and stated that the natives in the town lived in a filth surroundings and with inadequate land for cremations of the people.³³ It forced the authorities to adopt some measures to solve this crisis. This resulted in the introduction of mass graveyard in Kozhikode. With the support of some leaders in town, the Kannamparambu cemetery and west hill cemetery came in to reality. They made the graveyard for each community such as brahmins, thiyys, chettiyars, Christians, Muslims, Baniyas and parsis.³⁴

When system of water supply and sewerages go hand in hand the proposition of sanitation becomes sound. Protected water which is essential for the diet and maintenance of health. Most of the people in the district used to drink water collected from public or private wells. Several of these wells maintained by private households were not regularly cleansed and properly protected. People used water from these wells for drinking and cooking purpose as well as for bathing, cleaning and other domestic purposes. In fact, the water got contaminated spread contagious. Until 1892 protective walls were not constructed for the wells in Malabar.³⁵ It was very common that wells without protective walls got easily polluted by the surroundings garbage and left overs. This was prevented by the official action taken to protect the wells in the region. As part of this, the construction of boundary walls for the wells made compulsory by the execution of laws in 1892.³⁶ As a result, every house in the Kozhikode made a boundary walls for the wells.

Sanitation is one of the greatest medical discoveries in history. But the sanitation policies in colonial period were planned, designed and implemented mainly to keep up the privileged life style of the colonizers and to enhance comfortable governance, rather than to improve the real life of the natives. The reports of frequent occurrence of various epidemics in this town show that the scarcity of regular intervention from authorities to maintain sanitation and public health. Serious steps based on special regulations were taken only when the public health met with epidemics and other fatal situations. The lack of interest among colonial authorities resulted the absence of proper drainage. They left everything to local projects and avoided expenses and responsibility. The responsibility of keeping municipal roads and sewerages imposed on the lower level employees without the allocation of fund in the town. The non-availability of fund and absence of necessary staffs made a constraint on sanitary progress throughout the colonial period. It resulted filthy and unhealthy condition that continued in the Kozhikode town and people had not free from contagious disease and led to unnatural mortalities. The cantonments and the British residential areas were segregated from the residential areas of natives and lived in epidemics free area.

Though Kozhikode was blessed with municipality and a health department, both establishments were not worked properly and

most of the sanitary inspectors, whose knowledge of sanitation was practically nil as any other colonial town.

RUKMANI LAKSHMIPATHY - A VIGOROUS FREEDOM FIGHTER AND A STRONG POLITICIAN IN TAMIL NADU

Dr. C. Rouccoumany

1. Introduction

This research articles endeavours to make an in-depth study about Rukmani Lakshmipathy (1892-1951), an Indian independence activist, politician belonged to Indian National Congress in Tamil Nadu. Tamil Nadu, the southern-most state of India, nestles in the Indian Peninsular between the Bay of Bengal in the east, the Indian Ocean in the south and the Western Ghats and the Arabian Sea on the west. In the north and the west, the state adjoins Karnataka,

Andhra Pradesh and Kerala.¹Tamil Nadu was an asylum for the eminent politicians and the great personalities. Rukmani Lakshmipathy was one among them. She was excelled as speaker, marcher, campaigner and a tireless volunteer.

2. Early Life

Rukmani Lakshmipathy, born on 6th December 1892 in Madras, belonged to a family of social reformers deeply interested in women's education. Her father H. Srinivasa Rao,

a landlord and a member of the provincial Government service, refused to marry her off at an early age and educated her. So she had the benefit obtaining both traditional and western education, a privilege that was enjoyed by very few girls at that time. Her family defied all conventions for her intercast marriage with Dr. Achanta Lakshmi pathy, Smarta Brahmana Sect, niyohi division. The marriage took place on 3rd December 1911. Her husband was a staunch nationalist and got her also interested in politics.²

3. Member of the Women's Indian Association

On 8th May 1917 women's Indian Association was started at Adyar in Madras, by Jinarajadasa and Annie Besant with the purpose of advancing the interest and furthering the progress of women in India.³Rukmani Lakshmi pathy was a prominent member of the women's Indian Association since its inception. Before entering into politics, she was busy with social work and social reform. She felt sad about the social injustice done to women and worked for the amelioration of their condition. Along with the other great social reformers of that time, she was responsible for passing of social legislation, raised the age of marriage and age of consent, etc. She tried to enroll the help of women both to carry out social reforms and in the political struggle. As a prominent member of the Women's Indian Association, she was a delegate to the tenth International Congress at Paris in June 1926.⁴

4. Member of Indian National Congress

Indian National Congress, a political party of India, was founded on 28th December 1885, by Allan Octavian Hume a retired British officer at Gokuldas Tejpal Sanskrit College in Bombay with 72 delegates.⁵

In 1923, Rukmani Lakshmi pathy became a member of the Indian National Congress. She went to Japan in 1924 enquired about the western system of education followed there. After coming back to India, she insisted to implement that type of education in India. She argued that the system of education in India could produce only clerks to work for the British as their subordinates.⁶She was very much concerned about Indian education in general and women's education in particular. She supported for the extension of Elementary

Education Act of 1920 and advocated adult education and compulsory female education.

4.1 Attended the International Women's Suffrage Alliance Congress

Rukmani Lakshmi pathy attended the International Women's Suffrage Alliance Congress at Paris as the Indian Representative from 30th May to 6th June 1926.⁷She utilized this opportunity to travel all over the Europe and also to visit England and propagated there for India. Her social activities were coupled with political activities.⁸

4.2 President of Congress Women's Wing

In December 1927, in the All India National Conference held at Egmore, she was selected as the President of Congress women's wing. She had an opportunity to serve Gandhiji and Nehru who arrived for the conference along with Mrs. Kamaladevi Chattopadhyaya. When the Simon Commission came to Madras on 18th February 1929, along with the congress leaders, S. Sathyamurthy, Muthuranga Mudhaliyar, K. Bashyam Iyengar, Rukmani Lakshmi pathy along with Kamala Bai agitated with the slogans, "Boycott the Simon Commission", "Simon Go Back", etc.⁹

5. Participated in the Freedom Movement

As a member of Indian National Congress, Rukmani Lakshmi pathy established 'Youth League' a Pro Congress Organization in 1930 and through it she tried to accelerate public opinion for prohibition of liquor. In January 1930, as a president of the Madras Youth League, she expressed the opinion that independence could only be achieved by organizing the masses under the intellectual leadership of Youths.¹⁰In April 1930, Rukmani Lakshmi pathy, Durgabai, Bakthavatchalam and a few others arrived from Madras and spoke about foreign cloth boycott, Prohibition and Swadeshi.¹¹

5.1 Participation in the Salt Satyagraha

On 30th April 1930, C. Rajagopalachari, accompanied with one of the chosen Satyagrahi, Rukmani Lakshmi pathy including sixteen Satyagrahis defied the salt law and collected salt at Agasthian Palli. They were sentenced for six months imprisonment¹².At that time she got a telegram from her husband stating that her three year old child Rama Rao was in a serious condition. Initially she denied

for went back, but because Rama Rao was her only surviving son, being the first son Emton she lost in his 2nd year, she came to Chennai. But when she understood the condition had improved immediately she went back on the same day that shows her involvement in the struggle for freedom. For this service to the motherland she got the credit of being the first woman imprisoned in context with Salt Satyagraha.¹³

5.2 Effective Role in the Civil Disobedience Movement

Rukmani Lakshmipathy took an initiative of involving women in the Civil Disobedience Movement. Being a member of Women's League responding to her call eminent women like Ambujammal, Gnanambal, Dr. Shakuntala Iyer and Kamala Bai took part in the movement.¹⁴She was arrested for her active participation in the Civil Disobedience Movement twice first in 1930 and again in 1932 and sentenced to six months imprisonment.¹⁵

5.3 Vigorous Activities in the Individual Satyagraha

In 1940 Gandhi preferred Individual Satyagraha instead of Mass Disobedience Movement to demonstrate the national disapproval in view of war situation. The women Sathyagrahis responded remarkably for individual Satyagraha and courted arrest. In Tamil Nadu, the Tamil Nadu Congress Committee, which met at Pollachi on 20th October, 1940 planned to initiate the Satyagraha in a well-organized manner.¹⁶Rukmani Lakshmipathy, a member of the Congress Working Committee, made up her mind to participate in the Individual Satyagraha, which she considered as a necessary one.¹⁷As her activities were so vigorous during the agitation along with others in November 1940, she was convicted and sentenced to suffer simple imprisonment for one year.¹⁸

5.4 Active Participant in the Quit India Movement

The Quit India Movement which broke out in August 1942 was the last all Indian Satyagraha conducted by Gandhi, who wanted the movement to be symbolic in character in order to register India's moral protest against the British attitude and to draw the attention of the world to the right of Indians to

freedom.¹⁹When the important leaders were arrested in August 1942 in the Quit India Movement, Rukmani Lakshmipathy became the acting president of the Tamil Nadu Congress Committee and took the initiative to keep the organization alive.²⁰She continued to play a remarkable role in the Congress Politics till the end. She had given directions to the Satyagrahis after the arrest of main leaders. She also went from place to place appealing people to participate in the movement.²¹

6. Strong Politician in the Legislature

The Madras Legislative Council became Unicameral Legislative body in 1921 and the Upper Chamber of a Bicameral Legislature in 1937. In 1935, Rukmani Lakshmipathy was elected to the Madras Legislative Council.²²In 1935-36, she was the Vice-President of the Tamil Nadu Congress Committee.

6.1 Member of Legislative Assembly

The First Madras Legislative Assembly Election was constituted in July 1937. Bulusu Sambamurti and A. Rukmani Lakshmipathy were elected as the Speaker and Deputy Speaker respectively.²³In the Election, the Indian National Congress obtained a majority by winning 159 of 215 seats. C. Rajagopalachari became the first elected Chief Minister of the Madras Presidency. Totally nine women were elected.²⁴

Besides, Rukmani Lakshmipathy, G. Ammanna Raja, Anjalai Ammal, Kathija Yakub Hasan, A.V. Kuttimalu Amma, Jebamani Masilamani, V. Lakshmi Ammal, K. Lakshmi Ammal, and N. lakshmi Devi were the other eight women members in the Legislative Assembly.²⁵

In 1937, Rukmani Lakshmipathy became a member of the 'Working Committee' of the Indian National Congress.²⁶She was very much interested in the education of women and children. In 1938 she visited Japan as a member of Good will Mission. During her tour to western and eastern counties especially to Japan, she made a study of the educational systems there and wanted India to adopt those good aspects. She was a dedicated social worker. She strived hard for raising the 'Age of Marriage and Age of Consent'.²⁷On the eve of II World War with respect to the difference of opinion with the British Government, the Congress Ministry resigned on 29th October

1939, and the members involved themselves in Individual Satyagraha.²⁸ In July 1943, Rukmani Lakshmipathy and the other congress members of the Madras Corporation had launched a campaign on the food situation. She spoke about food problem and solved it with the support of communist Party.²⁹

6.2 Minister of Public Health and Medicine

The second Legislative Assembly Election to the Madras Provincial Legislature held in March 1946. Among 215 members in the Madras Legislative Assembly, eleven were women. Rukmani Lakshmipathy was the only woman minister among thirteen ministers in the Madras State under the ministry of T. Prakasam from April 1946 to March 1947. C. Ammanna Raja was elected as the Deputy Speaker.³⁰

Apart from Rukmani Lakshmipathy, Amiruddin, Begam Sultan Mir, C. Ammanna Raja, Anjalai Ammal, Bhupathiraju Bangarayya, Jebamoney Masilamoney, A.V. Kuttimalu Amma, K. Lakshmi Ammai, V. Lakmi Ammal, Sita Mahalakshamma, and Allum Suamangamma were the other ten women members. Rukmani Lakshmipathy was elected to the Madras Legislative Assembly and was

made Minister of Public Health and Medicine.³¹ Besides she was the minister for Fairs and Festivals and miscellaneous.³² Being a woman minister from 1946-47, she did a lot for the improvement of sanitation in the city of Madras.³³ Marshall's road in Egmore, Chennai is renamed after her. In her memory, a postage stamp was issued in 1997.³⁴ She continued to be a member of Legislative Assembly till her death on 6th August 1951.³⁵ She had always been a soldier for women's cause. Rukmani Lakshmipathy served as an Honorary Presidency Magistrate. She appealed to the youth to create a public opinion for the enactment and successful working of social legislation on problems like the caste system, child marriage, drink, untouchability, devadasi system etc.³⁶

7. Conclusion

Rukmani Lakshmipathy, an Indian independence activist, prominent congress leader, was a courageous women minister, self-sacrifice and loyalty to take the utmost penalty for one's conviction and this Rukmani Lakshmipathy had always done.

ANTI - BRITISH STAND OF RAMNAD AND SIVAGANGAI

M. Samyuktha

The Carnatic Treaty of 1792 established a sort of dual control of British and the Nawab over the poligars. The British were slowly introducing into the political domain of the native poligars. The tact and diplomacy of the British enabled them to establish complete control over Ramanathapuram. In course of time, the Sethupathis were reduced to the status of Zamindars. The Sethupathis did not accept the British hegemony without any opposition. On different occasions, they tried to revolt against the British. The anti-British stance of the Sethupathis formed a significant part of their relation with the British.

Queen Velu Nachiyar hailed as a heroine of South India who has found a pride of place in the very first chapter of history of the freedom struggle of this country. She was in the forefront in many aspects of life. She was compared with the Queen Lakshmi Bai of Jhansi, who fought against British in the northern part of this country, seventy years later. The Tamil Queen fought and drove away the British and ruled over her State as an independent ruler, for a period of ten years.

Queen Velu Nachiyar was the First Tamil Queen and freedom fighter, able general, great warrior and benevolent despot¹. She was follower of Pulitevar² by adopting secularism, equality, fraternity, democracy, social justice and preserver of culture in her administration. The Tamil Queen played a vital role in the native resistance against the British in the last quarter of the Eighteenth Century and fought the British

eighty five years earlier than Jhansi Rani Lakshmi Bai in India. In other words, she was the First Woman Freedom Fighter in Indian History.

Formation of Sivagangai State

During the reign of Ramanathapuram State, by King Thirumalai Sethupathy (1675-1678), a situation arose necessitating the creation of a new 'Palayam' for the protection of the North western part of that State³. With a view to improve the status of his son-in-law he appointed him as Palayakar of Vellikkurichi Palayam as well as Kaval in charge of Tondi, the seaport which belonged to Country⁴. Muthu vijaya Ragunatha Sethupathi of Ramnad, who was the founder of the First rule of Sivaganga. Velu Nachiyar wanted to take revenge against the British. Hence she strengthened the forts and increased forces to restore Sivaganga Kingdom. She also ordered the repair of forts at Kalaiyarkoil⁵, kollangkondan, Siruvayal, and built a secret exit from Sivaganga palace and started many training centers at Arasa Kullam, Piranmalai, Sathru Sangara Kottai and Sankarapathy Kottai.

The death of her husband Muthu Vaduganathar was informed to Queen Velu Nachiyar, who was staying at that time in Kollangude and she rushed to Kalaiyarkoil fort. The ghastly scene, which she saw there, shocked her mind and body together. Queen Velu Nachiyar was the daughter of king Sellamuthu Sethupathi of Ramanathapuram and Sakkandhi Muththaththal Nachiyar.

Sivagangai State came under the rule of the Nawab of Arcot, with his flag fluttering over the palace of Sivagangai. His son, Ameer-ul-Umara, ruled the state for a period of eight years as the representative of the Nawab of Arcot. The revolutionary force of Sivagangai was observing all that was happening in Sivagangai, staying in the border areas of Sivagangai.

The leader of these revolutionary forces, who were giving a lot of troubles to the rule of the Nawab, were the Marudhu Brothers who were instrumental in bringing Sivagangai back to freedom in later days. The meeting of Velu Nachchiyar with Hyder Ali, took place in Dindugal. After ascending the throne, Velu Nachchiyar made three important decisions⁶. In order to fulfill her desire, HyderAli ordered to built Rajarajeshwari Temple and install goddess Rajarajeshwari, an idol made up of gold, within the fort of Dindugal for her worship⁷. Women force was formed by Queen Velu Nachchiyar, with herself being a trainer for that force. When she and her daughter, Vellachi Nachchiyar, accompanied by the loyal servants, narrowly escaped near Kalayarkoli (at Ariyakkurichi Annayar Koli) which was known only to herd girl Udaiyal.

The royal family was chased by Benjor and Udaiyal was tortured for information. But she refused to answer despite the cruel British force. Immediately, he ordered his soldiers to slaughter the Young Martyr, Udayal, in the same place. In order to honour her Velu Nachchiyar named her force as Udiyal Padai⁸. In 1780, on the sixth of Iyppasi (seventh month of Tamil month order), on a Friday, Udayal Padai launched their attempt to restore Sivaganga⁹. On the previous day of *Vijayadasmī*, Velu Nachchiyar hatched plot against the British. Because there was no restriction on the particular day to worship Goddess Rajarajeshwari by women, which is located inside the Sivaganga Palace, the British had hatched a plot against the people. But fortunately, Captain Quili came to know about the plot against them just a few minutes earlier. Within a fraction of second, decided to save the Queen and restore Sivaganga by sacrificing her life. She burnt herself and acted as human bomb to destroy the arsenals kept inside the temple. It was unexpected by the British force, which paralysed them for a moment. The British soldiers were ravaged by Udaiyal Padai, under

Velu Nachchiyar, who came out into the front and gallantly played the role of a defender to restore Sivaganga with the help of Udaiyal Padai¹⁰.

A few references say that the Sivaganga ruling house was gradually slipping from the Maravas to the Agambadi¹¹. As Vellachi Nachchiyar as legal heir for Sivaganga Samasthanam in 1790¹². As Vellachi Nachchiyar was inefficient and inexperienced in the administration of Sivaganga by Queen Velu Nachchiyar. When they implemented the royal orders, they were familiar and famous among the people of Sivaganga. Thus, Sivaganga had come completely under the control of the two Agambadias, after the reign of Queen Velu Nachchiyar. At this juncture, they acted as defecto rulers of Sivaganga¹³. It is clear that efficient persons can rule the country without any royal background. Thus, she paved the way for the formation of democracy in India. This Velu Nachchiyar was the only woman, who restored the kingdom from the country clutches of the British by open war and ruled for a decade.

Velu Nachchiyar, who tried to bring peace and rule the State by her firm decisions, could not enjoy a peaceful life at home. She had problems as to whom she should entrust her daughter with, after had attained maturity and also to whom she should entrust the ruler ship of the State after her. Regarding the marriage of her daughter two persons were proposed. One was king Muthuramalinga Sethupathy of Ramanathapuram and the other was a relative in the lineage of her mother, Sanganthi Vengan periya Udaya Thevar. Velu Nachchiyar preferred the latter and her daughter was married to Periya Udaya Thevar. The interest of her State was foremost in her mind while taking such a decision.

The British started enacting a drama with a dual role as thought they were on the side of Velu Nachchiyar for some time and on the other side, for some time. As a result of that, Vengan Periya Udaya Thevar become the King of Sivagangai as per the compromise formula suggested by the British. The adopted son of Velu Nachchiyar, Padamathur Gowri Vallaba Thevar, escaped to Arantangi to protect his life.

Muthuramalinga Sethupathi ascended the throne in 1762¹⁴. He was an efficient administrator. He wanted to free himself from the control of the Nawab. To make the matters worse, the Nawab handed over the administration to the Company. The Company sent McLeod as the Collector of Madurai in 1790. He raised the tribute to be paid by the Sethupathis from Rs. 1,75,000 to 2,20,000.39 this become a very big burden to the Sethupathi. The economic condition of Ramanathapuram was deplorable. The internal problems and frequent battles had famished the country.

Hence Sethupathis were not in a position to pay the annual tribute promptly. He made an agreement with the Company by which the Company got the right to collect taxes. As per the agreement Colonel Martinz was sent to Ramanathapuram to collect taxes¹⁵. He built a Bungalow in the middle of Ramanathapuram. Muthuirulappa Pillai was the Dalavai of Ramanathapuram. He developed a sort of intimacy with Martinz. This was not liked by Sethupathi. On 15th March 1793¹⁶. The declaration made its obligatory on the part of the weavers of Ramanathapuram, to sell all pieces of cloth to the Company.

Revolts against the Company

The people of Ramnand suffered a lot under the administration of the Company. The company did not take any interest in the people. The Company ordered the people to pay the Desakkaval Duty to the Company. The first revolt broke out on 24 April 1799 at Mudukulathur. A group of revolvers attacked the Circar Cutchery. They ceased the rifles of the Company sepous, who were there on security guard. A similar attack was made on the Cutchery at Abiramam¹⁷.The rebels were not only engaged in activities of loot but also organized a sort of civil disobedience movement.

Rise of Marudu Brothers every country in the world had suffered, politically and economically, due to the spread of colonialism. In India, it was nationalism that opposed to parochialism, regionalism. Tamil Nadu, The southern most part of India, played a remarkable role in the "fight to finish" struggle. The freedom fighters in the fag end the

Eighteenth and early Nineteenth Centuries become the pioneers and the earliest torch - bearers of freedom struggle. They were none other than Puli Thevar, Khan Sahib, Kattabommam, Oomathurai and Marudu Brothers.

Kattabommman, the poligar of Panchalamkurichi, who rebelled against the British, used to meet Marudhu Brothers to seek advice and help in times of crisis¹⁸, Marudhu Pandyan with inadequate native forces valiantly fought his final struggle against the disciplined and well equipped British force, for six months. Like the other early patriots, he also failed to attain his objective of liberation of mother-India from the clutches of the British.

The proclamations of Marudhu Pandyan and the allegation of British led the situation to the brink of a bloody conflict. In May 1801, the freedom fighters under the command of Marudhu Pandyan, encountered the British. They drove away the British forces at Tirupatore and Natham. Then the patriots stormed Palamaneri shelter of the Fort of Ramanad. In July. Oomathurai, the ally of Marudhu Pandyan, commanded his followers in Madurai and captured it. In July 1801, the uprising spread to Kaveri basin. Shevatta Tambi, the son of Marudhu Pandyan, marched to Tanjore. The rebels expelled the British troops from Pudukkottai. Afterwards, they moved to Kumbakonam and Wodayarpalayam¹⁹. In the beginning of the struggle, the patriots gained astounding victory and by that success the places of Marudhu Pandyan. The continuous victories and by that success the places of Madurai, Ramnad, Kallarnadu and Tanjore came under the control of Marudhu Pandyan. The continuous victories of Marudhu Pandyan threatened the position of the British. The Madras Government ordered the mobilization of all the British forces towards Sivagangai. The end of Tippu Sultan and execution of Kattabomman at Panchalamkurichi, Tirunelveli, helped the British troops to divert their consolidated attention towards Sivagangai. Lt. Col. Agnew was put in charge of over all military operation against Marudhu Pandyan Advancing from the south, the British force occupied Palamaneri, Tirupuvanam, Tirupachetti and Manamaduri .Col Innes. Attacked Piranamalai, and

Saturusamharakottai situated near Tirupathur. Commanded by Blackburn, the British occupied the rebel posts at Tanjore and advanced to Arandangi and Pudukottai²⁰. Col. Macaulay defeated the rebels at Tirunelveli and Ramanad.

Thus the British surrounded the patriots of Sivagangai from all sides. On 27th July 1801, the British started their final concerted military operation. The combined forces of Agnew and Innes marched towards Siruvayal. The patriots resisted the mighty British forces by setting fire to Siruvayal. As a result, through an alternative way, on 30th September 1801, the British detachments moved to Kalayarkoil. After a sharp fire, Marudhu brothers were engaged in an encounter with the British at Cholapuram. Both of them were wounded and captured. James Welsh, an officer in the British army, had given a brief account on the last days of this great patriot. He had observed: "After Chinna Marudhu was defeated in the battle of Kalayarkoil, he was chased like a wild beast, was badly wounded and captured. He was seen lingering with a fractured thigh in prison and was lastly beheld with his gallant brother, Vellai Marudhu and no less gallant son, Shevata Tambi, surrounded by other, insurgents, in chains upon a common gibbet²¹." On 24th October 1801, Marudhu Pandyan, together with his brother Vellai Marudhu and a host of other patriots, were executed on the ruins of the Fort of Tirupatur in Ramnad District. The followers of Marudhu Pandyan carried his body to Kalayarkoil, buried it near the tank of great temple and erected a small tomb in his memory. The end of Marudhu Pandyan did not mark the end of the liberation movement.

THE ELITES OF COMMUNIST MOVEMENT IN NELLORE DISTRICT AND THEIR CONTRIBUTION TO INDEPENDENCE MOVEMENT.

Dr. K. Saravana Kumar

The political scene in Nellore district during the freedom movement and after independence presents a large number of distinguished personalities who influenced the course of political events many a time. The present study focuses on the important political elites of Communist movement, their political careers and their services to the people of Nellore district.

"History is but the biography of Great men", as Carlyle contended, all those men and women who have contributed in their own way, unmindful of reward and recognition, their might for the general welfare of all deserve to be remembered in history.

In this paper an attempt is made to identify and analyze the contribution of some of the Elites of communist party in Nellore district during and post independence period.

1.Sri.Puchchalapalli Sundaraiah ¹

Sundarayya was born on 1st May 1913 in Alaganipadu (in the present Vidavalur Mandal of Kovur Constituency) in Nellore district of Andhra Pradesh, India. At the age of 17, he joined Gandhiji's Civil disobedience Movement. He was arrested and spent time in a Borstal school in Rajahmundry where he became acquainted with various communists. When released, he organized agricultural workers in his village to protest against bonded labour.

He was mentored by Amir Hyder Khan who prompted him to become a member of the Communist Party of India, which was condemned and banned by the British government during the Second World War.

When the ban on the Party was lifted in 1943, the first Party Congress was held

at Bombay and he was elected to the Central Committee in the second party Congress held at Calcutta. In that Congress, the Communist Party of India adopted a line advocating armed struggle that came to be known as 'Calcutta thesis'. It was closely identified with its main proponent, the then General Secretary B.T. Ranadive. As a result, insurgencies took place in Tripura, Telangana, (then Hyderabad State under Nizam administration) West Bengal and Tiruvancore state.

The most important rebellion took place in Telangana, (Hyderabad State) against the Nizam of Hyderabad state. Sundarayya, was one of its leaders. He went underground between 1948 and 1952. He was re-elected to the Central Committee in 1952 when a special party conference was held. He was also elected to the Politburo, the highest forum within the Party. He was then re-elected to Central Committee and the Politburo in the third party congress in Vijayawada and again in the fourth congress held at Palakkad.

He was elected to the Central Executive and the Central Secretariat of the Party at the fifth Party Congress at Amritsar. At this time the internal conflict within the Communist Party of India had heightened. The Party leadership under S.A.Dange were in favour of supporting the Indian Government headed by the Indian National Congress at the time of the Sino-Indian War. Also, following the Sino-Soviet differences of International Communist Movement, the Party leadership under Dange was pursuing the USSR line, which the pro-Chinese leadership within the Party called revisionist. The group under Dange was referred to as the "Rightists", and the other group, "Leftists". Sundarayya was a prominent leader of the leftist group and he resigned his

positions conferred upon him during the Amritsar congress of the Party, protesting against the policies of the dominant leadership of the Party. He was arrested and imprisoned during November 1962 at the time of India-China border war.

The split came out in open and the leftists organized the Seventh Party Congress in October–November 1964 and forming a new Party called the Communist Party of India (Marxist). Sundarayya was elected as its General Secretary. However, immediately after this conference, Sundarayya and several Party leaders were arrested because of a ruling produced by the Congress government, and they were detained until May 1966. Again, he went underground to evade arrest during the period of the then Indian Prime Minister, Indira Gandhi, who evoked Emergency provisions of the Indian, between 1975–1977, to suspend Constitutionally guaranteed 'fundamental rights'. Sundarayya remained the Party's General Secretary until 1976. In that year, he decided to resign from his post as the Party's General Secretary and gave up his Politburo membership, for what he called the "revisionist habits" acquired by the Party.

In December 1972, the Communist Party of India (Marxist) published a comprehensive report prepared by Sundarayya, the then General Secretary, called *Telangana People's Struggle and Lessons*. Apart from narrating the socio-economic background of the Telangana Rebellion, Sundarayya went on to enunciate the Party's line on the question of partisan struggles.

In 1952, he was elected to the Upper House of the Indian Parliament, the Rajya Sabha from the Madras Assembly constituency and became the leader of the Communist group in Parliament. He was elected to the State assembly of Andhra Pradesh and remained a member of that House until 1967. After a long gap he contested again and got elected to the State assembly of Andhra Pradesh in 1978, he continued this up to 1983. Sundarayya held the party's state Secretary post in Andhra Pradesh and was a member of the Central Committee of the Party from this period to his death on the 19 May 1985.

2. Sri. Jonna Kotayya.²

Sri Jonna Kotayya was born in Talamanchi village of Kovur Taluk of Nellore

district. His political career started in 1933. He entered into direct politics in 1937 by opposing Justice Party in composite state of Madras. In the general elections held in the same year for state legislature he supported Sri. Bezawada Gopala Reddy and toured the district in support of him. He joined in Peasants Association of Talamanchi and was attracted towards Communism. At the insistence of Sri. Baswareddy Sankaraiah he joined in the party as a fulltime worker and started Talamanchi branch of Communist party. His comrades were Sarvasri. Chidambaram, Jonna Venkata Setty, and Jonna Narsaiah in the village who actively took the ideology of the party to surrounding villages and strengthened the party. He participated in Quit India movement, damaged railway property by burning a railway bridge at Talamanchi and went underground for few months to avoid police arrest. He attended All India Peasants conference held at Vijayawada in 1944 and implemented all the programmes that were resolved in Nellore district. He founded a co-operative society for the welfare of ryots in Talamanchi, which is still working and functioning well. He encouraged weavers to form into co-operative societies and utilize the services of the co-operative bodies.

Inspired by the call given by Mahatma Gandhi he personally supervised the *harijana* entry into temples of Talamanchi. Tanguturi Prakasam pantulu's ministry took a decision to form food security committees throughout the state. Jonna Kotaiah formed such committee in Talamanchi and made its functioning successful. When the Government banned the activities of the Communist Party of India in 1949 he was arrested and sent to Kadalur Jail where he spent two years as detenu. Before the general elections in 1952 all the communists were released. After the division in the party, he joined the Communist party of India (M) and later he sided the Naxalite movement for some time. He died on March 26th 2012 in Nellore at the advanced age of 93 years.

3. Sri. Darsi Chenchiah³

Darsi Chenchiah belongs to the galaxy of revolutionary freedom fighters who joined the Ghadar movement before the First World war. He belonged to the hard core of Ghadar

terrorists who tried to smuggle arms from abroad to fight the British white army during the war. He is remembered as the earliest detenué from Andhra, who had contributed to the struggle against British imperialists before mass movement of Gandhian Non-Cooperation. During his student life at the high school in Ongole, Chenchaiyah came into contact with patriotic youngsters who were inspired by the speeches of Bipin Chandra Pal and Aurobindo Ghosh. After the Bengal partition, the Swadeshi movement swept through the Andhra towns. The conviction of Gadicherla Harisarvothamarao for three years rigorous imprisonment in the Ashe murder case in Trichinopoly, the imprisonment of Tilak, Chidambaram Pillai and Lala Lajpat Roy and the repression in Bengal had encouraged patriotic young men to think along revolutionary lines. The martyrdom of Bose, and Dingra, the daring activities of Sarvarkar had also inspired young men to follow their footsteps. Young men wanted to go abroad for studies as well as international contacts. Among them Chenchaiyah was a sensitive young man, who was born in Kanigiri (then in Nellore district) in a merchant's family. He borrowed money to study Agricultural science in an American University. He joined in San Francisco for his higher studies. It was here he met number of patriotic sikh youths. In the wake of the repression in Bengal, Maharashtra, and Punjab the two sikh youths, Hardayal and Sohan Singh Bakna started a weekly newspaper called Ghadr, which means revolution. Hardayal was a brilliant student of history and politics. He was one of the earliest Indians to write about Karl Marx in Modern Review as early as 1912. The members of the Ghadr trained themselves through rigorous exercises and learned the art of using modern weapons and making bombs. Chenchaiyah was one among them. He was elected to the decision making body of the Ghadar group. The object of the group was to smuggle a shipload of arms to India and with the help of Indian revolutionaries and soldiers, they wanted to overthrow the British Government. At that time a German Indian committee promised to extend its help in this venture. Chenchaiyah was sent to Burma along with Balwant Singh to co-ordinate in this venture. He met Sun Yat Sen, the great Chinese revolutionary leader who inspired him

to overthrow the British imperialism in India. On his way he was arrested and detained in Singapore. He was then handed over to Indian Government which imprisoned him in Alipore, Delhi, Coimbatore and Kanpur prisons. He was detained for four and half years before he was released in 1919.

The Ghadar rebellion was suppressed and the Sikh patriots suffered death, transportation for life in Andamans under severe repression. The Ghadar phase of the revolutionary terrorism was never interested in individual annihilation of white officers, but in overthrowing the white army in armed struggle with international support. After release from imprisonment Chenchaiyah was active in social reform work like encouraging cross-section marriages, widow re-marriages and reforming prostitutes. He joined the freedom movement and suffered imprisonment. The old revolutionary in him could not compromise with this Gandhian passive resistance. He was drawn to the Congress socialism and later worked in Trade Union Movement. He led Simpson workers strike in Madras as a Communist organizer. However he later resigned from the Communist Party of India and took the educational and social reform work. Chenchaiyah wrote a book on agriculture in Telugu. His wife Subhadramma was a well known social worker in Madras. He died in 1964. As a pioneer of revolutionary terrorism and a sincere friend of workers Chenchaiyah deserves to be remembered for his sacrifices, socialism, internationalism and unselfish service to his fellowmen.

4. Sri.Jakka Venkaiah.⁴

Sri.Jakka Venkaiah was born in a landlord family on November 3rd of 1930 in Damaramadugu village of Kovur taluk. He did his elementary education in his native village, Damaramadugu. He was much influenced by the Communist ideology and joined in Communist Party of India along with Dr.Jatti Seshareddy. When the Congress government headed by Prakasam Pantulu banned the activities of the Communist Party of India through an ordinance he was arrested and kept in Kovur Sub Jail, though he was not a primary member of the party. However he was released later. In the same year he became an ardent supporter and follower of Basvareddy

Sankaraiah who taught him the Marxism and the techniques of organizing party meetings and mobilizing people.

However after the Chinese aggression the Communist Party of India was divided into two in 1963 and Jakka Venkaiah sided the Communist Party of India (Marxist) and rebuilt the party organization. Under his stewardship, Communist Party of India (M) spread into almost all villages in the district. However he was arrested during the emergency in 1975 and was imprisoned in Nellore central jail. After lifting of the emergency he was released.

He was elected to the Assembly from Allur constituency in 1985 and 1995 as party candidate. During his stint as MLA he used his good offices and his strategies to uplift the downtrodden and marginal peasants. He ensured the supply of water to tail end lands. He organized agitations and movements for the distribution of *bansar* lands to the landless poor. He is a born fighter and well informed man who

was active in politics and stood in forefront whenever his services were required by the party and people in need. He died in 2018 at an advanced age.

The Communist Party of India as political party and its managers i.e. elite of Communist movement in Nellore district played a vital role in creating political awareness among the masses during pre-independence era. They succeeded in their task. After attaining independence in 1947 they took keen interest in shaping the fortunes of their political organizations and their political careers. Since the formation of Andhra State, separating it from composite Madras state, the political elite of Nellore district always took forefront in national and provincial political power game as well as in the interests of the district in promoting socio economic welfare of the people. Nellore district played very crucial role in getting abolition of '*zamindari*' and feudal systems in the country.

OPERATION VIJAY - THE ONLY SOLUTION LEFT BY PORTUGAL TO JAWAHARLAL NEHRU IN THE LIBERATION OF PORTUGUESE TERRITORIES IN INDIA

Fr. Sebastian Mathai & B. Deena Dayalan

The paper is an effort to understand why Indian government followed the principle of violence to liberate Portuguese territories in India though it is well known for the principle of non-violence internationally. Paper focuses on deliberations and negotiations between India and Portuguese government and finally why and how India employed so called as Operation Vijay to liberate Portuguese territories in India.

Goa is an integral part of India. Goans are Indians, in culture, civilization, and religion. They wished to get rid of the Portuguese and join the Indian Union. These are plain and simple facts which the entire world knows. Thus, Portugal had no moral right to be in Goa. Jawaharlal Nehru, the first Prime Minister of India thought that if we became free in, what

was then called, British India, the inevitable result of this would be the independence of the French and Portuguese possessions in India as well; because they were parts of India not only geographically but also culturally. And it was quite inconceivable for us to think that there would be Portuguese territory or French territory in India after India became free. So, when India became free as a whole, we took these matters up in the normal course with the French government and the Portuguese government. We were a little surprised to find that this was not quite as easy as we imagined and there were obstructions, delays, etc. So far as the French government was concerned, we could at least talk to them. We could discuss the matter, although we did not always agree, and

so we talked and discussed for several years, gradually getting towards a solution. And ultimately, as we know, the French left their colonies and an agreement was arrived at with the French government. But the course of events was quite different insofar as the Portuguese colonies in India were concerned. Although they were small, the Portuguese tenaciously held on to them, and they raised arguments. Well, it is hardly correct to say that they were arguments. In fact, they refused to talk to us. We opened a special mission in Lisbon just to talk about this matter - Goa. The mission had a poor time because they had no one to talk to practically; I mean to say, in the sense of any serious talk. And one of the principal arguments that was produced before us by the Portuguese government was that, they were in Goa because of a Papal Bull which they had got 500 or 450 years ago; I forgot the exact date. Now, it is rather difficult to deal with a country which raises such arguments in this country. So, I am merely pointing out that we were taken aback. We lived in entirely different works of thought; there was no common ground even to talk about. Well, we withdrew our mission from Lisbon. Now, therefore, when we thought of Goa, in those days after independence; naturally, we reacted against what might be called military steps to capture Goa, which was not a very difficult matter, naturally, because Goa is a small corner of India. Also, for some years I said, we tried to get in touch with the Portuguese government to come to a settlement and we succeeded in the case of the French. We failed utterly in the case of the Portuguese. Meanwhile, all those other developments in the world took place; military alliances of NATO, Warsaw Pact, and all that, and the Cold War came in with a flourish.¹

In short, a vigorous mental, moral, and spiritual life - either for the individual or the nation - can develop only if one is prepared to fight the forces of evil.² This is apt in the case of the Portuguese territories in India. Their struggle too passed through phases of violent, followed by nonviolent and again violent methods, leading ultimately to their liberation by the Indian army in 1961.³

There were many reasons which forced the Indian government to intervene in the affairs of the Portuguese territories. Firstly, during

World War II, the strategic importance of Marmagao and Panjim came to be realized fully. German merchant ships took shelter in Goa and were found transmitting meteorological reports and other valuable information regularly to the German Navy. The situation was remedied by the Portuguese at Sir Winston Churchill's intervention. These factors gave greater urgency to the question of liberating the enclaves.⁴ Secondly, the Indian action did not come as a surprise because many countries knew that India had exhausted all methods open to it for a friendly parting of the ways with Portugal, as in the case of Britain and France. Soon after independence, when India sought diplomatic negotiations for the liberation of the settlements, Portugal refused to even discuss the subject. Later, the people resorted to Satyagraha, a method successfully used against the British. The Portuguese failed to understand the spirit of Satyagraha and ruthlessly shot dead several unarmed and nonviolent volunteers. After the indiscriminate shooting of the Satyagrahis in 1955, the Government of India stepped in to stop the movement because it feared that if the merciless methods of the Portuguese were allowed to continue, they might produce strong and violent reactions in India and this might ultimately lead to a clash between the two countries. India asked friendly nations to help with this problem. She might not have specifically requested these nations to come to her aid, but these powers knew the situation only too well. If only they had a will to help, they would have definitely found the way.⁵ In this regard, our then Prime Minister Jawaharlal Nehru said, "there was practically no resistance, there was no mind to resist, not that the Government there did not want to resist. The orders were to resist, but there was no mind to resist. They realized that they had no business to be there. They had to go". Thirdly, the revolts at that time in Portugal itself had proved the unpopularity of Dr. Salazar's regime. Not only the Goans, even the people in Portugal itself had started expressing their strong desire for liberty and a democratic form of government. After months of hesitation, indecision, and anger, Portugal agreed to repatriate 3,500 of its soldiers in detention at Goa. With the completion of the recall of soldiers and a sympathetic solution of the problem of Indian settlers in Portugal's Asian

and African colonies, the relations between India and Portugal would be like those between any two countries in the world. The future relations between the two countries would mainly depend on the attitude of Portugal because, in keeping with their tradition, the Indians had no bitterness towards the Portuguese for their misdeeds of 451 years in their colonies in this subcontinent.⁶

Fourthly, on the 20th or so of November, when a Sabarmati Steamship was on its usual trip from Bombay to Cochin and back and was passing through the waters between the Anjadiv island, which was a Portuguese possession, opposite Karwar port and Karwar village, the officer standing on the bridge was shot at by a Portuguese sentry from the Anjadiv island. Luckily, he was not directly hit. But, a piece of splintered wood of the bridge that was hit, went through his eye and he was almost blinded. But Portugal completely denied the firing. Thus, the security measures along the border were tightened by the Mysore police to keep a watch on the movement of Portuguese troops.⁷ This act was greatly condemned by the Prime Minister Jawaharlal Nehru.⁸ To this, when Mr. Hondoo, went to Karwar, he said, "To my horror, I was told that a fisherman who had gone out fishing from the Karwar village, as hundreds of them did in their small boats, was shot at again by a Portuguese sentry and killed. The two others in the boat rowed his body back taking a circuitous route. There was a great deal of consternation among the fisherfolk of the West coast of the area. Within an hour or so the navy of Bombay sent out two frigates on this patrol. I then hurried back to Karwar to see the effect of this patrolling on the fisherfolk and to get more information on the murder of Rajaram - the fisherman who had been shot dead and give his family assistance. However, it was a very happy sight to see the Indian frigates patrolling the area and I noticed that this did create a certain amount of confidence in the fishermen around Karwar who had begun to go out again in their boats to fish. One bright young naval officer, in fact, their intelligence officer, at once told me: 'Oh! Well, Sir, I can explain that to you because there is a naval intelligence report that we have, which goes to prove that the annual CENTO naval exercises were being held 200 miles from where we were due west in the Arabian sea and therefore 200

nautical miles off Goa. For these exercises, there were six Pakistani ships, three Turkish and six British, and some others on this exercise." He added that this exercise had begun on the 20th of November 1961, and was getting over on about the 28th of November. Further, in this regard, he concluded that as these attacks of provocation to India had been made while the CENTO exercise was on, they may have been made purposely by the Portuguese in order to find out what the reactions of the CENTO powers would be if India took military actions against them. In any case, if India bit this bait, the Portuguese would be able to call for help of this CENTO fleet to safeguard and defend Goa, Daman, and Diu.⁹

When the Indian government decided to have a joint mission of the Army, Navy and Air Force,¹⁰ Mr. Hondoo pleaded and begged with the Defense Minister and the three chiefs to drop this action, which if taken would lead at once to a confrontation with the CENTO fleet in the Arabian sea on the one hand, and on the other, would afford the much-sought after opportunity for Salazar to go straight to the UN and obtain an embargo against India taking any further action regarding Goa, Daman and Diu. Mr. V. K. Krishna Menon, the then Defense Minister of India, very kindly thought that there was something in what he was saying and decided to postpone the conference for the next day as he wanted time to think this over and consult with the Prime Minister. The Defense Minister decided that Mr. Hondoo should immediately meet the Prime Minister and tell him exactly what he thought. As said, the former gave a careful analysis of the situation and begged the Prime Minister to interfere and not permit the taking over of a scruffy little island like Anjadiv but agree to take complete action against all Portuguese possessions in India all at once. The Prime Minister listened to him carefully and asked him to meet again after dinner at his residence and said that he would also call in the Defense Minister and that he would, in the meantime, consider Mr. Hondoo's point of view. As said, all those who met opined that if at all India was to take any action in the Portuguese provocation, it should be for the takeover of Goa, Daman and Diu, and once and for all end this problem, this terrible sore, this ulcer, that was tearing into the very vitals of India. In conclusion, the Prime Minister told the

Defense Minister that he would give him instructions about this after he had talked to other members of the Cabinet and asked him to stay in for the next day. The following day, the Defense Minister received the green signal from the Prime Minister and the Cabinet as a whole. The trend of discussions was now on a full-scale operation by land, sea, and air against the territory of Goa, Daman and Diu, including Anjadiv Island. The date fixed was around December 15, 1961, but, thanks to the great organizational capacity of General Kaul, the then chief of the General staff, a whole Indian division was centered on the borders of Goa, Daman and Diu to be ready and poised for attack if necessary at all. On the contrary, there was reason to believe that Mr. Kennedy who was in touch with Salazar on behalf of the Prime Minister, soon after the Indian division began to get centered on the borders of Goa, had been told by Salazar that he was certainly not going to leave his territories of Goa, Daman and Diu unless Mr. Nehru again begged of him to do so and even then Salazar could only "consider" the matter. In this regard, Mr. Hondoo thought that the Prime Minister received a telegram from Mr. Kennedy around December 15, suggesting that Mr. Nehru should now make another approach to Salazar and ask him whether or not he would talk about a peaceful settlement with respect to these territories. In this regard, Mr. Hondoo was personally very nervous that the Prime Minister would possibly agree even at this eleventh hour to do so, but he was again wrong because the effect of that telegram on Mr. Nehru was one which caused him a great deal of pain and anger. After all of Panditji's persuasions, Salazar wanted the former to beg him to listen to some kind of reason and not attack him. The effect of it was that on the 16th of December, he received a telephone call from the Defense Minister giving us the green signal to go in according to the plan. Ever since December 10, Mr. Hondoo who was in Belgaum, was still there at the time of the attack, which started on the morning of December 17, 1961, the date that we had already fixed. Mr. Hondoo was a very relieved man at the time and so was General Chaudhuri because it would have been extremely difficult to withdraw the whole of the Indian Division from the borders. However, Mr. Hondoo was a much more happy man on the afternoon of

December 18th, when the Portuguese Governor - General of Goa handed in his unconditional surrender to Brigadier Kalwant Singh at Marmagao. Right through the operation, not one single Goan, man, woman or child, had been injured or had even accidentally been hurt. Panditji's image in the Goa operation was very greatly besmirched and muddled by a large number of international politicians, opposition leaders, international leaders and various other political parties, who did not at all like the fact that he took over Goa, Daman and Diu in the manner that he did. To this, very important was the fact that a very large number of our own Indian administrative officers, who belonged to the External Affairs Ministry, to the intelligence, and to various other allied ministries, were also very angry about action that had been taken. But according to Mr. Hondoo, Mr. Jawaharlal Nehru stands out like a beacon light. Nobody in the world would have been as patient and as considerate as him in regard to the Portuguese whom he had begged for 14 years to leave India in peace, as the British and the French had done. It was only when there was a lot of a cruelty that had been perpetrated on the Goans in Goa, that he was forced to take this action which was taken swiftly, successfully and without any person being injured at all.¹¹

The entire operation combing Goa, Daman and Diu lasted less than 36 hours. While patrols moved in overnight, the main columns of the 17th Indian Infantry Division, under Major General K. P. Candeth's command, crossed the border into Goan territory at the crack of dawn on December 18. The 50 Para Brigade under Brigadier Sugat Singh, marched in from the north, from Dodamarg, was in Tedium, across the Mandowi Creek ferry from Panjim, Goa's capital. They entered Panjim early the next morning, without meeting resistance. The 63 Infantry Brigade, led by Brigadier Kulwant Singh Dhillon, simultaneously entered from Anmode and in no time reached Ponda, and then moved on to Margao. On the way, on a rising ground, this column encountered some resistance from the Portuguese. When the fire was returned, the Portuguese fled, leaving behind their own cars, jeeps, and weapons. That was not the only resistance that the 63 Infantry Brigade met with in the course of their march-By 4 P.M., on December 19, this column was in Marmagao harbour.¹²

On December 20, 1961, it was reported that the Indians were in full control of Goa. The Portuguese Governor-General in Goa had run away and the Portuguese troops numbering approximately 1800 there, had also surrendered to the Indian troops. The Portuguese indeed put up no resistance. Thus, India's 14-year-struggle for the liberation of Goa came to an end. Peace was restored and the foreigners including the Portuguese troops were evacuated. Goa was soon amalgamated with the Union of India. India's long-cherished desire in Goa had been fulfilled through military action rather than diplomacy. Such a humiliating defeat could have been easily avoided if the Portuguese would have agreed to a peaceful settlement of the problem and come to terms with India and voluntarily vacated Goa.¹³

The main factor that put the Portuguese defenders out of balance was the speed with which the Indian Army moved; to whom no demolished bridge or obstacle was insurmountable. It did not give the Portuguese any time, even if they wanted to, to enforce the scorched earth policy. It was however not until 10 P.M. on December 19, 1961, the Portuguese Governor-General Vasello de Silva, formally handed in, to Brigadier Dhillon, the document of surrender of forces in Goa. Earlier to that, Daman had been surrendered at 8:20 A.M. and Diu at 11:10 A.M. The Indian action against the Portuguese enclaves was a combined operation in which all the three services participated. This was also the first action since independence in which the Indian Navy had taken part. The IAF bombed and put out of action, the wireless station at Bambolem, near Panjim, and the Dabolim Airfield, at the outset of the operation, on December 18, so as to cut off the Portuguese in Goa from Lisbon and immobilize any likely air effort or take-off. But apart from attacking these two strictly military targets, the IAF flights overhead did no harm whatsoever to civilian life and property and took the Anjadiv island on December 18. I.N.S. Mysore had to bombard the island when the Portuguese garrison there fired upon the Indian landing party. The Portuguese garrisons in Daman and Diu comparatively put up a much stiffer resistance. I.N.S. Delhi had to bombard the Diu fort from air before the two garrisons gave up. In the entire operation, the casualties suffered by the Indian armed forces were 15, out of which seven were killed among

the Indian landing party at Anjadiv, while 16 Portuguese were killed in action. The injured did not total more than fifty on both sides put together. But while the Indian operation was going on in Goa, many Portuguese officials and civilians took shelter on some of the 19 foreign ships lying at anchor in the bay but, no one knows the actual number of the Portuguese. Some of them who took refuge on a Japanese ship landed in Japan. Some others arrived in Karachi, and yet others had taken shelter on Italian and German ships. The damage to civilian property resulting from the military operation was nil, apart from that suffered by adjacent buildings by the blowing up of bridges by the Portuguese. Thus, the Church of Our Lady of Miracles was badly damaged.¹⁴

Once the Portuguese surrendered, it was the duty, and in the interests of, the Government of India to rush accredited news correspondents into Goa to record and supply to the Indian people and the world, eye-witness accounts of the formal surrender ceremony and the scenes of popular enthusiasm that accompanied it. The Indian army was moving so fast that the local people were taken napping. Thus, a nurse and a doctor walked right into the arms of the oncoming Indian troops. The Indian troops were quite surprised to see them nonchalantly walking up the street. When questioned, the nurse and the doctor said that they were on their way to the district headquarters to receive their salary. When they were told that the Portuguese government was no more in existence and that they were actually speaking to Indian army officers, the nurse sat on the ground with surprise and shock. She was revived and the couple were escorted in a motor vehicle by Indian army officers to their homes and assured that they would be paid their salaries by the Government of India. Despite the brave statements by Dr. Salazar and Goa's Governor-General, Brigadier Vasello de Silva about defending the Portuguese possessions, "to the last man and last bullet", the prisoners-of-war revealed that there was no intention at any time on the part of the Portuguese troops to resist the Indian army if it came to a war.¹⁵

REASONS FOR PORTUGUESE DEFEAT

Even the Portuguese forces were not enough to face the marching, well-equipped

Indian troops. This imbalance in the strength or force with their low morality was the main reason for their defeat. Apparently, Lisbon greatly relied on London, wrongly hoping that it would apply pressure on New Delhi against the use of force in view of the existing Anglo-Portuguese military alliance and thereby save Portugal from the debacle. Mr. Nehru had no other option but to move quickly, ignoring the Anglo-American representations as the campaigns for election in India were looming. Moreover, his failure to check the Chinese incursions in the north, added to the growing internal political pressures for intervention in Goa, were further reasons for his decision to fight and solve the issue once and forever.¹⁶ To add to these, artillery guns of Portuguese were brand new and so was all their other equipment and the grease was still clinging to them. Regarding this, when a Portuguese army officer was asked or intervened as to whether they had received any training with these weapons, he replied, "No training, only in the room".¹⁷ On the other hand, change of dates by the Indian government had put the Portuguese in a state of confusion. It is so, that a signal from Dr. Salazar to his Governor-General in Goa, intercepted by the Indian army, informed the latter that the Indian army's appointed day was December 14, 1961. It was good intelligence work, as that was actually the original date, which was subsequently, at the last minute, changed to December 18, 1961. He had also ordered the Portuguese troops to fight and hold up the Indian army for seven days, until December 21, 1961, when he would get the United Nations to act and intercede on their behalf. But the Portuguese soldiers had decided otherwise under the order of their Commander and Governor. To this, the Portuguese army had done a grand job of the demolition of the bridges - for which the credit should go to Brigadier - General Vasello de Silva, the Governor-General and Commander of the Portuguese forces, who was an engineer by profession. But it was apparent that the Portuguese troops lacked the will to resist.¹⁸ But the demolition of the bridges and culverts by the Portuguese did not deter the Indian troops' progress. They left their vehicles behind, where no diversions were possible and waded through streams and marched on without a let-up. The local people helped the incoming liberating

forces in many ways, guided them along shortcuts, ferried them across rivers and offered them drinks and their boats and motor vehicles.¹⁹

Many attempts were made to avoid this violent solution to liberate the Portuguese territories in India. One of them was by the people of Goa. On Saturday, December 16, 1961, with the Indian Army forces around Goa and Indian Commandos, last minute desperate attempt were made by a certain lawyer and leaders to relinquish the hold on Goa and voluntarily confer independence on the region. A monster petition was got up by these leaders to which signatures were being collected from prominent citizens. This petition was scheduled to be called 'Doctor Sailaja' on Monday, December 18, 1961. But it could not be dispatched as by then it was too late.²⁰

Our Prime Minister Jawaharlal Nehru, said that the success in Portuguese territories with special reference to Goa should not be called a military victory as there was no fighting. The Portuguese had offered no resistance. But the great fate of the armed forces, the Army, the Air Force and the Navy, working in coordination was the smooth, swift and efficient manner of ending Portuguese colonialism in Goa. There was not a single civilian casualty while the military casualties on either side were few. The whole campaign did credit to the planning and preparation of the leaders of the armed forces. "The smooth and swift campaign of India's armed forces has made many other countries quite aware and conscious of India's capacity and strength." Mr. Nehru said that strangely enough there were two reactions to it which were completely opposed to each other. One was in India and the other was in the Asian and African countries, of complete support to India's stand. Certain countries of Europe and America though, were completely opposed to it. He said, "There is no doubt that what had happened in Goa was wholeheartedly welcome by every man, woman, and child in every city and town and village in India. There might have been one or two voices in India who did not feel happy over it. But this was welcome by everyone in every sphere of life, whether he was a worker in a factory or a patient in the field, or a tongawalla, or a taxi driver or an ironsmith or a carpenter. They had all felt happy over it." Mr.

Nehru said, "I have used the word 'happy' to describe the People's feelings in India over what happened in Goa. But this word doesn't fully express the feelings. These feelings represented in miniature the mighty wave that swept the people's hearts at the time of independence in 1947 and uplifted them. On a small scale, we saw the same feeling fill the heart of the people in India on this Goa issue."²¹

WHY DID INDIA CHOOSE 'OPERATION VIJAY'?

The *Diario da Minha*, a leading Portugal newspaper, published the reply of Indian Defense Minister Mr. V. K. Krishna Menon to London reporters under the title, 'There was no other solution'. Here, Mr. V. K. Krishna Menon replied, "There was no other solution" left by the Portuguese except for the use of force to seize what did not belong to them."²²

Our Prime Minister Jawaharlal Nehru, too stated that New Delhi had tried repeatedly in vain to negotiate with Lisbon for the transfer of Portuguese possessions on the India subcontinent.²³ He further said, "If the invasion of Egypt, Cuba, and Hungary by powerful permanent council members did not weaken the world organization, how could India's action to liberate a part of its territory produce such a disaster?" He further said, "The U.S. knew the reluctance with which India took the final decision, India postponed the action twice after fixing "vague dates" first, when some Latin

American countries wanted to bring about a peaceful settlement and on the second occasion on a suggestion from the U.S. itself. Only after the United States informed India that the "Portuguese response to the American initiative had been a negative one", did this country decide in favor of police action and that too most reluctantly. The action came after India and other friendly nations had given up the hope of a peaceful settlement."²⁴

Thus, India tried its best to stick to the non-violent policy but the action was provoked by the violence and cruel methods used by the Portuguese government on the nationalists and other freedom fighters, and the fact that an acute frustration was developing among the brave Goans who had begun to feel that the Government of India was passive and not sincere in their protestations about freeing Goa.²⁵ Thus, Portugal and its policies ultimately forced India to take armed action code-named as "Operation Vijay" to defuse the Portuguese attack and get them surrender within 24 hours. Mr. Jayaprakash Narayan, one of the noted followers of Mahatma Gandhi, fully justified the steps taken to integrate the Portuguese settlements. Mr. Narayan said that it was a great pity that India had to resort to force in Goa. But politically, no alternative was open to it.²⁶ In short, it is very clear from the facts that Portugal's policy towards India forced India to apply force instead of peaceful methods to liberate Portuguese territories in India.

HISTORICIZING THE NATURE OF TRAVANCORE GRANDHASALA SANGHAM AND ORGANIZED MOVEMENTS

Dr. S.V. Shalini

The changing character of the library movement and its organization effort were seen in Travancore. The library organization formed in this region tried to please the colonial rulers primarily with the objectives of securing funds. This was evident from the proceedings of the first conference of Travancore Grandhasala sangham.¹ The Diwan of Travancore, Sir C.P Ramaswamy Iyer, inaugurated the library conference held at P.K.M library Ambalapuzha, on 16 September 1945.

The role of P.N Paniker in organizing a library network in the state deserves special mention. He was associated with the formation of Sanadhana Dharma Vayanasala in Neelamperur, Allepy. He succeeded in getting a grant of Rs.10 from the government for this library. He realized that the government and official agencies have to play an important role in promoting the library movement, and secured all possible assistance from them in forming rural libraries. He devoted his life entirely for the cause of the library movement in Kerala.

After the formation of the all Travancore library organization, an executive committee was elected with P.N.Paniker as convener and a memorandum was submitted to the Diwan for increasing the amount of grant from Rs. 200 to Rs 240 a special aid of Rs 250 to Travancore Grandhasala Sangham was also allowed following this, Zonal organizers were deputed for propagating the activities of the organization. P.N Paniker was appointed chief organizer. The government ordered to affiliate the library under the Travancore university with the Grandhasala sangham².

Grandhasala sangham was registered under the Travancore companies Act on the 27 May 1947. The sangham published a manual in

1948, which contained articles on the library movement in other countries and in other parts of India, the methods of keeping and distributing book and of preparing catalogue. During 1934-35, the government of Travancore established rural libraries associated with the primary schools. The government donated 50 books and newspapers, three benches and almirah and desks to these libraries³. The headmaster of the local primary school was in charge of these Rural libraries. for this additional work Rs 3 was given per month as special allowance. But in many cases these funds and the furniture were misused. As the local committee was not involved in the affairs of these libraries, the public showed no interest in them and within a decade most of these libraries became defunct because its pathetic condition. By them independence was achieved and democracy established. But even then the bureaucracy was unwilling to hand over these libraries to the sangham. At that time there 240 rural libraries working together with school handing over the administration of these libraries to the sangham was celebrated as a public event in every village.

With the unification of Travancore and Cochin in 1949-50, activities of the sangham spread to Cochin also. At that time village libraries existed in every village in Cochin library organization also existed. The samastha Kerala pusthakalaya samithi under the leadership of Chenkulath Kunjiraman Menon 2nd Akhila Cochin Granthasala sangham president by M.K Raja were the organizations in Cochin change of organizing the library movement and the apex organization did not have the democratic nature and the library of its centre part in Travancore. It was by 2nd large

government affairs in Cochin under the education department and Panchayath department libraries were functioning there under which libraries came into existence in the 272 villages of Cochin in 1948, a total annual grand of Rs. 50,000 was paid to these Libraries. Even with such libraries assistance, the library movement in Cochin did not have the momentum of those in Malabar and Travancore. Lack of people's participation in the functioning of these libraries was the main handicap⁴. But with the amalgamation of Travancore and Cochin in 1949 and the formation of a democratic government, these libraries came under the sangham and the library movement in Cochin entered a new phase.

In the early decades of the library movement the local people who took part in these activities⁵ voluntarily were primarily library activists with the amalgamation of the library organizations of the Travancore more workers became necessary and paid organizers began to be appointed⁶. Their duty was to visit each and every village and motivate the local people to establish Rural libraries. Centralized library activity controlled from above thus came into being.

The history of the library movement is closely related to growth of the publishing industry. As already mentioned printing, installation at presses, and publishing of books started in Kerala during the later half of the 19th century. In the early decades of the 20th century, publishing houses, mainly those dealing with the library works of eminent Malayalam scholars, came into being. The establishment of Sahithya Pravarthaka Sahakarana Sangham (SPSS) in 1949 revolutionized the publishing industry in Kerala in the first 18 years SPSS published more than 2000 books, i.e, at an average of more than 100 books a year⁷. This put an end of the scarcity of books in Malayalam Co-operative between the library movement and SPSS opened a new chapter in the history of printing, publishing and sales of Malayalam books. Till then, the major public libraries had been more with English books and Malayalam books.

With the formation of Kerala state in 1956, Travancore Cochin Granthasala Sangham was renamed the Kerala Granthasala sangham and its activities spread Malabar regions also.

During the period 1957-1975, the number of libraries under Kerala State Library council increased from 1747 to 4280. This rapid growth is an indication of the effort the sangham made to bring the entire library system in Kerala under the control.

Before 1948 school inspectors used to inspect the functioning of libraries and based on the grants were sanctioned of the all Thiruvithamcore Grandhasala sangham. The first gradation committee members were M.C Narayana pillai (chairman), M.Thomas (Kerala University Librarian), and P.N Panicker. It started to function from 19th June 1949 onwards. Granthasala sangham aimed at organizing all libraries in the state and to act as central organization. Accordingly its immediate programme was to enroll all existing libraries as members.⁸ Another programme was to give publicity about the organization and the library movement through the publication of pamphlets and booklets and by holding meetings with a view to canvas support.

The Travancore education department reported to the government that Akhila Thiruvithamkore Grandhasala Sangham had affiliated more than 500 libraries as its members and organized taluk library unions with a view to consolidating the efforts of the library movement. The organizers under the association had inaugurated adult education work in certain libraries. It was also seen that the Association had succeeded in compiling accurate library statistics. The Government appreciated the laudable work done by the association for expansion and organization of library movement in the state and was pleased to add that

- ❖ All Travancore library association may be recognized by the government
- ❖ All the libraries in this state be advised to get themselves affiliated to the association
- ❖ The monthly grant of Rs. 200/- be raised to Rs. 500 from the year 1948 AD⁹.

Emergency declared during 1975-77 adversely affected the working of almost all democratic institution in India Kerala Granthasala Sangham was no exception. The government brought an ordinance for the administrative functions and its member

committee with education minister as chairman was appointed. Democratic functioning of the sangham thus came to an end. But even to after emergency was lifted this control board system lasted for more than a decade. For revitalizing and redemocratizing the library movements, Kerala public libraries act came into effect in 1989. According to this act, office bearers of the sangham at the state, the district and the taluk levels were elected members if libraries from the lower level themselves. Thus after the bureaucratic rule of a decade and a existence on the 27 April 1994¹⁰.

The growth of the library movement came to a complete halt during the period of controlled board administration. The activities of the apex body had been adversely affected, and the grass roots-level activities of rural libraries has become paralyzed. As the office bearers of the board were only bureaucrats, people participations in the administrative affairs was completely lost. The apex body was an ineffective in motivating activities at the grass route level. Changes in the socio-political context during the 1980s and thereafter and the corresponding changes in the cultural sphere were also reasons for tardy growth of the libraries.

KERALA GRANDHASALA SANGHAM 1945

A meeting of the libraries at Ambalapuzha in north Travancore in August 1945 under the auspicious of the well managed P.K Memorial Library resolved to form a central organization to fill the gap as a result the All Travancore Grandhasala Sangham was formed with membership of 47 libraries represented at the meeting. With the integration of the Travancore Cochin Grandhasala Sangham, and later when the Kerala state was formed in 1956, it

assumed its present title Kerala Grandhasala Sangham.

At the first meeting Sri K.M Keshavan was elected president P.N Panicker as secretary. From the first election in 1945 P.N Panicker was continuously elected president of the sangham with his dedicated work as the moving spirit sangham has rendered as estimable service to the cultural renaissance of Kerala, it has become a movement which has no counter-part anywhere in the world¹¹. In the beginning the function which sangham undertook were modest. It aimed to function as the central organization of all existing libraries in the state. The preliminary programs prepared by the sangham were:

- To enroll all existing libraries as members
- To revive and rejuvenate all defunct and stagnant libraries
- To establish libraries in the regions where there are none.
- To connect common fund
- To strengthen the organization by enrolling more individual members.
- To give publicity to the movement through the publication of Pamphlets and booklets and by conducting public meeting with a view to canvas.¹²

Thus the Travancore Grandhasala sangham played a prominent role in the emergence of library movement in Kerala. Libraries are the centers of learning and wisdom. Travancore rulers also encouraged to the development of library movements in Travancore. So many progressive minded persons supported the library movement. Travancore grandhasala sangham helped the growth of libraries in every nook and corner of Kerala.

PRINT CULTURE AND NATIONALIST CONSCIOUSNESS IN COLONIAL RAYALASEEMA: A STUDY OF VENKATASAPATRIKA A.D. 1920-21

Prof. (Dr.) G. Samba Siva Reddy

In India, the print culture emerged as a result of the efforts made by certain officials of the English East India Company during the last decades of the 18th century. Later, it slowly but steadily spread from the presidency towns of Kolkata (Calcutta), Mumbai (Bombay) and Chennai (Madras) to the *motussil* areas including the present Rayalaseema 1 region. Despite the English elites started several papers, the latter had given importance to the issues of English educated people, English East India Company, and the British Government only. This infuriated the social reformers like Raja Rammohan Roy and Nationalists like Surendranath Banarjee, B.G.Tilak, Sisir Kumar Ghosh, Motilal Ghosh, N.N.Sen, G.P.Varma, and G.Subramaniya Iyer to protest against the restriction of freedom of the press and stall powerful newspapers in their respective local languages. During the last decades of 19th Century and early decades of 20th Century (1870-1918) the press played a seminal role to percolate the concepts of politicisation, political publicity, education, and nationalist ideology in order to arouse, train, mobilise and consolidate nationalist consciousness among people? During this period, the entire work of the Indian National Congress (INC) was accomplished by the press. It is interesting to note here that majority of the founding fathers of the INC were journalists. Similarly, almost all nationalist leaders were involved either directly or indirectly in the establishment of newspapers and writing of various issues in the press. The influence of the press was also extended far beyond cities and literate section. In course of time they reached remote villages and inculcated nationalist consciousness. The newspaper was not only the political educator, reading, discussing etc., but also a centre of political participation.³

This development at national level inspired the educated people of the Madras Presidency to print newspapers. The Christian Missionaries were the first to start several newspapers in local languages first in Madras and later in other regions, including Rayalaseema region. Among them mention may

be made of *Kannada Samachar* (Bellary-1812), *Karnatic Chronicle* (Madras- 1832)-the first newspaper started in Telugu language,⁴ *Fort St George Gazette* (Madras-1832),⁵ *Satyadoota* or *Messenger of Truth* (Bellary-1835)⁶ *Vrittantin* in 1838 (Madras) etc during the first half of the 19th century. In the beginning, the educated people of the region were forced to go to Madras either to start the publication of newspapers or to work as editors owing to lack of printing facilities and patronage. Some of the noted newspapers that started during the second half of the 19th century were *Sri Yakshini* (1864),⁸ *Vijayadhvaja* (1866), *Bellary Spectator* (1877), *Saraswati* (1889) and *Sanmargabodhini* (1890) all from the Bellary.⁹ On the whole as many as forty newspapers were started in the region during the British rule.¹⁰

Similarly some of the intellectuals of Coastal Andhra and Rayalaseema regions started several newspapers at local level so as to develop nationalist consciousness among people during the first half of the 20th century. For instance, Kasinathuni Nageswara Rao (*Andhra Patrika*), Matnuri Krishna Rao (*Krishna Patrika*), Gadicharla Harisarvotharna Rao (*Swarajya*), (*Nationalist*) and (*Matruseva*) etc, Pattabhi Seetharamaiah (*Janmabhoomi*), Tanguturi Prakasam (*Swarajya*), Maddoori Annapoornaiah and Krovvidi Linga Raju (*Congress*), and Atmakuri Govindacharyulu (*Satyagrahi*) were noted intellectuals and politician-cum-journalists in this respect.¹¹ In the same way noted nationalist newspapers like *Sri Sadhana Patrika*, *Balabharati* and *Pinakini Patrika* from Anantapur district, *Venkatesapatrika* and *Vidyabhi Vardhani* from Chittoor district, *Matruseva* and *Aindravathi* from Kurnool district and *Bharata Katha Nidhi*, *Sri Bhaktha Sanjivini*, *Sri Brahmanandini*, and *Andhra Chandrika* from Kadapa district were started in the Rayalaseema region.

On the whole these newspapers in general gave wide and extensive coverage, in their issues, not only various economic and social issues of local importance but also the political and national issues that were affecting the

whole nation so as to educate the people and thus create awareness and awakening among them. This article examines one of the land - mark papers, *Venkatesapatrika* of Chittoor or Putalapattu from Chittoor district of the region and its articulation of nationalist consciousness among people in this direction.

II

In fact *Sri Venkatesapatrika* was started at Poothalapattu or Chittoor by T.K. Narasimhacharya of Chittoor in bilingual Anglo-Telugu language as a weekly.¹² Along with other areas, agriculture and traditional industries namely weaving and salt making, that were main economic feature of Rayalaseema and affected seriously in the region, by the negative and indifferent attitude and their policies of the British towards India. The print culture of the time has given due attention and importance in their coverage to the recurring and burning agrarian distress in the Rayalaseema region. They bitterly criticised, through their reports and coverage, these step-motherly British attitude and policies towards Indians on the one side and issues like scanty rain fall, poor irrigation facilities, the resultant occurrence of drought and famine conditions and failure of crops, the stringent steps taken by the colonial officers, to collect revenue taxes from ryots even during severe distress on the other side. In such precarious conditions the ryots have no other option but were frequently forced to sell their lands to clear the revenue dues and maintain their families. In that situation, the ryots were prone to the pitiable position of agricultural labourers.¹³ The press of the region had exposed the harassment of the villagers, in light of promulgation of Forest Laws of 1882, by local officers like *munsifs* and *karnams*, who were given the duty of protection of forests till the separate forest department was formed. As the forests were adjacent to the villages, cattle were normally used to go to these forests, and that gave an advantage for the forest employees to catch them and extract as maximum bribes as possible from the cattle-ryots. The press had pointed out that the local officials were forced to take these bribes due to their poor salaries and maintain the revenue officers such as tahsildars, deputy tahsiladars and subordinates whenever the latter were used to visit their villages. If the village *munsifs* and *karnams* failed to look after

these forest officials, the forest officers along with the police constables were used to harass *munsifs* and *karnams*, by giving false complaints to their superiors against them.¹⁴ By showing such instances, the *Venkatesapatrika* of Chittoor district, examined:

No honour is to be found in an office the holder of which is served with a notice to appear and is subjected to worry by the tahsildar, the moment any petty official such as a constable reports against him. Not to pay them (the village officials) the small pay, on account of which they are subjected to so much high handedness, is preferable.¹⁵

The press of the region criticised the exploitation and utilisation of Indian revenues by the British to suit their colonial interests. They had given a number of instances of such false utilisation of Indian revenues. The newspapers of the region highlighted the faulty expenses of the World War I which were charged to the Indian revenues. The *Venkatesapatrika* remarked on the punitive tax levied on the people to meet the war expenditure and on the government providing military training to Anglo-Indians and Europeans who are staying in India at a huge cost to Indian revenues. It observed that these steps paved the way to increase the tax burden on the people and encourage racial feelings.¹⁶

After the World War I, the Viceroy Lord Chelmsford (1916-1921) appealed to Indians to forget the past and to co-operate with the government in the country's governance, *Venkatesapatrika* questioned the rational behind the appeal. It said: "with what face the viceroy is asking the people to forget the past events while he is levying punitive tax even on innocentmen?"¹⁷

Another area of interest shown by the press of the region was on education. Interest of the students who were aspiring for higher education was the main concerns of the newspapers. During the period of 1920s, the two reputed and noted colleges known as the Theosophical College at Madanapalle and the Ceded District College at Anantapur were started in the Rayalaseema region. At that time some of the students who got admission into the colleges in Madras like the Madras Christian College, the Pachiappa College and the

Presidency College were put to severe hardships at the time of admission. By giving such vivid details on the subject, *Venkatesapatrika*, covered an instance of the refusal of the principals of the respective colleges of Madras to give admission to the students notwithstanding the Board of Secondary School Education had given permission of eligibility to them to get admission.¹⁸ The paper made an appeal to the government to appoint an Imperial Committee to enquire into the matter further in order to do justice to the eligible and aspiring students, since all those above mentioned colleges were maintained with the public revenues. In its issue dated 10 July 1920, the paper had written:

We are sorry to learn that not one of the dozen students who passed out of the Devasthanam Hindu High School, Tirupati, in the last School Final Examination would find admission into any of the Madras Colleges. All of them have been declared eligible for admission, but the Madras principals have laid down their own regulations for admitting students. These, in many cases, are nothing more than a pretext on which to shut out students arbitrarily. If only an impartial Committee be appointed to enquire into the stories of admissions we fear a ghastly tale would be told. The fact, however, remains that year after year students are finding it difficult to secure admission into the Madras Colleges...The government lavishes its funds on these colleges from the public revenues, and if their managers would treat the institutions as their own, it is time the government withdraws *sic* / this help unless the institutions impartially respect the certificates of eligibility issued by the Secondary School Leaving Certificate Board. The principal of "first come, first served" is the only proper one to be adopted by the college authorities that desire help from public revenues".¹⁹

In this manner the press played a pivotal role to draw the attention of the government to the anomalies and sought modification of the rules so as to facilitate the admission of eligible and interesting students into the colleges of Madras.

The press of the time was more concerned about alcoholism. Drinking or intoxicating liquor as a habit was coming down to the people in India from time immemorial. The alien

government had given licence to sale liquor and collected excise duty from the liquor shops. People belonged to poor economic sources were became addicted to alcohol. They used to spent major portions of their daily earnings on it and exposed their families to severe social and economic hardships and spoil their families both mentally and physically. Both the elite as well as the press were more concerned about this evil practice and they urged the government to take serious steps to discourage people not to take it and became slaves to it. Papers like *Venkatesapatrika* wrote vehemently against alcoholism and government's policies towards it. This paper on the one side criticised the British government on its lighter vein of attitude towards it, on the other tried to educate the people on the evil impact of alcoholism on their lives. Under its influence the people of Narayanavanam in Chittoor district objected the starting of a toddy shop and that was run under the government licence and located in the midst of residential area. They requested the District Collector to take steps to shift that shop to distant place, but the former rejected it. On this the paper commented in its issue, "What else can be the meaning of flouting the unanimous opinion of the people of Narayanavanam, unless it be that the authorities wanted to tell them plainly that they must really learn to depend on themselves for everything and not rely on the government".²⁰

Apart from these socio-economic issues of the time, the nationalist fervour attracted the attention of the press. Among the nationalist issues, the Punjab disturbances and the police atrocities were occupied a prominent place in the coverage of the press. As a result of the impact of revolutionary movement in Bengal in the beginning and other parts of north India like Central Provinces, some areas of Bombay Presidency and Punjab later, the people of North India, especially the people of Punjab were resentful against the British policies and coercive methods like forcible employment, racial discrimination, severe and excessive police actions etc applied towards the Sikhs. They conducted large scale public meetings and showed violent demonstrations against the prevention of the entry of nationalist leaders into Punjab. These developments were reported by the press in the entire country including Rayalaseema. For instance, *Venkatesapatrika*

expressed its anguish against the British for the exaltation of the House of Lords on General Dyer who killed hundreds of innocent people at Jallianwalabagh in 1919 on the ground that he save many Europeans in India. It criticised the British and the House and warned that unless the British changed their attitude, "the lives and honour of the Indians are not safe" and that "we (Indians) will have to make them understand that their action is dangerous to the British connections"²¹ with India.

During the period of the Indian National movement, from the beginning both the leaders and the people of the Rayalaseema region participated actively in large number in all nationalist activities so as to foster unity and develop nationalist fervour among people. The press played a stellar role to cover all their activities and encourage them in all dimensions. The papers like *Venkatesapatrika* supported the Indian National Congress (INC) stand that the people of India should not buy foreign goods, but buy locally manufactured indigenous goods only and encourage *Swadeshi* industries. It wrote,

"The cotton required for clothing can be had here. If, as in olden days, we again engage ourselves with the spinning wheel in our houses for the preparation of our clothing and wear for some time at least coarse clothes, the foreigners will close their shops and go. We will be happy and our country will obtain *swaraj*"²²

The paper covered extensively different activities of Non-cooperation Movement (1920-1922) in the region. The triumphant mood of the paper can be visualised when it encouraged the Movement, "The elections are over. Non-cooperation has triumphed in the places in which it was preached...The Public Officer may try to club the figures of the whole district (Chittoor) and say that non-co-operation has failed in the district. But we will ask him to explain why, in spite of all his attempts to give even a colour of official mandates to the village officials and ryots to go to the polls, the Karvetnagar Zamindari and places like Tirupati failed to succumb to the election blandishments, while only the other portions untouched by our propaganda and non-co-operation workers have fallen into the trap...It is, however, needless to pursue the matter. People have absolutely no faith in these elections...We have

no doubt the new Councils will demonstrate their impotence from the beginning, and the people fully educated to demand complete *swaraj* will obtain it by adopting the inevitable non-co-operation in some form or other"²³

An important and interesting turn took place during the Non-co-operation Movement in the Madras Presidency when the Brahmin-Non-Brahmin issue developed in the second half of the century. This was because of the emergence of Justice Party and its Non-Brahmin activism. Some of the papers like *Andhraprakasika* and *Justice* supported Non-Brahmin Movement, whereas *The Hindu*, *New India*, *Venkatesapatrika* and *Balabharati* were neutral and wanted to see unity between the two groups. The papers of the region opposed the Non-Brahmin Movement and criticised the government for creating difference of opinion among its leaders. When the Justice Party was started, *Venkatesapatrika* suspected the highhandedness of the government behind the whole drama. Examining the mechanism of the government, it commented,

"The problem is now creation of the tried Messers. Thyagaraya Chetti, Ramarayananagar and Dr. T.M. Nair. The government whose influence is everywhere present have given them a helping hand. The Brahmins assembled in large numbers in the Congress sessions, criticised government measures and demanded *swaraj*. The British government promised to grant it. This would prejudicially affect the prestige and pay of European officers such as Collectors. If a division could be affected among the people, the grant of *swaraj* might be put off. It is therefore good to create a non-Brahmin party. If non-Brahmins were taken into confidence and Brahmins discarded, the former might condemned the government. So thought some of the Europeans, and accorded their patronage to the non- Brahmins"²⁴

When the elections were planned to the Madras Legislative Council as per the Montford Reforms of 1919, the papers of the region like *Venkatesapatrika* exhorted the people to be followed the decisions of the INC and observe the ideals of non-co-operation in the elections according to the INC plan, which would force the government to grant *swaraj* to India. Encouraging such course of the action by the people of the region, *Venkatesapatrika* wrote,

"...in the British empire, we have no redress for the evils we suffer at the hand of the white men. Unless we do our utmost with the persistent effort, the British government will not give us *swaraj*. The Congress has feared that representatives in the new Councils may be caught in the net of authorities and say like some moderates of today that the Indians are unfit for *swaraj*. So it had decided on a policy of con-co- operation. If the voters obstinately refuse to give votes, the British government cannot but grant *swaraj* to India."²⁵

These are some of the areas covered by *Venkatesapatrika* of Chittoor in the

Notes and References

1. *Rayalaseema* had its own antiquity and hoary past. In the past, the 'Rayalaseema' region was known, variously, as *Hiranyarashtra* or *Maharajaranadu* or *Maharajanadu* or *Marjavadinadu* or *Renadu*, "*Rayalavariseema*" and "*Rayalaseema*". Subsequently, during the colonial hegemony (1800-1928), the region was known as Ceded Districts. But, later, when the people of the region were under the grip of the patriotic fervour, the intellectuals of *Rayalaseema* region participated in the Andhra Maha Sabha held on 17 and 18 November 1928 at Nandyal in Kurnool district of the region. One of the prominent participants of the region, Chilukuri Narayana Rao coined the name '*Rayalaseema*' for the region in memory of the Rayas of Vijayanagar, Krishnadevaraya in particular. For more details see P. Yenadi Raju, *Rayalaseema during Colonial Times, A Study in Indian Nationalism*, New Delhi, 2003, pp.3, 10,11, see also M.Veerabhadra Rao, *Sri Sarvothama Jeevithamu* (A Biography of Gadicharla Harisarvothama Rao) (Telugu), Vijayawada, 1965, pp.311-312, 317 and K.V.Narayana Rao, *The Emergence of Andhra Pradesh*, Bombay, 1973, p.166.

TILAK'S CONTRIBUTION TO INDIAN PHILOSOPHY

Dr. K.V. Sreedhar Goud & Dr. Mallela Nagendra

INTRODUCTION

Freedom struggle is a greatest event in the history of modern India. In this movement great patriots of this country sacrificed everything for the nation. Among them Bala Gangadhar Tilak was one. He was source encouragement and boldness. He was born in 1856 and died in 1920 his life was full of events.

FOUNDATION OF TILAK'S POLITICAL THOUGHT

If political philosophy means the speculative construction of an idealistic utopia, then Tilak has not given us any picture of the politically perfect society in this sense of the term political philosophy. He does not discuss the features and possibilities of the best State as Plato, Aristotle and Cicero do. He does not create the architectonic of the conceptually perfect State in the manner of Hegel and Bosanquet. His main problem in life was the political emancipation of India and hence there is an element of great realism in his political ideas and outlook. However, he was not a realist in the Hobbesian and Machiavellian sense of the term. He was never a political pragmatist. He was deeply versed in ancient Sanskrit philosophy and his political thought represents a synthesis of some of the dominant conceptions of Indian thought and the nationalistic and democratic ideas of the modern west.

The dominant, metaphysical assumptions of Tilak also influenced his political ideas. He was a Vedantist. The metaphysics of non-dualism of the Vedanta implied, according to him, the political conception of natural rights. Because the spirit is the supreme reality and because all men participate in that absolute essence, hence all have the same autonomous of Hence, Advaitism taught him the concept freedom.¹ "Freedom was the soul of the Home Rule movement. The divine instinct of freedom never aged. . . Freedom is the very life of the

individual soul which Vedanta declares to be no: was as to separate from God but identical with him. This freedom principle that could never perish. Thus, freedom according to Tilak was a divine attribute. Freedom was equated with the autonomous power of creativism. Without freedom no moral and spiritual life was possible. Foreign imperialism kills the soul of a nation and hence Tilak fought against the British empire. Thus there were philosophical foundations for the political struggle for liberty in which Tilak was engaged.

Tilak's nationalism was also influenced by the western theories of national independence and self-determination. In the famous trial speech of 1908 he quotes with approval John Stuart Mill's definition of nationality.² In 1919 and 1920 he accepted the Wilsonian concept of self-determination and pleaded for its application to India.³ Hence, Tilak's philosophy of nationalism was a synthesis of the Vedantic ideal of the spirit as self-contained freedom and the western conceptions of Mazzini, Burke, Mill and later on of Wilson. This synthesis he expressed in terms of Swarajya, a Vedic term which was used in Maharashtra to indicate the Maratha polity of Shivaji.

Because of his spiritual approach, Lokamanya regarded that Swarajya was not only a right but a Dharma. He also gave a moral and spiritual meaning of Swarajya. Politically, Swarajya meant Home Rule. Morally, it meant the attainment of the perfection of self-control which is essential for performing "one's duty" (Swadharma). It also had a 'spiritual significance because it is the realization of spiritual inner freedom and contemplative delight. Tilak defined the spiritual connotation of Swarajya in these terms "It is a life centered in self and dependent upon self. There is Swaraj in this world as well as in the world hereafter. The Rishis' stance who laid down the law of duty betook themselves to forests, because the people were already enjoying Swarajya or people's dominion which

was administered and defended in the first instance people who by the Kshatriya Kings. It is my conviction, it is my Swaraj in the life to come cannot be the reward of a people who have not enjoyed it in this world.⁴ Hence, Tilak wanted both political liberty and spiritual freedom

NATIONALISM, REVIVALISM AND HINDUISM

Tilak's nationalism had a revivalistic orientation. He wanted to bring to the front the message of the Vedas and the Gita for providing spiritual energy and moral enthusiasm to the nation. A recovery of the healthy and vital traditions of the old culture of India was essential. He said : "a true nationalist desires to build on old foundations". Reform based on utter disrespect for the old does not appeal to him as constructive work. "We do not want to anglicize our institutions and so denationalize them in the name of social and political reforms.⁵ Hence, he pointed out that the Shivaji and the Ganapati festivals had been encouraged by him because they served to link-contemporary events and movements with historical traditions.

But because Lokamanya was, partially, a revivalist, it must not be thought that he was a mere Hindu nationalist. As a person, he had intense pride in Hindu religion and culture. As a political leader he wanted to preserve the legitimate interests of the Hindu people and would not sanction cowardice and surrender. But it is wrong to say that he was a mere Hindu nationalist and was opposed to the Muslims. Zacharias says that Tilak was the spokesman of an anti-Muslim retaliation. A British historian, Powell Price, says that "The Muslim League was an answer to the Indian National Congress, necessary because the possibility of self-government raised the spirit of separation which the intolerance of Tilak had emphasized."⁶ Chirol says that due to Tilak's extreme orthodoxy the Muslim members of the Poona Sarvajanik Sabha resigned from that body. Palme Dutt blamed Lokamanya Tilak and Sri Aurobindo Ghosh because their identification of national awakening with the revival of Hinduism cut off the Muslim masses from the national movement. But all these are partial and even incorrect interpretations of the political thought and action of Lokamanya.

Jinnah, Dr. M.A. Ansari and Hasan Imam have praised the nationalistic sentiments and spirit of compromise of the Lokamanya, because due to his wise counsel and moderation the Lucknow Pact of 1916 could be achieved. Shaukat Ali and Hasarat Mohani regarded Tilak as their political *Guru*. Shaukat Ali says : "I would like to mention again for the hundredth time that both Mahomed Ali and myself belonged and still belong to Lokamanya Than political party. Hasarat Mohani says : "I even at that early age, chose the Lokamanya as the ideal Leader for me... When I declare that all through Tilak's life I was both intellectually and practically a blind follower of his, anyone can well judge thereby, of that love that I cherished towards him."⁷ Hasan Imam as the president of the Bombay special Congress went to the extent of calling Tilak his father in Indian politics. Imam stated : "Let me say, and it is with great pride, that Lokamanya Tilak is my father in point of politics. Furthermore, Tilak had promised to support the Khilafat movement if the majority of the Muslims were behind that. Tilak had proposed the Congress resolution for the release of the Ali brothers. If Tilak would have been anti-Muslim he could never have commanded the confidence of the great Muslim leaders. Hence it can be said, that with the profoundest regard for Hinduism in private life, as a political leader Tilak had a broad policy calculated to lead to national emancipation.

TILAK'S THEORY OF NATIONALISM

Lokamanya wanted to substantiate the nationalistic movement in India by a strong cultural and religious revival of Hinduism. But he also accepted the economic arguments for nationalism. Dadabhai Naoroji made famous "Drain Theory" in Indian economics, Both Lokamanya and Gokhale accepted that foreign imperialism resulted in the enormous "drain" of India's resources. In 1897, Tilak wrote three articles in the *Kesari* at the time of the Diamond Jubilee celebrations of Queen Victoria. In the article written on the 22nd June he stated that India's art and industries had declined under the British rule. He wrote that the various economic enterprises and investments in India, under the ownership and management of the foreign capitalists, only created a delusion of prosperity. He referred to the evidence given by Dadabhai before the Welby Commission of 1896 wherein that veteran patriarch of Indian politics had

shown that during the imperialistic sway of Great Britain India had become impoverished and economically ruined. He referred to the economic "drain" of India also in the interview he gave to envision in 1907.⁸

Tilak held that the attainment of Swarajya would be a great victory for Indian nationalism. Hence, he gave to Indians the Mantra "Swarajya is the birth-right of Indians". Although in his speeches and writings Lokamanya always said that Swarajya did not imply the negation and severance of ultimate British sovereignty, still people knew that in his heart of hearts he always wanted complete independence. He once wrote that Swarajya is "the foundation and not the height of our future prosperity. He always pointed out that the path or the attainment of Swarajya was full of suffering and misery. During the Home Rule days Lokamanya always was careful to say that he was not opposed to the King-Emperor but he only wanted to change the Anglo-Indian bureaucracy. He confidently asserted that to preach against the despotism of the bureaucracy was not sedition. Since Lokamanya did not advocate the doing away with the King-Emperor hence Bipin, Chandra Pal says that Lokamanya was a believer in "imperial federation" which would be composed of Great Britain, Ireland and Egypt, India and the dominions, each absolutely autonomous internally but combined for the purposes of protection and progress.

We have earlier referred to the fact that Tilak was a Vedantist in his metaphysical views. His conceptions of freedom as a divine instinct in man, and of Swarajya as inner self-realization, indicate his Vedantic views. His belief in human fellowship also followed from his Vedantism. In a way, he pleaded for the reconciliation between the ideal of nationalism and the Vedantic conception of human unity. In a speech he once said : "If the Vedantic ideal is higher, it necessarily includes the national ideal which is lower. The two are not irreconcilable if you know how to reconcile them. The two are not opposed to each other. One includes the other much in the same way as a thousand includes five hundred. The two ideals are mutually consistent and both of them demand a kind of self-sacrifice and self-control. Both of them demand in addition to self-control and self-sacrifice, a kind of higher altruistic feeling by

which man is impelled to ignore selfish considerations and to work for persons and for objects which do not in least savour of any egotistic aim. The feeling is one of love for humanity, for the equality of man before God, and it is the spirit of that feeling that governs the two ideals, Vedantic and National.

Edward Shillito has written a book entitled nationalism: man's other religion. In that book there is a chapter entitled, "The two Tilaks". Shillito says that Narayana Vaman Tilak, the Christian poet, was a believer in the kingdom of God on earth while Bala Gangadhara Tilak was a strong believer in Swarajya. Shillito has presented an imaginary dialogue between the two Tilaks. But Shillito's interpretation is inadequate. Although Lokamanya Tilak was a great patriot and a convinced nationalist he definitely states in his commentary on the Gita that love of the country is only a step to cosmopolitanism. He quotes part of the famous Sanskrit Shloka which means that for the wise man of generous feeling the whole world is one big family.⁹

TILAK AND THE MODERATES

Lokamanya Tilak has won lasting fame by creating the vital foundations of an assertive nationalism. He was an extremist and there were several factors responsible for that. Temperamentally he was buoyant and represented the aggressive vigorous spirit of manhood. He had been inspired by the careers and exploits of Shivaji and the other Maratha heroes who represented struggle and fight and successful victories. His extremism had also been influenced by his growing disillusion at the coercive and repressive technics of bureaucracy. But although an extremist, he believed in legal methods of agitation. He was twice elected to the Bombay legislative Council. He contemplated election also a third time. He formed the Congress Democratic Party in 1920 for contesting elections. But although Tilak accepted the framework of the existing law he wanted to use the areas of action left free by the law of the British government to intensify the nationalist movement in the country. Ranade, Pherozeshah Mehta and Gokhale went to the extent of regarding the British rule in India as part of divine dispensation, but the leaders of the extremist party always believed in the independent destiny of India. In speech in 1909

Gokhale defended passive resistance¹⁰ but although Tilak and Gokhale might in times have used the same words and might have put their faith in the same political objectives still there was fundamental difference in their political technics. The activities of Lokamanya in the famine agitation of 1896, in the movements of 1905 to 1908, and during the Home Rule days were calculated to train the people in organized action. He wanted to infuse a spirit of dynamic activism and assertiveness among a people who had grown enervated and prostrate. His advocacy of no-rent campaign in 1896, his stress on national education, his advocacy of picketing for the purpose of stopping the sale of liquor and his firm support of Swadehi and boycott definitely showed that Lokamanya wanted that the national movement should have its strong roots in coordinated and united action by the Indian people. Before Tilak came into active prominence as a leader, the Indian nationalist movement was committed to a philosophy of intellectual discussion on occidental lines. He taught the gospel of Indianization of the nationalist movement. Hence his technics of political action and his philosophical defence of the nationalist movement were oriented to the historical heritage of the people of India. If some of the important moderate leaders looked only to Burke, Mazzini and Spencer for intellectual inspiration, Tilak also looked to Shivaji and Nana Fadnavis and the Bhagavadgita. Tilak's attempts to Indianize the policy and orientation of the nationalist movement brought to him the support of Lala Lajpat Rai who in several respects closely associated himself with Gokhale. Lalaji in distinguishing the technics and ideas of Tilak and Gokhale writes : "Tilak was the man of the people. Gokhale was the man of the intelligentsia. Tilak was a hero for all times

to come. His heroism at times verged on recklessness and regardlessness of consequences to himself and his free co-workers. Gokhale was a careful politician, weighing every word before he uttered, and balancing every thought he gave expression to, always trying to say the right thing but in a way most inoffensive to the authorities that be, and the people that he criticised. Tilak was a blunt incisive speaker who never minded matters, spoke few words, but gave out the truth from all embarrassment of language. Gokhale was an accomplished speaker, full of pathos, who prepared everything beforehand, and realised the significance of every word that he uttered. Gokhale's ethics would not sanction any violence in politics. Tilak would not only justify it but even press it under certain conditions.¹¹ The latter history of Indian nationalism, however, showed the efficiency of the methods of Tilak.

CONCLUSION

Lokamanya, as a political philosopher has given us a theory of Nationalism. He did not have the time to elaborate upon the other conceptions of political science like sovereignty, justice, property, etc, although he has referred to these. His theory of Nationalism was a synthesis of the teachings of both eastern and western thinkers. He was a thorough believer in democracy and that was the secret of his unique hold on the masses. He did not adopt an idealistic or conceptual and speculative approach to politics. He belonged to the school of realism. But he never tolerated the excess of realism into the apotheosis of the cult of power, force and success, Hence, his school of political thought can be characterized as Nationalism founded upon "Democratic Realism"

THE FORGOTTEN LEGEND OF THE JUSTICE PARTY: P.RAMARAYANINGAR

G. Srinivasa Reddy

Panuganti Ramarayaningar, also known as the Raja of Panagal was very influential politician, strategist and leader of the non-Brahmin movement in Madras presidency in 1920s. He was the first graduate from aristocratic families in Madras presidency. As one of the important leaders of the Justice party he became chief minister in 1921 and led the first popular government in Madras presidency introduced under 1919 Act. He was born in Kalahasti, Chittoor district on 9 July, 1866 in an aristocratic family. His ancestors hailed from a village called Panagal, near Srikalahasti¹. They left their ancestral home some generations ago and settled down at Kalahasti, Chittoor district. They soon entered into marital relations with Raja of Kalahasti. Since his father-in-law had no sons, his estate came into the hands of father-in-law of Ramarayaningar. Thus, both estates that of Panagal and Kalahasti merged into one².

He was educated in Telugu and Sanskrit at his house. He started the English alphabet in his 17th year at home after intensive private coaching for a year. He completed his schooling from Triplicane High School, Madras in 1886. He entered presidency college, Madras in 1883 with advanced chemistry as his optional subject. He graduated in B.L and MA (Philosophy and Dravidian languages) in 1899. He appointed a fellow of the presidency college in 1919. The Raja entered politics when he was appointed to the district board of North Arcot. He was elected member of the imperial legislative council in 1912 from Southern districts landlord constituency. There he soon made a mark as skilful debator though not as an orator. "Lord Harding, the Viceroy, made a particular reference to his wise suggestions and constructive criticism. Raja strongly pleaded in imperial legislative assembly for the betterment of the agriculturalists and education in regional languages"³.

The Raja second time contested to the imperial legislative assembly from Southern districts landlords' constituency in March 1916, but was defeated in the hands of his opposite candidate, the Raja of Tiruchinapally⁴. He was also active in the All-India Non-Brahmin movement. He was a friend of Sahu Maharaj of

Kolhapur and was closely associated with his Satyasodhak Samaj. "He attended the All India Non-Brahmin conference held at Belgaum in December, 1924, and presided over the second All-India Non-Brahmin conference held at Madras on 25th May, 1925"⁵.

Raja was a great politician. His ability to organise, his ability to bring friends and foes to a cause, and his capability to hold and sustain the realms of power, all placed him in good stead in turbulent and elitist politics of Madras presidency in 1920's⁶. He was very active in Dravidian Association founded by Natesa Mudaliyar and elected as its president in 1914. He donated funds for construction of Dravidian Home in Madras. He was very active in non-Brahmin movement in Madras. He was harassed by the Mylapore clique of the Tamil Brahmins in local affairs. In the district Board affairs the Mylapore clique helped his rivals. "When Raja wrote a letter to Sivaswamy Aiyer, the leader of Mylapore clique, to have one appointment for his men, Aiyer gave it to the candidate of Raja's rival in local district board"⁷. This enraged Raja and his defeat in the 1916 imperial legislative council election in the hands of zamindar of Tiruchirapally, a Brahmin, further influenced his attitude towards Brahmins.

Raja slowly drifted towards Non-Brahmin movement. He criticised the Home Rule movement as a movement of Brahmins. "Annie Besant, he said, had no contact with anybody except Brahmin leaders. She never came out of Adayar's headquarters and for her India is embodiment of the Brahmins only, only whom she knows about"⁸. He was the president of the first Non-Brahmin conference held at Coimbatore in August, 1917 and explained his future plan of action in his speech. He was very active in the Justice Party election campaign for the legislative assembly elections which held in November, 1920. In this election he won from the North-Central Landlords constituency against his old rival, Raja of Tiruchirapally and entered Madras legislative council⁹. As per the provisions of Diarchy there would be three ministers in charge of the transferred subjects like local self-government, education, health, endowments, and public works and so on.

The Justice Party won with comfortable majority in this election and formed the government in November, 1920. On the advice of the party president P.Tyagaraya Chetty, the Governor Wellington appointed A.Subbarayalu Reddiyar as the first minister. Tyagaraya Chetty opted for P.Ramarayaningar as the second minister. The Raja took his oath as minister and assigned the departments of local self-government and public health. K.V.Reddy Naidu was the third minister¹⁰. Within a short period A.Subbarayalu Reddiyar resigned on health grounds. P.Ramarayaningar was elevated to the office of Chief Minister and he retained the portfolio of Local Self-Government¹¹.

Thus, the career of Raja of Panagal started as the chief minister of Madras Presidency in March, 1921. He had no connection with local bodies which constituted the training ground and stepping stone into the legislature in those days. Raja had practical experience gained in the hard school of realities in life. He became a mature politician and an able administrator. He was a good chess player. These qualities helped him to attain a mental equilibrium which stood him on good stead at times of strain and stress.

Raja as Chief Minister:

P.Ramarayaningar acted as the chief minister of Madras state from January, 1921 to November, 1926. He shouldered the responsibility of implementing the Justice party mandate. In 1925, on the death of P.Tyagaraya Chetty, Raja became the president of South Indian Liberal Federation and leader of the Non-Brahmin movement; which position he held till his death¹². He believed in evolution, not revolution. Coercion by law would never bring success but progression by social reform, said Raja when a member in the council wanted revolutionary act to eradicate untouchability. Raja uttered these words when P.A.Sundarapandiya Nadar moved a resolution in the council to bring legislation in penalising any kind of obstruction in using public roads, schools, wells, etc; by people irrespective of caste and creed¹³.

He assured the members that if at all a new legislation would remove the disabilities of the depressed classes that his government would have no objection to introducing any number of bills to remove such disabilities. In

such a way he persuaded the member to withdraw the bill¹⁴. It is a good quality of the legislators to use similes and examples to justify their arguments. He proved this quality while discussing on a motion introduced in the council questioning the special status accorded to the presidency hospitals in Madras by B.Munuswami Naidu. "Raja used the simile that God has created only one heaven for many worlds. So far as Madras is concerned, it was the presidency capital and institutions there should be ideal and serve as examples to the mufasal towns. Thus he persuaded Munuswamy Naidu to withdraw the motion"¹⁵.

The Raja was capable of pointing out precisely and accurately all the technical points included in the issues raised by the members. When he introduced the Hindu Religious Endowments Bill (1922) he was bitterly criticised from a section of the members. There was criticism that why the chief minister excluded the Mohammadan religious endowments. Raja replied that, "I have no doubt that the honourable member will readily agree that the Khilafat question is still disturbing the minds of the Islamic committees, the time is not at all suitable for undertaking legislation with regard to Mohammadan Religious Endowments"¹⁶. It shows that the Raja was a man of realities. Because at that time the Khilafat movement was at its peak and the Raja did not want to pour oil to the fire of Mohammadan feelings. Actually this situation should have led to pandemonium in the house. But his tact, timing and sense of knowledge, ability to update on current issues convinced the members.

The Raja's style of facing the Non-confidence motion in 1923 reflected his ability to safely get out of stormy troubles. The Non-confidence motion was introduced in the legislative council in November, 1923 by a united front of all the opposition parties under the leadership of C.R.Reddy on the grounds that the ministry lost the confidence of the people. During the discussion on the no-confidence motion against the Justice ministry, the chief minister replied that, "The strength of the ministers' party and opposition could be tested in a different manner. Because apart from opposition party there would be individuals who could not see eye to eye as much to the

opposition as with the ministry. If such individuals or individual parties vote to the opposition or the ministry due to the tactical move on the part of the mover, it would not signify the magnitude of the opposition or the ministerialists¹⁷. He made this comment because there were many differences among different opposition parties, but they united for the purpose of knocking down the ministry. This clarification will always help the legislators to study the trends in politics at the use of tricks by some skilful politicians. This is a great moral lesson to the public representatives and is relevant as long as democracy survives in this country. Regarding the allegations of patronage politics during the non-confidence motion the Raja openly admitted in the style of Gladstone, the British prime minister, that if we confer patronage on three people, we will get three doubtful friends and, surely twenty enemies. It reflected the political fluidity of his times and indicates the emergence of politics of opportunism and confusion.

The Madras presidency witnessed a new era of political activity under Rajas Ministry from 1921-1926. Several laws were passed to fulfil the ambitions of the non-Brahmin communities as promised in the manifesto. The important legislations under Raja's leadership:

1.The Communal Representation: The main allegation of Raja along with other Justice leaders against the Brahmins was the latter's disproportionate representation in the public services. Under Rajas guidance and masterly support "O.Tanikachalam Chetty moved the resolution on August 5, 1921 which prescribed minimum qualifications for non-Brahmins and maximum qualifications for Brahmins"¹⁸. This bill led to bitter opposition from Brahmin members. The two communal G.Os passed on 16th September 1921 and 15th August, 1922 respectively gave the non-Brahmins more opportunities to enter into public services. Both the G.O's were based on government statistics; this led to some problems for the ministry¹⁹. Speaking on the communal representation, the president of the house commented that Raja's commitment towards downtrodden among non-Brahmins was fulfilled. Speaking in the debate on communal G.O's Raja said, my government intended to give special treatment for non-Brahmins to establish an egalitarian society by

bringing all castes on par with the Brahmin brethren. It is one of the measures towards democratisation of Madras society²⁰.

2. The Hindu Religious Endowments Act, 1925: It was a personal triumph of Raja of Panagal. Most of the Justice leaders were very much traditional and religious minded. As said above there was lot of opposition and fears about the bill. The bill was intended to democratise the temple committees in the presidency. Hitherto the temple committees were monopolised by the Brahmins and the government control on the temples was very less. Now the bill proposed to bring the temples under the government control. The Raja had to face bitter opposition, especially from Brahmins within and outside the council. Many non-Brahmin landlords and zamindars feared that their personal interests in the local temples will be affected. But raja was very firm and committed on this bill. "The calm and dignified manner with which he persuaded the ideal he had set before himself and piloted the Bill through the legislature amidst difficulties of no mean order and bigoted opposition from interested quarters-these showdown the conspicuous manner what a through going reformer he was and how tenacious and steadfast he could be to causes on which he has set his heart"²¹. While T.M.Narasimhacharyulu, an orthodox Brahmin legislator from Cuddapah, demanded that endowment board should consist of Brahmins only, Natesa Mudaliyar from Justice Party demanded that the Board should consist of mostly non-Brahmins since most of the endowment funds come from the non-Brahmins. Raja pacified both the groups and assured that the Board will consist of the official and non-official members and membership will be given to the Brahmins and non-Brahmins²². The Raja's tact and balance of mind lies in the fact that T.Sadasiva Ayer, a Tamil Brahmin and a retired judge of the Madras High Court, was appointed as the first president of the Hindu religious endowments board²³. Thus, Raja pacified the Brahmin intelligentsia.

Other Important Legislations: The state aid to industries Act, 1922 was intended to give financial assistance to developing industries to increase national wealth and industrial regeneration. The Raja assured that the state aid

to small industries would provide employment for a number of persons and encourage industrial development. It was a great victory for the Justice Party since it committed the government to the policy of industrial development with the support of public funds. The government might have been agreed to this since the British companies will also benefit. "The direct control of the government over the elementary education was withdrawn by an order under Madras Elementary Education Act. This was left to the control of the local boards"²⁴. Compulsory elementary education was introduced for the first time in Madras Presidency in seven municipalities from the academic year 1922-23. Raja was very much interested in medical education. He established two Medical colleges in 1923- one at Vellore, another one at Vizagapatnam.

The district boards and municipal councils during Rajas Ministry gradually came under the control of non-officials. The system of election was introduced to the office of president of the district boards and chairman of the municipalities. The local bodies can levy a tax for the development of the elementary education. Another important Act was enfranchisement of women. The 1919 Act did not give right to vote for women. "M.Krishna Nayer moved a resolution on April 1, 1921 demanding the right of the women to seek election for the legislative council and giving right to vote to them in the elections. Since the first one did not come under the purview of the legislature, his resolution seeking franchise for women to the provincial legislative council elections was passed by huge majority"²⁵.

Thus the Justice Party was able to face intense opposition within the party and from the opposition because of the tactful and strong leadership of the Raja. He was able to sustain non-confidence motion in the house moved by C.R.Reddy. His talent lies in the fact that he was able to maintain good relations with the government though defeated in the 1926 elections. His political manoeuvring led the government, led by united front of the opposition parties, to depend upon him, while sitting in opposition he proved himself as an intelligent leader of the opposition.

During Simon Commission's boycott the congress members G.Harisarvottama Rao

moved a resolution in the council opposing cooperation with the commission by the council. The motion was debated. The chief minister Subbarayan voted against the motion while his two ministerial colleagues A.Ranganatha Mudaliyar and Arogyaswamy Mudaliyar supported the resolution. The resolution was passed by huge majority and surprisingly the Justice members also supported the motion²⁶. Now the Governor felt that without Rajas support the Subbarayan ministry will not survive. Therefore he wanted to win back the support of Raja by appointing Raja's best friend M.Krishna Nayar as the new law member. The ministry was reshuffled. S.Muthaiah Mudaliyar and M.R.Sethuratnam Ayer were taken as new ministers²⁷. Undoubtedly it was the political ingenuity of the Raja. Raja made the two new ministers defected from the Swarajist camp. Thus, the newly rebuilt boat of Subbarayan ministry was dependent upon Raja. Though defeated in 1926 elections and sit in the opposition the Raja made his party return with new vigour. From the low ebb of the 1926 elections Panagal has rescued the Justice Party²⁸. Raja's supremacy was unchallenged in Madras politics by December, 1926. Especially in 1928 Panagal reputedly enjoyed more power and influence in government circles than he had done even while acting as the chief minister. He more influenced the Governor than the chief minister Subbarayan in policy making issues. He played political game with veteran congress leader Satyamurthi, the chief of Swarajists, successfully. Undoubtedly P.Ramarayaningar may be considered as the Chanukya of Madras politics in 1920s and surely king maker between 1926-1928.

Unfortunately, the Raja of Panagal died on 16th December, 1928 at the age of sixty two, the last of the trio of the non-Brahmin movement. It was a great loss not only to the Justice party but also to the non-Brahmin movement in Madras presidency. "Possessed as he was of the enthusiasm of youth and the wisdom of age he was always a guide, friend and philosopher to all his followers and we lost him on the 16th December, 1928. May his soul rest in peace"²⁹. His death marked the end of the Justice party for all political purposes in the Madras presidency.

