The period of expansion also witnessed the compilation and enforcement of the post office manual. Mail motors were arranged to expedite the conveyance of mails. The system of express delivery and window delivery was introduced. The postal charges were raised in 1930.

The Post Office Guaranteed Fund was created for the welfare of the postal staff. The city Head Post Office at Hyderabad was the only firstclass head post office in the Nizam's Dominions which was placed under the control and supervision of the Post Master General who enjoyed Superintendents Powers over the staff and offices under his jurisdiction. Under him there were Deputy Post Master. There were Inspectors of city postmen because the city peons and packers. Similarly, there were sub-post masters in town and their number was 31 throughout the city. Postman was provided with an umbrella and yellow cloth bag for carrying Letters, Parcels and Registered letters etc. The

Nizam's Government had great impact of British India. The Nizam's Government adopted some of their postal system but the services offered and the systems introduced in the Nizam's dominions were on par and were much better than those of the British India since they were all received by the people. The State adopted local languages like Urdu, Marathi and Telugu besides English on all the stamps and postal stationery.

The postal services of the Nizam's Dominions continued even after independence and the takeover of the State in 1948 by the Indian Union. The Hyderabad State stamps and postal stationery became invalid when the state was merged with Indian Union in 1950. However, the stamps and stationery were allowed to be exchanged for Indian items till July 31, 1950.

Telegraphs

The installation of electric Telegraph system in Indian dates back to the time of Lord Dalhousie. It was in 1857 when Hyderabad was connected with Bombay and later with Kurnool. Salar-Jung I took the initiative for availing the services of the Telegraphs for official purposes. Expansion of Telegraph lines in Hyderabad was made under the Act XIII of 1885, and thereafter all the Telegraph lines were opened by the Government of India were according to an Agreement in 1870.

In 1900, a line was established at Imperial Post Office, Chaderghat for the business facilities. Beside Railway stations the Telegraph lines were established in Residency, Secunderabad, Bolaram, Aurangabad, Aurangabad cantonment and Hingli. Beside these, telegraphs lines were installed in other places to facilitate trade and military needs. A petition was made for the opening of a Telegraph office at Yadagiri. On the request of the Resident permission was granted by the Nizam¹². Similarly, a Farman was issued by the Nizam in 1932 for the establishment of British post office and a Telegraph office at Warangal on the move of the Resident¹³.

During 1939-1940 the Indian Post and Telegraph Department finally agreed with the Nizam's Government for the linking up of the Local Central Exchange with that of the Imperial Trimulgherry Exchange for access to the All India Trunk Line¹⁴. On February 20, 1944 the Trade Association of Hyderabad passed a

resolution in their Fifth annual General Meeting for the introduction of phonogram facility to the merchants and trades to conduct business without side Hyderabad without loss of time and efforts¹⁵. Thereafter, the Telegraph lines were extended in many places throughout the Dominions.

A British Post Office in Hyderabad city (Chadarghat), and small British Government Post Offices are scattered throughout the State, and letters bearing English postage stamps are conveyed free from the State Post Offices to the nearest British Post Office or railway mail service section.

Postal Stamps

State Postage Stamps of different denominations are at present in circulation and can stand comparison with those of their kind in any other country both in excellence and artistic design. The post adhesive postal stamp of Hyderabad was issued on September 8, 1869 during the reign of Mir Mahboob Ali Khan Asaf Jah VI. It had the inscription in Persian Sarkar-i-Asafia (Government of Asaf Jah) and the year 1866, and denomination one Anna. In the year 1866 the stamp was first designed during the reign of Afzaluddaula, Asaf Jah V. But due to delay in getting the die and plates manufactured in London and subsequently printing. It could not be issued in that year. The design of the inscription is a masterpiece of calligraphy in architectural pattern and is unique in history¹⁶.

Several types of postal stamps, postal stationary, cards, covers etc., in various denominations were issued in numerous designs and values. The central theme of all the stamps and covers was Sarkar-i-Asafia either in the form of a monogram or inscription. The state's name Hyderabad was not incorporated in the stamps, except in one case. The first stamp to have 'Hyderabad' inscribed was Second World War victory communication stamp, Hyderabad was the first in the world to issue a victory stamp, while the inscription 'H.E.H. the Nizam's Government', appeared twice, first on the one rupee stamp of 1927 and on the set of three pictorial stamps of 1947. The unissued stamps of selfindependence Hyderabad of 1947 had 'Hyderabad'¹⁷.

On the occasion of the 47th birthday of Mir Osman Ali Khan, Asaf Jah VII, a set of eight

pictorial stamps were issued on 12th November 1931 through the designing was actually initiated much earlier during 1929-30. Subsequently they were modified and issued six of the set carry historical monuments of Hyderabad State. The lower values of four and eight pies has Tughra (Monogram) of Sarkar-i-Asafia. The one Anna value has Charminar, two Annas has High court, four Annas has Osman Sagar dam, the eight Annas has the ancient pre-Islamic period facade of the Chaitya Cave (No.XIX) of Ellora at Aurangabad, which is dated to 200 B.C. - 650 A.D. The twelve Anna value has the Madrassa of Mahmud Gawan at Bidar, dated to the fifteenth century, and the rupee one has Chand Minar of Daulatabad in Aurangabad. The colour scheme of these stamps was adopted from the stamps of Morocco which were pasted against each artist drawing for colour matching¹⁸.

Postal history was created on 13th February 1937, when Hyderabad for the first time issued commemorative as well as bi-colour stamps. The occasion was to celebrate the Silver Jubilee of the Nizam VII, who ascended the throne on 1st September 1911. But due to Ramazan the later King George V's death it was postponed twice. It was celebrated during 13 to 26 February 1937 and stamps were issued¹⁹.

When the British rule was withdrawn from India in 1947, British unilaterally denounced their treaties with Hyderabad and her obligation under them. Thus, Nizam chose independence of Hyderabad state. However, due to critical political conditions, the commemorative issues were not issued²⁰.

For public convenience Hyderabad issued postal covers, postcards, regulation covers from 1878 onwards in various sizes bearing variety of embossed or printed stamps in monogram or in one case Charminar monument, special money order forms too were issued. For official use the ordinary postal stamps were over printed 'Sarkari' (Official). For use of the Nizam's private estate Sarf-i-Khas, the stamps were also over printed 'Sarf-i-Khas' Sir Salar Jung I, Prime Minister of Hyderabad had stamps punctured 'S.J.E' for his estate' use²¹.

The Telephone Communications

The Telephone system was first introduced into Hyderabad in 1885 AD with a view to

facilitate communication between the Officials of the various important departments and the staff of the Nizam's personal Secretariat²².

The Department was first worked for seven months by the Bombay Telephone Company and was then taken over by the Military Secretary then the late Major Percy Cough to the Nizam's Government. Subsequently it came under the control of the Public Works Department, when it was worked by Messrs. the Callender Cable Company, Limited. Mr. Bala Pershad, Ph. B., M. A. I E. E. has been the Superintendent of the Telephone Department²³.

In 1938, that is the year of the introduction of the Magnets single line earthreturn Telephone system, only one telephone exchange was there at the Baradari, with sixteen subscribers but in order to connect up all the important offices, another exchange at Narayanguda was opened and later, in order to cope with the public demand, a third exchange was opened at Secunderabad²⁴.

As the magnet system was not satisfactory owing to the increased number of subscribers, it was decided by the Government in that the existing system and most of the overhead lines be replaced by means of a Central Battery system and underground cables. The change in the system resulted in the removal of about 650 magneto telephone instruments, magneto switch boards and other apparatus. In order to make use of these discarded apparatus, the Nizam issued orders in that Telephones should be installed in Aurangabad, Jalna, Nanded, Gulburga, Raichur, Warangal, Latur, Parbhani and Nizamabad²⁵.

Accordingly, Telephones were installed in Raichur and Aurangabad, Jalna and Warangal; and in trunk lines were installed connecting Aurangabad with Jalna and Hyderabad with Warangal. Proposals to connect up Bidar with Hyderabad by trunk lines and for the installation of Telephones at Nanded and Umri with trunk lines between them were submitted to Government. Connection of Raichur with Narayanpett via Saidapur is also made.

The Telephone Department made effort to popularize the system which meet with increasing success and not only added to the income but also tend to lessen the rate of subscription is prohibitive to persons of moderate means²⁷.

In the beginning, the Bombay Telephones managed the system which later came under public works department of Nizam's household. The subscribers were mainly the nobles, wealthy private individuals and important officials who paid Rs.15,000 towards annual maintenance. The cost for non-officials Rs.10,000. With the increasing demand a second exchange was opened at Narayanaguda. There were 202 lines in 1911²⁸.

A letter from the Secretary to Government Public Works Department in connection with providing a Telephone facility to the outlying police Secunderabad highlights that the charges of the Hyderabad Telephones were less compared to those of Imperial Telegraph Department. The total rental charges in Osmania Sicca were Rs.1270 in 1913²⁹.

In 1917, the Calendar Cable Company strongly recommended the Nizam's Government for automatic system instead of magnet system. Therefore, officials were deputed to Simla to study the advantages of the automatic system before the installation of these lines in the city and suburbs³⁰. Later, Calendar Cable Company was granted permission for the installation of automatic system and its maintenance and supervision till 1918. In 1919, the Department of telephones came under the supervision of a Superintendent. In 1924, the Department set up a central exchange of 1200 lines which had the capacity of an additional 2000 lines.

The reign of Nazim VII witnessed the extension and expansion of Telephone facilities. The total number of exchange and extension at the end of 1928 was 651 and 173 respectively. Certain offices like Finance had the facility of Automatic telephones and special arrangements were also made in the Automatic Switch Board which facilitated conferences among the officers³¹. In 1929, the Central Battery System was established. Later, Trunk lines connected Warangal to Hyderabad and Jalna to Aurangabad. In 1931-32, the damaged underground cables were replaced with new cables which improved the services and there was general satisfaction among the subscribers whose instruments were looked after with great care and rigid watch³². These improved services resulted in an increase in the number of subscribers from 848 in 1935 to 964 in 1937³³. In 1935, the Hyderabad City Telephones

completely shifted over to Automatic System at a cost of about five lakhs of rupees³⁴.

Telephones exchanges were also established at Bhongir and Jangaon. Later, Aurangabad was connected with the all India Trunk System. With this the important commercial centers of the Nizam's Government were brought together Telephone connections. The year 1941-42 marked the connection of All the Trunk Line with Hyderabad State. Telephone which provided easy access to the subscribers to have contacts over Telephone with any part of India³⁵.

In order to extend the telephone facility to other Government offices in Hyderabad, exchange at Naryanaguda was started in A.D. 1899. Three years later in 1902-03 the Telephones were extended to the general public. Another exchange at Secunderabad started functioning from 1912. However, in 1923-24, when the central battery switchboard system was introduced all the public subscribers lines were connected to the central exchange at Gowliguda. Consequently, the exchanges located at Baradari and Secunderabad were closed. In 1927 Hyderabad city was connected with Warangal by trunk-lines. During the year 1934-35, the exchange at Narayanaguda was discontinued. The next important stage in the development of telephone system in the city was in 1938 when the automatic switchboard system with a capacity of about 2,5000 lines was introduced. Under this system three sub-exchanges, one at Secunderabad, another at Golconda and the third at the Osmania University were started. The State telephone system was connected to the all India trunk-lines in 1941. Since then, the progress made in this direction is impressive as it can be seen from the fact that the number of telephone connections in the city rose from 1,680 in 1940-41 to 1,908 in 1950-51.

Conclusion

The Hyderabad postal Division was one of the oldest divisions in the State with jurisdiction over the twin cities of Hyderabad and Secunderabad and the rural parts of the district. Several types of postal stamps, postal stationary, cards, covers etc., in various denominations were issued in numerous designs and values during the entire period of its history. The central theme

of all the stamps and covers was Sarkar-i-Asafia either in the form of a monogram or inscription. And Salar-Jung I took the initiative for availing the services of the Telegraphs for official purposes. Telephones were first introduced in Hyderabad city in A.D. 1884-85 when the Bombay Telephone Company started an exchange at Baradari with 16 connections

intended only for the ruling family and high officials of the State. With effect from the 1st of April 1950, the administration of posts and telephones in the erstwhile Hyderabad State was taken over by the Government of India as a sequel to the integration of Hyderabad State with the Indian Union.

FIGHT FOR HIGHER SOCIO-RITUAL STATUS IN COLONIAL ANDHRA : THE CASE OF VISWABRAHMINS

G. Srinivasa Reddy & Dr. M. Ramesh

Much of the social history of India has been characterized by struggles against inequalities perpetuated by the *Varna* system. The pre-modern society in India was marked by an unequal hierarchical distribution of power and responsibility among different social groups and this system was legitimized and sanctified by brahmanical social, religious and cultural

symbols, beliefs and traditions. The best example is the theory of *karma*. The pre-modern forms of resistance to this unequal power system took several forms: the heterodox religious movements of sixth century B.C, *bhakti* movements of medieval period and so on. These movements were expressions of anti-hierarchical values.

The pre-modern efforts of resistance failed to bring any change in the existing system of socio-religious inequalities. Because the aristocratic sections who wielded political power supported and sustained this unequal system-*varnashramadharma*. The means of organized resistance were almost absent in pre-modern India. The arrival of the British colonialists to India led to revolutionary changes in the brahmanical socio-religious system, though the pace of change is slow and not uniform in different parts of the country. The unification of the country through structural and institutional changes had great implications on pre-modern systems of power and social relations.

Introduction of western education and values brought socio-political awareness among the non-brahmin groups. Some of these groups invoked myths and developed own caste literature to claim equality with the Brahmins in social and cultural issues and the Brahmins resisted these efforts through sabotage and filing cases in the courts against such claims. The Viswabrahmins in colonial Andhra fought several battles with the Brahmins in the courts and other means to claim socio-ritual equality with the Brahmins. This paper shows how the artisanal community of Viswabrahmins fought for social and ritual equality with the Brahmins in Colonial Andhra.

Unlike other Non-Brahmin communities, Viswabrahmins fought for equal status with the Brahmins in the Varna system and all the associated rights and privileges in the religion and society. The development of temple building activity started in South India in 6th century A.D and reached its zenith in 12th century A.D. This period saw the rise of *panchanam varu* or *panchals* (Viswakarmas) community in South India. "The Viswakarmas, originally called as Kamsali community in Andhra Desa, migrated from rural to urban areas with the acceleration of temple building activity. Temples were nucleus of urban centers and the Viswakarmas were an integral part of development of temple urbanism and economy in South India".¹

The Viswakarma or Viswabrahmin community consisted of five occupational groups: gold smiths, bronze smiths, black smiths, carpenters and masons. "The craft persons collectively called as Viswakarmas today constituted a unique craft/artisanal collective

that cut through caste and class lines having as its constituents the humble black smith and carpenter as well as the affluent *sthapati* who was the mason-cum-architect rather than their caste identity. They were collectively called as *Panchanamvaru* in Andhra Desa.² Their aspiration for a higher status in social hierarchy could be seen from their adoption of Brahmanical *gotras*, while these five artisanal communities designated themselves as the Viswabrahmins, and added the suffix of *acharya* to their names.

The Viswabrahmins were referred to as *Panchanamvaru* in medieval inscriptions. The Telugu inscriptions more often used the term Viswakarma kula or Viswakarma kulaja. "The *Chebrol* inscription of 1118 A.D, the *Nathendla* inscription of 1141 A.D and the *Tellapur* inscription of 1417 A.D stated that the smiths and sculptors belonged to the Viswakarmakula".³ The Viswakarma community played a dominant role in temple building and maintenance activity. Especially the mason-cum-architect group along with the gold smiths were involved not only in temple construction, sculpting activity, making of idols and different kinds of jewellery to the gods but also in some ritual activity connected with inaugural ceremony of the temples, on the eve of construction and after the construction. Thus, the Viswakarmas secured recognition at the royal courts and the aristocratic groups. Their social, economic and ritual position was raised. "There were several instances of Viswakarmas making endowments to the temples and the Brahmins. The temple for Vishnu in Nellore namely "Chitrameli Vinnagar" was constructed by them".⁴

In fact most of the privileges given to them during medieval period were those relating to temple rituals. Besides ritual privileges, at times other privileges seem to have been conferred, such as the appointment of the members of the artisan castes as accountants, temple managers, treasurers and trustees.⁵ They were not satisfied with the Sudras status accorded to them by the Brahmins in the *Varna* system. They felt it as insult to their community in view of their changing socio-economic position in medieval times. "From the late 18th century the Viswakarmas started calling themselves as Viswabrahmins and claimed equal status with

the Brahmins. In their community literature, especially the *viswakarma puranam*, this community established its brahmanical origin. They claimed that they were the descendents of the Viswakarma, the creator of the universe. They hold that they belonged to the fifth *Veda* which was superior to the existing four *Vedas*.⁶

The opposition of Viswabrahmin community against brahmanical socio-religious hegemony can be traced back to the Vijayanagara period. They claimed equal status with the Brahmins by performing rituals like *Upanayana*.⁷ The Kamslis aspired to call themselves as Viswabrahmins as they were the descendents of the Viswakarma. They not only denied that the Brahmins can claim priestly authority over them, but went further and stated that they were superior to Brahmins in origin, since whereas Brahmins claim to have descended from the *Rishis*, who were mere mortals, they themselves have sprung from the five faces of Viswakarma, a god and the architect of the universe, and so have divine parentage. They usually call themselves as Viswabrahmins to emphasize this exalted pedigree. Their concept of this god forms the basis of their claim to the Brahmins or even superior to the Brahmins.⁸

The Viswabrahmins fought many legal battles to acquire Brahmin status from the early 19th century. The Viswabrahmins of Machilipatnam sent a petition to the government in 1863, in which they pleaded her Majesty to issue an order to the collector to allow the gold smiths and the carpenter groups to go through all the public streets in procession mounting a palanquin on condition of their paying rupees 8.00 per each marriage ceremony and Rs 4.00 per each *upanayana* ceremony.⁹ The Viswabrahmins of Chittoor district engaged in a prolonged legal battle with the Brahmins claiming equal status with them. They quoted several instances from the Vedic literature to prove that they are the Brahmins. They argued that they can arrange priests from their own community and celebrate marriages of their community people. Though they were not *dvijas* they opposed Brahmanical classification of the *Varna* system and claimed equal status with the Brahmins. This led to attacks on Viswabrahmins by the Brahmins.

A prolonged legal battle between the Brahmins and Viswabrahmins in Sudurperi village in Chittoor district, following attack on the Viswabrahmin marriage function by the Brahmins, is very interesting aspect in this regard. A group of Viswabrahmins, with Margasahayachary as the priest, was performing a marriage. A few Brahmins, led by Panchangam Gundayya, objected to it and agreed to accept the Viswabrahmins right to perform marriages and other ceremonies if they could convince the people present there by answering questions posed by him. There was a lengthy discussion on the *Vedas*, *Puranas*, *Upanishads*, *Itihasas* and so on and the claim of the Viswabrahmins to be the descendants of the mythical lord Viswakarma. Replying to Gundayya, Margasahayachari quoted extensively from various ancient and medieval sources and reiterated their right to perform *Vedic* rites. This did not convince Gundayya and other Brahmins, but others present were convinced by the explanations of Margasahayachari and supported him.¹⁰

The Viswabrahmins filed a petition in Chittoor district civil court praying for Rs.550 as compensation and also a decree in their favor ordering Brahmins not to behave in an arrogant manner in the future. Having heard the arguments from both the sides, magistrate Daker ordered the Brahmins to pay Rs.550 as compensation for causing loss to Viswabrahmins and also confirmed their right to perform ceremonies and marriages as officiating priests. The judgment was delivered in favor of the Viswabrahmins on 15 December, 1818.¹¹ The Brahmins filed review petition against this judgment.

"There were nearly 70 legal disputes in 19th century as to whether Viswabrahmins were *dwijas* and they can perform their ceremonies on their own as per the *Vedic* rituals and whether they have the right to learn *Vedas*. The Brahmins made an appeal against all the above claims of the Viswabrahmins in Chittoor district adalath court. The Brahmins complained that the Viswabrahmins belonged to the untouchable (*mala*) caste. The court delivered its judgment again in July 1821 saying that the Viswabrahmins can celebrate marriages in Vedic tradition. Regarding the caste status the Viswabrahmins and the Brahmins resorted to a

prolonged legal battle. The judgments of 1843 and 1844 rejected Viswabrahmins claim for Brahmin status. Finally the Viswabrahmins were successful in all their claims except the claim for Brahmin status".¹²

Another dispute arose between Brahmins and Viswabrahmins in 1894 in Machilipatnam town of Krishna district. A Viswabrahmin named Sivakotiveerabhadru performed *abhishekam* (pooja) by pouring coconut water over a lingam in a Shiva temple at Rustumbada in Machilipatnam on 5 March, 1896, which happened to be a Shivaratri day. The temple priest, Jandhyala Ramaiah, who noticed this and objected to performing *abhishekam* by Veerabhadru and told him that being a gold smith, he had no right to perform such a thing in the temple. Ramaiah filed a petition in the asst magistrate court in Machilipatnam, and prayed for the punishment of the accused for causing defilement to the idol.¹³ The magistrate heard the arguments of the both sides and dismissed the petition in May, 1894, having found no substance in the argument of Ramaiah and other Brahmins.¹⁴

An historical fight between the Brahmins and the Viswabrahmins can be seen in Palnadu taluq of Guntur district in colonial Andhra during the first quarter of the 20th century. There was considerable Viswabrahmin population in Palnadu taluq, especially in Gurajala and Narsarao peta region in Guntur district. From the late 19th century the Viswabrahmins were involving in the ceremonies related to the construction of new temples, enshrining the idols of gods and goddesses in the new and old temples in the surrounding villages of Gurajala area of Palnadu taluq. The Brahmins were opposing these activities, but not seriously.

"There was a village goddesses temple of Poleramma and Pathapatemma in a village called *Janapadu* in Palnadu taluq. A petition was filed in the Gurajala sub magistrate court in February 1905 by a Brahmin pandit of *Janapadu* village named Janapati Pattabhirama Sastri regarding *pratishtha* (enshrining of the gods in the temple) of the goddesses Poleramma and Pathapatemma in the local temple. Pattabhirama Sastri alleged that the Kamsalis in many villages of this area are claiming Brahmin status and are doing things which are to be done by the Brahmins only. He objected the enshrining of

goddesses Poleramma and Pathapatemma in the village temple by the Viswabrahmins. He further says that the Brahmins cannot worship the idols enshrined by the Sudras (Kamsalis) as it is against the rules of *dharmasastras*. He demanded that the Viswabrahmins should pay the cost of the enshrining ceremony as it should be again conducted by the Brahmins to depollute the goddesses".¹⁵

It seems that the Non-Brahmin movement in this area was strong in the first quarter of the 20th century. We can assume that there was opposition against the Brahmins in this area among the Sudra communities, especially the Viswabrahmins and the Kammas. The Sudra communities of Kamma, Telaga and Reddy were very strong in this area. There seems to be cooperation between the agricultural Sudra communities and other Sudra communities, (especially the service castes like Kamsalis, Chakalis and so on). "The court delivered its judgment in November, 1905. The contents of the judgment are as follows:

1. *Brahmanatvam* (being Brahmin) comes not by birth but by *guna* (character). Brahmins should see people of other castes in this way.
2. The ceremonies of village goddesses are not necessarily be conducted by the Brahmins.
3. Therefore the Viswabrahmins need not to pay any *samprokshana* (purifying ceremony) expenditure to the Brahmins".¹⁶

Pattabhirama sastri appealed against this judgment in Narsaraopeta sub-court in December 1905. The case finally reached the Guntur additional district court in July 1912. The judgment of the district additional court was delivered in September 1915. The court pointed out that the Viswabrahmins are not Brahmins and they should not claim Brahmin status.¹⁷ It seems that the judgment was a sort of compromise between the two contending parties: the Brahmins and the Viswabrahmins.

In the villages of Palnadu taluq there seems to be antagonism between the Brahmins and the Sudras. Brahmins often make complaints against the Non-Brahmins and used to approach courts and the officials on petty issues in the villages. For example, "one Brahmin named Ramayya Sastri of *Janapadu* village made a complaint to the Palnadu tahasildar in November 1906. He complained that because of differences in the

village, V.Rangayya, the *karanam*, and his brothers in the village are instigating the Kummari (potter community), Chakali (washer men community) and other service caste people not to work for Brahmins. This is a kind of social boycott of the Brahmins. The above mentioned service caste people were rendering services to the peasants. For these services they are enjoying special inam lands. But they are illegally collecting "mera" (a share in the crop) from the peasants. He made these allegations against six persons from the above two communities. Ramayya sastri urged the tahasildar to stop these illegal collections and take penal actions against above mentioned six persons".¹⁸

It seems from the available evidence that Brahmins had utmost contempt towards Sudra people, the educated and the elders being no exception. "When the head man and chairmen of Dachehalli union, Gunturu district, K.Picchi Reddy was given certificate by the Governor, in the name of Majesty King Edward VII, Emperor of India, in recognition of his services in local boards, Janapati Pattabhirama Sastri commented that Picchi Reddy was a person of low social status who is not eligible for such award".¹⁹ This kind of arrogant attitude of the Brahmin elders hurted the sentiments of the Sudra people, especially the educated.

The Brahmins and Viswabrahmins were involved in press war criticizing each other. Pattabhirama Sastri established a magazine

called Abhinavasaraswathi (1907), and Viswa Brahmins started a magazine called Prabodhini (1908). Basically these two magazines were founded by the Brahmin and the Viswabrahmin intellectuals to substantiate their claims and defeat the claims of the opposition group. The editorials in these magazines targeted one another: the Brahmins and the Viswabrahmins. Even scholars from these two castes from Madras used to write articles in these magazines. For example M.Appakanvachari, a Viswabrahmin intellectual from Madras, wrote an article in Prabodhini quoting many examples from the Sastras to prove that the Viswabrahmins were Brahmins. He criticized Brahmins as hypocrites, feeding on the innocent people, doing no work, and leading idle life in their houses.²⁰

The struggle of the Viswabrahmins did not stop here. Many cases were fought by them in different law courts at several places in Andhra. The above discussion outlines the social conflict in the struggle for higher social and ritual status. Despite the success of the Viswabrahmins in different judgments upholding their demand for higher ritual status in the *Varna* system based on their professional competence and its usefulness to the society, the demand was not conceded by the Brahmins which perceived them a threat to their higher ritual position in the social hierarchy. These sporadic events were never got consolidated into concrete action until 1916.

LOCATING ABDUL KHADER MOULAVI AND THE MUSLIM EDUCATIONAL DEVELOPMENT IN KERALA

D. Subidam

Vakkom Moulavi was a social reformer, teacher, profile writer, Muslim Scholar, journalist, freedom fighter and newspaper proprietor in Travancore, a Princely State of the present day Kerala. "It is from him that all the Muslim reform movements which have been subsequently working in Kerala derived inspiration and guidance."¹ Vakkom Moulavi was born on 28th December 1873 at Vakkom, in the Chirayan Taluk of Travancore State. His family had ancestral roots to Madurai and Hyderabad.

Many of his relatives had worked for the Military of State Government. Both the father and mother evinced keen interest in the intellectual development of Abdul Khader. Father Muhammad Sahed realizes the shrewd intelligence and penetrating wisdom of the boy. They paid personal attention in bringing up the boy systematically. His father took care to give Abdul Khader the best education available to them.

Vakkom Moulavi studied logic from Kunju Pokkammu Musaliar, a great scholar who hailed from Malabar, Kesava Pillai, a native of Ambalapuzha who was working as a teacher in the Vernacular middle School at Vakkom. He taught the boy Sanskrit lessons. 'The boy read profusely the Malayalam works of A.R. Rajavarma Thampuran and Kerala Varma Valiya Koyil Thampuran'.² Abdul Khader studied Persian from Suleiman Moulavi of Allepy. The theological lesson basis on Islam and Tamil Literature were taught by Halim Sahib, a well-known Scholar from Tamil nadu. He studied Malayalam language, in which he became an elegant and powerful writer and eloquent speaker and acquired knowledge of Arabic.

After death of his father, he opted for journalism. It was al Mannar's influence which beguiled him to the field of journalism. "it was through Rashid Rida's al Mannar, that Kerala Muslims were awakened".³ Kerala society experienced a series of changes in the first half of 19th century. Portuguese, Dutch, and foreign traders introduced Kerala printing press, printed books etc. In 1905 a press entitled Swadesabhimani was erected at Anchutengu.

Chirayinkal Govinda Pillai was the first editor. The motto of Swadesabhimani was "Fear, crookedness and avarice never develop the country"⁴ In 1905 Swadesabhimani started first edition as a periodical journal under the editorship of Vakkaorn Moulavi. The editorials were emasculated the bureaucracy. In 1906 Vakkorn Moulavi appointed Ramakrishna Pillai as new editor. Swadesabhimani gave a new impetus to people. Through this, journal people understood the fundamental rights. He used columns of Swadesabhimani for the upliftment of Muslims. Swadesabhimani tediously stood for the Muslims and the need for the advancement of education among them. On 26th September 1910 Swadesabhirnani banned, press confiscated and Ramakrishna Pillai deported.

Advent of Science education came to Travancore by the Missionary Institutions of Westemers. But Muslims kept aloof from the Science education. He realized that the lack of religious and secular education was the main reason for the backwardness of Muslims. "Vakkom Moulavi was quite aware that "Enlightenment through education is essential for the progress of mankind."⁵ For this purpose he established several journals. The Muslim, The Deepika and al Islam in Arabi Malayalam. He emphasized that Muslims should forward to scientific, technical innovations of Aeroplane, Vaccine and Machine.

In 1906 Moulavi started Muslim. The Muslim was mainly aimed at the upliftment of oppressed sections of the Muslim community. Through the columns of Muslim he spread the need for modern education. Moulavi was aware that without educating women, the community will not progress. He wrote and encouraged others to write about women education. The Quran was translated and published in Muslim. Almost all the articles in the Muslim were written by him. He published the proceedings of All India Muhammadan Educational Conference. But in 1917 he was forced to cease its publication. In 1917 he published Al Islam, an Arabi Malayalam journal. The orthodox ulema oppressed the activities of Moulavi.

He took great effort for the propagation of Women's education. In 1931 the first edition of Deepika came out. It also published several articles in Urdu, English and Arabic. The most distinctive feature of Deepika was translation of Quran. It was through the columns of Deepika that the expression women empowerment found its way into the Malayalam lexicon. Deepika was primarily a cosmopolitan periodical covering social, political, literary and scientific topics. He always tried to restore women rights. He wanted to enjoy woman's right without forsaking the virtues of women. In his article "Nammude Strikal, he wrote that educated mothers could mould disciplined children, and instil in them noble ideals."⁶ Through his writings Moulavi established polygamy is neither mandatory nor encouraged by Islam; polygamy had been permitted with certain conditions under certain circumstances. It is the duty of man to treat wives with perfect equality in material things as well as in affection. Dr. Rekha one of the Vakkom Moulavi's grandniece was the first Muslim women Doctor. But he had to discontinue the publication due to ill health and heavy expenses.

All Travancore Muslim Mahajana Sabha was formed to promote educational efforts in different parts of the country. service rendered by Moulavi and the Muslim in the cause of Muslim education were greater than those of Government. Perhaps the Government as able to go forward and so much on account of the support given by their work In 1946-47 one third total enrolment of 46,261 students in elementary school was girls.

Moulavi in consultation with Muslim elite prepared a plan for the promotion of Muslim education. The plan recommended to appoint Arabic Munshis in schools, to appoint two inspectors for the inspection of Arabic, to grant scholarships to Muslims student from Matric classes. In 1914 Arabic began to be taught in schools first time.

Under his inspiration several organisations were established. Such one was Lajanatt ul Muhammadiya of Allepy. It established a higher elementary school Alappuzha. An Arabic teacher was appointed. 'For the first time in the history of Kerala Arabic teachers were paid by Sangham'⁷ The remarkable efforts of Vakkom Moulavi to popularize education among Muslims was appreciated by Government. In 1915

Maharaja Sri Mulam Thirunal visited Allepy, Sangham submitted a memorandum. In response to this, the Government assigned him the duty of responsibility of education of Muslims. Arabic teachers were appointed in schools by the Government. A Muhammadan School Inspector was appointed to encourage Muslim education. Vakkom Moulavi was appointed as the president of Arabic Examination Board. This Board prepared the Syllabi and the text books for the different classes". The textbook 'Ta' IlmulQirra prepared by him was approved as the textbook in the Schools for teaching Arabic in primary classes"⁸ These onerous task created wide interest in education among Muslims

In 1915 Moulavi's Muslim published a note on Muslim education entitled, 'Muslim and educational Progress". The Divan reported Sri Mulam Praja Sabha that in 1090 ME Muslims and Pulayas had progressed considerably...But the educational progress of Muslims is considered, It is not anything to be satisfied. The influence of journals was very effective. Within a short time several new schools started in Kollam and Karunagappily Taluk.

Special fee concessions were granted to Muslim Children. Arabic Munshis were appointed in the elementary School to teach Arabic as second language. In 1923 .. six vernacular schools for boys opened. In 1925 for the first time a Muslim girl passed the Vernacular School Leaving certificate and joined college. Four girls passed the Lower grade Arabic Munshis Examination. A Muslim lady graduate took admission in Lady Willington College.

Within a short period, 75 Schools were founded in different parts of Travancore including first Muslim School at Alappuzha. In 1919 Moulavi published an article in Muslim about the need of a Hostel in Trivandrum. A Hostel was established at Kunnukuzhi at Trivandrum. The inhabitants of Hostel were taught to practice Islamic principles. It has to be mentioned that many Muslim leaders of the later period were the products of this Hostel.

Vakkom Moulavi gave equal importance to both religious and secular education. The religious and secular educational condition of Muslims of Travancore were very sorrowful. Tamil nadu Scholars used to visit Travancore. But they only conducted religious classes and

followed Darses. So Moulavi introduced scientific practices in to Arabic teaching. One was modernize Madrasa adjacent to mosque and other was to introduce certain psychological principles and linking the same with the curricular subjects. It was Vakkom Moulavi who established modern Madrasas at various Muslim centres in Travancore where religious subjects as well as Arabic literature, History especially Islamic History and Modern science were taught.

"He directed through the Muslim that the instruction in reading, writing, arithmetic, Arabic and lessons in fundamental of religion be given in the Madrasas"⁹ The intellectual pieces of advice given by the Quran is still lay on the surface. No special care had been given for a meaningful study Quran. This resulted in the innovations (Bid'a) among Muslims. Arabic knowledge is essential to know the meaning of verses in the Quran. The study of Quran made easy by the effort of Moulavi. Pupils from neighbouring places of Vakkom visited Moulavi to learn Arabic. "Students from Cochin and Malabar came for learning"¹⁰

Islahi workers encouraged the founding of several organisations for the propagation of Modern education. Social activities of Vakkom Moulavi were ranged from educational development to cultural renaissance. As a contemporary of Sreenarayana Guru, Vakkom Moulavi established a local association named, Islam Dharma Paripalana Sangham, Nilakkamuku. This looked forward the Universal Brotherhood of Muslims. Sangham published several booklets, organised a library and held seminar. There were similar organizations, Pallipuram Hadiyyul Islam Sangham, Chirayankizh Taluk Samajam, Muslim Aikya Sangham, Kodungalloor etc. The Chirayankizh Taluk Samajam conducted an educational and economic survey of Muslim population and

published the result of census with the help of pamphlets. The samajam took special attention for the development education among Muslims. "the association aroused the enthusiasm of the Muslims of Chirayinkil to promote education, Moulavi started adult education centres, libraries and night schools".¹¹ Aided and elementary schools had been established. A High school and a modernized Madrasa were established at Edava. All these efforts of Moulavi, a small elite class emerged from Muslim community.

The Kerala Muslim Aikya Sangham was formed in Kodungalloor for the revival of Muslim community and modern education. This was the Kerala Association of Muslims. It provides a public forum to discuss common issues of the community. It took immense efforts for the development of modern education. As a result of Aikyasangham Madrasa education, was modernized with the introduction of class system. Thus education gradually spread among the Muslims of Kerala. A number of students came forward to study in colleges.

Conclusion

Vakkom Abdul khader Moulavi motivated Muslims to embrace modernity especially Modern education. He championed the cause of Modern education for Muslims. Vakkom Moulavi often referred as Sir Sayyid Ahammad Khan of Kerala for his Modern outlook. Moulavi understood that education is the key stone to Progress and Modernity. His journal mainly targeted Modern education . He was not a theoretician but pragmatic. As a result of persistent effort of Moulavi, Muslim education improved considerably. Muslims began to acquire Modern education and readiness for social changes.

THEATRE AND NATIONALISM IN COLONIAL ANDHRA

Prof. E. Sudha Rani

Introduction

Theatre is a literary composition to be enacted by players on a stage in front of audience. Its successful portrayal depends on the cooperation that among writers, actors, producers and audience in accepting the limitations and the conventions of the stage. It is not new to the Indian artists to educate the public of the contemporary events through their stage performances like dance dramas, padyanatakams, Harikathas, burrakathas etc.

By the end of the 19th century a noticeable change came about in the content of plays as they took up the cause of social reform. 'Prahasanas' of Veerasalingam and Chilakamarti and Gurajada Apparao's 'Kanyasulkam' are a few examples to be mentioned in this regard.¹ Once the national movement gained momentum, plays portraying patriotism on themes relating to Chandragupta, Shivaji, Jhansi Rani, Tilak, Punjab atrocities were produced.² Under the impact of Gandhian philosophy and struggles, plays were produced and played on themes such as untouchability and village reconstruction. As a part of national movement, adopting peasant problems as the subject matter, Rytubidda (peasant) was written by Sabnavis Rama Rao and staged during the 1920s.³ By the 1930s, another stream of writers, under the influence of the writings of Ibsen, Bernard Shaw, Chekov and also Freud brought out quite a number of plays advocating women's liberty and rights including, divorce, and property.⁴ Such play-writers included P.V. Rajamannar, Malladi Avadhani, Bellary Raghava, Chalam, Kallakuri Hanumantha Rao, and Gali Bala Sundara Rao who could be called the early feminist writer in Telugu.⁵ The final phase of theatre combined the nationalist as well as left led people's theatre

The Theatre in colonial Andhra can be divided broadly into two main stages.

- 1) 1880- 1920 Social Reform themes and early needs of Nationalism
- 2) 1920-1947 Nationalists Struggles, Gandhian Leadership and Emergence of people's theatre

The present paper attempts to analyze the role played by the theatre in the nationalist struggle in colonial Andhra from 1880 to 1947.

Early Phase of Theatre: 1860-1920

The Telugu theatre in the modern age was able to give entertainment as well as education to the public and began to introduce social themes as subjects. The writers through their works, tried to eradicate social evils, and were successful to some extent. The social awareness, social reforms, rationalism, patriotism etc, played an important role in moulding the plots in the hands of the play writers. Between 1860 to 1880, dramas were considered only as texts for reading. The first independent drama written in Telugu was *Manjari Madhukareeyam* by Korada Ramachandra Sastry in 1860 and due to some difficulty it was not played on the stage. *Sizaru charitramu* ('Caesar's Story') in 1875, by Vavilala Vasudeva Sastri, was a trendsetter.

Telugu drama did not emerge till the end of the 19th century when, translation of Shakespeare's plays began to appear. The *Comedy of Errors*, translated by Kandukuri Viresalingam Pantulu, *Chamatkara Ratnavali* in 1880 were earliest plays. Translations of Sanskrit plays Sudraks Kalidasa's Sakuntala, Bhatta Narayana's *Venisamharam* and Sudrak's *Mruchakatikam* were produced in the early years of the 20th century. The changing political and social environment had its impact on the writers. Only indirect and suggestive plays propagating National freedom struggle and patriotism came into existence.

The first Telugu play to be staged was *Vyavahara Dharma Bodhini*⁶ (a guide to law) by Kandukuri Veereshalingam. In 1880 Draupadi *Vastrapaharanamu* was written taking the theme from the Hindu mythology of Mahabharata, with a plot of Pandavas loosing their everything in *jjutham* (gambling). The dialogues indicates that it is addressing the British who by cheating have grabbed the property of the Indians and made them slaves.

The story of *Pandavodyogam*(1907) is taken from the Hindu mythology Mahabharatha. This was staged all over the country. The *Padyams* (poems) in the drama are bi-hearted

even by illiterates just by listening to them. The scene in Krishna was sent by Pandavas as *Rayabari* (ambassador) to make Kauravas agree for *Sandhi* (peaceful settlement) is called the central scene. This was written keeping Mahatma Gandhi in mind. Dharmavaram Ramakrishnamacharyulu in his 'Chandrasa' introduced the aspect of nationalism and salt tax, without disturbing the basic structure of the drama.

By this time, the plays in Telugu were staged with a view to keep alive the ideas of swadeshi and boycott. A play titled 'Lala Lajapati Rai' was staged at Masulipatnam in December 1907. The drama commenced with the exhortations of V. Parabrahmam, played the role of Lajapati Rai, to boycott foreign goods and to encourage indigenous industries. He was arrested and this led to a riot. Another drama called 'Vande-Mataram' composed by Veluru Vasudeva Sastri was enacted at Kottapalli Kakinada in April 1908.⁷ Another play in *Panchali Swayamvaramu* introduced social reforms and nationalistic ideas in the script. Child Marriages, destruction of artisan industry, and usage of foreign goods were severely criticized through this drama.

Padmavyuham was a mythological play written by Kallakuri Narayana Rao in 1919. The story of *Padmavyuham*⁸ was taken from Mahabharata.⁹ The central scene in which Arjuna was addressed by Sri Krishna as "Having given away your kingdom to the enemies you are working hard for your livelihood and living like slave; The line having given India to the British was the indication.

In another context, Abhimanyu said "the one who sheds his blood for the sake of freedom of his motherland though dead, is living in this world through his *Kirthikaya* (the body of fame) inspired audience. Many dramas like *Tilak Rayabaram*, *Congress Vijayamu*, *Ali Prabrutula Nirbandhamu* (the arrest of Ali Brothers) and others based on Khilafat movement had been written by the playwrights. Since the subjects taken were contemporary, they were written as socio-political and nationalist fervor.

Theatre during 1920-47

Political drama emerged as an important trend in the 1920s and 1930s. The writers often used historical or nationalist themes to represent

contemporary reality into an allegorical form. Somaraju Ramanuja Rao's *Tilak Rayabaram* (1921), Damaraju Pundareekakshudu's *Panchapa Parabhavam* (1922), and Budhdhavarapu Pattabhiramayya's *Matrudasya Vimochanam* (1924) exemplify this trend. Under the impact of the widespread anti-colonial movement and the upsurge of a nationalist spirit, the writers felt the need for re-creating a national history and sculpting a national identity. Sripada Kameswara Rao's *Kalapahad* (1913), Muttaraju Subba Rao's *Chandragupta* (1932), Viswanatha Satyanarayana's *Venaraju* (1934), and Gundimeda Venkata Subba Rads *Khilji Rajya Patanam* (1935) from a part of this development.

Gandhiji's Entry into active politics and his countrywide tours gave fresh inspiration to people. Inspired by the leadership qualities of Gandhiji, dramas were written taking him as the main character. *Gandhi Vijayamu*, *Gandhi Mahodayamu*, *Gandhi Vijayadhvajam* etc., were written in this sequence. Swaraja Rathamu is a drama written by Somaraju Ramanuja Rao with the cooperation of Tilak Nataka Samajamu of Guntur. The play advocated swadeshi and national and village *panchayats*. The author also describes the role played by Hindus and Muslims during the First World War. It also stressed upon the need for peace and non-violence to achieve the ultimate goal. The drama was banned by the British Government.¹⁰ Tilak Maharaju Natakamu : by Sripada Krishna Murthy Sastry in 1921 highlighted Bal Gangadhar Tilak. This play too was banned by the Government.¹¹ Many plays were enacted on the Quit India movement (1942), with which the Indian independence movement entered its final phase. The years 1943-46 witnessed the publication of a large number of plays revolving round the theme of political liberation. Vedanlakavi's *Telugu Talli* (1940), Utukuru Satyanarayana Rao's *Sapa Vimochanam* (1943), Jasti Venkata Narasayya's *Congress Vijayam* (1946), and Pattigodupu Raghava Raju's *Delhi Kota* (1946) dramatize the political struggle for freedom.

In 1929, the Andhra Nataka Kala Parishad was established at Tenali to infuse new talent both in dramatic dialogue and acting. A group of actors, playwrights formed this theatre forum, with people like Vanaraso Govinda Rao who later founded of Surabhi Theatre, Kasinathuni Nageswara Rao Editor of *Andhra Patrika*,

Achanta Venkata Sankhyayana Sarma, Kothapalli Lakshmaiah, Viswanatha Kaviraju etc. The Rajah of Pithapuram, Venkatagiri *samsthan*, the *Rajahs* of Vuyyuru, Challapallisamsthan, Bezawada Ramachandra Reddy, M.P., Rangayappa Rao, the then President of the *Parishad* were the patrons of the *Parishad*. The renowned artists of All-India level, Harindranath Chattopadhyaya, V. Shantaram, the film Director, Prithviraj Kapur, famous actor and founder of Prithvi theatre, encouraged the activities of the *parishad*.¹² They insisted upon the participating teams to make women play female roles in their plays. They had also published the photos of women artists participating in the dramas, in the advertisement pamphlets. The *parishad* started a special magazine named *Natyakala* especially for theatre in 1937, under the leadership K. Lakshmaiah, and N. Venkata Seshaiiah, as its editor.¹³

Involvement of Women into Theatre

Bellary Ragava and Kandukuri Veereshalingam were those who introduced women from their own families on to the stage. Surabhi Company being a troupe where all members were of the same family or nearest relatives encouraged the women from their families to act in dramas. Andhra Nataka Kala Parishad, while conducting drama competitions insisted upon that female roles must be enacted by women only. Thus a number of women could come out boldly to act in dramas. Kannamba was a great artist was the founder of Rajarajeswari Natya Mandali. Kannamba toured in Andhra giving performances of plays and earned fame. She entered into films in 1935 and acted in as many as 150 films. Born in Surabhi family Kamala Bai acted as child artist in her father's own drama company. She acted in more than 130 films. She played not only female male roles. She was the founder of Kamala Natyamandali (1952) and trained many artists. Purnima was the daughter of founder of Surabhi Nataka Samajam acted as heroine in theatre. Dasari Kotirathanam played both the male and female roles. She received almost 200 medals for her performance. She also established her own drama company and gave performances all over Andhra.

Impact of Theatre on Public

Madala Veerabhadra Rao, an author of many books on freedom struggle in Andhra

narrated his experiences in his book: "Pedanandipadu is at a distance of 18 miles from Guntur. I was a drama actor in those days, also I used to give performances in *harikathas*. A freedom fighter by name Kommamuri Lakshmi Narayana worked along with us on behalf of the Congress Committee. We could gather nearly 6000 people as *Santi Sainyam*.¹⁴ The next day itself nearly 20000 village officers have resigned for their posts.¹⁵ Seven women took a procession holding National flags and singing patriotic songs.¹⁶ Bandar Indian Dramatic Company had arranged the staging of the play "*Pandava Vijayamu*" written by Tirupati Venkata Kavulu, in Gudiwada of Krishna District. The Magistrate of Gudiwada imposed Section 144 on them and stopped the play and prohibited the company from staging plays for 3 months. The drama *Swarajya Sopanam* written in 1921 could impress the Andhra audience. In the preface to the drama, Kodati Narayana Rao expressed his observations as follows "The poems in the drama echoed throughout Andhra. Apart from actors, *Haridasas*, Singers etc., sung the poems in different occasions. In *Santarpanams* (group lunch in temples) the songs and poems of the drama were Sung".

Kodati Narayana Rao also recorded his observations as: "this drama was written by Damaraju in 1921 as a part of propaganda to non-cooperation movement of the day. The Tilak Nataka Samajam of Guntur staged the play. The government banned the play. Every time the play was banned, the name was changed and staged again". The impact of the play "*Gandhi Vijayamu*" was recorded by the author Damaraju Pundarikashudu in the preface of the play. "When we wanted to stage the drama in Kakinada, the police locked the theatre and arrested all our actors. Bulusu Sambamurthy pleaded for us. At the same time about 25 students from Visakhapatnam staged the play and were arrested and brought to the jail. During the night time the drama was presented in the jail hall itself whereupon slogans "*Mahatma Gandhiki Jai*" reverberated all over the jail premises. Desha Bhakta Konda Venkatappaiah, Unnava Lakshmi Narayana, and Duggirala Gopala Krishnaiah acted as the Congress leaders. N. Subba Rao through his Gandhi character created a great impact over the audience. Section 3A of Dramatic performance act about Act was created for our sake only and

then onwards the prior permission of the Day before staging was insisted upon.”¹⁷

When the drama "*Chíchchula Pidugu*" (the thunderbolt) was banned by the Government, the title of the play was changed and staged, in which Amancharla Gopala Rao, Kunepalli Subrahmanyam, Rahim Khan, Achari etc., were the actors. The youth of Yuvajana Samithi arrested and were imprisoned. Some prisoners were shifted to Tanjavur jail. After release from the jails, the youth had intensified the movement, and made the public to participate in it.¹⁸ The drama "*Panchala Parabhavam*" after banned by the Government played several times.¹⁹ This drama was actually written by Ramachandrani Venkatappaiah but Madduri Annapurnaiah did not reveal the name of the author and as a publisher of the drama underwent a rigorous imprisonment of two and half years.²⁰ Thus not only the dramas of those days, but also the actors were so inspiring both patriotically and socially, that their impact was there in every section of people and situations.

The British government banned more than thirty telugu dramas which were thought to be of revolutionary nature. Some were banned at manuscript stage, whereas some were proscribed after printing and publishing. The dramas banned after printing and publishing were: *Tilak Rayabaramu* by Somaraju Ramanuja Rao –(1921) *Swarajya Rathamu* by Somaraju Ramanuja Rao –(1921) *Tilak Rayabaramu* by somaraju Ramanuja Rao and *Gandhi Vijaya Dhvajam* (1921), by Sripada Krishnamurthy Sastry was banned by the Government vide [G.O.No.](#), 839 dt. 30.10.1923. This book is also called the *Navayugam* (New Era) since it was based on the emergence of Mahatma Gandhi as the leader of Nagpur congress. Another drama *Chirala Perala Gandhidasa Natakam* by Meduri Ramamurthi (1922) was also banned.

During the year 1930, on the day of *Pongal* P.V. Rajamannar's '*Tappevaridi*' (Whose fault is it) was presented at Madras Museum Theatre by Bellary Raghava and team. The female roles in the drama were enacted by Madabhushi Sarojini, Annapurna and Kommuri Padmavathi and gained the applause of the audience for their performance. Even before that Ramathilakam, Kannamba, Sarojini, purnima, Rajeswari Anjali etc., acted in dramas.²¹ The audiences were

ready to purchase a special ticket for 4 annas to see Kannamba particularly.²²

Praja Natya Mandali

By 1940s the political scenario, both in India and abroad, had changed. The world situation underwent a radical change. The spread of Marxist ideas and people's struggles resulted in the establishment of the hegemony of the Communist Party of India. The Progressive Writers Association (PWA) through its nationwide activities had spread the message of socialism and world peace in the wake of the outbreak of the Second World War. Left realized the help of the theatre, the powerful instrument of visual art. The Indian People's Theatre Association (IPTA), founded in 1943 in Bombay was meant to fill this gap.²³ Approaching the masses through people's theatre was the main aim of this movement and as such it was to be an adjunct to the PWA which was already working on the literary front.²⁴ The All India People's Theatre Association Conference (1943) declared in its draft resolution that it "recognizes the urgency of organizing people's theatre movement throughout the whole of India as the means of revitalizing the stage and the traditional arts. An all India Committee was constituted, the composition of which shows that all leading mass organisations such as All India Trade Union Congress (AITUC), Kisan Sabha, and PWA were associated with it and representatives from different provinces were included. The provincial organising Committees were also formed.²⁵ From Andhra Garikapati Raja Rao attended the conference, but in the organising committee Krishnamurthy and Chandalavada Pitchaiah were included.²⁶ The IPTA in Andhra popularly known as 'Praja Natyamandali' revived the thirty four old folk arts forms. The artists were young and most of them came from rural working masses. They compiled songs and composed music and scripted plays, skits and presented them before large gatherings.

The Praja natyamandali succeeded in popularising the Communist Party programmes and politics through its performances.²⁷ Its success was as much due to its class composition as also due to the medium of popular performing arts. Of all the arts forms they adopted, 'Burra Katha' (Bardic recitals) was the most popular form as it includes, a story, music, rhythmic movements of body, make-up and also

the satirical remarks that players make on contemporary politics²⁸ It was enriched by Sunkara Satyanarayana, the poet who wrote most powerful and popular Burrakatha scripts such as *Kashtajivi* (the toiler) Alluri Seetharama Raju, Veeresalingam Bengal Famine, Tanya, (Russian heroine), Nasser was the famous performer. About half a dozen 'dalams' (squads) performed this form throughout Andhra.

Activities of 'Praja Natyamandali' reached a peak during the Telangana armed struggle (1946-51) when many more popular forms of culture were used.²⁹ Particular mention may be made of the play *Maabhoomi* (our land) authored by Sunkara and Vasireddy. It stirred the urbanites and the rural masses alike with its splendid performances, even winning laurels from Congress politicians and ministers too.³⁰ In one year, during 1947, the play *Maabhoomi*, was staged around thousand times by 125 troupes to an audience of two million people which, according to K.A. Abbas, was a world record.³¹ The Theatre movement increased its network at grassroots level. With more than two hundred village level branches. Each district had a coordinating committee. The body at the provincial level supervised the work of the lower bodies. District training centres were organized.³² Rigorous rehearsals, group discussions of the script and attention to minute details in production were the hallmarks of the 'Prajanatya Mandali'. After a prolonged discussion within the Communist Party, it was decided that roles of women should be played only by women. Women, in particular family women of younger age became active participants in the movement. They were also trained in the technique of 'Burrakatha' and exclusive female squads of this were organized.³³

IPTA (Indian People's Theatre Association) in its pamphlets published that the drama *Paschattapam* (the repentance) was presented in twenty centres and attracted nearly thirty five thousand audience. The play *Prathima* taking Bengal famine as subject when presented in 159

centres, attracted two and half lakhs of audience. The play *Mundadugu* (a step forward) was presented in Krishna and Guntur districts. In Guntur district Rythu Maha Sabha (the peasant's conference) the drama was presented and forty thousand people responded to it.³⁴ Famous journalist and editor of Indian Express, Kasa Subba Rao expressed his reaction to the drama that "the drama *Mundadugu* is simply marvellous. In certain places, tears rolled down from my eyes. I am a poor man, But still I pay Rs.116/- as a token of my appreciation to the Praja Natya Mandali.³⁵

Conclusion

Drama which was considered to be only for entertainment of people in earlier days was noticed at later years to be a medium for communicating social awareness and sow the seeds of nationalism among the people into the minds of the common; but due to fear of the Government, the writers indirectly inserted some dialogues or some scenes suggestively; this was the early phase of theatrical revolution against the British rule; mostly mythological plays were given a sort of contemporary touch with the message of nationalism through characters like Pandavas, Kauravas etc.

However, the drama written from 1921 to 1947 taking themes directly from the contemporary political scenario showed their direct impact on the people of Andhra and prepared them to participate in the freedom struggle in spirit and deed. Bellary Raghva's performances on the stage impressed not only the public but the great leaders like Mahatma Gandhi, Rabindranth Tagore and Benard shaw. Dramas criticizing British brutality directly began appearing on the stage. Events like *Salt satyagraha*, Non-cooperation, Civil Disobedience and *Khilafat* movements were given prominence in the dramatic elements. In the above manner the Andhra theatre has contributed a lot for the National movement.

HISTORICAL SIGNIFICANCE OF TIRUVAMATTUR TEMPLE

V. Suganya & Dr. V. Raju

Introduction

Tiruvamattur is a prominent ancient Saivite centre adorned with the Abhiramesvarar temple. It is a place of attraction to various Saivite devotees from time immemorial. The famous Nayanmars like Thirunavukkarasar, Thirugnanasambandar and Sundarar visited this temple from yore. There are 274 Siva temples which have been immortalized in the verses of the famous hymns of *Devaram*.¹ Among them, 22 temples are situated in Nadunadu. Tiruvamattur is one among them.

The Greatness of Location:

Nadunadu is a jewel of Thondaimandalam. It attained greatness as a holy place in Tamil

Nadu. In mythology, once Brahma and Vishnu quarreled mutually for their superiority. It is believed that they came over to Nadunadu to prove their might, each trying to throw the column. Brahma wanted to find the top of Lord Siva. Sri Vishnu was to find out the bottom of Siva.² Brahma took the form of a swan and flew up while Sri Vishnu became a gigantic bore plunged down. Suddenly, the column opened and Lord Siva appeared in with all his glory. Both of them failed in their mission, recognized Siva's divinity and worshipped him. It is believed that it so happened in this Nadunadu and so it gained its prominence. Moreover, this place is also related to Vaishnavism. It is said that Lord Vishnu came to this region to measure 3 feet of land in

his *Vamana avadara*. This *Nadu* is also related to the life of Nayanmars, as the birth place of the Saivite saints Meiporul Nayanar, Thirunavukkarasar and Sundarar, one of the prominent Nayanmars, became a bonded slave of Lord Siva. It all happened in this Nadunadu.³ Thus, Tiruvamattur, a part of Nadunadu, has gained prominence as a part of glorious Tamil Nadu.

At present Tiruvamattur is a tiny village located at about 6km, north-west of villupuram, and the headquarters of the district of that name. The temple of Abhiramesvarar is situated in the heart of the village. A river by name Pamba flows along the northern side of the temple.⁴

Etymologically, the name Tiruvamattur is derived from the combination of words Tiru+aa+mattur. "Tiru" means to "holy" or "respectful." "Aa" means "cow" "Mattur" connotes a place. It is said that once the cows had no horns for their protection. Even small animals could attack and kill them. Fearing their total extinction, the cows, helped by the divine Kamadhenu, went into penance to Lord Siva. With his grace, they were blessed with horns, which enabled them to protect themselves. Thus, the earlier stage of the cows got changed, and hence, the name of the village came to be known as "aa+mattur" and with the prefix 'Tiru' (holy). Hence, the name Tiruvamattur.⁵ since the Almighty blessed the cows as mothers, this place is also known as "Gomathapuram.

The Sthalapuram of Tiruvamattur says that the worship of Abhiramesvarar in Tiruvamattur is equal to the worship of Lord Siva in *Panchabhatsthalas*. It also adds that Sage Behringi Muni stayed and worshipped the Lord of this temple. It further states that the Saints Thirugnanasambandar, Thirunavukkarasar and Sundarar have sung hymns in praise of the presiding deity of the temple. Apart from the Nayanmars, the famous twin poets have composed '*Kalambagam*' in praise of the Lord Abhiramesvarar. The name of the presiding deity of the temple is referred to in the inscriptions as Paramaswami, Mahadevar, Alagiya Nayanar,⁶ Aludiyar and Alvar.

A unique feature of this temple is that Muthambigai, the consort of the presiding deity, invariably found on the left side of Lord Siva in all other temples, in the same premises, is

situated as an independent temple in front of the Abhiramesvarar temple facing west. A Street separates these two temples.

The Abhiramesvarar temple at Tiruvamattur is one of the famous South Indian Temples. Nothing is known about the history of the temple prior to the Pallava period. The Bhakti movement gained importance with the advent of the *Devaram* saints.⁷

Thirunavukkarasar

The Saiva saint Thirunavukkarasar visited this temple at Tiruvamattur and sang two (*Thirupathigams*) hymns on the glory of the presiding deity as Esan and Iyyanar. His hymns contain information about the place and the temple. In one of the hymns, he says that Lord Rama had worshipped the lord of this temple. He also mentions the village as "Amattur." From this it is realised that this place was called only "Amattur" in the ancient period. His hymns speak about the greatness of Abhiramesvarar.⁸

Thirugnanasambandar

One of the prominent Saiva saints Thirugnanasambandar too visited this holy place and sang many religious songs. In his hymns, he describes not only the beauty of the village, but also narrates a tank with ambal flowers, the fertility of the soil and the presence of flower gardens. Mahendravarman I, a Pallava ruler of seventh century A.D, was a contemporary of Thirunavukkarasar and Thirugnanasambandar.⁹ This proved that this temple, an important religious centre, did exist even before the seventh century A.D.

Sundaramoorthy

Another glorious Saiva saint Sundaramoorthy, who lived in the first quarter of eighth century A.D., is one of the four great Nayanmars of *Devaram*. He also sang hymns in praise of the lord of this temple. His hymns are religion oriented. However, they do not offer any information on the importance of this temple but merely eulogise the lord.¹⁰

These saints visited this temple during the period between 600 A.D. and 710 A.D. and sang in praise of Lord Siva. The contributions of the Saiva saints to this temple are remarkable. Hence, it is believed that this temple should have been an important religious centre even before

the seventh century A.D.¹¹ But, later, the same temple was renovated by the Cholas with the addition of a sanctum made up of stone.

Tiruvamattur temple is a treasure house of inscriptions. The inscriptions of the Cholas, the Pándyas, the Vijayanagar rulers and their feudatories are found in the temple of Tiruvamattur. These are the primary sources of information to reconstruct the history of Tiruvamattur region and its temple. Most of the epigraphs mention the munificent endowments and lavish gifts made over to the temple in the form of lands, villages, gold, sheep, jewels, lamps¹² and various other articles for its upkeep and maintenance. The donors mentioned in the inscriptions are mainly the rulers, the officials, the merchants and the public.

The Later Cholas

Among the prominent dynasties of South India, the Cholas, especially the later Cholas, rendered meritorious service not only to maintain the divinity of the temple but also for its maintenance. During the middle of the 9th century A.D., Vijayalaya (A.D. 846-881) vanquished the chieftain Muttaraiyar and laid the foundation of the later Chola dynasty at Tanjore. Aditya I (A.D.881-907) the son and successor of Vijayalaya Chola, participated in Sripurambiam battle which took place between Pallava and Pandya near Kumbakonam, as an ally of the Pallava ruler. Eventhough Aparajita, the Pallava ruler, emerged victorious in the battle, he allowed Aditya to add some new territories. But Aditya wanted to extend his territories further. Therefore, he waged a war against Aparajita, defeated him and annexed Tondaimandalam¹³. This conquest enabled him to expand his territory from the river Cauvery in the south as the southern boundary and the Rashtrakuta kingdom in the north. Hence, Nadunadu including Tiruvamattur came under the rule of the Cholas right from the period of Vijayalaya. But we do not come across any of his records here. Vijayalaya was succeeded by Aditya I in A.D. 871. It was the custom of Chola kings to assume the title 'Rajakèsari' and Parakesari' alternatively in succession. Aditya I also took the title of Rajakesari' after enlarging his territories as an independent ruler¹⁴.

The Chola Empire, thus expanded, was later ruled by the celebrated Chola kings up to the end of the 13th century A.D. Among them,

Parantaka I (A.D. 907-953), Rajaraja I (A.D.985-1014), Rajendra I (A.D. 1012-1044), Virarajendra (A.D.1063-1070), Kulottunga I (A.D.1070-1130), Vikrama Chola (A.D. 1118-1136), Kulottunga II (A.D 1133-1150) and Kulottunga III (A.D. 1178-1218) deserve special mention. Tiruvamattur temple has inscriptions of these rulers.

After the decline of the cholas Kopperunjingan II became an independent ruler and ruled over Tondaimandalam¹⁵. His inscriptions are to be found in the temple at Tiruvamattur. During his tenure the village was known as "Rajaraja Valanattu Panaiyur nattu devadanam". He has also made endowments to the Mahadeva temple of this village. Mahadeva was the another name of the main deity of the Tiruvamattur Abhiramesvarar temple. We presume from these inscriptions at the temple that this village was under his control during his reign.

Sadayavarma Sundara Pandya I the Pandya king subdued Kopperunjingan II who ruled a part of the Chola country and annexed the chola country in A.D. 1279. Very soon he brought the entire Tamil Nadu under the Pandya rule. The inscriptions of Sadayavarama Virapandya (A.D.1270-1271) and Maravarman Vikrama Pandya (A.D. 1283-1296) at the temple of Tiruvamattur¹⁶. Proved that this village was a part of the second Pandya Empire. Due to the invasion of Malik Kafur the general of Alauddin Khilji the later Pandya rule came to an end and sounded the establishment of Muslim rule in Tamil Nadu.

After the second Pandyan Empire fell apart, Tamil Nadu underwent several changes of different rulers. Exploiting the confused circumstances prevailing then, the chieftains entitled Sambuvarayas chose to act as independent sovereigns. The inscriptions are to be found in the period of Rajanarayana I (A.D. 1337-1363) and Rajanarayana III (A.D. 1356-1397). In Abhiramesvarar temple at Tiruvamattur. They made several gifts of this temple. From these, we understand that this village was under the administration of Sambuvarayas¹⁷.

To recover South India from the Muslim rule, Vijayanagar Empire was established by Harihara I and Bukka I in A.D. 1336. By the expedition of Kumarakambana the second son of

Bukka I, Tamil country came under the control of Vijayanagar Empire in the course of the 14th century A.D.¹⁸

The inscriptions of the Vijayanagar rulers Bukka I (A.D. 1343-1379), Viravijayar (A.D.1412-1419), Virupaksha I (A.D.1470-1471), Krishnadevaraya (A.D.1509-1530), Achyutharaya (A.D.1530-1542), Sadhasiva Maharaya¹⁹ (A.D.1542-1586) and Venkata I (A.D. 1586-1614) are to be found in the Abhiramesvarar temple at Tiruvamattur. These inscriptions clearly show that the Kings of the Vijayanagar dynasty had liberally donated too. These inscriptions show that Tiruvamattur was a village under the sovereignty of the Vijayanagar Empire²⁰.

From the stock fact that the temple contains no other inscriptions after the Vijayanagar

Empire, we may conclude that Tiruvamattur had lost fame and importance.

In the post-independence India, Tiruvamattur region was first located in the district of South Arcot. When South Arcot district was bifurcated for administrative convenience as Cuddalore and Villupuram districts and at present it is a village panchayat in Villupuram Taluk.

Having analysed the evidences it is clear that name of the village Tiruvamattur is called in the same name from the very beginning to this date.

The above description leads one to the inevitable conclusion that the village Tiruvamattur is historically an important place from its inception to the present day.

MAGICAL BELIEF AND THEORIES AND ITS IMPACT ON MODERN SOCIETY

Dr. Suresh Chellappan

Introduction

This paper tries to understand magical belief and theories and its belief and theories and its influence on magician and clients and their positive as well as negative attitudes and in different ways and how they effect in modern society. This study of the paper needs carefully understanding the construction of mind with un

conceptualised evidences, structure of social institution, influential elements, culture, religion, class and caste etc. Recently new studies intervention and invention about different magical practices are going on the world in social context. Here the magical beliefs carry the relation between the existing social norms and domination subordinating people and controlling the metaphysical thinking. The

concept of magic and related superstitious belief in its existence has existed throughout the recorded history. The nature of the practices has different forms in different ages. Many scholars gave different types of definition to magic. But it is difficult to apply an Anthropological definition to magic. Historically magical label has been applied to practices of people belief influence of mind, body, to property of others against their will. Magic is a broad term¹ referring to diverse beliefs that share both primitive and highly cultures.

The magic mainly include three categories. The main categories are magical men, the magical practices, and magical objects. The magical men shall be concerned with individuals to who super human or supernatural powers are ascribed. The magical practices are the attainment of supernatural powers and magical objects, the things which needed to magical practices. The belief in magic included three complementary aspects. First the sorceress belief in the effectiveness of his techniques second, the patients or victims belief in the sorceress power and finally, the faith and expectations of the group. Magic is constantly acted as a sort of "gravitational field"¹ within which the relationship between sorcerer and bewitched is located and defined. Much anthropological literature refers to the objects used in magic as medicines. Magic is a generic term that refers to different kinds of beliefs and practices related to supernatural forces. Among it encompasses such areas as witchcraft, sorcery, and shamanism. In such context magic is not simply a pre-scientific way of attaining practical ends. It may also involve at least a partial. symbolic recognition of the societies spiritual world view and of its gods and myths.

Primitive man never analyze the mental process of the client he knows only the practical side of the magic. Magic in the supernatural sense is different from stage magic in which apparent magical effects are produced for entertainment through such means a sleight of hand. Taylor says "magic is one of the most pernicious delusions that ever vexed in mankind:

it was also a fundamental characteristic of the lowest] plown stage of civilization',².

People have certain beliefs. Even the educated man is not free from the beliefs he has inherited from age past. An average person can move his brain waves easily in any direction he wants. If one starts thinking positively, it works positively and if he thinks otherwise, it causes negative effects and these reactions carry an influence called Magic. The success and existence of these practices are based on its belief. Belief is here used to denote the attitude of mind in perceptions are regarded as real, judgments as true of matters of fact, actions and events as about to have certain results.

Magic can be divided mainly in to two broad classes that are malicious and beneficent. The word magic comes from" the *magi* the name given to European priests of ancient Persia". Magic is the mystery of profound connection between mind and spiritual consciousness, insights and expansion of feelings. The magical practices connect through imagination. And these practices and its consciousness work a pattern of connection through myths symbols and rituals and word power. Its nature is always deals with natural forces. All types of magic draw these ultimate power over animated and in animated things. Magical practice use the power of imagination and intuition thought to manifest energy in to matter. The magical practices have two side, the strength of the imaginative power on one side and the other is the power of the stimulation of negativity and weakness. The scope of magic is to acquire knowledge, power, love and wealth or to heal disease or ward of danger.

Magic may be considered as two, black and white. Generally it believed that white magic is considered as beneficial and uses positive powers. Black magic is considered as doing unacceptable things and unholy. But the different between white and black magic is the intent of the.. user. Both these magical practices are based on natural forces. Exactly all forms of magic exactly the opposite attitude of nature. Doing of magic is an attempt to use supernatural power

and spiritual reality. Most of the practices are come out from mysticism. "Magic involves an instrumental orientation towards supernatural".

Magic might be called the science of exploring mans hidden powers and his abilities. It is based upon a strong intuition of human mind. "Magic might be called the science of exploring mans hidden powers and his abilities. It is based upon a strong intuition of human mind" Magic is the science of arts of causing changing to occurring in conformity with will". Magic was no more that a crude attempt at science, and it had now been superseded by science". "Magic was not completely the science of the past it was the science future".

HISTORY OF ANCIENT MAGICAL THEORIES AND FOUNDATIONS

In various countries black magical beliefs and worships are known in various forms like witchcraft, sorcery, shamanism, and so on. Ritualizes roughly equivalent to shamans have described their contacts with fairies, spirits often involving out-of-body experiences and travelling through the realms of a transcended world. Beliefs of this nature are implied in the practices of much of Europe, and are explicitly described by accused witches in central and southern Europe.

We live in a world of duality where light and darkness are the two sides of the same coin. Black magic is the negative use of energies and power by evil minded human. All humans have their two sides; divine as well as evil, all human have different ratios of evil and divine within them. It is believed that everyday many prosperous and happy, families are being ruined by black magic. Magic is a manipulation of energy for own benefit. The same energy can be used in a positive way to heal the people as well.

"Belief in witchcraft and sorcery are on way of explaining the inexplicable, controlling the uncontrollable, and accounting for the problem of evil"³. There are two types' beliefs- that are natural and supernatural that is the difference between perception belief and imagination belief. According to *Srinivas* the "general preferences

for the martial way of life express itself, in belief of ritual and myth".⁴ Belief and superstitions are interconnected. "In common usage the term belief signifies the acceptance as true of a proposition for which empirical evidence is lacking. Belief entails an emotion of conviction that cannot be reduced to something more fundamental than itself "⁵.

According to *E M Butler* "The fundamental aim of magic is to impose the human will on nature on man and super sensual world and on order to master them"⁶ Magical force is a notion derived from experiences of natural force and employed to account for events that are usual, wonderful, mysterious not it be interpreted by the common sense which in the cumulative result of usual experiences. Magic begins with ignorance of some of a desired event, and the adoption of anything that fixes ones attention as contributing to the total antecedent. Magic may arise out of mystery, the sense of mystery arises when something excites wonder gives place to curiosity, and curiosity is baffled, and wonder returns with fear. Magic being mysterious the more mysterious the more powerful it must be.

E M Butler writes "the fundamental aim of magic is to impose the human will on nature, on man and the super sensual world in order to master them"⁷. But *Aleister Crowley* who said that it was no more than a first crude attempt at science and it had now been superseded by science because it is far beyond than science. Its secrecy is now beyond than science.

But *William D Husley* says "the practice of magic is based on magical, which are not supported by logic, science or religion and its performance involves words, actions, and objects"⁸. Magic is an impersonal connection of events, depending on some impersonal force that has real existence. What causes make men believe in such force. In the first place, everything is necessarily conceived of by everybody as a centre of forces

Magic is divided in to three broad classes, which is black, grey and white. It is believed that "white is helpful to the people and black is

harmful"⁹ "Black magic is called the left-handed path because right-handedness is normal and left-handed is reversal of the normal"¹⁰. Grey magic comes in the mix of good and evil. It is seen as falling in a continuum between white and black magic. It is also called neutral magic. *RW Firth* has divided magic in to "productive, protective, and destructive"¹¹

But Evan Prichard defines magic in three categories and points out that there exists "productive, protective, and punitive · magic"¹² Anthropologists had distinguished three types' magical practices.

That is "homeopathic, means the small portion of a thing to affect the whole. The other is sympathetic magic means a symbolic action effect the object and the last is contagious that is influencing one thing through contact with other"¹³

Another type of magic is green magic, and grey magic Green magic involves the practitioners attaining himself or herself to nature and the world around him or her. White magic is where the practitioners' attunes him or herself to the needs of human society and attempts to meet those needs. This type of magic does not entail harming other beings. Grey magic is a magic that is neither green, not black, nor white, and which usually replaces the absolute stand of these realm with an ethical code that is particular to the practitioner. Folk magic is an eidetic collection of herbalist, faith healing cures and hexes, candle magic, and other workings that has thrived in rural areas for centuries. According to James Frazer, Magic is a mistaken application to the material world of the laws of thought so as to constitute "a spurious system of natural law"¹⁴

The role of magic varies from generation to generation. "Both public and private magic can and do exist within single societies"¹⁵ Magic when good helps society cohere when bad it is used as a means to personal gains and inflicts evil on its practitioners enemies, "magic is nevertheless mans attempt to manipulate, propitiate or commune with supernatural forces

with specific end in view these end may be personal, or collective, Except when it is bad"¹⁶.

In spite of the social disapproval of magic in the society even educated people practicing the same. It is not surprise that education and science, the most potent symbols and purveyors of progress and modernity, should not eradicate belief in the unseen, in the magical, in powers that transcend ordinary human control and comprehension. It appears that the extension of social scale, rapid economic advance, political change and the spread of modern thinking, the influence of science and technology and modern education is not effected the considerable increase of magical beliefs. So it is believed that such type of beliefs and practices are the part of our society.

In this post-modern period people in all over the world is growing with rational thinking and scientific ideas. World is going faster and faster with new findings. But certain people did not change their attitudes and feelings. A large number of crimes, treachery, and robbery exist now in Kerala in the names of various kinds of sorcery. When a man attempts to harm others by magical practices, it is practically applied to the doer himself.

People know this practice has bad effect but their morality do not accept the truth. Accidentally some practices are seemed to have been success. There are lots of reasons behind the growth of magic. Its existence rests in the hands of clients. The narration about the results of magic IS the main reason for its existence.

Magic is related to human mind. The activities are the by product of mind. In the stages of development one has to satisfy their needs and wishes at their possible way. Magic satisfy the needs of the people derive from the desire to possession and selfishness. Possession syndrome one branch in hysteria is related to these beliefs. The people who are in the group of psychological problems may incline to these activities. Symptoms derive from beliefs: but are based upon social norms. Faith and belief of the magic is another reason for its existence. Human mind has enormous weakness, the aim whatever it may be, to achieve the impossible things; in

any possible way is the weakness of magic and its existence. Black magic is always related to hazardous ends. From this point of view the attitude towards black magic is being changed. Failures and success of the practices is justified by the clients. He never regrets his continuous failures but he is satisfying his rare favourable success.

Conclusion

Day by day we are hearing about a lot of cheating stories of magic through social Medias. The believers of magic are never aware of these cheating stories. The believers are ready to give their all belongings to the magicians without any guilty feeling. The gift such as the costly things like Car, TV, Fridge, *lakh* of money and so on, are giving as the gift to the present day believers in Kerala. The believers ready to give thousands of money to every *poojas*. The magicians earn *lakhs* of money by frequent *poojas*. Most of the magicians in world are now rich people. Here there is no capital invest anywhere without exploit the beliefs of ordinary people. Now magical practices are common in the name of herbal treatment. Even now the higher sections of the society in world are feared about the magical practices of lower section of the society.

Sometimes magical practices may cause to sex abuse. Most of the clients never reveal their regretful sex experience to the world. For the

sake of the death fear of family members, certain house members mainly wife is suffering such sex abuse for avoiding the calamities. Rumours about the haunted houses are wilfully creating for the sake of sex activities. The members of the black mass in Kerala entered sexual activities at the end of their programme. Wealth The, women, and wine became the gifts of the black magical practices.

Another thing is that according to some believers of magic in the world, they never change their attitude towards magic, how it is frightful, or how many failures they faced. "Magic was not the science of the past. It is the science of the future"¹⁷. Human mind has reached at the point of evolution where it is about to develop new powers-powers that would once have been considered magical. As a broader institution a microscopic attention should be given to magic.

If anyone inclined to magic it is difficult to turn him to the previous position. So it is better to organize classes against these stupid practices. In short the practice of magic is the manifestation of human being. Here people make waste their energy, time and money in worthless rituals and ceremonies. These things lead to decline and decay of civilization. So, we have to be vigilant and guard ourselves against the superstitions.

TEMPLES AS AN EMPLOYER DURING SECOND PANDIYAN EMPIRE

Dr. K. Thangapandian

In the medieval period, temples performed multifarious activities in and around their precincts. The temple was an active centre of religious life in the local area besides being an important social institution that filled a large place in the multi-purpose activities, political, social, economic and cultural of the villae or township; rather it may be said, it filled a large place in the cultural and economic life of the people of Tamil Nadu. It was an employer as it employed a large bureaucracy of servants, highly officialised. It served as a bank since it received deposits in its treasury and lent money to the people.

In early times, only priests and their families, who were supported by the village community on a collective basis, managed the temples. Even as late as the Pallava period, the temples had a small staff. The early Pallava temples generally employed one or two Brahmana priests, a manager and one or two readers of religious texts. The number of employees in the service of the temple, the variety of interests represented therein made the temple an employer of considerable importance.

The employees of the temples can be divided into two main categories:

(a) Those who were mainly concerned with the religious functions of the temple and

(b) Those who worked in the educational and charitable institutions attached to the temples. The first category included priests, dancing girls, musicians and supervisory and menial staff. The second category included the teachers, professors, doctors, nurses and others.

In addition to permanent employees, many persons were appointed by the temple temporarily or on part-time basis. They formed a group of their own. It is possible to say something about the functions and conditions of these various groups of employees¹. The temples provided accommodation to the houseless servants. The houses constructed in the temple premises were distributed among them for a minimum rate of rent.

A. Appadorai writes that "the position of the temple as an employer providing work and means of livelihood for a large number of people

is the most striking thing in this connection"². According to D. Dayalan, the temple played an important role in the socio-economic life as an institution providing ample employment opportunity to a large number of people³. Thus the temple became a major source of employment for the people, next only to the state. The employment capacities of temples were all not of the same. The strength of the temple establishment varied according to the size and resources.⁴ Being a great landlord and possessed enormous wealth due to large endowments in land and cash bestowed on temples, the medieval temples could afford a large number of employees and pay them wages by way of lands directly and indirectly.⁵

Brahmins

Qualifications and *gotras* were also taken into consideration at the time of appointment. Siva Brahmanas of certain qualifications and specific *gotras* alone were employed as priests. But when qualified persons were not found among the descendants, competent persons could be selected from among their relatives⁶.

For certain appointments, local people were preferred to others. A *bhattar* should be a native of the village. This is one of the qualifications prescribed for the appointments in temple. Moreover, an inscription⁷ of Jatavarman Sundarapandya I records an order of the king to appoint *ariyalarong* with *ullurar* (local people) to protect the temple treasury. Even for the cultivation of temple lands and breeding of livestock, local people were chosen. This method was adopted perhaps for the employed to be near the temple executives. Besides, many people from distant areas might not come forward to accept such works owing to their limited returns or share. However, by employing the local people, the temples exercised control over the local population.⁸

On certain occasions, people from distant areas were also posted to some categories. For instance, a group of Brahmins of North India was appointed to guard the treasury of the Srirangam Temple &. A record⁹ of Sundarapandya from the Nelliappar Temple also refers to the appointment of eleven reciters in the

same temple from various parts of the country. The non-availability of qualified persons in the local area was probably the reason for such a step. Further, the creation of *agraharas* by inducing Brahmins to settle near the temple is also in support of the above fact.

The temple functionaries were paid some remuneration for their service. But the present day system of paying monthly salary in cash was not in vogue then. Instead, they were paid in kind by assigning land as *jivita*¹⁰ or grain or cooked rice. The nature and quantum of remuneration given to the temple staff differed from temple to temple probably according to the position and rank they held.

In this temple, certain servants were paid in grain or in cooked rice. A record¹¹ of Venrumankonda Sambuvaraya, issued in his 141 regnal year, records that the Parasivar who engaged himself in repairing the temple was paid *tuni* (measurement) of paddy instead of food from this temple. A record¹² of A.D. 1228 of the time of Maravarman Simdarapandya I refers to the supply of *nali* of food daily to the servant who tended a flower garden. This instance shows the nature of remuneration according to their position in the temple hierarchy. In addition to remuneration, some of the employees were provided with accommodation in the *tirumadaivilagam*. Thus, as the religious institution, this temple provided large scale employment opportunities, a striking feature in the socio-economic life of the people.

The later Palyas reign also noticed similar appointments of servants for their various services rendered in the temple. An inscription from Jambai South Arcot district dated 1300 A.D. and issued in the reign of Maravarmao Kulasekhara I, records the alienation of 900 *kuli* of dry land at Manaduyya Perumal-nattilr which was a tax-free *devaditi* of the temple in favour of a Brahman of Manatilr for his services on the days of festival in the temple. It is stated that the *sthanikas* received 31 *parzam* in lump sum from the Brahman for the payment of *kac/imai* on the land levied

Artisans

The Artisans (*kammalas*) were associated with the works such as construction of temple towers (*gopurams*) with artistic sculptures on them, making of carts and chariots and making

of jewels and vessels from various metals. They had occupied a special place in the society and economy and particularly in the temple building activities. The *tachchan* or carpenters were made the wooden structures in palaces to wheeled toy carts for children. They built beds, planks, boats, doors, chariots and temple cars¹³

Economic activities involving stone-masonry (esp. after the advent of the new idea of the 'stone temple') carpentry, jewellery, goldsmith, icon-making, garland making, special textiles and numerous other ancillary industrial activities centred on the temple. These industries gave employment to a variety of people in the village or township. The making of icons (esp. the complex groups of figures in attitude illustrating the favourite theme of legend), which were noted for their high state of efficiency must have given constant and profitable employment for the skilled artisans. The making of ornaments and jewels to adorn the images must have given great employment to goldsmiths. Every segment of the society had something to do with the temple.

Other Employers

Jatavannann Sundara Pandya I appointed three persons; Prakataganadan Maran and his two brothers Soran and Bhuman as *Uvachchar*s for providing music daily in the temple at Puralakkuc:li¹⁴ Among the important servants 111 the temple were priests, *Tiruppadiyam Paduvor*¹⁵ *uvaccar*¹⁶ carpenter¹⁷ watchman¹⁸, *pancacarya*¹⁹ *nattuvan*²⁰, (accounts, etc.). They were all granted land for their maintenance. The *tapasys*, *devaraliyar*²¹ and drummers who were residing in the *tirumat:laivalagam* of the temple. Besides they were all owed to have second floor for their houses, two entrances in front and privilege of coating them with plaster²²

Besides the regular employees, the temple also provided job opportunity to a large number of people indirectly. The inhabitants of the villages were attached to the temple in various capacities. The Brahmins as priests peasants in cultivating the temple lands, the merchants in supplying various commodities to the temple and artisans and others rendering various other works and this apart, many persons were also hired by the temple temporarily or on part-time basis in need²³.

Temples were functioning as efficient administrative units. Several families made their living by depending upon the temple. Several agricultural families earned their livelihood by cultivating temple lands. There were multifarious appointments to ensure security of the assets of the temple. To maintain proper accounts, to receive grants in cash and in kind; to disperse salary to the different employees and the priests of the temple. to finance various activities like worship and service and to sponsor cultural activities.

The temple employees were maintained from the temple land or lands endowed for their livelihood. While donating any land or village as *devadana* certain allotment of land within it was made to them. The wages received by these employees were often reckoned in terms of land. The medieval epigraphic records furnish clear evidence remunerating temple servants through assignments of land which does not seem to have been common in the preceding period

wherein the payment was made in grain. The table below illustrates this:

Numerous other inscriptions suggest that the employment of temple servants and assignment of land for their maintenance, namely, for cleaning the temple floor²⁵ keeping the sanctuary lamp alight²⁶ keeping the temple yard clean²⁷, persons who fetched water for bathing the 'deit'²⁸, cooking in the temple kitchen²⁹, tending the temple garden³⁰, drummers³¹, conch-blower³², stone-masons³³, songsters³⁴, potters³⁵, carpenters³⁶, *bhiittars*³⁷, *SivabriihmatJas*³⁸ dancing girls³⁹, and goldsmith⁴⁰ was very much in vogue during the period under study. Besides assigning lands to the temple servants afwages for their services, temples also paid them in way of kind⁴¹ and mone or mone⁴² The appointment of the temple servants was generally hereditary. The temples of the medieval ages not only provide ample employment opportunities to the eligible in society but also gave them an opportunity to earn a respectable position in the society.

AN ANALYSIS OF BUDDHIST IDEOLOGY ON WATER CONFLICT RESOLUTION AS A SPIRITUAL APPROACH TO RESOLVE CONTEMPORARY INTER-STATE WATER CONFLICTS OF SOUTH INDIA

P. Veena

INTRODUCTION

In the contemporary South Indian scenario, the Competition between states over river water is often viewed as a driver of conflict. A long historical efforts of these Inter-state river water conflict resolutions precedents the bare fruitiness of effective water management process and the criticality in conflict prevention, peace building and reconciliation procedures. To overcome these hazards various doctrines and theories have evolved, among them Buddhist ideology which vindicates the path of truth, non-violence, peace and harmonious co-existence is the most capacious spiritual approach to water conflict resolution and predominant guide to solve contemporary inter-state water conflicts of South India even after centuries of Buddha's teaching.

INTER-STATE RIVER WATER CONFLICTS OF SOUTH INDIA: CONSEQUENCES

The region of South India consists of the five southern states of Andhra Pradesh, Telangana, Karnataka, Kerala and Tamilnadu as well as the three union territories of Puducherry, Lakshadweep, Andaman and Nicobar are dependent upon the non-perennial river water sources such as, Godavari, Krishna, Cauvery, Vamsadhara, Mahadayi, Periyar, Nethravati, Tungabhadra, Vaigai etc are relied on Mansoons. Decrease in water availability due to Manson failures and increase in demand because of high population growth are the frequent contributors withal the rapid urbanization, modernization and industrialization; socio-political and economical tensions; Regionalism and linguistics differences; varied physical features and sporadic water resources; level of education and cultural patterns of the citizens and poor relations between the states are the pre-dominant causes for the Inter-state water conflicts of South India. The Contemporary South India has the most contentious Inter-State river water conflicts over the rivers of Godavari, Krishna, Cauvery, Vamsadhara, Mahadayi and Periyar under the Inter-State River Water Disputes Act - 1956, which also involved the states of Western and Eastern regions and an union territorial of India,

are inflicting serious threat to the development of Nation as a whole. The court-appointed tribunals of relevant Inter-state water conflicts have frequently relied on a vague principle of equitable apportionment of water. The extra ordinary delays in the constitution, execution and implementation of the tribunals and its awards bringing more conflictions rather resolutions. Water governance challenges, inadequate legal approaches, institutional vacuum, unsatisfactory and unsuccessful distress sharing practices, absence of transparent information gathering and sharing are vital in mediating and mitigating escalation of conflicts. It is necessary to have credible avenues for pursuing political solutions supplementing legal and institutional mechanisms.¹ Thus the need of seeking different approach of water conflict resolution is always in demand.

BUDDHA AND HIS DHAMMA ON CONFLICT RESOLUTION

Gautama Buddha (563-483 BCE) also called as 'Tathagatha', 'Sakyamuni' was the founder of Buddhism, has been described as "the Light of Asia" by Sir Edwin Arnold, was a great philosopher, religious teacher and Socio-religious reformer. Born a man, living as a mortal, by his own exertion Buddha attained that supreme state of perfection called Buddha hood, and without keeping his enlightenment to himself, he proclaimed to the world the latent possibilities and the invincible power of the human mind.² His dhamma, called as 'Buddhism' is the philosophy of enlightenment and the religion of peaceful co-existence emphasizes non-violence and promotes harmony as well as universal peace become the world's fourth largest religion which originated in ancient India between the 6th and 5th centuries BCE. From Buddhist point of view, the roots of all unwholesome actions i.e. greed, hatred and delusion, are viewed as the root cause of all human conflicts. Conflict often emanates from attachment to material things: pleasures, property, territory, wealth, economic dominance or political superiority. Buddhism has some particularly rich resources for deployment in

dissolving conflict. Buddhism addresses the Buddhist perspective on the causes of conflict and ways to resolve conflict to realize world peace. The world has enough to satisfy every body's needs but not everybody's greed.³

INTERVENTION OF BUDDHA IN ROHINI RIVER WATER CONFLICT

The Rohini River Water Conflict of Buddha's period, waged by intensified interests of water sharing between Sakyas and Koliyas for the fulfillment of agricultural need, has ended with the goodwill of cooperation and kindness because of the auspicious intervenience of Buddha. One of the major Buddhist texts, the 'Runala Jataka' in 'Jatakatta' narrates the story of the Rohini River water Conflict and elucidates the Buddha's intervenience in resolving the conflict. Also 'Goutama Buddha Kappiam' narrates the Buddha's mediation as follows:

When the Sakiyas and Koliyas waged a
terrible war

About sharing the river Rohini,

Blood, gushing like a spring, flooded the
waters,

The Buddha, coming to know of it,

Did what was needful

To end the long-drawn and

To bring both sides together.

All shall be well if good men try.

(Translated from Goutama Buddha
Kappiyam in Tamil)⁴

The Rohini River originates from Chure or Siwalik Hills in Kapilavastu is one of the holiest and most revered rivers in Buddhist scriptures. Buddhist traditions hold that Siddhartha Gautama crossed this river in his return to Kapilavastu. On the fifth year of his enlightenment, when Buddha was dwelling in Kutagarasala in Vaishali, he saw his father on the death-bed by his divine eyes and flew to Kapilavatthu to visit his father, and preached him to become an arahanta. Soon after the death of Suddhodana, Buddha became the peace mediator for the Sakiyas and the Koliyas and averted the bloody feud between the neighboring tribes.

DEMARCHE OF BUDDHA IN ROHINI WATER CONFLICT RESOLUTION

The demarche followed by Buddha during Rohini water conflict resolution is unique and worthy of compliance. Initially, Buddha directly spoke to the local cultivators and found that the root cause of the conflict was the lack of water due to the draught. Being belongs to the Sakya clan Buddha also having close relationship with Koliyan kingdom as it is the native of his mother Mayadevi and wife Yashodhara, was able to bring both the clans together and conducted mutual meeting and mindful counseling between the King Mahanama and King Suppabuddha. Buddha asked them to negotiate a quick solution to the crisis, because both sides would lose in a war, whether the loss was greater or smaller. By accomplishing peaceful coordination, Buddha convinced the hostile groups not to fight; by telling them, "**blood was thicker than water**" and "**human lives were infinitely more precious than water**". Through the consolidation of peace and co-existence Buddha opens up the resolution for the aroused conflicts with hopeful manners. The jurisprudence negotiations of Buddha brought Equal allocation of water among conflicted states. Buddha emphasized the discussion and dialogues between all concerned people and also pioneered appropriate water conservational methods and storage systems for the draught seasons by the plan of constructing dams. He invented remedial alternates to conflict and taught Temper management techniques through religious practices. Buddha put forward the plea that water abundance or scarcity by itself is not the reason for peace or war; it is the attitude of the society that governs it. If society is willing to follow its dharma, willing to develop a conscious, only then conflict for water will cease. Hearing the Buddha's Counsel, the two confronting sides calmed down quickly and reached an agreement. There after shared the water without losing their temper. Harmony was restored and peace prevailed in the region. Both the tribes then encouraged their men to join the Sangha as a token of gratitude for his mediation; and each extended hospitality by inviting him as its guest. The Buddha accepted both the invitations and dwelt alternately in Kapilavatthu and Koliyanagara. Some 500 Sakyas and Koliyas converted into Buddhist upon hearing the teachings of Lord Sakyamuni Buddha.

BUDDHA'S RECOMMENDATIONS FOR PROTECTIVE CONFLICT FREE SOCIETY

The Enlightened Buddha recommended the development of mind of each individual in a society which is useful to reduce any conflict at different social interaction. Buddha advocates the control of one's own mind, where the other legislate the control of the other's body. Buddha guided people to conquer hatred by kindness and evil by goodness. He wishes to bring enlightenment in the minds of society where enmity, jealousy, ill-will and greed are absent. In order to achieve protective conflict free society Buddha recommended the Principles, Paths and practices are all about finding inner peace and controlling one's self desires.

BASIC PRINCIPLES, PATHS AND PRACTICES OF BUDDHISM

The Buddhism is all about finding inner peace and controlling one's self desires. **The Three Universal Truths:** (1) Nothing is lost in the universe, (2) Everything Changes, (3) The Law of Cause and Effect; **The Four Noble Truths:** (1) Dukkha: suffering exists, (2) Samudaya: there is a cause of suffering, (3) Nirodha: there is an end to suffering. (4) Magga: need of following eightfold path in order to end suffering; **The Ashtangamarga:** (1) Right view, (2) Right intention, (3) Right speech, (4) Right action, (5) Right livelihood, (6) Right effort, (7) Right mindfulness, (8) Right concentration are refers to "Eight members of the noble path", arranged into three **Skandhas**. Such as, **Sila:** Virtue, good conduct, morality. This is based on two fundamental principles: The principle of equality: that all living entities are equal. The principle of reciprocity: This is the "Golden Rule" in Christianity - to do unto others as you would wish them to do unto you. It is found in all major religions. **Samadhi:** Concentration, meditation, mental development. Developing one's mind is the path to wisdom which, in turn, leads to personal freedom. Mental development also strengthens and controls our mind; this helps us maintain good conduct. **Prajna:** Discernment, insight, wisdom, enlightenment. This is the real heart of Buddhism. Wisdom will emerge if your mind is pure and calm.⁵

The Buddha citing the "Chakkra Vaththi Sihanada Sutta" on the deadly effects of recourse to weapons recommended **The Three Powerful**

Weapons: (1) Knowledge, (2) Wisdom, (3) Relaxation - are capable of protecting human society.

The Buddha outlined **The Six principles** as being capable of creating a society free from armed conflicts and consolidating peace and coexistence, such as: (1) Compassionate deeds, (2) Compassionate words, (3) Compassionate thoughts, (4) Equal sharing of gifts among the near and dear, (5) A righteous life, (6) A correct vision.⁶

BUDDHIST IDEOLOGY – A SPIRITUAL APPROACH

The aforementioned Buddhist Ideology on water conflict resolution ever recommends genuine peace and harmonious existence among the states through non-violence practices. It would guide us to find exact mechanisms for internal and inter-personnel conflict resolutions which are mightily in need for consideration. But, the question of water allocation principles and patterns of regulation enforcement is rarely achievable through the Buddhist way of water conflict resolution. Rather spiritual and psychological intervenience of Buddhist thought of conflict resolution could unfold the alternates to conflicts and plead us to perform mutual share and care policy is a spiritual approach towards contemporary inter-state water conflicts of South India.

CONCLUSION

In conclusion, it can be propounded that the Buddhist ideology on water conflict resolution is a spiritual approach and almighty guide to solve contemporary inter-state water conflicts of south India as well as caboodle inter-state water conflicts of the world through brightening the path of restoring harmony and prevailing peace between the riparian states. Rohini River water conflict reflected on how the whole nation needs to be sensitized on the values of the renewable but limited resource. It asserted that the water question needs to seep into our consciousness; else it may end up in hatred and war which lead serious impact on economic growth, social harmony. Buddhist peace and non-violence - is not only a philosophy of life, but a doctrine of progressive reconstruction of society. Buddhism is a path of enlightenment aiming at the root of all conflicts. It is an answer for the problems which prevailed

in Buddha's time in India. But the validity of his message is universal. Therefore Buddhist

philosophy of peace is relevant even to the problems of contemporary world.

A CRITICAL STUDY OF SIMON COMMISSION'S VISIT OF COASTAL ANDHRA WITH SPECIAL REFERENCE TO PRAKASAM DISTRICT

Dr. D. Venkateswara Reddy

The appointment of the Indian Statutory Commission, popularly known as Simon Commission with complete non-Indian personnel in November, 1927 accelerated the discontent of all political groups and parties in the country. This paper entitled "A Critical Study of Simon Commission's Visit of Coastal Andhra with Special Reference to Prakasam District" is an attempt to analyze critically the Simon Commission's visit to the coastal Andhra in general and Prakasam District in particular.

There was a comparative lull in the political activity in India after the suspension of Non Cooperation Movement in February 1922. The British provided a chance in 1927 to break the slumber and resurrect political activity in India. As per the provisions of Government of India Act of 1919, a commission would be appointed and sent to India after ten years to examine and review the effects of constitutional reforms and to suggest the needful changes. As promised the British Government appointed a statutory

commission popularly known as Simon Commission on the name of its chairman John Simon to examine the state of constitutional reforms in India and to suggest changes. It was composed of seven Members of British Parliament under the chairmanship of John Simon. The Commission openly defied the principle of self-determination and a deliberate insult to the self-respect of the Indians. The Indian people were outraged and felt insulted when they came to know the composition of the Commission. All its members were white men and not even a single Indian was accommodated in it. Hence, the Indian National Congress in its Madras session held in December 1927 decided to boycott the Simon Commission when it visited India. It was decided to organise demonstrations and observe *hartal* on the day of the arrival of Simon commission to India.

The Commission arrived India on 3rd February 1928. Nationwide *hartal* was observed by closing the shops and other business

establishment and all the educational institutions, Municipal and *Taluq* board offices were closed. There was a deserted look at almost all the places of India. The Commission was greeted with black flags as a protest with the slogan of 'Simon Go Back' that reverberated in all the cities, towns and even in villages. The Government was irritated by the successful boycott of the Simon Commission. In Lahore, Luknow, Calcutta and other place even respectable citizens became victims of the lathi blows of the police during the hartals in connection with the visit of the Commission. Among such victims was Lalalajpat Roy, who was beaten on the chest so severely that he passed away shortly, there after as a martyr to the cause of the country's freedom. The Andhras felt that the people in the rest of the country they should boycott this all-White Statutory Commission. They declared that the British had no right to enquire into whether Indians were fit for Swaraj or not because Swaraj was the birth right of every nation and also because resolutions in favour of independence were already passed in some of their conferences. They therefore suggested that the Commission should be boycotted even before a resolution to that effect was passed by the Congress.

Several Municipalities in Andhra like Tirupati, Kurnool, Eluru, Vijayawada, Srikakulam, Vijaayanagaram and Guntur passed resolutions in favour of boycotting the Commission. Processions were held against the visit of the Commission.

In tune with the pulse of the nation and Andhra, the towns and villages of Prakasam district observed *hartals* and hold public meetings protesting against the Simon Commission. On the evening of 2nd February a meeting was held at the Mahalakshamma Tree at Chirala attended by nearly five hundred people belonging to all religious denominations. Local leaders like Kotamraju Bairagi Dasu, Kotamraju Rama Rao and Sikhakolli Pattabhiramulu Gupta attended the meeting and appealed the people that it was the responsibility of every Indian to boycott the Simon commission as it was against the principles of self determination of Indians. A resolution was also passed on behalf of the people of Chirala in the meeting to that effect.¹ The Kandukuru town observed a complete *hartal* on the 3rd February

and shops schools were closed in protest of Simon Commission. A public meeting was held near the local Ankamma temple in the evening under the Presidentship of P.V. Narasinga Rao. He explained the assembled gathering the purpose of the meeting. Achanta Lakshmi Narasimham resolved that the people of Kandukuru would not involve in any way in the affairs of the Commission and the people of the town were expressing their discontentment for disregarding the Indian feelings in appointing the members of the Commission. The meeting also appealed and ordered the legislative members of the region namely Battina Perumallu Naidu, Bezawada Ramachandra Reddy and Kumara Raja of Venkatagiri should meet or involve in the Commission's proceedings.² The villages of Prakasam District were also enthusiastically responded to the call of the nation. A *hartal* was observed in Gudlur village by closing the shops and organising a meeting in the evening under the presidentship of Mannepalli Rama Krishna Rao and resolved unanimously to boycott the Simon Commission. Similarly, the villagers of Guravareddy Palem observed a *hartal* by closing the shops and schools. A procession with black flags was held and a meeting were organised near the local Poleramma temple and passed a resolution of boycott of the Simon Commission and resolved not to cooperate the commission.³

In Andhra, Guntur and Ongole were selected for the Commission's visit. The Simon Commission wished to visit at least one meeting each of District, Municipality, Taluq Board and Union Board in Andhra.⁴ T. Prakasam, V. Ramadas and V. V. Jogayya issued a statement to the press in which they earnestly appealed "to the public and local bodies of Guntur and Ongole to maintain national self-respect and make the boycott effective and real in both places. Let not Guntur and Ongole betray the Country's cause at this juncture".⁵ They also stated that Ongole attracted national attention and fame during the Non Cooperation Movement and if at all the people of the town welcomes the Simon Commission, the people of the town not only earn disgrace not only for themselves but also to the national especially to Andhra. They appealed the people the people that they were not supposed to betray the nation at that critical time and boycott the Commission and uphold the nation's self respect.⁶ *Desabhakta* Konda Venkatappayya, on behalf of the Andhra

Provincial Congress Committee appealed to all the Andhra leaders to boycott the Commission. For his boycott call, Bulusu Sambamurthy was taken into custody. The arrest of Sambamurthy created a big stir in the Andhra Districts. The Commission arrived in Guntur on February 23, 1928. There were *hartals*, processions, black flag demonstrations with placards of 'Simon Go Back' and protest meetings were the order of the day in Guntur. The Students of Guntur belonging to various educational institutions enthusiastically took part in the boycott programme. *Desabhakta* congratulated the people of Guntur on the complete, successful and non-violent *hartal*. On February 25th the Simon Commission visited some rural areas near Guntur. In Chebrole and Kottareddy Palem boycott arches greeted the Commission. When the Simon Commission special train steamed through Tenali and Chirala, large crowds gathered at railway stations and raised full throated cries, "Simon Go Back". Simon Commission left in a Special Train to Chirala and Ongole.

Simon Commission Agitation at Chirala

The day before the arrival of Simon Commission to Chirala i.e. on 24th February, 1928, Guntur leaders like Maddi Venkatarangayya, Gollapudi Sitarama Sastry and Neti Venkatachalapathi reached Chirala and held discussions with the prominent persons of the town and made arrangements for the boycott. They held two meetings at Chirala and Perala and appealed the people to greet the members of the Commission with black flags in the Railway station. Many prominent people eloquently spoke in those meetings⁷. Many shops were shut down by noon. Nearly two thousand people assembled on the platform of the Chirala railway station with black flags and placards with the slogans of "Simon Go Back to Birkenhead" along with tom toms.⁸ Prominent among those who assembled including Srikakulam Subrahmanya Sresti, Nune Narasimham Sresti, President of Cloth Association, Julakanti Venkata Subba Rao, Secretary of Cotton Association, Ravula Sitaramayya, Chirala Rangayya, Rajupalepu Venkateswarlu, Kotamraju Rama Rao, Kotamraju Bairagi Dasu, Bitra Subbarayudu, Avvaru Venkateswarlu, Pendem Venkatrayudu, Siddi Saheb, member of state Congress Committee, Kottamanu

Ranganayakulu, President Cotton Association, Ghouse Beg Saheb, member of All India Congress Committee, Pattabhiramulu Gupta, member of state Congress, Gollapudi Sitarama Sastry and Narayana, member of municipality. The special train in which the members of the Simon Commission were travelling reached Chirala Railway station at 2-00P.M. on 25th February.⁹ The slogans of 'Mahatma Gandhi ki jai', 'Ali Brothers ki jai' and 'Simon Go Back to Birkenhead' were raised by the assembled public and the station was reverberated with those slogans. It became tuff to control the people. Ravula Subba Rao, the Muncipal Chairman along with Jakka Papayya, a councillor and Mangalapurapu Nagabhushanam, the ousted bench magistrate with a difficulty entered into the train by making way among the congregated mob with a lot of difficulty and garlanded John Simon and gave him some plantains as a token of respect.¹⁰ The total number of councillors of Chirala municipality was 16. But at that time there were 11 councillors in office and the remaining 5 was vacant. It was said that the municipal chairman was unhappy when his effort for a planned grand welcome was failed and he met the Simon Commission with a long face. Viewing the incident, the angry public raised the slogans 'Shame Shame the Municipal Chairman', 'Chairman is not our representative' and 'Simon Go Back' until the train left the station. It was stated that John Simon was furious against the Municipal Chairman and scolded him by stating what was the nuisance and black flags? The chairman had informed them that there was no boycott at Chirala and the municipal council members were enthusiastic waiting to felicitate him. If he might have been informed them in advance they might have left without stopping at Chirala.¹¹ True to the rumour, the Chairman got down from the compartment keeping his head dress in his hand and was felt ashamed off to show his face to the public. Hence, he boarded the next train and travelled upto Vetapalem and returned to Chirala in another train and got down the compartment from the other side of the platform.¹² The leaders organised a public meeting under the banyan tree near the railway station soon after the departure of the special train to thank the councillors to uphold nation's self respect by not attending the felicitation and the public for making the boycott of Simon Commission a

grand success. The meeting resolved that Ravula Subba Rao felicitated the Simon commission not as their representative but as an individual.¹³

The special train reached Vetapalem platform at 2-30 P.M. Hundreds of people gathered with black flags and national flags. They observed the boycott programme.¹⁴

Ongole Visit of Simon Commission

Despite of the appeal of the State Congress, Varada Sriramulu, the Municipal Chairman of Ongole took a decision to hold the municipal council meeting on the days of the visit of Simon Commission as requested by the Collector of Guntur.¹⁵ Deferring the Chairman's decision, five councillors gave a requisition to hold an emergency meeting on the morning of 25th February to take a decision not to conduct the municipal council meeting during the Commission's visit to Ongole.¹⁶ The Bar Association of Ongole conducted a special meeting in which many of the members resolved not to welcome the Simon Commission.¹⁷ A public meeting attended by many lawyers, merchants and others was held on 20th February under the Presidentship of Neelamraju Chalapathi Rao. The speakers condemned the Municipal Chairman's decision to conduct the council meeting during Commission's visit of Ongole. Cheruvu Venkata Subhramanya Sastry proposed the resolution to boycott Simon Commission and it was seconded by Gollapudi Ramanadhayya. Another resolution was passed by which while condemning the Chairman's decision and appealing the rate payers to teach a lesson to the Municipal Chairman in the next election. It was proposed by Oruganti Rama Sastry and seconded by Dhara Gopala Sastry.¹⁸ It was also resolved to observe a complete *hartal* on the day of Commission's visit.