LORD CURZON AND THE PRINCELY STATES: SOME SIGNIFICANT ASPECTS OF BRITISH PARAMOUNTCY

Suhail Ahmin Mir & Bilal Ahmad Khan

The administration of Lord Curzon (1898-1905) is rightly called the “High Noon”¹ of the British Empire. His administration saw the apogee accomplished by the strategy of thinking about Indian rulers as administrative agents of the Government of India, determining their rights, forces and nobilities from the Crown. His strategies and measures included the intervention in the internal affairs of the states at a greater level. At the installation ceremony of Nawab of Bhawalpur, he affirmed that, “No Native Chief in our opinion is in possession of sovereignty of his state.” “The sovereignty of the Crown”, he remarked, “is everywhere unchallenged. It has itself laid the limitations of its own prerogatives.”² It was “a claim not to paramountcy but to complete sovereign.”³ With his sharp brain, endless vitality and firm commitment to the British Empire, he works hard to twist the Indian Princes to his will. The princes were reduced to the position of merely hereditary officers who once were considered as the allies of British.

In the course of his very first of the speeches about the Native States delivered at Gwalior on 29 November 1899, he remarked, “The native Chief has become, by our policy, an integral factor in the Imperial organisation of India. He is concerned not less than the Viceroy or the Lieutenant-Governor in the administration of the country. I claim him as my colleague and partner. He cannot remain vis-a-vis of the Empire a loyal subject of Her Majesty the Queen-Empress, and vis-a-vis of his own people a frivolous or irresponsible despot. He must justify and not abuse the authority committed to him; he must be the servant as well as the master of his people. He must learn... that his *Gadi* is not intended to be a divan of indulgence, but the stern seat of duty”.⁴ Curzon viewed the Princes as “no longer separate appendages to the Empire, yet its participators and instruments.” In his first speech about the Princes of India delivered at Gwalior on 29 November 1899, he stated: The native Chief has become, by our policy, an integral factor in the Imperial organisation of India. He is

concerned not less than the Viceroy or the Lieutenant-Governor in the administration of the country. I claim him as my colleague and partner. He cannot remain vis-a-vis of the Empire a loyal subject of Her Majesty the Queen-Empress, and vis-a-vis of his own people a frivolous or irresponsible despot. He must justify and not abuse the authority committed to him; he must be the servant as well as the master of his people. He must learn... that his gadi is not intended to be a divan of indulgence, but the stern seat of duty.⁵

He spoke of the Indian princes as very strange people, "these natives; they have such an extraordinary respect for strength of decision and action that, if it be based upon sincere purpose, and expressed in sympathetic language, there is scarcely anything that they will not accept from their rulers, however contrary to their own previous utterances or prepossessions."⁶ At the same time he maintained the ultimate authority of the British power, as he affirmed that, "I maintain that the essential attributes of sovereignty in India are exercised by the British Crown and by it alone; and that so much of the essential attributes of sovereignty has been taken from the Native States that to continue to give them the title is not merely a misnomer, but is a political error. I deprecate the constant use of all those vague and unsatisfactory terms—the invention of constitutional lawyers—such as subordinate isolation, subordinate co-operation, protected sovereignties, subordinate allies, and the like."⁷

Lord Curzon in 1904-1905 attempted to create an advisory council of the princes, which, according to Lord Minto, could also serve as a counterbalance to congress goals.⁸ The majority of the ruling chiefs did not like the proposal of forming the "Imperial Advisory Council of territorial Magnates of British Indian and Ruling Chiefs"⁹. They didn't want any kind of interference from British India in their internal affairs which a close association might involve.¹⁰ Amid his vicerealty, the princes of India got a chance to participate in the coronation ceremony of the King-Emperor, Edward VII in London as a sign of their loyalty to the British Sovereign. In January 1903, Curzon held the Coronation Darbar at Delhi to proclaim the accession of the new sovereigns. This grand programme further strengthens the

bonds between the Native states and British Government. For the first time in the history of British India a British Emperor was to set foot upon the soil of India to receive the homage of princes and people. It was meant "to remind all the princes and peoples of the Asiatic Empire of the British Crown that they had passed under the dominion of a new and single sovereign."¹¹ "My one desire", the Viceroy explained in a circular letter to all the Chiefs, "has been that the Indian Princes, instead of being mere spectators of the ceremony, as they were in 1877, should be actors in it. It is their King-Emperor, as well as mine and ours, whose Coronation is being celebrated... The Darbar is not the Viceroy's Darbar. It is held for the Sovereign and the Sovereign alone."¹² Lord Curzon whose seat was allocated next to the Duke of Connaught announced the reduction of interest on famine loans to Native states for three years. He was likewise acutely desirous of the reduction of salt tax but the Home Government did not allow him to do so despite his many requests to the Secretary of the state which the latter thought that such a reduction would set an "awkward precedent."¹³ The Darbar marked the end of an era, however planned to inaugurate the beginning of a new one: "For the last time medieval India was revealed in its old barbaric splendour."¹⁴ Curzon felt he was "the true British Moghul.

The motives of the Viceroy were laudable. 'I entertain so strong a sense of the harm that is being done to India, and to the class of Native Princes, by the multiplication of the category of half-Anglicized, half-denationalized, European women-hunting, pseudo sporting, and very often in the end, spirit-drinking, young Native Chiefs, that I mean to put every obstacle in the way of their evolution that I possibly can.'¹⁵ Curzon's policies towards the minority of the princes proved advantageous to the British Government. In case of minority of the princes, Curzon took over the administration of the state in the hands of government as was in case of Nawab of Bahawal Khan V of Bhalwalpur whose ruler was only sixteen years of age at the time of his accession in 1899. Curzon arranged the special education and training for the minor prince and assigned the reigns of administration in charge of British Superintendent. Even in case of maladministration, the government took stern action against the ruler and Curzon did

not hesitate to deprive them from the *Gaddi* for instance, the case of ruler of Bilaspur, Raja Bijai Chand who was found incompetent and was deprived from his powers. Curzon also blamed the Punjab Government for having shown resolution' in the matter and ought to take action against the Raj much earlier.¹⁶

Curzon was averse of the frequent visits of the princes to foreign countries. It was believed that the financial loss of the states of Kapurthala and Baroda was due to the repeated visits of their respective rulers to the foreign countries. Therefore, in 1900 the Curzon government issued a circular in which the foreign visit of the Indian princes was prohibited without the consent of the British government. It was also stated that the princes must devote their best to the welfare of the people and administration of the state.¹⁷ Curzon also planned to make drastic changes in the previously established 'Imperial Service Troops' in order to extend it to all the princely states. It was suggested that every state should contribute at least ten per cent of its gross revenue for Imperial defence and sought the opinion of all princes regarding this. But the Secretary of the State intervened and declared that no further action would be taken without his consent¹⁹ which was virtually the rejection of this proposal.

Numerous princes resented his attitude of considering them as servants of the Imperial Government, bound to take orders from Shimla and Calcutta and having no rights of their own. His *modus operandi* was unbearable to many of his fellow princes. According to Ganga Singh of Bikaner, the viceroyalty of Curzon was so painful for some princes that merely talking about the epoch was enough to reduce them to tears.²⁰ He took a strong action against the Residents and Political officers about many valuable privileges and advantages enjoyed by them at the expense of Indian Princes. Amid his term of office, he strongly objected to this and issued a circular to prohibit it.²¹ Curzon was an absolute colonialist. He did not allow the princes to get indulged in traditional ceremonial grandeurs. Apart from his mental vigour and swift apprenticeship, Curzon conveyed two incredible qualities to the Indian opportunity—immense powers of work and an unanswering dedication of duty. Lord Curzon enjoyed impressive impact over the Princely states of India in the closing years of his Viceroyalty than any other Governor-General did in the past. Therefore, the various aspects of British Paramountcy vis-à-vis the Princely states reached its culmination during his viceroyalty.

MEGALITHIC CULTURE: ROLE OF TECHNOLOGY, SOCIAL STRATIFICATION AND KNOWLEDGE SYSTEM

K.S. Sujatha

Megalithic burial culture can never be treated as a byproduct of any single item called, technological growth, social gradation, ritual practices etc. The existence of all these elements together within same or different periods may lead to these practices in Pre or Early historic period in Kerala and South India as a whole. Of course the origin of technology and the explosion of the same were happened but when and how is a question still exist as difficult to make clear by people who worked in this field. Knowledge system here meant a thought or an idea behind that practice, in other sense with the emergence of new Archaeological trends it began to give equal importance to the mental activities behind an action. So here just going to discuss the role of whole these elements in the context of the development and spread of burial culture. It was a common phenomenon in all over the world. So the origin of this practice was traced from various part of the world by archaeologists and historians etc. The European megaliths are much older than the Asian ones as they have been located in a broad time bracket from 5000-2000 B.C.¹ Generally South Indian megalithic chronology was fixed tenth Century BC to the beginning of Common Era, and the early Historic from to 3rd century B.C to 3rd century A.D, with some overlap between the two. But in the case of Europe the dolmens have been identified with Stone Age and do not contain wheel made pottery.² The diffusionists like Elliot Smith and W.J. Perry who thought that the megalithic monuments all over the ancient world had been diffused from ancient Egypt.³

However, N.R. Banerjee argues that Megalithic technology came to India from Northern Iran and central Asia through Baluchistan and Vindhya. Scholars like Leshnik, Allchin and others support this view. Leshnik enlarged the central Asian theory and Lal made comparisons with Indian megaliths and Nubian graves in Egypt. But he is also aware of the fact that in the Nubian graves iron is completely absent⁴ Just mention these arguments for make clear that the picture of

megalithic origin and distribution is a controversial one.

MEGALITHIC CULTURE

The term 'megalithic' was originated from the words 'megas' meant big and 'lithos' meant stone.⁵ But all the burial monuments are not included in the list of megalithic monuments as a whole. The types like urn burials, pit burials etc are listed under this category based upon the remains of the grave goods. Megalithic monument was a burial culture with huge architectural features was found to be connected with Iron Age culture and practiced till by some tribal groups in South India.⁶ Generally this burial practice was called with the name 'Megalithic culture' 'culture' means 'a set of shared values, ideas, and beliefs.'⁷ When a society can going through a 'culture' indicates that a kind of common thoughts were followed by the people at that time for a common purposes. But here it is found that a burial culture was existed at there and people can followed this. But interestingly not all burials were made with same typology and grave goods also found to be different in various burial types. Various observations were made by scholars regarding these typological differences; the role of geography is one among them. But I think that the geographical differences are only one among them and so many other factors like social stratification, cultural diversity through people's involvement within and neighboring areas on trade or other practices also may have played a crucial role in this.

The concept of Death and burial

The concepts like death and life after death are found to be existed from the very early period onwards in almost all parts of the world. In one or another way all ancient civilizations were practiced some kind of funeral rituals in all parts of the world. The Egyptian, Mesopotomian, Chinese and India all have practices some rituals relating with the burial of human beings. In the case of India it is found that Harappan civilization and Vedic -purana texts also mentioned about this kind of practices

in here. That means in here they never treat the concept of death as an end to the living at the same time it was part of a circle that never be going to end otherwise it was the end of body and not by soul⁸. It of course indicates the role of a ritual importance in these practices. Burial was a common practice which is found in all kinds of societies from the stage of beginning itself. But it is little confused to call all these practices under the name 'Megalithic Burial'. These burial practices existed from early period but was find not to be attached with any kind of monuments or other things. So the Burial practices with huge stone monuments were a peculiar feature for this period.

In India it is found that the funeral or burial remains were seen from Upper Paleolithic period onwards and most visible from Mesolithic period. When it reached to Neolithic period the burial monuments were getting more common and increased in numbers. The burial remains were seen in Kashmir, South India and Orissa in Neolithic period. Chalcolithic period onwards found the remains of burials in large number. All the burial monuments are seems to follow certain kind of ritual practices.

Harappan period was also notable with the burials from various sites like, Kalibangan, Dholavira, Harappa etc. Infant burials also were reported from Mehgarh one of the important sites from here.⁹ Sanauli one important Harappan site was notable with the presence of burial types like extended, secondary and symbolic burials etc. The symbolic burials were clearly indicates the existence of some kinds of practices and beliefs behind that processes. U.S.Moorti opined that through the practice of various burial types found the development of stratified society and says that megalithic community was a stratified one.¹⁰

The burial architecture of this Iron Age was notable with its grave goods as well as typological variations. Both these indicates the relation of people with other areas and their efforts behind this practice. Probably this is the reason why scholars considered the society at that time is not to be existed as an isolated in nature.¹¹ Most of the burials in Megalithic period are found that it was secondary, some argued that it was really interesting that even a pre or early historic time people have spend much time for this kind of construction for their

ancestors. It is argued that the nature of grave goods may determine the nature of peoples and their social position at that time.¹²

Another point relating with the spread of burial culture is the technology stood behind that practice. It is not important that a society is there with some kind of *technology, at the same time it became relevant only when anybody can needs that technology in practice*. So here understood that in an early historic society like Megalithic period, the demand of technology for a common purpose is indicates the common nature of that practice in that time. That means the technology like tools and weapons making, pottery making, stone cutting etc have existed at that time in an easy available way.

The needs of that technology in a society can determine by the social stratification existed of that society with in a particular period of time. All these showed the importance of human involvement of this action. From the very beginning onwards people have maintained some kind of fear or anxiety towards 'death'. May be that was one reason for getting more importance to this burial culture and when periods are going that practice may reach to more and more elaborate forms.

When going through the past of India it is found that the country has a notable position in the world of producing ancient civilization. The country included in the list of seven countries which had produced food plants at first time in early historic period.¹³ It is found that when a human being transformed from primitive men to tool making and using men may indicates the fight by human beings with nature and the final achievement was a result of the continuous growth of them.

Like that the invention of metal in pre-historic and early historic time is a milestone in the development of the society at that time. Because the change of human beings from a stone using society to metal using one is not a simple one. The growth of human beings was found through changes in their tools and weapons also. When starting the history of human beings it is found that the tools and weapons were made out of stone, woods, ivory etc. So the technological growth of human beings were understood through the change happened in their tools also.

The historians and Anthropologists have made certain kind of generalizations about the means of living by the people in pre or early historic time based up on the artifacts used by the people at that time. That means they make a picture about the people and their way of living etc are determined by the type of tools used at that time. The divisions like hunting, fishing, agriculture etc are made based up on the tools used by the human beings at that time.¹⁴

From the monuments in Kerala received so much of artifacts made out of metals and wheel made potteries, precious and semi-precious stones etc. The artifacts made with Iron, Bronze, Copper, Gold etc are found from Kerala. But the sources of these metals were not to be traced by the archaeologists in now-a-days. The Bronze was received from Thiruvilwamala, one megalithic site. Like that gold and copper was reported from Arippa. Interestingly both the copper and gold from here is very pure in nature. Dr.P.Rajendran says that in Kerala gold was found in near Beypore river bed and Nilgiri hill ranges of Malappuram district, maybe it was the source of gold in Kerala. Like that it is found that the copper rings from Arippa are found that it was pure one. So it is considered that may be gold was obtained by them is available from here, but copper was not to be traced anywhere from Kerala, so that was used them through the contacts with other part of the world by trade or any other kinds of contacts.¹⁵

Another notable change in the history of South India is the development of agriculture in South India during the time of Megalithic period. But peoples who worked in this field

also have shared difference of opinions regarding the practice of agriculture at that time. Peoples like Leshnik, Deo etc said that the people of megalithic were not to be involved with agriculture or any other kinds of cultivation and latter people like R.K.Mohanti, U.S.Moorti, Selvakumar etc mentioned that they were practiced cultivation in small scale and of course pastoralism was an important form of living by the people who practiced this burial culture.¹⁶

In this paper here am trying to mention the nature of Megalithic communities in South India. This burial practice was never to be happened through a single incident or a single change in history. But it is clear that the facts like, technological growth, beliefs, social stratifications etc have equal role in this kind of practices in early historic time. Of course an 'agency' may work out in here for spreading these practices in almost all parts of the world as a whole. So many questions are exist here as a puzzle but one thing is almost sure that atleast they were not lead an isolated life. Because in Kerala found so many sites of megalithic sites in Palakkad, Thrissur, Calicut, Malappuram, Kasargod, Idukki, Kollam, Trivandrum etc. So many typological and technological similarities were found between these monuments and with the monuments of other parts of South India. Like that when conduct field work on the area of Palakkad which is lying as close to Western ghats it can able to trace craftsmen communities like potters, Blacksmiths, Masons etc close to the Bharathapuzha basin. All these lead us to conduct further studies on these area regarding this problem.

IDAYARAMAD HILLS DISPUTE BETWEEN TRAVANCORE COCHIN : AN ANALYSIS

Dr.J Suresh

The land and water cannot be separated under any circumstance. The world civilizations had emerged on the banks of various rivers. The river water and land had served as a bone of contention between States. The river Periyar is located on the border of Travancore and Cochin. The encroachments and sharing of river water had caused certain differences and disputes. An attempt to establish domination over Munambam Bar and the hilly place of Idiyaramad led to certain disputes. These disputes, though continued for a long period of time, might be settled amicably

Idiyaramad Hills located near to Malayattoor Hills. Idamalayar River passes through this place and joins Periyar, a slight above Malayattoor. In AD 1762, when *Zamorin* threatened Cochin, the Cochin ruler offered Alangad to Travancore for their assistance, like wise given. In 1764 the territory of Paravoor was also given to Travancore. Later Travancore raised the argument that Nayathodu temple situated in Alangad had certain income sources from Malayattoor forest region. So Travancore demanded Malayattoor and Idiyaramad hills to be their own. The then Resident to Travancore Cochin Col. Macaulay noticed the problem. British government without any trial or findings makes the matter favorable to Travancore. Cochin ruler again appealed to the matter. Actually Idiyaramad and Malayattoor were the continuation of Kodashery Hill ranges of Cochin. But with the decision of Macaulay, he issued a royal proclamation stating that the people of his kingdom should aware the fact

that the region to Malayattoor was given to Travancore and it was now under the position of Travancore.

British government extended the date of submission of Idiyaramad hills to Travancore. The reason for that is, in the Cochin kingdom the arrears in due to the British by Cochin were pending. So after solving problem, Cochin should give the territory. As a result when the dues were solved Col. Munroe demanded Cochin *Dewan* Nanjapayya to do the same. Likewise the treaty of 1818, Idiyaramad was surrendered to Travancore under Munroe's demand. However the Cochin rulers gave appeal to British government against this decision. Therefore J.C Hannington was appointed as arbitrator. The arbitrator declared his verdict in favor of Cochin. He demanded that Idiyaramad hills should be transferred to Cochin on or before July 1st 1882.

The Cochin Government admits that the Government of His Highness the Maha Raja of Travancore is at present in possession of the Idiyaramad Hills and in receipt of the produce of the same.¹ It denies that the Travancore Government has any right, legal or otherwise, either to hold possession of the Idiyaramad hills or to collect the produce of these hills, or that it has, as a matter of fact, ever collected there from any produce prior to 1818.²

Dassa Poy, inhabitant of Cochin, has rented from the Rajah of Cochin two Hills named Iddiara Mudda and Curijoo Mudda situated on the road to Malayattoor, for the

propose of cutting timber and bringing the produce of the Hills to Cochin. Also four elephants for the term for five years and agreed to pay annually for the Hills Rupees (2,800) two thousand and eight hundred and the elephants Rupees(1200) one thousand two hundred, for which grant he has the Rajah's Bond under date 1st August 1809 and the Rajah's is in possession of a counterpart.³

On the expiration of Dassa Poy's lease, Cochin resumed possession of the Idiyaramad Hills as well as of Curijoo Mudda and with such possession the exercise over them of all proprietary and sovereign rights, and this state of things continued undisturbed until Colonel Munro, who had succeeded Colonel Macaulay in the Office of Resident.⁴

Dewan Nunjapiah received Colonel Munro's letter on the 29th February, and without communication with His Highness on the subject tool upon himself at once to direct Captain Lethbridge in charge of the Cochin Forests to make over the Idiyaramad Hills to such persons as may be deputed for the propose by captain Gordon of Travancore service and on 30th June wrote to the latter requesting him to make arrangements to talked delivery of the Hills.⁵ His Highness had somehow or other, came to know of the receipt by his Dewan of Colonel Munro's requisitions for the surrender of the Hills and he accordingly addressed the Colonel on the 1st of Minom following, protesting against such surrender. Meanwhile the Dewan appears to have communicated to Colonel wrote to Nunjapiah on the 12th of the same month .to say that the surrender was justified by the tituram of the 9th July 1806. Other mater consideration, however, he seems to have c considered that something more was necessary for justification and accordingly on the 17th July, in replying to His Highness communication of the 1st August above alluded to, he relied not only up in the Tituram in question, but upon the fact of his having been informed, since his arrival in Travancore, by the people there that the Idiyaramad Hills belong to that State. His Highness was, however, not convinced of the justice of Colonel Munro's proceedings and therefore addressed him again on the subject on the September 1819. To this Colonel Munro replied on the 9th of that month, saying

that as "every case must be disposed of in accordance with Justice" he would reconsider this case too and communicate the result to His Highness without delay. But nothing further appears to have been done in the matter.

The question whether the dispute has been settled or not. Colonel Munro, the British Resident appears to have considered that Cochin had, by a Tituram dated 9th July 1806 surrendered the Idiyaramad Hills to Travancore, I am not prepared to admit that His Highness and issued any such Tituram, but conceding for arguments sake that a Tituram of the kind relied upon by Travancore had been issued I submit that a reference to it will shew that there is nothing in it to prove that the Idiyaramad Hills had been so surrender. The enquiry by Colonel Macaulay the resident and the decision come to by the Madras and Supreme Governments on such enquiry had reference exclusively to the Malayatoor Hills and the wording of the Tituram which was issued in difference of the views of the British Government, Clearly indicates that all that was relinquished by His Highness the Maha Rajah of Cochin in favor of his ally of Travancore was the places or hills in Malayatoor. In the Tituram there is no mention whatever of the Idiyaramad Hills which form no part of ht Malayatoor range.

There was treachery on the part of Dewan Nunjapiah in the matter may also be inferred from his subsequent action during the conference held at Quilon in 1824. He submitted to the Resident privately a memorandum in which he pressed for the restoration of the Idiyaramad Hills to Cochin, but in the list of disputes that he formally furnished to the Dewan of Travancore on the occasion he omitted all mention of claim of this Sirkar to the Hills, the more so as the Travancore Government was at the time advancing a claim of Rupees 40,000 as against Cochin in respect of these very Hills⁶. He not only failed to ask for a determination of the Claim this Sirkar had and has to the Idiyaramad Hills, but made admissions and give his assent to decisions in certain minor cases obviously with a view to favor the pretensions of Travancore and prejudice the interests of Cochin. The Idiyaramad Hills form part of the Codasher range of Hills which are admittedly in Cochin Territory. The situation of the Idiyara

Hills with reference to Codasheri in Cochin and Alungat within which it is contended by the Travancore Sirkar to lie, affords in itself cogent evidence if the fact of the disputed Hills being within the territorial limits of this Sirkar⁷. There is moreover nothing to show that these Hills were ever an appendage of Alungat or that the Rajah of Alungat had any time exercised any rights of ownership over them.

It is true that on two occasions Travancore advanced pretensions of the Hills in question and caused the Sirkar both loss and annoyance, but it should be borne in mind that the Government had to waive those pretensions on action taken by this.

The Idiyaramad Hills solely and exclusively belong to Cochin and that they should accordingly be restored to it by the Travancore Government, together with the value of produce for the past sixty-three years.

Before the court of Arbitrator duly constituted under the resolution of the Government of Madras, No 481 dated 29th October 1880, for the settlement of boundary disputes and other matters of contested Sovereignty between the two States of Travancore and Cochin. Statement submitted by the Dewan of Travancore on behalf of the Government of His Highness the MahaRajah of Travancore under Article III of the agreement of 1880 with reference to the dispute regarding the Idiyaramad Hills,⁸

First: That the Idiyaramad Hills belong to the MahaRaja of Travancore exclusively.

Second: That the Travancore Government is in exclusive possession of the sovereignty of the said Idiyaramad Hills and is in receipt of the forest produce of the said Hills.

Boundary of the Idiyara Hills- the boundary begins from Panny Moodu kuthoo; it then proceeds northwards along the small Nulla to a point called Kallyanypunthal, thence westward along the course of the Sholayar up to Choraykal. Whence it turns north waves and passes along the course of a small stream to a highly wooded top of a table land, thence turning westward proceeds along the crest of the Kurramanacil bridge which forms the south and south eastern boundary of the Nemarry sub-division of the Chittoor District of Cochin,

until it reaches a point a little to the west of Oorcoombanmad, thence takes a north westerly course along the Sholayar until its junction with vetecoly Poya; hence the boundary turns south westerly along the course of that stream until it reaches a point a mile north of Athirapulaymad; thence it proceeds south east and south along the crest of the ridge containing Mylloopunny Moody and Chokanny Moody until it reaches the Idiyaramad peak; Then the boundary turns south wards and follows the course of the Yeddumulayar until it reaches a point called Kavallalh, thence it turns north east and passes along the crest of the high ridge running west to east parallel to the Yeddumulayar on the north of it.

Counter statement submitted on behalf of the Cochin Government in answer to the statement filed by the Dewan of Travancore before J.C Hannigton Esquire, Arbitrator, on the 14th December 1880 in regard to the Idiyaramad Hills.

The Cochin Government denies⁹

- (A) that the Idiyaramad Hills belong to His Highness the MahaRajah of Travancore and
- (B) That the right of His Highness the MahaRajah of Travancore to the possession of the Idiyaramad Hills has been formally decided by the Madras Government and formally acquiesced in by His Highness the Rajah of Cochin as per Theetooram dated 9th July 1806 and also by article 39 (Travancore claims) of the agreement of 1824. between the two states.¹⁰

The Cochin Government is unable to admit that any such Theetooram as exhibit, filed with the statement of the Dewan of Travancore, had been issued by His Highness the Rajah of Cochin on the 9th August 1806. Or any other date¹¹.

The Cochin Government admits that the Government of His Highness the Maha Raja of Travancore is at present in possession of the Idiyaramad Hills and in receipt of the produce of the same, but it denied that the Travancore Government has any right, legal or otherwise, either to hold possession of the Idiyaramad Hills or to collect the produce of these Hills, or

that it has, as a matter of fact, every collected there from any produce prior to 1818¹².

The cochin Government submits that the burden of proving the alleged adjudication of dispute relating to the Idiyaramad Hills and the

alleged proprietor and sovereign rights of the Government of His Highness the Maha Rajah of Travancore to these Hills, rests upon that Government and that nothing that has hitherto been advanced is sufficient to prove either such adjudication or such rights.

DEVELOPMENT OF POLITICAL ASSOCIATIONS IN COLONIAL TAMIL NADU

Dr. G. Syed Kadhar

This paper focuses on the emergence of political associations in Madras Presidency during the period of later Nineteenth Century. After the Vellore Mutiny, the Madras Presidency, especially the Tamil Country, was relatively peaceful. Marathas, Sikhs and others resisted the British at different times. The 1857 Revolt was a major event but this did not affect the Madras Presidency. The growth of Madras during the Nineteenth Century was remarkable and it dwarfed all other towns, eclipsing such ancient dynastic capitals such as Madurai, Kanchi, Tanjore and supplanting more recent and commercial centres such as Calicut. The growth of this Metropolis created a new middle class and an elitist group. The elite took the first step in introducing the modern political party system and a new political consciousness emerged in the Madras Presidency.¹

In mounting their agitation against the missionaries, the Hindus in Madras were not aided by a political association. This did not mean that the instincts of corporate action were absent among the Hindus. Urban life in Madras,

by its very complexity and competitiveness, was compelling many Hindus to redefine their relationship to each other. When the Hindus first migrated to the City, caste bodies emerged to regulate the activities of their members and protect their traditional rights from encroachment by rival groups. However, the rapid changes that overtook Madras, following the establishment of British power in the area, coupled with the slow erosion of certain traditional institutions and habits, called for relationships other than those based upon kinship and caste.

Madras Hindu Literary Society

An early example of this new kind of relationship was the Hindu Literary Society. Founded during the 1830s, this body admitted members from different Hindu castes and occupations.² Within its ranks were found Brahmins as well as Non - Brahmins, Hindu pundits as well as merchants. This society held periodic meetings and organized lectures to review the contemporary issues. Though not

exactly a voluntary association, it was the nearest to one to be found in Madras during the first half of the Nineteenth Century.

The Madras Hindu Literary Society became somewhat inactive during the 1840s, at a time when the anti-missionary agitation was reaching new heights. This agitation, among other things, had resulted in a heightened sense of Hindu communal solidarity in Madras. There were appeals for a voluntary association to give effective direction to this new born Hindu consciousness. Some Hindu leaders, notably Srinivasa Pillay and Lakshminarasu Chetty, however, favored the idea of reviving the Hindu Literary Society, hoping thereby to instill new vigor and purpose into its activities.³ In March 1864, a meeting was held in Madras to revive the Society. Srinivasa Pillay, while calling for unity among the Hindus, argued that failure to achieve it would be a great impediment to their political advancement. This attempt to breathe new life into the society failed but failure only underlined the need for a new political association which would give expression to the growing Hindu solidarity in Madras.

Formation of Madras Native Association

The initiative to form a political organization came not, however, from Madras but from Bengal where the British Indian Association was launched in October 1851.⁴ Formed for "a period of not less than three years," the Association's immediate aim was to voice India's grievances during the impending enquiry into the affairs of the English East India Company. Believing that its representations would carry great weight if they were made simultaneously by the natives of every part of British India, or by a Society to represent them, the British Indian Association solicited the collaboration of other Indian centres.⁵ Madras was among those invited to co-operate, either by forming a branch body affiliated to the British Indian Association or by having an independent association with broadly similar objectives. This invitation was discussed in February 1852 at a large meeting of the native inhabitants of the Presidency and it was then decided to form a Madras Branch of the British Indian Association.⁶ The constitution of the parent body was adopted and a Committee of Management was elected to discharge the routine matters of the branch association.

It is apparent that this association was largely the product of the Hindu caucus which had spearheaded the opposition to the missionaries during the preceding decade. The caucus consisted mainly of merchants belonging to the Tamil and Telugu Non - Brahmin Castes. The dominant figure was undoubtedly Lakshminarasu Chetty. His popularity among the Hindus of Madras stemmed partly from his courageous fight against official involvement in missionary operations and partly from his readiness to sacrifice his wealth towards the cause of Hindu interest. The *Crescent*, for example, was known to be run at considerable loss to Lakshminarasu Chetty. He brought into the Committee of Management a number of Hindu merchants, notably Appasamy Pillay, a senior partner of an agency firm, P.Appasamy Pillay, P.Veeraperumal Pillay, a partner in the same firm and A.Alwar Chetty, proprietor of a large provision firm in the Black Town.⁷

But it would be wrong to conclude that this Association was exclusively a body of Hindu merchants. Other interests were also represented. C.Y. Yegambaram Mudaliar, its first President, was a rich Mirasdar with extensive landed property. Representing the small western - educated class were V. Sadagopah Charulu and V. Ramnujachari, both graduates of Madras High School. It was Ramanujachari who filled the position of Secretary of the Association. As the Torture Commission reported in 1854, these leaders constituted a fair representation of the Hindu wealth and influence in the Presidency. Exercising influence from outside the association was Harley, Editor of the *Crescent* and trusted aide of Lakshminarasu Chetty.

Relations between the British Indian Association and its Madras Branch ran into difficulties from the beginning. The Madras leaders found their freedom of action "unexpectedly impeded by the union of the Madras Association with that of Calcutta".⁸ There were also differences over the question of reform proposals to be submitted to the British Parliament. These differences became evident when Bengal drafted a petition which, according to Lakshminarasu Chetty, related almost wholly to the plans and recommendations of the change of government

and for the exaltation of the higher classes of Hindus while ignoring the grand object for which the association was founded. What precipitated the matter was the decision of Bengal leaders to circulate the petition in England without securing prior approval of Madras.⁹ The leaders of Madras resented this arbitrary action of Calcutta Association and decided to form an independent organization to serve the interests of South India. The new body was called the Madras Native Association (hereafter referred to as M.N.A.) and it was inaugurated at a meeting in July 1852.¹⁰

The immediate task before this association was to present its case in a formal petition to the British Parliament. Data were painstakingly collected and an appeal was launched for funds to cover expenses, estimated at Rs. 50,000. By December 1852, the document was completed, with Harley putting the finishing touches and a public meeting was convened to seek endorsement before dispatching it to England. The M.N.A. summarized the main grievances of South India as follows:

“That the grievances of your Petitioners arise principally from the excessive taxation and the vexations which accompany its collection and the insufficiency, delay and expense of the Company’s Courts of Law; and their chief wants are the construction of roads, bridges and work for the supply of irrigation and better provision for the education of the people. They also desire a reduction of the public expenditure and a form of local government more generally conducive to the happiness of the subjects and the prosperity of the country.”¹¹

The M.N.A. was sharply critical of the Company’s rule and dealt with in detail the shortcomings of the revenue and judicial system in the Madras Presidency. Some of its harsh criticisms, however, were reserved for the religious policies of the Indian authorities. The M.N.A. objected strongly to the Caste Disabilities Removal Act and charged that in its implementation, the Act had been stretched even beyond the principle on which it was professedly framed. It also took exception to the diversion of state funds to missionary schools under the grants-in-aid system, contending that such a policy would tend to distinctly identify the State with missionary work. The British Parliament was also asked to legislate to

dissuade the Indian authorities from enacting laws which insult and outrage the Indians and their religion.

This criticism of the British authorities, particularly the structures on their religious policies, created a split within the ranks of the M.N.A. One faction, led by Srinivasa Pillay, was aggrieved at the tone and much of the content of the petition and decided to quit.¹²

It must, however, be pointed out that there had always been an element of friction between Srinivasa Pillay and Lakshminarasu Chetty, stemming principally from their perception of the role that the British Raj should play in effecting social change in India.¹³ Srinivasa Pillay, who visualized an India free from the shackles of caste, superstition and poverty, believed that the British rulers had a part to play in bringing about this transformation. He wanted the Indians to give whole-hearted support to their rulers in achieving this grand design. Srinivasa Pillay had a long record of service in various charities and other organizations, including the Monegar Choultry, the Pachaiyappa Charities and the Madras Literary Society. In these bodies, he had endeavored to cultivate cordial ties with the Europeans, be they officials, merchants or missionaries because he believed that such ties would strengthen the bond of goodwill between India and the West and elicit European help in the regeneration of the Indian people.¹⁴

Lakshminarasu Chetty, on the other hand, did not share much of Srinivasa Pillay’s zeal for rapid westernization or for seeking British aid to bring about social change in India. He was not opposed to social change *per se* but he believed that change must come from within the community rather than from without. He was strongly opposed to the missionaries or the state, being an alien one, meddling in the religious and social affairs of the Indian people. Religious neutrality, Lakshminarasu Chetty believed, was the correct policy for the British rulers to adopt. Where they departed from this policy of neutrality, he wanted the Indians to declare their opposition and appeal to the Court of Directors and the British Parliament for corrective measures.

After the break with the M.N.A., Srinivasa Pillay and his supporters formed the Hindu Progressive Improvement Society in November 1852.¹⁵ The program of this body included the promotion of widow remarriage, the encouragement of female education and the uplifting of depressed castes. Many of Srinivasa Pillay's coadjutors in this venture were his Hindu friends who were associated with him in the management of charitable organizations such as the Monegar Choultry and Pachaiyappa Charities.

His closest ally was M. Venkataraylu Naidu, a Pleader in the Sadr Court, who shared many of Srinivasa Pillay's ideas on the regeneration of India. Venkataraylu Naidu was born into a poor family and his education was largely financed by charitable friends and relatives. When he entered government service, promotions came rapidly but he was summarily dismissed by the Tweed Dale Administration for allegedly transmitting official papers to the *Crescent*. He went to the court to prove his innocence but he never regained his post and he decided to enter the legal profession. Despite these misfortunes, Venkataraylu Naidu did not harbour any hostility towards the British. He fervently believed that Indians could only advance by approaching closer and closer to their rulers and called for an entire identification of European and Native interests to bring about the regeneration of India. For many years, he had been a vigorous advocate of widow remarriage and wrote often in the columns of the local newspaper urging some action.

In July 1853, Venkataraylu Naidu started his own paper, the '*Rising Sun*,' mainly to focus discussion on the social problems affecting the Hindu Community.¹⁶ In the same year, with the death of Srinivasa Pillay, he assumed charge of the Hindu Progressive Improvement Society and continued to support the causes his predecessor had championed. Schools were established for children of depressed castes, scholarships were given to needy students and support was obtained for social legislations like the Widow Remarriage Act of 1856. Venkataraylu Naidu was also anxious to provide the youth of Madras with the opportunity to read widely and acquire the facility of public speaking. Two societies called the Hindu Reading Room and the Hindu

Debating Society, were founded and they attracted students from various educational institutions in Madras. Government support was welcomed mainly to acquire official publications free of charge and prominent Europeans were invited to deliver lectures or conduct discussion groups. Through such means, Venkataraylu Naidu hoped to stimulate the spirit of inquiry which, he believed, would trigger a mighty revolution in India. But such grandiose hopes were rather misplaced in the conservative world of mid-nineteenth century Madras. Hindu opinion was hardly prepared to accept the radical ideas emanating from the leaders of the Hindu Progressive Improvement Society. Venkataraylu Naidu died in 1863 and with him died many of his projects, including the *Rising Sun*.¹⁷

The M.N.A. was not adversely affected by the secession of Srinivasa Pillay and his friends. If anything, their withdrawal strengthened the hand of the faction led by Lakshminarasu Chetty, which then pressed ahead for political and economic reform of South India. Throughout the 1850s, the period of its active existence, the M.N.A. remained a vigilant and unsparing critic of the government's policies and actions. In 1852, it had called for a full scale inquiry into Indian affairs before the Charter of the Company was renewed. This demand was supported by similar associations in India as well as the India Reform Society which had been formed in London in March 1853 but the British Government rejected the request.¹⁸

The M.N.A. was not despondent. In October 1853, when Danby Seymour, Chairman of the India Reform Society, visited India to make an on-the-spot investigation, the M.N.A. nominated two of its leading members to accompany him on a tour of the mofussil areas. The party visited a number of centers, including Cuddalore, Tiruchirappalli, Kumbakonam, Salem, Tirunelveli, Calicut and Mangalore.¹⁹ From the evidence he gathered, Seymour was convinced of the validity of the general complaints which the M.N.A. had listed in its petition to the British Parliament. On his return to England, Seymour called for an inquiry into the land tenure system in South India and alleged that excessive land tax had led to many abuses in its collection, including the use of

torture by officials. The Madras authorities agreed to investigate these charges and appointed a Torture Commission which found evidence of torture perpetrated by Indian revenue and police officials.²⁰

One of the problems, with which the M.N.A. had to contend with, stemmed directly from its relationship with the local officials. Until the formation of M.N.A., the Madras authorities had been able to discharge their responsibilities without any fear of public scrutiny or sustained criticism. The advent of M.N.A. altered the situation and officials soon found out that they had to face a small but active band of Hindu leaders, determined to probe into governmental affairs and criticize policies and expose official misdemeanors. What irked officials even more was the M.N.A. method of securing redressal of its grievances not by directing them to the local authorities but by appealing directly to the British. Such tactics, the officials lamented, encouraged unwarranted Parliamentary interference in Indian affairs. Moreover, they bemoaned that the civil service in India was being attacked from all sides, including by such respectable organs as *'The Time'*.

Official antagonism towards the M.N.A. increased after Seymour's visit to South India. Seymour's inquiries into revenue collection, especially his efforts to gather evidence of torture, annoyed local officials. Also irritating was the two leaders of M.N.A. who accompanied Seymour to enquire in the mofussil areas.

Local leaders in Cuddalore, Tiruchirappalli, Salem and Tirunelveli were persuaded to start branches as the means of helping the M.N.A. with funds and information.²¹ In South Arcot, the Collector intervened to put an end to what was called "This Extortion". In 1854, a more effective way was found to undermine political activity in the mofussil. Following the discovery in the Guntur District of a case where certain agents, claiming to represent the M.N.A., had raised subscriptions on the promise of securing tax remission, the Madras Government issued a proclamation throughout the Districts, warning agents and subscribers that such actions were liable to criminal prosecution. The M.N.A. protested its innocence and the Torture Commission absolved it of any connection with the Guntur

agents. But the Madras authorities steadfastly refused to withdraw the proclamation and the effect of which was to frighten the branch association into abandoning their ties with the parent body in the Metropolis.

Despite this clash with the local authorities, the M.N.A. showed no perceptible signs of abdicating its role as the watchdog of Hindu interests in South India. Petitions were regularly sent to the British Parliament. Public meetings were held from time to time to discuss local grievances. Memoranda were presented to important dignitaries, enumerating the demands of the association for acknowledging their services to the Country. One such address was presented to Lord Canning in February 1856 on his assumption of Governor - Generalship.²²

A continuous watch was maintained on the activities of local officials and their misdemeanors and their highhanded behavior was promptly exposed. One such incident involved a Tahsildar who was accused of torturing some weavers in Chingleput District to realize arrears of Loom Tax. The M.N.A. claimed, in a petition to Parliament in January 1856, that the Tahsildar had acted on the strength of an order issued by the Collector. The incident was discussed in the House of Lords while the Madras Board of Revenue initiated its own inquiry which ultimately led to the dismissal of the Tahsildar and the censure of the Collector. This, however, was not the kind of justice which the M.N.A. was seeking. The M.N.A. only wanted to demonstrate that contrary to what the Torture Commission reported, Indian officials resorted to practices of this nature only under instructions or covert encouragement of their European superiors.

One subject, which continued to generate controversy throughout the fifties in the Nineteenth Century, was the question of Christian proselytization. Hindu suspicions about official collusion with the missionaries were never completely allayed and from time to time, Hindu leaders alleged a pro-missionary bias in the actions of local authorities.²³

This underlying mistrust of the executive was best illustrated during the riots in Tirunelveli in December 1853. Against the background of rising religious tension in South India as a result of renewed missionary

campaign against the policy of religious neutrality, the decision of a European Magistrate in Tirunelveli to allow a Christian burial party to use a street occupied by higher castes, led to a violent clash in which ten Hindus were killed and nineteen wounded. The Madras Government approved the action of district officials and ordered the rigorous prosecution of those suspected of rioting.

The M.N.A. was unhappy with this order and convened a public meeting in April 1859 to discuss this and other related issues. The meeting attracted many Muslims from the Metropolis and some Hindu leaders from the mofussil. The meeting approved a Memorandum to the Secretary of State for India, which attributed the Tirunelveli disturbance to the machinations of missionaries. It was claimed that the magistrate's decision to reverse the old ruling which disallowed Christians the use of the street occupied by higher castes, was the result of the missionary pressure. The M.N.A. was equally critical of the way in which the Tirunelveli investigations had been handled. It complained that instead of appointing an imperial commission, the Madras Government had entrusted the task to persons "implicated in the unhappy affair".

Sir Charles Trevelyan, who had just assumed the Governorship of the Presidency, accepted the Memorandum as "a genuine expression of the native mind" and regarded it as creditable that "the faithful people of the South have had recourse to the legal and constitutional mode of petition" in airing their grievances. Though not always agreeing with the sentiments expressed in the Memorandum, he nevertheless felt that missionary campaign in England, had created widespread fear among the inhabitants of South India that the existing policy might be changed and of the "tremendous machine of the government being brought into the field against them". Trevelyan believed that a firm and authoritative declaration upholding the policy of religious neutrality would put an end to these fears.

The Tirunelveli Riots of 1858 provided the last occasion when the M.N.A. held a mass meeting in Madras. During the next three years, the M.N.A. functioned in a very sporadic fashion. In April 1860, it appealed to the British

Parliament, calling for the restoration of the Tanjore Raj and in the same month, petitioned the Indian Legislative Council protesting against the proposed license duty and income tax. In March 1862, a deputation from the Association called on the Governor of Madras to plead the case of the Mirasidars in respect of the right over wasteland. Four months later, the M.N.A. was said to be "practically defunct" and moves were afoot for the formation of a new "Native Association". Thus, after a decade of active life, the M.N.A. had faded into oblivion.²⁴

Whatever the reasons for its demise and these are by no means clear from the available evidence, the M.N.A. was the first real attempt at organizing a political association along Western lines in South India. Although founded by the Hindu commercial elite in Madras, which felt that its established traditions were threatened by the actions of the Christian missions, this Association did not act as the mere mouthpiece of the narrow interests of this group nor was it the platform for the ventilation of specifically religious grievances. In fact, its signal contribution lay in its elaborate criticisms of the excessive public taxation in South India and its graphic portrayal of the corrupt machinery through which revenue was being collected. The Madras Government took heed of these criticisms and it was reflected, for instance, in its decision to reduce the Land Tax in 1855. This is a testimony to the adroitness of the leaders of the M.N.A. in harnessing the instruments of modern political protest to secure redressal of their grievances.²⁵

The dissolution of the M.N.A. symbolized the decline of the importance of the Hindu commercial elite in the civic life of Madras. Propelled into prominence in the 1840s on the crest of the anti-missionary sentiment then prevailing in South India, this elite had given institutional expression to its power by organizing the M.N.A. However, as anti-missionary feelings slowly subsided during the 1860s, the influence of the elite also waned and a rival group emerged to provide an alternative focus of leadership in the Madras Presidency. Members of the later group were products of the Madras High Schools who had achieved distinction in the services of the British Indian Administration.

Madras Hindu Debating Society and Hindu Improvement Progressive Society

At the same time, difference of opinion arose within the Madras Native Association. As a result of this, two groups emerged such as 'Pro-social reform group' and 'Pro-political reform group'. Challenging of the Madras Native Association, two social associations were formed, The Madras Hindu Debating Society was founded in 1852 by M. Venkatarayalu Naidu, a Non-Brahmin Merchant and another association was the 'Hindu Improvement Progressive Society' which was founded in 1852 by Srinivasa Pillai, one of the founders of the Madras Native Association.²⁶ These two societies wanted to support the British government for the social reform. Following their death, these societies had also become defunct in the mid 1860s.²⁷

Triplicane Literary Society

The Triplicane Literary Society was established in 1868 by a Muslim named Ibrahim Ali and it was later developed by some Hindu graduates around Triplicane.²⁸ The office was situated in No.8, Tulasinga Perumal Kovil Street, Triplicane. Diwan Bhadur R. Ragunath Rao was its president and P. Rangahia.Naidu, D. Rama Rao, V. Krishnamachari, G. Subramania Iyer, Sadhasiva Iyer were the Vice-Presidents of the Society.²⁹ It expressed the native opinion and discussed important questions of the day. But the public opinion in the Madras Presidency was not effectively mobilised because there was no recognized forum to voice the feelings and grievances of the people. The members of the Triplicane Literary Society realized the need for the native newspapers when the Anglo-Indian newspapers in Madras criticized the appointment of T. Muthuswami Iyer, a Brahmin Lawyer as the first South Indian Judge of the Madras High Court.³⁰ In order to represent the opinion of the people, the Members of Triplicane Literary Society started "The Hindu", an English newspaper in Madras on 20th September 1878, with the help of six most ardent and enterprising but inexperienced youth such as G. Subramaniya Iyer, M. Veeraraghavachariar, T.T. Rangachariar, P.V. Ranagachariar, D. Kesava Rao Pantulu and N. Subba Rao Pantulu.³¹ G. Subramaniya Iyer, one of its founders, also founded the Swadesamitran, a Tamil newspaper in 1882.

With the circulation of these newspapers, political activities in the Madras Presidency picked up momentum.

Madras Mahajana Sabha

The need for a voluntary association had been felt in South India ever since the M.N.A. became defunct during the early 1860s. The absence of a recognized vehicle of political expression in South India and the disadvantages that stemmed from its absence, were sharply emphasized during 1870s when the Indian Association in Calcutta was beginning to make an impact on the Indian political scene by its determined opposition to unpopular policies associated with Lord Lytton's regime.³² The Poona Sarvajnik Sabha was rendering good service during the famine in Deccan. When there was a famine in the South in 1876-1878, the need for such a provincial association for the Madras Presidency was very much felt. The need for an active and respectable association, which would agitate incessantly against official iniquities and seek redress from the highest British authorities, including Parliament, was progressively felt in Madras.

Attempts were made to revive the M.N.A. These attempts started in 1877 and succeeded only in 1881. C.V. Renganata Sastri was elected as the President of the revived M.N.A but he died in July 1881. Then, V. Bhashyam Iyengar assumed the presidentship. The M.N.A. functioned upto 1883.³³ Attempts to revive M.N.A. failed because of the failure to keep pace with the changing political situation in South India. The Triplicane Literary Society and the revived Madras Hindu Debating Society also failed.

The leaders, who were behind the formation of the Madras Mahajana Sabha (M.M.S.), had revealed nothing to the public until they published a prospectus of the proposed body in March 1884. G.Subramanya Iyer, Anandhacharlu, Rangiah Naidu, Salem Ramaswamy Mudaliyar, Balaji Rao and Veeraraghavachari were the source of inspiration for the formation of M.M.S. The M.M.S. was inaugurated on May 16, 1884.³⁴ It was stated that unlike the Madras Native Association, M.M.S. would only have non - official members who would "represent

fearlessly the wishes of the people". It was also stated that the dual function of M.M.S. was to correctly represent to the government the needs of the people and to suggest remedies and to improve the condition of the people.³⁵ Rengiah Naidu established connections with institutions of a similar nature in sister Presidencies. The M.M.S. membership was open to graduates, pleaders, dubashes and landholders. A new constitution was drafted and Rengiah Naidu was elected as the first President of M.M.S. and Balaji Rao was elected as the Vice-President of M.M.S.³⁶

As might be expected, education played an important part in the selection of leaders of the M.M.S. No less than nineteen of the thirty six members of the Committee of the Sabha had a university degree or its equivalent. A breakup of the communal groups represented in the Committee of the M.M.S. shows that twenty were non-Brahmins, thirteen Brahmins, two Indian Christians and one Muslim. A fair number of the leaders of M.M.S. had served in statutory bodies, charitable organizations or literary societies and clubs. It was obvious that the Sabha was to be essentially elitist in character, drawing its membership from the ranks of professional elite and wealthier classes in the region. In 1885, it had 205 members and in 1886, 796 members.³⁷

It would be wrong to measure the influence of M.M.S. purely in terms of the number of members on its rolls. A truer index of its influence would be to assess the strength of its affiliated associations spread over various parts of the Presidency. The constitution of the M.M.S. had empowered its leaders to affiliate with any other association with the same objective. Almost every town in the Madras Presidency could now boast of its own local association and MMS provided the common thread linking them together.

A significant innovation in the evolution of agitational technique in South India was the decision of M.M.S. to convene a conference of gentlemen, representing various parts of the Presidency, in order to bring about a periodical exchange of thoughts between Madras and mofussil. Unlike earlier associations in South India, the M.M.S. took a new leaf out of the book of constitutional agitations in the past by convening periodic conferences attended by

delegates from affiliated associations in the Presidency, to formulate an agreed program for political action.

The first provincial conference of M.M.S. was held on December 29, 1884 with seventy delegates.³⁸ The great majority of them were from the mofussil. Reform of Indian legislative bodies, separation of revenue from judicial functions, the condition of agricultural masses in South India and changes desired in the structure of the Indian Government, formed their agenda. The main criticism that could be levelled against this conference was the large number of papers on fairly general themes rather than formulating clear resolutions on more specific issues. It was argued in some circles that the conference, instead of devoting its energies to all India issues, should have discussed subjects of immediate concern to the Presidency like the question of local self-government and the operation of salt and forest laws. However, with the passage of time, the M.M.S. began to pay more attention to these immediate issues. The Second Provincial Conference of M.M.S. took place in Madras on December 23-25, 1885. The mofussil was adequately represented with twenty-one centers sending a total of forty-four delegates. As the curtain came down on the second provincial conference, an important era in the political evolution of South India also drew to a close. This era had begun with the search by politicians in Madras for a new and cohesive presidency-wide organization.³⁹ Following the successful inauguration of M.M.S. in 1884, the metropolitan leaders moved quickly to forge ties with a plethora of local associations and literary associations which had already come into existence in the mofussil. This trend towards co-ordination was possible because their leaders shared a certain identity of interest with their counterparts in Madras in view of their shared educational and professional background. When the Indian National Congress (I.N.C.) became the important factor, the M.M.S. gave way to national agenda and the presidency-specific agenda lost its significance.

Madras Congress Sessions

Madras occupied a significant place where the final decision was taken up for the formation of the Indian National Congress. When the first session of the I.N.C. met in

Bombay on December 27, 1885, Madras nationalists like S. Subramaniaiyer, G. Subramania Iyer, M. Vijayaraghavachariar, P. Anandacharlu and P. Rangaiah Naidu participated in it and the M.M.S. affiliated itself to the Madras Provincial Congress Committee. These nationalists provided an opportunity to Madras to act as the venue for the third session of the Congress which met on December 27, 1887. All the prominent Madras leaders participated in the proceedings of the session. Almost all the communities, religious sections and professional groups were actively participated the session. Many ordinary people involved themselves in the session's activities, which contributed to the growth of political consciousness among the people.⁴⁰

When the session was over, the Tamil leaders sent numerous memoranda and petitions to the government seeking redressal of their grievances. The nationalist newspapers like *The Hindu* and *Swadesamitran* strongly criticized the British administrative arrangement. The propaganda of the Congress leaders and the press sharply inspired the Tamils who became more politically conscious. They slowly came to know about the step-motherly motherly attitude of the British. The nationalists held the tenth session of the I.N.C. in Madras in 1894, the second of its kind to analyse political problems. Among the Madras leaders who took

part were N. Subba Rao and C. Sankaran Nair. In this session, criticism was leveled against the British officials who obstructed social and political reforms. N. Subba Rao moved a resolution complaining of loopholes in the judicial set up of the British. Thereupon the fourteenth session of I.N.C., the third of its kind in Madras, was held on December 29, 1898. In this session, N. Subba Rao emphasized the need for securing socio-economic equality and concessions to the oppressed and placed a proposal before the government.⁴¹ G. Subramania Iyer passed a resolution demanding the British government to spend Indian money on Indian needs. On the appeal made by the leaders in the session, district conferences were organized since 1899, which ultimately aroused the national awakening among the masses. In Tamil Districts like Coimbatore, Tiruchirappalli, Madurai and Tirunelveli, such organisations inculcated national spirit. Five years later in 1903, I.N.C. again convened its nineteenth session, the fourth of its kind in Madras.⁴² In this session, the issue of exclusion of Indians from higher public services was debated. In 1904, the Congress leader, Annie Besant, established the Madras Hindu Association to create cultural unity in the State.⁴³ These political associations nurtured general awakening and subsequently consolidated the political ideas of the people of Tamil Districts.

“POLITICAL PERSPECTIVES OF WRITINGS OF Dr A.M. RAJASEKHARIAH”

Tajunnisa M Sayed & Dr. S.Y. Mugali

INTRODUCTION

Dr A.M Rajasekhariah, who has the unique distinction of being the first scholar in India to be designated as Babasaheb Ambedkar Professor of Political Science, was a scholar of rare eminence and an excellent Political Scientist. He was a versatile genius whose contribution to the arena of Political Science is invaluable and his service to the cause of downtrodden was noteworthy. He was an eminent scholar, researcher and loved teaching which always got first place in his life. As a teacher, he wielded a tremendous influence on his students in India and elsewhere. To him education of Scheduled Caste and backward classes in India was of prominent importance. He possessed a commitment to uplift the weak and meritorious students and was delighted whenever the oppressed got their post-graduate and doctoral degrees. Himself being a recognized scholar in multiple branches of political science, He has produced a number of doctoral and other scholastic works. He was the founder professor of study Chair of Dr B.R Ambedkar in the whole country, and even was the first scholar to pursue Ph.D on Dr Ambedkar and later pursued Diploma in Ambedkar's Studies, started in Karnatak University Dharwad. He got translated the works of Dr B.R Ambedkar into kannada language. As a great scholar, he has contributed books and articles that have enriched the literature on Political Science. He has made

unique contribution to Political Science with special reference to the studies on Dr Ambedka, Dalit and Subaltern Literature. Dr A.M Rajasekhariah believes that politics concerns the whole of man, and all of society. He holds that it is possible for a man to grasp the totality of existing reality and therefore he is keen on the socio-political question of healthy democracy in India.

II. Early Life and Career of Dr A.M. Rajasekhariah

Professor A.M. Rajsekhariah was born on 8th June 1929 in a middle class family of teachers at Davangere district. His father Avaregere Math Channabasaviah was a teacher in the school started by himself at Davangere, Kotturesh temple in Halepet and mother Smt. Neelamma was a simple and devoted house wife. He completed his primary education at Haunsbhavi in Dharwad district and completed his high school from Marimallappa's High School. After completing SSLC in 1947, he joined Yuvaraja's college, Mysore for intermediate course in Arts and completed it in 1949. He then joined Maharaj's College for BA(Hons) Degree - Political science (1952) and MA (Political Science) in 1953. Further in the year 1967 he was awarded Ph.D (Political Science), from Karnatak University for his Thesis " *Dr B.R Ambedkar: A Study of his Contribution to the Political and Constitutional Evolution Of India*". On 25th December 1953

he married Kamala Yogimath and was blessed with five children. In 1954, He joined Veerasaiva College Bellary as Lecturer in Political Science, conducted classes for the first batch of B.A students. In 1960 He was selected as Lecturer in Karnatak College Dharwad and on 15th June 1960 he joined Karnatak Arts College, a constituent college of the university. He conducted class on International Relations for postgraduate students. In 1961 he moved to P.G Department of Political Science, Karnatak University as lecturer. In 1969 he worked as Reader in the Department of Political Science, Karnatak University Dharwad and in 1974 he was promoted as Professor and Head of the Department of Political Science, Karnatak University Dharwad.

In 1977, the syndicate of the Karnataka University designated him as Dr Babasaheb Ambedkar Professor in recognition of his work on Ambedkar. This is the first Ambedkar Chair ever established in the whole country.

III. WRITINGS OF Dr A.M RAJASEKHARIAH

Dr A.M Rajasekhariah has contributed several books and articles that have enriched the literature on Subaltern, Dalit studies, Polity and Social issues. He has made unique contribution to Political Science with special reference to the studies on Dr Ambedkar and Dalit Literature. Among his works "B R Ambedkar The Politics of Emancipation", won universal recognition as rare work on Ambedkar. His other prominent books are "First General Elections in Goa", "Understanding Political Science", "Select Problems in Political Theory", "International Relations", "The Quest for Justice", etc. He has published several research papers both in English and kannada language, focusing on Political Philosophy, International Relations, Problems of Minorities, Problems of Federalism, Party Politics, Indian Nationalism, Politics of Untouchability (Gandhi and Ambedkar Perspective), Indian Elections etc. This article is an attempt to study two writings of Dr. A.M Rajasekhariah with reference to the political ideas.

IV. POLITICAL PHILOSOPHY OF Dr. B. R. AMBEDKAR (1991)

In this article Dr A M Rajasekhariah opines that among the galaxy of the great thinkers and philosophers of India, Bharat

Ratna Dr B R. Ambedkar occupies a prominent position in the history. His personal experiences which were bitter in nature, progressive and liberal Western education, extensive reading and research, wide contacts provided him the required perspective and dimension for understanding and analysing any problem, it may be social, political or economic. His incisive mind and diagnostic skill always stood as good-stead in his relentless search for truth. Dr. Ambedkar was a rare and curious combination of a scholar, thinker, writer, leader, legal luminary, constitutional expert and a champion of the downtrodden masses. He was all these clubbed into one single personality, whose memory never fades in the minds of the suffering asses and toiling millions for many years to come. Dr. Ambedkar's was a multi-faceted and multi-dimensional personality who has made a significant contribution to humanity and his concern for men all along led him build up a body of philosophical thoughts. Dr Ambedkar analysed very well that no philosophy will be worth its name if it does not have its roots in Humanism.

Ambedkar's social and political philosophy is very much influenced by the philosophy of his inspiring teacher John Dewey of Columbia University, "*there are many old friends who have gathered around me and [are] helping me in all sorts of ways. I was looking forward to meet[ing] Prof Dewey. But he died on the 2nd when our plane was in Rome*"¹ He further says "I am so sorry. I owe all my intellectual life to him. He was a wonderful man."² Further his Political philosophy is influenced by the American constitution especially the Fourteenth Amendment, the English Economist like J.M.Keynes, R.A. Selghman, the great English Parliamentarian Edmund Burke and the great indian Social-reformer Mahatama Jotiba Phule. Buddha had an enduring influence on him. Dr Ambedkar got the Idea of Liberty, Equality and Fraternity more from Buddhism than from French Revolution. The influence of Western Liberalism has been evident in his thinking too. These influences helped him to develop a philosophy based on a synthesis of rationalism and empiricism, idealism and realism etc. Ambedkar was one of our most prominent political and social thinkers, whose ideas on various social and political problems such as caste system, the pernicious

practice of untouchability, the emancipation of the downtrodden through political action etc., open up new vistas and horizons. His findings on all these and similar other problems that plague the contemporary Indian society and polity are original and characteristically his own. They speak volumes for his profound scholarship and intellectual capacities. He investigated deep into the Indian social and political history and contributed a good deal to the understanding of Indian society and polity through his writings. Dr. Ambedkar's main concern all along his life was to fight against this injustice, by all possible and necessary means and to establish a just and egalitarian society. His politics never aimed at gaining personal power or for climbing the ladder to high position but was for emancipation of the down-trodden million of Indians.

V. "B R AMBEDKAR THE POLITICS OF EMANCIPATION"(1971).

In this book Dr A. M. Rajasekhariah describes the nature of politics of emancipation of depressed classes under the leadership of Dr. Ambedkar. He explained the model of political mobilisation that Ambedkar developed and practiced for the progress of depressed classes. He endeavors to determine the role of Ambedkar as an emancipator and a champion of the downtrodden people of India. He attempts to explain and evaluate the prominent aspects of the thinking and approach of Ambedkar with regard to the political and constitutional issues. Ambedkar as an architect of the Indian constitution and as one who had deep concern for the sufferings of the Dalits in general and for social justice in Particular have also been discussed. His political and social ideals are also presented and examined.

Besides reflecting and representing the theoretical issues that are implicated in the writings of Ambedkar - attempts is made to capture the attention of the readers to the views of Ambedkar on such issues whose relevance is intensely felt even today. In this study, Ambedkar's thoughts on untouchability, caste discrimination, socialism, democracy, freedom, justice other issues related to nationalism, representation and formation of states, fundamental rights, political decentralization, impact of western culture and partition of India have been deeply analyzed. Dr AM.

Rajasekhariah's Political thoughts are based on the political ideas of Dr B R Ambedkar.

Democracy; DrA. M. Rajasekhariah opined that Dr Ambedkar was an ardent believer in Democracy and was, by philosophical persuasion, a liberal democrat. To Ambedkar "*democracy is more than a form of government - it is a form of organization of society. Further it is an associated way of life, where revolutionary socio-economic transformation could be brought without bloodshed peacefully*"³. He stress that there cannot be democratic government unless the society for which it functions is democratic in its form and structure. To him "*democracy*" meant *much more than a democratic government. Dr. Ambedkar said, "Democracy is not a form of government, but a form of social organisation"* ⁴

Another crucial feature of Dr. Ambedkar's conception of democracy is that it was associated towards the social transformation and human progress. Conservative notions of democracy, such as the idea that it is mainly a device to prevent bad people from seizing power, did not satisfy him. Dr. Ambedkar always had the egalitarian and socialistic approach. He believed that, Democracy is essential in imparting social justice and actual roots of democracy do not lie in the form of Government. A democracy is more than this. It is actually a mode of associated living, where people form relationship with other people. The roots of Democracy are to be searched in the social relationship, in the terms of associated life between the people who form a society. Society does not consist of only a few individuals but strong bondage of fraternity. He believed democracy means no slavery, no caste, and no pressure. Dr Ambedkar focused on three categories of democracy in India they are (1) Political Democracy (2) Social Democracy and (3) Economic Democracy. According to him Social and Economic democracy are most essential requirements and very basis. They are like the tissues and fiber of a political democracy;

The Forms of Government; The constitution of India provides for a Parliamentary system of government based on the British model with quite few modification to suit the needs of our people , in preference to the Presidential forms of the American model.

There was a considerable degree of opposition in the Constituent Assembly for adopting the parliamentary system. According to Ambedkar “A democratic executive must satisfy two conditions 1) It must be stable executive and 2) It must be responsive executive and a non-Parliamentary Executive being independent of Parliament tends to be less responsible to the Legislature, while a Parliamentary Executive being more dependent upon a majority in Parliament becomes more responsible”.⁵ It was also felt that the British system of Executive, which would provide a strong democratic executive would suit the conditions of our country. Ambedkar was a great admirer of Parliamentary system of Government. According to him, “there are three inherent characteristics of the system. Firstly, free and fair elections from time to time. Secondly, in the form of government no single individual can presume the authority that he knows everything and that he can make the laws and carry the government. The laws are to be made by the representatives of the people. Finally, the elected representatives, the legislatures and ministers must have the confidence of the people renewed in themselves at given periodicity”.⁶

Justice; According to A.M Rajashekhariah, Ambedkar in his final speech, posed the question whether the Indian citizen would be having democracy in real sense, in its economic and social aspects. Further he questions about the lofty idea of Justice - social, economic and political.

VI. CONCLUSION

Dr A.M. Rajasekhariah a man of versatile personality was an eminent scholar and researcher, has made unique contribution to Political Science with special reference to the

studies on Dr Ambedka, Dalit and Subaltern Literature. Dr A.M. Rajasekhariah’s Political ideas are based on the political thoughts of Dr B R Ambedkar. Dr. Rajasekhariah pointed out that Ambedkar’s model was that of democratic mobilisation through non-violent methods. This guided the depressed classes towards the path of progress unlike that of the revolutionaries which took recourse to violence with adverse and at a times disastrous consequences. Dr. Rajasekhariah discussed political methods followed by Dr. Ambedkar and gave new insights in his analysis. Dr A. M. Rajsekhariah opined that Dr Ambedkar was an ardent believer in Democracy and was , by philosophical persuasion, a liberal democrat. Ambedkar had no other alternative but to give legal shape to the parliamentary system with a removable executive by writing it into the constitution and justifying its adoption by the Assembly. Dr Ambedkar’s interpretation of Democracy is mainly emphasized on strong bond of fraternity, equality and social justice. Ambedkar’s social and political philosophy is very much influenced by the philosophy of his inspiring teacher John Dewey of Columbia University, the American constitution especially the Fourteenth Amendment, the English Economist like J.M.Keynes, R.A. Selghman, the great English Parliamentarian Edmund Burke and the great indian Social-reformer Mahatama Jotiba Phule. Dr Ambedkar got the Idea of Liberty, Equality and Fraternity more from Buddhism than from French Revolution. These influences helped him to develop a philosophy based on a synthesis of rationalism and empiricism, idealism and realism etc. Dr. Ambedkar’s main concern all along his life was to fight against this injustice, by all possible and necessary means and to establish a just and egalitarian society.

B.S. VENKAT RAO- THE HYDERABADI AMBEDKAR: HIS ROLE IN TELANGANA DALIT MOVEMENT

Talari Srinivas Rao

B.S. Venkat Rao was known as one of the *Trimurthis* of Telangana dalit movement in the erstwhile Hyderabad State. Along with Bhagya Reddy Varma and Arige Ramaswamy he played a significant role in the awakening of the downtrodden communities and worked for their socio-economic upliftment. Although he played an important role in the upliftment of Dalits, minorities and other oppressed people in the Hyderabad State, the main stream historical have ignored him. Hence in my paper I highlight the biography of Venkat Rao and contribute new facts to our understanding of the social history of Hyderabad State. My paper also attempts to remember, recognize and appreciate the achievements of a member of the great trinity of the Dalit movement in Hyderabad State.¹

An important aspect of biographical account of B.S Vankat Rao, who was conferred with the title Veera Ratna which suggests his boldness and courage in facing the problems and dealing with the social issues. He was born on 11th December, 1898 in a poor untouchable family in Secunderabad and he was the second child to his parents. His father was in the domestic service of Europeans and could provide his children with modern education. After studying in the S.P.G High school VenkatRao gained proficiency in Hindi and English. During the First World War he was posted as an artist in Pune and during the stay he married a Maharashtrian woman, his first wife. In 1919 he returned to Hyderabad and joined the civil engineering department of the Nizam state and subsequently posted as the overseas in the public works department. After working for few years he resigned to his position in 1922 and afterwards he became a civil contractor and carried out his social and political activities.²

As a social reformer he founded a number of organizations for the upliftment of the Dalits. In 1922 he founded Adi-Dravida Sangham with the help of M. Govida Raju and P.RVenkata Swamy for the educational development of Dalit communities he also carried out a number of educational programmes by establishing

schools in Secunderabad. For his educational contribution he got inspiration from Jyothiba Pule. In 1927 he founded Adi Hindu Mahasabha with Arigya Ramaswamy, M. Venkataswamy and others. Through these organizations he attempted to bring about a new awakening and consciousness among the Dalit communities. During the social reform activities Venkat Rao participated in various conferences and attended several meeting. He also constructed houses, schools, libraries, and temples for the untouchables and other backward/weaker sections. He constructed model colonies at Bansilalpet, new Bhoiguda, and Ghassmondy. Venkat Rao presided over the first Bombay Presidency Mahar conference held on 30th May, 1936 in Bombay. It was from this conference onwards he began to be addressed as Hyderabad Ambedkar. In the same year (1936) he was also conferred with Kuru-E-Deccan- a medal by the H.E.H Nizam of Hyderabad.³

Venkat Rao was critical of the caste system and Hinduism. The scholar has also briefly mentioned about various dalitbahujan movements in different parts of India. The Social reform movements in the 19 century brought about a new awakening and consciousness among the lower castes and communities. These movements aspired egalitarianism and were against the tyranny of ascriptive hierarchy, social slavery and caste feudal exploitation. They also rejected the upper caste culture and its traditions/customs, and strove to create socio- religious practices embedded in India's non- Brahmanic culture. Dalit movements focus mainly on liberation from caste oppression but not on the reform of Hinduism. It has been pointed out "Dalit politics emerged out of serious criticism of the oppressive nature of Hinduism. Dalit politics build its cultural criticism in response to what were identified as the inadequacies, faults and even structural defects of Hinduism as a religion, which they found the fundamental cause of their social discrimination and low socio- economic status. Many factors contributed for bringing about a new

consciousness among the Dalitbahujans in the 19-20th centuries".⁴ In particular the role of Christian missionaries which established educational institutions and undertook welfare measures among the lower castes had raised their awareness of oppression by upper caste Hindus and Brahmanical religion. In the early 20th century the social reformers in the Hyderabad State like Bhagya Reddy Varma, Venkat Rao, Shyam Sunder, Arigay Ramaswamy etc., have played a significant role in Dalit assertion which provided tremendous rational and radical insights.

B.S Venkat Rao was the most prominent among those who dominated the socio-political and religious fields in the Nizams States for about two decades. He was instrumental in the formation Youth League of Ambedkarites and he became its president. Its aim is also to carry out a vigorous campaign to ameliorate the social and economic disabilities of the downtrodden communities. He also campaigned against the religious conversion activities of the Christian missionaries. Venkat Rao propagated the ideals and mission of DR. Ambedkar and organized programmes to better the conditions of the depressed classes. He appealed to them "to get rid of the demoralizing influence of the monstrous Hindu religion and support DR. Ambedkar in his fight for the emancipation of the depressed classes." The league aimed to organize the youth of the depressed classes and to enlighten them about the evils of Hinduism. He also worked hard to remove the cost differences among Dalit communities like the Malas and Madigas. The activities of the Youth League were also focused on political issues. Venkat Rao was in constant touch with Ambedkar and informed about the leagues activities and he personally discussed about the constitutional reforms in Hyderabad State and sought his help in representing the untouchable communities in the Government of Hyderabad in order to safeguard their political interests. In view of constitutional reforms in Hyderabad State, the scope of the league and its activities were broadened.⁴

Venkat Rao founded The Hyderabad State Depressed Classes Association and it sought to organize the depressed classes into one united body.⁵ It also sought political rights by adequate representation of dalits in various organs of the Government. The Nizams Government

proclaimed a constitutional reform through Farman-E-Mubarak and provided scope for the nomination of dalit communities in the decision making and constitutional bodies. Subsequently, in the elections to the legislative assembly many candidates belonging to the depressed classes emerged on opposed from several constituencies. Thus Venkat Rao became a popular politician in the Nizam's dominion. Venkat Rao also supported the Nizams constitutional reforms declared on 11th June, 1947, by declaring the independence of the Hyderabad State. He announced the celebration of Hyderabad independent and welcomed the declaration. He said that the Hyderabad State Congress represents only a small fraction of the caste Hindus and vested interest and the position taken by it the with respect to the political future of the State was unsound and untenable. He believed that the caste Hindus were plunging the people into chaos by their negative and destructive attitude. He declared that the 40 lakhs depressed classes and 5 lakhs of Christians did not belong to the congress. The Depressed Classes Association celebrated the Hyderabad Independence Day and a public meeting was convened on 29th June, 1947. He hoisted the Asaf Jahi flag and garlanded the portrait of the Nizam. A resolution was passed expressing the loyalty of the association to the Nizam. The speakers of the meeting included Shyam Sunder and Kasim Razvi. In this meeting the speakers criticized the caste Hindus and expressed their support for the Muslims. Shyam sunder said about the Majlis, "We have shaken hands with those who freely come to our house and sit with us and who have pledged their support for us." Venkat Rao did not accept the leadership of the caste Hindu dominated Hyderabad State Congress and also did not believe that it represented the people of Hyderabad.⁶

Venkat Rao played an important role in the Nizam's Government. He became the Minister of Education and created one crore trust fund for the education of the depressed classes. He had undertaken a number of welfare measures for the upliftment of the Dalit communities. On his recommendations the Nizam Government distributed government lands and west lands across the state. Through his effective lobbying he managed to get Dalit

representation in the Nizams Government and he visualized a Hyderabad State based on an alliance between Dalits and Muslims. He was critical of the congress leadership and also Nehru for the military action against the Nizam in 1948.

Venkat Rao's contribution towards the social reform among the Dalits in Hyderabad State was quite laudable as he was inspired by Dr. B. R Ambedkar. He was instrumental in evolving programmes for caste annihilation by organizing a number of social and economic programmes in the interests of Dalits and other weaker sections. He launched vigor's struggles against Jogini system, child marriages, animal sacrifices, bonded labour etc., and launched prohibition campaign among downtrodden communities. As a social reformer he was associated with a number of associations like Adi-Hindu Social Service League, Manya Sangam, Swasthi Dal, Yuva Jana Sangam, Hyderabad Dalita Jatiya Sangam etc. He was also instrumental in establishing Keys Cooperative Housing Society and as its president he donated his own land to poor people and established a new colony. He was also responsible for constructing modal colonies for the weaker sections.⁷

B.S. Venkat Rao's contribution towards the educational progress of the Dalits was significant as he was responsible for the allotment for land at Aurangabad as well as sanction of funds by the Government of Hyderabad for construction of college buildings by Dr. B. R Ambedkar. As the Education Minister he obtained funds for education and established schools, hostels and sanctioning of scholarships for scheduled castes and other weaker section students. He organized night schools in slums and Dalitwad as with an object to educate the illiterates. He also was instrumental for the development of Barton School at Secunderabad and he upgraded it into High School. Presently it is known as

Audiah Memorial High School as a member of the School Committee for a long time. As Minister in Nizma's Government, he granted huge funds to meet three-fourth of the cost of annual maintenance of the school. He was responsible for admitting compartmental passed students in various educational institutions, particularly in Nizam College.

Venkat Rao was the most prominent dalit politician in the erstwhile Nizam State and he held several positions. In 1937 the Nizam Government nominated him to the Hyderabad Municipal Corporation. He had been a Municipal Counselor of Hyderabad for ten consequent years from 1937 to 1947. He was also a member of the statutory advisory of bodies of Finance, Education, Labour, Food and Defense during 1941-46. He got elected unanimously to the Nizams legislative assembly in 1946. He became the education Minister of the Nizam State in 1947. After the Police action in 1948 he was put under house arrest and was released later. He contested in the General Elections in 1952 as an Independent candidate, but was defeated by the congress candidate. Later he was nominated to Rajyasabha in 1951. He died on November, 4, 1953 due to prolonged illness at the age of 57.⁸

Venkat Rao by his hard work and commitment enjoyed considerable recognition as the first depressed class minister in the Nizam state. His contribution to the cause of emancipation of the down trodden communities was cherished by all. He sacrificed his life and wealth in the cause of the welfare of the dalit communities and died as a pauper. He was a generous person without calculation and selfish motives. Thus a scholar concluded "He came into the political arena with a bang. He was undisputed leader for two decades and strode like a colossus. He ruled the Depresses Classes Association of which he was the Chief Architect, with an iron hand."⁹

ROLE OF ERODE DISTRICT IN SOUTH INDIAN REBELLION

J. Vasudevan

The Kongu country formed the Erode, Coimbatore, Salem, Dharmapuri, Nilgiris, Namakkal, Karur, Kulithalai of Tiruchirapalli and Palani of Dindugal districts of Modern Tamilnadu. The present Erode district the core of kongu nadu in early time was under the sway of succession of rulers through their deputies as buffer region. The loss of independence by intrusion of alien rule in local autonomy, introduction of administrative innovations caused disturbance in local nature resulted in a popular rebellion called South Indian Rebellion. This paper is the modest attempt to trace the significance of Erode district in the South Indian Rebellion.

Geographical Location of Erode District

Erode district lies on extreme north of Tamilnadu situated between 10 36° and 11 58° North Latitude 76 46° and 77 58° East longitude¹. It is bounded by Karnataka state in the North, Dindugal district in the South, Namakkal and Karur districts in the east and Coimbatore, Nilgiris districts on the west respectively. Erode is the headquarter of the Erode district.

Topic and Scope

Political history has been the most favourite one for many historians. It is because politics is responsible in bringing many far - reaching changes in the society. It is quite nature that every historians has the desire to probe the history of his region. The ascendancy of British power in Indian soil caused serious of rebellion in all parts of the country. This inspired the researcher to probe that rebellion in his district.

South Indian Rebellion: (1799-1801)

The British ascendancy in the southern region of India as a result of the Carnatic Wars and Mysore Wars made excited reactions to struggle against the alien forces, which sought the destruction of India's cultural heritage and imposition of a strange order. Subordinate chieftains, the poligars and the zamindars raised isolated disturbances but these were neither widely organized nor properly coordinated. As the eighteenth century drew towards its end, the

cloud of horrors wrought by an alien sway, thickened and the masses moved swiftly in a climate of despair, bewilderment and revenge. British imperialism with all its abhorrent ramifications drifted inescapably into a violent collision against a concerted challenge organized by the peasants.

“No where in India at any time did the common people organize and fight for a nationalist cause so extensive so violent, a rebellion against British imperialism as the patriots of the South did in the memorable years 1800-1801”, says Dr. Rajayyan who has done extensive research using the original archival sources (1760-1801).² The steep upward revision of taxes levied by the British constituted the direct method of oppression. This was widely applied to the territories acquired from Mysore in 1792-1799 and from the Palayakars at different times made people resent against alien sway over their territories.

During Mysore Wars, the marches and counter marches of the troops and plundering expeditions in the district especially places like Sathyamangalam, Bhavani, Gobichettipalayam, Dharapuram, Kangeyam, Erode etc., the gate way to and from Mysore country, suffered wholesale destruction of crops and plunder of the riches. This melancholy situation did not however deter Hurdis and Macleod, the first collectors, from enhancing the land tax to a fantastic proportion of 118 percent over Tipu's assessment of 1792.³ Greatly agitated at the political melody and economic tragedy and languishing under the western heel of oppression and princely hand of collusion, the inhabitants rallied to the standard of resistance. This was South Indian Rebellion the first wide spread uprising in the annals of British India.

Formation of Regional Rebel Leagues

K. Appadurai in his book Thennatu Porkallangal opines that the National movement in the south was started by the great hero Haider Ali.⁴ His son Tipu Sultan opposed the colonial rule of British tooth and nail till his last day. The year 1799 was the most sadful year in the history of South India in which the two brave men Kattabomman of

Panchalakurichi and Tipu Sultan of Mysore laid their soul on the altar of martyrdom. After the death of Tipu and victory of British over Mysore, many of the patriots fled to remote region. They reorganized themselves and started resistance against the alien in co-operation with the inhabitants. Among them the most formidable rebel chief was Dhoondaji Waugh of Mysore who formed a rebel league to oppose the British.

In the south Sevethiah and Umaidurai the brothers of Kattabomman, Marudu brothers, Kizhavan Sethupathi, Gopal Nayak, and Kerala Varman formed different regional leagues to oppose British. The Marudu brothers headed the Sivagangai league, Umaithurai and Sevathaih headed the Tirunelveli league. Gopal Nayak of Virupakshi headed the Dindugal league and Keralavarman headed the Coimbatore league. In Erode, the rebels were led by Chinnamalai.

First Tamil Mission to Kannada Rebels (1799)

The rebels who formed different regional leagues wanted to get acquainted among themselves. So they employed hircarras (intelligence messengers) to transmit intelligence about the movement of the hostile forces and the struggles of the insurgent powers. Through these means the braveness and exploits of the leaders of the rebellion especially about Dhoondaji Waugh the rebel chief of Kannada nadu came to be known in the district and were discussed in the villages.⁵

The peasants of Coimbatore, Salem and Erode who were burdened with heavy taxation by British, took interests and espoused in undertaking hazardous mission to the northern region of peninsula for seeking the support of the Kannada rebels for three times. These were called as Tamil mission to Kannada rebels.

Chinnan Gounder popularly known as Chinna Malai, the headman of Perundurai (20 km west of Erode) and a native of Kangeyam, wanted to gain the support of Dhoondaji Waugh and decided to lead a mission of rebels to the leaders of the North. He was accompanied by his lieutenants Futteh Mohammed, Mohammed Hashan and Ramanulla Khan in the mission. The exact date of the mission could not be ascertained. The

four patriots led by Chinna malai visited Dhoondaji Waugh at Soonda.⁶

Chinna Malai explained that the inhabitants of the south were ready to raise rebellion and then he would furnish his services for promoting co-ordination of the rebel effort. He requested Dhoondaji Waugh to send his agents to Erode to motivate the people for revolt, but Dhoondaji Waugh was slow in understanding the vista of great possibility offered by mission from Erode.⁷ Yet with a lingering hope, the mission stayed on and moved with the camp of Dhoondaji Waugh. So he sent three of his confidential agents with Chinna Malai to the south and directed them to take guidance from Chinna Malai in the organization of revolt in Coimbatore, Erode and Madurai areas. The mission returned to Dindugul through different routes to co-ordinate with Gopal Nayak of Virupakshi.⁸ The rebel mission led by Chinna Malai to get support of Dhoondaji Waugh was called as First Tamil Mission to Kannada rebels. Thus he believed strongly that unity among the neighbours is necessary to succeed enemies and he was one of the first man took initiative to form alliances.

Second Tamil Mission to Kannada Rebels (October 1799)

Dhoondaji Waugh revolted openly against the British in 1799. The peasants of Erode and Coimbatore decided to help Dhoondaji and sent a second rebel mission to the north. So three powerful and influential leaders of Kongu region namely Appaji Gounder, Venkataramiah and Kasturi Ranga consulted with each other and agreed upon establishing a union with the rebel leagues of other areas of Kongu to help Dhoondaji Waugh. They deputed Venkataramaiah and his brother Narahari with a message to Dhoondaji Waugh for a joint venture against their common enemy-the British.

Venkataramaiah and Narahari, after a long and tedious journey, reached Shikarpur and met Dhoondaji Waugh. The records of the meeting were not available as it was held in secretly. It was possible that they sought his aid in organizing the rebellion in Erode & Coimbatore region. Dhoondaji Waugh wrote six letters and handed them over to Ellei Nayak and Rama Nayak of Ramagiri, Vella Gounder and

Varnawarshi Gounder of Erode, Peria tambi of Aravakurichi and Kumara Vellu of Perundurai and appealed them to join the rebellion. After the meeting Narahari stayed in the camp of Dhoondaji Waugh and Venkataramaiah returned to Coimbatore and distributed the letters to all the leaders. In the course of his travel through the district of Coimbatore, Erode and Salem for the organization of the rebellion, Venkataramaiah met Appaji Gounder the powerful leader implicated in conspiracy with Gopal Nayak of Virupakshi and disclosed the details of his daring mission from the Camp of Dhoondaji Waugh.

In the meantime the letter addressed to Peria Thambi of Aravakuruchi together with a few others was intercepted subsequently by the English at a place called Taramella. It was of importance as it held out a hope of assistance for Dhoondaji Waugh promised Peria thambi that he would march to the south in support of the oppressed inhabitants. The letter proceeds "Be it known to you - that Venkataramaiah having delivered to me your address, I shall more with my journey towards you for which reason you may be confident that you can have nothing to apprehend".⁹ Mutual co-operation extending between Dhoondaji Waugh and Kongu leaders was called as Second Tamil Mission.

Third Tamil Mission to Kannada Leaders: (June 1800)

Appaji Gounder, Venkataramaiah and Gopal Nayak held a meeting at Dindugul. As per the decision in the meeting, Appaji Gounder took the initiative in organizing the third mission to the north Gopal Nayak deputed Tamachi Mudali, his trusted man, to join the mission. Khan-i-Jha khan a strongestmen of Mudoor, as well as cavalry Chieftain under Tipu also assured to help and deputed his nephew Riza Sahib to this cause.

The four members of rebel mission, Appaji Gounder, Venkataramaiah, Tomachi Mudali and Riza Sahib started from Didigul. They took different routes as it was customary with the conspirators and decided to meet at a place called Muddoor. On the way Appaji Gour called on Konindra velli a determined rebel to strengthen the rebellious activities in the villages of Anthiyur, Perundurai and Dotagavely.

Konindra velli deputed Rangaiah as his representative to the mission. The patriotic mission reached Girikottai where Dhoondaji Waugh had camped and initiated the discussion, but before the meeting Chinna malai had already met Dhoondaji Waugh and taken over the command of the rebel parties of Erode and Coimbatore region. The panel suggested that the organization of the rebellion must be entrusted with a person acceptable to all leaders and indicated that Khan-i-Jahan would be the most acceptable and capable of doing the job. Accordingly the rebel council appointed him as its administrator for the Tamil region north of river Cauvery while Marathu pandayas led the uprising south of the river.

Dhoondaji Waugh requested three of the members of the mission to stay in his camp for the purpose of coordinating the work of the rebellion in the southern and the northern regions. Appaji Gounder and Venkataramaiah returned to the south with twenty letters addressed by Dhoondaji Waugh to the leaders of Sivagangai, Manamadurai, Madurai, Cheyyar, Erode, Kumarapalayam, Annamalai, Aravakuruchi, Karur, Kangeyam, Perundurai and Sathyamangalam all rebel centres in Tamil Nadu. They reached Mudoor, met Khan-i-Jahan and greeted him as the leader and with his representative they also met Gopal Nayak of Virupakshi. He sent his men along with them to deliver the letters secretly to other rebel chiefs without being caught by the British. The agents of the British, however, seized a rebel messenger and the letters sent to rebel chief of Talamalai; but others were securely handed over.¹⁰ The message was written in Kannada languages, these messages in the opinion of British indicated the advanced stage of the function of a peninsular confederacy. The leaders were directed to collect contributions for the support of the insurrection assemble armed men everywhere and co-ordinate their activities in their districts.¹¹

The interconnecting alliances made by the patriots of an extensive regions reflects the intense diplomatic activity that proceeded their function. It is certain that the patriots devoted to the nationalistic cause as they were, would have led missions to Malabar and Kanara region also. But, so great it is the paucity of historical sources that is impossible to gain a complete

and comprehensive account of this formative phase of the movement.¹² The rebels of Coimbatore and Erode region played dominant role in bringing the diverse alliances closer. These are led to the formation of good alliance system. They brought unity among organizations of north and south under a common banner of Peninsular confederacy.

Dindigul Conspiracy and Outbreak of the Rebellion

As the preparation for the struggle had been carried into effect, the patriots had to decide the venue and date for its commencement. The month of this conspiracy was of April 1800. The secret meeting of the leaders of the confederacy was held at Dindigul. The rebel diplomat Gopal Nayak presided over the meeting.¹³ The Dindigul conspiracy constituted a landmark in the movement. The rebel council decided to launch a general offensive against British with the storming of Coimbatore. The leaders of the command in their respective regions were Khan-i-Jahan led the rebellion in Coimbatore, Gopal Nayak commanded the attack in Dindigul, Appaji Gounder and Venkataramaiah to collect bands of armed man in Sathyamangalam and to begin depredations taking advantage of the mountains to shelter them.

The rebel council decided to attack Coimbatore on 3rd June 1800. Dhoondaji Waugh started his attack in the north in April 1800, Mohammed Hashan threatened Dharapuram. Besides Hashan Karuka Gounder of Aravakuruchi and Futeh Mohammed of Hosur led the first party towards Dharapuram and Ullah Khan led the second towards Kangeyam.¹⁴ Appaji Gounder and Shaniah advanced to Coimbatore from Sathyamangala, Chinna malai undertook the overall operations in all directions.¹⁵ The patriotic rebels were armed with pikes and match-locks. They were irregular and mingled with common people. In the meantime they got the support of villagers and the rebels of about 500 to 600 men were prepared to attack Coimbatore.

The plan of attacking Coimbatore became unfruitful, when the British came to know about the movement of rebels to attack Coimbatore. So the rebels turned their attentions towards Dharapuram, Talaimalai and Sathyamangalam

and threatened the British posts; but the British who expected the possibility of the rebellion spreading to these areas sent troops to all main disturbance centres. Though carefully planned and elaborately organized the plot proved abortive, Lieutenant colonel McAlister placed the entire garrison and equipped them with fire arms at right places. The confederates no doubt suffered a starting reverses in an unexpected manner and suffered defeats and many rebel leaders were captured.¹⁶ In an important battle of Talaimalai the rebels were not only defeated but many rebel chief were also captured. Among the captives, Mohammed Hasham was very important. He carried some letters from his leader, but before that he fell into the hands of British he destroyed them all and committed suicide by cutting his throat on 8th June 1800 before he was interrogated.¹⁷

The prisoners who had been captured during rebellion were put to trial by court martial. Among the victims, forty two in number, were Appaji Gounder and other five of the representative sent by Dhoondaji Waugh to Dindigul were included.¹⁸ In an attempt to terrorize the inhabitants, they were executed publicly, eight of them at Dharapuram, seven at Sathyamangalam, six at Coimbatore and the rest in different centres of disturbance.¹⁹

Conclusion

The Erode district has made an everlasting impact on the social and political spheres of the history of Tamilnadu. Though the district formed the core of kongu region having all resources, no dynasty set up their imperialistic rule - when it came under Mysore rule it became the cockpit of battles is Mysore wars between Hyden Ali and English East India Company. After the Treaty of Srirangapatnam, the present district was ceded to British by Tipu in 1792 and in 1799, the year of the death of Tipu, the alien rule was firmly established in the country. Thus, we can say that present district was one of the first regions in Tamilnadu to be occupied by the British. As their land came under alien rule, the common people resented it and organized an extensive rebellion against the new rule which was known as the south Indian rebellion. When different regional leagues were formed, the present district was led by Chinnamalai, the gallant hero of Kangeyam.

After that the rebels of Mysore rose up openly against British under the leadership of Dhoondaji Waugh. The peasants of Erode and Coimbatore helped them by interconnecting the alliances by intensified diplomatic activity and vigorously participated in it. The district served as the tunnel between Mysore and other

rebellious leagues and became the arena of the rebellion. In the course of the rebellion a significant point which deserves to mention, while the movement was headed by Palayakars and Chieftains of south. Erode it was wholly organized by the peasants.

SALT SATYAGRAHA IN COASTAL ANDHRA WITH SPECIAL REFERENCE TO PRAKASAM DISTRICT

Dr. D.Venkateswara Reddy

After the denial of Nehru Report by the British, the Congress met at Lahore in 1929 under the leadership of Jawaharlal Nehru. The session was momentous as the Congress Party had declared that *Poorna Swarajya* or complete independence was to be the sole aim of the freedom struggle. It was also decided to observe 26 January as the *Poorna Swarajya* Day every year and to launch civil disobedience if necessary the no-tax campaign against the British government as the means employed to achieve complete independence.

As decided in the Lahore session of Congress, January 26, 1930 was observed as Poorna Swaraj Day all over India. The ripples could be seen even in small towns and villages. The present day Prakasam district was not an exception as per the available information in the Telugu press. At Karamchedu village Poorna Swaraj Day was observed on January 26th

under the leadership of Yarlagadda Anjayya Choudary. Amidst slogans the national flag was hoisted to pole of sixty feet at the local Siva temple. Poona Swaraj resolution was unanimously passed in the meeting that was held after the flag hoisting ceremony. It was resolved that the people should be ready to give up even their lives in the ensuing fight for the mother country.¹ On the same day the independence flag ceremony at 8.30 am from Gandhi Chowk or Mahalakshamma Chettu in Chirala with sacred music and drum-beat. In the Pokur village near Kandukur a public meeting was held under the leadership of Achanta Lakshmi Narasimham for which nearly a 1000 people were attended. The complete independence resolution was unanimously passed by the members attended the meeting. Later the villagers took the photo of Mahatma Gandhi in a procession around the village

amidst the raising of slogans, singing patriotic songs with the holy music and bhajans.² Similarly a meeting was held at Guravareddy Palem under the leadership of Vaka Subba Reddy and the complete independence resolution was passed unanimously.³ On 30th January 1930 Mahatma Gandhi published in the 'Young India' his eleven points which included among others introduction of total prohibition, reduction of land revenue by 50%, abolition of salt tax and declared, "Let the Viceroy satisfy us with regard to these very simple but vital things of India".

Gandhi decided to defy the obnoxious salt tax imposed by the British. It should be recalled that an Act passed in 1882 granted British the monopoly to collect and produce salt from the seas. The people were subjected to a salt tax. Despite the commodity being freely available to be produced from the sea, Indians had to buy it from the government. Salt was chosen as the symbol of protest because it was a basic commodity of the rich and poor and everybody needed it irrespective of religion, caste, economic status, etc. In Gandhi's own words, "Next to air and water, salt is perhaps the greatest necessity of life. It is the only condiment of the poor. There is no article like salt outside water by taxing which the state can reach even the starving millions, the sick, the maimed and the utterly helpless. The tax constitutes, therefore, the most inhuman poll tax that the ingenuity of man can devise."⁴

On 12 March 1930, Gandhi started the famous Dandi March, often compared with long march of Mao Tsetung, from his ashram at Sabarmati in Ahmadabad. The march reached Dandi on 5th April where about 50000 people were waiting for them. On 6 April, Gandhi broke the salt law by raising salt from the sea. He then declared, that "with this, I am shaking the foundations of the British Empire." Initially, the British took the entire incident lightly similarly the people.

The Andhra Provincial Congress Working Committee met at Guntur on 29th March 1930. As per the suggestion of Gandhiji it was decided to offer *satyagraha* simultaneously at different centres of each district. Before the actual course of action was initiated, training was given to *satyagrahis* in the Congress *sibirams* (centres) to break the salt laws non-

violently at places like Pallipadu Ashram of Nellore District, Guntur, Bezawada, Machilipatnam, Eluru in West Godavari, Sitanagaram Ashram in East Godavari district and Vizianagaram in Visakhapatnam district.⁵

The following patriots were elected by the respective District Congress Committees as the District Dictators to carry on the movement under the Provincial Dictator, Konda Venkatappayya.⁶ Tanguturi Prakasam (Madras), Oruganti Venkatasubbayya (Nellore), Unnava Lakshminarayana (Guntur), Lakshmayya Choudary (West Krishna), Chinna Venkata Dasayya (East Godawari), Dandu Narayana Raju (West Godawari), Bulusu Sambamurthy (East Godawari) and Tenneti Viswanadham (Visakhapatnam).

Salt Satyagraha in Prakasam District

It is well known that most of the coastal regions of the present Prakasam District were under the Guntur and Nellore Districts. The Working Committee of the Guntur District Congress, met on March 29 under the Presidentship of Unnava Lakshminarayana. The committee entrusted the *satyagraha* movement to a War Council (*Satyagraha Samara Sangham*) consisting of N. V. L. Narasimharao, Anche Sivayya and Seeram Subbarao Naidu. They were empowered to nominate their successors as occasion arose. The committee made plans to enlist three thousand volunteers. The volunteers made extensive propaganda in the towns and the country-side of the district before they reached Guntur where a vast 'Sibiram' was established in Yedavallivari Choultry.⁷ Besides the Guntur Municipality, the Taluk Board of Ongole and the Municipality of Chirala passed resolutions sympathising with civil disobedience movement in spite of the government warning earlier that it would not hesitate "to resort to the powers of supersession and dissolution."⁸ The volunteers from the different taluqs, after touring villages and towns, converged at Guntur on April 6, 1930 where they were received by the local volunteers. Konda Venkatappayya sprinkled incensed water on every one of the volunteers. From there, the volunteers marched in a procession to the Central Camp (*Pradhana Sibiram*) in Yedavallivari Choultry. Gandhi's portrait was carried on a double horsed coach all through the procession in the town. Konda

Venkatappayya asked the volunteers and the *satyagrahis* not to be puffed up with the rumours. He said that Gandhi's breaking of the Salt Law was not the culmination of the *satyagraha* but only its beginning.'

Konda Venkatappayya's residence at Guntur was selected for breaking the salt laws. On 9th April 1930 Congress leaders like Konda Venkatappayya, Gollapudi Sitarama Sastry, Lakshmi Bayamma, Sreeram Subba Rao Naidu and others proceeded to Vadarevu near Chirala in Prakasam district and brought salt brine in pots to Konda's house. The brine was boiled to manufacture contraband salt. The volunteers after hawking the contraband salt assembled at the tank near the Shiva temple where they were received by Unnava Lakshmi Bayamma, singing "Veera gandhamu techchi naramu, veerulevado telpudi", (Tell u who the heroes are, we have come to anoint them". The salt prepared thus was packed in small packets to sell to people. In the Prakasam district salt packets were sold in places like Chirala, Ongole, Swarna etc. As per Andhra Patrika the volunteers came to Ongole on 11th April and sold nearly hundred contraband salt packets to people who included lawyers and merchants. The entire proceedings were closely watched by the police.⁹ By 13th April, the proceeds realised through the sale of contraband salt reached to Rs. 1000/-.

After technically breaking of the law, the volunteers encouraged the villagers to make or collect contraband salt on a commercial scale. Three places near the sea were selected. They were Vadarevu near Chirala and Kanuparthi salt factory near Ongole and Ganapavaram in Bapatla taluk of the then Guntur district. The first two lie in the Prakasam district and the later continues to the part of the Guntur district. The Ongole taluk, then a part of Guntur district, had sea coastline of 20 miles and the Hobson's choice of the Guntur district Congress leaders to organise the salt *satyagraha* was the coastline of the present Prakasam district.

Incidents at Vadarevu

Andhra Patrika in its issue of 17th April, 1930 reported the events taking place at Vadarevu as follows. "The volunteers (*Santhi Sainikulu*) who reached Vadarevu are divided into four groups and the work is going on

smoothly. Propagation is going on in the neighbouring villages. When some groups are manufacturing salt, the other groups are selling it in the nearby villages in organised meetings. Though, the government do not affecting any arrests, it is trying its best for obstructing supplies (of necessities) to the volunteers apart from secret propaganda against the movement. The people of Chirala are generously helping by supplying the needed food material to the volunteers. Gunturu Narasimha Rao's efforts in this regard are noteworthy. As Vadarevu is a small village, the government is scaring the people by all means. Each time when the employees came there, they are threatening the villagers. It needs to be stated that the villagers are very courageous. They are attending the meetings organised by the volunteers and comprehending the essence of *satyagraha*. Today when the volunteers went to sell *swarajya* salt, though the village headman propagated not to purchase it and the police are closely watching, thirty three persons purchased them after declaring their names."¹⁰

Summons was served as per section 112 of Criminal Procedure Code to Nethi Venkatachalapathi, the leader of the volunteers to appear before the district magistrate stationed at Chirala and to pay a security for his good behaviour for one year. As he decided not to offer surety, he was arrested and sent to Rajahmundry jail on 22nd April.¹¹ At the same place, where he was awarded punishment, a public meeting was held. Narasimha Rao, Ramulu Gupta, Rangayya, Gollapudi Sitarama Sastry and Ghouse Beg Saheb spoke on the occasion.¹² Thereafter regular public meetings were held in Chirala, Perala, Vadarevu and other surrounding villages. Leaders like Narasimha Rao, Pattabhiramulu Gupta, Kasi Viswanadham, Rangayya, Ghouse Beg, Janardhana Gupta etc. were the main speakers in those meetings. As a result many were inspired and enrolled themselves as volunteers. It was decided to observe mass civil disobedience in Chirala, Perala and surrounding villages and a complete *hartal* in Vadarevu on 28th April. In connection with the incidents of Vadarevu, leaders like Gollapudi Sitarama Sastry was arrested and was awarded one year imprisonment. Similarly Bhattiprolu Suryaprakasa Rao, Srikakulapu Pattabhiramulu Gupta, Chirala Rangayya and Ghouse Beg were

arrested and they were awarded varying terms of imprisonments. As a result there was a great commotion in Chirala and Perala. The Chirala Municipal Council held a meeting and congratulated Ghouse Beg for his arrest and resolved that all the municipal employees should only wear Khaddar.¹³ On 30th a great public meeting was organised in Chirala town to condemn the arrest of Desabhaktuni Seetarama Sastry in which Malladi Yagna Narayana an advocate and Ismail Saheb spoke. As a public demonstration of the Congress ideal of Hindu-Muslim unity both of them hug each other. The slogans of 'Gandhi ki Jai, Allah ho Akbar and Hindu-Muslims ki Jai' rocked the air.¹⁴

Incidents of Devarampadu

The incidents that took place near Kanuparthi, Devarampadu and Ammanabrolu in 1930 and the arrests thereupon were momentous in the freedom movement of Prakasam district. Near Kanuparthi the volunteers occupied the house of Tanguturu Prakasam Panthulu at Devarampadu.¹⁵ Even before the establishment of Devarampadu camp one Sagi Vijayarama Raju, a local young man strove hard to revive the glory of Congress in the region by constantly touring the nearby villages and persuading the people to fight for the freedom of the country.

On 26th April, the volunteers, thus staying in Prakasam's house, woke up in the early morning and proceeded to Kanuparthi under the leadership of Kurra Gopalakrishnayya. They crossed the Gundlakamma River by ferries and travelled through villages like Dasarivaripalem, Kanuparthi and Chinakanuparthi and reached Kanuparthi salt depot on the seashore on foot. On the way, they enthusiastically recited the nationalistic songs and created awareness by preaching the ideals and the need for the salt *satyagraha* among the people. As a result nearly a thousand villagers joined them enroute in that march.

There were two natural salt deposits at Kanuparthi. Anticipating the trouble one of it was destroyed by the salt factory establishment. The other was a deep depression filled by waves of the sea at high tide once or twice a month. It was roughly in the shape of a triangle with a base of some 250 yards and a height of

some 100 yards.¹⁶ Nearly seventy volunteers crossed the waste deep waters of Bakingham canal and reached the area of natural deposit and began to collect the salt. The salt inspector was seized as he resisted. The villagers of the neighbouring places actively took interest in the event 'as the salt was very good'. As per the report of Andhra Patrika nearly fifteen hundred villages from the nearby places collected the salt in baskets and sacks. As per their statement they were collecting the salt from 7 am onwards. The women folk actively participated in the event. Despite of the obstacles, the batches of volunteers did the assigned job with a great enthusiasm.

The Deputy Superintendent of Police Sourirajulu Naidu and three constables and thirty Reserve Police constables camped in the factory from April 26th and Venkatraman, the Sub-Collector of Ongole and the Guntur district Collector camped at Ammanabrolu, five miles on the railway line. Their plan was to arrest the leaders and fill up the depression. The salt department closed the gates of the depot and not even allowed the four hundred coolies who regularly collect the salt for the depot due to the fear that they will join with the *satyagrahis*. The authorities stationed at Ammanabrolu employed some coolies. There were some Christian coolies living at Ammanabrolu and these were persuaded to fill up the depression on payment of nearly double wages and provision of motor bus accommodation to and from the work spot for their women. Two buses had been commandeered by the police from Ongole and brought across country for the operations. The volunteers at first expected scenes of violence and were accompanied by two doctors and a press photographer. They were disappointed and there was the amusing spectacle of the coolies filling the depression and the volunteers collecting the salt at the same time.¹⁷ In this scuffle that followed the police fell on a batch of volunteers lathi charged, dragged and threw them in waters. Many leaders were wounded in the incident and were taken to Ongole hospital.¹⁸

On 3rd May, 1930 at about 10-30 A.M. the salt and the Police department jointly raided the Devarampadu camp set up in the house of Tanguturu Prakasam Pantulu along with a sizable number of staff with fire arms. At that

time only six volunteers were present and the camp office was locked. When the Circle Inspector and others were approaching the office room, Nagalla Krishnayya Choudary, the in-charge of the camp obstructed them and asked why they came. The Circle Inspector asked him to open the lock of the office for which Krishnayya rejected. The Circle Inspector harshly stated "open the door otherwise it would be broke opened". When Krishnayya asked the reason for breaking open the door, the police angrily stated "contraband salt was inside. It needs to be taken away". Krishnayya replied that the salt would not be taken away and added that 'as you are doing your duty', they were also doing it for their Mahatma. When Circle Inspector asked his name Krishnayya replied that he need not tell his name and if at all they had any order and they can summon him to their office for enquiry. When the Circle Inspector showed the order, Krishnayya answered that he did not know English knowledge and asked him to read the same and explain its meaning. He stated that the camp would be searched as per the order of the Collector. The police entered into the camp and seized the salt piled up on the top of the house and removed all the flags both hoisted and kept inside.¹⁹

By that time the volunteers who went to collect salt at Kanuparthi under the leadership of Turaga Venkateswarlu came back and the police attacked them which were responded by the slogans of 'Mahatma Gandhi Ki Jai'. Then the Salt Inspector tried to seize the flag from the hands of one Katta Ramakotayya. Then Devabhakthuni Venkatasubbayya Choudary took the flag in his hand and performed *satyagraha*. The Circle Inspector bet him on his hand and forcibly seized it. After harassing the volunteers with quarries for a while, the police left the place. Again, the police came in the evening and surrounded and searched the camp.²⁰

Thereafter there was a cat and mouse game at Devarampadu. When one batch of volunteers was observing *satyagraha* at Kanuparthi and Devarampadu, the police arrested them. Soon another batch of volunteers was sent to the camp. The native Newspapers repeatedly informed the details of the new batch of volunteers and the police arrests and

punishments. The police frequently captured the Devarampadu camp soon to lose to the *satyagrahis* in no time. For example Andhra Patrika reported that the police raided the Deverampadu camp and arrested and jailed 51 *satyagrahis*. On 18th May 28 volunteers were sent to recapture the camp and they were also arrested. The fourth batch of volunteers was sent from Guntur to bring back the camp under the Congress control. As per the available report the fourth batch of volunteers captured the camp on 24th May 1930. It was stated there were one batch at Devarampadu and another at Ulichu village, perhaps to substitute Devarampadu batch if at all they were arrested by the police. At another batch of volunteers was propagating in Ongole taluk.²¹

The government was very harsh towards the people who aided or helped the *satyagrahis*. One of the best examples was the case of Dr. Kanuparti Narayana Rao of Ammanabrolu village, which was close to Devarampadu. As per the available evidence Narayana Rao sheltered and fed the volunteers Salt Satyagraha, under the Vavilala Gopala Krishnayya who were passing through the village despite the tom tom of village munsif that even feeding of the volunteer was treated as crime. In the same manner he hosted the successive batches of volunteers under Unnava Lakshmbayamma and Yamini Purna Tilakam. As result Narayana Rao was arrested and punished for three consecutive six months imprisonment treating the three hostings as three crimes. Narayana Rao completed the imprisonment at Rajahmundry and Vellore prisons.²² Similarly some persons of Inamanamelluru village were arrested and awarded imprisonment for feeding *satyagrahis*.

Another interesting case was the punishment of six months imprisonment awarded to one Chivukula Sriramulu, a native of Nandipadu, which was unknown to jurisprudence. The crime committed by him was treating a *satyagrahi* for a scorpion bite.²³

Later the camp of Devarampadu, which was established in the building of Tanguturi Prakasam became a historic place. The patriots erected 'Congress victory pillar' at the place. Babu Rajendra Prasad, the then President of Indian National Congress came to Devarampadu to inaugurate the victory pillar on

21st November 1935. At that time the villagers presented a felicitation address which runs as follows. "This place is on the sea coast Salt pans and salt deposits are more. It is a salt mine. The best natural salt is available plenty everywhere. The facilities to produce salt are more. A certain amount of enthusiasm developed when the Congress started non-cooperation in 1921. When Salt Satyagraha was started in 1930 the war council of Guntur district started a camp at that place. It continued for five months. The government arrested 450 satyagrahis. Among them 25 belong to our area. The government resorted to lathi charge in and around the camp. The government confiscated the camp several times and place a board stating that it was a police station. The volunteers repeatedly reoccupied it.

The 30th November 1935 edition of Subhodini paper published the following. "After the felicitation Gollapudi Seetarama Sastry read out a document which states that Tanguturi Prakasam donated the building and the 2500 square feet of land to a trust. The trustees were Konda Venkatappayya, Sagi Vijaya Rama Raju, K. Chandamouli, Uppuluri Venkata Krishnayya and Prakasam. Babu Rajendra Prasad and Tanguturi Prakasam signed as witnesses of the document in the same meeting. Later Babu Rajendra Prasad spoke and inaugurated the victory pillar. It was made of Ferro concrete and its height is 30 feet".²⁴

Kothapatnam near Allur, which was part of Nellore district, was another camp where salt was manufactured by *satyagrahis*.

Other Activities in the District

The Salt Satyagraha in Prakasam district was confined to the Coastal areas more importantly to a few places like Vadarevu, Kanuparthi, Kothapatnam etc. As hinterland areas were lacking the sea coast they brought salt brine and manufactured salt so sell in the nearby localities. In other areas the Congress destructive and constructive activities like boycott of foreign goods especially foreign cloth, picketing of the shops selling foreign goods, manufacturing and wearing of khaddar cloth, temperance programme which included the picketing of toddy shops, chapping of the spathes and felling of the Palmyra trees were undertaken.

Temperance Programme

The Guntur district Congress War Council passed instructions to the *satyagrahis* to take care of the pernicious evil drink and see to it that Palmyra trees were chopped off. A few days before his arrest Gandhi asked the people to cut off the palm trees from which toddy was draw and he himself inaugurating the ceremony of destruction.²⁵ It influenced the *satyagrahis* of the Andhra region also. At first the cutting of spathes of toddy palms began in Guntur district later extended to the other areas. The most effective leader of the spathe cutting movement in Guntur district was Gollapudi Seetharama Sadtry.²⁶ By the month of May the spathe cutting took a drastic turn. The district administration was much agitated and the Collector reported to his superiors of the Fort St. George: "At one of my subsequent meetings with the ryots, one defended spathe-cutting because he had known so many well-to-do-ryots, who had lost their fortunes by drink. There is a general realisation in the taluks that leisure and money bring such temptation as drink and dancing girls and I have no doubt that the cutting of spathes was regarded as a measure of social reform --- Spathe-cutting was the most dangerous phase of the movement, as it brought the ordinary ryot into active opposition to government".²⁷

The *satyagrahis* were cutting down the palm trees in an attempt to effect a complete prohibition. They obtained a prior permission from the owners of the trees. As per Andhra Patrika seven members were arrested in this respect and brought to Ammanabrolu village for their trial.²⁸ Even minors actively participated in the temperance programme in Prakasam district. For example a 14 year boy by name Pakala Subba Rao was arrested at Ongole for cutting the spathes of palm trees and produced before Venkatrajam, the Sub Collector of Ongole. He was tried under IPC Sections 148 and 426. As the boy was a minor he was awarded the punishment of public flogging.²⁹

In Prakasam district the propagation for the temperance programme was going on well. As a result the sales of toddy and arrack drastically came down.³⁰ Andhra Patrika reported "One Surattu Narasimha Rao was propagating in the villages of Ongole about the evil consequences of liquor drinking. Either due

to his propaganda or the agitations going on in the country, the toddy shops of Ongole taluk was auctioned at lower rates than last year".³¹ There was a drastic decrease in the sales of liquor.

Boycott of Foreign cloth and propagation for Khaddar

The boycott of foreign cloth proved to be widespread and effective. At several places foreign cloth shops were vigorously picketed and even training was given as to how picketing was to be done in non-violent methods.³² The merchants in several business centres cancelled their orders already placed for imported cloth. They also took a vow not to import foreign cloth and goods for some time. Simultaneously, efforts were made to popularise khaddar and taught the villagers the art of spinning the cotton by using charkha. One B. Narasimha Rao of Swarna village went round the houses and sold the khaddar cloth.³³ Narasimha Rao and Patabhi Ramulu Gupta spoke on the boycott of foreign cloth in a public meeting at Vadarevu camp.³⁴ There was a public bonfire of foreign cloth at Chirala.³⁵

In May, at Chirala, foreign cloth merchants were "taunted and abused". On 23rd May there was a picketing of the shops selling foreign cloth at Chirala. The shop keepers promised to give in writing that they would not order for foreign cloth for a period of six months.³⁶ On 26th May a public meeting was held at Chirala under the leadership of Ivatturi Kameswara Rao. One Tanneru Krishna Murthy amused the public about the ideals, nature, political and economic philosophies of khaddar.³⁷ As some of the cloth merchants of Chirala had not signed the covenants to the effect that they will not sell foreign goods, some women volunteers picketed before their shops.³⁸

Udayagiri Ananthacharyulu, a popular leader of salt satyagraha of Nellore town, visited Singarayakonda as part of his Kandukur taluk tour on June 4th. He spoke in a public meeting at Singarayakonda attended by the Hindus, Muslims and women in large numbers.³⁹ At Nadanavanam village a public bonfire of foreign cloth was organised. The women of the village took a vow that they will spin the entire cotton produced in the village which amounted to 400 *putties*. In the month of June nearly 700

charkhas were in use.⁴⁰ Similarly, nearly 400 charakas were working in Karamchedu village as per the available newspaper reports.⁴¹

Incidents at Karavadi village

Karavadi a village near Ongole became popular during this period. The villagers were hosting the people of Ongole who were on the way to participate in the Salt Satyagraha. There were public meetings on daily basis. Bonfire of foreign cloth, selling the contraband salt and raising the patriotic slogans and songs were a regular phenomenon. The nationalistic flag was hoisted frequently and on one occasion twelve villagers were arrested for such an act.⁴² On 11th June 1930, Andhra Patrika newspaper reported the following news item. "Recently the villages took the national flag in procession and tied it to a neem tree of the village. On 5th June 1930, the Deputy Superintendent of Police along with thirty Reserve police came to the village to remove it. Soon the women, children and others obstructed them by standing round the tree to which the flag was tied (*Janda Chettu*). Unable to do anything the police departed after arresting eight villagers. Today i.e. on 7th June 1930 the District Collector, Superintendent and Deputy Superintendent came to the village with eighty Reserve police and made rounds in the village. Even one of the house locks was broken. One of the police personal asked Polavarapu Rangamma, a Kamma lady the whereabouts of her husband, when she replied that she did not know, the lady was slapped by the police. The Collector regretted when the matter was reported to him. Nine of the villagers were arrested and were taken to Ongole".⁴³ One Gudimella Truvengalacharyulu, a lad of 14 years from Throvagunta was arrested near Ongole court by Khasim Khan, a head constable for distributing pamphlets. Gudimella was forced to run by cane beating, while the police was on his bicycle up to taluka office, nearly a mile away where he was left out.⁴⁴

In the meantime, in India, the Viceroy, Lord Irwin who had adopted a policy of repression in order to maintain law and order, also seemed to have realised that the sheer force would not cow down the patriotic impulse of the Indian people, and that no useful purposes would be served by measures of repression.

This change in the attitude of the Government resulted in the release of Gandhi and the members of the Congress Working Committee on January 26, 1931.⁴⁵ Negotiations started between Gandhi and Lord Irwin, the Viceroy. They led to the conclusion of Gandhi-Irwin Pact on March 5, 1931. Under this agreement, the Congress decided to discontinue Civil Disobedience Movement and to participate in the Round Table Conference on Indian Constitutional Reform. The Government in turn agreed to withdraw the ordinances and notifications issued under the Criminal Law Amendment Act, to release all political prisoners undergoing imprisonment for participation in the Civil Disobedience Movement if their offences did not involve violence, and to withdraw all pending prosecutions. It further agreed to permit peaceful picketing of foreign cloth and liquor shops.

Though the Government was unwilling to repeal the Salt Act, it agreed to permit local residents in villages immediately adjoining areas where salt could be collected to collect it or make it purely consumption, as distinguished for trading. The Government also agreed to reinstate Government servants and village officers and restore properties confiscated during the movement.⁴⁶ Gandhi returned from London with empty hands and the Congress resumed the Civil Disobedience Movement. The government also took repressive measures and arrested all the leaders including Gandhi. Finally Gandhi was released on 8th May, 1933 and ultimately Congress suspended civil disobedience in 1934. Thus the struggle that was started in the first week of January 1930 was terminated on 20th May 1934. The Congressmen of Prakasam district obeyed the directive along with those of the whole country.

THE LIFE AND POLITICAL CAREER OF M.C. RAJAH

E. Vignesh

Introduction

In a move to serve and protect the rights of people and individual, some movements as well as political parties have to function as the voice of people, seeking all kinds of rights irrespective of race, class, creed, religion and caste in the democratic setup and for the flourishing of democracy the great ideals of democracy must be held high and protected political parties are to be given significant place and moments chance with a view to protect and glorify the great ideals of democracy. History tells us that a few dedicated political personalities, in spite of facing heavy odds and obstacles, have tried to transform the world. Some of them have championed the cause of the downtrodden and have fought to get back their rights and privileges against severe disapproval from all quarters. Mankind is eternally indebted to these leaders, who have tirelessly endeavored to change the world better for the voiceless.

Early life of M.C. Rajah

For creating awakening among the depressed class and making them responsible citizens many leaders have worked with untiring efforts. Among them M.C. Rajah was one of the most popular leaders. Rajah was born at Parangimalai (St. Thomas Mount) on 17th June 1883. His father was Mylai Chinnathambi Pillai, who was an important leader for the growth of Adi Dravida Saba. Chinnathambi Pillai served as cashier and Assistant Director of Government press then called as Lawrence Asylum press.¹ He brought up M.C. Rajah in western style, ever found in western suit and shoes. Rajah graduated from Madras Christian College and joined the Teachers' College, Saidapet. Then became a School teacher in 1906.² M.C. Rajah tried to educate the Scheduled Caste people by his writings. Rajah wrote several books. He started a school at Nungambakkam and many night schools at various places in the Madras City.³ M.C. Rajah evinced a keen and practical interest in the spread of education which would make them raise their heads and be counted as men. He once stated that education was the panacea for

all the problems of the community and the nation as well. He felt that elementary education ought to be made compulsory in schools. He stressed compulsory education was not only for boys but also for girls. He was also responsible for helping many depressed class students to get admission in Pachaiyappa's College, Madras in 1927.⁴ He also favoured providing Harijan children with a level meal at lunch hour and reducing the troubles of the parents who lose the services of their wage-earning children. He believed the depressed classes must have the benefit of education at any cost. He wanted a scheme for those schools. As a teacher, he took keen interest in the spread of education, and Scout movement. He also wrote text books for schools. Two of his works were, *The Oppressed Hindus* and *King George*. As a member of numerous academic bodies, he endeavored to extend educational opportunities to the depressed classes who were generally poor.⁵

Political Career of M.C. Rajah

M.C. Rajah was elected president of the chingleput district board. He was responsible for the organization of the Adi- Dravida Mahajana Sabha in 1916 and became the secretary of the Adi-Dravida Mahajana Sabha. He mobilized people and agitated for adequate representative for the Depressed Classes in the Legislative council and local bodies. He was one of the members of the South Indian Liberal Federation. He strongly believed, in the matter of political power, the position of the Depressed Classes has to be safeguard in Legislatures and public services. M.C. Rajah has nominated as the first Adi-Dravida member in 1919. He became the dalith leader to be nominated as the member of the Legislative council. He used this opportunity for articulating the problems faced by Depressed Classes in Madras presidency and secured their various social and educational rights.⁶

As Justice Party Member in Legislative Council

M.C. Rajah was one of the members of Justice Party Government since its inception and he was considered as one of its leaders. The Manifesto issued in 1916, resolved to set up a political association to safeguard and

protect the interests of the non-Brahmin community, the basis on which the South Indian Liberal Federation was founded. Its go-founder was T.M. Nair and Sir P.Thyagaraya Chettiar.⁷

Rajah was elected to the Madras Legislative Council as a Justice Party candidate during the first general elections held in November 1920. He was elected as Deputy Leader of the Justice Party in the council. Rajah was the first member of the scheduled caste community to be elected to the Madras Legislative Council.⁸

Education Committee Work

M.C. Rajah was nominated to the Elementary Education Committee in the year 1917. He moved a resolution in the Madras Legislative Council demanding an increase in the number of scholarships for the children of the depressed classes, so that more number of children of those classes could have the benefit of education.⁹ M.C. Rajah recommended a number of measures to the Government in order to induce more and more students from the depressed class to attend the schools. He declared that an adequate number of scholarships and liberal fee remission should be instituted for these children take part in recognized schools and colleges.

In 1919, M.C. Rajah was nominated to represent the Adi-Dravidas in a Select Committee. Instituted to study the Elementary Education Bill.¹⁰ In 1924, he was nominated to the Senate of the Madras University by the Governor of Madras, Lord Willington. In the same year, he was appointed a Member of the Chengleput District Elementary Education Committee by the Department of Education.¹¹

M.C. Rajah distinguished himself as the representative of the depressed classes in particular and of other castes as well that he was nominated repeatedly in 1921, 1925 and 1926. In the Council, he was elected to various important committees in recognition of his wisdom and experience. In 1920, the Labour Advisory Board was constituted with one European, one Brahmin and one Adi Dravida. They were Gilbert Slater, K. Ramanuja Chettiar and M.C. Rajah respectively.¹²

Changing the Name of the Community: The Resolution and Order

The Madras Legislative council members belonging to the Harijans, especially M.C. Rajah and others both inside the council and outside of it, vociferously raised the issue of changing their community's name from pariah and panchama to Adi-Dravida. In various districts of Tamil Nadu, meetings to this effect were held and resolutions were passed. Representations were made to Government and C. Natesan moved a resolution in the Legislative council in 1920 to designate "Panchamas" as "Adi-Dravidas". At last, in 1922, the Madras Legislative Council passed a resolution recommending a change in name. This was followed by a government order in 1922.¹³ The order directed that the name Adi-Dravida in the Tamil districts should be adopted in official documents in place of the words Panchama or Pariah. The Depressed Class representatives felt that the disregard attached to the name was thus done away with. M.C. Rajah, R. Veerian and Swami Sahajanandha argued that change in the nomenclature was not just to appease the community.

In 1921, the Justice party government of the Raja of Panagal introduced reservations for the backward classes in government jobs. However, this act did not allocate reservations for Dalits. Disenchanted M.C. Rajah led a delegation of Dalits to safeguard the act and press their demand for inclusion. But the Justice Party did not respond instead when riots broke out in the same year. Hence M.C. Rajah quit the party in 1923.¹⁴

Champion of the Depressed Classes

In 1926, M.C.R was elected President of the All India Depressed Classes Association. As the accredited leader of the depressed communities, he addressed numerous meetings, demanded adequate representation in Provincial Legislatures, Local Bodies and Public Services and led agitations and deputations. He toured across India in that connection and finally, he visited England. Rajah was welcomed everywhere and he was acclaimed as the "Champion of the Depressed Classes".¹⁵

Round Table Conferences

In 1928 M.C. Rajah was appointed to the Indian Central Committee and in that connection toured throughout India and lastly went to England. In 1929 M.C. Rajah was elected the Deputy leader of the South Indian Liberal Federation. In spite of his difference of opinion with regard to political matters, with other parties, he was always cordial with them. During the Round Table Conferences, B.R. Ambedkar demanded dual representation for Dalits in the form of separate electorate whereas M.C. Rajah supported joint electorate system because his view that joint electorate alone would strengthen the position of the untouchables and he subsequently joined with Gandhiji. Later M.C. Rajah was nominated as a member of the executive council in Harijan Sevak Sangh.¹⁶

Central Legislative Bills

The Untouchability Abolition Bill of 1933 was presented in the Central Legislative Assembly of Delhi. The Bill, formulated by M.C. Rajah, stated that no criminal or civil court and no officer acting under the Government Authority should base any judgments or order on a recognition of the custom by which some human beings are by reason of their birth in particular castes, deemed as polluting what they touch or what is near to them. It had been found out that untouchables, though in law had equal rights with other castes and communities, were yet unable to exercise their rights in actual practice.

Rajah introduced another Bill in 1935 in the Assembly for the removal of social disabilities among certain classes on 31st May 1935. According to the provisions of the Bill, untouchability should be removed. They should have access to any stream, well, tank, pathway, convenience or transport or any other service which the general public belonging to all the classes of Hindus have a right to enjoy, or access to which is dedicated or nominated or licensed for the use of the general public, or which is maintained or paid for, out of the funds of the State or Local State or Local Statutory Authority. Both the Government and the opposition welcomed the measure as a great piece of Social Reform long overdue.¹⁷

Madras Provincial Legislative Bills

The Central Legislative Assembly elections were held under the Indian Council Act of 1935, Congress leaders were in a jubilant mood. They wanted to throw open temples to the depressed people as in the case of Travancore. Drafting the Madras Hindu Temple Entry Disabilities Removal Bill with the assistance of Rajaji in January 1937, M.C. Rajah sought the help of the former to introduce it in the Madras Legislature. To fulfill the demand of M.C. Rajah, Rajaji urged the Madras Government for the careful consideration and introduction of M.C. Rajah's Bill in the Legislature on 18th March 1937. As a further step in this direction, Rajaji made a statement at the meeting of Tanjore Circle Temple Committee, on 5th May 1937, that he could not rest for a minute longer without securing temple entry for Harijans and invited M.C. Rajah to introduce a bill in the Madras Legislature. On 19th October 1937, M.C. Rajah and Rajaji expressed their intention to introduce the bill in the Assembly. After receiving the favorable reply from Rajaji, M.C. Rajah introduced his bill on 30th March 1938. It provided for the political expression of the people's desire when they wished to allow Harijans to join them in worship in their temples. It provided for the political expression of the people's desire when they wished to allow Harijans to join them in worship in their temples.¹⁸

Conclusions

M.C. Rajah was a good writer and through his writings he has created social consciousness among Dalits. His book *Oppressed Hindus* happened to be a turning point in the lives of them. He went to the Round Table Conference in 1930 along with Dr. Ambedkar and explained to all officials the plight of the voiceless. He explained the plight of Dalits to Sir Stafford Cripps. M.C. Rajah died on 20 August, 1943. He has a record of distinguished service behind him as an educationist, legislator and statesman. He was acclaimed openly everywhere, as the champion of the Depressed Classes. He served till the end of his life for the welfare of the oppressed people. In his name a big Adi Dravida hostel was constructed by Tamil Nadu Government in Saidapet.

THE POLITICAL RELATIONS BETWEEN VIJAYANAGAR AND BAHMANI SULTANS

Dr. Aravind M. Managuli

The fourteenth century witnessed the emergence of powers in South India against the North, which is hugely responsible for protecting the distinct cultural identity of the region. The disintegration of the Tughlaq Dynasty in South India and in the Deccan region led to the birth of the Vijayanagar Kingdom in South India and the Bahmani Sultanate in Central India, both of which dominated the south of the Vindhya for a period of more than 200 years before they were subdued by the Mughal Empire. It is relevant in this light to understand the nature of Vijayanagar-Bahmani relations, which comprises the area of concern for this paper. Such understanding shall aid to comprehend the effects of these relations on the political scenario in the region, following long even after the weathering of the two kingdoms.

The Vijayanagar Kingdom (later, Vijayanagar Empire) was established in the year 1346 A.D, around the same time as Bahman Shah founded the Sultanate. The Vijayanagar Empire had considerable hold in South India in areas including the Tamil country and that of the Cheras (Kerala). However, it continued to

face a constant threat in areas north of the Tungabhadra River in the shape of the Bahmani Sultanate. Unfortunately, this period in history is remembered more for the wars that marked the nature of the relations between the Vijayanagar Empire and the Bahmani Sultanate rather than for the developments they brought about for the region in which they were present. The researcher will commence by giving a very brief introduction of the establishment of the two kingdoms to set the ground for exploring the nature of the relationship. The researcher will then identify the bone of contention between the Vijayanagar Empire and the Bahmani Sultanate, which played an important role in assessing the reasons for the strained relationship between the two kingdoms. The researcher also seeks to comprehend the internal relationship between the ruler and the local overlords in the kingdoms to understand the ways in which it affected the conflict. Finally, the researcher will look into the effect of the conflict on the two kingdoms, culminating with the Battle of Rakshasa-Tangadi (also known as Battle of Talikota) in 1565 and leading to the decisive defeat of the Vijayanagar Empire.

FARMATION OF LINGUISTIC STATE - ANDHRA PRADESH: A REVIEW

V.Prabhavath

Andhra Pradesh was the first linguistic State to be carved on such a basis in the post-Independence phase. It was carved in two phases- one in 1953, with the Coastal districts and Rayalaseema called the province of Andhra. Later in the first major phase of re-organisation that India witnessed in 1956 the Telugu-speaking part of Hyderabad was clubbed to it leading to the formation of Andhra Pradesh. This paper is subdivided into two phases; the first phase relates to an historical overview of the Visalandhra movement from 1900 till India's Independence in 1947. It was almost a decade of Independence before Andhra Pradesh could be formed. So in the second phase from 1947-56, the events leading

to its reorganisation are discussed. This paper thus consists of main theme is the Visalandhra Movement. The question of linguistic provinces has not been a new development but has been rather predominant since colonial times. It has, however, been noticed that the linguistic question received scant attention during the colonial period as it obviously suited the British rulers to split people speaking one and the same language into more than one province and to include within the boundaries of one province people speaking different languages, on the principle of what they conveniently called "administrative convenience", as this helped the British imperialist rulers to keep the Indian people divided"

GANDHIAN DREAM OF GRAM SWARAJ: A MIRACLE or A MIRAGE - A STUDY

C. Priyalakshmi

India lives in its villages and development of villages will be critical if we want to disclose the gap between "haves and have nots" for a better human development. There is a substantial inequity in terms of health and development progress among the rural population. In India paying for health care has become a major source of impoverishment for the poor and even the middle class. It has remained a challenge to evolve a strategy and

process, addressing the various social determinants affecting the human development of the rural population, to make a paradigm shift by doing work for betterment of the Indian rural population and by realizing the Gandhian dream of an ideal village or Gram Swaraj as a miracle. Otherwise, the dream will remain as a mirage. The work is based on government policy papers and other secondary sources such as books, journals and articles etc.

HISTORY OF LOK ADALAT THEIR ORIGIN AND ROLE IN INDIA

M.Sailoo

The term LokAdalat' as the word itself suggests is a Court as per requirements and convenience to the People, for the People and of the People. Contrary to the traditional approach of forms, precedents, arguments and protracted procedure, which is the outcome of adversary system, Lok Adalath as its basis in consent. Its success lies in educating the people not only about rights of their s and duties/obligations of others, but rights of others as well. The present day lok Adalats have their origin in People's Court of Ancient times and concomitant peoples participation in India is as old as the advent of village. The foundation and respect for such Lok Adalats is to encourage people to participate in the process of justice seems to have been imbibed in Indian Culture and Civilisation. In ancient times forums known as Kula, Sreni and Puga were arbitration tribunals like modern lok Adalats. Under the Hindu system of jurisprudence the King used to see the functioning of administration of justice but people also used to contribute in the process of administration of justice. All the governments in Ancient India followed the policy of encouraging the people's courts and enforce their decisions. The Courts though were not strictly official in nature but had the authority of State behind them. The idea was that such Courts should widen the scope of their activity and command more and more respect from people.

SECTIONAL PRESIDENT ADDRESS - SOCIAL HISTORY SECTION
RISE OF DALIT CONSCIOUSNESS IN ERSTWHILE HYDERABAD
STATE IN 19TH & 20TH CENTURIES

Prof. G. Bhadru Naik

Respected President, esteemed Chief Guest, Fellow Delegates, Ladies and Gentlemen Good Morning.

I am grateful to the Members of the Executive Committee South Indian History Congress for choosing me to preside over the Social History Session of the 39th Annual session of South Indian History Congress which is being held this year at Hyderabad.

Social movements are an essential part of societies. While in some societies they are more pronounced and apparent. In others they are latent. The study of social movements is primarily a study of the social or cultural change of a social order as well as of values and norms. In this regard Herbert Blumer refers to social movements as "Collective Enterprises to Establish a new social order of life. In brief a social movement may be considered to be an organised attempt on the part of a section of society to bring about either partial or total change in society through collective mobilisation based on an ideology".

In my address, I wish to focus on **The Rise of Dalit Consciousness in Erstwhile Hyderabad State in 19th & 20th century.**

The term Dalit means broken / oppressed. It has been widely used by militant Dalit activist groups in Maharashtra a few decades ago. It refers to those belonging to the bottom / lowest segment of Indian society. But in recent years, particularly since 1980's the term Dalit is becoming popular among the activist groups and intellectuals. The mark of self-respect, self-identify and self-assertion by the ex-untouchable communities and their fighting slogan against dehumanizing caste oppression". The first half of the 20th century in Hyderabad State during the regime of Mir Osman Ali Khan, the last Nizam (1911-1948) was very crucial in the history of Hyderabad State. During this period many leaders emerged against the Nizam's autocratic rule.

The Hyderabad State, like many princely states in India was feudal in its origin and it was also the biggest princely State in India with 16 districts. By 1911, the area of the state comprised of 82,698 sq miles. The Hyderabad State was divided into 4 broad Subhas, Warangal, Medak, Aurangabad and Gulbarga Subhas. Linguistically the State has been divided into three divisions Telangana, Marthwada, and Karnataka. The two Subhas of Warangal and Medak consisting of eight districts constituted Telangana with an area of nearly 50 percent of the State. The 1921 census of the Nizam State government gives interesting statistics about the Adi-Hindu (Scheduled Castes) in the Dominion of Hyderabad state was about 19 lakhs, which was nearly 20 percent of the Hindu population and 18 percent of the total population of the State. There were 34 Sub-Castes which were known as Mala and Madiga in Telangana and Chmber, Mang and Mahar in Maratwada. The total percentage of literacy in the "Dominion was only 2.5 percent and among the untouchables it was insignificant.

Status of Dalits in Telangana:

The bottom of the class / caste hierarchy was the category of untouchables caste who came to be designated as the Depressed class during British rule. It included such caste as the Chamars and Bhangis in North India, the Izhavars, Parayas, Pulayas, Holeyas and Malas and Madigas. In the context of Telangana region these communities are referred to as Malas, Madigas depressed classes, out caste, Untouchables. Panchamas, Adi-Andhras, Adi-Hindus, Harijana and Scheduled Caste, Harijan nomenclature was coined by Narsi Mehta, a Medieval Gujarati Saint poet. Initially the term was used only to refer to the children of Devadasis, the female temple dancers. Symbolically speaking they were children of God / Goddesses. But Gandhi widely used the term Harijan and popularized it. Many of Dalits intelligentsia wondered why Dalit had been singled out as children of God? Where others

also not children of God. In this they perceived another attempt at subtle segregation of Dalits from the rest of the society.

The term Dalit which means squeezed crushed or broken and reduced pieces, Dalit originally denoted as class rather than a caste. The concept seems to have emerged from the people's usage in Maharashtra. It was Dr. Ambedkar who initially used the word Dalit. The term Dalit gained popularity and currently a popular academic terminology. Again the term surfaced in 1970s to the Dalit Panthers movement, In Maharashtra, For them the term Dalit conveys a symbol of change and revolution, a Dalit is one who believes in humanism, rejects the existence of God, rebirth, sacred books that teachers discrimination fate and became these of have made him a slave and Dalit represents the exploited man of this country.

The economic conditions of the untouchables was miserable. They were made to do the unclean jobs like scavenging. Sweeping the streets and removing the carcasses of animals. The Madigas took shoe making and on certain occasions like marriages, funerals and festivals they are called upon to play ceremonial music and pipes. The untouchables were not allowed to enter any place of public worship to use the water of any stream, tank well and to have access to hotels, restaurants and educational institutions at the time. All these social restrictions on the untouchables throughout the country since ages whether they were the subject of the Hindu Kingdom, Muslim-Sultanates or the Western Masters in British Raj.

Malas and Madigas had to keep vigil day and night at the house of the *Dora*. They had to cut the firewood and collect leaves to prepare patrol (leaf-plates used for dining). Whenever the *Dora* went to another place, they had to havalid his bullock-cart, running; carrying of necessary goods of the *Dora* was their responsibility.

It was customary to send a man from each Mala/Madiga family to do *Vetti* at the house of deshmukh the Patel, Patwari and Malipatel and keep watch on village *Chavadi* and the poundage (*bandara Doddi*). They had to do extra work whenever an official came to the

village *Chavadi*. Further they were forced to undertake other works like training of leather, stitching of shoes and preparing leather accessories to the landlords on free of cost, while the rest of the peasants had to pay *Vatan* or annuities in the form of grain for such services.

The Dalits were the regular and unequalled *Vetti* labourers in Nizam's state, who were considered as untouchables. According to Sundaraiah *Vetti* was continued in tribal areas or some of the most backward social communities in other areas. But in Telangana *Vetti* system was an all pervasive social phenomenon affecting all classes of people in varying degrees.

Their houses were located far from the villages at the edges of the periphery of the village. In some villages the untouchables were not permitted to move in the village freely except on certain occasions. In some villages the Madigas were not allowed to have the foot are also. There was an edge in Telangana that "the weaver lacks the cloth and the Madiga, the Chappal", depicting their poverty.

They were not willing to accept inter-marriages even between Madiga and Mala communities though both the communities were facing the same problems of social, political and economic oppressions. Even inter-dining was a taboo for the Madigas and Malas at the time and this was supported by the leaders of the untouchables on some occasions, including M.V. Bhagya Reddy Varma.

As the untouchables were socially looked down for not having any professional occupation they were mostly used as the forced labour, which later became as their professional work. P.R. Venkatswamy writes about his own community people in the erstwhile State of Hyderabad said that: "The occupation of our people in the village was field labourers and free labour (forced labour) and in the city of Hyderabad and town of Secunderabad it was domestic service in European and Muslim Households. There were also leather workers, scavengers and masons among them. Many were employed in Railway and Government Departments and in private workshops. There was a few well-to-do contractors and artisans too. They adopted all Hindu customs in their

auspicious and inauspicious ceremonies and consequently all the evils of Hindu society were coupled and they even observed untouchability among the sub-castes. The greatest evil which shapped the vary vitals of their economic structure was the evils of drink which was extensively practised on all occasions of religious and social ceremonies.

Economic conditions :

At the village level large number of them worked as agricultural labourers for land owners or tenants belonging to different castes. The ownership of the land in general, was confined to a few upper caste only. In those days, the drinking habit was very much a common thing that even the adolescent boys and girls of the untouchables were habituated to it for every silly serious occasion. Many of these community people were toddy tappers, also and due to their economic position 'drink' was the most available and 'useful' item for them because these helpless people feel that a drinking was the only panacea for them to get rid of the sufferings or postpone the problem, atleast for another day. Their were landless agricultural labourers living at the mercy of the landlords (*Jagirdars, Mukhedars, Patels, Patwaries, etc.*)

Thus untouchables also suffered from so many economic inabilities due to the strict observance of the caste principles by the caste Hindus, administrators and the Nizam himself. Besides, the Shudras, among whom the professional caste people such as Potters, Barbers, Weavers, Washermen etc. (were included) also did not show any sympathy towards the untouchables. These professional caste people did not co-operate with the untouchables with their social stigmas. They also like the upper caste Hindus, observed the untouchability by not entering the localities of the 'Malapalle' or the 'madigagudem' which were outside the villages.

The situations and conditions of these untouchables in the Nizams's State of Hyderabad, could see nothing because the other professional occupational castes, when it became necessary left the rural setting and migrated to the city of Hyderabad or other urban areas in search of living or subsidiary income. But the section of untouchables could

not move out from their shackles of social, political and economic boundaries since they had to face or encounter the same problems throughout the State of Hyderabad.

The Trinity of Adi-Hindu Awakening:

In those dark days, there rose among dumb masses three stalwarts celebrities – M.V. Bhagya Reddy Varma, B.S. Venkatrao and Arige Rama Swamy, who went about awakening them, educating them and fighting for their rights. These leaders go down in the history of the Scheduled Castes (Dalits) of Hyderabad, as the "Great Trinity" of the movement. It was through their untiring services, they uplifted the downtrodden out of the rut of caste untouchability and social bondage.

A small but vigorous Dalit movement developed after 1910 based among 'Hyderabad Malas. This particular movement has the advantage of having its organizational history thoroughly documented by a later activist. P.R. Venkatswamy. Bhagya Reddy Bhagya Reddy Varma (1888-1939) was originally Madari Bhagaiah, a stewed for a Catholic family who educated him, who became involved with, and later employed by, the Brahma Samaj and took the name 'Bhagya Reddy Varma' to emphasize the rights of Dalits to claim a high status, 'Varma' being Brahmanic and 'Reddy' indicating high status non-Brahman. "M.V. Bhagya Reddy Varma was the first among the galaxy of social reformers of Depressed classes (Dalits) of Hyderabad. He did Yeoman Services to the community.

Bhagya Reddy Varma threw himself heart and soul in the work of reclaiming the Dalit from degradation and despair. Bhagya Reddy Varma launched his reform movement, who sacrificed his all and utilised his talents for the promotion of the interests of the down-trodden community.

The Dalit communities soon recognised in him a unselfish and staunch leader and Bhagya Reddy Varma sustained their confidence by consistency and honesty. He made it known to his followers that their degradation was due to their own apathy and ignorance. He instilled into them this fact that God created all men equal and therefore no one was inferior or superior to another.

Bhagya Reddy Varma sacrificed his life in the service of the social, political and economic upliftment of the Dalits or the *Panchamas* who were termed as Adi-Hindus by him. Not only that he associated himself with a number of association, movements and meetings.

Jagan Mitra Mandali (1906)

In the year 1906, M.V. Bhagya Reddy Varma was still working in a Goanese Master's House not as a slave but as a little Manager of his master's house managing six servants under his command, and under the command of his tutor arranged by his master. He was not illiterate but lacked formal schooling. He used to read '*Andhra Patrica*' published from Bombay along with the '*Desabhimani*' and '*Manoranjani*' in Telugu language. He also used to read the books in English which helped him to understand the cruelty of Hinduism towards his community through the translated articles by eminent scholars of the time. Later, he himself, made research for finding the origin of his community, came to a conclusion that the regeneration of the untouchables was not so easy a thing to do. For accepting the Herculean task of reformation of the social evil of untouchability, he might have thought of the consolidated support and friendliness and regeneration of his community in advanced line.

"The first of social activity among untouchables is to be traced back to 1906. Bhagya Reddy Varma, the first pioneer worker in the State started the Jagan Mitra Mandali in 1906 which did yeoman service to enlighten masses by means of Public Lectures, *Harikatha* performance with reference to 'Pre-Arya culture, with reference to *Bhajans*, etc.

This was the first organization with which M.V. Bhagya Reddy Varma started his life's mission of social reformation in the Hyderabad State for the untouchables only.

Jagan Mitra Mandali, by its name and activity, was truly a friend to the poor and illiterate and tried to educate the untouchables of their social maladies. As a rule the Mandali imposed some restrictions on its members for enrolment that they should be teetotalter and abstain from the beverages, through the *Harikatha* and *Burka Kathas* it spread the misery of the untouchables and the Hinduism's

treachery as the culprit for their social disabilities.

Subsequently in 1912 Jagan Mitra was renamed and was known as 'Manya Sangham' for which Bhagya Reddy Varma was the President, "the Manya Sangham through which he worked for the removal of certain social evils like intemperance, dedication of girls to deities as Devadasis, sacrificing fowls or animals at the altar (for appeasement of Gods) of temples, child marriages, etc. This spirit of social service, and his convincing eloquence attracted the caste-Hindus of the state who extended their helping hand in his work.

The primary aim and objectives of **Manya Sangham** were:

1. To import education to Untouchables Children.
2. To discourage Child Marriages.
3. To disallow non-vegetarian food and intoxicants in marriages and other auspicious functions.
4. To abolish the Devadasi known as Jogini or Murali of Basavi custom prevalent in the community.

The other important object of the Manya Sangham" was prevention of cruelty to animals". By this object, M.V. Bhagya Reddy Varma introduced his new aim into his social showing sympathy (Karuna) and love of animals (Bhutadaya) was one of the prime of the Gouthama Buddha's teachings.

M.V. Bhagya Reddy Varma believed that Buddha should be venerated and his birthday should be celebrated as a festival since he was the one who led the movement against the *Vedic Dharmas*, *Varna Vyavastha*, offering animals to appease the Gods in Yagas and Temples, preached Vegetarianism, etc., which were already put forward to the members of the Jagan Mitra Mandali as the compulsory rules and to be observed strictly.

When all the members were of the same discipline their attitudes and opinions would also become disciplined. With that discipline they began to celebrate *Buddha Jayanti* on *Vaishaka Pournami* day every year starting from 1913 till his last days, i.e., 1937, except in 1938 due to communal disturbances in the city.

With the encouragement, support, guidance and his exemplary preachings influenced so many young and dynamic people of the untouchable community in Hyderabad and Secunderabad. This led to the establishment of a number of *Bhajan Mandalis* in many localities. "About twenty five *Bhajan Mandalis* of 'Kabir Panth', 'Tulasi Pant', 'Nanak Panth', 'Lingayat Panth' and other *Panths*. By this M.V. Bhagya Reddy Varma left the two jobs. He was relieved from the house of his master to join the Electricity Department as a Wireman. Soon he left his job also and secured a post as a Preacher in the "*Jeevanaraksha Mandali*" of Lalji Meghji on a monthly salary of Rs. 60/- with a Motor Cycle for his conveyance. The above post was very suitable for a man like Bhagya Reddy who had the ability to do this job most sincerely and efficiently". With this facility M.V. Bhagya Reddy Varma was able to develop contracts and mingle with people as often as he could with the sprouting '*Bhajan Mandalis*' in Hyderabad and Secunderabad as well. "Bhagya Reddy Varma's job as a preacher in the Humanitarian League afforded him many facilities to organise skilfully a number of associations of young men in various localities of the city of Hyderabad. A part from the work of social reform their activities included the creation of friendly relations between 'untouchables' and people of higher castes".

There was no inter-dinning and inter-marriage among these castes. Bhagya Reddy Varma introduced *Preeti Bhojanam* among the untouchables and also between the untouchables and caste Hindus. At these communal gatherings, as a measure of social reforms, only vegetarian food was served. So the caste-Hindus would participate in this *Preeti Bhojanams*. Serving of the food was entrusted to the lower castes because in those days accepting or taking even water, from an untouchables would mean '*Varnasakara*'; By this *Varnasankara* method the upper and lower castes would come and settle at the mixed state in the society thus breaking their original caste position.

Swasti Dal (1912)

With the help of band of about 35 volunteers belonging to the Mala community and as a part of Mission Bhagya Reddy Varma organised "Swasti Dal" under his own

standardship in the year 1912. Sir Ali Imam, the President of the Executive Council, H.E.H. the Nizam's Government awarded a Certificate in appreciation of its activities. Maharaja Sir Kihan Pershad also awarded a Silver Medal to the **Swastik Dal** for its excellent work done during the days of Industrial Exhibition held at Alwal. The Deccan Humanitarian League awarded a Gold Medal to Bhagya Reddy and the Silver Medals to volunteers for their meritorious services in the field of prevention of cruelty to animals.

While the number of *Bhajan Mandalis* were growing erroneously, the activities of Bhagya Reddy Varma were also becoming multifold. Between 1906 and 1916 i.e., in a span of ten years he gave a number of speeches at these *Bhajan Mandals* or on the occasions of *Buddha Jayanti* and *Nandanar Jayanthi* and the *JayantisofChowkamela Narsi Mehta* and such other saints. As Bhagya Reddy Varma was the president of the Deccan Humanitarian League he had the opportunity of touring all the Telangana and other places of erstwhile Hyderabad State where he used to criticise the Hinduism and lighting a sense of revolt in the minds of the untouchables. This made him a popular figure in entire Deccan (Hyderabad State) and outside as well.

With these relentless programmes of the *Bhajan Mandalis*, as well as the activities of Adi-Hindu Volunteer Corps (Swasti Dal) and with close collaboration of Philanthropic Caste Hindu people, Bhagya Reddy Varma was succeeded in controlling the prevalent social evils like *Joginees Parvatis* or *Devadasies*, intemperance, etc. He also succeeded in the abolition of use of meat and drink on all auspicious and inauspicious ceremonies alike. He was honoured by the untouchables, his brethren and by Caste-Hindus who convinced that he was their real and sincere leader with the titles of "Sangha Manya".

Devadasis :

Devadasis in this system, a virgin would be offered to the local deity and then onwards the girl and to live throughout her life at that temple serving the God or Goddess of the temple. The village heads, priests, king's men and the rich devotees might use her for their sexual gratification and in response offer her

food and clothing. If not she had to live on the offerings made to the temple for livelihood. She had to dance in the temple for festivals and ceremonies when performed. Though this might be a social custom of the day, past or present, this was practised in the State of Hyderabad.

Bhagya Reddy Varma worked to remove the evil customs like dedications of girls to deities known as "Devadasis". This Murali or Jogin systems as it was known was abolished by law by Sri Varm's efforts in the H.E.H. the Nizam's Dominion and also such other customs as dancing of women before funerals, use of liquor and meat in auspicious functions.

Bhagya Reddy Varma also founded an organization known as the *Murali Nivarana Mandali* to curb the custom of dedicating girls. Similarly, several other social reform organizations sprang up in different parts of Telangana region. For instance, the *Matangi Mahasabha* at Nampally and the *Suneetha Bala Samajam* founded by Arigay Ramaswamy at Secunderabad worked towards the abolition of the Jogini or Murali system in its larger concern for temperance. So also the *Adi-Dravida Sangham* founded by Venkat Rao in 1922 at Ghasmundry was concerned primarily with the removal of the Devadasi system. The Adi-Andhra reformers condemned the practice and felt that the "custom of dedication of girls was immoral".

The Adi-Hindu Social Service League undertook measures to mobilize public opinion by holding meeting in villages and tried to create public awareness of the evils of the custom. Weekly meetings along with street meetings, public lecturers also were means adopted towards generation of consciousness about the evil effects of the custom. Journals and booklets were reportedly published in Telugu. One of the books in Telugu was *Murali Streela Kathalu* published by Adi-Hindu Grandha Mala during the 1930s. The Dalit panchayats played a significant role in the movement thus existing as an alternative to the general reformist activities in the neighbouring regions of the Madras and the Bombay Presidencies. The movement was strengthened by the legislative action of the government, which passed an order declaring it as illegal in 1930. Despite intensive campaigns of the custom continued to persist due to lack of

effective rehabilitative measures. Just like the "Vetti" this social evil also continued after independence, and after the inclusion of the Hyderabad State into Indian Union, even till recently.

All these social restrictions on the untouchables further deteriorated their economic plight. This was the social, economic and political scene of the untouchables throughout the India since ages whether they were the subjects of the Hindu Kingdoms, Muslim-Sultanats or the Western Masters in British Raj.

Bhagya Reddy Varma also edited, printed and published *Bhagya Nagaram Patrika* fortnight basis on 1930 out it was renamed as *Adi-Hindu* converted to Monthly in year 1937. Nizam praised Bhagya Reddy Varma for his social work and recognised it with an award. Later the Nizam appointed him as Chief advisor to his government. The Adi-Hindu Bhavan at Chadarghat in Hyderabad has been platform for the many revolutionary meetings. His dream was to bring progress in Dalit families for which he struggled, taught and served till his last breath.

Bhagya Reddy Varma who felt that education was essential for an all round development of untouchables. His basic programme was to open primary schools for their education as in those days admission of children of untouchables in schools was unknown in Hyderabad. To began felt in 1910 a lower primary school was established at Esamia Bazar, Hyderabad afterwards at Lingampally and Bugal Kumta, Later on few more schools sprang up at Chechalgada, Sultan Bazar, Dhoolpeta, and Gunfoundry. The number of these Adi-Hindu Schools soon grew up to 26 with about 2500 Dalit, students.

In 1912 Arigay Ramaswamy, who had been an office boy, carpenter and ticket collector on the railroads, began a social reform group in Secunderabad; and Madari Audia, the son of a butler had started another *Manya Sangam* at Ghasmandy. All these organizations stressed internal social reform: attempting to ban drinking of alcohol and meat-eating at social functions, abolition of the devadasi custom.

As this emerging, partly-educated Dalit middle class began to enter social life, the radicalization among Dalits through South India brought with it an identification with the 'Adi' ideology. It was Bhagya Reddy Varma himself who presided over the momentous conference at Vijayawada in 1917 when the 'Panchama' identity was rejected, and over a number of conferences after that. Nevertheless, in Hyderabad itself organizing took up an '*Adi-Hindu*' theme: four *Adi-Hindu* conferences were organized between 1912 and 1924, and gradually the main organizers began to use this terminology. In 1924 Arigay Ramaswamy formed the *Adi-Hindu Jatiyonnati Sabha*, not to be outdone, Bhagya Reddy Varma transformed his *Manya Sangam* into the *Adi-Hindu Social Service League* in 1922. This became the main organization of the Dalits of Hyderabad a feat attributed to his energetic organizing and ability to gain support from liberal Hindu sympathizers. Along with the traditional aims of internal reform (removing social evils, establishing schools, societies, reading rooms, Bhajan mandalis), the aims of the organization included 'removing ignoble appellations and spreading the identity of 'Adi-Hindu'.

What exactly did the 'Adi-Hindu' identified connote? This term was spreading among sections of north Indian Chamars at this time claiming them to be exploited and conquered original inhabitants, and Bhagya Reddy himself travelled to North India for some of the conferences, notably two in 1927 and 1930, which described the depressed classes and *Adi-Hindus* as descendents of the original inhabitants of this country who were rulers and owners of this land of their birth before the advent of the Aryan to the country'.

Bhagya Reddy's rejection of tradition was more radical. In treating untouchables as the original 'sons of the soil', in seeing Brahmans as outsiders pushing all the original Indians down to south India, he was to have used the term '*Adi-Hindu*' in a way in which 'Hindu' did not refer to religion but was given by foreigners to those living in India.

Hyderabad Dalit politics was marked by intensive competitive struggles. During the 1920s these were primarily between Arigay Ramaswamy and Bhagya Reddy Varma, founding rival '*Adi-Hindu*' organisations. During the 1930s similar battles took place between B.S. Venkatrao and Arigay Ramaswamy and later between Venkatrao and Subbaiah. While there were ideological-political differences embodied in these disputes; the personal competition for leadership is striking.

Dalit activities in Hyderabad began to gain in momentum, if not depth, than before the radical 1930s. A host of young educated Malas, a few Madigas and some Marathi-speaking Mahar and Chambhar youth in Marathwada stood behind new leaders.

B.S. Venkat Rao originally known as Bathula Ashaiah, was born on 11th December, 1898 in a poor family of untouchables in Secunderabad. His father was in the domestic service of Europeans and could provide his children with modern education. B.S. Venkat Rao was proficient in Hindi and English. B. S. Venkat Rao, had started many social reform activities among the Dalit communities at Ghasmandy in Secunderabad. Venkat Rao was critical of the caste system and Hinduism. He said..

"So long as we live in the Hindu fold there is no salvation for our community as a whole. We are not given even the minimum rights and even dogs are treated better than ourselves. There are 24 lakh of Harijans in the State and almost all of them, particularly literates are ready to leave Hinduism".

After working for some time in Pune, he returned to Hyderabad in 1919 and joined the civil engineering department of the Nizam state and subsequently posted as the overseas in the public works department. After working for few years as a government servant, he resigned to his position in 1922 and carried out his social and political activities as a civil contractor. As a social reformer he founded a number of organizations for the uplift of the Dalits. In

1922, he founded *Adi-Dravida Sangham* with the help of M. Govinda Raju and P.R.Venkata Swamy for the educational development of Dalit communities and he also carried out a number of educational programmes by establishing several schools in Secunderabad. For his educational contribution he has drawn inspiration from Jotiba Pule. In 1927 he founded **Adi-Hindu Mahasabha** with Arigya Ramaswamy, M. Swamy and others. Through these organizations he attempted to bring about a new awakening and consciousness among the Dalits in Hyderabad. During the social reform activities Venkat Rao participated in various conferences and attended several meetings. He also constructed houses, schools, libraries, and temples for the untouchables and poor backward caste people. He constructed model colonies at Bansilalpet, new Bhoiguda, and Ghasmandy.

Venkat Rao presided over the first *Bombay Presidency Mahar conference* held on 30th May, 1936 in Bombay. Ambedkar himself invited Venkat Rao to preside over the conference which was considered as a great honour. It was from this conference onwards he was called as Hyderabad Ambedkar. In the same year (1936) he was coffered with *Kusru-E-Deccan* a medal by the H.E.H Nizam of Hyderabad. In 1937 the Nizam Government nominated Venkat Rao to the Hyderabad Municipal Corporation. He had been Municipal Counsellor of Hyderabad for ten consequent years from 1937 to 47. He was also a member of the statutory advisory of bodies of the Nizam's governments like Finance, Education, Labour, Food and Defence, during 1941-46. He got elected unanimously to the Hyderabad Legislative Assembly in 1946. He became the Education Minister of the Nizam State in 1947. After the Police action in 1948 he was put under the house arrest and was released later. He contested in the General Elections in 1952 as an Independent candidate, but was defeated by the Congress candidate. Later he was nominated to Rajya sabha in 1951.

Venkat Rao was the most prominent among those who dominated the socio-political and religious fields in the Nizams States for two decades. He was instrumental in the formation **Youth League of Ambedkarites** and he became the president. He propagated the ideals and mission of DR. Ambedkar and organized programmes to better the conditions of the depressed classes. He also worked hard to remove the caste differences among Dalits. Its aim is also to carry out a vigorous campaign to ameliorate the social and economic disabilities. He also campaigned against the religious conversion activities of the Christian Missionaries. He appealed "I wish to sound a warning to Harijans of Hyderabad State the implication of the divine message of Dr. Ambedkar to live the Hindu fold is not to effect an immediate change of religion. His move is to create a spirit of revolt against the Tyranny of caste Hinduism and the grave disabilities under which the depressed classes have laboured and continue to labour on Hinduism". He also said that..

"We are not seeking spiritual salvation through change of religion. What we demand is a complete change in the present economic and social structure of society and the removal of the gross injustices". The activities of the League were also focused on political issues. Venkat Rao was in constant touch with Ambedkar and informed about the leagues activity he personally discussed about the constitutional reforms in Hyderabad State and sought his help in representing the case of the untouchable to the Government of Hyderabad to safeguard the political interest of the depressed community in the constitutional reforms.

Venkat Rao played an important role in the Nizams Government. He became the minister of Education and created **ONE CRORE TRUST FUND** for the education of the depression classes. He had undertaken a number of welfare measures for the uplift of the Dalit communities. On his recommendations the Nizams Government distributed government

lands and west lands across the state. He also worked for bringing about communal harmony between Hindus and Muslims. He worked hard to reduce communal tensions and polarization and defused the communal clashes by mediating between the Hindus and Muslims. Through his effective lobbying he managed to get Dalit representation in the Nizams Government and he also visualized an alliance between Dalits and Muslims. Venkat Rao founded the **Hyderabad State Depressed Classes Association** and sought to organize the depressed classes into one united body. The all India depressed classes conference was held at Nagpur on 18-20th July, 1942, under the presidentship of N. Shivaraj. It was attended by a group of delegates from Hyderabad State. Venkat Rao maintained close relations with Dr. B.R Ambedkar and the Marathwada Dalit Leadership. Along with the Adi- Hindu movement the *Arundatiya Mathunga Sabha* and the *Arunditya Mahasabha* became the organizations of the Madigas who put forth their demands independently of the other communities. In Hyderabad State, all the above organizations stressed internal social reform: attempting to ban drinking of alcohol and meat-eating at social functions, abolition of the devadasi custom.

Sri. B. Shyam Sunder another important Dalit reformer in Hyderabad State was born in an untouchable's family of Aurangabad on December 21st 1908. He graduated from Osmania University, Hyderabad. He later represented Hyderabad as an M.L.A. After reorganisation of states, he became M.L.A. from Bhalki reserved constituency of Bidar. He later founded "*Bharatiya Bheem Sena*" for the upliftment of *Mool Bharatis*. By sheer dint of his leadership qualities he attained the position of undisputed leader of Bahujans, and voice of oppressed suppressed and depressed citizens of India.

He entered public life not by chance, but by choice in order to uphold the human dignity and protect the human rights. He possessed all prerequisite qualities to lead the masses. He

was a legendary hero in his lifetime, an erudite scholar, fire emitting orator, independent thinker, political visionary, poet, excellent writer and an eminent parliamentarian - a rare combination in one person.

We are Mool Bharatis:

From day one of his political career, he declared that we are not Hindus and we have nothing to do with the Hindu caste system. We are aboriginal, indigenous and original inhabitants of *Bharat Varsh* and we are builders of Harappa and Mohenjodaro civilization and we are *Mool Bharatis*. In this regard he submitted a memorandum to Sir Mirza Ismail and demanded that we should be treated as separate entity. To educate his brethren he toured the length and breadth of state and held public meetings brought small pamphlets and his 78 pages Presidential Address at Parable is a landmark wherein he has elucidated that we are *Mool Bharatis*. He says that caste system is to given them, by them, and for them, and we have been forcefully and wrongfully included amongst Hindus.

Contribution to Education:

Shyam Sunder had firm conviction that education alone was the golden key to liberate untouchables from the clutches of ignorance, superstition, conception of *Karma*, and theory of *punarjanma* (rebirth). Shyam Sunder realized that education is very vital instrument for the smooth and non-violent transition of the Scheduled Castes and Scheduled Tribes from the category of depressed class into the category of the prosperous and empowered ones. He was the brain behind setting up of an educational trust by the Nizam government known as "ONE CORE RUPEE EDUCATIONAL TRUST FUND" in 1932 and he was designated as the Chairman of this fund. The trust's main aim and objective was to take all-round care of educational needs of untouchable students. The trust established "Madarasa-e-Pust Quam" that is separate schools for untouchables in order to avoid caste-based ill-feelings among school children

and simultaneously it opened separate residential hostels. To combat school dropout menace, monthly scholarship scheme was introduced. And above all, a separate Directorate was established to monitor the scheme and whole educational system. The whole concept of the educational system was unique in several ways and it was first of its kind in the entire pre-independent India.

Champion of Land Reforms:

Knowing fully well that land was indeed an important and basic components for self-help and self-reliance in an agrarian based economy. He organised a huge and mammoth

Now disputes focused on pro-Muslim versus 'Ambedkarite' responses to the declaration of leaving Hinduism. Quite expectedly Muslims used Ambedkar's announcement to step up pressure for conversion to Islam. Several Dalits became active, including Kusuma Dharmanna in the coastal regions and peesari Veerana, a Hyderabad Mala who had confronted Gandhi himself in a 1935 visit and now became a propagandist for Islam under the name of P.V.Sardar Ali. After the intensified Hindu-Muslim conflicts of the 1938-39 Satyagraha, Venkatrao himself began to lean in a pro-Muslim direction. In 1938 he took the initiative of forming a **'Hyderabad State Depressed Classes Association (DCA)**. In contrast to the Youth League this was politically oriented to the Nizam's regime, and in May 1939 sent a memorandum to the Nizam's Executive Council demanding separate electorates.

In May 1940 J.H. Subbaiah was Secretary of the Association. After taking in that capacity for about a year he began to covet fame as the biggest Depressed Classes Leader of Hyderabad. As he could not gain his object by remaining the Secretary of the Depressed Classes Association under B.S. Venkatrao he began to work, in April 1941, for the formation of a Central Organisation of the Adi-Hindus to be known as **'Hyderabad State Adi Hindu Maha Sabha'**. Differences and rivalry arose between he and B.S. Venkat rao and eventually,

rally of landless untouchables and peasants at Hyderabad. He demanded land reforms and he gave a clarion call to his people to encroach the government held "Gairan" land. He later impressed on the Nizam government that land reforms alone could bring a qualitative improvement in the life style of untouchables. Later the Government regularized the encroached land by untouchables. It is due to Shyam Sunders efforts alone that many landless poor people in the then Nizams dominion do own some land holdings – even though their counterparts do not own any such land in any part of India.

Subbaiah was considered to be disloyal to the **'Depressed Classes Association'**, was removed from the post of Secretary and also was expelled from the **'Hyderabad Depressed Classes Association'**, After his expulsion from that Association Subbaiah worked with increased keenness for the formation of the **'Adi-Hindu Maha Sabha'** and Succeeded informing the body on 26-7-1941 with himself as President.

In July 1942, J.H. Subbaiah attended the 'All India Depressed Classes Conference' in Nagpur and got in touch with Dr. Ambedkar. Subbaiah appears to have impressed Dr. Ambedkar by promising to call his organisation as the **'Hyderabad State Scheduled Caste Federation'**, in the line with the name of the above All-India Body. Soon after his return from Nagpur, Subbaiah held a meeting on 26th July 1942 at Secunderabad at which it was decided that the *'Adi Hindu Maha Sabha'* should be called **"The Hyderabad State Scheduled Castes Federation"**.

Regarding the work of HSSCF, it passed the following resolutions on the day of its formation itself.

1. Requesting Government to give 1/3 representation to the Depressed Classes in the proposed expansion of the Executive Council.

2. Demanding equal representation with Hindus in the Advisory Committee formed under the constitution reforms in the districts.
3. Demanding that effective steps should be taken immediately to put an end to 'Begar' (Vetti).
4. Urging Government to make adequate provision in the budget for the political social and educational uplift of the Dalits.

Subbaiah also demanded that Government should earmark a special sum for the education of Dalits, give them adequate representation in Government Service and in the Executive Council, and give financial and other necessary help to Dalits to establish their colonies on waste lands.

The visits of Dr. Ambedkar to Hyderabad gave a decided fillip to the activities of the HSSCF. Dr. Ambedkar on his arrival at Hyderabad on 20-9-1944 patronised the **'Hyderabad State Scheduled Caste Federation'** at a meeting in Secunderabad. In 1946 also Ambedkar visited Hyderabad to participate in his Birthday Celebrations organised by HSSCF.

Sukam Achalu in Nalgonda and Butti Rajaram in Karimnagar apparently did some rural organizing for the SCF, to the point that when Achalu was denied as SCF ticket for the 1952 elected with the highest majority in India. Butti Rajaram was said to be a cousin of a member of the Hyderabad group, Prem Kumar, who became a fruit contractor and built a good base for the SCF in Karimnagar District.

The leaders in Hyderabad were Mala, but it is striking that Venkatrao's DCA, rather than the pro-Ambedkarite SCF, seemed to be more influential in the Marathwada region. Most educated, young Marathi-speaking Dalits were with the DCA, including Sponara Dhawe (of Latur), Ganpatro Waghmare (a Chamber of Parbhani) Govindrao Gaikwad (of Aurangabad), Hammanthrao were using Ambedkar's name in the Marathwada region, but the DCA's pro-Muslim orientation and propaganda gained

sustenance from the fact that the Nizam was actually implementing some reforms, including granting wastelands to Dalits, while the communists were absent from the area and the Congress sites (organized in the Maharashtra Parishad) were doing nothing to take up the economic or social issues of rural Dalits but were instead emerging as a 'Hinduistic' organization based almost exclusively among the middle-caste peasantry and upper castes. The land given to Dalits by the Nizam, in fact, became a major source of conflict in Marthwada after the Congress takeover, when caste Hindu 'Congress leaders' sought to snatch it back and Dalits who resisted were made objects of attack.

While the communists were attempting to survive repression in Telangana and Dalits in Marathwada were confronting reprisals from caste Hindu Congress men, the factionalised Dalit leadership of Hyderabad city went through a period of intense reorganization. Following the 'Police Action', in fact, many ran for shelter to the Congress or its association organizations.

Venkatrao was arrested, shyam Sunder, the most militant and pro-Nizam spokesmen, was out of the scene for some years, sent on a mission to Europe to represent Hyderabad's right to independence before the U.N. When he returned, at the time of the 1952 elections, with his usual verve he put up the board of the old **Depressed Classes Association** and announced his candidacy. But by that time the DCA had gone out of existence. A large section of its membership simply fled into the Congress fold, joining a newly formed *Dalit Jatiya Sangh*, allied with one Dharam Prakash who was the leader of a group that had split from Jagivan Ram **Depressed Class League (Dalit Jatiya Sangh)** was the normal Hindi translation for the league) and was under the patronage of the Hyderabad Congress. M.B. Gautam was its general secretary and Mudiguna Laxmaiah, a rich Madiga shoe factory owner who had previously led the *Arundatiya Matunga Mahasabha*, was its president. Some of their political opponents later protested against the 'ex-Razakars' in this group.

The SCF did not fare too well. There was a split in protest against Subbiah's dictatorial methods', with young activists such as P.V. Manohar and Vemula Yadagiri Rao leaving to form a **'United Scheduled Caste Federation (USCF)**.

During the 1952 elections the USCF allied with the socialists, apparently without much success, and the SCF established an alliance with the front organization of the banned communists, the Progressive Democratic Front (PDF). This was in spite of the Ambedkar's expressed policy at that time of not allying with communists, it proved to be beneficial. In fact the election results clearly showed that, whatever their mistakes and vacillations, their militant struggles had won the communists a popular base. They contested a total of 108 seats in the assembly elections; winning 36 of 51 in coastal Andhra, 36 of 45 in Telangana (all of these in the central districts of the revolt and 5 of 12 in Rayalaseema. At least two of the winners were second-rank Dalit activists who had formerly been with the SCF. In addition 10 socialists allied with the PDF won seats, while the SCF itself won five assembly seats (two in Marathwada and three in Telangana) and one Lok Sabha seat with the help of the PDF.

Though the SCF was organizationally weak in Hyderabad, there was tremendous pressure to take some kind of action after 1948-50. After the police Action, a severe repression had been unleashed on Dalits and Muslims by the victorious 'Congressites' Caste Hindus, Venkatswamy reports.

"The political bungling of the power-intoxicated Razakar leaders resulted in the massacre of hundreds of Muslims and Dalits. The districts of Parbhani, Nanded, Aurangabad and Bidar were the most worst affected where much innocent blood was shed".

Janata, which up to the point of the Police Action and been describing 'Razakar atrocities',

now began to focus on the retribution by the 'state Congress goondas', the pulling down of Dalit houses, violence against men, women and children. A report by B.S. More claimed that only the rich had fled, and on returning looked for scapegoats, picking on the poor Mahars, Mangs and Chambhars rather than the well-off who had actually given money to the Razakars. In this sensitive situation, with the majority of people in Marathwada 'uneducated and under the tyranny of tradition', Congress 'Harijan' propagandists were urging Dalits to engage in temple entry programmes with the result that they were only getting beaten up by caste Hindus' and then State Congress says this is only because of their previous Razakar connection. Tarring all with the Razakar brush was a useful tactic in low-key rural classes-caste warfare.

A key element in this was land-land promised to the Dalits by the Nizam government apparently seized by them in many cases in the chaos of the period taken back by the victorious returning Congress Caste Hindus. And in this context the new Congress government made its politics clear when it started snatching back some of the common lands given to Dalits on the excuse that they were cultivating it instead of planting trees on it as they were supposed to.

Following the 1952 elections, the SCF, led by the two MLAs from Marathwada, Shamro Jadhav and Madhavrao Nirlekar, organized resistance to these evictions. While directed against the Congress-ruled Hyderabad state, this was also an assertion of organizational strength vis-a-vis the Caste Hindus. Nearly 1,500 satyagrahis were arrested in the struggle, 'the first of its kind in Hyderabad state', according to Venkatswamy. With the leadership of P.N. Rajbhoj and the local Marathwada activists, it was carried on until 16 November 1953 when the Hyderabad government agreed to restore the lands.

MUSLIM WOMEN'S POLITICAL PARTICIPATION IN TAMIL NADU – A STUDY

R. Abida Begum

The aim of this paper is to explore the participation of Muslim women in politics of Tamil Nadu, which was seemed to be nightmare even by the women of some other communities in the recent past. Muslim women on the other hand tried their level best even in the political space. Islam was the first religion which talked about rights of women. For the first time, a human treatment and legal status was given to women. Muhammad Asad writes that Quran, Sunnah, and Islamic history provide ample evidence of women undertaking various forms of political involvement from fighting in battles to influencing political decisions.¹ Political participation is a major component of empowerment.

Role of Muslim women in Indian Independence Movement

Before we consider the present involvement of Muslim women in politics, it is relevant to look at their contribution to the

Indian independence movement. Inspired by Mahatma Gandhi, a number of women joined the freedom struggle and most of them were from the upper and middle-class Hindu families.² While Muslim women too joined the independence struggle against the British, played no less a role, but their numbers were less compared to Hindu women.³ Muslim women stayed within the four walls, behind the veils, observe strict purdah, so powerful and energetically helped to liberate the country. The list of Muslim women who participated in the freedom struggle is impressive and not restricted to one type of activity. They encouraged their husbands, fathers and sons at home to participate in freedom struggle and themselves took all the household responsibilities on their shoulders in the absence of their men folk. They came out of their four walls and travelled from place to place to encourage people to strive for independence. They joined non-violent as well as violent

movement against the foreign rule. These women were not only from educated and enlightened families but also from illiterate and rural areas. Some of them were imprisoned, fined and suffered for freedom movement and their contribution cannot be denied. It is estimated that about 225 Muslim women committed their lives to the revolt but their role in the freedom movement has not been properly acknowledged by the historians.⁴

Muslim Women in Political Arena

Participation in the political process provides an opportunity to the women to make the political system to reflect their aspirations and ambitions and at the same time lends legitimacy to the system which is the hallmark of democracy.⁵ The two important political rights sanctioned to women by the Indian Constitution were female enfranchisement and eligibility for the Legislature.⁶ It is a fact that representation of Muslims in Indian politics, has been disproportionately low, ranging between 6-8%, as compared to their share in the Indian population. However, following independence, when Muslims in India became a minority community suddenly withdrew into a shell to retain their religious identity. As a part of the process Muslim women were confined to the home. Muslim women, who tried to enter the parliament or legislatures as independents have had little luck. Muslim women have been faring very badly whenever they contested elections. Barring a few women from political families or from the royalty, most Muslim women have been losing their deposits irrespective of whether they contested under a party banner or as independents. The class from which most of the women MPs come is perhaps the most important factor in their successful inclusion into the political system.⁷ However, Muslim women are unable to claim their due in Indian politics, in spite of their ambitions.

Accordingly, no Muslim woman was elected in the first Lok Sabha, consequently there were only two Muslim women were elected in the second Lok Sabha election and only one Muslim woman was elected in the third Lok Sabha elections. Subsequently no Muslim woman was elected in the 4th and 5th Lok Sabha elections and in the 6th Lok Sabha election only two Muslim women were elected.

It is to be noted that, those who entered the Parliament belonged to the elite political families or were nominated. Till 1996, no Muslim woman from Tamil Nadu was contested in the Lok Sabha election and surprisingly no Muslim woman was elected to the Lok Sabha from Tamil Nadu.⁸

It was an established fact that national parties did not entertain Muslim women, unless they were already holding a track record or belonged to a dynasty and hence had a hold at the grassroots level and also had the means to fight the elections. The majority of women in the Indian Parliament are elite women. While their public role challenges some stereotypes, their class position often allows them far greater range of options than are available to poorer women. This left the Muslim women to try their luck to fight the elections under the banner of some existing party; even if it is obscure and has no history of electoral success. Muslim women continuously tried to enter the Parliament, most of them as independents. By participating in the elections and contesting as independent candidates, Muslim women have shown that given a chance and support, they do not shy away from the public sphere; and the men (fathers and husbands) who gave the necessary support did so with confidence in them.

Viewed from the angle, the level of participation among women is generally low except in voting and perhaps attending meetings.⁹ The political parties have generally been in different towards women, treating more as appendages to men. For example, working women and women professionals do generally tend to have high level of awareness but this is not reflected in the level of their participation in the political process. The AIADMK supported Bader Sayeed, Advocate and Social Activist from Chennai. With a little more support from the community made, she won the seat.

Due to such attitudes prevailing in political grounds, Muslim women had suffered historical seclusion from the political scene and political participation has consistently been considered as a male preserve. This has precipitated as one of the major demands of women and has constantly been sought as one of the main goals in all women's movements and activities.

Indian women have been demanding their rightful place in politics and in spite of a proposal to reserve 33% of the seats in the Parliament and legislative assemblies in the states, the proposal has been facing hurdles since 1996.¹⁰ When Islamic countries (with the exception of Saudi Arabia) are allowing women's political participation and providing quotas for them, why does not the Muslim community in a secular democracy like India promote their political participation? If so, is there any guarantee that the Muslim women will get their due if the Women's Reservation Bill becomes an Act?

Reasons for Political Backwardness of Muslim Women

Considering a total disempowerment and underdevelopment of Indian Muslims in nearly all walks of life, as pointed out by the Sachar Committee Report, it becomes imperative to think of enhancing the share of representation of Muslims in the political machinery.

Socio-Economic Backwardness

Foremost reasons for the poor performance of Muslim women at the election are socio-economic backwardness, lack of education, lack of support from the community, religious restrictions and the perception that women are not cut out for the job. Apart from the curtailment of most of their rights they are told that the primary duty of a conservative Muslim woman is to look after her husband and children. On the other hand Islamic laws do not make it mandatory for women to remain confined to household duties.

Lack of Political Awareness

It is an established fact that women in India suffer discrimination more compared to their sisters belonging to Hindu and Christian religions. Asghar Ali Engineer writes: "India being a secular democratic country there is much more political and social space available to Muslim women in India compared to their sisters in many other Muslim countries. To avail this social and political space increased awareness among women is needed. The greatest stumbling block is poverty.

Religious identity

Yet another reason for low representation of Muslim women is that many of the Indian

political parties, believes that the non-Muslim electorate, won't vote for Muslims because of their religious identity. On the other hand, there are a large number of constituencies where a majority or a significant fraction of the electorate is from the Muslim community and a small population of the SCs but the seats have been reserved for SCs. This seems to be a deliberate attempt to deprive the Muslim community of its leadership. Such moves, whether involuntary or deliberate, have further reduced the chances of Muslim leadership to grow.

Diverse Nature of Muslim Community

As far as the development of Muslim leadership is concerned, there have been many attempts to form Muslim political parties. Although some of the Muslim political parties gathered some strength at state level, however, none of them has been successful at the national level. The main cause of their failure is diverse nature of Indian Muslim community which is subdivided into many other religious, linguistic, and regional groups.

Conclusion

Women's representation in politics is important on the grounds of social justice and legitimacy of the political system. The issue of reservation needs to be addressed seriously. Indian Muslims deserve more affirmative action's as recommended by the Ranganath Mishra Committee to improve the socio-economic condition of Indian Muslims in general and their share in the political leadership in particular. To develop the Muslim leadership it is necessary to form pro-Muslim political parties or provide an equitable share to the Muslim leaders in mainstream political parties. Since in majority of the constituencies in India non-Muslims dominate the electorate, it will be difficult for Muslim candidates to win the election. Even if the Muslim candidates win a few seats, the Muslim-affiliated parties will seldom have a majority to form the Government so they will be left in the opposition. If the Muslim representatives perpetually sit in the opposition, the Muslim community ultimately suffers because of the partisan politics; consequence is that such partisan politics of Muslims supporting a pro-Muslim party will give the right wing parties a sound pretext to garner support on religious lines.

In an Indian Muslim society very few women are socially active and highly competent in different walks of life and felt that unless Muslim women demand their legitimate

rights they will continue to suffer. The presence of such women in the State Legislatures and Parliament will immensely benefit the community, its women and children particularly.

SHADES OF RESPONSES: TRAJECTORIES OF ELECTRIFICATION AND THE MIDDLE-CLASS CONSCIOUSNESS IN COLONIAL SOUTH INDIA

K.A. Amritha

The history of electrification in colonial south India can be constructed in many ways. This paper tries to understand the dichotomy between 'modern' science and technology in colonized territories and indigenously ruled pockets in south India which was deliberately created by the policies of the British Government. The British transferred the technologies, like electricity, evolved in the West, without seeking its adaptability to a new context. The indigenous had no choice over the selection of technology during the colonial period. How the traditional society in south India responded to the 'modern' technology introduced by the British in the late nineteenth and early twentieth centuries?

Modern science and its applied technologies were the evident consequences of 'modern' European civilization in colonial India. The Industrial Revolution was at the core of the 'modern' Western civilization which had overtaken the slower-paced Indian Sub-continent. The British never made any delay for introducing the products of modern technological inventions into India during the colonial period. As they were invented in the West, the colonized subjects never saw the evolution of many modern technologies implanted into their territory. Being a modern

technology and a new source of energy, electricity also went through the same saga.

The history of electrification in colonial south India can be constructed in many ways. The British transferred the technologies, like electricity, without seeking its adaptability to a new context. The introduction of electricity from a peculiar Western context may or may not suit to 'other' contexts. Since the context is an important deciding factor for the transfer, design and development of any technology, it is important to study how the colonized context of south India welcomed electricity.¹ The indigenous had no choice over the selection of technology during the colonial period. The traditional society in south India responded to the 'modern' technology in different ways in the late nineteenth and early twentieth centuries. The remarkable response came from the newly emerged educated middle classes in south India.

Electricity was introduced into Indian cities soon after it was used in London and New York during the 1880s. The demonstration of electric light was conducted by European electric companies in presidential cities in India. Electricity, as a technology, was implanted into colonial India suspending the scientific

knowledge behind its evolution, generation and distribution. The Western technological innovations, especially electricity, within the colonies, created many-layered fields of its application.

In south India, electricity arrived in the form of public utility services like telegraph and tramway. As the utility services of electricity were limited to the presidential cities, Madras was connected by telegraph.² It took almost one year to open the telegraph offices for the public in Madras Presidency. On the inaugural day, on 1st March 1854, the public was invited to send message, not exceeding six words, free of cost as a promotional feature.³ The indigenous middle classes started protest when the commercial service came into effect with the charges from 2nd March. Although they had desire, the exorbitant rates of telegraphic stamps discouraged them from using the 'modern' system of transmitting messages. The access to telegraph was limited to the British and the rich indigenous elite.

In the form of electric trams in Madras, the use of electricity for public transport was enabled in south India.⁴ The Madras Electric Tramway Company commenced its first commercial ride on 7th May, 1895.⁵ Before that, the Tramway Company offered its free ride to the public to encourage the people to try it out and to attract them to use it. Though there were horse-driven trams since 1877, the electric trams were new to the people of Madras. The operations behind the electric tram cars remained a mystery to the indigenous people. For them, the tram cars were nothing but a new way of transport, ran up and down the whole day, introduced by the British. Though the indigenous elite experienced the electric-driven trams, the knowledge about the use of electricity was unknown to the people of Madras. The indigenous intellectuals in south India wanted to acquaint the science behind the utility services of electricity.

The colonial government intensely redirected the education to a small section of people in colonized territory and gave top priority to create a new class as Macaulay's Minute on Education states, "Indian in blood and colour but English in taste, in opinions, in morals and in intellect". It was difficult to get

operators for telegraph in Madras because the people who know English in south India was very few at that time. The government wanted the indigenous to master English language in order to get interpreters and mediators between the British and indigenous people; operators for public utility services; clerks to ease administrative works. Along with the establishment of different societies, the indigenous intellectuals invested in presses for publishing newspapers, articles, debates and controversial period opinions in vernacular languages to create public sphere. The development of a print culture helped the intellectuals to spread their ideas, and their deliberate cultivation of bilingualism, with English and their regional languages as double-barreled their medium of expression, ensured a certain amount of homogeneity in the spread of such ideas across various regions.

The colonial governmental policies were indifferent towards the dissemination of scientific knowledge in India. The science was deliberately excluded in curriculum in colleges and universities in colonized territories. It was only by suspending the scientific know-how; the government of British India could sell the products of technological innovations in colonies. The logic of colonialism worked as technological developments were sold to the colonies but was very unwilling to allow the colonized to become self-sufficient in the field of science and technology. The new professional middle classes wanted to acquire the modern Western sciences in order to understand the knowledge behind the applied technologies and to initiate their own contribution to technology. They did not want to buy the technology and its applications as a commodity from West. The Indian intellectuals criticized the attitude of the colonial government and made attempts to spread interests and promote scientific studies in the later stages of their political growth as critical subjects under colonial rule.

The electric tram cars started running in Madras before it starts running elsewhere in India and other cities in England.⁶ The government of British India with colonial strategies did not hesitate to introduce the products of Western European technology into colonized territories. Though the colonial government supported the implantation of all

the amenities of modernity into India, the basic needs of indigenous people remained unfulfilled. Thus there was a growth without development in colonized territories in south India.

The public utility services of electricity were remained as mere a demonstration of use of electricity in front of the indigenous people. Being operated by European private companies, the services were purely commercial and became an elitist affair. The wealthy classes, who were the tax-payers, could access the services. The colonial policies of Government of India supported the private ventures as they took care of colonial interests. The welfare of indigenous people in colonized territory was not there in their colonial agenda. The educated upper and middle classes tried to reveal the true nature of colonial government and respond to it.

The European electric companies generated and sold electricity to British-owned factories in south India. The generation and distribution of electricity in Madras Presidency as well as in princely states was a private endeavour by European entrepreneurs. The European electric companies invested in electricity to get alternative and cheap source of energy to run their factories of plantation and gold mine enterprises in south India. They convinced the government of princely states to start hydro-electric schemes.

The governments of princely states recognized that the bed rock of all industrial development was cheap and accessible power. This necessitated the governments to conduct surveys in this field and develop schemes to generate power. The educated middle classes put pressure on princely governments to launch hydro-electric schemes. Hydro-electric installations were started for the purpose of providing power for the European entrepreneurs in south India in the early decade of twentieth century. The investment in the field of electricity was made possible by the 'state-capitalist' model of development under the Dewans in princely states in south India.⁷ The Dewans, who were the advocates of capitalism, launched the policy of active economic development and invited and encouraged foreign capital investment in the field of electricity. They tracked steps for the electrification of urban spaces in princely states.

Desire to acquire training in modern science was a slightly a later development in south India. The princely governments were ready to buy technologies from European private companies. The middle classes also wanted to buy technology like electricity, but with their own pooled resources. The newly emerged class of educated intelligentsia started to discuss investment capitalism and distinguished between private and public sectors. This middle classes identified clearly the motives behind the foreign and indigenous capital investment endeavours. They wanted the Government to encourage indigenous or *swadeshi* capitalism and demanded public endeavours in industry and technology.

In Kochi, the middle classes created a public sphere which generated the space within it to contest the decisions of the Dewan. In the case of princely state of Kochi, as it was not under the direct control of British supremacy, the subjects had the freedom to organize and discuss the issues of public interests. The middle classes were therefore involved in public debates to indigenize elements of modernity and progress – like production and distribution of electricity. Electricity agitation was radically a different one, which fought directly against the decisions of princely government to privatize the electric sector in one hand, and indirectly against the colonial agenda of detaching science and technology by withholding the know-how behind introduced technology.

The colonial endeavours towards the generation of electricity had nothing to do with the indigenous needs. The indigenous governments had to compete to develop the source of generation and supply of power themselves, to use for basic requirements like street lighting. The urge for industrial development and technological advancement forced the indigenous governments in south India to focus on power generation and supply.

The princely states were ahead of Madras Presidency in the development of electricity in south India. Hyderabad was the first among the Princely States to be electrified.⁸ Mysore State government was the first administration in India to start the major hydro-electric project at Cauvery Falls.⁹ Mysore Government catered more and more for the needs and wants of the

countryside by extending the network of electric stations and lines throughout the state.¹⁰ The Mysore Government facilitated the steady growth of the Cauvery power installation in all directions involving the extension of the transmission and distribution systems for utilizing the services of electricity for the common good of the largest number possible of the subjects of the state.

The electricity development in the princely states was well-coordinated and the same in Madras Presidency was uncoordinated by means of scattered licensed areas. The lack of a planned system of electrical management was reflected in the industrial backwardness of Madras compared to Mysore state. It was very difficult to take up an electric project, whether original or extension, colonized territory like presidency as the process was long such as to get sanction of the government; to get the approval of funds; and to secure the service of suitable technical officers on the standard scales of pay etc. The prominent educated public men characterized the existing undertaking in Madras Presidency as parochial. For them, the electrical development was unsatisfactory due to the profit-making policies of the private companies on the one hand; and the municipal licensees with lack of experience and inadequate finance on the other.

The reception and rejection of any technology not only depended on its physical suitability but also the mindset of people where it was demonstrated. The indigenous responded in different ways in different stages of development of electricity in south India. The first wave of response was emerged when the local authorities considered the matter of using electricity for lighting. The middle classes came to know about the use of electricity for lighting, they put pressure on the representatives of government to consider the matter. The question of electric lighting was diverted to the debate over the choice between gas and electricity. The main determinants of the choice of lighting were the resources and the economic condition of the territory. The ignorance of techno-scientific and technological progress and desire for modern Western amenities were reflected in the responses towards electric lighting.

The majority of members of local authorities showed their dissent against electrification as they felt that electricity was an 'unnecessary luxury'. There emerged the dichotomy between necessity and luxury. The matter of electrification was debated in many platforms in south India. Many leaders opposed electric lighting as they felt electricity was not an immediate necessity. They pictured electricity as an unwanted thing.

There were different opinions mounted around the criticism of existing electrical system in south India. In the initial years, the government never treated the electric undertakings as a public utility service but treated as a business enterprise. The lack of supervision; up-to-date commercial methods; and costly management were the main defects of existing electrical system in Madras Presidency. The capital was insufficient to provide for the legitimate electrical requirements of south India. The professional classes who holding offices in Madras Presidency, the government, as constituted, was not a suitable agency for generation and supply of electricity to the public or for carrying on any commercial undertaking.

There existed a desirability of a public body to manage electrical undertakings among the newly emerged professional middle classes. There emerged an opinion that a public corporation of full-time experts run on business lines would have more flexibility in the matter of staff and keeping accounts. Another argument in favour of a change to a public corporation was that the finance and revenue of the electricity industry should be separated from the general budget. Considering electricity concerns as public utility service, it was suggested that the Government should not depend on profits acquiring from their electrical concerns for supplementing their general revenues and that the profits from electrical concerns should be devoted to improvements and extensions.

The policies of colonial government deliberately created a dichotomy between 'modern' science and technology in colonized territories and indigenously ruled pockets in south India. The 'Western scientific discourse' had claimed the European techno-scientific advances as universal. Science and technology

were to be assigned an important role in the spread of European imperial expansion, and once it was implanted to non-European countries during the period of colonialism, other non-Western cultures were to be judged against this 'universal' standard.¹¹ Thus science and technology became firmly entrenched as the effective instruments for achieving control of and power over non-Western/indigenous knowledge system. Science and technology furnished the knowledge base for the process of empire-building. The techno-scientific inventions and discoveries established its 'superior' science-oriented socio-cultural base, which quickly established hegemonic control over the indigenous intellectuals.

Under colonial subjection, Indians were shaped by multiple ideologies, both inherited and imposed. Among the Indians, the middle

classes were subjugated by the colonial British values and ideologies, at least in the material domain. The project of electrification of the urban spaces was an integral part of this new material demand. Among the middle classes there were different layers such as the intelligentsia, the intellectuals and many others. While the intelligentsia was subject of the ideological influence and material interests, the intellectuals constantly tried to overcome them. As the intellectuals understood that the ideological and material superiority of the West was a colonial construction.¹² A new stage of middle class awareness: the necessity of not just 'consuming' a new modern convenience, the production of which is based on scientific principles, but actually to generate both the resources and the scientific and technological training which would make the production and distribution possible.

9. General Electric (GE), widely known for work at Niagara Falls, had installed hydro-electric power equipment for gold mines in America and South America, and the company was intent upon expanding its sales throughout the world. GE was commissioned by Mysore State to build the hydro-electric installation at Cauvery Falls. The power station was named after the island of Sivasamudram, nearby the Cauvery Falls. It was commissioned in 1902.
10. The total capital invested in rural electrification schemes up to the end of June-1933 came to a little over 19 Lakhs and 2 thousands of rupees. The total number of power and of lighting installations, excluding those of the Gold Mining Companies, was 2200 and 19312 as against 1763 and 16761 respectively for the previous year i. e., to the end of June 1932, vide Engineering Supplement, *Times of India*, October 14, 1933. Likewise the number of street lights rose from 10149 to 10776. These figures bear eloquent testimony to the progressive policy of the State.
11. George Basalla gives an appropriate model for the diffusion of Western science into the non-western areas in his essay 'The Spread of Western Science', *Science*, 156, 5 May 1967, pp. 611-22. He points out three overlapping phases or stages. During phase-1 the non-scientific society or nation provides a source for European science. The word non-scientific refers to the absence of modern Western science and not to a lack of ancient, indigenous scientific thought of the sort to be found in China or India; European, as used hereafter in this article, means "Western European". Phase-2 is marked by a period of colonial science, and phase-3 completes the process of transplantation with a struggle to achieve an independent scientific tradition or culture. FOOD CULTURE IN MEDIEVAL ANDHRA DESA

G. Anjaiah

Food has constituted an important part of all the civilizations, since ancient times to contemporary times. Region, groups of people, climatic conditions, availability of local products, political changes etc, influenced the food habits of the people. There are references in contemporary medieval Telugu literary works such as '*Kreedabhiramam*' of Vinukondavallabha Raya, '*Panditharadhya Charitam*' of Palkuruki Somanatha, '*Pratapacharitam*' of Ekamranath, '*Haravilasam*' of Sreenatha, '*Amukthamalyada*' of Srikrishnadevaraya, '*Hamsavimsathi*' and '*Sukasaphathi*' of Qutb Shahi period are containing references about the food habits and food items of people of Medieval Andhradesa. In this paper an attempt is made to highlight the different Food items of local Telugu people before and after the advent of Muslim rule over Andhradesa between 13th and 16th centuries. The entry of new food habits, their impact due to Muslim rule and migrations from Central Asia to Andhradesa is also discussed.

The Warangal Fort inscription of Ganapatideva¹ gives the list of food articles such as vegetables, wheat, paddy, gram, jowar, oilseeds, oil, salt, ginger, pickles, fruits etc. Purchased by consumers in the local pemta or angadi or adda. The Velpuru inscription² dated 1247 CE. of Dochana peggada Ganapayya (Ganapati Deva's period) the purchase of Goats, Sheeps, by different groups of people on the eve of special occasions such as festivals and marriages, millets, mustard, castor, sesame are also consumed by people during the period under study.

After the fall of Kakatiyas in the year 1323 CE. political uncertainty prevailed in Anhradesa. The oppressive rule of Delhi Sultan Viceroys of gave an opportunity to ex-Kakatiya officials to start anti-Delhi Sultanate movement. The heroic efforts of Musunuri Prolayanayaka, Prolayavema Reddi liberated the Andhradesa from foreign yoke. As the result Musunuri kingdom (at Warangal) and Reddy kingdom (at Kondavidu) were founded. Even we are getting glimpses of the crops, pulses, fruits, vegetables

and other food items of Reddi age poet Sreenatha in his work Haravilasam,³ and Bhimeshwarapuram⁴ different varieties of Paddy like kalama, vali, remukha, sastrika, patanga and hayana. It seems prasunga and rajamana are common variety of paddy grown extensively in Reddy kingdom and consumed by common people and rich. 'Kapparabhogam' was another superior quality of rice consumed by rich and Royal Classes.⁵ 'Ragi' and 'Cholam' constituted important food item of low class people.

During the age of Reddis coastal districts specially Godavari, Krishna region was known for fertile land and best water resources. The Vilasa copper plate grant⁶ clearly mentioned that alongwith rice/paddy, garden crops such as sugarcane, betel vine, plantain, Arecanut, coconut palms, mango jack fruits etc are grown.

Friar Jordanus (1323-1330) in his work '*The Wonders of the East*', also described the different crops, pulses etc. Grown and consumed by the people of Telugu country. He also stated the among the people vegetarians and non-vegetarians were there.⁷ '*Bhojarajiyam*' of Anantamatya is describing the '*podu-chenu*' and podu cultivation forest groups. They consumed pulses like Pttu Kandulu anumulu (beans).⁸

We are getting useful information about the food habits and drinks of people of Vijayanagara times⁹ from the literary works, foreign travel accounts and few epigraphs.¹⁰

According to the details given by Krishnadevaraya in his work Amuktamalyada,¹¹ the Reddis and probably the other cultivating classes of the inland districts of Andhra subsisted upon Cholam, ariga, ragi etc. Several types of vegetables and herbs were also cooked by the vegetarian and non-vegetarian families.¹² Pulses of all kinds were used by all the sections on larger scale in daily food. According to Domingo Paes¹³ rice, wheat, grains, Indian corn and certain amount of barely and beans, moong, pulses, horse-gram, and many seeds were the food of Vijayanagara people. Another

foreign traveller Durte Barbosa¹⁴ records that the staple food-stuff of the people of Vijayanagara was rice. It was cultivated on large scale in different parts of the empire. He further states that in 'Tulunadu' region four varieties of rice i.e., garacal, acal, quavagas, pachary are grown by cultivators. Royal family members, elites consumed the best quality rice known as 'Rajana'. The common people depended upon cheap and low quality black-rice (nallavadlu) as their purchasing capacity was low. The Muhammadans settled in the Andhradesa etc wheat according to Domingo Paes.¹⁵ The meat eaters enriched their diet by the addition of many meat dishes and mango pieces. According to Fernao Nuniz,¹⁶ the Rayas and the meat-eating sections of their subjects, etc. Mutton, pork, venison, partridges, hares, doves, quail, and all kinds of birds. Krishnaraya also mentioned about the tasty Hayyanagavina (Neyyiorghree) prepared from butter and consumed by various higher section in food items. The Royal king also referred about use of pepper in large quantity by all the sections in the preparation of vegetarian and non-vegetarian curries, fruits like mangoes, jack, grapes, cucumber, plantains, were consumed during lunch time by vegetarians and non-vegetarians says Krishnadevaraya.¹⁷

Krishnadevaraya¹⁸ also mentioned about variety of drinks. During this period different types of drinks were consumed by different sections. 'Panakam' made with sugar and water and niru-majjga (butter milk) were consumed in large quantity by all sections in summer season. Coconut water, sugarcane juice were also used. He also mentioned about the great technique of coconuts buried under the heaps of sand under the shade of trees in the gardens to keep the water cool during summer.¹⁹

Food offered to God or Goddesses as Naivedyam in different temples:

Inscriptions of Vijayanagara period are giving very interesting details about variety of food items offered by Brahmins to the temple deity in the morning and evening. This act was known as *Naivedyam*, *Aaragimpu*, the *Prasadam*, which was distributed among the bhaktas. A series inscriptions.²⁰ From Kalahasti (Chittoor) dated 1423 CE. Tripurantakam (Kurnool) dated 1423 CE., Kalahasti (Chittoor

dated 1532 CE.), Chinna Ahobilam (Kurnool) dated 1547 CE., Peda Ahobilam (Kurnool) dated 1558 CE., Cheruvubellagallu (Kurnool) dated 1560 CE., Srimushram (South Arcot District) dated 1584 CE., are giving list of variety Prasadam or food offered during this age on every Jatra days, pulihora, vada, chenigelu, sondelu, payasam, pesallu, (green gram), bellu (pulses), minimulu (black gram), veluvalu (horse gram), mumthanu (cashew nut) miryaalu (pepper), sonti (dried ginger), bellam (jiggery), rice, ghee, nune, curd rice (Dhaddhojanam), Appalu, etc., The information gleaned from Tirumala Tirupathi Devasthanam epigraphs also records most of the items mentioned above.²¹ An inscription²² of Krishnadevaraya's period dated the year 1519 CE., states that to lord Venkateshwara appalu, atirasalu, godhi, panakam, payasam, vada, idli, dosa, kanukka, atukulu, junnu, dhaddhojanam etc. Are offered. Fruits, such as Banana, Apples, mangoes, lemon, coconuts are also offered. *Tambulam (paan)* was also offered to lord Venkateshwara This shows that temple Archakas were experts in cooking different types of food.

With the establishment of Muslim rule in India at Delhi 1206CE and its expansion to Gulbarga, Golkonda, Hyderabad, the Arab and central Asian food culture, food items entered into the native food culture. Even the local Telugu people started, enjoying goat or sheep (mutton) Biryani, Sheek Kabab, made with Goat or Sheep Kheema), roasted on coal fire on a specially made stand, Nyaari, Kulche, Paaya Shorwa, Bun Sweet or Bread Sweet (Double ka meeta), *Sheerkorma*, (Ramzan special sweet), *Haleem*, *Dum ki Biryani*, *Patthar ka Ghosh*, etc. Became favourite food items of local Non-Vegetarians. Similarly the vegetarian. Baighan Masala (Brinjal Masala curry), Mirchimasala, Sambhar/Pappucharu, Rasam, Dhahiwada, Areselu, Murkulu, Pulihora (tamarind or lemon rice), Tamato Chatni, Karvepaakupodi, gongurapachadi, Mango pickle, Idli, Wada, Dosa, Utappa etc. 'Sharbat', 'Lassi', (made with curd) also became favourite drinks of Telugu people. Became favourite food for migrants from other parts to Andhradesa. Thus we can conclude that the delicious food consumed by the people of Andhradesa during medieval times helped them to be healthy and fit.

SOCIAL STRUCTURE AND FORMATION OF MIXED CASTES IN MEDIEVAL ANDHRA

Dr. Aravind Kumar

Andhra society did not remain a stagnant one, since early times till the medieval period. As a result of Economic development, due to growth of trade and commerce, industrialization and increased agricultural output, brought many changes in social structure of Andhra society. Indian society was generally conceived as based on the theory of 'Chaturvama system', or the division of Hindu society into the four vamaas such as Brahmin, Kshetriya, Yaisya and Sudra¹ which remained only as a theoretical concept. Due to the process of acculturation and contact of various Socio-Cultural groups and local tribal population², the society was integrated into a new social order, which resulted in the emergence of mixed castes. The Dharma shastra of Vasistha and Boudhayana³ tried to fix the position of these mixed castes and tribes in the traditional social order, 'Varna sankara'⁴ became a common feature during this period. The Buddhism and Jainism also contributed to the process of acculturation. An attempt is made in the present paper to throw some light on the social structure and social formation in the medieval Andhra.

The process of assimilation continued till the 10th and 11th centuries. By that time Buddhism and Jainism began to decline and

the resurgence of Hinduism in Andhradesha began. The ruling class started upholding the concept of Chaturvarna system, supported the Hinduism, which emerged in the form of Puranic theism⁵, supporting the caste system. In Andhradesha, the revival of Brahmanism began under the rule of Vengi kingdom, especially during the reign of Rajaraja Narendra (A.D. 1022-1063). Rajaraja Narendra thought of reviving of Hinduism as his moral duty and patronized poets like Nannayya, who translated Mahabharata into Telugu, with an aim of upholding the brahmanical social order⁶ many books were written with the same motive, during the period, except the Saivite poets, like Palkurki Somanatha, others propagated Chaturvarna dharma. Even the followers of Mallikarjuna, known as Aradhyas reconciled with the Brahmanical social order⁷ The kings took pride in taking the titles like, Chaturvama dharma pratisthacharya and Chaturvarna dharma pratipalitulu⁸ The Vamashrama dharma was upheld only in principle, by the rulers of the period. The prasastis are only traditional. The caste based occupations increased in number from the beginning. The medieval inscriptions mention the society consisting of 'Asthadasa Mahapraja'⁹, which is a general assembly of 18 major communities. The division of society into 18 communities is

based on occupational and even this also became traditional concept, over a period of time. Even during the period of Satavahanas, inscriptions mention the existence of 18 Srenis¹⁰Sreni is nothing but an occupational group. During this period each occupational group became a 'Jati'¹¹as most occupations are hereditary. 'Jati' of a person is the occupational group into which a person was born. Each Jati had its own rules and regulations, own codes of conduct, known as Kuladharm or Jati dharm,¹² if any member of the jati violated the Jati dharm, he was liable for punishment. So one must keep in mind that the concept of Asthadasa praja rather than the Chaturvarna dharm, in analyzing social conditions of the medieval times in Andhra. The Asthadasa mahapraja is mentioned in several records was a representative assembly of the major communities of a village or town or a Sthala. It discharged several administrative functions and played an important role in the economic and social life of the people. The Asthadasa mahapraja consisted of¹³1.Mahajanulu, 2.Nakaram, 3.Kampulu, 4.Balanja Settigaru, 5.Komati, 6.Idaravaru, 7.Gollavandru, 8.Srivaisnavulu, 9.Akkasalijanulu, 10.Salevaru, 11.Velamaveguru, 12.Illaris, 13.Gandavaru, 14.Nayakulu, 15. Reddlu, 16. Karnalu, 17. Telikivevuru, 18. Nayilu. Some other records mention the following as 1.Brahmana, 2.Kshetriya, 3.Vaisya, 4.Sudra, 5.Vevaharika, 6.Panchala, 7.Kamsakara, 8.Tantuvai, 9.Vastrabhedaka, 10.Tilaghatika, 11.Kuruntaka, 12. Vastra-rakshaka, 13. Devanga, 14. Pereka,15. Gorakshaka, 16. Kirataka, 17.Rajaka, 18. Kshuraka. Actually we find many more communities, by the early medieval period. There are several causes for the emergence of a large number of communities by the early medieval period. They are 1.Political, 2.Economical, 3.Religious, 4.Ethnic factor. Let's analyze one after the other.

Political: the early medieval period witnessed the rise of tribal chiefs and peasant warriors in place of traditional ruling classes, belonging to Kshetriya caste. Tribal communities such as Sabaras¹⁴ and Boyas, held very high positions. In the Rastrakuta-Vengi conflict, there were several Sabara chiefs fought against Vengi kingdom, supporting the Rastrakutas. In the Velanadu administration many Boya¹⁵chiefs held very high position, like

those of Mandaleshvara. The early Kakatiyas chiefs names such as Erra, Gunda and Proia, suggest their tribal background. They were earlier tribal warriors, who were later employed in the Rastrakuta army. We know that the Kakatiyas called themselves, as belonging to Samantha Visthi¹⁶ Visthi is the Sanskritised form of Vetti, which means a slave or servant. In later inscriptions they claimed to have belonged to the fourth caste¹⁷ But in some instances they are described as Kshetriya¹⁸Vidyanatha describes that the fame of Kakatiyas excelled that of the Solar and Lunar families.¹⁹We can infer from this that they do not belong to either of the two, to which most of the early ruling families' claim to descended from.

A very important social aspect of this period is the rise of the peasant groups, like the Reddy, Velama and Kapus, who were mainly agriculturists group, who entered the military service, under the various ruling dynasties. This was the need of the hour. As the period, witnessed frequent wars between the various neighbouring kingdoms. The wars gave an opportunity to become rich quickly. By this way, young peasants were recruited into army. The contemporary inscriptions mention such two groups known as Nayakulu²⁰and Ekkatlu²¹The Nayankara system under Prataparudra helped further development and increase in the number of military chieftains. After the downfall of the Kakatiyas and later its disintegration, Andhradesa witnessed the rise of several independent kingdoms. Such as Nayakas of Musnuri family under Prolayanayaka, who belonged to Kamma community, who established an independent kingdom at Rekhapalle²²Prolaya Vemareddy, who belonged to the Reddy caste, established the independent Reddy kingdom from Addanki.²³ Similarly the Padma Nayaka chief Singamaneedu who belonged to Velama community established the kingdom at Rachakonda.²⁴ These peasant warrior groups liberated the Telugu country from the Muslim rule.²⁵ This is known as the Reddy-Nayaka age in the history of Andhras²⁶

Economic factor: agriculture was the main stay of the economy during medieval Andhra, a number of industries related to agriculture developed. This gave rise to many sub-castes

among the agriculturist such as Reddies, Kampulu, Gallas, Boyas, toddy tappers (idarasi²⁷ etc. Next to agriculture, Textile industry became important, which gave rise to the sub-castes. Based on the specializations related to the textile industry, like Vastra bhedakas (dyers), Devangas (spinners), Tantuvaivi (weaver), and Vastra rakshakas (sewer). These sub-groups were involved in the cloth making and cloth manufacturing industry.²⁸

Ethnic factor: since the ancient times the process of drawing the hill and forest tribes, like the Sabaras, Pulindas and others into the mainstream of society began. The tribes were war like in nature, which made them to join the military services of the rulers of the age. The Matedu inscription was issued by a vassal under Proia II, who belonged to Pulinda Vamsa²⁹ The originator of his family, 'buchana Vemabolakula had the title 'Kotamalla', which means "destroyer of forts". Another important tribe that was slowly integrated into the social mainstream was the Boyas³⁰ The Boyas were engaged in agriculture and animal husbandry. As they were war like qualities of body and mind they were recruited informal³¹ Inscriptions mention that they also entrusted, with an obligation to supply ghee to the temple lamp³² Gradually they were integrated into the social main stream and raised high positions at the court. The Ganapeshwaram inscription, informs that, Jayapa Nayaka, the Gajashahini of Kakatiya Ganpatideve was the descendant of Naraboya, the ruler of Divi Seema³³

The process of assimilation of various ethnic groups into the society multiplied the number of castes. The Dharma Shastras also facilitated the absorption of such aboriginal into the traditional social order (Chaturvarna), by the concept of Varnasankara. The Mellacheruvu inscription³⁴ mention, Bettevaru, among the Samastha Praja. Bette or bettu means people having the temperament of adventurism and cruelty, which in-directly signifies their hunting background (aboriginal). From the above it is clear that aboriginals and hunters were absorbed into the society as Bette caste.

Thus the indigenous society of the early Andhra after the advent of the Brahmanism and Buddhism can be divided into three

divisions. The first one those like the Nagas, Pukiyas, Dhanakas, Mundas, Hirannekas, etc., who were hit herto acting as local chiefs and more civilized than others embraced either Buddhism or Brahmanism and were slowly absorbed in the ruling caste. The bulk of the agriculturist society called Reddis, Kapus, Telagas, and their dependent professionals, also come under this division. The second division consisted of those who took some more centuries to mingle with the Aryanised society. They are the Kurumas, Boyas Kondakapus, Kondareddies etc... Who were accustomed to a settled life by agriculture and pasturing, but not bothered in the early historical period and stayed away from the advanced classes for several centuries. Third division comprised several uncivilized groups who were accustomed to live independently, without being the subjects under any political authority. Such people are still noticeable in the tribal areas. Their needs were very limited and they do not require any help from the rulers for their sustenance³⁵

Emergence of outcaste sects in Andhra society;

It is generally believed that the advent of Brahmanism was responsible for the isolation of certain sects of people from the society and treats them as untouchables. It is worth examining hypothesis in a historical perspective. By the 41 and century B.C. some Brahmin families might have settled in few places not in many villages. In the process of Brahmanisation according to the reformed Purana cult, the Brahmans have admitted into their fold several deities like Katappa, Kotayya, Kondayya, Mallayya, Appanna etc. of the indigenous people giving Sanskritized names to those gods like Katesvara, Kotesvara, Mallesvara, etc attributing legendary origin to them and introducing Brahmanical rituals in those temples. In fact as we all know, they have admitted the Buddha himself into the Brahmanical fold as one of the avatars of God Vishnu. It was not a case of the said admission of the indigenous deities into a more civilized religious fold of the Puranas. So the theory that untouchables was the creation of the Brahmans does not stand to reason as well as historical evidence and lacks practicable way of implementation. The words Chandala, Matanga, Nishada, Antevasin etc... Which are

nearly synonyms for untouchables? The indigenous society consisted of various professionals. Agriculturists formed the bulk of the society. Whereas the other professionals like the potters, smiths, carpenters, weavers, washer men, barbers, leather tanners, etc...Formed, the subsidiary sects. Besides these sects there were certain communities who lived on the edges of the forests taking to the profession of cattle breeding and little farming. They are called even today as Kanda Kapus, Kanda reddy, Kurmas (Sheep breeders) adopting unsettled farming to just sustain themselves.

It is a wrong notion that the Chandal as or untouchables were those who evolved out of the illegal marriages between the Brahmin female and Sudra males as stated in the Smriti. Historically we have no evidence to say that inter caste migration from higher castes to Chandals took place in large numbers in the past. The implication of the statement is that such inter caste progeny would be treated to be equal in social status with the already existing Chandals. That classification in such stray cases, who trespass the norms of marital alliances. It is difficult to subscribe to the view that the entire community of the Chandals evolved as a result of the said inter-caste marriages³⁶ Some of the early eastern Chalukyan charters mention the term Boyas, certain Kanderu Boya Vidusarman of Parasara gotra, who is versed in the Vedas and Sastras appears as donees in the Koneki grant of

Jayasimha Vallabha³⁶ datable to A.D. 667. The Kondanagaru grant of Indra bhattacharaka³⁷, the Reyuru grant of Vishnu Vardhana also mention some Soya Brahmans, with gotra affiliations as donees. Here the term boya Brahman was interpreted as Boyas were considered as Brahmans if they learned the Vedas and Shastras³⁸ this is due to the misunderstanding of the Boya term. Boya is a corrupt form of the Sanskrit word Bhoja which means an official like gramani³⁹ The Pallava and Salankayana rulers appointed village officials with the title as bhojakas, this is noticed in the Hirahadgalli plates of Sivaskanda varma. The ja letter is changed to which is possible according to the Prakrit and Telugu grammar. The said grantees in the above allusions were such Boya Brahmans, who were born in the Brahmin families possessing the gotra and charanas as described in the charters. They were not the aboriginal Boyas taken into the Brahmin caste⁴⁰ The attribution Kammakula bhavana noticed in the Sanigaram epigraph⁴¹ of Kakatiyas Proia II belonging to 1149 A.D does not refer to the Kamma sect of modern period, but actually applies to a family of Brahmans which has migrated from Kammanadu. The family belonged to the Brahmin caste of Attreyagotra. The modern Kamma sect of people in Andhra desa is originally of the Kapu families hailing from Kamma Naadu or Karmarashtra of the medieval period. Family appellations as Kamma, Kona, Yengi etc.. Do not refer to separate castes but to regions or places from which those families hail.

CHENNAI LABOUR UNION LEADER – THIRU.V.KALIYANA SUNDARANAR – A HISTORICAL ANALYSIS

P. Arumugam

Thiru.V.Kalyana Sundaranar is known as Thiru.Vi.Ka as shortly among the Tamil people in state Tamil Nadu. He was born in Thundalam village at porur, Chennai in 188, august 26. His parents were Mr.Viruthachalam and Ms.Chinnamal. In 1894, he has joined in Wesley School for his studies and dropped out from school at 1904 without proper completion. He had a keen interest in Tamil language and literature from the eminent personalities of Tamil language named Karaiverpillai, Mahavithvaan Thanikachala Mudhaliyar, Pamban Kumaragurudhasa Swamigal. Also he learned the language from the great tamil scholar Maraimalai Adigal. He learned the concepts of Jain Religion from Parganaatha Nayinar, Professor Chakravarthi Nayinar. He learned science, Darwin's human history and evolution, and the scientific inventions of western countries from the first communist of south India comrade.Singaravelu.

He has joined in the company of British man Spencer due to his poverty in 1907. He had catalyst the thrust of independence struggle among the fellow workers during the lunch breaks by reading the newspaper 'Vandea Matharam'. The British were warned Thiru.Vi.Ka for his activities among the labours. He had infuriated with the British action in the company; hence he relived himself from the company and joined into the Wesley School as a Tamil teacher later. He served as the Head Master of the school in 1916.¹

THIRU.VI.KA IN THE LABOUR UNION

In 1908, while Thir.Vi.Ka was working in Company Spencer; the leader of England labour party Mr.Geer Hardy has arrived India and stayed in Chennai for few weeks. Thiru.Vi.Ka has maintained a relationship with Hardy while buying some materials in the company. During that time a brief history of Mr.Geer Hardy has published in a magazine. Thiru.Vi.Ka has enriched his knowledge on developing the labour union and research on labours with the writings of Geer Hardy and his story. Thiru.Vi.Ka then developed a continuous reading on the same. Thiru.Vi.Ka was also influenced by the Russian Revolution in 1917. All the mentioned factors were the lightening candles of Thiru.Vi.Ka's labour union activities mostly.

THE ORIGIN OF CHENNAI LABOUR UNION

After the school timings over, Thiru.Vi.Ka used to roam out and he used to make a discourse about patriotism, religious order, humanity. In 1917, he was invited to give a lecture at Venkatesa Gunaamirtha Varshini Sabha located at Barex, in Perambur, Chennai. Selvapathy Chettiyar has invited him.² The audience of that occasion were the workers of the Binny Mill and Karnatic Cotton mill. After the occasion, Thiru.Vi.Ka has disturbed immensely by knowing the hurdles of the workers who faced in those mills. Later he decided to start a labour union for them. In 1918 April 8, with the larger effort of

Thiru.Vi.Ka, The Chennai labour union (MLU-Madras Labour Union) has started and Mr.V.V.Wadiya has become the first president who was a leader of Homerule movement also the friend of Dr.Annie Beasant. Thiru.Vi.Ka was elected as joint-president.³ Binny mill and Karnatic Cotton mill workers were joined into this labour union. In continuation of this, the Choolai mill workers were also started the labour union for them at their workplace. Hence, the Chennai labour Union was the very first formal labour union in India. In this labour union there were 13,000 workers as members. All the credits should go to Thiru.Vi.Ka who was the core key for made this out.

In Binny mill, the British and their office assistants were attacked and tortured the workers by physically beatings and all was continued regularly. The peak of the atrocity was heating the iron rod and wounding the body of the workers as a punishment. The labour union which was started by Thiru.Vi.Ka has made an end for all the atrocities held in the binny mill. The continuous struggles of the labour union a labour commissioner has been appointed for Chennai. Though, several other labour issues were negotiated and finished. In Continuation of the same, he has started the M & S.M. labour union for the railway workers, Tramway Labour union, Electric board labour union, Kerosene oil labours union, Printing labour union, Aluminium Labour Union, workers who worked in the European people's house for them also a separate labour union in the name of European domestic workers union, Salon labours union, Scavenging labours union, Riksha drivers labour union, Police Union were bloomed in different times in different sectors.⁴ Thiru.Vi.Ka was the backbone for all the mentioned labour unions and he had the headship in many labour unions.