The special train carrying Simon Commission members reached Ongole at 3-30 P.M. Responding the appeal of the leaders, the public greeted them with black flags and slogans of 'Simon Go Back'. A complete *hartal* was observed from 12-00 noon. Only twelve lawyers attended the court. However, Varada Sriramulu, the Municipal Chairman and his supporting councillors, government officers and missionaries welcomed the Simon Commission. The Commission visited the local Municipal High School and met the teachers and students

of some classes. At 4-00 P.M. the Simon Commission went to the Municipal Office and attended the Council meeting that was conducted. The Chairman Varada Sriramulu explained the progress of elementary education in 1926-27 and a report a report on education. The Chairman and the president of the Commission discussed some more issues. In the meanwhile, the protesters arrived the Municipal office and raised slogans against the Simon Commission. Varada Sriramulu, the Chairman and Kopparapu Venkata Rao, Municipal Councillor, questioned the rational of boycotting such commissions and announced that they conducted the municipal council's meeting in their presence. They also watched the meeting of the *Taluq* Board for which only six out of sixteen members were attended. Later the Commission visited the Mission School and left Ongole in the special train to Madras.¹⁹

While the Commission was at Ongole, a huge public meeting was held at 5-00 P.M. in the evening of 25th February 1928. Dhara Gopala Sastry and other leaders spoke on the occasion condemning the actions of the Municipal Chairman and other councillors who attended the meeting and criticised that such activities harm the national interests. One Parupudi Satynarayana from Kakinada also spoke about boycott. *Desabhakta* Konda Venkatappayya also spoke on the occasion. He appealed the people to revive the Congress, to wear Khadi and to support the boycott movement. While strongly condemning the actions of the Municipal Chairman and other councillors, he asked the people to condemn such chameleon like behaviour that hinders the development of healthy politics and selfish politics.²⁰

It is worth recalling the heroic behaviour of Tanguturi Prakasam Panthulu, the brave child of the Prakasam district when the Simon Commission visited Madras. During the agitation against the Commission, there was a police firing in which a person by name Parthasaradhi was killed. Prakasam, the President of the Andhra Provincial Congress Committee, was proceeding with a batch of followers towards the spot of firing. The police blocked his movement upon which he defiantly bared his chest and told them that "we are determined to move on and have a look at the dead body of our comrade; shoot me if you want". The police were taken aback by his

boldness and courage and allowed him to proceed.²¹ The courageous behaviour of Tanguturi Prakasam Panthulu earned him the title "*Andhra Kesari*". Throughout the year 1928, the boycott propaganda against the Simon Commission was carried on throughout the length and breadth of the country.

In Madras, a public meeting was held on 3rd February under the Chairmanship of Kasinadhuni Nageswara Rao who spoke in Telugu. He declared that the Simon Commission was coming to India to perpetrate India's slavery and that Indians should with one voice declare that they would have nothing to do with that Commission. Gadicherla Harisarvothama Rao and Sami Venkatachalam Chetty of Ongole also addressed this meeting. The Congress in Madras attempted to boycott the Simon Commission under the joint auspices of the Andhra and Tamil Congress Committees. S.Satyamurthy was the Chairman of the Simon boycott propaganda committee and he issued a manifesto appealing to the students and teachers to abstain from going to schools and colleges, vakils, barristers to boycott courts, markets and shops to remain closed. He also said that no vehicles such as tramcars, buses, taxies and even bullock carts and rickshaws should ply on the roads of Madras and that all hotels and restaurants should remain closed. In appealing to the people to observe a complete hartal he declared, "The significance of the hartal is to show the government and to our enemies that the wish of the Congress runs as it is far as the Government, if not further".

Tanguturi Prakasam while appealing to boycott the Simon Commission by not presenting a Welcome Address also appealed to the people to show to the Government that "though we have quarrels amongst us, yet we have combined against you in the same manner as you (British Government) combined against India or other foreign nations". He said in this answer to the Commission lay the foundation for any Swaraj that Indians might seek to the ladies to observe hartal. In Madras the demonstrations against the Simon Commission were to a certain extent marred by the outbreak of violence.

Conclusion

The all White Simon Commission visited Prakasam District on 25th February, 1928. It got both shouts and claps in the district. In fact, the Commission was supposed to visit Chirala and Ongole. At Chirala the boycott was successful and the Simon Commission was unable to step down from the railway compartment. The welcoming and garlanding of the Commission became a closed affair within the railway compartment amidst noisy slogans of protesting the visit. However, despite of the *hartal* and agitation, Simon Commission visited the meetings and other educational institutions as per schedule at Ongole. The Ongole visit of Simon Commission was possible due to the efforts of Municipal Chairman, who belonged to the pro-British Justice Party. In fact, the Simon Commission's visit of Ongole was an indelible blot in the Commission's boycott in South India, if not in India.

SRIDHANA-FACTS REVEALED FROM THE INSCRIPTIONS OF TAMILNADU

Dr. R.Vimala

INTRODUCTION

Every society has its own ideals, aspirations, values and culture. These are the indicators of the characteristic nature of the society. This article is an attempt to analyse the Sridhana which is prevailing in Tamilnadu and Practice existed in olden days as revealed from the Inscriptions. On the time when a man wants to marry woman, he has to give money or asset to that woman in the name of Sridhana. As per the Inscriptional Sources, the pandiya period "*Manur*" Inscription mentions the Sridhana that may probably be the earliest. On the occasion of marriage, property as well as money in some cases was given by the parents to the Kanyas was called Sridhana. As per the Inscriptions, women had the share to property by means of Sridhana.

WOMEN IN SOCIETY

Women held very important position in ancient Tamil society. Women's life was divided between family, marriage and religion. The women were main concern and responsibility of the procreation. In those times, family was very big so the typical role of the woman was that to be a good wife and a good mother. The status of women in Tamilnadu has undergone tremendous change over the years. A bird's eye-view of the operation various factors ensures a better understanding of how evolved to create the status of women in the society. This historical perspective is revealing in the case of the Tamil society that chronicles a continuous history of women for more than three thousand years. The contribution of women to medieval society, though under estimated and unevaluated for the time, past and future will not be forgotten. ¹

The women assist their husbands by their love and affection along with the required advices at times. As part and parcel of their life the wives accompanied their husbands in all achievements and accomplishments throughout their life. The women, due to their involvement in the multifarious social and religious services, were placed at the highest pedestal in the ladder of social status.² Inscription and literary works prove that women were given freedom to do anything in the society. Women were placed

under no restrictions in their social life and activities, though modesty was considered the highest among their graces. The inscriptions give many examples of women of the royal and upper classes owning property in the own and disposing of it as they chose. ³

MARRIAGE SYSTEM

Marriage is one of the most important institutions in the social life of any people. It is considered a sacred one, and the union of man and woman in wedlock was viewed as a status desired in the society. ⁴These marriages do possess the best qualities of man and woman. In the sangam period as the bridegroom paid a price for the bride. In the Chola, Pandya period the bride parents paid Sidhanam to the bridegroom. During Nayak and Vijayanar period the sridhana articles increased.⁵

There were formerly eight different modes of conducting marriage ceremony in Hindu Tamil culture. Early Tamil literature speaks about eight types of marriages practiced in the Tamil society. They are **Brahmana (Brahma)**, that of gods (**Diava**), that of the Rishis (**Arsha**), that of the **Prajapati (Prajapatya)**, that of the **Gandharvas (Gandharva)**, that of the **Asuras (Asura)**, that of the **Rakshsasa (Rakshsasa)** and that of the **Pisakas (Paisaca)**.⁶ Of these eight forms of marriage the first four are generally approved as religious marriages and these are recognised as virtuous marriages. These four marriages are followed by Brahma rite.⁷

During the period polygamy prevailed among the members of the royal family. But monogamy was the normal unit of social life. Marriage was usually arranged by the elders or parents. In general, the bride groom's family approached the parent of the girl to have the girl married to their son.⁸ Marriage was conducted with elaborate ceremonies and the bride's family bore the expenses. Girls seem to have been married only when they attained maturity. The wife is referred to as Manayal, Manavatti, Illamudaiyal, Ahamudaiyal, and Perumanaikilatti.⁹

On the occasion of marriage property was given by the parents to the bride. Given dowry

was generally prevalent from the evidence of literature we could guess that gold, jewels, instruments, furniture, household article and land were given by way dowry.¹⁰ A married women enjoyed absolute rights over her sridhana as is evident from way they freely endowed. Her property could be inherited only by her daughter. In many inscriptions the donations given by women from their sridhana properties are recorded. This shows that women were entitled to property and had the right to dispose them.¹¹

SHRIDHANA

Though polygamy was prevalent in the royal families' monogamy was the general order even among the common public also. While this exposes the importance assigned to women at the time of marriage, the custom of offering **Mahakkodai or Stridhanam** too existed then.¹² It was a customary practice among the people to give seedhana (Stridhana) to the bride groom as bride price at the time of the marriage.¹³ During 8th century the Brahmins from Manur inscriptions gave a part of land to the girls.¹⁴

The queens too had their hand in the economic pursuits in some way of other. In the same way, the same queen i.e. **Tribhuvana Madevi**, wife of **Uthama Chola** (973-985 A.D.) had purchased lands, which were granted as **Stridhanam** to two ladies of **Sembiyan Madevi Chaturvedimangalam**.¹⁵ Sembiyan Madevi Build Sri Kailasha temple. On every nont of **Sankaranthi**, foods ever offered to 100 Brahmas by the wife of **Tribhuvana Madevi**, which was purchased from two ladies of mother and daughter. This grant is dated as the 15th regnal year (1000 A.D.) of Raja Raja 1 (985-1014 A.D.) Social privileges assigned to women to find their place in the inscription.¹⁶

An inscription of Vikrama Chola states, (C.E. 1118-1135) one Aganangarayan of Mangainallur had to give his wife some of his own property for having spent away the proceeds of the dowry which he had received.¹⁷ In the same way, another record of the same ruler Kulothunga III (1178 to 1217/18 A.D.) of the same year i.e. his 33rd regnal year (1211 A.D.) had been announced the record that the registration of the sale of land by one land by name Antappulapperumal and her daughter by name Uyyavandal after having Araicurrudayan

Periyavudaiyan as their guardian and witness. The land house site measuring one Veli and half Kani and fraction was given earlier as Stridhana to Uyyavandal, who was given in marriage to Kotturudayan Arayar alias Vicaiyagangan. So, the women were associated with the execution of specific social customs. It was also a customary practice to include the name of the ladies in the sale proceeds of the lands to avoid future complications in the claims.¹⁸

It must be remembered that during the period of the Cholas dowry system caused havocs to women and the married women revived land grants called **mahakkodai**.¹⁹ She alone enjoyed the right to spend their grants in any way she liked. The husbands had no right to spend those amounts. If he spent that amount he had to give a specific quantum of land as compensation for his expenses. The issue of **parisam** to the married women was condemned and it was decided even to ostracise the husband and his father who offered to the **parisam**.²⁰

There prevailed a custom of receiving **Stridhanam** by the son in law from the father of his wife and that was in the force of land, which could be utilised in anyway by him. The same thing could be attested by another inscription available in the Adhipuriswara temple of Nannilam.²¹ Since a father in law had referred to the sale of land by his son-in-law in the same way as mentioned earlier it is obvious that there prevailed specific customs to which women were also made as a party.

During the 11th regnal year of (1262 A.D.) of Jatavarman Sundara Pandya 1 (1251-1268 A.D.) one Anangichami had sold her mother's one Veli land to the Devakanmis* of the Thiruvallinatha temple. The Anangichami was the wife of ManavalaBhattan of Rajagambira Chaturvedimangalam. These lands were her property assigned to her as Stridhanam (maintenance) and Samskara Dakshina.²²

Later Pandiya's period 14th century A.D at Pudhukkottai inscriptions. Non-Brahmin person gave 200rs money to prides home when he was married. It was mentioned in the name of money given to the expenses of marriage. "Kalyana Azhivukanalduvathanapanam" is mentioned. One bridegroom didn't have money so he sold

his land and have that money to bride for the Shridhana.²³

An inscription dated in **Sakaera** 1347 which is equal to 1425 A.D. refers to a social custom of offering money to the bride before performing the marriage ceremony. The girls were given in hand to the bridegroom gratuitously by their father as that was the custom that prevailed in the Brahmin families. This inscription informs that both the father who accepted money and the bridegroom who paid money for the bride were punished and had to be excommunicated from their caste. This decision had been taken, while all the learned Brahmins hailing from Karnataka, Tamil, Telugu and Late regions, who settled in **Padaividu Rajya** attended the meeting held in front of the Gopinathan shrine.²⁴

Owing to their affection for the daughter the parents might have liked to give a part and sometime even the whole of the bride price to be enjoyed by her as a separate estate during her

own life time. According to Mitakashra, property of any description belonging to a woman becomes her **stridhana**, even if it be inherited by her from a male person either as a widow or as a mother. The dowry settled on a girl was not, allowed to be spent by her husband as he liked.²⁵

Conclusion

Women's marriage system is different from race to race. Marriage is celebrated all over the country. Thus, in the medieval period the sridhana practice was in existence at least with the upper castes because during this period the women were entitled to donate from their sridhana. Thus, they had the right to utilise the properties as they liked. Whereas, in these days, even though, women have right to due share in the property as per law, they are not allowed to utilise their property as per their wishes. Thus they are deprived of their right to utilise their property due to Social Customs and preferences.

EMNANT OF A CULTURE AND STRUGGLE FOR PROTECTION: MALA JEWISH TOWN AND PAITHRIKA SAMRAKSHANA SAMITI

Dr. Vinitha N. Vijayan

Varied traditions were there about the origin of Jews in Kerala. The travel accounts and the Hebrew chronicles from Malabar discussed their origin. It is believed that the first Jews sailed to South India on the ships of King Solomon; others say that they came during the Babylonian exile. Some others said that they fled to Malabar after the destruction of second temple. Some others refer to the fourth century migration. Most of these stories refer around the existence of a Jewish community in the ancient trade center Crangannore¹.

Jewish immigration to Kerala was a direct effect of the commercial contacts with Israel. The tradition says that the Jews came to Kerala coast in 68AD in order to escape from the religious persecution at home. They landed first at Muzuris and founded a settlement. Later they moved to such places as Paravur, Mala and Pullut². In course of time they developed into a business community with the patronage of the native rulers.²

Mala, a small town in Thrissur District near to Kodungallore and Chalakkudi has a vital role in the cultural history of Kerala. The region has its own cultural and economic impact in the annals of Kerala history and culture. Once it was the center of Jews and they made their own cultural imprints in the land. A number of studies were conducted in regard to their life and culture. When we trace the historiography of Jews in Kerala we reached up to the Jewish copper plate of Bhaskara Ravi Varman³.

The first definite proof of the Kodungallur settlement is the Charter of Bhaskara Ravi Varman (999A.D) granting lands and privileges of nobility to Jews. The Charter in the form of copper plates conferred in perpetuity upon Joseph Rabban, the leader of the Jews, and his heirs the free hold of a parcel of land called *Anjuvannam*. In addition, certain privileges of nobility were granted to Rabban including "the right to ride an elephant, to be carried in a litter, to have a state umbrella, to be preceded by drums and trumpets, to call out so that the lower Hindu castes might withdraw from the streets at his approach.²¹ It is also specified that the recipient shall not have to pay taxes and shall

enjoy all the benefits of the Rajah's administration⁴.

The 16th century Portuguese writer Durate Barbosa refer to the existence of Jewish Colony here. The Jews must have left Crangannore with the arrival of Portuguese and settled in other places where too the Jewish colonies eventually became defunct. At Paravur, Mala, Chennamangalam and Mattanchery there are Synagogues at present⁵.

When we traced the historiography of Jews in Kerala we reached up to the Jewish Copper Plate of Bhaskara Ravi Varman. It was issued in the 38th regnal year of the king. It reveals the socio-political situation of the region along with special emphasis of the Jewish community, the rights and privileges envisaged to the Jews etc. The Jewish Copper Plate is totally different from the temple inscriptions of that period. The document is a solid proof that how the ruler attracted the foreign merchants to the economic scenario of Kerala⁶

The Jewish Copper plates are the only relics of the Jews from the Chera period and they speak of the religious tolerance extended by the Hindu rulers of Kerala to the Jews at a time when religious persecution was the order of the day in many other parts of the globe⁷. However not much information is available regarding the religious aspect of the life of Jews in Kerala⁸. The Jews had the freedom to follow their religion in Kerala. These plates list economic and ceremonial privileges including exemption from paying taxes, the right to collect tolls and the honor of using particular lamps, umbrellas, drums and trumpets associated with high ritual status. This is a clear evidence of the firm establishment of the Jews in this area⁹. The Jews charter was unique in that it granted them rights that were the preserve of the royal family alone, including firings three salutes at day break and on the day of a marriage¹⁰.

Mala, a village in Thrissur District is a great cultural center of the Jews in Kerala. It is believed that the Jews at first migrated to Kodungallore region and from there they scattered to the regions like Mala and Cochin. The four acre

cemetery, perhaps the biggest Jewish cemetery in India and the beautiful Synagogue in Mala remains as a monument of their cultural life.

Scholars have different views in regard to the origin of the place name Mala. Majority of them tried to connect it with the Jewish settlement. Some says that the place name is derived from the Hebrew term *Mal-aha* means asylum. There is a similar word in Syrian language with safe place as its meaning. Mala the water logged area is considered as one among the oldest Jewish markets in Kerala. The region was a part of *Neythal* coast and salt making may be the prominent occupation of the people. Boats were made for the marketing of salt. These boats were known as *Masoola*. The term Mala may be a shorter version of *Masoola*¹¹. *Malak* in Hebrew also means salt. The *sangam* literary works mentioned of the term *Mantai Perumturai*. *Mantai* is defined as a port almost seven kilometers away from Kodungallore. Patittipattu praised the ruler Udayancheralathan as the lord of *Mantai* region¹². From the literary evidences it is clear that Mala was a notable center.

This paper is an attempt to trace the cultural antiquity of the Jews in Kerala especially in Mala and the pathetic situation of the Jewish cemetery and Synagogue along with the steps taken by *Paithrika Samrakshana Samiti* for its conservation and protection.

There are differences of opinion as to when the Jews of Mala first built a Synagogue. A Jewish Malayalam folk song revealing that wood used for the building of the Synagogue was donated in the year 1000 by the Raja of Crangannore. A new building was erected in 1400 AD, which in turn was renovated in 1792. Some others dated it up to 1597 after Kerala Jews had been driven away from Crangannore by the Portuguese. A rebuilding effort was occurred in 1909 evident by an inscription in the wood carvings in the Hebrew Malayalam along the sanctuary. In 1914 a fund raising effort was took place for the beautification of the Synagogue.

There have been frequent encroachments and attacks on the monuments. The synagogue first became a school and then a community hall. A shopping complex came up on the northern side of the synagogue. The compound wall was demolished, perhaps a hint that the sanctuary

was complete with all the religious artifacts intact. However, inside the synagogue, the Holy Ark, Torah Scrolls, lighting fixtures, main pulpit, original furniture etc. have disappeared and their whereabouts are still unknown. It is highly unfortunate that there is not a single photograph of Mala Synagogue's interior known to us from the period it was transferred to the Panchayath. No one knows whether these important artifacts were removed and sold or destroyed¹³.

The state of Israel was formed in 1948 and this marked the beginning of the immigration of Jews from India to Israel, the promised holy land of the Jews. Jews in different parts of the world decided to quit their diasporic life and reach their holy land as early as possible. The Jews in Mala also took the same decision. They sold all their properties at the available rate. There were more than forty Jewish families in Mala. The money from the sale of properties covered their travel expenses. A Jewish immigration office was set up in Bombay in 1950. Young people went first which was called youth *aliyah*¹⁴ with parents sending even little children. Gradually adults and older people also followed and many gave up even quite good jobs to make their future in Israel resulting into mass immigration.

When the last Jews of Mala returned to their home land, they entrusted the Panchayat to keep the Synagogue and Cemetery under certain conditions. They handed over their properties to the local authority that is the Mala Panchayat through a legally registered deed cum agreement on 4th January 1955. The historic document signed by the trustees of the Jewish community and the then President of Mala Panchayat contain explicit provisions for the conservation of the synagogue and cemetery by the Mala Panchayat. The agreement is signed as schedule A and B. A is the Synagogue property and B is the cemetery property. The condition in this agreement are

- Item A should not be used or converted as a place of worship of any denomination or sect.
- Under no circumstances A schedule item be used as a slaughter house.
- The done shall maintain the A schedule building in proper tenantable repair meeting

all the charges of its annual maintenance and repair.

- The done shall not in any manner alienate the A schedule item to any individual person or corporation.
- The done shall in a conspicuous part of the building in the A schedule announce and notify by a permanent and indelible inscription the factum of the gift as to perpetuate the memory of the Mala Synagogue.
- The done shall maintain as his own expense the Jewish cemetery without tress pass or molestation of the tombs.
- No one is allowed to dug or unearth the cemetery.
- The compound wall and the gate of the cemetery also are preserved.
- The done shall meet the expenses if any necessary for its preservation in good repair.
- The cemetery shall not be alienated and shall ever be preserved in its present condition without being put to any other use¹⁵. "Donors have been authorized by the entire Jewish community of Mala Synagogue and have become entitled to alienate all properties movable and immovable, appertaining to the Jewish Synagogue of Mala including the Synagogue Building and its premises¹⁶"

But the violation of agreement was not a difficult task to the Panchayat. The right and left governments didn't pay any attention to this. They used the Synagogue as a godown and the public began to enter their. The holy place of the Jews was converted as a business center. The authorities were least bothered about the terms and conditions of the agreement. The Synagogue began to function as the Govt. L.P.School by violating the agreement. When the school was shifted to another building Panchayat used the Synagogue as a community hall, and became a source of income. The Panchayat also constructed a two storied shopping center in the Northern side of the Synagogue. Today, the Synagogue is surrounded by private commercial buildings (South and West) and public roads (East and North). The freestanding boundary wall

in the southern border perhaps could be the original construction from pre-mid-20th century, but the current wall on the west is a later addition only. We know from the 1955 Mala contract that the Synagogue was surrounded by "compound wall on three sides¹⁷". There have been frequent encroachments and attacks on the monuments. The synagogue first became a school and then a community hall. A shopping complex came up on the northern side of the synagogue. The compound wall was demolished. Later, three-fourth of the cemetery became the Jawaharlal Nehru stadium.¹⁸

Resting place of ancestors means a lot to the Jewish community. Sometimes they even carried tombstones from their old settlements. Jewish graves have mostly Hebrew inscriptions. Cemetery was largely neglected. The orphaned cemetery became a feeding ground for cattle. Many of the tombs were completely or partially destroyed. Some of the natives took stones by break down the side wall. Trees planted in the cemetery were cut down. Pocket roads were formed inside the cemetery. Seventy eight graves in 1970s reduced to three in number¹⁹.

The people of Mala had a shortage of the public stadium. Historical monuments pose a great threat when any construction in the name of development is in progress. It is the responsibility of a civilized society to respect and preserve the historical monuments without any agreement. It is easy to pick up the land when there is no one to ask. Two decades of legal battles have been waged by the natives to preserve these monuments. The involvement of civic society, the formation of civic committees and the formation of small entities for anything and everything do not belong to a civilized democratic society. But all these are happening in Mala for the protection of these treasures of the Jewish culture²⁰

But in the beginning of 1990s Panchayat tried to do some construction work inside the cemetery. A series of agitations were organized under Thomas Master, a freedom fighter of the area. *Paithrika Samrakshana Samiti* was formed in Mala with K.A Thomas Master as the President and T.K.Sadanandan as the convener. Eminent personalities like C.L Joseph Master, K.H.M. Subair, E.K.Ouseph Master, M.K.Thankappan, K.C.Varghese, A.V.Thomas, E.A.Joy, K.K.Auseppunni and Kalam Master actively

participated for the cause of the protection of monuments. The Jewish Association in Cochin began to interfere in the problems of Mala. Their togetherness became menus to the Panchayat. Difference of opinion also created problems in the smooth running of the council. The political leaders of the area had an eye on the worthy land in the center of Mala town. They planned to construct a stadium on the cemetery in memory of K.Karunakaran, the loving leader of Mala people, and this decision was welcomed by the people of Mala. Actually it was a tactic from the part of authorities. In 2011, Mala fest was organized and at its end the then cultural minister Anil Kumar declared that the cemetery is to be convert into Judish Heritage Park of one crore sixty thousand rupees. Thomas Master the then President of *Paithrika Samrakshana Samiti*, Mala died in the same year.

Prof.C.Karmachandran, the present president of *Samiti* actively fight against the move of authorities. As a retired Professor in History, he took the issue in its real sense. He invited the attention of Professor M.G.S. Narayanan, the then Director General of Heritage Studies, Hill Palace. Thrippunithura. Prof. MGS strongly criticized it on the ground that it was the violation of the agreement. The heritage Council was able to create awareness among the public that historic monuments should be preserved. *Paithrika Samrakshana Samiti* has called for the amendment of the project, which destructed the traditional character and belief of Jewish community. A meeting of members of the council and MLA was held at Thiruvananthapuram.²¹ The meeting decided to rethink about the project on the basis of the conditions of the agreement of 1955. An advisory committee was also formed to make favourable changes for the protection of heritage.

On 18th July 2012 Panchayat convened a meeting with the presence of M.G.S.Narayanan and Prof.M.G. Sasibhooshan. Professor C.Karmachandran and Kittan were also there by representing the petitioners. But the absence of MLA in the meeting shows his displeasure. Even in his absence a monitoring committee was formed with MLA as the chairman for the future activities. But that committee decided to follow the destructive policy towards the heritage sites of Mala. They started the construction of Karunakaran Memorial Stadium in 2013 inside

the cemetery. They assigned it as a new project totally different from the previous one. The three stages of the construction were also announced.

- Indoor stadium in the first stage.
- Swimming pool, pavilion, gallery and two hundred meters of synthetic track in the second stage.
- The multi storied office and compound wall in the third stage²².

If the project has been done, every portion of the cemetery would be dig – another violation of the agreement and neglect towards the belief of a community. This injustice prompted the members of the Jewish community in Cochin and they filed a case against Panchayat authorities. They demanded the return of their ancestors properties. Panchayat give little attention to this. A case was also filed in Irinjalakkuda sub court. The court has stayed all works in cemetery by an interim order. In the court argument the Mala Grama Panchayat took a stand that the Jewish agreement was outdated and it was not bind to them. So in this juncture the is no question of violation of said agreement. The Panchayat also submitted that no body as Jewish were buried in this land. But the court rejected the all arguments of the panchayat and finally ordered on 3.9.2014 that the plaint B schedule property comprised 4 acres of land is undoubtedly Jewish cemetery and found Panchayat violated the agreement and the court directed by this order to the government and mala Grama Panchayat that the Jewish agreement is binding to all and the parties should not violate the agreement further. The court also directed to form a management and master plan to protect the Jewish cemetery at all cost²³.

The *Paithrika Samrakshana Samiti* stood for the protection of the monuments by demanding the declaration of it as the archaeological site under the protection of Muzuris Heritage Project. Finally their dream comes true. The Cultural Affairs Department has decided to include the 1,000-year-old Mala Synagogue and cemetery at Vadama village in Chalakkudy in the list of protected monuments thus signaling a victory for the long-running campaign for its conservation²⁴.The people's struggle was against encroachments and destruction of the rich Jewish history linked with the region. It is the responsibility of a

Government to keep the monuments as such they agreed to keep it²⁵.

Paithrika Samrakshana Samiti along with the support of Mala Grama Panchayat and Muzuris Heritage Project organized an international seminar on the 65th anniversary of the Jewish agreement on 4-1-2020 at Mala Panchayat Hall. The change of ruling parties and persons become a blessing and now the Panchayat affirmed their strong support to the protection of the monuments. A heritage walk was also organized. Professor C.Karmachandran was the seminar co-ordinator. The presence of Jewish members from Israel adds its importance. The teachers, students and the persons who loved history and heritage were also there. It was result of the hard work and dedication of *Paithrika Samrakshana Samiti*. Professor C.Karmachandran discussed the past, present and future of the Jewish monuments in Mala²⁶.

Our sites and monuments can only be given protection through the joint efforts of the global community. On the day of World Heritage, Prof. Karmachandran organized heritage walk for enlightening the students of neighboring institutions about the diversity of our cultural wealth and the kind of solution is needed to preserve and protect it. It is true that heritage sites are exposed to various risk factors and

hence we should do all that we can to the best of our capacity in providing protection to these precious assets. Heritage sites ought to be preserved and protected. They are priceless assets for mankind.

It is extremely important to inculcate a feeling of pride at our national cultural wealth and preserve it for posterity so that the coming generation can have the privilege of appreciating the cultural possessions of the Country. The least that we can do is not to throw garbage or litter the waste anywhere close to the premise of these heritage sites.

The case of Mala shows that the practice of popularizing monuments as places of entertainment and amusement should also be played down because it does not help much in protecting them as our heritage and on the other hand brings harm to the already vulnerable structures. In many cases, monuments have become love making spots which should be brought under control and younger and even older generations made to understand their cultural value and relevance. Only making laws will be of no help in protecting a monument, public support and administrative acumen are also required to achieve the objective.

SUBALTERN HISTORY OF PRE -MODERN KERALA :ANALYZING GENDERED RESISTANCE THROUGH NJĀTTU -PĀTTU.

K.S. Wilson Jovise

Oral History has had a significant impact upon historical practice in the second half of the 20th century .It has democratized the study of the past by recording the experience of people who have been hidden from history.¹ Oral sources give us information about illiterate people or social groups whose written history is either missing or distorted.² Oral poetry and folk songs are reliable because it holds some degree of truth, as it inextricably explains about what these subalterns encountered in their day to day life . Folk songs are key components which contain the very precious cultural chronicles of a particular folk.³

In Kerala, Folk Arts flourished under the shadow of feudalism .It attempted to raise voice against the social and economic inequalities of the time. Gender and labor representations are seen through variety of folk arts through songs sung by the subalterns .Our folk songs reflect the way of life and rituals of our forefathers .The folk songs of pre-modern Kerala can be classified as for the worship of god, worship of heroes, entertainment, scientific, occupational, moral, political and communal .The ordinary activities of the people in the field of agriculture were also the themes of some of these early folk dances. ⁴ To reconstruct the history of pre-modern Kerala a vast number of oral traditions have been transmitted from generation to generation and the dearth of written documents on the life worlds of the subalterns makes these oral traditions a prominent one.

The folklore told and used by women is not necessarily the same as folklore about women . Women's folklore is a discourse that women create about themselves but also about others . The discourses women create, communicate and negotiate extend over the entire range of human experience .Women's folklore also demonstrates

women's power and resistance .In fact, explicit or implicit resistance to the strictures of patriarchy characterizes the majority of women's folklore and is one of the few generalizations that can be accurately made about it. ⁵ The folk songs sung by the non-literate South Indian women express their experiences and hardships .The subaltern women have always been active in agricultural activities unlike their high caste counterparts .They were exploited mainly in the fields and at the place of work .Women in paddy cultivation sung songs that narrate their day to day life and hardships making us familiar with their unwritten history that have been orally transmitted by them through generations .The Parayas and Pulaya women are the composers of these agricultural songs .These songs have embedded history in them giving insights on the position of lower caste women, labour exploitation, upper caste atrocities, untouchability, etc .

These songs were called as 'Njattu - Pattukal 'or 'Penn -Pattukal 'which were their 'weapons of everyday life 'used as a symbol of resistance against the oppressions by the Thampurans .They satirically criticized the thampuran for his conspicuousness and other atrocities towards lower caste. This paper highlights the important function of these folk songs in which low caste people and women in general are afforded an opportunity to express their bottled up feelings in a socially acceptable form .These songs convey how the subaltern women were forced ideologically to obey these Thampurans and how their body was an object for his sexual satisfaction. They were aware of all the deceptive motives of *thampuran* and his henchmen .Poverty and question of survival forced these women to obey the cultural norms. Their body is a subject of sexual exploitation by the *thampurans* after attaining puberty.

The complexities of untouchability and gender have always been documented through literatures that constitute the perspective of these upper caste men. For example, *Ashouchadeepikam*, *Shankarasmriti* Brahmanical canonical texts, etc. However, the tribal songs reflect the agonies and hardships of these poor sections of the societies, which is seldom recorded in the history of the caste people.

The subjugation, subordination and silence, the resilience and neglect marks the lives of marginalized even when they resist, they feel bound and defeated by their subject positions. This can be well explained using the Marxist theory of cultural hegemony associated with Antonio Gramsci, wherein the ruling class can manipulate the value system and mores of a society, so that their view point becomes the world view.⁶ The basic premise of the theory of hegemony is one with which few would disagree: the man is not ruled by force alone, but also with ideas.⁷ It is usually achieved through social institutions. This cultural hegemony functioned in pre-modern feudal society where these subalterns accepted the rule of Thampurans and idealized them. The norms and ideologies were internalized by them and carried forward as a universally accepted one. This resulted in their subordination even after generations.

Subaltern population and women have been classified under the Depressed class section of the society. The classification 'women' apply to the general women population of the society while the term subaltern is inclusive of both men and women. These subalterns are subjugated socially and materially while women are subjugated physically. In a caste based society, the destruction of women is equivalent to destroying a whole set of people in a particular society through patriarchy.

A *Kizhalar* women has to fight against both caste domination and patriarchy. She is seen as an object and has been sexually exploited by men belonging to other caste especially upper caste. In a society where lower caste was kept far from the sight of upper caste and where untouchability was severe, the women belonging to the same untouchable category was sexually exploited by these upper caste men. The upper caste women were treated ruthlessly by their

men, if the woman is lower caste, then she is seen as an object for derivation of pleasure by these men.

James Scott explains about everyday resistance. Scott notes, "Everyday acts of resistance make no headlines".⁸ He further argues that, "everyday" acts still qualify as resistance, to the extent that they "deny or mitigate claims made by appropriating classes".⁹ In contrast other acts are observable yet not necessarily recognized as resistant by the powerful. This includes much of what Scott refers to as "everyday" acts of resistance. For instance the use of humor can be a way for those in lower status positions to covertly express resistance to the more powerful.¹⁰

Songs such as 'Illandi Kunjaleri', 'Omana Thampuran', 'Munjalan Padathe Kunjalethi', 'Kalipulayi', 'Cherupullayi' are few songs that reflect the hardships of these women and the satirical resistance which the thampuran himself enjoys. These songs are spread all over Kerala thus it is not area-specific and the theme and tone varies according to regions.

In 'Illandi Kunjeleri' the notion of untouchability imposed by the Thampurans on the lower caste is questioned by Kunjeleri. But this questioning is only satirical and raised amongst the other Adiyar women and not in front of the thampuran. Here, it can be seen that the approach of these feudal lords towards these Adiyar women is better as compared with their counterparts only for deriving sexual pleasure and exploiting their labour. The thampuran offers her paan and establish a friendly relation so that she willingly sleeps with him. Later in the evening as she goes to collect her wages, the Thampurans asks her to serve him food and orders her to take bath and lie down with him. The scenario ends when Kunjeleri shares this with her friends as they satirically comment "Aanale thottal Kulikuna Thambran, Pennale thottal Kulikatha Thambran)" the lord takes bath only on seeing the lower caste men and this does not apply when it comes to the matter of his concupiscence and after touching lower caste women.¹¹

In the next song 'Kali Pulayi', the Adiyar women falls for the Thampurans fake promises of marrying her and she agrees to kill her husband, she offers poison to her husband and

sleeps with the thampuran .Next morning as she wakes up, thamburan asks her to leave his house and go back to her place .He says ‘I don’t have any property to offer you, go away and live by yourself’. This song is sung by the women on the paddy fields as a warning to women who fall prey to thamburans lies.¹²

In ‘Cheru Pullayi’ we can see a clear denial by the Adiyar women when asked upon by the thampuran to stand under his umbrella and accompany him to the Illam where he can sleep with her .She replies back saying politely that ‘like her glass bangles, his umbrella is also momentary ’umbrella being symbolized for the support of a man for his woman .Here, Cheru Pullayi is well aware of the consequences if she agrees with his demands and thus denies politely. Here, Adiyar women are asked to resist Thampurans demands in a socially accepted manner.¹³

In the next song ‘Munjyalam Padathe Kunjelechi’, the friends of Kunjyelechi advises her to ask the thampuran who has an eye for her on his approach, whether he’ll marry her? “Nokki edukumbo chodikane thambran Kettumo ketyol aakumo..?”

This counter question would seldom make a change in Thampurans approach but this teaches the women to resist his deceitful means.¹⁴

Women of the lower caste are considered as the subalterns among the subalterns in the social ladder. Her poverty leaves her with scarce resources to keep her body and soul together . These songs provide an insight into the lives of these marginalized, who are seldom given a chance to be in the mainstream historical writing.¹⁵ The unlettered women have stories to narrate and as we go down the lane we understand the fact that they were trapped in the cultural hegemonic ideologies of the society . These songs perform an important function -the low caste are afforded an opportunity to express their bottled up feelings in a socially acceptable form.

These songs never reflect strong resistance or protest instead they provide insights on how the societal setup has prescribed them to live their lives .These agricultural songs were usually sung for entertainment purpose s while working on paddy fields .Such spaces are utilized by these women to place their sufferings in a frame of songs .The gradual decline of this rich oral tradition due to little or no traditional agricultural practices can be seen. These songs are a part of the cultural milieu and the transformation of these orally transmitted songs into written realities which is a specimen of mere survival and a shadow of resistance .

MUGHALS CONTRIBUTION TOWARDS ART AND ARCHITECTURE IN KASHMIR

Dr. Zahoor Yousf Sofi

Introduction

The valley of Kashmir has history of its own. A glorious past and a peculiar social setup had been of little importance to the outer world, for a longtime not because of political background but because of geographical position. Mirza Haidar Dughlat who was impressed by the kingdom states that it is astonishing that so little is known about this beautiful kingdom in the outer world. The internal disorders exposed the kingdom to the outer world and the mighty Mughals. The Mughal emperor, Babur's grandson, Akbar was the greatest. He expanded the frontiers of the kingdom to their widest limits, but also ruled wisely with extraordinary tolerance and was an enthusiastic patron of scholarships and the arts. Akbar started interference with the affairs of Kashmir in the time of Ali Shah Chak. Akbar helped Yusuf shah Chak against Lohur or Gauhar Shah Chak. Later he detained Yusuf, and finally ousted Yusuf's son, Yaqub, and annexed Kashmir. Assured of full support from Sunni community of Kashmir Emperor Akbar sent army under Qasim Khan to invade Kashmir, and finally annexed Kashmir on October 14, 1586 C.E. However, it is the Mughal period, the people enjoyed peace and orderly government. It was during the period that the Kashmiri merchants, soldiers, poets, artisans and scholars served outside the Kashmir. They spread almost all over India¹, while Iranis, Turains, Afghans, and Indians came Kashmir and settled in the Subah². Obviously, this social mobilization gave a new turn to the existing social order.

Architecture: Muhammadain architecture in Kashmir must be pronounced as rather disappointing in comparison with the grand edifices of Hindu rule like the temples at Martand, Avantipur and elsewhere. Even for an ordinary hill fort on Hariparat. Akbar had to import a large number of masons from India as one can see from the inscription on the Kathi Darwaza of the fort³. The art of masonry seems to have died long before the death of the Hindu rule in the valley. But the wooden architecture of Kashmir that commands our admiration to this day originated with the Muhammadain and it appears that

Kashmiri Hindu mason of old had rebirth in the Muslim carpenter of the latter day rule. Muhammadain architecture in Kashmir, broadly speaking, says Mr. W. H. Nicholls, fall under three heads, the pre-Mughal masonry style, the wooden style, and the pure Mughal style⁴.

The wood constituted the primary building material of the mosques and shrines, but the royal palaces, inns, and mosques built by them were exclusively in lime and stone over a core of brick work⁵. The art of stone building was revived by the Mughals, which was almost forgotten by the Kashmiris⁶. But its influence remained confined to the imperial architectural activity. The indigenous wooden architecture of Kashmir flourished uninterrupted; imbibing no influence from the Mughal style⁷. The wooden architecture of Kashmir has its own peculiarities in spite of its resemblance to that Scandinavian countries, and Tyrol of Australia. It has been least influenced by the Buddhist Pagodas. It has been rightly observed that there was not a single Buddhist pagoda at the advent of Islam in Kashmir⁸. It is also quite significant to note that notwithstanding the highly skilled craftsmanship Kashmiris were not well-versed at joinery work. That is why they used to put the logs on each other and the gaps were filled with the bricks, stones and lime.

The architecture of Mughal period can be divided into two sections the stone architecture and the wooden architecture. Nagar Nagar fort, Pather Masjid Mullah Akhwand Shah and Sarais are the living examples of the stone architecture, while Khanqah Mualla, Jamia Masjid Srinagar, mosque at Shopiya, Hazrat Bal mosque and a number of the tombs were the remains of holy shrines are enshrined represent the wooden architecture.

Nagar Nagar fort

The foundation of the Nagar Nagar fort was laid in 1597 C.E., and Jahangir completed it at the cost of 11000.000 rupees in around 1606 C.E⁹. Kohi Plaran had a considerable importance for the defense of the city of Srinagar. It is on account of this importance that the Mughals laid out a well-fortified and magnificent city. In

Kashmir, the skill of handling the art of stone building was forgotten over the centuries. Akbar was the first, who introduced this art into Kashmir region, which was flourishing in all over India at that time. It is astonishing to note that there is not a single building existing intact nor the ruins of the palaces are traceable. But the main gate known as Sangin Darwaza, and the dilapidated Kathi Darwaza are extant. Sangin Darwaza is a structure highly expensive, ornate and stoutly built. Its elevation consists of well built-arched recess. There are gateways on each side. Kathi Darwaza is now in ruins¹⁰. There are three stone buildings, which were built by Mughals in Kashmir, the Pathar Masjid or new mosque (stone mosque), Mosque of Akhun Mullah Shah and Fort of Hari Parbat¹¹.

Mulla Akhun Shah Mosque

It is situated near the shrine of Sheikh Hamza Makhdoomi. It is a most neglected monument and in ruins now. The domes and minarets are in a dilapidated condition and the raised verses of the Quran have been defaced, yet it is a living example of the Mughal architecture. It was built in 1649 C.E by Dara Shikoh for his preceptor Mulla Shah Badakhshi¹².

The mosque has a typical layout. It is as a matter of fact a mosque within mosque, built in polished granite stone. In finish and technique, it surpasses all the Mughal monuments. The exterior wall has six engrailed windows the north and the south. Main gate, now closed, lies in the east. The dome over the Mehrab, now dilapidated, appears to have been of great architectural importance. The Turkish bath is in ruins. It is purely a masonry work in bricks and lime¹³.

Jamia Masjid

The mosque represents both the stone and wooden architecture of Kashmir. It is rather a synthesis of Mughal and Kashmiri architecture. Originally the mosque was built in 1400 C.E by Sultan Sikandar, but it was devastated by fire on a number of times¹⁴. In 1622 C.E., while Jahangir was in Kashmir, the mosque was completely destroyed¹⁵. He directed Malik Haider to rebuild the mosque. It was again destroyed during the reign of Aurangzeb, but was again restored¹⁶. The massive arched gateway is built in stone and bricks. The building consists of a courtyard

surrounded by wide colonnades. The outer-wall is of masonry work having projecting entrances on all the three sides. The interior of the building contains a large amount of wood work. There are about 378 wooden ornamented posts of 25 to 50 feet in height¹⁷.

Pather (Stone) Masjid

The genius for the monumental architecture during the reign of Jahangir is exemplified by Pather Masjid or the stone Mosque built by empress Nur Jahan in 1623 C.E. situated in the heart of Srinagar city, on the left bank of river Jhelum opposite to Shah-i-Humdan^{RA} mosque near Zainkadal. The Pather Masjid also known as Shahi Mosque, is the only surviving example of the Mughal mosque built in stone instead of indigenous wooden material. Architecturally its style is practically the same as that of Masjid of Agra, Delhi, and Lahore and such it has been emphasized that it has no outstanding architectural merit¹⁸.

Khanqah-I-Mualla

The Khanqah is the best example of the typical wooden architecture of Kashmir. Sultan Qutubud-din had great reverence for Sayyid Ali Hamadani had built this mosque for the saint¹⁹. It was destroyed twice by fire in 1479 and 1731, but was again restored²⁰. The present *Khanqah* was built in 1732 C.E., by Abdul Barkat Khan²¹.

It is a 70 feet square building two storey in height. It stands on the right bank of the jehlam on an irregular masonry foundation of an old temple. Its three tiered pyramidal roof surmounted by the open pavilion for *Muazzin*, over which rises the steeple with 125 feet high finial from the ground is of considerable interest. The interior lower hall is 63 feet long and 43 feet broad. In the centre there are four eight-sided ornamented posts supporting the second storey. The paneled walls and painted ceilings in multi-coloured designs add to the grace of the hall²². This pattern of architecture can be found in all the shrines, *khanqahs* and mosques which were built during mughal period. The *khanqah* at Sopore, Bararaula, and Shopiyan are virtually replicas of Shah Hamdan mosque. The shrines at Charari Shareef, Hazratbal and so many other shrines scattered all over the Kashmir are also in the same style. There is hardly any difference of the architectural design, or ornamentation in these buildings.

Calligraphy: Calligraphy and elegant lettering was an art cultivated and valued highly and sometimes treated with greater respect than the art of painting in the Muslim world. It had attained perfection in the Islamic world well before the establishment of the Muslim rule in Kashmir²³. *Kufi* and *Naskhi* style were very popular. The *Kufi* style was popularized by the Umayyads while *Naskhi* flourished under the Abbasides. Soon after the establishment of Islamic rule in the kingdom of Kashmir, the art of calligraphy developed tremendously. In the course of the time a distinct Kashmiri style was evolved. An unwashable ink and unique tints were discovered by the artists²⁴. After the fall of Sultanate, the Kashmiri artists entered the imperial services and in the galaxy of artists they retained their individuality²⁵. The art of illumination, border decoration and illustration was at its highest pitch during the reign of Akbar. The Kashmiri artists also excelled in this art. The floral designs were convenient for the religious scriptures. The designs abound in the various works of the period. The Kashmiri artists had achieved mastery in *Kufi*, *Nastaliq* and *Shalgami* besides Kashmiri *Qalam*. The art of calligraphy was considered a notable profession. A number of scholars earned their livelihood by scribing the holy Quran. Mohammad Husain Kashmiri was a famous calligraphist of this period. He was given the title of *Zarrin Qalam* by Akbar²⁶. In the art of calligraphy he even surpassed his teachers, Maulana Mir Ali and Abdul Aziz his skill was acknowledged by all the calligraphists of the period. Mulla Mohammad joined the court of Shah Jahan and was given the title of *Zarrin Raqam*. The inscriptions of various imperial buildings were scribed by him.

Painting: It must be stated at the outset that no account of the religious objection to the delineation of natural forms, Muhammadain did not produce the type of painting or achieve the excellence their genius could rise to in other fields of art. In India it was probably the dictum of Akbar that gave a definite turn to the faculty of the Muslim artist when his Majesty said: "There are many that hate painting but such men I dislike. It appears to me as if a painter had quite peculiar means or recognizing God; for a painter in sketching anything that has life, and in devising its limbs, one after other, must come to feel that he cannot bestow individuality upon his work and thus force to think of God, the giver of

the life and will thus increase in knowledge²⁷." There is, however, a remarkable set of twenty four large paintings on cotton preserved in the Indian Section of the Victoria and Albert Museum, south Kensington that was produced in Kashmir about the middle of the sixteenth century before Akbar took measures to encourage painting after the Persian manner. These cotton paintings are said to have been illustration of a manuscript book of stories which has not been preserved or identified. The subject comprises many battles and scenes of bloodshed. The most pleasing and best preserved composition represents a central garden plot with chinar tree and highly decorated palaces in the Persian style cranes are seen flying above. The rocky scenery found in all, or almost all the pictures are connected with Kashmir. These works may be conjectured to have been executed in Kashmir between 1540 and 1551 C.E²⁸.

Garden tradition of Mughals: The conspicuous contribution by the Mughals to the Architectural wealth of Kashmir lies in the large number of gardens with their schemes of foundation and cascades which they built at several beauty spots in the valley²⁹. The gardens are famous throughout the world. Tom More in his immortal *Lalla Rookh* has painted some of these in colours so brilliant as to leave a lasting impression on the readers. The history of the development of the garden designs in Kashmir is, however closely associated with the Buddhist landscape gardening in China and Japan.

The Mughals from Baber to Shah Jahan were great lover of gardens. And the valley of Kashmir in the profusion of superb natural beauty, its variegated foliage and its enchanting vernal flower growth afforded the natural ground for the efflorescence of numerous gardens and the enclosed monuments to shed luster to the entire set-up. Right from the annexation hundreds of gardens were laid out by the Emperors and Subedars, and the other principal officers. Though the tradition of gardening and horticulture in Kashmir dates back to the period of Sultans³⁰, and even before, yet there were certain characteristics which were associated with the Mughals only. The fencing, symmetrical arrangement of the flower beds, presence of water and above all existence of fruit trees within the garden were the peculiarities of the Mughal

gardens. As a matter of fact the modern horticulture owes a great deal to the founders of these gardens. Experiments in grafting and the introduction of new fruit trees were virtually started with these gardens. Most of the gardens were laid out around the Dal lake and in the vicinity of the city. It is said that more than 700 gardens were found around the lake only³¹.

Shalimar: According to a legend, Parvarasena II, the founder of the city of Srinagar, who reigned in Kashmir from 110 to 170 A. D., had built a villa on the edge of the Dal lake in its north-eastern corner, calling it Shalimar, which in Sanskrit means "the abode of love." In 1619 the Mughal emperor Jahangir laid out a garden at this village and called it "Farah-Bakhsh" meaning "Delightful"³². It was spread over an area of 7500 square yards. The canal passing through the garden was paved with stone under the supervision of Prince Khurram.

Nishat Bagh: It is situated at a distance of seven miles from Srinagar on the farthest end of the Dal lake. It was gayest of all the gardens and even surpassed the Shalimar garden both in layout, design and architecture. It was put up by Asaf Khan during the reign of Jahangir. In 1635 C.E Asaf Khan hosted a feast in honour of Shah Jahan. He was highly impressed by the layout of the garden³³.

Bagh-i-Wafa: Mansbal lake is at a distance of 15 miles from Srinagar and the garden was laid out on the right side of this lake near village, Safapur. It was founded by Mirza Haidar Dughlat. But improved upon and renovated by Nurjahan Begum. In 1642 C.E, the garden was assigned to Jahan Ara Begum³⁴.

Achawal Bagh: It is situated at a distance of 6 miles from Islamabad. A small but a pretty garden was laid out there by Jahangir in 1622³⁵. It was improved upon and renovated by Shah Jahan in 1636 C.E. A pavilion was built in it. The garden was called Sahibabad. In 1662 C.E, Aurangzeb assigned the garden to Zebunnisa Begum. The garden is 467 feet long and 450 feet in breadth is divided into two portions. The water of the spring issues from several places near the foot of a low spur which is densely covered with deodar trees.

Bagh-i-Ilahi: It was laid out by Yousf Khan Rizvi during the tenure of his offices as Subedar in the vicinity of Batspora³⁶. A canal, three yard

in width was brought from the Sindh for irrigation of this garden. A pavilion was built in the centre with a tank in the front. Rows of fountains were installed in it. It was beautified by the plantation of chinars. Later on Shah Jahan Built two more pavilions on the either side of canal included this garden among the imperial gardens³⁷.

Bagh-i-Naseem: It stands in a fine open position well raised above the Dal lake. A cool fragrant breeze blows throughout the day and night. It was laid out by Akbar, and improved and enlarged by Azam Khan, Saif Khan and Afzal Khan. It was enclosed by a massive wall and a canal was dug out from Lar defile to irrigate the garden it retained its fame on account of its beautiful chinar trees. These were planted by Akbar and later Ali Mardan Khan also added more plants³⁸.

Bagh-i-Bahar Ara: On the bank of the western arm of the Dal lake is situated the Bahar-Ara. It was a spacious garden laid out by Nurjahan, queen of the emperor Jahangir. A stream of water from the Joi-Shahi, running from the Sindh Nullah vai Ilahi Bagh, used to flow into it, which watered the flower beds arranged in terrace³⁹. A mansion, seven story's high, had been built here on the highest point of vantage from which the emperor and his consort used to have full view of the Dal lake on moon light.

Noor Bagh: It was founded by Nurjahan in the vicinity of I'dghah. A branch of Shah Kul was brought through Zunimar for irrigation of the garden. It was famous for its fruits, flowers and chinar. This garden is now in ruins but the mohalla which sprang up around it called Noor Bagh.

Verinag: Verinag is a village situated on the foot of the Banihal pass. It is called after the name of the spring there known as Verinag. According to the legends the goddess Vitasta (Jhelum) wanted to take her rise from the place, but it happened that when she came, Siva was staying there, wherever she had to go back and she took her rise from Vithavatur a spring about a mile to the north west of this place⁴⁰. This spring was originally an irregular, shapeless pond and water oozing out from different places in it, spread about and formed a little marsh. The emperor Jahangir, whose artistic taste for polishing up the beauty of Nature is well known,

saw this and at once determined to improve it. He built the octagonal tank of sculptured stone round it, so that all water issuing from north-eastern side of the wooden hill was collected therein. This was completed in 1620 C.E.

Chashma Shahi: Chashma Shahi, the famous spring of pure, sparkling and cool water attracts people from far and near. Its situation on the slope of the Zebwan hill commands a superb view of the lotus on the Dal below and of the verdant vale across⁴¹. The spot could not, therefore, escaped the artistic eye of the Mughals. Under orders of the emperor Shah Jahan a small garden on the traditional Mughal pattern was laid out here by the governor, Ali Mardan Khan in 1642 C.E.

Conclusion:

The Mughal conquest in 1586 C.E., led to the attainment of many tangible results in the

overall development in the fields of administrative, social, economic and cultural institutions. The Mughal period was one of intense cultural regeneration in Kashmir. Art architecture and garden culture entered into a new phase of development. A huge amount was spent on the architectural activities: development of gardening, with requisite irrigation works, opening up of new trade routes, Serais, Roads and Cities. Moreover, remarkable growth was witnessed in the field of arts and letters; even the period was turning point in the cultural history of Kashmir. The mass scale contacts enriched the already copious cultural heritage. Cultural life attained a new dimension. There is no doubt that they beautified every spot that came to their notice and Kashmir reacted very well to their feelings. They did not only love nature, they had a fine sense of art.

IDENTITY FORMATION AMONG MUSLIMS IN COLONIAL TRAVANCORE : AN INTRODUCTION

C.H. Abdul Latif

British colonialism sought to transmute the princely states and provinces into what it perceived to be the icons and institutions of modernity, always within specific limiting conditions. The prevailing political structures and social practices were reframed and redesigned through the colonial technologies with varying degrees of success and sustainment. While widespread education and concerted proselytism did alleviate and plight those sections who had been suffering under ascriptive inequality, enumerative / statistical operations (biennial censuses, ethnographic surveys etc.) squeezed heterogeneous peoples into pre-existing cognitive grids. The resultant idea of rigid and monolithic communities has percolated into public imagination and has remained there almost intact since then. Such a process, wherein identity is linked to a religion, potentially and

actually leads to the redefinition and reconfiguration of the religion under reference.

The study of colonial modernity and identity formation in a class / caste / community has been a major research area of social science. The colonial rule in India has played a prominent role in the process of developing distinct characters of a individual / class / caste / community. These communities are, more or less, imagined communities. India witnessed major transformations in the identities of its Indian subjects during its colonial period. The growth of modern state, the introduction of new system of knowledge, the expansion of capitalist modes of production and spread of communication all have shaped these identities. Naturally the identity formation thus by community formation in a colonial state became the thrust area of modern scholars.

REDISCOVERING AND UNDERSTANDING THE FOLK GAMES OF KERALA

Abhimanew V.

Kerala has a fascinating history of native games. Majority of them had acquired deep-rooted history backgrounds. They are made or created in the villages and later acquired significance. As time flew they became competitive. Some of them are evolved into modern commercial games such as football and cricket. Each game varies according to the local dialects and the regional variations. Same Game may possess different names in the different places though the

gaming techniques are the same. By understanding the educational and enlightening methods of native gaming and its techniques one could amass the cultural and social history of the regions. This research paper focuses on the generous study of native games and gaming existed in the different parts of Kerala and thereby understanding the rich social and cultural history of the state.

MONUMENTS IN MEMORY OF FREEDOM MOVEMENT IN TIRUCHIRAPPALLI

P. Ayyappan

Tiruchirappalli remains an important centre of modern Tamil Nadu was an arena of national agitation organized for the success of freedom. Most of the prominent luminaries like Gandhiji, Balagangathara Tilak, Subash Chandra Bose, Jawaharlal Nehru and others visited Tiruchirappalli and encouraged the national movement. The meetings and struggle organized by them in this historic place are recorded in the history of Tiruchirappalli. Therefore, Tiruchirappalli played a vital role in all struggles organized against the British Government in

India. The places associated with them can be named as monuments of freedom movement. It was the venue for the famous historical movements related to freedom struggle. The places where the leaders stayed, worked, struggled are remaining memorial today. Therefore one can say each and every place of Tiruchirappalli keeps the golden memories of freedom movement. The purpose of this article is to record and remember the historical memories of the monuments of freedom movement in Tiruchirappalli.

ORAL HISTORY OF SKULL CULT IN MALAPPURAM

Balasubrahmanian Uruniankuth

Religious practices of particular community represents its socio cultural aspects especially in ancient days it was more complex than today. Now a day's rationalism and critical thinking influences every field of life and it impacted the removal of unwanted and unnecessary religious practices. But the ancient religious culture was more emotional than rationalism. Death and funeral customs and beliefs in life after death is the most significant aspects of almost all religious, religion laid foundation by these deaths associated rituals and marriage norms used to maintaining of communal identities. Religion is the most complex and philosophical construction of mankind. There are a variety of

religion and religious practices, the ancient burial practices especially the tribes and scheduled castes are interesting to the historians because it was totally different from the established religious. Kanakkas are one of the scheduled castes in Kerala. Skull cult was practiced among the scheduled castes of malappuram district up to the first half of the twentieth century. In those days the gods of lower castes separated from the mainstream Hindu gods and their religion was more ritualistic and black magical practices were very common. Black magical practices like *odi, maranam* etc. were very common. Skull cult was a form of ancestor worship prevailed in the area.

BUDDHIST MONUMENTS AT PHANIGIRI IN SURYAPET DISTRICT, TELANGANA - A STUDY

Bandari Suresh

The glorious era of Buddhism was a time, when the creed of Gautama Buddha had very stronghold on the minds of people of Telangana during the three centuries preceding and succeeding the birth of Christ. This phase witnessed an unprecedented growth of Buddhist, institutions and their art and architecture as witnessed from various Buddhist remains. The scores of Buddhist sites spotted so far by the spade or archaeologists attest the wide popularity of Buddhism in Telangana. The recent excavations revealed that the building activity began though in humble way by the local

Buddhists during pre-Ashokan or at least Ashokan times. The exploration of the Buddhist monuments initiated about the middle of the eighteenth century in Telugu speaking areas resulted in locating more than one hundred Buddhist sites and archaeologists excavated some of them. The excavated sites have brought out the grandeur and magnificence of *Stupas, Viharas, Chaityagrihas* and temples both rock-cut and brick built adorned with beautiful sculptures of stone and metal. Few of the label inscriptions and copper plates were also unearthed from these sites.

ROLE OF CHRISTIANS TOWARDS MODERN KANNADA LITERATURE AND PRESS

Chandra Kumari

Kannada literature, also called **Kanarese**, the literature written in Kannada, which, like the other languages of South India, is of the Dravidian family. The earliest records in Kannada are inscriptions dating from the 6th century A.D onward. The earliest literary work is the *Kavirājamārga* (c. ad 850). Christian Missionaries who primarily landed here for the spread of Christianity were found forgetting their original purpose rather learning Kannada language to revive, rejuvenate and immortalize that ancient language through several works. For this they established printing press. The German Missionaries and Christian scholars established

the first printing press and publishing centers in Karnataka. Kannada news paper has a legacy which reflects patriotism, public service and professional excellence. Kannada press has contributed immensely for the national independence, unification of Karnataka, democratic evolution, social change, economic development, Cultural Revolution and all-round progress of the state. In this paper I wish to write on, (i) Origin of Kannada literature and Press (ii) Christian and Kannada Literary works (iii) Christians and Press

HISTORICAL CONSTRUCTIONS IN SOUTH INDIA

Ch.Chandraiah

The Hyderabad State was located in the south-central region of the Indian subcontinent, and was ruled from 1724 until 1948, by a hereditary Nizam. The Asaf Jahi dynasty was very popular in the British India. Asaf Jahi dynasty ruled the state of Hyderabad for seven generations establishing it as the largest and foremost Muslim princely state in India. Hyderabad's existence and development was intrinsically linked to the rule of the Asaf Jahi dynasty and their contributions were foundational to not only the States but the Deccan's Historical, Cultural,

Social, and Economic milieu. These are the Contractions. Falaknuma Palace, Chowmahalla Palace, Purani Haveli, State Archaeological Museum, Salarjung Museum, Public Garden, **Andhra Pradesh High Court, Arts College, Osmania University, Jubilee Hall, Kachiguda Railway Station, Mozzam Jahi Market, Paigah Tombs**, And another construction in Delhi build by Nizam VII Mir Osman Ali Khan that is Hyderabad House. These are the Asaf Jahi's constructions.

THE TRANSITION OF ADVAITA PHILOSOPHY TO SPIRITUAL RELIGION

Dr. B. Chandrika

Religion, Philosophy, and Spirituality all these three are a certain extent inquire about the very same thing i.e. Origin of the Universe, the essence of the Self, the essence of existence, etc. these three can be put on the same side. Here in my paper; I would like to look into the ideas of religion, Philosophy, and Spirituality. What are the common factors in these three ideologies? What are the peculiar differences between Spirituality and Religion? And how can we rename Advaita Philosophy as Spiritual Religion?

The paper is having three parts. In the first part, the differences between Spirituality and Religion is being traced out. The second part the differences between Philosophy and Religion are being discussed and in the third part how can we arrive at the point that Advaita Philosophy as A Spiritual Religion i.e. how three characteristics of Philosophy, Religion, and Spirituality can be assigned to the Advaita Philosophy are being illustrated.

GLIMPSES OF INDIAN AGRICULTURE TOWARDS SL AND REFORMS

Dr.K. Govindaraj & A.Yogeswaran

India, a country which depended on the land based economy from yester year to modern era. Historically, all kings were initiate the new-fangled land reforms to enhance the agriculture. Indeed, Land reforms might focused to abolish the prevalent intermediary system between the state tiller of the soil. These reforms assure them that they will not be exploited and get full reward for their labour. Fortunately, Indian tenorial system of India is very defective, both from production and investment its highly disincentive-ridden system the owner is least

interested in making invest objective is to get the maximum share of the produce. By optimum output from a given dose of inputs and to make agri dynamic, it is essential to make changes in the agrarian relations. It is reforms that can ensure maximum production and investment in aground render justice to the man behind the plough. he extent. But to get ones it is the land at in agriculture. This study mainly focused on how the Indian land reforms could enhance the Agriculture.

CONSERVATION PRACTICES FOR ANCIENT STONE STRUCTURES & CULTURAL PROPERTIES

Dr. V.R. Gunasekaran

Stone construction is primarily used in practically every ancient cultural and heritage monument in India. Ageing, environmental effects, human effects, etc. can cause decay and deterioration to these stone structures. In order to stop and prevent it to preserve our monuments, we need to identify and perform the appropriate

restoration and conservation techniques. This means reviving the original state of the stone structures without altering its cultural and historic value. Use of detrimental techniques should be avoided while doing so. Lime mortar repointing and protective coatings are applied afterwards to prevent further decay in the future.

MIRAGES IN THE MOUNTAIN TOP – THE TRIBES OF VALPARAI AND THEIR IMPEDIMENTS TO DEVELOPMENT

D. Joseph Rohith

Mirages in the Mountain top – The tribes of Valparai and their Impediments to development, is a study about the tribes of the Anamalai Hills. The Anamalai Hills is a significant segment of the Western Ghats. This study is about the two tribes the Malasars and Mudhuvars of the Anamalai Hills in the Valparai plateau. The aim

of the study is to know their livelihoods and other aspects of living. This study describes their way of living, habitations, physical appearance, general characteristics, occupation and way of dressing, family life, marriage customs and usage of their weapons, diet, social status, deities they worship and how they dispose their dead ones.

HISTORICAL AND TOURIST INTEREST IN KOLLI HILLS OF TAMILNADU

Dr. K. Karthikeyan

Tourism, today, has become a global phenomenon, both in terms of its penetration into hitherto unknown parts of the world and in terms of the number of people participating in this Sector. Tourism Development Activities, although evolving in Tamil Nadu since the

Second Five Year Plan Period, it gained a concrete shape only, when a separate Department of Tourism was set up in 1971. The history of the Kolli Hills is closely linked with ancient Tamil literature. It is believed that in the Ramayana, these hills are called Madhuvanam

(forest of honey), the abode of the monkey king Sugreva. The Kolli Hills are populated by tribes known as the 'Malaiyalis'. It should be noted that these Malaiyalis have got nothing to do with the Malaiyalis, who are the natives of Kerala state. By that they are referred to as Malaiyalis congruously denoting those who rule the

mountain (Malai+alis). Two view points, one at Seckuparai and another at Selurnadu are being developed to encourage Tourism. The location is ideal for trekking, the breeze is pleasant and the cascades of silvery water touching and brushing the innumerable herbs, which are abundant in the Kolli Hills, making the environment invigorating.

TOURISM IN INDIA: CHALLENGES AND OPPORTUNITIES – A SPECIAL REFERENCE TO ANDHRA PRADESH

V. Mallikarjuna & Dr. G. Somasekhara

The travel and tourism industry as emerged as one of the largest and fastest growing economic sectors globally. Its contribution to the global Gross Domestic Product and employment has increased significantly. The Indian tourism industry has emerged as one of the key drivers of growth among the services sector in India. Tourism in India is a sun rise industry, an employment generator, a significant source of foreign exchange for the country and an economic activity that helps local and host communities. Rising income levels and changing lifestyles, development of diverse tourism offerings and policy and regulatory support by

the government are playing a pivotal role in shaping the travel and tourism infrastructure, global concerns regarding health and safety of tourist, disparate passenger road tax structures across various states and shortfall of adequately trained and skilled manpower. Concerted efforts by all community at large are pertinent for sustainable development and maintenance of the travel and tourism sector in the country. This paper aim to throw light on the importance of this area, the challenges and opportunities that awaits to make the customer satisfied and to lift the economy of the country.

GOMUKTISWARAR TEMPLE ARCHITECTURE AT THIRUVAVADUTHURAI

S. Meenakshi & Dr. V. Thirumurugan

The Architecture is the income of the ability technical skill. The greater pal lavas, Cholas and rules of first pandiyan Empire were devoted to the construction of Structural temples. The adhishanam, Kudappadai, Jagodhi, Kandan, Pattigar vimana are appealing. On the Southern side of the entrance of the mahamandapa houses the Vennaipillaiyar Scpture. The Mahamandapa has the same basement mouldings as that of the garbhagraha. Depite them the image of Rishabhadevar, Vishwanathar, Vishalakshmi, Thirumurai kanda Vinayagar, and sekkilar image are found. There are 20 Vimanas in the Gomuktiswara temple. The Vimana stones are constructed in a slightly projecting form in the centre on all the walls. Jagatai (the hare tier), Kundam (the central convey tier), and pathiga (the rectangular mould). This temple covering a total area of 9.30. Acres have a huge lower called Rajagopuram in the eastern entrance. The worship of Thiyagaraja by Musukundam,

Thirumalar under the papal three. Pillars of this Vasantha mandapa have the figures of animals such as yall, elephant, dancing women. Etc. The temple during the Chola period suggests that this temple was known not only for its architecture alone. It was a centre of Saiva learning and also was an impetus to the spread of Saivism. They also pinpoint that there were a number of artisans with exquisite caliber. This temple was the only one which was devoted to medical practices through mutts and madams. Thus, in addition to its architecture as the Gomuktiswara temple was actually a symbol of prosperity, it will be apt to presume that they are all brought to light by their superior Architecture. A number of Tamil works have references about the primary deity. The historical significance of the architecture of this temple has enabled to write many articles both on the architecture of this temple.

SHAIVA TEMPLES DURING THE PERIOD OF KALACHURIS OF KALYAN

S.R.Nagannavar

The *Kalachuri's* ruled Karnataka from 1000 AD to 1193. The dynasty started from the King *Uchit* and continued till *Bijjala III*. During the period of *Bijjala II*, *Rayamurari Sovideva's*, *Singhanadeva*, the age witnessed the overall progress in the fields of politics, religion and art and architecture. They tried their level best for the development of Shaiva religion. This is known by the

inscriptions. Totally there were 329 inscriptions available. In inscription, *Kalachuri* dynasty is recognized as *Kalachuri*, *Kalachuri*, and *Kalatachuri* etc. (*G.K.Devarajashwami. (Ed) Kalchuri Shasanagalu, p-23*) On the basis of inscriptions, this article aims at introducing the Shaiva temples built by the Kalachuri Kings.

ABOLITION OF CHILD MARRIAGE IN MADRAS PRESIDENCY - (1920-1937)

Dr. R. Nandhini & M.V. Muthiah

This paper highlights the women care measures undertaken by the Central Legislative council to the whole of British India and by the Madras Legislative council to Madras Presidency till 1937 when provincial autonomy under the Government of India Act, 1935, came into operation. These councils had enacted some laws to assign some rights for women and to care for their well beings against uncivilized

barbaric customs which were once the rules in Madras Presidency as in all other states of the British India, Legislations enacted by these councils rooted out the social evils of child marriage, slavery, inequality of women to men and immoral traffic of women in the society and they laid strong foundations for women's right today.

CHRISTIAN MISSIONARIES CONTRIBUTION TO SCHOOL EDUCATION IN THIRUCHIRAPALLI DISTRICT

S. Rajanvelu

Narrates about the schools started by the Christian Missionaries in various parts of Trichinopoly. This was the first attempt in breaking the contemporary way of educating the common mass. The school education that was enunciated by the Missionaries served as a tool to remove the clutches of social segregation and gave opportunity for the women and the weaker section to get educated. When the East India

Company was reluctant to start any education institution in India, Fr.Schvartz of the Society for the Propagation of Gospel started the first school (St.John Vestry) in Trichinopoly by 1772. The efforts of the missionaries led to the formation of about 132 Government Aided Missionary Schools which were started in the district by 1947, which educated the major chunk of the student community.

SIGNIFICANCE OF "KADAVALLUR ANYONYAM" AS A MEANS OF PRESERVING KERALA STYLE OF RIGVEDIC RECITATION

Saranya Gopalakrishnan

The Rigvedic recitation of Kerala is quite different from the traditional Vedic recitations in other parts of India. The *Anyonyam*, which is conducted annually in the famous *Sree Rama Temple*, Kadavallur, Kerala, is the final examination in Rigvedic recitation of *Namboodiri* scholars (Kerala Brahmins). This is

perhaps the only example for annual contest of traditional Rigvedic scholars in Kerala, India or even in the World. Even after UNESCO considered Kerala style of Vedic recitation as intangible cultural heritage of mankind, it is struggling for existence due to the lack of Vedic scholars. This study tried to analyze the

significance of *Anyonyam* in preserving the Kerala style of Vedic recitation, the problems faced by the system and intended to provide some practical recommendation to overcome this problems.

AGRICULTURAL LABOURERS' MOVEMENT AND THE INCIDENT OF
KILVENMANI MASSACRE –A HISTORICAL STUDY

Dr. G. Sheela Edward

The economy of India is predominantly agriculture-oriented. The majority of laborers are dependent on agricultural sector. A substantial labor force lies at the lowest rung of socio-economic ladder. They have passed their generation through socio-economic exploitation of resourceful rulers of the rural society. Kilvenmani is one of the villages in Nagapattinam district of tamilnadu had to bear the brunt of the ugly side of caste and exploitation. 44 dalits mostly women and children belonging to agricultural families were charred to death by land lords. This incident helped to initiate large scale changes in the local rural economy, engendering a massive redistribution of land in the region.

SECTIONAL PRESIDENT'S ADDRESS - HISTORIOGRAPHY AND MARITIME HISTORY SECTION

HISTORIOGRAPHY OF KARNATAKA A BRIEF SURVEY

K.L.N. Murthi

Fellow Delegates, Gentlemen and Ladies,

I am immensely thankful to members of the General Body and Executive Committee of the South Indian History Congress for having invited me to preside over the historiography and maritime History Section of the 40 Session of the South Indian History Congress I deem it a great honour and privilege .

I take this opportunity to present to your some of my views on the concerned topic :

Historiography of Karnataka a Brief Survey

Karnataka had been a land without historical narrative, particularly of the ancient past, in the 18th and early 19th Centuries. The European officers found it necessary to look for sources that could be harnessed for reconstructing the past of this region. The work has to begin from a scratch. In the case of Karnataka, as in the case of India, it was through inscriptions that people recorded history. For knowing the ancient past of Karnataka, therefore inscriptions proved to be of immense value. The European officers recognized their value and initiated their collection and study. The first name deserving mention in respect of exploring sources is that of Colin Mackenzie, an officer in the Survey of India. Beginning his career in India in 1783 he retired as Surveyor General of India in 1807.

Along with his official commitments Mackenzie collected all that could be of historical value -manuscripts, local traditions, Sthalapuranas ie., local mythological histories and more important of all, copper plate records and impressions of stone inscriptions. The collection goes by the name "**Mackenzie Collection**". This collection contained as many as 1700 inscriptions. The ninth volume of the Asiatic Researches, the mouthpiece of the Royal Asiatic Society of Bengal, carried an article on this collection. "**Mackenzie Collection**" was unmatched mine for its time and later on it was exploited with advantage by several scholars working in the field of epigraphy in particular.

Like this pioneering work was carried by the European scholars in the field of Archaeology and other fields of Karnataka is surveyed here as to understand the early attempts and there worth.

Prehistoric Studies in Karnataka - A Survey

Karnataka is the heartland of Peninsular India, forming an elevated region known as Deccan plateau. It has played an important role in the prehistoric times being the home of the Early Man who inhabited various parts of the Indian sub- continent. The antiquity of Man in Karnataka goes back to the middle Pleistocene times marking a time range of some two lakh years if not more. In the earliest part of this of period, the Palaeolithic Man inhabited this region migrating from the South- the north-western parts of Tamil Nadu or from the North - the southern Maharashtra and Andhra Pradesh. This picture seems to have continued during the later part of the Palaeolithic times down to about 5000 years B.C. But from then on the region of Karnataka, particularly the northern part assumed the leadership and the new culture in the garb of the Neolithic and, later iron using Megalithic culture originated here through inspired from outside and flourished indigenously, laying the foundations for what is called the Karnataka culture in the historical times Much research work has been done to unravel this evolution by a host of scholars, and let us now make a brief and critical review of the work of these scholars

Early Palaeolithic Age

It was Robert Bruce-Foote known as the 'Father of Indian Prehistory' who systematically undertook the search for the remains of prehistoric antiquities. He was the Geological Surveyor of Peninsular India and spread his search from Kanyakumari to the regions across the Vindhyas starting his work in the mid-19th century.¹ He continued his geological and prehistoric searches till almost the turn of the Century Part of his collection was handed over to the British Museum in London, another portion was given to Calcutta Museum, but much

of his collection was purchased by Government of Madras and thus came into existence the Government Museum of Madras. In the course of his researches he covered the region that is Karnataka today. Even before Foote.

Dr Primrose had found a bagful of stone implements—knives and arrow heads from the backyard of his bungalow in Raichur, but it was a stray and unintentional find.² Foote's collection came from ten sites in old Mysore state at present southern Karnataka besides some very promising sites from what is now called Bombay-Karnataka region in the valleys of the Ghattaprabha and Mallaprabha rivers. No doubt his work was rudimentary from the present standards, but seeing that he worked at a time when prehistoric studies were at an infant stage, his work must be considered as very important contribution. He not only collected tools and other antiquities from a number of sites but made the first attempt at their interpretation as shown by his work.

He suggested a sequence of cultures which are true even today though recent investigations have added new phases or divided them into many sub-phases. His deep insight into meaning and functions of the prehistoric objects he was studying is well illustrated by interpretation of the “**neck rest**” from T. Narasipura.³ It is aptly said by Allchin that no beginner of Archaeological work in India can afford to ignore the work of Bruce-Foote.

After Bruce-Foote ceased his work towards the turn of the century, there was a lull in prehistoric studies in the sub-continent as a whole. But in the thirties, there were two significant events: the first one is the discovery of Palaeolithic tools from the Godavari Valley by Cammide and their study in Burkitt and the second one is the Yale-Cambridge University expedition to India to study the Pleistocene chronology and Stone Age cultures of the sub-continent.

But even before the occurrence of these events, the members of the Geology Department of Central College Bangalore, P. Sampat Iyengar and L. Rama Rao collected the Palaeolithic tools from Kibbanahalli and Billigere, both in the Tiptur taluk of Tumkur District. This again is a stray work because it was not pursued with any earnestness by others for many years. The work

of the scholars listed here consisted of collection from the surface without their geological and environmental contexts being properly noticed. So it is not possible to get a comprehensive idea of their cultural implications.⁴

After the fifties of the present century trained students of prehistoric archaeology have undertaken explorations by Sri Seshadri and Dr. B. K. Gururaja Rao revisited the site of Kibbanahalli and the surrounding places. Dr. B. K. Gururaja Rao has undertaken a project on the geo-archaeological investigations in that site. Joshi has undertaken a detailed investigation and discovered more than twenty one sites in the Mallaprabha and the Ghattaprabha valleys of the Krishna basin. Among these sites mention may be made of Khyad and Menasigi first reported by Foote and Hiremulangi and Tuminhal which have yielded not only a wide range of tools but also provided a reasonably clear picture of the environment of the Early Man in the region.⁵

Pappu⁶ discovered more sites in the Krishna-Ghattaprabha complex particularly around Anagwadineer Bagalkot. The studies by Joshi and Pappu together reveal that Early Man in North Karnataka preferred to live on the lower foot-hills and banks of the rivers which supplied him water for drinking and also animals which came there for quenching their thirst and raw-materials for his tool making. Nittur on the Tungabhadra in Bellary District is another significant site. This site has yielded not only a variety of stone tools from stratified river terraces but also fossilized skeletal remains of cattle thus giving us an idea of the associated fauna of that age.

Another notable site is in Gulbarga district, i.e., Gulbal. This site is important as it is identified as a factory-cum-camp site of the Acheulian man, a place where he set up his camp, collected the river pebbles from the river bed and manufactured his tools. The most important discovery in the Palaeolithic studies in Karnataka, rather India is the location of a living site of the Palaeolithic man at Hunasgi in Gulbarga District by Paddayya.⁷

The site was excavated in 1975-76. Some more sites were located in the oval valley of the Hunasgi stream. The Acheulian man occupied for his 'home' about sixty sq meters and left behind an occupational deposit ranging in

thickness from 10 to 35 cms. The area of the 'house' was marked by pieces of stones to construct an enclosure to the living area, there were two granite boulders inside the square measuring about 50 cms. Probably they served as seats on which the man sat while making the tools. On the whole, the site consisted of an oval open area, over 60 sq.meters surrounded by granite boulders on three sides. This site yielded some 900 tools along with the waste flakes.

This recent work mainly by scholars of the Deccan College, Poona has given a new dimension to our understanding of the environment in which the prehistoric man of Karnataka lived; while Paddayya's work has given us an idea of the camping places of the Early Man.⁸ Ansari has thrown light on the faunal association and Pappu has shown us the evidence of the climatological conditions.⁹

Middle Palaeolithic Age

Though Foote has collected some flake tools from the North Karnataka sites, their real cultural significance in Indian prehistory was not known at that time. Again it was left to the researches of the Deccan College and Seshadri to identify this cultural phase in Karnataka. Banerjee was the first to identify this phase.¹⁰ It is about this time that Seshadri reported fine flake from Salvadgi in Bijapur district (1962).¹¹ But a clearer picture of this middle Palaeolithic age emerged from the work of Pappu and Paddayya.¹² New and improved techniques of tool making, diversification of means of subsistence and more importantly, adjusting to the changing environment were the noteworthy developments of this age and by employing newly discovered scientific techniques of study, the scholars have been able to reconstruct, though not to the desired extent, the environment in which the man lived in that age. It is about this period that new techniques of excavation, study and dating were evolved and the scholars have fully utilised this new situation. The work of Paddayya has provided a clean cut stratigraphical and the chronological clarity Pappu has provided an insight into the conditions in which that man lived.

Upper Palaeolithic Age

This phase also known as the 'Blade Burin Culture' in India is of a recently identified and representing closing phase of the Pleistocene

culture. Till in 1955, its existence in India was not recognised. Though Burkitt, Krishnaswamy and Soundararajan indicated the possibility of an upper Palaeolithic phase in Indian Prehistory, a clear and stratigraphical picture was eluding till Murthy reported a stratified cultural distinguishable horizon from Chittur district of Andhra Pradesh.¹³ Immediately there was an appraisal of the material collected earlier.

Further, Paddayya went in search of reinvestigation of the sites to obtain a sequence and understand the cultural horizon of these sites. Salvadgi, Meralbhavi, Gulbal, Vanahatti and Hunasgi proved to be rich sites.¹⁴ This industrial phase evidenced a new technique of tool making not on flakes, but on narrow blades and also using bones for tools. Yadwad is another site reported by Pappu also in Belgaum district. The tools become smaller and lighter, composite in nature, meant to be used while pursuing the fast moving smaller game.¹⁵

Mesolithic Culture Phase

The end of the Pleistocene age saw drastic climatic changes. An overall increase in temperature characterized this "Neo thermal" period. The big game of the Pleistocene disappeared, light footed fast-moving animals like varieties of deer, hare and rabbit besides wild fowl supplied Man's dietary needs; fish and other aquatic creatures supplemented his food habits. More importantly, hunting was yielding place to catching. The fast changing environment forced man to stay at or around perennial sources of water. This phase of human prehistory stretching from about 9000 to 3000 B C is the transitional one from the nomadic food collecting to food producing sedentary life style.

The existence of this was recognised right from the days of Bruce-Foote. But its chronological and cultural horizons were realised in a correct perspective only by Zeuner-Allchin, Sankharya and B B Lal. Before the work of the above scholars, microliths were reported by a number of field workers since 1896 in Karnataka particularly from Bellary and Chitradurga.¹⁶ These discoveries did not reveal any stratigraphical or cultural contexts.

At Jalahalli near Bangalore Todd discovered microliths from a narrow valley which provided for the first time, a hazy picture of the climatic conditions. To this may be added

the Brahmagiri group of sites which according to Seshadri represent a distinct group of Mesolithic culture having its origin in the upper Palaeolithic and leading on to the Mesolithic culture of the Neolithic phase in South India.¹⁷ A third group of microlithic culture is represented by the Kibbanahalli complex which stops with the Mesolithic. Since no evidence of a succeeding Neolithic culture is encountered in the region so far.

In North Karnataka the picture of the Mesolithic is not very different as shown by the evidence from the Bijapur, Bellary and Gulbarga districts. Recent work of Majumdar and Rajaguru at Kupgal, Sankalia, Ansari and Nagaraja Rao at Sanganakallu has thrown a flood of new light on the living conditions and environment of Mesolithic man in the region besides indicating the slow but steady progress towards the food producing stage of human history; it may be incidentally pointed out that actual food-producing or Neolithic culture emerged in course of time in this Bellary region. This work has also given an antiquity to this culture between 9000 and 3000 BC.¹⁸ Pappu's work referred earlier has confirmed the prevalence of similar cultural horizon in Bijapur. Paddayya's work in Gulbarga represents an almost similar cultural horizon.¹⁹

Some thirty sites have been discovered here of which some ten have been studied in detail by Paddayya. There are going descriptions would enable the pre-historians to conclude that this transitional Mesolithic culture emerging out of the Palaeolithic leads on to the proto-historic food-producing Neolithic period in Karnataka. This also shows how the food-gathering savaging man gradually was marching towards a sedentary food-producing stage which laid the foundations for the historical civilization.

Neolithic Age:

This period in the saga of human history marks a milestone; man within a short span of about a millennium transformed himself into a capable being on this planet Earth. He gained though gradually, mastery over nature, learnt the art of domestication of animals, cultivation of plants, acquired the quality of settled life as a consequence of which he started building residential structures, providing household

equipment's and variety of other necessities of a decent life.

The early discoveries of the Neolithic remains from India were made by HP Le Mesurier in Uttar Pradesh in 1861, Theobald (1862) and Cockburn (1879) also in Uttar Pradesh.²⁰ The first discovery of Neolithic site in Karnataka was made by Fraser at Kupgal near Bellary in 1872.²¹ Sometime about this period Bruce Foote started surveying the region of Karnataka geologically and incidentally picked up Neolithic tools from Birmangala and Srinivasapur in Kolar district, Pandavapura and T Narasipur in Mysore district.²² A study of the distribution of the Neolithic sites was made by Wormanin 1949.²³ But, regular systematic excavation work of Neolithic sites in Karnataka was started by M H Krishna at Brahmagiri in 1942 which spurred Wheeler to undertake more elaborate researches at the site.²⁴

This work has revealed to us the type features of the Neolithic culture in Karnataka and also an attempt was made to provide a chronological framework. Both these aspects are no longer considered as valid at present in the light of researches in the post-Wheeler era; Wheeler's work started, as it were a series of excavations in different regions in Karnataka – Sanganakallu (1948) by Subba Rao, Piklihal (1951) by Allchin, Maski (1954) by Thapar, Tekkalakota (1963-64) and Hallur (1965) by Nagaraja Rao, T Narasipura by Seshadri, Hemmige by Hanumantha Rao and Nagaraju, Sanganakallu by Ansari and Nagaraja Rao, Kodekal by Paddayya besides many other studies into life style and culture of the Neolithic man in Karnataka.²⁵

These studies have established firmly that during this period ranging from at least 2500 to 800 B.C. Karnataka witnessed a settled life, living in thatched huts, enclosed by a circle of stone boulders, mud or rough stone built houses equipped with a variety of hand-made furnished greyish pottery not very well fired. They earned their subsistence from pastoralism namely grazing flocks of sheep and goats, herds of cattle; cultivating different types of fruits and grains in a rudimentary way, they used for their daily activities a variety of polished and ground stone tools supplemented with bone and probably wooden tools, decorated their bodies with bone shell and semi-precious stone beads, often

terracotta and copper also being used for the purpose, a few gold ornaments were also found from Tekkalakota and T Narasipura. Some evidence of art is also seen in the form of punched dotted designs of pottery from Tekkalakota representing an antelope or pecked and painted designs of bulls, sambhar deer, gazelle, sheep, goat and horse, besides stylized human figures, a *trisola* and rarely trees and flowers: their pottery was often painted with red ochre on the lips.

In later phases, they came into contact with the chalcolithic cultures of southern Maharashtra and northern Deccan and from them adopted the use of copper, though on a small scale, for their implements, and utensils, the painting designs on their pottery which is distinguished as the black-on-red painted ware. It is under this influence from their neighbours that these Neolithic folk of Karnataka adopted the improved forms of agriculture often using irrigational facilities, wider use of copper and bronze in the closing phase of the culture and started more durable and elaborate residences. We can see the emergence of villages during this transitional phase. The work of scholars from Deccan College, Poona again claims the pride of place in revealing this evolving pattern of life of people of Karnataka in the second millennium Before Christ. The achievements of archaeologists from 1960 to 1970 have really provided us a lucid picture of life style of proto-historic man of Karnataka. But the sudden emergence of an iron-using dynamic culture in the first millennium B.C. brought about a transformation in the life style of Man in Karnataka.

Megalithic Period

The Iron Age Megalithic culture represents a very great step forward in the march of Man towards civilization. Having its origins in the Mediterranean islands in the fourth millennium B.C. It gradually spread northwards and eastwards and travelling through Europe, South Russia, Iranian highlands and Afghanistan, it arrived on the west coast of North India sometime in the later half of the 2nd millennium B.C. By the time it reached the Indian borderlands. It had already acquired certain distinct cultural traits like the use of iron for tools and equipment, the method of disposal of their dead by burial often in fractional form. In its first home on the Indian soil - Rajasthan and Sindh-

Baluchistan regions it picked up the use of a distinctive ceramic tradition besides other fabrics in its household equipment.²⁶ On its arrival in India, it found the Western India, the Ganga-Yamuna doab and even Central India being already made the home of developed proto-historic peoples like the painted grey ware using Aryan speakers or the Chalcolithic communities also of Aryan extract or under their influence.

Further these regions did not have the suitable rock mate necessary for building the distinctive megalithic burials since the Ganga-Yamuna valleys are largely covered by the alluvial silts and the Central and Western India covered with the trap rock as a result of the volcanic activity. Hence these megalithic folk moved south of the Vindhyas which region was at that time inhabited by the Neolithic-Chalcolithic people still using copper and stone for their tools and equipment. The Iron-using megalith builders had an advantage over them and thus quickly gain mastery over them and become dominant in the region. All this happened sometime around 1300 B.C and lasted till the beginning of the Mauryan penetration into South India in third century BC or the dawn of historical period.

Researches in this field began early in the 19th century. Among these early workers may be mentioned British civil servants like Babington, Congreve, Durand, Mackenzie, Newbold, Oldham, Meadows Taylor, Walhouse and others as the pioneers.²⁷ Among them the name of Meadows Taylor stands out prominently. Being the British Political Agent in the Nizam's State in the middle of the 20th century he discovered a number of megalithic sites in Northern Karnataka and conducted systematic very scientific excavations, of that time. While the earlier workers and even those who came after Taylor upto 1940, excavated these burials in a haphazard manner and imagined their dates from prehistoric times to early medieval period. Taylor followed a method of excavation which very closely resembles the present scientific standards. Then came Brecks who has made an ideal use of Ethno Archaeological model in the interpretation of a proto historic culture in the light of a present day tribal culture.²⁸ Another noteworthy name in the study of Megalithic culture in the pre-independence period particularly in the field of

Interpretation is Walhouse. He has tried to interpret various antiquities and customs of these people of South Indian Iron Age. Then came on the scene Wheeler and his excavations at Brahmagiri showed the correct approach to the study of these monuments.²⁹ But the chronological range suggested by him was very conservative and the two decades that followed his work saw an explosion as it were and the archaeological researches in the country by mostly those trained by him. Dr. Seshadri, Thapar, Subba Rao besides Krishna, M. H. of the Mysore State Archaeology Department have done numerous studies in this field.³⁰

But unfortunately these scholars devoted their attention to excavation, description of the antiquities or the fixing of their dating viz. more attention was being paid to the details rather than to the interpretation of these material for the material culture of the people of the times.

So the first attempt at classification of this material, a scientific analysis and reconstruction of the life pattern of the people was made by Prof. Dr B K Gururaja Rao and A Sundara.³¹ These scholars attempted for putting the available data in the form of a monograph and presenting comprehensive assessment of the life style, origin and chronology and authorship of the culture. Sundara, Nagaraja Rao and Subbayya are the other scholars who have contributed for the unravelling of some more debatable points still defying the solution.³²

Thus taking on overall view of the achievements in the field of Prehistoric studies in Karnataka, we have no hesitation in stating that it had grown out of its infancy and reached a stage when the problems facing the pre-historian are becoming well defined and appears possible to build up a cogent and intelligible picture of the development of human culture.

Epigraphical Studies

Epigraphical studies are the most notable branch. After Tamil Nadu, Karnataka has the richest collection of epigraphs, their number in the state estimated to be between 20 and 25,000 and most of them are stone inscriptions. Pioneering work in this field was done by Colin Mackenzie who was an officer in the Survey of India. He started his career in India in 1783 and retired as Surveyor General of India in 1807.³³ Along With his regular duties he also collected

manuscripts, local traditions and *sthalapuranas* and also copied inscriptions and collected copper plates. In his collection there were 1,700 inscriptions too, and in the 9th volume of the Asiatic Researches an article was published on his collection. From Bombay State in 1821 Elphinstone, M. collected hundreds of inscriptions which includes 14 inscriptions from Kannada areas and the summary of these was published in 1835.³⁴ Walter Elliot, is remembered for the pioneering work he did in promoting Kannada education in Bombay Karnataka area by opening a Kannada school at Dharwad in 1831. During his stay in this area (Bombay Karnataka), he collected 1,300 inscriptions from this area and also from Hyderabad Karnataka. Based on the records collected by Meckenzie and himself, tried to cull out relevant historical details.

The Hindu inscriptions of his collection became the primary source for his (1836) effort to outline his findings in the Journal of Royal Asiatic Society. Wherein he has surveyed 595 inscriptions and traced the history of Karnataka from the 9th century till 1234 A. D. He narrates the history of the Chalukyas of Kalyana and Kalachuris, the Hoysalas and the Seunas or Yadavas.³⁵ So important was this pioneering writing that Fleet later observed that "No better method than Sir Walter Elliot's of dealing with the subject could be well devised."

Elliot was a scholar in Persian, and he, with Dowson translated many Persian accounts under the title *History of India as Told by Her own Historians* in eight volumes and he also published a book titled *the Coins of Southern India*, in 1886.³⁶ Another officer, Major Dixon had collected some photographs of inscriptions from Mysore area, which helped B. L. Rice to publish Mysore Inscriptions in 1879.³⁷ Important work in the Bombay Karnataka area was done by J F Fleet. He was a senior revenue officer in Bombay service, and he started publication of inscriptions that he came across and later he started a series of publication titled Some Sanskrit, Pali, and Hale Kannada Inscriptions in Indian Antiquary.³⁸ He also published inscriptions in *Epigraphia Indica* from 1891. He examined nearly 1,000 inscriptions in Bombay Karnataka area, and in his pioneering work *Dynasties of the Canarese Districts* for the Bombay Gazetteer in 1882, he presented an outline of the history of ancient dynasties.³⁹

Epigraphia Carnatica, in 12 volumes edited by B.L. Rice's being his greatest contribution and is a unique work. The first volume was on records from Kodagu (Coorg) followed by those from Shravanabelagola. Inscriptions from Mysore State were published districtwise, each volume having inscriptions from every taluk regularly arranged and numbered. Such a systematic work of presenting the text in original script, the transliteration in Roman script and its English translation has not been done in any state and in any area. The districts in Karnataka from outside the former Mysore State also could not enjoy the privilege of such a systematic treatment of inscriptions found in them till now. The word epigraphical was Rice's coining, and was later used in such publications as *Epigraphia Indica*. Between 1886 and 1904, he published 9,000 inscriptions in 12 volumes.⁴⁰

His successor as Director in the Department of Archaeology of Mysore was Mahamahopadhyaya R Narasimhachar brought to light many more inscriptions not included in the *Epigraphia Carnatica* volumes and published them in Mysore Archaeological Reports.⁴¹ He also revised the volume of *Epigraphia Carnatica* on Coorg by adding some more newly found records. The work was continued by M H Krishna, and the Chandravalli inscription of Kadamba Mayura Sharman was his notable find.⁴² He read it as a Prakrit record; recently a young epigraphist, Dr. BRajashekhharappa has deciphered it and identified its language as Sanskrit.⁴³

Mysore University has taken up the commendable work of issuing the revised editions of the *Epigraphia Carnatica* volumes. Presently inscriptions of Mysore district of those days had been covered in the five volumes against three volumes of B L Rice. In the revised edition Mysore district alone excluding the former areas of the present Mandya district, carved out from former Mysore district has three volumes. Inscriptions belonging to Mandya district (which was created in 1939) compiled in two volumes. The increase in size is due to the addition of new inscriptions, which were found till its publication and published elsewhere are included in the revised volumes.⁴⁴

A host of scholars from the Epigraphy department of the Government of India collected and edited hundreds of inscriptions from the

Madras and Bombay Karnataka areas, and published them in the South Indian Inscriptions series.⁴⁵ Hultzsch, K. B. Pathak, D. R. Bhandarkar, Krishna Shastry, H. Venkayya, N. Lakshminarayana Rao, K. V. Subramanya Iyer, T.T. Sharman, D. C. Sircar and of late, men like G. S.Gai, K V. Ramesh, M. N Katti and Jayarama Sharma of the department have continued the work. Yazdani, R. S. Panchamukhi, P. B. Desai, A. M. Annigeri, Srinivasa H Ritti, B.R. Gopal, R.N. Gurav etc have done considerable work in Bombay and Hyderabad Karnataka area.

Panchamukhi and Annigeri edited *Karnataka Inscriptions* in four volumes and Gopal published two more volumes.⁴⁶ Recently Srinivasa H Ritti edited *Nanded inscriptions* and with Kumbhar, *Sholapur inscriptions*. Kundangar's *Collection of Inscriptions from North Karnataka and the Kolhapur State* is also notable work.⁴⁷ The inscriptions from these districts are neither exhaustively surveyed nor made available in one or two volumes, as in the case of the inscriptions from old Mysore districts. K.V. Ramesh and Jayaram Sharma have edited one volume of inscription from Dakshina Kannada.⁴⁸

M. M. Kalburgi has written a book on Kannada epigraphs in Maharashtra and has done solid work in preparing index of taluk-wise inscriptions collected from a few Bombay Karnataka districts.⁴⁹ T. V. Mahalingam and B. A. Saletore publishing summaries of Vijayanagara inscriptions. Historical Research had initiated a scheme of publication of epigraphs dynasty wise. In the later dates ICHR published all the inscriptions of Vijayanagara Empire as per the local language series along with Sanskrit ones in different volumes. Earlier G. S. Gai had brought out a volume of inscriptions of the Kadambas in this scheme.⁵⁰ Similarly, K. V. Ramesh had brought out a volume on The Western Ganga inscriptions.⁵¹ Recently, under the same scheme, a volume of inscriptions of the Chalukyas of Badami edited by S. V. Padigar has been published.⁵² Dr. Gopal has also compiled the inscriptions of Banavasi Kadambas and written a comprehensive account of their history.⁵³

Under the Classical Language Scheme, the University of Mysore has launched a series of dynasty-wise volumes of inscriptions. The volumes pertaining to the Rashtrakuta and Kalyana Chalukya dynasties have already

appeared and those pertaining to the Kadambas and Chalukyas of Badami are also published.⁵⁴

The scholars have contributed immensely to the field Epigraphy in the recent past are: Vasundara Filliozat of Mysuru, Seetharam Jagirdar, and K. Mohammed Shariff belong to University of Mysore EC revision Project, V. V. Kulkarni, S. Rajashekhhar, Leela Shantakumari, H. R. Raghunath Bhat, S. V. Padigar, associated with Karnatak University, Dharwad, Devarakonda Reddy, associated with Kannada University, M. D. Sampath, H. S. Gopala Rao, B. Rajashekharappa, Vasanta Shetty, P. V. Krishna Murthy, Dr. P. N. Narasimha Murthy and etc., are scholars of the present generation who have deciphered and published a good number of inscriptions. S. C. Nandimath and R.C Hiremath of Dharwad also contributed to the field of epigraphical studies.

The urgent need is to publish all the remaining volumes of B L Rice edition and the Inscriptions on the lines of *Epigraphia Carnatica* for the Bombay Karnataka and Hyderabad Karnataka areas and the Bellary district. In this lines the Kannada University has done some work much as to be done in that area.

Numismatic Study

Allan, Rapson, Elliot and Smith had written about coins of Karnataka.⁵⁵ B. L. Rice by his writing in 1891 on Roman coins found near Bangalore arouse the curiosity of the scholarly world regarding Rome's trade with South India and Karnataka. But much work was done by M.H. Krishna on the numismatics of Karnataka by his illustrated writings in the MARS.⁵⁶ R. S. Panchamukhi studied coins available in Bombay Karnataka. M.H. Krishna's unpublished manuscript, Deccan Numismatics is a noted work on the subject. Hultsch, Altekar, G. H. Khare, Deshikachan, Bhandarkar, Sherwani, etc, have done notable work in the field.⁵⁷ Dr. A. V. Narasimha Murthy has published *Coins of Karnataka*, introducing coins of all dynasties of Karnataka.⁵⁸ M. M. Prabhu of Mangalore has made many notable contributions to this field. The State Archaeology Department has a very large collection of coins. They require to be systematically catalogued and displayed with a view to help scholars to consult them.

Historical Survey

The historical narratives of Karnataka appeared in the last quarter of 19th Century. **Bhandarkar's *Early History of the Deccan***⁵⁹ and **Fleet's *Dynasties of the Kanarese Districts***⁶⁰ stand out distinctly as pioneering works in this respect. *Early History of the Deccan* was restricted to the history of the Maharashtra region **of the Deccan. But Fleet's work *Dynasties of the Kanarese Districts* focused on the political history of the entire region what is called Karnataka today up to 1318 AD.** These works, particularly the latter, are full of discussions on issues of chronology and succession and record the achievements of rulers. Cultural history, **though superficially dealt in Bhandarkar's work, does not find room in Fleet's work.** Fleet focused on translating, studying, translating the epigraphs and in finding suitable solutions to the ambiguous issues. His work is class example of '*epigraphist's history*'. He started a movement, as it were, of writing a history based on a study of epigraphs. **It is called here a 'movement' because *Dynasties of the Kanarese Districts* became a model to emulate for later writers like R. S. Panchamukhi and R. H. Deshpande.**

In the second decade of the 20th Century appeared an interesting work of historical nature. Alur Venkatrao, a nationalist leader from Dharwad authored the book entitled *Karnataka Gatavai bhava*.⁶¹ It contained an outline of the history of Karnataka up to the Vijayanagara period. The book had a specific goal. The goal of the writer is rise a wisdom and the belongingness to the linguistic region called Karnataka in the people at the same time sense of pride as a linguistic-cultural entity and to get united under one banner. The book embraces a highly emotional language for this purpose. This may be regarded as the first ever work in **Kannada on Karnataka's history with an open intention of glorification of Karnataka's past** for the goal of unifying Kannadigas. R. H. Deshpande was also 'inspired' to write a history of Karnataka in Kannada and he wrote *Karnataka Samrajya* in two volumes which were published in 1926.⁶² The first volume covered the dynasties of Karnataka particularly the Alupas, Kadambas, Gangas and the Chalukyas of Badami. And the second volume covered from the Rashtrakutas to the foundation of Vijayanagara.

He was the Vice Principal of the Teachers' Training College and had written some other books on history, like Mughal history, Shivaji, Nujjahan, Tipu Sultan etc. Some scholars have appreciated Deshpande as the first true Kannada historian of Karnataka. A peep through the introduction to the work shows that Deshpande was not a historian, but he was interested in writing history. However in his work he put in considerable efforts to make it objective. Unfortunately, the account of Puranas is treated by him as acceptable history, though he admits that this is so owing to want of information before the advent of the Buddha.

Mysore Gazetteer edited by B.L. Rice (1897)⁶³ and C. Hayavadana Rao⁶⁴ (1930), deals at length with the history of Karnataka. B.L. Rice wrote this gazetteer in two volumes whereas C. Hayavadana Rao revised the earlier Gazetteer compiled in two volumes in five volumes and seven parts. It comprises of four parts, running to 3000 and odd pages. In the first part the sources of history are considered in detail. Epigraphic, numismatic, art and architectural, sources and Sanskrit, Prakrit, Kannada, Telugu and Tamil literary sources are critically examined in great detail with respect to their utility in this part.

The second part discusses the ancient period from the Nandas through to Chalukyas of Kalyana, Kalachuris and Cholas. The dynasties of Karnataka covered here include Nandas, Mauryas, Satavahanas, Kadambas of Banavasi, Banas, Vaidumbas, Pallavas, Nolambas, Gangas, Eastern Gangas, Chalukyas, Rashtrakutas, Chalukyas of Kalyana, the Hoysalas and Kalachuris. The remaining parts of this work dealt with Vijayanagar Period (Part III) and post-Vijayanagara Mysore (Part IV). Since the treatment is based on all types of sources the work is of great use for any serious student of history.

Karnataka Gazetteer published in two parts (1982-83) comprises of sections on sources authored by Srinivasa H. Ritti, Prehistory authored by A. Sundara, history of the ancient period by A.V. Narasimha Murthy, history of medieval period by B.R. Gopal and history of Modern period by Suryanatha U. Kamat. Notes on historical developments in agriculture, irrigation, horticulture, industry, trade, transport, administration, education, literature etc are incorporated while dealing with respective

topics. To this may be added the district-wise Gazetteer volumes that have appeared for almost all the districts of Karnataka.⁶⁵

The next important work deserving mention here is *Karnatakada Arasu manetanagalu* authored jointly by N. Lakshminarayan Rao and R. S. Panchamukhi.⁶⁶ This work concerns itself only to the ancient **period of Karnataka's history. It contains valuable** discussions on the Kadambas, the Chalukyas of Badami, the Gangas of Talakadu, the Nolambas and Banas tapping particularly the epigraphic records available till the time of its publication. However the Rashtrakutas are not dealt with in this work. Perhaps the most significant work in Kannada on Karnataka history was by Panchamukhi entitled *Karnatakada Itihasa* Vol I.⁶⁷ It consists the history of Karnataka and its various political and cultural dimensions right from prehistoric times to the end of the Rashtrakutas, excluding the Gangas.

Among the works that gave considerable space to dealing with Karnataka history in the context of South Indian History, mention made to the works of KAN Sastri and Yazdani **particularly. The first is K. A. Nilakanta Sastri's** *History of South India*.⁶⁸ In this work Sastri tried to integrate the dynastic histories to avoid repetitions. Thus he deals with the history of the Pallavas and Chalukyas of Badami simultaneously, as politically related to each other. He also gave attention to cultural developments - in the field of religion, literature, art etc - **in an integrated manner. Thus Sastri's** work stands out distinctly in South Indian historiography. Later when Yazdani edited the *Early History of the Deccan*,⁶⁹ Sastri made major scholarly contribution in it about the Chalukyas of Badami.

The saga of writing Voluminous histories of Karnataka was inaugurated by *Karnataka through the Ages*. It was edited by R. R. Diwakar and his associate K. Sampadgiri Rao, and published in 1968.⁷⁰ It collection of papers by various noted scholars. The subject matter covered, apart from the history of major dynasties, the history of feudatory dynasties of particular periods. Aspects of administration, **society and culture on every imperial dynasty's** period are also dealt with in separate articles. This was soon followed by a Kannada version of the book entitled *Karnataka Parampare* in two

parts. Another large work on Karnataka history that followed soon after the above was *Karnataka Itihasa Darsana* edited by M. V. Krishna Rao and M. Kesava Bhatta.⁷¹ It can be considered as the first large book to appear on Karnataka history, but its approach is not always scientific.

A History of Karnataka jointly authored by P.B.Desai, Ssrinivasa H.Ritti and B.R.Gopal is the major contribution by the epigraphists.⁷² The work considered the whole range of Karnataka history from the earliest times to unification of Karnataka, though it dealt with the period up to the end of Vijayanagara extensively. The remaining period is covered very briefly. It was written as a forerunner to a twelve-volume comprehensive history of Karnataka, of which only two volumes saw the light of the day, one dealing with the Chalukyas of Kalyana and Kalachuris written by B R Gopal⁷³ and the other is the Seunas or Yadavas of Devagiri written by Srinivasa H Ritti.⁷⁴ A History of Karnataka shows mastery of its authors in utilizing the epigraphic material as the primary source. Suryanatha U. Kamat writes, "it was the first carefully written account of ancient and medieval Karnataka making the latest available epigraphical material, though only political history dominates the narrative" Suryanatha U. Kamat wrote a book titled *Karnatakada Sankshipta Itihasa* (A short History of Karnataka) in Kannada in 1973.⁷⁵ Its English version, *A concise History of Karnataka* was also published in 1980.⁷⁶ This work serves as a handbook on the history of Karnataka.

In 1997, the Kannada University at Hampi published a seven volume series of Karnataka history in Kannada entitled *Karnataka Charitre*.⁷⁷ The first volume in this series was edited by Sundara. Several expert scholars contributed their articles on various aspects of history. This 560 page work attempted to signify the nature of developments in Karnataka history through ten chapters and contains very useful information on background on environment, people and culture. The emphasis is on prehistoric cultures, only four chapters dealing with historical period from the Satavahanas to the Chalukyas of Badami.

It is worthy of note also that in the *Vishaya Visvakosa - Karnataka*, brought out by the University of Mysore in 1977 the various aforementioned topics have been discussed in considerable detail along with relevant

illustrations.⁷⁸ the same has been revised by A. Sundara as *Itihasa mattu Puratatva Encyclopaedia*⁷⁹ and this has extensive information on the latest material on various aspects of archaeology and history of Karnataka, written by experts in the respective field. Yet the fact that the political, social, economic, religious and other aspects as historically integral developments does not seem to have been recognized by many at present. One somewhat exceptional approach, though in outline only, has been recently put forth by a younger scholar M.V.Devadevan in a Kannada work authored by him. However an in-depth command over a wide variety of historical and literary data is a desideratum for such an approach to become valid.

Dynasty-wise works on History

Early Dynasties Study of individual dynasties could give scope for dealing with a limited period on an intensive scale. Quite early this advantage was realized by certain scholars and they took up the study of individual dynasties seriously. The Mauryas had their home region in Magadha (Bihar) and hence their age in the context of Karnataka has not been exhaustively treated by scholars in the field, though there is good scope for examining this aspect.

The Satavahanas

It is the Satavahanas who acquired importance in enquiries. The Satavahanas were considered to be centred in upper Deccan and Central India and hence their connection with Karnataka was also deemed marginal. Long chapters or articles have been contributed by scholars like V.S. Bakhje, D.R. Bhandarkar, A. S. Altekar, K. A. Nilakanta Sastri, Ramachandraiah, Gopalachari,⁸⁰ and Ajaya Mitra Shastri⁸¹ have published their findings and writings on the Satavahanas and their culture in various publications. One of the recent works with a great amount of discussion is by Ajaya Mitra Shastri and it reconsiders the chronology, genealogy and other aspects of the Satavahana history. However cultural aspects such as art, economy and religion do not figure in this work. History of the Satavahanas in relation to Karnataka is one of the areas deserving special attention of the scholars.

The Kadambas

The Kadambas One of the early dynasties to attract attention of scholars for detailed enquiry was that of the Kadambas. Reverend Henry Heras who did commendable work in the field of Karnataka history, particularly in respect of Vijayanaga, encouraged scholars to take up individual dynasties for in depth study. Many research dissertations were produced on aspects of Karnataka history. One of these was by George Moraes entitled *Kadambakula* published in 1931.⁸² This was produced under the guidance of Rev. Heras. This work included discussions on early Kadambas as well as later Kadamba families, such as those of Hanagal and Goa.

Western Gangas

The Gangas of Talakadu, better known as the Western Gangas, were among the important dynasties that had the longest rule and ruled over parts of Karnataka. They issued a large number of inscriptions Rice proved convincingly that this dynasty did rule and not all their records are **spurious**. **After Rice's reconstruction of Ganga history a small monograph appeared on this dynasty's history authored by M.V.Krishna Rao.**⁸³ Although the family was treated in the works of N.L.Rao and Panchamukhi and P B Desai and others, a single volume dealing with Ganga history was not published until when Sheik Ali brought out his work *History of the Western Gangas* in 1976.⁸⁴ This work is commendable in the sense that the author attempted in fourteen chapters the various aspects of Ganga history, the first eight dealing with political history and the remaining six chapters respectively with administration, economic conditions, social conditions, education and literature, religion and art and architecture.

Ramesh has brought out a volume of *Inscriptions of the Western Gangas*, titled *Inscriptions of the Western Gangas*, in the introduction of the volume he has focused on certain issues relating to the genealogy, chronology and usefulness of spurious records.⁸⁵ But this work cannot be considered a monograph on Ganga history. As such, the problem of understanding a period of history in relation to land, people and culture in integrated manner still persists in the case of the history of Gangas.

The Chalukyas of Badami

The first empire which falls within the scope of the present work is that of the Chalukyas of Badami. Fleet spared considerable energy in reconstructing the history of this dynasty by critically examining the numerous Sanskrit and Kannada inscriptions known till his time. The subject was treated also by R.S.Deshpande in *Karnataka Samrajya* at length wherein he examined to the extent of his abilities issues on Chalukya origin, their rise, temporary eclipse, and recovery, and the conditions during their period.⁸⁶ He dedicated as many as four chapters to these aspects. Similarly, N.L.Rao and Panchamukhi also dealt with the political history of this dynasty.⁸⁷ Chalukya period was one of the most wonderful periods of Karnataka history in terms of availability of sources, political achievements, cultural transitions, artistic heights and so on. But it is surprising that monographs were not attempted on this dynasty in significant numbers. Two notable publications on this dynasty are by Durga Prasad Dikshit (1980) *Political History of the Chalukyas of Badami*⁸⁸ and K.V.Ramesh (1984) *Chalukyas of Vātāpi*.⁸⁹ **Dikshit's work was an extensive review of review of the sources for reconsidering the various political and administrative aspects. Of the ten chapters in this work, seven deal with the political aspects and the remaining three respectively with general administration, fiscal administration and army organization. There is an exhaustive list of epigraphs with summaries. The attribution of certain epigraphs to rulers and re-fixing the chronology of certain Chalukyas rulers like Mangalesha are noteworthy in this work. However the religious, cultural and art aspects for which great amount of material is available has not been attended to in this work. Ramesh's work focuses on ruler-wise political developments, providing reinterpretations of many Chalukya inscriptions and using them, but from the point of view of development of religion, culture and art this work has little to offer. In the introduction to recent volume of *Inscriptions of the Chalukyas of Badami*, Padigar has attempted to review the status of knowledge of the Chalukya period on epigraphic grounds. Hampa Nagarajaiah's work looks at the Chalukyas in the framework of Jainism.**

Apart from the above-mentioned works, different aspects of culture have been treated

separately by different scholars adept in their fields. For instance, *history of Vaishnavism in Karnataka* has been examined on epigraphic and archaeological evidence by S.V. Padigar.⁹⁰ A comprehensive analytical *study of coins and currency system of Karnataka* has been made by A. V. Narasimha Murthy.⁹¹ Aspects of trade and commerce as gleaned from epigraphs have been treated by B.R.Hiremath.⁹² The most extensive work has been in the field of study of art and architecture of Karnataka, particularly of period of *the Chalukyas of Badamis* by Henry Cousens and it deals the subject with detailed drawings and brief studies of the Chalukya monuments.⁹³ **Percy Brown's Indian Architecture contained a critique of Chalukya monuments and proposed a classification and evolution of the temples.**⁹⁴ The accepted chronology of the Badami Chalukya monuments was questioned by different scholars and more objective and rational approach was provided during the latter part of 20th Century. Moreover, several studies of Chalukya monuments and sculpture have opened up possibilities of new vistas in understanding monuments and culture of the Chalukya period.

The Rashtrakuta Period

The Rashtrakutas produced a heroic line of rulers who had successfully challenged the rulers of Kanauj who are described as holding the paramount power of India from the days of Harsha. Dhruva and Govinda III had successfully challenged these rulers of Kanauj and collected tribute from them and Indra III had held Kanauj for two years (914-16) under his control. After Fleet and Bhandarkar, Altekar wrote an exhaustive work on the Rashtrakutas outlining the details about their administration, and also presenting a picture of social, economic and cultural conditions.⁹⁵ An improved chronological details of this dynasty was provided by Panchamukhi⁹⁶ and P B Desai⁹⁷ in their respective works on Karnataka history, mentioned earlier. Many Rashtrakuta temples have been identified by Annigeri, M S Nagaraja Rao (the Sirval groups), ASundara and Sindgi Rajashekar.⁹⁸ The Seminar on the Rashtrakutas organised by the Mythic Society saw many interesting papers on the art of the epoch including bronzes and paintings. These papers are edited by Dr. B.R Gopal and published by the Mythic Society, Bengaluru.⁹⁹

Dr M S Krishnamurthy has studied the Nolambas, whose contribution to art is important, it is covered in the work.⁹⁹ *The Chalukyas of Kalyana* have been treated by Fleet. Dr.B A Gopal discussed them in *A History of Karnataka* as he had studied the dynasty for his doctoral thesis. Krishna Murari's *The Chalukyas of Kalyani* (1977)¹⁰⁰ not only presents a political history of the dynasty but also discusses administration, and social, economic and cultural life at considerable length. But perusal of Kannada literary sources including the vachanas would have helped the scholar to present a better picture of the social and religious life. Even the genealogy presented by him is not free from defects for example he has not mentioned Mallikarjuna in the genealogical tree; though he ruled as crown prince under Vikramaditya VI for long.

K R Basavaraju's Administration under the Chalukyas of Kalyana (1983) is a detailed account of their administrative arrangements including taxation.¹⁰¹ *The Chalukyas of Kalyana* edited by M.S Nagaraja Rao, published by the Mythic Society in 1983 is the compilation of Seminar papers. It presents a fine picture of the cultural life of the period including an art, music, religions, literature composed both in Sanskrit and Kannada of the time.¹⁰² The authoritative work on the political history of the dynasty was *the Chalukyas of Kalyana and the Kalachuns*, written by B R Gopal (1981), who has carefully studied a large number of inscriptions in Kannada, Tamil, Telugu and Sanskrit spread over the whole of South India to present a carefully crafted life and achievements of each and every emperor. This is a readable and standard work on the subject.¹⁰³ The Chalukyan art is a subject of great interest and scholars like Rea, Burgess, Taylor, Brown and many contemporary scholars like S R. Rao, A. Sundara, S. Nagaraju, etc. have written copiously on it. There are over 100 temples of the Chalukyas and their feudatories in Belgaum district, and a majority of them need to be studied.

The feudatories of the Chalukyas, namely the Kaachuris usurped power in 1162 and became emperors. Fleet had given an outline of their history. But a very systematic study of the dynasty was made by P.B. Desai in his book *Basaveshwara and His Times* (1967) tracing the

history of the dynasty to several earlier generations, and identifying as many as six sons and two grandsons of Bijjala who either ruled or tried to rule.¹⁰⁴

The Yadavas or Seunas

About the Yadavas or Seunas, both Fleet and Bhandarkar had presented good accounts. Alterkar's chapter in *the Early History of the Deccan*¹⁰⁵ and also in the Maharashtra State Gazetteer on the dynasty are worth noting. Of the independent publication on the subject, is by Dr. O.P. Verma titled *The Yadava and Their Times*¹⁰⁶ was the earliest. But Verma could not make use of all available inscriptions on the dynasty, and he could not interpret Kannada records properly to explore their full importance. However, his chapter on the temple architecture is something unique. He also presents a good account of their cultural achievement. Next came A. V. Narasimhamurthy's *The Sevunas of Devagiri* (1971).¹⁰⁷ Here the author has strongly argued the Kannada origin of the Sevunas. His account of the genealogy of and chronology of the Sevunas was an improvement on what earlier writers had done. He also pointed out that a prince called Mallugill ruled as a feudatory of the Delhi Sultan in 1333 A.D. Srinivas Ritti's¹⁰⁸ *Sevunas* was a further improvement on their genealogical history. Ritti has fixed that date of the famous Battle of Soratur as A. D. 1190, and as against the years 1191 or 1192 fixed by others. Ritti has presented a very good account of local administration under the Seunas.

The Hoysalas

The Hoysalas have been carefully studied by Rice and Hayavadana Rao, and Prof. Coelho's *Hoysala Vamsha* (1950)¹⁰⁹ is the first major analytical work on the dynasty. Nobody can study the Hoysalas without reading these works. But a more readable and scholarly work was by J.D.M. Derrett, *The Hoysalas: A Medieval Royal Dynasty* (1975).¹¹⁰ He interprets *tottudere* as concubine tax (*tottuis* a female servant) and *balavana* as child tax (which is actually a tax on the livestock). He gives a highly analytical and scholarly account of their administration. Seetharam Jagirdas, of late, has traced the history of the Hoysala family to the 10th century A.D.

The Hoysala Dynasty (1972) published by University of Mysore edited by Sheik Ali is the

compendium of the papers of a seminar organised Department of History, University of Mysore.¹¹¹ This is a highly useful book on the dynasty, discussing literary and cultural growth under the Hoysala patronage. This volume contains several good papers on various aspects of the period. A Research paper on coins by S. Nagaraju and on art by scholars like A. Sundara, B. K. Gururaja Rao,¹¹² S. Settar¹¹³ and others are worth mentioning. Sundara has pointed out that stellar shape profusely used in *Hoysala temples*, was already in vogue in the Chalukyan structures. S. Srikantha Shastry's *Hoysala Vastu shilpa* (1965) in Kannada is a detailed and scholarly publication on Hoysala art.¹¹⁴ Earlier, R. Narasimhachar has published detailed monographs on Belur, Somanathapura and Dodda Gaddavalli temples.¹¹⁵ Many scholars have studied Hoysala temples, and the latest in the series is a highly illustrated book in the Marg series, *In Praise of Hoysala Art*.¹¹⁶

There are some interesting publications on the social and economic history of the period titled the rise of Vijayanagara. A. Venkata Subbayya published many scholarly papers on the *agraharas* and on education, including the Kodimatha of Belgavi. G. S. Dikshit wrote a booklet in Kannada on education in ancient Karnataka and also the chapters on the subject in *Karnataka Through the Ages*.¹¹⁷ M. Chidananda Murthy also wrote a chapter on the subject in his *Kannada Shasanagala Sanskritika Adhyayana*.¹¹⁸ Dr. S. Leela Shantakumari's work *the History of the Agraharas in Karnataka 400-1300* has been published (1986).¹¹⁹ The latest publication on the subject, Dr. Jyotsna Kamat's book covers new ground by discussing developments during the later periods too with very valuable illustrations.¹²⁰

The times of Vijayanagara

A Forgotten Empire by Robert Sewell thrilled the students of South India when it was published in 1901.¹²¹ The value of Sewell's **account lay in its full exploitation of foreigners'** accounts on the Empire like those of Frnao Nuniz and Domingo Paes and also of Nicolo Conti, Caesar Frederick, Durate Barbosa and Abdur Razzak. The translated accounts of Frnao Nuniz and Domingo Paes were published for the first time as an appendix to the book. He was at ease with epigraphical material too, but as many inscriptions as now were not made available to

him. He also freely borrowed the statements of Ferishta (1606), the historian who wrote from the court of the Adilshahis, and as such was biased against Vijayanagara. Gulshan-e-Ibrahimi or *Tarikh-e-Ferishtain* Persian has been translated by Col. Briggs under the title *Rise of Mohammadan Power in India*. Sewell's work, with all its disadvantages as a pioneering work, was still a very graphic account of the Empire. Scholars connected with national resurgence were thrilled by the account *Never to be Forgotten Empire* by B Suryanarayana Rao illustrates these feelings and popular reactions to Sewell's writings.¹²² Books on the rule of the Bahmanis, the Adilshahis and Mysore rulers had been published by then. They included writings of Ferishta, Zubairi (*Basatin-us-Salatin*, 1818), Kirmani, Wilks, Bowring and the like Meadows Taylor in his book on Indian history, Rawlinson etc had given an account of the Bahmanis, Adilshahis and Haider and Tipu History of other dynasties of the post-Vijayanagara times came to be written very late, during the 20th Century.

No systematic effort has been made to outline the impact of Maratha or Mughal activities in Karnataka Aurangzeb's campaigns and later the campaigns of the Peshwas and their commanders should be studied from the point of view of their effect on Karnataka.

Alur Venkatrao, from Dharwad wrote *Karnataka Gatavaibhava* in 1920 and it is in a highly emotional tone.¹²³ Historical writing in pre-Independence days by Indians had this tone in common all over India. He gave an account of Karnataka history till the days of Vijayanagara. The glory of Karnataka ended with Vijayanagara to him and many other nationalists. The Muslim period and other Hindu dynasties which ruled over small territories were not taken seriously for long. Secondly, there was a great fascination for epigraphic all studies because it involved scholarship in Sanskrit and Kannada. This national spirit did encourage historical studies.

In fact the *Karnataka Itihasa Samshodhana Mandal* was started at Dharwad and he sent R. S. Panchamukhi to the office of Epigraphy at Udakamandala and helped him to get appointed there with a view to get him trained in Epigraphy to serve the needs of the North Karnataka area. Later, Panchamukhi trained P.B Desai. He was hailing from a family of nationalists and Joined the office of Epigraphy by the influence of

Panchamukhi who trained scholars like Srinivas H Ritti N S Rajpurohit, Bengeri, Annigeri, Umarji, etc in epigraphical studies. Enthusiasm created by these men helped the founding of the Kannada Research Institute at Dharwad and Siddappa Kambali was instrumental in its establishment.

The Kannada Research Institute as a government department has done considerable work in the field of surveying antiquities, epigraphs and paper records. The institute has published *Karnatak Inscription* vols Panchamukhi, Malwad, Saletore, P B Desai, etc. were worked as its directors. It built up a highly useful library helping research scholars of Dharwad region.

The *Karnataka Itihasa Samshodhana Mandal* as a private body, created lot of public interest in historical studies, and it organised the Vijayanagara Sexcentenary Festival at Hampi in 1936 and brought out *the Vijayanagara Sexcentenary Commemoration Volume*, a highly useful publication, outlining the various facets of the empire's achievements in the field of religion, literature, art, music, etc.¹²⁴ P B Desai's *Vijayanagara Samarajya* (1936) in Kannada was also brought out on the occasion.¹²⁵

B. A. Saletore's¹²⁶ monumental work had already been published in 1934 and T.V. Mahalingam covered the same field in the early forties.¹²⁷ Both discuss in detail the political conditions, administration, taxation, etc., and also social conditions. T.V. Mahalingam has written a separate account on economic conditions of the Empire. Vijayanagara has been a popular subject on which researches have been continued by scholars from Karnataka, Andhra and Tamil Nadu. Works of H. Krishna Shastry (his three long articles on the three dynasties in the Annual Report of Archaeological Survey in 1907-8, 1908-9 and 1911-12),¹²⁸ S. Krishnaswamy Iyengar,¹²⁹ N. Venkataramanayya,¹³⁰ K. A. Nilakantha Shastry,¹³¹ Father Heras,¹³² P B. Desai,¹³³ Rama Rao,¹³⁴ Dr.G.S.Dikshrt,¹³⁵ O.Ramachandrayya, S.Srikantaya, Dr. K Sarojini Devi and a host of others have enriched our knowledge on the empire.¹³⁶

Dr. A.V. Venkataratnam has made a study of local government under Vijayanagara.¹³⁷ Dr. K. Srikanthayya has published a book in Kannada on social conditions, mainly based on

Kannada literary sources.¹³⁸ Outlining the developments of Vijayanagara rule in each and every district of Karnataka is bound to help secure **better insight into Karnataka's past as inscriptions** of the time are available in plenty in old Mysore area and also in Bellary region in quite a good number. Dr. G.S. Dikshit has edited a monograph titled *The Early Vijayanagara*, which contains the papers presented in a seminar on the Sangamas.¹³⁹ A separate work on herostones in Kannada by Dr R. Shesha Shastry¹⁴⁰ and Seminar papers edited by Settar are notable. Local self-Government in Medieval Karnataka by Dr G S Dikshit is a scholarly work, helping the reader to understand the political institutions connected with popular participation in local administration.¹⁴¹

Excavations at the capital city described as an open-air museum have been going on. Many foreigners like Mitchel, Filiozat (Dr Pierre and Dr Vasundhara) and a host of others have worked at Hampi and have brought out useful publications. Both the State and Central Archaeological Departments have also brought out illustrated reports. Those who have read Longhurst's Hampi Ruins have to revise their views after these excavations. An unpublished thesis by Anila Verghese (Bombay University) on the Hampi ruins being used to outline the religious conditions of the empire is worth mentioning here.

The history of the Bahmanis

The history of the Bahmanis is reconstructed with the help of the contemporary and near contemporary writers like Fenshta, Nizam-ud-din Bakshi (Tabaqat-i-Akbari, Volume I, II III),¹⁴² Rafi-ud-din Shirazi (Taz-kirat-ul-Muluk, translated by J.S King) and Tabataba Burhan-i-Masir, translated by King. These near contemporary accounts serve as highly useful source material for their detailed accounts of the dynasty, and the last two have been translated by J.S.King in the book titled *The History of the Bahmani Dynasty*, published in 1900.¹⁴³ H.K Sherwani's *The Bahmani Kingdom* and *The Bahmanis of Deccan* are two scholarly works on the Dynasty.¹⁴⁴ The Early History of Medieval Deccan edited by Sherwani and Joshi in 2 volumes (1973 and 1974) has presented an account of their political history, but also of their cultural achievement.¹⁴⁵ Dr. P.M. Joshi's chapter on the Delhi Sultanate family in the Bhawan's

series is also worth mentioning. Yazdani has given a detailed picture of their monuments in his profusely illustrated work *Bidar - Its History and Monuments* (1944)¹⁴⁶ in which together with the discussion on the monuments in Bidar and Ashtur, a history of the Baridis and an account of their monuments is included. It is a scholarly publication, with very good photographs and **drawings. S.K. Sinha's** *Medieval History of the Deccan*, outlines the history of the Bahmanis (1964).¹⁴⁷

The contemporary works on the Adilshahis, by Shirazi and Farishta serve as good source. *Busatin- us-Salatin*, written by Zubairi in Persian in 1818 is a copious account based on a large number of records he had at his disposal. A Marathi translation of this, undertaken by noted Maratha historian Parasnis and edited by V.C. Bendre, (*Vijapurchi Adilshahi*, 1968) is available work.¹⁴⁸ Meadows Taylor wrote a chapter on the dynasty in his history of India. So did Rawlinson and others.

All these accounts on the history of the dynasty have failed to present a picture of their rule with special reference to the Kannada speaking areas or its impact on Karnataka, except what has happened in Bijapur. There is a need to outline the picture of their rule with reference to agriculture, industry, trade and social aspects. The post Vijayanagara history is developed more or less on the Archival Material preserved in various forms in different libraries and the contemporary writings. Dealing such works will take more time space thus, those section in discussed in brief under archival studies

ARCHIVAL STUDIES

Another important branch of study connected with the utilisation of sources is the Archives study of paper records and *kadatas*. It is a far wider field, mostly connected with post-Vijayanagara period, covering the time when the Muslim rule in Karnataka started. The dynasties like the Bahmanis, the Adilshahis, the Baridis and all the subordinate pategars of Vijayanagara like Keladi, Mysore, Chitradurga etc. archives of no royal family have come down to us as it happened in the case of the Peshwas of Pune (the Shanivarawada collection, etc.) The papers of the Kodagu royal family found in the Deputy Commissioner's office of Madikeri. Only the

British administration built up their Secretariat records at Bombay, Madras and Bangalore from 1831. The Mysore Palace Records acquired by the Karnataka State Archives in 1982 do not go beyond the 19th century. Paper records are perishable and the scholars who took historical researches after 1900 did not pay much attention to them as they fond of inscriptions. Some individual scholars like Taliur Rayangauda, Panchamukhi and others at the Kannada Research Institute, Dharwad, Ganapathirao Aigal in South Kanara, Hulluru Srinivas Jois of Chitradurga and Keladi Gunda Jois did make some efforts in the direction. When British scholars like Meckenzie and his like collected them on a large scale, Indian scholars did not pay any attention to them. These papers were taken to far off museums and libraries overseas including the India House Library, and neither they are accessible to scholars easily nor are the systematic catalogues easily available.

Publication of Sringeri records by the efforts of G S Dikshit, S. V. Deshikachar and A. K. Shastry, and one volume of Kudli-Sringeri Records in 1956 by the Mysore Government (edited by B. Venkatasamanna) are two notable efforts in this direction.

There are records on Karnataka at the State Archives of Maharashtra (at Bombay, Kolhapur and Pune at the Shanivarawada and Alienation Office), Tamil Nadu, Goa, Andhra Pradesh and Kerala, and also at the National Archives. Records on Karnataka are also available at Paris,

Basel, London and Lisbon. Records at the Government offices like those of the Divisional Commissioners, Deputy Commissioners, Municipalities, etc., are yet to be systematically catalogued. A regular cataloguing of records in the custody of the mathas, temples, mosques, *dargahs*, churches, public institutions, in families of successors of officers of yore and industrial houses has not received adequate attention. Old newspaper files have to be located and preserved. Archival movement in the state is languishing, and it awaits the emergence of a dedicated band of scholars trained in the decipherment of Kannada and Marathi *modi* records and also those who know Marathi, Persian, French and Portuguese.

A good number of books surveying the history of Karnataka over a stretch of time came to be written is pioneering, and covered the period till the days of recent past. Books on the Shatvahanas, the Kadambas, the Banavasi, the Gangas, the Chalukyas, the Rashtrakutas, the Chalukyas of Kalyana and Kalachuris, the Hoysalas and the Vijayanagara are the major dynasties and some of the minor dynasties like the Goa and the Kadambas of Hanagal, the Guttas and the Rattas and many more medieval feudatory states contributed to the development of Karnataka Culture and the study of such dynasties needs to be carried in the lines of the major families.

LADAKH IN HISTORICAL OUTLINE : FROM ANCIENT TIMES TO MODERN TIMES

Amjad Khan

The history of Ladakh as an independent Kingdom can be traced from 10th century when after the disintegration of Central Tibetan Empire which resulted in the formation of small kingdoms. Earlier Ladakh was considered as part of Yarlung dynasty's Tibetan Empire. After the disintegration of Tibetan Empire, a group of royal lineage people migrated towards the west part of Tibet, founded the Gon dynasty around the areas of Nyari Gogsum. The founder of the Gondynasty Nyima Gon compartmentalized his kingdom among his three sons. Palgyi Gon, the eldest who received the proper Ladakh from the Zojila pass to Rutog was the largest portion.¹ The second son Trashis Gon, received the Purang and Guge. Ldetsug Gon, the third who ruled over the southern provinces of the kingdom, which includes Zanskar, Lahoul and Spiti. In their regime more people began to get access in the Ladakh region, monasteries were sprang up in Ladakh. Lha chenrgyalpo (1100-1125), who built Likir monastery is been considered as one amongst the ancient monasteries. During this period Ladakh has been considered as a part of Western Tibet.

According to Ladvag's gyalrab (royal chronicle of Ladakh) during the reign of Gyalpo Lachan Takbumde, his brother Takpabum

declared himself as independent. Concomitantly Ladakh was divided into two region, the lower ladakh comes under Takpabum who ruled from Temisgam as its capital and the upper ladakh by Takbumde centred at Shey. In fact Ladakh separated in to two kingdoms with new seat of power. During Bhagan, the son of Takpabum, who united the kingdom by defeating the Leh ruler and founded the Namgyal Dynasty with his surname Namgyal (Namgyal means victorious), thus the foundation of an independent kingdom was led by Bhagan.² He was succeeded by Tsewang Namgyal. He died childless, without any natural heir for the throne, there occurred power scuffle among the vassals, resulting in independence declaration.

The changed political scenario made the younger brother of Tsewang Namgyal, Jamyang Namgyal as new ruler on throne. The first task in front of the Jamyang Namgyal was to subdue the local chieftains. In the parallel time there was scuffle in the neighboring area of Purig. The rulers of Purig had accepted the religion of Islam, the two chiefs of Chigtan and Kartse had declared themselves as Sultan. Both rulers were fighting for their supremacy of the place, thus in this situation, the ruler of Chigtan called

Jamyang for the help. Jamyang Namgyal decided to help Tsering Malik of Chigtan.

The war against the Kartse proved detrimental, as according to the traditions the time was not suitable for war, as the festival of New Year was approaching, but the king was in haste and proceeded to help the chigtan ruler.³ At the other end the Balti ruler Ali Mir was waiting for an opportunity as the earlier ruler Tsewang Namgyal made inroads into the Balti province, resulting in the destruction of the area. Thus when Jamyang Namgyal reached Purig, Balti ruler had deployed its army to counter the Jamyang's soldiers. Both the armies fought each other on the battle ground of Purig. A fierce battle was fought between the two in which Balti ruler succeeded and Jamyang Namgyal was captured.⁴ Ali Mir found it difficult to rule Ladakh as the population were mostly belong to the Buddhist faith. Hence he concluded a treaty with Jamyang Namgyal. Jamyang Namgyal will continue as the ruler of Ladakh but he had to marry with the daughter of Ali Mir namely Gyal Khatoon and the child between them will be the successor of Jamyang Namgyal, which inturns means Jamyang Namgyal had to disinherit the sons with his earlier wife. Jamyang Namgyal had to obey as there was no other option for him. He married with Gyal Khatoon.⁵

According to the sources, during the war Ali Mir desecrated many Monasteries due to which Ladakh lost many valuable sources because Monasteries were not only the religious place but also acted as repositories of information. Another point was that the Balti ruler wanted to convert Jamyang Namgyal into muslim and put muslim ruler on the throne of Ladakh, but it doesn't seem a fact as Jamyang ruled Ladakh without converting to Islam, rather he sent golds, silver and other precious things to Lhasa and gave dinner to the lamas of monasteries in order to redeem for the destruction made to the gompas. He also promised to restore the books and erect the sacred places.

After Jamyang Namgyal, Sengge Namgyal ascended the throne.⁶ The reign of Sengge Namgyal had been a successful rule. He extended his kingdom far and wide. In order to complete the unfulfilled task of his father, he built monasteries and invited the famous Lama

Stag Tsang Ras Chen to Ladakh. In a fierce battle with the ruler of Guge, Sengge Namgyal defeated the Guge ruler. Sengge Namgyal constructed many buildings, some of the important buildings are Leh castle (it is of nine storeys), Hemis monastery (in which a huge statue of Stag Tsang Ras Chen is built and also monastery is famous for devil dance) he copied books in gold, silver and copper, and sent costly offerings of coral, silver, gold, pearls to Central Tibetan monasteries. Sengge Namgyal presented costly gifts and many other objects to Stag Tsang Ras Chen like 100 ponies, 100 yaks, 1000 sheep, 1000 rupees, 300 grammes of gold, 3000 loads of grain, 1 string of pearls, 1 string of coral beads, 1 string of turquoise beads, 25 match-locks, 25 spears, 25 swords, 25 pieces of silk, 10 pices of brocade, 25 pieces of blessing, and other presents.⁷ By sending the gifts and other articles, Sengge Namgyal wanted his position to be strong, no one can claim his right over the throne.

Deldan Namgyal ascended the throne, he was the eldest amongst the three sons of Sengge Namgyal. The position of Ladakh became precarious during the reign of Deldan Namgyal, the king in order to show his great respect to the Red sect of Buddhist religion took the side of Bhutan against the Gelukpa sect of Tibet. The Tibetans with the aid of Mongols declared war against Ladakh. Ladakhi army were driven away from the territory held as boundary between Ladakh and Tibet. Tibetan army followed the Ladakhi army and the latter had to run away for their life and had to hide in the fortress of Basgo. Tibetan army stayed near the Basgo fortress for three years from 1680 to 1683. In order to safeguard Ladakh from the Tibetan army, Deldan Namgyal send his emissary to Kashmir for the help. The help was granted with some conditions. Both Tibetan army and Mughal army fought battle near Basgo, Mughal army defeated the Tibetan army.

The conditions put forth by Mughal governor for safeguarding the Ladakh were: Deldan was to become Muslim with the new name Akabat Mahmud Khan, in order to make certain of Deldan's change of religion, his wife and son were to remain as hostage for three years. Coin has to be struck in the name of Mughal Empire. Every encouragement has to be given to the muslims in Ladakh and a mosque

was to be erected in Leh.⁸ The wool trade has to be carried out with Kashmir only. To carry out the trade four Kashmiris shall reside at Spitug and do the trading with the Kashmiris. Annual tribute has to be sent to Kashmir consisting of 18 piebald ponies, 18 pods of musk, and 18 white yak tails. In exchange the governor offered to send 500 bags of rice annually. With the departure of Mughal army from Ladakh, Tibetans were waiting for the opportunity, this time Tibetans were not for the war but for peace treaty, Deldan Namgyal had to agree as it was direction from the supreme Lama, called Mipam wangpo.

The famous treaty of Temisgam of 1684 was signed between Ladakh and Tibet, the boundary between the Tibet and Ladakh was fixed, and the tax of the villages within the boundary of Ladakh and Tibet will be used as the expenses for the sacrificial lamps and the reading of prayers in Tibet⁹. This led to the loss of territories of Guge, Purang, and Rutog in the name of religion. Another provision was the trade regulations, the king of Ladakh had to send a mission once in three years known as Lapchak mission, in which thirty grammes of gold, ten weights of scent, six pieces of calico, and one piece of soft cotton cloth to the Dalai Lama. In addition separate presents were also to be sent to the lamas. The members of the mission shall receive daily ration and fodder for the animals. On the other hand, the government trader of Tibet shall come every year with 200 loads of brick-tea.¹⁰

The conquest of Ladakh by Dogra general Zorawar Singh in 1834 put Ladakh under the Lahore Durbar, Gulab Singh collected a force of about 5000 men and sent under the command of Zorawar Singh Kahluria,¹¹ he took the route from Kishtwar and Zaskar. Ladakh at that point of time was without a strong leader, at the same time the weapons were old type, there was no standing army due to which the fighting spirit among the soldiers were lacking. Thus we have a picture not of an army in any real sense of the word, nor even a militia, but rather a rabble of untrained conscript. Dogras were allowed to advance without meeting any real opposition, till they reached Sankhu, above Kargil.¹² There was a small contingent posted but were easily defeated by the dogra soldiers.

An opportunity was provided by the nature as winter was approaching and the dogra general was well aware of the difficulty they had to face if they **don't** retreat to a suitable place for them. So the dogra general offered peaceful settlement by payment of 15000 rupees as retreating amount.¹³

The chronicle records that the king and his ministers were ready to take the advantage of the offer but the interference of the queen led to the abandon of the offer. Dogra general waited in Sankhu for the new season. Dogra forces waited till April till the snow got melted and the passage became accessible, the Ladakhi forces posted in small contingents were defeated and chased almost all the way to Leh. Ladakhi forces were unsuccessful to defend and such was the havoc of Dogra general that the envoys from villages like Saspol, Alchi, Likir and Nyemo brought presents and were ready to pay homage to the General. At Basgo the king himself came to meet the Dogra general and had to agree the terms which was huge. The king was to pay war indemnity of 50,000 rupees and an annual tribute of 20,000 rupees, and henceforth to consider Ranjit Singh's vassal.

The death of Zorawar Singh in the battle against the Tibet raised the hope of restoration of the indigenous rule but the Dogra ruler Gulab Singh came with his force and defeated the army of Ladakh, thus crushing the hope of resurgence and signed the treaty in 1842 thus putting Ladakh under the Dogra rule. The Dogra wars brought Ladakh into the world conflicts. It put an end to the independence it enjoyed earlier. With the treaty of Amritsar in 1846 Ladakh came under Jammu and Kashmir. And Ladakh remained part of Dogra Kingdom till 1947. After the partition of India and Pakistan, Ladakh with Jammu and Kashmir became part of India.

Thus the foundation of Gon dynasty broke Ladakh's political lineage with the Tibetan Kingdom which became stronger with the foundation of Namgyal Dynasty by king Bhagan. After staying independent for centuries Ladakh's independency came to end under the Dogra rule and in 1947 Ladakh with Jammu and Kashmir became part of Indian Dominion.

5. According to Cunningham, during the attempts to re-strengthen Buddhism in Ladakh, the colossal stone Maitreya at Mulbe is said to have been probably erected. This is quite improbable, as such an event would certainly be mentioned in the chronicles. Besides, the custom of erecting stone images is very much older. Judging from the few dateable ones, we may say that not many were erected after 1000 A.D. The Mulbe image was probably carved by one of the Purig chiefs during their first time of independence.

B.N.SASTRY'S (1932-2002) HISTORICAL WRITINGS AND THEIR IMPORTANCE - A CRITICAL NOTE

G. Anjaiah

The fact that some non-historians contributed to the enrichment of historical writings in India is indispensable. D.D. Kosambi (1907-1966) a mathematician by profession extended his valuable insights to history and all his historical writings were appreciated by eminent historians. To this genre belongs, the Telugu scholar Bhinnuri Narsashima Sastry, (1932-2002) who occupies a special place in the scholarly world of Andhra Pradesh for his contribution to Telugu literature, History and Culture. The formation of Telangana State on June 2nd 2014, made the government, Historians and Scholars to focus on the importance of history of Telangana from pre-historic times to contemporary period. In the process of tracing back the intellectual wealth of Telangana, the historical works, inscriptional volumes, Zilla Sarwasvaalu (District encyclopedias), Historical novels, plays etc., of B.N. Sastry became much sought after by historical scholars. To renew B.N. Sastry's works, his students E. Shivanagi Reddy, K. Suryakumar and Kurra Jithendrababu and his associate Sreeranga Chary, historians Adapa Satyanarayana and I made a humble attempt to revisit and highlight the great contribution of B.N. Sastry towards the regional history of Telugu people. The primary objective of this research is to focus on major contributions

of B.N. Sastry to Historical writings of Andhra Desa on the basis of his works.

Bhinnuri Narasimha Sastry, popularly known as 'Shasanaala Sastry' (Sastry of epigraphs) was born on 10th December 1932 in Nalgonda. He was a renowned scholar in Telugu, Sanskrit, Brahmi, Urdu and English, B.N. Sastry was a multifaceted personality. His works speak about his commitment to write a fact based empirical history and culture. All his published works were self-financed and never accepted any aid from government, institutions or individuals. Sastry condemned the policies of state government in his editorial articles in a monthly journal 'Moosi' until he breathed last. He is considered to be a unique personality of Nizam State. He toured more than two thousand villages of Andhra Desa and collected nearly eight thousand Telugu inscriptions which provided elaborate and interesting details about the History of Ancient and Medieval Andhra Desa.

The following are the important works of B.N. Sastry on Epigraphy, History and Culture:

S.No.	Name of the Book	Year of Publication	Remarks/Subject matter
1.(A)	Inscriptional volumes; 1. <i>Shasana Samputi</i> . 2. <i>Tripurantakam</i> temple Inscription 3. <i>Kanduru Chola</i> Inscription 4. <i>Bejawada Durga Malleshwari</i> Temples Inscription 5. <i>Mukhalingam Temple</i> Epigraphs. 6. <i>Cheruku Reddy</i> Epigraphs 7. <i>Golkonda Charitra Sanskrithi</i> Inscription 8. <i>Recherla Padmanayaka</i> Inscriptions.	1974 1984 1984 1985 1985 1989 1989 1994	These inscriptions are collected by Sastry. He visited many village in Andhradesa and published. All these inscriptions with his own money. Today these volumes became a primary source to scholars who are working on history of Telangana. Very interesting political, socio, economic religions, cultural aspects are found in these volumes.
2.	<i>Andhrula Saangika Charitra</i> (Social History of Andhras),	1975	This book gives a detailed History of Andhra people from 400 BC to 1100 CE. It filled the gap left by Suravaram Pratapa Reddy (The author of <i>Andhrula Saangika Charitra</i>).
3.	Andhradesha Charitra Samskruthi (History and Culture of Andhras) Three Volumes	1990	First volume describes the History of Andhradesa from Pre-Historic times to 1323 CE. Second volume covers the <i>History of Andhradesa from 1323 to 1517 CE</i> . The Third volume covers <i>The History of Andhras from 1518-1990</i> .
4.	History and Culture of India (21 Volumes)	1992-1999	The vision and aim of Sastry is not confined to Andhradesa. He was a true nationalist. A great admirer of Indian culture and its values. So he wrote the Indian History in 21 volumes covering from Ancient times to till the year 1948.
5.	Zilla Sarvaswalu (District Encyclopedias) a. Nalgonda. b. Adilabad. c. Mahaboobnagar	1975-1986 1990 1993	These Zilla Sarvasvaalu are real gift by Sastry to the people of this region. They contains glimpses of the life of Telangana Villages.

B.N. Sastry started the writing of '*Nalgonda Mandala Sarvaswam*' (encyclopedia of Nalgonda) in the year 1975 and it was completed and printed in 1986. In this work Sastry tried to provide the History of Nalgonda since Pre-Historic times to 1931. He collected

more than hundred inscriptions from different parts of this Mandal. Two Brahmi Inscriptions were discovered and edited by B.N. Sastry in 1965. They belongs to Vishnukundin Kings *Govindavarma's* (398-435CE), Indrapalanagara copper plate grant(556-570CE) and *Vikramendrabhattaraka Varma's* copper plate grant found at the same village, *Nagaram-Thummalagunde*, (in present Yadadri-Bhuvanagiri) brought him great recognition as epigraphist. These two Bhrami epigraphs were well read by Sastry and he established the correct chronology, family genealogy and that the *Indrapala Nagaram (Thummalagudem)* was the capital city of Vishnukundins on the basis of the above two epigraphs in a famous Telugu monthly journal *Bharathi* in June, July.1965. He received great appreciation from the established historians like M. Ram Rao¹ Eminent historians such as Nelaturi Venkataramanayya, Kommaraju Venkata Laxamn Rao, Ajay Mitra Sastri also appreciated the great historical value of B.N. Sastry's two epigraphs and his findings. Sastry became well known historian in Andhradesa. In his second volume, *Andhradesa-Charita and Samskruthi* (1323-1518) B.N. Sastry tried to provide a detailed history of Kakatiya Mandalikas such as Recherla Reddis, Cheruku Reddis, Kayastas, Malyalas, Viriyala Chiefs and Nathavadi Chiefs, he also tried to provide the history of Musunuri chiefs, Recherla Padmanayakas, Reddi rulers, Vijayanagara and Bahmani rulers, who ruled Andhradesa after the decline of Kakatiyas. In the writings of this volume he used the epigraphical data collected by him from Telugu inscriptions found at Warangal, Nalgonda, Karimnagar, Draksharamam and Velpuru.

B.N. Sastry quoted many primary sources in his three volumes, for instance while discussing about Satavahana Administration, he quoted the information collected from *Epigraphia Indica*, Vol-VIII Nasik inscriptions No.2 of Pulomavi II. According to the data collected from the above inscriptions in the Satavahana kingdom during the reign of Pulomavi II, Eleven Rastras or Provinces namely, Asika, Asaka, Mulaka, Surata, Kakura, Aparantha, Anupa, Akara, Vidarbha, Avanthi, Vaijyanthi were mentioned.² Similarly, the above scholar also mentioned the little 'Sarvaraajalokamandala Prathi Gruheetha Shasananya'. This title is given in the above stated Epigraph.³ The learned

scholar in another lace while describing the importance of King Hala's Prakrit work Gaadhasapthasati, provides very interesting details about Hala's queen 'Mayavathi' her multifaceted talent. The poets, scholars patronized by Hala such as Kumarila, Sreepalitha⁴ etc. In this same volume on Page Number 129, the scholar provided a map of Andhradesa, with important Buddhist centers such as Shulikatta, Kondapur, Thirumalgiri, Nelakondapalli, Vardhamankota, Gaajula Mandha, Phanigiri, Indrapuri, Amaravathi, Jaggayyapeta, Ghantasaala, Shaalihundaala, Nagarjunakonda, Karimagar, Bhattiprole, Guntupalli, Bavarkurthi etc.⁵ Thus the details given on certain aspects by B.N. Sastry are really showing his talent and caliber as historian.

Telugu and Sanskrit inscriptions⁶ of Outbshahis were given in chapter one.

The Information gathered from Urdu, Persian epigraphs was also used by Sastry in the writing of this volume. The details mentioned in this volume about the History of Outbshahis are matching with the details given by eminent historian H.K. Sherwani in his work "The History of Outb Shahi Dynasty".

Tripurantakam Temple Inscriptions (1984):

B.N. Sastry collected nearly 105 inscriptions between 1964-1983 from Tripurantakam (Prakasham District) Temple and its surrounding villages. They are issued by the various rulers and officials, queens, rich people of Andhra Desa who ruled between 1108 CE to 1386 CE. The subject matter of these epigraphs is composite in its nature. Political, social, economic, religious aspects are covered in them. Sastry gave a table in this volume. It clearly describes the name of the donar, occasion, details of gift made in the form of cash or kind. A separate table was given in this volume with a title 'Akhanda Deepadaanalu' states that 1276 cows, 127 bulls, 123 goats 127 oxen were donated to this temple by rulers. He also specifically quoted that in the year 1258 CE, Mollala Annapa Reddi donated 25 cows, one horse to Lord Tripuranteshwara for the purpose of maintain Akhandadeepam in the temple.⁷ Sastry collected the inscriptions published in *South Indian Inscriptions* Vol.X. published in his volume to make it more easy to understand to general readers.

According to Sangana Bhatla Narsayya a retired Telugu scholar from Dharmapuri (Karimnagar), B.N. Sastry succeeded in collecting and writing detailed account on Inscriptions of Vemulawada Chalukyas. Among them, Vemulawada epigraph of ArikesarIII (930 CE), Kurmalya (936 CE) inscriptions of Jinavallabha younger brother of famous Kannada poet Pampa. Dharmapuri village was donated by king Arikesari to Pampa. This epigraph gives a **lengthy details about Poet Pampa's ancestors.** The unique feature of this epigraph is it consists of **three Telugu, Three Kannad 'Khanda' Padyams** (poems).⁸

The learned scholar also edited Baddega's Vemulawada stone inscription, Repaka epigraph of Arikesari III, Vemulawada Tank epigraph of Ammalladeva (undated) Jagadekamalla Jayasimha II's Kedareshwara inscription dated 1033 CE, Beemeshwara Temple inscriptions of Vikramaditya VI dated 1106 CE mentions (Puttivenkrukalapannu -tax on hair removal ceremony (tonsure). These epigraphs are in Telugu, Kannad and Sanskrit language. B.N. Sastry also wrote '*Bezawada Durgamallishwara Inscriptions*' nearly 95 inscriptions (8th - 16th century) issued by different rulers, officials are described in this book. Contemporary socio-economic and culture is depicted in these volumes. According to eminent historian Kolluri Suryanarayana, B.N. Sastri edited these epigraphs. He also provided the history of Ganga, Gajapati rulers, who ruled this region.

B.N. Sastry was deeply influenced the ideals of Indian National Movement. He closely experienced the oppressive rule of Nizam (Osman Ali Khan) and his supporters (Deshmukhs, Deshpandes, Patels, Patwaris). He **read the articles written in 'Neelagiri' paper by Shabnavees, Venkata Rama Rao and Golkonda Patrika** by Suravaram Pratapa Reddy. The love

for freedom, equality etc propagated by above intellectuals of Hyderabad State inspired Sastry to raise his voice against Nizam. At the age of fifteen he took part in the Telangana Peasants Armed Struggle, alongwith the famous Communist leader Ravi Narayana Reddy. Young Sastry participated in Communist *Dalams* attack on the camp of Razaakars located at '**Gundrallapalli (Nalgonda) on 17-10-1947.** This makes it clear that Sastry is capable of using his '**Pen**' and **Gun to achieve justice.**

In his revolutionary novel '*Viplavajwala*' (Flame of Revolution), he described the Pathetic and horrible life of Telangana people under the oppressive rule of Nizam, Sastry was known for his humane touch. In his historical writings, he not only described the life style of kings, officials, rich, but he also presented the colourful, humble life style of common people. In order to provide a fresh life to historical and cultural aspects, to encourage research on above aspects, he contributed many scholarly articles in a leading *Telugu Journal Bharathi* between 1965-1980. But, as this journal was stopped since 1980, **Sastry, started his own monthly named 'Moosi'** from August, 1980 onwards. At present this historical and cultural journal (Moosi) is under **the able editorship of Sastry's daughter Bhinnuri Manohari and Sagi Kamalakara Sarma** son-in-law of Sastry. (Assistant Professor of Department of Telugu Osmania University). Recently they conducted a two-day National Seminars on 10-11 December 2019 in Osmania University on **B.N. Sastry's literature and historical works.** It was well attended by learned scholars from both Telugu speaking States. They appreciated the great qualities of Sastry as a true historian, paid tribute to Sastry. The idea of establishing a Telangana Cultural and Historical Centre was coined in memory of this great scholar.

INTRODUCING A NEW HISTORICAL GENRE: MISSION AND VISION OF HISTORY BE TALKING MALAYALAM ARTICLES IN PRINCELY COCHIN

Ansu Mathew

The debate regarding the historical consciousness of India began with the advent of Europeans in India. 'Modernity' made historical consciousness as equal to the writing of history in positivist methodology. So Europeans started to search for written history based upon positivist methodology in India. Since the historical consciousnesses of Indians were different from the ideologies of 'modernity', colonizers prejudiced that Indians are 'ahistoric'.

For the validity of knowledge, 'modernity' wants to institutionalize knowledge. It also wants different disciplines and insists on a strict methodology. Philosophy of positivism also influences knowledge making. Empirical knowledge making had an important role in it. The main dogma of empirical knowledge is that truth and objectivity will lead to knowledge. 'Modernity' wants value free-neutral and non-judgmental knowledge. Because of the influence of positivism, history also came under strict methodology. Ranke was introduced to scientific methodology in history. Chronology, data, interpretation, truth, causes, objectivity, collectivity, methodology and narration are important factors in it. From the period of colonial modernity Indians also started to understand historical consciousness as the writing of history. The influence of the philosophy of positivism sources got significance in the writing of history. Identification of 'authentic' sources, prioritize that sources based on the level of authenticity and the scientific data analysis are part of scientific history writing.

With the introduction of the positivist methodology by colonizers in Indian history writing, it shifted to an institutionalized form. Through this process, colonizers legitimized their power. At the same time history grown up as an academic subject. Knowledge forms like Archaeology, Museology, and Archives became institutionalized as part of it. Rankean Scientific history writing introduced to India as a result of colonial modernity. Even though truths, objectivity like scientific concepts are established to India as a colonial hegemony,

these concepts made significant changes in Indian history writing.

In the case of princely Cochin, all the fluctuations in the history crafting process can be seen here also. Even though *Cochin State Manual* was a manual, it was the first that attempted to cover the 'whole' history of Cochin with a positivist methodology. As part of colonial project colonizers discovered the 'absence' of historical consciousnesses in Indians. During the first half of the twentieth century, a discursive space was formed in princely Cochin about the history. Magazines and compiled works in the Malayalam language had an important role in it. Middle class educated people like Malayalam literary scholars, lawyers were active participants in these discussions. Some of the articles published in these magazines were added to the textbooks of students. The articles mainly focused to introduce what is history, what are the sources introduced for crafting history and how historical knowledge benefited for the contemporary society and so on. This paper is an attempt to analyze how the history discussed articles published between 1910 and 1930 gave awareness to craft history with a positivist methodology in princely Cochin.

As part of the colonial knowledge production pan Indian project, the colonial government tried to make a historical consciousness in princely Cochin in the first half of the twentieth century. The articles that come under the present study tried to define what history is. During the first half of the nineteenth century, two explanations can be seen regarding the history of princely Cochin. The first one is history deals with various cultural industries and social discourses in the contemporary periods of these events. Discussion of a particular event in a period is not history. It is one of the parts of history.¹ In another discourse, history is defined as a science. Because like all other sciences history is hypothetical and it concerns the human community². This definition makes awareness that how modernity connects science with history.

Some of the reasons behind the active discussion about the procedures for crafting history in princely Cochin are

'Absence of history' and 'absence of history writing skill' in Kerala.

The main theme explained in these articles was about the 'absence of historical consciousnesses of Kerala'. In South India and Kerala, history is absent and people never attempted to collect and preserve any historical sources. Only civilized society preserves its history. All these colonial notions are accepted in these articles and criticized the laziness of Kerala people to preserve its historical knowledge. Precolonial Indians had their kind of historical consciousness. Modernity made historical consciousness as equal to the writing of history in Positivist methodology and it differentiated historical consciousness, historical knowledge, and historical sense. Historical consciousness is placed higher than historical knowledge.

In Kerala historical narrative of each period is shaped by the important literary genre of that time. There are two kinds of historical narratives in Kerala. That is Normative and Specific. The normative kind of historical narrative includes legends, Folklore and so on. A specific kind of historical narrative framework has been adapted from contemporary literary genres and history interpreted within it. One of the examples of this type of history production is *MushikavamsaKavya*.³ But Europeans didn't understand our way of historical sense and they neglected it. The colonizers remarked that historical works in India is full of exaggerations and fables. So authenticity and chronology were absent in their works. After the *History of British India* by James Mill, most of the articles and works about history by Europeans and Indians repeated about 'ahistoric' Indians. These articles were also a tool for spreading colonial notions about India and thereby fed the mindset of Indians by colonial false assumption. So the history discussed articles in princely Cochin wanted Kerala people to build up 'authentic' historical knowledge about their society. Actually "The new historical method that ascended to dominance in the colonial period both criticized and delegitimized older narratives of the past but at the same time that these narratives became the raw material

with which the new historians could construct more accurate histories."⁴

Introduced a new kind of history writing method

Pre-colonial Indian historical consciousness is expressed through myths, legends, Grandhavari and so on. The historical consciousness of Kerala is presented in the prominent literary branch of the contemporary period. But Europeans never understand our way of expressing the history and falsely concluded that Indians are 'ahistoric'. They introduced a new methodology that is positivist methodology in India. Positivist methodological history writing is a new knowledge for Indians. That methodology came to British history during the nineteenth century. William Logan's *Malabar* is the first attempt to write a positivist history in Malayalam. The chapters dealt with history in *Cochin State Manual* and *Travancore state Manual* compiled based on positivist history writing methodology and focused on chronology, objectivity, source criticism and narration of facts. The nature of Manuals and Gazetteers set on positivist methodology. The first academic historian in Kerala, K.P. Padmabhamenon's work *Cochirajyacharithram* strictly followed positivist methodology.

In England, antiquarian practices and philosophical history were convergent to form new history writing method. Likewise, pre colonial practices of history and colonial antiquarian practices are combined to form a new method of historical writing in India.⁵ It indicates that the interference of 'native' power in the writing of history.

Identity creation

Even though chosen articles for the present study published in princely Cochin, they concentrated on Kerala history writing. Except for certain mentions about the initiatives to collect sources materials for history writing by Princely Cochin and Princely Travancore Governments, the entire essays focused on Kerala history writing. Articles interestingly discuss sources available for the writing of Kerala history and categorize them based on nature and authenticity. There is a strong relationship that can be seen between history and patriotism. Remarks like "History dealing works are absent in Kerala. Most of the available books dealing with history discuss

foreign history. This is because people attracted to follow the activities of foreigners. People less interested in the activities of Kerala is due to their ignorance in the Kerala history”⁶ is trying to say the strong bond between History and patriotism. This indicates the attempt of identity creation among Kerala people. This is one of the outputs of colonial modernity.

To Participate in Colonial Data Collection Project.

During the British Raj, History is developed as a part of the Pan Indian level Knowledge producing project. Colonial Government itself appointed officials to collect and preserve data about all the localities in India. ‘Native’ people also had an important role in it. As part of this colonial project, Government took initiatives to collect local histories, *nadanpattukal*, customs and rituals at the village levels. During the second half of the nineteenth century and the first half of the twentieth century, a conscious attempt happened to identify historical sources, order them and preserve those sources by colonial Government. Lord Curzon interestingly took initiatives for it. The Governments of Princely Travancore and Princely Cochin were part of it. In princely Cochin, the establishment of archives, preservation of historical monuments was the continuation of this project. But articles criticized that the Government of Cochin has done fewer activities than the Government of Travancore to collect and preserve sources for history. The archaeology department is active in Princely Travancore but in the case of Princely Cochin, there was no special department for archaeology and the activities of the archaeology department conducted by the transportation department. This had been criticized by these articles.⁷

The articles that came under this study mostly deals with the sources for history writing. Kerala needs a written history. Source materials are the main raw material for crafting history. Colonizers criticized people of Kerala as ‘ahistoric’ not only because of the absence of written history but also because of the absence of ‘scientific’ sources to write Kerala history. These articles aimed to make suggestions for practice to collect sources, scientifically arrange them, make scientific data analysis and craft an objective Kerala history. For this purpose

articles firstly discussed the sources for writing Kerala History. Here lots of sources introduced through these articles and arranged them in a hierarchical order based on authenticity. Secondly, articles discuss with available local sources and foreign sources to write Kerala history and how to collect those sources. Lastly, these articles discuss how to scientifically approach and analyse data from the sources. Heuristics and Hermeneutical methods are clearly explained here. How to study myths, legends, *nadanpattukal*, proverbs, rituals, and customs are well explained. The articles gave warning against the authenticity of the travelogues of foreigners and translations of foreign sources. Because foreigners were unaware about our specific customs and tradition. At the same time articles gave encouragements and supported the data collection process done by Europeans during the British raj.⁸ The entire articles focused on objectivity, truth, authenticity, chronology like concepts of modernity. It also tried to ensure a close relationship between history and science.

The articles mention not only the source collection process but also points to the necessity of a discursive space for the reveal these sources to the public. They suggested the formation of organizations like *Kottakal Charitrasamajam* to collect, print and publish collected sources. At the same time magazines which published articles came under the present study also take initiatives for publishing Grandhavaries, temple inscriptions and so on.

As part of an attempt to institutionalize history in Princely Cochin, Archaeology, Archives, Museums were the hub for ‘authentic’ sources for writing Kerala history. “...the formation of colonial archives at the cusp of the transition to colonial rule. It was at this juncture when precolonial narratives of past came into contact with the emerging historical method.”⁹ The colonial government had an important role in the growth of these institutions. The growth of all these institutions happened in the princely Cochin during the first half of the nineteenth century. Conclusion:

Conclusion

- Colonizers failed to understand the hybridity in the historical consciousness. At

the same time, they equalize historical knowledge and historical consciousness. The colonial notion that pre colonial India especially southern India lacked history and historical consciousness was a part of colonial hegemony. But the article published between 1910 and 1930 in Princely Cochin indicates the acceptance of this colonial idea.

- The articles are an attempt to train the people of Kerala to write history in positivist methodology. At the same time, the hidden agenda behind these articles was to support the pan Indian colonial data collection project. One of the main things is the authors of these articles were western educated. The articles show that this generation has to collect sources and the

duty of writing history is assigned to the next generation.¹⁰ But in the princely Cochin after *Cochirajyacharithram*, there is no other attempt to write the history of Princely Cochin or Kerala history in positivist methodology.

- The articles seek to establish not only the involvement of colonial power groups but also the involvement of the 'natives' in the historiography. So the article repeats that the history of Kerala write or materials collection for the writing of the history of Kerala should be done by Keralites.

In short, these articles indicate the attempt of the establishment of history as an independent discipline or institutionalization process of history in princely Cochin.

STUDIES ON THE HISTORICAL GEOGRAPHY OF EARLY INDIA WITH SPECIAL REFERENCE TO KAMATA-KUCHBEHAR.

Binay Barman

The present study 'Historical Geography of ancient and medieval India of Kamata-Kuchbehar, tried to find out the historical geography of Kamata-Kuchbehar region with valid and logical arguments and documents as well as its geo-political background. The early medieval period in eastern India may be starts from probably 7th century A.D. to 8th Century A.D. and its end probably in the beginning of 13th century A.D. During this period some remarkable geographical change took place in the state of Kamarupa (modern Assam) that influenced upon the change of history of Kamarupa proper making an important unit of historical geography

which we intend to deal with here in the present research work.

The historical geography of ancient Kamata -Kuchbehar state was built within the geographical regions of Kamarupa state. According to Pargitar, the early Pragjyotish state includes the present Assam, Kuch-Behar, Jalpaiguri, Rangpur, Bogura, Mymansingh, Decca, Tripura, Pabna and some parts of Nepal.¹ In the ancient time, Purnia district of Bihar was also a part of Pragjyotish which enlarged up to the Koshi River in the North West.² The Pragjyotish state was build in the age of Epics.

According to Edward Gait, “Prag” means “east” and “Jyotish” means “star” or “astrology” (shining), which means the “City of Eastern Astrology”.³ On the other hand, in the opinion of B. K. Kakati Pragjyotish, means “connected with topographical features of the land rather than any region’s cult, because Pragjyotish was situated on the extensive hill.”⁴ In the fourth century A.D. Pragjyotish became familiar as Kamarupa. We find the proof in the Allahabad Inscription⁵, where the word “Kamarupa-Kamakhya” was carved. And also, in the ‘Jogini Tantra’, we find the description of Pragjyotish state:

“Nepalasya Kanchanadri Brahmaputrashya Sangamang

Karatoya Samashrita Yabaddikkarbasani.

Uttarasan Yajmagiri Karatoyastu Paschime

Thirthasrestha Dikshunadi Purbasayang Girikanyaka

Dakshine Bramhaputrashya lakhyya Samgamadhi

Tringsat Yojana, Bistairna, Dirghen Shatojjonam

*Kamrupang Vijanihi Trikonakar Muktamam.”*⁶

Free translation: So, as detailed in the above-mentioned quotation of ‘Yogini Tantra’ the area of ancient Kamarupa was Kanchagiri of Nepal in the North and confluence of Brahmaputra and Lakshma in the south, Karatoya in the west and Dikshu River in the east.

The Kamarupa was divided into four parts which were known as “Pithas”. The four parts of the Kamarupa were Ratnapith the banks of Karatoya and Swarnakosh river, Kamapith, the area of Swarnakosha and Kapila, Swarnapith, the area of Pushpika Bhoirabi and Saumerpith up to Bhoirabi Dikshu river. But in the *Kalika Purana*, there is a description of Kamarupa. According to this description, the Kamarupa state was in the east up to Lolita Kandahar, in the west up to Karatoya, in the south up to Dikkarbasini, and in the north up to Bhutan.⁷

According to some archaeologists the Kamarupa had extended like a triangle and in the south, it was up to Padma river of Bangladesh and in the east up to Meghna River and in the west up to present Hoogly River. Though,

Ptolemy, a Greco-Roman geographer did not agree with such description.⁸ Hiuen Tsang in his work “Si-u-ki” has noticed some regions of India like Poundrabardhana, Kamarupa, Samatata, Karnasubarna, Tamralipta, etc.⁹

There are many regions in the Kamata-Kuchbegar state. Some important capitals and places of Kamata state are as follows a) Mynaguri, b) Prithurajar Garha, c) Chilapata Garha, etc. In the records of the fourth century A.D., we find the name of the powerful king Sanghaldeep in the east of Karatoya River. Afrasiab, the king of Turan and Sythia started a fight at Ghoraghat with Sanghaldeep. In that battle he was defeated by Sanghaldeep. Most probably Sanghaldeep was the first king of Kamata State. Many scholars believe that the word “Kamata” was not used in the indigenous sources up to 7th century A.D.

In this case, we can say that Sanghaldeep was not the king of Kamarupa as he had fought against the king of Kamarupa and extended his territory in the north up to Bhutan and then Banga, Gour and Bihar. The centre of his kingdom was from Karatoya to Swarnakosha River. During this period the king of Kamarupa was Salasthambha whose territory was within the eastern Kamarupa. The west Kamarupa became an independent state under the leadership of Sanghaldeep. Another important historical place of Kamata is Jalpeswar temple of Jalpaiguri which was built by the king Jalpeswar in the 8th century A.D.¹⁰ In the next period Prithuraja established himself as a powerful king. His capital was in the Bhitargarha or Prithurajar Garha.¹¹

The capital of Kamata kingdom was Kamatapur. In the reign of Kamata kings, this area became the centre of politics. The important places of these regions were Chilapata, Prithurajar Garha, Gosanimari, Singijani, Nalrajar Garha, Chilaroy Garha, etc. After the death of Sanghaldeep in the 7th century A.D. and after the destruction of Pala kings in Kamarupa, we find the historical descriptions of Kamata state. Maharaja Prithu, Sandhya Roy, Niladhaja, Nilambar were some of the powerful Kamata kings.

Finally we can say that the geographical position of India not only determined but also helped in her preservation of her culture. It may

be saying that it protected by the Himalayas in the north, India experienced only a few invasions from the north-west in the ancient times mainly through the Khybarpass. The foreigners were eventually assimilated in the local Indian population, firstly due to the absence of regular reinforcement as well as the fresh wave of new entrants with different racial background. The **studying of historical geography a country's** history and culture, not only that the important of its geography can hardly be over estimated. The physical features of any particular country

determine, to its large extent, the food habit, dress, ornaments of its people, their activities in the material and intellectual fields are regulated accordingly. It is indeed true that climate, fertility of the land and rainfall along with the physical environment shape of the nature of the people living in that particular region, and this features mould their way of life which one might called culture. So, the cultural study of the peoples of any country could well be done in the geographical context.

FROM PAYAVA TO THE PALLAVA EVOLUTION OF ROCK CUT ARCHITECTURE IN INDIA

Binod Bihari Satpathy

Introduction

Architecture is the art and science of enclosing and decorating the space created by nature. Architecture may be said to include every building or structure raised by human hands. Architecture arises out of an urge to protect oneself from the elements. It is an expression of symbolic desires. The first habitations of man were undoubtedly those that nature afforded, such as caves or grottoes, which demanded little labour on his part to convert into shelters against the fury of the elements, and attacks from his fellows or wild animals. As soon as man rose above the state of rude nature, he naturally began to build more commodious habitations for himself, and some form of temple for his god.

In the process of arranging an abode for himself, man created many kinds of structure with separate purpose. Mankind utilize naturally available materials such as wood, soils, rocks etc. for construction of building. Generally, the architectural activities of man are categories into structural or rock cut. Rock cut was one of the earliest and most durable architectural type men has created on the earth surface.

As the nomenclature suggest 'Rock-cut Architecture' is the creation of structures, buildings, and sculptures by excavating solid rock where it naturally occurs. Rock-cut architecture is designed and made by man from the start to finish. However, caves and caverns, that began in natural form, are not considered to be 'rock-cut architecture' even if extensively modified. Although rock-cut structures differ from

traditionally built structures in many ways, many rock-cut structures are made to replicate the facade or interior of traditional architectural forms. Interiors were usually carved out by starting at the roof of the planned space and then working downward. This technique prevents stones falling on workers below. The three main uses of rock-cut architecture were tombs, cave dwellings and temples.

Rock-cut architecture, though intensely laborious with ancient tools and methods, was presumably combined with quarrying the rock for use elsewhere; the huge amounts of stone removed have normally vanished from the site. Rock-cut architecture is also said to be cut, hewn, etc., "from the living rock". Another term sometimes associated with rock-cut architecture is monolithic architecture, which is rather applied to free-standing structures made of a single piece of stone.

The architecture of any region has influences of its geographical position, climate, social-political conditions and other related factors. In addition to the natural factors, contemporary socio-political, economic and most importantly religious conditions also played pivotal role. It is evident in history that in politically unstable society the importance was given to security than artistic embellishments. Similarly, when the society or state was prosperous, it provided a conducive environment for the development of sophisticated arts¹.

Global History of Rock-Cut Architecture

Ancient monuments of rock-cut architecture are widespread in several regions of world. Alteration of naturally formed caverns, although distinct from completely carved structures in the strict sense, date back to the Neolithic period on several Mediterranean islands e.g. Malta, Sardinia and others². Even in the southern territory of India some evidence of scooped or dressed activity during the Megalithic period has been noticed under the serpent hood shaped natural rock-shelters at Budigepalli³. The Megalithic people in order to keep the skeletal remains of their dead in safe enclosures, selected the hill slopes and excavated the laterite rock. Thus, rock cut architecture started with the purpose of tomb in different part of the globe.

The idea of making rock-cut tomb in real sense was started by the ancient Egyptian.

Among these monuments was the Great Temple of Ramesses II, known as Abu Simbel, located along the Nile in Nubia, near the borders of Sudan about 300 kilometers from Aswan in Egypt. It dates from about the 19th Dynasty (ca. 1280 BCE), and consists of a monumentally scaled facade carved out of the cliff and a set of interior chambers that form its sanctuary⁴.

The Hittite rock-cut sanctuaries around 1250 BCE followed the Egyptian. In the 8th century BCE, the Phrygians started some of the earliest rock-cut monuments, such as the Midas monument (700 BCE), dedicated to the famous Phrygian king Midas. Rock-cut tombs can be even found in Italy dating from the Etruscans in the 5th century BCE. The custom was brought eastward by Darius I, whose own tomb (486 BCE) was carved out of the cliffs near Persepolis. The rock-cut tombs in Lycia on the southern coast of Turkey date from the 4th century BCE; on the front of many of them are temple facades in miniature⁵. It is interesting to note here that in the Mediterranean region and Middle East Rock Cut Architecture was only manifested as tomb.

In course of her journey towards east the Rock Cut Architecture found its greatest creation in Indian subcontinent. Here the Rock-cut technique transformed itself from tomb to shrine and occupies a particularly important place in the history of Indian Architecture. The earliest instances of Indian rock-cut architecture, the Barabar caves, date from about the 3rd to the 2nd century BCE and continued upto late first millennium CE. Subsequently this kind of architecture spread to different part of the subcontinent and found manifestation in different forms. Below are some of the main sites of rock-cut architecture, by date:

Date	Structure type	Location
1450 BCE	Tombs	Thebes, Egypt
700 BCE	Tombs	Lycia and Cyprus
500 BCE	Tombs	Etruria, Italy
500 BCE	Tombs	Etruria, Italy

486 BCE	Tomb of Darius	Persepolis
312 BCE-106 CE	Tombs	Petra, Jordan
300 BCE-200 CE	Tombs	Cyprus
250 BCE	Ajivikas Caves,	Bihar, Eastern India
40 BCE	Jaina Caves	Bhubaneswar, India
100 BCE	Buddhist caityas	Western Ghats, India
100 CE	Buddhist caityas	Northwestern India
100 CE	Houses	Tiermes, Spain
400 CE	Buddhist caves	Dunhuang, China
480 CE	Buddhist caves	Ajanta, India
600 CE	Hindu temples	Elephanta, India
650-750 CE	Hindu temples	Southern India
700-900 CE	Hindu, Buddhist, and Jain caves	Ellora, India
900 CE	Churches	Cappadocia, Turkey
1200 CE	Churches	Lalibela, Ethiopia

Beginning of Rock-Cut Architecture in India

Buddhist literature referred about dwelling of monks in the caves.⁶ The Buddha was said to have allowed the monks to use *guhās* or caves among the other five kinds of dwellings. The Buddha himself is said to have stayed in the natural caves of Saptaparni at Rajagriha⁷. Apart from these early natural caves which were used for habitation, live rock was cut into caves for dwelling and religious purposes in India. The secluded location of the hills, far away from human habitation, with the tranquility necessary for the meditation and religious practices of the

Buddhist and Jaina monks, was responsible for the selection of this kind of site. Soon there was the proliferation of rock-cut monastic and ritual retreats.

In India the practice of rock-cut technology for monumental buildings was, for the first time, initiated during the Mauryan times. The earliest known examples are the caves at Barabar and Nagarjuni hills in Bihar state commissioned during the Maurya ruler or the *Ājivikas*⁸. The architectural features of the group of the Mauryan caves at Barabar and Nagarjuni hills provide ample evidence to comprehend the process of the genesis as well as experimentation of rock-cut architecture. The caves can be broadly categorised into two groups: The first type consists of the caves which have two chambers: the outer chamber is rectangular on plan and the inner one is circular. The caves of the second type include the caves having a rectangular or elliptical plan. Interestingly, the caves do not have any object of veneration carved inside the caves. In the inscription from the caves of the Nagarjuni hill, such as Gopika Cave and Mathika cave, which were excavated under the patronage of the Mauryan king Daśarath, not only mention the word '*kubhā*' but also the mention of '*vāṣa nīṣidīyāyē*' which is quite interesting. The scholars generally translated the word '*vāṣa nīṣidīyāyē*' as some kind of residence during the rainy season⁹.

Here a question appears that what led the Mauryan Emperor to excavate cave in the living rocks for the Ajivikas? Possibly it was because Emperor Ashoka got inspiration from his western neighbor of Mediterranean world. Rock-cut technique was originated in the Mediterranean region and later traversed to the east. As mentioned above there are innumerable rock-cut caves exist in Turkey and other nations. Interestingly some of the caves found in the Anatolia region of Turkey particularly those of Lycia resemble the Mauryan caves in Bihar.

There are caves and sarcophagi with pointed arches in Lycia, moreover carved as if they were wooden structures. Many of them were made in the 4th century B.C.E. As to India, the first cave temples appeared in the middle of the 3rd century B.C.E. They are the caves at Barabar and Nagarjuni Hills built for Ajivikas by King Ashoka. If there is no connection between the two sites located so far apart, it might be

considered only a strange coincidence. However, there exists historical evidence of the eastern expedition by Alexander the Great of Macedonia (reign 336 B.C.E. - 323 B.C.E.), in the latter half of the 4th century B.C.E.

Another place in Turkey is Phrygia, the capital of the ancient Phrygian Kingdom is Gordion, close to 100 km west from Ankara is dotted with ancient rock-cut caves. They are rock caves and rock carvings from the latter half of the 8th century B.C.E. till the first half of the 7th century B.C.E., which means about 500 years before the first cave temples in India appeared, and they were to be related to Lycian caves in the 4th century B.C.E. Many Lycian style rock-cut tombs are found in Necropolises in Caria. The best-preserved are the Kaunos remains located on the opposite bank of the river in Dalyan. The cliff tombs of Kaunos look like Greek temples, and also it is surprising that they are arranged in a row as rock cave temples at Ajanta, India. The largest tomb is incomplete, only the upper parts of the four columns are carved, and it proves that in Lycia, workers started to carve from upper part just like the Indian rock caves¹⁰.

The history of Lycia is almost clear as the ancient epigraphs are deciphered owing to the inscriptions on monuments written together in three languages, Greek, Lycian and Aramaic. According to the inscriptions, the majority of cave tombs and sarcophagi in Lycia were made in the 4th century B.C.E. It is quite probable these forms and techniques were brought to India after the eastern expedition of Alexander the Great late in that century, and influenced the Lomas Rishi Cave at Barabar Hill that is the first cave temple with an ornamented facade in India.

Though there remains no inscription on the Lomas Rishi cave, the plan and interior space suggest that King Ashoka had it made in the middle of the 3rd century B.C.E. together with the adjacent Sudama cave that has an inscription by Ashoka. The technique of excavating rock caves itself might have been brought from Persia to India, not from Lycia. Only the Lomas Rishi Cave has an ornamentally carved facade in the group at Barabar, but there is no similar carving inside. As its design is related directly to the facades of Baja and later caves, it is appropriate to consider that the facade of Lomas Rishi was carried out as a 'trial' for those of later Chaitya caves, perhaps in the 2nd century B.C.E.

Beside the Macedonian invasion the establishment of Mauryan Empire and unification of the Indian subcontinent, transformed India into a new and potent economic force in the Asian world. The Mauryan kings expanded their territory westward and southward until, at its height, the empire stretched northward along the natural boundaries of the Himalayas and westward to Kandahar, which had been founded by Alexander in the 4th century BCE. This brought India into full contact with Greek and Persian culture, and soon Indian spices, copper, gold, silk, and rice began to appear in distant places. Possibly during this time, the idea of Rock Cut Architecture arrived in India through trade connection.

Whatever, may be, the rock-cut architecture had a long tradition in Egypt, Anatolia, and Patra, so the technique was most likely brought to India through Persia, particularly after Asoka. In the centuries to come, this simple beginning was to flower into a tradition of rock-cut buildings that spread throughout Indian subcontinent. This method of rock-cut technology of the Magadhan region in all probability, served as models to the early examples of such rock-cut activity in the Western Deccan, coastal Andhra and Odisha. The beginning of rock-cut technology in the Western Deccan has been noticed at Ajanta, Bhaja, Kanheri, Kondavite and Pitalkhora and this goes back to the 2nd 3rd century B.C. The Odishan examples at Udayagiri and Khandagiri on the other hand, were excavated by the Chedi King Kharavela in the 1st century B.C.¹¹ Rock-cut technology in early Andhradesa can be considered co-eval with the Mauryan experiments or be attributed to a slightly later date.

Rock-cut Caves at Udayagiri and Khandagiri. The caves from Udayagiri and Khandagiri in Odisha are second phase of rock cut architecture in eastern India. A group of thirty three caves at the twin-hill site- Udayagiri and Khandagiri throws light on not only early Jain rock-cut architecture but also on the genesis of the early monastic architecture of the subcontinent and most of these caves were dedicated as dwelling retreats for Jain monks¹². Here the **caves are known as 'leṇā, koṭhā** (residential cell) and *pasāda* (shrine/palace)¹³. Many of the caves are excavated by Emperor Kharavela, his family members and officials in

the 1st Century B.C. Probably Emperor Kharavela got inspiration from the caves of Nagarjuni and Barabara hills, cave architecture of western Deccan and Andhradesa for excavating caves for the Jain monks. In the subsequent era the Bhaumakaras and the Somavamsis also patronised rock-cut cave architecture at Udayagiri and Khandagiri in Odisha.

Western Deccan: During the Satavahana rule, the *Sangha* flourished with the support of traders. The monasteries building and chaityas proliferated to a larger extent. Apart from the stupa, monasteries are the most impressive remains in the living rock. The Western Ghats became the centre of rock-cut activities due to the routes for the potential followers and patrons linked with Sopara and Arabian seaports¹⁴. As a result of this, more than a thousand excavations came into being. Among these most famous are: Bhaja, Nasik, Junnar, Bedsa, Karle, Kanheri, Kondane, Pitalkhora, Aurangabad, Ellora and Ajanta. Each of these site has at least one chaityagriha and several viharas. These are situated with each other in consistency¹⁵. These caves represent the finest skill of the craftsmen chiseling from top to bottom till finishing of each section before starting new¹⁶. The multi-storey structures, railings, terraces, balconies, lattice windows etc. ones which were predominantly produced in the timber work were literally translated into the living rock.

Rock-cut chaitya shrines of Western India may be divided into two groups representing two phases of development, Hinayana and Mahayana. Among these two kinds of structure, the chaitya hall and the vihara that were copied in the rock-cut manner, the more importance was given to the chaitya hall¹⁷. Rock-cut technique was started in western Deccan in the second century BCE and continued upto late first millennium C.E. Along with Buddhist, caves for the Jain and Brahmanical faith were excavated in this region by various ruling families and merchant classes.

Andhra region-The rock-cut monuments in Krishna-Godavari valley are divided into chaityagrihas, stupas, viharas, and cave temples. All the major religious faiths, viz., the Buddhism, Jainism and Hinduism have been affiliated to monumental buildings made with this technology. The earliest rock-cut monument has been reported in the form of a *chaitya-griha* and stupa at Guntupalli, Rampa Errampalem and

Sankaram. Monolithic stupas cut-out of rock-boulders have been reported from Karukonda. Rock-cut temples of the Brahmanical faith have been found near Vijayawada at Bhairavakonda, Gandharikota and Adavi Somanapalli. Few Jain rock cut caves have been noted at Sangamayyakonda. The rock-cut technology in Andhra began to operate from as early as the 3rd century B.C. and continued upto the 12th century C.E.

So far as patronage is concerned, the earliest sites of rock-cut caves located in the fertile tract of Andhra were commissioned by the royalty and chieftains and important officers of the State and merchant communities. The Andhra-Satavahan, Ikshvakus and the eastern Chalukyas of Vengi are the royal patron of Andhra rock cut architecture¹⁸. In pattern, the earliest rock-cut chaityagriha of Andhradesa found at Guntupalli is similar in plan to the circular chaityas at Mahakali and Junnar. The entrance facade of the Guntupalli rock-cut chaitya arch resembles the facade of the Lomas Rishi cave. The chaitya consists of a small circular chamber containing a rock-cut stupa in the centre with a domed roof, surmounted by curved stone ribs resembling an umbrella frame²⁹. At Karukonda, stupas of big size cut-out from living rocky boulders are found. Based on architectural style these cut-out stupas have been dated to the 3rd-4th centuries C.E¹⁹. Apart from the stupas the rock-cut technology was also used to build viharas in Andhradesa. Here, we notice certain interesting features in plan and execution. The vihara sometimes became both a monastic dwelling and a sanctuary as has been observed at Guntupalli, where rock-cut chaitya and vihara were excavated side-by-side. At Guntupalli five rock-cut viharas with rectangular halls and cells have been reported²⁰. The front facade was carved with three doorways, and two cells had windows on either side. These caves resemble the Hinayana counterpart of western India. On paleographic ground these caves are datable to 2nd century B.C.E²¹.

The Jain caves at Sangamayyakonda are carved with simple jamb designed entrance⁴⁶. These caves datable to 12th Century CE are plain and bear the carvings of the Jain Tirthankaras. After these cave rock cut technologies discontinued in the Andhradesa. The rock-cut cave associated with the Brahmanical sects are

found at Mogalrajapuram, Undavalli and Bhairavakonda. Stylistically these caves have been dated to the 9th century C.E. The origins of rock-cut technology in Andhradesa can be traced back to the 3rd century B.C.E and it continued to be used for excavating religious structures upto the 12th century C.E. This technology gradually became less important and then totally disappeared after 12th century C.E. Further, from the early medieval times onwards building of free standing stone temples in almost all sub-regions gained momentum, supported by munificent grants offered by the local chiefs, nobles, and royalty. This hindered the progress of rock-cut technology and finally it disappeared by the 13th century C.E.in Andhradesa.

Emergence of Hindu Rock-Cut Architecture

In the 4th century B.C the Gupta-Vakataka extended their patronage to the Rock Cut Architecture of both Buddhist and Hindu. During the sixth century C.E, the two Great empires- Chalukyas of Badami and the Pallavas of Kanchi in Deccan and Southern India respectively had ushered in an era of vigorous temple activities, reflecting in its mores the mingling of forms and ideals.¹⁰⁶ The Pallava in the Tamil initiated the Hindu rock –cut tradition in the form of *mandapa* and monolith *ratha* temple at Mahabalipuram and other localities in north eastern part of Tamil country. The rock-cut cave temples at Mahabalipuram are an expression of artistic genuine at creating monolithic temple from the living rock²². The Chalukyas of Vatapi erected the multitudinous edifices and structural excavations in that age and simultaneously Elephanta and Ellora cave can be attributed. Jogesvari, on the other hand, implies a long period of excavations and virtually should have got completed only by the time of the Chalukya Rashtrakuta transition. Later the Rashtrakuta rulers concluded the rock cut tradition with the gigantic monolith temple of Kialashnath at Ellora and others cave.

Rock-Cut architecture in India-Findings

From the above discussion following few findings arise:-

- The rock cave was produced throughout the world. The ancient rock caves in the Middle East, including Egypt, were almost all tombs.
- On the other hand, Indians did not produce rock caves as tombs but as monasteries and chapels.
- There may be a possibility that, because of the transmission of the form of cave tombs in the Middle East, Indians might have begun to construct stupas as tombs and chaitya caves to enshrine them. As opposed to the Middle East, where interment was dominant for funerals, sarcophagi were not necessary in India where cremation was. Consequently, only the rock cave tombs were inherited to enshrine stupas where the Buddha's remains were embeded, and they might have come to be used as chapels as well.
- Whether they are tombs or chapels, among the rock caves in the world, those with a pointed arch on the facade, moreover carved as if they were a wooden structure, exist only in Lycia and India. Indian Chaitya caves, influenced by the method of Lycian cave tombs and sarcophagi, developed on a larger scale, and created an imposing barrel-shaped interior space, setting semicircular rafters, even in true timber in certain cases, as if it was a sheer 'rafter structure', so as to match the hemispherical shape of a stupa.
- The rational wooden structure in ancient Lycia transformed into the fanciful wooden-like cave temple in India that cannot exist as an actual wooden building.
- The rock-cut activities are associated all the leading sects of ancient India such as Buddhism, Jainism and Brahmanism sects.
- The association of Buddhist monasteries along with the trade routes shows that these rock-cut caves were not only the place for meditation but were also exploited as trade centres by the traders.
- The phase of rock architecture extended approximately over a period of more than a thousand years from the time of Ashoka, and is found scattered over different parts of India.
- The rock-cut architecture consists of pillars and pilasters representing the various wooden prototype such as erecting a wooden post into a kalasha full of water, serving both the purpose symbolic and utilitarian. The early chaitya halls are almost

a replica in rock of wooden prototype is evident from their design and execution which are peculiar wooden architecture.

To sum up it is clear that the rock-cut technology arrived in India from Persia but the style of execution definitely traversed from Anatolia through the traders and found expression in Magadha under the Emperor Ashoka. Subsequently, the idea of rock cut caves spread to the Andhra territory and western Deccan and Odisha. In course of time pattern of the cave architecture change owing to the taste of the Patron class and influence of the affiliated

sects and geography of the different region. From rock-cut caves to rock-cut monolith at Mahabalipuram and Ellora for a period of thousand years this mode of architecture persist in the sub-continent. The cave temples in India have no superior in the world in their magnificent carvings and architectural formality, with pillars and beams in systematic order. About 1,200 ancient cave temples still exist, mainly in the Deccan, because they are carved structures on the strong Rocky Mountains. It is to be noted that rock-cut architecture of India are temple not tomb but the idea originated from tomb not temple.

FROM BACKWATER TO LANDSCAPE: CONTEXTUALIZING THE DEVELOPMENTAL HISTORY OF MARINE DRIVE, COCHIN

K.T. Binu

The study entitled '**From Backwater to Landscape: Contextualizing the Developmental History of Marine Drive, Cochin**' analyses the histological transformation of space through a human geographical perspective. It tries to examine the backwater reclamations as a part of urbanization process that has happened in the area from 1920's to the recent days. Marine

Drive is a beautiful promenade located in the heart of Ernakulam, facing the backwater-the Vembanad Lake. It is one of the most popular tourist attractions of Cochin City which has a walkway- starting from Rajendra Maidan to the high court junction including open spaces, boat jetties, shopping malls and hotels, residential and commercial places etc. There are two bridges in

the walkway- the Chinese Fishing Net Bridge and the Rainbow Bridge. It is a popular hangout for tourists as well as local populace, who gather during evenings to view the sunset and feel the gentle breeze coming from the backwater. Marine Drive is constructed by the Greater Cochin Development Authority (GCDA) of Cochin Corporation in 1980's. Mr. Kuldeep Singh is the chief architect of Marine Drive who has drafted the Marine Drive Scheme with two phases of development for GCDA. The first phase has completed with the extension of Marine Drive towards the Gosree Bridge with a new walkway and a bridge- the Kettuvallam Bridge- on 28 April 2013. The second phase of development aims to the extension of Marine Drive up to Vaduthala with a ring road and also plan ning to construct an International Trade Center, Logistic park, Laser dancing centre, Dolphin park etc. Now the place is a major hub of socio- political-economic activities and an important shopping centre of Ernakulam. In early period, Marine Drive area was known as *Alumkadavu* which later transformed into modern Marine Drive as a part of large scale reclamations or expansion of human interactions over the backwater as in the form of reclamations had changed the nature of its space from past to the present context. Therefore the study focuses on the nature of human activities in the backwater and how it reshaped the structure of space from waterscape to landscape and redefined it according to urbanization and modern commercial trends.

According to historians the place name 'Ernakulam' is derived from *Erayanarkulam* that means the abode of Lord Shiva. But according to the traditional view the place got its name from *Rishinagakulam*. The Revenue Settlement Register of Cochin State mentions Emakulam as 'Anjikaimal' or a place under five important persons. They were Kaimals of Cheranallur, Kunnathunadu, Pulakkadu, Kurumal kuru and Vakuru. The word '*Kochi*' is supposed to be a synonym of a Sanskrit word 'gosri'¹ which meant 'prosperous with cows'.² The earliest reference to the term '*gosri*' may be found in the inscriptions of Bhaskara Ravivarma, which refers '*Kosri Parakkara Iravivarma*'³ Kerala Mahathmyam and Keralolpathi refer Cochin as '*Balapuri*' which means 'small town'.⁴ C Achyutha Menon points out that the word '*Kochi*' is derived from '*Kochazhi*' or 'small harbour'.⁵ Kechi was known

to the Greeks, Romans, Jews, Arabs and the Chinese. Foreign travelers like Ibn Battutta, Ma-Huan and Abd-ur-Rassak had mentioned on Kochi. Nicolo Conti called the region as *Kochchi*. During the fourteenth century, Kechi was an important centre of spice trade. From the sixteenth century, Kechi witnessed rapid changes through the trading and colonizing attempts of European powers. The Ernakulam district was formed on 1st April 1958 including the Taluks of Alwaye, Kunnathunadu, Kechi, Kanayannur, Parur and witnessed unprecedented trend of urbanization during the past four decades. But today, they are not adequately used as waterway for transport. These water bodies are in a stage of deterioration or environmental degradation due to waste dumping, silting and other misuses. The effect of inadequate drainage becomes visible with flooding and water logging of low lying areas during rainy seasons.

In early period, *Alumkadavu* - the place where Marine Drive is now locating- was a tiny halt for boats that connected the backwater to the market. In those days, water transport was the backbone of trade activities and backwater served as the major water channel for transportation of men and materials. Boats from far and nearby places had made their voyages through the backwater moved towards the market by touching *Alumkadavu* and *Kovilvattom* areas.⁶ Trade boats from long distances especially Kallam, Changanassery and Malabar were reached to the market through *Alumkadavu*. From the memories of old local merchants the canals and small water channels around the market was filled with trade boats. In order to enter into the market canal, trade boats were awaited near Alumkadavu area for hours.⁷ The place *Alumkadavu* got its name from a large banya tree (*Aal*) existed on the shore (*Kadavu*) of the backwater. Later the tree was cut for constructing a hotel called 'Sealord'.⁸ From Old photographs, we can get a clear picture of Sealord hotel with its small stone fortification facing the backwater.⁹ Later in 1930's the Cochin State reclaimed backwater near Sealord to construct a road. The first reference on reclamations at *Alumkadavu* area can be seen in the Record of Administration of Cochin State 1938, in which, the Diwan of Cochin, Mr. Narayana Ayyar had sent a letter to the Maharaja of Cochin on 28 August 1927 for the

development of Ernakulam fore shore by reclaiming areas with a budget of Rs 15000/- According to it "the Emakulam foreshore is now in an unsatisfactory condition and the present scheme is to make the necessary reclamations to have a straight line from one end to the other and to take the necessary ground for a Government road for recreation and other purposes."¹⁰ In 1938, Cochin State had appointed Mr. Dann, the Town Planning officer of Madras Presidency, to prepare a Town Improvement Scheme for Ernakulam town. According to him, "We may without doubt accept the view that the reclamation- for public purposes- will be a great boon to the Town, and will be worth doing even at some considerable financial outlay for which the reclamation may to some extent indirect." The bulk of reclaimed¹¹ area will be reserved for recreation grounds i.e., public building sites, garden spaces and roads.

"Amount of backwater to reclaim- this will depend on the relationship between cost of reclamation and sale value of land. Taking the area which it will be desirable to reclaim for public purposes, i.e, public building sites, recreation and garden space and roads as a fairly fixed quantity. The area to be reclaimed can be settled with reference to the above mentioned formula. An important point bearing on the question is the fact that the coast of reclamation rises in proportion to the width owing to the slope of the bottom levels of backwater."¹²

Later during the period of R K Shanmukham Chetty large scale reclamations from backwater have done for infrastructural development and beatification of the Cochin State such as construction of new parks and a new road that later known as 'Shanmukham Road'.¹³ Thus Shanmukham Road has regarded as the 'First Marine Drive' reclaimed from backwater.¹⁴ From 1980's the Greater Cochin Development Authority (GCDA) had drafted the Marine Drive Development plan for large scale reclamations from backwater to create a new land for constructing shopping complexes, hotels and apartments. By 1990's GCDA negotiated the Marine Drive Development Scheme for the expansion of commercial and economic activities and thereby to change the place as a major tourist centre.

Thus we can see six stages in the development of modern Marine Drive.

1st stage- there was no large land- a tiny stretch of land projecting towards the backwater- ie, Alumkadavu, a halt of trade boats lead towards the market.

2nd stage- witnessed the disappearance of Alumkadavu and its shore area for constructing Sealord hotel

3rd stage- Reclamation was made for the construction of Shanmukham Road.

4th stage- Large scale reclamations were done and new plain land was created for constructing Marine drive in 1970's.

5th stage- Developmental activities of GCDA- i.e., construction of different buildings, shopping complexes, commercial centers and walkways in the reclaimed land.

6th stage- GCDA's Marine Drive Development Scheme and beatification of Cochin -construction of new walkway upto Gosree bridge.

Spatial Transformations from waterscape to Landscape

According to Human Geography, spaces are socially produced places and spatial activities are the outcome of human activities. Geographic and social spaces are symbolically transformed into places thorough process of human interaction across time. In Marine Drive's context, the backwater itself represented space in the form of waterscape. When the area of Marine Drive was a part of backwater we can call it as a geographical space. In those days, the space was also represented by *Alumkadavu* and the tree itself stood as an image to specify the landscape.) In other words, *Alumkadavu* and its surrounding areas represented the space as an empirical space of daily life.¹⁵ The Record of administration of 1938 supports foreshore reclamations for public purposes and to create new spaces for recreation and roads. Here human needs or utility of time had played a crucial role in transforming a geographical space like back water to a land. This is the first instance on human interaction to a natural space.

In the second stage, when the Sealord Hotel came into existence, the tree was disappeared along with the place name. The hotel brought a tremendous change in the entire landscape i.e., a small geographical place's space

was forcefully changed to a commercial space, where the hotel itself became the centre of attraction. From that, the place got a social status or a reflection of high culture, which was accessible to the rich. The old generation recollects, it was treated as a prestigious moment for people who enter into the hotel for having a tea. People from far and nearby places visited the place to have a close view of the building. Therefore Sealord represented an image space that has produced new apprehensions of space and also providing a space for consumption thereby became a symbol of economic status.¹⁶ Thus the emergence of Sealord hotel can be treated as the first instance for commodification of a particular place space. The third important change in space emerged during the backwater reclamations for constructing the Shanmukham Road. We can notice a drastic change in the spatial pattern of the place with emergence of a road. The new extensive road has facilitated the transportation of goods to the market. The pressure on the water channel was reduced by the road, which had the merit of easy and fast exchange of goods. Thus human spatial behavior in this place was in two ways. Firstly, Shanmukham Road has become the major transportation route to Broadway and the market. Different people interacted in its open space, thereby it transformed into an empirical space of human interaction.¹⁷ Shanmukham Road was pictured in Malayalam movies of 1970's especially in the movie *Anubhavgal Palichakal*. The song "*Pravachakanmaare Parayuu...*" gives a clear view of the newly reclaimed road the hero is walking through the Shanmukham Road and we can also see the police station on the right side and the backwater on the left side.

The fourth stage of spatial transformations emerged during the construction of Marine Drive in 1980's. Large area of backwater was reclaimed to construct a new land and GCDA had implemented different plans such as urban development schemes to transform the reclaimed space to a landscape. Literally the word 'landscape' includes all the visible features of an area of land.¹⁸ Geographically it includes all the landforms and how they integrate with natural and manmade features. It includes physical elements defined as landforms such as mountains, hills, water bodies such as river, lakes, ponds, sea living elements of land cover

including indigenous vegetation, human elements including different forms of land use buildings and structures and transitory elements such as lighting and water conditions. The character of landscape helps to define the self image of the people who inhabit or use it and a sense of place that differentiates one region from the other. Defining a landscape mainly depends upon the context in which it exists.

In the context of Marine Drive, the land transformed to a landscape according to urbanism or to make it a centre of economic activities. Here we can find that, spatial interaction and human behavior are begun to be influenced by economic urges. The land use pattern also changed with the construction of shopping malls, new bridges and walkways therefore within a short span the land is changed to a landscape and is used for multiple economic purposes or resulted in multiple land use that changed the landscape to urbanscape in a wider context. The name 'Marine Drive' got more importance than the past days. Projects and plans like 'Marine Drive Scheme' introduced to concentrate on the particular place. The symbolic representation of the area is different in different periods or contexts. In the past context, from old photographs- Marine drive is depicted by Shanmukham Road and seaload hotel. The memories of old generation also evoked the same picture which represented a space that will be a part of image space. In the present context this particular space has reduced to an object with least importance comparing to other spaces of interaction. Now the space became an area with different building and features and also a hub of economic activities and events. The word Marine Drive now brings the picture or image of three bridges, walkways and open spaces. We can identify the shrinking of space -as open space is sub divided by shopping malls, hotels, apartments etc. Actually the open space or public space is privatized or changed to a 'private space' with luxurious apartments and sky scrapers. Sometimes, entry to these spaces are restricted to a particular group of people- the entry to the star hotels confined to those who have a particular status, entry to luxurious apartments confined only to its owners.

(In present context, spatialization or spatial representations are influenced by consumerist mentalities. According to the modern life style

and food habits new shopping malls and commercial complexes sprang up by reducing the open space. As a part of this trend, the authorities tried to beautify the walkway and surroundings to attract the populace and thereby to make it as a major tourist spot. Therefore the space is restructured by the modern consumerist mentalities of man. Eventually, the space in urbanscape is transformed to a cultural landscape that consists of material aspects of culture including buildings, recreational facilities, transportation system etc. The shopping malls, walkways and high raise apartments are the facets of cultural landscape that had changed from their early form and underwent rapid changes within short time and aesthetically became the distinctive features of the place. In the present context, spatialization or spatial representations are influenced by consumerist mentalities. Now Marine Drive is a place with different spaces, a place of different symbolic representations, which differentiates it from other region.

Conclusion

Geographically, Marine Drive is a cultural landscape that is changing according to the trends and mentalities of time. Human intervention on backwater transformed it from a geographical space to place through reclamations. We can identify different stages in the transformation of space i.e., from *Alumkadavu* to Seaload Hotel, then to Shamnukham Road, and from the road to Marine Drive and finally to the large scale developmental activities in the landscape. In the old days, the place had a more public space that was changed in the modern context. The process of urbanization began to play a vital role in the transformation of space and spatial development plan is subordinated to capital interests and political decisions. Today, Marine Drive is not only a popular hangout or a public place for interaction but also its space has a varied nature and the surrounding spaces are on gradual privatization process of capitalist hyper urbanism.

SEA PORTS OF ANDHRADESA: PEEP INTO THE TRAVELOGUES

J. Chalapathi Rao

Generally the sea ports are the gateways to the sea voyages from the land. The sea coast or estuary is the main source of formation of ports which used for ships to load cargo and passengers voyage. The navigation of ships through ports develops the maritime time trade and improves the economy of the hinterland. India has long coast line classified into western

and eastern coast, both coasts consisted many ports. The eastern coast further divided into Bengal coast and Coromandel Coast. **Arasaratnam mentioned that** "the term Coromandel, widely held to be derived from the classical Tamil regional name Colamandalam, when applied to the eastern coast of India has come to embrace a wider geographic area than

that for which it was originally used. The Coromandel Coast was the wide expanse of **India's eastern coast from point Calimere, where the coastline takes a sharp northerly drift, to near the 20° N Latitude or the port of Ganjam.** It was further divided into two parts, the north and the south, with the Godavari point being the dividing line between the two. In later times the Coromandel Coast proper was held to be to the south of this Godavari point and the north was known as the Gingelly coast or Golconda coast. In modern times the coast lines are addressed with present geographical names of the state like coast of Tamil Nadu and Andhra Pradesh coast.¹ In this backdrop an attempt is made to present paper and focus the light on the Ports of Andhra frequented by the Europeans and other seafarers.

Note on Travellers

The travellers from many countries of the world visited India for varied reasons especially during late medieval and early modern periods. They stayed, they saw and they recorded the typical conditions of ports in their travelogues. They described about the ports of Andhradesa that were used for navigation as well as ship building. The Foreign travellers depicted that the sea coast of Andhradesa was good-natured, most commodious for navigation and pleasant for many respects.

Marco Polo (1293- 1295)² was a merchant and celebrated Venetian traveler. Antony Schorer (1614- 1616)³ William Methwold (1616-1633)⁴ basically merchant from England spent his time at Masulipatam, the head quarter of East India Company. Francois Bernier (1658-1668)⁵ was an outstanding Physician among the French travellers. Francois Martin (1664-1694)⁶ was an employee of French East India Company, later became the first Governor of Pondicherry. Jean Thevenot (1666- 1667)⁷ was a French traveller. Thomas Bowrey (1669- 1679)⁸ seems to be an English merchant and sailing master. Jean Baptise Tavernier (1670- 1689)⁹ was a French diamond merchant and made six voyages to the East. Abbe Carre (1672- 1674)¹⁰ was a French missionary and traveller. John Fryer (1672-1681)¹¹ was an English physician. Streysham Master (1675- 1680)¹² was the chief representative of the East India Company in the Bay of Bengal from 1676 to 1681. Butler (1807-1809)¹³ ranked as Serjeant into the second

Battalion of the Royals under the East India Company.

During this period Ganjam and Pulicat were considered as an integral part of Andhra region so that from Ganjam in Orissa to Pulicat in Nellore included here as the Andhradesa ports. They were Ganjam, Chicacole, Bimlipatam, Vizagapatam, Corango (Coringa), Madapollam (Madhavayapalem), Narsapur, Masulipatam, Pettipolee (Peddapalle) or Nizampatam, Motupalle, Karedu, Kottapatnam, Ramapatnam, Kistnapatnam, Armagon (Dagarazpatnam) and Pulicat. **Bowrey remarked that "Corango (Coringa), Vizegapatam (Visakhapatnam), Bimilipatam (Bhimilipatnam), Wattara (near Pentakota in Vizagapatam district), Manichapatam" were safe coasts.**¹⁴

Ganjam, Chicacole and Bimlipatam

The northern most port of Coromandel or Gingelly coast was Ganjam, situated at the mouth of the river Rushikulya. It was better known in the records in the eighteenth century than it was in the seventeenth. It was typical of the river-mouth ports of Coromandel Coast. The surf was heavy and large vessels anchored on the roadstead. They were reached by the many local boats that operated from the river. It was an important port in the coastal trade southwards to Madras, Pulicat and other places, where rice was in demand.¹⁵ Srikakulam popularly known as Chicacole a town on the coast of the modern Ganjam district, situated about four miles from the sea on the Nagavali river¹⁶ About the Bimlipatam port, Streysham Master explicated that the Dutch had settled at Bimlipatam in the Vizagapatam District in the middle of the seventeenth century. It was four leagues from Vizagapatam a fairly good trade was carried by Dutch.¹⁷

Vizagapatam or Gingerlee

Streysham Master articulated that '**Gingerlee or Gingalee** was the seventeenth century term for the coast between the estuary of **the Godavari and the Jagannath Pagoda**' in Orissa¹⁸ Bowrey informed that Gingerlee coast was the most pleasant with vast sea coast and commodious for navigation which was pleasant in many respects. It had many good harbours and stated clearly that the Gingerlee coast was in **between the "Coromandel" and "Orissa" Coasts.** It was more commonly known to mariners as the

Golconda Coast.¹⁹ But Pringle Consultations for 1684 suggested that Gingerlee and Vizagapatam were identical. It seems that the town at first known as Gingerlee and was subsequent called by the native name of Vizagapatam.²⁰

Coringa Port

Coringa was a principal port on the eastern coast of India situated on the mouth of river Godavari and located nine miles south-west of Kakinada. Coringa was the place where large vessels were docked and repaired besides building and repairing of small crafts. But the glory of Coringa waned as it was subjected to frequent inundations of the sea and to the effects of hurricanes and storms. It was stated that the rising of the sea in 1784 A. D. was so high that vessels were actually drifted.²¹

Madapollam Port

Madapollam (Madhavayapalem) was not only a port but also flourishing ship-building and manufacturing station, as well as a health resort when Thomas Bowrey visited. An attempt was made by the English to found a factory at Madapollam early in 1662 A. D. but it was not materialized till some years that it was in full swing as a “subordinate” to Fort St George. English East Indian Company established their factory at Madapollam near Narsapur in West Godavari District. It was most commodious port in the East coast next to Gingerlee.²² At Madapollam the East India Company had a very splendid house, ware-house, out houses and gardens which were all well situated upon the side of the great river Godavari that merged into the sea.²³ Fryer wrote in 1673 A. D. that Madapollam as a sanatorium for the factors at Masulipatam and remarks that the English had a “wholesome seat there.”²⁴ The healthiness of Madapollam was the reason for its popularity with the factors on the Coromandel Coast.

Narsapur Port

Narsapur was a sea port as well as a ship building centre, situated on the western bank of the Vasishta or the most southern branch of the Godavari. It was about six miles from the sea²⁵ where the large and airy marketplace was close to the landing-place from the canal. Peter Williamson Floris, a Dutchman who was employ in the English Company transacted trade and

extracted from his voyages “there is an excellent harbour for ships of the largest size, was well known more than two centuries ago for its docks for the building and repair of large vessels.”²⁶ Streyntsham Master stated that Narsapur was a very large piece of ground divide into two large quadrangles, in one of which as many forges as three hundred smiths might worked in them and another down to the river side upon the sand dunes laid many vessels which were employed in that great rice trade.²⁷ Francois Martin, the first governor of Pondicherry, wrote that Narsapur produced enough printed cloth to be shipped to the eastern coast and Persia.²⁸ The trade of the town had steadily declined since the abolition of the company's factory in 1827 A. D.

Masulipatam Port

Probably Masulipatam was the major port of the Kingdom of Golconda and all exports and imports had been undertaken through it. Thomas Wright referring to Rennell quoted that it “is a city and port of trade, near the mouth of Krishna River; and appears to be situated within the district named Mesolia by Ptolemy.”²⁹ Bernier asserted that generally received etymology and the modern rendering of the vernacular name Masulipatam or Machhli-patnam means ‘Fish Town’.³⁰ Bowrey also explained that *Metchli* means fish and *patam* or *patanam* a town. First it was given to the reason of the abundance of fish caught there for supplying to many countries, cities and inland towns but later much merchandize increased even the fishing trade was very inconsiderable still it was called with the said name.³¹ Methwold stated that Masulipatam, “was first a poor fisher town, from whence it took the name it yet retains; afterwards the convenience of the road made it a fit residence for merchants”.³² Schorer informed that Masulipatnam, called by some ‘Bandar’³³ which was still known locally by the name. Bowrey declared that for having a reasonable good harbour and the convenience of the Krishna River that ran up to the town side, many ships and vessels travelled to lay their commodities there. Several of the merchants’ vast stocks in the goods were transported in their own ships as well as in English ships or vessels.³⁴ The town was on the sea shore and renowned of its anchorage which was the best in the Bay of Bengal. It was the sole place from which vessels sailed for Pegu, Siam, Arakan,

Bengal, Cochin China, Mecca and Hormuz and also for the islands of Madagascar, Sumatra and the Manillas.³⁵ Thevenot informs that it lies in the coast of Coromandel but it was intolerably hot from March till July.³⁶ Serjeant Butler stated that it was not only intolerably hot but when clouds of sand blew liked to be suffocated.³⁷

Divi Island

Abbe Carre informed that Divi Island was sixteen miles to the south of Masulipatam, at the mouth of the river Krishna and was joined to the mainland by the time of his visit³⁸ **'gives its name to Point Divi.'**³⁹ Arasaratanam informs it was **known to contemporaries as Devy Island 'which was not right place for a harbour or any form of outlet of trade.'**⁴⁰ The place had advantage of being defensible from attacks from the mainland and would have made them independent of the hinterland power.

Pettipolee (Nizampatam)

Pettipolee (Peddapalle) was a trading port where Portuguese, Dutch and English had established their factories and ran their business. Bowrey informed that it was one of the first places on the Coromandel Coast at which the English made a settlement that later known as Nizampatam. Streyntsham Master notified that English people called it Pettipolee but the native people refer to it as Nizampatam.⁴¹ It was a very pleasant and healthy place situated in a sandy bay called Pettipolee bay.⁴² Schorer stated that it was about forty eight leagues north of Pulicat which was under the rule of the king of Golconda.⁴³ Streyntsham Master informed that the river was deep and many vessels of 50 to 80 or even 100 tons were anchored in it.⁴⁴ He further informs that some merchants of Pettipolee had given an offer to provide goods at cheaper rates than the merchants of **Masulipatam and 'not to receive money before the delivery of the goods.'**⁴⁵ Bowrey apprised that English valued it as **"a great Place for sault and large in compass... lying commodiously for the investment of the fine cloth, ramalls and allejaes yearly produced in these parts, besides a quantity of saltpetre upon occasion."**⁴⁶

Motupalle

Motupalle was an important Andhra port during the medieval period located in the present day Prakasam district about one hundred

seventy miles north of Madras. Mackenzie informed that **"on the coast is Motupalle, now an insignificant fishing village, but identified as the port where Marco Polo landed in 1290 A.D. It was much used as a landing place for shores for the French troops a Guntur a hundred years ago."**

⁴⁷ **Motupalle was "about 8 leagues to the north, north-east of Gondegam, is a small village half a mile inland, not discernible from a ship; but with the assistance of a glass, a small pagoda is perceptible. There are about twenty detached palmyra-trees to the northward of the landing-place, and about a mile to the southward, a thick grove of trees with clump on its southern part higher than the rest."**⁴⁸ W. Hamilton said that **"Mutapali, a town situated near the south extremity of the northern circars. A considerable coasting trade is carried on from hence in the craft navigated by natives."**⁴⁹

Karedu

Karedu was one of the ancient ports of trade in Andhra.⁵⁰ Streyntsham Master informed **that it is in Kandukur, Nellore District "which is a sea port and the best town on the road hitherto. Sevrall Boates were in the River, which we boarded, and tis allmost steep to."**⁵¹ **"The river (the Manner) that runs into the sea at this town, they say, comes from a fresh spring out of the mountains (the Veligonda Hills) to leagues off, and the water is fresh but 2 miles up the river from the towne."**⁵² The customs duties were comparatively lesser than that of Masulipatam and merchants were importing and exporting goods in some quantity.⁵³ Thomas Bowrey informs that it a seaport and the best town on the road which is now of no value as a port.⁵⁴

Kottapatnam or Ramapatnam Minor Ports

There are some minor ports such as Kottapatnam and Ramapatnam which were shipping piece goods in small vessels to the larger ports of the north and south. Kottapatnam was the northernmost port in Nellore District. It is a town stands in the road and nine miles distant from Armagon. From this port the customs yielded nearly nine hundred pagodas annually.⁵⁵ There was a tradition that after a quarrel between Balija and Komati traders in the adjoining port, the Komatis migrated in a body to Kottapatnam and established their trade.⁵⁶

Kistnapatnam

Kistnapatnam, in Nellore District, has a fine backwater, with good anchorage.⁵⁷ It was a chief port for the inland district administrative and market town of Nellore and situated on the left bank of the Vuputheru river. The shallow river was navigable through small boats up to twenty-five miles. As the Nellore district was weaving area which allowed the transport of piece-goods to Kistnapatnam for shipment.⁵⁸

Armagon or Dagarzpatnam

Usually the name Armagon must denote the small port at the north end of the Pulicat lagoon, where the English Company built a fort in 1626 A.D. ⁵⁹ The true name of Armagon is Duraspatam or Dagarazpatnam.⁶⁰ It was about fifteen miles south of Kistnapatnam situated on a river and a port of some significance in the seventeenth century.⁶¹ There was good anchorage for ships near the entrance to the river and large European vessels used to call their regularly in the early seventeenth century. It was an important place for the export of textiles which were made in neighbouring hinterland villages.⁶²

Pulicat

Pulicat was a sea port situated twenty three miles north of Madras. Dutch had established their factory there in 1609 A.D.⁶³ Probably, it was one of the earliest Dutch settlements in India. Pulicat was considered as the last laying in the southern most limit of the Telugu speaking region. Pulicat was a town on the southern extreme of an island at the south end of a lake with same name. Formerly, it was a centre of trade with Penang and the Straits settlements. It was used as a sanatorium for Madras but due to malaria fever its usage was discontinued and later completely deserted. Bombay duck and prawns were the main trade goods those were exported from the town.⁶⁴ **‘The people were employed mostly in knitting cotton stockings, which they export for the use of all the European factories in India.’**⁶⁵

Conclusion

The sea ports are the gateways to the ocean voyages. They are formed at sea coast or on estuaries that uses for ships to load cargo and

passengers voyage. The navigation of ships through ports develops the maritime time trade as well as improves the economy of the hinterland. India has long coast line classified into western and eastern coast, the later further divided into Bengal coast and Coromandel Coast. **Arasaratnam mentioned that ‘the term Coromandel, widely held to be derived from the classical Tamil regional name Colamandalam’.** In modern times the coast lines are addressed with present geographical names of the state like coast of Tamil Nadu and Andhra Pradesh coast. The travellers from many countries of the world not only visited India but also Andhradesa for varied reasons especially during late medieval and early modern periods. They described about the Andhradesa ports, were good-natured, most commodious for navigation, ship building and pleasant for many respects. The northern most port of Andhra coast was Ganjam. Coringa was the place where large vessels were docked and repaired besides building and repairing of small crafts. It seems that the Vizagapatam town at first known as Gingerlee which had many harbours. The Madapollam port got popularity for its healthiness on the Coromandel Coast. Narsapur was a sea port as well as a ship building centre, situated on the western bank of the Vasishta or the most southern branch of the Godavari. Probably Masulipatam was the major port of the Kingdom of Golconda and all exports and imports had been undertaken through it. Pettipolee (Peddapalle) or Nizampatam was a trading port where Portuguese, Dutch and English had established their factories and ran their business. Motupalle was an important Andhra port during the medieval period located in the present day Prakasam district. Karedu was one of the ancient ports of trade in Andhra that situated in Nellore district. Kottapatnam and Ramapatnam were small minor ports which were shipping piece goods in small vessels to the larger ports of the north and south. Kistnapatnam was in Nellore District, has a fine backwater, with good anchorage. Armagoan or Dugarazapatam was an important place for the export of textiles which were made in neighbouring hinterland villages. Pulicat was considered as the last laying in the southern most limit of the Telugu speaking region.