The struggles were not only held in the binny mill labour union. It was spreaded among all the other labour unions for demanding their rights in terms of wage increase, bonus, dearness allowance and protesting against the downsizing the labours, and closing the company for no reasons.

THE ORIGIN OF CENTRAL TRADE UNION

There was need to centralise all the labour union at Chennai. Hence, the concept of Central

Trade Union has emerged. In 1920, March 21 the labours conference was held for Chennai (Madras) presidency. Thiru.Vi.Ka has emphasized the need of Central Union in his presidential address on the same conference. There were 3000 delegates including the observers have attended the conference. The following demands were passed as resolutions of the conference. Those were: Voting rights for the labours in the Presidency elections of Madras Presidency, Representation of Labour unions at State council/State assembly, Wage should be given for the holidays and Sundays, Continuous assessment and research should conducted among the women labours to address their issues and problems in particular. In 1920 July 4, Central Labour Union for Madras Presidency has started. Thiru.Vi.Ka has elected as President and Mirunalini was the Secretary.⁵ In those days, every weekend that was on Sunday the Central Labour Union meeting used to hold at the beach. The labours were interestedly participated in those meetings by raising slogans and holding the flags of the labour union. This paved a way to build a labour unity among them.

If one labour union's company has lockout or proposing the strike; all the other labour unions were also participated with labour solidarity. The Central Labour Union was helping out to assist financially to the weaker labour unions, regaining the jobs of the labours who lost due to the labour union activities, and also they secured the family of the labour who involved himself/herself in the labour union activity.⁶ This was affected the British and the owners of the company very badly. This Chennai labour union was the key factor which emphasized the need of the labour union at all India level. Later, in 1920 AITUC – All India Trade Union Congress has originated.

THIRU.VI.KA – THE PERSON WHO WON STRUGGLES AMONG THE ANTI-ELEMENTS

Since the communism principles were not spread much the Chennai labour Union has faced many oppositions in its initial stage. The British were warned the then Governor of Chennai Lord. Bentland Wardia. Ramnad King and Kayar Desikachariyar were written in the Mail magazine that India did not any labour union. In the magazines, New India and Desa

Pakdan Thiru.Vi.Ka has written the explanations, opposed and criticised the stands of those landlords and kings. After the origin of Central Trade Union the then Governor Lord. Willington had warned Thiru.Vi.Ka for the labour union activities against the British. In 1920, Buckingham Mill was shut down due to the riot. The administration creates a story that the riot was happened because of the labours. The fact was that the administration wontedly created the riot. In 1920, November 11 the administration was filed a case on eleven workers in the high court of madras.⁷ These eleven workers were the main leaders of the labour union who ignited the riots, and they continuously disturbing the working environment at company premises, they made strikes and all, due to this all the production works were stopped in the factories/companies; hence hereafter they should not involve in the labour union activities also Rs.75,000 was lost due to these activities of the labour union leaders hence they should repay the money to the company as compensation- all these statements were made as a complaint and filed the case on these grounds.⁸ The high court has also given judgement in favour of the company administration.⁹ The administration was very glad and they considered that was their victory against the labour union. The Chennai Labour Union leader Wadia was compromised with the company administration under compulsion and left to abroad. The administration considered that the labour union could not work hereafter; but later after Wadia with the headship of Thiru.Vi.Ka the labour union was successfully worked with more vigorous.

The afore mentioned case and the struggles were the stepping stones of the origin of labour act in India at 1926. In 1921, there was a strike at karnatic mill and the Buckingham mill workers were also supported the strike. 13,000 workers were participated in the strike.¹⁰ The company administration has tried to stop the strike in many ways. The Maneuver of the administration became the riot. The administration was planned to separate the workers under some community categories with cunningness. Hundreds of huts of the labours were fired. 7 workers were fired and

shot dead by the police in the riot. 37 workers were injured badly.¹¹ Chennai has freeze and struggle was continued more furiously. The company administration has cooked a story that the labour union leader Thiru.Vi.Ka was the main reason for the incidents.

Hence, the then governor planned to deport Thiru.Vi.Ka. Since the justice party was announced if Thiru.Vi.Ka has depretd from India to abroad or somewhere the struggle would be continued like never before. Hence the then governor dropped the plan. Also he was continuously trying to separate the workers under the community category which was also failed utterly. All the plans of the governor were defeated by strong leadership of Thiru.Vi.Ka and the workers unity.

Thiru.Vi.Ka has done many records in building workers unity as a union leader. He was Tamil Scholar, a good Press Reporter, Fighter of Female Liberation, a Marxist, a Patriotic and an incomparable union leader. In all the roles whatever he made; he marked his success record. We cannot write the history of the labour union without his works. He had paved a strong base for emerging the labour union in India. His remarkable victory was made in the cotton workers strike with the demands of wage increase and working hours. The other labour union leaders were also focused on the wage increase and working hours since Thiru.Vi.Ka has deeply concerned and discussed about the socio-economic conditions of the workers. He challenged the company administration not only to increase the wage but to give share from the profit of the company. He demanded that the factories, companies should run under the control of government not by the private. He defeated the government's attempts to Step down him from the labour union. He was completely involved and sacrificed his life for the labour union after joining till to his end. In September 17 1953, Thiru.Vi.Ka has passed away with eye-sight problems. In April 1943, the silver jubilee occasion of the Chennai labour union, Thiru.Vi.Ka has discoursed an important speech which should not be forget by the labour class ever in the history.¹²

SOCIAL CONTRIBUTIONS OF CATHOLIC MISSIONARIES IN TIRUNELVELI DISTRICT

Dr. J. Arun

The History of Christianity in Tirunelveli is traced back to the arrival of Portuguese on the Coromandel Coast to augment their trading prospects at the turn of the fifteenth century. The Portuguese Roman Catholic missionaries who accompanied the traders to Tirunelveli coast were the first to spread Christianity in the district.

Francis Xavier (1542-1552) a member of the Society of Jesus, was a catholic Missionary from Spain reached India on Sixth May 1542 and settled at Goa. He worked among the coastal area people of Tirunelveli–Thoothukudi and Travancore with a small group of Goa trained interpreters. Many of his letters were written from Manapad on the coast near Tiruchendur. His letters Portray his daily activities in the Coromandel coast. He left India in 1552 A.D. and the work was continued by father Henri Heneriquez Superior of the Jesuit Mission, until his death in 1600 A.D. Thoothukudi, Mannar Island Vempur, punnaikayal, Virapandiyapatnam, Manappad and Periyapatnam become the major Catholic Mission stations.

Punnaikayal was the headquarters of the religious activities and commercial interests of the Portuguese until 1579 A.D. The Jesuit Missionaries shifted their headquarters from Punnaikayal to Thoothukudi in 1579 A.D. They took efforts to build a church near their residence. This was St.Pauls College dedicated

to our Lady of Mercy where the statue of our Lady of shows was placed. The Church was consecrated by the Bishop of Cochin, Dom Henrique De Tavora on 5th August 1582. Francis Xavier was followed by the Robert Nobili (1606–1656). John D. Britto (1674-1693) and Joseph Beschi (1711-1742) unfortunately the great Jesuit order was suppressed by Pope Clement leaving the good work done by it high and dry. Roman Catholic religion spread in to the hinterland of Thoothukudi region in the 17th century. Father constant Joseph Beschilater called Viramamunivar (1711-1742) an Italian Catholic Missionary did his missionary work in Kamanayakkampatti, Kayathar, Andipattian and Manapadu. He was imprisoned by the people of Kurukkalpatti village of Sankarankoil taluk suspecting his missionary work. He was rescued by the Christians of Kayathar.

The Society of Jesus was restored in 1814 by Pope Pious VII. In 1838, to Jesuit Missionaries, Father Martin and Louis DuRacquetsent by George XVI arrived at Palayamkottai and commenced their mission work in Tirunelveli. Yet the Jesuit mission suffered a steady decline in its missionary activities partly due to divisions within its own ranks and partly due to the growing influence of Protestants. There were 30,000 Roman Catholics, in the Composite Tirunelveli district by 1820. The Christian missionaries took a

pioneering interest in the promotion of social service in the district. Perhaps religious motives might have forced them to take such a large interest but it did not for the upliftment of the society especially the poor.

Social Services

The Tirunelveli Social Service Society (TSSS) is a voluntary organization under the aegis of the Roman Catholic Diocese of Palayamkottai, working for the Welfare of the downtrodden since 1972, by implementing a number of welfare programmes. The society works for the development of underprivileged, marginalized people, landless agricultural labourers, people who are below the poverty line, youth women and child labourers. The motto of the society is that they may have life. The aims of the Society are, to build up people's organization, to reduce child labour and to give awareness education and community health.

This organization working in Palayamkottai is engaged in the welfare programmes like, feeding the poor, the aged and the handicapped in the region. The mid-day meal programmes of the Social Welfare Centre of the society alone covered 5200 Children in 43 schools of this region. The feeding programme covered 12 orphanages with nearly 200 wards. The mother and child welfare centres have been set up to provide services to about 1000 mothers and babies.

To begin with, the Society started welfare programmes such as School feeding, poor feeding, food for work, health camps and some relief programmes during emergency situation like flood and drought. From 1980 onwards the Society is engaged in adult education programme, community health programme, women development programme, small savings and other educational programmes. The integral development of child labourers has drawn the attention since 1987. The society is implementing a number of development programmes which are described below

(i) Vimala Grihini Training Centre: The Centre was started in 1977 at Kuruvikulamin the District. By the end of 1992, training for 30 batches were conducted with 696 young girls benefiting. These girls are taught to read and

write, health and nutrition, ways to bring to their children and some skills like tailoring and plastic wire basket making etc. (ii) This society organises, to work for the development of rural people. 239 villages are covered under this programme. (iii) To organize women to work for their development Women Motivation Programme has been started. Under this programme 305 villages were covered during the year 1993. (iv) Development of child labour programme has started functioning in the District. (v) Under the Community health programme, health education is given to villagers, 12 dispensaries manned by qualified staff nurse and health workers function under this management. The society achieved in getting the housing colonies built, transport facilities, roads and drinking water facilities. It helped in obtaining loan for buying milchycattle, running petty shops, securing sewing machines, etc.,¹ (vi) Saranalayam a unit of the TSSS, has helped in a big way in rehabilitation of street children and preventing them from being exploited by anti-social elements.²

St. Joseph's Charity Institute

This charity home was founded as child welfare centre by the French Jesuits in 1854 at Alantalni near Tiruchendur. In 1859, the home was shifted to Adaikalapuram, four km north of Tiruchendur. This Institute has about 1006 inmates and embraces several social and educational organisations like (a) child welfare home, (b) two cottages for girls, (c) two cottages for boys each unit consisting of 25 children with a house mother, (d) Home for boys, (orphanage) (e) Women Welfare Home, (f) Rescue Home for women, (g) Home for aged women, (h) Home for aged men, (i) St. Joseph Middle school, (j) St. Mary's Middle school, (k) St. Joseph Industrial School, (Carpentary and Tailoring), (l) Typewriting Institute, (m) Teacher Training Institute for Women.

Lucia Society for the Blind and other Disabled

The Society was started at Meelavittan near Thoothukudi in 1978 by Fr. A. Antony, a visually impaired. The institution is a corporate body registered under the Societies Registration Act on 28 February 1978. Though initially started for providing services only to the blind through vocational training such as weaving, envelope making and furniture

making, the Institution had enlarged the scope of its work, to include there habilitation of all type of disabled. The services that the Society renders are: Medical treatment and surgery for visually impaired and orthopaedically handicapped through medical camps; providing aids and appliances; provision of special education such as braille reading and orientation and mobility; vocational training such as mat weaving, envelope making, textile weaving and recanting and furniture making; placement in services and settlement in life.³

Multipurpose Social Service Society

The Thoothukudi Multipurpose Social Service Society, is a charitable association registered under the Societies Registration Act 11 May 1972. The Bishop of Thoothukudi Diocese is the President of this Society who is assisted by 10 governing body members and a Secretary / Director, who is in charge of the day today administration of this society. The area of operation of this society confines to the area of the Revenue Districts of Thoothukudi and Tirunelveli districts.

With the "To Break the Bread and to Break Bondages", motto it helps the poor, the widows, the handicapped, orphans, less educated unemployed village girls and unemployed educated youth for getting the self-employment through financial accommodation, from banks and job oriented training.⁴

St. Joseph Leprosy Hospital

Bishop Francis Tiburtius Roche, the first Bishop of the Diocese of Thoothukudi started St. Joseph's Leprosy Hospital on 30 October 1949 with the help of three sisters of the institute of Franciscan Missionaries of Mary, in the Northern outskirts of the town which fittingly came to be known as Arockiapuram. Started with 15 leprosy patients accommodated in two sheds, it had developed into a well equipped hospital with 300 beds by the end of 1958. The first Survey, Education and Treatment Unit was started in the three roadside clinics in 196, the number of leprosy patients treated there rose to 2245. Now this Institution, is collaborating with the Government of India in its leprosy eradication programme with Leprosy Control Unit, In patients care in the hospital and rehabilitation

section, stands but as a hallmark of Thoothukudi town and a living monument of Catholic Church is compassionate care for the leprosy patients.

Sacred Heart Hospital

In the year 1959, the then Bishop of Madurai, Poona and Vizagapatnam requested Mother Elizebeth Affentanger to open the Hospital in the respective Diocese, but for want of trained personnel it could not be realized. In 1960 when Mother Elizebeth felt that there were enough trained sisters to start a Mission Station. She started a novena to the Sacred Heart, to reveal to her the most deserving place for starting a hospital. Fr. Thomas Fernando donated 18 acres of land at Thoothukudi for the temporary use. On 19 March 1960 a small dispensary was started by Sister Bertha and Sister Annie in the Sanatorium. In 1962 a small ward was built with 45 beds for admitting maternity cases and seriously ill female patients. There was also an operation theatre to attend emergency cases and other operations. At present it is the Little Flower Ward commonly known as Children's Ward. Soon it became necessary to build a ward for male patients too. To meet the requirements in 1963 Thomas Ward was opened. An outpatient department was built in 1964. Dr. Agastine also rendered his selfless voluntary service to this institution as a Resident Medical Officer.

In 1965, a residential quarters was built where three doctors could be accommodated. During the initial years Dr. M.P. Krishnan, Dr. P.J. Mathew and Dr. Paranjothi served in the hospital with great devotion. Through the continuous and tireless effort of Sister Paula Graf, the Hospital gained popularity in subsequent years and many patients started coming from distant places. To help these patients a country was built in the year 1966.

Additional buildings were constructed in 1966 with the financial assistance obtained from the Mother House, Luzern, Switzerland and West Germany. A new hospital with 150 beds was opened in December 1971. Recognizing the importance of having adequately trained people to provide efficient health care, a School of Nursing was started in 1974 to provide training in nursing education

in general nursing and midwives. At present the hospital has 225 beds and special departments such as medical, surgical, obstetrics and gynecology, pediatric, outpatients department and public health department.

Conclusion

Tirunelveli District Roman Catholics were once under the Bishop rice of Tiruchirappalli. Then upto 1973 they remained in the Madurai

Diocese. In 1973 Tirunelveli Diocesan was created and a new Bishop was ordained and consecrated. In educating the poor and in the upliftment of the downtrodden, the services rendered by the Catholic community is enormous. Today they are running schools, Colleges, Poor Homes, Hospitals etc., Roman Catholics of the Tirunelveli district live in all parts of Tirunelveli. Because of the service done by the priests and nuns most of them are educated and employed in various Jobs.

CUSTOMS AND MANNERS OF INDIANS WITH SPECIAL REFERENCE TO SOUTH INDIA AS GLEANED FROM THE ACCOUNTS OF FOREIGN TRAVELERS

Dr. Aziz Ur Rehman

Customs and manners are different between regions and among divergent societies below is the description of some popular customs among ruler, masses and foreigners. Customs were adopted by common as well as high class people with the difference of the grandeur and the purpose. Indian customs and manners were also introduced in Muslim society due to contacts¹ further it assimilate Iranian customs² and due to intermixing of customs and manners it becomes difficult to differentiate.³

Muhammad Tughlaq celebrates the coronation fourty days after his father death as it was customary.⁴ On coronation the streets were beautifully decorated with coloured cloths and drums were beaten in his admiration. Gold and silver coins were thrown over the parasol of Sultan from the roofs and on entering Tughlaqabad gold trays were given by the nobles and again coins thrown on spectators and people sang in his praise.⁵ On his returning from journeys the elephants are adorned out and all the sixteen imperial elephants bear an umbrella which sometimes was finished with gold and in other pierced with jewels; and ahead of it was the saddle-cover decorated with expensive stones. Wooden pavilions were

constructed there on them sits the girls with luxury stuff among whom some were expert dancers.⁶ Another custom among the ruler after returning from any campaigns they halt for one night before entering the capital perhaps for making great rejoicing from the next morning.⁷

Hanging of the turbans on the necks of their horses was the custom followed by the Indians while advancing for sacrificing their lives for the sake of Allah the glorious.⁸ Muslims of India followed custom while starting any work by the workers they give them some rice to eat and a *Fanam* to each when they leave.⁹

When a non Muslim desire to accept Islam he was brought before the Sultan who attires him in beautiful dress as per his status and give him a gold collar and bracelets as gifts.¹⁰ These newly converted non Muslim not fully gave their customs and manners and therefore Muslim also start adopting them with the passage of time.¹¹ Similarly the marriages with non Muslim princess gave further support to it.¹² It was a custom that head dress was not removed in the presence of elders.¹³ When the person of royal service not pay the debit the creditor visit the palace and demands for justice

standing on the door and thus payment was made from royal treasury.¹⁴

Before going on war the ruler of Vijayanagar appears in an open plain and it looks that he was going on pleasure, mounted on elephant or in palanquin each enrich with gold and costly stones accompanied by horsemen, foot soldiers and many elephants disciplined just before him. King then rides on a horse hold a bow and arrow in his hands and throw it towards the country on which the war is going to. He then announced the number of days left for the formal beginning of war and the news spread and then he reach in the plain and waits for the date of approach. On the day he announced a proclamation and orders that the entire city should be burned except the fortress temples and houses of the lords who were not thatched and this he do that all in order the people accompanied should attend their wives and household.¹⁵ He further orders that whatever came to his hands outside his own lands meaning from the land of enemies should be given to *Bazdars* (falcons) and to the Brahmins.¹⁶

In Calicut when king dies the apparent heir live constantly in the city in a palace little missing from the city for one year. After the time period completed, the prince other heirs, his brethren, nephews, and rest of all the official of the kingdom organized a function. They all assist the new king in celebrating the function performed on death anniversary as the memorial service in which alms were spent and money was utilized for providing food to the Brahmins and the poor people as well as all those who pays visit and those who accompanied with them. Almost hundred thousand people assembled. They all accept the prince as the heir his associates according to their ranks. Previous officers were removed while some succeeded in retaining their offices. An interesting law of the kingdom was that when all the people returned to their homes, the prince himself went to a far of place set for him and he did not come back to Calicut till the sitting king survive, while others may come. On going to his selected place the prince goes to a bridge where river flows near the town, and discharges an arrow in the direction of the king residence. He then offers prayer as a manner of respect.¹⁷

The ruler of Calicut city was an idol worshipper and so the inhabitants. They worship sun or an ox and large number of other idols which were made by them. Their customs and manners are contrasting some kills all types of animals saving cows and oxen.¹⁸ In the province of Quilon on the sides of roads after half miles found timber houses near them locate wells for the use of travelers. Non Muslims give water to their co-religious in vessels whereas to Muslims they throw in their hands to drink. The *Malabaris* neither permit the Muslims to enter in their houses nor to use their vessels for eating or drinking. If it happens they either break the pots or give to the Muslims. In the area where Muslim population was absent the Indians prepared their food in separate pots and put on the banana leaves and the things left were eaten by birds and dogs.¹⁹

"We used to meet infidels on this road at night; but as soon as they saw us. They get out of the way until we had passed. The Muslims are most respected People in this country except that, as before mentioned, the native do not Dine with them and do not admit them to their houses."²⁰

The rule of succession was that the son of the king's eldest sister was the natural heir of the state and all the brothers succeed one after the other and if there was no brother the nephews the sons of eldest sister become the heirs. In case the sister did not produce a son then a council was held in which someone relative of the king was raised to the throne and if not so they elect the person who was best from all. Due to this reason the rulers of Malabar always old. Their nieces and the sister were well treated and cared because the heir of the kingdom comes from them and they have their own revenue sources from which they meets their needs. When these girls reached the age of twelve or achieved the puberty. A youth belongs to royal lineage from outside the kingdom was summoned and was given the charge of taking her virginity. Large number of gifts and money was send to the young man.²¹ When the person arrived he was warmly welcomed and huge ceremonies and feasts were organized as it was in the marriages. This man tie a golden necklace to the girl which she wears throughout her life as a symbol of the

observance organized for her. After that she had the freedom to make relations with her own choice to which she was so far restricted.²²

King had two wives and each one of them was attended by ten priests and they sleep with them carnally to honour the king, and due to this reason the kingdom did not belong to the son but to nephew.²³ Women of *Caranjins* delivered child all alone and their husbands remained in the fields and treat it fortunate.²⁴ They washed the newly born child with cold water and laid it on the ground over figs leaves and these children live long in these countries without any headache or toothache or loss of any teeth.²⁵ *Nayres* women during menstrual cycle keep themselves up in a separate house for three days. They did not touch anything and prepare their own food in a pan and dishes especially reserved for this.²⁶ After three days they first bath in hot water and wear clean cloths, then went from the house to a tank and bath second time and remove the cloths and dressed again in fresh attire and return to their houses and restart talking with mothers, sister and others. These separate houses were plastered and swept and no one allowed in it except them. At the time of child birth the women were comprehensively washed in plenty with warm water during first three days and number of times onwards. With the exception of preparing their personal food women of *Nayres* did not perform any work.²⁷

Girls were deeply attached to their gods and on getting the partner of choice²⁸ they offer a sacrifice after consulting her husband, they fix a day for the ceremony and arrange a cart in which set a high water lift, at the end they hanged two iron hooks. On appointed day the relatives, friends both men and women with music, dancers and tumblers came. Girl remained naked above the waist and wears cotton cloths below.²⁹ She cuts the flesh from her body and throws upon her husband surprisingly without showing any sign of pain. On arrival at the gate she was let down and her wounds were treated and make her husband to love. In the end meals served to all the participants.³⁰

Another kind of religious custom was very strange. Some women of the country due

to their false notion dedicate the virginity of their daughters to one of the idols.³¹ Soon when they achieved the age of twelve mothers take them to the monastery where the idol was kept, decorated beyond expressing admiration, all the close people holding a celebration for the girl and it looks like they were going to marry. Outside the monastery stands a four-sided figure block of hard black stones surrounded by wooden gratings on them burn the oil lamps for whole night. Pieces of silk covered the stone and in the middle of the idol inserted a sharp pointed stick. Mother of the girl take her inside along with some women of relation and performed the ceremonies and finally the girl take her own virginity and spread the blood on the stones.³²

Indians are deeply attached with the superstitions and Mughal emperor too believes in astrologers and saints. Astrologer in Mughal court made horoscope of child and the rulers start expeditions after consulting them. Female soothsayers in the harem also forecast future Babur attributes one of his defeats by Uzbeks as his stars are not good.³³ Non Muslims are most superstitious than Muslims they believe in ghosts, sensation of eyes, *Kajal* mark on forehead protect the child, eclipse were ill treated and also believe in magic and sorcery.³⁴ Superstitious habits and the practices followed by people looking strange to everyone. The custom followed by people of Goa for the maid before her marriage. In order to honour the pagoda before giving her to the bride groom which was considered as auspicious for him they organize music and triumph before their pagoda made of ivory bone and bring her before the image and forcibly take the virginity of the maiden and blood fall on the image and after performing their superstitions and ceremonies they bring her back to home and then hand over to the bride groom. For this they feel honour and proud that pagoda makes their work easy and save them from labour.³⁵

They prey in the morning till they meet any thing and in whole day they prey from it be it a dirty thing. If a crow seen to them at first sight while leaving for any work they return believing it signal of evil and bad luck. On new moon they pray after viewing by falling on their knees and greet her with great dedication.³⁶ Some of them are known as *Jogis* like

hermits and for becoming holy men these people live very hard and strict life with asceticism and motivate general masses of many strange things. Many among them are soothsayers and magicians wandering all over the country, carrying live snakes which they know how to control by charm and put them in small baskets. Sometimes they call them out and make them dance on certain instruments voice which they engage and converse unto them. They put them in their necks on their arms legs kissing them simply for earning. These people were expert in making poison with which they perform strange activities.³⁷

To start any journey the Indians preferred second, seventh, twelfth, seventeenth, twenty two or twenty seventh days of the month of *Safar*.³⁸ Maintaining two swords one hanged from the saddle called as *Ar-rikabi* and the second with tremble.³⁹ If someone lies on the ground without fighting so that they may capture he was saved from being killed, because it was the custom in some parts of the country not to kill the person who reacts in such a way.⁴⁰

They perform their superstitions with extreme devotion. On every hill, cliff, cave built their pagodas and idols in most devilish and misshapen nature, cut out of the stones and rocks with their tools by hard labour and a stream of water drawn and the entire people pass from there wash their feet and then lay down before the idol. While others sit before their idol and offers fruits, rice, eggs, etc. as their affection and then the Brahmin the priest come and take everything and eat it making the people fool that the idol ate it.⁴¹ Fourteen days before going on sea voyages they perform great ceremonies by sounding drums trumpets and burn fires so much that it would seen both in the day and night. Flags were hoisted on the ships and feasts were organized for pagoda for safe voyage on return they again do the same functions for appreciation. Similar functions were observed on the occasions like feasts, fairs, child births at the time of sowing and travelling.⁴²

Portuguese and *Mesticos* of India when visited by a person who may be of little importance to another house who was the chief gentlemen of the city, it was necessary that the

visited receive him from the door of his house with great reverence with his hat into his lobby. He then asked him to sit on the chair before sitting himself and talks with each other. In the same way he went up to door to see off him. The visited offer farewell, if he not does this the visitor take it a great evil on his part esteeming it disrespect and seeks revenged on him in the similar way.⁴³

Many Indians drown themselves willingly in Ganga where they go on pilgrimage believing this river originated from heaven. The person who drowns himself tells to the people there, do not think I do this because of the sufferings or I require money but my main objective was to reach *Kusai* in this way he drawn himself and the dead body was burn and ashes were again drawn into same river.⁴⁴ Ganga treated in high assessment and thus in spite of fresh and clean water near they yet take it with great reverence and if not sufficient to drink they shake over it on them and then they consider themselves fine.⁴⁵

Indians regard cow with great respect and did not permit its slaying, they treat its urine as care of sick person if he drinks it, walls and buildings were plastered with its dung.⁴⁶ It was custom prevailed among some Indians when someone heard the news of death of beloved person they in hurry cut the collar of shirt.⁴⁷ Custom of honesty prevailed in India similar with the Sudanese that they did not seize the belongings of dead even it worth thousands. This property remains in the custody of the head of the Muslim (*Kabir-ul-muslemin*) until the legal claimant of it not takes.⁴⁸ Whenever a ship was damaged all things spared from it goes to the treasury.⁴⁹ Indian without wearing the socks does not appear before the Sultan.⁵⁰

Nayres were great warriors and believe in ghosts of different types and superstitions and considered days as fortunate and unfortunate and work according to them. Believing in omens always exist if a cat crossed in face any person who was about to start any task did not do so and if a crow start crying at the time of leaving they return back, or in a farewell a person sneezes the person sits again for some time before leaving. Adoration to the sun, the moon, the lamps and cows exist among the *Nayres* who gives them great respect. If a

person possessed something they simply believed that God enters in him and demons makes him absolute, and acts very awful things. They do number of devilish symbols and wonders. Believing that a person with proper signs dies would take rebirth from a different woman.⁵¹

Nayers soldiers increase the length of their nails as a symbol of gentlemen because they had nothing to do except military functions and long nails hinders to work other than military. Growing of nails also help in catching and holding a thing including the rapiers and same thinking exist among Portuguese and *Mesticos*. Their leader wear a gold or silver bracelet round their necks, arms, elbows for identification from each other, governors, ambassadors, king, captains and leaders when they go somewhere protection was given by *Nayres*. They were very strong fiercely fall on the enemies, and fighters of great reputation both at sea and land.⁵² The king did not persecute them for any crime even they sentenced death and the task was completed by other *Nayres*. Their daughters do not marry outside their creed and if any relation discovered they kill them without being answerable to higher authorities. It is amazing the use of dirty water instead of moving water like streams. Near the place of their residence they had a well or pit in which water was stored and its location were open on the way of public movement. When they get up in the morning they wash all their body starting from the feet up to head. Both men and women do this without hiding themselves from nearby going people. This water was so creamy and foul-smelling that a man could not cross from there with open nose. Their belief was that if they did not bath in this water they remained unclean and their whole body remained impure and full of sins. This way of cleaning body not to be done with moving water of river or streams but the standing water in well or pit because it was the necessary condition for purification, their Brahmins continues repeating some words and performed ceremonies for making it virtues and profitable.⁵³

Some Indian offers their prayers in the eastern direction like Russian exciting both hand high and putting them on the peak of the head then they lay downward and the direction

of face was towards the ground extending their body to its full length it was their law. The idols houses are located in eastern direction and the idols also stand towards east.⁵⁴ Indians go to *Pervota* which was their Jerusalem. They come either total naked including both male and female but some of them clad in *Fotas* and wear necklaces of sapphire, bracelets round the arm and golden rings called *Allooak*. They enter in the idol houses on bulls whose horns are covered in brass. These animals called as *Ach-Chee* with shod feet and three hundred bells in their necks. Non Muslims believe bull as father and cow as mother and with the dung backed bread by which they prepare their food and with the ash come after burning makes pictures of their animals on their faces, foreheads and rest of the body. On two days namely Sunday and Monday they eat one time in day.⁵⁵

Salam was the highest kind of reverence a rule performed in such a way that they joined both their hands and raised them above head as much as possible and daily they offer Salam to the ruler.⁵⁶

"The king gave Christovao Figueiredo on dismissing him a cabays of brocade, with the cap of the same fashion as the king wore, and to each one of the Portuguese he gave a cloth embroidered with many pretty figures, and this king gives because it is customary; he gives it in token of friendship and love."⁵⁷

Some inhabitants of India practiced an act of attachment the custom of never sitting at heal other not to sit on ground, some other did not lay full on the ground, while some adopt the custom of never speaking. Whenever the king toured anywhere a Brahmin who even of the age of twenty years of age, stayed in the house of queen and king accept it as greatest favour that these Brahmins become known to the queen and on this base he became confident that his sister and he belongs to same father. Moreover by this it became clear to him that the children of his sister are real than his own sons therefore the son of sister became the successor.⁵⁸

The foreign traders halt at inns according to the custom where food was cooked and served to the guests by land lady who then

slept with them. All this was done by women by their own choice as they like white men.⁵⁹

The two lowest castes namely *Pulari* and *Hirawa* (*Pulayan* and *Vettuver*) feed their children for three months and then depend on

cow or goat milk. Women without cleaning their bodies or faces put down them into sand and continue enclosed there from morning to the evening by which they became blacker and not differ from the colour of little buffalo.⁶⁰

THE MEDICAL SERVICES OF CHRISTIAN MISSIONARIES IN ANDHRA

G. Babu

A missionary in Guntur gave a graphic picture of diseases which took away hundreds, if not thousands of the poor in their wake. Mumps, measles, chickenpox, pneumonia, enteric fever, diphtheria, syphilis, cholera, hookworm, tapeworm, malaria, amoebic dysentery, bubonic plague, tuberculosis and influenza often afflicted the people. Added to the ill-health were superstitions. Smallpox, according to the past belief, was caused by a goddess and no treatment should be given to the afflicted person, as that would incur Divine anger. Death and often blindness were the result of the disease. Attempts of well-meaning officials to vaccinate failed; as people tried to evade it.¹ Cholera does its work so quickly that no time must be lost in rehydrating the patients. Plague was the worst killer in the Coastal District of Andhra, Pisupati Chidambara Sastry even wrote a book of poems giving a lugubrious picture of how people perished in multitudes due to the affliction of this contagion. Plague with all its velocity hit Ongole town in 1914. People had to leave the town, and live on the outskirts in palmary sheds. Whole streets wore desolate look,² when municipal areas presented such a shockingly bad picture, rural areas were worse, and residential areas of the outcaste people were the worst.

People of outcastes living in chill penury, devoid of proper nutrition, and living in extremely unhygienic conditions were often victims of ill-health. During the colonial rule, Allopathy was introduced in India; but for lack of proper facilities it was inaccessible even to upper caste Hindus. Traditional medical system of Ayurveda and Unani were on the wane. In these circumstances, the plight of the untouchables in matters of healthcare can easily be understood.

The American Baptist Mission its centenary celebrations were held at Ongole in 1935-36 there was on view among the few articles of the pioneers' personal belongings the surgical kit' used by Samuel S. Day who was the founder of the Mission. It is well that it was clearly labeled; otherwise it could easily have been mistaken for a high school dissecting set.

That little set of instruments was the only equipment of record in the Telugu Mission from 1836 to 1880. This surgical kit healed number of patients. It was reported that in 1858 there were only seven medical missionaries in all India. According to R. R. Williams in 1880 on the Seminary for that year Lakshmi Nursu, our medical man, has looked after all the Compound and has proved himself a very skilful doctor, his success it truly great. He has the confidence of the people not only among the Christians but the heathen regard him as a high authority. He is a faithful, earnest Christian physician.³ After two years, S. F. Smith, the man who saved the Mission from the second closure motion, he described in 1853, about Lakshmi Nursu:

Some of the disciples at Ramayapatnam have had an experience which is worth recording, one man having some knowledge of medicine as a native physician, after his conversion he became the doctor of the seminary and compound. He had a little room with a few samples of drugs and medicines, sufficient to meet ordinary cases of disease. He had been a heathen until two or three years ago. I asked him if, in the days of his heathenism, he sincerely believed in the power of his idols to do him any good. He replied that he had much confidence in them, but now he had learned that they were nothing.⁴ But, unfortunately in the year 1896 was a note that the services of Lakshminursoo were discontinued for financial and other reasons.⁵

In December 1886, Miss E. J. Cummings, M.D., arrived in Ramayapatnam. Although her stay in the Mission was brief on account of ill-health, She left early in 1892, apparently the impression she made was favorable the Mission Conference wrote a note to the Woman's Societies in 1887 "Whereas we have heard with pleasure of the interest and activity which the Woman's Baptist Foreign Missionary Societies to India and of the fact that several Baptist lady students in the various medical schools of the United States are now fitting themselves for mission work". That they had felt very happy and rejoice at the movement and, in view of the urgent need of such work in the

Telugu country, express the hope that such lady medical missionaries may speedily be sent out to the Telugu Mission.⁶

A few months before Dr. Cummings left India, Miss Ida Faye, M. D. and Miss Beatrice Slade, R. N. arrived in Nellore; there they opened a dispensary in rented rooms in September, 1893. The same year Dr. Stuart Timpany settled in Hanumakonda and began medical practice. Rev. A. Friesen in Nalgonda reported a thousand people treated with limited medical knowledge. In Palmur (Mahabubnagar), Rev. E. Chute had been doing some medical work when in 1892 he obtained the services of Dr. (Miss) Graham, a graduate of Madras Medical School. She continued in work there until her resignation in 1906 to take service in the Government Hospital in Bangalore. There she died of plague in November of the same year. The medical work in Mahabubnagar was carried on for twenty years more before being finally closed.

The work in Nalgonda was rapidly expanded on the arrival of Dr. Lorena Breed in 1896, but it suffered greatly for lack of continuous service of competent staff and was finally closed. Sooriapet started medical work with the arrival of Rev. and Mrs. A. J. Hubert in 1900. Mrs. Hubert, a trained nurse, ministered to many needy cases. When the Huberts retired in 1936, the Women's Telugu Baptist Convention appropriated Rs. 400 to help pay the salary of an Indian woman doctor and the Hanumakonda hospital staff assisted there twice a month and provided supervision. The doctor soon left because of ill-health but the Hanumakonda staff continued to supervise the work. Finally, however, the Sooriapet dispensary had to be closed.

Sooriapet started medical work with the arrival of Rev. and Mrs. A. J. Hubert in 1900. Mrs. Hubert, a trained nurse, ministered to many needy cases. When the Huberts retired in 1936, the Women's Telugu Baptist Convention appropriated Rs. 400 to help pay the salary of an Indian woman doctor and the Hanumakonda hospital staff assisted there twice a month and provided supervision. The doctor soon left because of ill-health but the Hanumakonda staff continued to supervise the

work. Finally, however, the Sooriapet dispensary had to be closed.

The medical work in Udayagiri began with the arrival of the F. W. Stait in 1898. They erected the buildings, accumulated equipment, and trained their own assistants in their hospital. In this way, the work was continued in Udayagiri, a rural village fifty miles from the railway, until the death of Dr. Minnie Grant Stait in 1928. Rev. F. W. Stait kept the work going with Indian doctors until his retirement in 1935, after his retirement no one shouldered the burden of running the hospital, then the hospital was closed. It was reopened in January 1936 and run by the staff of the Nellore mission they could not continue, the hospital was closed again in 1945. For a further period of five years, a nurse-midwife was employed to take care of deliveries in the homes. Since then, there has been no mission medical work in Udayagiri and the buildings have been used to running the school.

The first hospital in the Mission was in Nellore. It had its beginnings in the dispensary opened in 1892 and by 1896 the new buildings were in use. There were many changes of staff and other hindrances to uninterrupted work. The hospital was actually closed for several periods, once from 1901 to 1904. Then Dr. Lena M. Benjamin took charge and through her forty years service was able to build it up from four beds and 13 in-patients to 124 beds and 200 in-patients a year. Nurses' training began in 1906 with four women who had passed the sixth standard. One of these, Kodamala Atchamma of Kanigiri, graduated in 1909, the first Telugu Baptist trained nurse, apparently the first Telugu woman to complete nurse's training. The school for nurses was started with full equipment in 1908. By 1955, 275 women had finished the course and 261 of them had taken the training in midwifery also. In addition, 39 had taken the latter course only and 15 had been trained as compounders.

In 1906, nurses were looked down upon as mere servants and only the meagerly educated would take the training. By 1957, so many young women were seeking admission to what had become a respectable profession—largely because of the fine work of mission hospitals—that it was possible to fill the classes

with candidates who had finished high school. As a consequence, the lower grade of training in Telugu was discontinued and the higher grade course using English as the medium of instruction took its place. To Miss Helen Benjamin, R. N.-Thirty years in the service of the Nellore Hospital-Goes much of the credit for this achievement in the training of nurses.

Many Indian doctors and nurses have contributed largely to the growth and service of this hospital. The first Indian doctor was employed in 1913. By 1955, the two missionary doctors and one missionary nurse were being assisted by the following Indian staff: one M.B.B.S. graduate doctor (Bachelor of Medicine, Bachelor of Science), two nurse sisters, eight staff nurses, 38 graduate nurses, four technicians and compounders, four office staff, and 25 other workers. One of the nurse sisters, Miss Ethel Thoray, a Telugu Baptist of Nellore, has been nursing superintendent since 1954. Similar accounts could be given of the development of medical work in Hanumakonda and in Ongole. Dr. Stuart Timpany practiced medicine in Hanumakonda from 1893 but was unable to erect hospital buildings until 1902.

In Ongole, Clough Memorial Hospital looked after the health of the downtrodden and the untouchables. Due to the efforts of James A. Baker, this hospital came up on a site of twenty four acres. The hospital was constructed on the slope of a chain of Ongole Hills. It had many natural advantages - beauty of contour, good soil, adequate drainage and a location which was accessible to all classes of the people. The hospital building was opened by Lord Willingdon, the Governor of Madras Presidency in December 1919. The Governor was so much impressed that he remarked: "I had no idea it would be my lot tonight to see anything so beautiful".⁷The services rendered by Dr. G.H.Boggs, who worked as Physician and Surgeon for four terms till 1946, Miss Johnson, the great nurse with healing touch and the Indian doctor of the Depressed Class Doctor J.R.Wood,⁸ are still remembered by the senior citizens of Ongole and the erstwhile Guntur district of which Ongole Taluk was part.⁹

It is a pity when the Americans left, handing over the hospital to the native Christians, dark days befell this once great

centre of healing for the downtrodden. Thieves and burglars stole everything of the hospital. The bare walls now stand as mute spectators to the past glory of the hospital. The senior citizens, whom this Research Student had met, told him how the missionary doctors looked after the health of the downtrodden and poor charging next to nothing and how it has fallen on bad days "after the great white doctors and nurses" left Ongole.

Dr. J. W. Stenger started in November, 1961 the work which developed into the Clough Memorial Hospital. The missionaries contributing most to the development of this hospital and nurses' training school in the thirty years ending in 1956 were Dr. and Mrs. Arthur G. Boggs and Miss Sigrid Johnson, R. N. Medical work in the Mission by doctors qualified in Western medicine began with women. Missionary women doctors first came to India because of the desire to save the lives of some of the Indian women who preferred death to being treated by a man. They were able to continue in service and to build up a strong hospital and three good schools of nursing because this great need touched hearts and pocket books in women's missionary societies in America.

Another interesting feature of the medical work in the Mission is the extent to which it has been self-supporting; well over half the income being derived from fees paid by patients. In spite of this dependence upon fees for income, the hospitals have been able to treat practically all the worthy poor who have sought medical help, many of them completely without cost. This has been possible because missionary doctors have been willing to live on subsistence pay and put all the earning of their skill into the hospital account. That this measure of self-support is possible in a country where anyone may get free treatment in a government hospital is a great tribute to the reputation of the doctors and the doctors and the nursing service in mission hospitals.

The Question of the future is that of the relation of the medical work to Telugu Church. Are these hospitals necessary to the Christian church? If so, how can they be staffed, financed and managed? Obviously, Christian hospitals are not absolutely essential to the Christian

church because strong churches exist in areas where there are no Christian hospitals. Furthermore, it would be unthinkable that extension in evangelism should be limited to the people evangelized.

Even though Christian hospital may not be absolutely necessary, there is no denying

their usefulness and the desirability of continuing them as long as possible. Is it possible for the Telugu Church, even with foreign aid in money and personnel for a further period, to staff, finance and manage such institutions without jeopardizing its chief function of Christian nurture and evangelism?

DALIT SOCIAL REFORM MOVEMENTS IN HYDERABAD STATE

Bandari Suresh

The autocratic Nizam regime effectively repressed political and social movements and mass mobilization along party and caste lines. The Congress and the Communists hardly made a beginning, even through front organizations, until the late 1930s. Instead, the Arya Samaj took on political importance and fed into the Congress movement to give it a Hindu nationalist' tenor. Local Muslims and some Hindus (very often Kayasthas) formulated an ideology of a multi- religious, pluralistic Deccani Hyderabad culture' form the nineteenth century, but this came under attack both from Hindus and those Muslims who sought to promote a more orthodox Islamic identity.

Dalits faced pressures on both sides, to identify themselves as Hindus or with Muslims. In some ways there was closeness in Dalit-Muslim relations in the Hyderabad area itself, yet it was a closeness characterized by doubt. The relationship was expressed in a saying quoted by one Dalit activist, 'The Dalit colony is the Muslim's in-laws 'place', meaning that Muslims took wives/girls from among Dalits. But this was an unequal relationship. In the devadasi custom among Malas and Madigas,

the basavior matangis very often formed relations with affluent or noble after our girls', was a Dalit complaint. The closeness thus had a clear element of sexual exploitation in it, though Muslims did not observe untouchability, and was symbolized in the naming of Hyderabad itself, after a Dalit girl (Bhagyamma or Hyder Ali) said to have been brought into the harem of the founding prince.¹

The Adi Hindu movement

As this emerging, partly-educated Dalit middle class began to enter social life, the radicalization among Dalits throughout south India brought with it identification with the 'adi' ideology. It was Bhagyareddy Varma himself who presided over the momentous conference at Vijayawada in 1913 when the 'Panchama' identity was rejected and over a number of conferences after that. Nevertheless, in Hyderabad they took up an 'Adi-Hindu ' theme: four Adi-Hindu conferences were organized between 1912 and 1924, and gradually the main organizers began to use this terminology. In 1924 Arigay Ramaswamy formed the Adi-Hindu Jatiyonnati Sabha; not to be outdone; Bhagyareddy transformed his Manya Sangam

into the Adi-Hindu Social Service League. This became the main organization of the Dalits of Hyderabad, a feat attributed to his energetic organizing and ability to gain support from liberal Hindu sympathizers. Along with the traditional aims of internal reform ('removing social evils, establishing schools, societies, reading rooms, bhajan mandalis'), the aims of the organization included 'removing ignoble appellations and spreading the identity of 'Adi-Hindu'.

What exactly did the Adi-Hindu identity connote? This term was spreading among sections of north Indian Chamars at this time claiming them to be exploited and conquered original inhabitants² and Bhagyareddy himself travelled to north India for some of the conferences, notably two in 1927 and 1930, which described the depressed classes or adi-Hindus as descendents of the original inhabitants of this country who were rulers and owners of this land of their birth before the advent of the Aryans to the country.³

This was familiar anti-caste radicalism. But 'Adi-Hindu' could also leave space for identification as Hindu with simply the assertion added that Dalits could claim a high position within the total community, that they had been among the creators of the Hindu epics.⁴

These were issues debated and discussed among Dalits, and the 1931 Hyderabad Census reported on the controversy: A controversy recently raged in the press as to whether the Adi-Hindus are Hindus. While the caste Hindus maintained a discrete silence, two opposing sections of Adi-Hindus entered the arena. The Adi-Dravida Educational League argued that, judged by the history, philosophy and civilization of the Adi-Dravidas, the real aborigines of the Deccan, the Depressed Classes are, as a community, entirely separate and distinct from the followers of Vedic religion, called Hinduism. The League's contention was that Hinduism is not the ancestral religion of the aborigines of Hindustan; that the non-Vedic communities of India object to being called 'Hindu' because of their inherited abhorrence of the doctrines of the Manusmriti and like scriptures who have distinguished themselves from caste Hindus for centuries past. that the

Vedic religion which the Aryans brought in the wake of their invasion was actively practiced upon the non-Vedic aborigines and that the aborigines, coming under the influence of the Hindus, gradually and half-consciously adopted Hindu ideas and prejudices. A section of Adi-Hindus emphatically repudiated the above arguments in a statement in the press and deplored the tendency of the Adi-Dravida Educational League to seek to impose an invidious distinction. The concepts of God, the mode of worship, the system of rituals and code of customs and the manner of dress and way of life of the socially depressed classes are identical with those of the caste Hindus, and therefore they maintain that religiously adi-Hindus are Hindus.⁵

Awakening of Dalit Consciousness

The economic changes introduced by the colonial rulers in the 19th century in order to consolidate their rule and intensify the exploitation of India, had an impact on the relations of production in the rural areas and created new classes from among the various castes, the various revenue settlements - the zamindari, rayatwari, etc., the introduction of railways, defence works, the colonial education system, the uniform criminal and civil law and colonial bureaucracy affected the caste system and modified its role in society.

In the land settlements, the British ignored the inalienable rights of the actual cultivators, in many areas made the intermediaries, the non-cultivating sections that only had a share in the produce traditionally, become the sole proprietors of the land. In the zamindari settlement areas, the Shudra peasants became tenants at the mercy of the landlords; in other areas a class of peasant proprietors arose, but even in this the larger peasants gained while the actual cultivators became tenants or sharecroppers. The Shudra peasantry was divided into an upper section or the rich; intensified exploitation coupled with famines and other crises, indebted peasants of all the cultivating castes who were pushed into the ranks of the landless.

A section of agriculturists became landless labourers. A class of rural poor, landless or poor peasants emerged from the ranks of most of the middle and lower castes in the 19th century.

The most significant changes have been in the countryside. The close correspondence between caste and class no longer exists in most parts of the country. The old upper caste zamindars and other big feudal landlords have, to some extent, been weakened and feudal authority is, to a large extent, asserted by smaller landlords, the former big tenants of the zamindars and the large peasant proprietors. While the position of the upper castes has weakened the most, the new landlords are from the middle castes. The middle castes are, today, significantly divided along class lines. The landlords and the rich peasants are a small group from the traditionally cultivating castes, and these castes are also found in large numbers among middle and poor peasants and even among the landless.

The lower sections of the middle castes, i.e., the artisan castes are primarily middle, poor or landless and some are continuing their traditional occupations. Therefore, today, the main exploiting class in the rural areas consists of the earlier upper caste elements, i.e., the Brahmins, the Rajputs, together with the upper stratum of the middle castes, such as the Patidars, the Marathas the Jats, the Yadavs, the Vellars the Lingayats the Reddys the Kammas, the Nairs, etc.

The middle peasants, comprising about 25 percent of the rural households, largely come from the major cultivating castes and from other lower castes, as well as a small section of Dalits. This section has contradictions with upper sections of the rural elite, but due to the caste relations and low class consciousness in areas of low class struggle, they are trailing behind the elite landlord sections of the other castes.

The poor and the landless, who consist of 60% of the rural households, have the greatest number of caste divisions, including a large number of small artisan and service jatis, and even Muslims. This class consists also of a large number of households from Dalits and Adivasis. Of the rural agricultural labour families, 37% are Dalits and 10% Adivasis, while the remaining half was drawn from the cultivating castes and other lower castes. Here, caste divisions among the exploited are the greatest.

The Non-Brahmin Movements

The anti-Brahminical movements in India, especially in Maharashtra, are important because the specific characteristics of Indian caste feudalism and the way it was transformed and yet essentially maintained by British colonial rule, defined the specific anti-feudal tasks of the Indian revolution. The most basic anti-feudal task, the land question, took on extremely complex features as a result of Indian caste feudalism. Because of the way in which hierarchical relations were maintained within the village and among the exploited classes themselves, and because of the way in which productive work for the land was institutionalized through the *jajmani* / *halotedari* system, it was insufficient to look at the land question simply in terms of landlordism.

Similarly, the slogan of 'land to the tiller' was abstract and insufficient in the Indian context without understanding the overall Brahminical domination. For the fact was that much of the land had two tillers - the cultivating middle caste peasant, whether tenant or ryot and the Dalit field servant whose connection to the land was equally long-standing. The very inequality among the exploited institutionalized through the feudal caste hierarchy, meant that the need for creating unity in the context of resolving land question was crucial. It is hard to see how this could be done without a specific programme of action constituting poor peasants including Dalits, as well as caste Hindu toilers who would have the responsibility of seizing and distributing the village lands and instituting necessary programmes of co-operative and collective agriculture.

Though attempts were begun by the Dalit castes from the late 19th century to organize themselves, the various sections of Dalit liberation movement really began to take off from the 1920s in the context of the strong social reform and anti-caste movements, which were beginning to develop a genuine mass base. The non-Brahmin movements in Maharashtra and Tamil Nadu especially provided an important support. It is not accidental that Jyoti rao Phule, the *mali* (gardener caste) who lived in the middle of the 19th century, made the initial ideological advances and formulated a theory of Brahminism and 'Irani Aryabhat' conquest

turning the Aryan theory upside down to identify with the original non-Aryan Shudra and at i-Shudra inhabitants of the country.

Dalits, to some extent were organizing the century also. An early attempt in Maharashtra was the movement of Gopal Babu Wangankar. Much organizing focused on the effort to regain their rights to serve in the British Indian Army, which they had helped till the 1870s, but which was then withdrawn from them. It was in the 1920s, however, that the Dalits began to organize strongly and independently throughout many regions of India. The most important of the early Dalit movements were the Adi-Dharma movement in Punjab (organized in 1926); the movement under Ambedkar in Maharashtra, mainly based among Mahars, which had its organizational beginnings in 1924; the Nama-Shudra movement in Bengal; the Adi-Dravida movement in Tamil Nadu; the Adi-Karnataka movement; the Adi-Hindu movement mainly centered around Kanpur in UP; and the organising of the Pulayas and Cherumans in Kerala.

In most of the cases the Montagu - Chelmsford Reforms provided a spark for this organization of Dalits, but the crucial background was the massive economic and political upheavals of the post-war period. The movements had a linguistic-national organizational base and varied according to the specific social characteristics in different areas, but there was considerable all-India exchange of ideas and by the 1930s this began to take the shape of all-India conferences with Ambedkar emerging as the clear national leader of the movement. The founding of the Scheduled Castes Federation in 1942, and its later conversion into the Republican Party, gave Dalits a genuine all-India political organization, though this remained weak except in certain specified localities and did not by any means constitute the entire Dalit movement.

Social Reform Movements in Hyderabad

While other exploited sections of society identified both Hindus and Muslims as oppressors, and still others were led into the Hindu fold. There was some Dalit attraction to Muslim culture in Hyderabad. The period between 1920 and 1940 saw a clear split in the Hyderabad Dalit community on this issue. In

this narrow and communalized framework, a small but vigorous Dalit movement developed after 1910 based among Hyderabad Malas. This particular movement has the advantage of having its organizational history thoroughly documented by a later activist, P.R. Venkatswamy.⁶

Three men stood at the centre of it in the early period: Bhagyareddy Varma, B.S. Venkat Rao and Arigay Ramaswamy. Bhagyareddy (1888-1939) was originally Madari Bhagaiah, a steward for a Catholic family who educated him, who became involved with, and later employed by, the Brahma Samaj and took the name 'Bhagyareddy Vanna' to emphasize the rights of Dalits to claim a high status, 'Varma' being Brahmanic and 'Reddy' indicating high status non-Brahman.⁷ His organizing activity began in 1912 when he formed the Manyasa Sangam, with members including a building contractor, a confectioner-baker, the Superintendent of the Hyderabad public gardens and other employees, a disparate group which gives a sense of the emerging 'Dalit middle class', still without much education but, as a colleague described them, 'young and enlightened young men.

At the same time Arigay Ramaswamy who had been an office boy carpenter and ticket collector on the railroads, began a social reform group in Secunderabad and Madari Audiah, the son of a butler, had started another Manyasa Sangam at Ghasmandi. All these organizations stressed internal social reform: attempting to ban drinking of alcohol and meat-eating at social functions, abolition of the devadasi custom. This group also found itself in conflict with the traditional 'caste chaudhuris or headmen of the Malas and worked throughout the 1920 to reform this system settling up alternative courts to handle disputes outside the state's courts and in the process to try to broaden caste customs'.

Arigay Ramaswamy, according to Venkatswamy's account who was himself religiously, inclined and adopted the pose of a guru, seemed to have had tendencies towards an incorporative position:

'In our meetings he used to instill in us the sense of self-respect and to feel proud of ourselves as we were the aboriginals and

masters of this land. The foreign invaders hostilely dubbed us as 'Rakshasas' in their Shastras and Puranas. At the same time he insisted that we should give up the social evils which crept into our society and due to which we were contemptuously treated by the Hindus.... From Hindu platforms he talked of Vedanta, defects in the social structure, criticized Brahmans and recited atrocities against the Panchamas and the inhuman treatment meted out to them in the abominable Manusmriti'.

This was by and large an integrationist position. In later times Ramaswamy opposed Ambedkar's 1935 call for conversion and joined the nationalist Andhra Mahasabha, staying with the 'right wing' of Gandhian Congressites when the split occurred out of the All-India Depressed Classes League (also called the Harijan League) led by Jagji' between them and the communists. Later he followed his Congress connections to become paan Ram.

Bhagyareddy's rejection of tradition was more radical. In treating untouchables as the original sons of the soil', in seeing Brahmans as outsiders pushing all the original Indians down to south India, he was said to have used the term Adi-Hindu in a way in which 'Hindus did not refer to religion but was given by foreigners to those living in India. He opposed temple entry movements general), and at one of the important Adi-Andhra conference disputes in 1938 in East Godavari, refused to preside until all there agreed not to support a bill for temple entry then being introduced in the Madras provincial council by M.C. Rajah. He was also an ardent admirer of Buddha and celebrated Buddha jayanti for the first time in 1913 and again in 1937, two years before his death. While politically inactive during the 1930s he gave his support mainly to the Ambedkarite group of Dalits in Hyderabad.⁸

The 'autonomy versus integration' dispute which we have seen in the Nagpur- Vidarbha region was playing itself out among the Dalits of Hyderabad in a context in which an appeal to identity as 'original inhabitants' dominated discourse. However, the limitations of the Hyderabad organizing efforts have to be noted. Almost all organizing contacts were limited to Hyderabad city, in contrast to Maharashtra and the Andhra areas. Although leaders like

Bhagyareddy Varma made trips to north India and coastal Andhra, there is little evidence from accounts such as Venkatswamy's of vital rural contacts in Hyderabad state itself, though some village schools were said to have been founded. There was also clearly no working class of the type which lent such vitality in Nagpur and Bombay, and no sign of much thinking on economic issues during the 1920s.

Hyderabad Dalit politics was marked by intensive competitive struggles. During the 1920s these were primarily between Arigay Ramaswamy and Bhagyareddy Varma, founding rival 'Adi-Hindu' organizations, rival reformed caste panchayats, with occasional physical confrontation and fights between the factions. During the 1930s similar battles took place between B.S. Venkatrao and Arigay Ramaswamy, and later between Venkatrao and Subbaiah. While there were ideological-political differences embodied in these disputes, the personal competition for leadership is striking.

During the 1930s, Ambedkar's movement was to attain some significant mass base in the Marathi-speaking regions of the state, while the communists won a foothold in the rural Telugu districts using some of the same issues the Ambedkarites were using in other terminology-opposition to vethbegar and land for the landless. But the Telugu speaking Hyderabad Dalit leadership appeared aloof from this; when they went as Dalits to the rural areas in the 1940s they most often went to Marathwada and there had to speak the language of Ambedkarism; they had little organic connection of their own. Perhaps because of this, for all the initial impulse towards an autonomous Dalit identity, in practical political terms the main Dalit organizations and leaders of Hyderabad were to be divided, in later years, between Hindu (Congressite) and Muslim (pro-Nizam) orbits.

It was because of the efforts of the leaders of the Dalit liberation movement the process of the eradication of untouchability had started in the State. The erstwhile Madras State passed the Social Disabilities Removal Act 1938 and the Madras Temple Entry Act in 1948. These Acts were in application in Andhra region. The erstwhile Hyderabad State, after the Police Action, passed. The Hyderabad Harijan Temple

Entry Regulation in 1358 F. and 'The Hyderabad Harijan (Removal of Social Disabilities) Regulation in 1358F. These Acts

and Regulations were in Implementation in Telangana region.

CASTE AND COMMUNITIES UNDER THE LATER PANDYAS

Dr. A. Baskaran

The society of the pandya country was more or less similar to that of the other part of the contemporary Tamil Country. However, there were certain changes due to geographical and economic positions. When the pandyas were in esteem power their society was also its pack. The pandya country was divided into a number of small nadus and kurrans. Ur was a small village in which their divisions of Brahmadeyas caturvedimangalam, nagaram, agricultural societal villages, padaipathu, etc. They had their own institutions of them, mention must be made to the vellanuagai. The members of this institution were non-Brahmins. Next in the cadre formed the ngarams, where the traders dwelled. Padaipattu is a group of villages where the soldiers resided. The following communities Brahmins, Vellalas, Kammalas, Idayar, Parayas and other castes.

Villages

Generally, the villages and residences were located in the areas where there were enough water resources. In other words, it is to say that they were situated on the bank of rivers tank blinds and lakes. Most of the villages were established in the fertile regions where the once perennial rivers, the vaigai and the Thamraphical, were flowing. For example, the geographical position of Madurai was described in those days as Madakkulakkil Madurai is situated to the east of the tank Madakkulam. It

is still evident that Madakkulam is located to the west of Madurai and provides water for agricultural lands in certain areas of Madurai¹.

Social setup

In the pandya inscriptions, one cannot see the word caste. It is replaced by the term kudi. It is very difficult to ascertain that the Tail Society followed the chaturvarnu (Brahmins, Kastriyas, Vaisyas and sudras) system of the north Indians, Where the social status was maintained on the basis of the birth. It is not the fault on the part of any individual for his birth form any any caste or kudi². But the original Tamil society was based mainly on the occupation. There were the divisions of valangai and Idangai group which were formed on the basis of occupations³. The later Pandya society consisted of different caste people, Such as Brahmins, traders, Vellalas, Maravas, Valayas, Kallars, Palli, Kaikkaslur, saliyar, carpenter, thattar, smith, Idayuar, Kuyaras, Uvachars, Physicians, barbers, astrologer, Parayas, Pallars, Chandalar, etc⁴.

Brahmins

The Brahmins were respected by the public as the royal members next only to the kings. They showed much interest in education and religious discourses. This kings patronized them and established chaturvedimangcelams and Agaharns for their benefit. The inscriptions

and copper plate records of the later Pandyas mention about the patronage of the Brahmines by the kings and other lush strata of the society. The Brahmin population in the society was very meagre, but still they were highly respected. As per a record of the first later pandya ruler, Jatavarman Kulasekhara Panmdya I, the Brahmins from different parts of south India lived in the pandya country. They were called as malayala Brahmins and Kannada Brahmins⁵.

Vellalas

In the later Pandya Society, the vellalas occupied a high position second only to the Brahmins. They formed the majority of the population in the villages. Agriculture was their main occupation and hence most of them became landlords. There were a group of Vellals, called Kdikanathu Vellalas lived in Tirunelveli region⁶. A lower rank of vellalas, who lived in Thiumayam and Kottaiyur region were called as Siruvellalas⁷. As the peasant community they were also called as Bhumpulras children of the country the earth and Nattumakkal people of the country. As they considered plough as their god, they were again called by the name chitrmali parianattar⁸. As in the case of Brahmins they were engaged in various official positions. They served as ministers and army generals. Some of the vellalas were involved in Cattle breeding and weaving one udaya divakara muvendavelan seems to have served as an official during the reign of maravarman sundara Pandya I⁹.

Kammalas

Kammalas, the artisans, were also called as panca kammalas, as they engaged in five kinds of work. On the basis of the Materials that they used for making their works, they were categorized into five division namely the teacher (Carpenter) the tap tachchar (stone mason), the kannar (brass - smith), the tattar (gold - smith) and the kollar or karumar (black - smith). The Kammalas regarded themselves as the descendants of the divine artificer visvakarma and called themselves as thevisva Brahmins. According to the legends, Visvkarma is said to have five sons, namely, Manu, Mayan, Silpa, Divasekaran and Dairanga and they are said to be the originators of the five occupations or castes among the kammalas. According to one story, the kammalas were the descendants

of a Brahmina member and a beri chetti women. They often claimed equality with the Brahmina member and sometimes even higher status. They assumed the title acarya (artist) wore the holy thread yajnopavita and claimed the right to perform religious ceremonies and rites among themselves, especially at marriages¹⁰.

Idayar

The Idayar, Cattle breeder, were also called Idayar and kon. The areas where they lived were known as Ayakkudi, Ayapadi, Ayarpadi and Dvarapathi. The Podigai hill religion was mostly occupied by this community and hence it was called as tybadu. The chieftains of this region were also from this community. This is attested by a record of parthipasekharapuram. Their main occupation was cattle breeding and their women used to sell milk, butter, curd and butter milk in the cities and villages. They worshipped krsna and Balarama as their tutelary gods. An epigraph of Maravarman Sundara Pandya I, from Thiruvattiyur in this North Arcot district refers to the Maikirtis of the Idayas. In this, the Idayas were called as Nandaputras. They also donated cattle, lands and money to the temples¹¹.

Parayas

The word Paraya was derived from the root pavai, one who announces the orders of the kings and others during the festive occasions or during the ceremonial times. they were the permanent employers in the temples. some of them served as agricultural labourers, mud pot makers, helpers in the graveyards, cleaners and guards. The residential areas of the parayas were called as paraicheris. A paraya residential area was named after a queen of the pandya king Jadavarman sundara Pandya I, as Bhuvanmudh Udayal cheri, The Parayas also took keen interest in the administration of the Pandyas some of them, perianattu parayam, Kananattu Parayan and ahalangap paraya had signed in a land sale deed during the time of Maravarman Kulasekhara I¹².

Other Castes

There were also other castes during the later pandya period. The Marava tribes seemed to have lived in the Thirumayam region. They were mentioned in the inscriptions of this period as Maravar, Maramutaligal and

Maramanickar. They were involved in the construction of temple buildings. The kallars were supposed to have lived in the sivagangai area. They were referred to in an inscription of Maravarman Sundara Pandya I. The valayas were a sub-caste people lived in the Thirumayam region. Some of them were land owners. The Saliyas were the weaving community next only to the kaikkolas. They seemed to have lived in the flower garden area of Tirunelveli. A member of Saliya caste is said to

have gifted coins for lighting lamp in the siva temple at pattamadai¹³.

There were two major divisions among the caste of the Pandya country they were attached either to Valangai or Idangai division. Generally, the Valangai people were engaged in agricultural work while the Idangai were involved in trade and artisan works. But this was not followed throughout the period of later Pandya history.

BUDDHISM AND SOCIAL TRANSFORMATION IN ANDHRA

Prof. Challapalli Swaroopa Rani & M. Prasanna

Introduction

The contemporary interest in Buddhism is based on its social appeal. Within India Buddhism has appeared as an alternative to the hierarchical and in egalitarian ideology and Hinduism. Buddhism is viewed as a system which was more sympathetic to oppressed groups and social solution to the problem of caste oppression. After a pioneering work of Dr. Ambedkar on social philosophy of Buddha some scholars like Eleanor Zelliot. (1992), Uma Chakravarti (1996), Rhys Davids (1997), Gail Omvedt (2003) and others worked on the social dimensions of Buddhism. Studies on Andhra Buddhism are mostly historical and they focus on archaeological investigations of Buddhist sites, Buddhist art and architecture and so on. Scholars like M.Rama Rao (1956), I.K.Sharma (1988), B.S.L.Hanumantha Rao (1993), B.Subramanyam (1998), E. Siva Nagi Reddy and others have thrown some light on Andhra Buddhism. But the social aspects of Buddhism were not touched by the scholars of social sciences. Hence at least to fill the gap to

some extent, a modest attempt is made in this essay. The present essay mainly focuses on the social dimensions of Andhra Buddhism right from its inception. It further discusses the impact of Buddhism on other religious sects like Saivism and the social mobility that took place due to the impact of Buddhism among the lower castes in Andhra society.

Spread of Buddhism in Andhra

Andhra Pradesh is known as the land of ancient sites of Buddhist learning. The history of Buddhism is deep rooted in this land. Dating to the pre-Christian era, Andhra has some of the most fascinating archaeological monuments that tell the story of Buddhism in the region and the legacy had its beginnings in Andhra at a very early date.

The Pali Buddhist text *Suttanipata* gives us an interesting story of Bavari, an ascetic from Andhra Janapada, Asmaka or Mulaka dispatched his disciples to Rajagriha to meet the Buddha. Among the disciples sent by Bavari, Pingiya was renowned scholar and

elder. It is further said that Pingiya explained the greatness of Buddha to his teacher Bavari and Bavari was converted into Buddha's *dharma* (*Suttanipata*) according to the above information perhaps Bavari and his disciples are the earliest persons to be converted into Buddhism in the Telugu country.

Did Buddha Visit Andhra?

There are some stories which state that the Buddha himself visited this place. P.S.Sastry identifies Nandapura, as the present village of Candavolu near Bhattiprolu. He is also of the opinion that the women of the Nandapura (Candavolu) village may have seen at least once in their life the great Buddha. Buddhagam, a village near Candavolu is hallowed with the visit of the Gowthama Buddha and named after him. This very place Buddhagam has a large area of Buddhist remains and noted for its earliest metal image of Buddha from south, now kept in Madras government Museum. This identification of P.S Sastry emerges out of a wider study of early spread of Buddhism into Andhra desa. He firmly argues that Buddha in his life time came to Andhra. Naga king Muchilinda Naga was one of the earliest few persons to meet Buddha after enlightenment. It appears Muchilinda Naga and his dynasty was around Machilipatnam which is not far away from Bhattiprolu (Sharma, 1988: 46). Tantric Buddhist texts say that the Buddha himself started *Kalachakrayana* at Amaravathi and he was said to set the wheel in motion for the third time at Amaravathi (Mitra: 1971).

Bhattiprolu stupa was identified as the earliest among the other stupas of Andhra. It contains the corporal remains of Buddha. Raja Kuberaka is said to be the king of Bhattiprolu and he is an ardent follower of the Buddha. Kuberaka is said to have arranged a great festival on the occasion of installation of relic casket in the stupa. Hence the information regarding Bhattiprolu stupa indicates the spread of Buddhism in Andhradesa before Asoka and Satavahanas.

But most of the Buddhist monuments in Andhra date to the Asokan period. Asoka spreaded the message of Buddha and erected stupas in Andhra. The end of Asokan period came with the beginnings of the rule of the

Satavahanas. Kosambi says that the 'Satyaputtas' may be identified as a branch of the Asoka family in Maharashtra which eventually became the Satavahanas and who ruled perhaps the greatest empire after Asoka (Kosambi: 1975). Their rule is famous for their patronage to Buddhism. Though the later kings of Satavahana dynasty followed Brahmanical religion, they are indifferent towards Buddhism. Their women, merchant and artisan classes are the chief patrons of Buddhism. Likewise the successors of the Satavahanas in Andhra such as the Ikshvakus and Vishnukundins also promoted Buddhism by donating grants and constructing the *Viharas*. Buddhism mingled deeply with the local culture and it had a glorious career in Andhra desa. It also influenced the social and cultural life of the Andhra people for nearly a thousand years.

Social Dimensions of Andhra Buddhism

As Buddhism is known for social justice and equality, the Andhra society which followed the *dharma* of Buddha was also influenced by it. It is generally accepted that there was no evidence of casteism at the advent of Buddhism in Andhra. Andhras are also believed to be the non-Aryan tribes. As in the case of Magadhans in north India Satavahanas and Andhras also referred as the Mlecchas by the Brahmanical literature. The main reason behind this derogatory reference is the Brahmanical literature is that both these kings belong to the non-Aryan tribes who followed Buddhism.

All the social groups seem to have followed Buddhism in Andhra. An inscription found at Amaravathi mentions a cobbler by name Vidhika. He is the son of a Naga, who is an *adhyapaka* (the teacher). Vidhika is said to have visited Amaravathi stupa along with his family members and donated the *purvakumbha* which was adopted as the crest of Andhra Pradesh State. The Nagas and Yakshas. The non-Aryan lower caste groups, of the society are said to be the ardent devotees of Buddha. Buddhist iconography and literature frequently indicate their presence in Buddhist shrines. But Brahmanical literature says that the Nagas are the mere snakes and inauspicious who frequently trouble the Vedic rituals. This myth regarding the question of the Nagas was broken by Dr. B.R.Ambedkar in his writings. He says

that Buddhism only makes a difference between the egg born Nagas and the human Nagas (Ambedkar: 1957). Nagas appear to be the staunch supporters of Buddhism and in the same way the Yakshas as the guardians of the Buddhist centers.

Regarding the women in Andhra Buddhism women folk enjoyed both economic and individual freedom in Buddhist era. Royal women like Gowthami Bala Sri from Satavahana family and Bodhi Siri, Santhi Siri and others from Ikshvaku family are known for their donations to Buddhist Viharas.

Buddhist Culture

With the social revolution of Buddhism, an alternative culture to the Vedic or Brahmanical culture also evolved in India even in Andhra. Buddha emerged from the non-Vedic Sramanic tradition and opposed the superstitious belief system and encouraged scientific enquiry. He allowed all sections of people including the kings and slaves and royal women and the courtesans into his *Sangha*. Upali (a barber), Amrapali (a courtesan), Jivaka (son of a courtesan) are recognized as the close associates of Buddha. Buddhist society is simple and open. They do not regard one's caste and occupation and do not attribute any credit based on one's birth.

Buddhism highly influenced the art, architecture, literature and learning. Buddhist monasteries are known for imparting education to the people. Andhra society in Buddhist era also highly influenced by the democratic ideology of Andhra. Women enjoyed privilege in Buddhist era in Andhra desa. Matriarchy was followed by the rulers and others. The prefixes in the names of the kings like Gowthamiputra Satakarni and Vasitiputra Pulomavi indicate the prevalence of matriarchy in their society. As rightly pointed out by B.S.L. Hanumantha Rao, the cosmopolitan spirit of Buddhism removed the tribal barriers and helped them to be united under the Andhras who could establish the mighty Satavahana empire attended by economic prosperity and glory (Hanumantha Rao: 1993). Buddhism was not only a revolt against Vedic ritualism but also an attempt at the synthesis of all the best elements in Aryan and non-Aryan religions. Despite the indifference of Brahmanical kings like the

Satavahanas, Ikshvakus and Vishnukundins, Andhra became a flourishing centre of Buddhism and a place of pilgrimage for Buddhists all over the world. The chief patrons were royal ladies, merchants, artisans and the people at large.

Mahayana and Tantric Phases in Andhra

Acharya Nagarjuna, the chief proponent of Mahayanism is believed to belong to this place. It is viewed that Nagarjuna made a great damage to the popular Buddhism in Andhra. Under his leadership Mahayanism introduced Sanskrit *dharanis (slokas)*. Several unhealthy practices were also introduced in the Tantric phase of Buddhism. They deified Buddha and created a large number of Buddhist deities. Mystic syllables (*mantras*), ritualistic circles (*mandalas*), physical gestures (*mudras*), *yoga*, astrology, alchemy, magical sorcery, co-efficiency of female element etc. were practiced in Tantric Buddhism. According to Astin Woodwell Buddhist Tantrikism is nothing but Saiva idolatry, Sakti worship and demonology. Dhyan Buddha concept was also developed in which Sakti worship is an important feature (Goyal: 1993).

Spread of Tantric Buddhism among the Out Castes

Basically Tantrikism disregarded caste system. Hence the out castes and wanderers got attracted towards it. In Andhra context also lower castes were seen to be continued in this Tantric religion. Tantric priestly functions were usually performed by the people of lower castes. Several other non-Vedic practices and traditions such as Nathism and Siddha Yoga were also evolved from Tantric Buddhism. It appears that most of the practitioners of the Natha Yoga and Siddha Yoga were happened to be the persons belong to the out castes. Interestingly women also practiced Siddha Yoga. Tantrikism regard the *nivana* in the union of a girl belongs to out caste. Likewise Siddhas also consider the Chandala women as a symbol of *nairatmya* which leads man to the social and conventions. Hence it is viewed that the customs like Jogini among the out caste women in South India and Andhra in particular has been emerged out of the Tantric practices of the Siddhas. Jogan Shankar says that these Joginis are the degraded Buddhist nuns who belong to

the lower castes (Jogan Shankar: 2003). The religious mendicants or priests from lower castes such as the Pambalas and Pothurajus also might have emerged out of the Tantric practices of Buddhism. They participate in the rituals of Malas and Madigas. And these Pothurajus, Pambalas and the Joginis closely associated with the cults of village goddesses. During the occasions of the *jataras* (village festivals) they play a prominent role. Buddhism in its Tantric phase merged with the local traditions particularly in the worship of village goddesses.

Impact of Buddhism on Saivism

As stated by B.S.L.Hanumantha Rao, the processes of Aryanization in South India were characterized by conciliation, compromise and synthesis. We can see the process of syncretism even among the gods like Siva, who is a mixture of Harappan Pasupati and Rigvedic Rudra, neglected by the Aryans, began to appear on the scene. To encounter the spread of Buddhism in South, the Brahmanical Sages brought Siva into forefront. In this phase Saivism has been co-opted several ideas of Buddhism such as disregard of casteism and equality between men and women etc. trident a weapon of Siva also came into existence as an imitation to *Triratna*. As the Tantricism created religious mendicants from out castes, Saivism also produced a particular sect called Jangamas from the lower sections. Even these Jangamas do not care for caste distinctions and practice celibacy. Local aboriginal tribes are identified as the *ganas* of Siva. Village goddesses like

Ellamma, Pochamma were considered as the wives of Siva and have lost their identity.

Basically the worship of village goddesses is the practice of non-Aryan of Dravidians who also follow the matriarchy. Brahmanism imposed the non-Aryan god Siva against the non-vedic heterodox Buddhism. Religious history of Andhra proves that many Buddhist centers in Andhra were demolished and converted into the Saiva temples. Stupas were reshaped as the Siva Lingas. Pancharamas of Andhra Pradesh are said to be constructed on the ruins of Buddhist shrines. Buddhist monasteries were also demolished and the monasteries of the *bhikkunis* are named as *lanja dibbalu* or the mounds of the courtesans. And the *bhikkunis* lost their Buddhist identity. But the *sramanic* practices are still being continued in a worst form.

Conclusion

As discussed above Buddhism in Andhra desa highly influenced different aspects of Andhra culture over a thousand years. Though there are many changes in its course. but it did not lose its non-Brahmanical social philosophy. Right from its inception, the out castes have been closely associated with Buddhism in Andhra desa. The Nagas and Yakshas, who were the staunch followers of Buddha gradually, emerged as the priests of the village rituals. But the unhealthy practices of Tantricism made the women of lower castes as the objects of lust on one way and they were given the rank of religious mendicants on the other.

OCCUPATIONAL ARTISANS IN TELANGANA REGION- (WITH SPECIAL REFERENCE TO POTTARY)

Ch. Chandraiah

Artisans traditionally belonged to the professions of Black smithy, Carpentry, Pottery, Shoe-making, and Weaving and Oil extraction. They used to provide effective support and servicing facilities to economic activities like household tools and farm equipments and maintenance of these equipments in the villages. Artisans in the above cited trades were essential for all the agriculturists, were hereditary in nature and were being paid annually a given share by all agriculturists in the village. The artisans like Bricklayers, well diggers, etc., were neither required regularly nor by all. These artisans were paid fixed charges, which varied according to market conditions, as and when the services were used. Artisans are classified on the basis of castes, employment and products. In the districts Telangana the artisans are identified by their caste. Examples of such classification are: a) Sali - weavers; b) vadrangi – carpenters; z) kummari – potters; d) medari or erikala – basket makers; e) kammari – blacksmith; f) kamsali – goldsmith; g) dasari – wig makers; and h) kanchari – brazier. On the basis of employment, the artisans are classified in two categories viz., self-employed artisans and wage-earning artisans. Majority of artisans in the districts are self-employed artisans. The products of artisans in the district are two types i) those who produce for sale for example potters and carpenters; ii) those who render services for example barbers and washer men. On the basis of finance, the artisans are classified in to three categories. They are: i) independent artisans who can own the tools, secure raw materials by themselves and sell their products independently; ii) kharkhanas who own a shed and tools and workers come and execute the production; and iii) dependent artisans who usually depend on the middle men for finance, raw materials, etc.

Pottery is the process of forming vessels and other objects with clay and other ceramic materials, which are fired to give them a hard, durable form. Major types include earthenware, stoneware and porceiain The place where such wares are made by a *potter* is also called a *pottery* (plural

"potteries"). The definition of *pottery* used by the American Society for trusting and material(ASTM, is "all fired ceramic wares that contain clay when formed, except technical, structural, and refractory products." A different definition, used within the field of ceramics, is "everything which is not porcelain" In Archaeology, especially of ancient and prehistoric periods, "pottery" often means vessels only, and figures etc. of the same material are called Terracotta Clay as a part of the materials used is required by some definitions of pottery, but this is dubious. Pottery is one of the Oldest human inventios. originating before the Neolithic period, with ceramic objects like the Grayettian culture Venus of Dolni veston nice figurine discovered in the Czech Republic dating back to 29,000–25,000 BC,^[3] and pottery vessels that were discovered in Jiangxi, China, which date back to 18,000 BC. Early Neolithic pottery artefacts have been found in places such as Jomon Japan (10,500 BC), the Russian Far East (14,000 BC), Sub-Saharan Africa and South American and India.

Pottery is made by forming a ceramic (often clay) body into objects of a desired shape and heating them to high temperatures (1000-1600 degrees Celsius) in a kiln which evaporates all the water from the clay and induces reactions that lead to permanent changes including increasing the strength and solidity of the object's shape. A clay body can be decorated before or after firing; however, prior to some shaping processes, clay must beprepared. Kneading helps to ensure an even moisture content throughout the body. Air trapped within the clay body needs to be removed. This is called de-airing and can be accomplished either by a machine called a vacuum pug or manually by wedging. Wedging can also help produce an even moisture content. Once a clay body has been kneaded and de-aired or wedged, it is shaped by a variety of techniques. After it has been shaped, it is dried and then fired.

Pot and other materials making.

Create two balls of clay of the same size by weighing or estimating. Throw each half of the clay between curved hands until it becomes a ball. Push your thumb into the middle of the ball, leaving roughly $\frac{3}{4}$ cm in thickness at the bottom. Pinching: Rotate the ball in your hand, making small pinches between thumb and fingers and gradually moving up the wall. Aim for an even thickness, leaving the rim slightly thicker. Tip: Keep your thumb inside and fingers on the outside, if your finger muscles get tired, take a rest! If it's very flexible or wet. Dry the pots evenly inside and outside while avoiding the rims as much as possible. Its better to under dry than over dry— they should be flexible, but not sticky. Score around the rims of each pinch pot with a knife. You can crisscross the score marks and add slurry or water to help the clay stick. Place the pinch pots together. This is the most crucial part in the making process! Push one rim into the other by digging your finger in just a little and pushing over to the other side. Repeat all the way round the join. It doesn't need to look neat! Once joined you can gently hit the pot with a stick all over to compress and reinforce the join. Get it into round shape and knock out the join and pinch marks, patching up any holes using the above technique. Shape the piece to your desired shape. Air hardening clay may not get much taller, but you can use modelling tools to create a smooth surface and define the shape by smoothing up and down. Open the top by pinching to create a lip or cut the top open with a knife and finish neatly. *to dry it evenly, avoiding the rim. The pot is dry enough when it's no longer tacky or flexible and feels like leather (we call this 'leather hard').*

Decorating

Decorating your pot is where you can add your personality! I've demonstrated three decoration techniques here— each look nice alone or in combination. Place your pot on a banding wheel and use a serrated kidney to scrape around the shape. Then scrape in an opposing direction around the whole pot to further define the shape. Finally, use the rubber kidney to smooth the pot. Using the straight side of the kidney, slightly curved, scrape away the score marks. Mark making: I've used a soft rubber tool to make line marks in the clay, but you can use many different tools that are plastic, wood or metal, sharp or blunt, to get different effects. Slip decorating and paper resist: freehand paint with slips or use paper to make more defined lines, shapes or figures. Cut out shapes from paper, dip in water and stick onto the pot, making sure there are no gaps between the paper and the clay. Paint slip (or acrylic paint if using air hardening clay) over the top. When it's almost dry you can peel off the paper to reveal the pattern. For scraffito the slip needs to be very dry— otherwise you'll create rough-looking marks. You may need to leave your pot to dry overnight. Use a carving tool to carefully scratch the slip off in a pattern or image. Carving: Once leather hard you can carve clay. Here I've carved into the marks I made earlier with a sharp carving tool.

Dust: dry clay creates dust that is harmful to inhale. Pots shouldn't be scraped when bone dry as this creates the most dust. All clay must be cleaned off the tools after use to avoid this. Hair dryer: drying work too closely can overheat the hair dryer and cause fire. Sharp tools: scissors, carving tools, knife, serrated kidney (we can use plastic modelling tools with children). Pottery is beautiful work in village culture and pottery items very natural for cooking. This types of food is healthy.

SAHODARAN AYYAPPAN: A SHINING STAR IN THE SOCIAL REFORM MOVEMENT IN KERALA

I.B. Chinthu

Introduction

Sahodharan Ayyappan was one of the social reformers associated with the social reconstruction of modern Kerala. He was born in an Ezhava family. The impact of western education and the philosophies of social reformers like Sree Narayana Guru, Vaikunda Swamikal, Brahmananda Swami Sivayogi and Vagbhatananda influenced Ayyappan to become a social reformer. Ayyappan was closely associated with Sree Narayana Guru since his childhood. Sree Narayana Guru gave all kinds of help for his studies at Trivandrum. After completing his education Ayyappan actively participated with SNDP yogams for the irradiation of caste system in Kerala society and to uplift the Ezhava community who were the victims of religious discrimination.

With the introduction of the Caste System a three-tiered society was created in medieval Kerala with Nambutiris as the supreme authority of land and law and order. The second category includes people like kings, feudal chieftains and the Nairs, who ruled the country according to the guidance of the Brahmins. In the third category were the people who belonged to the untouchable groups. Numerically the Ezhavas were the largest community in Kerala. But they were at the top of the caste group known as *Tindaljail* or polluting caste. They were spread evenly all over Kerala. Basically they were the cultivating class, traditionally associated with growing and tapping coconut trees. They were also called *Izhuvans*, a widespread tribal people inhabiting

Malabar, Cochin, and Travancore. They are known under different names with more or less variations in their customs and manners; they form one and the same caste.¹ In Travancore they are called *Ezhavas* in Cochin they are known as *Chekava* or *Chovans*. In Malabar they are called *Tiyyas* while in present Kasargode and in (South Canara) Tulunadu they known as *Billavas*.²

They were deprived of all freedom and the fundamental dignity of being human members of a civilized society.³ Even during the first decades of 20th century, people belonging to the Ezhava to Nayadi were denied the freedom to walk on public roads. The only difference in comparison to earlier times was that they were not killed, but only beaten up if they sometimes happened to walk on such roads.⁴ Despite the fact that they belonged to Hindu community, they could not enter temples. They were denied to worship in temples and even entry in to temple roads. The Ezhavas had their own temples, but not allowed to worship the higher Gods of Hindu religion like Vishnu or Siva. Ezhavas and other *Avarnas* used to worship the corrupted forms of God like *Chathan*, *Chamunti*, *Madan*, *Marutha*, *Yakshi*, *Arathan*, etc. There were other social humiliations as well. An Ezhava should keep himself, at least thirty six feet away from a Nambutiri and twelve feet away from a Nair. There was also caste restriction in dressing styles. Only women of the upper castes were allowed to wear a waist cloth (*muntu*) which came below the knees. This *muntu* was usually woven by the Ezhavas, but

women of this community and other lower communities were not allowed to wear it.⁵ The low caste Ezhavas, both male and female should never dress themselves like a caste Hindu. In case of women they always need to appear topless before caste Hindus regardless of their age.⁶ They were not permitted to cover their breasts even with a simple towel, if anybody wears an upper cloth, she has to remove and expose her breast before the high caste men in order to show her respect. Samuel Mateer observed that the proper salute from a female to person of high rank was to uncover or expose her bosom.⁷ Covering up of the breasts of Ezhava women was regarded as an infringement or encroachment on the rights of high caste men. This prohibition was enforced throughout Malabar, until about the commencement of 20th century and in Travancore until 1859. While in Cochin it has strictly observed up to the first half of the 20th century.

Till 18th century the Ezhavas continued as the most populous landless community. They faced slavery, untouchability and unapproachability. They had not only cultivated the land but also rendered *uzhiyam* or forced labour for their masters. This system only harassed the Ezhavas. No one had the courage to resist or refuse to work. They were not permitted to carry umbrella, to wear shoes, or golden ornaments, to carry pots of water on the hip, to build houses above one story in height, to milk cows, or even to use the common language of the country. The caste system, feudalism and land system thus made the social and economic life of the Ezhavas a pathetic one.

The advent of colonial powers had helped in upliftment of various sections of society. With the impact of westernization and the modernization of society the condition of the community underwent some changes. The economic wealth acquired by some of the Ezhavas through their occupations like toddy business, coconut cultivation, coir and copra business. It also created in them an urge for getting privileges and to become elevated in the social hierarchy. Even these privileged class within the community denied the social privileges and civic rights. They were forbidden from walking through public roads or approach

roads of temples, entry into the temples wearing upper cloth and even to build a good home.

Both the Internal factors and national changes paved the way for many business and agricultural families among the Ezhavas to get prominence. Land ownership, agriculture and trade were the main factors contributed for this change. However the individual or private ownership of land was denied to the Ezhavas. They remained as poor landless agricultural labourers. Sahodharan Ayyappan realized that implementation of land reform measures was the only factor which raised the status of Ezhava tenants to the owners of land. The most revolutionary land reform measure in Travancore was the proclamation of 1818, which marked a turning point in the history of the Ezhavas. It gave right to the people to take up waste land and new land formed from rivers and backwaters for cultivation.⁸ Some of the Ezhavas secured a considerable share in the *sircar* tenancy rights and using their labour power and their capital earned from non-agricultural pursuits. It marked a change in the condition of Ezhavas from agricultural labourers to tenants. The Ezhavas who had a share in the *sircar* tenancy by the Regulation of 1818 became land owners by the Regulation of 1865 issued by the Travancore ruler Sree Ayilliam Thirunal.

The Ezhavas were actively participating in non-agricultural occupation such as coir making, coconut trade, toddy and arrack trade, artisanal occupations, handicrafts etc. The commencement of the interportal convention in 1865 between Travancore and the British Government was an important milestone in the development of trade, especially in the export of coconut products. The demand for coconut products in Europe and America increased towards the end of the 19th century, Ezhavas witnessed the advantage of cash economy. Through all these ways the most of the Ezhavas become economically independent and began to uplift themselves. Along with this the establishment of Public Works Department was the factor which contributed for the transformation of the community. Ezhavas were able to develop as wage labourers in rural and agro-processing industries. Several Ezhava women were employed as coolies in the Public Works Department. Thus they developed as an

enterprising community. They even ventured into new economic conditions as contractors, commission agents, cash crop farmers, traders and entrepreneurs.

Even though they advanced in many sectors they did not had a valuable change in their social status. In this circumstance the spread of Western education and the work of Christian missionaries brought about a radical social change in Kerala society. Most of the low caste people got certain social as well as civic rights as a result of these social movements inspired by westernization. In the processes of social transformation Sree Narayana Guru played a vital role. Getting inspired by the Sree Narayana movement the newly emerged middle class of Ezhavas like Sahodharan Ayyappan went forward with more social reforms to get rid of all these disabilities. For that venture they even joined hands with the Nairs, who treated the Ezhavas ruthlessly in the former years. They even went forward with the signing of Malayali memorial along with Nairs, Christians and Muslims for availing civic rights and for getting entry to government jobs. The memorial made a joint undertaking to cast off the impact of Tamil –Telugu Brahmins in civil service of the state, by touching the feelings of recognition of these communities.⁹ It constituted the first spark of political consciousness among the people of the state and a bold attempt by the educated middle class at exposing public policies prejudicial to its interest. This memorial was signed by 10038 people belonging to Nair, Ezhava, Christian and Muslim communities and the petition was submitted to the then Maharaja Sree Mulam Thirunal on 11th January 1891.¹⁰ The Nairs were the only group, among the memorialists of 1891, who were capable of getting any favour from the government.

The failure of the *Malayali Memorial* forced the Ezhava educated middle class to raise their voice against the government and society. Dr. Palpu, who was neglected a job in the Travancore medical service only because of his low caste birth, entered in to the mainstream and acted as the champion for the agitations against the deprivation of political as well as civic rights of Ezhavas, when they failed to get any desired result from the Malayali Memorial, the Ezhavas made the leadership of Dr. Palpu for the removal of their social disabilities by

submitting a petition of rights in October 1896. This is popularly known as the Ezhava Memorial, signed by 13176 Ezhavas among them half were land tax payers.

Ezhavas then aimed at entering into the *sirar* or government service, for which they needed entry to government schools. They claimed that as the majority community they were the major contributors of tax and so they wanted the government schools to be opened for them. Thus the memorial concluded by demanding entry to government schools and employment. As a result the Ezhavas got certain educational rights. The Ezhava Memorial was significant in many respects. For the first time, a section of the people who belonged to an untouchable and discriminate caste dared to point out to the government their importance in number, economic strength and contribution to the exchequer. Even though the Ezhavas did not assert themselves or question the prevailing customs, the Ezhava memorial was considered as the first charter of demands of the Ezhavas. This memorial certainly marked the beginning of an organized agitation of the Ezhava community.

Sahodharan Ayyappan decided to make a collective action for the destructing rigid caste system since his arrival at Cherayi in 1917. The idea of holding an inter dining as a prelude to the fight against caste system was put forward by him. Ayyappan arranged an inter dining and encouraged few Pulaya youths to participate in June 1917. The inter dining has created great chaos in the society, as its aftereffect 22 Ezhava families were excommunicated by a meeting organized by *Ezhava Vijnana Vardhini Sabha*. Consequently, Saharan Ayyappan was given the sobriquet *Pulayan Ayyappan*. In 1917, Saharan Ayyappan also started a journal named '*Saharan*' which means brother. This journal became a mouth piece of Ayyappan's movement to change Kerala society into a caste tolerant and enlightened community. Ayyappan was a follower of Buddhism, which made him protest against the animal sacrifices in Kali temples.

In Cochin Ayyappan organized the *Ezhava Samajam* which submitted a memorial to Cochin raja for providing the same rights for the people who refuse to convert to other

religions. As Ayyappan did not get a reply, he convened a meeting under *Ezhava Samajam* at Calicut the *All Kerala TiyyaMahayogam* declared that they will wage peaceful struggle till the disabilities of non- caste Hindus are removed. Ayyappan was the notable leader of Travancore SNDP Yogam even before his establishment of Cochin SNDP Yoyam.¹¹ An All Kerala Ezhava Youth League was formed and in its first meeting conducted on July 31st 1933, they set a request to SNDP Yogam for declaring Ezhavas as non-Hindus. In the second meeting held at Karunagapally Saharan Ayyappan asked Ezhavas to abandon Hinduism, as they felt their upliftment within the fold of Hinduism was much difficult.¹² Ayyappan was the member of Cochin Legislative assembly from 1928 to 1949 and the member of Travancore-Cochin assembly between 1949-1957. He also served as deputy speaker and minister in Cochin legislature. As a member of Cochin assembly he introduced the Civil Marriage bill, *Tiyya Patriarchal Succession Bill*, and *Tiyya Matriarchal Succession Bill*, all these bills paved way for the modernization of Kerala society and upliftment of Ezhava community.¹³

Conclusion

With the introduction of western ideologies the lower caste people got some privileges in society like the economic growth and stability but their social status was same as before because of their lower caste origin. The contributions of Saharan Ayyappan and other social reformers for the upliftment of Ezhava community have an immense role in the present status of Ezhava community. The inter dining organized by Sahodaran Ayyappan was an innovative step towards bringing all depressed caste together to fight against the injustice faced by them. All those progressive steps by these leaders paved way for the all-round development and modernization of Ezhava community. With these social reforms movement's higher caste domination over the society was changed, the society was reshaped with equality. Now they formed their own caste organizations and played significant role in society, which is even capable of controlling the political scenario of the state.

ISLAMIC ARCHITECTURE UNDER THE DECCAN SULTANATES

Dr. G. Dayakar

INTRODUCTION

After fall of Bahamani dynasty the five kingdoms were established in different parts of the Deccan such as the Barid Shahi, Immad Shahi, Nizam Shahi, Adil Shahi and Qutb Shahi. These dynasties worked for development of their regions. They were

established systematic administration and closely associated with the people. They were encouraged literature, art and architecture in those regions. During this period the Islamic architecture played an important role in Deccan. In my paper what are the monuments constructed with Islamic

features in the Deccan was analyzed and their architecture explained.

THE IMMAD SHAHIS

Immad Shahi rulers constructed several beautiful monuments in Berar. A very fine specimen of the architectural style of an Immad Shahis shows in the Great mosque in Gawligarh fort. Basically mosque was the house of Allah. It is built on high terrace, bound on the west by the prayer-hall and enclosed on the remaining three sides by an arcaded screen walls with battlement crestings of pleasing design, and with a large gate in the east and small entrance in the north and south sides. The large gate is itself an imposing structure constructed on the model of the Mahakali gate without its flanking set of rooms and galleries.¹ The interior of the mosque was divided by square pillars into seven aisles, each three bays deep, but now only two front bays remain, the third one along with the back wall was collapsed some time ago. All twenty one compartments thus formed were surmounted by a corresponding number of full domes of pleasing contour, of which only fourteen now remain.

The important monwment at Elichpur was the Idgah. It was constructed in 1347, it is the usual plan of a one wall mosque, with five recessed prayer-niches, crenellated at the top and buttressed at either end by slopping towers. To the north of the central prayer niche is a raised pulpit in the form of a domed structure shaded by projecting eaves on brackets and adorned with a parapet and finials at the comers most of which have fallen down. The shape of the receding arches of the prayer niche, conforming to the pointed horse-shoe variety, is similar to those occurring in the late fourteenth century tombs at Gulbarga.

Another monwment of Immad Shahis is Jame Masjid in Elichpur. In this Masjid the prayer chamber consists of a spacious hall four bays deep; having a fayade of eleven arches and is roofed by eleven small domes in the front of row. At the rear it seems to have had a large central dome covering the central portion of the interior to the extent of six bays, but the original dome, along with the side ones, is no longer there. The interior

is plain and simple to the point of being severe, the decoration being limited to rosette bosses in the arch spandrels under the central dome. It is the best suitable example of Islamic architecture in Deccan. However, some variation was provided by use of double columns in the bays under the two arches flanking the intermediate three ones. Apart from this, the general design of the fayade, the shape of its stilted pointed arches, the treatment of the cornice and the parapet are much in the same style as in the Gawligarh Mosque² Daru'sh-Shifa Mosque at Elichpur and Jami Masjid at Malkapur are other two monuments of the dynasty. Both were had same style, each comprising a prayer hall two bays deep, flanked by the typical square pylons at front ends, and consisting of five arched openings under a bold cornice on close-set brackets, decorated by an additional parapet of trefoil crenellation and roofed by ten very low domes. Architecturally, the only departure from the style represented in the Gawligarh and Elichpur Mosques is that the arches in these Mosques are wider, which was perhaps due to the smaller number of arched openings, necessitated in their turn by the smaller size of the Mosques³.

THE NIZAM SHAHIS

The Nizam Shahis of Ahmadnagar constructed several monuments in the Islamic style of architecture. A large number of beautiful and interesting monuments of all types, such as Palaces, Mosques, Tombs and etc., were constructed by Nizam Shahi Sultans not only in Ahmadnagar city and also in various places such as Daulatabad, Jalna, Junnar, Khuldabad and Paithan etc.

The first typical tomb in the Nizam Shahi style is Rumi Khan's Tomb, which was constructed in the middle of the sixteenth century. Measuring about 26 feet square and raising to a height of about 40 feet, it is crowned by an impressive large full dome. At four corners are flat-roofed square kiosks, and in between them, a parapet of trefoil merlons.⁴ The outside walls are divided into two horizontal pointed rows of three recessed arches each, which are variety displaying a tendency to ogee shape at the top. The

middle one of the lower arches is larger. Separating the two rows are a series of string-courses and a band of blind merlon-crests. The dome placed on a lofty drum within the band of petals is in contrast with flat-roofed kiosks at corners. The treatment of the exterior and the overall fine proportions make this tomb one of the outstanding monuments of the Islamic style. The Rumi Khan Mosque measuring about 40 by 30 feet is a double-storied mosque. The prayer-hall comprising the upper storey has a three-arched facade and is two bays deep, its flat roof being supported on round pillars of black polished stone. A tomb datable to this time is that of Sayyidu's-Sadat at Paithan. Its chief point of interest is in the ornamental quintifoil shape of the recessed arches on the wall, recalling mindfully the similar feature in the Lange-ki- Masjid at Gulbarga.⁵

The *Do Boti Chira* Tomb at Ahmadnagar locally believed to enshrine the remains of Sharza Khan consists of a square chamber with three arches of unequal size on two of its sides. The Tomb constructed in the year 1561. The whole is shaded by a deep cornice supported on brackets, and above it runs a simple parapet. The roof is crowned by a full dome placed on a lofty circular drum, the phase of transition from the square chamber to the octagon being achieved through squinches. The building is remarkable for its chaste simplicity and carries with it an air of impressiveness.⁶

Damri Masjid, a small gem like building of very neat design and fine workmanship, particularly of the carvings on its facade and the central Mihrab. It consists of a single prayer-hall of three aisles, each two bays deep, with corresponding arched openings in the north and south walls, and its flat roof is supported on arches springing from octagonal pillars placed on foliated bases. The facade has three arches of the pointed variety, shaded by a steep cornice on evenly placed brackets by a richly decorated square pylon at each end crowned by a slender and graceful minaret, which also occurs at the rear corners. From the middle of its highly ornamental parapet wall, topped by a cresting of double merlons of trefoil pattern, are placed square ornamental piers carrying two slender

minars which enclose for flying arch, marking an outline of a pointed dome. These minars have ornamental balconies and heavy *chakra* like moulding, domed by orbs of a fully developed type.⁷

Another magnificent monument is Salabat Khan II Tomb. He was minister during Murtaza I (1565-1588) rule. It was locally known as Chand Bibi ka Mahal. It was built on a lofty octagonal terrace of stone about 300 feet in width and 12 feet in height, the tomb consists of an octagonal hall about 12 feet across surrounded by a three storied verandah about 20 feet broad, the sides of which are faced with alternate openings placed symmetrically. The whole building rises to a height of about 70 feet⁸

The largest of the Khuldabad tombs situated a little distance to the west of the Malik Amber tomb is two storied square tomb of the usual type. In spite of its plainness, it is particularly remarkable for the perfect balance between its upper and lower parts. Another tomb in the said group which is remarkable for its unusual design is the tomb of Zachcha Bachcha situated close to Malik Amber's tomb. In general plan and design, it resembles to a certain extent the tomb of Shah Ashraf Bayabani near Amber. The dilapidated tomb of Zachcha Bachcha seems to have had the octagonal section only up to the roof level, and its corner pillar has a plain shaft and only volute capital, enclosed within long moulded brackets. The monuments of the last phase of Ahmadnagar architecture include a few tombs at Daulatabad, Khuldabad, Amber and Wakla in Aurangabad District, and a mosque and a tomb at Kher in Poona District. All these monuments of Nizam Shahis reflected the Islamic architecture in the respected areas.

THE BARID SHAHIS

The Barid Shahi rulers constructed several big and small monuments with Islamic architecture in the Bidar region. Ali Barid (1543-79) was an important ruler, who constructed several monuments with Islamic style. Ali was greatly fond of architecture and it is from his time onwards that a distinct Baridi style of building art became an important. The tomb attributed to Qasim I is a

small square building, measuring about 20 feet a side, of no architectural significance. Roofed by a plain conical dome of eight facets, both externally and internally, it resembles the tombs of Waliullah and Kalimullah at Ashtur. The in completed tomb of Amir Barid, on the other hand measuring about 64 feet a side, would have been quite imposing if it were completed, but in its present state, rises to the roof-level only. Its walls are divided externally into three equal vertical parts, the middle taken up wholly by a lofty arched portal enclosing the door, and each of the side ones by a double storey of two arches. But it was only under Ali that a distinct change came over the general architectural character of the buildings, and Bidar and its neighborhood witnessed much building activities, either in new construction like his own tomb and mosque, or in restoration, alteration or rebuilding, as in the case of fortifications and palace buildings, particularly the Tarkash and Rangin Mahals. Ali carried out large scale improvements to the fort and city walls Bidar and rebuilt the Rangin Mahal. In the Rangin Mahal, the only structural innovation is the use of wooden columns, minutely carved all over in intricate patterns in the Hindu style which supported the main hall. Its wall was originally faced with enamel tile decoration in floral and calligraphic designs and matching colours, but this has almost disappeared. However, a greater distinguishing feature is the fine glistening mother-of-pearl inlay work occurring on some of its archways, set in jet black stone or dark-coloured basalt⁹

Ali Barid tomb was architecturally example for tomb architecture of the Barid Shahis. It measure 58 feet square and built on a spacious platform in the midst of a vast garden, entered from the south through an imposing gateway. The middle arches are slightly larger, and the upper one is further emphasized by an ornamental window in the form of a miniature copy of the fayade of a triple arched building shaded by projecting cornice supported on brackets and decorated by a parapet of interlacing arches between two domed finials. The upper storey has a hall and rooms, whose walls are decorated with a large number of small niches; this

feature, found in most of the palace-buildings throughout the Deccan. A mosque was attached to Ali Barid tomb. It comprising a single prayer hall, measuring about 42 feet by 15 feet and divided into three aisles, also introduces some new features in the hitherto prevailing architectural design.¹⁰ In mosque the stucco decorations, with usual floral pattern, along the base of the vaulted ceilings and with decorated arches were there.

The Barid Shahis used in the constructions were stone with an occasional use of black polished stone etc. Workmanship is very fine during this period. The Kali Masjid constructed with wood. The more refined character of the mosque, emphasized by its exquisite workmanship of stone material and some of its forms which would be more appropriate in wood should indicate that in the mosque. It was built in the close of sixteenth century. It consists of a prayer-hall, measuring about 46 feet by 35 feet internally, which is entered through three arches of considerable dimension. The interior is divided into six compartments by means of massive columns on which rest the arches which support the basket-shaped ceiling in the middle bay at the rear and shallow domed ceiling in other bays. The vaulted ceiling in the interior is elaborately decorated with cut-plaster work¹¹

Another important Barid Shahi monuments were Ibrahim Tomb, Baber's tomb, Dog's Tomb, Qasim II tomb, Khan Jahan tomb, Chand Sultana tomb, Hazrat Mukhdum Qadiri tomb, Hazrat Sayyidu's - Sadat tomb, etc. The Ibrahim tomb was replica to the Ali tomb. It was 42 feet square. The dome was pointed instead of being three-quarters of an orb, and has thus a more pleasing outline, and the rim of the dome is externally decorated with a band of petals. There is little stucco work and decorated arches were in the tomb. It had beautiful dome architecture. The Qasim II tomb built with slightly pointed dome and balance between its height and weight. It measure was 31 feet square. The exterior of the walls are same style of the Bahamani architecture. The Barid Shahis expends lot of money on the monuments and gardens in the capital city. They were encouraged the

stucco work, flower decorations, decorated arches, beautiful designed domes small and big size etc in their monuments¹²

The prayer-hall in every Masjid is vary spacious and with good ventilation. They were followed the plan of architect and provided building material which was essential for the construction. Most of the time Sultans were observe the construction and gave some suggestions to the architects for the beautiful monuments. The Barid Shahis policies helped for spread of the Islamic architecture in the Deccan. They were contributed a lot for the Islamic architecture.

THE ADIL SHAHIS

The Adil Shahis of Bijapur encouraged the Islamic architecture in the Deccan. The first Mosque built in 1306-07 with wood and it was Malik Karimuddin who replaced it with stone. It was built by Governor of Bijapur on the name of Alauddin Khilji¹³ The reign of Ibrahim II (1580-1627) was responsible for large scale construction, and it was witnessed the full growth of the typical Bijapuri style which is characterized by lightness and symmetry of form, excellence of workmanship and exuberance of delicate ornamentation.

THE QUTB SHAHIS

The Qutb Shahis of Hyderabad occupied an important place in the history of

Deccan. They were encouraged Islamic architecture and other aspects in their kingdom. They were ruled the Telugu country from 1516 A.D to 1687 A.D. They built many monuments in the respected area.

CONCLUSION

The Deccan Sultans such as Bahamanis, Barid Shahis, Nizam Shahis, Immad Shahis, Adil Shahis and Qutb Shahis constructed several buildings with Islamic architecture. They were used lime plaster, sandstone, granite Stone, black stone and wood in the construction of the monuments. They were built several monuments such as Bidar fort, Raichur fort, Golconda fort, Ali tomb, Jame Masjid, Hyderabad, Charminar, Charkaman, Ashur Khana, Gol Gumbad, Rangin Mahal Tarkash Mahal, Gagan Mahal, Chand Sultana Palace, Mecca Masjid, Daru'sh Shifa, Naya Qila, Charkaman, Qutb Masjid, Miyan Mishkh Masjid, Atapur Masjid, Saidabad Masjid, Hayat nagar Masjid and five Sultanate tombs in different parts of the Deccan. The monuments built with big Domes, Minars, decorated Arches, Brackets, Jalis, Mihrabs, Flower designs and Calligraphy, etc. the Sultans spent huge money for the construction of monuments in the Deccan. The cities such as Bijapur, Bidar, Berar, Gulbarga, Raichur, Ahmadnagar, Hyderabad, Osmanabad, Daulatabad, Aurangabad etc were developed during this period.

RELATIVE DEPRIVATION- SEARCHING INTO THE EXPERIENCES OF AVARNA CASTES IN COLONIAL KERALA

S. Divya

The social customs and practices of early modern Kerala were infested with caste dissensions because of the historical materialism of Brahmins for centuries. The disciplinary power as Foucault, affected all aspects of the life of the avarnas and subjected to the possibility of surveillance at all times. So naturally the avarnas were inherently fragmented, disorganized, diffused and uncoordinated under the humiliating protocols set by the theological feudal society (Gopal Guru 2009, 210).

But by the nineteenth century, the socially politically and economically depressed castes of Kerala became the forefront of social struggles which paved the way for the social awakening and social transformations in Kerala. Here this paper analysis how far the experiences and the social situations of avarnas in colonial Kerala created the state of relative deprivation among them and how far it helped to their struggles.