CONTRIBUTIONS OF Dr. BABASAHEB. AMBEDKAR TO DALIT (SUBLTERN) HISTORIOGRAPHY

Chandrakant, N Koligudde

Introductions

Historiography, understood normally as 'history of history', is truly a discipline that examines histories written by historians. The purpose is to review the way or ways historians are looking at history, so that we can improve upon our knowledge of the past in its various dimensions and identify newer tools and paradigms of making the study of the past as objective, as comprehensive and as inclusive as possible. In the absence of historiographic studies our knowledge of past is likely to remain stagnant, may become stereotype and disinteresting, and even disgusting. As a machine requires overhauling, so also historical enquiry needs overhauling to keep satisfying to the requirements of the changing a time and demanding society.

In the context of Indian historiography, one is well aware of the way in which approaches to the study of Indian history have changed through time. There was a time when Indians were accused of lack of historical sense. But later on when the study of Indian history assumed the proper path, it became clearer and clearer that Indians did not lack in historical sense. What they lacked was a *regular* tradition of recording objective history. Indian epigraphs, over a lakh in

number according to an estimate, are ample proofs of historical sense of the Indian, and, to an extent, even of keeping reliable record of events. Ever since the attempts to understand and **reconstruct India's past began, the perception of her ancient past has been undergoing change. And this changing perception of India's ancient past has been perceived well by modern scholars.** The change of perception of the past in Indian context may be attributed to certain principal factors which may be listed as follows:

1. Discovery and accumulation of fresh historical data from variety of sources
2. Attitude of the historian using these data for historical reconstruction
3. The historical environment in which the historian belongs
4. Changing perceptions about the use of history It may be postulated that these factors may collectively affect the

Nature and course of historiography as well as **historiography's multiple strands in a particular period.** Romila Thapar has provided an excellent account of the course of developments in the writing and understanding of Early Indian history and culture

Ambedkar's contributions are not only significant in writing Indian history but in evolving a Method which is more relevant even for contemporary historians of different schools. Ambedkar came to forefront in Indian academics from the decade of nineties with the intensified struggles of Dalits. The struggles of the ordinary people forced the centers of power and knowledge to consider the importance of Ambedkar and his ideas in social reconstruction of the nation. With Ambedkar as the source of inspiration, Dalits are struggling to write their own history by interrogating the dominant Brahminical traditions. The relevance of Ambedkar has to be read with the fifty years developments of Post-Ambedkar of post independent India. His approach to Indian society and history are crucial in understanding contemporary India and the struggles of the oppressed. **Ambedkar's notion of history is identified with 'moral community' imbued with the principles of equality, liberty and fraternity.** His historical method borrows tools from Marxism in understanding the ancient history. Rather than mechanically applying Marxism, he had creatively used it in keeping the specific context of Indian society. He approached Indian society from the point of religion and finds the religion as source for the different ideological position. For instance, Buddhism is considered as revolutionary and Hinduism as counter revolutionary. **'Rationality' is the guiding principle in evaluating the principles and practices of religion. For the claims of religion he applied rationalistic principle. He brings the religion as a focal point in reference to caste system. To construct the Indian history in proper perspective, he availed of all the convincing ideas of his times, from liberal to Marxist. This may go in tune of pragmatism, especially John Dewey the pragmatism of Ambedkar differs from the context of Western societies. The pragmatic method of Ambedkar came out of his social responsibility and in presenting the history from the victim's point of view. In essence he made a serious attempt in constructing the Indian history in which one finds dignified place for 'Sudras' and 'untouchable communities'. Ambedkar is a source of inspiration for contemporary Dalit movement and so for constructing history from Dalit point of view. Dalit historiography establishes its own method by challenging the**

Colonial, Nationalist, Marxists and Subaltern approaches of Indian historiography.

HIS WORK'S

Administration and finance of the east india company, Ancient Indian Commerce Annihilation Of Caste, Buddha Or Karl Marx , Buddha And His Dhamma, Castes In India Commercial Relations of India in the Middle Ages, Communal Deadlock And a Way to Solve it, Essays on Untouchables and Untouchability- 1, Essays on Untouchables and Untouchability- 2, Essays on Untouchables and Untouchability- 3, Evidence Before The Royal Commission On Indian Currency And Finance, Federation versus Freedom, Frustration, India and The Pre-requisites of Communism, India on the eve of the crown government, Lectures on the English Constitution, Maharashtra as a Linguistic Province, Manu and the Shudras, Mr. Gandhi And The Emancipation Of The Untouchables, Need for Checks and Balances, Notes on Acts and Laws, Notes on History of India, Notes on Parliamentary Procedure, Pakistan or the Partition of India , Paramount and the claim of the Indian states to be independent, Philosophy of Hinduism, Plea to the Foreigner, Preservation of Social Order, Ranade Gandhi & Jinnah, Review : Currency & Exchange, Review : Report of the Taxation Inquiry Committee, Revolution and Counter-Revolution in Ancient India, Riddle in Hinduism, Small Holdings in India and their Remedies, Statement of Evidence to the Royal Commission on Indian Currency, States and Minorities, The Constitution of British India, The Evolution of Provincial Finance in British India, The Present Problem in Indian Currency, The Present Problem in Indian Currency , The Problem of Political Suppression, The Problem of the Rupee, The Untouchables and the Pax Britannica, The Untouchables, Who were they and why they became Untouchables, Thoughts on Linguistic States, Untouchables or the Children of India, Waiting for a Visa, What Congress and Gandhi have, done to the Untouchables?, Which is worse? Who were the Shudras?, With the Hindus. Dr. Babasaheb above mentioned vast writing will be act as the light house to the coming every generation. On 31st January 1920 he started his first weekly 'Mook Nayak', envisaged as a medium to articulate the voice of the untouchables' in their struggle against the age-old system of caste.

His fourth book- Provincial De-centralization of Imperial Finance in British India, published in June 1921, attempts to unravel the economic situation of India during British rule.

The fifth book- The Problem of a Rupee - Its Origin & Its Solution, published in March 1923, talks about the History of Indian Currency and Banking and how the Indian banking system functioned in order to sustain the Indian economy.

His sixth book- The Evolution of Provincial Finance in British India, published in 1925 **brings out Ambedkar's Economic Ideas**, Decentralization of provincial finance in British India, Public Finance, Economic History of India and Indian Economic Thought. His second weekly 'Bahishkrit Bharat', was started on 13th April 1927, aimed at debating morality and advancing the material progress of the untouchables. Another weekly 'Janata', began publishing on December 19307.

His seventh and most read- Annihilation of Caste was published in December 1935, was a speech of Dr. Ambedkar that has become a historic document, dwelling on the ideas of the annihilation of caste in India. Commenting on **such huge Babasahe's writing is really beyond** the scope of this work, while summarising about his individual writings one must consider his way of annihilating strategy of casteism, Jat-Pat-Todak Mandal, Lahor who have so very kindly invited him to preside over this Conference, under the theme Annihilation of Caste in 1936 as Annual Conference, at that time he was invited as the president to preside over the session. It is not possible to break Caste without annihilating the religious notions on which it, the Caste system, is founded it was the opinion of Babasaheb. The Conference was to meet in Easter but was subsequently postponed to the middle of May 1936. The Reception Committee of the Mandal has cancelled the Conference. At the start, a dispute arose over the printing of the address. Babasaheb desired that the address should be printed in Bombay. The Mandal wished that it should be printed in Lahore on the ground of economy. He published thousands of copies of the speech which was prepared by him as the part of diagnosis of caste Hindu. He thought that —Hindus must realize that they are the sick men of India and that their sickness is

causing danger to the health and happiness of other Indians.

The eight book- Federation Vs Freedom, published in January 1939, lays down the birth and growth of Indian federation, its structure and the character of the federation. The ninth book- Thoughts on Pakistan, published in December 1940, engages with the politics of partition and communal politics arguing for minority protection under the new constitution in India

His tenth book- Mr. Gandhi & the Emancipation of the Untouchables published in December 1942, argued how the untouchables have been cheated by Mr. Gandhi and points out the hollowness of programs that were implemented for their development. In the comparative analysis of- Ranade, Gandhi & Jinnah, published in January 1943, he problematise the three historic personalities and does a comparative analysis of these personalities and the social impact they have made in India.

His eleventh publication- What Congress & Gandhi have done to the Untouchables, published in June 1945, analyses through historical facts and figures about what the Congress and Gandhi have done unravelling their hypocrisy and double standards when it comes to _untouchables.

His twelfth book- Who Were the Shudras?, published in October 1946 brought to light how they came to occupy the Fourth Varna in the Indo-Aryan Society.

His thirteenth book- States & Minorities, published in March 1947, explains how the minorities should be protected and how their rights and development should be planned by the state.

His fourteenth book- The Untouchable, published in October 1948 talks about the history of untouchables and how untouchables became so in India.

His fifteenth book- Maharashtra as Linguistic Province, October 1948, showed the difficulties arising out of Linguistic Provinces, its advantages and the solution for its problems. This was followed by his sixteenth book- Thoughts on Linguistic States, published in December 1955, arguing about the creation of

linguistic state, the advantageous and disadvantageous and the solution for the same. His last and most popular book- Buddha & His Dhamma, was published in 1957. The book was **a treatise on Buddha's life and on the basic tenets** of Buddhism. Currently this book is revered by Buddhists all over the world. Finally it must be noted that in each of his books, Dr.B.R.Ambedkar lays down the most sophisticated ideas of a critical and an emancipatory politics which none can disregard if they are to seriously engage with the Indian reality

In his comparative writings of Buddha and Karl Marks he excavated lot of teaching of Buddha hardly anyone knows that what the Buddha taught is something very vast: far beyond Ahimsa⁸. The tenets of Buddha are very vast, he had understood them from reading of the Tripitaka : Man and morality must be the centre of religion. If not, Religion is a cruel superstition; it is not enough for Morality to be the ideal of life. Since there is no God it must become the law of life. The function of Religion is to reconstruct the world and to make it happy and not to explain its origin or its end. The above stated lines as he wrote itself shows that how **the Buddha's** teaching is the only teaching depends upon the reality not the myths? Such pure teaching of Buddha he was used to destroy the superstitious belief on non existing things.

Dr. Ambedkar had a visionary conception of democracy, which needs to be —rediscovered⁹ today. But going beyond that, we must also enlarge this vision in the light of recent developments⁹. While Dr. Ambedkar was far ahead of his time in stressing the link between political and economic democracy, perhaps he failed to anticipate the full possibilities of political democracy itself. He thought that in the absence of economic democracy, ordinary people would be powerless. Also, he thought of political democracy mainly in terms of electoral and parliamentary processes. In both respects, his assessment was highly relevant at that time. Today, however, we are constantly discovering new forms of democratic practice, in which people are often able to participate even if economic democracy is nowhere near being realised.

In his most research oriented book of Revolution and Counter-Revolution in Ancient India, he was not only written that the Buddha

was revolution, but also the first Social Reformer and the greatest of them all is Gautama Buddha. Any history of Social Reform must begin with him and no history of Social Reform in India will be complete which omits to take account of his great achievements

In his book of Riddle in Hinduism after doing in detail study and research on it he has strongly recommended that "The Veda has no authority, since it has the defects of falsehood, self-contradiction, and tautology. That verbal evidence, which is distinct from such as relates to visible objects, i.e., the Veda, has no authority. Why? Because it has the defects of falsehood etc

The introspective, logical and thoughtfully **expression of Dr. Babasaheb Ambedkar's** writings on not only on the issue like Riddles in Hinduism, but also in all writings very pure and scientific investigation has come into exist. In **retrospect, Dr. Ambedkar's vision** of the Dhamma as a universal code of ethics was perhaps a little naive. Personally, I doubt that there will ever be a universal code of ethics. Diversity, including the diversity of ethical codes, is an intrinsic and welcome feature of social living. **Dr. Ambedkar's devotion to the Buddha's teachings** occasionally jarred with his commitment to critical enquiry and independence of mind. Having said this, his recognition of social ethics as an essential ingredient of democracy has not lost its relevance. If democracy is just political competition between self-interested individuals (as in the —median voter¹ model and other theories that pass for —political economy¹ today), it will never succeed in bringing about liberty, equality and fraternity. In Particular, it will never do justice to minority interests.

The untouchable occupy the lowest rank of Hindu caste system and thereby the fateful destiny of being regulated as the outcastes¹⁰. Through the writing of Indian constitution he has not only raised the status of outcaste but also the status of all strata of women by the provision of many fundamental rights such as article no 14 strongly speaking on the equality before the law and equal protection of the law with irrespective of the caste, gender and place of birth. One of the most important contributions of **Dr.BR Ambedkar's life and his achievements in those** dark ages towards lifting the spirits of his fellow caste brethren is to inspire, to liberate their mind that has, for many millennia, come to accept

manacles and servitude impressed on them. Believed that, they are born to serve the 'twice born' and their existence is only as slaves. But Ambedkar thought that historical evidence was overwhelmingly against the hope of internally saving Hinduism, and therefore the structurally unchangeable Hinduism had to be discarded. For him it was not merely a question of saving the Untouchables, but it was saving India as a nation through saving Untouchables.

Dr. Ambedkar held that there were two qualitatively different groups which had not only been historically central, but continued to be central, to social organization and social dynamics. Contemporary Constitutional authority, Granville Austin has described the Constitution of India as 'first and foremost a social document with three broad objectives-ensuing unity, democracy and creating a social revolution'¹³. The Constitution of India bears the impression of **Dr. Ambedkar's thought as a key instrument for National Reconstruction**. He was the lone speaker at the Constituent Assembly of 1946, which discussed the framework of future Constitution to underline the need to build up a cohesive society¹³. —Our difficulty is how to make the heterogeneous mass that we have today take a decision in common and march on the way which leads us to unity. Our difficulty is not with regard to the ultimate; our difficulty is with regard to the beginning. Ambedkar felt that the 'untouchables' had lost their individuality for centuries; it was impossible to wake up such people through speeches and slogans. He decided to revolt against the blind beliefs of the Hindus. The Chowdar Tank Satyagraha was a result of this decision.

MAJOR THRUSTS OF DALIT HISTORIOGRAPHY

In the present intellectual and cultural climate in India, a major desideratum is the historiography of resistance, both the articulate and hidden forms of resistance. The implicit and silent forms of resistance have not attracted the

same scholarly treatment. This is to a large measure, due to the relatively underdeveloped state of cultural history, as silent resistance generally manifests itself in the domain of culture. Recovering the meaning of silence, along with the articulate, and contextualizing it in relation to the social forces should therefore form the agenda of new alternative historiographies, especially of the Dalit Historiography, as distinct from the textual analyses that currently crowd the cultural studies. The following sections deal with the main philosophical and hermeneutical thrusts and signposts, which would make of the Dalit Alternative Historiography, grounded, contextualized and related to the flesh and blood concerns of the marginalized of the society.

GENEALOGY AS A TOOL OF DALIT HISTORIOGRAPHY

Genealogy is a tool of investigation into the events that have led us to constitute ourselves and to recognize ourselves as subjects of what we are thinking and doing. It is contrasted with the Historical Schools of the Dominant Historiography. Genealogy looks at history from below, from the bottom to top and not from top to bottom. Foucauldian genealogy is indeed a Dalit historiographical tool for recording the histories of Dalit everydayness. Genealogical method helps to overcoming the privileging of time as a metaphor of history and progress, to privileging space. This, in turn, helps us to overcome the gap between history and memory, especially in the context of the everydayness of the Subalterns.

Conclusion

Dr. Babasaheb Ambedkar is known for his versatility. His interpretation of the Philosophy and his historical analysis throws new light on the thoughts. He believes Human Values are based on liberty, Equality and on Fraternity. Babasaheb Ambedkar was straight forward and realistic; he was above bias and Prejudice.

HEROIC STONES IN ATTAR TALUK AT SALEM DISTRICT – A STUDY

S. Deepalakshmi

INTRODUCTION:

Salem city in the fifth biggest city of the state is located in the northern central Zone of Tamilnadu. In the ancient times the Salem District was part of the kingdom of kongu and before which it was a part of the region under the region of king adhiyaman, Cholas, Nayakkas, Tipu sultan and the British. A lot of heroic stones were found in the Salem region the custom of people living as caste or region specific group washing practice since, old ages in Tamil Nadu Salem region was predominantly of the type of red soil of karisal soil and the cattle war consider the only source of income for the people who lived in those ages nothing the capitals which belongs to one set buy the other set was the point of conflict between these groups or sects of two oldest Tamil people who lived in the Kongu region. The height of valor by the soldier of the sect and it has brought laurels to their group. The soldiers who succumbed during those fights while recovering the cattle were laid to rest without most respect and dignity by erecting heroic stones in memory of their valor. A good number of Heroic Stones found in the Attur Taluk at Salem District of Tamil Nadu

ATTUR HEROIC STONES :

Attur in a first grade town ship in Salem District, situated in the south of Vashishtariver on 4th January 1965, it was up graded to township from municipality According to lebon an Englishman,¹ Who made the Salem District hand book, it was originally Aattrur. Later it because Attur. As the city in situated on the river side it is called Attur². The Memorial stones were

found in this famous Attur, like Oorkathankal, Prison rescue stone, Saint stone, Puli kuthipattaa kal (Tiger stone). Pandri kuthi pattaa kal (pig stone), satikal, There are many different types of stones.

VEDUKATHANPATTI VEERAKAL

Here, stone depicting war heroes were sculptured. In this two soldiers are in land, one horse fighting soldier and one separate horse also there. Being the soldier supper on the hand is not known. Small knife is seen the waist the hair of soldier on the horse. Rival in holding the hair of soldier and his right hand sword seems to be piercing the heart. Near the two soldiers the third soldier holds spear head on left hand and the horse on the left showing that he is be ready for race. One horse was found without the soldier. Probably he could have died “Kettimudali dynasty ruled their area in 16th century. During 1659 B.C and 1667 BC they fought war favoring Madurai nayaks. So the above inscription were in the remembrance of them.⁴

KOTTAI KAVUNDANPATTI SATHI STONE:

Sathi stone and square type stone sculpture were found here. It had, The soldier having structured kondai lace on left side jewels on ear knife on right hand with pointed edge facing ground on left side of the soldier. It also his wife with folded hands, her ear with jewels, bangles in wrist shows her as sumangali.

DEVIKURICHI NADUKARKAL:

This was found in the agricultural land of sculptor situated on the south bank of vasistariver. Structured kondai and decimated

face, gives an impression that sculptor could have been repaired with cement. It shows the soldier rings Dhusha panga posture wearing neck shoulder rings,Vaguvalayam,armed chest with an arrow on right hand and bow on the left hand.⁵

ATTUR PULIKUTHIPATTAN STONE:

This is kept in Selliamman temple, Attur fort it has a soldier sitting on the top of tiger with structured kondai with tilted head posture. Aaram around neck bracelet on hand left hand holding tiger tightly and his right hand piercing the tiger neck with sword. It is shown as if the tiger is biting his hand. This heroic stone was laid for the deceased soldier who saved public and animals from tiger.⁶

AARAGALUR NADUKARKAL:

Aaragalur is a village Situated 6 km away from Thalaivasal, Attur Taluk Salem District since it was Surrounded by six trenches it got its name Aaragalur. Aaragalur Navakandam heroic stone is situated in faming land in vellipalayam. It has a hero with broad moustache, his hair dressed in the back and ear rings are seen sword on the right hand is shown as if he himself is piercing his own head also sarabali in neck with decimated right hand are present no written inscriptions on that.⁷

AARAGALUR AYYANAR KOIL SATHI STONE:

It is found under Ayyanar temple tree. Head and face are decimated neck jewels are faded. Vaagivalayam, bracelet left hand rested on thigh is shown waist dress is beautifully sculptured with a small sword, Right hand is shown with a sword.⁸

THULUKANUR PAMBATTAN KAL:

It was found on the outskirts of Thulakanur. Sun and moon are shown. It has a

hero on a standing posture, Holding snake on his left hand in waist dress. This heroic Stone could have been laid for a hero who died while trying to save people from snake.⁹

YELUPULI HEROIC STONE:

It is situated on the Kariakoil river bed Hero shown in Thiribanga or body in a bend position well structured kondai in his right side neck lace shoulder rings bracelet in wrist showed hero in exemplary way. The type of weapon holding in his right hand its not shown clearly near to hero, A woman in bust size with Ear rings necklace and holding flower in her right hand is seen Both are buried in the earth .This Heroic stone of the hero was erected either for winning the war or hunting. After the demise of husband wife also dies So it may be Sathikal.

CONCLUSION:

After finishing this paper we came to a conclusion about the brave man is the hero stones. Inspective of their position from the king to bottom level ordinary citizen the heroic stones were. In Attur Taluk the hero stones erected for the brave man who fought and died during the rescuing the calf from the tiger are found. Fighting with the powerful tiger and died in really appreciable. Fighting for the calf is not because of the small but to redeem the loss of its hild from the mother cow Brave men honoured who killed the pigs which destroyed the paddy field and people. We found the hero stone in Salem area of who killed the pigs and protected their field has much evidence some hero stones leveled that women also kidnapped and raped in the later period. The hero stones raised for the bravery activities of the man who lose their life during the protection of women when they kidnapped the brave man are in unprotected condition from their enimies is also revealed from the hero stone. Taken into consideration the Attur Taluk heroic stones were spoken about the bravery of the braveman.

HISTORICITY OF VEMBATTUR

R. Devisri

Introduction

Vembattur, a famous village is located on the way to Manamadurai in Sivaganga district, on the northern bank of river Vaigai. Vembattur has its history from 2000 years ago. In the ancient period, Vembattur is known as Vembarrur and also called as Nimbai.¹

During the reign of Cholas in Pandya country, it was given to the Brahmanas and called as "Uttamachola Chaturvedimangalam".² After Chola's rule during the reign of later Pandyas, during the period of Jatavarman Kulasekara I, it came to be known as "Kulasekara Chaturvedimangalam".³ During the reign of Jatavarman Kulasekara he invited 2008 Vedic Brahmanas from Vembarrur near Kumbakonam in Chola country and were settled at Vembattur alias Kulasekara Chaturvedimangalam.⁴

These 2008 Vedic Brahmanas from Chola country were called "Vembarrur Choliya Smarta Brahmanas" They were also settled in different places upto Thirunelveli, Tenkasi and other villages.⁵ These Brahmanas were contributed a lot to the Tamil language and literature. From Sangam age to present day, Vembattur is known for its academic excellence and it has given large number of poets to the Tamil language and literature.

History of Vembattur gleaned as from Inscriptions

In Vembattur, large number of Pandya, Chola and Vijayanagar Inscriptions have been found. During the reign of Pandyas, large number of Pandya inscriptions were found especially, furnish information about Jatavarman Kulasekara and his contributions to the temples which are located in Vembattur.

The inscriptions found at Vembattur furnish information about the temples which were located in Vembattur during the ancient times, viz., Naduvirkoyil alias Rajendra Vinnagar.⁶ Tirumerkoyil alias Puravuari Vinnagar.⁷ Sri Kailasamudaiyar Naduvirkoyil, Rajendra Vinnagar and Vijayamanikka Vinnagar.⁸

These inscriptions recorded lot of informations about the donations, gifts and taxfree lands etc. During the age of Chola, The undated, damaged Chola inscription of Rajakesarivarmankulottunga I (1071 - 1122 C.E) seems to record a sale of land by the Mahasabha of Sri Uttamasola Chaturvedimangalam as Tiruvilakkupuram for two lamps to god Alvar at Naduvirkoyil alias Rajendrasolavinnagaram.⁹

The inscriptions of Parakesari Vikramachola (1120 - 1187 CE) were found at Vembattur. These inscriptions record about the foundation of a colony named "Vikramachola Chaturvedimangalam"¹⁰ and also refers to some arrangements made for food offerings. Another inscription of his is dated Saka era of 1043 is records the grant of land as Tirumadaipallipuram by the Mahasabha of a Chaturvedimangalam.¹¹

Large number of inscriptions reveal details about the offerings and donations of Pandya Jatavarman Kulasekara I (1190 - 1216 CE). During his fifth regnal year, the sabha of Vembarrur purchased and gifted as tax free for the temple as Thirunanda Vilakkupuram to God Emberuman.¹² They also assigned some lands Seliyaneri for various offerings to the god at Tirumerkoyil alias Puruvavarivinnagar.¹³

During his eighteenth regnal year, another Tamil inscription has recorded the gift of lands as Valinadaittiruvidaiyattam for perpetual and holy light lamps to the deities at Puravuarivinnagar and Vijayamanikavinnagar in Kulasekara Chaturvedimangalam.¹⁴

The land measurements were revised and fresh assessments were made from his nineteenth regnal year.¹⁵ Another inscription, records the lands which were formerly by the standard measuring rod Kuditangi were now measured by a standard measuring rod increased by one fourth of its length and the lands were reassessed and taxes were refixed.¹⁶

During the third regnal year of Jatavarman Srivallabha Pandya (1291 - 1296 CE) records the grant of land as Madaipallipuram.¹⁷ The inscription of Maravarman Parakrama Pandya (1335 - 1337 CE) refers the old names of

Vembattur, They are Uttamasola Chaturvedimangalam and Vembarrur alias Vikramapandya Chaturvedimangalam.¹⁸

Another Inscription of Jatavarman Vikrama Pandya (1401 - 1422 CE) records the gift of coins for expenditure in connection with a procession on the day of Hasta in the month of Panguni, in the temple of Emberuman at Rajendra vinnagar.¹⁹ The inscription of Vijayanagara is dated Saka era of 1445 on the Karpagavinayagar temple of Vembattur, records the information that vembattur was constituted as a agaram and renamed Krishnarayapuram²⁰ by the name king Krishnadevaraya.

According to the study of inscription found at Vembattur, the name of Vembattur has been changed dynasty by dynasty. During the Chola period it was to be known as Uttamasola Chaturvedimangalam and Vikramasola Chaturvedimangalam. During the second pandyanempire it came to be called as **"Kulasekara Chaturvedimangalam"** by the name of Jatavarman Kulasekara and also known as **"Krishnarayapuram"** at period of Vijayanagara. The Inscriptions traced the information about temples, which located at Vembattur in the ancient period. The Vaishnavite temples were, Rajendra Vinnagar (Naduvirkovil), Vinnagar and Vijayamanikavinnagar. KailasamudaiyarNaduvirkovil dedicated to lord Shiva.

Vembattur as a cultural centre

Vembattur is the soil closely associated with the life of illustrious Tamil scholars. Vembattur has the pride of being the birth place of renowned Tamil scholars belonging to the Sangam Age.

During the Pandya period, **"Vembarrur Choliya Smarta Brahmanas'** were great Vedic scholars who look great interest in Tamil language and literature. Over the centuries, a galaxy of scholars of these families, took up well known Sanskrit texts and translated them into excellent Tamil poetry.

Vembattur poets and scholars

From the Sangam age, Vembattur is famous for its Vedic scholars. The VedicCholiya Brahmanas were settled in different villages in Pandyacourtries like Viracholam also called

Virai, Tenkasi, Kilappavur, Vallanadu, Illuppaiyur, Karivadlamvantanallur, Karkulam, Panaiyur, Kurungavanam and others. Many of these Brahmins were called Nambis.²¹

During the 11th century CE The poet sevvaisuduvur translated Srimad Bhagavatam in 5000 verses into Tamil language for the first time. The most celebrated work of another poet **"Peruparrap -puliurnambi"** also called Tillainambi translated the 64 sports of Sivam, the presiding deity of Madurai. This work was called **"ThiruAlavay Puranam"** from a Sanskrit text called **"Sara Samuccayam"**. This work has been edited by Dr. U.V. SwaminathaAyyar, who has paid encomiums on his families contribution in general and TillaiNambi in particular. He has shown that this work written sometime before 1220 CE, in the time of Pandya ruler MaravarmanSundara Pandya, who was the first to check the greatness of the Imperial Chola dynasty.²²

One among the Vembattur scholars, **"Viraikavirajapanditar"** who settled at Viracholam, also called **"Virai"** translated the famous poem, Soundarya lahari of Sankaracharyainto Tamil. He translated another work Anandalahari from Sanskrit to Tamil. He wrote many Tamil works, viz., Aanandha Nayakimalai, VarahiMalai, Sri Buvanambigai KalaiGnanadeepam, Gnana Ula of Melakodu Malurkumaram.²³

Another poet SriPattar translated the Bahavatgeetha into Tamil and Gnana Vasishtam translated by the poet Alavantan Madava Bhattar into Tamil. Some other famous works and poets who belonged to the Vembattur are, Tatvaraya wrote 'Paduturai', Ambikapati wrote 'Paraparamalai', Thirunelveli Perumal Ayyar wrote 'Nellaivargakovai', Alagarkalambagam and Alagar Pillai Tamil were written by Kavi Kunjara Barathi and Sami KavikalaRuddhisar respectively.²⁴

Periya Sama Ayyar wrote Chandrakala malai, KavirayarSankara Subbu Sasthrigal wrote Thiruvananthapuram Maharavannam and Vasaikummi, Madurai Kovai were written by Narayana Ayyar, Kavisankara Narayana Ayyar respectively. Another work namely TiruvilaiyadalKummi wrote by AlavaiSubbayyar. Muthu Venkata subbhaAyyar also called as 'Siledaipuli Pitchu Ayyar' wrote

Prabandhadipika. Mambalakavisinganavalar sung about Vembattur and regarding Inscription were found at Utchipillayar temple at Trichy.²⁵

Madurai Thiruppanimalai gave the information about, the people from Vembattur, contributed lot to the Meenakshi Temple, Madurai and one of the tower of Meenakshi Temple which is located in front of Shrine of MukkuruniVinayagar called as “Vembatthurar Gopuram”. Dr. U.V. SwaminathaAyyar was here in his uphill task of collecting and editing ancient famous Tamil works by gifted authors.

Conclusion

Vembattur is one of the famous village located on the banks of the river Vaigai. It has its own history from 2000 years ago. According to

the inscriptions have been found at Vembattur, the name of the village has been changed dynasty by dynasty, viz., called as Uttamasolachaturvedimangalam, Vikramasolachaturvedimangalam, Kulasekarachaturvedimangalam and Krishna rayapuram called at the period of Chola, Pandya and Vijayanagara respectively. From the Sangam age, it is famous for its vedic scholars and also till now it is well known for its academic excellence. The ancient Shiva and Perumal temple are located in the vembattur, Now a days they lost their architectural heritage and the inscriptions were lost due to the renovation works have been done at these temples. But the pride of vembattur has continued by the renowned Tamil scholars and their contributions to the Tamil literature.

STUDIES ON PERUMUKKAL INSCRIPTIONS

M. Gandhi

Introduction: Many sources play important part in construction of history of a nation or a region. Inscriptions took part a main role as a source of history. Inscriptions bear source of political history, social history, cultural history, economical history and other histories. Hence, this paper aims to focus on inscriptions of Perumukkal. Perumukkal has a few lithic records are to inform the history of a particular period, political history, cultural history and economical history.

Location of Perumukkal: Perumukkal is situated on the highway to Marakkanam in the Tindivanam taluk of Villupuram district in Tamilnadu. Perumukkal is a small agricultural village which is located on the base of a small hillock so this village is named as Perumukkal.

Establishment of Thiruvanmigai Isvara temple: In the 3rd regnal year of Vikrama Chola king Vikrama Perumangalam chieftain Udaiyan Thiruvan alias Siruthondar established a granite shrine. Further he endowed Thirumadaivilakam

of this God, garden, Agazhippakkam alias Vikrama Chola nallur and Kakunayakan villages to the God. Siruthondar caused for the sake of chieftain of Konur who was called Araiyan Kaku nayakan alias Kanakarayan.¹

Twelve stone steps had been constructed on the hillock towards the Thiruvanmigai Isvara temple². This inscription was scribed during the 12 - 13th century A. D.

Installation of Images of Gods In this temple: Perumal stone icon was installed by one Brahmarayan. His details were not known from this inscription.³ One person named Andamai Thiruvudaiyan who was a resident of Kurrur in Cholamandalam erected an image of Pasupati in this temple. Further he purchased 250 *kuzhi* land and endowed to meet the expenses of Thiruppadi marru of Pasupati.⁴ Vijyalaya Kakku Nayakan by name a resident of Velur of Vandalai Velur Kurrum of Chola mandalam installed a Pillayar image in this temple. This Nayakan purchased 516 *kuzhi* land and gifted to this Pillaiyar for offerings during the reign of Kulothunga I in his 47th regnal year (1117 AD).⁵ Kothaiyazhvi alias Puravari Nangai daughter of a devaradiyar of this shrine installed a Vinayaka Pillaiyar. She further endowed 6 *kasus* to offer two *nazhi* of rice in the 8th regnal year of Kulothunga Chola II (1141 A. D.).⁶ A devotee called Karuppulan Velan Adaikkalapporulanar of Mosukulattur in Kulothunga Chola nallur alias Ozhukarai in Mathur nadu a subdivision of Jayangkonda Cholamandalam installed an icon of Subrahmanya in this temple. This inscription may be ascertained to the 12-13th century A.D.⁷ An inscription was carved on a small pilaster of Dakshimurti devakoshta with a portrait. According to this record, an acharayan by name Athreyan Thiruchchirabalam Udayan Anbarkkarasu Bhattan was appointed to this temple, his image was carved here in relief.⁸ In other small pilaster of above niche a relief image of Periyar Thiruvan alias Siruthondar of Peithalai Perumangalam in Tenkarainadu.⁹

Land reclamations and donations: During the 8th regnal year of Vikrama Chola villagers of Perumukkal alias Gangaikonda nallur of Oyma nadu alias Vijaya Rajendra Valanadu a sub division of Jayangkonda Chola mandalam auctioned land in which weeds had grown due to overflow of lake water. Araisur Udayan Uyyavandan Azhagiya Devan of Araisur in

Nittavinodha valanadu a sub division of Chola mandalam had purchased above land 500 *kuzhi* for good *kasus* of daily use. He endowed the land to Thiruvanmigai Isvara of Perumukkal.¹⁰ This transaction also occurred in the 8th regnal year of Vikrama Chola (1126 A.D). The same person mentioned above Azhagiya Devan purchased 500 *kuzhi* land from Perumukkal village and donated to the temple to apply sandal paste to Kuthadum Devan during the festival time and other expenses.¹¹ In the 8th regnal year of Vikrama Chola Nolambur villagers auctioned a land which was fallow due to breach of lake. The same person Azhagiya Devan of Araisur purchased and gifted as capital fund to use at the **time of Thiruvanmigai Isvara's arrival to cot and Thiruppadi marru function.**¹² In the same year (1126 A. D.) during Vikrama Chola's regime Araisur Udayan purchased 520 *kuzhi* on auction from the villagers of Perumukkal for three *kasus* and endowed to the God.¹³ Uyyavandan Azhagiya Devan purchased land for six *kasus* through auction from the villagers of Perumukkal and donated to the temple for Thirumandira Pongam an offering.¹⁴

Donations of perpetual lamps to the temple:

(a). Headman of Mambakkam village Narayanan Adavallan donated a perpetual lamp to the temple and his *kani* field also for lighting lamp daily. This donation occurred in the 13th regnal year of Vikrama Chola (1131 A. D.)¹⁵ (b). An unknown person donated *vilakkupatti* a land in the 10th regnal year (1127 A. D.) to the temple.¹⁶ (c). In the 9th regnal year (1126 A. D.) of Vikrama Chola Thiraiya devadigal Gangaikondan Rajadhiraja Valavadaraiyan purchased 500 *kuzhi* of land for daily usable good *kasus* and gifted as *Thirununda vilakkupuram* to the God.¹⁷ (d). In the 15th regnal year (1162 A. D.) of Kulothunga Chola II Ilvalapakkam alias Puravarinallur residents sold 500 *kuzhi* (*one ma*) land to Adittan Pakavan of Adhirajamangalapuram of Naduvil nadu for burning a *Nundavilakku* in the temple.¹⁸

Cow donations for lamps: (a). In the 16th regnal year (1162 A. D.) of Rajaraja Chola II the **study temple's devaradiyar** Andamai whose daughter Kulothunga Chola Manikkam and whose daughter Sivan Bhagan Kondal alias Virabhadra Nangai donated a lamp with 32 cows and a bull.¹⁹ (b). In the 5th regnal year (1171 A. D.) of Rajadhiraja Chola II Uppadu

Kudikuthuvan Padalikomani alias Ammaippa kon of Vahur in Naduvil nadu donated 32 cows and an ox.²⁰ During Rajadhiraja Chola II's 5th regnal year (1171 A. D.) one person Kuththu uganthal d/o of Nachchi was a servant maid of Kurrur temple located in Thiru Idaikkazhi nadu. Kuththu uganthal gave away a lamp along with 32 cows and a bull for burning in the Isvara temple of Perumukkal.²¹ (d). In the 7th regnal year (1152 A. D.) of Rajaraja Chola II Ilakkichal's daughter from Cheyyur alias Jayangkonda Chola Nallur in Cheyyur nadu endowed a lamp with 32 cows and an ox to the temple.²² (e). Three persons from the Cholamandalam gifted each one perpetual lamp along with 30 cows each gentleman to the temple. Two persons from Jayangkonda Cholamandalam donated one *sandhi* lamp along with twelve sheep by each man. Brahmanas of this temple endowed three *sandhi* lamps and three perpetual lamps to Thiruvanmigai Isvara shrine in the 45th regnal year (1115 A. D.) Kulothunga Chola I.

Kasu for lamp burning: In the 16th regnal year (1129 A. D.) of Vikrama Chola a person (name not known) gifted 6 *kasus* for burning a perpetual lamp in the temple.²³ An individual named Ponnai alias Vikrama Chola Muvenda Velan from Kadavayil donated a perpetual lamp to the hill shrine of Perumukkal.²⁴ In the 39th regnal year (1108 A. D.) of Kulothunga Chola I Madavan the headman of Mambakkam donated a lamp with sheep to be burned in the temple.²⁵ Gift of a village Kuttappakkam in Inkarai *parru* of Oymanadu to God's offering and restoration work to Thirumalaimel Aludaiyar shrine at Perumukkal in Oymanadu which contained Kidangil *parru*. Donation was made in the 4th regnal year of Raja Narayanan Sambuvarayan.²⁶

Offerings and renovations: In the 13th regnal year of Rajadhiraja Chola II's records donation of taxes of *antharayam*, *karthikai kasu* etc., as capital towards the spending of offering to the God by Sengeni Siyan Pallavan alias Rajanarayanan Sambuvarayan.²⁷ In the 4th

regnal year of Krishna Devaraya of Vijayanagar empire, his feudatory Eththappa Nayaka's son Thirumalai Nayaka from Chandragiri gifted three villages from Tindivanam *simai* to Thirumalai Udaya Nayanar for offering and renovation.²⁸ In the 6th regnal year (14th C.A.D.) of Maravarman Virapandian gifted 25 good coins to celebrate *Puratachi* festival, Aramiranka nadu offerings and renovation in the Aludaiya Nayanar shrine. The money might be considered as tax free from devadana lands and other taxes.²⁹ In the 17th regnal year of Sadaya varman Sundara Pandian (1278 A.D.) one *kani* (750 *kuzh*) land was bestowed towards Nayanar's midnight offering. Thirukkamakkottam Periya Nachchiyar for her bed chamber offerings. Items of offerings were vegetable food offerings and oil lamps. These gifts were donated by Nemmalai chieftain Arayan Achiriyamazhakiyan Chedirayan in Vijaya Rajendra valanadu of Oyma nadu in the sub division of Jayangkonda Chola mandalam.³⁰ In the 16th regnal year of Rajaraja Chola II Sengeni Siyan Pallavan alias Raja Narayanan donated *siru padikaval* tax from some wet land and dry land for food offerings to the God.³¹ During the regime of Kulothunga Chola II a Munnuru Kudipalli Sengeni Nalayiravan Ammaiappan alias Sambuvarayan gifted the paddy from *siru padi kaval* and *peru padi kaval* tax to the God.³² During Vijayanagar ruler Sadasiva raya (1546 A. D.) Manikka Nayakar of Vettavalam had endowed for offering to *kalasandhi* in the temple.³³ In the year 1568 A. D. Koppa nayaka, treasury officers of the temple, the Sengunthar granted *kani* land to Ponnambala Nayakar to repair the temple.³⁴

Conclusion: This study of Thiruvanmigai Isvara mudaiyar temple at Perumukkal highlights 12 century AD to 17 century AD duration period history, religion, society, economy, agriculture, irrigation systems and donations. Inscriptions in every class have to be saved to write our history.

CYCLONE HAZARDS AND COMMUNITY RESPONSE IN COASTAL TAMIL NADU: AN ANDHROPO- HISTORICAL PERSPECTIVE

P. Girija & A. Gughan Babu

Introduction

Tamil Nadu is vulnerable to the high level of the cyclone, its physiographical features responsible to occur, the frequency of cyclone hazards in the region.¹ Hydrometeorological hazards of cyclone started as low-pressure weather the system, then from moderate to high level. Depending upon the wind speed, cyclones are divided into several categories into depression, deep depression, cyclonic storm, severe cyclonic storm, very severe cyclonic storm, extremely very severe cyclonic storm and super cyclonic storm. Since 1891, cyclonic activities are increased in the eastern Coromandal coastal region of Tamil Nadu. The Cyclones of 1964 and the Tsunami of 26th December 2004 had a devastating shock along the coastal region. The heavy damages are occurred in the coast due to the past cyclones in Thane (2011), Nilam (2012) and Vardah, Nada (2016) and Ockhi (2017) and Gaja cyclone (2018) is very huge level. Government of Tamil Nadu is taking measures to reduce the hazards in all intensity.²

Study Area

The coastal zone of Tamil Nadu is about 1076 kilometres which are about 15% of the State.³ The area is consists of 10 coastal districts, 25 coastal blocks and 561 fishing villages, 15 major ports, harbours, sandy beaches, lakes and river estuaries.⁴ More than 40% of the fisher population lives within 1 km of coast and 50% of them live within 2 km of the coast.⁵ About 8% of the State is affected by five to six cyclones every year, of which two to three are severe than on the West coast, and occur mainly between April-May and October-November. Tamil Nadu is also subjected to annual flooding, including flash floods, cloud burst floods, monsoon floods of single and multiple events, cyclonic floods, and those due to dam burst or failure.⁶ The Tamil Nadu coastal comprises the Coromandel Coast from Pulicat Lake in the north to Point Calimere in southernmost, and the Gulf of Mannar, which extended up to the tip of Kanyakumari, which is the southernmost point of the Indian Peninsula.⁷

Cyclone Hazards

The fury of cyclone wind caused widespread destruction to the livelihoods, houses and trees. The destructive potentials of the cyclone had their impact on the coastal sites. The vulnerability of coastal people of Tamil Nadu continues to increase because of the progressive occupational of still more hazardous. Even today apart from the loss of life and collapse of buildings, damage agriculture, defoliate trees and plantation of the crop by cyclone winds and wash away food crops and heavy rains due to high wind velocities. The coastal residents refuse to migrate in a different place except they are forced or rendered completely homeless.⁸ Cyclones take heavy human tolls, blow off shanties, damage even masonry houses, destroy crop and forests, wash away protective embankments, inundate considerable coastal regions with saline water.⁹ Eastern Coromandel Coastal thus is the most vulnerable area of the Bay of Bengal with millions of people exposed to cyclone hazards, especially in the densely populated rural communities along the fertile regions at the confined head of the Bay of Bengal, and this area average over two or three cyclonic storms per year.¹⁰

Buildings Damaged

Due to the torrential wind pressure and offensive occurrence of the buildings to the footings, it can be blown away. Public building damages are based on a wider scale, usually most relevant in terms of damage to houses, more than other buildings. Damage to house property is the estimation in terms of the number of households affected, reporting percentage damage, and probable repair cost per household. This estimation is common for all houses Kutcha Houses, Pucca houses and Semi-Pucca houses. Besides, the house structure damage, there is also an aspect of household asset damage, which has to be taken into account. Damage of house structure can result in house goods damages, people assets and other productive assets stored in the houses. These notable damages are to be accounted for in terms of the average value of damages also

occurred due to the increased density of houses, construction of houses in vulnerable areas, use of poor quality materials as substitutes and the like which followed by leads to major building collapse which disappear much collateral damage. Cyclone Thane (2011) and Ockhi (2017) have extensive damages and destruction to the property such as Thane resulted in an aggregated loss amounting to more than 10,000 of houses fully destroyed.

Loss of Human Lives

The loss of human lives is expected to depend on cyclone intensity, landfall, and warnings. Among the cyclones listed, a comparison between the 1964 to 2018 cyclones is valid as they hit the same area and that of about the same intensity. The coastal area of Tamil Nadu was affected every year due to the cyclone. Human loss and injuries due to cyclones, often associated with floods, are one of the major problems in Tamil Nadu. Although, the number of fatalities caused by very severe cyclonic storms in Rameshwaram cyclone in 1964, Cuddalore cyclone in 1977, Jal cyclone in 2010, Thane Cyclone in 2011, Nilam Cyclone in 2012, Nada and Vardah cyclone in 2016, Ockhi cyclone in 2017 and Gaja cyclone in 2018. Injuries are the common impact of a cyclone on human lives and cattle. And also the primary cause of morbidity for these cyclones. The cyclone-related injuries are lacerations, blunt trauma and puncture wounds. Prominent causes of death and injury are electrocutions from downed power lines, flying debris, motor vehicle fatalities, and other related accidents.

Community response during the Cyclone¹¹

There is the dire need for food to sustain affected families who are displaced and lost everything due to cyclone. Fisherfolk communities living in the areas of the coastal belt bore the brunt of the cyclone.¹² They have been warned not to go out to sea for the next few days. Hence, their immediate livelihood has been severely affected. They will need food and household needs. People are suffering in lack of food supply, clothes, Milk for the children, candles, napkins, medicines and other essential supplies.¹³

Public Health

Diseases are commonly spread due to the cyclone and floods. Poor people access to basic needs such as drinking water and sanitation, adequate shelter, primary health care services. These conditions are most favourable for disease transmission, it must be addressed immediately with the rapid reinstatement of basic services. Disease easily associated with the sudden crowding of large numbers of survivors in Marriage Hall (Mandapam), cyclone shelters, schools, colleges, and public buildings. Often with inadequate access to safe water and sanitation facilities, will require planning for both therapeutic and preventive interventions, such as the rapid delivery of safe water and the provision of rehydration materials, antimicrobial agents and measles vaccination materials. After the Cyclone, it affects the public health, especially infectious out the breaker, has been documented compared with a flood. Gastroenteritis, cholera, typhoid, and other water-borne disease are common. Bacteria diseases attack the digestive system of the victim. Occasionally, for those stranded in the floodwater, availability of clean drinking water is also in issue waterborne infections can be avoided. Drinking water, clean sanitation, and self-cleanliness in the absence of purification methods such as boiling water, simple chlorine tablets can be used to disinfect water. Surveillance in areas affected by disasters is fundamental to understand the impact of natural disasters on communicable disease illness and death.¹⁴

Sanitation Crucial

After the cyclone, important issue and immediate concern is the sanitation. In Tamil Nadu, sanitation is non-existent in rural areas, even in the normal times, the issue is not given much more importance in cyclone and flood situations. However, the neglecting sanitation during a cyclone when people are crowded into temporary shelters, school, colleges and Marriage Hall (Mandapam) can lead to diseases and widespread epidemics. Each shelter is accommodated with 1500 people in varying cyclone-affected districts. 10 toilets are used for 1500 people in a crucial situation. During these times, women face several health issues and the notable problem is anaemia, leucorrhoea, infertility, and irregular menstruation and urinary infection will spread. It also leads to other problems.¹⁵

Therefore, the health department provides temporary toilet facilities in urban areas. However, temporary toilets were not entirely successful. Even though, women and children staying in the cyclone shelter were provided with sufficient food and drinking water are leads to health problems. Privacy, the separate place not for pregnant women, sufficient air and separate washrooms was not provided. Heavy rainfall resulting in the districts of Cuddalore, Kancheepuram, Thanjavur, Nagapattinam, Thiruvallur, and Chennai has rendered many poor people homeless during the cyclone times. Their shelter is made of mud and thatched houses which have been fully damaged¹⁶

Diseases

The impact of cyclones causes the spread of communicable diseases in a limited level then again, the risk for waterborne disease and vector-transmitted disease can be exacerbated. Human exposure to disease vectors can be increased due to changes in the physical environment. The impact on the health infrastructures and all lifeline systems is massive and can result in food shortages and interruption of basic public health services (water, food, sanitary napkins, and other needed things). In the case of flood and sea surges, risk of drowning and waterborne and vector-borne will lead to an increase in diseases. In the stormwater drains in all the 200 divisions, anti-adult activity is carried out using a hand-operated fogging machine. To prevent mosquito bite and thereby diseases spread through mosquitoes. During the Thane cyclone (2011) moreover, 5.90 lakhs mosquito nets had been distributed to people residing near waterways. 17 lakh houses are divided into 2035 sectors and one labour is engaged per sector to inspect and prevent mosquito breeding weekly. Crowded areas like parks, hotels, theatres and shopping complexes are inspected for mosquito breeding areas and preventive measures carried out periodically. All schools, colleges, students' hostels are inspected. Particularly, mosquito breeding areas instructed to clean regularly and proper action will be taken against them. Power cuts related to disasters may be disrupting water treatment and supply plants, thereby increasing the risk for waterborne disease. Lack of power may also affect the proper functioning of health facilities, including preservation of the vaccine cold chain. Although post-cyclone surveillance

systems are designed to rapidly detect cases of the prone disease. Deaths in Cuddalore occurred mainly due to electrocution, falling of trees, the collapse of house and walls. A large number of cows, goats, and buffaloes were killed in many villages. Trees, lamp posts and electro poles were uprooted, hand-pumps and bore-wells have been damaged that lead to water scarcity and lack of safe drinking water.

In cyclonic situation, the immediate requirements of food, water, shelter, sanitation and health care should be provided. Making unpolluted drinking water available to the people was, therefore, a priority concern. Unless this is done, diarrhoea diseases, including cholera could be widespread. In normal times, drinking water is made safe by chlorinating water sources with bleaching powder. The aftermath of the cyclone, three kinds of epidemics would be possible.

- Diarrhoea (cholera, basically dysentery, and gastroenteritis)
- Measles (among young children)
- Malaria

Of this diarrhoea was the most spread one, since it was bound to occur almost immediately, due to the large scale contamination of drinking water, the disruption of sanitation, and the displacement of thousands of people. Action taken to control diarrhoea consisted of disinfection of water sources and distribution of water purification tablets among the public. The fear of cholera was ever-present. When stool and water samples were tested positive for cholera the department's problems multiplied.

However, at the time of situation, the large tracts of the coastal area were underwater, and all drinking water sources in these areas were open wells, tube wells, ponds, water supply systems were partly submerged, this was an extremely difficult position. Nevertheless, disinfection was taken up in all accessible villages, by dissolving required quantities of bleaching powder in open wells. This had to be repeated every few days so that the level of chlorination did not go down. Also, water purification tablets were distributed to the public through health workers, Anganwadi workers, NGOs, panchayat members, and others. However in inaccessible villages, which means

village which remained marooned for several days after the cyclone, ensuring the safe drinking water remained the problem. The only thing that could be done in these villages was to airdrop halogen tablets along with food packets.

Government Response to cyclone hazards

The Government of Tamil Nadu and Disaster Management cooperatively was very effectively utilized the recent technologies such as remote sensing, Geographic Information system (GIS) to warning to the people and mitigate the impacts. Numerous technological information inputs are needed to take protective measures through the disaster analysis, cyclone hazard zonation and earlier risk assessment at all the levels. Satellite communication is used for early warning besides creating awareness in the cyclone-prone areas. The early warning system was developed in the centre of the Digital Cyclone Warning Dissemination System (DCWDS). Disaster Management uses familiar technical information for monitoring the cyclones and also gives timely warnings about the cyclones to reduce the causality and to safeguard lives stocks. These systems are well-planned and organized in the Indian Meteorological Department and also in other vulnerable coastal areas. Simultaneously, audio alarms can be sent out to choose prone areas

using digital sound broadcasting purposes. The Remote sensing application has been used to trace the cloud cover combined with cyclones and also subsequent flooding.¹⁷ National Disaster Management Authority (NDMA) to create the response between national, regional and local emergency plans.¹⁸

Conclusion

Tamil Nadu is one of the most disaster-prone States, with extremely limited resources, its real development is not possible without the integration of disaster mitigation programme. After the Tsunami, the State has established the Disaster Management to mitigate the effects of natural hazards. The early warning system was implemented by the Indian Meteorological Department with the help of Remote sensing Technology. Further, the human impact of cyclones can be assessed mainly in terms of socio and economic losses. But in truth, the impact goes far beyond just fatalities and collapse of buildings. These to one side, cyclones destroy the crop, disrupt water supply system and interfere with telecommunications. Thus, the severity of the cyclone impact-related here more to the level of human exploitation than to the stress imposed by nature.

PORTUGUESE SETTLEMENT ALONG THE COROMANDEL COAST: AN OVERVIEW

B. Hameed Basha

Introduction

The courageous, incessant, cognitive effort of Portuguese with an ultimate aim to finding the sea route for India, to contrive the trade activates before the other Europeans conceive it. Because King D. Manuel, ruled Portugal from 1495 to 1521, had been desired to stimulate foster trade and future expeditions.¹ Fortunately, he got bravery sailor named Vasco da Gama and his successful journey, Portuguese anchored their ships in India to reach via sea-route on 20th may 1498 in Calicut², the western coast of India. Earlier Portuguese were focused in the western coast of India instead of eastern coast. Portuguese sailed to India for the purpose of search of Christians and trade. Portuguese ultimate aim was not in gaining powers in India but rather in spreading the Catholic missionary. Thus they concentrated to build churches, basilicas and seminaries, not on defensive structures.³ **In the words of W.H, Moreland, "in the sixteenth century, the Indian ocean was a Portuguese lake in which the absence of any serious opposition made it possible to control the seas".⁴** Portuguese had been developed their settlement on the Coromandel Coast three prominent places viz., Nagapattinam, Sao Thome and Pulicat. Perhaps Porguese were first placed the word **"Coromandel" in their map.**⁵ The Portuguese became the masters and monopolist of spices trade in India. Indian rulers for monopoly over trade in Indian Ocean; they extended all facilities to the Portuguese to attract them to their ports. The diversion of the maritime trade of India to the hands of the Portuguese destroyed the trade of the Arabs and the native Muslims and also delivered a mighty blow against Islam. This study has mainly focused on the Portuguese settlements, trade, and causes for downfall in Coromandel Coast.

Coromandel Coast

The European accounts of the seventeenth century used the name **'Coromandel Coast'** somewhat loosely. In its widest sense, it embraced the entire east coast of the Indian peninsula. More specifically it was taken to mean the part of the coast lying to the south of the Godavari river and extending as far as Nagapatnam or even to the island of Manar, **'which marked the limit of ordinary coastal navigation'. The coast to the north of the Godavari was known as the Gingelly coast, a name at times used as synonymous with the Orissa coast.⁶ Coromandel vastly covered "the land of Tamil people"and the Andra Pradesh and Telengana.**

Attempt to reach Coromandel

During 1510-1520 Portuguese private traders made contact with the Coromandel Coast.⁷ The official presence in the Bay of Bengal was very limited in comparison with the Arabian Sea, and especially western India. the only major base was Malacca, and even this was hardly effective. Later, Gujaratis were trading in spices in the Bay, and later the rise of Aceh. There were some attempts to establish other official presences in the area. Viceroy Almeida sent out the primary expedition to Coromandel as early as 1507, the purpose being to investigate the general situation, especially relating to trade, and to look for the tomb of st.Thomas the Apostle. There were later investigations of the possibility of establishing an official presence, completed with forts and fleets, in Bengal; these came to nothing. By 1517 at least purported tomb of St Thomas had been found in Meliapur, from 1545 renamed Sao Thome and today a suburb of Madras. This port and Nagapatnam were the two main Portuguese settlements in Coromandel. Both had captains, but while in theory these were

appointed by the king, in practice they emerged from the local Portuguese inhabitants and then were recognized no salaries. At times there were no captains at all. This then was a very different Portuguese presence, one totally dominated by private trade and the church, more comparable with, say, the Gujarati merchants in Calicut before de Gama than with the official sixteenth-century Portuguese presence in western India, in 1538 the captain of Sao Thome was able to collect as many as 400 Portuguese for an expedition. At this time there were 50 *Casados* in San Thome, mostly traders and some who wanted to spend their retirement near the tomb of St Thomas. By 154 there were over 100 *casados* there.⁸

Portuguese

The Portuguese settled at San Thome and Nagapatnam and active all along the coast were the first rivals that the Dutch encountered in Coromandel. The Coromandel Portuguese was no representatives of any chartered company nor even of the Spanish-**Portuguese's state**. Their hostility to the Dutch derived primarily from a desperate struggle for survival of a sorely pressed trading community in an alien background. Through the mother country had little direct interest in the coast settlements, the latter had benefited from the Portuguese hegemony in the Asian waters and long enjoyed **a position of advantages in Coromandel's** overseas trade. Their commercial interests were similar to those of the local merchants in so far they sought profit from both import and export, and unlike the Dutch, were not primarily concerned with securing commodities for export on advantageous terms. The reason why as the local traders appears to be two-fold. The long established political enmity was a barrier to any such development and the active instigation of the Spanish state made it even more so. The question of the local Portuguese seeking secure **and profitable trade as the company's** middlemen and suppliers hence could not arise, besides in the early years of the seventeenth century, the Coromandel Portuguese apparently had a much greater share in the trade with the Indies than was available to the local merchants, the decline of Portuguese apparently had a much greater share in the trade with the Indies than was available to the local merchants. The decline of Portugal and the advent of the Dutch

threatened this lucrative commerce. The coast Portuguese had to fight the new comers for the security of their livelihood. Lacking in adequate economic power, they used the weapon of diplomacy, intrigue and adventurist action to thwart the hated rival.

From the earliest days of the company's contact with the coast, the Portuguese did their best to secure the expulsion of their arch enemies from the Golconda ports. In Coromandel the Dutch, in fact, had fired the first shot, for the yacht Delft on its second voyage to the coast in 1606 had burnt three Portuguese ships anchored off San Thome. The conflict between the rising power of the Dutch Company and the decadent Portuguese settlements in Coromandel was an unequal one, and by the middle of 1608 the local populations of Masulipatnam and Petapuli had been definitely won over to the side of the newcomers. That year the Portuguese captain at Masulipatnam was taken prisoner by order of the Mir Jumla, as a reprisal for Portuguese piracy against muslim ships in the Bay and such misfortunes of their arch-enemy further strengthened the Dutch position in the Coromandel kingdom.

Nagapatinam

Nagapattinam lies on the Coromandel coast to the south of Cuddalore district and another part of the district lies the south of Karaikkal and Tiruvarur districts. This peninsular delta district is bounded by the Bay of Bengal on the east, Palk Strait on the south, Tiruvarur and Thanjavur districts on the west, and Cuddalore district on the north. The geographical extent of the district is 2569 sq kms and covers 1.97% of the total area of Tamil Nadu. The district lies on the shores of the Bay of Bengal between **northern latitude 10.10' and 11.20' and eastern longitude 79.15' and 79.15'**. it has a **187.9 km** long coastline, stretching from a Kodiyampalayam in the north to Kodiyakarai in the south, which constitute about 15 percent of the coastline of Tamil Nadu.⁹ Available Evidence show that the Portuguese made their way to Coromandel only after 1505. Lodovico de Varthama who visited Nagapattinam in 1505 mentions the presence of Christians but not the Portuguese.¹⁰ As early as 1506, some of the Portuguese during their trip to investigate their prospects in Malacca had landed purely by accident in the vicinity of Nagapattinam where

they received a hostile reception from the Muslim traders¹¹. Sewel points out that the governance of the seas east of Cape Comorin was also in the hands of the Portuguese by 1509. From that time onwards the Portuguese made Pulicat an import trading centre since there was good hope for the collection of hinterland textiles of the area, these textiles were exported to Malacca. After Pulicat and Sao Thome, Nagapatnam was a primary trading center of Portuguese. Nagapatnam was a busy coastal commercial centre in rice trade to Ceylon and other southern ports and Malabar bringing back areca, timber, cinnamon and pepper.

Sao Thome

The origin of the San Thomas, who is believed to be buried at Mylapur gradually led to the emergence of San Thome as an important trading post for the Portuguese in the Coromandel Coast.¹² Christian presence in India, the land of religions, can be traced back to the first century A.D. St. Thomas, the apostle of Jesus Christ had come to India, labored in Mylapore in the Tamil Country and laid down his life-a witness to the faith.¹³ San Thome shortly after the establishment of the fort were welcomed by the English, for it was believed that their presence would attract more Indians. In fact, in partition of 1679 the Portuguese claimed that their presence drew painters, weavers, workmen and other inhabitants. During the course of the century, however, the Portuguese came to be regarded much more warily, especially as they made frequent attempts to regain San Thome. Orders were sent out that the Portuguese should not be allowed to settle quietly at St. Thoma, but such interruption and molestations were to be given as shall render that place too hot for them. Eventually the Portuguese did succeed in getting the grant of San Thome from the Mughals, but by that time, the town had already become more or less what it is today, suburb of Chennai. Many of the Portuguese continued to live at Black town, for in 1706, when the Company was trying to recover the expense it had incurred in fortifying Black town, the Portuguese were required to pay 3,300 pagodas¹⁴, the highest sum.

Pulicat

Portuguese were the first to establish their settlement in the history of Pulicat in 1502 A.D. they built new churches, cemeteries and the fort after their settlements. However, Dutch were followed by the Portuguese in 1602 A.D, and made vestiges of their history and culture, later British landed in 1610 A.D. Pulicat was a textile centre, by about 1530 Nagapattanam became an important trading centre with the outside world. It is noteworthy that in essence, the Portuguese settlers, operated side by side with the other principal groups in Nagapattanam, the Marakkayars; both typically functioning with small profit margins and small individual consignment in the trade, the trading activities of the Portuguese at Pulicat decline by 1580. But trade from Nagapattanam was on the rise.¹⁵

Conclusion

Europeans imaging of India's Malabar and Coromandel coasts and Ceylon as rich in trade goods, including cloths, ivory, pearls, coconuts, spices and stuffed tigers, and seemingly as much populated by Africans as Indians. On this concern, Portuguese were the progenitor for the geographical discoveries and maritime trade. This adventurous steps followed by other European countries like Dutch, Danish, French and the British. Portuguese efforts came to success, reached India by sea-route which already dreamed Bartholomew Diaz. Many European countries came to India for the purpose of trade and commerce; they never wanted to establish their territory for its own. Moreover, Portuguese had been sailed to India for finding Christians and trade. Geographically, they desire to make settlement in the western coast of India and its hinterland. Later, they were concentrating on Eastern coast of India, which **had been called as "Coromandel" or Tamil Coast.** Finally Portuguese established their settlement in the Coromandel Coast three places viz., Sao Thome, Nagapattinam and Pulicat. However, Portuguese might be the great traders, but they cannot control other Europeans overcome to dominate them. Thus, the British occupied all over India and dominated for three hundred years. If Portuguese maintain their control in Coastal India, they might be ruled in India instead of the British.

UNDERSTANDING ABDUL QADIRBADAUNI: A NEW METHODOLOGICAL APPROACH

Ikramul Haque

The intellectual history of the sixteenth century Mughal India is overwhelmed in modern historical writings by examination and exploration of ideas of Abul Fazl and his patron, Akbar. It is strikingly strange that Badauni, **Akbar's courtier and friend and arch rival of Abul Fazl**, has not received enough critical attention as far as his practice of history writing and his position on several questions of intellectual importance are concerned. Modern scholars portray these two contemporary scholars as opposites of each other, especially in their notions of politics and religion.¹ It needs to be underlined that such a binary and polarized portrayal is untenable, given their socio-political milieu and historical context. Clearly, some scholars in recent decades have recognized this problematic and have attempted to re-examine Badauni and his ideas.² What follows in this paper in an attempt to propose a new methodology that will perhaps help us understand Badauni and his ideas in a different way and will also lead us to have a more holistic sense of the sixteenth century intellectual milieu.

Part of the reasons why Badauni has been perceived as the opposite of AbulFazl is that modern scholars of medieval India focused only on his book of history, *Muntakhab-utTawarikh*, which he wrote secretly hiding it from everyone

including his progeny.³ Scholars found it distasteful because it was highly critical of **Akbar's religious and administrative policies**. While it was argued that the book gives an alternative view of **Akbar's court in particular and an expression of the sixteenth century political development in general**, historians did not strive to dig deep into **Badauni's ideas per se**. His critique of Akbar was treated as an expression of religious bigotry, which militated against the liberal pursuits of Akbar and AbulFazl. It is understandable since Akbar had been recognized in the nationalist historiography as the pre-modern liberal monarch who was idealized, and rightly so, for his religious tolerance and communitarian coexistence. Therefore, any opposition to Akbar was perceived as an opposition to the principles of religious tolerance, coexistence and accommodation. What was missing, though, in this scholarship was an objective evaluation of **Badauni's views on politics and religion**. Besides, he was not studied as a historiographer, first and foremost.

Another reason why he was depicted as an orthodox was the partial reading of his writings. Apart from *Muntakhab*, Badauni wrote another book called *Najat-ur Rashid*, an ethical treatise for Muslims to attain salvation.⁴ The book is a

complete guidebook that tells Muslims everything, which they need to know and practice to live a pious living in this world. Much of what Badauni believes in terms of principles of religion and politics is discussed in the treatise, some in detail and some in piece meal. The book, therefore, gives a sense of what would have been **Badauni's religious views on a number of things** that were practiced widely in the sixteenth century. Similarly, his views on different aspects of politics in general and of sixteenth century Mughal India in particular do illustrate and elaborate further his ideals of kingship and state. This is why it is important to study and evaluate the content of Badauni ethical treatise along with his book of history in order to get a better understanding of his intellectual formulations. Below I will provide a brief introduction of the book, *Najat-ur Rashid*, highlighting the historical significance that it deserves.

***Najat-ur Rashid*: Context and Meaning:**

The *Najat-al-Rashid* is one of the two texts written by Abdul Qadir Badauni (d. 1596), Akbar's courtier, theologian, historian and AbulFazl's (d. 1602) contemporary; the other being a secret chronicle called *Muntakhab-al-Tawarikh* (comp. 1595-6). The text constitutes an important source of information, still untapped fully, on **Akbar's reign as far as the socio-religious milieu of the sixteenth century is concerned**. In this book Badauni, who was very critical of Akbar's socio-religious worldview, aims at guiding towards the ideals of Islamic society through highlighting serious social, political, religious and moral problems facing Muslim society at the end of the sixteenth century. The text helps us **understand Badauni's perspective on the socio-religious transformation in Mughal India during Akbar's reign**.

The book was written in 1591-92 during a journey when Badauni was returning from Badaun to Lahore, where the royal court was camped, after overstaying his leave over a year at home.⁵ It is also attested by the name of the book, *Najat-al-Rashid*, which is a chronogram corresponding to 1591-92. The book is largely **based on Badauni's memory as he himself claims of not having relevant books at his disposal while writing**.⁶ The book was originally conceived by Khwaja Nizamuddin Ahmad Harwi, a sixteenth century historian in Akbar's court, who had begun collecting materials on this topic

but left it in midway. Badauni says that Nizamuddin Ahmad, his close friend and the author of *Tabaqat-i-Akbari*, gave him a bunch of papers (*tumar*) dealing with misdemeanours and sins and requested him to expand them into a book discussing all kinds of crimes and sins in full light of evidence so that it might serve as a guide for common people.⁷ It has been **suggested that Nizamuddin Ahmad's official responsibility as army paymaster (*Mir Bakhsh*) and simultaneously his preoccupation with the book of history he was writing, he found it nearly impossible to realize his dream project**.⁸ Besides, his proximity to Akbar might have discouraged him to write a book against beliefs and practices of the imperial court.⁹ He, therefore, had to assign it to somebody else and Badauni was the most obvious choice because of his deep knowledge of Islamic sciences and his writing skills manifested in the translation project. Thus, it seems that the *Najat-ur Rashid* was written to cater to the needs of the Muslim society as a book of advice/guidance on Islamic legal and moral injunctions covering many aspects but in a simple language.

The *Najat-al-Rashid* primarily deals with sins and misdemeanors of both kinds, venial and mortal (*saghirah* and *kabirah*). The text is written in such a literary format, which highlights the **severe negative effects of sins on Muslims' beliefs and their practices and thus urges them to refrain from committing such crimes**. Badauni's purpose was to expose the fallacy of un-Islamic practices in general and non-permissible customs promoted by Akbar in particular, hence establishing the pristine ideals of Islamic society in the process. The significance of the text lies in the fact that it gives an insight into the socio-religious milieu of the sixteenth century Mughal India. Although Badauni does not mention Akbar directly, but he definitely refers to his court and its key players.

A New Methodological Approach:

Given the content and nature of the book, it is certain that an exhaustive study of the *Najat-ur Rashid* can help us in re-visiting Badauni and his ideas in two major ways. Firstly, the book provides us with theoretical concepts that Badauni has formulated of kingship, state and politics. Secondly, it allows us to get into **Badauni's mind as he reflects upon issues prevalent in both Muslim and non-Muslim**

societies, thus giving us an opportunity to read his observations of Muslim society and his commentary on the Hindus. It would be surprising for scholars to know that Badauni is at some points critical of some of the practices followed by Indian Muslims, while on the other hand, appreciative of some customs prevalent among Hindus. **In the process of describing 'un-Islamic' practices, he reconstitutes and represents his own ideas on politics, society and religiosity.** The *Najat-al-Rashid*, therefore, is an important source of information, not just about **Akbar's reign, but also about Badauni's dynamic and interesting personality and multiple layers of his political, social and religious thoughts.**

Secondly, it is also important to recognize Badauni as an intellectual who conceptualizes and articulates his own ideas on society, politics and religion that are scattered in this book. What has been missing from the scholarly writing so far is any attempt by historians to systematically identify, classify and interpret the processes of making of his ideas. Let me illustrate it further. For instance, in order to know why Badauni has a certain ideal of state and kingship, it is equally pertinent to understand the sources wherefrom he is deriving his inspiration. For this to ascertain, scholars need to put more attention to his teaching curriculum and the plethora of books and treatises that he claims to have read or commented upon. An extensive study of the contents of such works will enable us to see the process of becoming of Badauni in what he was. It is well known that Badauni actively participated in the *ibadatkhana* established by Akbar in 1575 to discuss religion and its ultimate truth in which the emperor invited religious scholars including Muslims, Hindus, Jains and Christians to explain beliefs, philosophy and teachings of their respective religions. In such discussions, Badauni battled against the orthodox *ulama* (Muslims religious scholars) and refuted their understanding of some of the fundamental teachings of Islam.¹⁰ **Naturally, Akbar was very happy with Badauni's argumentative skill and in-depth knowledge of Islam.** As mentioned above, unpacking **Badauni's mental and conceptual framework** would require an analysis of religious and non-religious writings that he read which certainly would have shaped his mind and scholarship later on. Therefore, an intellectual biography of Badaun is not possible without looking into the

intellectual environment he was surrounded with and intellectual scholarship he was engaged with.

Badauni's secret chronicle, *Muntakhab*, needs to be examined in its totality. The *Muntakhab* is divided into three volumes, of which only the second volume is about **Akbar's** reign. The first volume gives the historical narrative of the Sultans of Delhi from Mahmud of Ghazni up to the reign of Humayun, while the third volume is a biographical account of the leading Sufis, *ulama*, poets and physicians of **Akbar's period.** **Sadly, modern scholars' attention** has been exclusively on the second volume to reconstruct history of the sixteenth century Mughal India. It is understandable why they paid more attention to the second volume, because it provided them information about the greatest of the Mughal emperor. However, they did not bother to analyze the other two volumes, which were equally rich and informative. This brings up the question as to how feasible would it be to develop a comprehensive understanding of Badauni if all the three volumes are put together and analyzed historically. There are two ways in **which a holistic reading of Badauni's chronicle** in its totality will help us reconstruct his life and make sense of his intellectual acumen as a historian.

Firstly, it is not required to distinguish the three volumes and read them separately. What is more befitting is to read the entire chronicle as a single statement cohesively structured and articulated by Badauni. This totality will enable us to realize inter-connections between different parts of his book. It will also help us to find reasons for why he wrote what he wrote. As a matter of fact, it is known that Badauni wrote the history of Sultans of Delhi on the basis of materials drawn from two other sources, *Tabaqat-i-Akbari* of Nizamuddin Ahmad and *Tarikh-i-Mubarakshahi* of Yahya Sirhindi, claiming that he has only summarized what the other two **had written with 'some additions' here and there.**¹¹ The question, which was never asked by scholars, is why he simply re-narrated what was already in the public domain in the first place. The answer to this question lies in the fact that **Badauni's purpose was not simply to reproduce** what had already been written about but to **"reconstruct" the history of the pre-Mughal India** in accordance with the narrative that was follow

in the second part. Consequently, Badauni was **not summarizing but actually “writing afresh”** the account of the Sultans of Delhi by adding and **deleting some parts from his “sources”**. It is evident that the true meaning of his book can only be discovered if it is read in its totality as one work wherein his ideas are scattered but follow a certain and cohesive pattern throughout.

From this follows the second aspect of the new methodological approach that I have proposed. Any comprehensive reading of **Badauni’s whole chronicle must adopt what is called “source criticism”, an approach adopted by Marilyn Waldman.** In her book, *Toward a Theory of Historical Narrative: A Case Study in Perso-Islamicate Historiography*, Waldman has **emphasized the importance of “textual criticism”** for understanding the meaning conveyed by historical narratives. She cautions, however, that the textual criticism is not to be seen only in the context of the historical setting, though the latter is **important for ascertaining the author’s response**.¹² It should rather be more attentive to **the structure of the text because “it is the structure of the work that often bears the brunt of communicating the author’s values. Elements of structure -organization, pace, arrangement, focus, selection, repetition, juxtaposition, omission, and emphasis- can convey the attitudes of the author”**.¹³ Adopting this methodology in the case of Badauni is very valuable. It proposes that meaning is not generated only through explicitly stated declarations. But it is also expressed in an implicit way; the meaning is, thus, embedded within the structure of the text and can be

ascertained through an analysis of its structural features.

I therefore argue that Badauni’s chronicle should not be looked into as merely a ‘mine of facts’ that need to be collected and put together as the final evidence. Instead, it is absolutely necessary to examine why certain issues have been discussed in a way, and not otherwise. For example, why certain couplets or anecdotes have been inserted in a story or what purpose do they serve in the overall narrative structure or how do they create or shape the reconstruction of the historical past? Questions like these require a deeper examination of not only the context of the book but also the structure of the narrative and its style of presentation, which engender a particular meaning in the minds of readers. Since history writing was a means to tell a story, it is meaningless if the story is not creating the impression that the author wants to generate.

To conclude, I propose that Badauni should not to be reduced to the binary of liberal and orthodox because these categories are armed with modern religious sensibilities and they do not help us in understanding him primarily as a historian and intellectual of the sixteenth century Mughal India. It is important to go beyond these subjectivities and adopt a methodology that gives equal weightage to all of his writings and reads him in his totality. His secret chronicle is to be subjected to a structural analysis where equal attention is given to his style and techniques of presentation, which shape the meaning of his narrative.

End Notes

1. For an assessment of Badauni’s life, works and attitudes towards state and religion, see H. Blochmann, ‘Badauni and his Works’, *The Journal of Asiatic Society of Bengal*, Vol. 38, 1869, pp. 105-144; Muhammad Mujeeb, ‘Badauni’, in *Historians of Medieval India*, ed. HISTORICAL WRITINGS AND MAPPING ON SWADESHI STEAM NAVIGATION COMPANY LTD, 1906-1909

T. Jadayan

The paper aims at focusing the writings on the newspapers of *Swadesamitran* and *India* and the scholarly writings A.R.Venkatachalapathy, J.B.P. More A.Sivasubramanian, N.Rajendran, V.Venkatraman and R.A. Padmanthan about the mapping of the Swadeshi Navigation Company Ltd and its role in spreading swadeshi activities in Nationalist Movement.V.O. Chidambaram involved in vigorous swadeshi activities. He aspired to found a swadeshi steam navigation company with the aim to run steamers between Tuticorin and Colombo.

When the Si. Va. Co. had come to a grinding halt, a modest pleader from a local court in Tirunelveli district, who had come under the influence of the swadeshi movement was fired with the desire of starting a new steam navigation company. According to R.A.Padmanabhan, his full name was Vallinayagam Olganathan Chidambaram or V.O.Chidambaram. He was born on 5th September 1872 at Vandanam village, near Ottapidaram in Tirunelveli District. His father, Olganathan was himself a lawyer. The son followed his father's occupation and became a lawyer. When his first wife passed away in 1901, he remarried Meenakshi Ammmal.¹

During the first half of the year 1906 V.O.Chidambaram came to Madras where the

swadeshi movement was being activated by Mandayam Srinivasachari and Subramania Bharati, a young patriotic poet from Ettayapuram in Tirunelveli. The latter who had started his journalistic career as sub-editor of *Swadesamitran* in Madras in 1905, was presently editing '*India*'; a radical Tamil journal, started by the Mandayam brothers in April 1906.

V.O.Chidambaram came to Madras to meet Subramania Bharati, who had already made a name for himself as a nationalist poet and writer. Chidambaram was imbued highly with swadeshi sentiments, he used only swadeshi goods and avoided using British goods. During his talks with Mandayam and Bharati, V.O.C. expressed his desire to start national industries. He insisted that resourceful individual Indians should get together to start their own industries in order to check the domination of British-owned industries and businesses in India.²

On his return back to Tirunelveli, V.O.C. actively involved in vigorous swadeshi activities. At the same time he started to mobilise influential wealthy Indians in the area with the objective of founding a steam navigation company to run steamers between Tuticorin and Colombo. His the aim was to counter and challenge the monopoly held by the BISN Co. in

this sector, after the debacle of the Si. Va. Co. He toured extensively in some districts of Tamil region as well as in Ceylon in order to mobilize the necessary fund for the foundation of the company. It was an attempt to defeat British capital by raising Indian capital. He had to rely on the zamindars or landlords and the merchants in order to attain his objective because it was they who had accumulated capital during British period. Besides, V.O.C. himself belonged to the professional class, which again was the creation of the British. The zamindars, merchants and the professionals were the elite classes of British India. V.O.C. reached out to the zamindars and merchants in order to start and promote the steam navigation company. Besides, he induced the nationalist feelings of the people to acquire support for his business project. In this attempt, he had the support of Subramania Bharati, editor of *India* and G.Subramania Iyer, proprietor of *Swadesamitran* who had toured Tirunelveli earlier to spread swadeshi ideals.³

His constant work resulted in the establishment of the Swadeshi Steam Navigation Company. It was registered under the Indian Companies Act on 16th October 1906. Its office was based in Tuticorin at 85, Periacattan Road. The Company's nominal capital was 10, 00000. The total number of shares available was 40000 and the price of one share was fixed at Rs.25.⁴

P.Pandi Thurai Thevar, the zamindar of Palavanattam was chosen as the President of the Company. Among the directors were Si.Va. Nallaperumal Pillai, A.M.M. Arunasalam Pillai, C.S.V. Krishna Pillai, P.V.Naidu, C.T.A Arumuga Pillai, A.S.V.V.Pillai, Adi Narayana Chettiar, A.V.S. Venkatachallam, A.C.Chettiar, V.Thiruchikanbala Chettiar, A.A.A.Arumugam Chettiar, Deivanayagam Pillai, M.V.Maya Nadar, Ismail Haji Abdul Rahman Sait and H. Solaimalai Thevar. They were essentially zamindars, wealthy merchants, bankers and money-lenders.⁵

The honorary secretaries were H.A.R. Haji Fakir Muhammad Sait & Sons. V.O.C. was appointed as the assistant secretary of the company.⁶ The four law advisers of the company were C.Vijayaraghavachariar (lawyer of Salem), K.R.Gurusamy Iyer (high court lawyer of Tirunelveli), M.Krishnan Nayar (high court lawyer

of Calicut and B.N.Vengu Iyer (district court lawyer at Tuticorin), Tuticorin's National Bank of India was among the treasurers of the company.⁷

Indeed, the Swadeshi Steam Navigation Company's objects were quite vast and varied. Another particularity of this company was that the shares in the company were exclusively reserved for Indians, Ceylonese, Burmese and other peoples of the East like the Japanese. The white Europeans were not given any right to buy shares in the company. Besides there also a racial motivation in the starting of the company apart from the swadeshi motivation.⁸ J.B. P.More in his work, *Indian Steamship Ventures*, observed that it was naturally done with the objective of keeping the white Europeans out of the company, in spite of the fact that India was still ruled by the British. The British Indian government did not object to this particularity.⁹

The company's honorary secretaries, Haji Fakir Mohammad Sait and Sons alone bought 8000 shares of the company i.e. one-fifth of the shares of the company. This showed that Haji Fakir Mohammad Sait had played a great role in the establishment of this company. It was he engaged V.O.C. to act as assistant secretary because the prime initiator of the company. The latter in his turn convinced Haji & Sons to throw in their lot in founding the company. The President Pandi Thurai Thevar and the other directors bought another 2000 shares on the whole, leaving the remaining 30000 shares for other buyers. The participation in the company of the directors including Pandi Thurai Thevar, the zamindar, was considerably less when compared to Haji & Sons, who risked a good amount of their wealth in floating this swadeshi company. Haji & Sons were no doubt the foremost swadeshi shareholders of the company based at Tuticorin, which thenceforth came to be known as the 'Barisal' of south India, given that Barisal in Bengal was the place from where the Roys of Bhagyakul operated their steamers since 1897.¹⁰

Though the company was registered on 16th October 1906, there prevailed some difficulties in procuring the required steamers for the company. V.O.C. himself, like his predecessors of the Si.Va. Co. went to Bombay to buy the steamers, when 10000 shares were sold out. He thought that by buying one steamer he could get the others invest in the company.

On 22nd December 1906, he actually procured a steamer. But the steamer was in a European dock and it had to undergo some repairs before it could be delivered to the company. Later, it appeared that when more shares were sold out, a second steamer was bought on 24th January 1907. Two steam launches were also to be bought subsequently. All these steamers were expected to reach Tuticorin by the end of February 1907 according to a report by V.O.C. himself.¹¹

However the steamers did not reach Tuticorin in February 1907. After a gap of another two months, i.e. in May 1907, the first steamer known as 'Gaelia' reached Tuticorin. It was almost immediately pressed into service between Tuticorin and Colombo. The second steamer called 'Lavoe' arrived at Tuticorin in June 1907 and was also operated into service. Lavoe was fitted with electric bulbs and other comforts. There was space in it for 44 first class travellers, 24 second class travellers and 1300 third class travellers. There were also facilities to load 2000 tons of goods and cattle. Lavoe was operated on Monday, Wednesday and Friday at 6 p.m from Tuticorin and reach Colombo at morning 6 a.m. and from Colombo every Tuesday, Thursday and Saturday at 5.30p.m and reach Tuticorin at 6 a.m.¹²

The old European names for the ships 'S.S.Gaelia' and 'S.S.Lavoe' were retained by the Company. A steam launch which eventually came was also known by its European name 'Miranda'. They did not deem it necessary to change the names into purely Indian swadeshi names. This was pointed out by none other than Subramania Bharati himself, one of the prime propagandists for the company. But V.O.C. seemed to have not taken note of it.

Bharati suggested four Indian names for the ships: Shivaji, Dadabhai, Balagangadhar, Tilak or Gaekwar. Of these, Bharati thought that two could be chosen for the two steamers while the other two might be used for the two steam launches. But neither V.O.C. nor the company directors seemed to have taken note of Bharati's suggestion.¹³ They were contented in calling the ships as 'Gaelia' and 'Lavoe', in spite of the fact that many BISN Co ships bore Indian names and all ships of the European-owned Asiatic Steam Navigation Company bore typical Indian names.

V.O.C. had reached out to the zamindars and merchants in order to set up the Swadeshi Steam Navigation Company. At the same time, fired by swadeshi sentiments, he also engaged himself in swadeshi political activities. Hardly a month or two after the launching of the two steamers G.Subramania Iyer of the *Swadesamitran* toured Tirunelveli delivering public speeches in favour of swadeshi. Now that the steamers were operating regularly to and fro between Tuticorin and Colombo, the officials of the BISN Co felt threatened. But with the goodwill of the businessmen of Tuticorin, the steamers ran successfully. BISN Company even advertised that they will carry goods freely for the businessmen. But V.O.C. convinced the businessmen that the intention of the BISN Company was to destroy the swadeshi company and that once this was done the businessmen would be at their mercy for they would increase the rate of their steamers as much as they wanted and make huge profits. Hence BISN company officials complained to the colonial authorities like the Governor of Madras and the Collectors who had shares in the company. The colonial authorities and the BISN Company officials found it right time and opportunity to strike at the fledgling swadeshi company.¹⁴ However, due to the vigilance of V.O.C. the swadeshi company run somewhat profitably in the initial stages.

Under these circumstances, V.O.C. thought that there would be no risk to the company's fortunes if he absents himself for some time from the service of the company. So in November 1907, hardly five months after the launching of the steamers, heeding to the request of Bharati, V.O.C. made his way to Madras, with the intention of attending the annual conference of the Congress party which was to be held at Surat towards the end of December 1907, with about hundred delegates from the Madras Presidency.¹⁵

There was a violent showdown between the extremists led by Bal Gangadhar Tilak, Aravinda Ghosh and others and the moderates led by Gopal Krishna Gokhale, V.Krishnasamy Iyer and others. The extremists met separately and selected Tilak and Aravinda Ghosh as secretaries of Bombay and Bengal respectively, while V.O.C. was selected as the secretary of the Madras Presidency.¹⁶

After this the Madras delegates returned to Madras. V.O.C. participated and spoke in some swadeshi meetings held in Madras. The *Chennai Jana Sangam* was established on 11th January 1908 under the presidentship of Mandayam Srinivasachariar to promote swadeshism in Madras City. Very soon V.O.C. made his way to Tirunelveli to carry on with the swadeshi activities there and also to look after once again the activities of the Swadeshi Steam Navigation Company. But this time as secretary of the extremist faction of the Madras Presidency, V.O.C. very much like Tilak and Aurobindo came under the scrutiny of the government. V.O.C. himself had admitted this fact in his autobiography, *Suya Saarithai*.¹⁷

However, when the extremists lost support mostly in Madras Presidency, there were some agitations in Tirunelveli District alone. Since January 1908, another extremist leader, Subramania Siva came to Tirunelveli from Madurai to promote swadeshi activities. He along with V.O.C. organised public meetings favouring swadeshi, especially at Tuticorin beach. V.O.C. had presided many of these meetings.

By February, they were appealing to the workers. Subramaniam Siva declared that if the coolies stood out for extra wages European mills in India would cease to exist. All such extremist activities of V.O.C. and his colleagues were taken note of by the government.¹⁸ V.O.C. Chidambaram, fired by nationalist sentiments, was quite oblivious to the fact that all his activities encouraging extremism would have an impact on the fortunes of the Swadeshi Steam Navigation Company of which he was still the Assistant Secretary and in which many Tamil businessmen and zamindars had heavily invested.

Besides, V.O.C. in his capacity as a lawyer and also Subramaniam Siva began to involve themselves in the strike of workers. Sumit Sarkar viewed that that it was due to the fiery speeches especially in favour of the workers and Communism which emboldened the workers of the Coral Mills, managed by the Harveys, to ask for higher wages and other concessions. The strike started on 24th February 1908. V.O.C. mediated between the workers and the directors of the Mill. Due to his efforts, a settlement was arrived at, favourable to the workers. In fact, a

50% rise in the wages was obtained. This was not at all to the liking of the directors of the company, but it somehow put an end to the strike and on 7th March 1908 the workers resumed work.¹⁹ Besides, V.O.C., in pursuit of his swadeshi aims, had started the 'Dharma Sangha Weaving Mill' and was asking the people to support it.²⁰

The Coral Mills strike and the starting of the weaving mill had come at a time when swadeshi sentiments were running high in Tuticorin and Tirunelveli district. V.O.C. involved in various activities related to swadeshi in the Tirunelveli district, other than being just the paid secretary of the Swadeshi Steam Navigation Company. Though he was instrumental in setting up the Swadeshi Steam Navigation Company of the capitalist type, he was also sympathetic towards the workers and Communism. In fact, he never opposed the fiery speeches in favour of Communism during some of the swadeshi meetings. This was possible because V.O.C. himself was a professional who never possessed any capital that could be invested in business. But the government was on the look out for him as he was the prime mover of swadeshism in the district and was also the secretary of the extremist faction since the Surat Congress split. V.O.C. seemed not to have been fully aware of the implications of all his swadeshi activities and the impact it could have on the fortunes of the Swadeshi Steam Navigation Company.

Foreign goods were regularly boycotted in Tuticorin since 1907. After the end of the Coral Mill strike, the swadeshists decided to celebrate the release of another extremist leader of Bengal, Bepin Chandra Pal at Tuticorin. The Collector, L.M. Wynch banned this meeting, thinking that it will create law and order problems. The meeting was nevertheless held on 10th March. It was then that the Collector decided to arrest V.O.C. Subramania Siva and few other leaders. They were duly arrested on 12th March 1930 and imprisoned in the Palayamkottai jail.²¹

The very next day riots broke out at Tuticorin and Tirunelveli Town. The workers of Coral Mills and also Best Mills, both owned by the British went on strike. All shops were closed. Europeans and European businesses as well as schools were attacked. Herbert Champion, the Principal of Hindu College sought refuge in the offices of Parry & Co, along with Parry

Company's agent Cameron. Public buildings and properties were set on fire. In Tirunelveli, the sub-collector and assistant magistrate Robert William Ashe ordered to shoot at the rioters. This resulted in the death of four rioters. Within a couple of days, the riots were brought under control both in Tuticorin and Tirunelveli, with the help of the loyal police.²²

By the way, towards the end of April 1908, there was an attempt to kill Magistrate Kingsford of Muzaffarpur District in Bengal. Kingsford escaped, but the wife and daughter of Pringle Kennedy, a lawyer in the Muzaffarpur court were killed. Barindra Kumar Ghosh and his brother Aravinda Ghosh were arrested in connection with this assassination. The Tirunelveli riots directed against the British and the Kennedy murders had contributed a lot to create a great sense of insecurity in the minds of the British colonialists in India. Bharati himself condemned these cold-blooded murders of two white women as a great mistake which had the potential to discredit the whole swadeshi movement. The British wanted to crush all such activities which threatened the security of the British and their rule. As a result all extremist leaders were dealt with severely.²³

In Tirunelveli itself V.O.C. pleaded that he or his speeches were not responsible for the riots and if there were riots it was due to the activities of some 'misguided rowdies'.²⁴ But under the prevailing tense situation at the all India level due to extremist activities, the British judge Pinhey thought it judicious to sentence V.O.C. to transportation for life twice. However the Madras High Court reduced the sentence on 4th November 1908 to just six years imprisonment. With the consent of V.O.C., his wife Meenakshi Ammal even appealed to the Privy Council in London to cancel the sentence on the ground that V.O.C. never indulged in seditious activities. Rs.1 0000 was required for the appeal. Meenakshi Ammal and Bharati solicited the financial support of the public for pursuing the appeal case in London. In the north, Aravinda Ghosh impressed by the activities and courage of V.O.C., declared him as "the first complete example of an Aryan reborn".²⁵

Bharati vehemently proclaimed that V.O.C.'s speeches were not seditious. He accused the British of wreaking vengeance on V.O.C. for challenging British business interests though the

Swadeshi Steam Navigation Company and for his role in the Coral Mills strike. He put the blame on the Madras Government for the riots as according to him British rulers were half businessmen and half rulers or rather three-quarter businessmen and one-quarter rulers.²⁶

The turn of events in Tuticorin and Tirunelveli which ended in the arrest of V.O.C. and other nationalists was a needed boost for British business in the region. Meanwhile, the Swadeshi Steam Navigation Company was subjected to rate wars by the BISN Company. With V.O.C. in jail, there was nobody to counter the rate wars imposed by the BISN Company. Besides, the BISN Co officials were also on the lookout to hinder the functioning of the Swadeshi Steam Navigation Company by using the patronage of the colonial authorities in the region. The local agent of the BISN Company reminded the district magistrate of the default of the Swadeshi Company in the matter of publishing the half-yearly balance-sheet of the company. Thereupon, the sub-Collector, Ashe went to the Swadeshi Company's office after the close of the business for the day, along with the civil surgeon, as a witness, and demanded of some of the Company's servants present to show the shareholders' list, offering one rupee out of his own pocket. But on being told that the request could not be complied with out of office hours and in the absence of responsible officers, Ashe retraced his steps. But very soon the steamer 'Gaelia', the principal vessel of the Swadeshi Company was prevented from being put at sea on the plea that the complement of officers was incomplete. Besides, among the persons arrested apart from V.O.C., there were also some shareholders and pleaders of the Swadeshi Company.²⁷

On the whole, the riots and the repression and intimidations that followed were not at all conducive to the commercial interests of the Swadeshi Steam Navigation Company. The absence of V.O.C. to steer the company on the right course did not augur well for the future of the company. Businessmen and people, fearing the colonial authorities began to abandon the Swadeshi ships. Bharati wrote that the shareholders of the company should invest more and save the company. Through his press organ he implored the people to support V.O.C. and the company.²⁸ But it was of no avail.

However since the arrest of V.O.C. in March 1908 until March 1909, the total loss incurred by the company amounted to about Rs.4,60,000.²⁹ 'Gaelia' had been already confiscated by the creditors. It was recovered later by paying of the debts.³⁰ 'Lavoe' was under repair. A Charitable Fund was created to come to the help of the Swadeshi Company. Two lakhs rupees were needed in two or three months in order to save the company. But the funds were not forthcoming adequately and the company went bankrupt by 1909. A certain Krishna Iyengar was the secretary of the company then as V.O.C. was in prison. Though there was some hope that the company would be revived through Iyengar's efforts, by the year 1911, it was simply liquidated. When V.O.C. was released from jail on 12th December 1912 from the Cannanore Central jail, as an impoverished man with nobody even to welcome him, there was no trace or talk of the Swadeshi Steam Navigation Company of Tuticorin.³¹ He remained a Congressman till his death. After leading a precarious existence since he was released from prison, he finally died on 18th November 1936 at Tuticorin.

To conclude V.O.Chidambaram posed a great challenge to the economic activities of the British in Tuticorin by initiating swadeshi

activities. He mobilized fund for swadeshi activities. According to P.B. Gopalakrishnan, due to the indefatigable efforts made by V.O.C. the Swadeshi Steam Navigation Company was inaugurated and was registered under the Indian Companies Act on 16th October 1906.³² In May 1907, the first steamer known as 'Galeia' reached Tuticorin. The second steamer called 'Lavoe' arrived at Tuticorin in June 1907, Bharathi suggested four names for the ships. G.Subramania Iyer supported the swadeshi endeavour of V.O. Chidambaram. Foreign goods were regularly boycotted in Tuticorin since 1907. The turn of events in Tuticorin and Tirunelveli ended in the arrest of V.O. Chidambaram and other nationalists. The Swadeshi Steam Navigation Company was subjected to suppression by the British authority. Fearing punishment from the British, people and businessmen began to abandon the swadeshi ships. Arrest of Chidambaram led a great loss to the swadeshi Company. V.O.Chidambaram was released on 12th December 1912 from the Cannanore Jail. He came out of the jail as an impoverished man with nobody even to welcome him. These historical events connected with the Swadeshi Steam Navigation Company were gleaned from the information given by the nationalist newspapers and from the writings of the nationalist historians.

THE ROLE OF THE BASEL MISSION IN THE DEVELOPMENT OF THIIYYA COMMUNITY IN MALABAR-NINETEENTH CENTURY

P.J. Jasna

The word Malabar is of a semi foreign origin 'mala' the Dravidian word means a hill or a mountain and 'bar' probably a Persian word [bar] means country.

The social system of Malabar in the nineteenth century was well entrenched in the principle of caste and kinship. Caste system as an institution created separation and segmentation in the part of each and every section of Malabar society. The fourfold classification of Varna system leaves a gap in Kerala as there is no counterpart of the vaishyas in the Kerala social order. At the top of the social hierarchy was placed the Namboodharies. The Kshathriyas came next in the order. Ambalavasis were placed below the Kshathriyas.

Then there were Nairs who formed the militia of the country. The low castes like Kammalars, Thiyyas, and Mukkuvans came below them and the lowest were the slaves, Cherumar or Pulayar, Parayar and others. The upper castes like Namboodharies, Kshathriyas, Ambalavasis and Nairs enjoyed several immunities and privileges. The principles of social freedom and equality found no place in the Hindu social organization. The polluting castes like Thiyyas, Kammalars, Mukkuvans, Cherumar or Pulayas, Parayas and several other castes were subjected to gross social and economic disabilities. All the domestic concerns of the lower castes, all their social

activities and all their liberty of thought and actions were regulated by the arbitrary will of the upper castes. Among the lower caste groups in Malabar, the most prominent was the community of Thiyyas. Their traditional occupation was tending and tapping of coconut trees, but many of them were agriculturalists, traders, shopkeepers, private servants etc...economically they were safes and in some cases even slaves in villages and towns they were segregated from the caste Hindu. The Thiyyas were not allowed to use public tanks, wells, roads and bridges than ran near the upper castes houses and temples. J.H. Hutton stated that, in south India, many castes regarded as polluting by proximity and are not allowed to approach within a certain distance of Hindu temple; so much of this the case that common expressions of spatial measurement are, or were, Thiyapad, Cherumapad, etc... indicating a distance equivalent to that with in which a thiyya or a cheruman, as the case may be of course, may not approach a man of high caste. The offence committed by an ezhava against a member of an upper caste was severely punished an offence against a Brahmin was punishable to death. The ezhavas were denied admission to the schools and were kept aloof from the administrative jobs in Travancore. They were prevented from dressing caste Hindu style and wearing certain ornaments. They were required to uncover above the waist.¹

The thiyya women were not allowed to use any upper garments to cover their breasts. They were also forbidden to wear any footwear. The holding of umbrella was also prohibited to them. They were not allowed to construct double storey- buildings. In the pre British days, for the most part of the thiyya slaves of the Nairs and Namboodharies lived in a one roomed thatched hut. Beside the house it was called by different names according to the occupations caste. The ezhavas were required to call the house and which they lived in ' pura' and 'kudi', were as Nairs called their houses 'vidu' and the Namboodharies ' illam'. The ezhavas are not only the majority of the backward classes but also a dominant caste in Kerala, William Logan stated that the thiyar or ezhavas are the strongest section of the Hindu population.

Those days education was the monopoly of the upper caste. They restricted this facility to lower caste in order to protect their interest. By denying education to the lower caste, they could easily suppressed them and exploit their service for the benefit of upper caste. They also believed that education of lower caste would be disturb the caste structure in which they enjoyed supremacy. *ezhuthupallokoodam* or the village school for the education of non Brahmin children functioned in each village under an *ezhuthachan* or teacher.ⁱⁱ The school functioned either in the house of the teacher or in the house of some important persons in the locality. The thiyas also used to run *ezhuthupallikoodams*, but such institutions were less in number.

The advent of Protestant Christian missionaries in the beginning of the 19th century marked a turning point in the history of Kerala. In their zeal for spreading education, abolishing slavery and forced labour, fight for women's liberation and eradication of caste difference and untouchability they became precursors of social reform movements in Kerala. The Basel Evangelical Mission played a significant role to bring social change in the 19th century Malabar.

The beginning of western education in Kerala was associated with the work of Christian missionaries. A German missionary group called Basel evangelical mission gave the leadership in spreading English education in Malabar area. They started centers at Cannanore, Tellicherry, Calicut, Palghat and opened education institution also, simultaneously the missionaries like

London missionary society took the cause of education in Travancore. The principle of equality preached by the Europeans and the emancipation of the down trodden advocated by the Christian missionaries attracted those communities to the field of education. Some of them were also converted to Christianity.

At the time of the arrival of Christian missionaries the social system of Malabar was well entrenched in the principle of caste hierarchy and differentiation. The status of the individual in society was determined by the norms of caste.³ The traditional institution of caste system, feudalistic land ownership and various the social evils like untouchability and unapproachability etc., were prevalent in the society. The higher castes enjoyed all the rights and privileges, while the lower castes were deprived of them. The lower castes had no freedom to enter into the temples. They were not allowed to walk through the public spaces and education was almost denied to them. The degraded condition of the lower caste people invited the attention of the early missionaries.

The Basel Missionaries approach towards the people attracted many low castes and they felt that conversion to Christianity could liberate them from the then existing social bondages and discriminations. Therefore, many low caste people were converted to Christianity: The conversion made them independent of caste restrictions and untouchability. Now they could not only walk along the road without the fear of polluting the upper castes, but also could go near to the brahmanic temples, both were otherwise restricted. Also, newly emerging public places like post offices and schools were made open to the converted. The freedom enjoyed by the converted people attracted many low caste people into Christianity.⁴

To attract more people to Christianity, the missionaries of Basel Mission thought that, social changes need to be brought about by extending educational facilities to the low caste people. With this objective they started educational institutions in different parts of Malabar. The pioneers in thought in Malabar were the missionaries like Dr. Hermen Gundert, Rev. Samuel Hebbik, Rev. J. Hermelink and Rev. John Michael Frists. They paid great attention to the educational efflorescence of Malabar. Dr. Herman Gundert was the outstanding figure

among them and he was considered as the founder of the Basel Evangelical Mission Church and its educational institutions in Malabar.⁵

Although the activities of Christian missionaries aimed primarily at either the protection of the interests of European capitalists or at the proselytization of the members of the backward community to Christianity, their activities did spread enlightenment among certain sections of society. It had also resulted in dispelling, to an extent, superstitions among the people of Malabar and engendering in them a feeling of self-respect and equality⁶. Overall, the Basel Mission did the pioneering effort to the modernization of the Malabar society. The educational activities of Basel Mission served as a model for the British government to follow. The school buildings were solid, airy and spacious where children sat on benches and wrote on slates and paper. There were textbooks to learn.⁷ The Basel Mission gave attention to elementary education. Dr. Herman Gundert was instrumental in initiating this activities. He established an elementary vernacular school at Tellicherry on 14 May 1839.⁸

The Thiyyas were able to take advantage of the missionary activities. In 1841 a missionary by name Rev. Habik came to Cannanore and at place called Vamasserri, established an English school. He appoints a popular man among the Thiyyas called Anbu Panikkar, as Malayalam teacher in that new school and it helped to promote education among the thiyyas of Kannur and nearby areas.⁹ The English education in Cannanore and premises was easily popularized. As early as 1845 the Basel mission established another English primary school in Kallai near

Calicut. Eight years later in 1856 they established one more school in Tellicherry. The Basel records on the education activities provide information that in these schools, almost every community was represented but bulk of the students came from the thiyya caste.¹⁰

The contribution of the Basel Mission in the field of education in Malabar is praiseworthy. Their involvement brought about changes in the educational and socio- economic realms of Malabar society.¹¹ The English education helped the people to improve their knowledge of the world and imbibe modern western ideas. The spread of educational facilities made the lower caste peoples rapid advancement in social scale.

The thiyyas of Malabar were a prominent group who best made use of the facilities provided by the Mission. By enrolling themselves into mission schools the thiyya boys and girls acquired new skills required to survive in the age of colonialism and after. They got employment in colonial bureaucratic structure which also resulted in the improvement of their social and economic positions. Colonial document shows that by the end of the 19th century several bureaucratic positions became a sort of monopoly for the thiyya community. The highest post that a native could reach in those days of British administration was that of a Deputy Collector. It was a thiyya of Tellicherry named Churayi Kanaran who first became a Deputy Collector.^{xii} Thiyya men were also appointed as Tahasi Idars, subjudges, doctors, lawyers, teachers and other employees in the colonial governmental service.

SACRED GEOGRAPHY: A CONCEPT TO STUDY THE RELIGIOUS HISTORY OF MEDIEVAL INDIA

S. Jeevanandam & M.L. Rajesh

Introduction

Sacred geography is a cognitive landscape that generated a powerful sense of land, location, and belongingness to the particular society. It is an important cultural element of the religious and spiritual tradition of the world. It constructs an idea of cultural homogeneity on the basis of religion. **The concept of 'holy' land is an agency** and gives a sense of association and pride towards the particular land and society. This is a universal phenomenon. This could be witnessed by the conflict over the geographical terrains of Palestine, Ayodhya etc. In this context, the particular paper is trying to understand the conceptual framework of the idea called sacred geography and giving its special reference to Medieval India.

Sacred Geography is the study of qualities of the sacred and related cultural activities that imposed on certain places and expressed in a spatial context. It examines the cultural superimposition of the spirituality over the reality, which means the geography. Usually, civilization revolves around the three factors such as nature (geography), human (history) and human experiences (cultures born of contacts).¹ The conception of sacred geography connects the above mentioned three elements. It is a complex relationship between the existing physical features and human activities.

In the Indian context, the conceptual framework of sacred geography played a key role in the unification of the culturally diverse vast territories of the Indian sub-continent. Pithawalla stated that geography as an aid of the **unification of India's cultures**.² It unified the cultures of different regions and could construct the path for the common heritage.³ It becomes essential for inter-provincial and inter-communal relations. Diana L. Eck pointed out that the confluences go beyond physical geography to create a virtual geography of interconnectedness, which binds all India together and facilitates the rich tradition of religious pilgrimage between key sacred sites in the landscape.⁴

The term 'Sacred Geography'

Sacred Geography is an evolutionary child of geographical school. The study emerged in the end of the eighteenth century. Alexander Von Ham Bolt and Karl Ritter introduced two new principles in geographical studies such as physical and social geography.⁵ This precise approach widened the study area of geography into regional particularities with concepts of physical and social aspects. The physical geography studies the world surface such as the distribution of land and sea, its position, its shape and etc.⁶ On the other hand, the social geography, otherwise, known as geography that studies human relationship with their physical settings and environment, as well as their conscious activities and continues progressing in adapting itself and in transforming it to its needs.

Richard F. Townsend mentioned that a deeply rooted aspect of human behavior, the ordering of space is an activity that consists of between places in terms of varied functions degrees of meaning.⁷ Social geography was subdivided into many sub-groups in a course of a period, such as economic geography, political geography, cultural geography etc.⁸ John Pinkerton,⁹ nineteenth-century geographer, stated that these divisions are instead small segments of the field each of which is of interest to different groups of specialists who need not even be geographers.¹⁰ The method was adopted by various disciplines such as history, sociology, and anthropology to understand their study area. He further pointed out that the new approaches in the field can be divided into general, sacred, ecclesiastical and physical.¹¹

The term 'sacred geography' is unique itself. It is a compound of two words, obviously sacred and geography. The understanding is that spirituality over reality. Scientifically, there is no place(s) could name as sacred geography in the earth. It is merely a **cognitive**. **The idea, 'Sacred'** is an embedded, intrinsic attribute lying behind the external, empirical aspect of all things.¹² It provided a system of meanings. Durkheimian explained the distinction between sacred and profane. In general, symbolism plays a primary

role in the recognition of sacredness and it differentiates the particular object from others. Their shapes possess the power of what they symbolize. Mircea Eliade, the veteran historian on religion, argued that sacredness is a feature of the place.¹³ Emile Durkheim, the French sociologist, stressed humanity's role in attributing sacredness.¹⁴ The sacred always manifests itself as a reality of a wholly different order from "natural" realities.¹⁵ Therefore, the concept of sacred geography is a cognitive region. It differentiates sacred place(s) or centre(s) from others. In general, it is a study of religious network or¹⁶ a study of the religious geography of any religious order.

Sacred geography as a term was first used by Thomas Tucker Smiley in 1824.¹⁷ He wrote twelve pages pamphlet to explain to students of the Bible about the relationship between the scriptures, their Biblical place-names, and their geography.¹⁸ However, he did not attempt to explain or elaborate it further than a plain adjectival use of the word sacred.¹⁹ As the geography of the Holy Land, this was most simply: a new branch of geography, called *geomorphology*. According to Anthony Thorley, sacred geography is part of the important post-enlightenment academic rediscovery of an animistic worldview relevant to Western Culture.²⁰ Mai Looatah referred sacred geography as a powerful agent in the science of cartography.²¹

Sacred geography varies from religion to religion. These differences result in specific cultural and historical facts as well as geographical conditions. The circumstances of a wandering life in an isolated region; the need to form or unify a state organization; the pattern of an early chain of missions on military conquests; the lasting prestige and sacred quality of ancient civil and religious centers. These and countless other factors may determine how sacred geographies are shaped. It has the functions of creating a sense of place and a certain order in the world.

Sacred geography is a cultural construction of the particular place and space. Sacred places have multiple levels of meaning in Indigenous cultures. Sacred places are defined as one and distinguished from other places. Manifesting the sacred, any object becomes something else, yet it continues to remain itself for it continues to

participate in its surrounding cosmic milieu.²² They are no longer being the ordinary places like other.²³ It provides existential insideness, the feeling that one belongs to a particular place, **characterizes peoples' relationships with their homeland.** Mircea Eliade referred it as Hierophanies.²⁴ Every religion has its own association with the particular space such as Mecca (Mohammedans), Jerusalem (Jews and Christians), Rome (Christians), Srirangam²⁵ (Vaishnavite Hindu sects) and Kashi²⁶ (Saivite Hindu sects). The medieval churches helped to construct the Holy Roman Empire to counter the Arabs intervention in the Europe.

The sacred places are acts of creation, usually designed by a World Maker. Through the use of symbols, networks of meaning are imposed upon the land; such spatial orders clarify the differences between places. Such difference is intensified with the special spiritual presences and qualities that set certain locales apart from advisory profane space. Those places well charged with the supernatural power. An ordinary place could make as sacred through mythology and it is continually consecrated by rituals. There are patterns of religious meaning have traditionally been constructed on the mythic presuppositions of divine plurality and plenitude.²⁷ Richard Townsend mentioned that in the passage of time, sacred places became invested with the accumulations of mythical and historical meanings in complex layers of cultural memory.²⁸ In general, people used to perform their ritual practice either at that place or direct towards it like Mecca.

The places are revealed through the **society's mythology (sacred truth), thereby** becoming the physical manifestations of the mythological system. These networks form the sacred geographies, and religious meanings imposed upon it. Those lands must contain in the form of natural features and human-made symbols that establish communication between the earthly and the spiritual, embodying, collecting values and shared norms of conduct. It forms a unifying ground and develops the culture, for it stems from the marking, exploitation and defense of territories that helps to join the humankind.

The sacred geography is primarily associated with the places of pilgrimage which bring the traditions of the gods and goddesses,

heroes, heroines and sages to the living embodiment in the geography. In many occasions, the sacred places are identified with the elements of water, tree (*stala virutcam*), mountains, hero-stones, structures, and idols. In Indian religious traditions of rituals, reverence is linked primarily to the place of hills and rock outcroppings, to the headwaters and confluences of rivers, to the pools and groves of the forests and to the boundaries of towns and villages.²⁹ The river is an ancient and complex cultural symbol in India.³⁰ To find the earthly manifestation of a mystical sacred mountain, we must instead rely on qualitative assessments of landform shape, relative location, inter-visibility (line of sight views of one sacred mountain from another), folklore, place names, ceremonial use, and previous explorations.³¹

Conclusion

The study of an idea of sacred geography could establish some of the relevance of historicity of the particular historical past. The medieval sacred geography explained the social transition of the primitive to an agrarian society. The Saivite and Vaishnavite *bhakti* saints propagate the *bhakti* tradition and temple centred religious activities. The temples that were eulogized by the Saivite and Vaishnavite saints were called as *padal petra thalam* and *mangala sasanam thalam*. The *bhakti* movement became a strong base for orthodox religion and created an antagonism towards heterodox regions of Buddhism and Jainism. They popularized the Brahminical religion and caste consolidation of the Tamil society.

NAGAPATTINAM – A STRATEGIC PORT FOR MARITIME TRADE DURING EARLY COLONIAL PERIOD

D. Julius Vijayakumar

Nagapattinam was referred as “the City of Coromandel” by the early writers. Portuguese established a commercial centre at Nagapattinam in 1554.¹ An unpublished manuscript preserved at the *Arquivo Nacional da Torre do Tombo* mentions that a team of Portuguese merchants came to trade with the flourishing port of Nagore on 25 May 1524 from the Western coast of India and they were arrested by the *Marakayyars* of Nagore for no reason and all of them were put in prison. After a few days this message reached Manuel da Gama, the Portuguese captain and factor appointed by the King of Portugal who resided at the port of Pulicat on the Coromandel Coast. He made a secret plan and sent a confidential letter to the captives through an individual hailing from the native soil. It is reported that this messenger had successfully handed over the letter and he received remuneration which is found mention in the account books of the Portuguese captain and factor of the Coromandel Coast. The prisoners were later released through negotiations and this incidence clearly shows that the Tamil Muslim *Marakayyar* traders wanted to keep the monopoly of overseas trade in Nagore- Nagapattinam complex in the Bay of Bengal and so they discouraged the Portuguese who attempted to trade there.²

Portuguese sources describe that Nagore had flourishing trade in rice and textiles with Aceh, Pasai and Sri Lanka and we find that Nagapattinam was not prominent at that time.³ The trade and commerce possibly attracted the Portuguese and permission to trade and settle down at Nagapattinam was granted by Chinnappa Nayaka (1514-1532) the ruler of Thanjavur in the year 1525 when approached. It is reported that the Portuguese were immediately successful in the export of twenty-six *kottai* of rice to Melaka from Nagapattinam in the same year. They also procured butter, salt and oil for their own use.

The port of Pasai in Sumatra was a famous trading centre of raw silk brought by the Chinese ships and it had direct trade contacts with Nagore. The *Marakkayar* merchants supplied rice since food provisions were scarce there.

They exchanged it for raw silk that was in great demand for textile manufacture by the weavers in the hinterland of the Coromandel Coast. Paddy cultivated in the Cauvery delta region and surplus of rice availability greatly facilitated the export of rice from Nagore to Pasai in this period.⁴

The coastal settlement of Nagapattinam under the political control of the *nayaka* ruler of Thanjavur brought him enhanced revenue from maritime trade. The ruler raided the Portuguese settlement in 1577 when the activities of the Portuguese came to be regarded as undesirable by the Hindu merchants. The Portuguese in turn were asked to pay to the *nayak* in Thanjavur an annual tribute (exact amount not known) out of the revenue collected by them. All ships which were washed to the shores of Nagapattinam after wreckage in the sea were declared as belonging to the Portuguese as they were the masters of the Sea.⁵ Regarding extradition of fugitives of law, those merchants and other individuals belonging to the Portuguese trading factory, having misappropriated cash and other properties of the factory (who took shelter in the villages of the *nayak*) were handed over to the Portuguese together with their properties.⁶

It was essential to acquire such huge revenue since the *nayak* had to pay annual tribute to the king of Vijayangar residing at Vellore till the death of the last emperor of the Aravidu dynasty in 1642.⁷ The eye-witness of Fr. B. Coutinho who observed the tribute sent by the *Nayak* of Thanjavur to the king of Vijayanagar stationed at Vellore may be worth mentioning in this regard. He described in his letter dated 11 October 1608, that the *Nayak* sent his revenue which consisted of 500 thousand *cruzados* and many presents.⁸ Therefore it is construed that concentration on the collection of revenue by the *Nayak* in his kingdom of Thanjavur was a significant feature as he had to pay an increased amount of six to ten million *pardaus* fixed by the king of Vijayangar and paid the same in 1611.⁹ Under these circumstances when the amount of revenue due not paid by his subjects to the royal treasury the *Nayak* himself came in person to Nagapattinam and entered the houses of the

residents who failed to pay it. Further, when the *adhikari* demanded unreasonable levies from the Portuguese in 1632, they sent an embassy to Thanjavur court and the matter was settled by the Nayak.¹¹

The administration of the port of Nagapattinam which remained under the control of the nayak of Thanjavur slowly passed into the hands of the Portuguese. Some factors such as economic and political were responsible for this situation.

Raghunatha Nayak (1580-1630) and Vijaya Raghunatha Nayak (1630-1673) who ruled from Thanjavur found it difficult the control the maritime affairs. During this period, Nagapattinam emerged as the main port of rice trade in the Cauvery delta. *Trigo de Almeida*, captain of Nagapattinam, procured rice from the hinterland areas. Merchants like *Diogo Fernandez Pereira* supplied rice regularly from Nagapattinam in 1586. The domination of Nagapattinam-based Portuguese and Kunimedu Marakayars in rice trade is clear from contemporary records. *Boccaro* narrates that with the enormous profits derived from rice trade conducted from Nagapattinam with various ports in 1594 the Portuguese built houses of stone. As part of country trade in rice between the eastern and western coast of India, Portuguese ships carried more than 20,000 measures of rice (equivalent to 470000 bushels) annually from Nagapattinam. There is an instance to show that Raghunatha Nayak was annoyed at the way the Portuguese acted in issuing *cartazes* (Naval trade license or pass) by capturing a ship at Nagapattinam on 27 January 1625. Although he intervened in the matter but still was forced to obtain a *cartaz* from the Portuguese for the security of ships and merchandise leaving the port of Nagapattinam.

In 1645 the King of Portugal framed the regulations of the customs house in the port of Nagapattinam and this shows that he had taken over the complete control of the place. It was accepted by the Portuguese settlers and the traders of Nagapattinam on 31 January 1645. The regulations were reconfirmed and they were notified for the purpose of information to the public by the Municipality of Nagapattinam on 20 August 1645.¹² The new order of the customs house of Nagapattinam prohibited

private traders to trade with the English, the Dutch and the Danes after 15 November 1646.

The Dutch was the second European nation to come to the shores of India. They emerged as a prominent commercial power in South India during seventeenth and eighteenth centuries and established several settlements along the Coromandel Coast.¹³ Initially the Dutch East India Company showed its interest on the lines of the Portuguese, the first country who reached East Indies for trading purposes. Later the increasing demand for Indian textiles in the markets of East Indies which were cheap and available on the Coromandel Coast attracted the attention of the Dutch company for expansion into the region.

The Dutch, having conquered maritime Ceylon from the Portuguese, crossed the Palk straits and intended to conquer the two Portuguese strongholds of Nagapattinam and Tuticorin. The Dutch conquered Nagapattinam fort from the Portuguese in 1658 with the help of Nayak of Thanjavur.¹⁴

In 1658, the Dutch tried to evict there under an agreement they had reached between King Vijaya Nayakker of Thanjavur and the Dutch in 1662, ten villages adjoining Nagapattinam Port-Puthur, Muttam, Poruvalancheri, Anthonipettai, Karureppankadu, Azhinji mangalam, Sangamangalam, Thiruthuramanagalam, Manjakollai, Nariyankudi were transferred from Portuguese to the Dutch.

Nagapattinam was a place of strategic importance for the trade of Southern India and Ceylon and an outlet for the rich Thanjavur hinterland. It had traditional trading ties with Southeast Asia and the Malay Peninsula.¹⁵ The conquest of this place led to the total destruction of Portuguese power on the south-eastern coast of India. The Dutch made an agreement with the king Vijaya Raghava Nayak (1634-1673) of Thanjavur on January 5, 1662, by which ten villages were transferred from the Portuguese to the Dutch.¹⁶ Later, the agreement between the first Maratha king Egoji (1675-1679) of Thanjavur and the Dutch, confirmed all the concessions the Dutch previously enjoyed in Nagapattinam and surrounding villages on December 30, 1676.¹⁷

The Maratha ruler of Thanjavur gave them freedom from all port customs and confirmed their right to mint coins in Nagapattinam and charged them half the mint duty.²¹ The king had developed a healthy respect for the Dutch power and accepted their naval dominance. In 1666, he leased them the port of Tirumalapatnam, about ten miles north of Nagapattinam and four neighbouring villages for an annual sum of 2800 pardao or about 1500 pagodas.¹⁸

The Dutch rebuilt the fort of Nagapattinam into a large impregnable structure with five points at a cost of million florins (170,000 pagodas).¹⁹ The seat of government of the Dutch Coromandel was shifted from Pulicat to Nagapattinam in 1690 when their fort Vijf Sinnen was completed.²⁰ The manufacture of cloth for export was the sole occupation of several indigenous groups of this area and the hinterland to the Southeast Asian markets. The trade prospects encouraged the Dutch to shift the headquarters to Nagapattinam and earned huge profits.

In 1657, the Dutch occupied the town, taking it from the Portuguese to become their chief possession in India. The Dutch conquered Nagapattinam fort from the Portuguese in 1658 with the help of Nayak of Thanjavur.²¹

In 1676, when the Maratha Prince Venkaji had established at Thanjavur, the grant of Nagapattinam to the Dutch was confirmed. During their stay at Nagapattinam, the Dutch built ten churches and a hospital. They also struck coins with the name Nagapattinam engraved in Tamil letters. During the course of Dutch occupation of Nagapattinam, two naval battles between British and French fleets were fought off the coast of Nagapattinam – first in 1758 as part of Seven Year War of Independence. The town fell into the hands of the British in 1781 after prolonged battles. 277 villages with Nagur as headquarters were handed over to the British East India company in 1779 itself when the Dutch and British reached a peace agreement in 1784, Nagapattinam was formally ceded to the British from 1799 to 1845, it was the headquarter of Thanjavur district.

The successful business of spices by the Dutch East India Company in the Southeast Asian region from the Coromandel Coast of

India encouraged the English to expand their trading operations from the west coast to the eastern coast of India. The Coromandel Coast became the scene of intense rivalry between Dutch and English for the control of Indian trade especially with East Indies. The British established themselves at Masulipatnam (1611) and Fort St. George (1640) and tried to control the trade with Southeast Asian countries. This had resulted into conflict between Dutch and British. The Dutch settlement of Nagapattinam fell into the hands of the British in 1781 after the two naval battles between the British and the French fleets were fought, off the coast of Nagapattinam. The first one was in the course of Seven Years War (1756-1763) and the second was in 1781, the American War of Independence. The heavily armed fort proved useless in 1781 siege and the British captured the fort. The town was taken by the British from the Dutch in 1781.²² The Treaty of Paris signed in 1784 ended the Fourth Anglo-Dutch War (1780-1784), formally ceding Nagapattinam to British by Dutch. A total of 277 villages with Nagore as headquarters were handed over to British. The headquarters of Dutch Coromandel was shifted back to Pulicat and later relinquished to British according to the Anglo-Dutch Treaty of 1824.

At present, the traces of the existence of European powers – Portuguese, Dutch, and British from 1554 to 1947 at Nagapattinam has been found in rare numbers. These traces are still available in churches, grave-yards, public and private buildings. But these monumental evidences are gradually disappearing from day to day. The Archaeological, Inscriptional, Architectural and Epigraphical evidences in these monuments can be helpful to substantiate the historical knowledge on the colonial rule in this town. There are more than 130 graves belong to Europeans which are hidden in the dense bushes are having a lot of information about the Europeans who came here for trade, military and missionary purpose, their trading companies, their position in their companies, reason for their death and also about the royal seal under which he conducted his expedition. It is also interesting to note that many number of trading companies had undertaken trade at Nagapattinam from each country. In the churches adjacent the sea are having

inscriptions and the Royal emblems which also provided more historical information. The architecture of the church and the various building tell about the European excellence of architecture. It is also known that most of the records of the ancient churches were transferred to Ecclesiastical Archives at Madras and the respective European countries.

It well known from the above monuments and literary evidence that Nagapattinam, as a strategic port, has played a very vital role in maritime trade. It is also evident that on account of the presence of Europeans for almost 200 years, the society in and around Nagapattinam witnessed great impact in religion and education apart from trade activities.

GENEALOGY AND CHRONOLOGY OF THE EARLY PALLAVAS OF KANCHI AS GLEANED FROM THE INSCRIPTIONS

V. Kalai & V. Thirumurugan

The Pallavas kings ruled over the whole of the kingdom of Kanchi. It is however probable that some one of the princes of the Pallava house of Kanchi, who was originally made a viceroy of the northern part of the Pallava kingdom by the king of Kanchi, carved out a separate principality in that part, independent of his overlord. If this suggestion is to be believed, the kings of the main line of the Pallava appear to have been ruling at Kanchi side by side with the branch line that was ruling in the northern part of the old

kingdom of Kanchi. Here shall the researcher try to see what we know about the history of Kanchi after the time of the Pallava kings of the Prakrit grants.

We have seen that Kanchi was under a Pallava king about the fourth quarter of the third century C.E., That king was succeeded by his son Sivaskandavarman who ruled about the first quarter of the fourth century C.E., He was possibly succeeded by a king named Sivaskandavarman. In the British Museum grant

of the time of this king, there is mention of the Pallava Yuva Maharaja Buddhavarman and of **the Yuva Maharaja's son whose name has been doubtfully read as Buddhayankura**. It is not known whether this crown-prince Buddhavarman and his son ever ascended the Pallava throne of Kanchi. In an attempt to fix the date of the early Pallava kings of Kanchi, we are fortunate to have at least three points whereon we can stand with confidence.

(i) The first of these points is supplied by the Jain work, *Lokavibhaga* where the precise date of the completion of the work is given as the 22nd year of Simhavarman, lord of the Pallavas, as 80 beyond 300 years of the Saka era. The 22nd year of a Pallava king named Simhavarman therefore comes to be equivalent to Saka 380, i.e. C.E., 458. According to S. Jha the date given in the *Lokavibhaga* corresponds to the 1st of March; but another record says that the 25th of August, 485. Anyway, the 22nd year of the Pallava king Simhavarman corresponds to 485 C.E. He therefore began to reign in (458-22=), 436 C.E.¹

(ii) The second point of importance is furnished by the Penukonda plates of the Ganga king Madhava² which, are to be assigned, on paleographical grounds, to about 475 C.E. It may be noticed here that the characters of this epigraph are remarkably similar to that of the epigraphs of the Salankayana king Nandivarman II. The Penukonda grant was issued by the Ganga king Madhava Simhavarman, son of Ayyavarman, grandson of Madhava and great grandson of Konkanivarman. But the greatest point of historical importance in this inscription is that it tells us of Madhava Simhavarman being installed on the throne by the Pallava king Skandavarman and of his father Ayyavarman being installed by the Pallava king Simhavarman. We have seen that Fleet ascribes the Penukonda plates to circa 475 C.E.; it is therefore almost certain that Pallava king Simhavarman who installed Ayyavarman, father of the Ganga king Madhava Simhavarman of the Penukonda plates, is identical with the Pallava king Simhavarman who began to rule in C.E., 436.

(iii) The third point of importance is supplied by the Allahabad pillar inscription of Samudra Gupta, which refers to the Gupta king's conflict with a certain *Kanceyaka* Vishnugopa. This "Vishnugopa of Kanchi" has been taken by all

scholars to have belonged to the family of the Pallavas. Samudra Gupta is believed to have reigned from circa 330 to 375 C.E., This dating appears possible from the facts that his father Chandragupta I began to rule in C.E., 320 and that the earliest date of his son Chandragupta II, according to the Mathura inscription⁵ is (Gupta 61+320=) 381 C.E., Since it is proved from the Prakrit records that Pallavas were master of the kingdom of Kanchi during the first half of the fourth century C.E., it is almost certain that the *Kanceyaka* Vishnugopa of the Allahabad pillar inscription was a Pallava king who ruled in the middle of that century which is the time of **Samudra Gupta's South India campaign**.

Let us now see whether these three Pallava kings - Simhavarman, Skandavarman and Vishnugopa, whose date is fairly correct- which can be found in the epigraphs of the Pallavas themselves. The evidence of the Penukonda plates recording the installation of two consecutive Ganga kings- Ayyavarman, and his son Madhava Simhavarman who seems to have **named after his fathers' overlord by the Pallava** king, Simhavarman and Skandavarman, renders it most likely that the Pallava king Simhavarman was the father and immediate predecessor of Skandavarman. It is very interesting in this connection to note that the Udayendiran grant (no. 1) of Nandivarman⁶ issued from Kanchipura, is the only known Pallava record, where we find a Pallava king named Singhavarman (Simhavarman) succeeded by his son Skandavarman. The genealogy given in this record is:

1. Skandavarman I; his son
2. Singhavarman; his son
3. Skandavarman II, his son
4. Nandivarman

These four kings are mentioned erectly in the same order in the Vyalor of Rajasimha⁷ though the relation of the others is not specified there we are therefore inclined to identify the Prakrit king Simhavarman of the *Logavibhaga* and the *Penukonda plates* and Skandavarman of the latter, with respectively the second and third king of the above list.

Beside the Udayandran plates there is another Sanskrit grant belonging early Pallava

rulers of Kanchi. This is the **Chendalur grant of Kumaravishnu II God VII, 233ff** issued from Kanchipura in the king's second regnal year. The grant plies us with the following line of kings:

1. Maharaja Skandavarman; his son
2. Maharaja Kumaravishnu I; his son
3. Maharaja Buddhavarman; his son
4. Maharaja Kumaravishnu; 2nd year.

The ° alphabet of the Chendalur plates more archaic than those of the Kuram and Kasakudi plates, but resembles those of the Pikira, Mangalur and Uruvupalli grants, from which it differs chiefly in the omission of horizontal strokes at the top of letters. But a point which stamps it as more modern is the fact that *r.k.* and subscribed *u* consist of two vertical lines of nearly equal length, while in the Pikira, Mangalur and Uruvupalli grants the line is still considerably shorter. Hence we may conclude that the four Pallava kings of the Chendalur plates ruled in the interval between Simhavarman and Simhavishnu.

We have already seen that Simhavishnu, the second of the four kings mentioned in the Udayendiram grant, ruled from C.E., 436 to not earlier than C.E., 458. Thus his father Skandavarman I appears to have ruled at Kanchi about the first quarter of the fifth century, and his grandson Nandivarman seems to have ended his about the beginning of the sixth century C.E. The accession of Mahendravarman I to the throne of Kanchi is supposed to have taken place about the end of the same century, owing to his being an older contemporary of the Western Chalukya king Pulakesin II (C.E., 608-642). Mahendravarman I was preceded by his father Simhavishnu and grandfather Simhavarman⁹ between Nandivarman, the issuer of the Udayendiram grant, who seems to have ruled up to the beginning of the sixth century and Simhavarman, grandfather of Mahendravarman I, the Vayalur record place three kings named (1) Simhavarman, (2) Simhavarman and (3) Vishnugopa. The Vayalur grant thus places five kings between Nandivarman and Mahendravarman I, i.e. in the sixth century C.E., roughly. Since the rule of the five kings covering

about a century does not appear impossible, since the existence of four earlier kings (Nos. 41-44 of the Vayalur list) has been proved by the Udayendiram grant and since it is possible that the greater Pallavas of the line of Mahendravarman I did not forget even their immediate predecessors, the three kings placed by the Vayalur record between Nandivarman and Mahendravarman grandfather may be historical persons, though we have as yet no corroborative proof of their existence. We therefore think that the four kings of Kanchi mentioned in the Chendalur record however appear to have ruled before kings of the Udayendiram grant. The kings of the Chandler record however appear to have ruled after Vishnugopa who came in conflict with Samudargupta in the middle of the fourth century C.E. We have already seen that in the first half of the fourth century Kanchi was occupied by the Pallava kings who issued the Prakrit charters.

There are some references to Pallava rulers of Kanchi in the inscriptions of the Kadambas. An epigraph of the Kadamba king Ravivarman¹⁰ mentions Candadanda, the lord of Kanchi. Who was defeated by the Kadamba monarch? We do not definitely know whether Candadanda is the name or a *biruda* of the ruler of Kanchi who fought with Ravivarman. He cannot be satisfactorily identified with any king of the traditional list of early Pallava kings. His contemporary, the Kadamba king Ravivarman appears to have ruled about the end of the fifth and the beginning of the sixth century (497-557 C.E., according to *Kadamba – kula* by Moraes). According to Moraes, Krisnavarman I ruled from 475 to 480. C.E., Another Pallava king named Santivarman or Santivaravarman has been mentioned in the Hebbata plates¹² of the Kadamba king Vishuvarman. This Pallava king is possibly also mentioned in the Birur plates¹³. But he cannot be satisfactorily identified with any of the Pallava kings known from the traditional list. It must also be noticed that excepting Candadanda none of these kings is expressly said to have ruled at Kanchi¹⁴.

We thus come to know of the early Pallava kings who appear to have ruled at Kanchi before the rise of the Greater Pallava of Mahendarvarman's line: ¹⁵

DRAVIDIAN IDENTITY OF ADI-DRAVIDAS AND NON-BRAHMINS : SOURCES GLEANED FROM THE WRITINGS OF IYOTHEE THASS AND E.V.RAMASAMI

P. Nagoorkani

The paper aims to highlight the notions of the Adi-Dravidas and the Non-Brahmins towards Dravidian identity based on the Buddhist tenets exposed by Iyothee Thass and Dravidian elements propagated by E.V.Ramsami based on the Caldwell work on Dravidian languages and the works of the elite Vellalas of the Nineteenth and Twentieth Centuries. Iyothee Thass in his works asserted that the Adi-Dravidas were belonged to the Dravidian ethnicity. While E.V.Ramasami, promoted Dravidian culture and identity among the non-Brahmins by starting Self-Respect Movement and Dravidar Kazhagam. He brought a numerous non-Brahmin castes into the Dravidian fold.

De- Sanskritisation.

By the end of the Nineteenth Century, the associations of the lower castes in Tamil Nadu emancipated themselves from the Sanskritisation ethos more quickly than possibly anywhere else in India.¹ This de-Sanskritisation process was well exemplified by the case of the Nadars. This impure but not Untouchable caste of toddy-tappers met with some socio-economic success in the early Nineteenth Century when Nadar middlemen and money-lenders began to acquire wealth.² These Nadars started to claim high Kshatriya status. Around 24,000 of them returned themselves as Kshatriyas in the 1891 Census. They also began to get Sanskritised, adopting, for instance, the sacred thread of the twice-born.³ However, this emulation of their manner of life was very much resented by castes ranked above the Nadars, such as the Maravars (warriors). Indeed, the Nadars, by Sanskritising

themselves did not display any compliance with the values of the caste system but tried to challenge it. Revisiting the notion of Sanskritisation, Srinivas emphasises that it may embody 'a strong element of protest against the high castes: "We dare you to stop us emulating you" seems to be the spirit underlying emulation'.⁴ That was precisely the attitude of the Nadars who even fight physically and killed Maravars and Brahmins in the context of growing hostility between them and upper castes in the late Nineteenth Century.⁵ At the same time, the Nadars began to shun this aggressive variant of Sanskritisation to acquire a separate identity. Their caste association, the Kshatriya Mahajana Sangam, founded in 1895 and significantly renamed Nadar Mahajana Sangam in 1910, aimed to promote the general welfare of the Nadars, the interests and rights of the community, to start schools and to encourage the industriousness of the community.⁶ These objectives were purely secular and showed that the association largely ignored Sanskritisation. In 1916 they clamoured for recognition as 'Kshatriyas'.⁷ In 1921 it called upon the Nadars to return their caste as Kshatriya in the census but it changed its mind soon after under the aegis of W.P.A. Soundrapandian, their main leader in the 1920s-1930s. He urged the Nadars to discard the sacred thread and to boycott the Brahmin priests, including for marriages. He advocated the adoption of the self-respect form of marriage which was performed without the use of Brahmin priests and inter-caste dinnings.⁸ In fact, Soundrapandian had become a disciple of E.V. Ramaswami Naicker, the chief of the non-

Brahmin Dravidian movement in the 1920s-1940s. Naicker selected him as the president of the first Self-Respect Conference in 1929 and in his speech the Nadar leader showed that he had imbibed most of his mentor's doctrine. He declared, for instance, that 'From the time when the Aryans came to our land from the north and strengthened and consolidated their position in our land, a great calamity overtook the country. The foundations of our society were shaken'.⁹

This discourse reflects a process of ethnicisation along Dravidian lines. This was to be the next step, after the rejection of Sanskritisation, for the Nadars: first they emancipated themselves from the dominant, hierarchical value system, then they adopted an alternative, egalitarian and ethnic identity. Soon after, in 1935, the Nadar Mahajana Sangam requested the government of Madras Presidency to include the Nadars in the list of the backward classes so that fee concessions might be given to Nadars students.¹⁰ This caste thus epitomises the way low castes of Tamil Nadu simultaneously internalised the Orientalist discourse on Dravidian identity and British social categories of positive discrimination. An attempt was made towards the making of the non-Brahmin Dravidianism in a larger perspective.

Dravidian Identity of Adi-Dravidas

The British Orientalists emphasised the cultural specificity of southern Indians as Dravidians in the Nineteenth Century. Robert Caldwell (1819-91) was especially successful in familiarising Tamil Nadu with the idea that Sanskrit had been brought to South India by Aryan, Brahmin, colonists and that the original inhabitants were Dravidians speaking Tamil, Telugu etc.¹¹ Tamil thinkers assimilated these views very promptly. In the 1890s, P. Sundaram Pillai considered that India south of the Vindhyas, the Peninsular India, still continues to be India proper¹², because of its pre-Aryan culture. However, Dravidian identity was especially articulated by low caste leaders in their fight against Brahmins.

In the first decade of the Twentieth Century Iyothee Thass, a Pariah converted to Buddhism¹³ pointed out that ancient India had been prosperous and most humanely governed under Buddhist kings but that they had been dislodged from power by Brahmin invaders who

imposed the caste system on them. The Buddhists were then marginalised and considered as unclean and base.¹⁴ Their religion had endowed them with a specific culture that eschewed violence, forbade alcohol and so on.¹⁵ Iyothee Thass even maintained that in the past India was called 'Indirar Desam', the land of Indirar, Indirar being the name of the Buddha after he succeeded in controlling his five senses (*Indriyams*).¹⁶ This original civilisation was none other than the Dravidian civilization and Thass therefore chose to call its castemates, the Pariahs, 'Dravidas'.¹⁷ Thus, as early as the late Nineteenth Century, Non-Brahmin leaders claimed that the lower castes were the original inhabitants of India.¹⁸

Gradually, the non-Brahmin South Indian associations adopted the name 'Dravida' and the suffix 'Adi' - meaning initial, primordial- in their titles. The Pariah Mahajan Sabha, which had been founded in 1890, became the Adi-Dravida Mahajan Sabha, and in 1918 it appealed to the government to replace the derogatory word Pariah by Adi-Dravida, denoting the original inhabitants of Dravida land.¹⁹ In 1917 an Adi-Andhra Mahajana Sabha had come into existence the same way. In fact, this association was initially called Andhra Panchama Conference but the chairman of its 1917 session, M. V. Bhagya Reddy (1888-1939), in his presidential address, declared that the so-called Panchamas (the fifth caste, the Untouchables) were the original sons of the soil and they were the rulers of the country.²⁰ Hence the change of name of the Sabha. In the 1931 census about one-third of the Malas and Madhigas (Untouchables) gave their Identity as Adi-Andhras.²¹

One of the most influential proponents of the Dravidian ideology was M.C. Rajah (1883-1947), a Pariah who became secretary of the Adi-Dravida Mahajan Sabha in 1916 and who had presided over the All India Depressed Classes Association since 1928. As a nominated member of the Madras Legislative Council since 1920, Rajah in 1922 moved a resolution recommending that the terms 'Pancharna' and 'Parya' be deleted from the government records and the terms Adi- Dravida and Adi-Andhra substituted instead.²²

Dravidian Identity of the Non-Brahmins

However, the main architect of non-Brahmin Dravidianism was E.V. Ramaswami Naicker, a social crusader who had been completely disillusioned by the Congress and Gandhi while taking part in the Vaikom *satyagraha*.²³ He left Congress in 1925 after the Tamil Nadu Congress rejected two of his resolutions in favour of reservations for non-Brahmins. If Phule drew some of his egalitarian inspiration from Thomas Paine, E.V.R. was more impressed by Robert Ingersoll. Like Phule and Ambedkar, he was egalitarian in a western, individualist vein.²⁴ The notion of human dignity was so central to his thinking that after quitting Congress in the mid-1920s, he launched the Self-Respect Movement, whose key word was *Samadharmam*, equality. But Periyar regarded it as much as a Buddhist as a Western notion.²⁵ Like Iyothey Thass, he argued that the lower castes were descendants of the first Buddhists and endowed them with a Dravidian identity. E.V.R. argued that the Dravidian-Buddhists were ill-treated by the Aryan-Hindus because they opposed caste hierarchy.²⁶ He eschewed the Orientalist view that interpreted the conflict between the former and the latter in terms of race but emphasised this cleavage by referring to **ethnic categories anyway**: “The Dravidians have a distinct origin in society, their languages are independent and belong to separate classes. The terms 'Aryan' and 'Dravidian' are not my inventions. They are historical realities. They can be found in any school boy's textbook that the *Ramayana* is an allegoric representation of the invading Aryans and the domiciled Dravidians has been accepted by all historians including Pandit Nehru and all reformers including Swami Vivekananda.”²⁷

E.V.R. established an equation between the Brahmins and the Aryan invaders. Himself the son of an affluent merchant from the Balija Naidu caste (whose members had often turned to trade), he presented the lower castes as the Dravidians and used Dravidianism against the Brahminical elite. One of the resolutions of the first Provincial Self-Respect Conference in 1929 concerned the boycott of Brahmin priests - especially for weddings. E.V.R. initiated 'Self-Respect

weddings', celebrated without such priests. Another resolution condemned the *varnashrama dharma*. Moreover, in the late 1920s, the movement had the *Manu Smriti* (the Laws of Manu) burnt on several occasions.²⁸ E.V.R.'s hostility to the caste system was spelled out in terms of a return to the sources of the Dravidian culture: '*Samadharmam* came to stand in for a cultural and civilizational alternative: a social order based on radically different principles from the present, which needed to rest on premises derived from a non-Aryan, non-Sanskritic ethos.’²⁹

E.V.R. had an openly ethnic conception of the low caste identity, which he compared to the situation to the blacks in South Africa.³⁰ He conceived of the Dravidian community primarily in terms of a coalition of mega castes - the non-Brahmin Hindu castes of Tamil Nadu.³¹ The Non-Brahmins who all shared a Dravidian identity therefore had to unite. Such a rapprochement did indeed occur since the Nadar followers of W.P.D. Soundrapandian and Adi Dravidas (Untouchables) were the mainstays of the Self-Respect movement. But the Self-Respect movement attracted also Balaji Naidus (like Naicker himself), Vellalas like S. Ramanathan, the second most important leader of the movement, Sengunthars (weavers-like C.N. Annadurai, Naicker's successor), Agamudaiyars (a cultivating caste), Minavars (fishermen), Mukkulathavar and even Chettis (merchants).³²

The scope and strength of this social coalition must not be exaggerated since old lines of cleavage persisted. As in Maharashtra, the '**non-Aryans**' did not form a solid block. All non-Brahmins did not back the Self-Respect Movement, nor were all the castes which were represented among its supporters fully behind it.³³ There were many Nadars in the Congress ranks for instance. However, the ethnic basis of the Non-Brahmin discourse which, from Thass to E.V.R. combined Buddhist and Dravidian references, helped its leaders to unite the low castes and mobilise them. As in Maharashtra, this process could only materialise because of the simultaneous implementation of policies of positive discrimination by the British.

End Notes

1. This development was largely due to the fact that the Sanskritic-categories had been super imposed on local society in a superficial way by the British administration. In pre-colonial Tamil Nadu, most of the avenues to social mobility did not involve the adoption of Sanskritic practices. LOCATING LAND SCAPE: A STUDY ON NALLURDESHAM

V. Neenu

Local history is generally understood as a range of historical writings focusing on specific, geographically small areas, usually by non professional historians for popular reading. These local histories helped to bring more light on the hitherto unknown, ignored or neglected aspects of human life in small locales and enabled the critical reading of the mainstream histories and necessitated change in them. This effort is aimed to study the history of a particular region of the south Malabar entitled as 'Nallur' in

Kozhikode district at the mouth of Chaliyar river and the role of Nallur Siva temple in social formation of the region. Nallur is very ancient settlement, surrounded water in its four sides. Chaliyar River flowed in its west and north side, Kadalundi River in its eastern parts and Vadakkumbadu River in its south. It has flourished from very ancient time with rich traditions in art, culture and religion and has registered prosperity in agriculture and trade.

The Sangam text says that Nallur was a part of Poozhinadu¹, which was under the control of early Cheras. Earlier the chera rulers and people were hunters later they turned into different occupations like cattle rearing, agriculture, black smeltery, fishing, salt production, oil production, carpentry etc. During those days Nallur was a part of Neithal Tinai here paddy, salt and fish were exchanged. The archaeological remains obtained from Nallur including urn burrials, iron tools and most significantly the remains of hook itself proves the agrarian and costal characteristics of the region². The presence of costal belt might have been forced people to engaged fishing activities along with agriculture.

Nallur was a very fertile region. The place names around the area like kottappadam, Madathilpadam, Pandippadam, Puthukazhipadam, Chalipadam, Mannarpadam³ etc shows the extensive paddy cultivation in the region. Each agrarian settlement formed as a part of village with its proprietors, intermediaries, necessary occupational groups like tillers, artisans, craftsmen, physician and astrologers. In short, an agrarian village of those times was a relatively self-sufficient settlement of people with various specialized occupational group of hereditary character as their name suggest. In Kerala context these settlements are called Desam⁴. In NallurDesam plot names like Kollarukandi (Blacksmith portion), Asarikandi (Carpenters portion), Thunnarukandi (Weavers portion), Chakkungalthodi (Oil producers plot), Parayathodi (Parayars plot), Mannankanti⁵ (Washermens portion) etc. indicates the existence of various occupational group in this Desam. In short, all these occupational groups became a necessary part of Desam.

A society with agrarian surplus would show off its wealth in the form of monumental buildings like huge temple⁶. In Nallur it is Nallur Siva temple. The period between the ninth and eleventh centuries witnessed large scale temple constructions in Kerala. Nallur inscription indicates the temple here during the perumal period itself. Most probably during the eleventh century. Though was constructed as a part of religious worship in the village, course of time it developed as the socio economic and cultural centre of society in Medieval Nallur. The temple transformed itself to fully developed institutions

which controlled the social life of the people and new socio economic relationships emerged centering the temple.

By that time the Brahmins in Nallur had acquired dominance in the society and his dominance was spread over the administration of temple also. The agrarian society of Nallur gradually became close with Nallur Siva temple. Most of the cultivatable land was under Nallur Devaswam⁷. Hence the rent received in the temple in the form of paddy and other products was much more than what was actually needed in the temple. It is said that Nallur temple had received 6000 *para* paddy per annually⁸.

No concrete evidence are available to prove that king was the absolute owner of this temple. However conventionally the king was the owner of the land⁹. Nallur inscription mentioned the perumal ruler Athichankota in its inscription. It shows the loyalty of temple to the king¹⁰. Theoretically the owner of Devaswam land was the diety of the temple, but practically the proprietors of the land was the Brahmin uralers, they leased out the Devaswam land to the Karalors for cultivation. The rent received from the Karalers were utilized for the daily expenses of the temple.

Many number of people made their livelihood through their relationship with the temple. Being this temple transformed as the principle centre for the consolidation and redistribution of goods produced people from various levels in the society were related to the temple. The perumals, koyiladhikarikal, Naduvazis were related to the temple in one way or the other way¹¹. The next important persons connected with the temples were the temple officials like the *Tantri*, *Melshanthi* and *Keezhsanthi*. Normally these people received the *viruthy land*¹² which was given to them as reward for their service rendered to the temple.

The others who made livelihood from the temple were mainly the Devadasis drummers, lthihasa reders, garland makers, sweepers etc. Devadasis were temple dancers and they are mentioned in the inscription obtained from Nallur temple¹³. The inscription says that there were given food grains as reward. Drummers were yet another functional group who had made their livelihood from temple. They were called kottikal in early days and Marar in the later

period. Once the rythem became an important part of the daily worship in the temple the importance of the drummers also increased. **When the drummers were also given 'Viruthi'** land they also became hereditary functional. The plot name Marathu around the Nallur temple shows the existence of drummers and they enjoyed *Viruthi* right.

Vedic school attached to the temple was known as 'Salas'. The vedic students known as *Chattirar* and the vedic teachers called the *Battas* were also given food and shelter from temple income. Apart from the salas, social education was also provided for the common public at the premise of the temple. This type of education was centred around the reading of *puranas and ithihasas* and interpreting them. The most famous among this type of social education was the '**Mahabharatham pattathanam**'. The Sanskrit scholars called Mahabharatha Bhattanmar were

specialist scholar of epic Mahabharatha¹⁴. Who recited and interpreted to the common public at the temple premises. Nallur temple performed this social function very well. Nallur inscription says that granting paddy to the the Bharatham Readers.

Some land was kept under the direct control of the king himself and this type of land was known as the Cherikkal land. In Nallur Desam they was a plot name '**Ramanadu Vaka Cherikkal**' indicate the existence of cherikkal land¹⁵. Ramanadu was one of the earlier nadus under the perumal period who ruled the areas around Nallur Desam¹⁶.

Concludingly the social formation of the period was based upon this power structure. Thus Nallur Siva temple had already become the socio economic and cultural institution of Medieval Nallur Desam.

KAYALPATNAM - AN ANCIENT PORT

G. Packianathan

Kayalpatnam is an ancient historical Coastal South Indian city which lies in the southeast part of Indian peninsula, on the shore off the Bay of Bengal. Kayal which means lagoons opening to the sea, was a celebrated Port during the medieval period in the Tamiraparani Delta of coromandal coast. It is a Muslim dominant town situated in Thoothukudi district and formally it was in Tirunelveli district. Kayalpatnam was an important trade emporium even before the advent of Islam. Kayalpatnam is also distinctly identified with Islam from 8th

century. Islam entered Kayalpatnam through Arab traders and Muslim missionaries during the reign of the first Caliph Hazarth Abu Bakar Siddeeq (Rali) and Kadal Karai Palli was the first mosque and the saints who ever visited Kayalpatnam never missed to pray in this mosque. Kayalpatnam was an important trade emporium even before the advent of Islam and it is generally believes that the port was identical with the famous ancient port and trading centre of Korkai. Once it was a famous port being only next to Korkai in 12th and 13th centuries. This

small place is mostly inhabited by Muslims who, it is said, originally came from Arabia and worked for Pandiya kings and settled down here more than thousands years ago. Kayalpatnam was known as Sonagarpattinam.

The port was came into prominence under the second Pandiyas and served as their chief emporium. In the beginning of fourteen century these region was conquered by Delhi Sultanate which followed the establishment of an independent Madurai Sultanate. The Port was first referred by Marco polo in his accounts as Cail and then frequently mentioned by the later travellers in various names such as Kabil, Kabal, Cahila, Chayal, Cael and so on. In this paper an attempt has been made to locate the Muslim traders in general, which devoted to Muslim merchants under the rulers of Kayalpatnam in the pre colonial period.

Settlements in Kayalpatnam:

The first settlement in Kayalpatnam occurred in 633 A.D. The first settlers were from Mecca and - who landed here during the reign of the first caliph, the successor of our Prophet Muhammad (Sal), Ameerul Momeneen Hazarat Seyedna Abubakar Siddeeq (Rali). Medina According to eminent Historians, *Greeks, Romans and Arabs* visited Kayal even before the advent of Muslim missionaries of Arabia. **Through our ancient saintly scholars' records, we** can make out that the first Muslim settlement in Kayalpatnam happened during the lifetime of Hazarath Abu Bakar Siddeeq (Rali).

The second settlement took place in 842 A.D. (Hijiri 227). They came from Cairo in Egypt during the tyrannical rule of Abbasid caliph Al-Multhazim (841 A.D.) and the beginning of Caliph Al-Wadiq's rule, (842 A.D.). They came under the leadership of Muhammad Khalji (Rah). Big Jamiah mosque (Kuthba Periya Palli) was built by Muhammad Khalji in 843 A.D. (Hijiri 228). Kayal was the name of the place till the advent of Muhammad Khalji. After his arrival, the southern part of Kayal was named Kahirfathan (after Khalji's home town town "Kahira" in Egypt). Kahirfathan, which is Arabic, slowly changed to Kayalpatnam. The northern part of Kayal is called Palaiya Kayal and Punna Kayal. The third batch of Arabs came from Arabia in 1284 A.D under the leadership of Sultan Jamaluddin (a descendant of holy prophet Muhammad (Sal)

and also a business magnate, statesman and famous ruler of Pandiyan kingdom. His descendants are still living in Kayalpatnam and they have their genealogical table from Sultan Jamaluddin. Kayalpatnam had a complementary relationship with each other. Christian centuries Arabs were also used to ride at Malabar and later Kayalpatnam (Kayal) emerged as early Islamic settlements in the Coromandal coast.

Marco polo whom the first reference about the name of Kayal came in 1292 AD revealsthat the active role of traders from the different parts of the world particularly from Arabia. He characterize that, at Kayal ships as far as from the west, Hormus, Kis, Aden and all Arabia came with horses and other things for sale and great business was done in this Harbour.⁵ Along with Rashid- al-din as contemporary of Marco polo records that Chinese merchandise were brought by junks to this ports where they exchanged their goods with the Islamic world. The horse trade carried by Arabs at Kayal is worth mentioning. The Pandiyan rulers had a high demand in good quality or war horses due to their continuous struggle with the neighbouring states and the Arab merchants remained as the chief importers of these war horses. As a result Pandiyas emerged as the supreme military power at south India during the second half of the thirteenth century and extended their empire even in the Northern side of Sri Lanka too. Wassaf another contemporary of Marco Polo narrates thousands of horses annually bordered at Malabar in a great some of money, even died horse also paid by the ruler while importing to his country.

Pearl Trade

Kayal was also famous for its rich outlet of pearl trade. The perfectly rounded pearls of Kayal had a great demand in the east as well as in the west and later emerged as the head quarters of pearl fishery in the Gulf of Mannar. The Arabs also played an important role in pearl fishery. It is worthy being mentioned that, the Pandiyan Arabs sometimes entrusted the charge to look after the pearl trade by the ruler. Even in colonial period the Muslim counterparts of these Arab traders at Kayalpatnam become wealthy engaged in pearl diving and many of them turned gem and pearl dealing and become the controllers of trade networks as far as Java, Sumatra, Ceylon and Malay peninsula. They were believed to have controlled the spice trade

of Indonesia. Apart from all, Kayal was famous for its extensive import of Arab potteries too. Thus, as a result of Arab contacts with Coromandel Coast, a well-established Muslim community has been flourished in Tamil Nadu. Likewise in the Malabar Coast, they had integrated with indigenous community by following local language and customs and also married local women. These Tamil speaking Muslims of Coromandel Coast have referred to as Lebbais. Interestingly, the principle colony of Labbais, have been firstly appeared at Kayalpatnam.

The religious patronage given by the Pandiya rulers of Madurai to the early settlers of Kayalpatnam seems worthy of being mentioned. On account of their trade interest, these Hindu rulers had always tried to maintain cordial relations with them. Among the other Pandiyan ports Kayal, which has come in for prominent mention in consideration with the rulers patronage. While discussing this port Marco Polo says that **“The King maintains great state and administration in his kingdom with great equity, and extends great favor to merchants and foreigners, so that they are very glad to visit his city”**.⁸ As a result, Malik-I Islam Jamalu-ddin the chief importer of horses was settled at Kayalpatnam in 1284 A.D. and later then Pandya ruler Sundara Pandi appointed Malik Taqi-al-Din the son of his brother Taqi-u-udin Abdurahman as the governor of Kayal. During the same time his al-Tayyibi family was the rulers of Persian Gulf and southern Iranian province of Fars. These, Muslim trade contacts and settlements gradually leads to the establishment of Sufism at Kayalpatnam and a large number of copper plate inscriptions found in the graveyards of various tombstones, which contains the records of death and burials of some persons of local importance have undoubtedly proved the importance of **Kayalpatnam as one of the early centre’s of Sufi culture** in south India.

At Pearl fishery coast the Marakkars emerged as the major trading group and they have regular trade contact with Malabar and South- East Asia. They brought rice to Malabar from Coromandel in return, carries spices to Coromandel and from where they procured textiles which they sent to south- east Asia. The Portuguese remained the mercantile collaborators with Marakkars at Kayalpatnam too in the beginning, but soon become their

relationship got strained around 1520’s. The reason behind these gloomy relations was more or less attached to Portuguese attempt to controlling pearl trade, which was so far controlled by them at the pearl fishery coast.

Horse trade

Kayal was flourished as a centre of horse trade in the second half of the thirteenth century, and then continued brisk trade relation with Arabia. Regarding horse trade in medieval India, it is said that, horses were imported to south India mostly through oceanic routes whereas north India depended to oceanic as well as inland routes. Marco Polo described about this port. Since from the early centuries of Christian era, the war horses had a great demand in India in general and south India in particular. Although, these demands reached its peak on the seventh century, then the cavalry got prominent place in the army of Indian rulers. It might have been the major reason for the demand of war horses was bound with the mutual struggle between the south Indian powers who ruled in different territories. Evidences said that under the Cholas the horse trade assumed important role and cavalry played an important role while the armies of the other south Indian powers opposed them. These long struggles continued in the later periods as well even under the Pandiyans of Madurai also. Wassaf, who came to Kayal after thirteen years of Marco Polo, presents the import of war horses from Persia to south India, particularly under the Pandiyans.

Other Commodities

Silk might have come from China, Elephants from Burma and horses from Arabia, rose water from West Asia into Kayal on the Pandiya coast. Thus south India was both on the transit trade and terminal trade from West Asia to China through Sri Lanka and South East Asia. In the transactions kayal was a halting station and distribution point used by the itinerant traders and it was a busy port. The South East Asian trade impacted profoundly upon the Tamil country of South India. It had regular contacts with South East Asia through the ports like Kayal. The coromandal coast with its ports like Kayal and Nagapattinam was an outlet for a major cotton textile producing and rice surplus area as well as the key to the Deccan region. It also served as a major entrepot area for trade with Far East and South East Asia. The Chinese

traded in pepper, precious stones, aromatics and pearls. The imports included camphor celadon wares, silk from China, sandalwood, horn of rhinoceros from Java, Camphor, wax, glass beads from Borneo.

Kayalpatnam acted as the leading Arab trading ports in Arabian Sea and Bay of Bengal during the medieval period. This centre as well as their rulers had maintained a good relation with the Arabs which brought vast Muslim settlements in this region. Along with these Muslim settlements stimulated its urban character and it is worthy being mentioned in the words of K.N. Choudhuri **“Whenever Islam made its presence felt as an indivisible combination of power, communication and exchange, urbanization flourished and expanded”**. However, after the advent of Portuguese they were terminated the Muslim communities particularly the Marakkars and themselves become the masters of Kayalpatnam.

In 1861 Caldwell collected thirty one gold coins from Kayal. Out of these, thirty were Arab coins, and one belonged to Europe. These coins belonged to thirteenth century A.D. It is learnt

from them that Kayal had overseas contacts with Arabia and Europe. In 1987, Dr V. Vedachalam of the Tamilnadu Department of Archeology visited the site more than twice and picked up some seventy pieces of Chinese ceramic sherds, which are now displayed in Madurai Government Museum and in the Thirumalai Nayak Mahal Musuem. This classification proves that Kayal had overseas contacts with China and Persian Gulf countries in thirteenth and fourteenth centuries. Kayalpattinam was a busy port under the later Pandyas during 13th and 14th centuries A.D. The encouragement given by the rulers not only brought many foreigners to trade in this region but also to settle in that region with great influence. The Muslim settlements in this region provided a conducive atmosphere for the emergence of Muslim rule. It kept the intercourse between Tamil country and South East Asia, Persian Gulf and Far East countries. It is due to its multi-dimensional role it paved the way for the emergence of a number of market centres. The prevalence of guild and its activities too besides promoting the cause of market centres had contributed significantly to trade and economy of the medieval times in general.

HISTORICAL SIGNIFICANCE OF TIRUCHENDUR REGION

G. Paranthaman

Human habitation in Tiruchendur taluk dates back to Mesolithic times. Available evidences suggest almost continuous habitation of the region through the centuries down to the present time. The earliest cultural phases represented is the Mesolithic period. This is

essentially a transitional stage between the Paleolithic food gathering economy and the more advanced Neolithic period characterized by food production, beginning of sedentary settlements and a stone industry dominated by ground and polished tools. A generalized change

towards microlithization in the stone tool industry as well as the emergence of composite tool manufacture, in which series of microliths are hafted on organic handiest of bone or wood is witnessed during the Mesolithic period. The substance economy of the sites was more broad based with coastal sites displaying evidence of fishing and exploitation of other marine food sources.

Robert Bruce Foote, the father of Indian prehistory spent 43 years exploring different parts of south India and during geological reconnaissance come across numerous fragment of chert, silified wood and limpid quartz embedded in the red sand dunes located along bamban coast.¹ These fossilized sand dunes locally known as Teris appear as huge reddish mounds along the coast and extend in abroad stretch from Kilakarai to Kanyakumari. The sands reach their broadest extent between Tissaiyanvillai and Tiruchendur foote attributed microlithic tools location on the teris to be the result of human activity. He categorized the 73 tools she collected from the area as neoliths but these microlithic artifacts have been reclassified as belonging to the Mesolithic phase. Subsequently these sites were investigated by Aiyappan.² Zeuner and Allchin³ in 1986. Martingell and Gardner in 1990 and 1995. The Microlithic yielding dunes were founding many localities in Tiruchendur taluks. The sites include Meignanapuram, Surangudi, Nazareth, Manadu, Kayamoli, Kurumbur, Puttantharuvai.⁴ Based on excavation conducted at the said above places It is asserted that the people of Tiruchendur taluk had a long history period to Indusvalley civilization of 4000 BC. The civilization that developed in the Tiruchendur region disappeared later on due to the natural calamities.

The northern part of Pandya country had its seat at Madurai and southern part at Tirunelveli. The southern part comprised of Tirunelveli region including Tiruchendur taluk. Upon the mouth of river Tamiraparani, there was the famous harbour Korkai reputed for pearl fishery. It is located 8° 40' N 78° 5' E at the southern end of the eastern coast.⁵ About seventh century B.C. by establishing a capital at Korkai an unknown southern ruler ruled the present Tamil Nadu and Kerala. To him it was stated that there were three sons namely Pandya,

Chola and Chera. They prosperously lived together in Korkai.⁶ Native tradition represents the eponymous ancestors of the Pandyas, Cheras and Cholas as three brothers who lived and ruled in common at Korkai near the mouth of Tamiraparani. The lands hold in common by all. Three were at Mukkani near Korkai. Eventually a separation took place, Pandyan remained at home, while Chola and Chera went forth to seek their fortunes and founded Kingdoms of their own to the north and west. The Cholas seem to have ruled in Tiruchi and Thanjavur districts. While the Cheras established themselves in Travancore, Malabar and Coimbatore, the Pandyas were in Tirunelveli and Madurai.⁷ As the Pandya and his successors ruled the southern part of Tamil Nadu the region was called as Pandya Nadu as well as Pandya Mandalam. Since the Pandya rulers ruled Tirunelveli and its surroundings the Southernmost part of Pandya country was named as Tenpandi region.⁸ From the early days Tiruchendur has been one of the sub divisions of Tirunelveli region and the rulers who had Jurisdiction over Tirunelveli region wielded the same magnitude of rule over Tiruchendur region. In other words Tiruchendur was ruled by the same rulers of Tirunelveli region. The Pandya rulers ruled this region from the ancient seat of Korkai. Indeed Korkai served the Pandya rulers in two capacities as military camp and government head quarters. Thus Korkai the gateway of the Pandyas by its existence as a marine capital clearly affords evidences that the people of Tiruchendur region were civilized 4000 years ago.⁹ The Ancient Pandya rulers ruled the Tirunelveli seemai by dividing into many sub divisions. They were Kaliaka Nadu, Karugulavalanadu, Kannipura theyyanadu, Keelavembunadu, Tenaryyanadu, Manadu, Melvembunadu, Mullainadu, Vellanadu, Valuthivalanadu, Vananadu, Vaikunthavalanadu and Nanjinadu.¹⁰ Indeed these divisions clearly indicate the Pandya rulers of Tirunelveli country had their sway over present districts of Thoothukudi, Tirunelveli, Ramanathapuram and Kanyakumari districts.

The present day tiny hamlet of Korkai lies on the northern bank of river Tamiraparani and is situated 23 km from Tiruchendur. Korkai had once been a celebrated sea port in the Sagam also the capital city of ancient Pandyan Kingdom. Sangam literature refers Korkai as Pugal

Malisirappin Korkai and Nartarvaluthi Korkai Sangam classic point that Korkai was the capital city of Pandya vetrivelcheliyan. It was indeed a tribute to Korkai that Pandiyan monarches ruled from the place were called Korkai Koman, Korkaiventhan. The pearls of Korkai had an international market. Such a city of name and fame in now reduced to a position of hamlet. According to scholars the port city of Korkai lost its importance after the eleventh century as a consequence of the gradual elevation of the sea coast. In 1860 Bishop Caldwell conducted excavations at Palayakayal, Maramangalam after unearthing burialurns. Ruined brick structures, under remnants identified the village of the sangam pandyas. Between 1969 and 1972 Tamil Nadu State Department of Archaeology conducted excavation at Korkai and based on Carbon dating established that was inhabited by civilized people who were familiar with the technique of Iron making in the eighth century B.C. ¹¹ An ancient temple with inscription is a noteworthy feature lithic records refer the place as Kudanattukorkai and also Madurodayanallur.¹² The central shrine has an image of Vinayakar. The temple is presently called Akkasalai Vinayagar temple. But the temple presiding deity according to inscription is Akkasalai isvaramudya Mahadever and Akkasalai iswaramudiyar thus indicating that it was originally a siva temple.¹³ The temple is of that it was originally a siva temple. The temple is made of granite from Adhistana to Vimana. The Vimana is Nagara variety being made of one stone. The temple has four inscriptions the earliest being that of Kulothunga Chola I. Hence the temple must have been erected in his time.

The History of Pandya rule in Tiruchendur region presented here is based on the research works available on the subject. Vadivalamba Nintra Pandya, Palyagasalaimudukhudumi perumarhuthi, Mudathirumaran, Kadalunmaintha Elamperumvaluthi, Ariwdainambi, Ollaiyurthantha Boothapandyan, Aryapadaikadantha Nedunchelliyan, Chitrmaduthuinjiya Nanmaran, Talaiyalankanuthu seruventra Nedunchezhiyan and Kanaperayil Kadanthaukkiraperuvaluthi were the pandya rulers of the Sangam period who ruled present Thoothukudi including Tiruchendur taluk.¹⁴ After the eclipse of the sangam age the alien rule of Kalabhras was extended over Pandya country.¹⁵

They let loose repression and subjected the Tamils. They swept over Tamil Nadu their own language and religion. They established autocratic rule. The Kalabhra inter region lasted for nearly 300 years (250 A.D. - 575 A.D.) ending with the sixth century A.D.¹⁶ Following them the first Pandya Empire was firmly established by Kadungon (575 - 600 A.D.) the Pandya ruler by defecting the Kalabhras.¹⁷ He laid his seat at Madurai had his sway over Tirunelveli region including Tiruchendur. Indeed he was consider as the founder of first pandya empire.¹⁸ The rulers of first Pandya empire were chezhiyansender (620-642) Maravarman Arikesari (642-700A.D.) Kocchadyan Ranadheera (700-768) Nedunchedayan Parantaken or Varaguna I (768-815 A.D.) Srimaran Srivallabha (815-862 A.D.) Varagunavarman II (862-885 A.D.) Parantakavirananarayanan (860-965 A.D.) Rajasimha II (900 - 920 A.D.) and Virapandya (946 - 960 A.D.) ruled over four centuries over Madurai and Tirunelveli regions.¹⁹

ChezhiyanSendan or Sadaiyamaran Seventh regnal year 627 A.D. inscription found on the door Jumb of Pallikonda perumal Shrine in the Somanathesvarar temple at Attur.²⁰ Varaguna II thirteenth regnal year 875 A.D. inscription found on two slaps setup in the Subramanyaswamy temple at Tiruchendur.²¹

The eclips of the first Pandya empire began with Varaguna II (862 - 885 A.D.) and lasted for about one hundred and fifty years Varaguna II was defected by the allied confederacy under the Pallavar at Thiru Purambiyem in 880 A.D. In the field of religion during that period the Nayanmars sprete Saivaite Principles whereas Alvars preached moral discriptions.²² The echo of their preaching was heard a lot in Tiruchendur, for Tiruchendur region was a junction for both the Saivas and Vaishavite Principles.

The Cholas who had lost their power to the Pandyas during the Previous centuries upheld and rose to Prominence under imperial cholas parantakachola defeated Rajasimha II the Pandya ruler in 915 A.D. and Captured Madurai and its different parts. But the chola ruler had to met crushing defeat at the hands of virapandya the son of Rajasimha II. Virapandya was defeated by sundarachola and his son Aditya II in 962 and 966 respectively. Under his successor RajaRaja Chola I (985-1016 A.D.) defeated the

Pandya Amarapujanga and brought entire pandya country under the rule of Cholas of Tanjore and named it as Raja Raja Mandalam. Raja Raja Ist 24th regnal year (1000 A.D.) inscription found on a slab built into the flight of steps leading to the Kitchen in the vaithyamanidhi perumal temple at Tirukolur.²³ Raja Raja Ist 21, 22, 27 and 28th Regnal year inscriptions (1006 A.D., 1007 A.D., 1012 and 1013 A.D.) found on the north and south wall of central shrine. West wall of central shrine.²⁴ During the rule of Rajendra Chola (1012-1044 A.D.) a Chola representative was appointed to look after Madurai and Tirunelveli regions in the name of Chola Pandya. Rajendra Cholas third, fifth, and sixth regnal year inscriptions (1015, 1017 and 1018 A.D.) found on the east, north and south wall of Pallikondar Shrine in Somanatheswarar temple²⁵ at Attur. Jatavarman Sundarachola the son of Rajendrachola I become the first chola pandya (1018 - 1040 A.D.) Jatavarman Sundara Chola Pandya sixth, 21st regnal year inscriptions (1024 A.D. and 1030 A.D.) found on the north wall of central shrine and stone in the pavement of somasundari amman shrine.²⁶ After him his successor maravarman parakirama (hall) Pandya served as representative over the Pandya country of the Tanjore crown. Maravarman alias Vikramachola Pandyadeva 25th regnal year (1045 A.D.) inscriptions found on the north and south walls of central shrine in somatheswara temple at Attur.²⁷ Jatavarman Chola Pandya 3rd regnal year (1050 A.D.) inscription found on fragments built into the basement of the platform around the central shrine in the Vaittamanidhi Perumal temple at Tirukkalur.²⁸ Jatavarman Chola Pandya 3rd Regnal Year 1050 A.D. and 26th regnal year 1076 A.D. inscription found on fragments built into the basement of the Platform around the central shrine in the Vaittamanidhi Perumal temple at Tirukkolor.²⁹ Vira Rajendra chola deva fourth and fifth regnal years (1067-1068) inscriptions found on the west and north wall of central shrine in Somanathar temple at Attur.³⁰

The post of Chola Pandya Viceroy was stopped during the rule of Kulottunga I (1090-1122 A.D.). The reason for this measure was due to the uprisings of Pandya Kings. Kulottunga I defeated the five Pandyas and brought the Pandya land under his direct rule. Sadaiyavarman Srivallabha one of the five

Pandya defeated Kulottunga I established Pandya rule in Tirunelveli.³¹ Kulottunga Chola Ist 29th, 34th and 38th Regnal years inscriptions (1099, 1104, 1106A.D.) found on the tiers of the north wall of central shrine in vaittamanidhi perumal temple at Tirukkalur.³² Kulottunga Cholas Ist, 12, 20, 22, 24, 36, 38, 43 and 48th regnal years. (1070 A.D.-1082 A.D., 1090, 1092, 1094, 1100, 1108, 1113, 1118 A.D.) Inscriptions found on the west and south and north walls of central shrine in Somanatheswarar temple at Attur.³³

During the rule of Rajathi Raja Chola II (1146 - 1173 A.D.) Jadavarman Kulasekhara Pandya, the son of Srivallabha (1096-1116 A.D.) the ruler of Southern part of Pandya country who had his headquarters at Tirunelveli. His brother Parakirama Pandya ruled over northern part of Pandya country had his capital at Madurai. The Separation of power was a significant one because the Tenpandi country existed separately.³⁴ Jadavarman Sri Vallabhas (1090-1116 A.D.) first, third and sixth regnal years (1132 A.D., 1134 and 1138) inscriptions found on the north wall, west and south wall of central shrine and Pillar in the Antharala in the central shrine in Somanathar temple at Attur.³⁵

A civil war broke out between the Pandya brothers. In that Civil war Parakrama Pandya (1087-1110 A.D.) was killed and Madurai was captured by Jatavarma Kulasekhara Pandya. But with the help of Srilankan forces, Virapandya the son of late Parakirama Pandya resumed his power. At this Juncture, Jatavarma Kulasekhara Pandya sought the help of Chola ruler of Tanjore. He gave timely helped and solved the problem. But Jatavarman Kulasekharapandyas change of alliance with Parakirama Babu of ceylone created strained relations between the Pandya and Chola rulers. It resulted in the reinstallation of Virapandya as Pandya rulers. At this time Kulasekhara Pandya died. His son Vikaramapandya sought the succor of the Chola ruler. As a result Vikrama Pandya became the king. Enraged by this incident Virapandya with the help of Chera ruler attacked Madurai. But the attack was crushed by the retaliation of the cholas under Kulotunga III yet his Son Jatavarman Kulasekhara 1190-1216 wished to free himself from the grip of the Chola ruler. By doing so he put the strongest nail of the coffin of the Cholas rule as king makers in the Pandya

country his successors ruled the Pandya country. Untill the fourteenth century A.D.³⁶ By the thirteenth century the Pandya empire was the mightiest Political power in south India.³⁷

The strained relations began between the Pandyas and Cholas with the rule of Kulasekhara Pandya (1190-1216 A.D.) the founder of second Pandya Empire. He brought the entire Chola mandalam under Pandya banner. He was succeeded by Maravarman Sundarapandya I (1216-1238 A.D.). MaravarmansundaraPandya II (1238-1251) Jatavarman Sundarapandya I and Maravarman Kulasekhara I (1268 - 1311) respectively.

Jatavarman Kulasekhara I six regnal year (1196 A.D.). Inscription found on the east wall of Mandapa in front of the century shrine in somanathar temple at Attur.³⁸ Maravarman Sundarapandyan I 14th regnal 1230 A.D. Inscription found on the south wall of Mandapa in front of the central shrine in Somanathar temple at Attur.³⁹ His 9th, 20th and 22nd regnal year (1225, 1236 and 1237) inscriptions found on the west and south wall of central shrine in the Vaithiamanithi temple.

During the Maravarman Kulasekhara Pandya rule the Pandya Empire witnessed with internal crisis in the form of civil war.

Virapandya and Sundarapandya, the two sons of Maravarman Kulasekhara contested for the throne while he was alive. In the civil war that ensued Virapandya emerged victorious. His archrival sundara pandya killed his father Kulasekhara pandya and captured the throne. It made the entire pandya country into hodge – podge situation. Sundarapandya wished to safeguard his position and sought the help of Malikkafur, the able general of Alaudin Khilji Sultan of Delhi. Malikkafur invaded the pandya country and devastated Madurai and had taken

away a lot of wealth on his home back. During Kafur invasion the chera ruler as Ravivarmankulasekhara conquered pandya country in 1311 - 1312 A.D. But Virapandya recaptured the pandya country from the Chera ruler. Virapandya left the country under the device of coregents rule. The coregency was shared by following rulers namely Sundarapandya, Vikrama Pandya. The Coregents on their part ruled different regions by dividing among themselves on his part Jatavarma Parakirama Pandya had his jurisdiction over Srivaikuntem region including Tiruchendur for he was entrusted with power over Tirunelveli region⁴⁰. The Chera rule over Pandya country was ephemeral one.

The Kafurs invasion was followed by Kuzhrukhan in 1319 A.D. and Ulughan in 1323 A.D. As a result of Ulughans invasion Muslim rule was established in Madurai and the Madurai sultanate came in to being in 1335 A.D. and lasted upon 1378 A.D. The scions of the Pandya royal family moved south wards and carved out petty kingdoms in Tirunelveli and Tenkasi.

At the end of fourteenth century A.D. and the beginning of fifteenth century A.D. three kings ruled the Tenpandi region in the Same name of Parakiramapandya from 1384-1415 A.D. 1387-1415 A.D. and 1401-1434 respectively. At the same time sadayavarman KulasekharaPandya, SadiavarmaVikrama Pandya Tirunelveli perumal Komaravarman alias vira pandya deva also ruled Tenpandi region⁴¹. During the fifteenth century A.D. central shrine of Sri Kailasanathar temple of Srivaikuntam was reconstructed by the virapandya. Two inscriptions of virapandya deva of 1439 A.D. found on the eastern wall of Mahamandapa of Sri Kallarpiran temple describes the various grants of virapandya deva to srikallarpiran temple at Srivaikuntam⁴².

PAHRULI AND KOMARI RIVERS AND THEIR LAND EDANAADU : A HISTORICAL STUDY

Prof. Pon.Thangamani

The objective of this study is to bring to light the forgotten history of the Pahruli and Komari rivers and their land Edanaadu. It is learned from legends and traditions that a great land mass existed beyond the present Kanyakumari called Lemurian Continent or Komari Kadam, which extended upto South Africa in the west and Australia in the east. The submerged region became the Indian Ocean due to deluge happened in the ancient past. The Book of Genesis of the Bible says that a disastrous deluge caused destruction of all except a remnant of the people.¹ The same flood would have caused the inundation of the Komari Kadam.

The first law giver of the world, namely Ur Nammu was a Sumerian. The capital of Sumeria was called Ur. Since 1935 excavations at Maari, a Thamizh word which means rain, situated in the middle of the Euphrates valley have turned up a palace with more than 260 rooms containing many thousands of clay tablets pertaining to the period of Noah. ² All these Thamizh words which were in usage in Sumeria

well illustrate that the Sumerians had maintained constant touch with the Thamizhians of the Lemurian Continent and the deluge occurred in the days of Noah caused the destruction of both Sumeria and the Lemurian continent. Added to this, many primeval seals were discovered at Ur with animals engraved on them, some of them belonging to Mohanjo-daro in Sind. This adds more authentic evidence that the Sumerians maintained commercial relations with Indians and it made it possible for them to make use of Indian animals on their seals.

There are many literary sources to establish the existence of the Komari Kadam in the ancient period. *Iraiyana Ahapporul Urai*, a Thamizh literary work refers to the Pandya rulers, who held first Sangam at South Madurai and the second Sangam at Kapadapuram. The author of *Purananuru* blessed the king saying that he would live equal to the number of sands on the Pahruli river.³ Adiyaarkunallar in his commentary on *Chilappathikaram* says that there were 49 *Naadus* prevailed in a country between Pahruli and Komari rivers. Scott Eliot in

his *Lost Lemurian Continent* emphatically pointed out that there existed Lemurian Continent.⁴

Ptolemy, a Greek traveller has referred to Komari in his travel diary (about 140 AD). Another Greek scholar Megasthenes called Ceylon, Tambapana which indicates that the river Tambiraparani had flown cutting across the Komari Kandam and Ceylon in the ancient days.⁵ The translator of *Chilapathikaram* namely Adiyaarkunallar says that there were seven kinds of Naadus in the Komari Continent. Komari Continent spread over an area of 700 *Kaavatham* (measurement of distance) and consisted of 49 Naadus. It was ruled by the Pandya rulers and patronized Thamizh and organized Sangams.

Like Egypt, the Lemurian Continent was a cradle of civilization. Komari and Pahruli rivers irrigated the land between these two rivers. The river which flows through Nagercoil and Suchindrum and joins at Manakkudi with sea at present, is called Pazhayaaru, but its name in the ancient past was Komari Aaru. Now it is called Pazhaya Aaru which represents only its age, but not the real name. It had flown through kanyakumari and thus it was called Komari Aaru. It originates on the Pothigai mountain. *Chilapathikaram* one of the epics of Thamizh literature says that Maadalan took bath in the Komari river.⁶

Pahruli river originates on the Pothigai mountain and runs through Thiruvattaaru, Kulithurai (Fspf;Fk; + Jiw = Fspj;Jiw) Athemcodu and Maankaadu and joins the sea at Thenkapattinam. The entire area is covered by coconut groves and thus this place is called Thenkapattinam. The land records connected with their registration on both sides of Pahruli river when indicating the boundaries this river is mentioned as Parali Aaru. Pahruli was corrupted into Parali which is common all over Thamizh Naadu when people pronounce the name of places.

During the First Sangam period the present Indian Ocean was a great land mass with mountains and rivers which had Thamizh speaking population. The civilization which flourished in this continent was contemporaneous with the Mesopotamian and Egyptian civilizations. The geologists named the Komari Kandam as Gondwana. The people lived

in the Lemurian continent developed Thamizh by producing literature of merit which were destroyed by the deluge. The people in the Lemurian Continent wrote on palm leaves, whereas the Sumerians wrote on clay tablets and this is the reason why the former sources destroyed and the latter preserved.

What the Tigris and the Euphrates rivers did for Mesopotamia, the Pahruli and Komari rivers did for Lemurian Continent. Over thousands of years the people along the Pahruli and Komari rivers took advantage of the north-east and south west monsoon rains with a few months gap. The silt laden waters of these rivers laid a layer of silt on the plain making the land more fertile for cultivation.

The land between the Pahruli and Kumari rivers was called Edanaadu in the ancient period.⁷ Edanaadu comprised of the three taluks Vilavancodu, Kalkulam and Agastheeswaram of the present day. Edai Naadu means a country between two important places or rivers or mountains and so on. Edanaadu was so called because it was situated between the Pahruli and Komari rivers and the surrounding areas. It was also called Nadunaadu.

Ptolemy an European traveler about 140 A.D in his book *Geography* has stated that the kingdom of the Aayis existed to the south of the Chera Kingdom which extended from *Melcynda* to *Komari*.⁸ Melcynda is Neiyattankarai in the Thiruvananthapuram district of the present day. The Aayis, who ruled Edanaadu at short intervals extended their territories on the north west and south east at the cost of the Cheras and Pandyas respectively.

Thiruvattaaru was a holy place and a centre of civilization during the rule of the Aayis of Edanaadu. A temple built at Thiruvattaaru in the modern period adorned with sculpture in stone has its own cultural importance. The temple has architectural excellence along with innumerable sculptures with iconographic traits. These statues have great charm and all those who visit the temple praise the talent of the sculptors. After Talayalamganam battle the Aayi Kingdom was fragmented and Vattaru was ruled by petty chieftains during the latter Aayi period.⁹

In Chitharaal, near Kulithurai in Vilavancodu Taluk has a jain temple. The Aayi rulers, though staunch Hindus, an Aayi ruler Vikramaditya Varaguna (885 to 925 A.D)

patronised this temple.¹⁰ This indicates that the Aayi Kings of Edanaadu followed religious tolerance. The Jain monuments at Chitharaal and Thiruchanathumalai very close to the Pahruli river are excellent examples of rock cut temples.

Between Thiruvattaaru and Athemcodu situated Kulithurai, where people lived far away came here for taking bath. This place is so called because of this practice of the people. On the left bank of the Pahruli river there is a temple called Vettuvenni Sastha Koil. The Catholic Christians have built a church nearer to the Sastha koil in the recent days which shows the religious tolerance of the people. On the right side of Pahruli river at Kulithurai there is a Brahmin settlement, where a temple had been built even in the ancient period. Athemcodu is situated South of Kulithurai where a great Thamizh scholar namely Athemcodu Aasaan lived during the Second Sangam age. About 2 kilometre east of Athemcodu there is a place called Kaappikaadu, where the author of *Tholkappiam* namely Tholkappian lived. His literary work, *Tholkaapiam* was presented for acceptance of Thamiz scholars in the presence of Athemcodu Aasaan.

Below Athemcodu, there is a place called Maankaadu situated on the right bank of the Pahruli river, has its own historical importance. Once it was a dense forest, where numerous deers lived and that is why this place is called so. Opposite to this place and on the left bank of Pahruli river is situated Munchirai, a place having historical importance. Munchirai had a Sabha consisting of a small intellectual elite which carried on local administration of the area. It maintained a Thamizh School and a medical school and the former gave instructions on Thamizh literature and the latter imparted instructions on Siddha medical system. The students were given free education, boarding and lodging. According to an inscription Karunandakan had acquired a place called Ulagudivilai from the Sabha of Munchirai, built a Vishnu temple there and named the place as Parthivapuram. He also started a vedic school (saalai) and made provisions for giving free education, boarding and lodging for about 96 students.¹¹ Since there were many masters on the different subjects of study lived in and around Munchirai in the ancient period this area was

called Kurunaadu. In the modern period a German missionary carried over medical knowledge and services of the ancient Siddha medical men. Now it has a medical college which imparts instruction on Siddha medical system.

The Komari river contributed much for the development of art and architecture. Once Nagercoil was a centre of Jainism and the Jains built a temple there. In 1522 A.D the Hindus occupied it and consecrated and named as Nagaraja Temple.¹² Among all the temples in the Edanaadu Suchindram Thaannmalayan temple has its primary importance. It was built in the ancient period and later the Chera, Chola, Pandyas added new edifices. The inscriptions of this temple carry historic informations to reconstruct the history of Kanyakumari District. The temples at Cholapuram and Krishnan koil situated very near to the Komari river have temples built on the Dravidian style of architecture.

Pothigai mountain after a break at Aralvaimozhi still continues towards kanyakumari after leaving a hillock called Maruthuvamali or Marunthuvazh Malai. Maruthuvamalai is noted for its availability of herbs of all inds meant for curing diseases, which are found to be incurable. The Siddha physicians flock over here to collect rare herbs. The Anuman Temple on the top of the hill, attracts devotees from far and wide. The local people claim that it was built in the ancient period.

The Pahruli and Komari rivers flown through the lost Lemurian Continent have left remarkable impression on the History of Thamizh Naadu. These rivers were responsible for the cultural development of Edanaadu. The sandal wood, spices such as cloves, cardamom, pepper, turmeric and ginger grown in the Edanaadu attracted the foreigners, such as the Phoenicians, Greeks and Romans and they sailed to this region and returned to their countries by ships laden with these rare products. The balance of trade was in favour of the Thamizhians and this led to the economic growth of Thamizh Naadu as a whole. The Edanaadu became a bone of contention between the Pandyas and Cheras through the ages. It functioned as a buffer state for all those neighbours who attacked this region.

TOURISM IN BAY ISLANDS: CHALLENGES AND PROSPECTS

G.S.V. Prasad

From 1858 to 1945, the mere mention of the name of the picturesque islands of the Andaman and Nicobar group created an image of fear and a dreadful vision of a place. This place, during our struggle against colonial rule in 20th century was known for its isolation of incorrigible criminals and revolutionary nationalists who fought the mighty British Empire and were transported here as life convicts. The popular image was that those who came to the Andamans, never returned, though the case was not so. Even the modern Indian cinema, particularly South Indian cinema referred the Andamans in very negative connotation. Even after 70 years of independence, people of India have vague knowledge about the state of affairs in these Islands. The fear of unknown taunts the skeptical Indian.

Everything has changed in the Andamans over a period of time. Now, the Andamans is not what it had been prior to independence. Despite its geographical distance¹, the Andaman Islands has emerged as dream destination for national and international tourists. Like many penal settlements of colonial era (Mauritius, Singapore, Australia, Malaysia etc), Andamans also has complete potential to emerge as fully fledged hub of tourism for various categories of tourists.

Geographical Backdrop

In order to enjoy a particular tourist spot, the knowledge of its geography and climate is necessary. Andaman group is part of archipelago of Andaman and Nicobar Islands lying in the Bay of Bengal in the eastern part of Peninsular India,

coordinating between 12° 30' N 92° 45' in an arch shape. The stretch of this chain of Islands is about 750 km from north to south, thereby becoming the largest Union Territory of India. Out of 572 Islands of this archipelago, 510 belong to the Andaman group². Andaman group is an oceanic continuation of the Burmese Arakan Yoma range in the north and the Indonesian Archipelago in the South. The 10 degree channel separates Andamans with Nicobar group of Islands³.

Tourism development in the Andamans

Andamans have the multi facet of tourism avenues. The Islands are known for their natural beaches and thick forests as well as flora and fauna. And at the same time, the archipelago witnessed a dark historical element of colonial penal establishment. The combination of all attracts both domestic and international visitors to these islands. The Andamans has the potential to develop into beach tourism, adventure tourism, historical tourism, anthropological tourism, penal tourism etc. The general tourist activities in the Andamans are Scuba diving, trekking, snorkeling, kayaking and surfing. The place is the treasure for both natural sites and historical sites. The following are the some of the important tourist destinations that are worth visiting in the Andamans.

Port Blair

It is the capital city of the Union Territory of Andaman and Nicobar Islands. Most of the **Islands' population is concentrated in and around this city.** The British establishment of

Penal Settlement started from around this place. The infamous Cellular jail now a National Memorial is located here. The three storeyed jail was actually constructed in star shape with 7 wings radiated from the central tower⁴. The revolutionary nationalist of the 20th century were kept and tortured here by the penal administration. The light and sound show gives vivid description of the atrocities that were carried out against freedom fighters. Anthropological Museum, Fisheries Museum, Samudrika, a Naval Marine Museum, Zoological Survey of India Museum, Japanese bunkers in the city, Corbyn Cove beach, Wandoor beach, Chidiyatappu, Mahatma Gandhi Marine National Park are other important tourist destinations.

Ross Island

Visible from the city of Port Blair, the Ross Island had been the head quarters of the British Penal settlement. This island was the place for **Chief Commissioner's house, a Cathedral, a tennis court** and also graveyard of many British soldiers. During the World War II, the Japanese occupied the Island and converted into site of Prisoners of War⁵. As of now the Ross Island is under the control and maintenance of Indian Navy.

Viper Island

Much prior to the construction of the Cellular Jail in the Andamans, the British constructed an open jail Viper Island near Port Blair. The Island derived its name when a British **vessel with the name 'Viper' met with an accident** and its wreckage was found near this island. During the colonial period, the dreaded convicts were sent here as punishment⁶. Brij Kishore Singh Deo, also known as Maharaja Jagannath of Puri was kept in the Viper jail, where he died in 1879⁷. After the construction of the Cellular Jail, the Viper jail had been abandoned. The Andaman administration is planning to develop this island with all modern amenities with public and private partnership.

Hut Bay or Little Andaman

Little Andaman also known Hut Bay is located south of the South Andaman Island at a distance of 120km by sea from Port Blair. It is the southernmost Island of the Andaman group. This Island has much potential to develop as a preferred tourist destination on account of its

virgin beaches, waterfalls, surfing etc. Butler Bay beach whose waves make it the best surfing destination in India. This island further has to be connected well with sea and air transportation and also infrastructural development for tourists⁸.

Long Island

This Island is 47 nautical miles the Port Blair city and having an area of about 18 sq.km and two thousand population. It has beautiful virgin silvery beaches along its coasts at Lalaji Bay and Merk Bay of North Passage Island adjacent to Long Island. Cruising through the creek at Yerrata and the sunset view from Long Island can attract any nature lover to these places⁹.

Havelock Island¹⁰

Those who visit the Andamans would not go back without visiting the Havelock Island. It is a picturesque natural paradise with beautiful white sandy beaches, rich coral reefs and lush green forest. It is one of the populated islands in the Andaman group with an area of 113 sq.km and is located 39 km of north-east of Port Blair. Radha Nagar beach of this island is one of the best beaches in Asia with a length of two kilometers and width of 30 to 40 meters. The sand is white and very fine in grain. The beach has a gentle gradient of around 1:20 and continuous out into the sea as a sandy bottom for over 100 meters¹¹.

Neil Island¹²

The Neil Island named after a British officer is in visible distance from the Havelock Island. With unexplored coral reefs, brilliant biodiversity, white sandy beaches and tropical forest and vegetation, it is one of the hot tourist spots in the Andamans. Neil Island has got many beautiful beaches named after Indian mythological figure like, Bharat, Laxman, Sita, Ram etc. This Island is also known as vegetable bowl of the Andamans as majority of the vegetables for the consumption of the Islanders are grown here. The Island also has a beautiful coral arch, locally known as Howrah Bridge¹³

Baratang Island

The Baratang Island is lying between South and Middle Andaman and approximately 100 kms by road from Port Blair through dense Jarawa forest reserve. The Andaman Trunk

Road to North Andaman goes through this Island. This island is also popular for beautiful beaches, mangrove creeks mud-volcanoes and limestone caves. From Baratang Island Lime Stone caves are of about one hour boat ride through a beautiful wide creek. After reaching Nayadera jetty, one and half kilometer walk through tropical forest takes us to Limestone, a sedimentary rock formed at the bottom of the sea. Mud Volcano is another interesting place to watch in this Island. From Baratang jetty, one has to reach this place through Jarawa creek. This mud Volcano is created by natural gases emitted by decaying organic matter underground. As the mud is pushed upwards by the gas, it deposits and hardens above the ground. As more mud oozes out and spills over the edge it grows in size, gradually forming a miniature volcano with rich creamy mud crater at the top¹⁴.

Diglipur

Diglipur is the major town in the North Andaman. It is 325 Kms from Port Blair and approximately take 12 hours by road and much more time by boat. Saddle peak the highest point in the islands is situated in Diglipur. Kalpong, the only river of Andamans flows here. The only Hydro-electric project of the Islands is constructed on this river. Andamans particularly, Diglipur is home to thousands of turtles. During December and January, turtle nesting takes place here at Kalipur and Ramanagar beach. The forest department has taken all possible measure for turtle nesting. Many tourists visit this place to watch turtle nesting¹⁵.

Ross and Smith Islands

Ross and Smith are two Islands situated in North Andaman near Diglipur. These two islands are joined by a sand bar to make a single group of Islands. But during the high tide, the sand bar comes under water and the Islands are separated. What makes these islands truly beautiful and sets them apart from the rest of the islands is that these two islands are joined by a natural sand bar. Water is crystal clear and gem green in colour. These is a Marine Sanctuary on the island which makes it an ideal place for spotting beautiful coral reefs and colourful species from the underwater¹⁶.

Barren Island

The strategic location of Barren island is 135 km northeast of Port Blair. This island is **known for India's only active Volcano**. The first recorded eruptions of the volcano on Barren Islands dated back to 1787. Since then, the volcano has erupted more than six times and the most recent eruption was on 2 May 2006. This volcanic island stands in the midst of a volcanic belt on the edge of the Indian and Burmese tectonic plates. The peak of the volcano rises to an altitude of 354 meters, but most of the volcano in Barren Island is underwater¹⁷. At present, the Island is under the control of Indian Navy and has all potential to develop as an adventure tourist destination.

Challenges

There is a strong economic base for the development of tourism further in the Andaman Islands due its limitation in limited agricultural land, constrains on forest land and little or lack of manufacturing. Tourism with its low capital high output ratio high economic output and employment potential is an attractive option. There are various areas where tourism in these islands could be explored further. Public and Private partnership is a very viable option. Personalised or customised itineraries for the visitors. Environmental consciousness could be increased through eco-tourism. Highlighting importance of heritage and ethnic tourism and developing and propagating an image about these Islands and at the same time retaining the core while leveraging on the variety are other important aspects in developing tourist activities in these islands. There is need of creating world class infrastructure in the Islands and also effective and prompt transportation and communication would enrich the demand for these islands.

The local people also welcome the development of tourism in the islands. As tourism is major viable economic option, the locals believe that it brings economic gains and prosperity. The tourism in the islands has to be expanded to new areas with new ideas. Little Andaman could be explored further. North Andaman could be developed with sufficient and effective infrastructural facilities like bridges connecting Baratang and North Andaman.

Proposed Rail Network

Rail link from Port Blair to Diglipur is another viable option in order to bring new areas under tourism framework. There has a proposal make a broad-gauge railway for distance of 240 kms connective two major islands with bridges and stations along the coast. The Railway Ministry is set to approve the project, which will **connect the Union Territory's capital city in the south with the largest town on the north Andaman island** currently linked by a 350 km bus service that takes over 14 hours and a ship that takes around 24 hours and there is no air connectivity. According to an internal survey report of the ministry of Railways, the cost of the line will be Rs. 2,413.68 crore with a negative rate of return on investment of -9.64 percent¹⁸. As soon as the line is commissioned, tourism will see a jump from the current 4.5 lakh visitors a year to around 6 lakh a year as per Prof. Jagdish Mukhi, Lieutenant Governor of Andaman and Nicobar Islands¹⁹. If the proposal is materialized, this would be a revolutionary move as far as tourism in Andamans is concerned and Andamans will be honoured to have its place in the Railway map of India.

There are other challenges that have to be addressed to boost tourism in the Andamans. Already Andamans has high cost of living due non-availability of sufficient vegetables and other commodities of daily consumption. The promotion of tourism should not affect the daily lives of the locals. The shortage of water would also hamper the growth of tourism. Issue of intra connectivity within the various islands as well as boat facilities not being sufficient was prominent. Apart from geographical distance, the tourists also find high cost of living as a reason not to prefer these islands, instead, they prefer South Asian countries like, Bangkok, Singapore, Macau etc. To attract middle class domestic visitors, these issues have to be addressed. The airport needs to be opened 24x7 and 365 days. At

present, the air operations are limited and confined to only day time. The airport which is under Indian Navy has to be extended and another run way needs to be constructed. Without compromising with security of the Islands, the international flights must be allowed, so that the inflow of foreign tourists would increase.

The context of Andaman Islands is different and to meet the challenges viable and out of the box thinking is required. Tourist models followed in the mainland and elsewhere may not fit into the framework of the Islands. The growth tourism in these Bay Island should focus on sustainable development by promoting employment opportunities to the locals and also not disturbing the nature and aboriginals. The visitors to these islands are not very well sensitized to the fact that they are visiting ecologically fragile islands. 86% of domestic tourists and 74% foreign tourists admitted that they were not sensitized and they believed that their holiday experience would be improved with more information on ecology and culture of the islands²⁰.

The Andaman and Nicobar Islands are **representing the earth's oldest culture that needs to be preserved**. It also echoes our struggle against the colonial rulers and the historical heritage keep reminding the sacrifices made by many unknown people for the emancipation of the mother land. There is no second thought to say that growth and expansion of tourism is only viable solution to generate employment and make the islands self sufficient to large extent. But in the process thoughtless and unplanned development of tourism would be a big threat to the precious heritage of this beautiful archipelago. The Andaman administration and the government of India should keep in mind while formulating policies for tourism in these Islands.

DEVELOPMENT OF PSYCHO-HISTORY IN INDIA: A STUDY OF WRITINGS OF SUDHIR KAKAR

Priyadarshi Kar

Psycho-historical Studies in India

The beginning of the study of psychoanalysis in India can be traced back to the founding of Indian Psychoanalytical Society (IPS) by Girindra Sekhar Bose (1886-1953) in Calcutta (now Kolkata) in 1922. Bose obtained a medical degree in 1910 from Calcutta University and a MA in psychology in 1917. In 1921 he was awarded D Sc degree for his original thesis on The Concept of Repression which put forward some original ideas that differed from Freud. Bose and Freud exchanged ideas and continuously corresponded with each other between 1921 and 1937. This correspondence was later published in *Samikshya*, the journal published by the Indian Psychoanalytical Society. During the 1960s and 70s a flourishing movement-cum-experiment in analysis was also taking place at the B.M Institute in Ahmadabad established by Kamalini Sarabhai. Eminent practitioners like B.K.Ramanujam, Jit and Baljeet Mehra, and theorists like Ashis Nandy were associated with this movement.

However, the beginning of Psychohistorical studies in India can be said to have started off with the publication of Erik Erikson's book *Gandhi's Truth: On the Origins of Militant Non-violence* (New York, 1968). In this study of Mahatma Gandhi, psychoanalyst Erik H. Erikson explores how Gandhi succeeded in mobilizing the Indian people both spiritually and politically as he became the revolutionary innovator of militant non-violence and India became the motherland of large-scale civil disobedience.¹ However, it is Sudhir Kakar,

trained and guided by Erikson, who is regarded as foremost scholar in India. Another equally acclaimed scholar in the field is Ashis Nandy, a brilliant political psychologist. Nandy in his work has demonstrated the relevance of psychoanalysis to the study of Indian culture and has explored the colonial impact on the unconscious mind in his book, *The Intimate Enemy: Loss and Recovery of Self under Colonialism* (Delhi, 1983).² As far as the study of psycho-historic themes in India is concerned, the discipline of psycho-history, established by Erikson, has been applied by many non-specialists also. This is especially notable in the subjects of religion, eros, and sexuality. For example, the two highly controversial psychoanalytical studies on the 19th century Indian mystic Ramakrishna Paramansa are: Jeffrey J. Kripal's *Kali's Child: The Mystical and Erotic in the Life and Teachings of Ramakrishna* (Chicago, 1995),³ and, Narasingha P. Sil's *Ramakrishna Revisited: A New Biography*.⁴ Another important work is by Austrian author Christiane Hartnack titled *Psychoanalysis in Colonial India* (New Delhi, 2001),⁵ wherein she examines the birth and growth of psychoanalysis in India from the angle of culture theory.

Sudhir Kar and Psycho-historical Studies

Sudhir Kkar is considered as one of India's leading intellectuals. Born in 1938, he spent his early childhood near Sargodha, (now in Pakistan) and also in Rohitak in Haryana. At age eight he was enrolled as a boarder in Modern School in New Delhi where he would later write about homosexual encounters in the school

dormitories. He next attended St. Edward's School, Shimla and began his Intermediate Studies at Maharaja's College, Jaipur in 1953 after which his family sent him to Ahmedabad, where he obtained his B.E. degree in Mechanical Engineering from Gujarat University in 1958. Kakar thereafter obtained a master's equivalent in business administration at the University of Mannheim (1960-64), and a Doctorate in Economics at the Vienna. **Kakar's interest in psychoanalysis** grew out of an encounter with Erik Erikson when was teaching in IIM Ahmadabad in the 1960s and 1970s. Thereafter Kakar seriously began his training in psychoanalysis at the University of Frankfurt's Sigmund-Freud Institute in 1971. In 1975, Sudhir Kakar moved to Delhi and worked as a practicing psychoanalyst. For someone trained as an engineer and later as an economist, Kakar continues to cross disciplinary boundaries and capture the imagination of readers and everyone interested in the world of ideas.

Kakar has published as many as seventeen works of non-fiction and four novels apart from several edited works. Most of them have been translated into more than twenty languages around the world. Some of his most popular non-fiction works include *The Inner World; Shamans, Mystics and Doctors; Tales of Love, Sex, and Danger; Intimate Relations; The Analyst and Mystic; The Colours of Violence; Mad and Divine; and The Indians: Portrait of a People* (with *Katherina Kakar*). His major novels include: *The Ascetic of Desire; Ecstasy; Mira and the Mahatma; and Crimson Throne*. For Kakar, the central concern has been to evaluate the validity of the psychoanalytic theory, which originated primarily as a Western canon, when applied to the Indian context. He also takes of the broad and more pertinent question that-- can the psychological make sense of the cultural in all human experience-- in his works.

According to Kakar, psychoanalysis is informed by a vision of human experiences that mans individuality and his self- contained psyche. In the psychoanalytic vision each of us lives in our own subjective world pursuing pleasures and private fantasises, constructing life, and a fate that will vanish when our time is over. This view emphasises the desirability of reflective awareness of **one's inner states**, an insistance that our psyches harbour deeper

secrets than we care to confess, the existence of an objective reality that can be known and an essential complexity and tragedy of life where by many wishes are fated to remain unfulfilled.

Kakar invites his readers to participate in open debates about the universalistic pretensions of psychoanalytic theory when he applies them to Indian culture. A psychological analysis of the Hindu world image by Kakar makes sense because it provides readers with an analysis of the disnctive features of Indian social and spiritual structures based on notions such as dharma, karma and moksha. While analysing sexuality practiced in ancient India, Kakar remains a severe critic of the conservative and puritanical sexual mores of contemporary India. His new book on the *Kamasutra* jointly written with Wendy Doniger, appears to be an effort to critique modern Indian sexual behaviours through the presentation of this classical erotic text. For Kakar, the *Kamasutra* is actually an oldest Hindu text about the art of living and not about sexual positions.⁶

In his 1986 publication, *Tales of love, sex and Danger*, co-authored with John Rosss, Kakar **analyses the 'paradigmatic love story of Hindu India'**-- the story of the milkmaid Radha and her union with the god Krishna.⁷ For Kakar, the Radha Krishna relation amounts to a depersonalized voluptuous state recalling the earliest attachment of the infant to his mother. It is interesting to examine Kakars methodology by understanding the ways in which he presents the Indian culture viewpoint before applying psychoanalysis to it. His research on the Indian psyche and sexual behaviours relies profoundly on the Indian classical texts, Indian popular culture such as Hindi movies, and folk tales, and on primary source materials such as biographies **and letters. What makes Kakar's work original is** that he presents a composite view of India in which Indians recognise themselves and which helps other people to go beyond their touristic and simplistic view of Indianness.⁸ Above all Kakr remains in dialogue with the key building blocks of Indian ness while he interrogates the impact of modernity on Indian society. The works of Sudhir Kakar on psychosocial tension underlying Indian identity are a great landmark in understanding the stresses and strains of an unexplored and hidden India which is in the

process of aspiring to be authentically traditional and yet thoroughly modern.⁹

Another interesting work by Kakar is a psychobiography of Gurudev Rabindra Nath Tagore titled *Young Tagore*.¹⁰ In this reconstruction of Tagore's childhood and youth, he draws a nuanced portrait of the young prodigy and the decisive experiences that shaped him: the death of his mother when he was fourteen, the intimate bond he shared with his sister-in-law Kadambari and his sojourn in England. Through these Kakar uncovers the vital themes in young Rabis inner world that shaped his creative genius: his yearning for solitude that was tempered by his fear of loneliness; his preoccupation with spiritual concerns that enabled him to give voice to the sensualist within; and his abiding quest to find a balance between traditional Indian values and Western cosmopolitanism

Conclusion

However, it is too easy simply to dismiss psychohistory as bunk. As one recent

commentator pointed out, 'as a dogmatic structure, Freudianism is largely unconvincing: yet in diffuse form, Freudian ideas have become an indispensable part of our common-sense understanding of humanity'. Psychoanalytic history remains a sub-discipline whose conclusions, to sceptics, too often appear either irredeemably banal or else impenetrably abstruse. In arguing that true psychoanalytic historians must be trained as both psychoanalysts and historians, the sub-discipline has gained in analytical rigour, but in so doing has arguably both reinforced its intellectual exclusivity and continued effectively to alienate non-believers. To some, psychoanalysis will continue to be the key to historical understanding. To others it will no doubt continue to be bunk. Yet if Freud failed to supply convincing answers, he certainly raised questions about human motivations and the influence of irrationality and emotion in historical endeavour that no historian can reasonably ignore.

LALBAGH -VITAL LUNG SPACE OF BANGALORE

B.S. Puttaswamy

While describing the origin and growth of Lalbagh the role of local Chiefs is not taken into consideration. Curiously enough it is the local rulers of Bengaluru that is the kings of Kempegowda dynasty, who laid the foundation of horticulture in Bengaluru. This dynasty which is described as Yalahanka Nada Prabhus (petty chiefs of Karnataka) who contributed to the all round development of Bangalore as a capital city. Particularly Kempe Gowda I.¹ am acknowledged as the founder of Bangalore. Who planned various aspects of social and economic development of the new capital.

Kempe Gowda I (1513-1569. A .D.) During his long rule he paid attention to every aspect of the civic life I. He invited people of all professions like architects, artisans and others. He presided them a separate location to settle comfortably and to develop their trade or profession. Kempe Gowda rulers who belonged to the Vokkaliga or Gowda community (agriculturist caste) gave uitabk encouragement for the development of agriculture². He encouraged farmers to clear bushes and forests and develops cultivation of food crops. Kempe Gowda was well aware of the needs of fanners in the village and the citizen in

the towns. In Bangalore he built a network of tanks, ponds, wells and canals. The farmers were provided with necessary facilities including tax concession for new land or uncultivated land which was taken up for cultivation³.

In this connection Kempe Gowda I, who is aptly called Bengaiuru Kempe Gowda, gave suitable importance to gardens and development of various kinds of flora. He made arrangements for flower plants and as a result floriculture developed in a remarkable way. As the flower gardens and various types of fragrant and colourful flower plants began to bloom small ponds, tanks and wells were also constructed to supply water to these plants. After giving suitable importance to floriculture, he made arrangements for the growth of various fruit yielding trees and plants. Most important among these trees was the mango and jackfruit⁴. In this connection he made arrangement for a well-developed nursery at the present Lal Bagh area. Various species of mangoes, jackfruit, lemon, grapefruits and grape wine were planted. There was a planned development of various types of fruits, flowers and greenery.⁵

At the time of the Kempegowda I period 1510-1578 A.D. four watchtowers to various that marked Bengaluru's boundary were set up. These four watchtowers built at the time in Bengaluru are still seen today. The tower the Lal Bagh is built on ancient rock.⁶

It must be noted that Kempegowda gave proper attention not only to the growth of food crops; he did not neglect the ecological and environmental balance. These rulers were aware of the need for environment and ecological balance. As the result they gave importance to the growth of greenery whenever and wherever it was suitable. As a result of this planned development Bangalore developed into a pleasant and a healthy spot in South India and attracted both the merchants and the craftsmen.⁷

Kempe Gowda made arrangements to invite the Tigalas (a caste devoted to the profession of garden). These people concentrated on the growth of various flower plants and trees in the gardens and in the fields. The modern horticulture experts have appreciated the scientific knowledge and procedure followed by this community in developing horticulture, growing health plants,

trees and preventing diseases to plants and trees and choosing the proper crops suitable to the season, soil and weather. The gardens and flower plants were developed not only around the Palace of Kings, but also around temples and selected sites in the state. The Government itself took necessary steps to develop various flower bearing trees, garden, grass, plants etc. In Bangalore two tanks - the Mavally tank and Siddapura tanks were utilised exclusively for the purpose of development of horticulture⁹. There are many plots and areas where specific crops like mangos, jackfruits were grown.

The present area called Mavally in central Bangalore was the place where various types and varieties of Mango seeds were developed for cultivation. In this way it must be emphasised that due recognition must be paid to Kempe Gowda I for the foundation of horticulture and planned development of various flowers and fruit bearing trees grown in Bangalore at Lalbagh. The garden which this illustrious King developed was called by Kempegowdana Thota, Kempayyana Thota or Kempu Thota.¹⁰ **Basically the garden developed by Kempe Gowda.** Kempu in Kannada means **Red**, Thota means **garden**. (Kempu Thota (Kannada), Red Garden(English), Lal Bagh(Persian/ Arabian)

Haider Ali and Tipu Sultan (1760- 1799 AD)

Haider Ali, who ruled Mysore for about 20 years, came to visit this green heaven on shining red soil. His son a young boy looking at the garden called it as "Lal Bagh". (Red Garden, in Kannada Kempu Thota) a garden developed on red soil. That is how this beautiful garden got the name of Lalbagh.

Haider himself was interested in horticulture. He also developed a beautiful park on a four acre plot. This garden began to grow regularly and expanded to 200 acres by 1856. In the 18th century rare varieties like Anjur, Pomgranates etc appeared on the red soil of Lalbagh. Then followed beautiful flower plants from Lahore, Multan, Kabul and Delhi. Among these were attractive roses which gave the name of Lalbagh. During the rule of Tipu Sultan Lalbagh received more colourful and useful plants. New species of flower plants from France, Mauritius arrived at the Lalbagh. Then followed fruit yielding trees like Guava, papaya, apple and grapes¹². Thus Lalbagh had become an attractive

tourist spot in 18th Century. The British who succeeded Tipu Sultan did not fail to appreciate the value of Lalbagh. During their rule the British Government brought Lalbagh under the jurisdiction of the Royal Botanical Garden which was having its Head Calcutta.

The term Lalbagh comes from the colour of the soil. The soil was red in colour hence it is called Lalbagh. An interesting explanation is that the boy Tipu Sultan who on seeing the colourful and prominently red flowers shouted in excitement 'Lalbagh'. Hence the name was given to this garden. The term Lal also refers to the Rubies. Therefore it is called Lalbagh or garden of the Rubies.

Haider Ali who contributed to the development of Lalbagh followed the Moghal horticultural pattern and contribution. It is said that he captured many people who were adept in horticulture and utilised for the development of Lalbagh. Haider and Tipu had contacts with many foreign Countries and North Indian States. They got various kinds of fruit trees and flower-bearing trees. Thus fruits, vegetables, herbs, were imported and were grown in the Lalbagh.¹³

These places were Delhi, Lahore, Multan, China, Arabia, Africa and Kabul. It appears Tipu was fond of mangoes and he got many good varieties of (man goes from abroad) planted them at Lalbagh. It is also mentioned that some of the mango trees in the Lalbagh were planted by Tipu Sultan.¹⁴ A part from mango various other kinds of fruits were also grown here. They were peaches, jackfruits, plantains. The most important flower bearing trees were rose, champaka, hibiscus and other varieties of flowers¹⁵. Some of those wild flowers were also grown in various parts of the city.

Colonial India

When the British Government took over the administration of Mysore State they appointed a Botanical adviser. In 1856 the Lalbagh became a national issue. It was converted into a Botanical garden under the supervision of the Government officers on the request of Indian Government. Brittan sent one horticultural expert for this purpose William New was sent to manage development of Lalbagh in a scientific way¹⁶. This officer procured many

new plants and trees on exchange basis from various Countries and Indian States.

When Robert became the superintendent of Lalbagh, he began to develop horticulture in various parts of Mysore. The Lalbagh became the most important centre in horticulture in India. It was Krumbigal who suggested that apart from floriculture. In many commercial crops can also be developed in Lalbagh as there was krttic oil in that garden.

Glass House- A Jewel in Lalbagh's Crown

John Cameron is one of the greatest horticulture experts, who developed the Lal Bagh. He introduces the Pear Squash to Bangalore city. Cameron is considered the father of horticulture. His great contribution is the Glass House modelled on London- Crystal Palace. The foundation stone of Glass House was laid by Albert Vicwr. John Cameron was an efficient man full of ideas, action and passion for plants and horticulture. The Glass House conceived and constructed by Cameron is called the "Jewel of Lalbagh". The Glass House, modelled on London' **Crystal Palace** (now re-modelled with a different layout), is the centre of attraction. Lal Bagh is a 240 acre garden and is located on the southern part of Bangalore.¹⁷

Cameron who worked as the superintendent of Lalbagh (1874-1908) is considered the real architect of the Lalbagh and regarded as the 'Father of Horticulture' in Karnataka¹⁸. He introduced many profitable plants and trees in the Lalbagh as well as other parts of the State. This opened new World of profitable business in sale of flowers and fruits. Cameron developed the Lalbagh in many ways. It was expanded to hundred acres. Many flowers beds and walking path were introduced. The crowing achievement of this period is the construction of Glass House which was opened 1893. A beautiful fountain was added to this building. A band stand and a small zoo were other attractive additions. The flower exhibitions in January (Republic Day) and August (Independence Day) used to draw huge numbers to the Lalbagh.