The advent of Christian missionaries in the first decade of the 19th century caused disturbances in the 'peaceful and stagnant' society in Travancore. William Tobias Ringletaube, a Persian missionary received extensive help from the Dewan John Manroe in founding new churches and converting the natives. Help provided by the activities of the Christian missionaries contributed to a large extent in ushering social changes in Kerala. Missionaries spread their humanitarian work in the early decades of the 19th century in several districts in South Travancore. Such interventions resulted in the embracing of Christian religion by a large chunk of Channar community. The women of Channar sect abandoned their obsolete way of dressing and following the instructions of the missionaries started wearing modern clothes. They violated the customary social order by wearing the upper garments by women and preaching the new gospel in public among the upper caste people (Samuel Nellimukal 2003, 50). The Channars who were hitherto performing *Oozhiyam* job for their masters and were keeping away from the courtyards of the residences of the landlords now entered the courtyards fearlessly and preached the Biblical

scriptures parrot like without understanding the seriousness of what they were pronouncing. The slavish and passive Channars now became conscious of their rights and were not ready to tolerate any longer the humiliation heaped on them. Fearlessness was infused into their veins by Christianity (Samuel Nellimukal 2003, 50). This open defiance of existing social norms propelled intolerance on the part of the *savarnas* and led to yearlong agitations.

The socio-cultural regeneration in the nineteenth century Kerala was occasioned by the colonial presence, but not created by it. It is proved by the differences of opinion existing among scholars regarding the introduction and the implementation of breast clothes among the weaker sections of society. Some modern historians say that it was mere tactics adopted by the colonial masters. According to Max Weber the Christian missionaries who worked in Kerala were inspired and informed by the ideals of a protestant ethic and the spirit of capitalism (Weber 1930, 87). The various markers of modernity and its ethics were introduced in Kerala during this period. But there were some errors in the case of their attitudes towards the lower castes in Kerala. Actually the major reason for the Channar revolt was the cunning activities of supplying upper garments to the converts by the missionaries. Even though the majority of the rest of the population had to struggle for many more decades to get that right realized (Neettu 1034 M.E), it is to be noted that Channar agitation which transformed into a problem of caste or class influenced the marginalized people in a notable manner (Abhimanyu 1990, 133). Even after getting the right to wear upper garments in the case of Channar women, the law never affected those who were at the very bottom of the society. But this incident highly influenced the outlook of the downtrodden and naturally a sense of freedom worked out in their minds. They wanted to bring changes in their own life and it also led to the development of self-consciousness among them.

In order to usher in social changes and developments, several social movements were

launched by early social reformers in Kerala who were awakened to a sense of self-consciousness from their relatively deprived conditions. Under the spell of the awakened consciousness, they brought about several changes in the feudal hierarchical society.

In short the low caste people were deprived of socio-cultural, economic, political and educational opportunities, power, money, status, social freedom etc. Eventually they became discontented and compared their positions to others and realized that they had less of what they believed themselves to be entitled than those around them. In this context we can use the 'Relative Deprivation' concept of sociologist Samuel Stouffer as the central variable force. In sociology, relative deprivation theory is a view of social change and movements, according to which people take action for social change in order to acquire something like opportunities, status or wealth that others possess and which they believe they too should have (Stouffer 1949, 210). The theory encourages the exploration of an individual's feelings of deprivation that may result from comparing his or her situation with that of a referent person or group as well as the behavioral effects of deprivation feelings. It is to be noted that people became conscious about

their status and positions from the thought of deprivation. Thus their feelings of deprivation over power, money, status, may lead individuals and groups to create social consciousness. Here such people become rebels when their desires become legitimate expectations and those desires are blocked by society. It would lead them to the inevitability of the movement for access of social satisfactions.

In the context of the theory of 'relative deprivation' it can be clearly seen that the reformers in general understood that the status of the downtrodden were pathetic than any other community in the society. When the people were suffering from socio-political, educational disabilities, others were unconditionally enjoying all the privileges and thus was convinced about relative deprivation of his fellow men of the downtrodden brethren infused a spirit of rebellion in the minds of reformers and it prompted them to fight for the well being of the socially, economically and politically weaker people (Chentharassery 2005, 16). They became more conscious and fought for social justice and social equality and infused consciousness in the minds of the downtrodden and began to think about their community development and attainment of social status and advancement.

THE EDUCATIONAL CONTRIBUTION OF AMERICAN BAPTIST MISSION IN ANDHRA

Prof. K. Gangaiah

The Western Christian missionaries by their charitable disposition and benevolence, permeated with Evangelical spirit, attracted the outcastes - *Malas* and *Madigas and other communities*. They extended to them all assistance to hold their head high. Their contribution to the education was indisputably great. Their helping hand to the health, hygiene and economic upliftment of the untouchables was no less great. They displayed a genuine sympathy for the suffering of the underprivileged. The Districts of Andhra were dotted with missionary educational institutions and workshops, some of which stand even today as living symbols of the indefatigable zeal of missionaries. Naturally, untouchables, the poorest of the poor were attracted by the kind missionaries. The cross became to them symbol of self-reliance and hope.¹

The Christian Missionaries from the United States of America and the Continent were often subjected by the orthodox sections of caste Hindus and Muslims to criticism. Ulterior motives were attributed for their efforts to educate the downtrodden sections of the Hindu community. Their zeal, and in some cases over zeal in proselytisation, might have contributed for the creation of such an impression. But subjective thinking apart, the missionary contribution to the education of the *Panchamas* should under no circumstances be underestimated. A visit to Christian localities in every Andhra town reveals a high degree of sophistication, multi-strayed buildings and more than average standard of life by Indian standards. Both husband and wife earn. Their combined income as teachers and other professionals far exceeds that of a class I officer. In this context, it is imperative to know that more than ninety per cent of the Christians were the offspring of the Mala and Madigas, some two or three generations back. But for the benefits conferred by the White Missionaries, it would have taken a century or more for the outcastes among Christians to reach their present status. Hewers of Wood and drawers of water were transformed into teachers, medical men, engineers and other professionals.

The Missionaries themselves recorded the sufferings and the indignities which the Malas and the Madigas were subjected to because of their illiteracy and age-old traditions. The children of the outcaste parents were skeletal. Their ribs were conspicuous and their stomachs were protruding because they had been eating every scrap of food they came across. In times of famines, the untouchables' woes multiplied. The untouchable and his family would go hungry to bed after drinking only water with a little salt. To save himself from starvation and death, he borrowed money on exorbitant rate of interest. The unscrupulous money-lender wrote down on the stamped paper recording the loan of Rs.30/- when actually he lent Rs.15/-. According to the Government Census of 1901,² 99.5% of the untouchable in coastal Andhra could neither read nor write. In such a illiterate state, the poor borrower put his thumb-impression on the promissory note. So, scarcity, debt and ignorance combined to hang a milestone round the outcaste's neck. To the question what the Government was doing in such conditions, the missionary himself answered. Even good laws and righteous administration can be completely nullified by the fall in the general morals of the society.³

According to the annual report of the Baptist Missionary Union in 1838, the most of the Telugu male population, of the higher and Middle, classes, can read, echoing one of the easy generalizations of hasty writers. It is true, of course, that even in those days the Brahmins, many merchants, and those recruited for government service in offices could read; but the great middle class of farmers and artisans was almost complete illiterate.⁴

It was natural that the wives of missionaries start schools to educate the locals such a situation Roenna Clark wife of Mr. Samuel S Day who was responsible for starting of American Baptist Mission in India, she wanted to start teaching school almost as soon as she arrived in Nellore in February, 1840, and that Mrs. S. Van Husen had assisted in this work from the time of her arrival a short time later until she and her husband fell ill and had

to leave India at the end of five years. In less than a year from that time, the Days had to return to America for the same reason and the schools and all the work were left in the care of the two Anglo-Indian assistants.

In 1849 i.e., three years later when Samuel Day, leaving his family in America, returned to Nellore hoping to show the Rev. Lyman Jewett, his new missionary colleagues, what a splendid beginning the Mission had made, he learned that the Anglo-Indian assistants he had trusted had immediately closed the schools, abandoned the work and spent the mission money in scandalous living in the mission residence. However Mr. Day rebuilt the school in one short year and a half was shown by his letter in October 1, 1859 to his wife in whom he reported dismissing nine teachers and 270 pupils. This time the school was closed by order of the Executive Committee in America.⁵

In January, 1853, the Peck and Granger were Deputation to visit the boarding school with great interest but were displeased to find that only about one fourth of the working hours were given to religious instruction. They insisted that all concerned in the teaching or management of the school be persons of hopeful piety. They opposed any teaching of English and were emphatic that even vernacular schools should be subsidiary to the preaching of the Gospel and have as their direct aim and tendency the raising up of a native evangelical ministry. Their recommendation was about the boarding school: For the reasons assigned by the Mission, and while the school enjoys the immediate care of Mrs. Jewett, the Deputation was not 'Prepared to recommend its discontinuance'⁶ By the summer of 1853 Samuel Day's ill-health had removed him from India and the Jewetts were left alone with the work, the problems, and the criticisms. F. A. Douglasses had joined the Jewetts in 1855, these two missionaries and two female assistants i.e., wives of missionaries and one native assistant, served the day school which was in the compound 'connected with the boarding school and the average attendance was 45 with 13 boarders.

In 1862, the average attendance of that school was given as 75 and it was reported that interest in it had been shown by Indians and

English friends, particularly by Judge and Mrs. Story. Mr. Douglas said that a Brahmin teacher school in Kovuru with and sixteen pupils had been thrown upon his bands. There were two schools among Outcastes. And all the schools were, wholly supported in India, except the small pittance allowed by the Union toward the boarding School.⁷The educational facts: 20 schools, 33 teachers, 2,000 pupils; 24 pupils had become church members; nine pupils had become employees of the Mission.⁸

In 1867, John Everett Clough said that he had seven young men probably seven of the twenty eight he had baptized at Talakondapadu; he made them in Ongole to learning and read. Later send them back to their villages as teachers and preachers. To expect great results from sending out as teachers and preachers young men from the most despised class in society whose acquaintance with the alphabet was only six months old takes faith in mankind.⁹ Mr. Clough had started also an Anglo-vernacular school but, before the end of the year 1867, his first full year in Ongole, he closed this school and turned all his educational efforts into training Indians to teach and preach in Telugu only.

Rev. John Mc Laurin, the second missionary to Ongole, he said it is hard to educate these people without separating them from their caste barriers and superiority feelings, among upper caste Hindus, but still it must be done. If the downtrodden people must be raised and gradually they must raise their people.¹⁰ Mr. Clough in 1870 said about the converts, perhaps one in two hundred can read a little, but not one can write correctly. The converts are willing to build school-houses, and support teachers, in most instances, if they and their children can only be taught.¹¹In the Ongole by 1872 there were 21 schools, 14 regular teachers, two of them teaching two schools each in alternate weeks, the rest of the schools being taught by preachers' wives. Catapilly Paradashi, a young man with five years of schooling, was the best educated assistant to Clough¹² By 1880, with the development of the seminary at Ramayapatnam; there were 291 teachers, preachers, and Bible women assisting 32 missionaries in the conversion of 26,339 as Telugu Baptists.

In 1881, Rev. S. F. Smith of New England, the man who saved this American Baptist Mission from extinction with his sacrifice, he had paid a visit to Nellore for that he had faced lot of hardship to reach Madras. From Madras he faced all the problems to reach Nellore by various means of transportations¹³ He arrived to find the missionaries just recovering from the dreadful experiences of the Great Famine. Memories of thousands dying for lack of food of precious schools closed for want of energy to carry on were being erased by preoccupation with the task-of re-starting the schools and of helping to rebuild shattered personalities.

According to W. B. Boggs who was one of the missionary, commented on the condition of the schools in Cumbum in 1884, lack of qualified teachers, lack of genuine desire for education and extreme poverty was the chief causes for the present very unsatisfactory state of these schools.¹⁴ The situation in Vinukonda show that in 1892 there was only one teacher who had passed any examination; in 1894 twenty-one passed the primary examination, seven were normally trained, and one had passed the middle examination. In Kanigiri the story was the same, Rev. George Brock was continually reported on the difficulties lie was having with the village schools. In 1893, for instance, he said about the night schools to one of them a few Vyshyas go and receive instruction from a pariah (untouchable)¹⁵ Brock could be patient with many shortcomings in the village schools that could in one generation, so transform an Outcaste Christian as to make him acceptable as the teacher of the high caste merchants. Again in 1903, he wrote, Sudra children attend many of our village schools, clearly these schools, poor as educational institutions, as measured by any reasonable standards, were achieved remarkable social changes.

In Bapatla, Rev.E.Bullard was having experiences in village education similar to those of his colleagues in other parts of the Mission. In 1888, the matter of education, in the village schools that have hitherto sprung up on this field have not been able to find teachers and many of them have been closed, in which there are at present fifteen promising pupils, studying for the Special Primary Examination. Our rule is that these pupils shall consent to spend at least

two or three years after they obtain their certificates in teaching our Christian schools.¹⁶The Normal Training Institution had completed its first year by graduating a class of thirteen young men and one young woman of these pupils, three were from Cumbum, one from Narasaraopet, and the others from our own field. All found schools waiting for them and the supply was far from being equal to the demand.

In 1892, a training school for mistresses was opened in Ongole and in 1895 a similar institution was started in Nellore. In Kurnool, the first Christian girl from the leather workers passed the primary examination in 1986. These events in the education of girls constituted a harbinger of the great contribution that Indian Christian women were to make to the educational and economic advancement of their people. But even training the teachers did not automatically remove all the obstacles to the improvement of the schools. Rev. F. Kurtz, writing about village schools in Vinukonda in 1898, said, The quickest way to improve our village schools is not to employ better qualified teachers at increased salaries, not to build school houses with mission money, but to create on the part of the people a genuine desire for an education.¹⁷

It is clear from the foregoing that there were many difficulties encountered in educational work, that determined efforts were made to overcome the difficulties, and that success achieved ill terms of education imparted was often very disappointing. Still the missionaries carried on with this type of work. Mr. Clough stated his reasons for his interest in schools for Christians by quoting from Dr. Howard Malcolm who reported to the Missionary Union on his visit to Burma in 1836. The largest development in village education during 1881-1905 was in Ongole, the largest field. Rev. J. M. Baker, succeeding Dr. Clough in this station, reported in 1902 that from the brightest pupils of 258 village schools 737 boys and girls were in boarding schools in Ongole. As soon as they finished the fifth grade many would return to their village became leaders because of their superior training. Some, perhaps after years of manual labour, would take a short course in teaching and enter school work. Some would learn a trade or go into

humble government employ. The influence of this large class who had been lifted up from the low level in which they were born must be enormous

According to Mr. James Baker, the small minority who are really a second selection from a selected lot prepare for life's work. After further training some were invited to teach in school, many went to the theological seminary, more than 100 men were on this field had taken the four years course at the seminary. The girls married and their lives determined by the course taken by their husbands. Some are left widows and these generally find their way sooner or later to the Bible Women's Training School, there were 43 such women in the villages and also a good number of other women who have received training with their husbands in the seminary. Although not all the 12,398 pupils in 634 village schools of the Mission in 1905 were so, integrated into a carefully planned system, everywhere remarkable progress was in evidence.

In 1872 the school was started at Ramapatham of which in later became the Theological Seminary in 1875. In 1877 the College was opened by Mr. Clough in Ongole had raised, while in America, an endowment of \$50,123.91 for the seminary and money for the college and Rev. A. Loughridge had arrived in Ongole to start the college. The first class was admitted March 1, 1877, all Christians of Nellore, Ramapatnam, and Ongole. As Mr. Loughridge asked the Missionary Union to the support for the school was not given, the institution was closed in October 15, 1878, and the missionary went to Hanumakonda to open a new station. But by May, 1880, pupils and teachers gathered again. In 1882, there were 178 boys in the school, 54 of them Christians 15 of these were prepared for the middle school examination and one for the college matriculation examination.

But progress was very slow; the first class in the college department was admitted in 1894 - seven students in 1902, two young men passed the First Arts examination (University examination at the end of the second year of college work) one a Brahmin and one a Christian in 1905 another Christian passed the F.A. This was D. Arogyam who after further

training entered the ministry and remained a faithful and effective Christian leader until his death. By 1910 there were other Christian colleges in Masulipatam and in Guntur and the work of the college department in Ongole had so declined that the Mission decided to close it. In 1904 three important events took place in the field of educational: the Free Church Mission (Scottish) withdrew from Nellore and transferred its boys high school to the Baptist Mission, a girls high school was opened in Nellore and the decision was taken to open a boys' high school in Kurnool. Consequently, the close of the year 1905, finds the Mission with the following strength in education: 634 day schools with 12,398 pupils, 23 boarding schools with 1,761 pupils, three high schools for boys with 824 pupils, one high school for girls with 15 pupils, one seminary with 105 students, one training school for men with 32 students, two training schools for women with 35 students, and one college with 34 students.

In Kanigiri, Mr. Brock encouraged the Home Missionary Society and decided to meet half of the salaries of the 17 workers employed by it in the 32 villages for which it had taken responsibility. He had in mind the work in the Christian Education Society was doing for the children who had completed the schooling offered in their villages, he had thought of the many Christian men and women teaching in the government schools who had received their first education in one of the village schools. In the Gurizalla area Sudra pupils were attended the entire village schools, some teachers were being supported by Sudras and in one village Moslems had called a Christian teacher. In 1929 at Cumbum there were sixteen boys in high school, eight boys in training school, five girls in teacher training; two boys in college were enrolled.¹⁸

In 1919 at Markapur encouraged the development in education for the Christian children and their neighbors in the villages were provided 17 Panchama Board Schools and 51 aided non-mission schools, all staffed with Baptist teachers. That means the education of Christians in the villages was handled by Baptist teachers at government expense under government supervision. Rev. C.B.Marsh invited those Christian teachers to a four-day Bible study camp in the mission compound and was

happy to attend, sixty of them attended. It was to achieve this fortunate arrangement for village education because the Hindu president of the Taluk Board a close friend of missionaries appreciated the work of Christian teachers and used his influence to extend their services for the community. In 1930, under this system of education, Markapur had thirty-two boys and four girls in high school, and nine men and two women in teacher training schools.

By 1925, the Ongole area, 51% increase in village education in 24 years. The village schools were entirely in the hands of the Mission and there was a considerable organization to handle the details of management and supervision. Mr. Baker had started his Continuation Course—a program for the publication and use of little booklets in simple Telugu designed for villagers who had learned to read but who would lapse into illiteracy again as they returned to work in the fields unless someone directed their reading and encouraged them to enlarge their learning. This was a natural outgrowth of Baker's belief, stated earlier, that even people who were barely literate could exercise a significant influence in the development of their villages.

The one girls' high school which had 15 pupils in 1905 increased strength 176. In percentage this is a tremendous increase but in fact it is discouragingly small improvement for 25 years compared to the increase of the boys. The reasons for this, parents did not yet feel that it was worthwhile to give their daughters higher education, parents were straining their resources to pay for the education of sons and had nothing left for sending girls to high school and parents were not yet willing to send girls to sit with boys in the local government high schools. In 1908, the school was upgraded a new class being opened for Higher Grade Training. The enrolment increased it remained at about 150 until Lower Grade Training was abolished in 1929 and reducing the strength to about 100. By 1930, the strength was 143 and the school was fortunate enough to obtain its first and thus far only-Christian headmaster, Mr. N. George. This was the only training school for men in the Mission but there were many Baptist teacher candidates in government schools.

The training schools for women in Nellore and in Ongole were continued and had an enrolment of 166. Some women were studied in other schools also it means the college education, the closing of the college department in Ongole has already been mentioned, but this did not mean that all Baptists ceased going to college for they were welcomed in Christian colleges in Madras, Guntur, and Masulipatam. By June, 1925, 125 Baptist men and women were named who had received two or more years of special training beyond high school, some were college graduates and some Trained Graduates it means graduates with a year of further training to qualify them for teaching in high schools and some doctors or lawyers. The progress in the education was significant, especially village education and in the training of teachers; but the preparation made for further advance in the later years were even more significant.

The way was prepared for the development of education to continue the legacy. In 1956 there were in Donakonda area 61 aided elementary schools and nine night schools under the management of Telugu Baptists who employed 195 Christian men, 64 Christian women and ten Hindu men. There were 5,229 pupils in these schools, 2,356 of them Christians. Half of the elementary education of the area was in the hands of these Christians, they taught a few more Hindus, mostly caste children, than Christians. They employed some non-Christians to teach in their schools. In one case, a Christian from the Outcastes employed a Brahmin as his assistant.

There were five government high schools in the Donakonda area, every child who qualified for admission could go to high school, there was a high school either within walk able distance from his home or he could get shelter within his relative house. The achievement in Donakonda was made possible by the training of the people during the first thirty five years of this century under the continuous guidance of one missionary, J.A. Curtis. Since his retirement in 1937, different missionaries had charge of the station but rarely had any been in residence.

In the Udayagiri area the situation was entirely different, in 1936 Rev. F. W. Stait reported that there was hardly a single village school in the whole field that was doing even

reasonably satisfactory work; he gave a gloomy picture of the prospects for the future in that area,²⁷ Rev. E. B. Davis, who had been in charge of the field most of the time since F.W. Stait's retirement, wrote that whereas Mr. Stait gave four rupees a month aid to village school teachers and was disappointed in their teaching in school and congregation, the seventy-two Christian teachers in that area in 1955 contributed to the local evangelistic program four hundred rupees. These same teachers, completely independent of the Mission, were the backbone of the Christian community settling church fights, marriage tangles, and disputes with caste landlords.

In Donakonda in spite of relative neglect for twenty-five years, the work progresses because of a sound background in education and Christian training; in Udayagiri, even though it seemed that little had been accomplished by 1936, something reasonably comparable to the Donakonda achievement had been attained. Perhaps the secret of success in both cases lies chiefly with the people themselves, who had at last really become convinced that education and the Christian way of life have substantial advantages for them. In the villages many more Christian teachers were taught to many more Christian and non-Christian children, in the 672 primary schools listed in 1955, practically all of which were in the villages, only 39 were even managed by the Mission. The numbers of primary schools during 1930-1955 decrease. The strength from 1,160 to 672 but the number of pupils increased from 27,930 to 34,232, an increase in average strength per school from 24 to 51, this shows that the primary education of Christian children was being taken care of with practically no effort on the part of the Mission.

The training of teachers during this period was greatly expanded. The number of men in

training increased from 143 to 431 and that of women from 166 to 214. At Bapatla the enrolment increased year by year to 285 in 1955, eight of these being women. A significant development was a new training school for men at Cumbum. One hundred and fifteen years after the opening of the first school in Nellore, the Mission reported as follows: three boys high schools with 1,542 boys and 179 girls on the rolls; two girls' high schools with 388 girls attending; one co-educational high school in which there were 153 boys and 77 girls; two men's training schools teaching 431 men and 21 women; two women's training schools with 193 students; 20 grammar schools with 2,026 boys and 1,080 girls; 39 mission primary schools teaching 1,703 boys and 1,443 girls; and 694 non-mission primary schools with 4526 boys and 13,789 girls in attendance.¹⁹

It is noteworthy that there were 431 men and 214 women in the four teacher training schools. These schools are not only increasing in enrolment but also advancing in grade. Since June, 1957, both men and women candidates must complete high school before entering teacher training. In the high schools 42% were Christian pupils, in the grammar schools, 51%. In both these categories there were, doubtless, more Christians in non-Christian schools than non-Christians in Christian schools. There are no statistics on this point, nor can one tell how many non-Christians there were in the Christian primary schools. It is significant that primary education had almost completely passed out of the hands of the Mission into the bands of individual Christians for the last item in the figures given above represents largely schools formerly managed by the Mission which have become the property of members of the Telugu Church.

“WORLD RENOWNED MEDICAL EVENTS OF ASAF JAHİ PERIOD FROM THE PAGES OF HYDERABAD CITY - A CASE STUDY OF HYDERABAD CHLOROFORM COMMISSIONS OF 1888 A.D. AND 1889 A.D.”

Dr. N.R. Giridhar

‘Hyderabad’, is the fifth largest city in India, It was established by the fifth Qutb Shahi ruler Muhammad Quli Qutb Shah in the year 1591 A.D. It was in limelight in Indian history, more so particular in south Indian history under the Qutb Shahis during the Medieval period and under the Asaf Jahis during the modern period. The Asaf Jahi's made Hyderabad the capital of their Dominions and popularly came to be called as the Nizams of Hyderabad state. The rule of Last four Asaf Jahi rulers namely Nazir-ud-Doula (1829-1857A.D.), Afzal-ud-Doula (1857-1869A.D.), Mir Mahboob Ali Khan (1869-1911A.D.)and Osman Ali Khan (1911-1948A.D.) saw the establishment of modern Hyderabad State.

There was all around progress and Hyderabad City witnessed several world renowned medical events related to the western medical science of Allopathy. These events which took place in Hyderabad City caught the attention of the medical world and put it on the medical map of the world. The name a few World renowned medical events which took place were the establishment of the Hyderabad Medical School in the year 1846 A.D. to impart medical education in Allopathy, the establishment of the Medical Department in the same year, the establishment of Afzal Gunj Hospital in the year 1866 A.D.,conducting the Hyderabad Chloroform Commissions of 1888 A.D and 1889 A.D., the establishment of Ameenbagh Maternity Hospital and Zenana Hospital in the year 1890 A.D. and in the year

1891 A.D., the discovery of the Malarial cause by Dr. Ronald Ross in the year 1897 A.D. and subsequent practical demonstrations in Afzal Gunj Hospital, Hyderabad Medical School and acceptance of the findings by the medical world, the establishment of special Departments to deal with Plague and Malaria in the year 1929 A.D., and Special Infant welfare centers from 1931 A.D. onwards. The two Hyderabad Chloroform Commissions occupies a special place in the history of medical science of Allopathy.

The two Hyderabad Chloroform Commissions was conducted at Afzal Gunj Hospital in Hyderabad in the year 1888 A.D. and 1889 A.D. respectively, under the stewardship of Dr, Edward Lawrie. Dr. Edward Lawrie was the Residency Surgeon of the British Residency at Hyderabad and belonged to the Indian Medical Service and was the personal doctor to Mir Mahboob Ali Khan the VIth Nizam of Hyderabad State. Dr.Edward Lawrie wanted to prove to the Allopathic medical world of the efficacy of use of chloroform as a safe anaesthetic agent in surgical operations which did not have any side effects, as a response to the world wide debate and experiments going on in the Allopathy medical world especially in London regarding the use of safest anaesthetic agent in surgical operations and whether Chloroform can be used instead of other anaesthetic agents. The two Hyderabad Chloroform Commissions caught the medical attention of the world and

focused it on to Hyderabad. Dr. Edward Lawrie was a medical student and house surgeon under Prof. James Syme (1799-1870 A.D.) at Edinburg.¹ Dr. Edward Lawrie had used Chloroform as an anaesthetic agent as taught by his teacher on his patients without any incident of death while being administered during surgical operations. He wanted to prove this to the medical world and when posted to Hyderabad he persuaded Mir Mahboob Ali Khan the VIth Nizam of Hyderabad State to give permission and the support scientific research on the safety of use of Chloroform as an anesthetic agent that led to conducting of the two Hyderabad Chloroform Commissions.

The experiments, the findings, the apparatus used including the chloroform cap, the subsequent demonstrations in London by the products of Hyderabad Medical School, the reports of the Commissions and the acceptance of the findings of the commissions in London and the presidencies in British India gives a special place to these Hyderabad Chloroform Commissions. Hence in this paper an attempt has been made to present the facts related to the Hyderabad Chloroform Commissions which stands out as one of the most world renowned medical events of the Asaf Jahi period from the pages of Hyderabad city.

"The First Hyderabad Chloroform Commission 1888 A.D."

The first Hyderabad Chloroform Commission, was held in 1888 A.D. at the "Afzalgunj Hospital", in Hyderabad city, under the directions of Dr. Edward Lawrie, and under the aegis of the "Hyderabad-Medical School" and the Nizam's Government "Medical Department". The VIth Nizam Mir Mahboob Ali Khan, took personal interest in the holding of the commission at the request of Dr. Edward Lawrie. The commission was inaugurated by the Nizam, at "Afzalgunj Hospital". The first commission consisted of surgeon Patrick Hehir, as President, Dr. A. Charmarettes and Dr. J. A. Kelley as members. A series of experiments were performed on dogs to determine the exact cause of death due to chloroform anaesthesia, to last the effects of poisonous does of chloroform on dogs, with the aim that the experiments should have an important bearing on the way in which the administration of the anaesthetic ought to be conducted in the

human objects. The elaborate experiments of the commission, lead them to conclude that chloroform can be given to the dogs by inhalation with perfect safety, and without any fear of accidental death if only the respiration and nothing but respiration is carefully attended to throughout".²

Dr.Edward Lawrie, while forwarding the report to the Government, stated that "the results of the experiments with the principles necessary for the safety of administration of chloroform taught by Mr.Syme, who never had a fatal case and with, my own experience which is founded upon the same principles. I have killed scores of dogs with chloroform and in every instance death was resulted from failure of respiratory function. I have also given chloroform in surgery without a death for more than twenty years and for as many as five to ten times a day during the last fifteen years, I have never seen syncope 'or' failure of hearts action produced by it". Dr.Edward Lawrie, lost no time in publishing the results of the commission.³

Dr.Edward Lawrie, on the occasion of the distribution of prizes to his students by the Royal Highness the Duke and Duches of Connaught gave a short speech on February 23rd 1889, saying that "He had done experiments with reference to the effect of chloroform and had never seen the heart injuriously 'or' dangerously affected by chloroform". Reacting to this statement of Dr.Edward Lawrie, Lancet, "a famous medical journal in Britain, commented on March 2nd, 1889, that the result of the research made on pariah dogs, was that these animals were killed from respiratory failure, in no case did cardiac syncope occur directly. Unfortunately Dr.Lawrie, contents himself with bare statements of results, adding that these results tally with his own experience, which he believes to be uniquely large. Dr.Edward Lawrie, as a disciple of Simpson and Syme arrives at conclusions consonant with the teaching of those great clinician's, but utterly, at variance with the experience alike of experiment and practice as carried out in Europe. We should require more than the scanty statements of experiments performed upon dcgs, notoriously non-susceptible to chloroform syncope - before we could accept the conclusions of the "Hyderabad Chloroform Commission", when they appear to

go in the very teeth of those at which the commission appointed by the "Royal Medical and—Chirurgical Association" (The Glasgow Committee), arrived and further, are opposed to the careful and pain taking experiments of such scientific observers as Snow, Claude, Bernard, Mac Mendrick, and others too numerous to mention.⁴

All those who are familiar with chloroform are well aware that syncope, when primary, as a role supervenes in the initial stages of inhalation. While secondary syncope due to respiratory embarrassment is the result of accumulation of chloroform in the blood leading to paralysis of the medullary centers, and occurs in a late stage of the administration. The primary syncope it is rarely if never, possibly to induce in dogs, although, unfortunately it is this form of chloroform heart failure which does occur in human beings, and which it is almost impossible to remedy. While welcoming the attention paid to the subject by the "Hyderabad Chloroform Commission", we cannot but feel that, the commission should inculcate a disregard of the heart as a factor in chloroform dangers, and it will do harm and provoke a slipshod. Carelessness in the use of that valuable anesthetic, which must in the long run is no damage to the cause the commission, has espoused.⁵

Dr.Edward Lawrie, accepted the Lancets challenge, and in a letter to that journal, published on May 11th, 1889 A.D. he wrote "There is no such things as chloroform syncope. It is conceivable that syncope may occur in initial stages of inhalation of chloroform, but in the course of a very large experience, I have never met with a single instance of such an accident, and if it ever does occur it cannot be due to chloroform poisoning though it might be caused by fright or shock. Owing to the numerous accidents, that have happened with chloroform to the discussions prevalent in the profession, and to the mistaken notion that the risk of heart failure is inseparable from its use; the public dread its administration much more than the dead surgical operations, and familiar from mere fright in the early stages of inhalation, is no less intelligible that it is easy to prevent, in cases where it is likely to occur by a preliminary dose of alcohol. On the other hand, it is equally intelligence that syncope may be

inducted if an operation be commenced, in the initial stages of chloroform shock by being brought fully under its influence. In poisoning by chloroform the heart fails when the respiration ceases, and never before, the heart or' gradually stops beating as a direct result of the stoppage of respiration and as an in-direct effect of poisoning with chloroform.⁶

Dr.Edward Lawrie, further asserted in the letter that the Lancet, should trust to the heart and circulation to signals of danger in "chloroform-administration". Our contention is that if the administration is even pushed far enough to cause the heart to show signs of danger, the limits of safety have already been exceeded and a fatal result must almost inevitably ensue, but we say further, that the respiration invariably gives warnings when a danger point is approached and consequently, that it is possible to avert all risk to the heart by developing the entire attention to the respiration during chloroform administration.⁷

In reply to this letter from Dr.Edward Lawrie, the Lancet, said "Mr.Lawrie, has contended himself with dogmatic assertion and iteration of his former statements. Whatever may be the value of work done by the "Hyderabad Chloroform Commission", Dr.Lawrie, seems inclined to accept the conclusions arrived at, rather than those of well known and tried scientists. It is quite impossible for those who have neither seen the experiments to which Dr.Lawrie refers nor received an authoritative statement 'or' to those methods employed and precautions taken. To accept the evidence of the results, to which he refers, concerning the depressant action of chloroform upon the heart.⁸

Due to Lancet's, dismissive reaction, Dr.Edward Lawrie, persuaded the Nizam of Hyderabad, to give permission to hold a "Second Chloroform Commission", and pay for a second more extensive study in that regard and in 1889 A.D. In a further letter to Lancet, Dr.E.Lawrie, stated that "He was directed by His-Highness, the Nizam of Hyderabad to offer "Lancet", the sum of one thousand pounds, to send out a representative to repeat the experiments of the "Hyderabad Chloroform Commission". In response to this offer, "Lancet", proposed, the name of Dr.Lauder Burton, as his

representative in this matter, who accepted the offer. He was regarded as an authority on the action of drugs, on the heart and had published books on the subject.⁹

"The Second Hyderabad Chloroform Commission 1889 A.D.

"The "Second Hyderabad Chloroform Commission", was held at "Afzalgunj Hospital", Hyderabad in 1889 A.D. the same venue as that of the first Hyderabad Chloroform Commission. The second "Hyderabad Chloroform Commission", was held under the presidency of Dr.Edward Lawrie, Dr.Lauder Brunton, was one of the members of the commission, and the other members were surgeon, Major Gerald Bomford and Dr.Rustomji. The President and the members of the first commission were also associated with the second commission. For three months, the commission performed various kinds of experiments on some six hundred animals. The first telegram sent by Dr.Lauder- Burton from Hyderabad to London, was "Four hundred and ninety dogs, horses, monkeys, goats, cats and rabbits used. One hundred and twenty with manometer. All records have been photographed and numerous observations made on every individual animal and the results are more instructive than danger from chloroform is asphyxia or overdose none whatsoever on heart, directly".¹⁰

In December 1889 A.D. the report of the "Second-chloroform commission", was completed with the same conclusion as that of the first chloroform commission, that on administration of chloroform by inhalation to see the respiration stops first by heart. One of the most significant findings of the second commission, was that the administration of chloroform causes a fall of blood pressure and dilatation of the ventricles of the heart.¹¹ The report of the "Second-Hyderabad Chloroform Commission" was first published in instalments in the noted Medical journal "Lancet", in London between January and June 1890 A.D.¹² The conclusions of the "second chloroform commission", provoked numerous adverse comments in England leading medical journals. One of these was from Mr.Lenard Hill, the distinguished physiologist; who said that "the doctrine that chloroform, kills by paralysing

the respiratory centre propounded by the findings of the two "Hyderabad Chloroform Commissions", and the prejudiced enthusiasm of surgeon Major Dr.Edward Lawrie, is one of the most pernicious and dangerous doctrines ever put before the medical profession".¹³

Dr.Lenard Hill, also found many of the conducted experiments faulty, such as chloroform anaesthesia started with the animals in the induction boxes, in less than 6% of the animals were found to have ended, unobserved in the boxes during induction with chloroform, before any of the experiments on them had been set up in this. Hill, also said "The commission gives away their whole case. They never observed the accidental deaths. Dr.Lawrie, Dr.Burnton and their colleagues had ignored those deaths and had glibly ascribed them to the slipshod techniques of their unqualified assistants whose task was to render the dogs unconscious prior to the commission's experiments. Similarly after the publication of the results of the careful researches of Dr.E.H.Embley, the editor of the "British Medical Journal", said of the second commission that "It had looked upon the respiratory failures as the primary cause of death, most of the other researchers looked upon this as secondary to the failure in the circulatory apparatus. The commission deserves much credit for pointing out the importance of the respiration, but from the scientific point of view, no impartial observer can maintain that they proved its main contention".¹⁴

In spite of the wide experiments during the "second chloroform commission", and Dr.Edward Lawrie, personal assurances based on his vast experience, that he had never seen a death from heart failure due to the direct action of chloroform and Dr.Lauder Burton's, conversion to Dr.Edward Lawrie's beliefs the "Lancet", remained to some extent doubtful regarding the authenticity of the results. A carefully prepared questionnaire was sent to individual members of the British medical profession and similar information was sought in a more detailed form of questionnaire from the hospitals at home and abroad. The material thus gathered was analysed and many interesting observations were made by 1893 A.D. Such as by the most prevalent method of administering chloroform was pouring on a

handkerchief and in descending order of frequency on lint, 'or' towel 'or' a napkin, into an extemporized cone, 'or' on a sponge, etc. The recorded deaths resulting from chloroform being administered without an inhaler was used, as to determining the causes of death by chloroform, the answers to "Lancets", questionnaire bore out the findings of the chloroform committee of 1864 A.D. and the Glasgow committee of 1880 A.D. The larger proportion of deaths were reported as having resulted from initial heart failure, in opposition to the view of the physiological researches of the Hyderabad ommission.¹⁵

A possible explanation of why the observations of the "Hyderabad Commissions", differed from these made during the above survey by "Lancet", was suggested that, the conflicting views are reconcilable and seems to be possible, at least in many cases. The reports of the numerous cases refer to the failure of the pulse, as occurring before that of respiration, and it is undoubtedly true that although the pulse does fail, yet the actual heart action continues for sometime after pulse failure. This explanation however seemed hardly to apply to those cases of sudden death, which occurred at the commencement of chloroform anaesthesia, nor can the deaths, be explained as being due to fright and not due to anaesthetic effect.¹⁶

Dr. Edward Lawrie, gave convincing replies to all the criticism and he finally believed in the results of both the "Hyderabad Chloroform Commissions". In order to prove his point, that was based on the results and conclusions of the two 'Hyderabad Chloroform-Commissions', that chloroform administration for surgical cases as an anaesthetic, had no action upon the heart, but only upon the lungs and was absolutely safe, Dr. Edward Lawrie, impressed upon the Nizam and he along with some Hakims of the Hyderabad Medical service, on being deputed by H.H., the Nizam's Government, went to England in order to demonstrate the famous "Hyderabad method of chloroform administration", in 1894 A.D. The account of the then visit and the success of the deputation was well summed up in the report upon the subject which is included in the Medical report of 1894 A.D. of the Nizams Government. The report concludes "During our visit to England there were four discussions at

the well-known Medical societies on the subject of chloroform, the first was at London 'Hospital Medical Society, and was arranged by Dr. Leaf, and presided over by Dr. Dean, of the London Hospital. The meeting was an immense success. The second discussion took place at the Royal Medical and Chirurgical Society, but was marred by a suggestion made on the part of Dr. Gaskell. The third discussion took place at Sheffield, at a pleasant gathering of the Medical and Chirurgical Society of that town. The meeting was arranged by the friend of the late Dr. Jackson Clenver, and is memorable on account of the brilliant flattering reception accorded to us, as the representatives of the H.H. Nizams Government, by the distinguished physicians and surgeons of Sheffield, and also by the remarkable statement made by the president.¹⁷

In closing of the third discussion, the president said "that he was convinced of the truth of all we had stated about chloroform, but we should still continue to use ether, for the reason, that they got from the London-School as assistants and house surgeons, who knew nothing at all about anaesthesia. Ether being the less patient agent of the two was safer in their hands than chloroform. Finally during our stay in England, Dr. Ferner, introduced us to Mr. Victor Horsley, who had discovered that death from bullet wound of the brain is on cell forms with death from the uncomplicated action of chloroform, and is produced by simple arrest of the respiration without a asphyxia 'or' cardiac syncope. Horsley, whose disinterested kindness can never be forgotten; took any amount of to show us the results of his work, and how to perform experiments, at a time when he was excessively busy and he also repeated in our presence, one of the most famous of those experiments. This experiment showed clearly that death from simple bullet wound of the brain, and it finally settled by the chloroform controversy. No one has attempted to disapprove this statement, for the very excellent reason that it is not possible to do so".¹⁸

Dr. Mohammed Abdul Ghani, and Dr. M.G. Naidu, were the two students who went with Dr. Edward Lawrie to England for chloroform demonstrations. Dr. Ghani, used the now famous Hyderabad Chloroform Cap.¹⁹ The important facts, connected with the Hyderabad

Chloroform Commission's as recapitulated by surgeon-Lieutenant Colonel Dr.Edward Lawrie in the annual report of 1303 Fasli/1894 A.D. which was presented to the Nizams Government and was published in the year 1895 A.D. represented as follows highlights the importance and the final results of the 'Hyderabad-Chloroform Commissions'

Reports of both the commissions were later published by H.H. the Nizam's Government in a book form in the year 1891 A.D. This

memorable event caught the attention of the Allopathy medical world and focused it on to Hyderabad. Hyderabad found a permanent place in the History of Allopathy Medicine, and the permanence was high lightened by wide acceptance of chloroform as the main anaesthetic agent, the use of Hyderabad apparatus for administering chloroform with the help of Hyderabad Chloroform cap in surgical operations stands as a testimony to this world renowned medical event of the Asaf Jahi from the pages of Hyderabad City.

IRRIGATION AS A SOCIAL RESPONSIBLETY, A CASE STUDY OF KAKATIYA PERIOD

Dr. Gugulothu Ravi & Dr. B. Babu Rao

Water is the essence of Nature. Without water the living things cannot survive and the world cannot exist. The qualities of water and its essential nature are recognized since ancient times. Indian literature refers to the precious nature of water at several instances. The vital activity of water in the natural phenomena is well recognized in India. The Hindus attached divinity to water and called it 'Ganga' and 'Yamuna'. Varun is the god of rain and water. The banks of rivers, river confluences, places of water springs, tanks, seashores etc., are treated

as sacred places, where the temple were built and gods installed¹.

The presence of divinity is felt more in places where a pleasant river flows, swans swimming in the water with the flowering trees on their banks². The Vishnu dharmottara, referring to the installation of images, states that installations should be made at river slides, in forests, gardens, at the sides of ponds, on hill tops and in beautiful valleys. At these places, the denizens of heaven are present³. In Tirukural it is stated that the world cannot exist without water and rain gives life to all the

creation, revives the dying vegetation, restores life to what seems to be dead⁴. Water is considered to be "liquid gold" in the east⁵. Thus the importance of water in the practical life is well recognized even in literature, in mythology, in religion and ritual.

Apart from being the essence of life water plays an important role in the economic life of all societies, as medium of transport, as source of irrigation for agriculture, for power and drainage.

The earliest civilizations of the world flourished on the banks of the great rivers. River waters helped the man in developing agriculture, easy transport, and also to have commercial inter course with distant communities. The rivers acted as the agents in enriching the soil by their seasonal inundation and providing irrigation for the growing crops, as well as the highways by which the produce of the land could be transported to cities⁶.

Irrigation is the artificial creation of water resources by constructing dams, tanks, canals, channels etc., for agriculture. In India, the antiquity of irrigation goes back to the beginnings of civilizations and early farming communities. The hunter-gathers of the prehistoric times turned to be food producers during the Neolithic period⁷.

The people of the "Harappan culture" were also familiar with agriculture as evidenced by the food grains collected from the sites like Mohenjo-dara, Harappa, Lothal etc., though no irrigation systems of the period are brought to light, it is evident from their highly advanced drainage and sewerage systems that the Harappan people must have used the waters of Indus and other small rivers for irrigating their farm lands by constructing dams and tanks and by digging channels etc. During the vedic period also, there are references made distinctively to wells, canals and dams.

The artificial tank irrigation became more popular in the Peninsular India because of its physiographical features inadequate rainfall and lack of perennial rivers in the region. The antiquity of artificial means of irrigation such as tanks, channels etc., may be traced back to the Megalithic times in South India. Almost ninety percent of the Megalithic sites, a characteristic feature of South India, are in close proximity to large reservoirs or river banks⁸. From the

extensive archaeological data on Megaliths, it is concluded that the authors of the Megaliths were settled people who practiced agriculture as their main industry and knew the value and use of irrigation⁹.

During the early historic period and medieval times, the importance of irrigation was spoken highly in the literary works as well as the epigraphical records of the period. The Tirukural and other works of the Sangam period stresses the importance of irrigation and agriculture to society¹⁰.

A few treatises on law also speak with authority on the importance attached to irrigation. The **Mitakshara**, written by Vignaneswara who adorned the court of Chalukya Vikramaditya VI, AD 1076-1126, advocates the importance of irrigation works by stipulating rules and regulations for the construction of tanks, wells etc., and for their protection. These stipulations are useful even for the modern society.

The **Mitakshara** states thus:

"When after obtaining the permission of the owner of the field either by request or by payment of money, a man wishes to erect a dam for water or sink a well and if the owner of the field occupies it, the owner himself is punishable".

"The construction of a dam to a water flow should not be stopped by the owner of the field, even though it destroys another's land, provided that it causes little injury and is productive of much benefit (to many). A well, moreover, as it occupies a small portion of land, causes little injury but is beneficial on account of the abundance of water (in it) shall never be stopped. The use of a well more over is indicative, by implication of a small well, a water pond and like others"¹¹.

The construction or digging of a tank is considered by the early writers as the greatest of the seven meritorious acts of a man¹². The **Amuktamalyada** of the illustrious Vijayanagara king Sri Krishnadevaraya stresses the vital importance of irrigation by stating that both virtue and prosperity would increase only when tanks and irrigation channels were constructed¹³. Indian Epigraphical records, while referring to numerous foundations of tanks construction of bunds and sluices, digging

of channels and wells, emphasise the real Indian perception in giving so much importance to irrigation. The early Prakrit inscriptions contain references to the excavation and construction of such water reservoirs as **Kupi, Vavi, Kue Vavika, Tataka, Podhi** etc. In the Sanskrit epigraphs, there are such varied references to water works as **Vapi, Kupa, Tadaga, Paniya-Sangraha, Udapana, Dirghika, Kesara, Saras, Samudra** and **Sagara**¹⁴.

The famous Junagadh inscription of Rudradaman, dated AD 150 is the earliest inscription to speak about some technical details and the repairs conducted to the already existing Sudershana lake¹⁵. The Hisse-Borala inscriptions of Vakataka Devasena, written some time in AD 458-59, refers to the construction of a reservoir and named Sudersanasaras. The slab bearing this inscription was found in a place where there are remains of an ancient brick wall beside an old lake¹⁶ a well found on the side of the Pundariksha Perumal temple at Tiruvellarai near Tiruchirapalli in Tamilnadu has an inscription of ninth century AD engraved on a number of stone slabs forming the margin of the well. It states that the work on the **Perunginaru** or big well was commenced in the fourth and complete in the fifty year of Pallava Dantivarman's reign. This well was repaired in AD 1262 during the reign of Hoyasala Ramanathadeva¹⁷.

The priority given to the construction of tanks over temples is clearly understood from the inscriptions referring to the founding of new settlements. Among such numerous examples, the Kannada inscription of AD 1210, from Agraphara Belagum in Hassan district of Karnataka alludes to the founding of an **agrahara** thus:

"Having created an **agrahara** by the names of Kesavapura, having constructed the tank called Kesava samudra and Lakshmi-Samudra and having erected the temple of Isa and Kesava"¹⁸.

Some of the epigraphical records have explicitly revealed the great religious and social significance attached to the excavation of irrigation works like tanks, canals, sluices etc. From the beginning the construction of a tank was considered as an act of charity which attributed religious merit. As an impact of these

ideological perceptions, the kings, the samantas, the nobles and officials, the merchants and all wealthy man and women in general all contributed a lot in the construction of irrigation works. Particularly the rulers felt, throughout the historic times, that it was obligation on their part to provide irrigation facilities throughout their kingdom. Rulers without heirs considered the creation of a tank as their contribution to one of the Sapta samtanas. Even otherwise also the construction of a tank is considered as one the **Sapta Samtanas** or seven kinds offspring or seven acts of righteousness, which would also immortalize the name of the donor and establish his fame permanently¹⁹. The Ganapesvaram inscription of Kakatiya Ganapatideva (AD 1199-1262) enumerates the seven kinds of off spring or the **sapta samtana** as the procreation of son, the composition of a poem, the hearing of treasure, the planting of a grove, the marriage of a girl to a Brahmana, the construction of a temple and the construction of a tank²⁰. The Vanapalli plates of Anavema dated saka 1300, also refers to these Sapta samtanas.

The Porumamilla tank inscription of AD 1369 is a classic example commemorating the construction of a tank²¹. Apart from invocatory and genealogical details, the epigraph extols the merit of attaching to the building of a tank and also the details of tank construction and the specifications of the site etc.

Verse nine enumerates the seven kinds of the best off springs such as: a son, a literary composition, a tank, a hidden treasure, a Siva temple, a grove and a brahmana village.

These verses clearly explain the importance given to water and irrigation works throughout the period from Vedic times to fourteenth century AD.

In another inscription of sixteenth century AD it is said that the gods, men, **pitris**, the **gandharvas, uragas, rakshasas** and the **bhutas**, all depend on a tank. It is also claimed that the person, in whose tank, men, beasts and birds quench their thirst by drinking its water acquire the same merit as attached to the performance of an **Aswamedha**. Further claims that the **pita** of the excavator of a tank rejoices, the **Pitamaha** dances (with delight) and even the **pitris** of his cognates join him²².

Many other records, particularly of South India speak about the construction, restoration and repairs of tanks, channels, well etc. A study of the beliefs and ideological perceptions which inspired the rulers and other classes of people in undertaking the irrigation works, the attitude of the state towards these works and the different classes of people as authors of these works disprove Karl Wittfogel's theory of "Oriental Despotism".

Irrigation is the artificial application or process of supplying water to crops in the areas where the rainfall is insufficient or unseasonal. It is also termed as "hydraulic agriculture" applied to a system of farming which depends on large scale and government directed water control. "Oriental society" is also called as "hydraulic society".²³

The antiquity of irrigation is as old as agricultural farming. In ancient Indian literature, the land which is "not dependent on the god of rain" (adevamatrika) and has plenty of natural resources of water is highly praised. But when this is lacking, irrigation through lakes, dams, ponds, wells etc., becomes inevitable.

The large scale irrigation works executed in India and other oriental countries were attributed to the state. Some western scholars considered the execution and maintenance of irrigation works as the chief function of the state. Adam Smith, Engels and Karl Marx were the first scholars who stressed the importance of irrigation activity in relation to the position and function of the state. Inspired by Engels analysis, Karl Wittfogel put forward the concepts of "hydraulic civilizations" and "oriental despotism".

Wittfogel's concept of "Oriental despotism" or "hydraulic despotism" focuses on the nature of the tasks in large scale irrigation projects. He explains that the large scale irrigation projects could be executed only by the use of mass labour and this mass labour must be coordinated, disciplined and led only by a controlling authority i.e., the state. He says that in a "hydraulic state" one finds such "authoritarian patterns" as "agro managerial despotism" and a "monopoly bureaucracy". In other words, he has proposed a model of a state sponsored and state controlled hydraulic activity in which there is no scope for an individual private enterprise.

Wittfogel further explained that there were two types of irrigation societies: hydro-agricultural and hydraulic-agricultural. Hydro-agricultural societies are those having small scale irrigation works such as wells, tanks, rivers etc., which did not require a centralized apparatus like the state. Hydraulic-agricultural societies are those having large scale state directed irrigation farming. According to Wittfogel, it was the latter which led to "hydraulic despotism".²⁴

Taking into consideration of all the facts in Indian context, the scholars like Irfan Habib, R.S.Sharma and R.Thapar have questioned the validity of Wittfogel's hypothesis. V.K.Jain,²⁶ after an analysis of the epigraphic and literary data from fourth century BC to second century AD, has concluded that Wittfogel's hypothesis is both logically and factually incorrect.

A review of Indian perception of water as well as irrigation reveals the special attention paid by Indians to water and irrigation works since ancient times. The qualities of water and its essential nature are recognized in Vedic literature as well as Harappan culture. The role of rivers in the economic life of the country was very well recognized by Indians as early as the civilization began in the sub-continent. Artificial irrigation and water management are associated with Harappan and Megalithic cultures. Artificial irrigation in the form of tanks, canals, dykes etc., continued to play a major role in agriculture throughout the historic period.

Some of the epigraphical records have explicitly revealed the great religious and social significance attached to the excavation of irrigation works like tanks, canals, wells etc. From the beginning the construction of a tank was considered as an act of charity which attributed religious merit. As an impact of these ideological perceptions, the kings, the samantas, the nobles, officials, the merchants, religious establishments and all wealthy men and women in general all contributed a lot in the construction of irrigation works.

Many epigraphical records particularly from South India, speak about the construction, restoration and repairs of tanks, canals etc. A study of the beliefs and ideological perceptions which inspired the rulers and other classes of people alike in undertaking the irrigation works, the attitude of the state towards these works

and the different classes of people as authors of these works disprove Karl Wittfogel's theory of 'Oriental despotism'.

The present study concludes that irrigation as a social enterprise in the community life of Medieval Andhra. The epigraphical records

from Andhra clearly reveals that people from all sections of the society contributed greatly for excavation and upkeep of irrigation works. The temple also plays a significant role in that direction.

MILITARY ORGANIZATION IN SOUTH INDIA WITH SPECIAL REFERENCE TO TANJORE (17th & 18th centuries)

P.S.Harish

Warfare has been a recurring phenomenon from the very beginning of the civilization. Initially wars were small and not complex in nature, but in course of time warfare manifested itself into an important feature of the growing civilization. Since conflicts between various groups and nations became more competitive and widespread, different types of armed forces had to be maintained. In order to ensure success they had to be properly mustered and organized to be effective against the enemy. Hence military organization can be described as away of structuring the armed forces with a need to offer effective military capability.

Military forces have to be powerful in order to attack the enemy and for this discipline and orderliness are very essential. This can be cited as one of the reasons for the growth of the concept of organization in arm y.

Not only here, but when there is team effort in any activity in an orderly manner, we say that it is well organized. Hence the term 'organization' can be used to describe a group effort. In the context of army, there would be groups of soldiers who need to attack the opponent in a well organized way and for this training has to be imparted not only for making soldiers disciplined but to motivate them and imbibe the qualities of bravery and self confidence. In his essay 'A typology of Military Organization', Manry D. Feld identifies five ideal types which he intended to 'represent states of mind'.¹ They are the characteristic military organizations of particular political system and they are as follows-

1. Military elites who maintained themselves as an alien body superimposed on a conquered society. (characteristic of an imperial state)

2. Military elites who maintained themselves as an alien body distributed within a conquered society. (characteristic of a feudal state)
3. Military elites which make their place in society as members of native and politically oriented aristocracy. (characteristic of a national state)
4. Military elites who qualify themselves in terms of some socially oriented scale of aptitudes. (characteristic of a representative state)
5. Finally, military elites whose composition corresponds to the overall structure of power within a nation in arms. (Characteristic of a totalitarian state)²

The important point here is that different states had different types of military organizations based on their necessity and societal background. The British army had to modify itself to the situation based on the type of state on which it was having control. For instance, the Indian army under the East India Company and the British Raj serving an imperial state had to be different from the British army serving a national state or representative state. Similarly the type of persons who served and their loyalty to the state were very different in the Raj (in India and British territories) and Great Britain. These differences imposed different requirements on the officers in the performance of their duties.³

A strong and well organized army is an essential feature in order to sustain a mighty and stable empire. The basic principle of organization and growth of army depended on the nature of wars and the manner in which wars were carried out. Bigger army and sophisticated weapons influenced the methods of fighting and yielded decisive results. From sixteenth century we can notice that the aspect of military organization received significant attention owing to the introduction of firearms in war. These new weapons infused new spirit in the armed troops and it facilitated to the reorganization of the military forces. Stability of the rulers and their territorial expansion depended upon well experienced military strength. The following words of Ziauddin Barani, speak about the importance of military

forces-'Kingship is the army and army is the Kingship'⁴ Hence in order to be victorious in a battle, the king had to strengthen his troops and be an effective leader.

South India during 17th and 18th centuries consisted of numerous kingdoms ruled by various kings and hence there were diverse military organizations operative in the region, each employing different ways of training and operation. For example the organization under Golconda was different from Mysore and Tanjore and vice versa. Most of the functions in the hierarchical set up were similar but the names assigned to them were different. Only in two aspects we could see the difference. Firstly it was with reference to the various weapons used by the soldiers in the army and secondly it was the size the armed forces maintained by various rulers.

MILITARY ORGANIZATION UNDER TANJORE RULERS

Tanjore (Thanjavur) which is located in the southern part of Tamilnadu in the Kaveri delta region is historically a famous city from Sangam period onwards. After remaining as the main capital of Cholas for more than two centuries, this region came under the control of Vijayanagar rulers. During post-Talikota period, Tanjore asserted its independence, though it continued to remain loyal to the Vijayanagar overlords. Sevappa Nayaka who was given the area of Tanjore by the Vijayanagar ruler Achyuta Nayaka became its ruler.

The army under the Tanjore rulers consisted of mainly cavalry and infantry along with artillery. The artillery soldiers were recruited from the Muslim population, while the cavalry was manned by soldiers of Rajput background.⁵ Besides the above three arms of the military, there was irregular infantry who carried with them swords, shields and occasionally bow and arrow.⁶

The Marathas who expanded to the south after the mid 18th century, ruled Tanjore for more than one hundred and fifty years. From the beginning the Marathas established a strong base in their south Indian territories. It was Shivaji's step brother Venkoji who started to rule Tanjore under Maratha banner. During this long rule of Marathas, there were changes

in the administrative matters including that of the military and warfare. During the time of Ekoji and Shahji, various changes began to be introduced in the military system. Serfoji II, who ruled Tanjore from 1798, was well equipped with his armed forces. His infantry consisted of ten battalions of about two thousand four hundred regular troops. They were known as '*Junjhar Pathak*.' It is very significant to know that he adopted all the rules and codes of the British army; however, he prescribed Marathi and equivalent for the ranks and cadres of the Company forces.

The infantry of Serfoji II army consisted of the following-

- a. For every section of six sepoy, one *Dharusi*.
- b. For every section of twelve sepoy, two *Dharusis* and one *Prathikwan*.
- c. For every section of twenty four sepoy, four *Dharusis*, two *Prathikwans* and one *Pakwan*⁷

It is very interesting to see that Serfoji abolished English, Arabic and Persian (vocabulary) and gave Marathi and Sanskrit equivalents instead. He also replaced English drill commands into Sanskrit words.

In the context of military it is very prominent to note that even the names of the instruments usually played and used during the time of the beginning of war and in course of the battle were also translated into Sanskrit and Marathi words.

The designations of some chief officers of his army were *Hashan Junghar Pratama Pratik* (General) and *Hashan Junghar Samaradhira* (Deputy General). The infantry band consisted of twenty seven instrumentalists.⁸ A military store was known as '*Sangram Bhandar*.' The standard equipment for each of the ranks was one musket and a sword. The shape and worth of the sword and belt varied according to the rank the concerned officer held. Serfoji's artillery consisted of cannons of several sizes ranging from small ones to giant sizes. It is significant to note that most of the cannons were imported from England and many were cast in his foundry at Tanjore and Sarabendiraja Pattinam fort.⁹The fort at Tanjore

and the palace were mounted with cannons. Huge cannon (*Bhooda Birangi*) known as the Rajagopala which was built during the reign of Raghunatha Nayaka was also in use at this point of time. The cannons were cast by one Saverimuthu of Madras who was in the service of Serfoji and persons manning the cannons were known as '*Thof Daroga*.'

For using in the cannons and muskets, the gunpowder was imported from Trichy and Madras. He also maintained a *Dharu Khana* for the manufacture of cannon balls and gunpowder behind the present day Saraswati Mahal library and also in the north main street adjacent to the palace.¹⁰ He was also said to have purchased a large number of muskets from Krit Company of London.¹¹In addition to the infantry and artillery Serfoji maintained a small but efficient cavalry capable of doing field service. A portion of the cavalry was kept in the palace to serve him as mounted lancers (known as Lal Risala) and designated it as *Samaradhira Aswa Rakshaka*. These lancers wore beautiful dress and head gear and also wore epaulet, gauntlets helmet and belt with the emblem of Serfoji with the inscription of *Huzur Yodha* or the King's soldier.¹²

Hence it can be concluded that there were numerous kingdoms in south India during seventeenth and eighteenth centuries and therefore we find diverse military organizations. With regard to the military organization of Tanjore, there was three fold foreign influences to the existing military organization. One was the influence of Muslim soldiers who basically looked after the aspect of artillery, secondly, it was from the Marathas who ruled the region for a span of more than a century and thirdly it was from the Europeans who influenced not only Tanjore, but also other parts of southern India. The Maratha rulers developed a strong military system and had a thorough interaction with the European military pattern in course of time. It was so profound that Serfoji II adopted all the rules and codes of the British army; however, he prescribed Marathi and equivalent for the ranks and cadres of the Company forces. This is a very significant fusion of European and Maratha military organizations and can be considered as a unique element in the military system of Tanjore.

CUSTOMS OF DIVORCE AND WIDOWS REMARRIAGES OF LAMBADA COMMUNITY IN TELANGANA - A STUDY

Dr. B. Hathiram

Among the tribals inhabiting the plains of Telangana, the *Lambadas*, with their near-yellow skin complexion, are the largest group. They are originally from North India. After the loss in Battle of Tarain between the Rajput king Pruthviraj *Chauhan* and Muhammad Ghori, the *Lambadas* migrated to other regions. In India's system of positive discrimination, they are listed as Scheduled Castes in the states of Karnataka, Himachal Pradesh and Delhi, as Backward Classes in Maharashtra, Punjab and Madhya Pradesh, and as Scheduled Tribes in Orissa and Bihar. The erstwhile state of Andhra Pradesh has classified them as Scheduled Tribes from 1956 in the coastal areas, and from July 1977 in Telangana¹. After the formation of separate states of Andhra Pradesh and Telangana on 2nd June 2014, their population in Telangana is 20.46 lakhs or 5.81% of the overall population of the state².

The *Lambadas* are also known as *Banjaras* and *Sugalis*. The term *Banjara* owes its etymology to the Sanskrit word '*Vanachara*' - wanderers in jungles - based on their nomadic life. They are found all over the country and are variously known as *Banjaras*, *Banjaris*, *Boiparis*, *Lamans*, *Lambanis*, *Sugalis*, *Sikalis* and *Lambadas*. The language they speak is *Gor Boli*³.

For marriage alliances between two *Tandas*, they first approach and consult the *Tanda* head. The head hands over the details of

both the bride and groom through *Baat* and *Dadee* and also speaks to the parents of the other side. The *Gotra* or patrilineage of both the families is referred, and only if they match, would the activities related to the marriage be initiated. A *Banjara* man cannot marry outside the sub-caste nor within the section to which he belongs. He is also forbidden to marry a woman belonging to his mother's side, paternal or maternal grand-mother's side and Paternal or maternal great grand-mother's side⁴.

To marry a *Lambada* girl, the groom has to offer the bride a young bull and at least Rs. 25/- as dowry. The marriage ceremonies last at least for six months. The groom has to spend this period at the bride's residence. He has to offer cigars and tobacco leaves to the visitors to the bride's home, and in the evening toddy (palm wine) to the bride's father after consuming some for himself. During this period of six months, he has to drape himself with a five metre long red blanket. When *Tanda* heads visit the bride's family, the groom has to remain standing, draped in the blanket and can sit only when advised to do so. Through out the period, the bride's family offers him with a variety of delicious food, and also dry coconut soaked in ghee and mixed with jaggery, so as to ensure that his attention towards the bride and her parents does not waver⁵.

In ancient period Securing a divorce is quite easy among the *Lambadas*. When

differences of opinion crop-up among the couple, the marriage does not long last. Just like any other tribe, divorces are rampant even among the *Lambadas*. Right from the day one of certain marriage, the community plays spoilsport. Disputes arise around consumption of toddy and arrack. In matters of reciprocation of gifts, the community is invariably involved. If either the man or the woman is divorcing his/her spouse, they are not forced to pay for the expenditure incurred during the marriage. But will have to pay a penalty of *Sakyar Saat, Ghungater Pachchees* – an amount at Rs. 60/- per each rupee of witness, besides Rs. 25/- towards the cost of the veil of a married woman. Over and above this, they will have to bear the expenditure incurred by the community, besides the penalties imposed by the community head. The *Sakyar* rupee has great value among the *Lambadas*. Hence, during community settlements, the *Dhadis* take this rupee with great reverence.

The *Sakyar* rupee is given at the time when the gathering eats jaggery – *Golkavajanna* – in the presence of all. The *Navi* moves in an anti-clockwise direction and gives it over. The same is done in a clockwise direction at the time of engagement. The *Sakyar* rupee is given in the presence of the heads of various near by *Tandas*. If it is the woman who is seeking divorce, her parents try to counsel her; yet if she insists on going ahead, they leave her to her own fate. In such cases of extreme obstinacy on the part of the woman or man, she/he will have to bear all the penalties that are imposed. There are cases where the woman elopes with another man since she dislikes her husband. In such cases, it is customary on the part of the second husband to pay a certain amount to the first. An essay titled *Lambada Tegalo Vivaham, Vidakulu* (Marriages and Separations among the *Lambada* tribes) refers to a *Lambada* woman Gangi, who it seems, sought nearly six divorces.⁶

Widow re-marriages, called *Bang Karer* or *Suko Atochataero*, have been in practice right from the days of yore. The *Lambadas* had the tradition of getting their widowed daughters married again. During those olden days, if the husbands are martyred in *Battles*, their widows ended their lives by burning themselves on the husband's funeral pyre. Such women are known

as *Satis*. There are many such women in every family of the *Lambadas*. They are revered with great respect. A young woman leads a horrible life after the demise of her husband. To ensure that his nephews and nieces are not orphaned, and to afford parental protection, the deceased husband's younger brothers must have married the widowed sisters-in-law⁷.

An investigation of the when and why of the origin of widow remarriages in the *Lambada* society reveals a strong narrative. During the ancient times, Rana Kanji was martyred in a *Battle*. His wife was too young when he died. Moreover, she was the daughter-in-law of a reputed clan, and unfortunately she had lost her husband. The *Lambada* elders deliberated on this matter and decided that she is too young to suffer widowhood. To ensure that the woman of the clan remains within, they have permitted Shekmal, the brother of Rana Kanji, to marry her.

An analysis of the above historic event reveals that the *Lambada* elders did not let the young girl's life wither, and that their hearts melted at the very thought of widowhood at such tender age. Thus they have initiated widow remarriages within the clan. Instead of letting the daughter-in-law of the family become the wife of another man, the elders seemed to have requested her brother-in-law to accept her as his wife. Henceforth, the younger brother marrying the wife of his deceased brother has become a custom.

According to anthropologists, some societies have made it a social right for the brother to marry his deceased brother's wife. Such marriages are known as *Devara Nyayam*. This tradition is prevalent among the *Khasa* tribe living in Himalayan regions. *Devara Nyayam* is of two types – if the elder brother marries his younger brother's widow it is *Jyeshtha Devara Nyayam* and if the younger brother marries his elder brother's widow, it is *Kanishtha Devara Nyayam*. At present, the latter tradition is prevalent among the *Lambadas*. If the deceased man does not have any younger brothers, and the widow marries another man outside the family, he has to pay a certain amount to the deceased man's family as decided by the elders, besides bearing the expenditure towards hosting a feast for the leadership of the *Tanda*⁸.

It is permissible among the *Lambadas* for a man to marry his elder brother's widow. But according to Hindu tradition, the sister-in-law is deemed to be next to mother. However, among the *Lambadas*, the wife of a younger brother is considered like a daughter for the elder brother, hence such marriages are not acceptable.

The tradition of younger brother marrying his elder brother's wife is, therefore, in vogue since ages. The *Lambadas*, therefore, follow the tradition and the younger brother takes care of his brother's wife and children. As barred by the custom, the elder brother does not marry his younger brother's widow but treats her as his daughter. If he happens to be lascivious and satiates his lust in such a relationship, he is ridiculed as *Bodinchoddu*, i.e., one who sleeps with his younger brother's wife. The rituals associated with widow remarriages are a little different from the usual marriage rituals. The widow is first transformed into a *Muttayiduva*, i.e., she is given a *Ghagari* and *Chudo* to wear, and is then decorated as a bride. The couple is seated together; they are given a sweetmeat made of rice flour, ghee and jaggery to feed each other. This culminates the marriage ritual. The left over sweet meat is distributed among the attendees. This event is known as *Bangkaren Ghalero*⁹.

Divorce among the *Lambadas*, during those olden days, was an easy affair. If either the man or the woman is no longer interested to continue married life, they could easily opt for a divorce, without even offering to bear the expenses incurred towards the marriage. However, they had to pay a penalty of *Sakyar Saath, Ghungater Pachchees* – an amount at Rs. 60/- per each rupee of witness, besides Rs. 25/- towards the cost of the veil of a married woman. Over and above this, they will have to bear the expenditure incurred by the community, besides the penalties imposed by the community head. Divorces were rampant during those days, but because of the increased percentage of literacy among them, and their transformation from pastoral life to urban and civilized life, there seems to be a decrease in the number of divorces. But, the divorces settled with in the *Tandas* witness the man being ordered to pay large sums to the woman by way of alimony. Of late, some of the educated *Lambadas* are approaching the courts of law seeking annulment of marriages. Hitherto, the

woman was not paid large sums by way of maintenance costs since it was the man who paid the Bride-price at the time of marriage. But, today aping the surrounding cultures, it is the bride who is paying dowry in lakhs and crores depending upon the family's affordability. In such marriages, if marital discord arises leading to divorces, the man is forced to pay double the amount of dowry that he had taken. However, in some of the *Tandas*, if the couple has marital discord, they live separately but do not seek divorces; such couples are small in number, though ¹⁰.

In the olden days polygamy was rampant among the *Lambadas*, but because of social awareness gained today, this social evil is largely reduced. They pray to various gods for a child, and if they already have a daughter, they seek a son, since he is deemed to continue the family's lineage. No matter the number of daughters they have, they still continue to bear children until a boy is delivered. One such instance can be seen in our *Tanda*, wherein a man had five daughters followed by two abortions, yet they had no son. The first delivery resulted in triplets, of which the two girls survived but the boy died on the third day of birth. There are men who convince their wives who bore them daughters and go on to marry another woman. They do not hesitate to divorce her if she refuses to allow him to marry again. This goes on to prove that the *Lambadas* give more importance to sons than daughters. The *Lambada* society accepts polygamy.

Within our *Tanda*, a couple could not beget any child for quite many years; the man ultimately convinced his wife and married her sister, who beget a child for him. Likewise, my father's elder brother Sri Boda Golya *Nayak* married three women, the younger brother Sri Boda Malu married two women, and my cousin *Sri Boda Mangya Nayak* had married four women. While some of the *Lambada* men resorted to polygamy for reasons of necessities, some others married multiple times to suppress their sexual urges, yet some others marry their elder brother's wife out of obligation to care for her and her children.

During my field study at Lingannapet *Tanda* in Gambiraopet *Mandal* of Sircilla district, I met a 60 year old individual named

Gangaram, who had married a 30 year old woman, since his wife had expired. This 30 year old woman had deserted her first husband to marry Gangaram. Such marriages, although not common these days, can be seen even today in the *Lambada* society. Here is another instance. About fifteen years ago a resident of our *Tanda* (Beriwada) died quite young due to a fall in a well. His wife was at that time pregnant. The leaders of the *Tanda* decided that the deceased person's younger brother shall marry the widow of his brother since she is too young and is about to become a mother and therefore performed their marriage in a temple¹¹.

It is clear that some ornaments indicate their marital status. There is no system of Mangalasutram among the *Lambadas* in Telangana. A married woman wears ornaments. Such as: *Devi, Bhuria, Haar, Hansali, Phulli, Bhaajuband, Kasotia, Matlee, Baliyaa, Chooder Baliyaa, Kasse, Chatki, Phetiya, Kaanchli, Tukri, Wankidi, Sonklvalo Haar* and *Laalderoharr*. The widow will never use the ornaments like *vankidi, anguthala, Tike, Chuderbalya, Gugri*. After remarriage she has to wear all ornaments with bridegroom.

If the deceased person is a man, his wife is given new clothes to wear. She is then accoutred like a *Muttayiduva*, and then all the symbols representing her marital status are divested from her. Henceforth, she cannot wear colourful clothes nor can she use flowers to deck her hair. Her brother-in-law (the deceased husband's younger brother) has to break the *Topali, Ghugari, Baliya* And *Vankad's* she used to wear till then. These ornaments after being removed from her are then tied to the bier.

If it is a husband who is dead, the wife is divested of all the objects that hitherto gave her the status of a *Muttayiduva* on the third day. On the day, all the *Muttayiduv*as in the hamlet give her a shower, braid her hair, apply vermilion mark (*Bottu*) on her forehead, and decorate her with flowers. After she is so bedecked, the widows take charge and first remove the

Ghugari (veil) from over her head, followed by the breaking of the bangles (*Chuder Baliya*), thus signifying the start of her widowhood. She is thenceforth, barred from wearing any ornaments or clothes that are usually worn by the *Muttayiduv*as. Instead of a *Ghugari*, she starts covering her head with a *Chotla*, a simple jacket (*Kali*), and a petticoat (*Petiya*), and a simple half-*Saree* like cloth to cover her chest (*Chantiya*). These clothes are first bought by the daughters for their widowed mother. All the gold and silver ornaments that the deceased father was wearing at the time of his death are distributed among the sons; if it is the mother has died, the daughters receive the ornaments belonging to the mother¹².

In the ancient times it is very easy the process to giving divorce in *Lambada* Community but today it is very difficult to take divorce after marriage. In the olden days the *tanda* leaders only after dispute, thorough discussion Leaders had to decide Divorce, But at Present for the purpose of Divorce process in Men and Women consulting approaching through the Courts only. Although in Ancient period when they come of age, of widows if they have Brother – in – law, the remarriage process will be complete with them only or any wife dies, or Husbands wife may dies are there they will have to marry with widow only. Several remarriages will be held in those days. At present these marriages are not appearing in *Lambada* tribes, as well as in those days polygamy was popular in this tribe Because at the young age any Husband dies, the particular women, cannot live as widow throughout in her life, that *tanda* leaders have to believe that, and or his Brother–in–law or any regular relative marriage process will be complete through turned married couple will see their children benefits and take responsibilities. But now a days polygamy is rarely appearing in this tribe. As it polygamy some are follows for lust, others are for widows children benefits this remarriage continued and also some of them follows this custom.

DUBASHES RECORDED IN THE DIARY OF MUTHU VIJAYA
THIRUVENGADAM PILLAI (1794-1796) (Monograph in Tamil by Jayaseela
Stephen, Pondicherry, 1999)

K. Ilangoan

Introduction:

Dubash (dho-two, bash or basha, bashi-language) which means knowledge of two languages. He also played role of an interpreter, translator, supervisor, agent and mediator in trade and personal/official matters during 18th century.

When the European traders established trading activities during 17th century they had difficulty in conversing and to deal with the local people. Hence they sought the help of natives to communicate and made them as their assistant. Most of the Europeans i.e, English, French, Dutch and Portuguese who had to essentially need to interact with the regions where they wanted to establish their activities had to depend on these Dubashes. As explained the literal meaning of dubashes are multifaceted and they enacted as interpreter, translator, supervisor, agent and mediator in trade and personal/official matters. Not only they knew two or more languages some were even conversant one or more languages such as Dutch, Portuguese, German, Persian, Sanskrit, Tamil, Telugu, Malayalam and Marathi languages. There were several dubashes, they predominantly belonged to Brahmin, chetti, pillai and nayaks. Most of the European had dubashes/assistants. Even Indian Princely State Rulers, Kings and other chiefs had one or more dubashes.

The type of work or negotiations they have done are varied from translation of conversation, interpreter, writing letters and other documents, dealing of business, collection of taxes, settlement of disputes among locals and between foreigners, arranging loan, finance between company, working as secretary, manager, banker, creditor, accountant as well as commercial brokers to the chief whom they were working and to the European companies like English/French East India Company, Dutch and Portuguese.

French Dubashes

The details of these dubashes are found in British and French records. In French they were spelt as 'daubachy' as seen in French documents. They were also referred as 'modeliar' a caste name and generally termed as commercial brokers. Mostly the term 'courtier' was used by the Compagnie des Indes(French East India Company) who is the senior local Tamil employee and designated as 'chef de malabars'. These so called dubashes played dual roll both as courtier to the company and between the local artisans, weavers and merchants as chef de malabars¹. The prominent among them were Anandarangapillai, Rangappa Thiruvengadam Pillai, Muthu Vijaya Thiruvengadam Pillai, Avadhanum Paupiah, Pachiappa Mudaliar, Muniya Pillai, Kanakappa Mudaliar, Neydavoyal Narayana Pillai, Manali

Muthu Krishna Mudaliar, Tottikalai Kesava Mudaliar, Vayalur Kulandaiveera Perumal Pillai^{2&3}, and European dubases such as Christian missionaries like Bartholmaus Ziegenbalg, Roberto de Nobili, Giuseppa Beschi and Christian Friedrich Schultz were also carried out role of dubashes³.

These dubashes played a significant role in the social history of South India and to the society where they lived. This paper analysis specifically about the dubashes narrated in the Diary of Muthu Vijaya Thiruvengadampillai (1794-1796). In Pondicherry itself during French rule especially the family of Ananda Ranga Pillai, his son and grandson had written the diary consequently. The period of diary recorded is between 1794-1796 when Pondicherry was under British occupation for the second time. The French revolution also took place in France during this period.

The diaries of Pondicherry:

The spotlight on the dubashes and history of southern India during the 18th and 19th century was thrown out by Anandaranga Pillai, because it was due the translation of his diary from Tamil to English and published on the auspicious of the English rulers. The other three diaries which were later published had not been studied in detail. Hence as an attempt to show some more reading is now made of the history through the diary of Muthu Vijaya Thiruvengadam Pillai.

There are several aspects that could be looked into the daily writings of the diary with the language that was used, social aspect, religious activities, political affairs, customs, practice and systems existed at that time, business, trade, natural and geographical events, type of money dealings like advance borrowings, interest, loan etc.

A number of researches, articles and books have been released and seminars conducted on Anandaranga Pillai diary. The first four diaries mentioned above i.e, Ananda Ranga Pillai, Rangapa Thiruvengadam Pillai, Muthu Vijaya Thiruvengadam Pillai, Second Veeranayakar has been published and the last one the diary of Guruvappa Pillai is not found but a reference appears in the Anandarangapa Pillai diary. All three diarists are from the same

family spanning around 60 years. The fine streaming of diary events jotted down in the 18th Century throws light on the history of French India, the society of the yester years, customs, practices, trading, business etc., Still more studies could be done on the unexplored subjects. The essence of system of religions, customs and practices existed, role played by these dubases, administrative and legal system that prevailed, castes and community in 18th century can be felt when we read the diary. From this study of these dubashes the picture of 18th century social strata, education, customs and rituals followed, trade, business etc can also be visualized.

Diary of Rangapa Thiruvengadam Pillai:

The diary of Rangapa Thiruvengadam Pillai and his son Muthu Vijaya Thiruvengadam Pillai has been edited and published Shri S.Jayaseela Stephen. The present study is taken on the dubashes mentioned in the French colony of Puducherry.

Diary of Muthu Vijaya Thiruvengadam Pillai (1794-1796).

Muthu Vijaya Thiruvengadam Pillai is the son of Rangappa Thiruvengadam pillai born in 1777 and he has called as Vengadasam as pet name. His name has been mentioned in Paris documents as Vasaradarya Muthu Vijaya Tiruvengadam Pillai. French Governor Thembran has appointed him as Tamil leader after his father on 1st March 1791, when the English troops laid siege on Pondicherry. He helped and guarded the Governor and died in 1801. The period in which this diary was recorded is after the third Mysore war (1790-1792) where British under rule of East India Company gained more power for their colonization. The British then occupied Pondicherry for the second time from 23 August 1793 to 18th June 1817 for a period of 23 years. The diarist who was living during this period has written only for two years and only a short period of British administration is known. But it is known that migration and desertion of people from Pondicherry to other places took place since the English has demolished the buildings and entire town in ruins.

The Gist of the diary:

Elaborate details of judgement, orders passed by the court i.e, Chavadi, notices, public announcement of the authorities has been recorded in the diary. The clashes between Right and Left hand caste people, payment of tax for his inherited Sedarapet village income, getting permission for construction of house in the Puducherry town, death of Arcot Nawab Mohammed, death of Vijayanagar King, the cannonball villages of Puducherry taken over by the Cuddalore Collector, Temple festival celebration about the fire walking, Kolattam, houses auctioned for non payment of taxes and loans, announcement of French police Chief in French on 11th April 1795, Monsieur Fumeron shot himself dead by his two barrel gun for not paying the loan he borrowed from local chettis, Tanjore Amarsingh proceeding on pilgrimage to Kasi are some of the incidents registered in the diary. Another fact that has been recorded is that he has appointed an English men to teach English for him (15th Sept 1794) and could not continue because of his busy work.

The language spelt at the time of the diarist the names of the masters/chiefs Monsieur (Mister), Escotton (Esquadron), Maister (Major) etc, differs. These dubashes most of them are either picked up or appointed to the European masters who does not know the local language. The dubashes are well known persons in the Pondicherry and nearby local community and mostly from Pillai, Mudali and one Brahmin. They know Tamil, French or English. As said earlier they main task is to assist the masters in interacting with local people and to deal with their personal and business requirements. The details of the salary or any other kind of payment or remuneration paid to these dubashes are not known. But most of them have got their share by way considerable percentage of business dealings by arranging loans & interest, sale of products in textile trade and collection of taxes.

The dubashes enjoyed dignity, pride and the higher status in the society and they were also leaders of their respective community. It was also the responsibility to solve amicably the clashes, problem arising in the community and in their area. The qualification were mainly to know the languages of Tamil, French or

English and the ability to deal with their European masters requirements. The period of this diary from 11th August 1794 to 15 January 1796 which comes to 402 days most of the days the word dubashi is mentioned. This shows that there are a number of dubashes were working for their masters are well recorded.

Some important events documented in the diary

The significance of this diary is that tamil language with mixed words of French, English, Portuguese, Sanskrit, Arabic, Persian and Hindustani is written in the diary and a list of glossary and word that is spelt has been given for guidance to read the diary. The 18th century tamil has slowly changed its face in a way with mixed words of above said languages. This shows the dominance of foreign rulers for the past few centuries and especially there are more foreign words mingled in French Puducherry than other parts of India. The system of collection tax, judicial system, punishment, announcement by tom tom are elaborated here. The diarist Muthu Vijaya Thiruvengadam has translated French to Tamil, Tamil to Arabic and Tamil to English as seen on date 06-01-1795. An advocate from Srilanka Kandy has visited Pondicherry and he was welcomed in the palanquin with drums, dance and fanfare on 23-09-1795. The diarist explains in detail that the information written in a letter which was received by another dubash Subbraya Mudali from Gudiyatham. about the incidence of flood that occurred on 24-12-1795 in Arcot, Gudiyatham, Chetpet and Chittoor where it washed away several houses, damaged trees, cattle and caused huge loss to crop and to the people. There is also information about the death of Nizam Ahamed Khan on 28-10-1794 and death of Karnataka Nawab Mohammed Ali Khan on 13-10-1795. Another recorded report is the Police Chief Bimron committed suicide by shooting with his two barrel gun since the lender has asked to repay the loan that he borrowed and didn't pay. Solar eclipse occurred on 10-01-1796 as was recorded in this diary. The celebrations of Gokulashtami, Bogi, Pongal, Pot breaking(uriyadi), New Year are documented in the diary.

Conclusion:

From 17th century until the transformation to the direct control of the British and only during the period of East India Company when the Europeans needed to establish their trade and business they appointed dubashes. In the beginning of 19th century the Company, when more problem arose with the dubashes the Europeans discontinued the assistance from them and directly dealt with entities. Hence the

dubashes disappeared from the scene. It is evident from the diary that the dubashes recorded in the Muthu Vijaya Thiruvengadam diary are prominently caste leaders and even the diarist itself has a strong binding on their religious faith dealt with the Right and Left hand caste feud and about their financial dealings such as collection of taxes, mediation, translation and interpretation for their masters are the main task they had carried out during the study period of this diary.

THE CHANGING PERSPECTIVES ON URBAN SCAVENGING: THE VIEWS FROM COLONIAL CALICUT

U.V. Jasriya Yoosof

“It is a perpetual source of wonder and amusement to see the unembarrassed care with which employment of a personal nature are carried on in the most crowded streets”¹

The above mentioned are the words of a traveller who came to India in the nineteenth century which provides an insight regarding the practice of open defecation during those times. Excretion is one among the basic characteristic of every living organisms and like any other aspect of the day to day life of the human beings, this one aspect also witnessed some sophisticated changes and ways from the oldest civilizations to the current living condition of humans due to their enlarged brain structure when compared to the other creatures. Majority of the population of India practiced the open defecation system before the introduction of toilets and the practice continues even today in some parts of the country. Open defecation can romantically viewed as a relationship with the nature as it involves the procedure of decomposing the waste produced in the living organisms from the consumption of natural products and the giving back of it to the nature to produce new products.²

Open defecation may have been the common culture in the rural areas but with the

starting up of towns new ways were needed for the disposal of human waste because the towns were very congested places when compared with the rural areas. Human waste is considered as a polluting object and with the urban agglomeration happened due to the inflow of population from rural to the urban milieu in search of good opportunities in matters of job resulted in the creation of many homeless people in the cities and they used streets and other places of public resort for defecation. This sudden increase in the demographic pattern may compel the rulers of the city to think about new ways for the disposal of human waste. We have some idea about the toilet system during the Indus period and a toilet case has been found at Harappa.³ The toilet jars used in the Harappan period were made of ivory, metal, pottery, stone etc and small toilet tables were also there which was specially designed for women.⁴

The knowledge and practice of toilet may have started during the Indus period but the institutionalisation of sweeping and scavenging as a profession seems to be of a recent origin. There is a reference in Koutilya's *Arthasasthra* regarding the prohibition of open defecation in the towns but it doesn't mention about the employment of scavengers for the disposal of

night soil.⁵ Old scriptures like the *Naradiya Samhita* mentions about fifteen duties of the slaves and the disposal of human excreta is one among them. The *VajasaneyiSamhita* attributes the above duty to the *Chandals* and the *Paulkasa* slaves.⁶ The Chinese traveller Hsuan Tsang who visited India during the time of Harsha mentions about the living condition of the untouchables such as scavengers. They lived outside the villages and when they entered the town, they need to announce their entry by shouting loudly so the other people can keep distance from them in order to not get polluted by their approach.⁷

During the British period, India has witnessed the outbreak of many epidemic diseases and the main task of the British administration in India was to safeguard the English population from these diseases. In the initial period they only cared about their habitation areas and viewed the so called 'black towns' as the main source of the diseases. The significant awareness happened in favour of the natives during the British period was that the "diseases respected no barrier between natives and Europeans".⁸ Hygienic practices were begun to be considered as a useful tactic in preventing the disease generation, distribution etc and the municipal bodies in various corners of the country gave ample amount of attention towards this. Scavenging as a profession has its birth in the history of modern India through the administration of civic bodies and the present paper is an attempt to understand the nature and mode of scavenging that existed in city of Calicut.

The time when there was no septic tank toilet as of today, the service of the scavengers was inevitable in an urban set up and the civic bodies were in charge to provide this basic amenity to the urban population. The local self government policy introduced by Lord Ripon strengthened the local bodies with the power and fund needed to implement the upkeep of the conservancy staff like the scavengers. But still the work done in this regard in the Calicut Municipality was not sufficient. It is reported that Calicut municipality had used incinerators and trenching grounds for the disposal of the night soil during 1914-1917. But the common practice was the use of trenching ground for the disposal of night soil and the number of

incinerator used in the municipality was insufficient. The collected night soil and other garbage were mixed up with saw dust and burned into ashes with the help of incinerator but the unavailability of saw dust was a problem in this method because saw dust was heavily used as a cooking medium by the people. There was also another method used in the incinerator which did not become common because of the use of comparatively expensive items such as Kerosene oil and Carbolic acid.⁹

Unresolved garbage and the night soil became serious problem in the streets of Calicut and it was causing a high threat to the wellbeing of the population. In Calicut town each sweeper had to attend seventy houses and this disparity in the required and actual number of sweepers needed in the town was causing the lack of hygiene.¹⁰ The private scavenging system was considered as the best way to tackle the diseases and introduced after the widespread influence of contagious diseases during the British period in India.¹¹ During 1943, sixty four families were doing the scavenging work in the Calicut municipality and only thirty families were provided with residential area by the municipality in lieu of one rupee of monthly rent payable to the municipality.¹² Scavenging lanes were situated in the town areas exclusively for the residential purpose of the scavengers.

Paraya, *Pulaya* and *chakliya* were the most important castes among the scavengers and the latter were the immigrant class of people from Tamil Nadu. They were also called as *Thotti Parayar* or *Pattana Parayar*.¹³ *Thotti* was the term used in the regional language to refer to the scavengers. Scavengers used to collect the night soil from the houses in buckets and transferred it to the hand carts. A hand cart would contain ten buckets of night soil and then it was deposited in the lorry parked near the present vegetable market or Ansari Park in Calicut town and its journey will end after reaching the night soil depot.¹⁴ Some days the system of scavenging in Calicut municipality starts when the scavenger clean the latrine in morning and carry it to the temporary place of deposit and the night soil would be there till the forenoon, then night soil lorries transfer it to the night soil depot known as *Njeliyanparambu*, 1.5 mile away from the city. The strong public

reaction against the dumping of night soil in a water course at Puthiyara resulted in the inauguration of a new trenching ground at Njeliyanparambu. It has an area of eleven acres during 1927 and a *maistry* was in charge of the trenching ground and the trenches were done by the *coolies*.¹⁵ The night soil deposited here and there in the town areas for a temporary purpose of storage was a continuous nuisance till the motor lorry collected it from there. It was a major concern from the part of public and they asked for either an altogether avoidance of such temporary deposit sites in the public places of resort or the deposit being made in certain selected places out of public view. The actual work time of the scavengers of the Municipality was from 5:30 in the morning to 7:30 in the evening without any proper lunch break.¹⁶ Apart from this they must also report during any emergency or if they made any mistake in the work done while cleaning the latrines.¹⁷

Calicut municipality levied one percentage of the annual rental value from buildings and half percentage of the annual rental value from land as the scavenging tax.¹⁸ As an example, the Fisheries training institute in Calicut paid rupees 3-6-0 as the quarterly scavenging fee to the municipality for the hostel building and rupees 3 for the institute during the year 1925. The scavenging fee for the hostel was paid by the inmates.¹⁹

Scavengers were the one section of people who were associated with the task of cleaning the waste of the town dwellers but at the same time they had dirty surroundings to live upon. The very hectic work schedule from early morning to late evening did not allow them to concentrate on their body or surrounding cleanliness. The essence of caste system is its attachment to the body, not the soul and thus giving importance to purity and pollution. Physical contact of the body with the disgusted things causes pollution and which can be removed by physical cleansing. It is important for the higher castes to protect the purity of their body and the creation of an unclean section of people was become inevitable to engage with the polluting materials.²⁰ In the case of the scavengers in Calicut also, there may have been a social segregation due to the nature of their work.

Generally, the people employed as scavengers were from the lowest strata of the caste hierarchy and the demeaning and defiling nature of their work may even increase the social distance they were faced earlier as part of their caste identity. Some kind of insight regarding this can be drawn from the inspection report of the Calicut municipality in the year 1927. The inspection report of the municipality was a routine after every three years in the Madras presidency and the inspection report of the Calicut municipality mentions that Calicut town was an area having strong caste prejudices and highlights the need to provide urgent housing infrastructure to every conservancy staff in the Calicut municipality.²¹ From this inference, it may be assumed that the scavengers who were not given housing by the municipality are facing problems in finding an accommodation due to the nature of their job and their caste.

Mulk Raj Anand in his work '*Untouchable*' depicts the inhuman treatment received by the scavengers from the high caste people. The protagonist Bakha, scavenger in the military barracks says; "They think we are mere dirt because we clean their dirt."²² Caste restrictions regarding the use of public wells, roads, entry to the temples etc. were even worse to the scavengers when compared with other backward castes. The *Untouchable* novel draws a scene where the scavenger informs his arrival by shouting while walking through the streets so that his approach may not pollute the 'pure people'. *Thottiyude Makan* (means 'son of a scavenger' in Malayalam) is a novel written by Thakazhi Sivasankara Pillai. The novel gives us insights regarding the living conditions of the scavengers. In the novel, Municipal overseer and its President were exploiting the scavenging community due to their ignorance regarding their remuneration. The actual salary was never received by the scavengers and a major share of what they got was used for buying alcohol. The children were not given admission to the schools because of the caste prejudices and the first set of people wipe out due to the break out of an epidemic in a locality was the scavenging communities. The novel *ThottiyudeMakan* depicts a situation where the municipal overseer and president discussing the measures to be taken regarding the outbreak of a chronic small pox and they doesn't even

consider the scavengers as fellow human beings. Overseer does not make any step to vaccinate the scavengers and his view point is that the fever followed after vaccination will pause the scavenging work of the municipality. His plan is to fetch new scavengers from Tirunelveli to Kerala after all the existing scavengers died due to the epidemics.²³ Scavengers viewed these epidemics in connection with their religious belief also and during the outbreak, various offerings to their local deities were conducted to get rid of from it by appeasing these gods. Later on various working communities including the scavengers began to understand the power of their unity and began to form unions and organisations to make their appeals to the authority and thereby provided with their actual salary without any alteration to it by the intermediary officers.

Starting of the trade union movements in different parts of the country influenced the scavengers in Madras to form their trade unions and three thousand scavengers in the Madras Corporation under the Madras Scavengers Union went for a strike asking for hike in their pay.²⁴ Calicut also witnessed formation of a union among the scavengers under the banner of the *Harijan Seva Sangham*. The sangham conducted a survey regarding the condition of the scavengers and submitted the report to the municipality. The report tried to draw the attention of the municipality on the dangerous condition of the scavengers lane situated opposite to the woman's hospital, provision of casual leave, sick leave and provident fund etc, educational backwardness of the children of scavengers and to provide them with adequate housing. It also urged the municipality to stop the heinous practice of removing the night soil in bucket as head load. It stressed that no other administrative body in the world will promote such a disgusting practice.²⁵ Scavengers opted for many strikes and the municipal bodies began to give awareness to the town dwellers on the need to find permanent solution to the disposal of human waste and install permanent arrangements. After the independence also, private scavenging²⁶ existed and it ended in Malabar during the 1980s due to various strikes by the scavengers in different part of Malabar to get rid of this demeaning occupation.²⁷ When the private scavenging was abolished, the communities traditionally doing the scavenging

work began to work under the municipality as the sweepers and the cleaning staff. Today also the majority of the cleaning staff work in the Calicut municipality is from the earlier scavenging communities and the scavenging lanes in the earlier time are still in the town areas now. Some of the still existing colonies of the backward castes in the town were the scavenging lanes provided by the municipality to the scavenging communities for the residential purpose. The settlements opposite to the present EMS stadium in Calicut town, near the Nadakkavu bus stop and the Malayala Manorama office are some of the earlier scavenging lanes.

Scavenging as a practice can be seen in India before the advent of British but their rule in India ignited it to more institutionalised form and despite the 'civilizing mission' cry of the British administration, they officially employed scavengers in military cantonments and municipalities.²⁸ They did not provide technological innovations instead of manual scavenging and this institutionalisation of the scavenging led to the deepening of the already prevailed caste prejudices, notion of bodily purity and pollution, segregation of the lower castes etc into a more rigorous level. In Calicut town area people used the service of scavengers by paying the municipality a monthly scavenging fee and according to a notification issued by the Calicut municipality in 1932, it is compulsory for the owner of every building to construct the latrine. The latrine shall be situated in such a position for the easy access of the cleaning staff of the municipality and the municipality will levy a fine of rupees 50 from the owner of the building if he prevent any municipal staff or scavenger from conserving such places.²⁹ From this we can assume the importance given to the conservancy of the town by the Calicut municipality and any breach in it from the part of the owner of the property was a fineable offence. The service done by the scavengers or the conservancy staff was a great deal in this matter but due to the demeaning nature of the work they have done, they were secluded from a social life among the main beneficiaries of their service. They were confined to the scavenging lanes and these lanes were regarded as the filthiest place in the town. Here the town dwellers can't imagine their life

without the service of scavengers but that service itself was the reason of the privileged section to keep aloof from the scavenging lanes and the scavenging community of the town.

The continuous strikes by the scavenging communities and the introduction of the septic tank toilets in Calicut town ended the practice of scavenging in the town.

THE AMERICAN BAPTIST TELUGU MISSIONARIES CONTRIBUTIONS TO ANDHRA PRADESH & TELANGANA

Dr. B. John Robert

The Missionaries had vigorously strived for the promotion of lower rung of the classes in the society and found the most fruitful field for their labours. There was formerly in deep seated prejudice against the admission of low caste

children in Public Schools, which sprang partly from the dislike of the well – to – do children to mix with low class panchanamas which includes the Madigas and Malas, etc.

The Christian Missionaries has established many Elementary Schools in all over the Telugu Mission Area with the hope of improving primary education and to make it attractive to the rural population. The lamentable backwardness in literacy was common to all communities. Rev. J.H. Brock had opened 82 schools in the Ongole area with enrollment of 1309 Pupils.

Education especially in Ongole field became a great asset to the evangelistic work. Those who wanted to become ministers right after their Baptism were given a six – week training course and were sent out as evangelists. The teachers training school for women were established at Bapatla, Ongole and Nellore. The training schools made possible the educational and economic advancement of the depressed people. Dr. Fishmen gives fascinating statistics on the growth of education.

He says that “by 1905 there were 635 day schools with 12,398 Pupils, 23 boarding schools with 1,761 Pupils, three high schools for boys with 824 Pupils, one high school for girls with 15 Pupils, one seminary with 105 students, one training schools for girls with 35 students and one college with 34 students.

The success of the educational mission was due not only to the Missionaries but also to the people who responded to the Missionaries.

The Missionaries had also paid great attention to improve the conditions of the criminal tribes. They also tried to bring them in the mainstream of social life. The Yerukalas, of whom there were 6,514 in 1921, were originally a nomadic tribe in the Nellore District. Donga (or thieving) Yerukulas who have no permanent place of residence had a tendency to lead a life of crime. The African Baptist Mission started a school at Kavali in connection with the Kavali criminal settlement. The school had done an excellent work for reclamation of the younger generation of the criminal tribes of Nellore District. In 1912 Rev. Bullard opened Yerukula settlement at Kavali with 20 Yerukula families. At one time the number of inmates came to 2,000 and there was also a branch settlement at Allur. The Christian Missionaries had also laid great stress on vocational education. They taught a trade or handicraft

which would help them to eke out their livelihood. John H. Reissner aptly said that one of the out standing features of organized Christianity within the few decades was its increasing awareness and interest in rural life.

Medical Work:

The medical work of the American Baptist Mission was begun at Ramapatnam in 1890. first a dispensary was maintained. The most noticeable feature about the South Indian Village life was the low standard of health maintained by the people. It was often assailed by epidemics. The Christian Mission finds its sanction and compelling motive in the very nature of God, which is revealed in Jesus Christ – as redeeming love. It is for this ministry to bear witness to a distinctive conception of God of the world and of human life. It must show compassionate concern for every human being seeking to restore and maintain health within him and to lead him to build up an enduring Christian character. As such it is inescapable obligation of the Church to provide the medical service that will meet the needs of the people and foster within them the ideas of unselfish service. The Church cannot and will not separate itself from the issue of health.

The territorial extent of the area in which the Gospel preaching extended is called the Mission field. The American Baptist Telugu Mission is an evangelistic enterprise. It has been worked out the Telugu field by the sincere efforts of the pioneer Missionaries among the outcaste pariah tribe i.e., Madigas and Malas. It was an experiment which yielded tremendous results in a period of one century. History shows that evolution takes a good many centuries in any phase of movement to reach its desired effect. The Missionaries knowingly or in knowingly in an abrupt manner without any agenda or constitution plunged into the evangelistic work. They applied their endeavour to evangelize the rustic downtrodden. They learnt many things by doing in a pragmatic way. Their purpose was to preach the Gospel and of the recipients was to get out of their traditional backwardness. These two aspects desirably produced the present developed American Baptist Telugu Mission.

The historical perspective of the American Baptist Telugu Mission presents in a distinct

form, the origin and establishment, the evolution of the Mission fields the evangelistic work of the Missionaries along with humanitarian perspectives of educational work, medical work and relief work. The perspective also describes the aims and objective of the American Baptist Telugu Missionary movement. It also aids to it the brief histories of the Missionaries of the Telugu Baptist Mission.

Of all the denominational Missions working in the Telugu country, the Baptist denomination has done wonderfully well in raising a large number of leaders who can be depended upon. They have been instilled with the principles of honesty, sacrifice and duty from the very beginning by the distinguished lives of the Baptist Missionaries. The Missionaries of this mission have done this one thing more than any other thing. They have produced leaders by the hundreds and thousands. The fact that a great majority of responsible places in the Methodist, Wesleyan, Mennonite and other Missions were filled by the leaders from the Baptist denomination is the proof of overflow of leadership.

This system of organization was in existence up to 1965. The name American Baptist Telugu Mission was changed to the Samavesam of Telugu Baptist Churches. The new nomenclature "Samavesam of Telugu Baptist Churches" came into being in 1963, but it became official in 1965 when the new Constitution was submitted to the Registrar's Office. Some changes were made in the erstwhile constitution and bye-laws to suit the changed circumstances.

BOARDING SCHOOLS

The schools were not only the agencies of the educational work referred to here, but also the centers of all community service. In this connection a boarding school in the mission could be described as the power house of the whole enterprise, and a source of supplies. Such boarding schools were established in many District centre where there were mission stations. A significant social change took place in the boarding school.

A significant social change took place in the boarding school. The learning situation in the village life is replaced by the compound life

which exerts stranger educational influence than family and community life. The discipline of the classroom is more strict and the dormitory is carefully regulated in the interests of meeting the needs of a large group of small children for food, shelter, recreation and health care with the greatest possible economy in effect and material and with the least possible friction. Under such strict control in an environment completely removed from family life and traditional occupational atmosphere much of village superstition and awkwardness disappeared. In fact youth educated in this manner were so completely isolated from such influences for long period that they were astonishingly ignorant of Hindu religious practices. Classroom education loomed large in this life and points over to higher institutions of similar kind. Instruction was very formal and bookish and seldom related to daily life and needs of the compound, even much less of the village. As these schools were vital for the success of the evangelistic work, the missionaries best gave great attention upon the successful functioning of these schools. The Missionaries have given the best encouragement for the children of the Christian converts, by giving financial help in the high school education several High schools for boys and girls were established in many Mission stations and the orphanages were attached to them. Hundreds and thousands of Christian students and come up through these schools. They poverty had never come in their way to prevent them from education. There are other high schools namely, the boys high school, Ongole: The Coles Ackerman Memorial boys High School, Nellore the Girls High School Nellore: The Hird High School Narasaraopet and the A.B.M High Schools at Bapthla and Kavali.

These schools are as prominent as the Kurnool High School. All are orphanage attached schools. Many of the best educated Christian men and women and passed through the portals of these high schools. The Christian Boys and girls of other casts in these places received their education by paying low fees. The money they spent away the money and used up other benefits they lapsed into their pristine degradation. The missionaries were however, conations in keeping the minds of the converts. The missionaries therefore, began opening schools as a drive against illiteracy.

These schools later developed into vocational centers to help the people in earning a respectable and dependable livelihood. Services of teachers, doctors, social workers, nurses were engaged. An awakening was felt in the villages, and the oppressed were becoming conscious and thinking individuals. The sincere and dedicated services of the missionaries were frequently hampered by adverse conditions that prevailed in villages.

Coles had long been involved in the extensive educational programmes. The mission pioneers had done a great work in the education of women, on tastes, and tribal groups in all stages of education. The American Baptist Telugu Mission Educational institutions were well provided with a dedicated band of staff, and pleasant atmosphere which was congenial for learning and training for future life both in secular and sacred fields. The educational programmes of the Telugu Mission geared up the improvement of social life and preparing the taught to become valuable citizens of the Mission.

KANDUKUR – 1893

Kandukur is a small village about 50 miles north – west of Ramapatnam. Rev. Wheeler Boggess and his wife worked in the field from starting in 1893 to 1914 for three terms. The Boggesses arrived in Kandukur in 1893 and began their evangelistic work. A Mission bungalow was erected during 1893-1894. Rev. Boggess was a strict believer in the policy of self – support. He openly announced his doctrine in the churches in 1897 and followed it through out the period of his service in the field. Dr. Ferguson was in charge of the field from 1899 to 1901 during the absence of the Boggesses. Seventy-six converts were baptized during 1900 by Ferguson. The Boggesses returned to Kandukur in 1901 and resumed their work. Social and economic problems could not be ignored if the missionaries were to preach the Gospel to a people who were socially down-trodden and economically deprived. These problems demanded attention as much as spiritual issues.

So the A.B.T.M. established an organized system through which the Socio-economic needs of the needy people in Andhra Pradesh were met with. They met the socio-economic

need of the people by providing education to boys and girls, extending medical care, emergency relief, agricultural assistance, starting orphanages and societies such as Christian Endeavour Society and other methods.

When the American Baptist Telugu Missionaries started their work in 1836 in the Telugu area the social and economic condition of the lower caste people was deplorable due to illiteracy and poor economic background. The society was very rigid with caste distinctions. As per as the lower classes were concerned their economic condition was disappointing. The situation was caused due to the failure of the rains and also the famines that followed as a result. So the Missionaries involved themselves in the upliftment programmes ever since.

The low-caste people who were converted by the American Baptist Missionaries, were originally traditional leather workers of the village community. They had the traditional productive relationships and the system of reciprocal duties and services. Their main duty was the tanning of hides and the manufacture of rule leather articles. They bent the thappets (Trumpet) at the village festivals and ceremonies. They worked as yetis to carry the news and announce news by tom-tom in the villages. They took some parts of their family use. They performed many other subsidiary services for the smooth functioning of the village community. They worked as labourers on long term basis.

SECUNDERABAD – 1875

Secunderabad is within five miles from Hyderabad. It was once a British cantonment with largest British troops in India. Rev. W. Campbell and his wife were sent to Secunderabad to open a new Mission Station. They reached Secunderabad in 1875 and stayed in a travelers bungalow. Campbell held Sunday service in the bungalow itself, and Mrs. Campbell started a Sunday school too. Campbell baptized three converts from a family in December, 1876. He arranged regular English prayer meetings for soldiers. A bungalow was secured in 1878. In 1881 a building adjoining the bungalow was purchased and converted into Chapel – cum – School House. The Campbell left for America in 1881 due to ill-health and returned in 1882.

Mr. and Mrs. Newcomb came to Secunderabad in July, 1884 to assist the Campbells. But they went to Cumbum in the same year to look after the work of the field in the absence of Dr. W.B. Boggs. Campbell opened Nalgonda. The Campbells were forced to leave for America due to the continued illness of Mrs. Campbell in 1888. Mr. R. Maplesden was transferred to Secunderabad from Ongole, to relieve the Campbells in March, 1888. The Secunderabad field was divided and a second station was started at Bolaram assigning W.E. Hopkins to the new station. After a few years of fruitless efforts Bolaram station was closed. The Secunderabad field suffered from frequent changes among the Missionaries and among the soldiers as well. Dr. W.B. Boggs who had been working at Secunderabad for four years, was called as the Principal of Theological Seminary at Ramapatnam in 1899. Mr. Hopkins was succeeded by F.H. Levering. Miss Kathrine French, Miss Mary D. Faye and Miss Sussie were all designated to Secunderabad during the period. The Leverings were transferred to Madras in 1910. Mr. and Mrs. A.M. Boggs who were already in Secunderabad assumed the charge of the field. Miss M.E. Morrow and Miss French looked after the educational work. The Leverings again returned to Secunderabad and continued their work. Miss F.F. Hollis joined them in 1913. Mr. and Mrs. Marsh were transferred to Secunderabad. They arrived on April 1, 1921. the Leverings left on April 6, for Kotagiri on the Nilagiri Hills and they retired there.

The Marshes left for America in 1921. Mr. Rutherford was assigned to the Secunderabad field. Miss Hollis continued her service in the field. The co-educational station school was converted into girls school. Miss Hollis started a kindergarten in 1825. A Church was organized with 83 Christians. Rev. C.R. Marsh and his wife were the station missionaries in 1929. The special Commission of the American Baptist Foreign Mission Society visited Secunderabad on January 13, 1929. The Kurtzs were the Station Missionaries in 1932. The annual Deccan Association meeting was held in March, Deccan Association. He was also the manger of the Baptist Missionary Review. These were nine primary schools with 132 boys and 35 girls. Five men teachers and six women teachers were working in those schools during 1935.

The A.B. Missionaries explored a new mission station in the Nizam Dominions at Secunderabad. It was also the first mission station in the Deccan area.