John Cameron greatest contribution was the Glass House which is considered the Jewells House of Lalbagh. It was Cameron's idea to have a conservatory in the garden to facilitate acclimatisation of plants and about a venue for

the flower shows which until the glass house built was held near the band stand. The renowned Glass House was constructed in 1889. John Cameron is only of the most significant officers. His long term of office 1874 to 1908 is regarded as the "Golden period" of plant introduction at Lalbagh. He was a man full of ideas, action and passion for plants and horticulture. He got many new species and got them planted in Lalbagh, using his contact around the world to bring in new plants to the garden.¹⁹ He got Clematis from Greece, oil palm from West Africa, Silk rubber from Indonesia, Qat from Yemen, fish poison tree from Sri Lanka and blackthorn from Australia. He also tried to introduce many commercial crops¹⁹ including like coffee, apples, rubber and grapes.²⁰

G.H.Krumbiegal, who succeeded Cameron in 1908, did memorable work in Lalbagh as well as Mysore State. Like his predecessor he also introduced several plants species including Rome beauty apple. He beautified Lalbagh with large number of native and exotic species and gave special importance to the creation of park and garden in Bangalore and Mysore cities including the Brundavan gardens²¹. The excellent work of the English Botanists was continued during the tenure of the Mysoreans

namely H.S. Javaraya, K. Nanjappa and Dr.M.H. Marigowda.

Conclusion

Thus the most admirable Lalbagh has evolved as one of the most beautiful garden in the world. During its long history the foundation laid by Kempe Gowda I in the early 17th Century, has blossomed into an enchanting garden as a result of the contribution of various Indian rulers, Europeans, Botanists and great horticulture specialists. It stands shining in the heart of the city not only as a beautiful spot but also as a health lung space for the citizens of Bangalore, who require fresh air and fragrant environment. Lal Bagh is the only garden in the world to be visited by the princes and princess of almost all British colonies.

It was for the first time an Independent and separate Horticulture Department (1963) was established in India. **Karnataka is the first state in the country to have a separate Horticulture Department** and many other states followed the example of Karnataka. Because of this, the state could achieve remarkable progress on the field of Horticulture, whether Fruits, Vegetables, Flowers and Plantation crop.

AZHAGANKULAM VAIGAI RIVER ESTUARY PORT TOWN THE HITHERTO UNKNOWN COASTAL TRANSOCEANIC TRADE CENTRE OF TAMILS WITH MEDITERRANEAN SEA

P. Rajan & M. Elangovan

This Archaeological site Azhagankulam is situated near the river mouth of Vaigai and 3 kms from the shoreline on the bank of river Vaigai. As this port Azhagankulam was situated in Palk Bay, the transfer of cargo from vessels coming from the south was made through a land crossing about twenty kilometres north. At present, a channel which is running about two km from ancient port town Azhagankulam is connecting with sea which could have been near to the site in bygone age must have been used for waging the boats. This site Azhagankulam was excavated by the State Archaeology of Tamil Nadu during 1990's in five phases. The Archaeological artifacts found at Azhagankulam connotes a cultural sequence of periods ranging from 500 BCE to 1200 CE.

The place Azhagankulam mentioned in *Periplus Maris Erythrian Sea* as '*Argaru*' or '*Argalou*'. The expression *Argaru* could be identified with present Azhagankulam rather than Uraiyur the ancient Chola capital which is situated far away inland. With the aim of finding more archaeological evidences to throw further light on the existence of transoceanic trade between Tamil Country and Rome in the ancient period, large scale recent excavations so far undergone at Azhagankulam, a far off village in Ramanathapuram district located along Vaigai river beside the estuary. Among the newly excavated sites some of which are neither mentioned in the classical works nor the indigenous Tamil literature. The recent Archaeological remains are a valuable source which throwing a new light on the hitherto unknown coastal trading centres having transoceanic trade contacts with Mediterranean world.

The Archaeological site Azhagankulam has generated an indigenous Roman wares, particularly roulette wares from Rome as well. Further the site Azhagankulam has borne Terracotta dice, spindle whorls, and measuring weights. The Roman coins of 4th-5th centuries CE were also unearthed in this place Azhagankulam. No literary references have been quoted regarding this port town Azhagankulam

and rich transoceanic trade activities either in Sangam Classical works or in foreign notices.¹

In due course of time the site Azhagankulam lost its importance probably due to the growth of the port Periyapattinam near Ramanathapuram during this period. The ancient Tamils had transoceanic trade network both on the coast and in the hinterland. They had close commercial nexus, internal and maritime. This paper discusses the significance of the newly discovered materials at Azhagankulam on transoceanic trade contact between ancient Tamil Country with Rome.

The Tamil epic *Silappadikaram* also refers to the Yavanas who reside in Kaveripumpattinam and whose prosperity was never on the wane had their residences or colony there.² Another interesting Tamil epic *Manimekhalai* also refers to the Romans rich transoceanic trade in Kaveripumpattinam. Further the work *Manimekhalai* also mentions how the artists of Magadha, Cratsmen of Mahrathi, blacksmiths of Avanti and the carpenters of Yavana contributed to build the splendid portal city of Kaveripattinam.³ The expression 'Yavana tachar' clearly refers to carpenters or stone-workers or architects. This work also points to the fact that Yavanas were employed in Kaveripattinam.

Speaking about the east coast, it is generally felt that the foreign writers like Strabo, Ptolemy and the author of the *Periplus* are somewhat reticent in their observations. As pointed out by Lionel Casson, the Prime source of our information about the trade between Rome and India is the *Periplus Maris Erythrian sea* "that unique anonymous handbook" written sometime between 40 and 70 A.D. for the use of merchants and shippers who sailed out of the ports of Roman Egypt on the Red Sea to trade with the eastern coast of Africa, with Arabia and India.

Lionel Casson states that even this important work, *Periplus Maris Erythrian Sea* provides a valuable graphic details about major ports (emporium) on the west coast.

The work, *Periplus Maris Erythrian Sea* also portrays the various commercial goods both import and export or in other words the goods which were bought or sold in very brief on the east coast. Further the work gives only a list of the more important stopping places with brief references to some local speciality.⁴ This scantiness of the foreign source is corroborated by the sources provided in the Sangam Classical works of the Tamils attributed to the early centuries of the Common era and possibly one or two centuries earlier too. Though the *Periplus* mentioned that, the Indian vessels sailed regularly from the east coast to the west coast and vice-versa. Casson also states that parenthetically, the reason for the paucity of transoceanic trade evidences available regarding the east coast in the work of *Periplus*, is mainly attributable to the fact that the Roman ships visited the east coast not much as on the west coast. Added to this was the land trade route between the west and east coasts, which must have served well for the transport of the goods and the traders. Further the trade goods which were commercialized on the east coast were the produced by the craftsmen and transaction by the middleman who had the monopoly of trade. Ptolemy also gives interesting information of various types of crafts used on the east coast. Thus various types of crafts also produce in the regions of east coast estuary.

The expression *Argeirou* mentioned in Geography of Ptolemy, also supplemented the expression *Argaru* refers to *Periplus Maris Erythrian Sea* are one and the same and the expressions which could be identify with this port town Azhagankulam during the ancient period.⁵ *Argeirou* mentioned in Geography of Ptolemy is said that this port town Azhagankulam is located around Orgalic Gulf, which is nearer to Rameswaram traditional ancient port town.⁶ The word *Argaru* or *Argalou* of *Periplus* of Erythrean Sea also suggest the same location of Azhagankulam.⁷ It is said that it is lying inland and celebrated for a manufacture of muslin adorned with small pearls. Ptolemy while describes the celebrated port city of Kaveripumpattinam on the mouth of the river Kaveri, as 'Kaberis Emporion' in his works. Further the work also mentions transoceanic trade contacts in the early centuries.

The artifacts found in archaeological exploration and excavations provide an outstanding corroborative evidence for the Indo-Roman transoceanic trade contacts. More articulate is the recent archaeological and numismatic evidence on the transoceanic trade contact, which helps to fill up the gaps found both in the foreign accounts and Sangam Classical literature. The Tamil epic *Silppadikaram* refers to a separate sophisticated settlement of the Romans at Kaveripattinam. The expression *Yavanar-irukkai* clearly attested the Roman settlements in the Coastal town Kaveripattinam.⁸ It was very active port during the late Roman period (around 3rd-4th century AD) and Roman ships laden with their wine in Amphorae jars and other goods had come here.⁹ Apart from Pandyan and punch marked coins a few Roman coins datable between AD 383-408 were also found here.¹⁰ Another important discovery of a few fine sherds produced its contact with Gangetic India in early centuries of Christian era.¹¹ Archaeological excavations at Azhagankulam yielded a rouletted sherd bearing the figure of the ship on the shoulder portion.¹² The figure is very similar to that found at Ostia a Roman period port. It therefore, suggests that Azhagankulam had active trade contacts with Roman world and foreign writers must have noticed it. There are also evidences on the exploitation of marine resources. A mooring stone of sandstone was noticed near the shore. It was exposed up to 75 cm and two square holes were noticed. Near to shore a British period warehouse was noticed. The distance between ancient site and present shoreline clearly suggest a very little shifting of shoreline. Fishermen towards the south of Azhagankulam waters also reported a shipwreck. As per the present location of the site, it is suggested that the boats at this place were coming by a river channel, which is existed about 2 km south of this site. So far the coastline is concerned there is not significant change of shoreline in last 2000 years. Further south of Nagapattinam Azhagankulam a Chola port and Korkoi a Pandyan port of Sangam period is located far from the shore.

The antiquities and literary references suggest that both these ports were very active during Christian era and they had overseas trade relations with Mediterranean countries. Thus this archaeological site Azhagankulam denotes a vital role of transoceanic trade activities held in

this port during the ancient period. Renewed excavation from bay at Azhagankulam village in Ramanathapuram district, Tamil Nadu, has thrown up fresh evidence that it was an important trading post between the Sangam Pandyas and the Romans from circa 50 BCE to circa 500 CE. Archaeologists from the Tamil Nadu Department of Archaeology, who are taking part in the excavation, said Azhagankulam, Arikkamedu in Puducherry and Pattanam (Muziris) in Kerala formed a troika of trade centres between Rome and the Tamil country during the Tamil Sangam age.

The State Department of Archaeology had earlier excavated the site in 1986-87 and again for five seasons in the 1990s.¹³ Those excavations revealed the trade link between the ancient Tamil country and the Mediterranean region. The excavation under way now at Azhagankulam has yielded broken Roman Amphora jars, Mediterranean pottery, embossed Roman potsherds, copper coins, Chinese Celadon ware, rouletted ware, potsherds with Tamil Brahmi letters, a potsherd with a swastika symbol and so on. Beads made of carnelian, quartz and glass were found. Of the five trenches, four were laid in the Kottaimedu area.

They yielded Roman amphorae (jars for storing wine), two copper coins, roofing tiles, black and red potsherds. A trench dug at Parithikaadu near the seashore yielded three corroded copper coins.¹⁴ The discovery of the Roman artifacts like the Arretine, the amphorae jars, Roman glass, lamps and coins clearly reveals the fact that the ancient Tamils had rich transoceanic trade contacts with Rome. It is also supplemented by the presence of the Roman resident traders in coastal busiest ports like Poompuhar, perhaps Azhagankulam also served a resident for foreign traders.

Archaeologists emphasised that the Roman antiquities thrown up from the renewed excavation at Azhagankulam proved once again the trade contacts between the Pandya rulers and the Romans. Madurai was the capital of the Pandya country and Ramanathapuram came under the Madurai region. Roman gold coin hoards had been found at Utthamapuram, **Nathampatti and Karivalamvandha Nallur.** "From circa 50 BCE, the Roman context occurs at Azhagankulam. The Pandyas had trade contacts

with the Yavanas.¹⁵ The Romans bought pearls from the Pandya country. The contacts lasted till **500 CE," said an archaeologist who had taken** part in the earlier excavations at Azhagankulam. Those excavations yielded three Roman coins.

The legend on them showed that Roman emperors Valentine II (regnal years 383 CE to 395 CE) and Arcadius (regnal years 395 CE to 408 CE) issued them. Square copper Pandya coins were also found. The Mauryan context at Azhagankulam was revealed, with the occurrence of the northern black polished ware (elite tableware used by the wealthy) and punch-marked coins.¹⁶ Azhagankulam, Arikkamedu and Korkai in the Tamiraparani basin on the east coast and Muziris on the west coast saw flourishing trade between the ancient Tamil country and the Romans, the archaeologist added.

Tamilnadu has yielded perhaps the largest number of Roman coin-hoards including Azhagankulam. The most important recent Roman coin hoards are Azhagankulam near Rameshwaram, Mambalam in Madras City, Karur and Coimbatore. Among these Roman coin stockpiles two coins of the Byzantine dynasty found in Azhagankulam. One Roman coin belonging to Valentine have been found in stratified excavation at Azhagankulam. This would indicate the rich transoceanic trade contacts of Tamils with the Roman world even during the Byzantine period. This has to be viewed along with a few more coins of the same period found earlier in the hoards. Azhagankulam is also an extensive site at the mouth of the river Vaigai with easy access to the open sea and in close vicinity to Sri Lanka coast.

Azhagankulam has been excavated by Department of Archaeology, Government of Tamilnadu under Mr. Natana Kasinathan. Fragmented of imported amphorae, considerable quantities of Rouletted ware sherds and two Roman coins of the Byzantine period have been found in Azhagankulam. The artifacts found at Azhagankulam reveals that the place was probably a trade centre from 1st century B.C.E. to the 4th and 5th century C.E.¹⁷ The coin evidence shows that the trade with the Roman world was revived in the Byzantine period after some intervening lull. The site has also yielded a new type of red Rouletted ware. The usual Rouletted

ware is either grey or black but types found here are bright red somewhat resembling the arretine but certainly different from it. Its exact origin or affiliation is not known. Whether it was indigenous or imported has to be examined.¹⁸

The recent Archaeological artifacts which are found at the Egyptian coastal site of Quseir-Al-Qadim in the strata associated with the Roman trade states that some of the merchant-sailors trading with the Mediterranean Sea via the Red sea may have been Tamils. The two short Tamil Brahmi inscriptions on the potsherds attested the fact. The Potsherds give proper names in the Tamil Brahmi script assignable to

the first or second century C.E. Thus Archaeological sources on the different aspects of the transoceanic trade contact between the Mediterranean and the coromandal coast is increasing steadily and more sites and Roman like Azhagankulam artifacts are coming to light. Further it is an urgent need to identify the excavation work on the coastal sites and collaborate the Indian with the abroad archaeologists in order to arrive the concluding facts from both the sides of this efflorent transoceanic trade activities during ancient period not only coastal port towns but also towns like Azhagankulam.

AN OVERVIEW OF THE HISTORICAL WRITINGS OF T.K VELUPILLAI

T. Rajesh

T.K.Velupillai was an erudite scholar, an eminent advocate, a good researcher, a gifted writer and a famous historian of Kerala. He made memorable contribution to the growth of Kerala historiography by the publication of the *Travancore State Manuel* in four volumes.

T.K.Velupillai was born on 28th February 1882 at Trivandrum as the son of Velu Pillai and Lekshmi Pillai. In 1898 he completed his matriculation and in 1904 he graduated from the **Maharaja's College, Trivandrum. He started his**

career as a teacher in the English school at Chalai, Trivandrum. He studied law and in 1914 enrolled as an advocate and started his public service. He was the first elected deputy President of the Sri Mulam Assembly. He served as the member of the Travancore Legislative Council and elected member of Temple entry committee. Considering his meritorious services, the Sadasya Tilaka title was conferred on him by the Travancore Maharajah. The government of Travancore decided to revise the Travancore State Manuel written by Sri. V Nagam Ayya. The

revision of the work was entrusted to Sri T.K.Velu Pillai who took up the assignment as special officer for the revision of the State Manuel. He completed the work with the assistance of Sri. Suranad Kunjan Pillai.

His important works are *Hemalatha*, *Sahityadarsanam*, *Sreeramayanam*, *Krishisasthram*, *Moonnu Maharajakkanmaar*, *Veluthampi Dalawa* etc. *The Travancore State Manuel* is his important historical work published in four volumes in 4000 pages.

In the first volume of *The Travancore State Manuel* deals with the physical features of Travancore, its geology, flora fauna people, language, religion, caste, Hinduism, Christianity, tribes, general features of Travancore etc. In the second volume, he has questioned the credibility of many myths and misconceptions and unverified assertions about different aspects of the history of Travancore and has given new explanations and interpretations in the light of historical sources and the evidences. He has also given an account of the ancient, medieval and modern political history. In the third volume he deals with the economic history of the country. He has examined the economic conditions, land tenures, land taxes, forests, agriculture, irrigation, fisheries, means of communication, electric power, industries, trade and commerce, investment and credit, joint stock companies and co-operative societies, education, public health etc. In the fourth volume he describes, the general administration, land tenure department, administration of justice, power department, State force, jails, registration, department of public works, water works and drainage department, marine department medical department, local self government, Devaswom department, the miscellaneous department etc.

Velupillai studied the records used by T.Madhava Rao, P.Shangoony Menon and V. Nagam Ayya in the preparation of the accounts of the history of Travancore. He consulted the Travancore Land Revenue Manual compiled by R.Mahadeva Iyer. He also used the documents in the Archives of the government, Huzur Central Vernacular Records and Records from the Sree Padmanabha Swami Temple etc. He found that large volumes of relevant materials were unused. Government appointed staff of clerks and scribes to assist him in the compilation of the work. He made use of the large collection of valuable

records preserved the Matilakam, in the palace and in the Central Vernacular Records etc.

Veluthampi Dalawa is another notable historical work. It deals with the life history of Veluthampi Dalawa and his achievements. His assessment of Veluthampi Dalawa as a national hero has been questioned by modern researchers. It is true that, he fought against the British in 1809; but he ruthlessly suppressed the Nair revolt of 1804 to win the favour of the British and it finally led to the establishment of British supremacy and the conclusion of the treaty of 1805.

In the first chapter of the book *Veluthampi Dalawa*, he gives a general view of Travancore. **He says, "No political limit in India presents a picture of such continuous history and cultural tradition of substantial achievement and steady progress in the moral and material welfare of the people as this state". It is a known fact that, the people of Kerala came to know about the continuous history of the land from the 18th century AD, but during the medieval period utter moral degeneration and degradation prevailed. He further says, "the writings of foreign travelers are full of appreciations of the country and its people". The foreign travelers have written about the evil customs which were barbarous and inhuman that prevailed in the country and invited the attention of social reformers for starting the reform movements in the country.**

Velupillai has given a poetic description of the land of Travancore. **He writes: "Travancore is richly endowed by nature with practically unlimited resources and had evolved a typical civilization during the period of over two thousand years of recorded history. Indian poets of eminence have sung praises describing the beauty of the forests and rivers, the fragrance of its sandal, the abundance of its pepper and its cardamom and the wealth of coconuts".** According to him our country is very popular for **Naga worship. "There is no place anywhere in India where Naga worship has been more popular than in Kerala where every Hindu family has one or more groves consecrated to snakes and maintained by the due performance of the prescribed ceremonies".**

Velupillai gives us a vivid picture about the ancient history of the land. **He says," the ancient history of Travancore is the history of the larger**

unit of Kerala. The actual facts are difficult to discover. The search has been rendered more difficult by some of the previous writers who ever fascinated by written accounts of comparatively recent composition, like the *Keralolpathy* and the *Kerala Mahatmyam* preferred to work down from them to the earliest beginning instead of making independent enquiry among the actual vestiges of the past embedded in customs, convention and tradition. *Keralolpathy* which is in Malayalam was compiled at the advent of the Dutch in Malabar. The composition of the *Kerala Mahatmyam* which is in Sanskrit cannot in any event be attributed to a time much earlier. Those works probably epitomize the stories transmitted through many generations; but the truth is often **concealed by mythical and legendary lore**".

Velupillai refers to the Parasurama tradition **and says that: "traditional account cannot function for history. But beneath all this miracle**

and fable may be discovered certain materials which are of great value in reconstructing the social and political history of Travancore and Kerala. Scientific researchers have proved that, some parts of Kerala are not so old in their geological formations as the adjoining parts of South India. Originally, it would appear that, the sea extended to the foot of Western Ghats. But the water seems to have subsided several **thousand years ago**".

Through his historical works Velupillai has explored the unexplored areas of history with the help of interdisciplinary studies since it was a government publication. *The Travancore State Manual* is still being used as important source materials for the history of the country. It is a treasure house of knowledge to the common readers and a valuable guide to the researchers. He devoted his life for the reconstruction of the history of Travancore and the enrichment of historical knowledge.

THE DUTCH EAST INDIA COMPANY SLAVE TRADE IN THE COROMANDEL COAST

S. Ravichandran

Slavery, far from being a 'peculiar institution', has deep and far-reaching roots, stretching back at least to the beginnings of historical times in many parts of the world. Slave trading along the Indian Ocean world was of far greater antiquity than in the Atlantic world and that the total number of slaves exported from sub-Saharan Africa across the Indian Ocean and Sahara probably exceeded that shipped across the Atlantic.¹

The Portuguese were the first Europeans to purchase and transport slaves to destinations within the Indian Ocean basin.² The arrival of the Dutch early in the seventeenth century heralded greater European involvement in slave trading to destinations within the Indian Ocean basin particularly in the Coromandel Coastal region.

The Dutch East India Company (VOC) shipped Coromandel slaves to work as domestic servants, artisans, and labourers at their headquarters at Batavia, at strategic commercial emporia such as Malacca and Makassar, on the **plantations they established in the 'Spice Islands'** of eastern Indonesia, at their stations in coastal Ceylon, and at its settlement at the Cape of Good Hope.³ The magnitude of this traffic is suggested by the presence of approximately 66,350 slaves in the various Dutch Indian Ocean establishments in 1687-1688. Although Dutch settlements drew many of their slaves from the same sub-regional catchment area in which these settlements were located, the VOC also transported significant numbers of slaves across

the length and breadth of the Indian Ocean to meet the demand for such labourers.⁴

The entry of the Dutch had the major impact on slave traffic, introducing a new demand for slave labour in the settlements that they developed in maritime Asia⁵. The rise of the European port city in areas where wage labour was expensive and difficult to recruit and organise brought into existence mechanisms for the purchase and sale of slaves either through existing channels or through new transactions. In the early decades of the seventeenth century, the Dutch had decided to annex and find colonies in small spice-producing islands of the Moluccas, Banda,⁶ as well as to establish and develop a port settlement in Java as the capital of their eastern enterprise⁷ and Sri Lanka.⁸ Later in the course of the century, the number of these settlements increased through their own logic, and the Dutch found themselves in possession of innumerable forts and little townships surrounding them through extensive parts of maritime Asia.⁹ The manpower necessary to construct and maintain these was expensive if recruited by payment of wages. Hence, the search was on for outright purchase and ownership of slave labour.¹⁰

The men, women, and children purchased and shipped by the Dutch to destinations within the Indian Ocean basin, like those transported across the Atlantic to the Americas, were enslaved for various reasons and by various means.¹¹

These included kidnapping and pilfering. A number of documentary sources indicate how the VOC acquired its slaves from slavers whose raids took place on the Coromandel coastline. The slavers often bought people who had been enslaved inadvertently during the local wars and slave raids. There were times when the VOC also carried out its own slave raids, also chiefly on the Coromandel coastline; occasionally, people were lured onto ships in the promise of exceptionally profitable deals and then forcefully enslaved, as they were kept on board until the ship had sailed. Many times the shippers captured or bought Indians of a variety of positions in society, thereby acquiring slaves from both the upper and lower castes.¹² Debt was the most important force behind enslavement in Southeast Asia.¹³

Another factor in the trafficking in slaves in the seventeenth century was the periodic increase in supply in the Indian subcontinent caused by food shortage and famine.¹⁴ The fine balance between population and food resources that existed in many parts of the Coromandel Coast would be severely disturbed by a succession of failed harvests caused by two or more years of successive drought. In districts bordering on the coast, which in the seventeenth century had become increasingly monetised, large groups of the population depended on food grains bought for cash in the market. When their access to cash was interrupted and scarcity led to steep rises in the price of food grains, this section was reduced to starvation, left their villages as entire families, drifted towards the ports and sold themselves into slavery.¹⁵

Also, the insatiable demand by Europeans, especially the Dutch, for slaves thus procured on the southeast Coromandel Coast, appears to have become well known in the interior and offered enslavement as an alternative to starvation during times of scarcity and famine.¹⁶ The trade was run mainly by the Dutch at Pulicat, who employed brokers at Madras for slave catching. The shipping was done at Madras port itself. The Kannappa merchant in Madras acted as a slave-baiting broker for the Dutch.¹⁷

The Coromandel remained the hub of a spasmodic slave trade throughout the seventeenth century. In various short-lived booms accompanying natural and human-induced calamities, the Dutch exported thousands of slaves from the east coast of India. A prolonged period of drought followed by famine conditions in 1618–1620 saw the first large-scale export of slaves from the Coromandel Coast in the seventeenth century. Between 1622 and 1623, 1,900 slaves were shipped from central Coromandel ports, such as Pulicat, Madras, and Devanampattinam. Company officials on the coast declared that 2,000 more could have been bought if only they had the money.¹⁸

The second short-lived boom in the export of Coromandel slaves occurred during a famine in the wake of the revolt of the Nayaka Hindu rulers of South India (Thanjavur, Senji, and Madurai) against Vijayanagara over lordship (1645) and the subsequent devastation of the Thanjavur countryside by the Bijapur army.

According to indigenous informants, more than 150,000 people were taken by the invading Deccani Muslim armies to Bijapur and Golconda. In 1646, 2,118 slaves were exported to Batavia, the overwhelming majority from southern Coromandel. Some slaves were also acquired further south at Tondi, Adirampattinam, and Kayalpatnam.¹⁹

A third short-lived boom in slaving took place between 1659 and 1661 due to the devastation of Thanjavur, resulting from another series of successive Bijapuri raids, creating the usual 'famine-slave cycle'. At Nagapattinam and Pulicat, the company purchased 8,000–10,000 slaves, the bulk of whom were sent to Ceylon, while a small portion were shipped to Batavia and Malacca.

A fourth boom (1673–1677) was initiated by a long drought in Madurai and southern Coromandel starting in 1673, exacerbated by the prolonged Madurai–Maratha struggle over Thanjavur and resulting oppressive fiscal practices. Between 1673 and 1677, the VOC exported 1,839 slaves from the Madurai coast alone. A fifth boom occurred in 1688, caused by a combination of poor harvests and the Mughal advance into the Karnatak. Reportedly, thousands of people from Thanjavur, mostly girls and little boys, were sold into slavery and exported by Asian traders from Nagapattinam to Aceh, Johor, and other slave markets. In September 1687, 665 slaves were exported by the English from Fort St George, Madras. The Dutch decision to participate was belated for the boom ended as abruptly as it had started as a result of the abundant rice harvest in early 1689. Finally, in 1694–1696, when warfare once more ravaged South India, a total of 3,859 slaves were imported from Coromandel by private individuals into Ceylon²⁰ (see Table 1).

Table 1. Number of slaves traded by Dutch to destinations within the Indian Ocean, 1600–1700

Exported from	Destination	Period	Total
Coromandel Coast	Batavia	1622–1623	1,900
Coromandel Coast	Batavia	1645–1646	2,118

Coromandel Coast	Ceylon, Batavia	1659–1661	8,000–10,000
Coromandel Coast	Batavia, Ceylon	1673–1677	1,839
Coromandel Coast	Ceylon	1694–1696	3,859

Source: Richard B. Allen, 'Satisfying the "Want for Labouring People": European Slave Trading in the Indian Ocean, 1500–1850', *Journal of World History*, Vol. 21(1), 2010, pp. 45–73.

The Dutch acquired the majority of their slaves indirectly through purchase from indigenous suppliers, which, similar to the other universal religions of Buddhism and Islam, was rendered in religious humanitarian terms as a 'work of Christian compassion' based on the alleged material and spiritual salvation of the individual slave's body and soul. Apart from saving people from physical starvation in instances of severe famine, enslavement also allegedly saved the soul of infidels ensnared in the trappings of the devil.²¹

Inheritance and judicial punishment were the most common sources of forced labour in the closed systems where a money economy was little developed. There existed, however, no institutional obstacles against the sale of slaves on a massive scale once a strong external demand made itself felt along with the spread of a money economy in the absence of a strong state. All major indigenous powers prohibited the export of slaves as an intolerable loss of the country's most precious resource and a violation of the collective moral code of society. On the Indian subcontinent, for instance, the Dutch encountered difficulties with the Nayaka rulers in the south Coromandel Coast opposing the slaving activities of the Europeans. In 1643, for instance, the ruler of Senji, Krishnappa Nayaka, lectured a visiting Dutch envoy-Calvinist minister 'that selling human beings was not only disgraceful to the world, but was also considered one of the greatest sins by our gods'.²²

Slaves were transported to Dutch settlements by company ships or other European slavers, free burgher vessels, and Asian craft. Special slaving voyages were occasionally undertaken by the company in times of great demand or for special projects, though normally 'pieces' of slaves were stowed as supplementary

cargo on board Dutch East India ships along with other commodities. Company officials as private individuals also engaged in the legal and illegal slave trade.²³

Slave Occupations

Slaves were general labourers and used in a wide variety of occupations in the Dutch slave societies across the Indian Ocean basin. Specialisation among private and company slaves, however, occurred in accordance with the size of the individual slave household and the particular position the settlement occupied **within the company's overall trade network**. The majority of slaves acted as domestic servants in small or large slave households of company officials, free burghers, and Asian subjects in areas under Dutch jurisdiction. They served as cooks, lamplighters, houseboys, housemaids, concubines, seamstresses, bread bakers, tea makers, coachmen, musicians, masseuses, honour guards, valets, and so forth. They performed menial labour as coolies in the construction of fortifications, buildings, roads, canals, and trenches, and as porters and stevedores in the ports and warehouses.²⁴

In agriculture, slaves grew food crops (rice, wheat, potatoes, and vegetables), cash crops (pepper, nutmeg and mace, cloves, sugar, cotton, tobacco, and grapes), and herded cattle and sheep. In mining, slaves dug for gold, tin, and other minerals, and broke coral stone for the burning of lime. They served as fishermen, sailors, and country traders in the intra-Asiatic trade. In manufacturing, slaves laboured in artisan workshops as carpenters, furniture makers, coopers, tailors, cobblers, gold-, silver-, and blacksmiths, and numerous other artisanal

occupations. They worked in gunpowder mills, sulfur and saltpeter refineries, arak distilleries, sawmills, shipyards, and sugar mills. In the service sector, they were active in retail, (lower) administrative functions, medical professions (nurses, midwives, etc.), and so forth. Political exiles and criminals, the result of judicial punishment, formed a small but separate category. Invariably, they were condemned to perform hard physical labour at the public works **at the company's fortifications or elsewhere often as part of a chain gang**.²⁵

In Batavia, the administrative center, central rendezvous, and port of transshipment of the VOC in Asia, several hundred company slaves **served on the island of Onrust's (Pulau Kapal)** shipyards to repair and service the visiting Dutch East Indiamen, while others worked in the company hospitals. In the environs of Batavia, thousands of Asian and free burgher slaves cultivated the sugar, rice, and pepper gardens in the late seventeenth century. In eastern Indonesia, the center of spice production, thousands of free burgher and Asian slaves worked in the clove gardens in Ambon and the nutmeg plantations in Banda. In 1694, for instance, 1,879 free burgher slaves laboured on the some 70 nutmeg gardens or perken of Banda, though 2,500 were deemed necessary.²⁶

Conclusion

For the Dutch, the Coromandel slave trade was the most useful means of augmenting the supply of labour in their colonies. The Coromandel slaves were reputedly malleable and subject to disciplined control. They were agricultural workers and there were a fair proportion of skilled labourers among them.

THE RECENT RESEARCH TRENDS ON THE CO-OPERATIVE MOVEMENT IN KARNATAKA - 1900-1956

Y.R. Sadashivaiah

The history of Co-operative movement in India has similar development along with the princely state of Mysore. As far as the research in Co-operative sector, particularly in the regions like Bombay Karnataka and Hyderabad Karnataka, little has been done so far. These were the areas where the British have direct sway and initiated Co-operative institutions in this regions. For an example, the first credit co-operative was established in 1904 at Kanaginahala in Gadag district. There are many

co-operative institutions survived and giving yeoman service to the economy even today in these regions. Though, there are some attempts made by scholars from the fraternities like Commerce & Economics with commercial outlook, but none have tried to give concrete sketch on the historical development of co-operative institutions in these areas. These are institutions catering the microlevel economic requirements of the mass, particularly in the rural and semi-urban areas.

The growth of economy in the modern **times depends upon the people's participation** in a micro level economic activities with state initiatives. It was materialised in Karnataka as early as 1900 AD with the introduction of co-operative institutions to relieve the rural mass from the clutches of the greedy money lenders.

The history of Co-operatives in Karnataka needs to be traced on the lines of colonial attempts made by the British to rise indigenous capital through the thrift agencies like Agricultural banks & **people's banks in different** parts of the country. Ultimately they found the solace in establishing credit Co-operatives on the western model by passing the Indian credit Co-operative societies Act 1904. The Act had provision to open credit Co-operative societies in the rural areas to end the menace of the traditional money lenders where the problem of rural indebtedness was so vigorous due to the tyranny of the greedy money lenders and landlords and to relieve the peasantry from the exploitation. The Act heralded the beginning of Co-operative movement in India. The princely state of Mysore was the first Indian princely state to enact its own co-operative legislation on a set imperial model to start co-operative movement in the state with few modifications suited to its local conditions. As elsewhere in the country, in princely Mysore also, the problem of rural indebtedness and agony was vigorously pervading in the economy, necessitated the opening of credit co-operative societies. The erstwhile Agricultural Banks, which were established in 1894, did not full-fill the dreams of founders in providing effective solutions to the problem of rural indebtedness and economic weakness of the million living in the nook and remote corners of the countryside. The failure of the Agricultural Banks, led to the passing of co-operative legislation to give concrete shape to the effective thrift agencies and as a result, in 1905, the Government of Mysore passed the first Co-operative legislation known as the Mysore Co-operative societies Regulation III of June 1905, through the passing of this legislation the state championed the Co-operative movement and built a tradition of its own and supra culture for an effective co-operative network in the state. Though, the state adopted the Imperial model, it changed some aspects suited to local needs, accepted three tier system like Apex Bank on the top, the District Central Co-operative Banks as

the intermediaries and primary agricultural, non-agricultural, credit, non-credit, production, procuring, manufacturing, consumers, making depressed classes, women, Housing such other Co-operative societies at the grass root levels.

In India, the co-operative movement was a Pre-conceived Colonial Policy brought from the West to experiment in Indian soil. In the second part of the 19th century when an Indian Civil Servant Fredrick Nicholson working in Madras Presidency was deputed to Prussia to study the working of co-operatives in the West and his **1885's monumental report on the** subject and emphatically stated that India must find its own Reiffensin. Further, a careful study of the problem has been done by Mr. Dupernix an Indian Civil Servant who began to experiment **People's Banks in U.P. Even the Strachey** Commission of famine insisted on constructive programs through **self-help, people's** participation, instead of sketchy, rehabilitation. In view of this development in 1900 Government of India appointed a Committee led by Sir. Edward Law to consider the ways and means of establishing such agencies which are worthy to encourage thrift and self reliance. On the basis of the recommendations made by Law committee, the Government of India passed a bill, the Co-operative Credit Societies Act of 1904 which enabled to open credit Co-operatives in the **country and marked 'turning point' in the socio-economic history of Modern India.**

In Mysore, taking the advantages and wider perspectives with larger experience of the Government of India, the Princely State of Mysore passed the Mysore Co-operative societies Regulation III of June 1905 with certain modification suited to the local condition. The Co-operative credit societies act of 1904 by Government of India, mainly confined to the credit operations and formation of credit societies, whereas the princely Mysore adopted major changes and modifications in views of the wider perspective and to extent to scope of the act into all the levels of the economy.

In the initial stages the movement was mainly confined to the certain pockets of the state. But the introduction of the modified act of 1912, threw it wide open and encouraged the formation of credit, non-credit, agricultural and non-agricultural co-operative societies in an extensive manner. Further the formation of the

District Central Banks and the provincial Co-operative bank which was the vertex of the pyramidal structure in the state which was acting as a friend, philosopher, guide and exchequer of the Co-operative movement in the state. In 1920 the Government of the His Highness Maharaja of Mysore appointed a Committee to enquire into the working of the Co-operative societies and suggest remedial measures to improve the working conditions of the Co-operative societies in the state. The committee led by Lallu Bhai Samaldas Mehta submitted its report in 1923. It was a monumental report in the history of the Co-operative movement in the state. On the basis of the recommendations made by the committee in 1925 the Mysore provincial Co-operative bank was converted into the Apex Bank as a Chief Financing Agency of the Co-operatives in the state. Co-operative societies regulation of 1929 was passed which made certain provisions and changes in the entire set up and also for the starting of Land Mortgage Banks in the state.

In 1936 Government of His Highness, The Maharaja of Mysore appointed a Committee headed by Raja Dharma Praveena Dewan Bhahadur K.A. Chandra Shekar Iyer to enquire into the working of the Co-operative societies in the princely state of Mysore. The committee visited various regions and interviewed with various officials, members honorary organizers and public and submitted its report to the government in 1937. The committee suggested that the vested interests were to be checked at first instance, dual membership to be stopped. Strict measures on loans and their recovery,

encouraging the weaker sections to involve themselves in the movement to benefit themselves committee. By 1945 the movement entered a new phase wherein consumer Co-operatives, land mortgage Co-operative societies, house building Co-operative societies, multipurpose Co-operative societies and Co-operative forming became main instruments of development in the economy. Thus by 1956, the Co-operative movement in Mysore reached the stage of introspection by the Government, Co-operators, politicians, officials and common people alike. But the movement had better prospects to meet varied needs of the common folk in the state and also a model to the other states.

The geographical barriers and administrative dissimilarities varies from regions to region, much has not been done in unearthing and presenting the justifiable facts as far as the Co-operative movement is concerned. In recent past and present times, there were some humble and justifiable attempts made to sketch a comprehensive history of co-operative movement in the state by the scholars like Hayavadana Rao, M. Shama Rao, Marks Wilks, Lewis Rice, Suryanath Ukamath, Dr. S. Chandrashekhar, B.B. Hetne, James Manor, K. Veerathappa, Dr. Shadaksharaiah and host of others attempted to give a sketchy account of the aspects like Banking, Agriculture, trade and commerce, education, Backward class movement, irrigation, Railway, forest and freedom struggle and such other issues, but their treatment was very sketchy and it was a part of their study.

STUDYING ENVIRONMENTAL HISTORY IN INDIA: METHODOLOGICAL DEBATES

Shaik Abdul Thaha

Introduction

One of the most important recent developments in the historiography has been the growing interest shown by historians in the process of ecological change. The subject of forests has been much discussed by ecologists and social scientists in the past five decades, mainly because of the large-scale environmental degradation faced all over the world. One of the resultant consequences of such concern has been the emergence of environmental history as a distinct field in the historical writing. Environmental history as a distinct field of research was first emerged in the USA in the early 1970s. As a separate field, it was pioneered by the geographer Carl Saucer and W.P.Webb whose main emphasis was on the process of ecological degradation and on the identification of the human agents behind these processes.¹ Their main research agenda of environmental **history has been the study of past 'ecological crimes' and the ecological destruction and social dislocation consequent on the Europeans colonisation of the America as well as later process of resource exhaustion and pollution with the growth of industrial capitalism.** Donald Worster (1977, 1979, 1988), who can also be called a pioneer in field of environmental history, has analysed the rise of ecological ideas in the West. He described natural beauty of old America, before capitalist farming and irrigation engineers began meddling into it. He extended

his moral support through his writings to the development of American environmental history.² By that time in the case of Europe, environmental history has not taken a separate field, but many of the historians have studied the relationship between ecology and economy **concentrated a society's changing perceptions of nature and delved into the history of forests and commons.** In the case of African history, the main focus has been on the conservation policies, the history of hunting and pastoral rights, and the ecological impact of colonialism.

Recent researches have shown that starting from the 15th century world ecology was profoundly altered by Western colonialism, capitalism and imperialism. Alfred Crosby gives a comparative account of European Colonialism and argues that ecological domination in the New World (America and Oceania) also accompanied by diseases, weeds and animals resulted in the devastation of indigenous cultures and their supportive eco-systems.³ He argues that this ecological invasion has paved the way for political imperialism. But in the case of Asia and Africa, European colonialism could not hamper its nature due hostile tropical environment. However his argument hardly gets any support from other scholars in this field since the evidence points out to a considerable ecological degradation in colonial period. The critique of his contention has its best expression in the words of David Arnold and Ramachandra

Guha, 'but in fact even in regions like south Asia, and perhaps Africa too, where Europeans did not achieve an automatic, biologically assured domination over the indigenous population, they did succeed... in fundamentally reshaping the socio-ecological fabric of the country and the colonised. Having achieved political control through their superior military and technological resources, European colonial regimes were well situated to manipulate a seemingly unfavourable environment to their own advantage and profit.'⁴ The debate on forestry in colonial India would at least remove such misconception.

The writing of environmental history of India is rather late in its emergence in comparison with other parts of the world. Indian environmental history, as it has developed as a distinct field since the early 1980s, has focussed most strongly on forests as nature and forests were regarded outside the purview of history. However, some substantial works have been published subsequently on the ecological changes in different regions of the country. Scholars like Ramachandra Guha and Madhav Gadgil have pioneered the process of writing the environmental history.⁵ The main focus of these studies has been on the ecological crisis originated due to depletion of forest cover and the consequent disruption in the subsistence economy of peasants who depended on forests for their sustenance. The control over natural resources like forests and its over-exploitation under colonial rule is seen as ecologically significant and thus the study of forest policy has acquired a prominent place in the study of environmental history. It was discussed that in the study of forest policies the focus has been mainly on three aspects: A) the pressures and influences that shaped colonial forestry; B) the difference between pre-colonial practices and colonial forest management and C) the relationship between colonialism and ecological decline.

In the writings on environmental history, the ideas and the interests that shaped colonial forest policy have become a debatable subject. According to imperial forester historians the colonial phase was a watershed. For instance, E.P. Stebbing argued that the introduction of colonial forestry had brought the unruly and the greedy private interests under scientific supervision and control.⁶ Another forester historian B. Ribbentrop argued that *colonial*

scientific forestry marked the end of a 'war on the forests'.⁷ These imperial notions however have been questioned by scholars like Ramachandra Guha and Madhav Gadgil.⁸

Guha and Gadgil in their works have brought out an ecological dimension to the study of colonial State policies, agrarian history and peasant resistance. The most important consequence of colonial rule in India, according to them, was the introduction of commercial forestry. Its origin was as much ideological as economic. The use of the forests by the peasants and the State was embedded in a very different understanding of the social role of the forests. The ecological history therefore cannot merely be the history of changes in the landscape; it must link environmental changes with changing **human perceptions on the 'uses' of nature**. Talking about the colonial rule as an ecological watershed, Guha and Gadgil argue that the practices of colonial forestry were largely an outgrowth of the revenue and strategic needs of the empire.⁹ And the customary usage of natural resources were eco-friendly where as the colonial forestry and commercialisation of natural resources led to deforestation and proved to be destructive. Guha and Gadgil even go to the extent of arguing that the relationship between local societies and their natural resource bases had a perfect equilibrium in pre-colonial period that was disrupted by the colonial rule. **The Forest department's interest in reducing local use of forested areas was therefore intrinsically linked to the imperial state's concern with maximising forest revenues.**¹⁰

Guha was highly critical of the British, who in his account were blamed for both snatching the forests from the people and for providing the institutional base for their commercial exploitation. He was challenged in this by the British historian Richard Grove, who sought to **show that the original 'greens' in India were in fact colonial officials**. Countering what they perceive to be purely a materialist explanation of the origins of Indian forest policy, Grove argues that pre-colonial societies did not enjoy a state of equilibrium and posits commercial exploitation of forests to the pre-colonial period and more importantly argues that the notion of conservation was a colonial creation.¹¹ In other words, Grove projects colonisers not as exploiters as argued by Guha and Gadgil but as ecologically conscious individuals who

introduced conservation policies in colonial India. Grove disagrees with Guha on the chronology and character of colonial conservation. Deforestation, according to Grove, was much more faster before the coming of the British to India and therefore colonial rule did not mark an ecological watershed. Colonial forest policy was, in his view, rooted in an enlightened understanding of environmental issues developed in particular by a group of remarkable Scottish medicos serving in the colonies, who sought initially to understand the connection between climate and health, but very quickly became experts in botany and ecology. He further argues that medical officials were ideologically committed to conservation which should be seen as a more significant colonial contribution rather than harping on the commercial exploitation of the forests by the colonial commercial interests. Grove does accept that in the initial stages of conservation measures were primarily based on colonial considerations. It was only in the later stages that all these conservation measures were relegated into background with the rise of commercial exploitation of forestry by the British.

Atlury Murali shows different findings opposed to Grove in his study of Andhra region in Madras Presidency. He has discussed how pre-colonial period had mutually sustaining relationship among agricultural, forest and pastoral zones which was disturbed with the assumption of control over forests by the colonial state. He argues that the British colonial needs were fulfilled by the systematic colonial extension of administrative, judicial and commercial control over forests and common lands, at the expense of customary rights enjoyed by the poor.¹² He says that the peasants and pre-colonial rulers did not develop a 'commercial' attitude towards forests; and recognised the control of tribal groups over forests as their unquestionable natural right, which was later eroded by colonial law.

Similarly, Laxman D. Satya (2004) argues that the British colonial policies brought severe imbalance of the harmonious equilibrium between forests/common/grazing lands and agriculture in the Berar region of Central India, leading epidemics and ecological change.¹³ Later, scholars like Jacques Pouchepadass and Mahesh Rangarajan have chosen a middle path unlike the diametrically opposite models

discussed above. J.Pouchepadass argues that instead of contrasting with these two sets of arguments, 'it is inaccurate to characterise colonial periods uniformly on the most dramatic phases of ecological devastation and it is equally inappropriate to present the pre-colonial societies and their environment as a golden age of 'equilibrium' which colonial conquest disturbed or destroyed'.¹⁴ He says that the indigenous societies have supposedly not lined in perfect balance from the dawn of history until the advent of the Europeans. He shows how the forests were cleared for the extension of agriculture in the area of Central Western Ghats. But at the same time he has made the British responsible for the large-scale deforestation which disrupted the ecological balance.

Mahesh Rangarajan who dealt with forests and conservation policy of the British during the colonial period advances the arguments diametrically opposed to the position taken by Ramachandra Guha and others on the one hand and Richard Grove on the other.¹⁵ Explaining that the differences between them is in terms of gap in the chronological focus of their research Rangarajan argues that the material interest of the colonial State and ideological commitments of a section of officials cannot adequately explain the nature of colonial forest policy. For him 'the latter (the ideological affinities) has to be placed in the wider context of the British desire to regulate the production system and settlement patterns of groups on the fringes of the settled arable cultivation'.¹⁶ While examining the pre-colonial systems of forest management he concludes that the State control over forests and appropriation of forest produce were not unknown in the past but there was a qualitative change after the arrival of the British.

Unlike Mahesh Rangarajan, K.Sivaramakrishnan looks at both the arguments for and against the British forest conservation policies. He says that both the State and subjects try to draw their support from the past to claim rights over the use of natural resources.¹⁷ He has stressed that the culture and political economy combine in complex ways as the past is imagined and that they are then used in contesting and negotiating relations of power, which led to the creation and perpetuation of certain ideologies. Both Mahesh Rangarajan and K.Sivaramakrishnan point out the importance of the local context and the field experiences of

foresters in the ultimate shaping of conservation policies. In addition for Sivaramakrishnan the institutional context is a powerful factor in shaping the writings of colonial foresters who had played some role in the ultimate shaping of forest policies of the colonial government. Ravi Rajan argues that the earlier botanists lost control of forest affairs after about 1860, being **replaced by 'scientific foresters' trained in Germany and France.**¹⁸ In both of these parts of Europe, forests had been enclosed as government property during the course of the 17th and 18th centuries, managed by a new class of professional foresters. These foresters believed that one of their prime duties was to protect **forests from their 'destructive' use by local peasants and woodmen, even if this entailed ruthless repression.** The doctrine was applied in India by the Forest departments set up under the forest acts of 1865 and 1878.

Ajay Skaria, dealing with the forest region of the Dangs in western India, shows that **although the new 'scientific forestry' was the driving force, allowing a systematic appropriation and exploitation of forest resources from the late 19th century onwards, the earlier 'desiccationist' arguments of the botanists were still deployed to justify this official control over forests.** He argues that this created an official consensus which continued right upto the 1980s – long after the demise of British colonialism itself. Only in the past 15 or so years have Indian foresters begun to have second thoughts.¹⁹

Concerning water logging problem, Elizabeth Whitecombe has shown how the orientation of agricultural production towards the export market and the construction of large irrigation works which increased soil salinity, water logging and spread of malaria in the Doab region.²⁰ She argues that the massive developmental projects such as expansion of railways and in more roads and tracks being constructed into hitherto inaccessible forest and hill regions, resulting in extensive deforestation. Dhirendra Dutt Dangwal gives the chronology of agrarian expansion and the history of common lands in the Garhwal hills.²¹ He argues that throughout the 19th century, the arable expanded rapidly, keeping pace with population growth. By the 20th century, with the limits of expansion having been reached in the hills, population increased faster than the arable, leading to a

move into the less fertile areas with low returns. Richard Tucker, writing on forestry, elaborates on conflict between imperial bureaucracy and the new nationalist elite in Bombay Presidency in the context of 1865 and 1878 Forest Acts.²² Faced with the exhaustion of forest wealth, he argues, consequent to the advent of railways combined with the needs of urban centres and private exploitation, colonial state sought to acquire extensive control over forests through the forest acts of 1865 and 1878.

Conclusion: The most widely debated questions in the general historiography of south Asia concern the nature and impact of the British colonial rule and the relative agency of British versus indigenous actors. One set of arguments go like this: Prior to the arrival of the British, indigenous south Asians lived in harmony with nature and engaged in ecologically sustainable agricultural and forestry practices. With the arrival of the British, an abrupt rupture occurred, indigenous people were subordinated and their environmental practices suppressed and replaced by the destructive practices of the British colonial state. Another approach suggests the importance of thinking about the **British Empire as a transformative period in south Asia's** environmental history, but one that can only be fully appreciated in relation to prior environmental practices and patterns of change. Collectively they question conventional models of oppositional relations between coloniser and colonised, and highlight instead the complexity of the social power relations at work in global imperial networks. Their suggestion is to get out of **'methodological nationalism' and work to globalise south Asian Environmental History in a larger context.**

Some of the questions raised in the above historiographical debates on ecology can be extended to British India as well as princely states though they were not under the direct British rule but their revenue administrative structures were mainly influenced and dominated by the system of British administration. The study of the forest policies of the different geographical locations would therefore help us understanding the regional variations in articulating forest policies and thus contribute to the ecologically oriented study of Indian history.

P.N.PANICKER: A HISTORICAL BIOGRAPHY

K. Shinith Chandran

INTRODUCTION

Puthuvayil Narayana Panicker (P.N.Panicker) is known as the father of the Library Movement in the Indian State of Kerala. P.N.Panicker was one of the creators of Kerala Association For Nonformal Education and Development(KANFED) which was responsible for the socio- cultural renaissance of Kerala. He was pioneer and patron of the literacy movement. He was also honoured for his many other welfare activities and for his dedication to life.

P.N.Panicker was the owner of a unique personality has always respected literary Kerala. Through constant suffering, he ventured to organize cultural conferences in rural areas, thereby inspiring the spirit of the people and to spread cultural awareness among the masses.

The literary Kerala cannot ignore the fact that P.N.Panicker who has been spread all over the state with countless words, such as setting up libraries in Kerala villages, reading and growing, and thinking and understanding. His vision was that of a philosopher who reached the summit of culture. The Kerala Association For Non Formal Education and Development he had formed grew like a tree.

There are many other areas in which his work spanned. P.N.Panicker started an institution called KEDES to achieve this goal by providing employment to women, Dalits, and arousing them self esteem and bringing them into the mainstream. Through small scale industry and various action plans, he has proven that women can lead independent lives through the craft.

He hoped the Sauhridha Gramam project should be formed throughout Kerala. The villagers should live in perfect harmony without **conflict with one another**. P.N.Panicker's declaration that there should be no conflict on the basis of caste and creed is still relevant today. It was decades of great wisdom. Present generation is enjoying the benefits of that sacrifices. This seminar discusses the personality traits and social services of P.N.Panicker who worked for the welfare of the people, ignoring his own affairs and for the welfare of the society.

Family Life of P.N.Panicker

Puthuvayil Narayana Panicker (P.N.Panicker) was born on March 1, 1909 in Neelamperoor in Alappuzha district as the son of Govindapillai and Janaki Amma¹. His father Govindapillai was a farmer. His brother was Keshava Panicker. P.N.Panicker belongs to a high caste family. This was a time when the rituals of Thodeel and Theendal(Untouchability) existed. But his family did not practice any of these customs. So, he was against the caste and religious ideas.

P.N.Panicker had shown exaggerated taste in reading since childhood. While he was still a student, he owned the best book collection. His **father's death prevented him from furthering his education. His father's death made family life miserably. P.N.Panicker's life was then taken care of by his brother Keshava panicker.**

P.N.Panicker has achieved a prestigious victory in the JSLC examination from Changhanassery High School. Financial hardship hampered his higher education². In 1926 he joined the Neelamperoor Middle School as a teacher.

In 1930 he married Chembaka Kuttiyamma at Malayekkapparamba, Ambalappuzha. Since there was no other head **of the family in his wife's house, he was entrusted** with the care of the family. The thought of life being more meaningful exploded in the mind with a married life. P.N.Panicker- Chembaka Kuttiyamma couple has seven children. His children are Chandramathi, LeelaKumari, Vilasini, Indhirakkutti, GeethaKumari, N.Balagopalan, and Krishna Kumar.

P.N.Panicker's youngest daughter, GeethaKumari died of gastroenterology when she was in seventh standard at Cotton Hill School. The Gita Memorial Prize was instituted in the school where she attended to preserve the memory of that child. A student earning the highest marks in seventh standard is eligible for the Geeta Memorial Prize. It was P.N.Panicker who took a keen interest in the distribution of the Geetha Memorial Prize.

CONTRIBUTIONS OF P.N.PANICKER

Harijan Seva Samithi

The sympathetic condition of the Harijans, who had fallen into a bottomless pit of slavery, has often pained P.N.Panicker. From his childhood on P.N.Panicker had in his mind the idea of actively working towards the awakening of the lower class people. While Mahathma Gandhi conducting an all India Harijan upliftment, P.N.Panicker founded the Harijan Seva Samithi in his village. With the help of T.T.KeshavaShastri, the activities of the Harijan Seva Samithi became refreshing. As a result of Harijan Seva Samithi, the Harijans had a social upliftment.

The idea of Mahathmaji's Gramaswaraj influenced P.N.Panicker. It was through Gandhiji that he realized the truth that the soul of a country lies in the villages. It was Gandhiji who instilled in him the idea of enlightening different communities for the social and cultural development of the country. For that he made the rural youth active. With that in mind, he wished to strengthen the public base by lecturing on the culture of reading and the glory of book reading became intriguing in that mind. He worked relentlessly for the upliftment of the Harijans and for the advancement of the Grandhashala Sangham.

Grandhashala Sangham

In 1945, the Akhila Thiruvithamkoor Grandhashala Sangham was formed at Ambalappuzha³. By 1956 it was known as Kerala Grandhashala Sangham. P.N.Panicker was the creator, mentor and patron of Kerala Grandhashala Sangham. As a first step, he revamped the rural libraries that had been inactive throughout Kerala, created new libraries, and co-ordinated those movements into a centralized movement. The Grandhashala Sangham, envisaged by P.N.Panicker, was the embodiment of many public welfare projects. These projects are to eradicate illiteracy, to **arouse people's sense of patriotism and cultural** thought and to equip young volunteers throughout the state to do so.

During 1970-1971 the Grandhashala Sangham emphasised the literacy program⁴. The Grandhashala Sangham prepared hand books, guide books, primers and literacy charts to

literacy activities. The Grandhashala Sangham also organized orientation courses for volunteers who perform literacy activities. Thousands of illiterates have been made literate through voluntary workers of local libraries. The humble work of the Grandhashala Sangham started at Ambalappuzha with great aims has grown into a great nationwide venture.

KERALA ASSOCIATION FOR NON FORMAL EDUCATION AND DEVELOPMENT (KANFED)

Grandhashala Sangham was taken over by the Government of Kerala in 1977 and P.N.Panicker was completely expelled from the Grandhashala Sangham. It was in such a situation that he created the Kerala Association for Non Formal Education and Development (KANFED). The aim of the organization is to provide education, economic and social development to all in the society. KANFED organized meetings, marches, and cultural events to educate illiterate people about literacy⁵.

KANFED conducted classes for illiterates using charts, Newspapers, and pictures. The majority of the illiterate in society were women, tribes, and fisherman. The number of illiterates in the society has declined significantly as a result of the work of KANFED. The action of KANFED has been tremendously powerful, even for the Government. The Government was impressed with the work of KANFED, and gave KANFED the responsibility of the State Resource Centres of Kerala which separated the activities of Adult Education.

KANFED has prepared and published several primers, readers, and guide books. KANFED published the newspapers Naattuvelicham, KANFED News. KANFED made **a short film 'Lead Kindly Light' to help people** understand the importance of education. Books fairs were organised to promote reading skills among the people. KANFED conducted awareness programs for the public on the danger of alcohol and smoking⁶. KANFED built over six thousand literacy centres. Statewide Padhayathras and vehicle jathas were organized to spread the message of KANFED among the public secure their support. Agencies like German Adult Education, UNICEF, World Bank, UNESCO, Ministry of Human Resource Development provided financial support for the programs of KANFED.

KANFED first concentrated in securing 100 percent literacy in some selected areas. Ezhome is a village in the Kannur district of Kerala state. KANFED's literacy programs began in 1983 at Ezhome. A three months programme was evolved and implemented successfully resulting in securing the desired results. Ezhome is known as the first Indian village to achieve complete literacy through KANFED.

Total Literacy Campaign is a program jointly organized by the Kerala Sastra Sahitya Parishad and Kerala Association for Non Formal Education and Development(KANFED). The Total Literacy Campaign is evaluated as a strategy to eliminate illiteracy. A campaign for literacy program was launched in January, 1989 at Ernakulam District which has a population of 1.85 lakh people has achieved complete literacy. On 4th February 1990, Prime Minister V.P.Singh declared Ernakulam as the first district in India to achieve complete literacy.

It lead to the launching of a state wide campaign in Kerala as well as in other parts of the country. The campaign were area specific, time bound, volunteer based, cost effective and outcome oriented. Through the Total Literacy Campaign, the district was fully literate in just 18 months. The learner was the focal point in entire processes and emphasis was not on mere literacy only. Spreading literacy, National integration, universal immunisation women's empowerment etc. are the objectives of campaign. The Total Literacy Campaign is an example of Kerala Association for Non Formal Education and Development (KANFED)'s performance excellence. KANFED is an example of P.N.Panicker's leadership skills.

KERALA EDUCATIONAL DEVELOPMENT AND EMPLOYMENT SOCIETY (KEDES)

P.N.Panicker, who toured the villages, recognized the sufferings of people. Various schemes were created for the welfare of thousands of educated and unemployed youths. P.N.Panicker considered the means of earning a livelihood for the unemployed. He discussed this matter with the Khadi Commission and the Khadi Board. In collaboration with A.M.Thomas, who was the chairman of the Khadi Commission, P.N.Panicker formed the great movement called Kerala Educational Development and Employment Society(KEDES).

Justice V.R.Krishnalyyer was appointed as the Chairman of KEDES and A.M.Thomas was appointed as Vice Chairman⁷.

Established industries in the rural areas of Kollam district and Neyyattinkara under the auspices of KEDES. KEDES was proven that women can live self-care through the handicraft industries.KEDES was shown in a village that solar energy can be used to light .KEDES carried on small business and exported goods to Kuwait. P.N.Panicker was the driving force behind all these activities. Until his death, P.N.Panicker continued to be secretary of the KEDES. P.N.Panicker has been able to create employment through thousands of unemployed youths through KEDES. Even today, through creative and energetic activities, the movement KEDES following the path of progress.

Sauhridha Gramam Project

In the final stages of his life, P.N.Panicker was actively engaged in a vigorous program to find a lasting solution to the customs and superstitions among the common people of the villages⁸. Many schemes were developed to build confidence among the rural masses. Families should be friendly, complete withdrawal of people from alcohol, sympathizing with **stranger's sorrow, surrendering of one's life** to others, renouncing everything for the sake of life, avoiding unnecessary pomp and jewellery, give importance to agriculture, the Sauhridha Gramam Project was his motto for emphasizing theme. He was convinced that if these things were to work, conflicts would end. Many volunteers were trained for this purpose. He considered the ultimate goal of the Sauhridha Gramam Project to be a success in the end of life.

Agricultural Book Corners

P.N.Panicker has initiated many innovative ventures not only in the social and cultural spheres but also in the field of agriculture and psychology. Through the book corners of rural libraries in agriculture, there was a refreshment. The agricultural book corners were meant to educate ordinary farmers about modern farming practices⁹.

MAJOR WORKS OF P.N.PANICKER

The major works of P.N.Panicker are Grandhashala Manual, Grandhashala Dictionary,

Saksharatha Pravarthakarkkoru Guide, Grandhashalakalkkoru Maathrika Niyamaavali, Veettammamarkkoru Pusthakam, Njanghalkku-Padikkanam, Nizhalum Velichavum Janasevanathintae Paathayil, Upabhokthru Kotathikal, Madhyam Vishamaanu, Enthaanu Raashtreeyam, Aadhivaasi Bodhavalokkanam, Vidhyarthikal Rashtra Sevanathil, Saaksharathayil Koodi Jana Shikshanam, and Ammamaarum Kuttikalum (Anaupacharika Vidhyabhyasam). P.N.Panicker has authored articles and countless pamphlets on a variety of topics for news media. He also served as the editor of Anaupacharika Vidhyabhyasam, Naattuvelicham, KANFED News, and Our Newspaper.

P.N.Panicker has served as a member and Chairman of various State level committees including Sahithya Pravarthaka Saksharatha Sangham, Samastha Kerala Sahithya Parishath, **Student's film society, Kerala Tourism Development Committee, Temple Entry Proclamation Committee, SC/ ST Development committee, State Resource Centre Executive Director** and many more.

P.N.Panicker died on June 19, 1995 at the age of 86. In honour of him, the Government of Kerala holds a reading day every year on 19th June. A weekly reading week from June 19 is being celebrated. Reading week is held every year with a variety of programs in schools and public institutions. As a mark of respect to P.N.Panicker, the Postal Department issued a postage stamp bearing his picture on June 24, 2004.

CONCLUSION

P.N.Panicker was one of the greatest cultural heroes of Kerala. He is a great leader who has worked for social development, cultural

reform and holistic literacy in Kerala. He is a mentor to the organizers, a glimpse into the world of letters, and a radical product of culture. The cultural march led by him excited the public as a historical event.

His work in setting up libraries in the rural areas of Kerala and encouraging the public to read them will forever be remembered by Kerala. He considered the central leadership of libraries and the illumination of the illiterate to be the achievement of life. The Grandhashala Sangham which was established in 1945 at Ambalappuzha has become a major movement. It was P.N.Panicker who transformed the Grandhashala Sangham into an organized force.

P.N.Panicker was able to reach out to the illiterate masses in Kerala through the Kerala Association for Non Formal Education and Development (KANFED) organisation to make them literate. P.N.Panicker has consistently remarked that man can be liberated only by reading.

The Kerala Educational Development and Employment Society (KEDES) founded by P.N.Panicker are still working today to provide employment to women and Dalits and to arouse self-esteem and to bring them into public life.

In honour of P.N.Panicker, who died on June 19, 1995, June 19 is celebrated as a reading day every year. On June 19, the state of Kerala renews his memory and commemorates his service. Those who have accepted the service of the people as a way of life are rare. P.N.Panicker is important in that. P.N.Panicker was a great man who proved the power of life with honesty and sacrifice.

OVERSEAS TRADE BETWEEN TAMIL COUNTRY AND SOUTH EAST ASIA UPTO - 900 C.E.

K. Sivaramalingam

Introduction

We have a lot of information about trade and commerce during the early period in Tamil country. Inscriptions, numismatic evidences and literary evidences throw light upon internal and external trade which helps in collecting information about the various guilds prevailing in those days. The main literary source material of trading community in early Tamil society is found in Pattinappalai, which belongs to the Anthology of Pathuppattu.

From this source material we came to know about the internal and external trade of the early Tamil society, which is corroborated by the finds from the excavations conducted by the Archaeological Survey at Korkai, Arikkamedu etc. From Arikkamedu, numismatic evidence is the most important source, which gives about the foreign trade of early Tamils with Rome. Agananuru gives the details about the trade of the Tamil merchants in North India. The literary source gives an account of the sea trade of the Tamils and information about the various ports. Pearl, Coral, Sandal etc., were exported from these ports.

This article deals with mainly based on the trading community of the early Tamil country with special emphasis on merchant guilds. Numismatic evidences and inscriptions are the main source materials for the study of trade and commerce. It is possible to know how far these trading communities, i.e. Merchant guild, the caste guild, weights and measures, currency system, collection and distribution of products, help in the future development of industrial growths, trade and commerce. Visits to Arikkamedu, Karur and Kaveripumpattinam help to collect materials about the trade prevailing in early Tamil country.

Overseas Trade between Tamil Country and South East Asia

The Tamils being a sea-faring people developed their over seas trade to a great extent. From Sangam sources we hear of commercial relations between the Tamil country and foreign lands, but much of the correlated information

relating to foreign trade however, one gets from foreign sources i.e. Roman, Greek, Arab, Chinese etc. and not from indigenous sources. The Periplus and Ptolemy give us valuable information regarding the ports and marts which managed the trade. Foreign trade was one of the planks on which the economic prosperity of the Tamils depended.

In the Sangam Age atleast the Tamils stood much to gain by lucrative trade with the Roman Empire. In later times the shift in foreign trade was from the west to the east and China, Philippines and Indonesia became chief oriental markets for Tamilian products. Trade with Ceylon was continuous and considerable and was only technically overseas.

The contacts of the Tamils with countries overseas have been commercial, political and cultural. The Tamils could have inherited their commercial and sea faring instincts from their Middle Eastern ancestors particularly the Phoenicians. The earliest Hebrew and Tamil accounts agree in mentioning the lucrative trade the Tamil merchants carried on from c. 1000 B.C. down wards. The Chiruttal (Panthar) tohai (Peacock), the monkey etc; were favourite animals imported from Tamil country.¹ The loan words in Hebrew and Aramaic from the Dravidian language, particularly Tamil also suggest trade relations.² An early colony of South Indian Merchants is believed to have been established in Babylon, where it continued to flourish till the 7th century A.D. There is more dependable evidence from the early Tamil literature. The Greek merchants in Tamil India were known as Yavanas, obviously that name was derived from Ionians who formed a section of the Greeks. From the periplus of the Erythraean sea, of the 1st century A.D., it is learnt that Greek merchants from Egypt to the Malabar coast brought wine, brass, lead, glass, copper, antimony and wheat.

The evidence available from the classical writers of the West reveals the reign of Augustus and the following connections between the Chera kingdom and the Pandyan kingdom and the Roman Emperor.

The Tamils were the first to learn the technique of Ocean going traffic, which they perfected from small beginnings. First they built small coasting vessels, which they perfected through various improvements and they proceeded to build bigger vessels until they built ocean going ships. Periplus is clear on this point when it mentions three types of vessels, large coasting vessels, small coasting vessels and ocean going ships, which agrees with the evidence of the literary works of the Tamils.³ We also come to know that the ancient Tamils distinguished three kinds of boats.⁴ These were those for fishing craft, those for river crafts and those far overseas.

On the basis of internal and external evidence furnished by the Arikamedu excavations Sir Martimer Wheeler concludes that the site was occupied by the Romans at the end of the 1st century A.D. and that it was deserted sometimes in the 2nd century A.D. Therefore, the **glorious epoch of Arikamedu's industrial and commercial activity** ranged during the first two centuries of the Christian Era.

There was a close trade relation between South India and Rome which is supported by the finds of many Roman coins in that region. The coins were not used as a currency but for their metal value only.⁵ The excavations of Virampattinam (Arikamedu) near Pondicherry have yielded evidence that this port imported from a strange land situated at a distance of 5000 miles, wine glass and engraved gems. As at Puhar there was a small colony of foreigners. Poduca of the Periplus and Poduca emporium of Ptolemy is identified with Pondicherry. Periplus mentioned only summarily the cities and ports after the Cholamandala. According to Ptolemy the Chola ports were Nicamer (Nagappattinam), Chaberis (Kaveripumpattinam), Saburas (Cuddalore), Poduca (Pondicherry) and Malanga (Krishnapattinam).⁶ The cities situated on the sea coast are called by the generic name Pattinam.⁷ Every coastal city was composed of two main divisions. One division was called ur and the other Pattinam.⁸ The two divisions of the city of Pumpuhar were known as Maruvurpakkam and Pattinappakkam. Likewise the city of Nagai on the Cholamandal coast also consisted of two ports. The places now known as Nagur and Nagappattinam were treated in ancient times only as two divisions of one and the same

coastal city. Small settlements on the sea shore are known as Pakkam.

There was a colony of Yavana merchants at Kaverippattinam.⁹ Roman gold poured largely into the Tamil country at this period, is attested by the numerous Roman coins dating from the reign of Augustus, to that of Zeno (B.C.27 to A.D. 491) which have been found buried in different parts of the Tamil land.¹⁰

Roman colonies were set up in South India during the period. Not only in the coastal area but even in interior parts like Madura, Karur, Perur, Coimbatore, Pollachi, Kangayam, Dharapuram and even in places like kaniampundi in the Avanashi Taluk of Coimbatore district, and Kalyamuthur near Palani, comparatively unknown to-day there were permanent Roman settlements as is evidenced by the Roman coins unearthed from these places.¹¹

The Pandyan king was the first to realize the benefits of an alliance with the Romans. He sent two embassies to Augustus Caesar, desiring to become his friendly ally. Roman soldiers were enlisted in the service of the Pandyas and other Tamil kings.

The commercial relations of the Tamils with the Greeks and Romans is mentioned in some of the Sangam classics as well as in the twin Epics.¹² A poem describes the prosperous port of Musiri, whether the fine large ships of the Yavanas come bearing gold, making the water white with foam, and returned with pepper, along with the rare products of the sea and mountains given by the Chera king. Pepper became the **"Yavanapriya" or the spice dear to the Yavanas** here referring perhaps to the Romans, and it is said that pepper formed more than half the cargo of many a west bound Roman ship.¹³ The remarkable skill displayed by the Yavanas in making artistic lamps of brass is adverted to more than once.¹⁴ The Purananuru speaks of the importation of delicious wine which was eagerly sought for by and courtiers.¹⁵

It is interesting to observe that among the exports from India to the West, tigers, elephants, hounds, parrots, peacocks, serpents and pythons were included. Ivory, pearls, diamonds, silk cotton, pepper and spices, coconuts, gingelly oil and timber of various kinds formed other articles purchased by Rome.¹⁶ The Periplus testifies to the South Indian export of coconut oil while Pliny

includes bananas, rice, millets and various plant products like nut mugs and tamarind. The Pattinappalai provides the additional information that gold from the Kongu country, pearl from the Pandyan sea, sandal from the Malabar coast and pepper from coorg were among the most prominent articles of export from South India.¹⁷ The imports from the west and particularly from Rome included coins, gold, coral, wine, tin lead and decorated doll lamps.

The Sangam classics have several references to the wine imported from abroad.¹⁸ The Pattinappalai adds that horses were brought from across the seas; it is difficult to determine the country from which they were imported perhaps they came from Arabia or Persia. But there is no doubt that on the whole, so far as Rome was concerned, the imports from India for outweighed the exports. After the second century A.D. there was a marked decline of the Roman trade with Tamilakam.

The foreign trade of South India was not confined to the west. With the east, too there was a brisk trade from early times. The earliest trade relationship with the East appears to have commenced with China. Besides silk, sugar was imported from China. The names of these articles which obtained currency in Tamil indicate this fact. Silk is known in Tamil as Pattu as well as Cinam, again through the ages sugar has been known as Sini. In exchange for these articles China imported from South India Pepper Cardamam, incense and red coral. The Chinese historical sources belonging to the 7th century B.C. confirm the fact of Indian commercial products having reached China. Some of them might well have gone from North India, but the typical products of Tamilnad were also included among them. It is but natural that the trade between China and the coramandel coast of Tamilakam must have led to commercial relationship with other countries to the east of India. Burma, (Suvarna Bhumi) Java (Suayaka) Malaya and regions of the Far East undoubtedly had commercial contacts. In this connection it may be noticed that among the pre historic relics

of th Philipines have been found iron weapons like daggers, knives and axes, as well as bangles and glass beads, which archaeologist consider to be similar to those found in South India and datable to the 1st millennium B.C. This fact suggests an early and close contact between the Philipines and South India. It is not too much to presume that sooner or later commercial relationship should have followed. Recently similar glass beads and bangles have been unearthed in North Borneo, Java and Malaya Peniusula.¹⁹

The goods imported at this port were horses, wine and lamp of sculpture. The goods which were exported from the sea port of Korkai were white salt, palmyrah sugar, spiced tamarind, and dried fish. These are known from the literary sources.²⁰ The Tens Tens also bear testimony to the existence of sea shore cities.²¹ They were Eyirpattinam, Pattinam (Mamallapuram) Korkai and Kaveripumpattinam. Eyirpattinam was the sea port of Oymanadu. Pattinam was the sea port city of Tondainadu. Korkai was the sea port city of Pandianadu. Kaveripumpattinam was the sea port city of the Chola country.

As the sea port of Eyirpattinam Anil and other scented goods were imported. At the sea port of Pattinam horses from western countries were imported.²² Kaveripumpattinam became a cosmopolitan city due to its active trade.²³ The ship carrying the cargo was called as Vangam.²⁴ The merchants had never devalued the goods which they sold or purchased from the people. They valued both the goods equally. These moral values are known from the Research article on Pathuppattu.²⁵ The motive of their adventure does not seem to have been conquest but commercial. Pattinappalai give us a graphic description of the trade of the times which no historian can ignore.²⁶

In the foregoing pages, an attempt has been made to give a brief account of the overseas trade between Tamil country and South East Asia upto 900 C.E.

AUTOBIOGRAPHY AS A HISTORICAL SOURCE - CONTEXTUALIZING "KHILAFATH SMARANAKAL"

U. Sreeba

Introduction

In modern times, Autobiography is considered to be one of the important sources of historical reconstruction. For the historians these are the windows, entry points into the social and political history of the period. It is particularly true in the case of the autobiographies of both Gandhi and Nehru which are available by the 1930s. In addition to this, the biographies and autobiographies of great personalities were objects of new secular commemoration. These all indicate the value of autobiography as a **source of information**. This doesn't mean that we can heavily depend on the facts furnished in the autobiography as there are certain problems associated with them, especially that of the problem of bias. Even with this the autobiographies have an important, though not exclusive role in the reconstruction of history.

Emergence of Autobiography as a form of writing in India

The analysis of the growth of autobiographical writing in India, make it clear that in India the autobiographical writing had its beginning with the impact of the colonialism. It is clearly attested by Gandhi in the introduction of **his autobiography stating that "writing an autobiography is a practice peculiar to the West. I know of nobody in the East who having written one except amongst those who have come under Western influence."**¹ That doesn't mean that India didn't have a tradition of

autobiographical writing. Self - reflexive writing in the autobiographical mode has long been a part of Indian literary tradition. Whether such self reflexive writing can be termed as biographies is a debatable point. A.R. Venkatachalapathy rejects the possibility of an indigenous tradition of autobiographical writing before the advent of the British.² In his opinion writing that is intensely personal and experimental is not tantamount to biographical writing.³

The reason highlighted by the scholars for the late emergence of autobiography as a form of writing was that the idea or the notion of reflective individual subject was alien to Indian culture. In other words, the expression of individualism and individuality are missing from **India's cultural assemblage prior to the 19th century**. Kerala is not an exception to this. In Kerala as well the autobiographical narratives began to be written in the late 19th century and it assumed a distinctive shape during the first half of the 20th century. It was the early news papers and periodicals in Malayalam, which often serialized brief biographical accounts of famous personages. In response to the interest of the readers in the biographical and autobiographical writings the various periodicals began to publish the autobiography in series. It increased the popularity of writing the autobiography.⁴ The autobiography which the present paper discusses also was published in the Mathrubhumi in series. Very soon like novel, autobiography appeared on the literary scene as

an expressive form associated with modernity. Such biographies functioned as objects of narratives interest and source of inspiration and **also served to connect Kerala's new reading public** with the lives of the people in the rest of India. These autobiographies occupy a place of importance in the sources for the construction of the political, social and cultural history of Kerala. In other words these autobiographical literatures played an important role in shaping new discourses of agency and responsibility in early decades of the 20th century.

Autobiographical writings in Kerala

In Kerala, Autobiographical writing in Malayalam language began to appear in the 1870s.⁵ Among them the first one seems to be that which describe the autobiography of Vella and Appathiri which is supposed to have written in 1711.⁶ At the same time the biography of Vaikkath Pacchu Moothathu published in 1875 and the brief Autobiography of Travancore Maharaja Vishakam Thirunal published in 1880 in English forms the earliest autobiographies in Kerala. Gradually we can see the development of autobiographical writing as a particular branch itself in the Malayalam literature.

There was an opinion that the autobiographies of common people particularly those belonging to the middle group are more useful for historical reconstruction than that of great personalities. It is made clear by Vijay Ram swami. He suggests that the autobiographies or biographies which have provided the best historical insights are those written by and about **the 'people in the middle, as fascinating and refreshingly new facts of our political and social history can emerge from such accounts of people in the Middle.**⁷ The autobiography as a literary form performs the historical role as an effort to depict the life experience of an individual. It deepens our conscience of history.⁸ It is very correct in the case of the autobiography of Muzhikunnathu Brahmadathan Namboothirippad as it provides picturesque details about the events relating to the *Khilafath* and Non Co-operation Movement that took place in Kerala especially that of the places in and around *Valluvanadu* and also the rebellion associated with it.

The present study tries to point out how the people from different social strata and personal

accounts of individual's lives contribute to our understanding of the historical movement. The present paper is an attempt to trace out how an autobiography can be used as a source for reconstructing the historical past by analysing the *Khilafath Smaranakal*, the autobiography of Muzhikunnathu Brahmadathan Namboothirippad, who had been a victim of the police atrocities meted out by a political prisoner who had been imprisoned as a part of the Khilafath and Non co operation Movement in Kerala.

Muzhikunnathu Brahmadattan Namboothirippad – a Biographical sketch

Muzhikunnathu Brahmadattan Namboothiri was born in 1897 at Cherppulassery as the son of Narayan Namboothirippad and Savithri Adithirippad. As per the Brahmanical customary rite and the pattern of education of the time he had undergone the Veda padanam. He was Very much inspired by the advent of Gandhiji to the Indian independence movement. He accepted Gandhiji as his guru and became a staunch follower of Mahatma Gandhi. He plunged into active politics in 1918 as the ardent supporter and active member of the Congress Party in Kerala. Gradually he assumed the president ship of the Cherppulasserry Mandalam Congress and was responsible for spreading the congress ideologies and activities to the nook and corner of Malabar. The great importance of this personality was that he tried to prevent the spreading of the so called *Mappila* Riot of 1921 to *Valluvanadu* and was arrested and imprisoned by the British. For that he was excommunicated from his society.

The autobiography of Muzhikunnathu_ Brahmadattan Namboothiri entitled *Khilafath Smaranakal* was published in 1965 by K.P. Kesava Menon posthumously in 1964. This work has got a place of importance in the literature for being the heart touching autobiography. It can be considered as a story of a locality, a historical story and political history rather than a mere autobiography. In this work he tries to give a true picture of his life experiences.⁹ The basic content of this work is that of the description of a riot that had taken place in Malabar at the beginning of the Non Co operation Movement of 1921 and the personal experiences of the author. It is considered to be one of the earliest works

dealing with the Malabar Rebellion.¹⁰ More over the author take into account his own experiences while explaining the events which led to the riot, neglecting those sayings which he does not know and those saying which he could not believe.¹¹ Hence his work can be considered as a great contribution in reconstructing the history of the Malabar Rebellion. He reveals his experiences without any kind of exaggeration.

Readings from the Khilafat Smaranakal

In the introduction of this work, the author expresses the view that we cannot call the struggle that took place in 1921 as *mappila* riot it will be apt to call it as mappila revolution or Khilafath revolution. What there took place was actually an internal revolution or internal war which continued to exist for almost four months. During that period they looted two treasuries, attacked several police stations and captured weapons, burnt the records of four Munsiff courts and so many register offices, disturbed road transportation and postal systems, attacked the army camps several times and killed the army men and a dozen Europeans.¹² More over they were successful enough to establish a temporary government as part of the struggle.

Like K.P. Kesava Menon¹³, he considered it as an internal rebellion that took place against the policy of oppression followed by the British army towards the *Khilafath* Movement.¹⁴ He says that the four months were a period of atrocities. Both the police and the army shot thousands of rioters. In addition to that they killed hundreds of local people as well. As such the rebellion was an attempt from the part of people facing severe oppression to escape from it and establish a rule favourable to them. In his opinion it was the policy of severe repression adopted by the police against the members of the Khilafat Movement that forced them to raise their hands for the cause of their own protection.

Similarly Brahmattan Namboothirippad denies the view of Stephen .F.Dale that the revolt purely had a religious base.¹⁵ Though some had misunderstood that communal struggles were the reason for the revolt, it was not so as in such struggles the position of the British was not insecure. Moreover he rejects the views of the British¹⁶ and supports the view tat that the rebellion was not a communal riot rather than it was a political revolt that aroused out of the

suppression of khilafat movement and the rebellion that took place was an organized attack against the repression of the administrators. Though the rebellion had its beginning from a religious factor it resulted in a tripartite struggle which caused heavy damage to the region as a whole. The rioters expected that as in the case of the khilafat Movement the Hindus would extend their support to that revolution as well. When their expectation was not brought in to action, they doubted that the Hindus were against them and joined side with the British. It was the reason for the emergence of the tripartite struggle.¹⁷ Gradually they turned against the Hindus. When they established their rule with Thirurangadi mosque as the centre, proclaiming Ali Musaliyar as the ruler, they began to raise funds in the name of war especially and forcibly from the Hindus particularly from those who were wealthy. Along with that they also began to loot them.

He disagree with those who consider the riots as the agricultural tenants fighting The evidence raised by those who support the notion was that of the attack against the Nilambur Kovilakam. Brahmattan Namboothirippad repudiates that notion as well stating that though the rioters attacked the Nilambur Kovilakam on 21st August 1921, it was not because of their enmity with the Kovilakam as being the landed magnet and the resultant sufferings of the tenants of the Kovilakam. It was the support given to the British government particularly in favour of the police oppression which was highlighted as the chief reason for their specific opposition to the Kovilakam. When the rioters attacked the Kovilakam the members were already left the place and reached Kozhikkode safely on the basis of the prior information and those who were killed by the rioters were the servants of the kovilakam .Similarly the rumour that the rioters were fired at by the securities were also fake as there was nobody who were reported to have wounded among the rioters

The work makes reference to the origin of the revolt and the leaders of the revolt especially that of Ali Musaliyar who was held as the leader of the *Khilafath* Movement in Kerala. He states that actually the leadership of the *Khilafath* Movement was to be taken up by the *Mambaram Thangal*, who was the chief priest of the *Mambaram Mosque*, which was the social and

religious centre of the Muslims. As the *Thangal* was not ready to take up the task, Ali Musaliyar who was the teacher of the Mosque had to become the leader. He became the leader not because of his political connection but because of the respect of being a model teacher and also due to his support by a number of his students. The immediate provocation which resulted in the outbreak of the revolt was the spreading of the false information that the Mambaram mosque was sacked by the British army. When the mob who gathered around the Mambaram Mosque after hearing the news became uncontrollable the police resorted to firing. With that the riot is said to have its beginning. He also opines that the revolt can be considered as one of the most important revolt in the history of India after the revolt of 1857, considering the extent of the area to which it spread, the loss in terms of men and money, its nature and the time.

He gives a detailed description of the activities under taken by the *Khilafath* Movement as a part of the revolt such as the robbing of the treasuries, attacking police stations, destroying the records of the registrar office, cutting of the post and telegraphs removing rails from the railway tracks, killing of a number of European officers and military men etc.¹⁸ The author dedicates one entire chapter to describe the activities undertaken as a part of Khilafat Movement. By the beginning of 1921 a Mappila Volunteer Core was organized in Eranad under the leadership of the Mappila Ex-soldiers who formed the majority in its membership as well. They conducted the training in the places in and around the mosques. When the Khilafat Movement had began they became a part of the movement and began to act as a voluntary core of the Khilafat movement and assumed the title and position of the army in the first state Khilafat conference held at Ottappalam which is reported **by the 'Yogakshemam'**¹⁹. The police report highlights the view that this voluntary movement of the *mappilas*, though formed a part of the Non co-operation movement, it was quite different from it. He states that the beginning of the Movement was due to the repercussion of the *Khilafath* Conference held at Karachi and also **the declaration of the slogan 'Swaraj within one year' by Gandhi. This terrified the police and they** tried to prevent the conducting of the meetings. It had a great impact on the people who began to show the signs of revolution. At the same time

the police was also terrified by this and they also began to make attempts to block the public meetings. When they failed in it directly they induced the land owners to express their unwillingness in organizing the meetings in their lands. Another attempt made by the police to weaken the khilafath movement was to encourage the royal supporters who vehemently opposed the Movement.

Another thing that is clearly illustrated in this autobiography is the various atrocities committed by the police and also the sufferings that the prisoners had to face in the jails. He held the view that the khilafat and Non Co-operation movement gained popularity when the police began to adopt violent and corrupt measures **especially against the Ali Musaliyar's group. They** were arrested on false reasons such as house breaking, robbery, etc and those who were arrested were physically tortured. As the followers of Ali Musaliyar could not with stand such torturing, they began to react especially against the forcible arrest of the police. The intention of the police behind such atrocities were to provoke both Musaliyar and his group and make them apart of the riot and thus to destroy the Non Co-operation movement by bringing them before law. When the police atrocities became intolerable The Khilafat members also resorted to the making of weapons. Though the leaders of the Congress like M.P.Narayana Menon and K. P. Kesava Menon etc tried to prevent the newly developing trends and establish the principles of Non violence they could not succeed before the growing repression from the part of the police.

He had a difference of opinion regarding the date of the beginning of the revolt. He held the view that though the Malabar rebellion is said to have began on 20th August 1921 with the arrest of Vadakke Veettil Mammad, actually the rebellion had its beginning from the 1st August itself when Vadake Veettil Mammad²⁰ with preparation met Inspector Narayana Menon.²¹ When he joined the Khilafath Movement, he was dismissed from service by the manager, Araam Mura Chinnanunni Thirumulppad of Nilambur otherwise called Thampan. When he asked for the salary arrears of around 350 rupees, Thampan was reluctant to pay which made Mammad to collect it forcibly. For that the Thampan filed a false petition against Mammad on the charges of theft and house breaking.

Another thing that is brought to light by the author is the attitude of the National Congress. Though the rebellion had its beginning with the *Khilafath* Movement which was a part of the Congress agenda, they never supported the Movement or the revolt instead they gave support to the English. More over they did not do anything to release the political prisoners captured as a part of the *Khilafaths* Movement. He even blamed the congress for not withdrawing the Non Cooperation Movement immediately after the Tirurangadi event.

Conclusion

Though the present Autobiography highlights the typicality or representativeness of his experiences It was not one of the intimate self revelation but of an experimenter sharing notes with others. From this it is very clear that even

when autobiographies turn away from focusing on the protagonist their mode of writing remain tied to a first person voice and a lived history. Using the life of the author they sought to provide their readers with a slice of history.

In conclusion we can see that the autobiography *Khilafat Smaranakal* has a place of importance in re reading the history of khilafat movement in Kerala and it also gives further references and clarifications to the existing theoretical problems in analyzing the nature and character of the Malabar rebellion of 1921. As in the case of other autobiographies we cannot minimize it role as merely as a literary expression rather we have to consider it as a valuable source for historical reconstruction.

FROM CONQUEST TO CONSOLIDATION: REFLECTIONS ON THE BRITISH ETHNOGRAPHIC EXPLORATIONS IN MALABAR

P.V. Sreekkutty

This paper mainly deals with the nature of British administration in Malabar through their different perspective. So I want to divide Malabar in to three phases:

- Early phase of British Malabar (1792-1830)
- Second phase (1830-1857)
- Third phase : After 1857 what are the factors contributed for the changing nature

of the British perception from one period to another about the people is a very important question.

The first period of British administration (1792- 1830) represents the early phase and also the period of commercial perspective. This period witnessed many revenue records. In this period British mainly wanted to establish Malabar as a separate revenue and political entity as a part of the early administration. These

reports mainly shows how the collection of revenue and what should be the nature etc. So we can analyze that the conquest nature of the British. But in this phase British made a scanty reference about the people of Malabar. Because their mainly concern was to make profit.

The second phase has an important role in the history of British Malabar. In the period between 1830- 1857 we can see number of changes in Malabar due to the policies of British. We can see the *Mappila* disturbances, Basel Mission activities, Plantations, British public works etc. So this phase analyzed the nature of Peopling of Malabar through these activities.. Through the different acts, plantations, activities, Education, Public works British wanted to subjugate the people as a part of the Peopling of Malabar. In this period British mainly concentrated commercial and controlling the population. The second phase also pointed out what was the background or the reason for the creation of census and also ethnographic analysis.

So in the first phase British mainly wanted to establish Malabar as a separate revenue and political entity. This period produced number of revenue reports. But all reports deals with the land and sources of revenue. For this purpose we can see only a scanty references about the people. But these are not ethnographic concern. This conquest phase changed into another phase, that is controlling and consolidation of the people. It also lead to the ethnographic exploration in Malabar. So after 1857 we can clearly shows the number of ethnographic nature of the British.

In the first phase there are many revenue reports with scanty references about the people. In the report of Joint commissioner's we can see the various divisions of the people. According to this report, Malabar *Rajas* considered as the second tribe of Hindu and Malabar *Brahmins* considered as a significant caste differed from all other castes in India.¹ According to this report Laborers, carpenters, Braziers, Gold and Black smiths were belongs to the *Tiers* caste. The castes like *Paraya pulaya* mentioned as cultivating groups and we can see the details of caste *Polere* and *Churmer* as degraded castes.² The joint commissioners called the rebels as Jungle *Mappilas* or robbing *Mappillas*.³

In the Jamabandy Report of Major Macleod, we can see the details of different castes and also their features. He mentioned the castes like *Namboothiris*, *Nairs*, *Moplahs*, *Teers*, *Muckuans* and *Cherummers* etc.iii He viewed the customs of castes in a different point of view. This time British began to write or identify the divisions in the Castes.⁴ He also mentioned about the *Mappila* caste as *robbers* in the hilly parts of the southern districts and their number varied according to the energy or weakling of the Government. He considered *Teers* as *Shanars* are a caste of *Hindoos* lower than the *Nairs*, they are very industrious and useful and possess landed property in every district. According to him, The *Mckuas* are a low caste of *Hindoos* and the *Cherummars* are all slaves an they were bought and sold like cattle with and without the land.

In the report of Buchanan we can see the classification of Malabar population as *Musalman*, *Namboothiri*, *Tamil Brahmins*, *Rajas*, *Nairs*, *Mukkuva*, people from eastern countries in the North Malabar and *Namboothiri*, *Pattar*, *Nair*, *Thiyya*, *Mappila*, and other castes in South Malabar. Francis Buchanan also classified the population of Malabar as different castes and sub castes under one caste. He made different point of view about Mappilas as they were intelligent and communicative people. According to this report the castes like *Shanars* as *Tiyya* and numerous tribe, *paraya* as slave, *naidies* as outcaste tribe.

According to Graeme, The *Nairs* of Malabar are high minded, intelligent, active, intrepid and independent in their manner, but candid and respectful.⁵ Then *Mappilas* are industrious, skilful in trade, crafty, avaricious people. So we can see this British view about *Mappilas* also changed in later periods as criminal tribe. The condition of Slaves also became an important subject in this report. He also pointed about that, the Slaves may be sold with and without the land. So we can analyze that British categorized some communities as tribes. Later the concept of tribe changed in to new perspective. Later periods British categorized the population into tribes, high castes, low castes etc. In the Memoir of Ward and Conner we can see the population classification in the Talooks of Malabar. This memoir also includes the population of each district.

So these are the main reports in the first phase. We can see the nature of these records are only commercial purpose. Descriptions about the people are based on revenue manners not an ethnographic manner. This is also part of conquest of British. As a part of this process they made only scanty references about the people. But the period between 1830-1857 the perception of British began to change as from conquest to consolidation.

Then the second phase clearly shows the period of change from conquest to consolidation. In this period we can see the *Mappila* disturbances, Basel Mission activities, Plantations, British public works etc. So this phase analyzed the nature of Peopling of Malabar through these activities. Through the different acts, plantations, activities, Education, Public works British wanted to subjugate the people as a part of the Peopling of Malabar. In this period British mainly concentrated commercial and controlling the population. The second phase also pointed out what was the background or the reason for the creation of census and also ethnographic analysis.

In this phase British more concentrated the properties under the people belongs to different castes. But British did not give any importance to understand the features of caste as a ethnographic manner. To get income through controlling of the people is the main concern of the British.

Moreover the hill tribes were largely recruited as labourers in the plantations and thus they became bonded laborers. Thus, the tribes like *Adiyans*, *Paniyans*, etc. were released from agrestic slavery from paddy fields but became bonded laborers in the plantations on low wages. We can see the encouragement of coffee and teak plantations of Waynad in the 1840's.⁶ After the Government Abolition of Act in 1843 British made the status of such people as labourers in their estates. So this was the main logic of British behind the abolition act. The nature and extent of peasant revolts was the effect of British controlling and consolidating process. We can see such revolts as Communal riots, religious disturbances, Fanatical outbreaks in British documents.⁷ In the Strange report, he called the uprising as "*Mapila* inhabitants upon Hindus".⁸ According to the Report on *Mappila* out rages, *Mappilas* are not a people as other subject of the

British Government. Then this stage also witnessed the conversion from the lower castes, particularly, Cheruman, Pulayan, Vettuvan and Mukkuvan- the first three being *agrestic slaves* and *fisherman*.

During this time, the status of the individual in society was determined by the caste. The traditional caste system, Feudal relation, and other social evils were the part of society. The higher caste enjoyed the privileges while the lower castes were deprived of them. So in this stage we can see many conversions in to Christianity.⁹ We can see the encouragement of public work in madras presidency. Building roads, canal networks, Bridge construction were the important works. So during this time British gave an importance to communication systems as a part of their controlling activities.

The period after 1857 we can see the shift from the early perception of the British. This is the third phase. In this background British forced to understand the anthropologization of colonial knowledge about the subjects of their rule.

In the Madras Government Museum Records, there is wide ethnographic description of the people of Malabar. It is also based on Anthropology. This record represented the Malabar as the Diversity of the people and also it is very interesting for the study. In this stage we can see the changing British perception in the understanding of people. Because British more aware of the ethnographic features of the people. So in this record deals with the peoples of different castes and also their height, weight, shoulder, Nasel length etc. So this study is not according to the individual person but based on caste. Then this time the high caste and low caste divisions became more wide. So British tried to give a meaning of castes. For example, the meaning of castes. *Namboothiri*: 'Nambi' means trustworthy, and 'Tiri' means light.¹⁰ In the Madras musuem record, Anthropology of *Paryars*: mainly deals with the description of festivals in Malabar. In this record we can see the the caste like '*Cherumas*' as lowest class, cultivation agent and also agrestic slaves.¹¹ Then in this stage the ehhnographic studies became concentrated the other sections of the society like *pulluvar* (snake worshipers). So in the early British period we cannot see such type of studies.¹² Omens, evil eye charms, animal superstions, sorcery, and votive offerings became the study of British in

order to deeply understanding the society. Then we cannot see the details of these things in the earlier period. In the Caste and tribes of southern India of Edgar Thurston, we can see the Head measurements, dictionary, wide details about sub castes and also the pictures of some ceremonies.¹³

In India we can see some assistants as informers of British in order to understand the Indian society. No doubt these people were high castes. The person like Mr. Ragachary was the assistant of Thurston, then many thahsildars or village officials and police officials helped British to understand the people of Malabar. So we can say they will give an information as in favor of them. So we can also see some Savarnna bias in the writing. So the British wanted to get some support from such peoples. But they acted according to the British instructions.

After 1857, for the expansion and maintaining political and economical control British needed knowledge about the people. So the ethnographic studies became powerful tool of them. So the attitude of the British about the

people of Malabar changed according to the situation that when they faced challenges from the society. So the early records deals with some scanty references about the people. That time British had no serious thought about the ethnographical point of view. After 1857 the British forced to understand the ethnographical features of the people in a wide manner. So the process of subjugation of people was also the important feature of this period. Sudipta kaviraj analyzed the transforming nature of Fuzzy identities to enumerated communities. So we can understand how British constructed and marking the people from fuzzy identities in to enumerated communities through the ethnography and Census. Such knowledge culminated in decennial Census reports from 1871 onwards, and the late nineteenth and early twentieth century series of district Gazetteers, Survey, and settlement reports, and tribes and castes volumes for the various British Indian provinces. Ethnography and Census provides the best illustration for the historiographical shift.

SLAVE TRADE IN THE DUTCH INDIAN OCEAN WORLD: A COMPARATIVE STUDY OF MASULIPATNAM AND COCHIN

A. Subash

Introduction

Slavery and other forms of coerced labour are seen as oriental modes of production and more as part of labour-intensive means for economic development.¹ Slavery in particular is claimed to have been an integral and dynamic

part of the colonial economic system. Coercion and confinement were not the only key elements crucial to this system of slavery. It is now increasingly accepted that transportation and trade were also crucial elements supporting it.² Various studies have explored the dynamics and

size of slave trade and slave transportation in modern period under the colonial rule from a global perspective. Whereas the Atlantic slave trade has been mapped out in relatively great detail in numerous studies, its Indian Ocean counterpart has remained largely uncharted territory and overlooked in Asian colonial historiography.

Slavery, far from being a “peculiar institution,” has deep and far-reaching roots, stretching back at least to the beginnings of historical times in many parts of the world. In India slavery is traced to ancient period. Mainly the debtors and captives of battle were converted as slaves. The number of slaves a particular officer or an individual was allowed to take depended on his status. The services of slaves have been used by the kings, aristocrats, *zamindars*, higher officials, Brahmin teachers, sages and prostitutes since ancient times. From the first quarter of the sixteenth century, the dynamics of slavery underwent changes. Instead of being used as a labour force, the slaves have been converted into a commodity that can be traded. From this period onwards, the Muslim rulers and European East India Companies started involving in export of slaves from various ports of Indian subcontinent.

Among different European trading companies who colonised India, the Dutch East India Company (*Vereenigde Oost-Indische Compagnie* or VOC) was involved in slave trade in an organised manner and on a large scale compared to the others. For most of the seventeenth and eighteenth centuries the Dutch were active participants in the Atlantic and Indian Ocean slave trade. Various circuits throughout the Dutch Asian Empire ensured the continuous mobility of slaves to it. The Dutch Indian Ocean slave system drew slaves from three interlocking and overlapping circuits of sub-regions viz., 1. African circuit of East Africa, Madagascar, and the Mascarene Islands, 2. South Asian circuit of the Indian subcontinent (Malabar, Coromandel, and the Bengal), and 3. Southeast Asian circuit of Malaysia, Indonesia, New Guinea and the southern Philippines.³

Among these different circuits, the Indian subcontinent remained the most important source for slaves until the 1660s. Moreover, the majority of the enslaved population in the VOC empire was not owned by the Company, but by private slave owners, mainly VOC personnel and European, Eurasian and Asian inhabitants of VOC cities and rural regions. The VOC owned only a few thousand of the tens of thousands of slaves living in Company regions, in some cases hiring additional slave labour from local slave owners.⁴

The study of Indian Ocean slavery is not only complicated by the paucity of written sources, but also by its multi-directionality and the many players involved. The supply of slaves was often determined by catastrophes, both natural and manmade, indebtedness and more powerful polities raiding weaker ones expressly for enslavement.⁵ These dynamics of slavery and the slave trade seem to have existed before European powers arrived in South and Southeast Asia.⁶ The arrival of the Portuguese, the Dutch and other European trading companies only intensified the long-range slave trading networks. In this way, European demand for both slaves and Asian commodities resulted in the growth of the slave trade throughout the Indian Ocean world.⁷

Several studies have dealt with the transportation of enslaved Asians and Africans by the VOC, often for its own use as Company slaves.⁸ Most of these studies have focused on the Company and private slave trade in and around Batavia (modern Jakarta) and the Company slave trade from Madagascar to the Cape of Good Hope.⁹ Despite these pioneering works, too little is known about the private slave trade involving VOC employees. This article explores the patterns of private slave trade by the Dutch along the Coromandel and Malabar Coasts, particularly from the ports of Cochin and Masulipatnam.

As mentioned earlier, throughout the seventeenth and eighteenth centuries, the European companies were involved in the slave trade in Asia. Indian slaves were exported by

European powers to their colonies in the eastern and western Indian Ocean.¹⁰ Company officials as private individuals also engaged in the legal and illegal slave trade.

An important area in South Asia taking over most of the Dutch slave trade was the Malabar Coast (Kerala) of India, where between 1657 CE and 1663 CE the Dutch successfully ousted the Portuguese enemy from their colonial trading posts. Several thousand prisoners of war on the Malabar Coast were transported to Ceylon and Batavia as slaves. After hostilities had ended, the Dutch continued to export a small but continuous stream of slaves, mostly taken from the hinterland of Cochin and estimated to consist of 50-100 slaves to Batavia and 80-120 to Ceylon on annual basis.¹¹ This Malabar slave trade was maintained well into the eighteenth century.¹²

The Malabar region and its main VOC port, Cochin, were strongly connected to the slave system as one of the most important slave exporting regions. Cochin was located on the shipping routes between Persia and Surat, the Coromandel Coast and Bengal, and the Indonesian archipelago. It is from here the slaves were traded and transported to all regions of the Dutch empire.

The Malabar slaves were one of the most significant groups of enslaved subjects in the private slave trade, being shipped from the Malabar Coast to the Indonesian archipelago (especially Batavia), to Ceylon (especially Colombo) and to the Cape of Good Hope. The slaves traded were mainly, but not exclusively, male. It is apparent from different sources that high and low ranking VOC officials, free citizens and Asians under VOC jurisdiction partook in this lucrative slave trade. Information about the slave trade at Cochin primarily comes from the Dutch sources known as *Acten van transport*.

The *Acten van Transport* is a kind of register that speaks volumes about slaves traded and transported by VOC personnel in Cochin and on VOC ships engaged in intra-Asiatic shipping. The transactions of slaves in Cochin

indicate that the participation in the slave trade by the higher and middle ranks of VOC personnel was extensive. High-ranking VOC officials – merchants, administrators and governors – were sometimes able to fit out their own private ships to engage in this slave trade.¹³ On the other hand, lower and middle-ranked personnel employed in intra-Asiatic shipping, used the opportunity of their voyages in Asia on board Company ships to transport slaves giving a fillip to the private slave trade.¹⁴ Within Cochin, slaves were sold and bought by a large variety of local and European actors, ranging from *lascorins* (soldiers) to *moquadons* (overseers) and burghers (wealthy bourgeoisie or privileged citizens of medieval towns in early modern Europe), and from merchants to artisans. A significant number of the slaves were sold to VOC personnel on board ships. Most of the crew members buying slaves were captains, mates and boatswains, although others, such as constables, surgeons, lieutenants, ministers, would also participate.

The *Acten van Transport* also gives details of the seller (name, occupation and status), buyer (name, occupation and status) and slave (new name, old name, caste, gender and sometimes age). In combination, these sources will allow us to study the practices of permitted transportations of slaves from Cochin. Slaves for this private trade were supplied especially by other European servants and Asian Christians and burghers living in Cochin and surrounding places such as Chettue, Paloertij and Sint Andres.

The first European factory established on the Andhra coast was at Masulipatnam by the Dutch, on the strength of the *firman* issued by Muhammad Quli Qutb Shah (1580-1612 CE), the sultan of Golconda, in August 1606 CE.¹⁵ The officers put in charge of the factory were Pieter Eyloff and Willemsz.¹⁶ The main purpose of the factory was to obtain precious stones, food-grains, textiles, apart from slaves.

With a view to populate, cultivate and for domestic services in European colonies like Banda, Amboina, Moluccas and Batavia, all part of present day Indonesia, the Dutch started

sending a large number of slaves from the Andhra coast, particularly Masulipatnam. It was started by the Dutch officer Schorer who also **mentions in his records that the “trade of (human) traffic carried on here is extensive by sea as well as land.”**¹⁷ It is assumed that slave trade by the Dutch that was started in the first quarter of the sixteenth century continued upto their retirement from India.

The Portuguese traveller Borbosa refers to **“slaves being brought and taken to Malabar Coast from Masulipatnam in times of famine”** which occurred in Golconda kingdom in the early sixteenth century.¹⁸ It is estimated that 2,000 to 3,000 slaves were sent to Batavia, Amboina and Banda in 1621 CE.¹⁹ On 7th June, 1621 CE, a ship named *Schoonhoven* from Masulipatnam departed to the Dutch colonies consisting of 150 child slaves along with other commodities.²⁰ On 12th August, 1621 CE, orders came to the factors of the Dutch at Masulipatnam to send more number of slaves to Banda who were needed for the nutmeg and mace plantations. As such many slaves, mainly young and middle aged, were sent to Jakarta as the ship could carry. Again and again indents were sent from Batavia to fetch as many slaves as possible from Masulipatnam.²¹ As the Dutch officials on the Coromandel were not able to meet the requirements of Batavia as far as slaves were concerned, the Dutch East India Company permitted even the Indian merchants to take slaves to the South East Asian countries.

A Muslim merchant of Masulipatnam named Mohammed was permitted to collect **slaves and send them in the company’s vessels** to Batavia for sale. Similarly, an English man Alberto Gomes, who was from his childhood in the Portuguese service, was also given permission to buy slaves from Masulipatnam and take them to South East Asian countries for sale. The Company officials were of the opinion that the most profitable trade in the twenties of seventeenth century was to trade slaves from the Deccan and to sell them at Batavia to free burghers. But private traders were found more efficient in this and so the Company had

permitted both Indians and the Dutch to conduct this lucrative trade. In order to appropriate the more profits, the officials in Batavia used to write again and again to the factors at Masulipatnam for more slaves.²²

The Dutch cloth merchant Pieter Dircksz, travelling with the ship *Witte-Deer* to Coromandel was instructed by the VOC to take particular care in the purchase of slaves because they were needed to populate newly conquered territories. It shows the greed of the Dutch in getting slaves. The Dutch regarded slave trade precisely as any other branch of commerce.²³ The factors of the Dutch were reminded by the officials in Holland that they would be doing a better job to the Company by sending more slaves to Holland which would fetch more profits than other commodities.²⁴

Slaves were mostly children or young adults: on average they were only 13 years old. The girls were on average somewhat older (15.7 years) than the boys (12.4 years). Most of the slaves sold in Cochin were male (on average 71%). The slaves were taken for the purposes of acting as domestics to their masters/mistresses **and to work in the Company’s estates and plantations.** Slaves were often renamed. This was not only the case when they were sold by Asian sellers to European buyers, but could also be the case for European slave sellers as well.

The cost of slaves fluctuated from time to time and place to place. According to Methwold, the English official at **Masulipatnam**, **“children** were brought for a cost which was not above three or four shillings a child and they were sold again in Masulipatnam and other places for forty shillings.²⁵ On 8th May, 1622 CE, a slave had 8 to 10 *rials* as his price at Masulipatnam and 56 *rials* at Surat.²⁶

For the Dutch, the Coromandel slave trade was the most useful means of augmenting the supply of labour in their colonies. The traffic was large enough to attract the attention and incur the displeasure of native rulers and local Mughal officials. Some of the Indian rulers felt that sale of human beings was not only a scandal but a sin. W.H. Moreland found only one instance of the

refusal of Indian authorities to sanction the purchase of slaves. This was in the year 1643, when a nayak/chief rejected a Dutch request to buy up to 1,000 slaves yearly. But this human attitude was not universal.²⁷ The archival record reveals that European slave trading invited negative reactions from local Mughal officers also.