HANUMAKONDA – 1879

Hanumakonda is a town in the Nizam Dominions situated between the rivers the Godavari and Krishna. It is 86 miles north – east of Secunderabad and four and half miles from Warangal. Mr. and Mrs. Loughridge arrived in Hanumakonda on January 9, 1879. After a year's work among the people Loughridge baptized his first convert. A Church was organized in Hanumakonda on January 4, 1880. A day school was also opened. Mrs. Loughridge took care of the school and also work among the women. A.A. Newhall joined Mr. Loughridge in February, 1883. While Mr. Loughridge was busy with the construction of the bungalow Newhall toured the field and preached the gospel. Mr. Loughridge returned to American in 1884 leaving Newhall incharge of the work. Newhall married Miss Menke in 1884. Miss Bortha Menke joined her sister Mrs. Newhall at Hanumakonda. They worked among the girls and the women in the field.

Rev. J. Stuart Timpany a medical missionary was designated to Hanumakonda in 1896. He started a hospital as The Victoria Memorial Hospital. Dr. Timpany attracted both Hindus and Muslims apart from outcaste Christians.

Miss Wagner who was transferred to Hanumakonda in 1901 worked in the nurse training school up to 1904. Then she went on furlough and she had not returned. The Timpanys left for America in 1905. Handing over charge to Rev. J. Wiens and returned in 1907. Miss Anna Linker joined the work in Hanumakonda in 1907. Rev. Charles Rutherford and his wife were transferred to Hanumakonda in 1910 for the field work, but his wife died in 1911. Rutherford continued his work after the death of his wife. He baptized many people in the field. A new boarding school was opened. He returned home with his little daughter in 1913. Rev. B.J. Rockwood succeeded him but stayed only two years. He was transferred to Kurnool in 1915 as Principal of the high School.

Timpany established and carried on two branch dispensaries one at Cumbum and the other at Jangaon, where, over 5,000 patients were treated in 1914. When the Timpanys went on furlough in 1915 Rev. Jesse W. Stanger, M.D., and his wife were transferred from Nellore to Hanumakonda. There was at first a slight falling off in the attendance at the hospital but in the second year he had the largest attendance on record. Mrs. Stanger worked among the women and the children. She supervised the station schools and the Bible and Zenana work. The Timpanys returned in 1917 and the Stengers were transferred to the Clough Memorial Hospital, Ongole. Mr. and Mrs. Rutherford, the second wife, returned to Hanumakonda and relieved Dr. Timpany of his field work. The Preston Institute was started in Hanumakonda in 1919 by Rutherford in memory of his first wife Mrs. Rutherford. Later on it was transferred to Jangaon.

In 1922 the Station Missionaries were the Timpanys. The Home Mission Society organized the Church in the field and supported their pastor also. Many caste people freely invited the Christian preachers to their homes. The Mulsim parda women admitted the Christian nurses into their houses to treat them. The manleys came to Hanumakonda to attend the medical work. The Penners continued their gospel work. There were five organized churches with 786 Christians. The construction of the Church at Hanumakonda was continued.

One hundred and Seventy – Nine converts were baptized in Warangal during 1926. The station School was continued in spite of the budget cut. The Missionaries shot many cruel beasts of the forests which hunted the villages. Mrs. Manley and Miss Gulban started child welfare centers in three villages. The Hanumakonda field association was organized in 1928. It began to manage field affairs and paid the salaries of the workers from the local income.

Rev. C. Rutherford was in charge of the field work in 1931. Miss. H.L. Stoudenmire took care of the women's and theological education were needed. So schools of different kinds were established in the fields. To meet the needs of health and hygiene, dispensaries, health centers, hospitals and nurse's training schools were provided in the fields. Economic development

and unemployment problem demanded industrial schools and settlements and increasing of the village schools. In this way the evolution of the fields took many turnings. In course of time the small beginnings of the Mission in one or two stations expanded into 28 Mission fields. Each Mission field with expanded into 28 Mission fields. Each Mission field with a Mission Station situated in the crucial place has worked on mostly for the full scope of its expansion. In this chapter an attempt has been made to trace the history of the main Mission fields with special reference to their beginning and the services rendered by the leading Missionaries in spreading the religion and starting educational and medical institutions.

NELLORE – 1840

Nellore Mission Station was founded on February 26, 1840 by Rev. Samuel S. Day, the first Baptist Missionary. Since it was the first station the geographical extent was unbounded. It was then called the 'Lone Star'. Day started the Gospel work from Nellore staying in a rented house. In 1841 an eight acre land was purchased from the Government near the Grand Trunk Road and a Mission House and Chapel were built in the site. A girl's school was also started there by Mrs. Day. It was the first girl's school in the Mission. After a year and seven months the first convert Venkappa was baptized by Day.

The Nellore field comprised the then Nellore Taluk North of river Penna, all of the Taluks South and a portion of Guduru and Rapur taluks. The town of Nellore, 107 miles North of Madras, is the headquarters of Nellore District. The area of Nellore was about 800 square miles. Nellore Church was organized on October 12, 1844. Rev. Van Hussen and his wife who arrived in Nellore on March 21, 1840, worked as Assistant Missionaries to Day. After a period the Hussens went on furlough in October 1845 due to ill-health. The Days also left for America in December, 1845 due to ill-health, leaving the station to the incharge of Eurasian Preachers in 1846.

JEWETT

Rev. Day singly returned to Nellore along with Lyaan Jewett and his wife on February 16, 1849. The under cultivation. The children in the

schools worked to have their clothes and rise the grain in the fields for their food. These schools also received no financial support from the Mission. The government recognized the boarding school in consideration of the wonderful service of the Staits. 78 pupils were in the school. It was admitted to grant – in – aid by the government. The Staits retired in May, 1932.

Five Christian native men and three Christian native women and one non-Christian men worked in three primary schools with 74 boys and 34 girls during 1935. There was also one grammar school with 18 boys and 4 girls in the Udayagiri field. Rev. J.F. Burditt was the first missionary who started the Udayagiri field with grant missionary zeal and the Staits were the longstanding Missionaries who brought the development of the field to a climax. Mrs. and Dr. M. Grant Stait was awarded Kaiser – I – Hind Gold Medal for two times.

KURNOOL – 1875

Kurnool is situated on the banks of river Tungabhadra about 160 miles west of Ongole. Clough and D.H. Drake visited Kurnool in 1875 and baptized 26 converts on December 1, 1875. Thus the Kurnool field came into existence. Drake began the evangelistic work in August, 1876 and baptized twenty – two converts. A church was organized in Kurnool on December 23, 1877. Another church was also organized in Atmakur on the following Suncay. Guravaiah was appointed as the pastor of Atmakur Church. Drake went on furlough in 1879.

Rev. F.E. Morgan and his wife worked in the Kurnool field from 1879 to 1885. Morgan constructed the Mission House in 1882 with the grant of Rs. 5,000/- received from the Mission. Forty – Seven converts were baptized during 1882. Rev. E.E Sillima Succeeded the Morgans in 1885 and left the field in 1888 due to ill-health. G.N. Thomssen worked in the field from 1892 to 1895. Dr. Rogers Memorial Gospel Hall was erected in 1892 to 1895. Dr. Rogers Memorial Gospel Hall was erected in 1893. W.A. Stanton and his wife took charge of the Kurnool field in January, 1895. The Stantons worked in the field up to 1932 with some interruptions due to the furloughs and transfers. The Kurnool field was divided into Kurnool and Nandyal division was handed over to Dr. Stenger evangelistic and educational work. Medical work was taken care of by J.C. Camran, M.D., and Nurse Training School, by Miss Sadie Robbins. Rev. Rutherford took over the charge of Hanumakonda field in addition to the work of Jangnon in 1932. One Hindered Thirty Two converts were baptized in the Hanumakonda field. Two chapel school houses one at Doshnpet and the other at Paidapalli centers were dedicated. This was the second Mission Station of the A.B.T.M. in the Telangana.

The Missionaries in their attempts to uplift the socio-economic condition of the depressed classes, educated the people and provided them with job after completion of their education. They extended their help through institutions and through relief measures

THE ROLE OF DALIT LEADERSHIP AND SOCIAL AWAKENING MOVEMENTS IN HYDERABAD STATE: A STUDY

Dr. P. Krishna

Introduction

The roots of Dalit movement in the present day Telangana lied in Hyderabad during the early decades of twentieth century. Hyderabad State witnessed a radicalized autonomous and urban based Dalit movement. It was during this period, 1906-46, that Dalit leaders rebelled against the servile status within a feudalized agrarian economy; their segregation and lack of access to social and civic amenities by caste-Hindus and caste ideology that conferred an inhuman status to the Dalits (Omvedt, Gail 1995:43-52). The Dalit leadership expressed the new-found solidarity among the lower communities and their determination to struggle to escape the hereditary fixation of occupation and appropriate the emerging form of newer power structures (Omvedt, Gail: *ibid*).

The Dalit movement ideologically fought for structural changes in the society. It also sought to organize the Dalit masses for

achieving socio-economic and political equality. In view of growing democratization, their increasing importance and their involvement with various political circles, Dalits were naturally inclined to build up organizational strength for achieving political power for their progress. As a result they established their own organizations to put forth their political demands. Thus, the Dalit liberation movement in Hyderabad established several organizations through which they organized Dalits to strike squarely at the decaying practice of untouchability (Patankar, Bharat & Gail Omvedt 1979: 409-24).

Moreover, the colonial rule witnessed the emergence of a new force in the Nizam's dominion. The increasing evidence of the growing consciousness of the outcaste groups, culminated into proliferation of organizations throughout the region. Soon after the Madras government accepted appeals of Dalits to be called with their regional name prefixing Adi,

i.e., Adi-Andhra, Adi-Dravida, etc., the Manya Sangam, established in 1911 by Bhagya Reddy Varma was renamed Adi-Hindu Social Set-vice League in 1922.

One of the significant developments of the period in the Nizam's dominion that was to reproduce crucial repercussions during the post-colonial phase was the divide between the Malas the Madigas. The inability of leaders to overcome their prejudices, lack of a comprehensive policy to cement the widening gulf between the two communities hampered the development of the Dalit moment (Chinna Rao, Yagati, 2003: 23-24). This paper focuses mainly on the leadership of Bhagyareddy verma, Arige Ramaswamy and B.S. Venkatrao

Bhagyareddy Verma

Bhagya Reddy Varma (1888-1939) laid the foundation of the Dalit movement in the region. He was actively associated with the caste-Hindu organizations especially the *Brahma Samaj*, which were to have a decisive impact on his own ideology and agenda of action. Yet his organizations maintained an autonomous outcaste identity in juxtaposing to the caste- Hindu organizations that were keen to incorporate outcastes within their fold of influence. He worked against many evil things by organising people under organisations and conferences. Some of them are listed below:

Jagan Mitra Mandali. In fact, The Dalit movement in Hyderabad dates back to 1906, when Madari Bhagya founded an organization called the *Jagan Mitra Mandali* which involved Madigas and Malas, and started telling stories by 'Hari Katha' (popular folklore). In 1910, he started to educate Dalit children from his own expense. In a short span of time he was able to run 25 centres with 2000 students. He arranged regular *Harikatha Kalakshepams* during or at the end of which Bhagya Varma spoke eloquently, telling the Dalits that they were the real and original inhabitants of the country and that the others have migrated from central Asia for their livelihood and that the main cause of their backwardness was their ignorance and illiteracy.

Buddha Movement (1912): Jagan Mitra Mandali members gave due recognition to Buddha's movement against the Vedic dharma,

the Varna system, and offering animals to appease deities, and preached vegetarianism. BuddhaJayanti was celebrated every year on Vaisakhi poonima day. Later, Bhagya Varma formed Manya Sangham to eradicate social evils.

Panchayat court system: In 1919 a meeting held with *Jangamulu, Dasulu, Mulnavasi*, for the **Adi Hindu** beneficial program. The purpose of this event is to resolve the internal issues in Dalit community; he insisted the panchayat court system to be rebuilt.

Adi Hindu Hand skills exhibition: In 1925 Adi Hindu Hand skills exhibition was held to showcase the dalits skills to the world. Bhagya Reddy also campaigned on many social issues like Child Marriage, Black Magic, Women Education, Alcohol prohibition etc. His work was spread to neighbouring states Karnataka, Tamil Nadu, Maharashtra and Andhra, from their as well people joined voices and followed the revolution.

Adi-Hindu Social Service League: Soon after the Madras government accepted appeals of Dalits to be called with their regional name prefixing Adi, i.e., **Adi-Andhra, Adi-Dravida**, etc., the Manya Sangam, established in 1911 by Bhagya Reddy Varma which was renamed as **Adi-Hindu Social Service League** in 1922.

In 1931, on the eve of the Second Round Table conference, a special political session of the (Ninth) *All-India Adi-Hindu Conference* was held at Lucknow. Bhagya Reddy Varma presided over this conference in which representatives from all-over India participated. The most significant resolution of the conference was recognition of Dr B R Ambedkar as the sole and true representative to speak on behalf of 9 crore of Adi-Hindus (Untouchables) in India, a resolution which was passed unanimously (Bharat Patankar and Gail Omvedt, pp. 409-424).

Devadasi Movement. Reddy had launched a movement against *devadasi pratha*, forcing the Nizam to declare it a crime. Moreover, During the Telangana Movement in 2017, the students of Telangana region renamed the G. M. C. Balayogi Athletic Stadium at Gachibowli as Bhagya Reddy Varma Stadium.

Arigay Ramaswamy (1885-1973)

Arigay Ramaswamy (1885-1973) is also one of the most influential leaders and social activists who stood at the centre of Dalit activities in Hyderabad State and Andhra regions. He formed and advocated the rights of Untouchables under many different banners. Some of them are as follows:

Suneetha Bala Samajam: Arigay Ramaswamy founded Suneetha Bala Samajam, and carried on his activities in Kummonaguda, a locality in Secunderabad, where he lived. He exhorted his brothers to abandon liquor and eradicate the Jogini system and preached against animal sacrifice and child marriage. Though Ramaswamy had faith in Achal Siddanth and Brahma Samaj, he firmly believed that Dalits were separate from Hindus.

Arundhatiya Association: Recognising the backwardness of the Madiga, he formed the Arundhatiya Association for their welfare. It seems to be that there were conflicts between Arigeramaswamy and his contemporary leaders. For instance, Ramaswamy married a Madiga boy with a Mala girl, which was opposed by the community members.

Adi-Hindu Jatiyonnati Sabha in 1922: He formed an Adi-Hindu Jatiyonnati Sabha in 1922, with Konda Venkataswamy as president and J. Papayya and Arigay Ramaswamy as vice-presidents and J. Papayya as its secretary. Bhagya Memorial Girls High School at Esamia Bazar, Koti, Hyderabad, and Telangana, which he started in 1913, is still functioning.

B.S. Venkatrao

The year 1922 saw the emergence of another great Dalit leader, B. S. Venkat Rao in Telangana Dalit history. In this year B. S. Venkat Rao with the co-operation of Madari Govindarajulu and Madari Venkataswamy started an organisation under the name. **The Adi-Dravida Sangam** in Bangaru Basti, Gasmandy.

The Adi-Dravida Sangam. This organisation was an imitation of the Adi-Dravida Sangam of Madras Presidency. Its main objective was the removal of Devadasi system which was rampant in Bangaru Basti"

Adi-Hindu Mahasabha: In 1927 B. S. Venkat Rao formed the Adi-Hindu Mahasabha along with C. S. Ethirajan, K. Ramaswamy, Arigay Ramaswamy and others, and tried to bring a new awakening among Dalit masses.

Adi-Hindu Library: Adi Hindu Library was established by Venkatrao and he also extended financial help for the opening of a Library and Reading Room which was called "Adi-Hindu Library." Worker of the community regularly met at the library to discuss their difficulties confronting them P. R. Venkataswamy. 1955. p. 49.

In 1936, B. S. Venkat Rao led the delegation to the *Maharashtra Asprishya Youth's Conference* at Pune. This conference was presided over by N. Shivaraj and addressed by Dr. Ambedkar (Ibid: 51). Influenced by the speeches of Maharashtra Dalit leaders, they organized the youth league of Ambedkarites with Venkata Rao as president and Venkataswamy as secretary. Its aims were to organize the youth to support Ambedkar in leading the untouchables out of the Hindu fold, to enlighten the people of the troubles of Hinduism and to organize a dynamic campaign of social economic disabilities and deprivations (Ibid., Pp. 80-101).

Conclusion

The role of Dalit leadership is inevitable. In fact, 1920s and 30s witnessed factional struggles among the Dalits. By the later part of 1930s, Hyderabad Dalit politics was marked by competitive struggles. Divisions in the movement, the founding of rival Adi-Hindu organizations and rival reform caste-panchayats produced occasional physical confrontations and fights between factions during 1930s. B. S. Venkatarao had difference with Arigay Ramaswamy and later with Subbaiah. Bhagya Reddy Varma was condemned by rival organizations for being partial to the cause of Malas and creating fissiparous tendencies within the movement. The Arundatiya Mathunga Sabha and the Arundatiya Mahasabha became the organizations of the Madigas who put forth their demands independently of the other communities.

KAKATIYA FORTS IN UNITED KARIMNAGAR DISTRICT – ANALYSIS

Kundur Sudhakar

The rule of the Kakatiyas inaugurated a new era in the history of Andhradesa. They ruled the regions inhabited by the Telugu people from about A.D.1000 to 1157 as feudatories of Western Chalukyas and from A.D. 1158 to 1323 as independent rulers. As independent rulers, they succeeded in their endeavour to unify the Telugu country extending from Bastar (Chhattisgarh) in the north to Kanchipuram in the south and from Bidar in the west to the Bay of Bengal in the east. The Kakatiya rulers not only tried to bring all the Telugu regions under one umbrella but also to strengthen the feeling of oneness among the people by glorifying their cultural heritage. The Kakatiya kingdom was regarded as one of the most powerful kingdoms of medieval India owing to its powerful military establishment. The rulers, following the tradition, gave much importance to the construction of impregnable forts in the strategic points and fully equipped them with armaments, soldiers, cavalry, elephants, food stock and medicines including the very rare things and were kept under the

able supervision of *dandanayakas*. Especially, their construction technology attracted the attention of the art critics and engineers of modern times.

Among all the forts of this period, the one that was built in the capital city was considered as the core of the defence mechanism. In the early years of their rule, Anmakonda served as their capital. Garuda Beta, or Beta I was the earliest member who settled in Anumakonda. In the ninth century epigraphical records, we can see its name mentioned as Armakonda and gradually it took the form of 'Anmakonda'¹. This ancient town since the Rashtrakuta times, besides being a Jaina centre, continued to be the capital of the Kakatiyas till Rudra became independent. The remains of an old fort, the temples in the fort complex such as Siddhesvara temple, Padmakshi temple, the Thousand Pillared temple, Prasanna Kesava temple, the Betesvara and Proleswara shrines etc. can be seen even today. After becoming an independent ruler, Rudradeva felt it necessary to carve out a more formidable fort to meet the

needs of his capital. Thus came into existence the wonderful fort of Orugallu, the details of which can be discussed in the succeeding pages.

The Kakatiyas, in course of time occupied some other forts which were built by the previous rulers who ruled Andhradesa before 11th century A.D. and carved out some others aided by the natural formation and availability of the material. Thus the entire territory inhabited by the Telugu people right from Bastar in the north to Kanchipuram in the south and from Bidar in the west to the Bay of Bengal in the east came into the hands of the Kakatiyas. The territory around each fort was kept under the supervision of a *Mandalesvara* or *Senapati*, who was regarded as the ruler in charge of the territory around the fort, but subordinate to Mahamandalesvara (the King). Each and every Mandalesvara vied with others in developing the region under his jurisdiction socially, economically and culturally. As a result of it, the fort city became a centre of multifaceted glory. Thus the study of forts with their categorisation and significance in the political, socio-economic and cultural milieu becomes an interesting study. The present study is an attempt to focus on this aspect with the help of all the available historical sources.

Veligandula Fort

Veligandula (now known as Elgandul) in Karimnagar district lying on the Kamareddy road, about 10 kms to the west of Karimnagar town ((Bahudhanyapura and later from the days of the Kakatiyas, it came to be called as Veligandula. The first available record at this place is dated S'1124 (A.D.1202)² belongs to Chaunda Peggada of Malyala family, who was a subordinate of Kakatiya Ganapatideva. Throughout the rule of the Kakatiyas, it played a key role in protecting the kingdom from the aggressions of the Seunas of Devagiri. After the rule of the Kakatiyas and the Musunuri nayakas, the fort went into the hands of the Padmanayakas. Kandana was the governor of Velugandula fort during the Padmanayaka rule.

After the Bahmanis, Elgandula came under Quli QutubulMulk, the founder of the Qutubshahi dynasty. During the rule of Ibrahim Qutubshah (A.D. 1550-1580), the governor of Elgandul fort was Jagadeva Rao. He revolted

against the qutubshahis, but was defeated and driven away. The rebel leader fled to Vijayanagar and later to Berar. With the misunderstanding that Ramaraya gave shelter to Jagadeva Rao united all the Bahmani kingdoms which led to the battle of Rakasi-Tangadi. When the Mughal emperor Aurangzeb conquered the fort of Golconda in A.D., 1687, Elgandula also went into the hands of the Mughals.

When the Asaf Jahis came to power in A.D. 1724, Elgandula came under their control. Amin Khan became the first governor of this fort. The successive governors of this fort were: Muqarrab Khan, Fakir Munwar Khan, Ibrahim Khan Dhonsa, Ehtesham Jung and Bahadur Khan. During the rule of Mir Mahaboob Ali Khan, the Nizam VI, the political headquarters was shifted from Elgandul to Karimnagar in A.D. 1905³.

Thus the fort of Elgandul played an important role in the political and military history of the Telugu country from the Kakatiya period to the Asafjahi period. The Brindavan tank in the eastern side of the fort gate, the temples of Nilakanthesvara and Narasimha, lying on the fort, and mosque built in the later period, attract the attention of the tourists.

Ramagiri Fort

The Ramagiri fort, which is 65 kilometres north-east of modern Karimnagar, is an impregnable hill-fort built in stone with several bastions containing a very vast area of several square kilometres on the hill. It played an important role from the early times to the period of Asafshahis. The fort is identified as surrounded by many Satavahana sites, which reveals the fact that Ramagiri might have been a stronghold of defence for the Satavahana rulers. Some historians believe that the mud fortification was built by the Satavahana rulers. After them many dynasties ruled this region and many extensions were added to the vast area of the fort⁴. Gundaraja of Manthani and Edaraja of Ramagundam, the feudatories of the Chalukyas of Kalyani, were defeated by Kakatiya Prola II, who captured the fort of Ramagiri along with its out-posts i.e., Manthani and Ramagundam. It was an important stronghold of the Kakatiyas till their sudden fall in A.D. 1323. It was under the control of Samanta Bhoja, the Kakatiya

feudatory of Sabbi Sayira mandalam, who successfully occupied Kamchi for Ganapatideva. According to the literary sources, Prataparudra was first taken to Ramagiri fort as the captive of Ulugh Khan, but the idea of imprisoning in the Ramagiri fort was withdrawn by the Prince of Delhi with the fear that local uprisings would take place in favour of Prataparudra.

After the Kakatiyas, Musunuri Kapaya Nayaka, who liberated the Telangana region from the Delhi Sultans, strengthened the fort of Ramagiri along with its out-posts. During the rule of Anavota Nayaka, the Padmanayaka ruler appointed Muppa Bhupala as the governor of Ramagiri fort. The Bahmani Sultan Ahmad Shah occupied this fort in A.D. 1433. Sultan Quli Qutbshah occupied it defeating the Berari forces. An inscription datable to A.D. 1556 belonging to the period of qutbshahis reveals that a Nayaka namely Tumminayaka built the entrance gate of the fort (perhaps renovated), the expenses of which were imposed on the local people⁵. In 1656, Abdullah Qutbshah, being defeated by the Mughal forces, gave his daughter in marriage to Muhammad, son of Aurangzeb along with Ramagiri fort as marriage dowry and thus the fort went into the hands of the Mughals.

Still we can see the ruined walls, bastions, temples, mosques, tombs, wells and gardens on the hill. The local people identify the buildings on the hill as Prataparudruni Kota, *Asvasala*, *Gajasala*, *Bhojanasala*, *Cerasala*, royal court, secret passages, narrow paths, guns, canons, canon-balls, etc. The relics of various structures such as *Citrakota*, *Tratikota*, *Nimmakota* and wells such as *Topubavi*, *Nallakayya-bavi*, *Pasarubavi*, *Haribavi*, *Acchammabavi*, *Ammagaribavi* and *Saptadwaras* (seven gateways) are spread over in the hill

Thus the fort of Ramagiri played a strategic role in the history of medieval Deccan and it was developed and expanded by different rulers both Hindu and Muslim, giving space to different architectural structures. This vast hill-fort complex, if made accessible to the visitors, will become a great tourist destination.

Pratapagiri Fort

It is situated at about 120 kms north-east of Karimnagar and very near to Veligandula

and Manthani or Mantrakuta. An undated Telugu inscription, which records the construction of the fort by one Muccha Nayaka, and refers to the titles such as *Cholarajya Sthapanacarya*, *Pandya-manu-vibhala*, *Dayagaja Kesari*, *Ari-Raya-gaja-kesari* and *Teluguraya*⁶. While the last two titles were usually borne by the Kakatiya rulers, the others indicate the southern expeditions and achievements of Prataparudra II. The fort was named after him as it was built on his advice and direction and the care taken by him in its construction. Hence on the basis of the information given in the inscription, it can be assumed that it was built by Muccha Nayaka on the instructions of Prataparudra after his southern expeditions in A.D. 1318. It is a hill fort built in stone. As it is located in a thick forest, it can be treated as a *Vanadurga*, and also can be identified as *Vana-giri-durga*, a *giridurga* located in a thick forest. As it was a strategic fort, the Bahmani Sultans, the Padmanayaka rulers and the qutbshahis might have made use of it as a defensive fort.

Mulangur Fort

Mulangur fort, situated to the south-east of Karimnagar at a distance of about 30 kilometres. It is another formidable fort built during the reign of Prataparudra II. It was constructed by Oragiri Moggaraju, the Mandalika of the place and the subordinate of Prataparudra. It is constructed on a granite hill and the inscription found available on a boulder informs us that the fort had two gateways. It can be grasped that it was an outpost lying on the way to Orugallu fort from Veligandula fort. The relics of this fort such as walls, gates, bastions, sculptural panels, etc. can be found on the hill even today.

Jagityala Fort

Jagityala, situated to the north of Elgandula at a distance of 50 kms. Polasa lying in the vicinity of Jagityala, had a glorious past dating back to 11th and 12th centuries A.D. when it was the capital of the Polavasa chiefs, who ruled contemporaneous with the early Kakatiyas of Anumakonda.

The Polavasa chiefs ruled over this region with their capital at Polasa as evidenced by the pillar inscription dated A.D. 1108 lying in the courtyard of the Paulastyesvara temple of

Polasa. After Medaraja I, his son Jaggadeva (A.D.1110-1116) became the ruler. He was a valiant soldier and was victorious in 21 battles. It may be presumed that the same Jaggadeva might have founded this village in the neighbourhood of his capital Polasa to commemorate one of his victories after his name as Jaggadevala (*ala* means a colony or habitation of the Brahmins) which had gradually turned into Jagadala, Jagatyala and eventually as Jagityala⁷.

Later, the Kakatiyas might have developed it as a fort town, but those structures were destroyed during the Bahmani attacks. Jagadala Mummadi ruled it for sometime as the governor of the Kakatiyas. The Pakala Lake was constructed by him. Now we can see a strong fort built during the Asafjahi period. The Kakatiyas identified the perennial water resource and selected the site for the construction of this fort. As the fort is built with a very big tank of Kandlapalli village, the water

in the deep moat never gets dried up even during the summer season. Perhaps, this is the only fort seen in the Deccan with a moat always containing water in it.

Nagunuru Fort

Situated at about 8 kms to the north of Karimnagar town, Nagunuru was a prominent centre of political and religious activities for about four centuries under the Chalukyas of Vemulavada. Western Chalukyas of Kalyani and the Kakatiyas of Warangal. In the inscriptions, the village is mentioned as Nagunuru. In the village can be seen the remnants of a mud fort around it and the traces of which can be noticed even today. All the splendour and glory of the village have vanished and today, we can see only the Kakatiyan temples, which were once attached to the fort and which are very important for their architectural and sculptural wealth. These temples belong to 12th and 13th centuries A.D., exhibiting the sculptural beauty of the Kakatiya artists.

PHILANTHROPIC DONATIONS TO TEMPLES AND OTHERS UNDER QUTB SHAHI RULE – BRIEF STUDY

Mangth Maloth

Qutub Shahi of Golconda kingdom ruled all Andhra desa for nearly 170 years well knit administrative system by maintaining harmony and equality. They united all Telugu speaking people into an umbrella from A.d 1518 to 1687. The dictionary meaning of the word 'harmony' is peace and friendship'. The harmony is otherwise known as (synonym) toleration.

Regarding the toleration, it is recognition of right of others in religious matters, or liberty to uphold one's religious beliefs and forms of worship without any interference. In its widest sense it means much more than this and amounts to even-handed treatment in all

respects, covering not only religious freedom and liberty of conscience but also recognition of right of enjoining privileges of all kinds without regard to religious differences and without making invidious discrimination between the rulers and the ruled or between one class and another. It will be a negation of toleration if a person is granted freedom of thought and worship but is not admitted to those privileges to which his fellow-beings are, or rather if he is subjected to such gross inequalities as have often been experienced by the people of the countries under foreign domination. It was toleration in the widest and not limited sense that the Muslim rulers of India granted to their

subjects of all classes and creeds. They enjoyed not only liberty of thought and freedom of worship, but also admitted them to all powers and privileges, which they themselves enjoyed. They behaved as Indian national kings, completely identified themselves with the interests of their subjects and worked for their social, cultural and economic development. Under them, the Hindus enjoyed equal status with the sons of the ruling race and occupied the highest offices in the State next only to that of the king.

The Golconda kingdom under Qutb Shahi rule in Deccan was also similar to above-mentioned statement. They always worked for the welfare of the Hindus; they protected their lives and properties. The Hindus enjoyed equal status, rights and liberty as that of their Muslim brethren under the Qutb Shahi rule.

Hindu Charities

The religious institutions of the period were also great social welfare and charitable organization. Many a time, they also acted as agents for executing the charities of the rich and pious members of the society. Charity, which is of a comprehensive nature, was expressed in different ways depending upon the capacity and the convenience of the donors. The usual form of charity was to give villages, lands, grains, money and other items of property for maintaining religious and educational institutions and for providing shelter, food and water to the needy persons free of cost.

Thus, the religious institutions provided an outlet to the charitable urge of people and enabled them to extend their charity to the needy members of the society.

One of the important charities conducted through the Hindu temples, irrespective of their religious affiliations, is to provide food and shelter to the needy. This service was conducted through the establishment of feeding shelters known variously as *Satramu*, *Bhoga Satramu*, *Anna – Satramu*, *Ambali – Satramu*, *Ramanujakutam*, etc. The feeding – houses, where free lodging and boarding facilities were provided to the general travelers and pilgrims, though specifically endowed by donors, were attached to the temple and managed by them.

Most of the temple feeding houses were normally, meant to serve the pilgrims and the general travelers irrespective of caste and creed. These feeding choultries were maintained by the temple usually with the proceeds of the villages, lands, taxes, etc. granted, by the pious donors, as permanent endowments, especially for that purpose. These feeding houses, though attached to the temples and were under the general supervision of the temple authorities, had their own organization consisting of the functionaries like managers, men for supplying various items, cooks, etc. The Qutb Shahi government also granted lands to run the trustees in the kingdom. We have an example of an inscription dated A.D. 1530 at Kondapally of Bezwada Taluq, Krishna District, by Qutb-ul-Mulk deals with the grant of 26 places of land (*Stalamulu*) each to Kavuru and Kidrabad to maintain the trust house of a temple (not known)¹.

The Qutb Shahis and their chiefs also granted aghararas to the Brahmins. One Lal Khan presented Uppunutula village as an agharara to three Brahmins for the religious merits of Mohammed Quli². Mir Mohammed Sayeed, the Mirjumla of Golconda granted Madhurapura in the Krishna district as an agharara to a Brahmin for having performed the *Sarvato mukha Yagna* at the instances of Mangalagiri Pantulu³. Sultan Abdullah granted a plot of land as *inam* to one Appa konda, belonging to a village situated in the subha of Hyderabad⁴.

Besides, there are also cases of Muslims granting villages for the up keep of chowtries, digging wells and constructing sluices for the benefit of the people and bestowing other kinds of charities for the merit of themselves and their king. It is understood that from above instances, after consolidating their power, the Qutb Shahi's did not hesitate to patronize the religious and charitable institutions of their subjects for placating their good will. Hence according to A.M.Siddiqui, "Abul Hasan's name is sung in ballads on ceremonial occasions and to solemnize wedding rites in Muslim homes and is revered as a *Rishi* in Hindu homes"⁵.

The temple got patronage from the benevolent Qutb Shahi rulers as they consolidated their rule; they found it expedient

to adopt a policy of toleration, and even of encouragement to Hinduism and the Hindu subjects. No doubt, we notice the cases of destruction of temples and construction of mosques in their places but they were few and on the other hand, there are several cases of kings and their subordinates donating liberally for temples.

Kollampudi village inscription of Narsaraopet Taluq, Guntur District by Kollampudi Singaraju deals with the construction of Nilakanthesvara temple for merit for his parents in A.D.1565⁶. Another Eepu village inscription of Vinukonda Taluq, Prakasham District mentions that one Chennappa, donated Kesaripalakuchela land to meet the expenditure of Alladanatha temple's *Dasami* festival for every year. This inscription dated A.D.1574⁷.

Besides an inscription from Jagarlamudi village, Tenali Taluq, Guntur District of the period of Mohammed Quli registers donation of the land for the maintenance of Sri Sangamesvara temple⁸. And another inscription found at the temple in Simhachalam village, Visakhapatnam Mandal records the grant by Sarvappa Asvarayudu, who donated Narava village lands for the maintenance of Simhadri Narasimha Swamy temple, in A.D.1604⁹.

An inscription found at Macherla village, Guntur Madal registers the grant of a land by Ramadaka Rama Chandrudu, for the maintenance of Chennakesava Swami temple, in A.D.1619¹⁰. Another inscription of Kuvvam village, Chengalpattu District (T.N) deals with the donation of banana tope of Lepakshi village, Hindupur Taluq Ananthapur District¹¹ to Tervikkolesvara Swamy temple for its maintenance, in A.D.1670. An inscription registers the grant of land by the local Reddies and Karunams for the maintenance of Santa Nandesvara Swami temple of the same village¹².

A *farman* (18th February 1684) of Abul Hasan Tanashah, confirms the award of *jagir* assignment to Bhadrachalam temple and Bramaramba Mallesvara Swamy temple situated on the banks of Godavari and Krishna rivers respectively resounds the magnanimity of his heart. Bhadrachalam temple owes its origin to Gopanna (Ramadasu) whose famous story

reveals the construction of the temple, his imprisonment in Golconda and his release. Tanashah had endowed three villages, Bhadrachalam, Palvancha and Sankaragiri Patti for the maintenance of the temple. It was founded in March 1652. Abul Hasan Tanashah on the occasion of *Sri Rama Navami* started the practice of sending *Mutyalatalambralu* every year. The three villages, Bhogavaram, Cherukuru and Veerannapatnam were endowed to Bramaramba Mallesvara Swamy Temple of Srisailam for its maintenance, which is situated on the bank of Krishana¹³. Some Muslim officials were appointed as custodians for the supervision of the temple administration. This system was continued upto Nizam government¹⁴.

Some of the temples were repaired and some Hindus got donations from the Qutb Shahi government. It is confirmed by an inscription found at Jugutti village, Tanuku Taluq, East Godavari District by the order of Mohammed Quli Qutb Shah, that one Somesvarudu and his aunty Laccamma arranged to renovate the temple and consecrated *Arcaka* idol of Lord Vasuki Ravi Somalingam in A.D.1583¹⁵. Another example is that Abdullah Qutb Shah granted a field as *Amaram* in the village of Cundi, situated in Kandukuri Sima, to a Hindu person belonging to the Valmiki caste in order that "he may keep in good repair the temples in our Sima"¹⁶.

Asvarao, a general of Mohammed Quli, donated Srikurmam to the temple of Kurmanatha under the orders of the king¹⁷. Hasan Beg, the son of the Sultan, ordered the construction of a sluice and stone steps to the tank attached to the temple at Palivela, East Godavari District, besides planting a palmyra grove¹⁸.

We have an interesting example of stipend in cash by the Qutb Shahi government to temples in the State. *Tareeq-e-zafra* refers to Rs. 64,925 was allocated for the temples in the State as stipend for the year A.D.1685-1686¹⁹ and it might have been continued for the year of A.D.1686-1687 also.

Not only temples, but also *Agraharas* were granted to Brahmins by the rulers and their subordinates. As mentioned earlier, one Lal Khan presented Uppunutula village as an

Agrahara to three Brahmins for the religious merit of Mohammed Quli *Padsayaningar*²⁰. Mir Jumla Amir Mohammed Sayyed Nawab granted Madhurapura in the Krishna District as an *Agrahara* to a Brahmin for having performed the *Sarvatomukha Yajna* at the instance of Mangalagiri Pantulu²¹. Sultan Abdullah granted a plot of land as *Inam* to Appakonda, belonging to a village situated in the Subah of Hyderabad²².

There are also cases of Muslims granting villages for the upkeep of choultries, digging wells and constructing sluices for the benefit of the people and bestowing other kinds of charities for the merit of themselves and their king. The maintenance of water sheds, where drinking water was provided free of cost to the thirsty people, through the agency of the Hindu temple, was an absolute necessity during the period is evident by a number of references in the contemporary inscriptions. To perpetuate this charity, the donors entrusted their management to the temples by making a permanent land or monetary endowment for the purpose.

Some of the donors who instituted watershed service through the temple also made provision for the planting and raising of trees (like *haritaharam* programme at presently), probably, intended to give shade to the people who came for water. In addition to this, Qutb Shahis and their subordinates arranged to dig wells to cater to the needs of drinking water in the kingdom to get merits and sacred benefits. We have some inscription examples that Eepuru Village inscription of Tenali Taluq, Guntur District deals with the well for drinking water to said village people, which dug out by Mokhasai Agashiram Saheb in A.D. 1668²³. Another inscription of Ghanpur village of Vanaparathi Taluq, Mahabubnagar District says one Malik, son of Yar Ali dug out a well for drinking water to the village people in A.D. 1528 during the period of Qutb-ul-Mulk²⁴.

Besides, a member of the royal family, ordered the construction of a sluice and stone steps to the tank attached to the temple at Palivelpula, East Godavari District besides planting a palmyra grove²⁵. Another inscription of Sanigaram village of Husnabad Taluq, Karimnagar District by Syed Muzaffar, a local

chief by the order of Abdullah Qutb Shah had constructed a dam on Peddacheruvu in A.D. 1664 and 540 *Hons* were spent for this construction²⁶.

The above inscriptions and farmans inform us of Qutb Shah's secular attitude towards charities of both Muslims and Hindus in their kingdom in 16th and 17th centuries. The above inscriptions and *farmans* prove that the Qutb Shahis encouraged the temple constructions and their maintenance by donating land grants and etc.

In the words of A.M. Siddiqui "All the Qutb Shahi kings were tolerant, humane and just, their guiding principle was benevolence. They treated their Hindu subjects as liberally as they did the Muslim community. They even went to the extent of declaring Tuesday as a week holiday and assigned *Jagir* and large tracts of arable lands for the upkeep of Hindu temples and for the performance of religious ceremonies thereof". Further, he also describes, "Abul Hasan's name is sung in ballads on ceremonial occasions and to solemnize wedding rites in Muslim homes and is revered as a *Rishi* in Hindu homes"²⁷.

According to Methwold, who was a contemporary English official of the East India Company, religion is here (Golconda kingdom) free and no man's conscience oppressed with ceremony or observance²⁸. Hence, it can be understood that one can (irrespective of caste and creed) go anywhere in the kingdom without fear and obstacles.

Nelaturi Venkataramanaiah puts regarding Sultan Quli "the policy which he adopted in his relations with his Hindu subjects was based on two fundamental principles namely, tolerance in religious matters and lack of discrimination in the exercise of political rights... (the Qutb Shahi Sultans) believed that it was expedient to allow a large measure of freedom to the Hindus who formed the bulk of the people, subject to their rule, so that they might establish their power on firm and lasting foundations. This fact perhaps explains why they condemned the acts of intolerance perpetrated occasionally by some of their over-zealous subordinates"²⁹.

The same author writes elsewhere "of all the Muslim dynasties that ruled India, the Qutb

Shahis of Golconda were the most enlightened. True, they plundered and destroyed Hindu temples in the enemy's territory during the course of invasions, but within their own dominions, the Hindus enjoyed a measure of religious freedom, not known in other Muslim kingdoms. Nor did the Qutb Shahs show discrimination in appointments to public service on grounds of religion. The Hindus and Mohammedans were equally eligible to all posts including the highest under the government. They never regarded themselves as alien conquerors; superior to the people over whom they held sway. They were of course, Muslims but, like their subjects, they were Andhras³⁰. From the above statements, we can conclude

that the kings of Golconda never forced their Hindu subjects into Islam. In addition, some of the Hindus appear to have taken to conversion into Islam by their own choice.

During the rule of the Qutb Shahis, there was a close interaction between the Hindu and Muslim people. The Muslim government of the Qutb Shahis liberally promoted the various aspects of culture like education, literature, music, dance, art and architecture. The Qutb Shahi rulers and their subordinate nobles liberally encouraged not only the Muslim but also the Hindu scholars and artists. Because of that, there was a synthesis of both Islamic and Hindu cultures.

ECONOMIC CONDITIONS OF MUSLIMS IN TELANGANA

Dr. Md. Sharif

INTRODUCTION

In Telangana economy, Muslim community occupied a prominent place. They engaged both in the agriculture and industrial sector in the State. They contributed for the development of the nation as well as the State. Muslims actively participated in the industrial sector when compared with the agriculture.

Most of the Muslims were settled in different parts of the State particularly in towns. Most of the people migrated from villages to towns for the employment and education of their children. However, in Telangana, agriculture is one of the best sectors for all the sections.

MUSLIMS IN THE AGRICULTURAL SECTOR

Contrary to the popular belief reinforced by uninformed journalists, Muslims-even in Hindustan and the Deccan regions- live, by and large in rural areas of the country. It is only comparatively that they are more urban than the Hindus. As a rural community, the Muslim peasantry is the largest segment in the Muslim community in the country. Not all Muslims living in the rural areas are agriculturalists. A large number are artisans and menial who do participate in agricultural activities during the busy portion of agriculture season and occasionally they own land which they cultivate but their main occupation is non-agricultural. Like other segments of Muslim society, the Muslim peasantry also falls into different categories according to the size of land holding, the area of habitation, and the general characteristics of the agricultural growth of those areas since independence. So far as one can generalize about a group so vast and dispersed, it does not seem that the economic conditions of the Muslim peasantry has improved greatly during the last four decades or so over and above the general improvement that may have accrued to the group as a result of the general rise in the prices of agricultural commodities and the price of land.¹

The Muslim peasantry, which is concentrated, by and large, in the rice-growing areas² where traditional agriculture still dominates did not, thus have the situational advantage that has brought economic prosperity to the areas located in the green revolution zones, and its economic condition has, therefore, remained largely unaffected. Moreover, the Muslim peasantry in the States of Andhra Pradesh (include Telangana), Maharashtra and Karnataka inhabits semi-arid districts in the region of Telangana and the Rayalaseema, Marathwada and the Hyderabad Karnataka of the erstwhile Nizams Dominion that are historically subject to famine conditions. Unless a radical advance is made in tank irrigation system on a breakthrough materializes in the rice cultivation, no improvement can be expected in the lot of the peasantry in rice cultivation areas -Muslim or otherwise.³ The details of the distribution of

persons by occupation in rural India is as follows

DISTRIBUTION OF WORKERS BY INDUSTRY GROUPS

It is felt that narrating the meaning of Labour, Employment and Wages is relevant to understand the contents contained in this chapter. Labour includes both physical and mental work undertaken for some monetary reward. In this way, workers working in factories, services of doctors, advocates, ministers, officers, teachers etc., are all included in labour. According to S.E. Thomas, "Labour connotes all human efforts of body or mind which are undertaken in the expectation of reward." Any physical or mental work which is not undertaken for getting income, but simply to attain pleasure or happiness, is not labour. Employment can be expressed in number of people working or in total working hours. A mixed measure is the number of hours divided by standard working hours to give a full-time equivalence to jobs. Wages are defined to include all remuneration in monetary terms and also payable more or less regularly in each pay period to workers as compensation for work done during the accounting year. The skilled and un-skilled labour participates in primary sector in rural Telangana.⁴ Particularly the agriculture sector dominates in the rural areas. Even today nearly 85 percent of the labour in rural area directly and indirectly participates in agriculture sector.

In the case of rural male workers, the share of agriculture is 66 percent. This percentage is highest among Hindus at 67 percent and lowest among Muslims at 47percent. The percentage share of workers depend on agriculture percent in the case of other Minorities. Thus, for rural male workers belong to all Muslims, both agriculture and non-agriculture are the principal sources of income while for all Hindus; agriculture is the primary source of income.⁵ In the case of rural female, the share of workers depend on agriculture is higher than that of male across all religions especially other Minorities and all Hindus. The details of the male work participation rate in Telangana State during 2011-12 details as follows

Table : Male work participation rates in Telangana **2011-12**

District	Hindus			Muslims			All		
	Total	Rural	Urban	Total	Rural	Urban	Total	Rural	Urban
Adilabad	55.3	56.7	51.0	50.3	52.3	48.8	54.7	56.3	50.4
Nizamabad	55.6	55.9	53.8	50.7	53.7	48.1	54.7	55.7	51.6
Karimnagar	56.2	57.0	53.3	51.3	54.9	49.3	55.8	56.9	52.6
Medak	55.7	55.8	55.1	50.6	52.5	48.0	55.0	55.8	53.4
Hyderabad	56.5	--	56.5	46.5	--	46.5	51.8	--	51.8
Ranga Reddy	55.9	55.6	56.1	50.8	53.3	50.1	51.1	55.3	55.0
Mahaboobnagar	56.0	56.6	51.6	52.4	55.1	49.1	55.6	56.4	50.9

Warangal	54.9	56.0	51.7	51.5	55.0	49.6	54.6	55.9	51.3
Khammam	57.9	58.9	54.3	55.4	58.2	52.8	57.7	58.9	54.0
Telangana	55.9	56.6	54.6	49.6	54.4	48.0	55.0	56.4	52.8

Source: Census of India, 2011. Andhra Pradesh, Part XII-B, Directorate of Census Operations, Andhra Pradesh.

The above table reveals that the male work participation rate both the Hindu and Muslim in different areas of Telangana in 2011-12. In rural area both the Hindu and Muslim work rate is almost all same i.e. the 50 percent above. But in case of the urban area the Muslim work rate is less than 50 percent except Ranga Reddy, Nalgonda and Khammam. The overall work rate is more in rural than the urban area in

Telangana. The total male work rate is 55 percent in TelanganaP The female also engaged in rural and urban works. In total population of the Telangana half of the female force were actively participated both the agricultural and non-agricultural sector both in the rural and urban areas. The details of the female work force participation in Telangana in 2011-12 is as follows.

Table : Female work participation rate in Telangana **2011-12**

District	Hindus			Muslims			All		
	Total	Rural	Urban	Total	Rural	Urban	Total	Rural	Urban
Adilabad	44.2	51.6	20.0	22.7	36.3	14.2	41.9	50.6	18.8
Nizamabad	48.2	52.1	29.5	23.4	34.8	13.3	44.3	50.4	23.7
Karimnagar	45.1	50.7	25.3	24.2	37.0	16.7	43.6	50.2	23.9

Source: Census of India 2011. Andhra Pradesh, Part XII-B, Directorate of Census Operations, Andhra Pradesh.

The above table reveals the households migration from Telangana villages and towns, Andhra Pradesh villages and towns. Muslims from villages of Telangana 38.7 percent migrated to other places whereas from towns 33.5 percent migrated. From Andhra Pradesh the Muslim migrants percentage from villages is 17.2 whereas from city is 10.6 percent. Most of the people migrated from villages to town for better employment and education opportunities etc. The Scheduled Caste, Scheduled Tribes and Backward classes especially from Telangana Villages migrated to town and their percentages are 72.0, 93J and 65.8 respectively.⁶

In Telangana districts, like Karimnagar, Warangal, Nizamabad, Nalgonda and Hyderabad migrants are more than other districts. From these district Muslims migrated to Gulf countries. Particularly Karimnagar district Muslims migrated from their native place to Iran, Iraq, Kuwait, Dubai, Saudi Arabia, Riyadh, Sharja, Oman and Mascot etc. The Gulf countries provided employment opportunity to this community. The Indian migrants engaged in different sector like hotel, petrol pumps, vegetable markets, meat shops and industries.⁷

Seeking employment is the major cause for the Muslim to migrate. Around 86.2 percent of the migrated Muslim household did so to get employment. 5.8 percent of the migration happened because of protection system. Only 5.4 percent migration happens because of better

education facility to their children in comparison to 11.3 percent of migration in case of Hindu community for the same purpose. Only 2.5 percent of the migration happens due to business, family problems, tenant problems etc. The survey also found that 3.3 percent of the Households with members working in the Gulf Countries among Muslims in the State. The Scheduled Castes 87.5, Scheduled Tribes 94.1, Other Backward Class 84.7, Hindus 84.4 and other 92.5 were migrated for employment purpose. Overall, 2.4 percent of the households in Telangana have at least one members working in Gulf Countries.

In June 2014, an estimated 700 people from Telangana were stranded in Iraq, which was witnessing a war for control of the nation. Most of them were from Karimnagar, Nizamabad and Adilabad districts. The situation revealed irregularities in migration, as out of the 700, around 694 were illegal emigrants with Emigration Clearance as they crossed over to Iraq after travelling to Kuwait on work permit. More than 1,000 youth and middle-aged men left for Gulf countries from Indalwai, once infested with Maoists due to large scale unemployment. Most of them had migrated to Kuwait in search of jobs, while others have also left for Sharjah, Oman, Qatar, Bahrain and Yemen. Apparently, they were lured by some "agents" from Mumbai who promised them nice jobs with fat salaries⁸

TRADITION AND MODERNITY IN THE *MUTHUVAN* LIFE-WORLD: AGRICULTURE, FOOD HABITS AND MEDICINE

Muhsina Noohu

INTRODUCTION

The mainstay of the Muthuvan economy in Idukki, before the time of extension of the control of the outside world over it was primitive subsistence agriculture of the 'slash and burn' type. This slash and burn method continued for a

long time among the *Muthuvans*, though the duration of the fallow period got progressively reduced, even after the juxtaposing of the settled agriculture of the low-land people in the high ranges. Traditionally, land in the wider sense of the term formed the pivot of the *Muthuvan*

economy in general. However the question of who owned the lands did not arise among the *Muthuvans* so long as the land was commonly owned. After they reached the stage of 'slash-and-burn' agriculture, each family within a tribe used to be allocated an area by the headman according to its needs and ability to cultivate.¹ That plot was cultivated for the subsistence of the family.

Due to the penetration of various forces of modernity and the pressure of market forces, the traditional monoculture of *Muthuvans* which consisted of cultivation of coarse cereals such as ragi, cholam, etc., were subsisted by diversified agriculture with commercial crops resulting in crop-mix in *Muthuvan* cultivation. Ragi, the staple crop of cultivation of *Muthuvans* as mention by Edger Thurston, still continues to occupy the major share of the crop acreage at many settlements.² At the same time, other food crops like rice and tapioca which were not used by them in the past are now cultivated at an increased rate. This reflects a sign of change in the traditional food habits of the *Muthuvans* which regard to food grains.³

They cultivate orange, mango, and lemon in some areas. Guava is a common fruit found in almost all the *kudi*. Along with agriculture *Muthuvans* collect the wild tubers and honey from the forest. They also collect *rudraksha* and *kunthirikkam* which is also known as *thelli* in *Muthuvan* language from the forest and sell it through the Girijan society. *Muthuvans* rear goats and chicken. But, they use neither the milk nor the egg; they believe goat milk is for goat kids and keep the eggs for breeding. *Muthuvans* eat the meat of goat and chicken. Very rarely, do they use milk and that too is used for children. However, in Marayoor area those who have cattle, use its milk. There is a *kudi* in *Edamlakudi* named *Kavakkattukudi*, where they rear cows but never use its milk. They believe goat milk is for goat kids and keep the eggs for breeding. *Muthuvans* eat the meat of goat and chicken.⁴ Very rarely, do they use milk and that too is used for children.

They use the cow dung as manure and for flooring. Their food timing vary depending on their work. They usually go to work by early morning and are in the field up to evening. *Muthuvans* often drink black tea without sugar.

They eat twice a day that is around 8 am in the morning and 7 pm in the evening and drink black tea several times a day. Traditionally, the staple food of the *Muthuvans* was finger millet. Their daily menu includes rice and finger millet. The place of their *Katli* or *koranggatti*, a gruel prepared from finger millet has now been taken over by rice meals. Government of Kerala provides 22 kg of rice in a month for per kg. This has brought drastic changes in their food habit. They prepare either *sambar* or *adaka*, a curry prepared out of a green vegetable and mainly use pulses like yellow gram and red gram. *Muthuvans* rarely use vegetables and mainly use pulses like yellow gram and red gram. Most of the households do not keep sugar, though some of the households keep Jaggery.

Chinnar Wild life Sanctuary is the home of approximately 758 *Muthuvans* who live within the 90 sq.kms area of the Sanctuary. They have been living in the region for centuries, practicing shifting agriculture, hunting wild life and gathering variety of products from the wild habitats. Since the declaration of the area as Sanctuary in 1984 these tribes have been asked to cultivate crops only in the area allotted to them resulting in the enforced change from the 'slash and burn' to the short rotation shifting cultivation in the area allotted to them.⁵

The mixed crop cultivation in *Muthuvan* settlement is an enforced sedentary form of cultivation with a short period. Finger millet (Eleusine Coran Cana), Maize (Zea Mays), pigeon pea (Cajanus Cajan) and chilli are common in almost all plots while lady's finger, sweet potato (Ipomoea Batatas) are also seen in many plots.

Recently, many families in Chinnar-Marayoor region started cultivation of lemon grass (Cymbopogon flexuosus Wats) for commercial purposes. The lemongrass cultivation in Chinnar region shows that this new crop allowed the *Muthuvan* farmers to become more productive and economically efficient using lands with infertile soil not suitable for mixed food crop cultivation. Therefore, the lemongrass cultivation may be considered as a sub-system adapted to micro-environmental variation and economically efficient one. It may be also be pointed out here that among different sub-system, of the land use system of the Chinnar region nowadays more emphasis is

placed on lemongrass cultivation. Because of this, it appears that there is less interest among farmers on other subsystems such as hunting and gathering. It is also seen that the *Muthuvans* have now turned their attention to cultivation of high value crops such as cardamom, are canut, pepper, lemongrass, etc., with a considerable degree of inter-regional variations. For example, the settlements of Edamalakudy cultivate cardamom as their main source of income, while the *Muthuvans* of Adimali cultivate pepper in large quantity.⁶ These changes in the agriculture products, crop-diversification, modes of production, etc., have taken place in imitation of the cropping pattern of the market-conscious immigrant non-tribal farmers and planters, who introduced in their newly acquired lands of high ranges, crop-diversification appropriate to the market demand and the agro-climatic conditions.

Another plausible reason is the economic compulsions arising out of the new situation in the '*Muthuvan* region' having close proximity with the 'non-tribal sector' and the former has no existence independent of the latter, one such economic compulsion was the prevalence of the debt credit nexus forcing the *Muthuvans* farmer to cultivate the kind of crops preferable to the non-tribal creditor. Thus the imitative tendency and economic compulsion played their part in the adoption of new cropping pattern, production of high value crops, which are the indicators of modernity in the sphere of economy and land relations.

The introduction of modern medicine has multiple impacts on the *Muthuvan* community in general and the ethno medical system in particular. The allopathic medicinal aid and medicinal practices came to the doorsteps of the *Muthuvans* during the plantation period itself. The allopathic medicine is a new system of medicine and all its methods and concepts of etiology were alien to the *Muthuvans*. At the initial stages of its introduction, the *Muthuvans* never bothered to avail its facilities. They thought that modern medicine was not ideal for their culture and it could not able to treat their illness.⁷ At the early stages of the introduction of modern medicine it was a period of non-contact between the community and modern medicine. Some of them even feared to approach the modern medicinal practitioners. During this time they continued the use of ethno medicine for the

illness afflicting them. Because of the withdrawal of the *Muthuvans*, modern medicine could not do anything worthwhile for the health care of the *Muthuvans* in its initial period of introduction in the *Muthuvans* areas.

However, with the passage of time the *Muthuvans* started availing the facilities of modern medicine. The efforts of the medical personnel, the awareness programmes, education of the youths, increased mobility, close association and contact with non-tribal immigrants etc., influenced the way of thinking of the *Muthuvans* and persuaded them to experience modern medicine. Initially, the use of modern medicine by a small percentage of the people especially the younger generation, who were mainly working as wage labourers in the plantations, evoked a rebellious attitude among the rest of the community.⁸ Often the elders and traditional medicine men (Vathy) ridiculed the people who used modern medicine, which in their opinion would bring the wrath of Gods and ancestral spirits. Modern medicine was thus judged as anti-cultural and useless.

In the area of general health, it is observed that there is a growing pattern of treatment-seeking behaviour from the part of *Muthuvans* especially among the men going for wage labour outside. If they suffer fever or chest pain, they will treat themselves with their traditional medicine. If they are sick for many days, they cannot go for work and it affects their financial status and enjoyment of other activities like celebration of festivals they resort to allopathic medicines for a fast cure.⁹ The men consume foreign liquor, which is a new element that has entered into their life from outside. They believe alcohol has some medical potency to cure diseases. *Muthuvans* prefer injections rather than tablets for fever and other diseases. They believe that the injection works faster than tablets.

Nowadays one of the important external agencies that had influenced the health system and culture of *Muthuvans* is the Department of Health, which through their interventions promoted by government initiatives and projects, viz., medical camps, vaccination programmes, distribution of medicines and injections, etc. has impacted tribal culture and their curative care process. Most of the *Muthuvan* settlements are in the remote and in accessible places. Health

Department provides sufficient funds to the District Hospital and Community Health Centres for providing free treatment including medicines and laboratory tests to all tribal patients. Health camps have been the major health intervention introduced in to *Muthuvans* life. In the medical camps the doctors give medicines and vaccinations to children and pregnant women. Now the impression of *Muthuvans* on vaccination is that, 'This medicine will protect our children from all the illness'. The health department allows *Anganwadi* workers to keep some medicines for common ailments like fever, cough, diarrhoea, and also for body pain. They supply it to the needy. All these initiatives had resulted in the increase of dependence on modern medicine among *Muthuvans*. Now, the number of *Muthuvans* taking medical treatment has increased whereas earlier there were no cases of hospital admission.

In the case of illness, *Muthuvans* first think of local healers who are available in the *kudi* or nearby *kudi*. To treat any disease they first apply their knowledge of ethno medicines and in addition to this, they take allopathic medicines available in the *kudi*. If they are not cured, then they decide to go to the hospital. Some individuals in the *Muthuvan kudi* are experts in treating jaundice, skin diseases and problems related to eyes. They do not reveal those medicines to the fellow *Muthuvans*. They believe by sharing the contents of medicine to others it may lose its effectiveness.¹⁰ Their ancestors who passed the knowledge to them strictly warned them not to tell anyone. But restricting the knowledge to a limited number of people will slowly erase that wisdom from the *kudi* and may be after one or two generations such valuable treasures of knowledge may disappear totally. *Muthuvan* people of Adimali region now started keeping allopathic medicines within their houses and use them during emergencies.

Modern medicine brought in many changes in sexual and reproductive health practices of the *Muthuvan*. One of the points of this paper is how 'modernity' and modern medicine affect sexual and reproductive health practices of *Muthuvan* women and how do they interpret the role of contemporary practices in their life along with the struggle for preserving their traditional medicine. Reproductive and sexual health practices are the areas where the

push and pull of modernity are observed. *Muthuvan* women do not know their exact delivery date since they never note down their last menstrual date so the accurate calculation is not possible regarding the date of delivery. It is observed that in the *kudis* after the expected time as per their calculation pregnant women could wait till the pain actually starts. Special care for pregnant women, like intake of iron tablets, is unheard of in their traditional life.¹¹ Hospital deliveries are a recent occurrence in the *Kudi* and even now the hospital deliveries are very few. Most of women who go from the *kudi* to the outside hospital for delivery had Caesarean session. In all cases, the reason was no sign of delivery after the due date. The due date is decided by the doctor through a scanning process in the third trimester. It may be in some cases a few days or a few weeks later. In cases which reach the hospital, the doctor decides the due date and if delivery does not occur even after one or two days, they take the baby out surgically.

Mala-D is subjected to diversification in term of its original purpose and practical use and is popular among ordinary *Muthuvan* women. Their typical mode of usage of Mala-D is always in tune with cultural convenience. The Health Department introduced Mala-D among *Muthuvans* in the mid 1990's as a birth control measure.¹² When the women started using it for menstrual control both men and older women vehemently opposed this trend, but gradually they do support the use of Mala-D in private spaces. The *Muthuvan* women are hardworking and have a major role in the household and agricultural works. If they go to stay in *Valaymapura* during their menstrual dates, it became difficult for men and older women to handle the household and agricultural works. Therefore husbands silently support the use of Mala-D for preventing menstruation. The introduction of modern medicine and usage of these contraceptives pills are new threats to the *Muthuvan* community itself.¹³ The excessive use of these contraceptive causes increased rate of infertility and ovarian cancer among the *Muthuvan* women. The excessive use of contraceptives and the decrease in the birth rate in *Muthuvan* settlements are indicators of the negative effect of modern medicine.¹⁴ They re-conceptualised and reconfigured the world in which they live, in terms of reproductive and

sexual health practices without upsetting their traditional cultural domains regarding pregnancy and child birth. However, to a certain extent the interventions of modernity disturbed the tribal scenario.

CONCLUSION

Even though modern medicine has gradually come to stay among the tribes and it is now accepted along with ethno-medicine, the latter is still strong in the *Muthuvan* world of illness and cure. In the present age of modernity the common man may be tempted to presume that modern medicine has taken over ethno-medicine and is the sole agent of health care of *Muthuvan* world too. But such an assumption would be far from reality. The acceptance of modern medicine does not mean that *Muthuvans* have lost all their faith in their own ethno medicinal system. The *Muthuvans* are not ready to give up their beliefs and practices regarding the causes and cure of diseases in its pure form. However the activities of the government and private agencies have changes in the modes of

treatment in the *Muthuvan* world of rigid customs and tradition.

Like most other tribal groups, the activities of *Muthuvans* remained restricted to their isolated geographical and physical space for a long period of time. Prior to the arrival of the European planters and settlers from the low land, in the Western Ghats region, the *Muthuvan* work-force was dependent on agriculture as self-cultivators. The subsequent displacement of the *Muthuvans* from their lands, resulted in a high proportion of them being reduced to the status of agricultural laborers. The migration which started gradually among the *Muthuvans* is characterised by 'pull' factors. Outmigration promised high income and an attraction of modern ways of life. It is evident that the migration of small and marginal farmers helped them to supplement the meagre agricultural income from their land. The *Muthuvans* wish to hang on to their tribal base and migrate repeatedly and varying duration, either to the same urban areas or plantations or to different ones. It can be termed as circulatory migration.

KALAI GNAR M. KARUNANIDHI — A CHAMPION OF SOCIAL JUSTICE WITH SPECIAL REFERENCE TO RESERVATION POLICY

Dr. H. Munavarjan & K. Sabapathy

Introduction

The entire country has accepted that the concept of Social Justice originated from Tamil Nadu. "Social Justice" is an elixir propounded by the Dravidian Movement for the advancement of the downtrodden and oppressed population of Tamil Nadu belonging to Backward Classes, Most Backward Classes,

Scheduled Castes and Scheduled Tribes. Eminent leaders like Pitty Theagarayar, Dr.T.M. Nair, Dr.C. Natesanar, Thiru S. Muthiah Mudaliar, Thanthai Periyar and Perarignar Anna had to wage a relentless war to achieve the objectives of Social Justice and finally during the era of Kalaignar M. Karunanidhi won the battle.

Kalaignar M. Karunanidhi (03.06.1924 – 07.08.2018)

The life history of Muthuvel Karunanidhi is also a history of Tamil Nadu politics. A five-time Chief Minister, and the longest serving legislator, winning 13 terms in the Assembly and not losing even once, Karunanidhi was the engineer of many of the progressive measures adopted by the State since Independence. As the leader of the Dravida Munnetra Kazhagam, an offshoot of the rationalist social reform movement, the Dravidar Kazhagam, he was an influential figure at both State and national levels, whether in or out of power. He excelled as both administrator and organiser, adopting different styles, but always displaying a clinical efficiency while interacting with bureaucrats and party workers.

He was born on 3 June 1924 into a poor family from an extremely marginalized backward caste; He was a key participant in events that radically shaped the nature of politics in Tamil Nadu. In an interview on 16 February 1965, a correspondent of *Pravda*, the official organ of the Communist Party of the Soviet Union, asked Karunanidhi about the goals of the Dravida Munnetra Kazhagam (DMK). Karunanidhi responded that the goals were social justice in society, rationalism in culture, socialism in economy, and democracy in politics.¹ the route to achieve these goals, he said, was via the parliament.

M.S.S. Pandian writes that the politics of the DMK was built around two major ideological planks. The first was caste-based social justice; the second, Tamil identity. The politics of social justice took the form of a critique of caste hierarchy and Brahminism coupled with continuous improvisations in the reservation of government jobs and seats in educational institutions for the lower castes.

Social Justice through Reservation

Karunanidhi appointed a Backward Classes Commission under the Chairmanship of A.N. Sattanathan with the retired district judges Chinnappan and Jamal Hussain as members to give recommendations to improve the welfare of the backward class people.² The commission submitted its report in 1970 and pointed out the following facts:

1. Some forward castes as "small minor groups" were similar that of backward classes in all respects and that they should be included in the list of 'backward classes' to get the benefit given to the under-privileged. And most of the caste representatives urged before the Commission for inclusion of their castes in the scheduled castes list as their lot in every respect were as bad as that of any Scheduled Caste.
2. The Commission has taken the term 'caste' as the unit to identify the backward classes because the M.L.As, M.Ps. Chairmen of Municipalities and Presents of Panchayats are all identified only by their castes.
3. The Commission asked that the Government's policy on reservation to backward classes should be at least 25 per cent in educational institutions.
4. The most important recommendation of the Commission was that "Most Backward Classes" as a group should be taken into consideration for separate reservation because they have no or a little progress in education and particularly in the field of Engineering and Medical education. The Commission collected the statistical data of the 'Most Backward Classes' and aptly pinned its recommendation.³

Karunanidhi government have examined the recommendations of the Backward Classes Commission and the high level committee very carefully and have decided to increase the existing reservation for Backward Classes from 25 per cent to 31 per cent and for Scheduled Castes and tribes from 16 per cent to 18 per cent where reservation is provided by the state Government for the above classes.⁴

All India Anna D.M.K. succeeded the D.M.K. Government and it included many more communities in the list of backward classes. The Central Government passed an order that those who were getting an annual income of Rs.9,000 and below and belong to one of the backward communities are alone eligible to get the benefits meant for Backward Classes.

The Chief Minister Marudur Gopalan Ramachandran introduced the economic criterion in making reservations for the

Backward Classes. By an order⁵ of his government fixed Rs. 9,000/- as annual income limit for the socially and educationally Backward Classes to get the advantage of reservation. The people rejected the party, AIADMK in the 1980 Lok Sabha elections. Immediately MGR convened an All Party Leaders' meeting on 21st January 1980.⁶ Major participants representing various political parties expressed their views against the action of the government.

M.G. Ramachandran came forward to restore justice to the 'socially and educationally' backward sections of the society. His government issued G.O.⁷ to abolishing the notorious Rs. 9000 order based on economic criterion. M.G. Ramachandran government passed another order.⁸ It raised the reservation quota of the Backward Classes from 31 to 50 per cent. The total reservation reached during his period is: 50 + 18 = 68 per cent.

When Karunanidhi became Chief Minister for the third time in 1989, he passed a G.O.⁹ considering the reasonable nature of the demand. It declared that from out of 50 per cent reservation available for Backward Classes, 20 per cent should be reserved for the Most Backward Classes and denotified communities. Later his government allotted one per cent reservation separately to the Scheduled Tribes. So now the reservation scheme in Tamil Nadu is 69 per cent.

He welcomed the implementation of the Madal Commission at a time when the north saw huge protests against the same. By passing a unanimous resolution in the assembly in support of V.P. Singh, he made the Mandal commission implementation a moment of

jubilation in the state. Likewise, in 2007, the DMK also provided 3.5% quota each for Muslims and Christians within the BC share of 30%. Christians found this compartment restrictive for students and job aspirants, as they stood to gain more if there was no Christian quota. This quota was withdrawn, but the BC-Muslim category of reservation is being successfully implemented in Tamil Nadu.¹⁰

In 2009, Karunanidhi introduced the Tamil Nadu Arunthathiyars (Special Reservation of seats in Educational Institutions including Private Educational Institutions and of appointments or posts in the Services under the State within the Reservation for the Scheduled Castes) Act to ensure representation for the most marginalized among the Scheduled Castes, providing them a sub-quota of 3% within the SC quota. When taunted by the AIADMK for being a "minority government" during the 2006-2011 tenure, Karunanidhi responded that, his government for the minorities.

Conclusion:

An ardent and foremost follower of Periyar and Perarignar, Kalaigarnar M. Karunanidhi's selfless and tireless service and dauntless struggles for social justice for the people of Tamil Nadu in particular and to the Indian nation in general for a long incredible period of 80 years. There is no other leader in recent history who stands in comparison to Kalaigarnar be it for political acumen, principle, ready wit, dauntless courage, determination, quick perception, preparedness, struggle, creativity, sympathy, eloquence and the like. For championing the cause of social justice he is called the Champion of Social Justice.

SOCIAL CONCERN OF DANCERS IN MYSORE STATE DURING COLONIAL REGIME

Nagaraja Kadlbalu

Introduction

Since ancient time, though there was a strong relationship between dance and temple, social reformers of 19th century declared that dancers, losing their morality were responsible for not only societal degradation, but also dangerous for day to day life. Therefore, they requested the government to arrest them using the law of the land. As a result, ill practices (like prostitution) was abolished. (Here I am talking about lower caste dancers (Courtesans) not upper caste women). Did this abolition increase the state of morality? Was not it a great disturbance to art of dance? How this effected on Indian culture will be studied here.

How Courtesans become Devadasis

Getting the importance of dance, devadasi community developed in 8th or 9th century AD. These were specially sacrificed for god. Their main duty was to blow air to god and dance in the procession. They brought importance to temple activities with their romanticism and artistic character. The characteristic features of a dancer can be identified from the statue available in Mahenjadaro. Though the names of the Ganikeyas are found in 'Arthashastra' but the names of devadasis are not mentioned. As this tradition is seen in the kingdom of Ujjaini, the same can also be observed in Kalidsas' Meghaduta. It is mentioned even in the 'Bhavishya purana'. Kalhana has also spoken about the presence of this tradition in his work 'Rajatarhangini'. There were 500 dancers in Somanatha temple. Altekar has mentioned in his work 'Woman in Hindu Civilisation' that there were 500 servants in the temple of Tanjore. In Southern India devadasis were called 'Murali, Jogathi, Nayakini, Kalavanthi, Basavi, Devali Jogathi, Matangi and Sharani'. As music and dance were learnt by devadasis, the women of higher community did not practise them. Dance and other entertainments were conducted for British's. Sometimes the British's conducted their entertainment programmes. In the first half of 18th century the British's considered dance and smoking hukka were common.

"There were beautiful dancers in Tipoo Sultan's palace. Their eyes, legs, body and other parts of their bodies attracted the people. They were attractive in their thin waists. They were usually 16 and 17 years old. As soon as they got aged, they were sent back to their villages. They took refuge in temples. Their romanticism filled the treasury of the government and Brahman's. Dance programmes were usually conducted for the guests who came from either the British govt or the officers from any kingdom to honour them. In 1893 when Duke of Edinborouh and the prince Albert Edwards visited India, dance programmes were conducted, besides a dancer named Lakshmi was introduced to the king at Rayapura station in Madras. Nobody went against this act.

From this incident it is proved that dance was an integral part of life. There was no much opposition for it. In every temple there were devadasis meant for dance. These devadasis had sexual relationship with married men, these men did not consider it a mistake. The wives and children of these men had to put up with this relationship. This was not taken seriously. M. Chidanandamurthy opines that they were a part of the Rangabhoga (stage luxury). 'Dance and songs before the deities were considered stage luxuries. During 1800AD the devadasis who were patronised by the kings in Tanjore lost it and had to lead beggar's life. For example, Muddupalani in Andhrapradesh became poverty stricken due to lack of the king's patronage.

In 1892, House of Commons called a meeting and formed a committee to look into the practice of prostitution and its vastness and how far we were successful to stop the diseases caused due to this practice. To report this, a sub-committee was formed. As a result, it was reported that the spread of prostitution was due to British's encouragement and an appropriate support was coming from various other sources. In April 1892 The Indian social reformer reported "In larger cities like Madras I am afraid of the general opinion that a man is not worth

his opinion of what he does not attach himself to a dancing. In this report even the flower of Hindu Society and increasing array of distinguished graduates does not smell sweet in Madras." The Indian Social Reformer also supported this. A purifying unit in Lahore also helped this and others supported for this fight.

Speaking about the protest against the dance, 'Karnataka Prakashika' a daily newspaper argued that the movement which wanted to eradicate bad behaviour in people should be going slowly. This dance form should be continued until a new form of entertainment came into practice and this also gave some time to devadasis to become good people and came to the mainstream of life. Otherwise this brought in some bad effects by making the viceroy and the British officers attend this kind of dance programmes for entertainment. In 1893 social reformers along with Christian priests gave a requisition to Viceroy lord Lance down not to invite dancers to any social programmes, allow and encourage such activities. The Viceroy replied, "I witnessed these dance programmes two or three times, but I did not find any immoral thing in it. As they are leaving India they cannot answer."

'The Indian Social Reformer' a daily newspaper from Mumbai, answered that the dancers had not exhibited any sexually related things and it was not necessary for viceroys to attend such programmes as they were devadasis. In 1882 the protest against the dance was started in Madras. Social reformers promised that they would eradicate this profession.

This movement did not take much time to spread to Mysore. Many youngsters encouraged this movement. D.V. Gundappa who encouraged this tied a black colour thread to others as a sign of protest. (D.V. Gundappa, Jnyapaka Shale (Memorable Art School), part-1, page no.22-24). But, later he felt that the promise he had made was wrong and there was nothing wrong in witnessing such dance.

When asked K. Subbaraya who had recently joined civil service exam about the dance, he said that the protest was against the courtesans who were selling their body through music and dance.

Literary Association of Mysore and Bengaluru under the leadership of M. Venkatakrishnaiah called a meeting and discussed the problem created by the prostitutes. The members of the Literary Union requested people not to go to brothels. Under the presidency of H.J.Baba, govt. secretary, it was discussed whether brothels should be closed legally or to stop taking the public opinion. Inaugurating the meeting P.Singacharya cautioned that the number of dancers was decreasing according to the Mularai dept. B. Ramaswamy Iyar said that encouraging women education would be the solution for the problem, instead of using law. He also said that dance programmes should not be conducted in houses. Other members thought of alternative entertainment programmes in case it was stopped. Devadasis were meant for dance. They were respectable under the patronage of kings. They felt very bad about the sorry state of the dance. They also agreed that their moral life was degraded.

Having seen no professional security the dancers decided to have a unity among them forgetting their personal as well as professional differences. They decided to work for the art by collecting one fourth of their earning from everyone. After reaching a certain stage they wanted to spend their collected money on their children's education, music and painting. But, on the contrary, the girls from Ballari which belonged to Madras presidency then gave an application in black and white saying that they wanted to remain as courtesans. The application reads, "Our parents are dead. We want to continue our life as courtesans. We do not want to be in the cage of married life. Therefore, we are going according to our tradition."

Arkat Sreenivasaiah, the head of the Mularai headed the institution to work hard. In 1892 it was planned to stop such activities in the temples which belonged to mularai. Mysore government stopped taphe that was going to take place in Nandeeshwaraswami celebrations on Nandidurga. In 1899 it was stopped even in Sreekanteshwara temple in Nanjanagudu. But the government continued to give pension to devadasis. After their death it stopped appointing devadasis in their places.

'Gejjepuje', a traditional programme was usually conducted in temples belonged to Mularai dept. On that day an adult girl who went through this programme was handed over to her husband. Though gejjepuje was related to dance, Mysore government ordered to stop it cruelly thinking that they were courtesans. Nalvadi Krishnaraja wodeyar gave an order to stop conducting Gejjepuje in temples. Following Mysore, many other neighbouring states abolished devadasi system. In 1930 this system was abolished in Thiruvankur. Everybody admired this act. Praising the act of Mysore, 'Vruthanta Patrike' suggested to the government to look after the families of devadasis and provide employment opportunities to the children of those devadasis in place of their profession.

Contribution of Dancers

The novel 'Naster', written by Hassan Shah in 1790 is the available work that first created awareness about Taaphe. It means the pain we get after losing one's love. Khanam John is the heroine of this novel. She was meant for entertaining the British officers of East India Company. It is originally written in Parsi. It has been recently translated by a gnanapeeta awardee Kuratalam Hyder in the name 'Natchgirl'. This novel displays the attitude of the British officers, environment for dance and introduces their life. This novel which was written 200 hundred years ago tells us about life of the dancers in lucknow city. Now it is available.

Another novel 'Umarao Jhon Aad', which was published in 1899, tells us about Umarao Jhon Aad's life in lucknow. The novel 'Devadasi', written by K. Sreenivasan (Kasthuri) is related to South Madras. Though it shows a real life story of a devadasi named Meena, she married a common man and led a respectable life. The novel 'Gejjepuje', written by M.K. Indira is known to all.

According to Monier Williams, "Dasis drive a profitable trade under the sanction of religion and some courtesans have been known to amass enormous fortunes not do they think it in consistant with their method of making money to spend it in works of piety. Here and

there Indian bridges and other useful public works owe their existence to the liberality of this frail sisterhood."

The large tank at Channarapatna in Mysore district was built by two dancing girls. Gohar John was the daughter of Malik John of Kolkotha. She was a poetess and courtesans. She belonged to Armenian community, European father. She was a well performed Kathak dancer. She knew many languages. She participated in Indian National Congress. She used to sing Tagore's poems in her own style. The first recorded voice of H.M.V. Hindustani music is hers. Having visited Mysore many times she sang Kailasam's 'Namthipparalli' song in Urdu style.

Finally, those who know about Nagaratnamma may also know about her education, talent in music. She got constructed a tomb for Tyagaraja in Tiruvayur. Music lovers of this place even today never forget her wonderful service she rendered in music. This is a great pride for Mysore. She was very courageous. She tried her best to get published the book 'Radhika Sathpanam', by Andra poetess Muddupalani. We have to praise her valour she had shown when the British government banned Palani's book. This book was reprinted after India's independence.

Conclusion

Social reformers worked hard to bring in morality in the society. The question whether the prohibition of the dance could bring any reformation in upbringing morality in the society remained. The act of reformation regarding the dance even in the reformers never be the same in the long run. Those who learnt dance and music were not all devadasis. The government's attempt to stop the dance would not give expected results. This abolition of devadasis' dance by the government destroyed the very art of this dance as well as it could not bring any moral change in the society.

As a saying goes, '*argument leads to who is right, but discussion leads to what is right*', the reformers gave importance to argument rather than discussion. Therefore, the dance lost its stand in the society. We have taken a century to bring it back to its original place.

MANNATH PADMANABHEN : ACRITIQUE

Omali Aloysius

Introduction

Mannath padmanabhen pillai is hailed as one of the leading figure of Kerala renaissance. Born to a higher caste Nair woman- Though viewed as sudra by Namboothiri Brahmins- and Namboothiri Brahmin father as a result of inhuman concubinage system-Sambhandham- then practised by Nairs of Kerala-where the offspring of such Pratiloma union did not have the right to inherit property of his father- he fought against irrational and regressive customs practiced by the Nair community and sympathized with the movements of the lower castes in Kerala pertaining to some of the aspects of their social empowerment. But when we look at his attitude towards movements for political empowerment of lower castes and minorities I found it rather regressive and reactionary, especially Attitude of Nair service society towards Abstention movement and the role played by him during struggle for responsible government. My paper is an attempt to make a critical appraisal of progressive as well as reactionary strands in the life and thoughts of Mannam.

Mannath Padmanabhen as Reformer-An overview

Mannath padmanabhen was born on 2nd January 1878 in ordinary Nair family to Easwaran Namboothiri and Mannath veetil Parvathi Amma. In 1910 Mannam became the secretary of the Karayogam at Perunna. It was the beginning of his Public Life. He along with some other leading nairs took the initiative to form Nair Samudhaya Bhrithya Janasangham

on 31st October 1914 which later to become Nair service society. It became a tool in the hands of Mannath padmanabhen in his struggle to reform Nair community. He fought against the irrational customs and blind faiths prevalent among the nairs of the time. He wanted to abolish Marumakkathayam and Joint family systems, Raised voice against Namboothiri sambandhams, Talikettu kalyanam...etc, Objected the policy of Tiruvitamcore govt. of giving government jobs to Paradesi Brahmins excluding the native nairs, He was vocal against the provisions in the Travancore penal code which exempted Brahmins from Death punishments, told the nairs that they need to observe Pula only for 10 days as done by Brahmins... Mannam strived hard to break the barriers of caste prevalent among the various sub castes of Nairs and wanted to unite Nair community. He advised the nairs to relinquish caste name tags attached to them like Panikker, Pillai, Nair, Kuruppu etc...¹

His reformist Zeal was not confined to Nair community. He raised voice against the practice of Untouchability in Kerala. He supported the rights of the people of the lower castes to enter the public streets and Temples. He lead Legendary Savarna Jatha (March of the Higher castes) with 120 Upper caste Hindus starting from open ground closer to Vaikom boat jetty to Thiruvananthapuram expressing solidarity to the demands of Vaikom satyagrahis who were fighting for the right of the lower castes to enter public streets closer to Vaikom Temple². He was also actively involved

in the Guruvayoor Temple entry satyagraha as the member of the organizing committee and strived hard to win the support of the higher caste nair community members in favour of the entry of the lower castes into the Guruvayoor Temple. Nair service society in its constitution declares that it is aimed to work for the welfare and progress of the Nair community, without hurting the sentiments of other communities. This Provision shows the tolerant attitude of Mannath Padmanabhen and other leading Nair leaders towards other communities who were behind the creation of Nair service society. Under the initiative of Mannath Padmanabhan 'Harijanodharanam'(Empowerment of Harijans) also became an agenda of Nair service society. In a letter to Changanassery Parameswaran Pillai, Then President of Nss, He writes about his efforts to start a hostel for Nair students and a special school for pulaya children.³ Thus we have seen Mannath Padmanabhen was certainly a man ahead of his times, I did not want to repeat all the minute details of the activities of the Mannath Padmanabhen as a reformist leader because the objective of this paper is also to look at the other side of the spectrum.

Critique

Later decades of 19TH century witnessed resurgence of oppressed communities in the Land of Kerala. Rise of the lower castes especially those of the Ezhavas till then subjugated by the higher castes created irritants to conservative sections among the nairs. Sree Narayana Dharma Paripalana Yogam- For all practical purposes an Ezhava organization though in theory otherwise-was founded on 15th of 1903 by the followers of Sree Narayana Guru with his blessings. Expansion of the activities of Sndp and the awakening of the Ezhavas was responsible for a Nair response in the form of Nair service society and subsequent efforts at Nair empowerment, reform and revival. According to P.K.Parameswaran Nair neglect and contempt experienced from the Ezhava brethren who till then had shown respect and submission to the Nairs was one of the primary moving factors behind the formation of Changanacherry Taluk NSS Union.⁴ The formation of Nair Service society, inspite of liberal claims of its founders, sowed the seeds of caste antagonism in Kerala.

By the 1930's lower castes and minorities began to raise voice for political rights. Provisions of constitutional reforms announced by Travancore government in 1932 were far behind their expectations. It retained Property criteria at a higher level leading to wider gap between the number of higher and lower caste members in the proposed popular assembly. Share of the Religious minorities in the Assembly also fell below their proportion in the population of Travancore. To fight against this injustice Representatives of the Christian, Muslim and Ezhava communities assembled at L.M.S hall in Thiruvananthapuram on 17thDecember 1932 and formed All Travancore joint political congress. Representatives of the discontented communities again assembled at L.M.S hall on 5th of January 1933 and took historic decision to start abstention movement. They exhorted the members of the respective communities to abstain from the elections to the legislative assembly and council which will be held according the provisions of new reform law. Massive public meetings and demonstrations were organized to spread the message of abstention across the state. Abstention movement unleashed waves of communalism throughout the state of Travancore with higher caste Hindus on one side and lower caste Hindus and religious minorities on the other. In 9th of November 1933 joint political congress submitted a representation to the Dewan under the leadership of N.V.Joseph. Excerpts from the representation reveal how far abstentionists were motivated by a deep passion to bring an end to Nair hegemony in the state.⁵

"The gist of the contention of the 'abstentionists' was whether it was fair that forty lakhs of citizen's would secure only thirty seats while eight lakhs of citizens could get as many as twenty five seats in the legislature"⁶

In these circumstances Nairs were duty bound to protect their ageold privileged position in the Travancore.⁷ The Nair service society which had been the creation of Mannath Padmanabhen and nair radicals joined hands with the government to tarnish the abstention movement.⁸ Higher caste nairs tried to portray this movement as a Christian conspiracy against Hindus of Travancore. Hindu communal organization's like Hindu mission and Nair

dominated nationalist party tried its best to incite communal passions to weaken this movement. Ezhavas and nairs engaged in a series of tongue fight in this period. According to Christian leader K.T Thomas primary target of nairs was Christians. In the Nair conference held at Thiruvananthapuram they hailed Hindu raja of Travancore as the great king of nairs, they alleged Christians are foreigners and they should be expelled from this kingdom. Nairs who are the lords of the kingdom and who belong to the same community of the king should emulate the policy of Hitler towards Jews in Germany while dealing with Christians of Travancore.⁹ In the Nair conference held at konni, Malloor k.Govindapillai vehemently criticized Ezhavas alliance with Christians and Muslims; he said it was against the laws of nature.¹⁰ In these turbulent times Mannath Padmanabhen tried to bring in conciliation between Nairs and Ezhavas with the hope of drifting them away from the alliance with religious minorities. While attending the inaugural function of S.n.d.p shakha mandiram (branch office) in the same place great Nair leader Mannath padmanabhen made an emotional appeal to Nairs and Ezhavas to forget the past misdeeds and to strive for Nair-ezhava unity.¹¹

Finally Travancore government bow before the popular pressure exerted upon it by the abstentionists. By 1935 a public service commissioner was appointed to ensure proportional representation to various communities in Travancore. High court judge G.D Nox was appointed as first public service commissioner. In the same year Nair brigade was reconstituted with a historic decision to admit any eligible person in Travancore to its cadres irrespective of caste and creed.¹² Government passed an order on 16 august 1936 to extend the franchise for the assembly to everyone who paid one rupee or more as tax, based on the recommendations of eleven member franchise and delimitation committee headed by E.Subramania iyer. It decided to delimit the constituencies and appointed Nilakanta aiyer as special officer for preparing the voter's list. Lowering of property criteria for eligibility to vote from RS.5 to RS.1 increased percentage of eligible voters out of total population from 3% to 12%. Temple entry proclamation on 12th of November 1936 is

viewed as an indirect outcome of abstention movement. Higher caste Hindu dominated Travancore government was trying to break away Ezhavas and other Avarna Hindus from their alliance with non-Hindus. Nair communal organizations were thinking of launching a counter agitation to halt implementation of new administrative and constitutional reforms when they found that government is yielding to the pressure exerted by Ezhava, Christian and muslim communal groups. A deputation of Nair vigilance committee which included M.k Govinda Pillai, R.k Krishna Pillai, A.Thanu Pillai, A.S.Damodaran Asan, K.Kunjukrishna Pillai and Puthupally S.Krishnapillai submitted a memorial to the new Dewan Sir. C.P. Ramaswami aiyer on 7 November, 1936 outlining their opposition regarding the new reforms announced by the government. He advised the nairs not to abstain from elections directly or indirectly but give the reforms a fair trial because if the scheme were to be scrapped, a recrudescence of all that had happened would follow.¹³ Since C.P Ramaswami aiyer was considered as a well-wisher of Nair community by its members they lent ear to his advice and dropped their plans, if any, to sabotage new reforms by a Nair agitation.

Members of the joint political congress and a section of progressive higher caste nairs realized that indefinite communal rivalry for a handful of government offices or representation in the legislature would lead them nowhere and will only sustain the autocracy of the Dewan and ruling class, and they now decided to form a secular political organization to fight for the establishment of responsible government in Travancore based on universal adult suffrage. In February 1938. The joint political congress transformed itself into a new organization called The Travancore state congress with Pattom. A.Thanupillai as its first president. C.Kesavan, T.M Varghese and other prominent leaders of the joint political congress emerged as leaders of the state congress also.¹⁴ It now decided to launch direct action to achieve its declared goal of responsible government in Travancore. Travancore was now passing through one of the turbulent phase in its history. Threatened by the rising tide of popular anger, government withdrew the ban on the state congress and the youth league, also released all the leaders from prison. But the autocratic state administration

under sir C.P continued its repressive policy and devoted all the energies at its disposal to stifle the progress of popular movement. He insisted on the withdrawal of the memorial presented to the maharaja as a condition precedent to the conduct of any negotiations between the government and the state congress on the subject of constitutional reforms in Travancore.¹⁵ At this critical juncture Mahatma Gandhi interfered and advised Travancore state congress to withdraw the memorial as a conciliatory step. These proposals from Gandhiji lead to hot debate within rank and file of state congress. Finally state working committee of congress after lot of hesitation, decided to withdraw the memorial according to the wishes of Gandhiji. This controversial decision created a split in the state congress. Radical progressive elements left the organization and later on crystallized in the form of communist party. The struggle for responsible government temporarily came to a halt.

Hindu communalists and their organizations were trying to portray this agitation for responsible government as a Christian conspiracy to oust Hindu's from power. Travancore government under Dewan sir C.P Ramaswami aiyer tried his best to incite upper caste Hindu communal sentiments. He could convince a section of nairs that responsible government based on universal adult suffrage, if put in place, Christians will dominate the politics in the state in the place of nairs, since total population of Christians (1604475) is double that of Hindu upper caste nairs (868441). The resolution passed by national convention of Hindu mahasabha held at Nagpur in 1939 alleged that responsible government agitation in Travancore is an attempt by the Christians to establish their dominance in the state.¹⁶ Hindu Mahasabha leader V.D.Savarkar visited Travancore following the request by C.P and made speeches in various places of Travancore. Nair service society fell prey to the divisive tactics of the Diwan sir C.P.V.D Savarkar was invited to preside over the Hindu conference held at Changanachery on the occasion of Golden Jubilee of N.S.S and conference took the decision to form a federation of Hindu communal organizations in the state. A committee was formed for this purpose¹⁷.

Mannam, Thuppan Namboodirippad, P.C Adichan and Ramachandrabhas were its members. Mannathu padmanabhen thus became a tool in the hands of the Autocratic reactionary regime of Travancore under sir C.P. Nair service society interpreted responsible government "as rule by the Christians instead of the Hindu king".¹⁸ With the blessings of Dewan C.P Hindu communal organizations like Hindu raja bhakta sangham¹⁹ and Hindu royalist group were organized to counter struggle for responsible government. Rajyasevasurandhra V.S.Subrahmaniam was the founding president of Hindu rajabhaktasangham.²⁰ C.P could win the support of a section of royalist leaders from different communities including even a few from backward caste and religious minorities. Mannath Padmanabhen played a major role in the formation of pro-government organization 'The Travancore state people's league' on 13 April 1938 at Changanacherry with a view to make propaganda against all anti-government movements and for maintaining peace in the country. A series of propaganda meetings all over the state were planned. C.M Joseph was elected as the convenor and the committee consisted of members from all major castes and religious groups in central Travancore. Other than Mannath padmanabhen pillai, Asan bava rowther, Tariath kunju thomman and N.V Joseph were the prominent members of the new party.²¹ Along with it Nair service society took the initiative to form Travancore national congress another pro-government organization which also included a few royalists from other communities.²² Other than Mannath padmanabha pillai, Kottoor Kunju Krishnapillai, K.G. Parameswaran Pillai, Kadavoor Madhavan Pillai were the founders of this organization. Here again Mannathu Padmanabha pillai appears on the wrong side of the spectrum and acts as vanguard of the reactionaries. Leaders of the T.N.C - kainikkara padmanabha pillai, Kottoor kunjukrishnapillai and Ezhava community member K.P.Kayyalakkal-visited Gandhiji on May 13-14, 1939. They tried to convince him that Travancore state congress is actually an organization of the Christian communalists and T.N.C is the organization of genuine nationalists. They alleged that Travancore state congress is formed with an intention to destroy Hinduism and few Nair leaders like Pattom thanupillai is a cover up to

hide the Christian nature of organization. But their perverted arguments could not impress Gandhiji.²³ Thus we have seen royalist elements in the Travancore state were trying to use communal organizations and its leaders like Mannath Padmanabhan and Nair service society as tools to weaken the struggle for democratic rights.

Large section of Nair service society stood firm behind the Hindu monarchy of Travancore as I stated before and remained staunch opponent of movement for democracy though it cannot claim to be a representative of all the nairs in the state. Annual conference of society held on 1938 May, at kidangoor in kottayam passed resolutions in support of the Monarchy and told nairs not to join state congress²⁴. Nss schools alone defied the repeated boycott calls issued by the state congress agitators and remained open during the period of responsible government agitation.²⁵ Nair service society erected a statue in honour of Sir C.P in front of legislative assembly building on the occasion of his sixtieth birthday celebrations. It was unveiled by His Highness Chithira tirunal on 8th of November 1939.²⁶

In March 1944 Travancore government dissolved the legislature and decided to notify the elections in July. Dewan C.P was trying to play communal card again in this election. The Nair service society and the S.N.D.P yogam, two prominent Hindu caste organizations were united under the initiative and encouragement of Dewan C.P Ramaswami aiyer, to oppose the state congress in the election.²⁷ Now secular progressive forces in the state decided to form a united front to resist forces of communalism created and nurtured by autocratic government, with a hidden motive to preserve its monopoly over power. The leaders of the state congress joined hands with leaders of the radical section like M.N Govindan nair and P.T.Punnoose- who were active in the first phase of struggle for responsible government as leaders of Travancore state congress, and later on had parted ways with it, after the decision to withdraw memorial-they agreed to render mutual help to fight the communal forces in electoral politics and to empower the hands of progressive forces in the state.²⁸ The state congress was able to contest only in nineteen seats, but eleven of their candidates were declared elected to the assembly.²⁹ It was a

severe blow to communal forces and their perpetrators in the state.

Year 1945 witnessed a communal conflagration when Dewan C.P announced his new education policy which was intended to nationalize more than two thousand private schools in the state. Since overwhelming majority of private schools was run by Christian management, Christian Clergy and Christian communal organizations were against this move. Like other Hindu communal and caste associations like Hindu mahasabha and S.N.D.P, N.S.S also welcomed the decision of the government. It also expressed its willingness to hand over schools run by them to government. New education policy was part of divide and rule strategy of Dewan. He wanted to turn Various Hindu communities and their organizations against Christians and efforts were made to form an alliance of Brahmins, Nairs and Ezhavas against Christians.³⁰ Unfortunately Mannath padmanabhen and N.S.S again became a tool in the hands of reactionary regime.

By 1940's Class consciousness began to encroach upon the space of Caste consciousness among the people of Kerala. Like S.N.D.P, N.S.S leadership was also losing ground among the ordinary members of the community. In Thiruvananthapuram where nairs were a dominant community Travancore national congress –The Nair dominant royalist party- could not convene even a single meeting.³¹ In 1938, initially N.S.S leadership was planning to conduct Annual conference for that year at Cherthala and wished to declare their open support for the Monarchy and Dewan C.P at the venue. But many of the nairs in Cherthala were against C.P and were reluctant to eulogize him. So they were forced to shift the venue to some other place and finally chose kidangoor in kottayam as per the request received from Meenachil taluq karayoga unions.³² We have seen that in Nair dominant regions like Thiruvananthapuram and to some extent in Cherthala N.S.S found it difficult to woo its ordinary members towards its royalist line. But in Christian dominant regions like kidangoor in pala where nairs were hostile to Travancore state congress and responsible government agitation, Nair service society could convince members of its community that

responsible government means 'Reign of Christians in the place of Hindu Raja' and it is something to be opposed.³³

A dramatic turning point in the life of Mannam came with the Proclamation of idea of Independent Travancore by Sir C.P. It prompted him to reverse his policy of political reaction, who till then had been a royalist to the core. He now took the membership of the Travancore state congress and metamorphosed to a democratic patriot. He condemned the 'idea of creation of Independent Travancore after the lapse of British paramountcy', in his muthukulam speech, and later on devoted all his energies to oppose Independent Travancore movement, and to bring in responsible government in the state³⁴. He was sentenced to two years of imprisonment by the Travancore administration- but before long, movement could accomplish its task well before the completion his jail term³⁵. In the statement before his arrest, he refuted the statement of the Dewan which claimed majority of the people support the declaration of Independence. In response to it, Mannam stated that ninety nine per cent of the people are against Independence and challenged Dewan to conduct a referendum, he said that, he feels surprised that Sir C.P. Ramaswami aiyer, who was not prepared to shed even a drop of sweat for that cause of Indian freedom but endeavoured all along to secure the goodwill and support of governors and viceroys to rise up in official ladder, is attacking the Indian national congress. He added, had it not been for the efforts of the Indian national congress to secure Independence of India, the native state rulers would have remained as slaves. Will it be possible for Sir C.P. Ramaswami aiyer, he asks, to declare the Independence of Travancore, if the British lingered here.....³⁶

In another interesting development of long term implications, Annual meeting of the N.s.s held on 13th of August 1946 decided to refrain it from direct involvement in the politics in future and gave permission to its members to join state congress as individuals, reversing its age old policy against joining it.³⁷

1940's witnessed the spread of communist movement across Kerala transcending caste and religious barriers. Class

consciousness began to challenge consciousness on caste. Growing Class associations began to undermine the grip of caste associations on peasants, workers and agricultural labourers. In 1957 First Popularly elected Communist Government came to power in Kerala under the leadership of E.M.S. Namboothirippad. Reactionary strands of thought dormant in the life and thoughts of Mannam could be gleaned from his attitude towards the constitutionally elected Communist Government. He and Nair Service Society played a major role in the Liberation struggle, intended to topple this government. Even the idea of Liberation struggle, itself, was first mooted by 'Akhila kerala nair pratinidhi sammelanam' held at Perunna on 8th of March 1959. On this occasion Mannath Padmanabhen delivered a fiery speech in favour of Liberation struggle to oust communists from power.³⁸

He raised the slogan of Nayareezhava aikyam (Unity of Nairs and Ezhavas-i.e. Unity of higher caste nairs and lower caste Ezhavas). At a time he succeeded in forging an alliance with S.N.D.P under its leader R.Shanker, but it remained a short-lived one. His efforts in this regard were the earliest attempt in the history of post Independent Kerala for Hindu polarisation. Indirectly it sowed the seeds of Hindu Communalism.

Conclusion

There is no doubt that Sri Mannath Padmanabhen was a man far ahead of the times and a social revolutionary. His selfless efforts to reform and rejuvenate the Nair Community should be appreciated. He sympathized and expressed solidarity towards Movements to end untouchability and social discrimination against lower castes in Kerala, and played a leading role in winning the support of higher caste nairs for such movements. But in the sphere of politics his policies were rather regressive and reactionary-excluding his stance against the idea of Independent Travancore-. Like any other caste association Nair service society too cannot escape the blame for prevailing caste antagonism in the state. Opposition to Abstention movement and responsible government agitation strengthened the hands of communal and reactionary forces in the state of

Travancore at that time. Leading role played by him in the Liberation struggle and subsequent dismissal of Communist government by the Central government using Article 356 lead to the revival and growth of casteist and

communal elements in the politics of Kerala. His clarion call for Nair-Ezhava Unity sowed the seeds of Hindu Communalism in post Independent Kerala-Though for which he alone was not responsible.

SOCIAL HISTORY AND IDENTITY OF THE STATE IN MEDIEVAL INDIA

Peddolla Gangareddy

Introduction

The political developments after Harshavardhan, about whom you have read in the last chapter, can be best understood if we divide the period from AD 750 to AD 1200 in two parts (a) AD 750–AD 1000; (b) AD 1000–

AD 1200. The first phase was marked by the growth of three important political powers in India. These were Gurjara Pratiharas in north India, Palas in eastern India and Rashtrakutas in South India. These powers were constantly fighting with each other with a aim to set up

their control on Gangetic region in northern India. This armed conflict among these three powers is known as 'Tripartite struggle'. In the second phase we notice the break up of these powers. It resulted in the rise of many smaller kingdoms all over the country.

For example, in northern India, the disintegration of the Pratihara empire brought to the forefront various Rajput states under the control of different Rajput dynasties such as the Chahamanas (Chauhans), Chandellas, Paramaras, etc. These were the states which fought and resisted the Turkish attacks from northwest India led by Mahmud Ghaznavi and Mohammad Ghori in the 11th and 12th centuries but had to yield ultimately as they failed to stand unitedly against the invaders. Let us now trace briefly the history of the three powers we have mentioned above. The Gurjara Pratihara dynasty was founded by Nagabhata I in the region of Malwa in the eighth century. He belonged to a Rajput clan. Later one of his successors, Vatsaraja extended his rule over to a large part of North India and made Kannauj in western Uttar Pradesh his capital. Vatsaraja's policy of expansion brought him in conflict with Dharmapala, the Pala King of Bengal and Bihar. Soon, the Rashtrakuta king Dhruva from south India jumped into the fight. And thus began what is known as 'Tripartite Struggle' i.e. struggle among three powers. It continued for about the next hundred and fifty years under various succeeding kings with ups and downs. The Gurjara-Pratiharas, however, could continue to maintain their hold over Kannauj till the last. One of the important kings of this dynasty was Mihira Bhoja (ninth century). He was highly praised by an Arabian scholar Sulaiman for keeping his empire safe from robbers.

Identity of the Princely States

In eastern India, Pala dynasty was founded by Gopala (8th century). As the names of all the succeeding kings ended with 'Pala' this dynasty came to be known as the 'Pala' dynasty. The son and grandson of Gopala, viz; Dharmapala and Devapala greatly extended the power and prestige of the Pala dynasty. Though their expansion towards west was checked by the Pratiharas, the Palas continued to rule over Bihar and Bengal for nearly four centuries with a small break. The Pala kings were the followers of Buddhism. They greatly promoted

this religion by making monasteries (*viharas*) and temples in eastern India. Dharmapala is known to have founded the famous Vikramashila university near Bhagalpur in Bihar. Like Nalanda university, it attracted students from all parts of India and also from Tibet. Many Sanskrit texts were translated into Tibetan at this monastery. The most celebrated name associated with Vikramashila University was that of Atisha Dipankara who was greatly respected in Tibet. In south, Dantidurga was the founder of the dynasty called, Rashtrakuta dynasty (8th AD). The capital of the Rashtrakutas was Manyakheta or Malkhed near Sholapur. It was under the king Dhruva that the Rashtrakutas turned towards north India in a bid to control Kannauj, then the imperial city. And as mentioned above, it led to the beginning of 'Tripartite struggle'. One of the important kings of the Rashtrakuta dynasty was Krishna I. He built the famous Kailasha temple at Ellora (near Aurangabad, Maharashtra). It is dedicated to Lord Shiva and is monolithic i.e. made of one single piece of rock. The Arab accounts inform us that the Rashtrakutas were quite friendly with the Arab traders who visited their empire. These traders were allowed to build mosques and follow their religion without any hindrance. It testifies to the liberal attitude of the Rashtrakuta kings and also to their desire to draw economic benefit from the growing sea trade conducted by the Arabs at that time.

In South India, the Chola Kings founded a mighty empire during AD 1000–AD 1200. The relationship between these Cholas, called the "Imperial Cholas" with the earlier Cholas mentioned in the Sangam literature is not clear. The Cholas came to power after overthrowing the authority of the Pallavas in South India. The founder of the Chola dynasty was Vijayalaya (9th century AD) but the real architects of the glory of the dynasty were Rajaraja I (AD 985–AD 1014) and his son Rajendra I (AD 1014–AD 1044). During the heyday of the Chola empire, it extended from R.Tungabhadra (a tributary of R.Krishna) in north to Kanya Kumari in south. The Chola Kings made a successful use of their navy and conquered not only Maldives and Lakshadweep Islands but also Sri Lanka. They also defeated the kings of Malaya and Java and Sumatra. One of the greatest contributions of Rajaraja I was the construction of the famous temple known as Rajarajeshwara

or Brihadesvara temple, dedicated to Shiva at Tanjore. He also ordered a survey of land for better collection of land revenue in his empire. The rule of his son, Rajendra I was even more dazzling. He carried his arms up to Ganga in Bengal after defeating the Pala King, Mahipala. To commemorate this victory he founded a new capital called 'Gangaikondacholapuram' and acquired for himself the title "Gangai-konda" (conqueror of Ganga). He was a great patron of learning and was known as Pandita-chola. The last important Chola king was Kullotunga (AD 1070–1122 AD). Under him the Chola empire started disintegrating and shrunk to much smaller area. The above account will make you understand that though there were frequent inter regional clashes, cultural growth was also taking place side by side. In fact, the emergence of big political powers brought about a relative stability in different regions. It led to the developments of distinct cultural patterns related to art, architecture and literature within each of these regions. We shall discuss these patterns slightly later in this lesson.

State and Its Identity

The state structure in this period has often been described as "decentralized" political system. What is 'decentralized' polity? It is a system in which there is of course a king as the main authority at the top, but he shares his rule with other small chiefs called feudatories or the *samantas*. You may wonder who these *samantas* were. Well the term '*Samanta*' basically refers to a king who has been defeated but his kingdom has been restored to him but with the condition that he will continue to accept the over lordship of the conquering king and also pay regular tribute to him in cash or kind. He may also be asked to help with military assistance in times of need. As these chiefs enjoyed freedom of administration over their regions they were quite powerful. Surely you can guess that these chiefs could always be a threat to the overlord, and no wonder whenever there was a weak king at the top, they would assert their independence leading to the break up of the empire. And precisely it was what happened during the last days of Pratihara empire as mentioned above.

Another aspect the decentralized polity was characterized by the practice of making

land grants to Brahmanas and others. This practice was initiated by the Satavahanas kings in the 1st and 2nd centuries AD, but after the Gupta period it had become a normal practice all over the country. Now land grants came to made not only to religious persons and institutions but to state officials as well. Why did it so happen? It is suggested that one of the reasons for the increase in land grants during this period, was the decline in trade and, therefore the shortage of coined money to pay to the officials and others for their services. The shortage of coined money in the post-Gupta period is indicated by the absence of the presence of coins in the archeological finds. The land granted to the donee (the receiver of grant) was tax free, i.e., the donee did not pay any tax to the state and used the produce and income on it for his personal benefit. The donee was also free from any interference by his king or his officials in managing the land donated to him. Thus, these donees converted the lands granted to them into independent islands of authority with no or little central control.

In the Chola kingdom in South India, the structure of administration was slightly different. Here at the village level, a great amount of autonomy was enjoyed by the local people. They looked after their administration with the help of self elected local bodies. Two types of village assemblies are mentioned in the records. These were known as Sabha and Ur. Sabha was the assembly in the villages which were inhabited predominantly by the brahmanas, whereas Ur was in the non brahmanical settlements. These assemblies looked after the local public works, tax collection, temple management etc., with the help of the members elected through a procedure set by the villagers. It was a unique feature of the Chola administration as it represented a harmonious balance between the central authority and the local self-government.

Social, Economic and Historical Changes

The early medieval period was also marked by many social and economic changes. Socially, an important phenomenon of this period was the proliferation or increase in the number of castes. How did it happen? One of the reason for it was the inclusion of newer groups into brahmanical society. It is suggested

that as the number of land grants increased, new areas were brought under cultivation. It made local tribal people leave hunting as their main profession and take up agriculture. They were then transformed into peasants, and assimilated in society as sudras. The land grants in fact resulted in movement and migration of Brahmanas to different internal areas where they were able to introduce and enforce their brahmanical social values. The land grants also led to the increase in the number of Kayastha class. The Kayasthas were basically scribes and they specialized in drafting and writing land grant documents. Naturally, with increase in the number of land grants their importance also increased. But the most important feature of this period was the rise of a new class of people called the Rajputs, such as Chahamanas, Paramaras, Pratiharas, Chandellas etc. Some historians believe that they were the descendants of various groups of foreign invaders such as Sakas, Kushanas, Hunas etc, who had been coming to India from northwest during different times of history. These people gradually settled down in the region of Rajasthan and, after intermingling with the Indian society, emerged as a warrior class.

There are others who treat them as a part of the Kshatriya varna of the brahmanical system. But today many scholars see a connection between the rise of Rajput class and the extension of agriculture activities in Rajasthan. It is pointed out that with the spread of land grants there was an increase in the number of agriculture settlements. As a result, many local chiefs came to acquire enough financial and political power to set up an independent authority. In order to acquire

legitimacy and authenticity to their newly acquired position in the eyes of their subjects, they invited brahmanas from Gangetic and other regions to perform for them royal rituals and ceremonies, and in return gave them land and other things as fee, i.e. dakshina. They also made brahmanas write about their illustrious ancestry linking them with lord Rama (of the solar race) and lord Krishna (of the lunar race) to claim a dignified position of a warrior class.

Conclusion

Indians were never such people to stay at home. They have been moving out from ancient time to different parts of the world for trade and other activities. As far as the Indian contact with Southeast Asia is concerned, it appears to be as old as fifth century B.C. Jatakas the Buddhist texts belonging to this period refer to Indians visiting Suvarnavipa (island of gold), which is identified with Java. Such early contacts with Southeast Asia are confirmed by the recent archeological finds of pearls and ornaments of agate and carnelian, the semi-precious stones of Indian origin from the coastal sites in Thailand, Vietnam, Indonesia, etc. These finds belong to as far back as first century BC. According to the Chinese traditions, the first kingdom in South east Asia was founded at Funan (Cambodia) in the fourth century AD by a brahman known as Kaundinya who had come from India and had married the local princess. However, Indian and Southeast Asian contacts became closer from 5th century AD onwards when inscriptions in Sanskrit language start appearing in many areas. It reached its peak during AD 800–AD 1300 when many kings and dynasties with Indian names emerge all over Southeast Asia.

SOCIO-ECONOMIC AND CULTURAL CONDITIONS UNDER THE LAST NIZAM'S OF HYDERABAD (1911-48)

Pothana

Princely states which formed 45% of the land and 24% of the population of India occupy an important place in our country. The growth of Modernity and nationalism in the autocratic Princely States was rather slow and painstaking when compared to British India. It has been generally known that the great body of the people live in rural areas. The occupation of agriculture makes it necessary for the people to live in villages. Even now, land continues to be the main source of national income and the land owning classes command great political influence. Anywhere in the country or in any country the pattern of social and political structure is decisively influenced by the pattern of land ownership and power structure of society. The present paper deals with the socio-economic and cultural conditions that existed under last Nizam's of Hyderabad i.e. between 1911-48.

Rural life: Generally, the villages were situated in the uncultivated lands and rocky plains. The houses were mostly made up of mud with red country-tile roofs. Groups of houses encircled by large tamarind, mango, neem and other large shady trees, giving the village a picturesque appearance. There were no proper streets and roads within the village, but narrow crooked lanes formed by the land left out between the houses. There was always a *chavidi*, a place for travellers to stop for rest and the village headman used it as their office, an *ashurkhana*, a place of worship were constructed and public wells were also dug. There were quite a number of private owned wells for drinking water and for the use of household purposes. Surrounding inhabited area was usually the village grazing ground.

Joint Family system was the backbone of the then society. Child marriages helped a lot in strengthening the bonds of joint families. Telangana village was self-reliant, tranquil and relatively autonomous community had undergone radical change. The people were simple and mutually dependant with their natural ways of life, belief systems, crafts, arts, occupations, values and entertainments. The oppressed classes, *dhengs*, *mangs* etc, in

almost all the villages had their huts, away from the main village, in a more neglected and dirty quarters known as the *Dherwara* or *Mangwara* of the village.¹ The history and culture of our country did not begin with the class, religion or caste order. It may be noted that Benjamin Franklin opined that making of tools in the starting point of human culture. In the context of India this ramified into caste order.

The caste society took the shape of a hierarchical order of a ladder of five rungs. This order spread its tentacles into all fields of life, and began to determine the direct social, political, economic, cultural and philosophical spheres. The village people who could intermingle eat together and sleep together was treated as one caste. This led to the stagnation in the self-sufficient rural economy till the East India Company took command of our country's destiny. Though the East India Company effected, in its own interest, many changes in economic and judicial spheres, it could not bring about any change in the age old caste system. Strangely the Christian Institutions that set foot on this soil through the East Indian Company contracted the local caste cancer.

The caste system is not unknown to the Telangana region in Nizam's State. It would not be appropriate to discuss the caste system without discussing the nature of the structure of the Telangana village.² In Telangana society was divided into so many castes, sub-castes and tribes. The ruling class rather upheld and strengthened the caste system. The Reddy and Velama caste occupied a predominant position in Telangana. As for Government records most of the landlords, jagirdars, and deshmukhs belonged to these castes. But they did not exempt their fellow caste people from *vetti* who are economically poor. Another important social evil was Untouchability, the concept of pollution plays a crucial role in maintaining, the required distance between castes. A high caste man should not touch a low man, accept cooked food and water³ from him.

Each caste has a culture which is to some extent autonomous, there were differences only in decorations, speech, customs, manners, rituals and ways of life. The higher caste women wore gold ornaments and other variable ornaments. They kept their hair always combed while the lower caste woman wore coarse material and other gold items. The speech of the higher castes was refined while that of the lower castes was rugged. Traditionally, the lower castes were prohibited from wearing on good dress, ornaments and follow the customs of the higher castes and the offenders were punished by the village panchayat.⁴

The caste relations have become anachronistic and the system as a whole became serious impediment to any progress. The caste system provided a solid ground for the *jagirdars* to contract the forced labour from peasants in the name of tradition and custom. The *Vetti* system in Telangana was an all pervasive social phenomenon affecting all classes of people. It was not limited to any section. The *Begari* or *Vetti* was a major evil prevalent in almost all the villages of Telangana. There were two manifestations of this cruel system i.e. *Vetti madigas* and *Balutdars*. They rendered various types of services to the village community. *digas* varied from family to family in the villages. There were *vettimadigas* in almost all the villages in Telangana. The second type of *vettipani* was undertaken by the people called *Balutdars*, Cobblers, Barbers, Washerman, Blacksmith etc.⁵ Caste system has stood as a corner stone in the exploitation of working class.

The *Zamindars* who held huge landholdings used this caste system as a protective shield to strengthen their position. All these landlords, who depend on use of force and violence, belong to the dominating castes. It may also be noted that *Zamindars* boasted of their caste and area of land in their possession. It reveals that there is an indisputable relation between power and caste.⁶ It will be seen that caste was created only to subdue and suppress the drudging class who tilled the fields and provided food to people. Caste functioned only as a handmaid for the rulers for exploiting. It never functioned as an enlightening agent to awaken the dormant people.⁷

If we observe the structure of the Telangana village, the village will be found / classified into categories like Productive Caste or Agricultural Community, *Handicrafts community*, services castes and the fourth group can be called the leisured or usurping. Very often this fourth group comprises the priest, the trader (*vysya*), village officer (*Karnam*), Police patel, Mali Patel and the Lord (*Dora*). As we have already seen the practice of receiving *Inams* was in vogue in the reign of Nawabs. The classes helped the rulers protect the state and strength in the administration. All the village officers were sub-servient subordinates to *Dora*. They kept the working classes ignorant of the statutory benefits they could get in the self sufficient village order, and concerned for themselves 75% of the lands with the connivance of the revenue officialdom. It may be noted here that these usurpers did not have any knowledge of agricultural field. Maybe it is this situation that popularized the saying in the Telangana rural society that "one with the bull is dull, and one with the head has no bull." Consequentially the leisured group with the tacit abetment of the authorities usurped the lands that were not theirs and acquired supervisory status since 1907. This marks the beginning of the modern era of neo-landlords. This forms the basis of the shaping of economic relations of agriculture in modern times. This order has gained in strength even after India's gaining freedom and continues to be so – the leisured class rules the roost, enjoying the produce of the sweat of the working class.⁸

Many people under various designations like the *Deshmukhs*, *Deshpandes*, *Desai*, *Makhtadar*, *Banjardar*, *Jagirdar*, *Patel* and *Patwari* used to conduct and control revenue administration in the Nizam state. They were addressed as *Dora*. The *Brahmin*, *Reddis*, *Velamas* along side the Muslims enjoyed the privileges of these positions. They were the representatives of the heartless and hardened landlord order. A few of them conducted their affairs residing in towns and few others in villages with a *gadi* (fortress)⁹ as the centre of their administration.

These peasants in Telangana village do not have sufficient lands to cultivate and hence take up other professions or become agricultural labourers. The small landholders

used to take on lease a little more land and cultivate. They used to hire the service of other poor people on daily wages. The lives of these daily wage earners were always sad and miserable. Even the small land holders resorted to borrowing. In spite of their longing for education, poverty did not grant them even the sight of the precincts of the school. The children were almost half naked and suffered from poverty.

Caste system was very deep rooted in Telangana villages. The people led their lives in accordance with the tradition yet they were unable to escape the social and economic exploitation because of the repressive policies followed by the rulers. In fact Nizam's State was an area of darkness. All the poor had to serve the *Dora* according to their castes. Patel *Patwari* and the officers visiting the villages¹⁰ not even the suckling babies mothers were spared. Their trouble were compounded by the inconceivable types of taxes they were forced to pay on different occasions *Tottepannu* (birth tax), *Shadipatte* (marriage tax), *Budidapannu* (death tax), ¹¹*Thirthemaditepannu* (pilgrim tax), *Rokatipannu* (grinding tax)¹² and the list is endless with many unconstitutional collections. Extraction of taxes was considered a sign of the authority. Added to these there were "*nazranas*" to offer to the Nizam. On some pretext or the other the *Zamindars*, *Jagirdars*, *Deshpandes* and other village officers sucked like leeches the blood of the people. There was exploitation in the name of grain interest (*naagu*) and interest loans.

The Brahmins was occupied the top place during the later vedic period continued to hanker for the same even in the period of Nizam with their priestly knowledge and skills of writing horoscopes. No religious rituals could be thought of without their supervisory participation. Surprisingly, even the priestly class could not escape from the exploiting clutches of the *Dora*; the Brahmin women had to stitch deaf plates for the use of the *Dora's* family. The Vysyas, belong to the trading class also suffered exploitation in a disguised form. It was incumbent on them to maintain records of yields of the crops of the *Dora* at the thrashing floor and send the grains to the *Dora's* granaries.

The agriculturist, productive castes like Reddies, Velamas, and Kapus hire the services of the labour class and castes of different types and pay a part of the produce as remuneration and many time free of cost. Similarly, the service castes used to receive a part of the produce instead of money for their labor and played their role in the collective self supporting villages. These productive castes also were not exempt from bonded labour. During the beginning of the monsoon they had to plough with their own ploughs the *Dora's* fields and the sowing work. They had to offer the flowers and fruits grown in their gardens free to the *Dora* first. The self supporting economic order of the village has established inseparable relationship with the service castes. The *Doras* have created a situation where they cannot but serve them as sub human bonded labourers.

Dress and Food:

The ordinary form of dress for majority of villages was the short cotton '*dhoti*' for men and cotton '*saree*' for women. Apart from the cotton '*dhoti*' men used cotton turbans on their heads.¹³ The peasants ate the cheapest varieties of food grains out of his produce. The food of the common people of Telangana consisted chiefly of cakes of jowar & bajra and boiled millets known as *Ambali* (gruel). This was supplemented by drinking water or butter milk along with chillies, onion and salt, occasionally, they consumed rice and a few vegetables. The intoxicant toddy was popular in Telangana among the majority of castes.

Marriage System:

The Outstanding feature of the marriage relations is its Universality. Religious beliefs and social opinion confine to press as many as possible and as early as possible into the responsibilities of the married life.

There were certain restrictions imposed in the selections of the bride and bridegrooms. The marriages in between children of fraternal and maternal, having some gotrams and same house names were banned.¹⁴ The marriages between fraternal cousins, which was introduced by the Arabs and the marriages between cross cousins were allowed. In Telangana area and in the South India the marriages between the children of maternal

origin and counter maternal were most common. The marriages between uncles and nieces were also common especially. Thus, the male selected his partner from a limited route which is blood related. Remarriages are also in vogue in primitive society. In certain societies, the widows were not allowed to have remarriages and child marriages were more frequent. In higher castes, marriages are celebrated in the house of the bride but in lower caste in the bridegrooms house.

Status of Women:

The status of women was very low due to various social conditions, i.e. religious customs, superstitions etc. the traditional social customs and restrictions made them lose their identity and let them helpless. The traditional society of that time approved child marriages and polygamy women were beaten mercilessly and after get scolded deliberately by the males. Their chastity of low caste women was at the mercy of the feudal lords women folk were dependent on the male head of the family and played silent, self-effacing and secondary roles serving the family and community. The women and their children were employed in the castle of the Dora not only to perform all sorts of domestic works but also to look after all the needs of the entire family of the Dora.¹⁵ The majority of women were engaged in the agricultural operation for their livelihood.

The peasant women spun linen for the feudal lords and their children were engaged in fruit picking and leaf gathering in the woods for their master's household.¹⁶ The most horrible exploitation in feudal society was presenting the girls as slaves to the Doras. The beautiful girls were, either forcibly or by paying nominal amounts were taken by the landlords. The slave girls were sent as gifts to the in-laws houses after marriage of land lord's daughter.¹⁷

The village landlords, Jagirdars, desh mukhs, desh pandes also followed polygamy as a symbol of greatness. The purdah system was practiced by the Muslims and Hindus of higher castes as well as some middle class people.³⁶ The working class and oppressed class woman did not follow this system. Women from higher castes whenever they were traveling on bullock carts or the meena or pallaki various colors curtains on two

sides of the cart were hanged. They were not allowed to see other male persons except people like goldsmith, washerman, the potter etc, and they never came before their son-in-law's and never talked to them.

In the Hyderabad state there was almost illiteracy among females. In the villages lack of schools, orthodox ideas among Hindu families, early marriages and Parada system were stumbling blocks in the way of women education in the Telengana. Some higher caste woman studied in their own houses. The Muslims had a much larger proportion of women sitting behind curtain or in *zenana* schools (girls) which were available only in the capital. The Government provided the education facilities only for Muslim women. But no such facility for provided for Hindu women particularly middle class and lower class women in the Telengana area.¹⁸

In Telengana, one of the social evils was "Devadasi system". This has been in practice since ninth and tenth century A.D.¹⁹ The main motto behind was that these girls had to serve and enrich the temples as the centres of the ancient Hindu culture and fine arts. Few of the girls were exclusively dedicated to look after the temple with a view to render service to the God till their death by remaining unmarried. Hence, the term "dedication of girls" was widely used instead of devadasi.²⁰ In 1946, the Telangana peoples struggle had reached its zenith. They fought against social evils in Telangana. Women were generally believed subordinate and inferior to man in society.

Education:

Hyderabad (Nizam) state was very backward in education and literacy. The culture and the language of the over whelming majority of the people were suppressed by the Muslim rulers. The natural desire for education and preservation of culture and development of their own mother-tongue got inevitably linked up with the struggle against the Nizam's rule.²¹

The total percentage of literature in the state was only 4.8% of these; the percentage of literature among the non-Urdu speaking people was 3.3% though they constituted nearly 89% of the total population. The state Governments policy of making Urdu as the medium of

instruction in educational institutions was greatly responsible for the educational backwardness among the non-Urdu speaking people. Text books for produced in Urdu. Each district as a High school but Taluq centres did not have even a middle school. Both in khalsa and jagir villages a primary school could be spotted with great difficulty. Even well populated villages in jagirs were not provided with schools. This had an adverse effect on the masses who remained educationally backward. According to 1941 census the number of educated Muslims per thousands was 59 while that of Hindus was 23.8. Many different rules and regulations were enforced by the

Government with regard to the starting of private schools.²²

People suffered a lot under the despotic rule of paigahs, native rulers and jagirdars. The magisterial, revenue and police officials, who ruled tyrannically in the absence of their overloads, were absolutely corrupt. When the native rulers and jagirdars visited their place once or twice a year, the people had to offer them nazaranas. *The Jagirdars and Paigahs* lavishly spent on their personal luxury, but nothing was spent on education of the people. Samsthanams and Jagirs were no less bad from the administrative and educational point of view²³.

WOMEN LEADERS IN POLITICAL MOVEMENTS A CASE STUDY OF ARUTLA KAMALA DEVI'S ROLE IN TELANGANA ARMED STRUGGLE

Puppala Varalaximi

INTRODUCTION

Women played an active role in all important movements in the world. In Russian revolution, Chinese revolution, Telangana Armed Struggle and Srikakulam revolt in

Andhra and in many other revolts, women participated very actively and in responsible manner. Women never kept themselves aloof from the movements of liberation. It is a known fact that so many women sacrificed their lives in

the struggle for freedom. Women were equal to men in all spheres of life but they discriminated by the society in the past. All these discriminations were erased in the struggle especially in our freedom movement.

Women intensely practical and what she learns she put into use. Swiftly she is awakening now and reclaiming her ancient power. And movements for social reform will never sweep the country until she takes hold of them. There have been many prominent women who have distinguished themselves in political, literary and artistic fields in our country. Samyukta the daughter of Jayachandra of Kanauj, Rani Padmini of Mewar, Tara Bai of the Solanki Tribe, Rani Durgawati of Kalinga (MP), Lakshmi Bai of Jhansi, Rani Rudramadevi of Kakatiya, Rani Gangadevi of Vijayanagar, Rani Umayamma of Travancore etc. Are some names that came to mind readily.

There were many others over the centuries who have risen above their social turmoil and restrictions and have shown brightly with their power in their chosen field. More recently, Sarojini Naidu, an ardent and dynamic was also a poet, idealist and a politician entered drastically in the arena of Indian women. Indira Gandhi a historic legend ruled the political scene to the country.

The Indian freedom movement has generated many other noteworthy women leaders. Similarly Telangana Armed struggle also witnessed number of women leaders who fought with the then rulers on different grounds like for land, wages, against atrocities, liberation etc. Noted women were Atchamma of parsapalli village, Suryapat taluq, Banala Lingamma of shilpakunta village of Pusalapally Lambadi thanda, Yerramma, Lingamma, Venkamma, Papakka Koya women, Ailamma of palakurthi, Boodemma a koya women of Bendalapadu, Konda Lachakka, Venkatamma of koya women, Padigapati Nagamma, Savitramma, Tirupathamma of Chintalapalem, comrade Ramulamma of Cherukupally, Nalgond taluq, Chakilam Lalithamma of Suryapet etc., who participated in Telangana Armed Struggle.

At local level, women played an active role in Telangana Armed Struggle. There were many incidents, where women participated in the struggle. In the village administration also

women lead very actively. Sometimes, women worked as members in the local body committees. A few women acted as commanders of dalams, members of sangams, lyric writers of organization's songs, as singers and activists to participate in attacks against land lords, Nizam's army and Razakars. They also worked as couriers, secret agents, provided shelter and served food to participants outside the organizations.

The Telangana Armed Struggle

The historic struggle of the people of Telangana for ending the inhuman and autocratic feudal social headed by them Nizam of Hyderabad, is as old as the achievement of the country's independence. It is but natural that this important episode in our freedom struggle comes to our mind on this occasion when we use to celebrate Independence day. Telangana armed struggle occupies a unique place in the history of India.

Telangana armed struggle was fought successfully against the feudal rule of the Nizam with the slogan "Land Bread and liberation" in the history of India during the twentieth century: The main objective of the movement was land, food and removal of slavery of under-Privileged poor people.

The Significance of this historic struggle lies in that it was an armed struggle of the people fought for almost five years under the leadership of the communist party of India and the Andhra, Maharashtra. In this struggle about 4000 men and women laid down their lives. It also took a toll of thousands of exploiters and their agents, the Razakars, armed personnel who sought to suppress this struggle with all the strength of their command.

The struggle started at the end of 1946 and it continued even after the Nizam's autocratic rule was ended with the entry of Indian troops in September 1948 right up to the end of 1951. This glorious struggle played a very significant role in the ending of Nizams autocracy as apart of the general upsurge and movement of the people of the whole state of Hyderabad in which the state congress and other mass democratic organization also participated.

The peasant struggle that took place in Telangana (1946-51) constitutes one of the landmarks in the growth of communist movement in Andhra Pradesh. Though more than fifty five years old, the Telangana armed insurrection is still debated widely, both by scholars as well as by the various communist parties of India including the naxal groups and few regional parties. For, this movement exposed not merely the inadequacies of the communist party, but also the ideological and tactical cleavages which rocked the communist movements.

Planted red flags in their fields and marching up and down, protected their fields, drove away the goondas and tilled their lands. It was the Lambadis who had cleared their waste lands and cultivated them for decades. The landlord who had all the power in the village in his hands could not drive away the Lambadis and was defeated in his plans. This is just one example. Many other mass struggles were conducted during this period in Mundrai Village, in Bethavolu, in Bakkavanthulagudem, in Patha Suryapet, in Mallareddy Guddem, in Mellacheruvu and so on. After this the people of the taluq fought for-tenancy rights against Ananthagiri Deshmukh, Fatehpuram Keshava Rao, against landlords of the velidanda, Chiluka villages in Dorakunta, against Jagirdar Mogalnayak. People also fought against 'Vetti' and Police Atrocities. Just at this time they saw the victories of the people in struggles in Suryapet and Jangam and got very much enthused and the Andhra Maha Sabha had progressed to be the real people's organization.

The story of their heroic and stubborn resistance in defence of their personal dignity, against molestation, torture and rape, is an inspiring one. Their awakening to social equality, to new moral and cultural life, their stubborn fighting quality, give us a glimpse of that tremendous revolutionary spirit and energy that is smouldering in our economically and socially oppressed womenfolk. We only take a little trouble to enable it to emerge out of its old tradition bound shell and try to channel it in proper revolutionary direction.

Telangana women and girls participated in the struggle in a big way along with their men. There was not much difference in the level of political consciousness between men and

women, but at that time women's problems were not discussed as separate issue. The question did not arise because the primary issue. The question did not arise because the primary issue was that exploitation. The people of Telangana had to be taught to demand their rights. Men and women fought combinedly against the Nizam's government.

Role of Women

Women played significant role in Telangana armed struggle. Equal to men, women fought for land, wages, cattle and also against vettichakiri. Women fought against the implementation of 'Brigs plan' which was meant to vacate the Koya, Chenchu and other tribals from their villages. Women participated in the struggles like against Nizam- Razakar, Nehru forces and Congress- Razakar etc., Along with their parents, brothers, life partners and kin and kith, women participated in different struggles including Telangana Armed Struggle. They joined in the troops. They did not care to enter into thick forests to achieve their goal. They acted as political representative messengers, revolutionists. They spread over the objectives of the movement among the mass. Unfortunately most of the women were tortured and ill-treated by the then rulers. Even then they did not leave their activities.

The real spirit which was witnessed among women is highly appreciable. They simply witnessed the atrocities against them and their relatives. There were some instances where women faced untoward situations bravely. They fought with enemies like female tigers. For instance Chakali Ailamma was the first lady from palakurthy village of Janagam Taluk in Nalgonda District who fought to protect her land with the help of Andhra Maha Sabha and Communist party. She was the first symbol of Telangana armed struggle. Likewise women played exorbitantly heroic role in Telangana Armed struggle.

Many women came into the movement when they saw their family members being tortured or killed. The loss of family members was a powerful inspiration, for militancy. Women were also inspired by the songs written and sung about the heroic deeds of people like Ailamma of Palakurthy village. Sometimes 'Burrakadha' groups went round the villages

singing these songs and narrating stories of bravery and sacrifice.

The example, Mallu Swarajyam of Kothagudem village, Suryapet taluq was from a landlords family and yet took an active in the movement. She was born in 1931, and was leader of the koya people resistance at the Gundala centre. Swarajyam had been active even as a young girl in the Andhra Maha Sabha. Later on joined the communist movement, and thus Telangana struggle. She organized men and women to participate in the Telangana Armed struggle. She observed that the condition of women was deplorable with all social evil like illiteracy, child marriages, polygamy, drinking and beating women and children by men and bonded labour etc. She was a good organizer and become a prominent leader in Nalgonda District, inspiring not only women but men also. Swarajyam influenced by the Communist party.

There were women like Atchammamba who served in all capacities. But this was very rare. We can see many koya women as fighters because, they were more courageous than other women. There were also women who did all types of jobs which were challenging, like fighting, or organizing the dalams as its commanders etc.

But we can see that there were very few women who gave their suggestions to the party and on the movement question. Rarely were ideas of women followed, and valued. The only exception perhaps is Mallu Swarajyam, who was listened to with respect.

Women worked as couriers, distributing letters from one dalam to another dalam, which was a really difficult task. For example, Sugunamma, a Brahmin landlord's daughter supplied letters from the families to the dens and vice versa. Kamalamma of Mynala village, Manukota Taluq worked in the area centers and regional centres writing the circulars. Women worked as nurses were served the wounded in

the fight. Atchamamba was the only woman doctor then who roamed about in the villages with the kit. She served in the dalam as a nurse and later learnt to use guns as well. She also cooked, washed and did all jobs in the dalam.

Women were also commanders, squadron leaders and organizers. Mallu Swarajyam, a very good example, was in the forefront in organizing women and men also. She was a zonal organizer and later area committee member. Comrade Ramulamma of Cherukupally village Nalgonda District was also another important organizer likewise Rangamma of Penchikaldinna, Huzurnagar taluq, Tirupalamma, Savitramma, Narasamma, Venkatamma, Lacchakka of koya women etc. Were important guerilla fighters.

MAHILA RATNAM - ARUTLA KAMALADEVI

Equally skillful in leading men and women was Arutla Kamala Devi of Kolanpaka village, who gave up her middle – class comforts to fight in Telangana, Kamala Devi came with her husband and joined Andhra Mahila Sabha as a student and later joined in the states people's conference in 1938, taking part in the activities of the state people movement, especially its constructive activities. She ran a primary school in her village Kolanupaka having herself witnessed the oppression in the Jagirdari areas she organized and enthused the women of Kolanupaka to right against the Jagir administration, against forced labour, high taxation, illegal exploitation of women. A bitter struggle ensued against Jagirdari atrocities and the people of Kolanupaka joined this struggle. During the years 1946-48, that is up to the time of police action, Kamala Devi addressed hundreds of public meeting, inspite of all the hazards and dangers involved in the city of Hyderabad right under the nose of the Nizam and his administration and the dreaded Razakars, there were some women who rendered sustained help to the Telangana armed struggle in its evolutionary as well as revolutionary stages.

THE CHALUKYAN TEMPLES OF PEDDAPALLI DISTRICT IN TELANGANA – A STUDY

Dr. Raju Balgoori & Mr. Kadari Jayapal

There is a growing interest in the study of the history of Telangana based on evidences and the results of the latest research. Similarly micro-historical studies are also gaining importance over dynastic histories. They imply the detailed study of a territorial unit of limited extent. As the area is limited the study of the reactions of the people to the political currents and cultural developments and their participation in each of them would become easier. At the same time political and chronological approach is being replaced by socio-economic and cultural approaches. The temples and its art and architecture reflex the socio and cultural life of the people.

A temple for a Hindu is a place where he obtains spiritual bliss through devotion and worship symbolically within the sanctum sanctorum of the temple. Godhead manifests itself symbolically within the sanctum sanctorum of the temple. Temples in India or elsewhere exhibit skill in engineering, architecture and art. They differ from place to place; time to time and from one religion to another or may sometimes bear similarities with minute differences. Underlying these, differences exist certain basic principles giving scope for the classification of temple style. Temples in India exhibit an evolutionary progress through ages. The small platform under a tree supporting an image or object is the most ancient type of worship.¹ A stone slab resting over two uprights is the most ancient form of temple. In the later stage Hypaethral type of shrines were raised.

A study of the temple art architecture is an appreciation of the artistic beauty on scientific lines. A study of art and architecture of these temples is a good source of information about our cultural heritage. Apart from the art and architectural traditions, temples also reflect the political, social, economic and religious conditions of the period in which they were constructed. Many studies are made on art and architecture of temples both at macro and at micro levels, enriching art history. Recent studies on temple art and architecture stress the need of region-based studies for better understanding of the evolution of temple styles as well as the role of temples in the society.²

Sources of the Study: The epigraphic and literary evidences from the main source in framing the history of Peddapalli district. An on the spot study of the temples are giving a vivid and clear idea about the historical sites. The present paper deals with the art, architectural features and sculptural art of the Chalukyan temples of Peddapalli district in Telangana.

Peddapalli district is a district located in the northern region of the Indian state of Telangana. Ramagundam city is an educational hub and for Industrial hub. Ramagundam city is well known for its multi cultural and linguistic diversity. Peddapalli town is an educational hub. Peddapalli district is also famous for agricultural occupation. Ramagundam is only the largest city in this district and 5th largest city in Telangana State.³ As of 2011 Census of India, the district has a population of 795,332.⁴ The district will have

two revenue divisions of Manthani and Peddapalli are sub-divided into 14 Mandals. There are; Peddapalli, Odela, Sultanabad, Julapalli, Eligaid, Dharmaram, Ramagundam, Anthergaon, Palakurthy, Srirampur, Kamanpur, Ramagiri, Manthani and Mutharam.⁵

The Chalukyan Temples and its Art and Architecture:

Peddapalli district, which was successively ruled by various dynasties of the Chalukyan lineage such as the Chalukyas of Badami, Chalukyas of Vemulawada and the Chalukyas of Kalyani from the beginning of the seventh century A.D. to mid-twelfth century A.D. had naturally imbibed the traits and trends of this early Chalukyan style, which has an impact on the temples constructed here during the later Chalukyan period. The Chalukyas of Badami,⁶ Chalukyas of Vemulawada⁷ and the Chalukyas of Kalyani,⁸ who ruled over Peddapalli district, built a good number of majestic temples, dedicated to Shiva and Vishnu. The grand galaxy of temples at Peddapalli in Peddapalli Mandal, Neerakulla in Sultanabad Mandal, Murrur in Anthergaon Mandal, Telukunta, Peddapur in Julapalli Mandal, Kasipet in Manthani area exhibit the grandeur of Chalukyan art and architecture in Peddapalli district. The profusely carved ceilings, lintels, gateways, glistening pillars and the sculptural decor of the temples bespeak the heightened glory of the Chalukyan art.

I. Ramalingeshwara Temple at Peddapalli Town:

Peddapalli town, the headquarters of Peddapalli district, is situated at a distance of 197 km. from Hyderabad. It is a railway station on Kazipet-Balharshah line. There is a Chalukyan Shiva temple known as Ramalingeshwara temple in the old town of Peddapalli. It consists of *garbhagriha*, *antarala*, an open pillared *mandapa* and a porch before it. The walls are plain and the spire is in stepped pyramidal form. The *Trisakha* doorway of *antarala* is beautifully sculptured and it contains a well projected cornice above the lintel while *Purnakumbhas* are carved at the base. This temple stands as an example for the traditional pattern of architecture which was upheld in raising temples in the later times.⁹ The sculptures of Chalukyan Nandi and Ganapati

with four hands wearing *mukuta* are noticed in the temple.

Bhairava: There is a loose sculpture of Bhairava near the entrance. He holds Trisula in upper left hand, Damaru in upper right, Khadga in lower right and a severed head in lower left hand. The image with disheveled hair is of 5 feet height in black granite.

II. The Shiva Temple at Telukunta Village:

Telukunta village otherwise known as Telikunta or Tellakunta in Julapalli Mandal of Peddapalli district is about 25 km. to the north-east of Peddapalli and 4 km. to the south of Julapalli. It can be reached from Karimnagar by bus via Sultanabad or Choppadandi. It is a very old village, where from the coins of Vishnukundins belonging to 5th, 6th centuries are known to have been recovered.¹⁰ Various wonderful sculptures, which are a millennium old, are noticed in the temple lying beside the tank. The iron slag is abundantly visible on the hills and hillocks surrounding the temple and the tank. This is a Kalyani Chalukyan temple lying beside the tank surrounded by hills and hillocks and green pastures. The temple facing the east is now at a deserted place far from the village. A visitor of aesthetic sense greatly enjoys the beautiful surroundings of nature around the temple, where from it is pleasant to look at the ripples on the shining water of the tank in the hot sun.

This temple consists of only *garbhagriha* which is a 7'-3" square with an enclosed *ardhamandapa* before it which is 8'-3" long and 7'-3" wide containing an iron grill at present in the front. Over the simple *adhithana* the walls rise with pilasters as noticed in the Chalukyan temple at Choppadandi,¹¹ which is not even 10 km. distant from here. The shrine is surmounted by a spire in stepped pyramidal form with a spherical stone *Kalasa* at the top. The *mandapa* and the *garbhagriha* are flat roofed. The exterior walls of the temple measure 20 feet in length and 13 feet in width. The doorway of *garbhagriha* measures 5-0" x 2-7" with Gajalakshmi motif on *Lalata* and *Purnakumbhas* at the base. The shrine contains a Chalukyan panavatta with Linga while the Nandi,¹² which is 4'-2" long and 2'-10" high, is found in the *mandapa*. The Nandi looks thin and disproportionate when compared to the other sculptures found in this region.

Loose Sculptures: Several loose worn out sculptures in red sand stone are now placed beside the northern wall of the temple.

1. **Surya:** This sculpture holding lotus buds in two upraised hands is of 2'-6" height.

2. **Mahishasuramardini:** This eight-handed sculpture is of 2'-3" height. The goddess is seen thrusting Sula into the body of the demon found in buffalo form.

3. **Saptamatrika Slab:** The two broken pieces of Saptamatrika slab are now placed behind the Linga in *garbhagriha*. The bigger piece contains four while the smaller piece contains three goddesses endowed with four hands wearing Mukutas over their heads.

4. **Bhairava:** This is a naked sculpture of 2'-2" height holding Damaru and Trisula in upper hands Gada in lower right hand and severed head in lower left hand.

5. **Nagini:** This sculpture in half human and half serpentine form holding sword and shield is similar to the one found in the eleventh century temple of Polasa.¹³

6. **Naga:** This is a sculpture of curled Naga with a single hood.

7. **Linga:** A Linga of more than one foot in height in black basalt without *panavatta* placed outside to the south of the temple is noticed.

8. **Bhairava:** This is a much worn out sculpture of 4 feet in height and 1'-10" in width in red sand stone now placed on a small platform to the south of the temple. The god is flanked by female figures holding fly-whisks at the top. The hands of the god are found mutilated.¹⁴

III. The Shaiva and Vaishnava Temples at Peddapur Village:

Peddapur village in Julapalli Mandal of Peddapalli district is about 22 km. to the north-east of Peddapalli and 3 km. to the west of Julapalli. There is a single shrine temple containing only *garbhagriha* in Brahmanawada.

1. **The Shiva Temple in the Village:** The ruined Shiva temple lying beside the ruined *gadi* of the landlord probably belongs to the Chalukyan times. It faces the east. The ceiling noticed in *Kadalikakarana* process is ruined end

a few large blocks of stone are Visible now. The *garbhagriha* has a simple doorway which measures 4'-0" x 2'-4" containing Gajalakshmi motif on *lalata* and *urnakumbhas* at the has Adhithana is buried in the ground. The *garbhagriha* is a 6'-9" square while the exterior walls measure 12 feet in length and breadth. A small *Panavatta* containing Linga and a Nandi before it are noticed. An old sculpture of four handed Ganapati with the trunk twisted to the left resting on Modakas is noticed in the shrine together with a sculpture of Devi with four hands.¹⁵

2. **Another Shiva Temple in Fields:** Another Shiva temple facing the east is in the fields containing 7'-7" square *garbhagriha* and an *antarala* of 7'-7" width and 3'-6" length. The *antarala* doorway measures 4'-5" x 2'-0". The exterior walls of the shrine measure 16'-19" in length and 11'-10" in width. There is a Chalukyan *Panavatta* with linga in the shrine.

3. **Vaishnava Temples in the Village:** There is a Venugopala Swamy temple in the village with its spire in stepped pyramidal form. There is a Narasimha temple on a hill which is about 2 km. to the north of the village. It is a cave temple facing the south.

IV. The Shaiva and Vaishnava Temples at Kasipeta Village:

Kasipeta village in Manthani Mandal of Peddapalli district is situated at a distance of about 35 km. to the south-west of Peddapalli and about 15 km. to the north-west of Manthani and can be reached via Ginjapadge village. Now the village totally stands deserted for the unknown reasons except the Chalukyan group of temples standing on the bank of the river Godavari, which can be reached after covering 3 km. from Gunjapadge. Kasipeta is an early historical site with several mounds where pieces of black and red ware pottery and large number of brickbats are noticed.¹⁶

1. **The Double Shrine Temple:** This temple stands in a stone walled compound facing the east. The *prakara* wall on the east with an entrance facing the Vishnu shrine is extant while the walls on the other side stand collapsed. The *prakara* wall appears to have contained another entrance facing the Shiva shrine but it is in total ruins. The temple consists

of two separate *garbhagrihas* standing side by side dedicated to Siva and Vishnu with a common *antarala* and a multi-pillared *mandapa* with porches on the east, north and south. There is a sub-shrine situated on either side in the north-west and the south-west corners of the hall. The brick *sikharas* over the shrines are in ruins.

The *mandapa* has six rows of pillars five in each row. Thus there are 30 pillars excluding the corresponding half pillars rising over the parapet wall which runs all around the *mandapa*. The shaft consists of two square parts and curiously enough their faces are sculptured with several figures in low relief which are simple in design and exhibit less workmanship. The figures of dancers, huntresses, a woman holding a Kalasa, the palanquin of woman being carried by two women on either side, the nude figure of a young woman standing cross-legged laying her right hand on breasts and hiding her yoni with her left hand, a man standing with folded palms, the scene of *Gopika Vastrapaharana*, the entwined *nagas* and the friezes of elephants, lions and deer are the most important among the sculptures found on the pillars.¹⁷

2. Sri Ramalayam: This is a single shrine temple facing the east at a little distance to the south of the main temple housing at present the seated image of Sri Rama along with his consort Sita sitting on his folded left leg. The *makara torana* behind the image is carved with *dasavataras*. A beautiful sculpture of Annapurna is reported to have been shifted from here to Hyderabad state Museum.¹⁸

V. The Shaiva and Vaishnava Temples at Murmur Village:

Murmur a remote village in Anthergaon Mandal lying on the banks of Godawari is about 42 km. to the north-east of Peddapalli, about 12 km. to the west of Ramagundam and 4 km. to the east of Anthergaon. This old village is about 20 km. to the east of the early historical site Kotilingala the capital of the Satavahanas,¹⁹ if one travels through the forest-track all along the Godavari. Murmur is likely to get submerged in the waters of the newly taken up Yellampalli (Sripadasagar) lift irrigation project, the work which is in progress on the river Godavari near Yellampalli village lying

beside Murmur. It is too difficult to reach Murmur as one has to travel for about 20 km. through the worst dirty and dusty country road filled with several pits.

1. Sri Chenna Keshava Swamy Temple:

This old temple facing the east repaired recently by the villagers stands in the midst of the village within an enclosure. This small temple consists of *garbhagriha*, *antarala* and a four pillared *mandapa* before it. The exterior walls measure 18'-6" in length and 12 feet in width. The *mandapa*, with 16'-6" length and 13'-3" width is flat roofed. The *antarala* doorway measuring 4'-8" x 2'-4" contains the Vaishnavite mark flanked by disc and conch on Lalata and Vaishnavite Dvarapalas at the base.²⁰ The *adhithana* contains *upana* and a *gala* flanked by two bands, the lower band decorated with semi-circular stones looking upward while the upper band contains the same semi-circular stones looking downward. The *gala* part contains sculptures which are indistinct due to white washing of the temple. The Bhatti rises to a height of 4'-9" over the *adhithana*. The spire is in stepped pyramidal form connected by a tapering band on all the four sides.

Loose Sculptures: Several loose worn out sculptures in black granite and red sand stone are now placed courtyard of the temple.

1. Lakshmi Narasimha: This beautiful sculpture of lord Narasimha in black granite with his consort seated on his. Folded left leg is noticed in the north-west corner of the courtyard. He holds wheel in upper right hand and conch in upper left hand keeping his lower right hand in *abhaya* while running his tower left hand around the waist of the goddess. There is a *makara-torana* carved with *Dasavataras* behind this sculpture of 1'-5" height.

2. Bhairava: This naked sculpture of 1'-9" height and 1'-3" width, in red sand stone holding Damaru in upper right hand, trident in upper left hand, Khadga in lower right hand and a severed head in lower left hand is now placed before the compound wall of the temple.

2. Sri Pataleshwara Swamy Temple: This Shiva temple facing the east is only a few yards to the south of the above Chenna Keshava Swamy temple. As this single shrine temple

with a *garbhagriha* and an *antarala* before it is found buried in the ground, so it might have been named as Pataleshwara temple by the villagers. The visible part of the temple is only the stepped pyramidal spire with a little upper most portion of the *bhitti* under the cornice. The villagers have built steps to reach the underground *garbhagriha* containing a Chalukyan Panavatta with Linga on it.²¹ The doorway of *garbhagriha* measures 4'-2" x 2'-2" and the ceiling of it is laid in *Kadalikakarana* process. The *antarala* is 7'-2" long and 6'-8" wide.

Ganapati: This image with a single pair of arms in *garbhagriha* and another Ganapati with four hands wearing a short *mukuta* in *antarala* are noticed.

VI. Sri Ranganayaka Temple at Neerakulla Village:

The village Neerakulla in Sultanabad Mandal of Peddapalli district is only 5km. from

Sultanabad and about 15 km. from Peddapalli. There is an old temple standing on a very big rock in the middle of the river Maner. The natural surroundings are beautiful with hillocks and luxurious vegetation. The spot is picturesque as the rock containing the temple is surrounded by water. The Chalukyan temple is dedicated to Vishnu in the form of Sri Ranganayaka Swamy. The walls of the temple are plain and the spire is in stepped pyramidal form. The pillars in the open *mandapa* are massive and short and appear to be of an early origin. In the vicinity of the above temple there is a hillock on the northern bank of Maner containing a small temple with *garbhagriha* and an *ardhamandapa* before it. At present there is no deity in this temple. The doorway of *garbhagriha* contains Gajalakshmi motif on Lalata and *Purnakumbhas* at the base. There are two miniature shrines at the same place provided with the Vimanas of south Indian style.

KOLANU PAKA AN URBAN CENTRE UNDER THE KALYANI CHALUKYAS IN TELANGANA

Ravindhar Banoth & Dr. Sobhan Babu

Kolanupaka is presently a small village in Yadagiri gutta Taluk of Nalgonda district of Telangana State. But historically speaking this village is known to have existed right from the 9th Century A.D. The village acted as an administrative Centre under the Rastrakutas and the Kalyani Chalukyas as *Kollipaka* 20,000 and *Kollipaka* 7,000 respectively. In the inscriptions the village is described as Kollipaka

nadu, Pura and desa etc which was one of the biggest administrative divisions in medieval Andhra in the Telangana region for which Kolanupaka was head quarters.¹

Politico - Administrative centre :- The geographical analysis of Kolanu Paka region indicates the significance of this place right from the Mauryan times. The early Brahmi edicts found at Gajulabanda, Phanagiri and

Vardhamanakota clearly signifies the geopolitical importance of the region. After the decline of the Mauryas, Satavahanas rose to prominence in Deccan. Many of the Archaeological sites in the district yielded materials like coins, bricks structures as an evidence of the extension of the Satavahanas rule over this part of the country.

After the downfall of the Satavahanas the region came under the control of Vishnukundians.² It is evident from two copper plate grants records the construction of Buddhist Vihara at a place called Indra Pala Nagara i.e. Thummala Gudem. These evidence clearly indicate the importance of the regions in the early historic phase. But the village Kolanupaka is not traceable but it suddenly rose to Prominence at the time of Rastrakutas. The earliest record refers to Kollipaka found at Akunuru in Janagon Taluk of Warangal district, which is undated and does not mention any over lord. It states that Sankara gandarsa, the Mahasamanth dhipathi Jayadhara and Vittinaryana was ruling over Kollipaka Nadu 20,000. A certain udapayya seems to have been governing Akunuru and that someone appears to have made a gift probably of land to the basadi at Kollipaka.³ The inscription is important historically in two respects. Firstly, the region Kollipaka formed as an administrative division i.e. Kollipaka the village was headquarters. Secondly, this was centre and a strong hold of Jainism.⁴ The absence of epigraphical data on the village or Irrigation works. We may surmise that a number of villages settlements might have existed around the Kolanupaka region. So, the region has economically prosperous and strategically important that's why the village is constituted as administrative headquarters in the region. After the Rastrakutas the immediate successors were the western Chalukyas during the period the village developed as an important fortified capital. It was the head quarter of the vishaya comprising 7,000 villages. There are inscriptions ranging from the period of Tailapa II to Vikramaditya IV providing us the names of various governors ruling over it.⁵ In medieval times Andhra become the bone of contention between the Tamil and Kannada rulers. This region was also drawn out to a series of Struggles for its dominance some of the important battles were fought between the

Western Chalukyas and the Cholas of Tanjore.⁶ During the region of Somesvara I according to an inscription at Tirumala of Parakesari varman alias Udaigar Rajendra Choladeva in his 12th Year conquered, with his great army idai turunadu Vanavasi, Kollipakkai the Chola attack on Kollipaka took place in the year AD.1044 during the region of Somesvara I as his feudatory Singadeva rasa bears the title "Kollipakayam Kawanm" Protector of Kollipaka in AD.1045.⁷ In this connection, it is clear that the region had been a part of Chalukyan dominions from the earlier period and it continued so up to the end of their rule. Kolanupaka as an administrative headquarters the governors, higher officials soldiers and large number of service personnel might have since stationed at Kollipaka. Different social groups must have inhabited around the region.

Religious Cultural Centre: *Kolanupaka* was the centre for different religions affiliations such as Jainism, and Vaisnavism and Concentration for heterogeneous population of different faiths. The earliest record mentions a gift of land to the basadi at Kollipaka.⁸ The inscription belongs to the Rastrakuta period. During the Rastrakuta period Jainism received royal patronage in Telangana and Rayalaseema regions. Kollipaka was also one of the strong holds of Jainism in Andhra, another inscription dated AD 1034 mentioned that a gift of the Muppanahalli in Aluru Kampana 40 to a Jaina temple.⁹ The donor of the gift certain Aggalayya, of Jaina faith thus, it indicates that Jainism continued to receive that royal patronage in the successive periods of the later ruling dynasties. An inscription dated AD.1047 registers a gift of five mathas of the place by the merchant guilds of Aravas and the Gundas.¹⁰ It indicates that the village must have been the centre for the mathas before the record of the donation. From the beginning of the Somesvara period Royal Affiliation has shifted to Saivism. From then onwards upto a period of more than two hundred years all the records found at Kollipaka deal with grants, construction of Saiva temples.¹¹

This is the second factor that shaped the urban character of Kolanupaka owing to the Religious and cultural activities. An interesting inscription from Kolanupaka dated at 1279 belonging to the region of Rudramadevi, states that

Potinayaka caused a canal called Vamsavardhana to be dug and that Indusekhara of the Nidadavolu chalukyan family made a gift thirty Nivartnas of land for the worship.¹² Somanatha shares allotted to various professionals is also stated in the record.

Trade and Commerce :

The epigraphical evidences witnessed the growth of trade and commercial activities in the Kolanupaka region. Kolanupaka as a centre of Administration and religion contributed to the concentration of diverse occupational groups in the premises. Such as huge population could depend on agricultural surplus extension of cultivatable hinter land. Naturally it gave an impetus to the growth of trade and commerce in the temple and royal centres. In Kolanupaka trade and commerce Played rather a complementary than decisive role. The inscriptional references earlier to testify that the merchant organizations and the names of individual merchants such as aruvas, gavundas - nagarams & settis etc.¹³ All these evidences clearly indicate the flourishing conditions of Kolanupaka. It is clear that the trade also played a vital role in the growth of Kolanupaka as an urban centre.

Kolanupaka developed into an urban centre due to the fact that primarily it was a Strategic Political Administrative centre. It must be noted here that a separate administrative division with Kolanupaka as a provincial headquarters consisting of as many as twenty thousand villages was nearly created during the Rastrakuta period. This itself speaks of the utmost strategic and political importance of Kolanupaka during the times of Rastrakutas. This political character has continued during the succeeding centuries well up to 13th century A.D. However, as the above discussion suggest the urbanization of owed it growth to the polity and the encouragement of land grants. This process was supported by the religious factor in the form of construction of temples and associated with land and village grants resulting in the agricultural expansion and surplus production. This resulted in an increase population and temples played a vital role in involving all the sections of the society in their functioning. The hypothesis is further supported by the fact that after the 13th Century Kolanupaka lost its political and administrative character due to the political changes. The urbanization seems to have come to an abrupt end indicated by the absence of inscriptions from this place.

LANGUAGE AND CULTURE: THE 'HINDUSTANI' IN COLONIAL TRAVANCORE

T. Sakhariya

Introduction

Language and Culture are the main currents of study in the Linguistics Anthropology¹. Thus, the ethnological studies on linguistic groups further gave a fillip to the cultural studies in general. According to Pier Paolo Giglioli, "Under the label of 'language and culture', the linguistic Anthropologists study

topics such as the relations between world views, grammatical categories and semantic fields, the influence of speech on socialization and personal relationships, and the interaction of linguistic and social Communities"². From the ancient period onwards there were so many groups that arrived and settled in the land of Kerala with their own culture and dialects,

mainly for commerce and trade purposes. Nowadays, their language and culture has become a part of the land and their descendants lived in the region with their own dialects as their home language.

As stated by Edward Sapir that, "it is preferably true that history of language and history of culture move along parallel lines"³. With regards to, racial as well as the linguistic anthropology the Mohammedans⁴/ the Muslims in Travancore can be divided into three classes, viz., the successors of the early Arab and Egyptian settlers along with the off springs of the Muslim converts with the tradition of Malik Ibn Dinar and follow the Shafi School of Jurisprudence like the Jonaka Mappilas/Mappilas and Methans⁵. The other groups who had migrated and settled down from the east coast (Tamil regions) for the purpose of trade like the Thulukkans, the Labbais or the Ravuthars; the third group who were the settlers from the Northern and Western regions of Indian Sub continent like the Patanis⁶, the Dakhinis⁷, the Memons / the Cuthies or the Cutchi Memons,⁸ Syndiars⁹, etc . The first of these classes usually speak Malayalam, the second Tamil and the third Hindustani¹⁰.

The Dakhnis or Pattanis migrated to Travancore from the Deccan regions especially from the Bahmani Kingdoms through Tamil and Carnatic Regions. During the disintegration of the Sultanate of Madurai, a large number of Hindustani speaking Pattanis had migrated to the Venad regions and became the soldiers of the Venad rulers. After the formation of Modern Travancore under Marthanda Vrama, he had appointed a number of Hindustani speaking Pattanis as his bodyguard. They also invited large number of Pattans to the state of Travancore from the neighboring states for military purposes. The Military officials of the Maharaja of Travancore such as Khiladar, Razaldar, Sirkari-i-Munshi, Saphesaladar, etc were the Hindustani speaking personals¹¹. When the seaport of Alleppey was opened for trade by the reign of Karthika Thirunal Rama Varma (Dharama Raja), his Diwan Raja Kesavadas, in order to curtail the monopoly of Dutch trade at Purakkad, a large number of Muslims from Bombay regions were invited to the land for trade purposes¹². Thus, the Muslim

traders from Gujarat, Cutch and Sind began to settle down in the coastal regions like Alleppey, Quilon, Trivandrum and Kottar, with their mother tongue as Hindustani¹³.

However, the language Hindustani was considered by different scholars in different forms. Urdu scholars such as Nasir Ud din Hasmi, Moinudin Abdul Quadir Zore, Moulavi Abdul Haq, etc described it as Deccani, while presenting a paper in the Allehabad University in 1952, Ram Babu Saxsena, the famous author of the Tareekh- E-Adab Urdu had expounded that it as Deccani Urdu or Deccani Hindi. M Akbarudin Siddiqi delineated that this dialect was the vernacular of the Guzargah (way side Market), thus it was called by Gujari, Dekkani, Zaban -e – Hind (the Indian language), Musalmani Hindi (the language of the Muslims), Tulukbhasha (the language of the Turks), Pathanibhasa (The language of the Pathans), etc¹⁴.

As we know that the rulers of Travancore were the great patrons of language and literature. They invited scholars to the royal families as tutors especially Hindustani, English, Persian, etc. An official Neetu (Palm leaf Record) issued by the Maharaja to the Dewan Peshkar Venkitta Rao in 1818 shows that, after the death of Syed Mohamed, the Court Munshi for Hindustani and Persian, his Son-in-Law Mohammed Ali was appointed as the next Munshi with a monthly allowance of Rs. 100 by which Rs.35 as a pension to the deceased Munshi's surviving children¹⁵. The ruler cum scholar, Swathi Thirunal of Travancore has composed 31 Hindustani songs written in Malayalam script. Its said to have that the Mughal Ruler of Delhi had given a title Panchasari, a flag and the Urdu song, Nowbath (recite with the help of nine orgastra) along with nine Urdu Pattanis, which was used by the Maharaja at the time of Araat festival¹⁶.

With regards to the Hindustani¹⁷ in Colonial Travancore as well as Kerala, written in Nastaliq Script (Perso- Arabic Script) which was known as Dakhini (some are called it as Urdu or Dakhini Urdu)¹⁸. However, in the word stocks of Dhakini Urdu had included words from Sanskrit, Prakrit, Abhabramsha, Persian, Arabic, Hindi, Sindi, Rajasthani, Punjabi, Avdi, Marathi, Braj, Tamil, Kannada and Telugu¹⁹.

Nonetheless, there were very few Mohammedans in erstwhile Travancore whose mother tongue was Hindustani (Dakhini Urdu). As per the Census Report of 1875, there were 2844 people speak the Hindustani as their mother tongue, which was the 0.12 percentage of the total population²⁰. Among them 745 residing at Trivandrum taluk and other major settlements at Paroor (467), Quilon (293), Ambalapuzha (266), Agastheeswaram (242) and so on²¹. According to the Census of 1901, the number of Hindustani speaking persons in Travancore were 5944 including 3672 males and 2272 females and major portion of the population was concentrated in the Western division of the state (3485)²². Though, the report stated that, in the case of Urdu speaking population of the state were only 6²³. As a spoken vernacular language of the state, the position of Hindustani was 6th after Telugu²⁴. In the Report of Census of 1911 stated, there were 4647 people in the state were used the Hindustani as their mother tongue²⁵. The largest population of them concentrated in the taluks of Trivandrum (1649) and Serthalai (789)²⁶.

According to the Census of 1921, the total number of Hindustani speaking Mohammedans in the state was only 2889²⁷. The Hindustani was also included in the western language group including Hindi, Gujarati, Patnuli, Punjabi, Urdu, etc. At the same time, Urdu as a separate entity and was spoken by a number of 224 people²⁸. They have practically confined to Trivandrum and Kottar. The Chief Muslim centers of erstwhile Travancore were Alleppey, Quilon, Edava, Manakad, Thiruvithamcode, Edalakkudi and Alwaye.

In 1931, there were 7188 Dakhani Muslims of whom some were Hindustani speakers and some probably Gujarati speakers²⁹. At Alleppey, Quilon, Edava and Alwaye the local Mohammedans speak Malayalam; they have no fascination for Urdu. The floating merchant population at Alleppey was of Gujarati extraction with Cutch or Gujarati as their mother tongue. At Manakkad, they have equally divided between the Hindustani and the Tamil Muslims. Manakkad is / was a centre of Urdu speaking Cutchi Memons and the Dakkini Muslims. At Thiruvithamcode, they are all Tamil Muslims. At

Edalakkudi, a few speak Hindustani and the majority being Tamil Extraction. In the taluks of Nedumangad, Meenachil and Pathanamthitta, there were a large indigenous population of Mohammedan agriculturist and traders with Malayalam or Tamil as their mother tongue.

Hindustani Literature in Travancore

The Hindustani was written not only in Arabi- Persian script, but also used Roman, Devanagri and Arabi- Malayalam. It was around 1885 A D (A H 1313), *Nusrat Ul Lisani Bilugatil Hindustani* (the Hindustani Primer) on Arabi- Malayalam script was written by Hydrus Musaliar of Alleppey³⁰ and which was printed in the Amir Ul Islam Press, Thalassery³¹. He was the tutor of the Hashimia Madrasa of Alleppey. An Urdu- Malayalam Dictionary, which was compiled by an anonymous scholar, who lived in the patronage of the Travancore Maharaja before 400 years ago, was kept in the Manuscript Library of the University of Kerala³². Social reformers like Mohammed Mahin Hamdani Thangal and Vakkom Abdul Qadir Moulavi were great scholars in Hindustani (Urdu) too. Hamadani Thangal had used the Urdu verses of Sir Syed Ahmad Khan and Althaf Hussain Hali in his speeches³³. Sulaiman Moulavi, a Cutchi Memon of Alleppey was famous in Urdu scholarship and he taught Hindustani and Persian to Vakkom Moulavi. Therefore, Vakkom Moulavi translated Ahul Sunnah val Jama'h, an Urdu work of Syed Sulaiman Nadvi into Malayalam³⁴. M'arif, an Urdu magazine edited by Sulaiman Nadvi, was circulated among the Hindustani Mohammedans of Travancore. Vakkom Abdul Khader Moulavi, the revivalist among the Muslims of Travancore, was a subscriber of this Urdu Magazine³⁵. So many scholars in Travancore had made tremendous works for the propagation of Hindustani teaching in Travancore. In 1925, C P Narayana Pillai of Panamana wrote a primer in Malayalam titled "Hindustani Prabhodini" which was published by Reddiyar Press and Book Depot, Kollam³⁶. 'Urdu Teacher', a textbook for the training of Urdu language was written by A Mohammed. He also translated Al Ghazali of Allama Shibli Nomani in Malayalam³⁷. A famous Urdu poet of Travancore, Abdul Hameed of Manacud wrote poems such as Na'th, Hamth, Marzia, etc, in Urdu under the pen name 'Quresh'³⁸. A Cutchi

Memon lady by Ayisha from Thalassery, who was settled at Trivandrum, wrote poems in Urdu which was published by Northern Indian magazines like Shair. The Cutchi Memons built a Mosque at Alleppey known as Nurani Masjid in 1262 A H (1845 A D) in which the Friday speech (Qutba) was delivered in Urdu till 1988. The Bijili family of Travancore was a Dakhini family popularized the teaching and learning of Hindustani³⁹. Though there have no direct contact with the language of Persian, a number of Persian words have been borrowed from it through the Dakhini. The Mappila poets of the 19th Century have also carried the themes, terms and phrases from the Arabic – Persian literature, which was prevalent in Dakhini too.

Hindustani teaching in Schools

Hindustani Munshies were appointed, as already stated, by the Maharaja to the royal houses as tutors. In the Administrative Report of 1872 stated that there was an appointment of a Hindustani Munshi by the Government in the His Highness the Maharajas English School, Trivandrum with the view of encouraging the spread of education among the Muslim subjects of the state⁴⁰. During 1875, the Maharaja of Travancore had appointed Syed Leffiudeen as the Hindustani Munshi to the His Highness the Maharajas School, Trivandrum⁴¹.

The Residency Escort School, perhaps the first Hindustani / Urdu School in Kerala, was established to teach Sepoys who had not completed three years service. On 10th March 1899, by an order of J D Rees⁴², the British Resident of Travancore, further, this school was brought about to teach the children of the escort men and also the children related to the Residency⁴³. On 22nd March 1899, Sayed Abdul Jaleel was appointed as its headmaster with a personal allowance of Rs. 5 per month⁴⁴. However, this school was handed over to the Travancore Government in 1899 itself. Thus, the Hindustani School was started in Trivandrum as an aided school for teaching Hindustani to the children of the Sepoys of the bodyguard⁴⁵. The Hindustani Escort School was the joint efforts of the chief secretary, Mr. Watts and the Hindustani Mohammedans with the help of Commandant Col. Kitchen.

In the first decade of 20th century, the Maharaja of Travancore had given permission to the school and granted a piece of land at Thycaud to Sayed Abdul Jaleel, the headmaster to build his quarters⁴⁶. In 1902 (1077 M E), it was converted into a Government School known as the Residency Escort Lower Grade Vernacular School and the ownership of the land had handed over to the Government free of cost on public good⁴⁷. This became the one and only Hindustani School in Travancore.

P M Ismail Munavari, a Dakhni Muslim, the medical practitioner by profession, was nominated as the member to the Sri Moolam Popular Assembly of 1917 (12th Session) demanded for the promotion of elementary schools for the state and also the appointment of Arabic Munshis. The Arabic Munshis for such schools should be versed in Urdu or Hindustani, as the Arabic Textbooks prescribed for the schools contained only Urdu interpretation⁴⁸.

On 21st August 1920, the Government sanctioned to open Class VI to the Residency Escort Lower Grade Vernacular School with effect from the academic year 1920-21 and sanction was also accorded to the Headmaster of the school had to given a pay of Rs 17 per month from the academic year⁴⁹. In an inspection by the director of Public Instruction, L C Hodgson submitted his report to the Government, in which he stated that the students strength in each class were inappreciable⁵⁰. Thus, the Government decided to cease the functioning of the school.

On 24th September 1927, a group of Mohammedan inhabitants of the cantonment, Trivandrum submitted a memorandum regarding the discontinuance of the Hindustani Primary School, Trivandrum⁵¹. They demanded to allow the continuance of the school as a special case. On 26th January 1928, the Director sent their report which stated that, "the strength and attendance in the School have not been satisfactory so as to justify the continuance of the school...the school at the inception was intended to impart instruction in Hindustani to the children of the Sepoys of the Bodyguard among whom there were then several Hindustani Mohammedans...these Mohammedans have since become domiciled

and do not now care much for Hindustani"⁵². He also stated that, "the teaching of Hindustani in the school is very poor and that there is hardly any scope for Hindustani school in the state". The Inspector of vernacular school had forwarded his report to the Government stating that, "the school has only two classes and it is seen that out of 16 students in Class I only 3 are learning Hindustani and that in Class II there is no Hindustani at all"⁵³.

In 1928, on the basis of the Report of the DPI, the Government of Travancore had discontinued its working as a departmental institution. The report of the Chief secretary stated that, "it is unfortunate that the school situated in the place where there is a large population of Mohammedans should not be popular and that the petitioner who styled themselves as leaders of the community and who have protected against the contemplated abolition of the school, should not have persuaded their brethren to send more of their children to the School"⁵⁴. On 5th May 1928, as per the letter of the DPI (No. 116, dated 26th January 1928) the Government sanctioned the Hindustani Escort School at Thycaud being closed from the end of the academic year 1927-28⁵⁵.

On 15th December 1927, Pir Mohammed Ismail Munavri (Pensioned Doctor, Trivandrum), a nominated member of the 23rd Session of the Sri Mulam Popular Assembly of Travancore had submitted a representation (Rep. No. 78/ Education) to the Dewan regarding various issues connected with Mohammedan education in Travancore⁵⁶. In his representation regarding the Mohammedan Education the third point was related to the Hindustani or Dakhini Urdu education in Travancore. Pir Mohammed Munavari represented that, "the Arabic Munshis should possessed knowledge of Hindustani (Dakhni Udru), that the Hindustani should be treated as one of the Vernacular in the case of Dakhni Muslims students and that Arabic-Hindustani Munshies should be appointed in all departmental schools having 25 or more Muslim students. As reply to the Pir Munavari, the Dewan stated that, "I must confess that, it is with very great surprise that I now discover that the Arabic Munshis do not possess knowledge of Urdu. I thought the two languages always went hand in hand here as elsewhere in India. I

shall ask the Director to consider whether it is possible to accept the suggestions. No less surprised am I to find that there is no Urdu teacher in the S M V High School, Vanchiyur. Not merely it is necessary that Muslim boys should be given the opportunity of taking up Hindustani as their optional subjects, but I think it is advisable that students of all communities should have the opportunity of learning Hindustani, because without a knowledge of it, stay in other part of India is certainly difficult and it will be well that pupils in Trivandrum are given the chance of acquiring early in life a knowledge of the Lingua Franca of India"⁵⁷.

As a reply to the representation the Chief Secretary of the state pointed out that he had sent a letter (Letter No. 1864/ 2367 of 1102 M E, dated 10th December 1927) to the DPI to enquire and report whether it to be possible to accept the suggestions on the matter⁵⁸. On 8th October 1928, the DPI submitted his report regarding the possibility of the teaching of Urdu or Hindustani in schools: "As the report from the Inspector of Vernacular Schools that the Hindustani schools as such are not likely to thrive in the state. Pir Munavari, the member had contended that Hindustani should be compulsory subjects for the examination of Arabic Munshi. The Mohammedan Inspector for schools of Travancore stated that, if Arabic made compulsory for the exam, there will be very few to appear for the Arabic Munshi Examination and he suggested that if considered desirable, it may be made one of the optional like either Malayalam or Tamil. This may be a concession in favor of the few persons who may not have a chance to appear for the Exam with Malayalam or Tamil as optional"⁵⁹.

The DPI also stated that, "during the period of L C Hodgson (former DPI), he made a detailed enquiry with regard to the real demand for the study of Urdu or Hindustani in Travancore and he came to the conclusion that there was no such demand. It may be mentioned in this connection that the fact that the only Hindustani Departmental School in the state which was located in Cantonment, Trivandrum, there the largest number of Hindustani speaking Mohammedans in the State reside, had to be closed for want of sufficient number of pupils".⁶⁰

Pir Mohammed Munavari, in his representation stated that there were a large number of enquiries for the starting of Hindustani in the Sri Mula Vilasam School, Vanchiyur, Trivandrum. As the enquiry of the DPI in this regard, the headmaster of the S M V School, Vanchiyur stated that, there is no demand for teaching of Urdu in the this school as the Muslim students in the lower classes are satisfied with the Vernaculars they are studying and their parents do not find any practical benefit in learning Urdu⁶¹. After all the DPI had recommended that the Hindustani or Urdu be included as an optional subject, like Malayalam or Tamil, for the Arabic Munshi Examination as well. On 8th January 1929, the Government had informed the DPI that (R. Dis. No 39 of 1929 / Education.), the Government did not see the necessity to introduce the teaching of Hindustani as a compulsory subject in schools. However, the Government had been sanctioned accordingly to include Urdu or Hindustani as optional subjects for the Arabic Munshi Examination in Travancore⁶². In 1932, the Cutchi Memons of Travancore established the

Allama Iqbal library at Trivandrum in order to propagate Urdu language and literature⁶³. For the propagation of Urdu, the Urdu loving people of Travancore had started a Madrassa named Anjuman Ta'edul Mussalmin. With the help of Abdul Hameed, a branch of the Madrassa named Adabi Saman Madrassa in the Contonment, Trivandrum⁶⁴.

Conclusion

The linguistic minorities of the state of Travancore with Hindustani as a Lingua Franca had made their own cultural identity which molded the state into an ethnographical laboratory. They formed cultural groups within the communities, such as the Muslims as well as the Hindus by using Hindustani with Perso-Arab script and Devanagari Script, follow Hindustani Culture – food habits, Clothing, life style, etc which was alien in nature. They were the trust worthies of the rulers also. However, it was the Hindustani language that brought about a cultural symbiosis in Colonial Travancore.

LIFE AND WORK OF DR. HARRIET (HATTIE) ELIZA PARKER- PIONEER WOMEN MEDICAL MISSIONARY OF AMERICAN MADURA MISSION

Dr. J. Saral Evangelin

Introduction

By the dawn of the nineteenth century AD, medical apostolate became the mainstream of missionary methods across the globe. From the beginning, medical work was recognized as an important means of evangelism. It was the door of approach, and often the "most effectual" door of approach to the heart of the patient and the necessary embodiment of spirit of Christianity whose founder (Jesus Christ) Himself was a great healer. Within decades their medical services became increasingly formalized and professionalized. Although the pace of change varied across different mission fields, denominations and stations, the principles of expertise and efficiency became the underpinnings of the missions drive to modernize their health apostolate. The forms and functions of medical missions were transformed gradually into those resourced with fully qualified doctors and nurses who in their turn gradually replaced the partially trained predecessors. Their missionary medical practices began to increasingly focus on highly equipped hospitals with advanced therapeutic efforts.

The Need for Medical Missionaries

In general, the attitude of Indians and Hindu community towards medical mission can be better expressed in a single word 'indifference'.¹ The orthodox reactions of the society hated medical missionaries. Once a Brahmin who had a dangerous tumour refused to consult the foreign missionary for the fear of pollution. Then he went and consulted with a Hindu priest. After much debate they left it to the idol to indicate its choice in this matter. Two bouquets of flowers, one white and other red were laid before god, and a little girl was sent in to bring out whichever she chose. If she brought the red it was a token of the god's disapproval, if white, of approval. Luckily white flowers were brought out, so operation was done and that man's life was saved.² When the missionaries came, fierce scourge of cholera was prevalent in Madurai. From six to eight persons died daily. People were terrified and asked the magician to drive the spirit away. But the sad thing was even the magician died of

cholera. That made the people to ask help from the missionaries. With the good supply of medicines and prayer they were able to fight against the disease and were able to save the life of many. This made the people to look upon medical work of missionaries.³ The native doctors of Madura found it inconvenient to have the people flocking to missionary doctors for medical and surgical help. So they determined to destroy missionaries' life by witchcraft.⁴ With the treatment of missionary doctors many blind came to receive sight, and many enormous tumours were removed. These medical missionaries never let the evangelistic and medical labors clash with each other. They allocated different timings for medical and evangelical work.

When missionaries began to visit zenanas and the villages, they saw the dreadful neglect of women's health. They were fully aware that it was more important for a woman to be healthy. Since they realised that sick mothers were unable to provide adequately for their families due to their physical and intellectual needs, they came forward to relieve them of their sufferings. They understood that through persuasion and follow up the Indian women can be conscientised on the need to be healthy. Despite their success in establishing hospitals and other medical amenities, they still found the creation of health awareness in the Indian women's minds a big problem.⁵ Also in the wake of their medical apostolate they cared for the orphans and destitutes as allied medical mission activities.

Dr. Eliza Parker (1867 -1953)

Dr. Eliza Parker was born in 1867 to Sterne Oscar Parker and Cordelia Bohanan of Putney of U.S.A. She began her medical services through missionary activities at Madurai from 1895.⁶ This remarkable dedicated missionary healed the sick, offered hope to despaired persons. It resulted in the arrival of many other missionaries from the U.S.A.⁷ Sent by WBM, Hattie Parker began her Missionary work at Pasumalai at the age of 27.⁸ Her ministry was sponsored by the Pilgrim Congregational Church of St. Louis Missouri⁹.

She graduated from the Women's Medical College of the New York infirmary in 1890. Perhaps the idea to go to India had been in her mind from childhood days. The church journal namely The Missionary Herald was a regular reading fare in many homes in New England, and probably it might have infused in her the thought to go to India. Her families association with the Congregation Church at Putney where Christian messages from across the globe gathered, inspired her with the idea of joining a mission abroad.¹⁰

The Medical work by women and for women

The medical work for women was first distinguished from the general medical work in 1877¹¹. **Dr. Harriet Parker** arrived for this work in November 15, 1895, and on the 15th September 1896 the mission passed the following, "In view of Dr. Harriet Parker's having passed her first examination in Tamil voted that she be placed in associate charge, with Van Allen, of the medical work for women in Madura."¹² In January 1898 Dr. Parkar was placed in full charge. As the work grew the accommodation in hospital building was insufficient, so she built an annex called "**Harriet Newell Hospital Annex**".¹³ Countless thousands came to know her as their "*Doctor Ammal*" who came from America to care for them because her Christian faith taught that all men are brothers.¹⁴ Dr. Parkar was assisted by **Mademoiselle Zeline Eugenie Cronier**, who came to Madura in 1897 from Paris to minister in Mission Hospital. Cronier was her devoted friend and they worked as a team and tended thousands each year. She was nineteen years older than Dr. Parker, even then she worked tirelessly for fourteen years as Parker's capable assistant in all facets of her work.¹⁵ She was an ideal companion to Dr. Parkar in her personal relationship, hospital ministry and in her motherly care of the little ones left in the tender mercies of the doctor. But she went to be with the lord on 14th January 1904. In the same year Miss Pichaimuthu, daughter of one of the pastors connected with the mission, who had been trained as a Hospital Medical Assistant in Madras Medical School, took her place in the hospital, and has become a most valued assistant. Many faithful nurses were trained, some of whom have gone to work in other missions, even as far as Mysore City¹⁶.

For her first seventeen years (1895-1912) in India Dr. Parker was the only doctor at the hospital and the only women doctor south of Madras. From the beginning she trained native women to help out as nurses and compounders and some proved to be remarkably able and dependable. For the year 1896 Dr. Parker reported treating 10,670 patients with the help of several nurses and a compounder in training. The Hindu community furnished nearly two-thirds of the patients, native Christians composed most of the other third. The Mohammedan attendance varied between 800 and 1,800 a year, touching its lowest point during the scare about plague inoculation in 1899¹⁷. All the helpers are Tamil Christians, trained in this mission. Few patients have come to baptism, though a good number have privately professed faith in Christ and a desire to follow him¹⁸. Dr Parker, in one of her letters to her father described her first experiences in "*Itinerancy*".¹⁹

Parkers Itinerancy – Medical Visitations

She has written that she enjoyed the work away from the hospital and tried to make several trips each year to the outstations. For her it was travelling by bullock cart, lodging in a tent and working under the most primitive conditions. Hundreds of patients came, some walking miles, and Dr. Parker with her assistants tried to furnish remedies and treatments, referring more serious cases to the hospital in Madura. The cases of women who entered the hospital for treatment and returned in health to tell an entire village about the kindness of these Christian women missionaries, was repeated over and over again. Restored patients made the most effective evangelists. Dr. Parker could be away from hospital only for few days and at that time Mademoiselle Cronier took care of the hospital.²⁰

Dr. Parker in her letters to home expressed the hope that the deputation team²¹ which made a tour of inspection late in 1901 would give them a good report. They did indeed. In the reference to the medial work at Madura they wrote, "*The hospitals are tested to their utmost capacity and numbers are increasing. The missionary physicians are to the people the best illustration of the life of Jesus Christ. And these hospitals need enlargement.*"²² This was the

year that the women's hospital handled 41,010 cases not including the 400 visits that Dr. Parker and Mlle. Cronier made to patients home.²³ Reporting on the medical work at the mission for the year 1905, Dr. Van Allen wrote, "*A clinic of more than 100 patients a day, hospital in-patients, patients in missionary bungalow, considerable outside patients, constant calls to out-stations, seldom a night of unbroken rest- all this makes one to ask how long Dr. Parker and Mlle. Cronier can be expected to continue at the above rates.*"²⁴ This report clearly indicates the dedication and the hard work of these dedicated women missionaries.

Growing strength of Patients and need for Commodious Hospitals

The small hospital where Dr. Parker began her work became over crowded in just a few years. To make more space, a new separate dispensary was built, and the interior of the hospital was rearranged to gain as much space for patients as possible. Stairs were removed, halls and bathrooms set up with patients' beds and even verandas were used. These temporary solutions were just that, and it was obvious that a new hospital was needed as the number of patients increased each year. It was a great day in the history of the Madura Mission when the cornerstone for the American Hospital for Women and Children was laid in the fall of 1916. Hospital for Women and Children carried on for many years by Dr. Harriet Parker Vaughan. Then it was under the care of Dr. I. M. Roberts, Dr. A. M. Otto, Dr. Hilda Smith, Dr. Grace Kennett, with Miss Lucile Lee as Superintendent of Nurses. Also a Nurses' Training School was started with Mrs. E. L. Nolting as Acting Superintendent and 60 Indian girls were in training as nurses in the year 1900. One of the finest pieces of work of Dr. Hattie Eliza Parkar was the "Birds' Nest," a home for neglected girl children, carried on in connection with the Hospital²⁵. The Hospital evolved from a small dispensary established by the Missionary Doctor C.S. Shelton in 1849 which, in the next two years, became a hospital. Till 1953 this hospital functioned as two separate units namely the hospital for women and children and the Albert Victor hospital for men, later, as the Willis F. Pierce memorial hospital for men. These two hospitals were

amalgamated in 1953 with a new name of Christian Mission Hospital. Many Doctors of Western and Indian Origin contributed untiringly to the steady growth of this hospital in the last one and a half century. Memorable among them are Doctors Paulin Root, Harriet, E. Parker, E.W. Wilder, Chellappa, J.J. Barnes, Betty Chinniah,²⁶ Indra Raja and Rajeew Chelladurai, A.K. Fenn. The Christian Mission Hospital is 150 years old. Now it has 350 beds to treat inpatients. It has most modern equipments and assistants with dedication to provide all kinds of specialised treatments.

The School of Nursing- Medical Training Institute of the Mission

The School of Nursing was started in 1913 with lower grade Nursing and Midwifery Courses in Tamil in the Hospital for Women and Children. In 1934 higher grade nursing for men started. Higher grade General Nursing and Midwifery Course began in 1951. Many men and women of nursing background have toiled to nurture this institution to its present status and memorable among them are Sisters, Fint, Betty Taylor, Wilson, Raynert, Attwood, Margery Thomas, E.B. Lang, D.S. Hoath, S. Perera, Mr. T.J. Thasiah and Mrs. Kamala Roberts. The School was upgraded as a College in 1993 with a new name C.S.I. Jeyaraj Annapackiam College of Nursing and Allied Sciences, with a generous financial assistance from the Jeyaraj Chelladurai Trust, Madurai.

Sahaya Veedu

Dr. Parker was relieved from the responsibility of the hospital work in Madura on request. She got married to Rev. Vaughan and settled in Manamadura. So she started another project. She set up a combination 'Maternity-Baby Welfare Centre' in Manamadura, called it '*Sahaya Veedu*', meaning House of Hope. '*Sahaya Veedu*' was very brisk from the day it was started. Within a year of its establishment, the records showed that the doctors had performed 52 operations, made 100 house calls, and treated 6,207 patients.²⁷ They collected fees in a few cases, but most of the time their services were without charge. Dr. Parker enjoyed taking care of mothers and babies.

Birds Nest Foundation Home for Orphan Girl Children

Origin of Birds Nest

Birds Nest was founded by Dr. Hattie Eliza Parkar (Dr. Harriet Parker) a missionary of American Madura Mission in the year 1900.²⁸ One day a problem arose at the hospital that, "what should be done with a beautiful four year old girl who had recovered from her illness but had no home to go to". Both of her parents had died of cholera a year ago, and the aunt who undertook to care her had died of the same disease while the little girl was in the hospital. Dr. Parker was so charmed by this child that she took her to live in her quarters in the bungalow where Mlle Cronier showered her with loving care too. She was the delight of their days, Dr. Parker acquired a daughter, never dreaming that this was the beginning of a whole new project. God according to His purpose widened the vision and mission of Dr. Parker through Grace Kennet.

A few years later this child, whose name was Grace Annammal Kennett, was joined by another little girl whom Dr. Parker named Zeline Parker in memory of Mademoiselle Zeline Eugenie Cronier. Two girls became as close as natural sisters and being the eldest, they took some responsibility for the care of other children as they came along. By 1910, Dr. Parker had adopted five more such homeless children and living space became a real problem. She fixed up small store room for the children and when someone commented that they looked like birds in the nest, the label lasted. Therefore the home for these children was called the "*Birds Nest*".²⁹ In 1914, ten more new birds arrived and Dr. Parker not only had big housing problems, but financial ones as well. The house was crowded beyond description but somehow she founded a temporary larger home. The generous benefactor Miss Emily Wheeler, helped to solve money problems.³⁰ She continued to be a most faithful partner not only with personal donations, but also organised fund raising through pledges, persuading church groups to sponsor some of these children, etc. Contributors from USA found it personally gratifying when Dr. Parker sent reports and photos of children they were supporting. Some children became pen pals of Birds Nest

children. Children in Birds Nest learnt English along with Tamil.

The Birds Nest had become an institution, not according to any thoughtful plan, but as a loving Christian response to the desperate needs of innocent children. This was a private venture and was not funded by the Women's Board of Missions (WBM) or AMM. Dr. Parker found some sponsors who contributed money and gifts and Indian Government also gave some significant grants. By nature she had a tender heart of a Mother Bird, so she was quite natural with the orphaned children. She treated them as if they were her Children. It is a combination of orphan asylum and, founding home.³¹ As the bird nest is closely associated with the Mission Hospital, many of the birds came directly from there.³²

As the Children at the Bird's nest grew up, it kept Dr. Parker busy finding ways and means to help each one, find an occupation appropriate to their talents. Finding and managing funds for this orphanage was a worry at times, but somehow the needs were met. At one point Dr. Parker decided fifty birds would be the limit, but when another child came she reasoned "*to refuse this child is like saying that the Lord can feed fifty but not fifty one.*"³³ The child was welcomed to the nest, and before another day passed, Dr. Parker received an unexpected donation which eased the most immediate financial pressure. All the Children attended the school at the Birds nest. Then they went to the schools run by the mission and whenever possible they sought further training for an occupation. It was Hattie's dream that these unwanted abandoned children should be restored to health, reared in a loving Christian home and trained to take their places as useful contributing citizens.³⁴ Birds Nest had little waifs, deserted babies, and homeless children and out of it have come doctors, nurses, school teachers and workers in several callings.

Bird's Nest School

As there were many traffic problems for the children, Dr. Parker decided to have school in the Bird's Nest campus itself.³⁵ Bird's Nest and its school gave importance to vocation oriented education so that the children could learn the dignity of labour. They were taught "*to minister and not to be ministered unto*"; the

inmates quite easily learnt these Christian principles very early. The result was that many became professionals in many fields. The American Board was ready to lease a piece of land in the campus of Rachanyapuram to the Bird's Nest foundation for the purpose of building a home for the Bird's in the country. Here they could attend the school. The Bird's Nest School was commended on inspection, with the words, "First-rate teaching." "A high grade of efficiency."³⁶

Last days

In the year 1921, Dr. Parker was honoured by King George V and the government of India. She was awarded silver Kaiser-i-Hind (Emperor of India) medal for distinguished service to the people of India. This was considered to be the highest award for public service. It was an expression of recognition and gratitude for this American doctor's untiring efforts at the women's hospital, the Bird's nest and the leper asylum at Dayapuram.³⁷ Encouraged by human counselling offered by Rev. Vaughan, Zeline Eugenie Cronier³⁸, Otta, Van Allan, Sr. Hoath, Mr&Mrs.Chandler and Mr & Mrs. Wallace, the fellow missionaries, she was able to identify the need for her philanthropic services.³⁹ She married Rev. Stanley Vaughan on 24 May 1924 at the age of 57. Continuing poor health of Rev. Stanley Vaughan forced them to retire and they were given retirement by the ABCFM Board and ordered to return home for treatment in January of 1934. Even when she was in Ontario, Canada for Vaughan's treatment for cancer, she was busy raising fund for Bird's Nest. Rev Vaughan passed away on 28 November, 1936. Dr. Parker's family hoped that she will stay in American in her retirement years, but Dr. Parker returned to India to her home and children in July, 1937.

Dr. Grace Kennet adopted daughter of Dr. Parker arranged for Golden Jubilee celebration on November 1945. Fifty years since Dr. Parker had arrived in India. Dr. Parker was showered with gifts and overwhelmed with fifty garlands. Bird's Nest children sang a song and presented her with a lovely silver bowl, plate and best of all a slender gold chain with a thin gold star pendent with its five points engraved: Hospital, Birds Nest, Dayapuram, Sahaya Veedu and

Restabit. Dr. Parker developed the problem of failing vision and hearing. Her health started to deteriorate and went to be with the Lord on 27 February 1953 at the age of eight five. There is no way to know how many hearts and bodies knew her healing touch. Small in stature, she was gigantic in wisdom and compassion. When she went into her final rest, a great multitude grieved for their "Doctor Ammal" She was buried near her old friend Mlle. Corner in "Kakkathoppu" and her tombstone is inscribed by her children⁴⁰:

*"Beautiful rest for the weary
Well deserved rest for the true.
When our life's journey is ended,
We shall again be with you."*

Conclusion

Hattie was a teacher, mother, friend, philosopher and guide to women of the region. The children of that place captivated her attention.⁴¹ For 45 years, she accomplished her services uninterruptedly. The small hospital where Dr. Parker began her work became overcrowded in just few years. As she was a medical graduate, she was able to understand the needs of doctor's service in a backward area. The orphan girl children and the abandoned were all patronised. For them she founded Bird's Nest. To restore the health of the abandoned children and to make them useful citizens, she involved in rendering free medical service to the neglected poor of the remote villages.⁴² She was well supported by Rev. Vaughan who was her husband and a Canadian missionary. He was also an inspiration for Hattie Parker because of his founding of a leprosy hospital at Dayapuram, (city of Mercy) in Manamadurai.⁴³ She helped the lepers and founded a hospital for them in Dayapuram in 1913. Dr. Parker purchased six acres of Government waste land at 1500 feet below kodaikanal hills and built a four room stone house on a steep side hill there. She called it "Restabit" which was her own personal retreat centre. She often took some of the children with her, especially those whose health was fragile and needed a little personal attention. The whole work of Dr. Parkar was nothing but a fulfilment of their early dreams and manifestation of their readiness to positively respond to God's calling to serve

humanity in the world beyond the borders of their nations, races, colours and creed. Amidst hot tropical climate, language problems, hostility of native governments, wide spread ignorance of people, non availability of basic hygiene including unsafe drinking water supplies, superstition, poverty, disease and starvation, she

carried out her missionary services. As the torch bearers of the Gospel ways and values, wherever she went and served, she lit the benighted souls with love and compassion which still enable their offsprings find light even today.

4. Witchcraft was done against Dr. Scudder and his assistant. They killed some animal probably a sheep, took its blood cooked it with rice, brought it to the street near the mission compound, spread it out, and then made two images, one to represent Scudder and the other his assistant and placed them near the sacrifice. A nail was pierced into each of the images, expecting that their victims would be destroyed at the same time. Two conjurers well skilled in the black art were hired to do this. Scudder's assistant had been quite ill, and they must have expected him to be an easy victim but he recovered. Nothing happened to two of them. So the conjurers said white skin impervious to witchcraft. Ref: J.S. Chandler, *Seventy five ...*, *op.cit.*, p.131.

ROLE OF POLITICAL SCHOOLS IN THE PROPAGATION OF LEFTIST IDEOLOGY IN ANDHRA

Savithri Kandula

During the British ruling period, Indians faced many problems and struggles. At the same period due to October revolution in the year 1917 formed Communist government in Russia. Indians are attracted by the Russian communism Ideas and theories. In British ruling period, Indians are faced socio-economic problems. To liberate people from these problems, few of the national leaders attracted to communism and formed the communist party in India. The communist party of India was born on December 26th 1925 to serve as a political platform for both the leftist intellectuals and also the labour forces in India.

The growth of the communist movement in Andhra districts took place in different stages. Puchhala palli sundrayya played a vital role in developing the communist movement in Andhra who belongs to Alaganipadu village in Nellore district. When he is studying in Madras Layola college he was influenced by HD Raja's lecture on communism. Along the way his colleagues Kambhampati satyanaraya & P.K Narasimhan were in support of HD Raja's ideologies. After one year Ameer hyder khan met P.Sundarayya at Bangalore and invited him to join the communist party to take forward of the communist activities.

Amir Hyder Khan started Young workers league in 1932 and recruited K.Satyanarayana and P.Sundaraiah into the communist movement and encouraged to become active participants in the party programs and a branch of the communist party was established in the Madras city in the year 1934. When Amir Hyder Khan who is arrested due to convict of the Meerat Conspiracy case, in his absence P.Sundaraiah taken responsibility to build up the communist party in Andhra region.

The first region level conference was held in 1934 at Patamata (Bezawada) and many representatives from various districts attended the conference. The conference selected a seven member state level organising committee which comprising of P.Sundarayya, P.Narasimha Murthy, M. Chandra Sekhar Rao, ch.Vasudeva Rao, T.Venkata Chalapati, A satyanarayana and

K. Seshaiiah. The committee taken a resolution to form a labour protection leagues in all over the region through in which the party intended to spread the communist ideology and create the awareness in the youth.

In 1934 Puchalapalli Sundaraiah formed a 'Labour Protection cell' in Alaganipadu village of Nellore District. This was the first socialist activity in Nellore District. Later in 1937, Vennelakanti Raghavaiah formed a 'Andhra State labour protection cell' in Nellore. In this movement the communist party cell conducted a meeting in which M.N.Roy acted as a Chairman and V.Raghavaiah was elected as a State Secretary by the Andhra State Labour Protection Cell. And Also D.Balaramireddy, P.Sundaraiah, J.Ramalingaiah and K.Satyanayana were elected as a members in that cell.

In 1936 November, communist leader Mr.Donge visited in Nellore district and organized the several youth meetings and motivated against imperialism, in this time his speeches were motivated to the youth about communist policies and theories. In 1937 the socialists organized Andhra state students meeting, Batliwala attended the meeting, and visited the Nellore, Kavali, Venkatagiri towns and speeches about socialist policies. In 3rd September 1937 Batliwala speeched against imperialism in Venkatarigi meeting. His speech was impressed to the people, by this reason Batliwala arrested and sentenced for six months imprisonment.

Later in 1937 November, Jayaprakash Narayana who known as National leader visited the Nellore district and propagate the socialist theories by his speeches. At the same time students who belong to V.R. college attracted by leftist ideas, theories and later they organized a student federation. The first student meeting was held in 1938 January 29th and 30th. The Andhra State Youth Association of the Congress socialist party conducted a summer political school at Kothapatnam near Ongole in Guntur District from 1st may to 10th June 1937 and nearly 180 students were attended

from all over the Andhra. Further another camp was also organized in Manthenavaripalem in Guntur district.

The Kothapatnam political school was banned by the Madras Government and later Students and organizers were later charged by the Police. The government filed a case against sixteen members and sentenced six months jail including Vasireddy Sivalinga Prasad, Munipalle Ramarao, Kollavenkataiah Puchhalapalli Govindamma, Ravi Adisheshaiah, Biram Ramanadham and Pusupati Narasimha Raju, Baswareddy Sankaraiah, Pedavalli Sri Ramulu of Nellore District.

The above two schools formed a number of well trained activists in Nellore district. After completion of these schools the communist party membership increases highly in Nellore district Alluri Rangaiah, Bhimavarapu Seshiah, Ramineni Akkaiah, G.C.Kondaiah, Pamulapati Narsaiah, Ganga pedda Kondaiah, Gudipenchalaiah, Nukalapati Sankaraiah, Kota Appaiahsettim Amsa Sundara Rajan etc people was joined as a party members by 1938. In 1938, the party organizers decided to develop the party activities elaborately. In this process the state committee sent P.V.sivaiah to Nellore as district organizer. He spent more than six months in the Nellore district and had been tried to strengthen the communist party in Nellore District and visited more than 100 villages. He took a leadership in V.R.college, and staged Dharna in ABM college respectively.

Political School in Mypadu

By the inspiration of Guntur District political schools, the Nellore communist party organized a political training school in Mypadu village in 1939 May. In this school, the organizers conducted a classes on study public problems, and work with the public. S.V.Ghate was also attended to Mypadu political school. He try to increase the knowledge on communism policies and activities in youth.

Political School in Alluru 1940 :

The state committee sent Mr.P.V. Sivaiah, successful leader to Nellore from Guntur district to strengthen the communist party in Nellore district. Mr.P.V.Sivaiah had a good experience as a principal for the two schools of Kothapatnam and Manthenavaripalem of Guntur District. With

that experience he had organized a school successfully in Alluru. For this course Mr.Jonna Kotaiah from Nellore Region attended the programme and after that he joined and involved actively and tried his best for the growth of the party.

Political School in Nellore :

In 1943 a political school was organized at a Bungalow Mulapet police ground. For this Mr.Yenugula Srinivasa Reddy, Amamcharla Gangadhara Rao were known as communist party leaders in Nellore were participated. During the same time on the other end of town in Nellore District, a student meeting was held at Navalakula Thota Pattivari Satram outside of the town in Nellore District.

Mr.Amamcharla Gangadhara Rao monitored the programme. He tried his best to spread leftist ideology among the public. Gangadhara Rao played an active role in that area and felt the responsibility of spreading leftist ideology and worked hard for the party.

Political school in Kondepi:

Mr. Parankusham Seshacharyu attended political school at Uppugunduru in 1944-45 with that influence he had started a branch in Kondepi, Kandukuri taluka in North Nellore Division and worked as secretary. He gathered not only the committee members, but he motivated the farmers and the youth to attend the school especially. He conducted schools at night time and he read out the pamphlets, paper news and communist literature to the participants and inspired them. Not only that he also started Burrakatha Dalam, further he encouraged his daughter to spread his leftist ideology through the traditional art Burrakatha Dalam. His daughter Saroja given so many Burrakatha shows. She motivated other active girls to involve in Burrakatha Dalam.

With the influence of Parankusham Seshacharyulu, teacher Lakshmi Narayana motivated the people. This time Kunarneni Sriramulu, his wife Chencharma joined the communist party in 1946. Their daughter Jhansi also joined this party. She also joined the Burrakatha Dalam. Jhansi along with Saroja were performing Burrakatha Dalam in the north Nellore division. This time people were motivated by girls Burrakatha Dalam, and also

impressed by the leftist ideology. Kunamneni Sriramulu couple were organized one political school in Kondepi with help of communist

In the leadership of Paruchuri Suryamba and some of the women were actively participated in the school from Nellore district. They also attended the state level meeting in Vijayawada. The Nellore Communist women took a major role to increase the membership. Later the women participated actively in various communist movements in Nellore district. It is a great thing to be able to cross the women's socialist barriers and move into the communist movements and regional movements during the period.

WOMEN AND CHARITABLE WORKS DURING THE GANGAS OF TALAKAD

Dr. S Shivaramu

Historical records reveal that women engaged themselves in good number of charitable works and that they were held in high respect by the society at large. Naturally in such services women from higher strata of society were more in number. But sometimes women from ordinary walks of life also participated in public utility constructions attested by a number of Epigraphical records of the Gangas of Talakad.

It is stated that they took personal interest and became society responsible for construction and maintenance of tanks, aramas. Which were perhaps parks meant for public use: todikes which stood for the small gardens or the flower gardens used by the public, satras or choultries or alms houses that were either attached to the temples or operated as separate establishments in which the Brahmins, students and member or other caste groups were fed;

Conclusion : Some of the well-known political schools held in various districts in Andhra Pradesh i.e., Kottapatnam Political School, Manthenavaripalem Political School in Guntur district, Tunikipadu Political School, Vijayawada women's political school and Pamarru political school in Krishna district, Mahanandi Political School, Kurnool district, Hindupur Political School Anantapur district, Rajolu political school in East Godavari district etc., These schools played a major role in Andhra Pradesh and create a second generation communist leaders. They spread leftist ideology in whole Andhra Pradesh and Telangana. The activists influenced by communist Ideas and theories and they joined national movement and regional movement.

aggistike which was meant for keeping fire alive continuously for the benefit of the people in the mathas. Temples or the houses of the vaidika, Bramanas and aravattiges which were either attached to the temples and satras or maintained independently for the purpose of serving water to the needy. Noble women patronized agraharas and mathas. Offered liberal grants for the Educational institutions and presented gifts to the Bramanas¹.

Position of Women in Administration

Women performed varied functions in society. Women of the upper classes held important positions. During the Ganga period Revakanimmadi daughter of Amoghavarsha and wife of Ereganga Administered the region of Edetore-nadu². Butunga II's queen was in charge of Kurugal³. Sripurusha's daughter-in-law Kanchiabble who was the wife of Duggamara

was entrusted with the task of governing the territory of Agalli⁴. One of the queen soviyabbe accompanied her husband to battle and fell fighting at his in the battle of at Bagiyur. Sripurusha's queen Viniyavati governed over malavellur⁵.

Another able women administrator was Bhujjabbarasi of the Ganga Family. She had three younger brothers called Battayya, Singhavarmarasa and Chichchapayya. Her son Butungha II was the son-in-law of the Rashtra Kuta ruler Amoghavarsha III. the record states that in 975 A.D. perbala or Hebbala a village about 18 miles to the South-East of Lakshmesvar in Dharwad District was under her control and she administered that area. She was responsible for such religious and public utility works as the construction at perbala of the plinth of the temple of siva named Bhujjabbesvara after her and of an outlet for the tank in the same place apparently for irrigation purposes.

The record dated 1112 A.D describes the powerful Bhujabala-Ganga-Permmadi-Barmmadeva and his chief queen the highly praised Ganga-Mahadevi and she was the mother of four sons called Marasinga, Sathya Ganga, Kalirakkasa-Ganga and Bhujabala Ganga. It states that she assumed the crown for the King and also for Gangavadi which would perhaps imply that she shouldered the responsibility of Kingship⁶. Some women also knew the art of state craft and their spouses often consulted them in matters of Administration. For Example a record of 1118 A.D. Sisters that Lakshmidivi, the wife of Commander Ganga. Offered suggestions to her husband in Political affairs. It also praises her as the inspiration for him in wars⁷.

Women performed varied functions in society women of the upper classes held important positions. During the Ganga period Revakanimmadi daughter of Amoghavarsha and wife of Ereganga administered the region of Edetore-nadu⁸. Butuga II's queen paramabbe was in charge of Kurugal in 920 A.D. Sripurusha's daughter-in-law Kanchiabbe who was the wife of Duggamara was entrusted with the task of governing the territory of Agali⁹. One of the queen's Soviyabbe accompanied her husband to battle and fell fighting at his side.

Sripurusha's queen Viniyavathi governed over Malavellur¹⁰.

The record dated 1112 A.D describes the powerful Bhujabala-Ganga-Permmadi-Barmmadeva and his chief queen the highly praised Ganga-Mahadevi and she was the mother of four sons. It states that she assumed the crown for her king and also for Gangavadi. Which would perhaps imply that she shouldered the responsibility of kingship¹¹.

Construction of Aravattige and Satras

Aravattige is the arrangement made for providing drinking water to the travelers. Queen Chattaladevi gave land grants for the purpose of feeding the community of rishis but also completed the construction of tanks, wells, abodes of gods, watersheds, sacred bathing places, satra or choultries and araves which were perhaps small parks meant for public use and planted gorves¹². A record of 1139 A.D informs that Suggiyabbarasi was the sister of Ganga King Marasinga and she offered food to the yatis¹³. It is noteworthy that royal ladies also offered grants for the feeding of not only ascetics and Brahmanas. But also the students for maintaining Education in 1029 A.D queen Suggaladevi handed over certain land to a Brahmin named Brahmasri Pandita for the purpose of maintaining ascetics and students¹⁴. Queen Lakshmadevi in 1084 A.D preented Pomgari village to Somesvara Panditadeva of the temple of Achalesvara at the capital of Sundi with the implication that the entire income accruing were to be used for feeding the ascetics and imparting education to the students¹⁵. Records explain clearly that ordinary ladies also belived that they could get great merit by giving charities to Brahamanas and holy persons on special auspicious occasions. Polegabbe was the mother of Kannayya. She observed the Vrata of voluntary fasting, bathed in the holy Ganga and then to acquire much more merit granted to Santi-bhatara the land under the hiriya-kere of Adanur in 965 A.D. The pious Ponnabbe was told by two good persons Datteya and Tikkayya that great merit would come to one who offered charity to Brahmanas at the time of Sun's eclipse. Believing that to be true she bought some lands and offered them to the Brahmanas of Tageratti. She also gave a money grant to them in 978 A.D and humbly

said that she would offer them as much money as they wanted¹⁶.

Construction of Tanks

Giving water in charity is considered as the greatest act of merit. It is said that one derives a lot of merit from setting up aravattige. Well, tank, canal or lake perhaps full with lotuses. Because water nourishes all living beings, so one who gifts water to the living beings will be blessed by the god, that even lord Brahma cannot count¹⁷.

When water is so sacred and important naturally in order to preserve it. People started building tanks and ponds. Increasing the water wealth for the sake of the community was considered as noble as performing sacrifices and giving gifts to Brahmanas¹⁸. The greatest acts that will invoke the blessings of god are some of them was when Mahamandalesvara Madaranga was ruling Asandi as capital, Chhattagaunda the son of Banka Gaunda and Bamma Gaunda and his wife Chandave Gaundi set up God Bankesvara built a tank and for the purpose of the illuminations of that God made a grant of land in 1104 A.D¹⁹.

Construction of Temples

Patronage to construction of temples by women is also of considerable magnitude. Many women have patronized construction of a number of temples as attested by a number of inscriptions these temples belong to Jaina, Vaishnava and Saiva faiths.

Pocabbarasi the mother of Rajendra Kongalva by constructing a Basadi in 1050 A.D and making an image of her Guru Guna Seva Panditadeva of the Dravilasanga, The Talugragana and Irugulanraya and also presenting lands to the basadi in the prescribed manner in 1058 A.D. A howed clearly that the name devotion and patronage of the Jina Dharma could be found among the royal ladies²⁰.

Thus these Epigraphical evidence are enough to extend an excellent explanation about the religious fervor of the women in Gangavadi. The crowned Queen of Mahamandaleswara Bhujabala. Ganga Perumanandi Barmadeva made a grant of land Suleya Bayalu for the Pattada Basadi of

Mandalitirtha in 1062 A.D²¹. The grant of Budanagere in the mandal 1000 free of all imposts and certain lands in Banni kere, a garden, two oil mills and certain custom dues in both these towns for god Parsvanatha was made by the chief Queen Gangamahadevi and Pergade Bachaladevi in the presence their husband Bhujabala Ganga permnadideva the four princes Gangarasa, Narasinga deva. Goggideva and kaliyagangadeva all the ministers and nadprabhus. These ladies have been highly described Gangamahadevi's asserted to be superior to all kings and queens.

The Naregal inscription of 950 A.D for the first time mentions padmabbarasi as another wife of Butuga and the basadi erected by her at Naregal to which a dana-sala (Charity-house) was attached²². Santara Queen Cattaladevi daughter of Rakkasa ganga or Ganga-permanadi and the queen of koduvetti the ruler of the Tondenad 48000. Unfortunately her husband, son an married younger sister had preceded her in death. But she did not lose courage. She adopted the four sons of her sister Taila, Goggiga, Odduga and Barma as her own sons, in association with them she built many sacred abodes of Jina at pombucchapura the capital of the santaras of them the most beautiful was the pancha kutta or panchavasadi know as urvi-tilakam or glory of the World²³. An inscription of Marasimha states that both Chaggiabbarasi and Butuga granted bittuvatta. The unpublished grant of Salem district was gifted to Nilakanta at the instance of Duggamara's wife Kanchiyabbe. Who was related to the Rashtrakutas. The mother of Butuga Bujjabarasi was instrumental in getting the Siva temple constructed²⁴. Another inscription of Butuga II states that his queen Galabbe caused a temple to be build and conferred a grant of land on it. An inscription of 1139 mentions three ladies whose pious deeds centre round the great strong hold of uddhare. The younger sister of Marasimha III was suggiabbarasi whose guru was Meghanandi. She gave gifts of food to Jaina ascetics and decorated the Pancha-basadi in uddhare. It is said of this lady that wherever there was no Jaina temple she would provide one of wherever any Jaina teacher needed any support she gave them grant²⁵.

Women as cultural Representative

The position and status of women is considered to be an index of the level of cultural development as well. A healthy society is that in which more and more women take part in more and more cultural activities.

Many a time they were accomplished in dancing singing and other traditional arts and also noted for their religious fervor and charity²⁶. The court used to patronize them. A record states that dancing was accompanied by singing, drum and instrumental music proficiency in several types of dancing as Bharathi, Satvaki, Kaisike, arabhate and different kinds of pose and expression of feeling was considered to be a mark of distinction. Bachaladevi a perfect dancer attracted the king by her dance and won the king as well as titles of patarajagadole (head of the world of dancers). Dancing halls with stone pavements in courts and temples were constructed embellished by kings and often from donations by the rich who

were grant patrons and promoters of music, dancing and decorative arts²⁸. An inscription from Honalli Taluk mentions the grant of lands to dancing girls²⁹. Yet another inscription from Shimoga district records as similar grant to dancing girls³⁰. Likewise we have a few other inscriptions which indicate such grants towards remuneration to the dancing girls. The temple authorities also undertook to protect them from being carried away by persons who were struck by their talents and accomplishments in dance and music.

Conclusion

Thus these Epigraphically references throw light on the fact women belonging to all strata of society during the period under study possessed their own properties had freedom and opportunities to undertake many and charitable works and thus contributed in their own way to public welfare. They kept alive the belief and tradition that one would get grant merit through undertaking such works.

HISTORICAL VISIT OF HUI - EN –TSANG TO MAHARASHTRA

Shyam Prakash Deokar

India is always the destination to those who have to learn philosophy of spiritual life. Lord Buddha is the lighthouse to them all truthseekers. Lord Buddha's philosophy is balance between spiritual and physical life. All other religious paths are one sided developed

towards spiritual life only. But Buddha's path is the answer to all problems of physical and spiritual life. That's why the foreign traveler was attracted towards India; that attraction is only for Lord Buddha. He was the most enchanting personality; having the solution of all problems

of human being. So the attraction towards Buddhism and its literature fetches out the scholars to India.¹Hui – En – Tsang is one of them. He was born in 603 AD at *Chin-liu* city of *Honan* province of China. His family name was *Chin*. In his early childhood he went with his brother *Changsi* to eastern capital *Loyang*. At the age of thirteen he had to escape from, the cause of the situation which arose due to the decline of *Suie* state. Afterwards he went to *Shingtu* city. He stayed there for seven years. He worked there as a monk. His hunger towards knowledge compelled him to travel all around China. Once, when he reached to *Changan* he felt as if the Chinese traveler *Fahien* and *Chijen*²

He decided to travel towards the western world to discuss with the Buddhist scholars about his queries which arose after listening to it. When he became 26 years old ; he started travel from *Changan* with *Cingchui* the monk of *Consue*³ When he reached at *Sungling* he met with some merchants. Those merchants used to travel for trade. When *Hui-en-tsang* told them about his purpose of travelling to Buddhist India; to take education of religion, they helped him as they could. But at that time one had to take permission from the Governor to travel out of China. Problem got worsen when the Governor denied him permission. So, he started his travel without permission. He continued his travel by hiding his identity. When he reached the *Hulu* river, his colleague attempted to deceive him. After that he alone continued his travel. He lived in India for fifteen years and studied various Buddhist centers.⁴ He visited the famous and important Buddhist and non Buddhist centers. He visited somewhere in Maharashtra, but one couldn't fixed the spot that where he visited to Maharashtra. The travel and his rout was tried to studied by the British and Indian scholar in British period. But after British period we can say that, the study of his literature, rout and work, stopped for a long period. He registered in his writings about the visit to Maharashtra (Mo-Ho-La-Cha).

The researchers have studied his rout and literature and tried to fix the spot which he visited in Maharashtra. There have been various surmises as to the name of this capital. M.V.de St. Martin registered that it was Doulatabad but this spot does not match with the description by

Hui-en – Tsang about the capital. Because there is no river to the west to Doulatabad General Cuningham also tried to fix that spot; he registered that the spot was Kalyan. But this spot also does not match with the writings because Kalyan is at the south to Bharuch but that spot is mentioned to the East of Bharuch. (The actual wording says that he went 1000 li to the west.) Mr. Fergusson also tried to fix that spot and he mentioned that it was Paitthan; Toka or Phulthamba was that site but the distance mentioned in writings doesnot match with Fergusson's site. Now question arise about the capital where Hui-en-tsang visited in Maharashtra. Samuel Bell mentioned in his translation work of 'Buddhist record of the Western world' that the site may be around Tapti- Girna river but this site also does not match with the distance.⁵ If one has to fix that site accurately then first of all there is a need to mention the criteria of spot fixation. Which points one has to decide? Those points can be mentioned as follows :-

- 1) There is a river to the west of the capital and that river is 1.5 km around to it.
- 2) The distance between Konkanpur and the capital is 2400 to 2500 li means 1200 to 1250 km
- 3) That spot is 1000 li means 500 km to the East of Bharuch.
- 4) There is a mountain range to the East of the capital.
- 5) There is *Sangharam* in that mountain range.
- 6) There is 5 Stupas in and out of the capital, made of bricks and stone.⁶

Scholar's view about destination: Above mentioned criteria reveals that the capital where Hui-en-tsang visited must be in Purna Besin. The Purna Besin emerged as rich cluster of archaeological sites. Tuljapurgadhi, Bhon, Paturda, Kaundinyapur, Kholapur, Kavthal, Bhendaval, Salbardi; these centers have rich historical background. Now among these or other sites, which was that spot where he visited? This question remains unsolved. Among these sites Bhon has emerged as the only one Pre-Satvahan site in Maharashtra. So thinking about Bhon Tq. Sangrampur Dist.

Buldana, Maharashtra must be that site. If the above mentioned criteria tried to match with the Bhon, what the picture will emerge about site is as follows-

- 1) Bhon has the Purna river around it from three sides of the spot. The river flows East to West and that river is around three sides East, West and South to the Bhon. The Purna is the only river which changes its stream frequently. Some geologist says that the salty groundwater which finds in this region and the alluvial soil with gravelly clay of high depth proves that there was a sea in ancient period.⁷ The very deep alluvial soil with gravelly clay naturally flows with water and the high pressure of water compelled such soil to create new stream for rivers. So very high rainfall converted the river multi streamed for short period. But sometimes the temporary stream of rainy season converts into main stream of the river. So there is more possibility of the changing the main stream of the river Purna which seems to flow North-Western side of the town.

The town has ravine to its North which connects the half circle of the river. In rainy season Bhon converts into island, because the ravine converts into river due to overflow of mainstream of the Purna river. This ravine must be the old mainstream of the river. Two local rivers also flow North to south and that two rivers confluenced to the Purna to the East and West points of the half circle of the river. The old stream of the river was North – West to the site. So Hui – En – Tsang felt that the river was to the West of the site.