The Governor of Madras, Elihu Yale noted that the Dutch had incurred Mughal displeasure for exporting slaves from Masulipatnam and as a result Yale and his council banned the purchase and exportation of slaves from ports of Madras Presidency in May 1688 and also imposed a fine of 50 *pagodas* for each slave illegally purchased and exported. Unfortunately, it is unclear whether this ban, which reportedly remained in place for five years, was ever enforced in any meaningful way. In the 1780s

NUMISMATIC DATA ON MARITIME EXCHANGES IN EARLY MEDIEVAL KERALA

N. Sudarsana Kumar

Perspective of our past is formulated on geographical realization, which is formative in the passage of time. One of the unique feature of ancient Indian knowledge system was the comprehensive understanding of the products and regions of the subcontinent, which seems to have evolved from pre-historic period onwards. *Arthasastra* explicitly states that most of the regions have been assessed from the point of view of their important products and amply indicate that a pan Indian vision of economy had emerged by the 3rd century BCE. *Jatakas* in the 6th century BCE propose an in-depth portrayal of the network of craft production, well net with internal and external trade centres. There has been considerable research on the literary and numismatic exchanges in early Kerala history. Most of these studies are solely based on literary references in Greco-Roman or indigenous sources such as the bardic poetry of the Sangam Age. However, the numismatic references in inscriptions substantiating the flourishing maritime trade of early Kerala remains untapped to a great extent. The present study focuses on inscriptional reflections of numismatic exchanges in the early history of Kerala.

The geographical area resided by people of Kerala in the south-western peninsular region was initially known as *Malainadu*, which literally means the hill country. Fr. Heras, the noted Indologist mentions, '*Karmukil Malayala nadu*' (*Malayala nadu*, the land of rain clouds¹). It is evident that when inhabitation started in the initial stages, the region was known as *Malainadu*² or *Malaimandalam*³ and with the evolution of linguistic identity, it was called *Malayanma* and the usage *Malabar* is reminiscent of trade exchange with Arabs (*Barr* means land or country). When the British colonialization process brought northern Kerala under their direct administrative control, they called it Malabar to differentiate the region from native states of Cochin and Travancore. The merchants from the region were also identified as such; *Malaimandalathil kuthiraichettikal*⁴, *Anjuvannam* merchants of *Malai-mandalam*⁵, *Magodayar-pattanam* in *Malai-mandalam*⁶, etc.

Another notable archaeological ground is the wide distribution of NBP from its central Ganga plain origin to all parts of the subcontinent from Charsada and Taxila in the northwest to Korkai in Tamil Nadu which symbolizes that through their region-specific symbols, the consolidation of the regional politics and their participation in a monetized trade network.⁷

Variety of materials such as agate, carnelian beads, amethyst, lapis lazuli, punch marked coins far away from their natural distribution and the coincidence of punch marked coins along with the local coins issues of the southernmost dynasties of Chera, Chola and Pandya points how well the subcontinent was integrated even at the dawn of history in the deep south. Among the available coins of Kerala, the silver punch marked coins and Roman coins represent the first generation and the Chera, Chola and Pandya coins signify the second generation. Roman mercan started in the 1st century BCE grew to substantial proportions in the 4th century CE, is evident from the availability of 41 hoards from south India, including the coins of Augustus, Tibirious, Nero, etc. Notably, the coin hoards from Kerala i.e. Eyyal in 1945, Kumbalam in 1974, Anjukunnu 1979, Valuvally in 1983, Angamaly, Nedumkandam, etc. were recovered either from indigenous trade routes connecting prominent ports of the ages such as Muziris, Baris, Tyndis, Nelcynda etc or on riverine exchange centres well networked through inland navigation lines. The remarks of Pliny, the author of the *Periplus of the Erythrean Sea*, Ptolemy's *Geography* (139 CE) and the Sangam works such as *Patittupattu*, the *Agannuru* and the *Purananuru* substantiate the extensive Roman trade with the Kerala coast.

Table: 01 List of Early trade coins from Kerala

Dynasty	Period	No. of Coins recovered
Magadha	542-440 BCE	2
Sisunaga	440-400 BCE	6
Nanda	400-324 BCE	70

CGM & Bindusara	324-273 BCE	16
Ashoka	273-232 BCE	94
Later Mauryas	232-187 BCE	783
Courtesy: Gupta, P.L.(1965), <i>The Early Coins from</i>		

The significant transition in the political economy of Kerala is traced from the wide distribution of Roman coins as tangible evidence in the first half of the beginning of the Common Era, which was directed towards the urban centers⁸. The coin hoards point the evolution of riverine markets, the nucleus of towns in the succeeding periods. The humming trade of Malabar coast necessitated the clearance of forests for mercantile resources such as timber, teak and sandal wood and pepper cultivation. The distribution of megalithic sites points to the wide use of iron tools and beginning of cultivation. The brisk trade was so much beneficial to Kerala, which is evident from the lament of Pliny that, “the wasteful extravagance of the richer classes and reckless expenditure on spices, pepper, perfumes, ivory, muslim cloth and such as beryl”⁹.

Major inscriptional sources containing reference of coins in trade context are:-

Chera Inscriptions: Contain reference of maritime relations, Chola, Pandya naval attacks of southern Kerala, especially Vizhinjam & Kandalur salai, indigenous trade, political organization of the time, role of merchant guilds, the town assembly of the *Arunoottuvar* (Six Hundred), the system of taxation and the spirit of religious toleration.

Chola Inscriptions: Rajaraja Chola’s naval invasion of Vizhinjam, defeat of Cheras and levied tribute from them, *Malaimandalathil Kuthirai Chettikal*, (the horse traders of Malainadu), strategic importance of this forest trade route, through which pepper that earlier brought to Quilon via Ariankavu pass from Kottarakara and suburbs were diverted through Thenkasi to the markets, etc.

Pandya Inscriptions: Vira-Pandya’s subjugation of Malainadu, Suchindram Inscript.: mentions that Vira-Pandya the opponent of Kulothungachola III took refuge with his near relations at Kollam, the capital of Kupaka kings, Nalpattennayiravar, the merchant organization.

Ay Inscriptions: Paliyam copper plates/”*Sreemoolavasam Cheppedukal*” AD 898 issued by Ay king Vikramaditya Varagunan - the donation numerous land holdings to Buddhist institution. It also remarks about Paranthaka Chola’s attack on Kerala for maritime control, Ay king Karunandadakan in AD 866.

Karnataka Inscriptions: refer merchants from Malaimandalam contact the cloth merchants known as *Mahasreshthin* of Karnataka associated with *Ainnuruvar*, popularly called *Ayyavole Ainnuruvar* at the end of 8th century, refers the grant of 12 villages to a Jain *basadi* by the Ganga king Kongunivarma, which was to be protected by the merchant guild Ainnuruvar along with 1000 *malepas* (hilly people) and five land lords(*damarigas*). Another 12th century inscription states the direct involvement of the merchant community in the construction of temple and installation of deities in Karnataka, grant of paddy/rice in Shantinatha *basadi* by certain *nanadesi* and Halaru merchants for serving food, grant of one *haga* i.e. gold coin, per horse by the horse merchant of Malayala for serving food, perpetual lamp and renovation of temple. In addition to direct evidence of horse trade of medieval period, it points the role of economically powerful medieval merchants from Kerala in patronizing a local temple, refers to Damodara Setti, *mahavaddavyavahari*, Malayali merchants from *Kulamukha pattana*, constructed a Trikuta Shiva temple called Damodareshwara at Bendeyakere.

Another Karnataka inscription furnishes a list of Malayali merchants, their locations, various activities, etc. Kunji Setti of Padiyur, and his nephew Kandanambi erected Satra in Harihara, Rameshwara, Panduranga and Varanasi. He was “a rich international merchant who negotiated between the Hoysalas and the Sevunas and established an alliance between them”.

Foreign Inscriptions mainly Chinese Fig.03
Early Ports and Maritime destinations on Malabar Coast and Ceylonese Inscriptions: Contain reference of maritime relations refers the presence of merchants and guilds from Malainadu. Important ports, cultural centres, trade items etc are referred. *Epigraphia Zeylanica* contain references of the maritime trade relations of Ceylon with the Indian subcontinent. *Ancient Inscriptions in Ceylon* by Edward Muller is another major source of

inscriptions. Ancient and Medieval Commercial Activities in the Indian Ocean: Testimony of Inscriptions and Ceramic-sherds: Report of the Taisho University Research Project, 1997-2002 edited by Noboru Karashima is a valid source for the maritime relations in the Indian Ocean region. **Other Epigraphic Sources** include:-

1. The Travancore Archaeological Series (VII Volumes)
2. South Indian Inscriptions
3. *Epigraphica Indica*
4. *Epigraphia Carnatica*
5. *Indian Antiquary*
6. *Puratattva*
7. Annual Report on Indian Epigraphy
8. Annual Reports of the Archaeological Department, Southern Circle, Madras. Coins are specifically referred in the following inscriptions.

Achchu: Achchu is a gold coin repeatedly referred in several inscriptions. The Cholapuram inscription of Kulotunga (396 KE) mentions a donation of 15 Achchu to the Udayamahadeva temple of Rajendra Choleswaram. Another Cholapuram inscription of 428 KE contain reference of installation of an image of Paravthy by a devadasi and giving 10 old Achchus and 10 new Achchus of gold to meet the expenses. Mitranandapuram Copper plate of the 12th century CE refers 30 *Anai Achchu* (coins bearing elephant mark)¹⁰, Trivandrum Inscription of Kodai Marthanda enshrined in the Goshala Krishna shrine in the Padmanabhaswami temple at Trivandrum refers alag-achchu¹¹ Thiruvarruvay Shiva temple inscription of 13th century CE¹², an inscription in the Siva temple at Sivagiri¹³, Minchirai Madam plate of 13th century refers 67 achchu set apart for feeding the Brahmins in the Dwadasi days¹⁴ All these inscriptional references of Achchu proves that it was an important coin in wide circulation for major transactions of the time.

Kanam: A gold coin or weight, that had been in use in early Kerala. It is referred in the inscription of Srivallavankodai at Tiruvanvandoor (149 KE), as the Venad ruler Thiruvallavankodai donating land to the deity of Thiruvanvandoor, free from the interference of Uralar and with provision for fine if interrupt.¹⁵ Thrikkodithanam inscription of Bhaskara Ravi

Varman of 992 CE¹⁶, The Huzur Treasury Plate belonging to the Vishnu temple at Thiruvalla refers Kanam as remunerations given to the temple priest.¹⁷ The Thiruvalla copper Plate (KE 491) refers Kanam, in the context of regulating the conduct of priest of the temple and were liable to fine of 24 Kanam-s of gold¹⁸. Thrikkakarai inscription of Kerala Kesari belong to the 10th century refer a land grant to the temple and mention wages to be paid in Kanam-s to the servants. The Kollur-Madam Plate of Udaya Marthandavarman (KE 364)¹⁹ also refers the provision of fines in Kanam-s of gold for any default in duties. Kulashekara Perumal's Thiruvallur inscription (11th/12th century CE) mention the extra-payment of one Kanam of gold to the *kilsanti*. From these inscriptional referances it is evident that Kanam was extensively used as the media of exchange for payments to and from the treasury.

Kasu : Kasu was another coin in use both in gold and copper extensively in Kerala. But inscriptional reference points that copper coins were more in use compared to gold Kasu. Sthanu Ravi in his Tharisappally Copper Plate (9th century) refers the land grant to the Church of Tharisa (*tharithakkal*; foreigners) remitting all taxes due from the families attached to the church. The church authorities were authorised to collect the taxes such as *Talaikanam*,²⁰ *Enikkanam*²¹, etc. from the families made over to the church in Kasu. The church authorities were also empowered to collect the custom duties on the incoming and outgoing boats in Kasu. Alagiyapandyapuram Inscription refers that, the land dues were collected by the temple authorities in Kasu. Manalikkarai Inscription of 9th century mentions a donation in Kasu to maintain the temple lamp at Tiruppanikulam. Tiruvidankode Stone Inscription belonging to the 10th century CE donation of land to the temple of Tiruvidancode with the provision to collect the fine in Kasu.²² Inscription of Bhaskara Ravi Varman 1004 CE remarks donation of gold Kasu to feed the Brahmins to the temple Tirukkakkarai. Chola-pandya inscription in the Suchindram record a gift of land and the sale amount of the land is stated in Kasus²³. Virakerala Varman's Cholapuram inscription (KE 302) accounts a royal grant of revenue in paddy and Kasu to the Rajendracholesvaramudiya Mahadeva temple. All these inscriptional

references of Kasu makes it clear that Kasu was an important currency of early medieval Kerala.

Panam : Panam was another coin found referred in inscriptions, there were gold and silver coins, which seems to be in existence in towards the 15th century CE. Several other coins such as Izhakasu, Salagai and Dinara, etc found referred in inscriptions. Salagai was a Pandya coin, which is cited in Kodai Marthanda Stone Inscription of KE 403. Salagai is referred in Trivandrum Inscription of Kodai Marthanda²⁴. Only in major ports printed money was current, major and minor markets, riverine centres all might have been led by material exchanges, bondage transaction via religious centres. The inscriptions (SII XXII no. 447, 448, 449) dated in the 23rd , 31st regnal year of Maravarman Kulasekara Pandya refers to the sale of land to an individual from Malai mandalam (i.e. Chera region) by the village assembly (*mahasabha*).²⁵

Conclusion

The archaeological and literary substantiation of the flourishing maritime trade of Kerala with Romans embodied in Sangam literature and Greco-Roman accounts, several hoards of coins, ranging from Magadhan period to 15th century Chinese hoards recovered from the dredging of Kollam port in 2014 exemplify the demand for the products such as pepper, ginger, cardamom, cloves and akin spices, faunal articles such as animal hides and ivory, beasts such as apes and birds like peacocks; wild forest resources like aloe, sandal, teak, precious and semi-precious stones, such as beryl, pearls and the cotton fabrics, etc. in return of gold and silver coins and also for copper, tin, and arsenic. Occurrence of black pepper, irrefutably from Kerala at Sanghol in the Kushana period, indicate the demand for Kerala spices²⁶. To sum up the inscriptional sources furnishes interesting and valuable references of different coins of early history of Kerala and it help us to have an insights into the currency system prevalent and its role in facilitating maritime trade.

CONTRIBUTIONS OF MUSLIM HISTORIANS TO INDIAN HISTORIOGRAPHY SPECIAL REFERENCE TO SULTANATE PERIOD

G. Syed Kadhar

Introduction

Historiography is known as *Ilm-al-tarikh* in Arabic. As a responsible to the society, the account of all activities of human race is called history. Historians are always active with the collection of historical data, compilation of books, analysis of historical events, examine authenticity of the sources of history with his wide attitude noted that he is also a member of the society. A historian cannot deny his time, place and environment, own thinking, sense of morality in his writings. In fact, history is itself changing because of having many obstacles. But men always want to know actual events related to the human life. From the ancient time, this trend of the knowledge continued and in this way, historiography is formed as an important part of knowledge and education. The Ghurian conquest of north India towards the close of the twelfth century A.D. is an important event in Indian history. This is because an independent sultanate, founded in its wake, opened India to foreign influences on the one hand and led to the unification of the country under a strong centre on the other. It also attracted emigrants from the neighbouring countries who represented different cultural traditions. One of the traditions introduced by them was that of history writing. The historical literature produced by them in Persian language is of vast magnitude. As a matter of fact, the study of history was considered by the Muslim elite as the third important source of knowledge after the religious scripture and the jurisprudence. With the coming of the Mughals in the 16th century, the tradition of history writing achieved new heights. During the Mughal period, the state patronized writing of history and we have a large body of historical literature in Persian spread over two centuries. In this chapter, we will discuss only the tradition of history writing during the Sultanate period.

Muslim Historiography

In the early stage of Islam, in the beginning of 9th century Muslim scholars and historians considered historiography to be the third source of knowledge after the research of Quran and Sunnah. For this reason, after the collection and

compilation of the Hadith of the prophet, they start writing of the history. It seems very interesting to me that the same tradition was followed to the collection, compilation and preservation of the Hadith of the prophet and the history of the primary age of Islam. This tradition was followed till hijra 3rd century (9th and 10th C.E). Since Arab historiography was mostly around with the description of the events and religious theme. In course of time, it was enlarged and enriched with the research of tribal, regional and national history. Also by the description of the world history, Arab historiography becomes a major part of the world historiography and it starts the glorious steps of the Muslims in the development of knowledge. Standing on this, Arab historiography took its multi-formation not only discussion of the historical events but also fixed its relation to the cause and effects along with deeply analyzed criticism attached with the history. In this way, the Muslim scholars developed historiography at the same time Arabic language was also developed because the state language was Arabic at that time and research work on historiography was continued naturally in Arabic.

In 1258 A.D, having destroyed Abbassids Khilafat and Ilkhani dynasty was established. With the Ilkhani **dynasty, 'Persi' language** became the state language and it was developed during the time of Timurids and Safavids. In this **way, 'Persi' entered in Indian sub-continent** by the change of political power around the world. When Turkish replaced Persians, historiography was also started in Turkish language. But, the research of historiography in Turkish language has not so far enriched. Turkish sultans also patronized the Persian language later and at that time, regional and dynastic history continued in Persian language. Though the Arab historiography follows the Persian trends in the research of historiography, there is something different in the Arab historiography. Main theme of the Persian historiography was the conduct occupation of the kings. In the Persian history, general people was totally absent or a little bit was seen in their historiography during Ilkhani **period composed in Persian language** "*Jami-at-*

Tawarikh by Rashid-ud-din. In this book, the author tries to follow the trends of At-Tabari's writings but in his writings, the character of Arab historiography is totally absent in this write up. But, Rawatas- Safa composed by Mirkhand represents Arab trends and nature. During the Timurids period, the same trends 'Tarikhi- Khani' and 'Jafamama' were composed. In these two books, Timurids dynastic history was arranged superbly. It is said that Muslim historiography was influenced later by the trends of Arab and Persian historiography. The Persian and Turkish carried on the central Asian trends of historiography towards Indian subcontinent.

Historiography in Sultanate Period

The early writings in Persian on the history of Turks who came to India are traceable to 12th Century. As far as Delhi Sultanate is concerned, we have a continuity of available texts in Persian till the end of the Sultanate (1526). Many of the authors were attached to the court as officials while a few were independent scholars not associated with any official position. In general, the available histories put forward the official version of events, rather than a critical evaluation of the policies and events. It is rare that one comes across any critical reference to the reigning Sultan. Even the style is also generally eulogizing or flattering to the Sultan under whose reign it is written.

In most cases, the authors borrowed freely from the earlier works to trace the earlier period. We have referred to the constraints faced by various scholars while discussing individual works. Apart from historical texts, a number of other Persian works are available for the period. **Abdu'r Razzaq's *Matla'us Sa'dain*** (travelogue), **Tutsi's *Siyasatnama*** (administration & polity), **Fakhr-i Mudabbir's *Adabu'l-Harb wa'as- Shuja'at*** (warfare), are a few important ones. A few Arabic works are also available for the period. Ibn Battuta (*Rihla*) and Shihab-al Din al-Umari (*Masalik al-absar Mamalik al-Ansar*) have provided excellent travel accounts. Here we will study the historiography for the whole Sultanate period in separate subsections.

Ziauddin Barani's Tarikh-i-Firuzshahi

Barani is, no doubt, the doyen of the Indo-Persian historians of medieval India. Born in an aristocratic family and associated with the royal court of Delhi for generations, he was obviously

concerned with the fate of the Delhi Sultanate. He seems to have believed that it was 109 his duty to present through his *Tarikh-i Firuzshahi* an intellectual composition for the enlightenment of the ruling elite of his times. Barani's *Tarikh* begins with the accession of Sultan Balban to the throne of Delhi in 1266 and comes to a close with the account of first six years of Sultan **Firuzshah Tughluq's reign, i.e. the year 1356.** Barani's *Tarikh* is unique to the Persian history writing tradition prevalent till his times. It is for the first time that he tries to analyse the cause and effect of the events and developments taking place in polity and economy. In his account of the economic policies and measures of Alauddin Khalji he provides an analysis with causes and formulation of the policies and their impacts. Barani also elaborates the purpose of writing history in explicit terms. Barani also declares that the job of the historian is not only to eulogise the deeds and good works of the rulers but also to present to readers a critical account of the shortcomings and drawbacks of policies. Moreover, the scope of history is considerably widened by Barani with the inclusion of details about the cultural role performed by intellectuals, **scholars, poets, and saints.** Barani's style of history writing inspired the historians of the subsequent period, many of whom tried to follow his ideas. reduced to the size of a town. Khizr Khan (ruled from 1414 to 1421) and his son and successor, Sultan Mubarkshah (1421-1434) tried to rebuild the power of the Delhi Sultan but could not succeed. His own nobles assassinated the latter in the prime of his life. One of his officials Yahya bin Ahmad Sirhindi, composed the history of the Sultanate and named it after the Sultan as *Tarikh-i Mubarakshahi* in 1434. It begins with an account of Sultan Muizuddin Mohammed bin Sam, who led the Ghurian conquest of India and the account closes with the accession of Mohammad Shah in 1434. The compiler seems to have drawn information from a number of histories written in India at different times. Some of the sources utilized by Yahya are now extant but bits of information on them survived through information collected and incorporated in the *Tarikh-i Mubarakshahi*. It enhances its importance. The historian of **Akbar's reign utilised** the *Tarikh* in the preparation of their volumes devoted to the history of the Delhi Sultanate.

Trends and Nature of Historiography in India During Sultanate Period :

In the Ancient India, there were no fixed and specific methods that were followed regarding the preservation and compilation of the historical events. Moreover, it was preserved through oral system. This system helps preserve religious rules and regulations, restrictions and others social rules. But it is not sufficient or enough to establish a permanent system of the preservation of all historical data and events especially the events related to the dynastic rule of India. At that time, the scope of the historical analysis was also very limited. So, we can say that, before the Muslim rule in India, historiography was totally absent. During Muslim rule in India, historians wrote analysis and criticism of political parties, rulers, government, administration and other organs of the country and Indian historiography, on the basis of research methodology, authenticity and inquisitiveness could not reach to the similar position with the western. In fact, there are separate attitudes and thoughts among the two parts of the historians of east and west. For the first time, Muslim historians started their historical research by removing this difference between the East and the West. In the composition of "Tabakat-e-Firozshahi", "Tabakat-e-Akbari" Muslim historians follows the modern methods and systems. Based on this, we can say that the Muslim historians were well versed of the modern historiography elements and sources. In the Sultanate period, (1206-1526 A.D) their royal court was filled up with the presence of Historians, Writers, Philosophers, Thinkers, Politicians, Orators, Poets and other scholars of the time. In this time, Indian historians did not fully follow Arabs and Persians, but they introduced a new trend in their research in accordance with Indian local perspective and reality of the time. In all regional historiographical write-ups, we see this tradition was followed seriously. Muslim conquerors conveyed the traditional historiography and cultural heritage of Arab, Turkish and Persian towards Indian sub-continent. The Indian Muslim historian's writings were almost similar with the writings of the outside of India by the Muslim writers on the basis of the planning through objectives of the events and also in the decoration of language. For this reason, the culture of Hindu and their social life are rare in the write-ups of the Muslim

historians of India. The reflection of the conservative mentality and social attitude was inactive in the Muslim historiography of India. Hasan Nizami is one of the famous writers among the historians of early Sultanat period. In his "Taj-ul-Maa'sir", history from 1st 'war of Tarain' of 1191 A.D to the of Sultan Iltutmish's time till 1229 A.D was placed. Hasan Nizami presents some pictures of the society and culture with the political history of that mentioned period in his book.

Al-Biruni (973-1039A.D)

Al-Biruni's full name was Abu-Rayhan Mohammad. He passed his youth on the banks is of the river Oxus in the city of Khwarizm (Khiva) situated in the Republic of Uzbaikistan. The prince and ruler of Khwarizm professed ardent zeal for science and arts, and encouraged scholars like Al-Biruni to study the various branches of knowledge and inspired people to travel different parts of the world. Al-Biruni, through his dedication and vast knowledge, achieved great scholarship in philosophy, religion, mathematics, chronology, medicine, and various languages and literatures. He was a man endowed with creative genius, sagacity, wisdom, sincerity, and commitment to inductive reasoning. His humour, courage, enterprise, objectivity, honesty, prodigious industry and intellectual skills were unprecedented.

Early Career

Al-Biruni was one of those prodigious minds at work in the medieval world whose creative, versatile, scientific, and international outlook, coupled with universality of thought, amaze the modern world. He was free from dogmatic conservatism as well as emotional bondages. This helped him to remain free from prejudices. He was more of a synthesizer than a dogmatic scholar, a keen observer of comparative studies par excellence. Al-Biruni's position as a scientist and scholar may be appreciated from the fact that the eleventh century has been regarded as the 'Age of Al-Biruni'. According to some historians, Al-Biruni was born on 4th September, 973 A.D. (3rd of Dhul-haj, 362 A.H.). His father and mother expired at an early age. Although a Tajik by race, he was Persian by culture. There is a strong controversy about the birth of Abu-Rayhan. It revolves round the identification, interpretation

and meaning of the word 'Biruni', a part of Abu-Rayhan's name. Is Biruni a city? Where was it situated? Or is Biruni a suburb of Khwarizm (Khiva)? Or does it denote one who was born in Khwarizm or one who lived outside the city of Khwarizm? This confusion has led some later authorities to find a logical explanation for this term. According to Samani's *Kitab-al-Ansab*, the people of Khwarizm called foreigners Beruni (Biruni) in Persian and for this reason Abu-Rayhan was called Al-Biruni. The well-known historian, Yaqut, has opined that perhaps Biruni meant one who lived outside the city or in the countryside. Except Abu-Rayhan, no other person was given this appellation which means that it was not in general use. Abu-Rayhan's stay in Khwarizm was also not short for his first 23 years were spent in that region under Al-i-Iraqi, and a further period of 8-10 years under the Ma'munids. In all he spent nearly 30 years in Khwarizm. Moreover, he was born in the suburb of Kath-a town in the region of Khwarizm. His other contemporaries like Ibn-Sina stayed for far shorter period in Khwarizm but none was ever styled Al-Biruni, even though Ibn-Sina was a Persian by origin. The use of Al-Biruni with the name of Abu-Rayhan, therefore, appears to refer to his birthplace, a town or a suburb settlement of Khwarizm. Unfortunately, Abu-Rayhan has not left behind any autobiographical account. There are some scanty references in his writings but these do not throw light on his education and early life. One may presume that he received the traditional Maktab and Madarasah education. Al-Biruni was a great scholar and possessed encyclopedic mind. He was always in search of new knowledge.

Alberuni and Different Branches of Learning :

He was a liberal and profoundly interested in science. In his age orthodox reaction had already set in and Abu-Rayhan was wary of being accused of heresy while writing *al-Hind*. Abu-Rayhan, born with a great analytical mind and keen comprehension, was irresistibly drawn to the study of mathematics. Travelling was always regarded as a part of education in Islam. But, by the 11th century, numerous rich libraries established by rulers had greatly reduced the need to travel to distant places for acquiring knowledge. However, when Abu-Rayhan wanted to study Indian sciences, he had to travel, visit, and use all the means at his disposal to

have access to the scattered sources in Western India. The most noteworthy trait in Abu-Rayhan's character was his insatiable thirst for knowledge. Like a thirsty man he returned again and again to the fountain of knowledge. Even when his life was ebbing out he would not let the scarce minutes go by uselessly. Very little is known about the family of Al-Biruni. Probably, he had no children and this partly explains his polarized devotion throughout his life. Free from the burden of parenthood he lavished almost parental love on his studies and books. He studied the Greek books through Arabic translation. He was versed in Persian, Turkish, Syriac and Sanskrit. He was familiar with the Roman language of the Byzantine Empire. He had friendly contacts with Syriac and Christian intellectuals. He was acquainted with the Arabic translation of Indian works. Subsequently, when political developments brought him into contact with the Hindus of the subcontinent, he made full use of this opportunity. He learned Sanskrit when he had already completed 45 years of age. He commanded a vocabulary of nearly 2,500 Sanskrit words. The facility with which he discusses and explains Indian doctrines shows his full command over the subject. His proficiency in Sanskrit literature is also corroborated by the fact that he was able, while delving into the nature of God, to clearly explain the foundations of the Advaita School. He distinguishes between the beliefs of the educated Hindus and the common people. It is clear from his works that he made astronomical observations in the cities of Ghazna, Kabul, Lamghan, Peshwar, and Multan. He was a witness to the Muslim conquest of the city of Nagarkot situated at the foot of the Himalayas. This city was famous for an ancient Hindu (idol) temple. Probably, he accompanied the soldiers of Mahmud, up to Mathura and Kanauj on the banks of the Jamuna and the Ganga, respectively. He died at Ghazna in the year 430 A.H. (1039). The prolific writer, Al-Biruni, has written a number of books and has dwelt upon a great variety of subjects. Among the main works of Al-Biruni include *Kitab-al-Hind*, *Al-Qanun-al-Masudi* (The Canon of King Masud), *Vestige of the Past Athar-al-Bagiya*, *Tarikhul-Hind*, *Kitab-al-Jamahir*, and *Kitab-al-Saydna*. He translated from Sanskrit into Arabic the original title of Patanjali which contains valuable information on India and China. He wrote 27 books on geography,

four each on cartography, geodesy, and climatology, and the remaining seven books on comets, meteors and surveying. Al-Biruni's academic interests and activities encompassed a wide variety of subjects, ranging from abstract theories of philosophy to the practical sciences of mathematics, geography, geology, physics, astronomy and medicine. His main field of study, however, was astronomy.

Al-Biruni's age was characterized by orthodox reaction. There were people who regarded astronomy as heresy. This prejudice was similar to people's opposition to logic on the plea that its terminology belonged to pagan Greek literature and language, although the adoption of Greek terms was mainly the fault of the translators. In much the same way, there were people who ignored geography as something without any utility, though the Holy Quran is full of episodes of travels and adventures, e.g., Prophet Abraham's journey from Ur, Moses' journey from Egypt and the hijrah of the Prophet of Islam (peace be on him).

Alberuni and India

Attracted by Indian culture, he learnt Sanskrit and studied several books concerning Hindu philosophy and culture. His curious mind and master eyes did not spare even the Puranas and the Bhagavad-Gita. He travelled far and wide and wrote a masterly account of India in his book *Tahqiq-i-Hind*. This also known as *Kitab-ul-Hind* (1017-31 A.D). In addition to it, Alberuni is also credited to have translated many Sanskrit works into Persian and Arabic. Talking of Hindu in general, Alberuni complains of their complacency and ignorance of the outside world. He even finds faults with them for their want of sympathy and communication with other peoples whom they call mlechchas. Observing the consuming arrogance of Hindus he notes, 'The Hindus believe that there is no country but theirs, no nation like theirs, no kings like theirs, no religion like theirs, and no science like theirs. If they travelled and mixed with other nations, they would soon change their mind, he adds, 'for their ancestors were not as narrow-minded as the present generations.' According to him, India was divided into a number of kingdoms such as Kashmir, Sindh, Malwa and Kannauj. He talks of various kinds of castes and distinctions in the society. Another point of society is that early marriage was common and

women who lost their husbands were condemned to perpetual widowhood. Parents arranged marriages for their children and no gifts were settled, though the husband made a gift to his wife which became her stridhana. A further comment of Alberuni is also worth-noting. He observes that the Hindus did 'not desire that a thing which has once been polluted should be purified and thus recovered'. Thus, the above portrayal clearly shows that all was not well with India. Society as the least compact. Caste tensions were prevalent. There was no sense of cause; the disintegrating tendencies were already serious. The disorganized people of the country finally surrendered themselves to foreign invaders. Alberuni was able to observe the condition of India very minutely. He wrote what he saw here.

Al-Biruni and the Kitab-UI-Hind

Al-Biruni was born in 973, in Khwarizm in present day Uzbekistan. Khwarizm was an important centre of learning, and Al-Biruni received the best education available at the time. He was well versed in Syriac, Arabic, Persian, Hebrew and Sanskrit. In 1017, when Sultan Mahmud of Ghazni invaded Khwarizm, he took several scholars and poets as hostage to his capital and Al-Biruni was one of them. In Ghazni, Al-Biruni developed an interest for India. When the Punjab became a part of the Ghaznavid Empire, Al-Biruni came to India and spent years in the company of Brahmana priests and scholars, learning Sanskrit, and studying religious and philosophical texts. He travelled widely in the Punjab and parts of northern India. He collected various information and wrote a book called *Kitab-ul-Hind*. Al-Biruni's *Kitab-ul-Hind*, written in Arabic, is simple and lucid. It is divided into 80 chapters on subjects such as religion and philosophy, festivals, astronomy, alchemy, manners and customs, social life, weights and measures, iconography, laws and metrology. Al-Biruni adopted a distinctive structure in each chapter, beginning with a question, following this up with a description based on Sanskrit traditions, and concluding the chapter with a comparison with other cultures.

Hazrat Khwaja Abul Hassan Amir Khusro (1253 A.D. to 1325 A.D.)

Amir Khusro, one of the most versatile personalities of medieval India, was born in

1253 in a place called Patiyali, Uttar Pradesh. His real name was Ab'ul Hasan Yamin al-Din Khusrow whereas Amir Khusro was his pen name. Also known as Amir Khusro Dehlavi, this creative classical poet was associated with the royal empires of more than seven rulers of Delhi. The life history of Amir Khusro is truly an inspiring one and he is considered to be one of the first recorded Indian dignitaries who are also a household name. Known for his immense contribution in literature and music, this legendary personality was born of a Turkish father and an Indian mother in a village in India. To know more about Khusro, continue to read this insightful biography on him.

Personal Life

Khusro lost his father at a young age and then moved in with his maternal grandparents. His grandfather served as an attendance master of soldiers at the royal palace of Emperor Ghayasuddin Balban. Khusro was exposed to all famous literary figures of his time when he accompanied his grandfather to the royal courts to attend the private congregations. This inspired him to take up poetry and indulge in fine arts like music. He also learnt horse riding and received training in martial arts. The famous Sufi saint Hazrat Nizamuddin Auliya was his spiritual mentor.

Major Work

Amir Khusro is often acknowledged for creating Khayal of north Indian classical music known as Hindustani. He modified raga Dhrupad and added Persian tunes and beats to it. He created Qawali on the likes of bhajans. The poems he wrote were in Persian and a combination of Bhojpuri and Persian, which he called as Hindvi. Amir Khusro These poems later were developed into Hindi and Urdu. Probably Khayal originated from Qawalis that he created on the lines of Bhajans. He wrote poetry in Persian as well as what he called Hindvi--a combination of local Bhojpuri and Persian, which later evolved into Hindi and Urdu. Many of his poems are even today used in Hindustani classical as bandishes and as Ghazals by Ghazal singers. Royal Poet: Khusro was a Royal poet under Sultan Aalauddin. Aalauddin due to his righteous nature and for the moral wellness his empire banned all the intoxicants from his kingdom. **Khusro contributed in Sultan's**

chastisement movement. He took the responsibility of discipleship. Under his watch he accepted all kinds of people--people who were rich or poor, high in social status or low, nobles or beggars, educated or uneducated, fortunate or unfortunate, city people or rustics, soldiers or priests, murids, etc. Khusro helped people, equally, to live a clean life and abstain themselves from morally harmful habits. When people did commit any sin, then they could approach Khusro and confess. Khusro helped them to get back on the right track and renewed their discipleship. He started the new regime for daily prayers and everybody started following it. Whether it was a man or woman or young child, everyone started gathering together to offer daily prayers. This even included the late morning prayers. Even the high end of the society-people with money and status started attending these prayers. This lot included royal secretaries, **clerks, sepoys, slaves, etc. Because of Khusro's** praying sessions or barakah, people started concentrating on the pious things and got involved in tasawwuf or mysticism of life. Some of them even turned to renunciation or tark and got involved in devoutness. Even towards the **end of Sultan Alauddin's sovereignty nobody in** his kingdom gave into the practice of drinking liquor or gambling or taking to any indecent ways of living. Everybody lived in complete harmony and followed the goodness taught by the religion. The effects of teachings of Khusro was so strong and widespread that it is said that even the shop keeper stopped lying, cheating and under-weighting to make more profits. He even entertained the scholars from all walks of life and discussed mysticism with them. These discussions were mainly based on books on mysticism from those times like: Fawaid-ul-Fuwad, Qut-ul-Uloom, Kashif-ul-Mahjub, Awarif and Malfuzat of Hazrat Nizamuddin Aulia. People started to self-educate themselves after being in the company of Khusro, on topics like self-control and renunciation. Most of the people took to spiritual style of life and followed the rules and regulation of that life very strictly.

He also catered to the cause of peaceful co-existence of Hindu-Muslim in the society. He helped the cause by writing in Hindvi language, which appealed the most to young children and elderly people. He was proud of the fact that he belonged to a Hindustani nation as in one of his books called Ghurra-ul-Kamal he said that he

had written some of his books in Hindvi language because he is a Hindustani Turk and it is a tribute to his connection with Hindustan. He was also proud of his fluency in Hindvi language.

Historiographical Contribution

Amir Khosru (1253-1325 A.D) was a prominent figure among the historians of medieval India. He was famous in India as a Poet, Litterateur, Musician and Historian. He composed near about 100 books on various topics in his life. In his long life, he continued his research activities by the patronization of sultan Kaikobad, Bugara Khan, Jalal-ud-din Khalji, Ala-ud-din Khalji, Kutub-ud-din Mubarak sah Khalji and sultat Gias-uddin Tughlak. He did not write any chronological history; just he compiled some selective events of history. His six books are following: a) Kiran-as-Sadain, b) Miftah-al-Futuh, c) Khajain-al-Futuh, d) Dual rani khijir kha, e) Nuh sifihor, f) Tughlaknama. All these books are the compilation of important events of that time.

Historian Amir Khosru described the dramatic and emotional meet of Sultan Kaikobad of Delhi with his father Bengal sultan Nasir-ud-din Mahmud Bugara khan and also he gave a clear picture of the city life of Delhi in his book 'Kiran-as-Sadain'. In Miftah-al-Futuh, he describes four military expeditions and victory of sultan Ala-ud-din khalji. In Khajain-al-futuh, he discussed the victory of sultan Ala-ud-din khalji. His another book, Dual rani khijir kha, was composed with the romantic description of the romance of sultan Khijir khan, son of sultan Ala-ud-din khalji with princess Dual rani daughter of king Koron of Nahrawala. His book, Nuh Sifihor, was composed by the description of the events related with sultan Kutub-ud-din Mubarak sah and in this book, the writer also presented a brief discussion on language, eco-geographical condition and royal court of Delhi sultanate. In his book, Tughlaknama, he described the victory of sultan Gias-ud-din Tughlak, especially the victorious events of Delhi in 1320 A.D. (*Minhaj-*

e-Siraj, Tabakat-e-Nasiri, translated and edited by Abul kalam Mohammad Jakaria, Dhaka, 1983, page-245.) He wrote eventual history based on political theme and his writings also did not follow any chronological time line and period.

The motive of Amir Khosru's writings was to maintain the request of the sultans and the royal members of Delhi sultanate to won prizes from royal kings and to be famous in his life as a scholer. In his writings, he just tried to give pleasure to the readers of history by making an interesting description and did not try to deeply analyze the historical events and purify its authenticity or he did not try to convey any kind of message in his writeups. Futuh-us-Salatin was composed by Khaja Abdul Malik Isami. In this book, the writer described the history of around three hundred and fifty years from Sultan Mahmud of Gazni till sultan Muhammad bin Tughlak of Delhi. Isami composed this book by the patronization of Bahmani ruler Ala-ud-din hasan sah of Deccan. In this book, he strictly criticized sultan Muhammad bin Tughlak of Delhi. But, this book of Isami was an excellent historical document to know successive history from sultan Mahmud of Gazni to sultan Muhammad bin Tughlak of Delhi.

Conclusion

Based on above mentioned discussion, it is to be noted that in Indian sub-continent, Muslim historians write the praiseworthy history under the patronization and supervision of the Muslim sultans even they named their books by the name of sultans. Historiography of this time is almost based on politics. Other side and sector of human society was totally absent in their writings. We see that some historians hardly include the description of society and culture in their writings. So, we come to an end that historiography of sultanate period was based on **rulers' and the activities of the royal court and royal persons and Persian-Turkish trends were also reflected through their writing.**

A HISTORICAL STUDY OF THE SPATIAL PLANNING OF BENGALURU CITY

Vadde Venkatesh

Introduction

Bangalore city, the capital of Karnataka is one of the fastest growing cities in India with a population growth of 3.25 percent per annum and it is expected that the city's population will touch 10 million by 2021.¹ The phenomenal growth of the city was spurred by the governmental agencies and public sector industries to begin with and later on it was led by the booming IT sector.

The city enjoys a pleasant and salubrious climate throughout the year. Its tree-lined streets, numerous parks and abundant greenery have led to it being called the 'Garden City' of India.

It has also been identified as the country's 'Silicon Valley' and it is one of the technological innovation hubs with a score of 13 out of a maximum of 16². However, with all the hype about growth in IT and IT based industries, Bangalore also houses numerous other leading commercial and educational institutions, and industries like textiles, aviation, space, biotechnology, etc. As an immediate consequence of this growth in the last decade, apart from creating a ripple effect in the local economy, there has also been great pressure on infrastructure and resources like water supply, energy, public transportation, land, etc. The local body and other parastatal agencies responsible for delivery of basic services are facing stiff challenges in catering to this demand.

The present paper aims to address the development of the urban sprawl in the Bangalore city as the macro level investigation. Since pre independence period the Bangalore has seen unprecedented growth spatially and economically leading to sprawl.

The concept and Definition:

Spatial Planning over time has been envisioned to produce a city in a particular way. The higher scales of concentration of activities,

various constituents, and people in the city, planning has also been selective in expanding the built environment and the scope for certain kinds of activities for the people in the city. In a way planning has a vision to expand the city spatially in a particular manner, and at the same time planning attempts to restrict the city growth and spatial expansion, which is perceived as 'undesirable' by the planners. In the process of expanding the city in a particular manner, planning has spawned different kinds of land developments.

The definition of an urban area is normally based upon the number of residents, population density, percent of people dependent upon non-agricultural income and provision of public utilities and services. The term 'urban' has its origin from the Roman word Urbanus; which adopted the meaning 'city dweller' in Latin. The precise definition of an urban area can vary from country to country. Some countries define an urban area as any place with a population of 2500 more while some other countries set a minimum population of 20,000 as a criterion. In general, there are no universal standards and therefore each country develops its own set of criteria for recognising urban areas. In India, an area is designated as urban if the population is more than 5000 with a population density of more than 400 persons per sq.km and at least 75 percent of the population is involved in non-agricultural occupations.

Geography of Bangalore City:

Bangalore is located at 12° 59' north latitude and 77° 57' east longitude, almost equidistant from both eastern and western coast of the South Indian peninsula and is situated at an altitude of 920 metres above mean sea level. The mean annual total rainfall is about 880 mm with about 60 rainy days in a year considering the last ten years. The summer temperature ranges from 18° C to 38° C, while the winter

temperature ranges from 12° C to 25° C. Thus, Bangalore enjoys a salubrious climate all round the year.³

History and Culture

Bangalore⁴ is the principal administrative, cultural, commercial, industrial, and knowledge capital of the state of Karnataka. Greater Bangalore⁵, an area of 741 square kilometres agglomerating the city, neighbouring municipal **councils and outgrowths, was 'notified'** (established) in December 2006.

A tiny village in the 12th century, it grew to become one of the fastest growing cities in the world by the 21st century and to figure among the million-plus (in population) cities in India⁶. Bangalore has grown spatially to more than ten times since 1949. Bangalore, in spite of the buzz around IT-based and related commercial activities, has retained much of its unique cultural ties keeping its date with its history, culture and tradition.

The earliest reference to the name, in the form *'Bengalooru'*, is seen in a ninth century Ganga inscription (hero-stone) from Begur, referring to a battle that was fought in that place. The present name of the city, Bangalore is an anglicised form of *Bengalooru*, which according to the popular belief is derived from *Bengaalu* - synonymous of *Benda kaalu* or boiled beans and *ooru* meaning a town. Tradition associates Hoysala King Vira Ballala (12th Century) with the Origin of this name. Vira Ballala, during one of his hunting expeditions in this region, lost his way and after hours of wandering reached the hut of an old woman. This woman is believed to have offered cooked beans to the king. Pleased with her hospitality, the king named the place as **'benda kaala ooru' (town of boiled beans)**. But it is interesting to note that there was already evidence for name of the place much before Hoysalas.

The real founding of modern Bangalore is attributed to Kempe Gowda, a scion of the Yelahanka line of chiefs, in 1537. Kempe Gowda is also credited with the construction of four towers along four directions from Petta, the central part of the city, to demarcate the extent of **city growth. By the 1960's the city had sprawled** beyond these boundaries. The Bangalore is said to have got its name from benga, the local Kannada language term for Pterocarpus

marsupium, a species of dry and moist deciduous tree, and ooru, meaning town⁷.

Later on, the city was administered by the Wodeyars, rulers of Mysore, until it was given as Jagir (with rights for general administration and collection of taxes) to Hyder Ali during late 18th Century. Hyder Ali and later, his son, Tippu Sultan, were responsible for the growth and development of Bangalore in a significant way with the construction of summer palace and Lalbagh. Indeed, Bangalore was already the **commercial capital during Tippu's time and the second important city after 'Srirangapatna', Tippu's capital. During the early nineteenth century, the city was known to have almost all coins in circulation from different places and kingdoms, thus evidencing a flourishing trade and commerce.** The fall of Bangalore in the Second Mysore War of 1792, may also have led to the fall of Tippu Sultan in Third Mysore War of 1799, after which Bangalore became a base for the British troops and saw the establishment of the Cantonment in 1802.

British control over Bangalore was initially established indirectly through the Maharaja of Mysore. By 1831 the administration of the city was taken over by the British, and in 1862 two independent municipal boards were established: **Bangalore City Municipality (in the older areas), and Bangalore Civil and Military Station Municipality.**

Under the rule of commissioners Bangalore reached its level higher, during their period transportation was developed in 1859 the first line was started between Bangalore to Jolarpet, Central College, Bowring hospital, Victoria hospital, Isolation hospital, Attarakacheri, Cubben park and other developments were by commissioners like Mark cubban and Bentham Bowring. In between 1831 to 1881 the city view got started change.

In 1949, the two municipalities were merged and the Bangalore City Corporation was formed. Subsequently, to keep up with the pace of growth and development, there have been reorganisations with respect to the zones and wards within the corporation, rising from 50 divisions in 1949 to 95 wards in 1980s, 100 wards in 1995 and now about 145 wards. With the 2006-07 notification, the Bangalore City

Corporation is now reorganised as Greater Bangalore City Corporation.

URBAN PLANNING IN PRE-INDEPENDENCE PERIOD

The first major physical expansion of Bangalore happened in the early nineteenth century. The British developed Military-Administrative District for the settlement of army personnel and its officers. This happened within the context of the colonial establishment/arrangement in agreement with the Mysore Princely State. In the beginning of the 19th century, the General Post Office was opened and the Cantonment was established nine years later in 1809. In 1831, alleging misrule by Krishnaraja Wodeyar III, the British took over the administration of the Mysore Kingdom. The Madras government of the British had chosen some lands near the City of Bangalore. For the purpose the British had approached the King of Princely Mysore to occupy it. The chosen lands were **“readily granted” near Ulsoor. These lands** were occupied in 1807 by British Regiments, and barracks and other military buildings were constructed. The demands of British troops for various goods and services attracted trade and other opportunities for public and private employment.

This created a settlement adjacent to the Military Station. These settlements were subsequently termed as a Civil Station and Military Station for administrative purposes. The people of the Civil Station were the subjects of Mysore Government and paid taxes; and their disputes, civil and criminal were adjudicated upon by tribunals set up by that Government. This arrangement remained intact until the whole area was given to the control of the British in 1881 saw the building of AttaraKacheri.⁸

Extensions and Planning:

In ‘real’ terms the expanded space was set up as an independent unit though it was in some ways connected to Bangalore Town by sheer physical proximity. This implanted town state was termed as Civil and Military Station. This marks the first expansion through a kind of an **“invasion”/“acquisition”**. **Ulsoor which was a village on the eastern outskirts of Bangalore Town became the first expansion.** The British had sought a healthier environment for its troops

which were stationed at Seringapatam after the defeat and death of Tippu Sultan.

The second major expansion was taken up in the 1890s. This expansion included the development of *extensions*, to the city. Many extensions were laid for the first time- Richmond Town, Cleveland Town (Civil and Military Station- Eastern Part) and Chamarajpet (City Area- Western Part). These were the earliest of extensions. The exigencies of plague led to decongestion of the city to settle population in these extensions.⁹ These extensions were laid out in the eastern and western parts of the city. Bangalore City, and Civil and Military Station saw the expansion. These extensions happened through governmental acquisition of land for the extensions and formed the first palliative measure for the relief of the residents of the city.

In 1890s, a number of extensions were laid out in the City by the Government or the Municipal authorities. The third kind of spatial expansion happened for the **‘middle income groups’ settlement. A number of suburbs, known as extensions in the city and ‘Town’ in the C & M Station**, were laid out for the benefit of middle income groups. Basavanagudi, Malleswaram, Shankarapuram, Visveswarapuram and other extensions were formed in the City Area, while in the C & M Station, Frazer Town, Tasker Town, Cox Town, Mc. Iver Town, etc., served the same object. During this period there was a consistent, though gradual, expansion of the city due to the increasing number of extensions in the City area. In the City area, residential extensions were created for the Princely Mysore bureaucracy.

Bangalore City Corporation, the City Improvement Trust Board, and the public agencies were legally entrusted with the responsibility to expand and improve the city. Apart from the maintenance and improvements, these agencies took great interest in expanding the city by forming layouts. There was also an emerging trend, significantly, of private layout residential formations beyond the purview of legality.¹⁰

City Growth and Development:

The spatial spread of the City during 1901 and 1951 remained the same at 25.41 square miles, whereas the population had increased from 1,58,976 to 7,78,977 lakhs (a 400% increase).¹¹ the need of a rapidly growing

population, planners felt that sizeable parts of Bangalore were the product of planned development taken up by Government or the Municipal authorities and much later by the City Improvement Trust Board from 1890 onwards.

Planners co-opted the previous institutions at work in producing space. City Improvement Trust Board (CITB) and the Civil Station Municipality and City Municipality combined into Corporation of the City of Bangalore in 1949 to maintain, improve and expand the city. City Improvement Committees were set up to take up tasks of improvement in the City. Act V of 1945 was passed to constitute Board of Trustees were entrusted with special powers for the improvement and future expansion of the City of Bangalore.

According to the Report of the Bangalore Development Committee 1954 (BDC 1954), Bangalore City was facing problems due to the **preceding decade's growth (1930s-40s)**. The city, which had only capacity to accommodate four lakhs population, had to put up with a population of a million, which In 1960-61 there were 29 layouts to be regularized with plans and estimates of regularization charges, which were ready, but there were many more private and unauthorized layouts which were to be brought **within the purview of Corporation's plans**.¹² All those lay-outs were regularized. Three more unauthorized/private layouts were also regularized. They were - Narayanaswamy Gowda and Krishnappa Layouts, 15th Cross, Malleswaram, Thyagarajanagar, and Mariyappanapalya, Old Kempapura Agrahara - which yielded 170, 1,120, and 213 sites respectively.¹³ Totally 10 more unauthorised layouts were identified and added to the **preceding years' 29 unauthorised layouts** which finally tallied up to 39 unauthorized/private layouts- out of which 22 unauthorised layouts were approved by the Corporation for regularization.¹⁴

The Regularization of private layouts was planned within the CITB limits which were in different stages of implementation. By 1962-63, the total of 39 private layouts/revenue pockets / unauthorised layouts identified for regularization remained static and the approved unauthorised layouts by the Corporation too remained static at 22.¹⁵ There was also a proposal to buy 300 sites and multi-storeyed buildings from the City

Improvement Trust Board for 're-housing' slums.

¹⁶ The Corporation area of the Bangalore City was in the process of expansion. Maruthi Sevanagar, Jayabharathinagar, Thomas Town **and North Road area, Pillanna's Garden behind Civil area Slaughter House, Kadiranapalya, Binnamangala Villages, Gayathrinagar and Prakashnagar** were included in the Corporation limits.¹⁷

Bangalore City Corporation started to expand drastically during the year 1963- 64. Thirty-four villages were added by the Government into the Corporation area.¹⁸ A place known as Agrahara Tank bed was also used up for residential purposes.¹⁹ The Corporation boundary expanded from 27 square miles to 46.5 square miles. The City boundaries expanded 72.22%. The merged Bangalore City Corporation in 1949 had 50 divisions; with this expansion of the City, it increased to 63 divisions.²⁰

In 1967 a notification was issued by the government to determine the land use within the Planning area and in the same year government constituted the Bangalore Planning Authority (BPA) for the BCPA. BPA authority structure was constituted with memberships from- individuals of village institutions, members belonging to democratic institutions and associations and eminent leaders of city.

The new planning authority, BPA, replaced Bangalore Metropolitan Board. Bangalore Metropolitan Board had already prepared the Outline Development Plan (ODP) for the city of Bangalore, but the new planning authority declared its intent to prepare ODP only in 1967. ODP was to be operational in both the City Area and the BCPA which was 193 sq miles. ODP was approved and promulgated in 1972.²¹

The Report on the Comprehensive Development Plan of Bangalore (1976) (RCDP) indicates the first systematic attempt to create **divided planning entities known as "Planning District"** to structure the city accordingly. It was termed as **"Comprehensive Development Plan"**, and it laid down the approach for the **'development and improvement' of the whole local planning area of Bangalore City** in a regulated fashion. This meant that the **planning units were to be brought under 'zoning regulations' of land use; patterned transportation**

network for traffic circulation; spaces for parks, playgrounds, other recreational uses, agriculture, public and open spaces, public buildings and institutions and for all other civic developments; improvement of major roads; areas earmarked for housing, and land areas to be reserved for the future developments to be taken up in different phases.²²

The Second priority of planners concern was industry and industrialization. Bangalore had developed into an industrial city. There were eight industrial areas- Jalahalli, Old Madras Road, Whitefield Road, Rajajinagar and Yeshwanthapur, Mill area, Mysore Road, Hosur Road, and Kanakapura Road and along other Highways too.

Mainly Karnataka Industrial Areas Development Board (KIADB) and private industrialists were involved in the industrial development activities. It was felt necessary to set up industries in all directions of Bangalore city to create work centres wherever they were scarce. For future location of industries, **Bangalore's southern area having state highways- Kanakapura Road and Bannerghatta Road -were identified.** And the Private commercial developments existed in the all parts of the City. The government was promoting organized commercial centres by allocating more lands in the district particularly as district **commercial centre' was to be set up near Voddarapalya** as part of Thavarekere-Madivala Scheme, and as part of Ideal Housing Scheme area, and a strip of commercial development was planned along Bangalore- Tumkur Road near Dasarahalli village. Similarly areas were allocated for small-scale commercial developments in the district.

On the industrial front, mostly the developments were for private industrial developments, except a few large scale public sector units such as Indian Telephone 166 Industries (ITI) and New Government Electrical Factory (NGEF). Many industrial units existed along Hosur Road and Bannerghatta Road and more lands were allocated for further expansion along these routes. In the city some other industrial units existed along Bangalore-Mysore State Highway and more lands were allocated along the same road, and lands were allocated along the Vrushabhavathi valley for the development of medium scale industries.

Planning at this stage, to create recreation centres in the city- parks, playgrounds, etc., existing water bodies and spaces around that were used to develop them and another way to create such spaces was by allocating lands separately. Regarding the public and semi-public spaces, greater area of land was allocated for Bangalore University. And in all other places to some extent was reserved for offices, educational institutions, etc. Given the nature of residential and industrial expansions the allocation of space for transportation in the districts was considerable.

THE EXPANDABLE CITY

Various factors have contributed to the urbanization of Bangalore city and its resultant expansion. Moreover, urban planning has not been merely a response to the urbanization process. In the city there was a mixture of residential land developments- In the city there were older planned layouts viz., Pottery Town and Benson Town, **CITB's planned layouts viz., Jayamahall Extension and Gangenahalli Extension,** and industrial and institutional planned layouts viz., Hindustan Machine Tools Colony, University of Agricultural Science Colony, State Bank Colony, etc. Private housing colonies which were both planned and unplanned too the residential developments followed the pattern of a mixture of old planned layouts viz., Richards Town, Cooke Town, and St. Thomas Town, with the new CITB planned layouts viz., Jayabharathinagar, Maruthinagar and other CITB planned residential extensions- viz., Jayamahall extension and Indiranagar. New planned layouts viz., N.A.L Colony, Jeevan Bheema Nagar, H.A.L. Colony, N.R. colony, Thyagaraja Nagar and Yediyur were old planned residential areas whereas Banashankari II and III were newly developing layouts.

The old areas of the city viz., Austin Town, Gowthamnagar and the new planned layouts viz., Koramangala layout, part of Indiranagar, the most of the residential planned layouts were old ones viz., Shankarapuram, Basavanagudi, Gavipura Extension, Hanumanthanagar, etc.,

In Rajajinagar the Industrial Estate was the oldest industrial area, hospitals, technical educational institutions, parks, burial ground, railway lines, etc. A new predominantly industrial district with its residential suburb. Peenya

industrial estate, the biggest of industrial estate in Bangalore, was part of the district. CITB had already formed residential layouts in the area- Mahalakshmi Layout, West Chord Road Extension, etc. New residential layouts created by house-building cooperatives, CITB layouts, railway lines, a cinema theatre, a large scale industry- Bharat Electronics Limited (public sector unit), technical educational institution, the Agricultural University, cottage and small scale industries, a research institution-Indian Institute of Science, market yard, defence land & its residential colonies, and a water body.

The Central Business District and the oldest part of Bangalore City. Cottonpet, Akkipet, Chamarajapet, Cubbonpet, K.R. Market, Gandhinagar, etc., are its parts. This part of city has important public buildings, government buildings, Central Jail, Maharani's College, Victoria Hospital, Minto Hospital, Medical College, KSRTC bus stand, City Railway Station, many cinema halls, handloom industry, etc., the contiguous to the oldest part of Bangalore's Central Business District, have Malleswaram layout formed in the last decade of the 19th century and Seshadripuram, Guttahalli, Palace area, Vyalikaval etc., formed in the early part of the 20th century. Similarly its adjacent areas Srirampuram, Oakalipuram, Kumara park Extension, Rajajinagar, etc., are also developed.

Planning Approach

Bangalore city has a planning history spanning more than fifty years. The first step towards planning for development of Bangalore city was initiated with the Outline Development Plan prepared by the Bangalore Development Committee in 1952. The city's planning got statutory backing in 1961 when KTCP Act, 1961 was enacted. The Bangalore Development Authority (BDA) is entrusted with the task of preparing a Comprehensive Development Plan (CDP) as per the KTCP Act.

It is in the context of increasing emphasis on urban governance and stakeholder participation that the Master Plan-2015 for Bangalore city was published in June 2007. The Bangalore Development Authority (BDA) is the local planning authority entrusted with the task of preparing the Master Plan (MP) for Bangalore city and its environs as per the Karnataka Town and Country Planning Act, 1961 (KTCP Act,

1961). The KTCP Act requires that the MP be revised at least once in every 10 years. **Consequently, the BDA's mandate was to revise** the Revised Master Plan (1995), earlier called the Revised Comprehensive Development Plan of 1995. The Master Plan - 2015 covers a Local Planning Area of 1307 sq km and consists of 387 villages, 7 City Municipal Councils (CMCs) and 1 Town Municipal Council (TMC).

Vislon of Planning: The first systematic and comprehensive attempt to plan Bangalore City can be found in the *Report of the Bangalore Development Committee (1954)* document. In the post-Independence period, the Indian State **initiated broad based 'Planned Development'** for the growth and development of the economy and society. In that context, planning was considered as an essential instrument for **'development' in all spheres and at various levels.** Urban planning as an approach to solve the problems faced by the city was yet to be **conceived. Taking note of the 'haphazard'** growth of cities in America and Britain due to migration of rural population to urban areas and **the growth of the cities into 'unmanageable'** proportions, the report argued for **'comprehensive master plans'.²³**

Underlying all the spatial developments was the conception of *zoning*, BDC's (1954) **idea of incipient classification of various spatial developments into "zones"**- Residential, Industrial, Administrative, Commercial, Open Spaces and Recreational facilities, etc., to segregate various kinds of activities or enterprises, and also to examine which kinds of activities could coexist.

The approved Outline Development Plan (1972) by the Government increased and fixed **the "compact area" of the city from 79 sq. miles to 102 sq. miles.²⁴** By widening the boundaries of the city growth within the context of urbanization of contiguous surroundings of Bangalore city, the plan was characterizing *Bangalore as a Metropolis*, in a way widening the scope for the growth of the City and at the same time linking the city with various places seeking various vantage points, though this was not elaborated. Metropolitan Region was extended up to 193 square miles. It added 43 square miles to the previous 150 miles boundary drawn for Greater Bangalore. During the plan period, much larger spatial view of the Bangalore city which

could be expandable came into view with the announcement by the Government of Karnataka in 1965 of notified Local Planning Area or Bangalore City Planning Area consisting of 218 villages. During the same year the planning legislation 'Karnataka Town and Country Planning Act, 1961(KTCP) too came into effect, thus ODP was to adhere to the planning law. **This kind of planning would finally 'promote general standards of living in the areas'.**

The Metropolitan region

Bangalore city had already gained the character of an urban complex, and a space for national production of various goods and services. In that context, creation of land uses had also meant the creation of residential layouts, industrial areas, and provision of civic amenities and infrastructure. To a greater extent, Bangalore City was imagined to be an Industrial labour community for which the City was to be designed. Different spatial units were to be organized interdependently.

Bangalore Metropolitan Regional Development Authority (BMRDA) is the statutory body entrusted with the preparation of structure plan for the Bangalore Metropolitan Region and the master plan has to be prepared for Bangalore within the framework of the structure plan. Bruhut Bangalore Mahanagara Palike (BBMP) is one of the biggest stakeholders as it is responsible for the implementation of a major part of the MP and is also responsible for formulation of CDP under JNNURM. Bangalore Electricity Supply Company (BESCOM), Bangalore Metropolitan Land Transport Authority (BMLTA), Bangalore Metropolitan Transport Corporation(BMTC), Bangalore Water Supply and Sewage Board (BWSSB), Central Public Health and Environmental Engineering Organization (CPHEEO), Karnataka Power Transmission Corporation Limited (KTCPL),Karnataka State Road Transport Corporation(KSRTC), Bangalore Metro, South Western Railway, Bharat Sanchar Nigam Limited(BSNL) are also key stakeholders who provide the necessary infrastructure and utilities in Bangalore. Karnataka Housing Board (KHB), Karnataka Slum Clearance Board (KSCB) and Karnataka State Pollution Control Board (KSPCB) are the government agencies involved in various aspects of urban management in the city of Bangalore. A number of private bodies are

involved in the various aspects of the urban development of Bangalore city especially in the infrastructure and housing sectors and they play a vital role in the economic growth of the city. The vibrant private sector also forms an **important stakeholder in the city's development.**

The Plan imagined a self-sufficient community within the given areas and Industrial suburbs known as neighbourhoods or extensions. To contain the strains of increasing scales of concentration of activities in the City - the expanding industrial, administrative, military activities, etc., - a **"policy of decentralization"** was suggested to establish new units of industry, administrative units, etc., in other centres. The Report delimited the Bangalore Metropolitan Region.

Obviously, the plan must take into consideration not only the City of Bangalore but also some of the urban and rural areas surrounding it on account of the socio-economic reactions between them. According to one view, this territory may extend as far as Doddaballapur in the north, Kolar on the east, Channapatna on the south and Tumkur to the west. But practical considerations of time and other factors make it necessary to confine our attention to a much smaller area. And we have accordingly decided to include with the Region only the City of Bangalore and such other areas adjoining the **city as the Government have so far notified...** The Metropolitan Region as so defined covers an area of 193 square miles and extends to a distance of 5 miles from the Corporation Boundary.²⁵

The metropolitan region was to consist of spatial jurisdiction of the City of Bangalore Municipal Corporation, areas formed by CITB, Municipal Councils, Bangalore South and North Taluk Boards, and H.A.L. Sanitary Board, which were to be under the planning authority later. The Plan for Bangalore was conceived in three phases.

For the future expansion of the City, the BDC classified the City into two broader administrative planning divisions- **"The area of the Bangalore City Corporation would be approximately 40 sq. miles and that of the Trust Board (i.e., Greater Bangalore) about 150 sq. miles."**²⁶

Two Main Development Bodies of Bangalore City

Bangalore Development Authority (BDA)

The Bangalore Development Authority (BDA) came into being with effect from 6th January 1976 under a separate Act of the State Legislature viz. the BDA Act 1976. This Authority combined in itself the Planning functions of the City Planning Authority and the developmental functions of the erstwhile CITB.

BBMP (Bruhat Bengaluru Mahanagara Palike) After Indian independence, the two Municipal Boards were merged to form the Corporation of the City of Bangalore in 1949. The name of the council changed — first to Bangalore City Corporation (BCC) and then to Bangalore Mahanagara Palike (BMP). In April 2007 renamed 'Bruhat Bangalore Mahanagara Palike'(Greater Bangalore Municipal Corporation).

Bangalore Metro Rail Corporation Limited

Bengaluru Metro is a rapid transit system serving the city, the Construction work for Phase 1 of the project was scheduled to start in 2005. The section opened to the public on 20 October 2011. Bangalore Metro Rail Corporation Limited (BMRC), a joint venture of Government of India and Government of Karnataka is a Special Purpose Vehicle entrusted with the responsibility of implementation of Bangalore Metro Rail Project.

Bangalore Metro, christened as "Namma Metro", not only adds to the beauty of Bangalore skyline, but immensely adds to the comfort level of travel. Besides this, Namma Metro is a major environment friendly addition to the Bangalore City as it significantly contribute to the reduction of carbon emissions. The project has an East-West corridor - 18.10 km long, starting from Baiyappanahalli in the East and terminating at Mysore Road terminal in the West and a 24.20 km North-South corridor commencing at Nagasandra in the North and terminating at Puttenahalli in the South. This is the First Metro rail project in India commissioned with 750V DC

Third Rail on Standard Gauge. The metro network consists of two colour-coded lines, with a total length of 42.3 kilometres serving 40 stations. The system has a mix of underground, street level, and elevated stations using standard-gauge tracks. The metro has an average daily ridership of 400,000 passengers. By 2023, the system is expected to complete its phase 2 network and provide connectivity to the city's important tech hubs of Electronic City and Whitefield.

Conclusion

All these measures were to organize the whole developed and developing areas of Bangalore city into different zones for development- 'residential', 'commercial', 'industrial', 'public and semi-public', 'parks and playgrounds' and 'agricultural zone'. Planners conceived and divided the city into many districts for the development and expansion of Bangalore city in an orderly manner. Now Bangalore is home to numerous institutes of higher learning and research, which is evident from the establishment of premier centres like Indian Institute of Science (IISc), Indian Institute of Management (IIM), Institute for Social and Economic Change (ISEC), Indian Institute of Information Technology (IIIT), National Institute of Advanced Studies (NIAS), Tata Institute for Fundamental Research (TIFR), Jawaharlal Nehru Centre for Advanced Scientific Research (JNCASR), Indian Space Research Organisation (ISRO), National Aerospace Laboratories (NAL), Central Power Research Institute (CPRI), Central Manufacturing Technology Institute (CMTI), various research centres of Defence Research and Development Organisation (DRDO), and several professional engineering and medical colleges at undergraduate and graduate levels. In tune with recent trends, Bangalore now has numerous malls and multiplexes that are swarmed during weekends. With an active nightlife and Bangaloreans penchant for fast-food, a large number of restaurants, pubs and 'eat-outs' throng the city.

LIFE AND ACHIEVEMENT OF PUDHUVAI SIVAM

R. Velmurugan

INTRODUCTION

The western education and its political ideology brought a general awakening in Pondicherry. The development of social and the intellectual movement has unparalleled credit to the leaders in Pondicherry. Poet Sivaprakasam, popularly known as Pudhuvai Sivam is one among the leaders in Pondicherry. Such a man of eminence has inspired many Tamil people in this territory. He is a contemporary of twentieth century Tamil poets Subramaniya Bharathi and Bharathidasan. The growth of his talents of equality liberty and fraternity in his poetical works is a major contribution to the growth of Tamil literature in Pondicherry. He also rendered service to the growth of Tamil culture in Pondicherry. He is an unstinted admiration for his poetry and political courage.¹ A review of literature is a pre-requirement to identify the research works already undertaken in the area of study to understand the different dimensions of various scholars in this field. The research reveals in the available sources to bring out new dimensions of life and contribution of Pudhuvai Sivam. This research paper is to highlight the life and achievement of Pudhuvai Sivam an ideal man and social reformer in Puducherry.

EARLY LIFE

Pudhuvai Sivam was born on 23 October 1908 at Muthialpet in Pondicherry. He is the first son of Shanmuga Velayutham and Visalatchiammal. Nadasabapathi, is his younger brother. Pudhuvai Sivam began his education in thinnai school. He studied French and Tamil in government school. He had his primary education from 1914-1924. He was well-versed in his mother tongue Tamil.² After passing 'Brevet' he served as a Tamil Teacher. He was inspired by the poems of Mahakavi Subramania Bharathi. His revolutionary spirit took up arms against the alien French rule. His grandfather, Talava Veerasamy Naicker was a Land Lord of Sancheevarayampet in Pondicherry. Pudhuvai Sivam had been involved in agriculture even in his youth. His father died when he was twenty-year-a old in 1928.³ After the demise of his father he continued in

agriculture work and worked at in the textile loom at Muthialpet.

In 1926, the Magazine "Kudiyarasu" was published at Muthialpet by E.V.R. Periyar. The authors of the magazine were Janaka Sankara Kannappar, and Chidambaram. On this occasion, Pudhuvai Sivam impressed E.V.R. Periyar with his rationality and ideas of eradicating superstition in the society. E.V.R. Periyar appreciated him on this event. Then, **Pudhuvai Sivam began to carry out Periyar's** ideas of self-respect movement in Pondicherry. He organised a **Labourer's Reform Conference** in 1930. He highlighted the problems of cotton mill workers of Pondicherry.⁴ They demanded eight hours of work and right to form unions. Sivapragasam motivated and constantly encouraged the workers through his inspiring and vibrant songs and writings.⁵

Poet, Pudhuvai Sivam ran a publication of the journal "Pudhuvai Murasu" in coordination with poet Bharathidasan in the year 1930. He was the managing editor of the Journal. He wrote various articles and editorials in "Puduvai Murasu". These articles were against the British supremacy. The Journal was banned in British India. In 1932, he was imprisoned by the French Colonial Government for his publications. He was fined five hundred Francs and six-month conviction. He continued to fight against French rule ever after his arrest. He supported the **agitation of the mill workers in 'Savana Mill' in 1936.**⁶ Through his pamphlets and poems, he supported the labourers agitation. He kindled the spirit of freedom in his poems and articles published against the French rule. Pudhuvai Sivam was married to Jagadambal, daughter of Nataraja Pillai from Kottakuppam on September 15, 1940 at the age of 32. This reformed marriage took place under the leadership of Bharathidasan. They had five children namely Ponmani, Poongodi, Madhizhayagam, Ilavazhagi and Ilango. He involved himself in respect and Dravidan Movement through his literary contribution to Tamil poetry in a proper manner to the external world.⁷ Pudhuvai Sivam taught Tamil in school for twenty five years from 1940 to 1965.

CONTRIBUTION TO TAMIL LANGUAGE

Pudhuvai Sivam's contribution to Tamil language and literature is immense. He taught Tamil language and speech training freely to the Tamil society system. In Pondicherry, 'brevet' was the curriculum of French education. Those who were successful in this 'brevet' examination became teachers in the Government school. Sivam organised the Tamil classes in his residence and conducted 'brevet test' periodically. He also taught French and maths subjects. He treated all of them who joined as teachers as equals.⁸

His fifty collections of Tamil songs and poems and ten plays created equality in the society. The poems also narrated the Liberation of Women, the ideology of socialism, rights of workers, self respect movement. Dravidian ideology, Labour problems and widow's marriage. He organized anti-Hindi agitations. His collections of poems such as 'Marumalarchi Kavithaigal', 'Marakkudi Magalir', 'Kaimmai Verutha Kanigal', and 'Thamizhar Thanmathippu Padalgal' spoke for the emancipation of women and the development of Tamil language. His lyrics greatly contributed to Tamil music and drama. His plays were staged in 1930. His plays were performed in Pondicherry, Tamil Nadu, and Malaysia. His plays 'Kokilarani', 'Sithaintha Vazhvu' and 'Samuga Sevai' were published in the form of books. Eventhough, he was not financially sound, he started a publishing house of his own.⁹ He published books through his own 'Gnayiru Publication' for the development of Tamil language. Poet Pudhuvai Sivam also published journals and magazines like 'Puduvai Mursu', 'Kavithai Mandalam', 'Thozhilalar Mithran', 'Gnayiru Sudaroli', 'Porwal', etc. The works of several writers like Periyar, Anna and Bharathidasan were also published.

In 1940, literary movement was established in Pondicherry by Pudhuvai Sivam Bharathidasan as its leader and Siva Prakasam as Secretary.¹⁰ This movement discussed the importance of the self-respect through their scientific and rational approach in their literary works and agitation. Freedom cannot achieve until they free themselves from the caste discrimination, inequality, superstition and religion. He brought out the racial discrimination and contradiction between the Tamil and Aryans.

AS A SOCIAL REFORMER

The Tamil society got ruined by superstitious beliefs and practices. His motive was the upliftment of the society by his writings. He preached for an undivided humanity and advocated for a literate India. He thought that the problems of Women in India could be resolved by their emancipation through proper education. His thought-provoking ideas on women's rights advocated inter-caste marriage and widow re-marriage. He was dead against child marriage. He wrote poems on these themes. He himself arranged and performed reformatory marriages of which most were widow re-marriages. He fought against the caste system.¹¹ He took it as a challenge to bring out a caste free socialist society. His thoughts and actions bring out aimed at the eradication of superstitions of the society. He also fought for poverty-free society. His dream of a society was completely free from the barbarous and inhuman atrocities of religion. His writings on social reform, rationalism, socialism, women's liberation and labour welfare. He condemned method of marriage ride of religious rituals. Pudhuvai Sivam lands the love marriage in his song. He expresses that love marriages lead to mutual love in married life. He attacked on supersititions religions and inequality.¹² Sivam's poems, essays, songs and plays proved to be the off springs of his progressive thoughts.¹³

SELF-RESPECT MOVEMENT

Poet Pudhuvai Sivam respected all sections of the society. Self-respect and Dravidian movements were led under his leadership in Pondicherry. Poet Pudhuvai Sivam joined hands with his contemporaries like poet Bharathidasan. In Pudhuvai Sivam passed in the 'brevet' examination, but he did not join the government school. He worked as a Tamil teacher in a private school of Societe Progressite. He continued to work in a school upto 1934 with a low salary. The self-respect movement was spread in Pondicherry through Periyar ideology.¹⁴ In 1965, the Self-respect movement headed by Periyar attracted a great social reformer, Sivam. This Dravidian movement made use of visual arts for their propaganda. The drama was a very powerful medium of the movement. The dravidian ideas reached the common people. Arignar Anna and Kalaingnar Karunanidhi also wrote plays of the same kind to spread

rationalistic ideologies.¹⁵ Pudhuvai Sivam policies of self-respect movement were abolition of caste system, superstition, rationalism, self-respect, equality, anti-colonial, anti-slavery, upliftment of Tamil and solidarity of the Tamils. His poems express the socio-political objectives of the self-respect movement in Tamil Nadu. They need for political independence of Dravida Nadu which was the slogan of the Dravidian movement.

FREEDOM MOVEMENT

Poet Pudhuvai Sivam kindled the spirit of freedom in the hearts of the people through his poems and articles. **Publication of 'Tamil Musical Songs' supported the agenda of DMK to participate in public election and form liberation front to organise struggle for merger of Pondicherry with independent India.** He was an ardent supporter of Annadurai from DK and started DMK in Pondicherry and became the Chief organizer in 1949.¹⁶ Pudhuvai Sivam was campaigning for Puducherry to join the Indian Union. DMK leaders from Tamil Nadu invited him to speak and support of French India freedom struggle. He met Anna in Chennai and he explained political situation in Pondicherry. Then Anna promised to support DMK in Tamil Nadu for the French India freedom struggle. Later, Pudhuvai Sivam was very actively involved in the French India freedom struggle. He led the freedom struggle in Pondicherry along with Thiru. R.L.Purushothaman Reddiar of Irulansanthai, Thiru. S.R. Subhramanian, and Thiru. V. Subbiah.¹⁷ He played a major and significant role in the convergence of Pondicherry with the Indian Union.

POLITICAL LIFE

Poet Pudhuvai Sivam was a close Associate of Bharathidasan, Thanthai periyar, and Arignar Anna who emerged in Tamil Nadu as political leaders. In 1944, the Dravidar Kazhagam was established at Salem conference. It was organised by the Justice Party. The same party was started in Pondicherry in 1945. Advocate S. Perumal was elected the Chairman and Pudhuvai Sivam was elected the Secretary. Pudhuvai Sivam organised a public meeting on behalf of Dravidar Kazhagam. It was opened in every villages of Pondicherry. He invited leaders from the Madras to spread their policies and ideologies of the Dravidar Kazhagam.¹⁸ In 1949,

Annadurai and his supporters away from **'Dravidar Kazhagam' and he started Dravidar Munnetra Kazhagam in Tamil Nadu.** Pudhuvai Sivam, became the founder of the Dravidar Munnetra Kazhagam in Pondicherry. Anna was the Chief of organised of DMK in Pondicherry. He was the main advisory member of the DMK, and he became a member of DMK general body in Tamil Nadu. He formulated the policies, regulations, and operational mechanisms of DMK. In 1954, DMK was registered as a political party in Pondicherry. Poet Pudhuvai Sivam involved in full time politics in Pondicherry, and he organised DMK state conferences.¹⁹ He was responsible for the spread of DMK Party in Pondicherry. He was a hard-core politician. In 1964, he lost the assembly election the Kasukadai constituency. Then, he was elected Deputy Mayor of the Pondicherry Municipality in 1968. In 1969, he was elected a Member of Rajya Sabha in the parliament (1969-1975), when DMK Party ruled in Pondicherry.²⁰

He delivered first Tamil speech in Indian parliament voicing the problems and grievances of Pondicherry in the Rajya Sabha. During his tenure, he placed several demands for the Welfare of Pondicherry i.e., State finance, separate train facilities to Chennai through Cuddalore, Pondicherry and Marakkanam, fulfilling the reasonable demands of freedom fighters of Pondicherry, the identify of Pondicherry, statehood for Pondicherry, procuring the rights of French citizens of Pondicherry, postal stamp for his mentor poet Bharathidasan, and expansion of urban area in Pondicherry and so on.²¹

These problems were brought to notice in the parliament by Pudhuvai Sivam. A poet and social worker at heart, Pudhuvai Sivam was one of the leading contemporaries of social and political leaders of Pondicherry, like E. Goubert, R.L. Purushothaman Reddiar, Venkata Subba Reddiar, V. Subbiah, and Ansari P. Duraisamy, and he was very successful as an honest politician in Pondicherry.²²

Pudhuvai Sivam organized Tamil literary as well as service organization. He formed various literary and social organizations. In 1983, Tamil Nadu Government conferred Paventhar Bharathidasan Award with golden shield.

Pudhuvai Sivam, multi-faceted personality, marked a great difference as a teacher, poet, writer, dramatist, editor, journalist, social reformer, freedom fighter, and politician. Above all, he became a renowned personality with clean hands in Public Life. The Tamil poet Pudhuvai Sivam passed away on August 31, 1989 at the Government General Hospital in Pondicherry at the age of eighty two.

The Government of Pondicherry has been celebrating his birthday as a Government function. His poems and plays are published by the Government of Pondicherry through the Department of Art and Culture. In 1993, a literary association in the name of Pudhuvai Sivam foundation was established to honour Tamil

writers in Pondicherry. In 1997, Art and Culture Department of Pondicherry published the collected poems of Pudhuvai Sivam.²³

CONCLUSION

Pudhuvai Sivam was the first of **Bharathidasan's disciples and he has always** been recognized as a hero of Self-respect Movement in Pondicherry, Pudhuvai and as the father of the Dravidian resurgence. The Tamil society in Puducherry is greatly incepted to the social and political reformations of an ardent writer, whose dexterous, vibrant and untiring efforts would always be remembered in the socio-political history of the Union Territory of Puducherry.

'REDEFINING THE DEVELOPMENT CONCEPT FOR A SUSTAINABLE FUTURE WITH REFERENCE TO KORAGAS OF KASARAGOD, A PRIMITIVE VULNERABLE TRIBAL GROUP'

Dr. K. Vijaya Kumari

Introduction

Tribal communities are at different stages of economic development. Tribes in India have been socially oppressed, culturally subjugated and politically marginalized for centuries and forced to lead a way of life in which dignity and self-respect and individual freedom denied. They

experience oppressed exploitation, isolation and negation for long centuries.

Caste system considered innumerable aborigines as depressed and downtrodden classes. Francis Day wrote that an Ezhava must keep 36 pace from a Brahmin and 12 from a Nair while Kaniyan pollutes a Namboodiri Brahmin at 24 feet and a Nair by touch.¹

Barbosa make the observation about the caste Hindus.² In Malabar there existed class of slaves and semi slaves.³ They regarded themselves as **their masters' property**.⁴ Accordingly, they were degraded and driven away to remote places, even beyond see able distance by treating as untouchables or slaves. Thus aborigines were compelled to live in inaccessible places, primarily forests and hills. Tribal people groups who are food-gatherers and engaged in their traditional occupation without the habit of agricultural practice, with diminishing population and very low literacy rates can be called as Primitive Tribes.⁵ Reliance on these factors with geographical isolation, primitive traits, unique culture and so forth contributed to consider the Koragas as Particularly Vulnerable Tribal Group.⁶ They have been primarily residing in the district of Kasaragod, in the northern part of Kerala. They are quite and inoffensive, and live in the outskirts of villages⁷.

Objectives

To understand historical background of marginalisation of Koragas and find a relationship between prevalence of slavery among Koragas in the past and vulnerability in the present

To address some of the pertinent problems of adivasis through a new development concept

Hypothesis

Koragas lived under centuries of colonial oppression and the prevalence of slavery led to their marginalization

There is a need to redefine the Tribal development concept

Methodology

Analytical historical methodology has been followed through the wide use of primary and secondary sources together with field study.

Discussion and Analysis

Koragas of Kasaragod⁸ lived in 52 colonies. There are 445 families of Koragas in Kasaragod.⁹ Koragas lived under centuries of colonial oppression and marginalisation. They followed different customs which validate the prevalence of slavery among Koragas. One peculiar custom was followed with regard to the

symbolic transfer of sufferings and diseases to Koragas by giving nail and hair of upper caste. During festivals in temples, Brahmins stand near the temple, while Koraga has to stand far away from the temples even though rituals are for Koraga God.¹⁰ The owner puts a vessel full of water and one gold coin before Koraga. He has to drink whole water from the vessel and catch the gold coin. To marry a Koraga woman, a male member has to get the permission of the owner.¹¹

Another custom prevailed here shows that if the landlord or owner dies, soon after hearing this news, Koraga elderman should shave his moustache and hair of Koraga slave to show his sincerity and obedience as a slave and thereby observe obituary for his owner. There also existed different types of unjust punishments in the case of Koragas. Studies show the existence of slavery among Koragas for centuries. This long time slavery, oppression and exploitation made them more subjugated.

Koragas were considered as untouchables. Hence, they are forced to perform less desirable menial jobs, especially sweeping, cleaning of excreta, removal of dead bodies, and leather works. The District Gazetteer of Dakshina Kannada reveals that till the beginnings of the 20th century, Koragas were treated as slave labourers in weekly and yearly fairs in the district. The price of a male slave was three pagodas equal to Rupees 14 whereas female slave, five pagodas. They live only in the **huts of leaves called "Kappus"**. They were agrestic slaves, bought and sold with land till recent times.¹² 19 They were forced to beat ritual drums during festivals, run before buffaloes during a local festival, checking the soil by their bare foot. For rendering these services, they are entitled to collect some leftover food and old cloths.¹³ In the field study, it is evident that they ate whatever they got, they wore the dress given by others.¹⁴ The study reveals that, even about two decades back, the Koragas were given water, tea etc., in coconut shells. Ajalu practice is eradicated in 2000 even though there exists its after-effects.¹⁵ Based on inhuman treatment and subjugation, Koragas become mild, docile and fearful.¹⁶ The study reveals that the non-inclusion of Koragas even into the four fold caste system forced them to lead despicable life in society. Today, they are

largely regarded as a sub-human race and are enslaved within the Hindu caste system. They faced highest degree of untouchability which resulted in social oppression.

Tribal communities are at different levels of development hence each tribal community needs to be addressed differently since there are variations at different levels of the development ladder.¹⁷ State Planning Board of government of Kerala, has identified seventeen alarming issues in the tribal problems.¹⁸ Tribal communities faced numerous problems such as the loss of their lands to plainsmen and traders, chronic indebtedness to the money lenders, the tyranny of petty officials who force free labour and supplies, lack of facilities for cheap credit on fair terms, dearth of medical and veterinary aid, lack of organised help to sell their produce to their best advantages- all these handicaps are experienced by these tribes.¹⁹ Poverty deprives Koragas and their ability to fulfill basic needs. Studies have shown that they were more exploited, isolated, deprived and remained below the subsistence level of economy and faced the threats and challenges of survival.

The tribal world reacted to these situations in terms of withdrawal, submission and flight and some were violent. Despite the provision for prevention of land transfers from tribals to non-tribals, land alienation through debt mechanism, tenancy and other unfair practices continued unabated in many parts of tribal India.²⁰

Findings

Koragas were called as a wild tribe of basket makers and labourers.²¹ The Koraga settlements are not fertile. They had only primitive knowledge about agriculture. They involved in minor forest produce collection. The chief occupation of the Koragas is basket making.²² Even though they worked hard to prepare variety of baskets and handicrafts, irrespective of difficulty in getting raw materials they get only cheaper rates for their products. For example they earn only 15 rupees from a strainer, and if the shop owner is not satisfied with their work, he may return it. Families may go to sleep empty stomach as they earn nothing for a long day of tedious efforts.²³

Koragas are skilled artisans as they manufactured baskets of various types, mats, wooden spoons, and objects needed for domestic purposes as well as occupational needs. They are experts in basketry and weaving a variety of items such as winnowing fans, cradles and baskets are made. Some are skilled in the manufacture of cradles, baskets, cylinders to hold palsy, winnowing and sowing baskets, scale pans, boxes, and rice water strainer, ring stands for supporting pots, coir or rope, brush for washing cattle. They also manufacture various domestic utensils with cheap rate. They are inadequately paid for their baskets. They are forced to have their own colonies on the outskirts of the villages. Even in the cities their colonies are segregated from the rest. Their houses are either incomplete or not in a qualitative nature. They led a satisfactory life in forests. But when they forced to abandon that life and to live in concrete houses, they felt problems of adjustment. According to their customs, they couldn't continue life in a house where any person died. That means they rejected or abandoned a house in which death happened. During field visit, researcher had seen a number of unfinished structures of houses and toilets. Food support programmes were provided. Rice, pulses, oil, sugar, are supplied. But these are not essential. Yearly repairing of houses is needed due to low quality nature. Their pathetic living condition continues even today, to a considerable extent²⁴. They face problems and challenges in getting a sustainable livelihood and a decent life. Most of the Koraga families are still devoid of basic facilities such as proper housing, sanitation system, electricity, drinking water, health care facilities, ample transportation etc.²⁵

Koragas were educationally backward. There are only first generation learners.²⁶ It is clear that only a small percentage of Koraga children who enter into school, complete formal school education. School authorities are not able to intervene effectively regarding students who have discontinued from the schools. Majority of Koraga parents are not aware of the importance of education for their growth and development. It was understood that breakfast is not being prepared in most of the Koraga houses and the hungry students find hard to attend classes seriously. The dropout rate among Koraga schoolchildren is alarming

irrespective of various steps taken by state governments to check dropouts. They still face the practice of social exclusion.²⁷

On analysis, it can be stated that, the deterioration in socio-economic status of tribals due to loss of tribal lands and common property resources, increasing dependency on non-tribals, lack of raw materials for traditional occupation, unhealthy conditions of work, heavy alcoholism, low price for handmade goods including baskets, lack of market mechanism and heavy reliance on social security assistance from voluntary and government agencies put the Koragas in to subservient status in society.²⁸

Conclusion

It is pertinent to note that the tribal people are facing the challenges of marginalization, discrimination, social protection, poverty, land alienation, exploitation and denial of forest rights. These issues have to be addressed properly and an accurate profile of the problem can be arrived and thereby suggest practical solutions. As the primitive tribals historically subjugated and were the victims of human rights violations and faced psycho-social problems It is necessary to investigate their psycho-social problems, emotional aspects and policy makers can give due importance to solve these problems of tribals. Adivasis want a development that will preserve the best parts of their culture, their sense of collective life, community sharing of resources, protection and continuation of their livelihood, preservation of traditional knowledge, equalitarian life and freedom and sustainable future of adivasi communities. The genesis of discontent among Dalits lies in the age-old caste-based social order. The Constitution of India and various legislative and policy measures have created entitlements to undo this structure of oppression.²⁹ But still there is significant gap in human development indices between Scheduled Tribes and others.³⁰ PVTG groups are among the most vulnerable sections of our society as they are few in numbers, have not attained any significant level of social and economic development and generally inhabit remote localities having poor infrastructure and administrative support.³¹ The present tribal welfare measure is found to be inadequate. Even though Constitution provisions and several policies and Acts, tribals

are lagging behind in the aspect of socio economic development.

Studies have shown that they are more exploited, isolated, deprived and remained below the subsistence level of economy and faced the threats and challenges of survival. Studies revealed that the tribes continues to live below the poverty line, have poor literacy rates, suffers from malnutrition and disease and are vulnerable to displacement. Displacement for development **projects has deprived tribe's folk of their land and forests** from which much of their food came. The basic human rights to food, to clothing, to shelter, to education, to health and employment are not protected for the tribes. Without securing these rights the other human rights are futile. Even after seventy years of independence of our nation, tribals continue as one of the most marginalized communities and always figures at the tail end in the parameters of development. There are many laws and different rights allotted to the tribals by the Constitution of India, but the pathetic condition of tribals never changed but going to worse. The concept of a tribe has undergone a change from that of a political unit of olden days to a group of people identified with poverty and backwardness. Centuries old exploitation and oppression has resulted in a complete loss of their nerves. It is difficult to reconcile their glorious past with the preset state of misery. However, they are gradually waking up from centuries old slumber. The young generation particularly the educated class have now come to realise their potentiality and are anxious to face the new challenges.

The tribal society had been once self-reliant. They had a community-based, eco-friendly and self-governing political life till the time outside intervention of the settlers. They experienced utmost humiliation and discrimination and thus marginalized throughout history and became vulnerable communities afflicted with abject poverty, illiteracy, unemployment, displacement and landlessness and always figures at the tail end in the parameters of development. They were displaced without considering their life, needs, livelihood, sustainability and survival.

Suggestions

On the basis of reality that the livelihood of PVTG and their culture are intertwined with land

and forest. There is a need to develop livelihood strategies and design development programmes for the PVTG that are right based, factor in the felt needs of the community, taking into consideration their special vulnerabilities and empower them to negotiate their livelihood concerns. Alienation of land in PVTG habitats must be prevented, they should aware of their rights, develop livelihood strategies by considering the culture, traditional knowledge, skill and also by respecting the diversity of livelihood systems. Another important suggestion regarding value additions in minor forest produce for PVTG who depend sustainability on collecting and selling this produce could be ensured by requisite training and capacity building to enhance their income. To make the PVTG self-sufficient, the land and resources should be protected. Both policy and implementation levels should be streamlined and channelized in the best interest of the tribes. There should be a greater stress on development than welfare. Therefore, policy makers and administrators should take into confidence the native tribal population. The participatory approach is specifically meant for the economic and social development of the **rural poor. Such holistic forms of people's participation** are certainly required

It is globally significant that indigenous people their life, culture, tradition, knowledge to be protected and to be incorporated in sustainable livelihood and development. Every nation can follow and implement Sustainable Development goal by considering the regional variations and local needs of the indigenous people. To plan and implement it nationwide it is essential to formulate comprehensive policy and programmes by considering the regional variations, geographical features, living status and peculiarities of the tribal communities, their traditional knowledge, skills, their felt needs, and

problems and involving them in policy making, designing of development strategies for the sustainable development of vulnerable tribal communities. To put in to practice, grass root level planning by prioritizing the felt needs of the tribals are essential. The traditional knowledge of indigenous tribal groups can be reminisce, highlighted and preserved. Traditional knowledge and Skill of these indigenous people can be shared and transmitted to the younger generations in a systematic way. Any educational policy would need to take account of their distinct culture.

Adivasis want a development that will preserve the best parts of their culture, their sense of collective life, community sharing of resources, protection and continuation of their livelihood, preservation of traditional knowledge, equalitarian life and freedom and sustainable future of adivasi communities. Development concept of adivasis is different from that of the concept of policy makers and authorities belong to mainstream which is based on western model, such as providing road, bridge, buildings etc. There is a need to redefine the development concept according to the locality, region, culture, tradition, physical and psychological traits, geography, regional variations, climatic change, livelihood, the needs, interests and opinion of tribals etc. It should be implemented through participatory approach in a decentralised governance system. Empowerment should not be measured solely on the basis of quantitative indicators but by actual improvement in the well-being of the people. Steps can be taken to foster community-based resource management systems that work on a co-operative model. Strict monitoring mechanism needed for ensuring that the tribal funds are effectively channelled to the intended beneficiaries to avoid corruption.

DIALOGUES ON ENVIRONMENTAL DETERMINANTS OF HISTORY AND HISTORIOGRAPHY

A.S. Vysakh

Environmental history/Ecological history, the macro term would be ecological history, because, ecological history or ecology is in fact a derivative of biology. It is derived from the Greek word *Oikos* which actually denotes, 'study of the relationships between organisms and their environment'.¹ We interact directly or indirectly with the environment or the organisms around us. Environmental history/Ecological history deals with enormous stuffs such as organisms, food, fuel, fodder, animals, hills, forests, trees, streams, rivers, oceans, minerals and their interaction with mankind. It further enquires how man has interacted with them and how man was helped by the environment, to further facilitate his progress as a civilization. Looking at the history of Environmental history/Ecological history, as a subset of history, it is a comparative new comer.

On studying environmental history one has to look keenly on the sources of it. The sources of environmental history are not confined only to archival material. It is not solely concerned with documentary material or not even literature. It is concerned with tribal art, sculpture, bio-archives and so on. Geo history and geo archives which studies on land patterns and understand the past too forms an integral source. Hence, environmental history in the strict sense of the term is an interdisciplinary discipline. It is more interdisciplinary than any other subset of history. It is more interdisciplinary than political history or social history or economic history. It is so because environmental history involves Biology, Botany, Chemistry, Physics, Geography and a host of other sciences including meteorology.

It was born in 1970's, long before political history and social history began to be written. Gazing at the developments of the various subsets of historiography, like micro history, it originated in Italy. Thenceforth, we see social history, anthropological history developing in England. The Annales historians, especially, the founder being Henry Berr,² had written extensively on nature, and how nature and environment impacts upon history. This was taken up by Marc Bloch and Lucien Febvre who were officially the founders of the *Annales*

school. When the *Annales* historian led by Lucien Febvre and Marc Bloch in the earlier part of 20th century started the Journal called *Annales* from which their school came to be known, they gave importance to 'Total history'.³ And in Total history, Environmental history was very much an important part. The relationship between man and nature, the result of this interaction, was studied by the French in the concept of Total history. Studying about the environment, climate, climatic changes, the psychology of the people, all these became very vital. But in spite of the Annales effort and the importance that it gave to environmental history, environmental history as a discipline did not take off. It did not take off because, the other subsets of history such as the social history, micro history, local history etc. gained predominance.

Marc Bloch in his work *Feudal Society*,⁴ has done a brilliant labor on the interaction between man and nature, the interaction between soil and man, the interaction between organisms and man, the interaction between the environment and man. Similarly his co-founder, Lucien Febvre, who was a historian and a geographer, he started the concept long after Friedrich Ratzel (who actually laid the foundations of Human Geography and notable for first using the term *Lebensraum* or "living space").⁵ Lucien Febvre in his *A Geographical Introduction to History*,⁶ exposed how man interacted with nature for his own progress. He emphasized the multiplicity of human responses to cope with particular environmental surroundings. And many a time, the progress of man proved detrimental to nature. It led to unpredictable devastation, despoiling of nature, pollution, environmental hazards, floods, landslides, catastrophes, famine and what not. Even famine, pestilence, cholera, plague are concerned with ecological history. And in that sense environmental history is important as class analysis and is as important as any other branch of history. It is as important as the history of Power and the uses of power.

Initially, Environmental history was not entertained in England, European countries, Asia or even India. But environmental history

was entertained in the United States of America. It was in USA that serious studies on environmental history began. Environmental history in a sense was born from an highly industrialized country, it was receiving the battering of industrialization. England and America are two countries which benefited largely from industrial revolution. And after the industrial revolution we see a surfeit of factories coming up. We see pollution, the exploitation of nature and natural resources, mineral resources etc. And as this started/ increased the historians started bestowing their attention on the environment. Because there was problems like fog, pollution, poisoning of rivers and streams, uni-crop patterns of cultivation, deforestation, climatic changes, and the environment changed. And as such what happened was that the Americans especially the industrialised countries started bestowing their attention to this area because they started to sense the ill effects of environmental degradation. In the late 19th century, historians generally defined history as **'things worthy of being remembered by one age of another age'** and if one would have to define environmental history it would have been the **opposite i.e 'one age remembering unworthy things of another age'**. All the unworthy acts of the man vis-à-vis the environment, the degradation, contamination, exploitation of the environment by the private players, by the capitalists, by the colonialists etc. What were the effects of these on the environment?!

When one look at the area where it started initially, the first person who wrote the history of the environment was a historian called Roderick Frazier Nash. **He coined the word 'Environmental History'. In 1967, he wrote about the American wilderness-an American thinking.** Wilderness means deserts or denuded areas without forests. He thus wrote about American Wilderness and American thought. He also wrote about how the Americans conquered the wild West and its devastation. He wrote about large scale capitalist farming, industrialization and **pollution that occurred due to man's intervention with nature.**⁷ After Nash, we find other historians especially the historian Alfred W. Crosby who wrote a work on Columbian Exchange.⁸ Today, the book is a founding text of the field of environmental history. Here, he wrote about colonialism in the 13 American colonies. **The historian discusses the 'ecological impact' of**

Columbus' landing in 1492 on the Old World and the New World. He specified how Britain not only brought about armies or military conquests, or ammunition, but brought with it disease, poison, new cropping patterns, new bacteria, a new intellectual mind and a new culture. These not only hegemonised the colonies but also polluted the colonies also. He thus very deeply in this work *Coloumbian Exchange*, writes about the colonial devastation of the environment.

The same occurred in India also. Right before the British came to India, the environment was worshipped by the Indians. If one looks at Hinduism, Jainism or Buddhism, there is ample philosophy of worship of Nature, worship of vegetation and both the flora and fauna, in the philosophy of these religions. But when the British came to India, they started encroaching into the forests, started cutting timber, railway tracks were laid deep into the forests. Teak wood was exploited and they were used as sleepers for the railways. The Teak wood and other durable woods were exported through the ports to Europe. In Kerala, railways were run deep into the forests of erstwhile Nilambur, Cochin territories. Our forests were denuded and hence, the whole natural environment changed due to the devastation of the forests. Colonialism exploited the mineral resources and raw materials of India. Colonialists set up huge plantations. Thenceforth, our rich varieties of forests were replaced with single cropping pattern, which were harmful to the environment. For instance, huge variety of forests with rare trees were cut down and Teak wood were planted. In certain areas the variety of forests were smashed and coffee and tea plantations were set up. For e.g. looking up at Munnar in Kerala,⁹ the natural environment of the region has disappeared and replaced with tea plantations, an area which were once rich in flora and fauna. The habitat of the natural flora and fauna was taken over by the human beings for their greed. The capitalist interest of the colonialists looked at every aspect of the environment as the source of making profit and this quest/ greed or the thirst for profit actually led to the devastation of the earth. Even today as the New Economic Policy was inaugurated by the Indian Government, huge companies like the Vedanta Group have been mining huge areas of Odisha, of Jharkhand, of Bengal for ores. And the habitats of the *adivasis* and the natural

habitats of the other flora and fauna had all been destroyed, bringing about huge changes in the environment. If such changes occur in the environment it questions the very survival of the mankind. In the recent huge floods that inundated Kerala, it was partially because of **man's cruelty towards nature, man's lack of understanding of nature.** The natural ways of the rivers/streams/rivulets have all been taken over by the greed of man. The pathway of the rivers have been stolen by man. The natural varieties of trees that gripped the soil and which absorbed the rainwaters have been replaced by rubber, **coffee and tea. That's why there occurred huge** devastations in Wayanad and Idukki and almost the whole of central Kerala. This is even seen even in the Himalayan areas. The famous movement of clinging of the trees or the Chipko movement took place against the capitalists cutting the trees of the Himalayan valleys. These in fact would change the whole climate of the Himalayan area. There would be melting of ice, floods in the great rivers originating from the Himalayas and if so the whole of North India would be submerged in the flood waters. There would be soil erosion, silting in the floors of the dams, leading to the breaching of the dams and thereupon will be forced to opening of the dams. **This situation occurs due to man's inability to understand nature. Man's lack of dialogue with nature.** Unless man conducts a constructive dialogue with nature and unless he recognizes the space of every organism that they legitimately has, man would be prone to the devastations of nature. There are huge national highways running across the forests. There is a path the elephants travel or the elephant path. And we construct path crossing it, and blame the elephants for the hazards/objections caused. One sees the elephant, the vegetation etc. as commodities to enhance profit or greed. And then the nature hits back. Man needs to understand that every tree, organism, the climate, and even the flapping of the wings of the butterflies determines the climate. If the butterflies die out, if the birds die out it means a catastrophe is in waiting.

Another wonderful book that laid the foundations of environmental history is Donald **Worster's *Dust Bowls***.¹⁰ In this he wrote that the whole of America is converted into a desert i.e. Wheat Desert. There were so many trees there **originally, but man's quest for profit, the**

industrialisation of agriculture led to miles and miles of forest land being reclaimed for cultivation. And as a result, instead of multi cropping patterns, single cropping patterns were adopted, where they selected a profitable crop. i.e., Wheat in America. They cultivated wheat in thousands and thousands of miles and thus one **finds deserts of wheat. In the 1930's America faced a terrible 'dust storm' that lasted** for weeks and devastated America. Howling winds followed by huge dust storms. That was all because the original vegetation has been slaughtered by mankind for the quest to make profit. For the quest to export Wheat, Americans began to bargain with wheat with the Soviet Union, and with other countries, as America is the largest country which produces the largest amount of surplus wheat in the world. Thus, through **Worster's *Dust Bowls***, he actually frames a concept on writing a methodology of environmental history, largely following the materialist school of thought in which he finds out how the materialist needs of man were responsible for the devastation of nature. Plastic waste has become a grave concern. And now in the Pacific Ocean, there is an area bigger than France filled with trash and even the sea animals consuming these shredded debris.¹¹ (The patch is so big that environmentalists called on the United Nations to declare the Great Pacific **Garbage Patch a country, called "The Trash Isles," complete with its own passport and currency, called debris.**) It is harming the ocean life, the man kind, the ground water level etc. So **man's needs forgetful of nature's compatibility** are devastating nature and in the end it will lead to the devastation of mankind. All these life style we follow is not compatible with nature. Donald Worster has written the kind of manures applied on the soil, its effects on the organisms, and reduction of productivity of the soil leading further to the slow desertification of the land. In the famed Sumerian epic of Gilgamesh,¹² written **prior to Hommer's *Illiad and Oddysey***, Gilgamesh the hero of the epic is confronted with the holocaust of nature, mainly because civilization denuded the Cedar trees of the area. On studying the various civilizations inclusive of the Indus valley civilization, the Russian Hydrological studies have shown that the Indus valley disappeared because of the flooding of the river Indus. Because the bed of the Indus began to rising because of the silting of the soil and led

to flooding of the cities. One finds so many layers, one layer above the other in the buildings /citadels in the excavated sites. The Russian historian who used the Hydrological techniques for the study especially Bongard -Levin,¹³ says that the Indus valley was destroyed by the mismanagement of the rivers. There is another theory that says that it was destroyed by deforestation as cropping became impossible owing to loss of fertility and the population had to move away to look for new areas for farming. **This is a problem when one doesn't comprehend nature properly and doesn't enter into an constructive dialogue with nature.** Thus the scientifically acclaimed great civilization or the Indus valley civilization was destroyed due to the mismatch with nature. The interface with nature was wrong. And as a result of that several civilizations disappeared. Even the Chinese civilization and the river Huan-Ho, in the Mesopotamian Civilization the flooding of Tigris or Euphrates, and flooding was always due to the incapacity of the rivers to hold water to a capacity which it normally did. That was due to deforestation leading to silting. All our dams are in danger; right from the Bhakra Nangal to the Mullaiperiyar is in danger due to the silting. This is a huge problem that we have not addressed as yet. The second aspect that Worster deals with is the political aspect of the environment. Because of the craze for power, largely propelled by capitalist philosophy, one finds that nature has been exploited. Sometimes the National highways or factories have been set up by the political decision and not due to the need of the people. Many a time these political decisions were no way concerned with the needs of the people. For eg., if you look at the Coco plantation in Kerala, it was a political decision. Once, when the prices of Coco went up with the original producers in Africa, the Americans looking for cheaper Coco and they lobbied with the Indian parliament and got the then Agricultural Minister to encourage Coco plantation. And all our planters in India, they cut down their coconut trees and planted Coco.¹⁴ Subsequently when the original Coco producers in Africa reduced its price, the Americans went back to them and the Indian producers were left with no purchasers. Our farmers had to once again cut down the Coco. **Thus many a time's political decisions determine the crops of cultivation.** Weather the planters of India or Kerala should grow coconut

or rubber is many a times is a result of political decision. International relations also affect the same. It might be because of inter-state relations also. For e.g., the Centre takes a line which is antagonistic to the state, they take a decision which is detrimental to the coconut producers. Political decisions in the international scenario are also decisive. Pertaining to Kerala, if this injustice, ceaseless exploitation of the nature continues, Kerala would go back to the ocean, if the mythology is to be believed. The demand for the military for Iron ore, in fact iron ore mining started with the militaries of the world started expanding, in order to build huge ships, artilleries, tanks etc. For the aircrafts Aluminium was inevitable. For instance, in Odisha, a huge hill worshipped by the tribals as the dwelling place of their gods, the whole hill has been purchased and mined by a mining company called the Vedanta Group, owing to the large deposit of Bauxite ore in it(which is needed for producing Aluminium) .The company is one of the leading multinational mining company , the shares of the same were even owned by the political giants and ministers.¹⁵

The intellectual and cultural determinant is yet another determinant of Environmental history. **One's culture, one's way of thinking, one's intellectual perception etc., determines one's interface with the environment.** A connoisseur of nature would look at the nature with passion, whereas a businessman would look at it with the malicious eyes of profit making. The plants, crops being sown and the type of fertilizers used largely determine the future.

Environmental History, though it came to the USA, mainly because it was the first country to suffer from environmental degradation, mainly because capitalism was running riot in the US. They were looking every object (inclusive of religion, institutions) in the point of view of the profit. Jayaprakash Narayan who was once student at the Wisconsin University of USA, wherein the erudite Professor of Environmental history Donald Worster himself was teaching, JP quotes how he worked as a labourer in farms¹⁶ and also among the Loggers(Forest fellers), who cut sold the forests for various purposes.

Thus the forests, just like the animals were used for satisfying the capitalist greed of mankind and this greed is going to prove very costly. However, India had a noble value to

boast off compared to other nations then. India had a culture of protecting environment in many ways since antiquity. Nonetheless, it changed silently. **Certain rulers don't understand the environment.** If one looks at the degradation of the Kerala environment and the first floods in the beginning of the 20th century, it is perhaps due to the wrong use of land. Going back to history, earlier rulers of erstwhile Travancore (especially Marthanda Varma) prodded on by the colonialists, who started at looking at agriculture as cash crop, as an object of profit. Infact before the onset of colonialism, the spices were produced for meeting the needs of the family and not for the need of the market. As the colonial powers reached one after another seeking spices, we were insufficiently producing spices to meet their demands.¹⁷ Suddenly, Marthanda Varma on assuming the power started insisted the farmers for not producing the spices. He gave distinct quotas to the farmers in areas to produce and supply spices. Henceforth, insisted on producing pepper instead of rice or coconut. For the same large areas of land were freshly cultivated. Forest areas were turned into spice plantations. And henceforward, the whole cropping pattern of Kerala underwent a change. Even after Marthanda Varma, the other native rulers and feudal potentates were not very environmental friendly. The huge plantations were established after the after the *Pandarapattom* legislation etc., and the huge plantations started by the colonialists were started by the native rulers of Travancore, in which the whole Munnar area were colonized by the Britishers. In Munnar, the colonialists, took over the *adivasis*, made them their agents and labourers and started planting tea and coffee; and the whole Munnar belt became a very fragile area. This capitalist tendency, which changed our culture and the way we look at the environment and even religion changed. Earlier on, all our gods were nestled in forests, or in the midst of forests and now the forests have become sites of International Tourism. In one instance, when the Kerala government wanted to proclaim Sabarimala as a national Centre of pilgrimage, the central government intervened and nodded to make it as International Centre of **pilgrimage. in the 2000's there were 1,65,000** private vehicles plying to Sabarimala; which is very fragile ecological zone. In 2005, it increased to 2,35,000 and now it runs unrestrained.¹⁸

Imagine the havoc that was being caused by the increasing vehicular congestion upon the flimsy ecosystem! The original tradition of carrying the ritual baggage, food, water and the paraphernalia **on one's head on trekking to Sabarimala. Now** one gets everything on the way, and with huge shopping establishments within the premises. This neo-culture has destroyed the fragile ecosystem of Sabarimala and not to mention the pollution. The fury of nature, was well witnessed during the recent hefty flooding in the River Pampa, washing off everything on its way. The traditions pertaining to the purity of rituals inclusive of barefoot walking have changed. And the environment is taking the beating all along.