- 2) The distance between Konkanpur and next spot Mo-Ho-La-Cha (in Maharashtra) is mentioned 2400 to 2500 li; it means it is 1200 to 1250 km. About writing Konkanpur General Cuningham said that the Anagundi might be that spot. The distance between Bhon and Anagundi is 779 km. Mr Fergusson had fixed that the spot near Maisur.⁸

The distance between Bhon and Maisur is 1223 km. The spot is around Maisur Plateau. What it might be, but if it is around Maisur, the distance between that spot and Bhon perfectly matches.

- 3) After Bhon visit he went to Bharuch and the distance between these two spots was mentioned 1000 li means 500 km. Today the distance between Bhon and Bharuch is 493 km. Means it matches with the given distance. And Bhon is situated to the East to Bharuch. This location also matches the given direction.

- 4) There is a mountain range to the East of the capital. If we carefully read the translations of 'SI-YU-KI' in most of his writings the writer got confused about the directions. Always there is confusion of directions found 45° wrong. If this confusion is considered; the statement about the mountain finds true.

- 5) The Satpura ranges are to the North and North-West to the Bhon. Some hills of the Ajanta ranges and Satpura ranges came across in the Khandesh region. It gives feeling of continuous ranges. That's why the statement about *Sangharam* is true. That statement may be about the Ajanta Buddhist caves. There is also the second possibility of the *Salbardi* caves which are in Satpura ranges. There are also the Buddhist caves and *Sangharam*. But now the caves and *Sangharam* are ruined. The statue of Lord Buddha is also cut headed and now worshiped as a devi (goddess).⁹

- 6) The current excavation of the site at Bhon found about the third century BC *Stupa* built of bricks.¹⁰ This excavation was taken place by Dr Deotare's team. But this excavation was on limited basis. If the excavation on the large scale would be held; there is more possibility of findings of more historical monuments. Before the excavation of Bhon; the Pre-Satvahan period was mostly unknown. The Bhon is the only the site which reveals the history of Pre-Satvahan period of Maharashtra. The Bhon was the major city from the third century BC. So this region must be the part of Ashoka's kingdom. That's why the sentence mentioned in the SI-YU-KI about Mo-Ho-La-Cha that there were the *stupas* built by Ashoka proves true. And there is more possibility of findings of some more Buddhist *Stupas* which are mentioned in the writings.

Conclusion: Bhon Tq, Sangrampur Dist. Buldana may be the capital where Hui- en – Tsang visited in Maharashtra. There excavation should be taken place on large scale by ASI. The Jigaon Project may be

harmful to this site, because the future backwater of the Jigaon dam may sink the Bhon town. So this archilogically rich site which gives proofs of Pre-Satvahan period must be saved.

CULTURAL HERITAGE OF KAKATIYAS OF WARANGAL: A STUDY ON GREATER WARANGAL IN TELANAGANA

Singarapu Padma

Warangal is enriched with variety of monuments, museum and testify to pioneering past, and the city also has many facets of tourist products. To every tourist and Scholar these specimen of Kakatiya culture serves as the rewarding revelation. In the history of Andhradesa the rule of the Kakatiyas is unique in several respects. The Kakatiyas strove throughout their rule for the glorification of their kingdom through achieving the public-welfare. ***They built-up a lot of infrastructure of civic and tourist importance centuries ago.*** They not only encouraged trade, industry and agriculture but also patronized arts and letters. They made improvements and embellished the city with palaces, gardens and fountains. The age of Kakatiyas witnessed multifaceted progress and prosperity. The irrigational tanks brought economic well-being to all. The numerous temples of all sects sprang up and they were the standing example of religious liberalism. The architectural buildings and sculptures are the important sources of our study. Literary works like ***Kridabhiramam of Vinukonda Vallabharaya*** described Orugallu city and its fort in detail.¹

I. Fort Warangal:

It is located at 12 km. distances from Hanamkonda. It was started by king Ganapathideva in 1199 A.D. and completed by his daughter Rudramadevi in 1261 A.D.² The remains of four huge stone gateways, similar to those of 'Sanchi' and several exquisite pieces of sculpture can be seen. Interesting information is available in the local records and traditional accounts about the rise of the township of Warangal to prominence. According to a tradition recorded in *Siddeshwara Charitra*,³ it is said that one day a bullock cart carrying goods to Hanamkonda struck a rock and turned upside down. One of the iron tires of the cart or probably the iron axle rod came into contact with the rock projecting from the ground and turned into gold. It was a miracle. The information was conveyed to king Prola-II, who was residing in his palace at Hanamkonda. The accompanied by courtiers and priests came to inspect this spot. When the place was excavated, a *Golden Sivalinga* of miraculous powers was discovered. Learned priests from Kaleshwaram and Hidimbashramam were brought to the spot of the miracle for consultation. The sage named Ramaranya

Sripada advised Prola II to build the temple of *Swayambhu Swarna Shivalinga* at the same spot, and develop a town around it and that would serve as the future capital of the rulers of the Kakatiya dynasty. The Sage then draw a plan called *Sri Vidyadhara Chakra* or *Ekasila Nagara*. Prola II built a temple enclosing the Linga which subsequently came to be known as *Sparsavedi* and *Svayambhu*.⁴

Kakati Prola Raja II was the founder of Ekasila Nagaram and Warangal Fort in A.D. 987. Rudradeva and Mahadeva were the sons of Prola Raja II, who developed Ekasila Nagaram into a strong defensive Fort and finally Kakatiya Capital was shifted from Hanamkonda to Ekasila Nagaram by their successor Ganapathideva. Ganapatideva's illustrious daughter Rani Rudramadevi and her adopted son Prataparudra strengthened the fortifications and made it an impregnable Fort by building an outer wall of defence. By recent satellite imagery from space they have photographed one more outer defensive fortification of the Kakatiya Fort of Warangal of a circle with a radius of 10 kilometers.

The great circular Fort is surrounded by an outer earthen wall and an inner masonry one and has but four gates, one at each of the four cardinal points, the east and west gates alone being now used. Within are the remains of many buildings of sorts, but by far the most important are those of the great temple which occupied the centre and of which now only the four great gateways and a group of pillars and lintels, forming the south-west corner of the temple remain. The great gateways now standing evidently stood before the four entrances and the distance between the north and south ones is 480 feet, while between the east and west is 433 feet.⁵

Warangal Fort is now under the administration of the Municipal Corporation and looking after schemes of development. Warangal Fort now has four entry points. The Principle gateways are locally known as *Bandi Darwaja* in the east, *Chini Darwaja* on the south, *Hydari Gate* on the west and *Machili Darwaja* on the north. These gateways unlike those in the mud rampart are of original construction having uniform plan and elevation.⁶ Within the stone fort wall, there are several remains of ruined buildings, temples,

pieces of broken sculptures, tanks and wells attesting the one time glory of the capital of the Kakatias. Within the fort there is the Ekasila or one rock standing in the south east quadrant close to the earlier gateway and stone built ramparts.

Ekasilanagaram or Orukallu: Almost in the centre of the stone fort is a huge rock from which the city and the fort seems to have derived the name *Ekasilanagaram* or *Orugallu*.⁷ In Warangal Fort near the eastern stone gate and bastions, a small hillock is located. It was called *Orukallu* or *Ekasila*. 'Orukallu' means, single rock in Telugu and Tamil. 'Ekasila' means, Orukallu in Sanskrit. Telugu and Sanskrit were court languages of Kakatias.⁸ At present we see a temple of Siva built of granite stone. Closed to the temple is an octagonal shaped watchtower. There is another store built structure which was used as an ammunition store. There are steps carved out of the granite rock from the east and west. It is not difficult to ascend to the summit of the hillock. From the top of the watchtower, one can have a panoramic view of the beautiful landscape. The watchtower of the Ekasila is the highest View Point from which one could steady to the limits of the Horizon in all directions with the help of field glasses or binoculars. The watchtower was used in the past to survey the movements of the attacking enemy beyond the fortifications. At this Vantage Point, the bronze statue of the mighty warrior queen Kakati Rudramamba is going to be erected on a high pedestal. A beautiful landscape garden with fountains is under development.

Kesava, Swayambhu and Rudra Temple Complex: The Hindu rulers of the Kakatiya dynasty from Prola II to Prataparudra utilized the open space of the city square of Ekasila Nagaram between the Keerthi Thoranas for building a huge temple complex about thousand years ago. The rulers like Ganapathideva, Rudramadevi, Prataparudra, and Mahamandaleshwaras like Recherla Rudra and many other loyal chieftains were also built shrines in the walled city Ekasila Nagaram.

There are relics and remains of Buddhist and Jain temples Saivite and Shakti temples of Bhairava, Temples for Sun God Kesava, Venugopala Swamy, Sri Rama, Laxmi

Narasimha, Sri Venkateshwara, Kakati, Mahisha Sura Mardini, Hanuman and Vinayaka, Chamundi, Bhadrakali, Mailaru Deva temples for Pandavas and Heroes of Palnadu existed in Ekasila Nagaram in the glorious past. Hindu Religious thought or all shades and cults found representation in the Kakatiya temples here. The sculptural art was at its zenith under the patronage of the Kakatiya rulers. The Swayambhu Deva, Kesava temple complex represents the best in Kakatiya architecture. The charm of the place vanished when the hammers of the iconoclasts wrecked things which were sublime and beautiful.

There are still a few highly polished pillars, door jambs capital stones, running friezes of yells, swans, elephants, cavalries riding on horses, dancers, square bases of Natya Mandapas, Gajakesari brackets from the temples of Kesava, Siva and Rudra, were founded there builders names cannot be identified. It is so difficult to identify the names of master sculptors, who dedicated their lives to god and service to humanity through art forms of poetry, dance, painting and sculpture.

Kushi Mahal of Shitab Khan: The only courtly building to survive the attacks of the invaders is Kushimahall attributed to Sitabkhan Alias Sitapati, a Hindu Chief and Governor of Warangal under the Bahamanis. Located close to the Warangal Fort, these magnificent edifice houses idols excavated in the surrounding areas. This Mahal is used as dance Darbar for the entertainment of the Nizam Nawabs visiting this place.⁹

Some historians are of the opinion that Sitapati Raju, who was himself a Bahamani Sardar, had this structure built. Sitapati Raju ruled over Warangal for a short period from 1504-1512 and he bore the Bahamani title of Chitab Khan. But, he did not record in his own inscription that he built his Darbar Hall called Kushimahall.¹⁰ On the other hand, Chitabkhan alias Sitapati Raju mentions in his inscription that he attempted to revive the glory of Kakatiyas by restoring and repairing Kakatiya monuments like Sambhuni Gudi, Panchala Raya temple etc. He even undertook the repair of the Fort of Ekasila Nagaram.

The Department of the Archaeological Survey of India has taken this monument of

Islamic style of construction under its protection. It is said that Kushimahall of Warangal Fort has close resemblance to a structure at Mandu in Madhya Pradesh known as Hindola Mahal. Many broken sculptures of Jain and Hindu Temples, inscriptions, Lion brackets of the temple complex are preserved here. In front of Kushimahall are found some graves with a crumbling compound wall with a sculptured doorway of a temple, serving as an entrance. There is another tomb built of stone and bricks on the roadside.

II. Temples of Warangal Town:

1. Bhadrakali Temple: In the heart of the twin cities of Warangal and Hanamkonda, in the midst of rocky hillocks, lies the abode of the family deity of the erstwhile Kakatiya rulers, 'The Bhadrakali Temple'. It is located at a distance of one kilometer from the city main road. It stands on the raised ground level than the normal. Daily *poojas* are performed in the temple. The introduction of this Goddess is found in the *Ulekha Tantra Sastras* and *Atharvana Veda*¹¹ Siddhis to devout Sadhakas. We could find many stories which depict the history of the destination and vital role of Goddess Bhadrakali in the lives of the legends.

Chalukya king Pulakesin II first built this temple, in the 7th Century A.D. The deity is believed to be worshipped by this historic ruler Pulakesin II of Chalukya dynasty in the year 625 A.D. after his win over the *Vengi* region of Andhradesha. During the reign of Ganapatideva, a patron by name Meesaraganda Hari, the son of minister Vithala constructed a water tank and also donated the surrounding land for the maintenance of the building. Since the mother blessed the kingdom with wealth and propriety, the Kakatiya rulers worshipped her as their family deity. There is also a tale, which depicts that Rani Rudramadevi, daughter of Ganapathideva is a strong devotee to 'Kali'. She used to visit this temple every day before partaking meals. Foreign invasion concealed the glory of this temple for many years.¹²

The Bhadrakali Lake: The lake with full of lotus flowers and swans gracefully moving all over, the hillocks on the one side and a gorgeous garden on the other present a Panoramic view. It is around 336.7 acres, whose radius is 2.5 km. The major attraction of

the lake (with 50 feet depth) is the temple on the bank which is very picturesque during the time of sunset. Now, this lake is using for drinking water. Besides this, the lake can be used as a good leisure and entertainment hub for the tourists and visitors if developed.

2. Shambhuni Gudi or Swayambhudeva Temple at Warangal Fort: The Kakatiya King Prola II builds Shambhuni Gudi, is the oldest temple in Warangal Fort. This is said to be the shrine of god Swayambhu, one of the tutelary deities of the Kakatiyas.¹³ It was built to house the 'Golden Siva Linga' with miraculous magical powers. The temple is now inside a high protective compound wall built by the Archaeological Department of the old Nizam State.

It is a historic temple in which Lord Swayabhu was worshiped by the famous Kakatiya rulers 'Prataparudra' everyday during his life time. The presiding deity is Lord Siva called of Swayambhu (Literarily means self-incarnated God).¹⁴ The Shambhuni Gudi is an ancient structure built in Chalukyan style, with a Porch, a *Sabhamandapam* with a *Natyamandapam*. The roof is made of stone slabs spread evenly the *Antarala* and *Garbhagriha* have small doorways. Sambhuni Gudi was destroyed and the Golden Siva Linga with miraculous powers is missed. Subsequently the temple was re-built with changed dimensions by Shitab khan Sitapati, who ruled over Warangal as an independent ruler. The pink stone inscription pillar now found near the Southern *Keerthi Thorana* inside the excavated temple complex tells how Sitapati Raju tried to revive the cultural traditions of the Kakatiya rulers. Sitapati Raju claims the credit for re-building temples of the Kakatiyas raised to the ground by the Tugluq Sultan of Delhi,

when he conquered Warangal Fort and annexed Kakatiya Kingdom and made it a province of Delhi Sultanate.

The re-built Sambhuni Gudi enshrines a small Siva Linga at the ground level. There is a beautiful carved sacred bull Nandi with its neck and face turned to west. This is considered a very unusual feature as all the sacred bulls carved during Kakatiya period had head and neck turned towards right. The temple has now a high stepped pyramidal shaped *Vimana*. The idols of Veerabhadra and a conspicuous semi circular sculpture with a canopy of a Naga snake with seven heads carrying Jewels on the top are founded within the temple. Under the hood canopy, there is a small Siva Linga fixed on the backside the temple of Sambhuni Gudi facing east are a number of huge richly carved sacred bulls. There is huge black basalt Siva Linga with four faces of Siva in four directions. It was dislodged from its original place and kept preserved with other broken sculptures. The Sivarathri festival can be celebrated here in a grand manner. Daily poojas are performed in the temple. This temple is still used for worship by devotees and tourists who are coming to see the fort.

III. Temples of Hanumakonda Town:

Conclusion: Greater Warangal city is a centre of archaeological and historical zone, attracting the heritage tourists. These heritage monuments are the sources of our history and culture. They are symbols for our Telugu Culture and reflect the life of the people. The Kakatiya sculpture inspires us and takes back us to that age. Hence, we have to preserve our heritage centers. The Warangal would become a cultural hub and alive from the past glory of Kakatiyas by linking all historical sites of the Kakatiya period.

SOCIAL REFORM MOVEMENT IN SOUTH INDIA WITH SPECIAL REFERENCE TO TELUGU PRESS

Dr. G. Somasekhara

INTRODUCTION

The Telugu press, too played its role in rousing national consciousness among the Telugu people and was also responsible to a great extent for the participation of the Telugu people in India's Freedom struggle. But the Telugu press first concerned itself chiefly with social and reformist issues. It was only later that it began to concern itself more and more with political and nationalist questions. The vernacular press in general tried to make people aware of such social evils as child marriage, Sati and the like. Many newspapers voiced the demand for sweeping changes in the social fabric so that the persistent social evils could be eradicated. The vernacular press first busied itself with rousing the social conscience of the people, as if it were the first step towards achieving national consciousness and national awakening, though at a later stage of its development in the twentieth century political and national issues took precedence over other questions.

In the two decades since the formation of the Indian National Congress, a gradual consolidation of the forces of nationalism in India had taken place. The growth of the press in India as a force in the political, Social and economic life during this period was into a large measure modeled on the traditions of the British Press set in England. The press became a strong force in the emergence of healthy Indian nationhood.¹

REFORM MOVEMENT

The coming of Kandukuri Veeresalingam Pantulu, the father of the renaissance movement in Andhra and the champion of modern Telugu language and Telugu Journalism was a trendsetter in the History of nationalist press in Andhra. He was a pioneer in social reform in Andhra. Veeresalingam started a weekly called Vivekavardhini in 1874 from Rajahmundry for advocating the much needed reforms in the social and literary fields. Later on he started Satihitabodhini a periodical specially intended to educated women as well as Hasyavardhini

and Satyasamvardhini wherein he led a tirade against the prevailing social evils such as child marriages, caste system, the institutionalization of prostitution, and he also pleaded for the introduction of widow marriages and worship of God on monotheistic principles.²

The Telugu press in Andhra during the period of this study, abundantly contributed to the growth of the social reform movement which to a large extent was a part of the Indian national movement. In India between 1885 and 1920 the nationalism and social reform went hand in hand which also true of the Andhra region. Many nationalistic Telugu newspapers supported the various moves pertaining to social reform.

Individual outrage against particular customs and religious beliefs has always been a feature of Indian society despite the high value that has always been placed on continuity, order, and the wisdom of social precedent. The major stimulus to social reforms in India during the 19th century came from the work and the ideas of the Christian missionaries, a fact acknowledged by many reform movements in Andhra. The important social reforms advocated during the period of this study, both by the leaders of the social reform and the Telugu press, were to a large extent moderate measures rather than revolutionary in nature. Abolition of child marriages, Devadasi system and banning of the nautch parties at marriages as well as widow marriages, education of women were the important items of the social reformers in Andhra.

ABOLITION OF CHILD MARRIAGES:

In the social reforms the abolition of child marriages received wide support and publicity from the Telugu press, because in which very young girls were often married to very old men. The evil effects of such marriages were vividly exposed to the public through editorials and articles. Besides leading newspapers like Krishna Patrika and Andhra Patrika, which were always in the forefront of public awakening, a number of women journals such as the

Hindusundari, Grihalakshmi, Vivekavati and Strividya rendered their Yeoman Service to this reformation. Most of the Telugu journals protested against the practice of child marriages and tried to rouse people moral awareness and they pointed out that such a practice did not exist at all in ancient India and it had no support in the sastras.

Hindujanasamskarini from Madras expressed its strong anguish over early marriages. It wrote: "As very young girls are often married to very old men, a wish is expressed that government should interference and pass an act, to prevent such marriages."³

Krishna Patrika in an article pointed out that Susruta, the famous exponent of Ayurvedic medicine and surgery in ancient India, had stated in his treatise that girls below the age of 16 years were not properly developed to bear and bring forth children.⁴ In an article on child marriage published in the same newspaper of October 26, 1912, the figures of the 1911 census were cited to prove that the number of child marriages had unfortunately increased in Andhra. Hindusundari mentioned that there were 40,000 child widows in India as per the 1911 census.⁵ It further gave the statistics of child marriages and concluded that such marriages were the root cause for the staggering number of child widows in the country. Quoting the 1911 census figures, the journal further mentioned that 90 lakh child marriages had taken place in India.⁶

Apart from vehement criticism of child marriages other devices were used by the newspaper to build up public opinion against them. An interesting cartoon was published under the heading, "wife or grand-daughter" in the Krishna Patrika. The cartoon depicts a fruit-vendor who sees a young girl and an old man in a house and presuming that the old man is the grand-father of the young girl, then the vendor asks him to buy fruits for his granddaughter. The girl replies that she was the wife and not the grand-daughter of the old man. The note under the cartoon said that many such marriages between young girls and old men took place during the marriage season of 1916 and that some of the bridegrooms of those marriages had even supported the Home Rule.⁷

The - post puberty marriages bill was introduced in the Madras legislative council in 1914 by V.S. Srinivasa Sastri. It provided a golden opportunity for the prominent papers to carry on a tirade against those in the society who supported child marriages. The leading papers acclaimed the bill of Srinivasa Sastri as an important step in the direction of abolition of child marriages and criticized strongly those who opposed it.

In its editorial Krishna Patrika, not only supported the bill strongly, but also tried to remove the apprehensions of the orthodox people about the bill. The support of this papers to the move to abolish child marriages was so bold and courageous that it eve ridiculed the threats of the "Peetadhipathis" that those who performed post-puberty marriages would be socially ostracized.⁸ In its inspiring bearing editorial of September 8, 1911 issue it remarked: The "Peetadhipathis are lifeless stones like the dead institutions in society. It is foolish to assume that the progress of society is dependent on them". Andhra Patrika argued that the post-puberty bill was "purely a social matter and should be passed."⁹ The paper urged the government should not adopt neutral attitude to measures involving social reform, but support to Srinivasa Sastri's Bill.¹⁰

WIDOW-MARRIAGES:

Public awakening was most effectively organized in the early decades of the 20th century by the leading Telugu newspapers in favour of widow marriages. Krishna Patrika, Andhra Patrika, Hindusundari and such journals rendered great services for the cause of widow marriages by way of publishing articles by eminent writers, correspondents and timely editorials in support of such a necessary humanitarian step.

Krishna Patrika in its editorial column supported widow marriages and criticized the opposition of the orthodox marriages which had taken place at Machilipatnam. To mobilize popular sympathy for the cause of widows, the paper published a number of articles on the miserable plight of the Hindu widows.¹¹ Channa Pragada Poornachandra Rao in his articles expressed his indignation and stated that the widows were treated inhumanly worse than animals, they were not shown any

sympathy.¹² Andhra Patrika also published such articles and made its contribution to this endeavour of rousing public awareness.

Hindusundari was in the forefront of the movement for widow-marriages. In its October-November issue of 1911, the journal recalled the services of Kandukuri Veeresalingam Pantulu in the cause of widow marriages, and deplored the attempts of orthodox people to mislead the ordinary people by their perverted interpretations of the Sastras. On the occasion of the birth anniversary of Iswar Chandra Vidyasagar in 1912, Hindusundari reproduced an article from Andhra Patrika. This article, entitled "the miserable plight of the Hindu widows", argues that the celebration of the Birth anniversary of Vidyasagar will have no meaning if people do not make efforts to improve the appealing conditions of widows by helping them to remarry, and by giving them a fair deal.¹³

Satyagrahi also supported widow marriages. In its issue of January 28, 1919 a letter on a widow marriage performed at Denduloor was published and in the editorial, the paper expressed its happiness for the spread of social reform to villages. The tragic consequences of not allowing child widows to remarry were brought out effectively by a letter published in Krishna Patrika. The author of the letter told the pathetic and tragic story of a child widow by name Kameswari. She became intimate with a bogus swamy and became pregnant, and in a crude attempt to terminate her pregnancy the unhappily ended her life.¹⁴

Papers like Krishna Patrika gave wide publicity to widow marriages that were taking places and commended all such efforts, and exhorted others to follow suit. Owing to the encouragement of Krishna Patrika, many widow homes were opened at Kakinada, Rajahmundry, Narasapur and other places.¹⁵ Commending the suggestions of Mahatma Gandhi as published in the journal Navajeevan on child marriages and widows Krishna Patrika in its editorial said that while the institution of widow hood in India was one of the causes for the greatness of the country it unfortunately was causing much misery as it was blindly followed as a social duty and not as a means for individual spiritual uplift. The paper accepted the suggestion of

Mahatma Gandhi that child widows below the age of 15 years should be allowed to remarry. The glorification of the institution of widowhood by this newspaper was a later development. It was a consequence of the journal's strong attachment to the ideology of Mahatma Gandhi. The effort to find solace in the spiritual glory of India in the face of political bondage was another reason for saying something good about the system of widows. While in the early period no such laudatory remarks were made by it the shift in the stand of the journal might have also been due to the priority given to political matters over social questions in the nationalist journals during the later period.¹⁶

Several periodicals of the day carried heart-rending stories of the travails of young and child widows. Sri Sadhana of Anantapur reported the news of conviction of a widow for transportation to life, for burying alive her illegitimate child and also wrote an editorial on the subject. The lady who was convicted to married at the age of 3 years and she became a widow at the age of 7. In later years due to illicit contact she became pregnant. She tried to bury the live child in a field. But cattle grazing boys noticed it and reported the matter to the village elders. The law of the land took its course and she was sentenced to transportation for life. In its editorial the paper justly held to blame the evil customs of society which had transformed the young mother, into murderer of her own child. Further the paper urged people to open their eyes and learn to avoid such social atrocities.¹⁷

The publication of such letters, news, stories and articles besides editorials on the subject of widows, by the leading journals in Andhra roused the conscience of the people and created public opinion in favour of widow marriages and like reforms. Therefore it is possible to maintain that the gradual improvement in the condition of the widows and increase in the number of widow marriages were the results of not only the sustained efforts of dedicated social reformers but also the consistent and sincere efforts of the newspapers of the day which influenced the educated reading public and moulded their opinions in favour of several good social causes.

There was a controversy in the early part of this century; over the question whether social reform should precede political reform or political reform should precede social reform. In this debate popular Telugu journals like Krishna Patrika and Andhra Patrika Supported the view that social reforms could not succeed without self-government.

Krishna Patrika vehemently argued that self-government need not be withheld till the removal of the social evils. In its issue it wrote the injurious social customs of the people could not stand in the way of bringing about changes in political matters, for such customs obtained even in countries where people enjoyed independence.¹⁸ Again in 1917 the same paper commented in its editorial columns that the misapprehension that social reform should be achieved first before gaining political independence arose mainly because it was not understood that the constitution was only an instrument for social progress and that the society did not exist for the sake of the constitution.¹⁹

Deshabhimani also asserted that social reforms would not succeed without self-government. It proclaimed that before reforming society, people should try for self-government. Unless the government was in the hands of the people, could not enforce the reforms which were conducive to their (social) welfare.²⁰

Andhra Patrika believed that social reform should be the foundation for all activities connected with the progress of the country, but it did not support the contention that social evils should be removed before the grant of self-government. In its issue dated July 31, 1917 a lengthy article was published expressing the view that it was "mad to contend that one should not work for political reforms before social reform was affected".

One of the social evils in Andhra which continued to exist during the early part of the twentieth century was the arranging of nautch parties during marriages and such other functions. The dancing girls in the nautch-parties sang obscene songs and exhibited vulgar dances. The educated people disapproved of such vulgar practices. The awakening of the educated elite was reflected in the Telugu press of the day, when the

newspapers condemned the continuation of such vulgar entertainment. Krishna Patrika published many letters condemning their evil practice and mobilized public opinion against it. When the Deputy Collector of Guntur, by name, Apanna Subbaiah Chetty arranged a nautch-party on the occasion of his daughter's marriage, a condemning letter was published.²¹ Again Krishna Patrika in its editorial exclaimed its displeasure in the continuation of this practice and deplored the efforts of some people to justify it on economic grounds. Again it on 20th August 1927 congratulated the Mysore government for banning nautch parties in temples and asked the government of Madras to do the same in the Madras presidency. The paper said: "Nothing becomes sacred simply because it is ancient."²²

ABOLITION OF DEVADASI SYSTEM:

The Devadasi system was another social evil on which the Telugu press focused attention. The Devadasis, once a community of artists, had degenerated, and became virtually prostitutes, popularly known as 'Kalavantulu'. To eliminate the evil from the society, the government came forward with a proposal in 1911 to pass a law to prohibit the adoption of minor girls as dancing girls. This proposal was received with great applause by the journals which favoured the end of the Devadasi system. Krishna Patrika published a signed letter by 38 members of the Devadasi community commending the efforts of the government²³. The letter also urged the people all over the country to convene meetings and support the government's efforts in the direction of putting an end to the Devadasi system. A similar letter appeared a few weeks later in this paper, written by one of the community in Peddapuram.²⁴

The efforts of Muthulakshmi Reddy to put an end to the practice of dedicating dancing girls to temples met with an enthusiastic response from the press. Satyagrahi of December 9, 1922 in an editorial commended her efforts to root out the Devadasi system by introducing legislation in the Madras Assembly. Krishna Patrika also applauded the efforts of that great social reforms by publishing resolutions which were passed in various conferences supporting her bill. Sri Sadhana

which was strongly opposed to the continuance of the Devadasi system felt that the bill of Muthulakshmi Reddy was only a small measure, and wanted more radical laws for rooting out the evil system.²⁵

The reform of the community of dancing girls or 'Kalavantulu', received much attention in the columns of the prominent Telugu papers like Krishna Patrika, Andhra Patrika, Satyagrahi and Sri Sadhana. The papers published the proceedings of the conferences of the community and gave wide coverage to the proposals that were made to reform them. Satyagrahi in its editorial on December 9, 1929 expressed its dissatisfaction with the poor progress of efforts for reform among the dancing girls and emphasized that the uplift of dancing girls was essential both for the girls and the Hindu society.

Prostitution was also attacked by the press advocating social reform. In 1910, Krishna Patrika published an appeal by A.Narayana Rao to all "Vesyas" (Prostitutes) to meet at a place to discuss relating matters to the reform of their community.²⁶ Again in 1911 this paper wrote an editorial appealing to the educated people and members of the community of "Vesyas" to cooperate with the government in checking up

the evil of prostitution.²⁷ An incident of the sale of a girl by her mother to a prostitute provoked Krishna Patrika to express its indignation and resentment at the indifference of the people towards social problems.²⁸ Andhra Patrika suggested the appointment of women in the police force to curb prostitution. In 1930, commenting on the act intended to abolish brothels, Andhra Patrika of February 4, emphasized the needs for educated men to take up effective steps to control prostitution.²⁹

CONCLUSION

It is well known that the socio-religious reform movement in India played an important role in creating the spirit of nationalism in India. The Telugu press played a vital role in the socio-religious reform movement in Andhra region. Eager to reform the society the Telugu press attacked many social evils which were the bane of the Indian society, fearlessly and with a rare missionary zeal. In the course of their fight for the eradication of social evils the Telugu press braved the wrath of the British officials and also that of their own conservative Indian compatriots. The enlightened Telugu journalists brought together scholarship and progressive outlook to bear upon their chosen mission.

REGIONAL VARIATION IN SOCIAL STATUS: A CASE STUDY OF NAYARS IN MIEVEAL MALABAR

R. Sonima

The formation of caste in medieval Kerala is a complex process. The Post-Perumal period in Kerala history is marked by such complexities in the case of development of castes. The disintegration of perumal rule created a way to the emergence of regional units. The absence of a centralised administration accelerated the growth of Naduvazhis. There exist variations of a castes in each region. The present paper is an attempt to understand the existence of service groups in medieval period of Kerala and their variations in their names under different Naduvazhis while taking Nayers as an example. It also analyzes the development of servicing groups of medieval Kerala.

The main sources used in the present paper are *Keralolpathi Granthavari*, inscriptional evidences, foreign traveller's accounts etc. The secondary sources like the books of various historians like M.G.S. Narayanan, Raghava varrier, Rajan Gurukkal, and others are used for the present paper.

Nayers were the major part of the karalar, who represented the second dominant factor in the temple centered agrarian society. This caste of present day includes a large number of servicing groups existed in medieval Kerala. Though there is a little doubt that the Nayers proper were primarily a military class probably as a sort of the yeomen militia, or those who devoted themselves to agriculture. The origin of the term Nayar is a controversial issue among historians. The inscriptional evidences are used by historians to argue about the origin. The earliest appearance of the term Nayakais found in the Tarisappalli copper plate of Sthanu Ravi (AD849) mentions Mathil Nayakan.¹ On the basis of these inscriptional evidences M.G.S. Narayanan says that the term mathil nayakan refers to the commander of the mathil (fort) and the office itself has parallels in the Alupa and Ganga kingdoms of Mysore. It is definitely a military service.² The Tirunelli Copper plate of Bhaskara Ravi Varman (962-1021) refers about patanayar. Among the witness

Amayamangalath YakkanChathan as the PataNayar and was a witness to this

copperplate.³ Another inscription which gives evidence on patanayar is the Nedumburam Thali inscription. It is dated in the 10th regnal year of Ramavarma Thiruvadi. This document says about the koottam conducted to decide the matters of thali and deva matters, in this koottam Nedumbranad patanayar kumaran kumarathichan is the adhyaksha.⁴ The Tiruvalla Copperplate mentions about Chirukataithuruthi Patanayar, These instances again point to the military office and use of the term Nayar as a title.⁵ According to K.N.Ganesh, the term Nayar is derived from patanayar. The inscription refers the patanayar of Ramakulashekhara, the last ruler of the Chera kingdom.⁶ Raghava varrier and Rajan Gurukkal also says that the traditional occupation of Nayar is that of patanayar (soldier), kaval (protection) and chekon (mercenary). In Zamorins palace they were known as Lokar and these Patanayars were also known as kurup and panikkar.⁷

Foreign travellers who visited Kerala mentioned about Nayers. Barbosa a Portuguese traveller of the 16th century says that Nayers are noble men who have no other duty than to serve in war and they always carry their arms wherever they go. The description of Nayers is elaborate in Barbosa. He says that all Nayers are mighty warriors.⁸ Pietro Della Valle says about the practice of matriliney among Nayers. "Before I leave Calicut, I shall here observe one strange custom of the people of this part of the country, The gentile Nairi had no peculiar wives; but all women are common amongst them; and when any man repairs to visit one of them he leaves his weapon at the door, which sign sufficiently debares all others from entering to disturb him; nor does this of course be get any difficulty or jealousy. The children seek to neither know nor do many times know who their father is but their descent by the mother is alone considered and according to that all instances are transferred".⁹ Sheik Zainuddin a native of Ponnani gives an eye witness account on the society of Malabar, says that Nayar caste is known for their physical strength and for their large numbers. It is the martial class of Malabar.¹⁰

The original home of Nayers is a question among historians. There exist various theories regarding the coming of Nayers. Some argued for Naga origin others for Scythian origin, and also exists arguments on indigeneous origin of Nayers. According to the brahman tradition Nayar caste is the result of union between the Nambuthiris with deva, gandharva and rakshasa women introduced by Parasurama, and this tradition embodies the undoubted fact that the caste by its practice of hypergamy has had a very large infusion of brahman immigrants who are among the first immigrants of Malabar and as conquerors assumed the position of the governing and land owning class; and in the ethnological sense the term may be used to include the Samantha and Kshatriya castes. The high caste Nayers are the proud martial class so often described by early travellers.¹¹

E.M.S.Nambuthirippad says that there exist various opinion among historians regarding the origin of Nayers some argues that they came from Nepal, others that Chotanagpur was their original home. Some historians argue that they were the native South Indian Dravidians. The matriline system and Naga puja is the base of all theories and Nayers had a few similarities with other groups in these matters.¹² Elamkulam Kunjan Pillai says that it was in the period from the 8th to 11th centuries that Kerala was enclosed with the straitjacket of the caste system. There was no Kshatriyas till the 7th century and no sudras till the 9th century AD in Kerala. Sangam literature and other literary sources do not mention Nayers. The inscriptions prior to the 11th century AD never refer about this caste. On the basis of available evidences Elamkulam argued that in the beginning of the 11th century Namputhiris created a group of Nayers from among the native people like Villavar, Parayar and Anthanar for providing service to them.

M.G.S. Narayanan argues that the most important nearly emerged caste in Kerala is that of Nayar. In sangam period it is absent. It became prominent in Kerala in this period after the settlement of the west coast brahmans. Therefore the proper assumption is that it was a byproduct of Brahmin settlement, that it was recruited from the aboriginal tribes for military service in the Chera period.¹³

K.P.Padmanabha Menon argued that Nayers are ethnically Dravidian or Turanian race. He pointed out certain distinctive features of the Nayar community for indicating their racial origin such as family is founded on a matriarchal basis and is serpent worshippers to a large degree.¹⁴ Some historians also argued for Scythian origin of Nayers, it is based on the serpent worship among the Nayers and a fancied resemblance between the term Nagar and Nayar. Francis Buchanan called Nayers as the sudras of Malaya and he said that they are born to be soldiers but they are of various ranks and professions.¹⁵ K.V.Krishna Ayyar argued that they were the descendants of the Arattavahikas of Mahabharatha. They were Ayudhajivins or people living by arms for their profession. In Mahabharatha they are found living in the region of the five rivers by the time of the Periplus of the Erythrean sea (1st century AD) they had reached the valley of the Narmada. The Sakas, Satakarnis, Pallavas and Kalabhras each in turn pushed them southward and their irruption account partly the decline of the cheraman in the 4th century.¹⁶

Nayar caste includes a large number of subdivisions. The north Malabar subdivisions rank as higher rule than the south Malabar subdivisions. In south Malabar the highest class is known as Kiriyam or Kiriyathil. The word is derived from the Sanskrit word graham, a house but this does not seem very convincing. Kiriyam Nayers can cook for all others. Most Kiriyathil Nayar affixes to their names the simple title Nayar; but some use the titles Panikkar and Kurup. Another group of nayers in south Malabar known as Charnna or charnavar, divided in to Agathucharnna and Purathucharnna. According to one the purathucharnna are the armed retainers of the various chieftains, while the Agathu Charnnavar are the body and house servants. According to the other explanation the distinction refers to their position of yagams (sacrifices), various duties inside the yagashala are performed by the Agathu charnna Nayers, while the purathucharnna are certainly considered to rank higher in the social scale. The manniledathu Nayar who ranks as Kiriyathil Nayar are considered purathu charnnavar.¹⁷ The last groups of the high caste nayers are known in south Malabar as sudra nayers. These are par excellencethe attendants and retainers of the

nambudiris as the charnavar are those of the non-brahmin chieftain; they were termed as swarupakkar and illakkar.

In North Malabar, a still more complicated and varied system exists amongst the high caste Nayers. There are exogamous groups called kulams, and these are grouped to form the sub caste which is usually endogamous. The main castes in North Malabar were Nambyar, kurup, adiyodi, Andurans or kusavans are potters, ottatunayar, pallichans or parappunnayar are palanquin bearers, Edacherynayar, vaniyanayar, ezhuthachan, attinayar, perimbaranayar, arimbranayar, ravarinayar etc.

Occupational variation among the Nayers is evident in medieval period. Some occupations are handled by different castes in different Nadus. There did not exist any homogeneity of castes. In Northern part of Kerala, Kolathunadu occupies an important place. Keralolpathi says that among the Kola swarupam Puthussery Nambyar is appointed as royal accountant. Same position in the case of Perumbadappu Swarupam Paliyathu Menon is appointed as royal accountant. Perumbadappu Swarupam existed in Kochi. In Nediyruppu swarupam Mangattu, Rayracha Menon is appointed as royal accountant. In Venad Keloth Omana Puthiyakoyikkal Pandarapilla is the royal accountant. Menon, Pilla, Nambyar etc at present belong to Nayar sub castes or sub divisions of Nayers. Their occupation is same but known in different names or as groups. Like Pilla in Venad, Menon in Nediyruppu swarupam and Nambyar in Kolathunadu.¹⁸

In northern part of Malabar washermen caste is called Vannanor vannathan, at the same time in southern part they are called Veluthedan.¹⁹ In Keralolpathi, Veluthedan is named as Iran kolli and also Vannathan, their duty is washing and 'Thirupudava Njerika'. In

northern part of Malabar Vannathans are divided in to eight exogamous illams, Kolankada, Malakulagara, Malot, Mundayad, Chelora, and Trichambaram in Ernad and possibly elsewhere they were divided in to four subdivisions called Veluthedan proper or Kshethraveluthedan, Vannathan, Mundapadan and Irankolli, first being endogamous and regarded as higher.²⁰ These all castes spread in all Desams, their service is needed for all rituals. Raghava varier argued that Veluthedan is considered as washer men of higher caste and Vannan is of lower castes.²¹

Vattekkad or Chakkingal Nayers are another caste considered as a sub division of nayar caste. Their occupation is oil making but known in different names in different places. Vattekkadan or Chakkingal Nayers or Vaniyans divided on the basis of their work, their mill run by hand or by bullocks.²² In Travancore Vaniyans are known as Vaniya vaisyas, and in northern part of Malabar they are known as Vaniyas, in southern part of Malabar they are known as chakkala nayar.²³ Vaniyans were also known as Vattakkatu Nayar and also Peruvianian Nambiyar and Chettiyar. In north Malabar Nambiyars were the landlords, in Kadathanadu Kurup became the soldier cum landlord. In central part of Kerala Karthavu, Kaimal, and Panikkar and in southern part Pillai all belongs to the service group of Naduvazhis and they were title holders under different Naduvazhis.²⁴ In later period the census enumeration consolidated them as Nayers.

The present study makes it clear that the caste system of Kerala is not of a uniform structure. There is no homogeneous structure, based on varna system. These sub castes cannot be included in the four fold division of varna ideology. Same occupation is handled by different castes and they existed on a regional basis rather than as part of affixed social structure in medieval Kerala.

DISRUPTING SOCIAL CONTINUITY: THE ROLE OF CASTE AND COMMUNITARIAN ORGANISATIONS IN 1920S IN MALABAR

Dr. Sreevidhya Vattarambath

The socio political scenario of Malabar in 1920s is tensed with lot of newly entered events which shook its very existence. The most important cause for this change was the entrance of national movement in the region. The land and people of Malabar made a warm welcome to the movement, which in later caused for all its transformation. One of the most important events that had been taken place in the land in the 1920s was the Malabar Rebellion of 1921, which was taken place as a part of the Khilafat and Non cooperation Movement, that was launched in all over India in 1920 under the banner of Indian National Congress and Mahatma Gandhi. The Rebellion was really against both the lord and the State and the main participants were the poor Mappila peasants of the region who suffered lot of hurdles and suppression from the hands of their Jenmies. But the Rebellion turned into a more violent way and lots of people died or murdered or arrested and a chaotic situation was taken place in the region especially in the Southern parts of Malabar. Even though the British Government could suppress the Rebellion, it created far-reaching impact in the Malabar region. Life itself was became a great hurdle in the region. The people of the region feared of further such incidents. They realized the fact that the disunity existed within the Hindu community caused for all their sufferings. Afterwards they felt the need of the unification

of their own caste and community which caused for another change in the socio-political scenario of the Malabar region. This article entitled **Disrupting Social Continuity: the Role of Caste and Communitarian organizations in 1920s in Malabar** mainly intended to trace out the development of caste and communitarian organizations among the Hindu community in the Malabar in the post 1921 Rebellion period which further caused for the disruption of the existing situations in the region.

Communitarianism or community sentiments offer a sense of security within one's own community, but without being against another. Socially significant features of communitarianism are that it is mostly confined to individual initiatives, uses institutional or state channels and circulates with in a class, peer group or status group.¹ When a particular community upholds the rotten antiquity, it badly affects not only that community, but others also. The communitarian organizations conduct an organized attempt to eliminate these trends. Communitarianism or community sentiment is significantly different from communalism. Communalism is the making of a social and political identity based itself on religion and constructing itself other religious identity.² But communitarianism is a consciousness that developed within a class or caste group. **Communitarianism**, as a social and political philosophy, emphasizes the importance

of community in the functioning of political life, in the analysis and evaluation of political institutions, and in understanding human identity and well-being. It is a philosophy that emphasizes the connection between the individual and the community. Its overriding philosophy is based upon the belief that a person's social identity and personality are largely molded by community relationships, with a smaller degree of development being placed on individualism. Communitarianism is a social philosophy that, in contrast to theories that emphasize the centrality of the individual, emphasizes the importance of society in articulating the good.

The word community for a religious collectivity can be used for the first time in the 19th century. During the earlier period, the sense of community depended on a set of diverse factors. Although religion was an important aspect of social life of the people, it seldom became an exclusive basis for the formation of any distinct community existing at that time.³ Along with the emergence of nationalism in India, the construction of communities on the basis of religion also occurred and in the interaction of community consciousness with nationalism in their various phase of subsequent growth is quite indicate and complex. Benedict Anderson in his study of origin and spread of Hindu nationalism has observed that "all communities larger than primordial villages of face to face contact are imagined".⁴ This formulation can be invoked to understand the formation of new type of religious communities in India in the 19th century. Jawaharlal Nehru had of a different view in connection with the growth of communitarian sentiments. He stated that religious communities represented only reactionary form of politics and obstructed the growth of anti imperialist struggle.⁵ The religious based communities of the 19th century were not primordial entities inherited form the past. Instead these newly constructed collectivities were rooted in contemporary needs and aspirations of distinctive sections of society which had gained prominence under the colonial setup. The consciousness associated with these religious based communities which had their role as distinctive social formations underwent some significant changes in the late 19th and early twentieth

century's. Such changes were taken place along with the some significant events in certain areas which created everlasting changes in such societies. In the case of Malabar, the post 1921 Rebellion period witnessed such a communitarian development.

a. Attempts among the Upper Sections of Hindus to form their own separate organizations

Yogakshema Sabha

The period following the 1921 Rebellion, in Malabar region, almost all castes began to form their own separate organizations and associations for their own safety. Various associations, formed before the Rebellion, became stronger and more energetic in this period. Among them, the Namboodiri Yogakshema Sabha, Nair Service Society and Sree Narayana Dharma Paripalana Yogam were more prominent. *Kerala Yogakshema Sabha*, formed in 1908 March on the Sivarathri day in a meeting held under the chairmanship of Desamangalam Sankaran Namboothiripad at the Illom of Cherumangalam Vaideekan, was the first organization of the Kerala Brahmins.⁶ Even though the organization was there even long years before the Rebellion, it attained a slow growth mainly due to the lack of strong leaders. In the post Rebellion period, many youths came to the forefront of it, especially those who were eager to modify the orthodoxy kept by the elders.⁷ The Youth wing of Yogakshema Sabha put forward a new revolutionary idea for the removal of evil customs existed within the community. The activities of the Sabha helped to develop self consciousness among the members of it and to strengthen unity among them. The Sabha advocated everybody to wear Khadi, but to keep the lower castes, who also wore Khadi, far away. In its initial stage, the Sabha rejected the resolution regarding the removal of untouchability. Meanwhile, *Mathrubhumi*, in its editorial advocated the Namboodiri youths to wake up and it reminded that: if not, "it badly affects the community". It was at this juncture that a radical wing of the Namboodiris emerged into the scene that advocated the eradication of untouchability and other evil customs existed in the society. One of the prominent among them was Kurur Neelakantan Namboodiripad, an

active Congress leader and an advocate of the anti-untouchability campaigns. He made an attempt to pass a resolution regarding the abolition of untouchability from the community, in the Thrissivaperur session of Yogakshemasabha held on 3rd May 1924, in which, he could win the support of the Sabha for the same cause.⁸

Just like this, in the case of Jenmi-kudiyan issue also the same attitude was followed by the Sabha. Some of the elitist wing of the Sabha was against the passing of the Tenancy Bill but the youth wing was in favor of the Bill. Thirty one Annual meetings of the Sabha were conducted without fail. Since then, the Sabha became nominal. Some of the activists entered into politics. The others ensured a place in the field of art and culture. Majority have withdrawn to their own domestic circles. However, the Yogakshema Sabha and its activities created a new fervor in the Namboodiri community.

Nambissan Samajam

A Nambissan Samajam was organized in North Malabar with the purpose of safeguarding their caste from its decline. The second annual conference of the Samajam was held at Kuttiadi on 14th May 1924 in which numbers of resolutions were passed with the aim to attain their goal.⁹ While the reforms in the Nambissan community were underway, Koliprath Damodaran Nambissan wrote an article in Mathrubhumi on 24th March 1924 which stated: " the Nambissans of today are living in a most deplorable condition that it is difficult to call them even as human beings. It is relevant to note at a time when the downtrodden communities are trying their best to improve their social status, other communities like Nambudiris, Nairs, Thiyyas and Pulayas are far ahead in their social reform attempts. Pulayas, whom we consider as the most impure and inferior are also moving on the same route. We are depending Namboodiris to perform our most sacred practices and rituals like *choroon*, *choulam*, *upnayanam*, *kanyadhanam* etc.. It is shame on our part that we have to depend often other communities like Namboodiris to perform out most sacred practices. Therefore we should take the responsibility of performing these practices using our own men. Though there are members within our community who are aware

about the need for this changes no effort has been made to curtail these irrational practices".¹⁰ It was such an awareness that motivated the Nambissans to form an organization and try for their upliftment. No doubt, this was an anti Namboodiri movement.

Nair Service Society

The Nair Smudaya Brithyajana Sabha formed at Mannam House of Changanasseri on 31st October 1914, was renamed in 1915, as Nair Service Society and became a big communitarian organization.¹¹ The All Kerala Nair summits conducted by the society gave way to the basic reforms in the community. The objective was to renovate the community by eradicating unnecessary evil customs and practices. NSS attempted to spread their hold even in the remote areas through Nair Samajams. In their view, such societies are necessary for a community to strengthen it by eradicating evil customs from the society. In their view, less work was done in Malabar for the upliftment of their community.

There arose criticisms from various quarters against the formation of such communitarian organizations. The critics had of the opinion that the growth of such organizations would affect badly on the political front. But the leaders of the Nair community rejected this view and stated that such samajams and sanghams would regenerate the community, instead of letting them as mere political agent. The most notable fact here is that all these attempts were undertaken against the Brahmanical supremacy. At Calicut, a meeting was held to discuss various measures that would undertake for the internal reforms of the community.¹² At Payyarmala, near Payyoli, a Nair *Mahayogam* was held under the chairmanship of K T Kumaran Nambissan in which almost all Nairs of that area participated. It discussed the unification of various sections of Nair community to strengthen it.¹³ Afterwards the branches of Nair Samajams were formed in various parts of Malabar like Cheruvannur, Nilambur, Mampad and Wandoor . They mainly intended to bring the Nairs in to the forefront of anti untouchability campaigns.

NSS decided to conduct local conferences for strengthening it and also to spread its ideas in every nook and corner of Malabar. One of the

most important Nair conferences was held at Karuvatta in May 1929.¹⁴ This conference decided to form branches of NSS Karayogams in all parts of Kerala. It passed a resolution which denounced the caste and national difference existed in the Nair community. Another resolution demanded permission to all Hindus to enter into the temples and also recommended to handover the village reconstruction programme to Karayogams. A conference of Ponnani Nair samajams was held at Ponnani High School ground in 1929 under the presidentship of Kannan Menon. It declared communal harmony and eradication of untouchability as its main aim.¹⁵

The Nair conference held at Ponnani in January 1930 under the presidentship of K Madhavan Nair decided to form a Malabar Nair Samajam, as a representative body of Nairs of Malabar.¹⁶ In his presidential address, Madhavan Nair stated that "even though some Nair Samajams are here in Malabar, like North Malabar Nair Samajam and Ponnani Nair Samajam, they were not having enough strength and influence among Nairs. So such an organization is necessary for the regeneration of the community".¹⁷ It formed a working committee of about 30 members from various parts of Malabar. It also decided to apply to make changes in the Marumakkathiyam system.¹⁸ The conference was held immediately after the suspension of Kudiyan Conference. Therefore there arose doubts about the nature of Nair Samajams. Some doubted that Kudiyan Sangham was changed into Nair Samajam. As a response to this, M M Kunkrishnan Nair declared that the doubt is worthless and these two have no relationship at all. He stated that the main aim of the Samajam was eradication of untouchability and nothing else.¹⁹ In later days, such Samajams and organizations were very active in Malabar which worked for the upliftment of the community by eradicating evils that existed within its purview.

Division within the Nair community

One of the most important features of the age was the existence of lot of sub divisions within the Nair community and the formation of their separate organizations. Each subsection is trying to build up their own organizations and to oppose the harassment by their higher

divisions such as Manavalan Nair Samajam, Veluthedathu Nair Samajam, Vettekattu Nair Samajam etc..

b. Attempts from Other communities to form their own separate organisations

Sree Narayana Dharma Paripalana Yogam

SNDP is the oldest and like biggest communitarian organization of Kerala. While analyzing its aims and objectives, it is clear that it is not a communal organization. Almost all the members of this organization belonged to a particular community-Ezhavas or Thiyyas- and thus it is also a communitarian organization which was formed to safeguard the interests of that particular community. Even though it was formed in 1888, it became active in Malabar only during the post Rebellion period. It was in 1929, a branch of the Yogam was established at Kozhikode.²⁰ Even though a resolution was once passed saying that all who joins in the Yogam will be treated as Ezhavas, the downtrodden castes lower to Ezhavas were not admitted to the Yogam. The earlier activities of the Yogam were mainly concentrated at Kozhikode. The main agenda of the activities of the Yogam was eradication of untouchability. In a meeting held at Parishhall in May 1924, they decided to extent full support for the cause of the eradication of untouchability.²¹ There are references regarding the joint attempts of NSS and SNDP, in later days, against the existing social evils. As a part of this, a joint conference of NSS and SNDP was held at Vaikkom in 1924,²² in which, it was decided to render full support to the cause of the Sathyagraha. Later the attitude of leaders of SNDP had changed and its leaders had moved into severe criticisms against national movement and Congress. Even they had demanded for separate constituency for the Ezhavas.²³ Even though the SNDP Yogam had accepted many policies entirely different from its earlier ones, it had grown into an organization fighting for the upliftment of the Ezhava community.

Keraleeya Vaidya Samajam

Just like all other communities, for the upliftment of their own community, an organization under the name *Keraleeya Vaidya Samajam* was established by the Vaidya community. An annual meeting of the Malabar

Ayurveda Vaidyasala of Thalasseri and the *Keraleeya Vaidya Samajam* had held near the Thalsseri Railway station.²⁴ Lots of such meetings were held in different parts of Malabar which is the best example of the fear of insecurity and bothering of the need of the upliftment of their own community from its evil practices.

Malayalee Viswakarma Sabha

The *Malayalee Viswakarma Sabha*, an organization of the Viswakarmas (Kammalas, who were artisans) of Malayalam was also actively present in Malabar. The first annual meeting of this organisation, which was registered in 1926 to the regeneration of the community was held at Cheruvannur under the Chairmanship of Manjeri Ramayyar. Another meeting of the Sabha was held at Calicut on 24th October 1928, under the chairmanship of C V Siva Rao.²⁵ Resolutions were passed in the meeting requesting the government for giving tenders regarding the works of Local Boards and government done by Kammalar to the community itself, granting scholarship to Kammala students and appoint their own representatives in people's bodies like the Legislative Assembly, District Board and Municipal Council.

Samastha Kerala Chaliya Yuvajan Yogam

The Chaliya community also decided to involve in the activities of the improvement of their community and woke up from their sleep. With this purpose, meeting of *Samastha Kerala Chaliya Yuvajana Yogam* was held at Panthalayani Board Higher Secondary School on 22nd January 1927, under the presidentship of K Kelappan and decided to work for the upliftment of the community²⁶.

Attempts made by Peruvannan community

With the aim of eradication of the disabilities of the Peruvannan community of Kozhikode Taluk and for undertaking measures for their upliftment, a meeting was held under the chairmanship of K M Nair B A. BL., at KSR High School, Chalappuram on 15th January 1928. On account of the notice of Vaidyar K Bapputty, many members of the community, including 20 women, attended the meeting.²⁷ The meeting advocated for the upliftment of the society by eradicating the evil customs

prevailing in the community like untouchability, child marriage and liquor consumption. Following this, on January 28, Sunday, a meeting was held at Kozhikode under the presidentship of Chamunni Vaidyar and decided to hold a public meeting of the community.²⁸

Organizations of the Downtrodden communities

Just like all these upper caste communities, the downtrodden sections of the Hindu community, who were considered as the untouchable section in the society, were also tried to form their own separate association to safeguard their community from the evils of the Hindu society and also from its decline. The downtrodden sections formed such associations to protect themselves from the clutches of untouchability and unapproachability. A joint meeting of *Cherumas* of Kalyasseri, Pappinisseri and Kannadiparamaba was held at Kaylasseri in Kannur in 1924 and with the aim of discussing the problems that they had faced and to find out solutions to these problems, especially to attain freedom to walk through public roads.²⁹ In the meeting, the *Cherumas* proclaimed that they didn't want to enter the houses of the savarnas or their temples, but wanted the right to walk through public roads constructed with public money.

The condition of the riot stricken south Malabar region was also not so different. They realized the fact that the disunity among the caused for all their subordination. So they also felt the need of joining together under the banner of their own separate organization. Attempts were being made to organize a meeting of the Paanchamas³⁰ of Malappuram, Manjeri, Pallippuram, Panthallur etc. to make attempts for the eradication of the evil practices existed within the community and also to get freedom from the cruelties of the upper sections of the society. The meeting was held under the leadership of enthusiastic *Kanakkans* of the area like Kunhikeeran, Cherukutti and others. Some leaders from the Nairs, Menons and Muslim community, who were sympathetic towards these poor people, also attended the meeting. Persons like Nadimaster and Valiyachathan of Malappuram, Kutti from Manjeri,

Kottiyal Peravan from Oorakam, Chathan of Kachinikkad, Kuncholan and Nochiladi of Pookkottur came forward and spoke about their grievances. They asked: "though our blood is similar to that of *thampurans*, why we are subjected to harassments?"³¹ Their important demands were: to get freedom to walk through the public roads, eradicate evil customs prevailed among them, encourage education of their children and bring light to their huts.

The *Panas*, *Pulayas* and other such downtrodden sections also made similar attempts to solve their problems through the formation of such communitarian organizations. A Kerala *PananSamajam* was formed in Malabar in 1920s.³² As a lesson to the Hindu conservatives, a great summit of *Pulayas* was held at Pallikkavu in North Malabar under the chairmanship of

V. K.Kunhikannan. Some Nair elitists like C C Appukkutty Nambiar and many Muslims and Thiyyas attended the meeting. Famous social activists like Mannath Padmanabhan, Kesava Pulayanar and C Kuttan Nair were also present in the meeting. This meeting was

organized due to the harassment of the poor *Pulaya* by a Nair Jenmi, who was considered by the *Pulayas* as their drinking water and air to breathe.³³ Kesava Pulayanar told in the meeting that the *Pulayas* will be able to live like human beings only after having a community organization and attaining education. He felt that the condition of the *Pulayas* of Malabar was more deplorable than that of Travancore. Through the formation of *Pulaya Mahasabha*, in later days, the *pulayas* also tried to come into the forefront of the society. Through these organizations the downtrodden sections also clamored for reforms within their community.

In the Post 1921 Rebellion period, attempts were made to introduce some communal and communitarian elements in the society, along with secularist tendencies. The development of such tendencies later played a great role in the social sphere of Malabar. The development of caste and communitarian organizations in the post 1921 Rebellion period led to the development of a Hindu consciousness which later become one of the most important elements for the creation of a Hindu identity in Malabar.

SOCIO-ECONOMIC AND CULTURAL LIFE OF PEOPLE DURING QUTB SHAHI DYNASTY- REFLECTIONS FROM EUROPEAN TRAVELOGUES

Dr. Srinivas Rao Vaddanam

Qutub Shah Dynasty ruled the Golkonda Kingdom, which comprises most of the modern day Telangana and some of the modern day Andhra Pradesh for a period little less than two centuries (1512-1687). They gave Hyderabad to the world and also gave some of its iconic structures like the Golconda Fort, Mecca Masjid and many more. Sultan Quli Qutub Shah was the founder of the dynasty. He declared independence from the Bahamani Sultanate and took over the title of Qutub Shah.

The Qutub Shahi rulers originated from the Kara dynasty which ruled over Central Asian countries like Azerbaijan, Armenia, Iran, Turkey, and Iraq. After establishing the dynasty, Persian was introduced as the official language of administration. The kingdom was known to the people of the Middle East Countries since its inception and its illustrious culture attracted hoards of statesmen, scholars, traders and artisans from abroad inheriting a valuable legacy of culture. They brought to the Deccan traditions of art and culture and high ideals of life and society.

The welfare of the state subjects of all castes and creeds was the primary concern of the Qutub Shahi Government. The Qutub Shahs were fully committed to the social and economic needs of the people and tried their utmost to provide with all possible comforts to the extent that the sources of the kingdom permitted. Religious freedom was the distinct hall-mark of the Golkonda kingdom. All classes and communities, whatever be their religious affiliation, caste or creed, enjoyed full freedom of conscience and religious practices. There is no record of mass conversions of the Hindus to Islam during the long range of the Qutub Shahi history.

Although the Qutub Shahi constitution was a replica of the Bahmanides in many respects because the Golkonda Sultanate was but an off-shoot of the Great Bahmani Kingdom, yet it reflected local concepts of life and Society as well. The Constitution was so moulded as to be in harmony with the local temper and not contrary to the local traditions and concepts. A

very important sources of reconstructing the socio-economic and cultural history of Qutub Shahis are the records of Dutch, English and French Travellers. They are essentially "private" records and do not deal directly with the political affairs of the region. They contain certain data not found in our chronicles and throw considerable light on the social and economic aspects of the life of the people during Qutub Shahis period.

The Qutub Shahi Kingdom saw three distinguished Frenchmen who visited Golkonda during the reign of 'Abdullah Qutub Shah. The first, Jean Baptiste Tavernier, Baron d' Aubonne made six voyages to the East ranging from 1638 to 1663. His book, *Travels in India*, first appeared in 1676, edited by V. Ball and published in 1889. His observations regarding the life of the people are extremely valuable. He has traced the roads by which he travelled, the method of transport, the cities through which he passed, the stages on the way and the formalities he had to undergo. Being a dealer in diamonds his detailed description of the mines he visited is unique.

Jean de Thevenot, the French Traveller visited the Qutub Shahi dominions in 1655-1668. He is careful to note down in his book things he saw, the difficulties he had to undergo and his experiences. He also gives a fair description of the Qutub Shahi army, the frontiers of the Kingdom and its economic conditions. But like Tavernier, his account of the history of the dynasty is meagre. Thevenot and Careri, published at New Delhi in 1949.

Francois Bernier was a doctor by profession and was attached to the court of Shah Jahan. After the battle of Samugrah he joined the service of Mirza Raja Jai Singh and accompanied him to the Deccan as Captain of Artillery. He was at Golkonda when Aurangzeb occupied the citadel. He moved on to Madras where he died in 1717. Bernier's book has been published by the Oxford University Press with the title 'Travels in the Mogul Empire'

Manucci's 'Storia do Mogor', which runs into four volumes is his personal observation. Although at times the treatment is slightly exaggerated, it consists of data which is most useful to the historians. He was at Golkonda as physician to Abul'l-Hasan Qutb Shah and as such had ample opportunities of observing what was happening at the court. Among his contributions are the two famous groups containing the portraits of all the Qutb Shah I and 'Adil Shah I Kings respectively which were copied from individual portraits. The English translation of the Storia was edited by W. Irvine and published in four volumes in 1906.

We have also the account of the Dutchman Schoerer and the Englishman Methwold. Schoerer was a factor at the Dutch factory at Masulipatam from 1609 to 1614, and in that capacity has occasion to visit Hyderabad. Being a merchant himself he has given us useful information about the coins current in the Kingdom, the rate of exchange, weights and measures. He also describes the cargo which was loaded and unloaded at Masulipatam, the chief port of the Kingdom.

Methwold, who rose to be the President of the English factory at Surat was originally employed at Masulipatam from 1619 to 1622. He gives an account of the social set-up of the State, its produce and its cattle wealth. The Sultan was so well disposed towards him and permitted him to visit certain forts of the Kingdom. He gives us an account of the clothes the people wore, their religion and the religious freedom enjoyed in the Kingdom. Both Schoerer's and Methwold's memoirs have been included in Moreland's 'Relations of Golconda', published in 1931. The Travellers themselves with the country they lived in, imbibed the local spirit and assimilated the local traditions and concepts¹. Thus the Qutub Shahi culture which comprehends life and society, politics and Government and science and art is a harmonious fusion of diverse elements drawn from various sources, Persian, Indian, Bahmani and Andhra.

Accounts on Army

According to Thevenot, the Qutub Shahi Army numbered five lakhs, comprising both feudal and standing forces². He clearly states that the fief-holders of Golconda, who were

supposed to supply the bulk of the army, failed to provide their stipulated quota and, therefore, half the number was supplemented by the central Government at its own expense³. The statement further shows that the kingdom in its earlier period, lacked the system of maintaining a standing army paid by the central treasury, whereas it depended very much on the feudal forces supplied by Jagirdars.

Thevenot is definite in his statement that king Abdullah paid salaries to the members of his fighting forces out of his own pocket⁴ if a later authority is to be relied upon. Abul Hasan had also raised an efficient body of Troops, 40,000 strong, at his own expense and his prime minister, Madannah had maintained his own cavalry, which numbered 10,000.

Natural Resources of the Kingdom

Golconda was an extensive kingdom with fertile lands and rich mineral resources. Foreign travellers too expressed their admiration to the productivity of the soil. Barren villages were populated and new tanks and wells were constructed. The country yielded good harvest in almost all cereals and pulses. Wheat, rice, millet, bajra, pulses, gram, masur, tur and til grew in abundance. The cash crops namely cotton, tobacco, castor-seeds as also toddy formed great source of revenue. Fruits were grown, in many varieties. Mangoes, bananas, lemons, oranges, pomegranates, pineapples and guava were commonly grown⁵.

Besides the agriculture land and the forests, Golconda was blessed with lucrative mines of diamonds and other minerals, which brought to the Kingdom unbounded wealth and prosperity. Golconda was particularly famous for its diamonds all over the world. None of the Deccan Sultanates except Golconda could claim such a mineral wealth. And that is the reason why Golconda was known as the 'Country of Diamonds'⁶.

According to Tavernier who gives a good account of the Golconda mines, there were twenty three mines in the kingdom. Some of them were situated in Telangana and a few in Karnatak.⁷ Kondapalli which lies close to the Krishna river and Narsapur which is situated about 39 miles from Rajahmandry were rich in diamond mines. Narsapur had the best type of

mines which yielded diamonds of bigger size and superior quality. Kandikota and Kollur which formed parts of Karnatak, possessed a large number of mines where twenty thousand people used to work. These labourers were employed for different types of work: some of them performed the work of digging, others removed loads of earth and some extracted water. As a result of mining activities, these places which were once desolate and barren became thickly populated⁸. These mines yielded enormous wealth and formed the greatest sources of income to Golconda. Some of the mines were reserved for the personal use of the King. According to William Methold, all diamonds weighing more than ten carats were reserved for the king who used to appoint special officers to protect them from theft and embezzlement. But even these stringent measures failed to check thefts⁹. The mines were usually given to traders and contractors on lease who carried on the mining work subject to the Government royalty. The diamonds were brought in the market for sale. The contractors required to pay the royalty at the rate of one hun per hour for each mine, irrespective of the yield¹⁰.

Economic Life of People

Foreign travellers speak highly of the abundance of iron and steel as also of their fame and demand in distant places. This steel was exported to the Punjab and Persia and the Damaskas swords which were world known for their quality were manufactured from the Golconda steel.

Golconda was an agricultural country. It was not devoid of trade and industry. The advent of the Qutub Shahi culture gave an impetus to trade and industry and various articles were manufactured to cater to the needs of the royalty, gentry and commonality. When the city of Hyderabad was founded, we come across various arts and exhibits of skilled sleight of hand which satisfied the need of the people. Hundreds of Artisans and industrialists flocked to Hyderabad and accelerated the advancement of culture. To quote a Mughal historian, there were so many 'artisans, tradesmen and artists' in Hyderabad that a detailed account of them all would require a separate volume¹¹.

The cloth woven in the kingdom may conveniently be divided into two varieties; one was the plain cloth which was meant for ordinary use and the other was the superfine which satisfied the needs of fashion. All colours and designs were made by means of a brush. Its colours and designs were so indelible that they did not lose their lustre even after washing and remained to the last. This cloths was only fabricated in coastal town like Masolipatam and Narsapur, which were particularly famous for their textile industry throughout India. The patterned cloth called the 'Qalamkar' of Masolipatam was not produced in other parts of India¹²

In addition to fabrics, metal instruments and arms made of iron deserve a detailed study. Steel of good quality was made at Golconda and arms and weapons were also manufactured. Nirmal and Indore which were situated to the north of Golconda were centres of the steel industry. Good quality of steel was here prepared¹³. According to Thevenot, swords, daggers and spears were being manufactured at Indalvai near Indore or Nizamabad and they were supplied to the markets all over India¹⁴. Wood cutting was another industry. Boxes and other house hold furniture were made of wood with fine design and polish. This industry is still in existence of Kondappali and other towns. Narsapur on the banks of the Godavari was famous for this industry. Ships were also built in the same town. Merchandise was exported overseas in these ships. Big steamers meant for long voyages were also built here and according to Schorer, a servant of the English East India Company, even British merchants had got a steamer named the 'Globe'¹⁵ built at this centre. Indigo was prepared at Nalgoncha and exported outside. (Nalgoncha was situated at a distance of twelve miles from Khammammet to the South East Direction) Gun powder and cartridges were manufactured at Masolipatam, and the town was also famous for salt and durable masts¹⁶ for ships and steamers.

Masolipatam which is also popularly called Machli Bander had developed into a great port during the reigns of Abdullah Qutub Shah and Abul Hasan and it more or less enjoyed the same position as Bombay does in the modern age.

The travellers gave vivid depiction of living of people. The common people and the aristocrats were rich and happy. The aristocratic families, both Hindus and Muslims known as Amirs, possessed two kinds of lands and Jagirs: one was the Madad Maash (grant-in-aid) and the other was conditional with military service. The latter kind of Jagirs served as a great source of income because the incumbents never fulfilled the conditions as demanded by law and saved money and therefore financially they were rich and affluent and led a kingly life. As for the middle classes, they comprised two communities, namely the Muslims and the Hindu. The Muslim population consisted of two classes, first were the traders, who carried on their internal as well as foreign trade. This merchant class which was mostly of Persians, was very rich and prosperous. The Persians also carried on banking transactions and lent money. They charged 4% interest and made a fabulous wealth¹⁷. The other section of the Muslims lived on Government service and earned their livelihood from the royal treasury.¹⁸

The Hindu population consisted of three classes, namely Government servants, peasants and traders. The Hindu population had a larger share of Government service. Not only the local Government as well as the village administration was conducted Hindus but also the district Governors as also the Mustajirs (Contractors) who held the districts on lease and paid the stipulated revenue were all Hindus. They also dominated trade and mines. Government counted on Hindu officers to control the mines. The lower classes which comprised the cultivators and labourers earned good wages.

The artisans who worked in iron, gold and silver factories drew their wages from their shops or establishments. The iron-smith and the goldsmith was paid 3 annas per day and their servants and palanquin-bearers used to get one anna. But all of them had to pay a part of their income to the local authorities.¹⁹ As a Government levy. It appears that the labourers earned wages sufficient to meet their humble needs.

Social Life

The private and public life of the people of Golconda was also reflected in the writings of

Travellers. Refinement of taste and manners was noticed in almost all the classes of the people and in all their walks of life. The Society, as a matter of fact, was influenced by the exaltation and magnanimity of the life of those who belonged to royal household or to the nobility. The lofty ideas of Golconda kings and noblemen are manifest in their buildings some of which are still extant. Even their residential quarters were as magnificent and gorgeously decorated as the darbar halls. The pomp and pageantry which surrounded the royal durbars also marked the royal processions. The King, dressed up to the hilt, rode a colourfully embellished elephant, escorted by a large number of troops and retainers and was also accompanied by noblemen and grandees of the state, who rode either on horses or were carried in palanquins.²⁰ The life of the nobility was equally high and expensive. They lived a life of affluence, resided in palatial buildings and moved about in processions which looked as impressive as those of the king. They were carried in palanquins escorted by a large number of retainers, with elephants and camels²¹.

Tavernier gives an interesting description of these processions. Elephants with banners flying and rows of camels and carriages moved in the front, then followed by the palanquin in which the nobleman was seated. The rest of the bodyguard consisting of cavaliers and infantrymen came in the rear²². The middle class also lived a decent and gracious life. Hyderabad was the biggest city of the Medieval age with large number of dwelling houses numbering about two lakhs. If four individuals as average may be supposed to dwell in each house the population will rise to eight lakhs. The houses of noble class people were provided with all basic amenities and decencies of life. The household vessels and utensils are described as of gold and silver. Glassware was also in common use. Houses were lit up with lamps and chandeliers made of glass which were imported from outside and were available in Hyderabad and Masulipatam markets²³. Thevenot states that the common man lived in very low and ill contrived huts built of earth and thatched with straw²⁴.

Dress Pattern of the People

Hyderabad people have their own dress pattern. The members of the royal family stuck to their old, Turkish style in their early days, yet they developed a local outlook in later years. Mohd. Quli Qutub Shah who was the 5th King in the line had discarded his Turkish dress, and adopted pure Deccani style. He put on a Deccani turban instead of Turkish samura cap and loose jacket of linen instead of woollen coats. What is more curious about his dress is that he shaved his beard and put on jewels and wore bracelets on his arms according to the Telangana fashion²⁵. His poetry which depicts his impressions about the life and culture of the Telugu society shows his sympathy with the local life and traditions. The Golconda people were tall, fair and well dressed. The middle classes wore jackets of fine linen and put on either white or coloured turban of Deccani style as their head-gear. They were armed with different weapons. Everyone was skilled in the use of swords and sticks which was characteristic of the social life of the Deccan. The courtiers who attended royal durbars were required to put on Deccani dastars, used belts round their waist as their official and court dress. The Hindu population wore their own dress which was in vogue from time immemorial. The Karnatak Hindus wore long locks of hair.

Religious Life

All the Qutub Shahi Kings were tolerant, humane and just. Their guiding principle was benevolence. They treated their Hindu subjects as liberally as they did the Muslim Community. They even went to the length of declaring Tuesday as a week holiday²⁶ and assigning jagirs and large tracts of arable lands for the upkeep of Hindu temples and for the performance of religious ceremonies thereof. Abul Hasan's liberal award of jagir assignment to Bhadrachalam and Bhramara Malleshwaraswami temples situated on the Godavari Krishna respectively redounds to the magnanimity of his heart²⁷. This is why the Andhra people regarded the Qutub Shahi Sultanate as their own and the king as their national ruler. Sultan Quli, the founder of the kingdom was received and loved by his Hindu subjects as 'Bare Malik' even in his early days when queens were revered as 'Maa Sahib'.

There were divergent religions and religious affiliations in the kingdom. The Hindus formed the bulk of the population who differed from their Muslim brethren in their religious ideals and notions of life. The first three kings, Sultan Quli, Jamsheed and Ibraheem were ultra catholic in their religious views. They declared no state religion of their religious views. They declared no state religion of their own about left the matter of religion to the freewill and free conscience of the people. They never allowed their religion to be polluted by sectarian bigotry and narrow sympathies. They, on the other hand, admitted all sections of the population, Hindu and Muslim, Shia and Sunni in their political and social fold without the distinction of caste and creed.

Sultan Quli had joined the punitive expedition against Yousuf Adil Khan of Bijapur who had declared Shia faith as the state religion. Mohd Quli Qutub Shah's religious policy was at variance with that of his ancestors. Mohd. Quli was not in the habit of taking a broader view as his ancestors did. He, no doubt, pursued a more liberal policy towards his Hindu subjects than even his ancestors. He was a bigoted Shia and was very enthusiastic for mourning rites and for installations of 'Alams' in Muharram. Hussaini Alam in Golconda was installed by his for the first time. He bestowed his favours on the Shia community at the expense of the Sunnis.

Mohd Quli was the first king of Golconda to start diplomatic relations with the Persian court and regarded the Persian monarch as his over lord. The King also invited Persian families to settle down in Hyderabad in order to safeguard his interests. They were not only colonized in Hyderabad all around the royal palaces but they were also give ample opportunities to make use of trade and banking at Hyderabad and Musulipatm²⁸. Most of the Shia families who now reside at Hyderabad and Masulipatam trace their origin to Mohammed Quli's reign.

Accounts on Medical Practices

European travelogues, the account of Jean Baptist Tavernier gives a vivid description of the collection of drug-substances, the demand for medicinal stones of Golconda Kingdom in the countries of the east and the west of the

position of surgery etc. He describes an incident of blood letting to Abdullah Qutub Shah by a Dutch Surgeon. He gives a graphic description of the performance of venesection at four places under the king's tongue to cure his headache.

The hygiene which was observed before under-taking venesection also is vividly described by Tavernier. The physician was first given a bath and was given clean clothing, his hands were cleaned and rubbed with medicinal oil in order to make them thoroughly free from germs and microbes. Manucci, an Indian physician at Golconda in Abul Hasan Tanisha's service receiving 700 rupees as salary, refers to the talent of the native doctors in performing plastic surgery. When a war broke out between the Moghals and the Bijapur, the Bijapur soldiers defeated and cut off the noses of the Moghal soldiers. Manucci describes 'the surgeons belonging to the country cut the skin of the forehead above the eye-brows, and made it fall down over the wounds on the nose'²⁹. Mesotheno, a French Traveller, who came to Hyderabad during the reign of Abdullah Qutub Shah appreciated the treatment of 'colilic'(treatment by making on certain points of the body with hot iron) and described the kinds of diseases and methods of cautery or *agnikarma*³⁰.

John Fryer, a British Physician came to India in AD 1670 and served at various settlements in India. He writes 'People were free from sickness during summer but from May, with cooling showers, air grew foggy and emphysemas and fluxes were rife'³¹. His

description of venereal diseases, seasonal diseases, some home remedies, the activities of country doctors, etc. and his critical review of indigenous medicine are useful to understand the condition of the science of medicine and its impact on society. Tavernier, Methold and Fryer refer to the medicinal stones produced and used extensively as antidotes in the Kingdom and which had great demand in the export market. They called them as bezoars. Tavernier writes 'Bezoars come from a province of the kingdom of Golconda towards the north-east. John Fryer also refers to the uses and popularity of 'Goa Stones' in various diseases. The British called them as 'Goa Stones' as they were exported mostly from that part after collecting them from all the parts of the Deccan. Linschoten, the Dutch traveller of 16th Century wrote a work on the drug substance of south India and the Deccan which was published and translated into many European languages by A.D.1580. The rulers and the physicians were eager to develop the science according to the need of the day.

Conclusion

From the records and accounts of the European Scholars many aspects of the people lives in Qutub Shahi kingdom such as the happy association and tolerant attitude towards the people, the peaceful living of the people in the conflict free society. Stability of their living with flourishing economy and the architectural grandeur and public places are thrown open to light.

CHRISTIAN MISSIONARIES AND THE GROWTH OF KANNADA LITERATURE DURING 19TH CENTURY

Dr. T. Srinivasa Reddy

Introduction

The history of Christianity in India begins as early as first century A.D. St Thomas, a Disciple of Jesus established Christianity at Malabar. The followers of this church came to be known as St. Thomas Christians. Later on Missionary Activities were continued by the preachers from Syria (345 A.D-823 A.D) and the followers of these Syrian preachers came to be known as Syrian Christians. However, they were followed by Dominicans and French Foreign Missionary Society. By about 14th Century A.D., prior to the invasion of the Portuguese, Dominicans and Franciscan Missionaries began their missionary activities. Brother Jordan, a French Dominican Missionary came to India in 1321 A.D. and preached the Gospel.

There are two largely accepted views concerning the founding of the church and the functioning of the Missionary work in India. One group traces it to St. Thomas, one of the twelve disciples of Jesus Christ, who came with his Missionaries and visited the interior parts of the Indian coastal areas by sea-routes as early as 5th Century A.D.² Another group ascribes it to the enterprise of merchant and Missionaries of the East Syrian or Persian church who came to Indian in trading vessels. The most active and successful Missionaries were the members of the four orders which established their houses in India. They were the Franciscans, the Jesuits, The Dominicans and the Augustinians.

The real expansion of Christianity in India began with the arrival of the Portuguese.

Portugal was a Roman Catholic country having the blessing of the Pope in its sea-voyage endeavors. During this period Francis Xavier, the zealous disciple of St. Ignatius Loyola, traversed Mysore on his way to the south and did missionary work for almost a decade. But his attempts at conversion among the people of Mysore proved infructuous.

Robert de Nobili, another important Italian Jesuit catholic missionary arrived in India in 1605.⁴ The place chosen for his missionary work was Madurai in Tamil Nadu. The Portuguese after the loss of her commerce to the Dutch and the English in the 17th century were no longer able to carry out their missionary duties properly. In course of time catholic Missionaries were followed by many protestant Missionaries. The first protestant trading company to land in India was the British East India Company. It began its trading enterprise in 1600. But the first Protestant Missionaries to arrive were in India were the Germans in the year 1707.

The British East India Company, a private trading company started its mercantile with India from the beginning of the 17th century. The East India Company having the commercial motive of making profits as its sole aim had no sympathy towards the Missionaries cause and was unfavorable to the spread of the Missionaries as it might arouse serious resentment among the natives and jeopardize their commercial interest in the country. It followed a policy of religious neutrality. But in the middle of 18th century, Britain was going

through many changes. The charter of East India Company was presented to the Parliament for renewal in 1813. The proposals by the Evangelicals for inclusion of Missionary enterprise in the charter were accepted and received the Government's sanction on 21st July 1813.⁶

With the passing of the Charter Act of 1813, for the first time trade barriers were broken down between India and Europe which led to an even increased volume of commercial activities. The year is also significant in as far as the founding of Wesleyan Methodist Missionary society. The Christian Missionaries were allowed to come and work freely in India. Their first work was to select the fields and decide where Stations were to be established and then build houses for the Missionaries. In this way the early Christian settlers brought the Gospels to India, having a firm belief in the superiority of their race and religion.

Christian Missions and Missionaries in the first half of the 19th century were deeply involved in reforming the Indian society as they viewed it. The Missionaries adopted a number of Strategies and Methods while spreading their faith and missionary works. Generally all the Missionaries gave primary importance to the native preaching education, medical assistance and the upliftment of the down trodden in the society their earliest work consisted of preaching in the bazaars and religious melas in the local languages.⁷ They begin to learn the vernacular languages of the people mainly to interact with the local people.

Early history of the spread of Christianity in Karnataka

Christianity in Canara

The Christians, especially the Catholics of South Canara, were converted natives. Later, we have the Protestant converts made by the Basel Mission. The Portuguese influence was strong during the rule of the Vijayanagara kingdom (1516 – 1570).

The Christian Communities of Southern Karnataka

The history of Christianity in Southern Karnataka is largely the history of the Mysore mission. The work of evangelism in the territories of the Raja of Mysore was started by

the father Leonardo Cinnami, an Italian Jesuit belonging to the province of Goa. He set up his residence in Ramapura, Mysore⁸ in 1653, while became the first center of the Kannada mission. In spite of the Missionaries the number of Christians increased rather slowly in the state of Mysore. The mission had 4 residences administrated by the father who spoke Kannada. A new mission station was opened at Hassan in 1697, with Belur as its substation. The Wesleyan Methodist Mission began its work in Mysore 1836 and their work in the Kolar Gold Field was started in 1897.

Christianity in Northern Karnataka

In the 17th century (1622) Jesuit fathers went to Bijapur and obtained permission from the Sultan to build a house in his territory. The incipient mission in Bijapur was destroyed during the war between the Mughals, the Bijapur, the Marathas and the Portuguese in the second half of the 17th century.

The London Missionary society established its first protestant mission to work in Karnataka in 1810 which was in Bellary. By publishing various forms of Kannada literature Missionaries provided and inspiration to Kannada literature of Navodaya period. Roman Catholic and Protestant Missionaries opened Kannada schools and made education accessible to common people. The Missionaries introduced printing technology in the state and also open libraries. The first almanac in Kannada was printed by Missionary Father of journalism; Herman Moegling, who translated the works of Purandaradasa and Kanakadasa into German. The German Missionaries also collected and translated Tulu paddanas, folk songs, proverbs, riddles and Kannada grammar.⁹ The arrival of Basel mission exactly 175 years ago marked the new era of modern Kannada. Eminent writer and researcher, the late Srinivasa Havanoor is one of his kind who has done the critical reviews on literary contribution of the Christian Missionary to Kannada language. In fact, if paddanas (folk songs), proverbs and age old manuscripts are available in public domain, it is rightly due to the effort of the Missionaries of Basel mission. When John Christopher Lehman, Christian Lenhard and Samuel Hebique from Basel Evangelical Missionary Society came to

Mangalore in 1834, learning the local languages in order to spread message of the gospels topped their agenda. Much of the contribution to Kannada literature began when Basel mission sent Herman Mogling to Mangalore. After the death of Mogling other Missionaries like Father Muller, Father Gustav Reverend rigorously struck to the task of publishing books. The Missionaries were also credited for making books accessible to all by establishing the first printing press in 1842. Father Godfrey Faintly received a printing machine as a gift and he set up a printing press in Mangalore. Father Faingl was instrumental in writing a book tracing the history of Kannada literature when the common man had little knowledge about the history of Kannada literature. Prominent among the Missionaries, Father Keij finds special place of mention for focusing his works on women's education. Among the Missionaries Reverend Ferdinand Kittel who selflessly worked for Kannada literature also deserves a special mention.

From 1838 up to 1928 Missionaries continued their good work making significant contribution to Kannada literature. Almost all their work is still available at the Karnataka Theological College Library. Herman Mogling (1811-1881) a German missionary from Basel Mission was 200 years ahead of his times. He landed at Mangalore in 1836 and left for Germany in 1863 and was hailed as the first modern Kannada writer. In the short span of two decades he churned out as many 36 literary works each being unique and revolutionary in Kannada literature. On entering Mangalore he mastered Kannada language quick enough to write his first book in Kannada, Krista Kalakrama. He turned into a prolific writer on his transfer to Kodagu district in 1842. Teaching with Father Hebig, Harman authored a shortly literary work Hrudaya Darpana in 1842; the work with 20 poems composed along with his cousin and fellow Basel missionary G. H. Weigle in modern Kannada poetical form fetched him laurels as a pioneer of modern Kannada poetry. Mogling compiled and published, corresponding with his first convert Pupil Anand Rao Kaundinya, making it a literary phenomenon. He revealed his literary genius by having a Kannada book Rajendranaame printed in a simplified

autobiography. His Bibliotheca Carnatica placed him on a pedestal.

The University of Tubingen on the recommendation of the influential Germany based ideologist R. Roth awarded an honorary doctorate to Harman in 1858. This is surely the first doctorate for Kannada work awarded by a foreign university to a non kannadiga. From July 1st 1843 he published a Kannada fortnightly, Mangalore Samachar using stone slabs. Later renamed as Karnataka Samachar it was published in Bellary from May 1st 1844.

The Contributions of Missionaries to Kannada Grammar and Dictionaries

The Christian Missionaries who arrived in India in the 19th Century, in order to spread the message of their religion, needed to learn the local vernacular languages. In order to ease the process of learning, they compiled Kannada grammar into books and also made dictionaries. In these efforts, they made their contribution to the Kannada language and culture. The first person who made Kannada grammar available through books was William Carey. Later, John Mackerel wrote 'A Grammar of the Carnatic Language'. Mackerel was followed by Frederick Zeigler, who also wrote on Kannada grammar. Finally, there were Thomas Hudson and Campbell, who worked in the same field. However, the lion's share of the work for the Kannada grammar cause by the Missionaries was contributed by Kittel, who wrote 'A Grammar of Kannada Language', which ran 483 pages long.¹⁰

The first Kannada dictionary was printed by William Reeve in Bellary, who started developing it in 1818 and finished it by 1832. Reeve's work was an English – Kannada dictionary consisting of 10,000 words, which later helped Kittel a lot, while the latter was making his own dictionary.¹¹

John Garret and Sanderson made available a dictionary exclusively meant for students. Here too, Kittel contributed a comprehensive effort. He started in 1887 and after 17 years of hard work, was able to complete, in 1894, a dictionary having 1752 pages and 70,000 words. This dictionary, appreciated by everyone, continues to be a help to the Kannada language and people even today.¹²

Conclusion

The Christian Missionaries mainly came to India to popularize and the spread the religion of Christianity. However, they found it impossible and improbable to do so in the English language. Hence, they tried to learn the vernacular languages, and this offset the production of many Kannada dictionaries and grammar books. The main translation into

Kannada was the Bible, though books in other languages were translated into Kannada as well. Kannada books were also translated into English. The missionaries are also credited for commencing printing presses and journalism in Kannada. The missionaries also started printing Kannada school textbooks. Kannada as a language gained and enriched a lot because of the work of Christian Missionaries.

DR. B. R. AMBEDKAR AND KALARAMTEMPLE ENTRY SATYAGRAHINNASIK

PRIN. Dr. C. Sudhakar

Introduction:

The1920s and the 1930s saw a series of agitations led by Dr.B.R.Ambedkar to get public wells, tanks and Hindu temples opened to "untouchables." Kalaram Temple is the very site in the old city where Dr.B.R.Ambedkar led and later abandoned a temple-entry movement in the early 1930s.

Dr.B.R. Ambedkar said "I didn't launch the temple entry movement because I wanted the Depressed Classes to become worshipers of idols which they were prevented from worshiping or because I believed temple entry would make them equal members in and an integral part of the Society."

Kalaram Temple Agitation Organized by Dr.B.R. Ambedkar and the local Maharleaders, the Kalaram Satyagraha involved thousands of untouchables in intermittent efforts to enter the temple and to participate in the annual temple procession. The agitation for entry into the Kalaram temple went on for Five years, from

1930 to1935. Opposition came not only from the orthodox Hindus but also from some local congressmen. The outcome of the Kalaram Satyagraha, however, was not only further disillusionment with the Satyagraha, with the satyagraha method and the attitude of the congress, but also a rejection of Hindu is manda strengthening of the separatist political stance then developing among Untouchables.

Dr.Ambedkar continued the agitation in 1935 following opposition by priests, notwithstanding the support extended by Gandhiji. But he fought a legal battle, along with a peaceful agitation, for the next five years, and in 1940 ultimately secured entry to the temple for "untouchables."

Wandering in the temple courtyard and on the narrow streets around its precincts, with their small houses, latticed wooden balconies, gnarled pipal trees, and clay-tiled sloping roofs, it is hard to imagine a time when access to this temple was so fraught an issue as to become the watershed after which Dr.B.R.Ambedkar could

never allow himself or his community to be reconciled with the Hindu mainstream.

Importance Kalaram Temple: The Kalaram Temple is an old Hindu shrine dedicated to Rama in the Panchavati area of Nashik city in Maharashtra, India. It is probably the most important Hindu shrine in the city.

The temple derives its name from the statue of Lord Rama that is black. The literal translation of kalaram means black Rama. The sanctum also houses the statues of goddess Sita and god Lakshmana. Thousands of devotees visit it everyday. The temple was funded by Sardar Rangarao Odhekar, and was built around 1788. It was said that Odhekar had a dream that the statue of Rama in black colour was in the Godavari River. Odhekar took the statue from river and built the temple.

The temple formed a pivotal role in the Dalit movement in India. Dr. B.R. Ambedkar led a protest outside the temple on 2 March 1930, in order to allow Dalits into the temple. The movement was to have a right to enter temple, it was more towards having equal rights. We don't want to go to temples though but we should have rights.

The main entrance has a Lord Hanuman deity which is black. There is also a very old tree that has Lord Dattatreya's footprint impressions marked on a stone. Pilgrims visit the Kapaleshwar Mahadev temple near the Kalaram Temple.

The agitation news published in the times of India newspaper on June 07, 1932 the news is that, "on the whole I believe that untouchables have neither the right to approach the four Kunds (bathing pools) nor to bathe in them. Therefore, under Section 147(3) of the Cr.P. Code, I hereby prohibit all Mahars, Mangs, Chambhars, Dheds, Bhangis & other untouchables from exercising their alleged right of proceeding to & bathing in Lakshmana, Dhanushya, Ram & Sita Kunds, until they obtain from a Civil Court an order entitling them to bathe there." Thus observes Mr. L.N. Brown. District Magistrate of Nashik in the order passed today in connection with the inquiry instituted into the dispute between the Sanatanists & untouchables in which the latter

claim the right to proceed to & bathe in the Sacred Kunds.

Dealing with the question of Irish Bridges and located near the Ram Kund, the Magistrate says that it appeared that this Sandhwa is used by the pilgrims doing the pradakshana (a religious ceremony) or the Sacred Kunds. Its use as a thoroughfare is secondary. It is, I think, a fair deduction from the evidence that respectably dressed Christians & Mahomedans have been allowed to cross the sandhwa, but this evidence is not strictly relevant to the present case which is concerned with the rights of untouchable Hindus. It has not been proved that Hindus untouchables have any right to use this Sandhwa."

Kalaram Mandir Satyagraha: In earlier days Harijans were not allowed inside the temple but Dr. B.R. Ambedkar done Satyagraha in 1930, after which the Harijans were also allowed into the temple. The objective of this Satyagraha was to have equal rights to all people of society. This satyagraha played a very important role in the Dalit movement in India. Kalaram Mandir Satyagraha was done under the leadership of B. K. (Dadasaheb) Gaikwad and (Babasaheb) Dr. B. R. Ambedkar on 2 March 1930. Thousands of people gathered in Nashik & took part in the agitation of Kalaram Temple Entry Satyagraha. The management (Puraji) of temple closed all the doors of the temple for five years. After five years Dr. Babasaheb Ambedkar stopped the agitation & declared that those I was born in Hindu relegation/community because that is not my hand. "But it is my hand I will not die in Hindu religion."

The Hindu community can't accept untouchable on equal ground, than they change religion with his lakhs of followers. & an accept/Embrace the Buddhism on 14th Oct. 1956.

Conclusion:

Festivals of Ramnavami, Dasara and Chaitra Padwa are celebrated every year in Kalaram temple. Rathayatra is the main attraction of Kalaram Mandir Nashik which is celebrated during Ramnavami (Ram Janmotsava). Temple authorities decorate the entire temple with beautiful flowers during these festivals.

The construction of temple was started in 1780 and completed in 1792. It was done under the guidance of Sardar Rangarao Odhekar and Sawae Madhavrao Peshwa. Rangarao Odhekar once had a dream that a black statue of Lord Ram is there in the Godavari river of Nashik. So according to his dream, he undertook the operation to find that statue and he actually got it from the river. He

also found few other statues. The river section where these statues were found was given name as—Ramkund. Shriram along with wife Seeta and cousin brother Laxman stayed in the Panchavati region near this temple during his 14 years of Vanvaas. So people believe this land to be very sacred due to past presence of Lord Ram.

OPINION AND REFORM IN TRAVANCORE: AN ANATOMY OF PUBLIC OPINION AND AFFIRMATIVE ACTION (1891-1938)

R. Sunilkumar

Discursive formations within a given cultural space exert influence on government and individuals and result in creating and maintaining consensus necessary for society's functioning. Travancore in the 19th century

presented a gloomy picture of a highly retrograde society which was essentially custom and caste-ridden, convention oriented and tradition bound. Social and religious change in Kerala was largely the result of the

conditioning of an elite conservative mentality towards progressive reforms. This social conditioning was made possible through the construction of a general public opinion. This paper focuses on how the socio-religious discourse of the 19th century influenced the orthodox sections to rethink themselves, mend their ways and accept a fundamental change in mentalities, habits and practices.

Public opinion and its formation in Travancore in the sense it is understood as today began to evolve only at the end of the 19th Century. Before that, the Brahmins and the Kshatriyas or the ruling class represented the 'elite'(traditional/conservative) opinion and the Nairs, the main prop of Brahmanical hegemony represented 'public opinion'(there was nothing public in it) in Travancore. They did not want to change the caste based social system; instead, they wanted to perpetuate it for their personal benefit.

The majority of the Hindus –the Ezhavas, the Christians, the Muslims, the slave castes, the tribals and other backward classes had no say in administration or any other state matters. They had no right to express any opinion worth considering. They were the silent majorities. The social and political movements that sprang up had leaders from these backward communities and no wonder they wanted to end the social system based on inequality.

The progressive social and religious leaders who hailed from both the *savarna* and non-*savarna* communities really constituted the new elite group in Travancore. They could influence the opinion of the majority-a more democratic and popular public opinion than that existed earlier-to transform society on desirable lines.

The growth of press, the emergence of socio-political organizations and movements for removing restrictions on civil liberties and influence of great social reformers helped to build strong public opinion in favour of change.

The dedication of the kingdom of Travancore, though a symbolic act, had a disastrous effect on the life and conditions of the people of Travancore. The state came under the direct influence of Brahmanical ideology. The Brahmins in their capacity as priests, land

lords and councillors could mould a hierarchical social order in which they had the upper hand. The result of Brahmanical stereotyping was baneful to overall social progress. The elite opinion or the opinion of the Brahmins decided everything. Religious and social norms, caste rules, criminal justice and punishments, land relations and even the day-to-day affairs of the individual were governed by conservative opinion. A series of disabilities were imposed on the non-*savarnas*. Spatial distance to be observed between castes was clearly laid down. A Pulaya must keep 64 feet, an Ezhava 32 feet and a Nair 16 feet away from a Nambudiri.¹ Lower castes were denied access to public spaces. *Theendalpalakas* or notice boards on public roads prohibiting access to Ezhavas and other low caste people were a standing source of disgrace to them.²

Law was not the same for all castes but varied according to the caste and status of the culprits.³ Penal code was extremely severe and unjust as far as the low castes were concerned.⁴ Under the Brahmanical social order, the condition of the slave castes viz., the Pulayas, Kuravas, Vedas, etc., was deplorable to the extreme. They were bought, sold or mortgaged like landed property or cattle.⁵ The backward classes were denied access to public places, temples or Government institutions.⁶ The backward classes had to render *uzhiyam* or forced labour for Government and temples.⁷ They were not given admission in Government schools nor were appointed in Government service.⁸ The Government contention was that public opinion was against their entertainment in schools and Government service.⁹

Thus the public opinion to which the Travancore Government was referring to was not the opinion of the majority but that of a handful of Brahmins and their cohorts who in order to maintain an iniquitous system violated all the principles underlying *Rashtradharma*-the law of righteousness that guided administrative action in India ever since the time of the Mauryan Emperor Asoka. This traditional-conservative opinion had to be conditioned to accept change and reform and made more humane, democratic and representative of the majoritarian will. This task of conditioning and taming the opinion of the stakeholders of the society was done by socio-political reformers

who had a universal vision which transcended caste or sectarian considerations.

Customary and orthodox opinion influencing state policy had been subjected to a radical change with the coming of the British. The colonial masters looked down upon the colonised with equal indifference and repugnance. They paid little respect to the caste based social order and to them the Brahmins and the Parayas were equally uncivilized. Perhaps they might have found the Parayas more useful than the Brahmins.

British influence in Travancore began to be felt when it became a subsidiary ally of English East India Company. Thereupon British opinion on state policy had to be respected. Col.Munroe greatly influenced the Travancore Government to introduce several administrative and social reforms during the reign of Rani Gouri Lakshmi Bai (1810-1815) and the regency of Gouri Parvathy Bai(1815-1829).Abolition of slavery in Travancore in 1812,assumption of the administration of the temples in 1811 and the abolition of *uzhiyam* were some of the notable reforms carried out during the time when Munroe was guiding the state policy of Travancore.

Missionary influence was great in introducing changes in conservative Travancore .Their main concern was the rights of the converts to Christianity, especially their demand for dressing in a decent manner. Consequent on the breast cloth disturbances that broke out in South Travancore, the Government had to abandon its adamant attitude and issue orders permitting shannar women to wear upper cloth.¹⁰ This was the first occasion in Travancore when the Government had to yield before popular public opinion. The first severe blow at the heart of conservatism was struck.

The first attempt to organize public opinion by constitutional means against the traditional policy of Travancore Government was the Malayali Memorial of 1891.¹¹It was against the Government policy of filling the state administration with officials recruited from Tamilnadu. G.P.Pillai ,the Father of political agitation in Travancore' raised the slogan 'Travancore for Travancoreans'. He was able to mobilise public opinion on a large scale and

collected more than 10,000 signatures from persons belonging to various castes. It was pleaded in the memorial that a fair share be given to the educated natives in the Government of the country.¹²

Dr.P.Palpu, a great social reformer of Kerala organized and mobilized the Ezhava community against Travancore traditional policy.He collected more than 13000 signatures for the Ezhava Memorial to be subjected to the Maharaja on 3 September 1896. The Memorial requested the Travancore Government to throw open sirkar schools and Sirkar service to the Ezhavas ,the largest Hindu community in Kerala.¹³

The Malayali and Ezhava Memorials were the earliest attempt made by the people of Travancore to change the traditional attitude of the Government towards its subjects. It was from this period onwards conservative opinion and traditional policies came to be challenged and the Government was compelled to heed to the 'popular opinion' of the majority.

The Travancore Government had to mend its traditional conservative attitude due to organized public opinion during the Civic Rights Agitation (1919-1922) and the Abstention Movement of the 1930's.

The Civic Right Agitation (1919-1922) and the Abstention Movement of the 1930's reflected the organized dissent of the people of Travancore against an obsolete state policy. The Christian, Ezhava and Muslim communities were deprived of employment to the Revenue Department on caste and communal grounds. Revenue Department was attached to the *Devaswom* Department and both these departments were the monopoly of caste Hindus. The non-*savarnas* and non-Hindus were, therefore, excluded from the Revenue Department. The deprived communities, the Christian, Ezhava and Muslim- demanded the separation of the Revenue Department from the *Devaswom* Department so that they could not be excluded on grounds of sanctity. Their agitation bore fruit on 12 April 1922 when the Maharaja issued a proclamation separating the Revenue Department from the *Devaswom* Department.¹⁴ In 1932 the Christian, Ezhava and Muslim communities once again united and started the *Nivarthana* Agitation for getting

representation to the legislatures and public services in proportion to their population.¹⁵ Their joint activities had the desired effect. In 1935, the Travancore government appointed a Public Service Commission. The Principle of communal rotation equal to reservation in the recruitment to the public services was accepted.¹⁶

Modernization of religious worship was a matter that attracted the attention of all progressive social leaders. The orthodox Hindus never agreed with the question of temple entry to the non-Savarnas. This mentality had to be changed and public opinion had to be elicited for temple entry. It is in this background that the famous Vaikom and Guruvayur *Sathyagrahas* were organised to throw open the approach roads of these temples to the non-savarnas or low caste people. The temple entry in Travancore was a serious question as it involved conflicting views and interests to be discussed. There was a growing sense of disagreement and tension among the Ezhavas. As their question of temple entry was delayed, they were planning to convert to other religions, most probably to Buddhism.¹⁷ The threat of conversion was cleverly used by Ezhava leaders like C.V. Kunjuraman to take a decision in their favour. A large number of Savarna leaders like Mannathu Padmanabhan, K.P. Kesava Menon, K. Kelappan had a genuine desire of reforming Hinduism and the evil practice of untouchability. They wholeheartedly supported the entry of the avarnas into temples. Finally after much deliberation, the Maharaja Sri Chitra Tirunal Balarama Varma issued the Temple Entry Proclamation on 12 November 1936. It opened all state controlled temples to all Hindus irrespective of birth, caste or community.¹⁸

Opinion and Reform: The Making of the Temple Entry Proclamation

C. Rajagopalachari characterized the Temple Entry Proclamation as "the most non-violent and bloodless revolution in the history of man in recent years".¹⁹ The bloodless revolution was undoubtedly owing to the magnanimity and progressive outlook of His Highness the Maharajah, Sri Chitra Tirunal Balarama Varma and his mother the Junior Maharani, Sethu Parvati Bai.²⁰ The timely counsel of the Dewan, Sir C.P. Ramaswamy Iyer

also did help to bring about the epoch-making proclamation.

But the real credit for the Temple Entry Proclamation goes to the people of Travancore, both *savarnas* and *avarnas* who continuously agitated for opening of the temples to all Hindus. Events and persons who worked behind the great drama were numerous and the agitators had to undergo great sufferings at the hands of the orthodox Hindus and officials at every stage.

The leaders of the caste Hindus took an active part in the agitation. They were responsible for creating public opinion in favour of the reform. The change in the mentality of the *savarnas* first happened among the progressive leaders who then endeavoured to effect this change among the larger sections of the people. However, this mental transformation of the *savarna* leaders was conditioned by a number of factors.

As the non-Savarna castes such as the Ezhavas, Pulayas, etc., were not allowed to enter caste Hindu temples, Sri Narayana Guru started building temples for their worship. This counter-revolution within Hinduism was inaugurated in 1888 with the installation of the Siva temple at Aruvippuram. This was followed by the construction of a large number of temples dedicated to Siva, Subramanian, Sarada, etc. These temples were simple religious institutions, provided with schools, libraries, reading rooms and prayer halls and were opened to all castes. They were surely models of what temples should be. By opening such temples the Guru was setting an example to be imitated by the caste Hindus. Dr. Palpu, Kumaran Asan, T.K. Madhavan and other leaders of the S.N.D.P. Yogam were fighting against the social and religious disabilities of backward classes in Kerala. Their civilized manners and the tremendous influence they had exerted over the largest social group in Kerala, won the appreciation of all progressive social leaders. A feeling that the Ezhavas were a social force to be reckoned with and accommodated within the Hindu fold was gradually overtaking the narrow caste considerations of the *savarnas*.

In the 1920's the influence of Sree Narayana Guru, Kumaran Asan and

T.K.Madhavan was very strong on the Ezhavas and it acted as a check to the Ezhava desire to leave Hinduism and seek refuge in other religions. The question of conversion occurred on many occasions. While C.V.Kunjuraman was in favour of Christianity, Sahodaran Ayyappan and C.Krishnan favoured Buddhism. But T.K. Madhavan was against conversion to any other religion. Kumaran Asan, though inclined to Buddhism left the question to be settled by Sree Narayana Guru. ²¹The Guru's answer to the question came in the form of an All Religious Conference at Alwaye. The conference revealed that the substance of all religions is one and the same. While the Guru's stand discouraged the conversion enthusiasts, the Vaikom *satyagraha* started under T.K.Madhavan's leadership turned the attention of the Ezhavas towards that direction. The successful culmination of the Vaikom *Satyagraha* satisfied the Ezhavas for some time and in 1927, T.K.Madhavan at the 24th annual meeting of the SNDP Yogam at Pallathuruthi decided to give up temporarily the idea of mass conversion. The Guru who was present at the meeting gave the message of one religion, i.e., the 'Religion of *Sanatanadharma*'; of 'One Caste, One Religion and One God for Man'.²²

In the 1930s when the question of conversion recurred, there was none among the Ezhavas to defend Hinduism. Asan had died in 1924, Guru in 1928 and T.K.Madhavan in 1930. Dr.Palpu dissociated from the SNDP Yogam after the death of Sree Narayana Guru and after the tussle between the Yogam leaders and the *Sanyasi Sangham*. It was increasingly felt by the radicals of the Ezhava community such as C.V.Kunjuraman, C.Krishnan and K.Ayyappan that the religious and social disabilities could not be removed so long as they remained within the pale of Hinduism. Such a move was only natural because even after 40 years of agitation, the Ezhavas, the most progressive and educated among the non-caste Hindus were not allowed to move freely, were not adequately represented in Government service and kept away from *savarna* temples. ²³ The SNDP Yogam at its meeting held in July 1934 passed the conversion resolution. While public opinion among the Ezhavas was increasing against Hinduism, the Christians, the Buddhists and Muslims volunteered to receive the Ezhavas

into their fold. The determination to abandon Hinduism was both uniform and firm among the Ezhavas of Malabar, Cochin and Travancore. The only question remained was to which religion they must take refuge. ²⁴ At this critical juncture, Dewan C.P.Ramaswami Iyer who was a staunch supporter of Hinduism and an opponent of the activities of the Christian missionaries, perceived the danger to Hinduism. He considered the whole issue of the temple entry and counselled the Maharajah to issue the Temple Entry Proclamation. ²⁵

In 1934, the Government passed an order opening all roads, wells, *chatroms* to the public. The reform that came in 1936 was thus preceded by a sequence and a step-by-step granting, of concessions so as not to displease the orthodox public opinion. The answer that came from the palace to the reformer's demand for temple entry and that was repeated from time to time was that the public opinion was not in favour.

The *savarna* leaders like K.P.KesavaMenon, K.KelappanNair, Mannath Padmanabhan Pillai, etc., were progressive and unorthodox people who had a genuine desire for reforming Hinduism and its evils. But this broad outlook was not shared by the majority of their castemen. However, these reformers did in all possible ways to create public opinion in Travancore for temple entry by holding meetings and organizing *jathas*. The existence of public opinion (or rather the impression of it) which in those days meant the opinion of the caste Hindus was the one that was counted by the Government.²⁶

It was in 1934, the report of the Temple Entry Enquiry Committee was published. The Maharaja's Chief adviser, C.P. Ramaswamy Iyer was, at that time, not in favour of temple entry. What he mattered was the strength of the public feeling against the reform. He said: "the problem could only be solved by a process of mental adjustment which could preserve the solidarity of the Hindu community. Shock tactics, he said, will not answer the purpose".²⁷ It was only after the creation of much public opinion that he advised the Maharajah to act.

Dr.Ambedkar's advice to the Harijans to leave Hinduism came as a rude shock to the reformers. The non-Hindu missionary

organizations – Christian, Sikh, Aryasamajists and Muslims – started activities to absorb the discontented elements of Hinduism. In January 1936, a number of Ezhava leaders, doctors, lawyers, teachers and journalists decided to leave Hinduism and took steps to become Christians. They even approached some leaders of the Church of India, i.e., the Anglican Church and held discussions with them. The threat of conversion had its desired effect.²⁸