All knowledge is universal and unless one **understands the universal, one won't understand the local.** On studying local history; one shall not forget the Universal history. One should look at the particular with the point of view of the general. As **Fernand Braudel said, if you don't understand the universal history, you don't understand the local history.** After Febvre, **Fernand Braudel's *La Méditerranée*,**¹⁹ brilliantly emphasized on the environment. He established how the environment determines the progress of man. If man thinks in his arrogance and he could trample over nature, he is proven wrong. Nature has a way of hitting back that man cannot stopover.

Fascinatingly, long before these European scholars, Ibn Khaldun, the prominent West Asian historian, in his *Muquaddima*, has amply portrayed on the importance of environment and climate,²⁰ its powers and its need for being protected for posterity, thus making environmental history most important. Though for Ibn Khaldun, environmental history was only a subset of economic, political and cultural history; he drew attention to environmental history.

The Continuity and Discontinuity Theory and Environmental History in India

Historiography on the environment in India is divided between the advocates of change and continuity. The advocates of discontinuity emphasized the sharp divide between the pre-colonial and colonial periods. And consider the colonial rule as the harbinger of destructive policies. On the other hand, the votaries of

continuity argues that there has been an intrusion on ecological resources since the times of the earliest civilizations. However, the continuity theorists also agree that colonial rule particularly since the 19th century introduced policy changes and exploitation of material resources with far reaching consequences.

In fact, Gandhi was the 'early environmentalist' and critique of Colonial exploitation and thereby ramblingly holding discontinuity, though Dadabhai Naoroji²¹ and R.C. Dutt had pioneered in critiquing the colonial drain of material wealth from India. World renowned thinkers and policy makers have expounded that Gandhian philosophy holds key to prevention of exploitation of natural resources. Gandhian ideology is unique as based on interdisciplinary approach. Its emphasis on optimum use of natural resources, sustainable and close relation with environment, preventing indiscriminate exploitation and potential to curtail environmental degradation besides tracking the key issues of poverty puts the ideology into a high pedestal for human sustenance.

Undoubtedly, the general consensus of Indian environmentalists appears to be that Gandhi inspired and even perhaps, in a manner of speaking, fathered the Indian environmental movement. He cannot, however, be likened to John Muir or Aldo Leopold, and much less to Thoreau, but he had his own domain in the environmental space.²² Ramachandra Guha, who scholastically traced the global history of environmental movements,²³ initially critiqued Gandhi as an "early environmentalist" for his poor recognition of the problems of urban areas, yet in his later impressions he acknowledged, as do most others, that the impress of Gandhian thinking is to be felt in the life and works of many of India's most well-known environmental activists. As Guha identified, may it be the Crusading Gandhians, Appropriate Technologists or the Ecological Marxists,²⁴ it is obvious that all these distinct strands in Indian Environmentalism, visibly or invisibly adopted and employed the Gandhian strategies to radicalize ecological movements.

The Gandhian epitome and ecological concerns meandered into the plains of the 21st century Indian society through his direct and indirect disciples, Mirabeau and Saralabehn,

Chandi Prasad Bhatt, Vimla, Sunderlal Bahuguna, Baba Amte, Kumarappa, Medha Patkar or through the many non-Gandhians, but the spirit of Gandhi has undoubtedly moved Indian environmentalists.²⁵ This form of environmentalism touched by Gandhian ideas made it possible to see an interconnectedness among environment, development, survival, sustainability and peace. The Norwegian philosopher Arne Naess,²⁶ with whose name 'deep ecology' is preeminently associated, was an ardent student of Gandhi's thought and work & influenced by his metaphysics, found in Gandhi a political philosopher who most clearly shows the way to the conflict resolution and balanced living, and led Naess to delve into the problems of environment. The movement led by the Petra Kelly (German Green Party) or Nobel Laureate Wangari Mathai owes to the natural coexistence dictum of Gandhi in many aspects. Countless are the men and movements, in the past or the present, who had least encountered the Gandhian way of environmentalism while linking their movements or deliberations with larger concern for human sustenance.

Gandhi's environmental vision sought to extract from nature what is necessary for human sustenance and development and showed a total sustainable way of organizing human affairs and for the world today it has become compelling to adopt the practical positives of Gandhian principles and policies towards life through practicing the self-reliance and self governance; which ultimately would help to achieve environmentally sustainable development. The distant dream of Greener Globe could be less tedious to achieve, once the humanity arises to the dwindling situation, hence secure the boons of nature to the future generation. To Gandhi environmental degradation is in the mind of individual and hence he should change himself from inside out.

In India, Ramachandra Guha's *The Unquiet Woods* is considered to have inaugurated modern environmental history in India. It is a social history of a protest movement, the 'Chipko movement' in the 1970's which brought out the greater role of women in local ecological preservation. Guha focuses on the traditional values of peasant society in Uttarakhand and critically views various policies of the state from this angle. He

also thinks that traditional knowledge about the environment found in the peasantry's precepts and practices is better, intimate, and more nature-friendly than those held by specialists and scholars. The egalitarian culture of the largely homogenous peasantry in the mountains keep a **'reservoir of local ecological knowledge', which cares about nature and maintains a balanced relationship between environment and society in the midst of 'a century of alienation and protest'**.²⁷

Pertaining to studies on environment, there has been a very fine work *The Asian Elephant: Ecology and Management* by Raman Sukumar. He portrays how the ancient elephant is important enough to manage the ecology, i.e., on the ecology of the Asian Elephant and wildlife-human conflict. He underscores how even the mite in the tongue of the elephant is important and effects of when a tiger disappears.²⁸

History is littered with environmental disasters, but few compare to the one kicked off in 1958 in China. An instance of destroying the birds/sparrows feeding upon the millions of food grains during the time of cultural revolution of Mao Zedong in China. The Chinese Communist party felt that more than 10 million tons of food grains (to feed the people's army) were eaten up by the sparrows. Thus in 1958, Mao Zedong ordered all sparrows to be killed or otherwise the Great Sparrow Campaign (apart of the broader Four Pests Campaign). Hundreds of millions of sparrows were killed during the campaign, but it **wasn't long until the imbalance in the ecosystem** became apparent. As a direct result, millions of people starved to death. In the next year, the whole fields were swamped by insects, pests, worms etc., and regrettably, instead of 10 million they lost 50 million tons of grains and human fatalities as high as 45 or even 78 million.²⁹ This incident pestered the Communist party to once again encourage the breeding and feeding of birds in each household, by 'importing' sparrows from Soviet Russia to fight the plague of vermins and preserve their crops. So there is affine balance in nature. When the balance is disturbed by the greed of man the whole ecology changes. This problem was highlighted by Madhav Gadgil and Ramachandra Guha in one of their master pieces, *This Fissured Land: An Ecological History of India*, being the first book which is deep and profound, analyzing the history of India

in all its ramifications vis-a-vis the environment. In this work, the authors analyse the manifold ways of resource use by pre modern as well as modern industrial societies in India. They argued that the customary practices and the caste system ensured the judicious use of natural resources.³⁰ The colonial policies upset the balance that the earlier periods had maintained between humans and the environment.

Richard Grove's work, *Green Imperialism*, discusses the character of the scientific community under colonialism, which was seen in conversation with local and indigenous knowledge and which pioneered some conservationist policies.³¹ It observes that the earliest writers to comment specifically on rapid environmental change in the context of empires were scientists who were themselves often actors in the process of colonially stimulated environmental change. The Scottish medical scientists such as William Roxburgh, Edward Nalfour, Alexander Gibson, Hugh Cleghorn and et.al., wrote alarmist narratives relating deforestation to the danger of climate change, as they could use the historical evidence of environmental change in government records and thus became *de facto* environmental historians. Sumit Guha in his *Environment and Ethnicity in India*,³² strongly argued against viewing precolonial period as homogenous and questions the discontinuity theory. Chetan Singh's *Natural Premises: Ecology and Peasant Life in the Western Himalaya*³³ presents a continuity argument related to human impact on the environment in Himachal Pradesh around 1800-1947. To him colonialism only superficially affected the nature, economy and culture of the area. Mahesh Rangarajan's *India's Wildlife History*³⁴ traces over a long period of time the processes and policies that have led to the degradation of wildlife in India. scholars such as Rangarajan³⁵ and Satya³⁶ have shown, colonial forest policy drained India's natural wealth, alienated its population and compounded the impacts of droughts and famines during the late nineteenth century. It outlines the role of colonialism in creating a critical situation for forests and the animals. Although the British colonial regime initiated forest conservation policies, it was during this time that many species of animals became extinct. Velayutham Saravanan's *Environmental History and Tribals in Modern India*, offers a

comprehensive account of India's environmental history during both colonial and post-colonial times, subaltern struggles, and contributing to the current environmental policy debates in Asia.³⁷ Few new works pertaining to environmental historiography are Richard Grove and et.al, *Nature and the Orient*, **Vasant K.Saberwal's Pastoral Politics: Sheperds, Beaurocrats and Conservation in Western Himalaya**, Ajay Skaria's *Hybrid Histories:Forests, Frontiers and Wilderness*, **Ravi Rajan's Modernizing Nature**, **K.Sivaramakrishnan's Modern Forests**, Arun Agarwal and K Sivaramakrishnan (eds.) *Agrarian Environments: Resources, Representations, and Rule in India* and so on.

Pertaining to Kerala, there remains a void in the writing of its Environmental history, other than representations by few scholars within their broader framework. However, Sebastian Joseph's³⁷ work *Cochin Forests and the British Techno-ecological Imperialism in India*, is an exclusion. He delivers a penetrating analysis of deforestation in Cochin, that offers a thorough analysis of ecological, political and socio-economic conditions in the princely state, as it fell under the grip of this unique manifestation of

colonial techno-imperialism and global capitalism. Joseph focuses on the exorbitantly destructive capacity of the tramway to penetrate **deep into the heart of the region's 'virgin forests'** by the British in 1907, in order to access supplies of prized teak, ebony and blackwood in 1907.

Presently, the environmental history of South Asia is taking place simultaneously on multiple interconnected fronts that in disciplinary terms may be identified with the sociology of knowledge or history of science, linking such intellectual or cultural histories with the material and ecological histories and correlated social transformation in India. Environmental history further looks forward to searching traditional methods of land use, water management, non-intrusive technologies and alternatives for the irrevocable impairment caused by and being caused by pillagers of nature. Hence, the need for **developing a culture that doesn't pollute, a culture that is environmental friendly, a culture which respects the other inhabitants of the planet earth has become inevitable for future.** Only on realizing these cultures of natural co-existence one would become a good student of environmental history.

STATISTICAL AND HISTORICAL COMPILATIONS OF TIRUCHIRAPPALLI UNDER THE EUROPEAN GOVERNANCE

S. Xavier

Introduction

The history of Tiruchirappalli is contributed with a great number of historians and eminent writers under the governance of both East India Company and England. They write history based on their serious researches and field works. The colonial administrators worked hard to bring out the historical account of Tiruchirappalli in the form of statistical compilations, manuals and gazetteers. They make history of Tiruchirappalli as vibrant and informative. Their contribution in compilation of historical past of this region is to be commended. The antiquity of this place attracted many people and still evinced the interest. It is the need of the hour to study the biographical sketches on these history writers. The research activities make the history of historic Tiruchirappalli into vibrant. Hence, the purpose of this article is to present a brief biographical profile on a few statistical and historical compositions of Tiruchirappalli.

Makers of Manuals and Gazetteers

Gazetteers are the publications of the Government of Tamil Nadu on its various districts. They are written, as per the uniform

guidelines prescribed by the Government of India, by an Editorial team headed by an Editor. After acquiring the territory in the South, the English East India Company carved out districts and placed them under the administration of the Collectors. In the absence of any comprehensive guidebooks on districts, the Government ordered for the preparation of the Manuals for the districts. The District Manuals are the precursors of the District Gazetteers. M.C.S. Lewis Moore who was the then Acting Head Assistant to the Collector and Magistrate of Trichinopoly compiled '**A Manual of the Trichinopoly District in the Presidency of Madras**' published in the year 1878.¹ It is the first ever kind of it. Its content is vast and more comprehensive. 22 chapters in this manual present a complete account on the various aspects of Tiruchirappalli.² **It's heartening** to note on the possibility of compilation of such a massive work in those days since the modern transport and communicative devices were not available. When the District Manuals became out of date, they were revised and retitled as District Gazetteers. The first such District Gazetteer by W. Francis for Madurai District was published in 1906 followed by various districts.

Tiruchirappalli Gazetteer was published by F.R. Hemingway in 1907.³

Lewis Moore

Trichinopoly Gazetteer is authored by Lewis Moore. Manual of the Trichinopoly District in the Presidency of Madras is an unchanged, high-quality reprint of the original edition of 1878. The concepts of individual district gazetteers originated in the mid-19th century. The Madras District Manual published by J. H. Nelson in 1868 was the first of its kind. This was followed by the South Arcot District Manual (John Henry Garstin, 1878), Trichinopoly District Manual (Lewis Moore, 1878) and other districts.⁴ By the early 1900s, however, these manuals had become obsolete. Hence, they were revised in detail and expanded and re-published as district gazetteers. The first of the gazetteers appeared in 1906. Since then, there have been plenty of gazetteers published both in British as well as independent India.

The original 'District Manual' of Trichinopoly, written by the late Mr. Lewis Moore, I.C.S., was published in 1878. The book contains I to XXII chapters with variety of details and ends with statistical information.⁵ The present volume, which owes much to its predecessor, follows the plan for the new 'District-Gazetteers' prescribed by Government and, under instructions, it treats the taluks of Karur and Namakkal, which are to be transferred to the district from Coimbatore and Salem respectively, as though they were already part of it. The separate statistical Appendix, which was compiled in advance, omits these two taluks, but this defect will be remedied when it is re-issued after the census of 1911. The history of Trichinopoly is largely on the history of the Cholas and the Nayakkans, and Chapter II has consequently indented freely upon the corresponding portions of the Gazetteers of Tanjore and Madura, in which districts the chief capitals of those powers were respectively situated.

F.R. Hemingway

F.R. Hemingway is the author of Trichinopoly Gazetteer printed and published by The Superintendent, Government Press of Madras in 1907. Tiruchirappalli was the third most important fortified post in the Madras Presidency (after Fort St George and Fort St

David). The rectangular fort was built to enclose the Rock, one of several natural outcrops of volcanic gneiss which rise abruptly from the plain. The greater part of the fort of Trichinopoly and most of the city was built in the reign of Viswanatha, King of Madura, from 1559. The work of FR Hemingway has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Chapter I to XVI contains physical description, political history, the people, agriculture and irrigation, forests, occupations and trade, means of communication, rainfall and seasons, public health, education, land revenue administration, salt, akbari and miscellaneous revenue, administration of justice, local self-government, gazetteer and Pudukkottai state and finally ends with index.⁶

The Trichinopoly Gazetteer follows the **plan for the new 'District - Gazetteers' prescribed** by Government and under instructions, it treats the taluks of Karur and Namakkal, which are to be transferred to the district of Coimbatore and Salem respectively as though they were already part of it. Having little personal knowledge of Trichinopoly the author has been obliged to rely upon information supplied by various officials and individuals.⁷

Popular Scholars

Abbe J.A. Dubois (1765-1848)

Abbe J.A. Dubois or Jean-Antoine Dubois (January 1765 - 17th February 1848) was a French Catholic missionary in India, and a member of the 'Missions Etrangères de Paris'. He was called '**Dodda Swami**' by the local people. In his work '**Hindu manners, customs and traditions**' he presented Indian cultures, traditions, thoughts and varnasrama system in his work. After some years he returned to France, and authored the book *Hindu manners, customs and ceremonies*, a valuable work of Indology. He is remembered locally for having adopted the way of life, clothing, food (vegetarianism) and language typical of a Hindu monk, and to have thereby earned the trust and respect of the local people. However, he failed in his mission of converting Indians to Christianity, and often expressed the opinion, in writing and in

conversation, that the project of bringing the Indians to Christ is doomed to failure.⁸

His most notable work was *Hindu manners, customs and ceremonies*. Although Dubois disclaimed the title of author, his collections were not so much drawn from the Hindu sacred books as from his own careful and vivid observations, and it is this, united to a remarkable prescience, that makes his work so valuable. The book contains three parts: a general view of society in India, and especially of the caste system, the four states of Brahminical life and religious practices - festivals, feasts, temples, objects of worship.⁹

Lord William Bentinck purchased Dubois's French manuscript for eight thousand rupees for the British East India Company in 1807. In 1816 an English translation was published, and about 1864, a curtailed reprint of this edition was issued. The Abbé, however, largely recast his work as *Mœurs, institutions et cérémonies des peuples de l'Inde* (published in Paris in 1825), and in 1897 this revised text (now in the India Office) was published in an edition with notes by H. K. Beauchamp.¹⁰

CD Maclean (1843-1916)

C.D. Maclean was born in the year 1843 at Cambridge, United Kingdom and died in the year 1916. C. D. Maclean and C.P. Brown were the authors of 'Manual of the Administration of the Madras Presidency' published by Asian Educational Services in the year 1887 contains 1436 pages. Most of the pages have been taken from the portions of the Madras Administration Reports for 1872-73 and 1875-76 which dealt with standing as opposed to current information regarding the different departments. This volume does not attempt in any sense to be a Gazetteer of the Presidency the few remarks of that nature which will be found have been introduced only because there is at present no Presidency Gazetteer.¹¹ Vol. I consist of Chapters 1-9 containing the Principal articles of the manual arranged so as to conform to the order of subjects in the yearly presidency administration report. Vol. II consist of appendices containing articles and statements, supplementary of the articles of vol. I arranged under general heads. It also consist of glossary of the Madras Presidency

Gazetteer and Economic Dictionary of the Province and other information.¹²

Edgar Thurston (1855-1935)

Edgar Thurston (1855- 12 October 1935) was a superintendent at the Madras Government Museum who contributed to studies in the zoology, ethnology and botany of India and published works related to his work at the museum. Thurston was educated in medicine and lectured in anatomy at the Madras Medical College while also holding his position at the museum. His early works were on numismatics and geology and these were followed by researches in anthropology and ethnography. He succeeded Frederick S. Mullaly as the superintendent of ethnography for the Madras Presidency.¹³

Edgar Thurston was the son of Charles Bosworth Thurston of Kew, London. Schooled at Eton College, he then studied medicine at King's College, London, qualifying as LRCP in 1877. He worked as a medical officer in Kent County Lunatic Asylum and became a curator of the museum at King's College before joining the Madras Museum in 1885 as a superintendent.

Aside from his role at the Madras Museum, Thurston was for some time Honorary Secretary to the now-defunct Fine Arts Society of Madras and was influential in promoting the artistic works of Raja Ravi Varma and his brother C. Raja Raja Varma.¹⁴ Thurston was awarded the Kaiser-i-Hind Medal, first class, on 2nd June 1902. He was made C.I.E. in 1909. He retired to England and spent his winters at Penzance where he studied the local plants and regularly hosted a New Year party for the local botanists. He died on 12th October 1935 at Penzance.

In 1901, Thurston was appointed to the Ethnographic Survey of India project, established at that time following the success of Herbert Hope Risley's Ethnographic Survey of Bengal.¹⁵ Risley was an adherent to the theories of scientific racism and had been appointed as director of Ethnology in India. Thurston worked as a part of this project to collect accurate anthropometric measurements. These included a number of measurements of the skull and derived indices or proportions such as the nasal index.¹⁶ He did this work alongside his role as

superintendent of the Madras Museum, a position that he did not leave until 1908.¹⁷

Among other published works, Thurston wrote the seven volumes of *Castes and Tribes of Southern India*, published in 1909 as part of the Ethnographic Survey of India. In that work he was assisted by K. Rangachari, a colleague from the Madras museum who had also assisted him in a 1906 ethnographic study, *Ethnographic Notes in Southern India*. Rangachari had supplied most of the forty photographs used in this earlier study.¹⁸ The September 1910 edition of *Nature* described the 1909 publication as a monumental record of the varied phases of south Indian tribal life, the traditions, manners and customs of people.

Thurston also authored *Coins – Catalogue No. 1: Mysore* (1888), *Catalogue of the Batrachia, Sallentia and Apoda (Frogs, Toads, and Coecilians) of Southern India* (1888), *Coins – Catalogue No. 3: Sultans of Dehli* (1889), *History of the coinage of the territories of the East India company in the Indian peninsula and catalogue of the coins in the Madras museum* (1890), *Notes on the pearl and chank fisheries and marine fauna of the Gulf of Manaar* (1890), *Coins – Catalogue No. 2: Roman, Indo-Portuguese, and Ceylon* (1894), *Pearl and Chank Fisheries of the Gulf of Mannar* (1894), *Anthropology of the Todas and Kotas of the Nilgiri Hills: and of the Brāhmans, Kammālans, Pallis, and Pariahs of Madras City* (1896), *Kadirs of Anaimalais – Malaialis of Shevaroy – The Dravidian Head – Dravidian Problem* (1896), *Monograph on the silk fabric industry of the Madras presidency* (1899), *Anthropology: Notes on some of the people of Malabar – Mala Vedars of Travancore – Miscellanea* (1900), *Monograph on the ivory carving industry of Southern India* (1901), *Anthropology: Visions of the Uralis and Sholagars – More Marriage Customs in Southern India – Hook-Swinging – Paliyans* (1903), *Ethnographic Notes in Southern India* (1906), *Omens and Superstitions of Southern India*. New York: McBride, Nast & Company (1912) and *The Madras Presidency, with Mysore, Coorg and the Associated States* edited by T. H. Holland in 1913.¹⁹ Besides the above he also authored two other works on provincial geographies of India and on flora of Madras Presidency.

Fr Henry Whitehead (1853-1947)

Henry Whitehead (19th December 1853 – 14th April 1947) was an eminent Anglican bishop. Whitehead was educated at Sherborne and Trinity College, Oxford. Ordained in 1879 his first post was as a preacher at St Nicholas, Abingdon. He then emigrated to India where he was principal of **Bishop's College, Calcutta** from 1883 to 1899.²⁰ On St Peter's Day (29th June) 1899, he was consecrated a bishop by Frederick Temple, Archbishop of Canterbury, at St Paul's Cathedral, to serve as the fifth Bishop of Madras an office he held for 23 years. In 1903 he married Isabel Duncan. A noted author on his adopted country, he died on 14 April 1947.²¹ He had become a Doctor of Divinity (DD).

He was the author of *The Village Gods of South India* (1916) published by Humphrey at Milford. He was also the author of *Indian Problems in Religion, Education, Politics. Constable in 1924, Christian Education in India (1932) published by Macmillan*. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps, and other notations in the work.

The material for this account of the village gods of South India²² has been gathered almost entirely from his own observation and inquiry. This was the first attempt at dealing systematically with this aspect of Indian religion. It does not pretend to be anything like an exhaustive account of all the various rites and ceremonies observed in the worship of the village deities. The variety of ritual and ceremonial in the different districts of South India is almost endless. A Glossary of Indian Terms and several Indices have been included in order to facilitate reference to the large amount of unfamiliar detail which the book contains.

Conclusion

Based on the above passages it is evident that the history of Tiruchirappalli is contributed with many numbers of historians and eminent writers of European powers. Their contribution in compilation of historical past of this region is to

be commended. The antiquity of this place really attracted many people and kindled their interest. It is noteworthy that only these energetic people and their research activities make the history of historic Tiruchirappalli into vibrant. These historians left many research into half way. Hence, the duty of present history researcher is to carry forward the new findings and new

methodologies, which will add strength to the history of Tiruchirappalli as well as to history of Tamil Nadu. The European scholars not only produced valuable, theoretically oriented works on Indian rural culture, but also inspired young and old anthropologists to take up similar researches on Indian villages and caste system.

THAHREEDH : SITUATING A 16TH CENTAURY ARABIC TEXT

K. Abdul Vahab

The present paper entitled 'Thahreedh : Situating A 16th Century Arabic Text' is an attempt to analyze the historical significance of an Arabic text written in 1521 by Sheikh Zainudheen Ibn Ali who is considered the first Makhdoom (accepted scholar cum judge in the Ponnani tradition). He was the grandfather of Sheikh Zainuddin, author of Tuhfat al Mujahiddin, the first written history about Kerala. The book was written in the context of the Portuguese invasion of Malabar. The full name

the text is 'Thahreedh Ahlii Eemaan Ala Jehadi Abadathi Swalban : Situating A 16th Century Arabic Text' (It means : Motivating believers for struggle against Cross - worshippers). The paper is prepared based on the original text. *Tahreedh* is a poetic outburst of rancor at the event of colonialism couched in eschatological references and expressing the tone and concern of a pamphleteer. The event of colonialism lies at the background of the book.

SURFACE EXPLORATION AT UZHAKUDI AND KALIYAVOOR

M. Arumuga Masana Sudalai & K.S. Sasikala

Tamirabarani River which originates from the Pothigai hills of western ghats and flows through Tirunelveli and Tuticorin districts of Tamil Nadu. Village of Uzhakudi lies around 12 kms from Deivacheyalpuram.. The urns or the **'muthumakkal thali'** are used in war times to bury people in areas where there cannot be any other occupation. Sometimes they were concealed to prevent the epidemic spread out in the country. I started my research from kaliyankadu and found an urn used to bury people. The first ever urn which was used in the area was also recovered in a fine state. The quartz stone found in the riverbed are used as tools. They are known as Meta Morphic Rock Likewise, animal bones and tree branches were also used. A stone tool is found in my research. Stone tools were carved out of large stones. All these evidences suggest that this rich culture should have been created before two million years in the southern part of

India. Recent studies say that this civilization has been an old and large civilization. The antiquities that I found in research such as Black and red, polished black, inner black-outer red earthen materials, Water filter made of sand, Mud ring used to place pots, play things resemble the things got from Keezhadi excavation. From this we can know that they belong to the ancient period. Moreover, the earthen materials from the recent excavations had been inscribed with Tamizhi scripts. But earthen materials from Uzhakudi and Kaliyavoor excavations had no scripts inscribed. So we can learn that the people lived in Uzhakudi and Kaliyavoor belonged to the period before the letters appear. In the history of India, Tamil civilization has been the ancient and aged civilization. It is much older than the now known civilization of Indus valley. The world needs to know this truth.

WATER RESOURCE MANAGEMENT: REQUIREMENTS AND MEASURES

S. Benazeer

Water is one of the most essential natural resources for sustaining life and it is likely to become critically scarce in the coming decades, due to continuous increase in its demands, rapid increase in population and expanding economy of the country. Variations in climatic characteristics both in space and time are responsible for uneven distribution of precipitation in India. This uneven distribution of the precipitation results in highly uneven distribution of available water resources both in space and time, which leads to flood and drought affecting the vast areas of the country. Better and scientific structural and non-structural measures are required for mitigating the floods and droughts. Mathematical models are needed for forecasting the monsoon rainfall accurately, which utilized by the decision makers and farmers for adopting appropriate strategies for management of droughts and floods. There is need for increasing the availability of water and

reducing its demand. For increasing the availability of water resources, there is need for better management of existing storages by constructing small, medium and large sized dams considering the economic, environmental and social aspects. The availability of water resources further enhanced by rejuvenation of drying lakes, ponds and tanks and increasing the artificial means of ground water recharge. In addition to these measures, interbasin transfer of water provides one of the options for mitigating the problems of the surplus and deficit basins. However, for inter basin transfer of water the scientific studies need to be carried out for establishing its technical and economic feasibility considering the environmental social and eco-hydrological aspects. This paper traces different measures to solve the sustainable requirement of water and measures towards its conservation and utilization in the present scenario.

PERIYAR VIEWS ON EMPOWERMENT OF WOMEN

K.N. Manjunath

Periyar's struggle for the cause of women has few parallels in the history of women's liberation in India. Amidst various social reformative activities, he gave priority to **women's upliftment. The Self - Respect Movement**, the brain - child championed by Periyar has contributed greatly for the upliftment of women by creating rationalistic thinking. Periyar stands unique and highly practical in his approach to the problems of women. He understood the deep rooted social evils of the marginalized section and took up as his life mission right from the day he entered the public

life to eradicate child marriage, to encourage widow remarriage, to provide education for women, to uproot male chauvinism and their right to property and to abolish Devadasi system. The myths which extol servility in women as virtue and all atrocities committed on women were exposed, ridiculed and condemned by Periyar in public meetings, marriage ceremonies, political platform and writings. He wanted to put an end to all kinds of unjust discrimination and to promote social justice and rational outlook and supported rational and secular ethics based on the values of freedom, equality and justice.

HISTORICAL WRITINGS OF N.S. RAJAPUROHITHA-A REVIEW

R.D. Pavamana

Second half of 19th century and early half of 20th century is important period in the history of modern Karnataka. Many of the intellectuals of the period particularly from Hubli, Dharwad and Belgaum were more inclined towards Tilak and Tilakism. In the kind of writings that emerged during this period, attempts were made to project historically and culturally greater Karnataka. Narayana Shrinivasa Rajapurohitha was a renowned, litterateur, translator, social worker and a historian of late 19th and early 20th century Karnataka. He was a witness to significant historical developments of modern Karnataka and India. He has authored a number of books including books of Karnataka history. An attempt is made in this paper to review his historical writings.

The cultural revivalism that emerged in the 19th and early 20th century got manifested in several ways. One significant aspect was taking pride in the past. Veneration for cultural and philosophical achievements of the past, importantly the Hindu past was one of the significant aspects. Such a keen spirit of revivalism was quite profound in Western India. Coinciding with the cultural revivalism was a tremendous political ferment especially with the

emergence of the new ideology within the Indian National Congress. Developments in Poona and Bombay had an implicit effect upon the Kannada provinces placed under Bombay Presidency. Kannada provinces had been dismembered and placed under the Bombay and Madras Presidencies besides the several Princely states. Kannada speaking provinces under the Bombay Presidency known as Bombay Karnataka and Southern Maratha provinces. The region saw the emergence of several intellectuals who invariably fell under the influence of one or the other of the ideologies or movements that emerged in Presidency. Undeniably, many of the intellectuals particularly from Hubli, Dharwad and Belgaum more inclined towards Tilak and Tilakism.

Of the period under study, there were several who wrote profusely on the history, culture and language of Kannada provinces. There was keen sense of pride in the past, the **'Kannada Past' very much in tune with the developments at the nationalist level.** In the kind of writings that emerged attempt were made to **project historically and culturally 'Greater Karnataka'. Significant in this direction.**

MARITIME ACTIVITIES DURING VIJAYANAGARA EMPIRE

C. Santhosh Kumar

Since from 3000 years ago India have been well known about the maritime trade. The same tradition was also continued in the reign period of Vijayanagara Empire. Geographically this empire was situated in the deccan plateau, and obviously it was having a huge coastal line as a part of its kingdom. It had many important ports to have maritime trade, viz., Honnavar, Bhatkal, Mangalor, Barakur. Cananore and Goa etc. With the help of these ports, it was imported many things like Horses, Pearls, Eleph ants, Copper, Coral, Mercu ry, Vermillion, China Silk and velvet. And exported goods like Cloth, rice, iron, Saltpetre, Sugar ai1d spices. There are many

references to these. Not only trading but there are also references for ship building activities. Nicolo Conti who visited the empire during Devaraya I, had made his reference about ship building. **There is also reference in the 'Amuktamalyada'** authored by Sri Krishnadevaraya about salt production in the empire. Until 16th century AD, Arabs had played an important role in the maritime trade. But, by the advent of the Europeans, especially Portuguese, total scenario of the maritime trade had been changed. Vasco Da Gama, a sailor from Portugal found a sea route to Calicut, India. He started exploiting the local rulers as well as merchants of this soil.

BRITISH RAJ AND HAJJ PILGRIMS: QUARANTINE REGULATIONS IN THE MARITIME MADRAS (1850-1900)

T.A. Shameer

The proposed paper tries to understand the patterns of changes in the Quarantine among the Hajj pilgrims in British regime in Madras. The period of study will encompass from 1850 to 1900 in which the British introduced more regulations related with quarantine rules among the Hajj pilgrims. The paper also endeavor the Quarantine regulations in the ships as well as ports in the Madras presidency from 1850 to 1900. The major reason for introducing the quarantine regulations among the pilgrims was larger response from the colonial metropolis regarding

the spreading of various contagious diseases in the metropolis. The paper tries to understand, how the British institutionalised the quarantine regulations in among the Hajj pilgrims who were travelling to Mecca for the religious ceremony. The present paper has divided into two parts according to themes, first, to understand the nature of quarantine changes in the maritime Madras during British period. Second, to analyses the quarantine regulations among the Hajj pilgrims and to trace the ways in which it implemented in the ships and ports in Madras presidency.

A HISTORICAL STUDY OF THE GENEALOGICAL RECORDS OF HELAVAS

V. Shashi Kumar

Helavas, traditional archivists, have documents containing the genealogy of almost all families in every village. The Helavas sing family genealogies from carefully kept records. Songs of the past: **How a nomadic community preserves records of Karnataka's ancestral bloodlines, Helavas preserve** their ancestral archives with utmost care, as the bundles that they carry contain documented information dating back centuries(in Chippodu, copper and bronze palates) Perhaps, it is the only community in India that has made archiving a source of livelihood. Families offer them money, gold and silver articles, and foodgrains in return. Their inherited skills of archiving can leave modern archivists awestruck. Like most other tribal heritages, the exceptional Helava practice of narrating genealogies is also fast diminishing with the advent of modern technology and computerization.

ENDOWMENT LECTURES
KASTHURI MISRO MEMORIAL LECTURE
THE ASSIMILATION PROCESS OF *MATANGI* OF MADIGAS INTO
HINDU PANTHEISM
Prof. Thallapally Manohar

Esteemed president, distinguished delegates, ladies and gentlemen, at the outset I would like to express my deep sense of gratitude to the distinguished members of the executive council of the South Indian History Congress for selecting me to deliver Kasturi Misro Memorial Lecture on the occasion of 40th Annual Session of the South Indian History Congress being held at Annamalai University, Annamalai Nagar. I am extremely thankful to Prof. Misro and his family members for creating this lecture in the memory of their beloved daughter. It is a rare privilege and honour bestowed upon me. But I am conscious about my limitations. An attempt is made in this lecture to study "The Assimilation process of Matangi of Madigas into Hindu Pantheism", as revealed through the historical sources and extensive field work.

Madigas are Telugu speaking people found in the South Indian states of Telangana, Andhra Pradesh and Karnataka. They were considered as untouchables, perhaps due to their eating habits or profession. They live on the outskirts of the villages mostly on the North-eastern corner in many cases close to the water bodies. They eke out their livelihood through leather work. They cleanse the animal skins and prepare a variety of equipment with the hide. They acted as one of the servicing castes of the village agricultural communities and perform the work of agricultural labourers. They consume the meat of the animals they skinned both alive and carrion. They are tall and dark with well-built bodies and are scantily clothed. Besides pursuing their traditional occupation of tanning and leather working, they play drums (*Dappu*) during both auspicious and inauspicious occasions in the villages.¹ Syed Siraj-ul-Hasan in his book *Castes and Tribes of H.E.H Nizam's Dominion* listed a number of equivalent words for Madiga like - "*Madigodu, Madigaru, Dher, Chandala, Antyaja, Ettivandlu, Peddinti Vallu, Matangi Makkalu, Gosang, Kamati, Bendar* and

Chambar."² The first comprehensive census operation carried by the British government in 1881 categorises the Madigas as non-Hindu or aboriginal castes and tribes along with *Holayas*, another outcaste.³ But many historians contested the intention and rationale of the British Indian census reports on the ground that it was meant to divide the people on caste and religious lines. Notwithstanding the reasons behind categorizing the largest untouchable community as non-Hindus in the Census Report of the British Government during the 19th century, there is a need to examine the ancient belief systems of the Madigas and the changes they have undergone with the passing of time, the reasons thereof, and how the tutelary deity *Matangi* has been alienated from them and assimilated into Hinduism. The primary objective of the present study is to examine all these aspects with the available sources. In the present paper an attempt is made as to how *Matangi*, the tutelary deity the Madigas, was Hinduised and transformed into one of the principal deities of Hindu pantheon with various names and worshipped in diverse ways.

Origins of Madigas:

*Jamba Purana*⁴ is the origin myth of the Madigas. The dependent castes of the Madigas like **Nulkachandayya, Dakkali, Chindu's recite**, narrate and perform the *Purana* in their own styles. The *Nulaka Chandayyas* otherwise known as Madiga *Jangams* melodiously recite the *Purana* from the paper rolls they carefully preserve for generations, the *Dakkalis* narrate it using artistically painted scrolls, and the *Chindu* Madigas dressed as *Gosangis* depict it in the form of a dance drama. Some of the legends were recorded and quoted in the ethnographical reports of the colonial period. Edgar Thurston & K. Rangachari in their book *Castes and Tribes of Southern India* in form that "**Yugamuni, the son of Jambavan, enticed by Sankhyamuni killed the**

Divine Cow Kamadhenu, cooked its meat and consumed it. As a result of this trespass, Lord Siva cursed Yugamuni. The descendants begotten by Yugamuni and his wife *Matangi* are the Madigas.”⁵ Similarly, Syed Siraj-ul-Hasan in his *Castes and Tribes of H.E.H Nizam's Dominion* narrates the story of Jambavan and *Mala* Chennaiah to reveal how the name Madiga came into existence.⁶ A closely related story of Vellamanu was cited by Edgar Thurston⁷ Based on the narratives cited above, it can be concluded that there are quite a number of stories as to how they came to be named as the Madigas and why they are considered untouchables.

Madigas – Descendants of *Matangi* – Literary Evidences:

There are oral and literary evidences galore to state that Madigas are the original descendants of *Matangi*. The Telugu dictionaries reveal the meaning of *Matanga* as Madiga. According to Gustav Solomon Oppert, the word '*Matangi*' is a compound word formed by '*Mang*' and '*Madiga*'.⁸ Further, he opined that the word *Matangi* refers to a 'tribal mountain climber'.⁹ Strengthening this opinion of Gustav Oppert, Nanjundaiah and Ananthakrishna Iyer have stated that the Sanskrit word *Matangi* variously means a savage, a mountain climber, and an uncivilised person.¹⁰ Edgar Thurston states that *Matanga* means *Chandalas* or men of the lowest caste, or *Kirata* mountaineers, uncivilised, children of *Matangi*, or *Matangi Makkalu*.¹¹ Though the word has several meanings, it may signify a 'tribe of the lowest caste'. Scholars agree that the term Madiga is derived from the ancient term *Matanga*. Moreover, there is a large subdivision of the Madigas called *Matangi*. And the Madigas of the Canarese country call themselves *Matangi-Makkalu* which means 'children of *Matangi*'.¹² In their article published in *Madras Mail*, Thurston and Rangachari stated “**Madigas are *Matangi Makkalu* or children of *Matangi*, or as the descendants of Durga, and that she is their tutelary deity**”, which is further confirmed by Nanjundaiah and Ananthakrishna Iyer.¹³ However, according to Syed Siraj-ul-Hasan and Emma Cough “the Madigas have, to elevate themselves, declared themselves as *Matangi Makkal* and also as the descendants of *Matangi*, who is the daughter of Sage Jambavan.”¹⁴

Ramayana and Mahabharata state that the Madigas are the descendants of an untouchable sage.¹⁵ According to Thurston and Rangachari there are references to Matangas in Ramayana and in Banabhatta's *Kadambari* which states that the name of the leader of Cabaras is Matanga.¹⁶ However, according to the genealogy of Madigas, Matanga is the son of Sage Jambavan. His daughter was Arundhati, and she was the wife of Sage Vasishtha.¹⁷ *Matanga Jataka*, one of the *Jataka* tales, describes the former births of the Buddha as Bodhisattvas in which the Buddha was born in a village as Matanga belonging to the Chandala community, but because of his greatness, he had achieved the status of a Brahmin.¹⁸

Edgar Thurston, while referring to Madras Census Report (1891), and the writings of H.A. Stuart, states that the Madigas are the descendants of *Matangi* and were known as *Matangi Makkalu* (children of *Matangi*). According to Stuart, the Madigas consider themselves to be the successors of the rulers of Matanga kingdom in the present Karnataka region. Similarly Fleet in his book *Dynasties of the Kanarese Districts of the Bombay Presidency* (1882), states that the Matangas and Kalachuryas have relationship with Mangalesa – the younger brother and successor of Kirtivarma I, who ruled the kingdom between 89 Saka Era (567-68 CE) to 132 Saka Era (610-11 CE). Fleet further states that the successors of Mangalesa are known as Matangas.¹⁹

The same conclusion is elaborated by Emma Rauschenbusch Clough in her work *While Sewing Sandals: Tales of Telugu Pariah Tribe*. She says, “**If a record of the Madigas, as a tribe among other tribes, could be found in an inscription, it would at once take their history out of the region of the merely conjectural and legendary and place it on a somewhat firm foundation. I thought I had found a record of this kind. It dates back to the year 634 A.D., when Mangalisa, a king of the Chalukya dynasty, conquered the Katakchuris, one of the early Dravidian dynasties. The inscription is engraved on a stone tablet let into the outside of the wall of a temple at Aihole in the Canarese country, and contains the following sentence: 'His younger brother Mangalisa, whose horses were picketed on the shores of the oceans of the east and the west and who covered all the points of the compass with a canopy through the dust of**

his armies became king. Having with hundreds of scintillating torches which were swords dispelled the darkness which was the race of the Matangas, in the bridal pavilion of the field of battle he obtained as his wife the lovely woman who was the goddess of the fortunes of the **Katachchuris**.²⁰ Fleet found an inscription and he deciphered and interpreted it as 'some aboriginal family of but little real power.' While reinterpreting his work, a few years later, he says, **"Examining the verse again, I consider that the components of it are connected in such a way that the word Matanga must be taken to denote the elephants of the Katachchuris."** Thus the supposition that the Madigas were meant in the inscription is rendered very doubtful.²¹ In all probability, as per the present author's opinion, Mangalesa and his forces defeated king Matanga and annexed his kingdom and Mangalesa married the wife/daughter of Matanga, besides accepting their tutelary deity - *Matangi* as their deity. Whatever the conclusions and opinions of the historians, the Madigas believe that they are the descendants of *Matangi*.

***Matangi* – Tutelary deity of Madigas:**

Matangi is basically related to the forest and nature. According to many scholars, *Matangi* is stated to be the deity of the untouchable or lower-caste hunters.²² The *Matangi* must be worshipped by the devotees only while being impure and offered only impure items. Being impure, implies that the devotees are not required to have bathed before worshipping her, nor are there any restrictions like being on fast or follow a vow. Even the menstruating women can worship her, besides offering her the clothes soaked in menstrual blood.²³ Such mode of worship is forbidden in Hindu religious practices. Hence, it appears that worship of *Matangi* is an absolute contrast to the Hindu religious tradition.

Throughout the world, woman was considered as synonymous to the fertility of earth and hence feminine was made as a divinity and worshipped in many world civilizations including that of India. Perhaps, due to this reason matriarchal cultures prevailed in the world and the residues of that culture can be noticed in India even today. The Madigas practicing the *Matangi* system worship *Matangi* in the form of *Yoni* the female reproductive tract. It is learnt that worship of the *Yoni* began in the primitive ages itself according holiness to the

organ that is the root for their birth. There are historical evidences to show that the worship of *Yoni* is prevalent across the globe. Based on the artefacts found during archaeological excavations concerning the first civilisation of India – the Indus Civilisation – the people of Indus are said to have worshipped Mother Goddess in the form of *Yoni*. It can be said that every society or community that worshipped the *Yoni* has accorded a respectful status to women too. Hence, it can be said that the Madigas have, in the same way, worshipped *Matangi* in the form of *Yoni*, thereby according primacy to worship of Mother Goddess.

A study of the ancient Matriarchal system reveals that the women of the ancient past had the liberty to copulate with a man of her choice. D. D. Kosambi asserts that some of the women of the ancient Mesopotamian civilisation namely Goddess *Ishtar*, and that of the Indus civilisation in the name of Mother Goddess have copulated with the men of their choice.²⁴ In tune with the same traditions, the *Matangi* system as representative of Goddess *Matangi* in the physical world, prevailing among the Madigas need to be understood. In accordance with the tradition, some of the Madiga families dedicate their daughters to their deity *Matangi*, the practice being called *Jannekiduchuta* in Telangana parlance, to follow ritual prostitution.²⁵ There are many such stories on dedication of Madiga girls to their deity *Matangi*. In these, one of the prominent folklore of Madigas is Renuka Yallamma²⁶ story narrating by Baindilas. The Madigas have been following the custom of dedicating their first born girl as *Matangi* not only as act of penitence for blasphemy but also to provide them succour. The Madigas in some regions are still practicing the *Matangi* system, though officially abolished by law. Based on this, it can be learnt that the Madigas originally followed the Matriarchal system and the residue of the practice is *Matangi*.

Assimilation of *Matangi*:

According to the Sanskrit-English dictionaries, the word *Matangi* has multiple meanings – mythologically belonging to the race of elephants, a *Chandala* or *Kirata* woman, Goddess Durga – one among the ten incarnations, and mother of Sage Vasishtha.²⁷ Similarly, the Telugu-English dictionary of C P Brown gives the following meanings - Goddess

Parvati, Sage Vasishtha's wife, a siren, a wonderful nymph, a ghost, an untouchable woman, the tutelary deity of sailors of Madras, and a seller of alcoholic liquor.²⁸ As already stated, Thurston and Rangachari have identified her as Goddess Durga. In the same manner, while Syed Siraj-ul-Hasan opined that she was Jambavan's daughter, Emma Clough states, like the Sanskrit dictionary, that Arundhati and *Matangi* are the wives of Sage Vasishtha and that *Matangi* belonged to Madiga community and is venerated as Mother Goddess *Ellamma*.²⁹ Similarly, during the early years of 20th century, Chilumuri Srinivasa Rao, after extensive field studies in Nellore district stated that *Matangi* is the tutelary deity of Madigas, and that Goddesses Kali, *Matamma*, and *Ellamma* are her other forms.³⁰ All these definitions clearly reveal that *Matangi* was identified with Durga / Parvathi in the process of assimilation of the great tradition-Hinduism.

Inclusion of *Matangi* among the Ten Mahavidyas:³¹

The first traces of *Matangi*, the tutelary deity of the Madigas, was found in *Divyavadana* – the compilation of Buddhistic stories in a rudimentary form. Based on the stories, *Matangi* is said to have been a girl belonging to a lower caste, who enticed one of the disciples of Buddha.³² But it seems that *Matangi* was appropriated initially by the tantricism. According to the sources, *Matangi* is considered to be the ninth among the ten *Mahavidya Avatars*. The *Mahavidya Avatars* are ten in number.³³ The number may at times be increased by three to six more *Avatars*.³⁴ These *Mahavidya Avatars* came to limelight from the 10th century onwards.³⁵ Considering them to be the various forms of the same Goddess, the devotees worship them and get their wishes fulfilled.³⁶ Each *Mahavidya* is a great Goddess in her own right.

Matangi is described in the tantric texts as a beautiful maiden of dark complexion with long hair, drowsy eyes, and surrounded by all the elements of Nature.³⁷ She is described to be seated on a diamond studded throne, or on a corpse.³⁸ She holds a variety of articles in her hands, prominent among which are *Veena*, skull, sword, sound, a wand, armour, and a *Chekola* (baton).³⁹ She is depicted to represent sapphire and green colour. However, some depict her as representing a dark colour and restrict the

definition to black. *Kubjika Upanishad* states that *Matangi* appears in a blue attire, wearing blue ornaments and bluish scents, and possesses a blue coloured parrot.⁴⁰ When *Matangi* is depicted as having four arms, each arm represents one *Veda*.⁴¹ Alternative names like *Raja Matangi*, *Sumukha Matangi*, and *Uchhishta Chandalini* have been created for *Matangi* as per the respective attributes.⁴² Although there are a variety of descriptions of *Matangi*, each one of them describes her as a popular deity.

A story related to the birth of *Matangi* is found in *Sakti Sangrama Tantra*, according to which *Matangi* emerged from the food left-over by Lord Siva and Goddess Parvati. Lord Siva declared that the boon of *Uchhishta Matangi* is the best one among all the boons. According to the Hindu tradition, the left-over food is considered to be an impure one not fit for offering to the deities. However, *Matangi* wishes that her devotees offer her the left-over food, and thus wishes that the offering be made through wet hands and through the mouths of the devotees (*Uchhishta*). These offerings are known as *Chavas*.⁴³

Matangi can be said to be the tutelary deity of the untouchables or the lower castes. Two of the stories relate her to the untouchable caste. According to the first tale appeared in *Pranatosini Tantra*, Siva tests Parvati's trust in him. Even Parvati goes to Him disguised as a *Chandala* woman to test Him. She (the *Chandala* woman) pretends love towards Siva, who gets entrapped in her love. She then seeks the boon that was bestowed by Lord Siva. As per that she became eternal in the form of a *Chandala* woman as *Uchhishta Chandalini*. Thenceforth, Parvati continued to be worshipped as *Uchhishta Chandalini* or *Matangi* – the tutelary deity of the lower castes. According to another tale, *Matangi* is Lord Siva's sister. Unable to bear her behaviour, Siva banished her. Later, when she began bad-mouthing about Lord Siva, Goddess Parvati cursed her to take birth in an untouchable family. The distraught *Matangi* then sought the advice of her elder brother Lord Siva, who blessed her to be worshipped by the devotees on their way to Varanasi.⁴⁴

Matangi is considered to be a deity who lives in the forest, who knows all about the forests, and the one who enjoys the forests – as Savari.⁴⁵ The *Swatantra Tantra of Raja Matangi*

Purana depicts the roots of the birth of *Matangi*. *Matangi* helps in controlling all the living beings. Hence, she is equated with Savareswari Devi. In the *Sandhyavarta Tantra*, there are *Slokas* related to *Matangi* along with those of Savareswari Devi. The *Sarada Tilaka Tantra* describes *Matangi* to have leaves on her forehead and garlands of flowers in her hair. All these are indicative of her relationship with Savareswari Devi.⁴⁶

Matangi is said to be the daughter of Matanga.⁴⁷ She is also described as the goddess of the hunters. She protects the living beings in the nature. She is also called as the power of the elephants. In *Matangi Tantra* it is said that meditating upon her is considered to be the power of elephants and as happiness of the world. It is said that she is seated on a throne of ornaments and that the gods prostrate at her feet. She is also considered to be the goddess of romance and is compared to a she elephant.⁴⁸

Matangi can be said to be a goddess who has intoxicating organs. Some scholars consider her to be another form of Saraswati the Goddess of culture and knowledge.⁴⁹ A look at the traits of Saraswati and *Matangi* reveals that both of them are goddesses of music, knowledge, and bestowers of wisdom that would liberate the worshippers.⁵⁰ In summary, *Matangi* can be said to be a Goddess possessing multiple traits and of various forms. She is the guardian of people.

Like the other *Mahavidyas*, *Matangi* too possesses great supernatural powers.⁵¹ She possesses the power to fulfil the wishes of her devotees, and in controlling and attracting them too. Moreover, she can annihilate the enemies of her devotees. She can make them rich and powerful too.⁵² To seek her benevolence, the devotee has to chant the *Matangimantra* while offering various herbs into the fire.⁵³ To achieve the power to attract others, one must offer salt and honey to Agni. Similarly, the rituals related to *Matangi* must be concluded only at mid-night, and sacrifices offered.⁵⁴

Worship of *Matangi* as Renuka *Ellamma* or Lajja Gouri:

In his book *Religion in Andhra*, B S L Hanumantha Rao states that Mother Goddess was initially worshipped in the form of shapeless stones and later in the form of a pot decorated with flowers. It was for this reason when she is

worshipped in the form of *Yoni*, she is called as *Garigamma* (a small earthen bowl called *Gurigi*, which represents the *Yoni*).⁵⁵ Based on this, *Matangi* - the tutelary deity of Madigas, being worshipped by the upper castes as a principal deity is, in fact, a naked goddess worshipped in an iconic form of *Gurigi*, *Gavvalu* (cowrie shells), *Nagapadige Chekola* (a baton with its head in the shape of the hood of cobra) and *Veeratradu* (long rope made of coir). Though the times are changing, in the effort to accord a form to *Matangi*, the practice of worshipping her in the form of *Yoni* or *Nagnakabandham* - the female reproductive tract - continued.

Idols in an iconic form of *Nagnakabandham* are found in temples located at Aihole, Badami, Mahakuta, Siddanakota, Jalahaal, Panchalingala, Kudavelli, and Alampur. It is learnt that worship of *Matangi* / *Ellamma* is also performed in these temples. The idols in these shrines would leave the visitor in a mix of emotions - inspired and wonderstruck. These idols appear with a head that is symbolically substituted with a large lotus-flower, with strong breasts, and the legs folded at the knees and in splayed position with a fissure between them like the *Yoni*. These idols were easily comprehensible and clear postures were found to be erotic, hence the scholars have considered them as the idols of a 'Shameless female deity' and 'Tutelary deity of reproduction'. Likewise, the goddess is known as 'Lajja Gowri', '*Ellamma*' and *Nagnakabandam*.⁵⁶

After conducting extensive field studies in Nellore and surrounding areas during the early decades of the 20th century, Chilumuri Srinivasa Rao concluded that *Matamma* and *Ellamma* are the alternate forms of *Matangi*.⁵⁷ Based on this, it can be said that *Matamma* herself has transformed into *Ellamma*. In other words, in due course of worshipping *Matangi* as Jagadambika (The Mother of the Universe), the Madigas began worshipping her as *Ellamma*. There are famous shrines galore across South India where *Ellamma* is also worshipped in various an iconic forms like stones or baskets, to which turmeric and vermilion are applied as part of the ritual. The Sundatti *Ellamma* shrine in Karnataka is one such famous shrine. The *Matangi* Devi shrines Surabheswara Kona and at Mogilicharla, where the Kakatiya rulers worshipped, are famous as the shrines of *Ellamma*. Similarly, *Ellamma* Rangapuram temple in

Mahabubnagar district is noted for the shrines of *Ellamma*. Idols of *Matangi* were found in the front yards of the shrines of *Ellamma* at Surabheswara Kona, Mogilicharla, and *Ellamma* Rangapuram.⁵⁸ In light of the above, by being worshipped as *Ellamma*, *Matangi* has lost her identity itself. It is learnt that in their writings the Hindu scholars and historians have strived to popularise *Ellamma* as a form of *Matangi* and have succeeded in transforming *Matangi* as *Ellamma*.

Renuka's story in Literary Works and Oral Traditions:

According to the tale of Renuka in *Mahabharata*, Sage Jamadagni married Renuka, the daughter of King Prasenajit and took her to his hermitage. She gained fame as a *Pativrata* (virtuous woman). The couple had five sons, the last of whom was Parasurama. Once Renuka went to a nearby tank to bathe and while returning she saw King Chitravrata enjoying bath along with his wives, which raised uncontrollable desire in her, thereby making her impure. Jamadagni discerned her mental status and felt that she had become impure. He then ordered his sons to kill their impure mother, but they refused. The infuriated Jamadagni cursed them. However, the fifth son – Parasurama – obeyed the father's orders and severed his mother's head. The pleased Jamadagni asked him to seek a boon. Parasurama sought his father to restore life to his mother and free his brothers from the curse. Jamadagni consented and fulfilled the son's wishes.⁵⁹ The same story is narrated in many literary works and oral traditions with slight modifications here and there.

Emma Rauschenbusch Clough narrates a story which reveals how *Matangi* / *Ellamma* came to be worshipped as the tutelary deity of the Madigas. The story goes thus: Parasurama was the son of Brahmin woman *Matangi* / *Ellamma*, who is the wife of a great sage. With the power of her purity, she converted water from River Kaveri into balls and rolled them to their hermitage to be used by her husband during *Yajna*. One day, on one of these balls of water, she saw an image. She lifted her eyes to see Gandharvas moving in the sky. She was awestruck looking at their beauty. Consequently, she lost her virtue and could not convert water into balls. When she revealed this to her husband, he said "*Pativratas* would not raise their eyes, nor would they be awestruck looking at

Gandharvas. Hence, you have lost your *Pativratya*." He then, out of anger, summoned his sons to sever **their mother's head. It was only Parasurama who agreed to obey the father's order. In the meantime, Ellamma flees to a Madiga family to seek refuge.** Parasurama then slaughters the Madigas who have sheltered his mother, and also his mother, thus **fulfils his father's order. When the pleased father asks Parasurama to seek a boon, he requests the father to bring life to his mother.** The father accepts the request. Parasurama then carries the severed head of his mother to the Madiga hamlet and fixes it to the severed body of a Madiga woman instead of that of his mother. However, the sage did not accept her as his wife. Finally, she became the tutelary deity of the Madigas. Thenceforth, according to Clough, the Madigas continued to worship *Ellamma*.⁶⁰

According to yet another narrative, Lord Siva gave his daughter *Ellamma* in marriage to Jamadagni, the son of Ahalya and Gautama. After some time, Jamadagni left for the forests to perform penance. Intent upon meeting her husband, *Ellamma* decorated herself and carried a *Bonam* (Pot filled with cooked rice). Predicting that her presence would disturb Jamadagni's penance, God created three infants and sent them to meet *Ellamma* on the way. She ignores the pleas of the infants for food and reaches Jamadagni, who instructs her to bring water in a sieve. With the power of her *Pativratya*, she was able to comply with the instruction. The pleased Jamadagni sits in readiness to eat. But, when she was about to serve, half the food in the *Bonam* vanishes. Jamadagni uses his supernatural vision to know the reason and instructs her to feed the infants first. The infants request her to be naked while feeding them food. She complies with the request. After this, Jamadagni instructs her to make a pot using sand and then fetch water in it. She makes a pot of sand, and while filling the pot with water, she happens to witness the copulation of a pair of frogs. Considering her to have become impure for having witnessed the copulation of the frogs, Jamadagni orders his sons to kill her. When Parasurama accepts the order and chases his mother to kill her, she hides herself in a wide mouthed trough (*Landagolem* – the trough in which animal hide is soaked for treatment) lying in the house of Madigas. On reaching there, Parasurama picks-up a thin layer of skin soaked in the trough and using the nerves of a cow from

its leg sewed the skin into a *Jamidika* and started drumming it up while with a loud voice commanded her to emerge from her hiding place. Hearing the sounds emitted from the *Jamidika*, the frightened Renuka emerged. Thenceforth, the *Baindilas* say, the *Jamidika* became their principal instrument of music, using which they sang the ballads of *Ellamma* to earn livelihood. They declare that Parasurama is their primogenitor and the *Baindilas* of the present day, call themselves his descendants.⁶¹

According to the oral tradition (genealogy of Madigas) narrated by the *Baindilas*, the dependant castes of Madigas, fearing for her life Renuka flees to Jambhalagiri, where she seeks refuge with Jambavan, the primogenitor of Madigas, for protection from her own son Parasurama. She then hides herself in the *Landatotti* (wide-mouthed trough) and warns Jambavan not to reveal her place of hiding, failing which a great power would emerge and engulf all the Madigas. However, Parasurama finds her and kills her. As a result, a great power emerges out and goes forth to engulf all. But, Jambavan calls for Chindu Jihvamahamuni and pleads with him to pacify the Power; the latter disguises himself as a *Gosangi* and pacifies the Great Shakti.⁶² Thenceforth, Renuka *Ellamma* found in the *Landatotti*, is venerated as an incarnation of Goddess Shakti. It is for this reason that the Madigas worship the *Landatotti* as an aniconic representation of *Ellamma* every Tuesday.

According to the oral tradition in Kannada, Renuka after being cursed by her husband Jamadagni became a leper. Out of hunger, when she plucks a cucumber in a field, the farmer and his friends chase her. Fleeing them out of fear, she hides herself in the house of *Matangi*, a woman belonging to the *Chandala* community. Unable to enter the house of that *Chandala* woman for having provided shelter to Renuka, the farmer chops off the nose of *Matangi*. Over a period of time, Renuka is cured of her leprosy by Ekaiah and Jogaiah, who used their mantric powers to achieve this. After being cured of the disease, when Renuka approaches her husband Jamadagni, he orders their son Parasurama to slay her. Parasurama complies with the order by severing the head of Renuka. However, he **brought back life into her after Parasurama's request.** She then became a goddess and bestowed a boon upon *Matangi* who sheltered her. *Matangi* and her descendants, thenceforth,

worship Renuka *Ellamma* as their tutelary deity.⁶³ The Madigas, while migrating from the Telugu region to the Kannada regions, might have continued their worship of *Ellamma* even there.

It may be surmised that the primary reason for creating such mythological stories is to appropriate and assimilate Goddess *Matangi* / *Ellamma* of the Madigas into Hinduism. The intention seems to be incorporating the aboriginal Madigas into the fold of Hinduism to exploit their expertise of leather working for the larger benefit of agriculture and warfare.

Worship of Renuka *Ellamma* as Jogulamba at Alampur:

The attempts to popularise through various stories in literary works and Puranas by transforming the Mother Goddess *Ellamma* of Madigas into a female divinity of mainstream Hinduism. The Researcher intends to explain the cult and worship of Jogulamba of Alampur of Telangana state, one of the eighteen Saktipithas, for introspection after an extensive field study.

As per the Stalapurana of Alampur, Daksha Prajapati, one of the *Navabrahmas*, gave one of his daughters Sati Devi in marriage to Lord Siva. After some time, Daksha Prajapati decided to perform a *Yajna*, and to invite his son-in-law Lord Siva he went to His abode. Lord Siva, being in meditation, did not speak to him. The infuriated Daksha Prajapati invited all the Devatas but avoided Siva. Upon seeing the Devatas and learning about the *Yajna*, Sati Devi out of **affection towards her parents sought Lord Siva's permission, which He rejected.** She went to the *Yajna* without His knowledge, was insulted by her father there and unable to return to Lord Siva, she created fire and immolated herself. Upon learning about the fate of Sati Devi through the *Pramadha Ganas*, Lord Siva was highly infuriated. He then plucked a lock from his hair and flung it down. Out of this emerged **Virabhadra, who following Lord Siva's orders** killed Daksha and spoiled the *Yajna*. Lord Siva then carried the body of his consort Sati Devi on his shoulders and performed *Pralaya Tandava* (Dance in violent mood), which shook all the three worlds. When the Devatas prayed to Lord Vishnu, He smashed **Sati Devi's body into eighteen pieces using his Sudarsana Chakra. These eighteen pieces of Sati Devi's body have** fallen at various places across the country, and

the places where they have fallen came to be known as *Ashtadasa Shakti Peethas*. The shrine at Alampur – Jogulamba is one such *Shakti Peetha*.⁶⁴

But as per local legend the original name of Alampur was *Ellammapuram*. The same tradition informs that long ago Jamadagni had his Ashram at Alampur and his wife Renuka Devi used to go the River Tungabhadra every day, make a pot with the sand, and fetch water in it. Once, she witnessed a king happily enjoying bath along with his wife. She was all praise of the **couple's luxury and their fortune. She felt depressed and because of it she could not make the pot with sand.** When she returned to the *Ashram* without water, Jamadagni learnt what has happened through his supernatural vision and got infuriated. He ordered his sons to kill her. It was Parasurama, who severed her head and pleased his father, who wished to bestow a boon on the son. Parasurama requests his father to bring life back into his mother. However, when she was severed, the head flew and fell at the front-yard of a *Chandala* family. Because of this, Jamadagni said that the head has become impure, and hence cannot be joined with the body. He declared that henceforth this head shall be venerated as *Ellamma*, the village deity of the *Chandalas*, and that the body without head shall remain in the shrine of Bala Brahmeswara henceforth and the body remained as Bhudevi in Alampur and is being worshipped by women.⁶⁵

According to the tradition, a head is being worshipped in the Madiga hamlet of Undavelli village near Alampur as *Bhudevi*.⁶⁶ Similarly, the headless body is located beside the Bala Brahmeswara shrine, one among the Navabrahma shrines, on the southern side, along with a *Nagnakabandham* in a room. The idol appears as if the body is in a position for copulation with both the thighs raised high and in splayed position clearly showing the *Yoni*. There are two mango fruits in both the hands of the idol. The head is, however, substituted with a flower. One cannot find such robustness in any other idols there. The people call her Renuka *Ellamma*. Archaeologist Madho Sarup Vats renowned for the excavations at Harappa, upon looking at this idol remarked that it resembles the idol of the Mother goddess found at Harappa.⁶⁷ Considering her as bestower of children, the idol is being worshipped by barren women to beget children. Women, who could not

conceive, worship her by cleansing the idol with water or milk, decorating it with turmeric and vermilion powders, applying honey or ghee on the *Yoni* and then licking it. Doing thus, they believe, would bless them with children.⁶⁸

However, the idol of the presiding deity Jogulamba at Alampur, who is considered to be the consort of Bala Brahmeswara (the presiding deity of one of the Navabrahma shrines) and also known as Renuka *Ellamma*, was hitherto placed in a shrine located on the south-western side. When the shrine became dilapidated, a new shrine was built at the same place. At present, the idol has been installed on the north-eastern side of the Bala Brahmeswara shrine.

There are three more Sakthipithas in the erstwhile state of Andhra Pradesh – at Srisaillam with the presiding deity known as Bhramaramba, at Pithapuram known as Puruhutika, and at Draksharama known as Manikyamba. At all these three places, while the idols of the Goddess and the associated *Yantra* are located apart from one another. The shrine dedicated to *Ellamma* or *Ellamma* at Vegayammaapeta near Draksharama (the site at which Daksha Prajapati had performed *Yajna*) is considered to be a pilgrim site. She is venerated here as the *Gram Devata*. It is also known as Mukti Kshetra. But, the idol of Manikyamba is installed at a separate shrine within the precincts of Bheemeswara Temple at Draksharama. However, at Pithapuram in the same district, the *Mukti Kshetra* or *Yastrasthana* is near the *Gali Gangamma* shrine of the same village. The presiding deity here is known as Gali Gangamma and Puruhutika. But, in the Kukkuteswara temple of Pithapuram, a separate shrine has been built and the idol of Puruhutika Devi is installed. Similarly, at the Srisaillam Hill shrine located in the Eastern Ghats of Kurnool district, the presiding deity is Srisailla Mallikarjuna or Chenchu Mallaiah. His consort, Bhramaramba has a separate elevated shrine for herself behind the one dedicated to Lord Mallikarjuna. Likewise, Jogulamba too is worshipped in a separate shrine dedicated exclusively to her. Damodar Dharmanand Kosambi says that though shrines dedicated to the respective male deities are closer to those of the Mother Goddesses, the latter retained their identity by being worshipped separately and on par with the respective male consorts. During the

field study of the four *Shakti Peethas* located in the erstwhile Andhra Pradesh, the present author noted that while being installed in their own shrines known as *Muktikshetras* associated to the shrines dedicated to the respective male consorts, they are all worshipped as Mother Goddesses. Though they are being worshipped at all the *Ashtadasa Shakti Peethas* as consorts of the respective male Divinities, at the four *Shakti Peethas*, it is clear that Jogulamba, Bhramaramba, Puruhutika, and Manikyamba are all Mother Goddesses having their own importance.⁶⁸

It must have taken quite a lot of time to transform the Mother Goddess *Ellamma* as Jogulamba, to be incorporated in the shrine as one among the *Ashtadasa Shakti Peethas*. It seems that nine shrines dedicated to Navabrahmas were constructed later, and made Jogulamba as the consort of Bala Brahmeswara in the process of assimilation. Many *Puranas* were written, rather used to validate the assimilation process. It was through this literature that Mother Goddess *Ellamma* was transformed into Jogulamba as one among the *Ashtadasa Shaktis* and then as the consort of Bala Brahmeswara. Just the way India was the main theatre of many battles, it is also home to many communal clashes. The **religious beliefs of the tribal's and non-peasants** along with their Mother Goddesses and

Nagadevatas found a place in the main stream Hinduism.

Conclusion:

The Madigas are the largest leather working community found in both the Telugu speaking States apart from Karnataka and Tamilnadu. They had been identified as the *Panchamas*, and ghettoised to the outskirts of the villages. The Madigas have been worshipping *Matangi* as their tutelary deity as the Mother of all or *Ellamma*. Literary works have been created to link her with Renuka and to bring her into the Hindu pantheon, perhaps to incorporate the Madigas into the fold of Hinduism for material benefits by exploiting their expertise in leather working. However, the Madigas continued to worship her as *Ellamma*. Renuka *Ellamma*, who was hitherto worshipped as a naked goddess, has been transformed into Alampur Jogulamba, the consort of Lord Siva. There are evidences to prove that *Matangi*, the tutelary deity of the Madigas was incorporated in Hinduism initially in *Sakthism* as one among the *Dasamahavidyas* and later as the presiding deities at *Astadasa Shaktis Pithas* of Goddess Parvathi as the consort of Siva in Saivism. The irony is that their goddess *Mathangi* was kept away from the Madigas by barring them from entering into the Hindu temples.

4. According to the Jamba Purana, Jambavan is considered to be the progenitor of the Madigas. It depicts the emergence of the Universe, followed by that of Jyotirmaheswara (the Supreme Spirit) and then of the sacred sound Om. The narrative goes on to depict the emergence of the Lotus influenced by the sacred sound Omkara, the origination of the Conch shell through which the birth of Adi Jambavan, and the subsequent emergence of Adi Shakti. As a result of her union with the Supreme Spirit, the Goddess transforms into a peahen and lays three eggs, which hatch as Brahma, Vishnu and Maheshwara. When Goddess Adi Shakti appeals to them copulate with her, the divine Trinity steal her eye aided by Jambavan and then reduce her into ashes. They divide these ashes into five heaps, out of which emerge Saraswathi, Lakshmi, Parvathi, Jalaveerakanyaka and Kamalakshi. While Lord Brahma married Saraswathi, Lord Vishnu married Lakshmi, Lord Siva married Parvathi, Jambavan married both Jalaveerakanyaka and Kamalakshi. Sage Matanga was Jambavan's progeny and his daughters are the ancestors of the Madigas. Besides depicting these cosmic originations, the Jamba Purana narrates the emergence of the pantheon of gods, the demons, and also that of the Madigas, the Malas and their sub-castes. Jambapuranam is narrating by the dependent castes of Madigas like Nulkachandayya, Dakkali and Chindu. Their performance is quite deferent and story also little variance but the theme of Jambapuranam is same mentioned above. Cited from, *Vikram Harijan* (Ed), Problem of Castes in India - Investigating History and Historiography., *Theegala Sreenivas & Thallapally Manohar*, Origin Myths of Shudras and *Ati-Sudras* as Depicted in *Jamba Purana* narrated by *Nulkachandayyas*, Meena Book Publications, New Delhi, 2019, pp. 40-55.
5. This narrative is a legend related to *Jamba Purana* and cited in the *Census Report of Mysore State* (1891). According to the legend, Rishi Jambavan lived in his hermitage along with **his son named Yugamuni Matangi & Yugamuni's wife. For**

- sustenance, the Rishi prayed to Lord Siva who gave him Kamadhenu – the Divine cow that yields all that is desired – as a boon. The Rishi's family lived happily on the milk and curd the cow yielded. Jambavan attended the court of the Lord only after taking care of his son's welfare. One day Sankhyamuni visited the hermitage in the absence of Jambavan. Yugamuni treated him hospitably with the milk and curd yielded by Kamadhenu. On tasting them, Sankhyamuni enticed Yugamuni into killing the cow and serving its meat. In the meantime, Jambavan returned home to see his son and the visitor relishing the beef. He went straight to Lord Siva and narrated the incident, who summoned Yugamuni and Sankhyamuni to his court. While Sankhyamuni stood on the right side, Yugamuni stood on the left side in the court. Lord Siva cursed Sankhyamuni to be born as Holayas – the right-sided caste. He then turned to Yugamuni and cursed him to be born as a *Chandala*, and to survive by making footwear out of cow hide – the life of a left sided caste, cited from Thurston, Edgar & K. Rangachari., *Castes and Tribes of Southern India*, Volume-IV, Government Press, Madras, 1909, pp. 315-316.
6. Syed Siraj-ul-Hassan in his book *Castes and Tribes of Nizam Dominion* (1920) narrates that Jambavan had seven sons who were killed by Lord Brahma to create the world and populate it. "Brahma killed Heppumuni and out of his blood and flesh he created the land, Jalamuni to create water, Ghatamuni to create the mountains, Raktamuni to create blood, Palamuni to create milk, Nilamuni to create the blue sky, and Gavumuni to create the Madigas." This narrative reveals that the Madigas are the first human beings. The narration continues: "Around the same time, Goddess Parvathi was menstruating and left the soiled clothes underneath a tree to bathe. Out of these soiled clothes emerged a boy called Chennaiah. The Goddess appointed him to guard the Divine Cow, Kamadhenu. When Chennaiah tasted the milk yielded by the Cow, the evil desire to taste its flesh overwhelmed him. Under the influence of the desire, he killed the Cow. The carcass of the Cow was so heavy that even the gods could not move it. Lord Siva then summoned Jambavan "Tataal Maha Digi Ra" (Oh great one! Come down). Thenceforth, Jambavan came to be known as Mahaadi or Madiga. Upon being summoned, Jambavan descended, moved the carcass, and cut it into pieces. Lord Siva then ordered Chennaiah to clean and cook the meat, and invited the gods to feast on it. The already craving Chennaiah picked-up a piece of meat that had fallen out of the cauldron, blew over it to cleanse it and put it back into the cauldron. The gods, who had witnessed this, left the place saying that the meat has been defiled. An irate Lord Siva cursed Jambavan and Chennaiah to transform into baseborns. Thus, the descendants of Jambavan continued to be Madigas, and those of Chennaiah as Malas." Based on the narrative, it can be said that after Lord Siva summoned Jambavan "Maha digi rad" the descendants of Jambavan came to be addressed as *Maha-Dige-Varu*, which later on became corrupted to become Mahadigevaru and much later became Madiga. Cited from Syed Siraj-ul-Hasan., *Castes and Tribes of HEH Nizam's Dominion*, Op cit, pp. 410-411.
 7. The story goes thus: "Kamadhenu is a Divine Cow, which yielded milk to all the gods. Vellamanu, a Madiga boy was craving to taste the milk, but Jambavan forbade him from doing so, which however did not deter Vellamanu. Hearing his craving for the milk and its flesh, the Divine Cow dies. The gods cut the carcass into four pieces and send a piece to Aadijambavan. The gods, later on, change their mind and decide to bring the Cow back to life. In the meantime, the over-desirous Vellamanu starts cooking a part of the piece sent to Jambavan. In the process of cooking, to check if the piece is cooked sufficiently, he picks-up a chopped piece of the beef from the cauldron, blows over it, since it is very hot, and drops it back. As a result of his blowing over the piece his saliva was sprayed over it rendering the beef defiled. Because of the defilement, all attempts by the gods to bring the Divine Cow back to life failed. The enraged gods degraded the Madigas in social status, as a curse." From then onwards, Thurston states the Madigas lived in humiliating status. Like the earlier story, although the cause for curse was defilement of the cut of beef, thus defiling the whole carcass of the Divine Cow, in the present story, the act of Vellamanu, resulted in lowered social status for him and his descendants, who until then were living in an eminent position. Prof. T.R. RAMACHANDRAN ENDOWMENT LECTURE
CONTRIBUTION OF THE VISVAKARMAS TO THE SOUTH INDIAN
ART AND ARCHITECTURE

(with special reference to Karnataka)

Prof. Iranna Pattar

Introduction:

Honourable President, General Secretary of South Indian History Congress distinguished delegates, ladies and gentlemen and student friends at the outset, I wish to express my deep sense of gratitude and thanks to the Executive Committee and members of the General Body of the South Indian History Congress for nominating me to deliver Professor T.R. Ramachandran Endowment Lecture. I am indeed very fortunate to deliver this endowment named after revered Professor T.R. Ramachandran. I deem it a great privilege to accept it with all humility. I am extremely thankful to all the members of his family for creating an endowment, lecture this congress. When invited to deliver this endowment lecture, I took me decision to present the paper on **Contributions of the Visvakarmas To The South Indian Art and Architecture (with special reference to Karnataka)** So far very few scholars made their attempts to construct the history of the Vishwakarmas, hence, I selected this theme.

I shall begin my lecture with a literary source on a verse from the Mahabharata which **refers to the celebrations' of the Vishwakarma** details are as follows

“Vishwakarma, Lord of the arts, master of a thousand handicraft , carpenter of gods and builder of their palaces divine, fashioner of every jewel, first of craftsmen, by whose art men live, and whom, a great and deathless God, they continuously worship”.¹

Visvakarmas are treated as Visvabrahmana, Devabrahmanas, Panchalas, etc. They are said to be originated from the five sons of lord Visvakarma and they scattered in various places in India and outside and contributed lot to the art and architecture, epigraphy etc, right from the beginning of historical period. The Indian historical source materials like stone inscriptions, copper plate inscriptions, monuments are providing considerable information about the

contributions of the Visvakarmas. The Indian heritage is generally focused through the splendid monuments like temples, forts, towns, wells, epigraphs etc. They exhibited their technical innovative ideas both in the religions and secular literary works for building monuments etc. With the help of literary background the religious edifices and the images appears at least one in a colony of any village or town or city in India and south East Asia. The people gave high respect to worship with great devotion. The paper deals with the contributions of the Visvakarmas in the field of art and architectural production including chiseling the memorial stones, images of gods and goddess, stone inscription and copper plate inscriptions right from the beginning to Vijayanagar period

Origin of Viswakarmas

Viswakarmas trace their ancestry from the five sons of Visvakarma, namely *Manu* (blacksmith worked in iron), *Maya* (carpenter worked in wood), *Thwastha (Tvastra)* -(bronze smith, worked in brass, copper and alloys), *Silpi* (stone carver,), *Visvajna* (goldsmith worked in gold, silver, and jeweler), The community is spread widely throughout India and played socio-economic role and status varied from a very high level to the low level in different parts of India. They earned high wages in towns because of their factory employment and low wages in villages.

As it was explained above they are descended as five sons of Lord Visvakarma. The five occupational sects from one compact community, and are not mutually exclusive; the son of any one may follow any of the five crafts at will. Probably many individuals practiced more than one craft. For examples, an inscription of 1088 C.E. mentions a carpenter Ketoja of Chunbagi who is said have engraved the inscriptions. (*Chubina badagi Ketojana Khandarana*). Another inscription of 1174 C.E. refers to Badagi Barmoja, son of Ballaoja of

Neregala who has engraved the inscription. (Nereyangalla Ballojana maga Badagi Barmmojana kandarani) Another inscription from Tavarakere states that blacksmith Vikramaditya had engraved the inscriptions (*Besageydo Koyatura Kasigam Vikramadityam bahuguna tejan*)² An inscription dated 1130 A.D. mentions that a goldsmith Jakoja, son of Huliycari engraved the inscriptions (karavidiyakkasale huliycariya putra Jakojana kelasa)³ All these refers to the engraver of inscription only.

Anand K. Koomarswamy says that “the kammalar (i.e. Panchal) were known as Visva or Dev Brahmans or Dev Kammalar. They spread gradually towards the South, and then reached Ceylon, Burma and Java. The Kammalar claim to have been at one time spiritual guides and priests to the whole people, of which the position trace their survives in the saying, that “the Kammalar is guru to the world.” They still have their own priests, and do not rely on Brahman; they also perform priestly rites in connection with consecration of images. They claim and possess various special privileges which they have always upheld with much vigor; in some cases. They claim a rank equal to that of Brahmans.⁴ “He also mentions” throughout the rest of ceremony all priestly offices had been performed by the craftsman themselves, acting as Brahman priests.⁵

The Vishwakarma Brahmins have contributed greatly to Indian civilization and culture as temple builders, architects, engineers and artists without their immense contribution, Indian civilization would be very poor indeed. Visvakarmas of Karnataka, also known as Achary or Viswabrahmins or Devabrahmana. They are classified into various sub-groups like, Akkasale, Aksali, Achari, Badiger, Konkani Achar, Viswa Brahmin, Daivagna Brahmin, Kammar, Kambar, Kamsan, Kanchagar, Kanchoore, Kammalan, Lohar, Kamsal, Panchal, Panchala, Sutar, Badaga, Sonar, Pattar, Gejjejar, Silpi, Tachchan, Thattan etc.

Vedas mention Visvakarma: in tenth Mandal of Reg Veda Suktans 81 and 82 which belongs to Viswakarma suktas. The Sixth sloka of 82 Sukta of tenth Mandala mentions the navel of the unborn lord who lies in water again hinting that the verse is actually meant for Lord Narayana who creates the world in the form of

Brahma. Yajurveda pictured him as the Prajapati and in the Atharvaveda he is mentioned as Pashupati. Shwethashwatharopanished describes him as Rudrasiva the one who is dwelling in all living forms. (Internet)

Visvakarma in Puranas

The Vedic Visvakarma refers to God as the creator while Puranic Visvakarma is the artisan of the Gods. In Vishnu Purana calls him the son of the Vasu Prabhas and Yogasiddha, the sister of Devaguru Brihaspati. (Chapter 25 of Book 1)

Shiva Purana (Section 1.2.14) mentions the following. **“Once, Brahmaji went Kshirasagar (the abode of Vishnu) accompanied by the deities and asked lord Vishnu how a man could be liberated from his sorrows. Lord Vishnu answered them that this objective could be met by worshipping Shiva-Linga. “Viswakarma then made a Shivalinga for Kubera, Dharmaraj, Varun, Vishnu and Brahmaji, etc.**

In *Varuna Purana* (section 1.17.4), “after reaching Mandaar Mountain Lord Shiva instructed Viswakarma to construct a home. Therefore he constructed a spacious home for Shiva which was spread in the area of 64 *Yojans*. The home was decorated with swastika symbols and its walls were made of gold. *Skanda Purana, Bhagvat Puran* (section 1.10.46) mentions that Viswakarma construct the Dwarikapuri and other cities.(Internet)

In ancient days the sculptural art and architectural aspects were inherited from father to son. It has been mentioned in number of epigraphs. For example (Dasoja son of sculptor Ramoja ⁶ Chavana the, son of well know artist Dasoja of Balligame⁷ Nagoja, son of the sculptor Bupoja⁸ Thus the art skill was practiced by the members of the same family. These artists are sculptors. They believe that they are the descendants of Vishwakarma, the divine architect in heaven

Artists are the scientists of engineering knowledge. They are referred to as *Sutradharis, Kallakuttiga, Ruvari, Rupakara, Stapati, Upadhyaya*, etc. In Inscriptions and sculpture of Badami, Aihole and Pattadakal, Balligave, Gadag, Lakkundi, Degave, Halebidu, Belur, Somanathapura, Annigeri, Doddagaddavalli, etc **the architect’s signatures are helping in identifying their respective works.**

The names of artists have suffixes ‘*acarya*’ (*acar*) or *Oja* (*upadyaya*), *manic*, *ruvari*, *rupakara*, *Sutradhari*, etc. Use of such suffixes may be noted in the case of Sarvasiddhi acharya, Gunda Anivaritacari and Duggi-acari in early Chalukya period, Gangacari Saralacari, Binamacari, in Rastakuta period, Kalacari, Ikkudacari under the Chalukya of Kalyana. Gangacari-Vardhamanacari, Poysalacari, etc under the Hoysalas.

The suffixes *Oja* appears in many names. For example Revadi Ovajja, Kalloja, Maroja, Masanoja, Dasoja, Tippoja, Malloja, Maniyoja, etc. The term *Oja* is probably derived from the Sanskrit word *Upadhyaya* (in Prakrit *uvajjha*) the terms *ruvari*, *silpi* and *oja* denote artist who are usually sculptors, but the same terms are applied to scribes or stone-masons (*Kalkutigas*), smiths (*Karmacaris*), carpenters (*badiger*) and goldsmiths (*akkasalis*) as well. Besides these we come across terms like *Sutradharis* and *Sthapatis* who are obviously master architects and sculptors.⁹

In Early Chalukyan context we find the suffix ‘*manchi*’ also. For instance Kottimanci¹⁰ Kolimanci¹¹ Singamanci¹², Kondimanci¹³, Pelamanci¹⁴, Kantimanci¹⁵ etc. are appeared in the epigraphs. An inscription found on the Malegitti Sivalaya at Badami implies that manic ending names were borne by architect craftsmen. The inscription states that the temple was created by Aryamanci-Upadhyaya.¹⁶

The Vishwakarmas are able to work in different media like stone, wood, gold, iron and copper and they are called sculptor, carpenter, gold-smith, black-smith and copper-smith respectively.

In Hoysala period architect Hoysalacharya endowed with all titles, the illustrious Maya, Visvakarma and Totakacarya skilled in all handicraft like gold work, metal work, stone work, jewel work, wood work, painting calligraphy, iconography, and all other skilled handwork, a descendant of Visvakarma was Gavaracarya; his son born in that family was Hoysalacharya;

(*Swasti samasta prashastisahitarappa sri manumayam visvakarma totakacharyarappa hastakusaleyalu hemakarmma, lohakarmma, silakarmma, ratnakarmma, Kastakarmma,*

*citrakarmma, patrakarmma, pritamalakshana samasta hastakusaleyulla visvakarma nirmitamappa Gavarocarya natana putrakulodbavanappa Hoysalacharya natanaputram bahukulanvaya gotram XXX tranappa Suracaryanavara piriyyamma Kallaboja Manikacari mattu Surojanam Kireyyagalu Jayagondacari siruvagunda mareyanegalu Ketoja mahacari Nakharacari Mulloja antu kulanvaya kottali sahita madisida dharmapurobhivradaiyantendade.....)*¹⁷

Previous works on Artisans

The role of artisans has been studied by very few scholars. The artisan may be classified into several groups they are the producing the monuments, inscriptions, copper plates etc. While editing the volumes of Epigraphia Carnatica by B.L.Rice, it has pointed out some **artisan’s names**. While writing the description of Hoysala temples by R.Narasimhachar and M.H.Krishna has mentioned some of the artisan names in MAR reports.

Ananda K. Coomaraswamy, one of the earliest historians took interest to study the artisan of India, in his book on ‘*The Indian Craftsman and History of Indian and Indonesian Art*. He has mentioned some of the names of artisans. Later Vincent smith, Dr M.Seshadra, Dr S. Settar, Dr A.V.Narasimha Murty, Dr M.S.Nagaraja Rao, Dr S.Rajashekara, Dr Seelakanta Pattar, Dr S V Padigar, Dr Srinivasa Ritti, G.Seturaman,(Kammalas in the History of Tamil Nadu,(Prof. T.R. Ramachandran Endowment lecture . XXXIV, SIHC Poondi,2014) Vijaya Ramaswami, (Vishwakarmas in South Indian History, key note address of the XXX VIII,SIHC, Calicut, 2018) have also mentions some artisan of the ancient and Medieval South India

Book like Kelleon Collyers “*The Hoysala Artists* their identity and styles Published by Directorate of Archaeology and Museums, Mysore, 1990 appear as the first full scale work. It refers to Hoysala artists and their socio-economic statues and their styles. Similarly K.Sundaram’s ‘*The Artisan Community of Medieval Andhra* (A.D. 1000-1600) gives information on artisan community of Andhra Pradesh. Dr. S. Settar’s book on *Hoysala Temples, in Second Section of that book “Artists and Craftsmen including Their social and*

Economic life, Peregrination of artists and artist is work also discussed .His another book Ruvari,(Kannada Naadina Vastu Shilpigala Charitrika Hinnnele) Abhinava Prakasana, Bangalore,2019.gives the information's of sculptures of Karnataka. Settar S. and Gunther D. Sontheimer; (Ed) on *Memorial Stones*, a study of their origin, significance and variety, (Institute of Indian Art History , Karnatak University, Dharwad and South Asia Institute University of Heidelberg, Germany.1982.) “ is the first comprehensive study of the memorial stones of India and he tries to focus attention on the vast archaeological and literary wealth of the country and on the salient features of the cult-practices prevalent in the past and in the present.”(Preface).It also included the three articles on artists of Memorials. Another work of Dr. Settar, *Halegannada Lipi, Lipikara,lipi Vyavasaya*(Kannada)(Ancient Kannada Script, Scribe and Cultivation of Letters) (Abhinava Prakasana, Bangalore 2014).The book of Kumaraswamy. K.S. on *Bruhath Karnatakada Shilpaachaariyara Charite, (Kannada) (Kanva prakashana, Bangalore, 2013)*;K.P.Iranna, on *Shasanokta Viswakarmara Veerajivana,(Kannada)(Sri Bhuvaneswari Sahitya Prakashana, Shirahatti, 1993). Siddalingam B.G.Artisans in Medieval Karnataka (Sanush Publications, Hubballi,2017)discussed about the artisan of Karnataka.*

Jan Brouwer, who has done extensive study on Vishwakarmas, calls them ‘The Makers of the World’ (Caste, Craft and Mind of South Indian Artisans) of these five groups of Vishwakarma. (OUP. 1995)

The role of Vishwakarmas started from the period of Shatavahana. For example the Vasana inscription (Nargund Taluk, Gadag district) of king Pulumavi refers to the construction of Chandashiva Mahadeva temple (Ayata). In the name of predecessor Chandasiriya said to be remembering of the service of local Vardhaki and he could be identified a scribe or artist or carpenter for the construction of temple. This Vardhaki who could be the family name Vardhaki.. Unfortunate that the portion of the name of this carpenter is effaced and retained part refers to *teii*, which could be derived from (Kateti- pra = Kritaiti- sam).The credit of building this Shiva temple and engraver of this inscription goes to the carpenter Nirgunda.¹⁸ If this person

belonged to carpenter community the temple could be in all probability built with wood. The location of inscription shows the remains of the temple like brick bats of the period. Shown by Dr.R.M. Shadakshar Therefore the temple could be built with bricks as well as wood.

Malavalli pillar of Kalleshvara temple contains two inscriptions. One is referring to the grant of village by Vinukada Chutukulananda Shatakarni,(250 C.E.) Another inscription belonged to Kadamba Sivaskandavarma (300 C.E.), refers to *Uktam khando Vishvakam*. This is the earliest reference to Visvakarmasa. As far the order of Malapali deva it appears that Visvakarma chiseled out this temple¹⁹

The inscriptions of Gangas refer to largely the engraving of stone inscriptions and copper plate inscriptions. For example Kudluru copper plates of Ganga Harivarma refers to Visvakarma Chayana which could be Charyana satana (Kidam). The copper plate inscriptions of Tumbala in T Narsipura Taluk said to be written by Kammar Kongani Acharya. Both are obviously belongs to the Visvakarma scribes,Both the copper plates belonged to the reign of Harivarma and they were the earliest copper plates and the name of Visvakarma achary and Kammar Kongani achary are the first Kannada scribes.²⁰

Visvakarmas continues to appearing in Ganga inscriptions from C.8th century onwards Hallegere copper plates of Shivamara refers to *Visvakarma samanenna Visvakarmacharya* who could be a well versed in Sanskrit . The copper plate contains set of five plates with writings on nine faces and sixty eight lines in the mixer of prose and poems in Sanskrit. The text contents largely Kavya style. The copper plate of the Ganga period brought to light who the *Brahmadehas* were built and who they given *Brahmasvam*²¹

These copper plates are belonging to 748 to 819 and are belonging to the reigns of three kings Shripurusha, Marashimha and Rachamalla. The credit of engraving the copper plates goes to Visvakarma acharya. It appears that they were listening the orders and write the documents in detail and he worked long period begin with the age of 25. When we see the Perjarangi inscription of 819-20 C.E. It can be calculated that he lived about 100 years. It refers to two

grants for the Jina, (Sripura & Manne) ,for four *Brahmadeha* (Agali, Peenne, Kottinba and Perjarangi) in this five inscriptions, two belonged to Marasihma, another two belongs to Sripurusha and one belongs to Rachamalla. Two more copper plates are indentified for this scribe (750-51).He is describe as *Sarvakaladharabutena Chittrakalabhijnena guru shisya*²²)

In Salem copper plates of 771 A.D refers to the epithet of his person. Another Visvakarma name appears in the Ganga inscriptions 904 CE ²³ He was well versed in the bronze work and also described as court engraver. (Visvakarmacaryarena likhitam)²⁴

In Karnataka between sixth century to fifteen century tremendous temple building activity was done under the Chalukyas of Badami,Rastrakutas of Malkheda, Chalukyas of Kalyana, Hoysala of Dwarasamudra, Kalachuries of Karnataka, Yadavas of Devagere, Vijayanagar and other feudatory rulers(like Kadambas of Goa, Kadambas of Hangal, Rattas of Soudatti, Santaras etc) The Vishwakarma artisans are the creation of work in the building of temples like Sangameswara and Virupaksha temple at Pattadakalla, Cave temples at Badami, Kasivisweswarra temple at Halluru, Nannaya temple at Sirivala, Kasivisweswara temple at Lakkundi,Kedareswara temple at Balligave, Mahadeva temple at Itagi, Chennakeshava temple at Belur, Hosaleswara temple at Halebidu, Lakshmidevi temple at Doddagaddavalli, Keshava temple at Somanatapur etc. Some of the *Sutradharis* of early Chalukyas are as follows;

Aryamanchi Upadhyaya

Aryamanchi Upadhyaya is said to have built the beautiful Melegitti Sivalaya at Badami in Dravida style around 625 C.E. An inscription on the eastern wall of the temple reads as *Sri Aryamanchi Upadhyaya Prasad nirmmitam*.²⁵ It shows that, the word Upadhyaya is associated with *Sutradharis* or Vishwakarmas. It is interesting to note that he has two suffixes of Vishwakarmas namely Manci and Upadhyaya. The temple is very imposing and impressive with its Vimana type of superstructure, is a 'Nirandhara' style of temple.²⁶

Narasobba

Narasobba is a renowned architect and sculptor of Aihole. He was the architect of the temple of Huccappayya gudi which is in the northern Rekha-nagara style. In a Sanskrit inscription on its pillar in the porch of that temple informs are following:

Swasti Jambudvipantare Kaschit

Vastu Prasada tadgatab

Narasobba Samo Vidwan

Na bhuto na bhavishyati ²⁷

[In *Jambudvipa* in the art of building of temple there has been none in the past who equaled Narasobba or there any in the future]

Another epigraph on a boulder near Jain cave at Aihole refers to that the multi faceted personality of Narasobba. He was the disciple of Binjadi. He was well versed in the science of construction of buildings. In character he was like the sun. He was one who chiseled sculptures with accurate proportion. It is evident from these inscriptions that he was both the architect and sculptor of rare caliber.²⁸ The inscription eulogizes him as under.

*Sri-Binjadi [vidaj]rddhara Cattan
Vimana-ranjitan sastra-mahesvaran
Guna-Ravi rupasamghatan Pramana-
Bharan Narasobban.*

The above said inscription describes him as the disciple of one Binjadi (No.180). An inscription on a pillar of the double - stored Buddhist structure on the Meguti hill refers to Binjadi- Ovaja obviously. This person, **Narasobba's teacher, was the architect of the Buddhist structure.**²⁹

All these information Badami, Aryamanchi Upadhyaya built the temple of Malegitti Sivalaya with Dravida Vimana while Narasobba built Huccappaya temple at Aihole with Rekha Nagara super structure. He also chiseled out outstanding sculptures of this temple³⁰

Gunda Anivaritachari and Sarvasiddhi Achari:

Today Pattadakal has been recognized as the world heritage site. The most magnificent architectural feature of early Chalukya period is the Virupaksha temple at Pattadakal. This was patronized by the queen Lokamahadevi to

commemorate the triple victory of her husband Vikramaditya II over Pallavas of Kanchi.³¹ We are fortunate enough to find the details of architects who solidified this imposing huge temple. In fact two master architects were involved in its construction. One was Gunda Anivaritachari who was in charge of entire temple construction except the southern part which was supervised by Sarvasiddhi Achari.³²

Both architects were the recipients of the unique title called *Perjerepy*. It was the royal honor of the highest order. Gunda Anivaritachari was conferred the title Tribhuvanachari. The title implied the recognition as the best of architecture in the three worlds equaling the divine architect Visvakarma. The important part of the inscription is as follows.

Svasti [II] Vikramaditya –Sri
Pri (pr)thivi-vallabha Mahadevi
Yara degulaman ma(ma)dida Sutradhari
Sri-Gundan Anivaritacari
Ge mume-perjerepu-Pattamu Trivhuvanachari
y-endu Pesarittu Prasadari-geydar³³

Sarvasiddhi achari is mentioned in two inscriptions in the Virupaksha temple. The first inscription engraved on the pillar in the southern side of gateway is as follow.

*Svast Sri-Vikramaditya-
Bhatara-mmume kamiyan-mumepara
Jisidora Sri-Lokamahadeviyara
I Lokesvara madida Sutradharige
Mume-perjerepugeyda-balikkei*

[the king Vikramaditya- bhatara, who had defeated (the king of) Kanchi thrice, did the honour of mume-perjerepu for the architect (Sutradhari- Sarvasiddhi-acari) who made the (temple of God) Lokesvara (built by) Lokamahadevi.³⁴ Thereafter it gives the Prasasti of

Sarvasiddhi acari as follows.

*Svasti Sri Sarvasiddhi achari Sakala guna
achraya
Aneka-ra (u) Pu- vastu- Pitamahan Sakala-
niskala-su-
Ksm-ati-bhasitan va(a)stu-Prasada*

*-yan-asana-saya- Na manimakuta-ratna-
cudamani*

Te[m]kana dise Ya Sutradhari

(The Prasasti describes him as the asylum of all virtuous qualities, the Pitamaha in making images and houses, one with perfect and refined conversation and one who had for his jeweled diadem and crest jewel the houses, Palaces (or temples) vehicles, seats and couches (built by him). He is stated to be the architect of the Southern side (temple).³⁵

The second Inscription on the wall of Nandi mantapa of the same temple is a clear evidence of the architect of Southern part temple. The inscription runs as-

Sri Sarvasiddhi aca
ryya tenkana diseya
sutradhari³⁶.

Scholars have provided varying interpretation on the phrase *tenkanadiseya Sutradhari*, which literally means the architect of the southern quarter. Fleet thought that he was the architect of southern country, there by implying that he belonged to the south. Later on it was suggested that the phrase should be understood as suggesting that he was the architect of the southern side of the Lokesvara (now called Virupaksha temple. This view currently holds ground. But it would be strange to hold that two architects would work a single temple, one doing the southern side and the other, by implication, the northern side.³⁷

Revadi Ovajja:

Another important architect and sculptor of Pattadakal is Revadi Ovajja. He is the architect of Papanath temple at Pattadakal. The southern part of this temple was constructed by Revadi Ovajja. He happens to be the disciple of Sarvasiddhi Achari and grandson of Silemuddar. An inscription on the east-wall of the temple runs thus-

*Swasti Sri Silemuddara
marman Sarvasiddhi a
Carjyara cattar Reva
di ovajjar ten
Kana dise madidor³⁸.*

It is worth nothing here that Sarvasiddhi **Achari's disciple Revadi Ovajja built Papanath** with Rekha Nagara Superstructure. It means that, Sarvasiddhi imparted the knowledge of Rekha Nagar style to Revadi. Thus it is clear that, Sarvasiddhi achari was the master in both styles of architecture namely Dravida Viman and Rekha Nagar. Because of his mastery over both styles he could experiment blending features of southern and northern styles in Virupaksha temple. As a result the unique temple exhibits the northern features of architecture like Sukanasi at **the base of Superstructure and 'Kakhsana'** in the porch. These two are the typical architectural elements of Rekha Nagara temple³⁹.

An inscription of 754 CE states that during the reign of the Badami Chalukya king Kirtivarman II and states that Subhadeva belonged to the Sandilya-gotra and was the son of the Sculptor Sivavardhamana. He created the pillar at the gateway of the Vijayesvara temple (known as Sangamesvara for the acarya Jnanasiva who had come from Mrigathanikahara visaya on the north bank of the river Ganges and who had been made the Priest of the Vijayesvara temple.⁴⁰

The Sutratharis of Rasrakuta period as follows:

Among the names of craftsmen's mentions in the Rastrakuta period only a few bear the signatures of craftsmen. Among them, Paliyana, son of Inurbarchari figures as a significant architect who worked on the Bogha Nandhiswara temple at Nandhigrama in Chikkaballapur district.⁴¹ craftsmen Gangachari worked on the Dadigeswara temple at Mudalapalya in Magadi taluk⁴²

An inscription from Alampur dated 780 CE, refers to the first regnal year of the Rashtrakuta king Dharavarsha (Dhruva) of Malkhed. It refers to the construction of Srivagili (Mahadevaras) and also gift of 30 mattara of Land to Ayyanachara and Sridharoja for building this Mahadeva temple. At that time Balavarmaras was administering the Alampura⁴³. The Sutratharis of Chalukyas of Kalyana as follows:

Dasoja of Balligamve

Dasoja and his son Cavana are great sculptors from Baligamve in Shikaripur taluk of the Shivamogga District later he migrated to

Belur. Dasoja engraved a record composed by the great Kannada poet, Santinatha, Whose Jaina work Sukumara-Carite has been survived to this day. He also sculpted image of Acyuta at the Sitihonda at Balligave and of Kesava (and probably of Brahma also) at Mattihalli, Hire Kerur taluk of the Haveri district. At Havanagi in Hangal taluk we encounter a mason named Sarasvati-ganada-si(sa) Dasoja, who made an image of Adityadeva in 1119 C.E.

An inscription from Huvinahadgali in Bellary district dated 1062 CE refers to 120 Mahajanas of Poovina Padangili and there said to have made the grants to Maroja who laid the foundation stone (Kesarukallu) to Kalidevaswami of Poovina Padangili. The sculptor who engaged in the construction of the temple was completely exempted from the payment of taxes.⁴⁴

Udega, the chief architect of the Sarasvati temple is mentioned in the inscription written on the pillar on the right side wall of the same temple. It contains of two lines in Hale- Kannada language and script.

According to Dr Srinivas Ritti "Triumphant in the world is Udega the disciple of Sri Kriyasakti Pandita (Udega) who is equal to God Brahma in expounding the various arts and sciences who to the wicked architect is, as Siva was to Karma; who would overpower the opponent architects just as a lion would overpower a rutting elephant; who would break the pride of the jealous architects as an expert paramour would do to a harlot.⁴⁵

Bisadoja, Chavoja and Singoja

For their having erected the mantapa of the god Kedara within the contract time, the Rajaguru deva being pleased, made a grant of 150 kamma of rice land in Kiru Balligave, to Bisadoja, Chavoja and Singoja, these three to continue free of all imposts, as long as sunana moon. Also he grated to them Siruvolal in the Bedue seventy, with enjoyment for three generation.⁴⁶

The inscription on the pedestal of Brahma figure at Kuruvatti in the Bellary district. tells us that Cavunoja, the son of Gulgoja, architect (*Sutrathari*) of Trailokyamallesvaradeva, worshipper of the feet of Srivadideva, belonging to Sarasvati-gana and a disciple of the learned, made the idol of Brahma⁴⁷.

Tippoja

Tippoja was the chief architect of the Kamalanarayana and Mahalaksmi temple at Degaon about three k.m South West of Kittur. An inscription on the pillar of the temple runs thus-

Bharatagam sastrakala
Parinatyol varnakaviteyol danaguno
Tkaradol sariyar vanke
Swara devara Tippoja bhutaladol.⁴⁸

This temple is elegant Nagar *trikuta* with a highly unusual plan; the central shrine is located within the hall and hardly visible from outside. From the outside the temple looks like a *dvikuta* with two *mulaprasadas* lying side by side and sharing one oblong open hall with a Verandha added to it. The letter is unique and splendid. The Nagar articulation of the walls of the temple in plan and without superstructures, very clearly look like Nagara *mulaprasadas* and not like Dravida *Vimanas*.⁴⁹

The temple was built in the name of Kamaladevi the queen of Goa Kadamba king Permadi or Sivachitta who was ruling 1169 C.E.

Sri Karanaga

Sri Karanaga said to have made four pillars to the Navaranga of Amruteswara temple at Holal in Hadagali taluk, Bellary district. Further he said to have received 90 gadyana for these pillars it indicates that he charged 20 gadyana for each pillar and 10 gadyana for his workmanship. He described as *Kaliyuga Visvakarma*

An inscription on the navaranga mantapa pillar of the temple runs thus ;

“Kaliyuga visvakarma choushashti kalavida pravina, Choushashsti prasada visharada Nagara Kalingandra dravila, Vesara chaturjati prasada nimita Sutradhari”⁵⁰

These details inform that he was expert in varies art of Dravida, Vesara, Kalinga etc.

The Sutradharis of Hoysala period as follows;

During the Hoysal period many temples were built with many Innovative ideas and skills. Therefore most of the temples are showing significant art and architectures details owing to the production of various literary works and

writing of large number of inscriptions and copper plates we could notice the influence of religious themes as well as cultural aspects. The agama text could be followed for the building the temples and installing various images. The persons like Viswakarmas appear to be well acquainted with the literature background. They could build the magnificent temples with technological perfections and made the images of gods and goddess with appropriate features like physical features, ornaments and weapons etc. In this regard we are getting many names of Artisans and sculptors and scribes of the Hoysala period. Some of the important Artisans and sculptors are introduced here.

In the early years of Hoysala rule, particularly between 1060 and 1115 temples were mostly built by local artists in their homeland. A basti at Angadi was built by Poysalachari in 1063 C.E.⁵¹ The Lakshmidivi temple at Doddagaddavalli was built by Malloja and Manivoja in about 1113 C.E.⁵²

Gangachari- Vardhamanacari:

Gangachari was an accomplished scribe as well as sculptor of the early 12th century. He was the elder son of Poysalachari and brother of Kamvacari. His father appears to have been the one who lived at Angadi during the latter half of the 11th century and distinguished himself as a sculptor- architect. He made as many as seven items Four of these are on Nisidhis (or memorials erected in honor of pious Jains who took to ritual termination of life) **Two are on donatives’ records** and one is on the image of the Jina. He had the title like *biruda- lekhaka-madana-mamahesvara* or a forehead ornament of the titled-sculptors.⁵³ **Hoysalacari’s son Vardhamanacari called himself Gangacari** after the name of his famous patron. He could engrave long records with as much ease as he could carve intricate images of Yaksas. Gangacari’s original name appears to have been Vardhamanacari. Being a Jaina and in the service of Gangaraja, he seems to have spent the major portion of his life-time at Sravana-Belgola and in the immediate neighborhood of this great Jaina centre.⁵⁴

Mallitamma

Mallitamma was the most prominent of all the Hoysala sculptors exceptionally long career spanned the greater part of that period the first reference to Mallitamma is to be found on the

ceilings of the Amrtesvara temple at Amrtapur dated 1196 C.E.. It was the earliest work of Mallitamma his last work was Panchalingesvara temple at Govindana halli (K.R.Pet Taluka).

These six temples on which he worked include, the Amrtesvara temple at Amrtapur (1196 C.E.) the Laksmi-Narasimha temple at Harnahalli, (1237 C.E.) at Nuggehalli (1246 C.E.), Javagalla, and Saligrama and Kesava temple at Somanathapur, dated 1269 C.E. Panchalingesvara temple at Govindanahalli and Laksmi-Narasimha temple at Javagalla have both been tentatively dated c.1250 C.E. by R.Narasimhachar . **Mallitamma's name is inscribed beneath two of the four Saiva dvarapala images which guard the two eastern doorways of this five sanctum temple at Govindanahalli.**⁵⁵

The first deity carved by Mallitamma as one circumambulates the temple from left to right be the Laksmi-Narasimha image in which the god Visnu is portrayed in the man-lion *avatara* incarnation.⁵⁶

The next deity which bears Mallitamma's name is the image of Visnu in the form of Sridhara which can be identified not only by the **god's name inscribed on the Pedestal.**⁵⁷ The third image on the western wall of the sanctum though the order of the vaisnava symbols is different. The fourth deity on which Mallitamma name has **been inscribed is an image of Visnu's consort at Harnahalli** he made group of images which is of the greatest interest in the analysis of his stylistic development. He engraved images like Laksmiana, Pradyumna Aniruddha Laksmi, Adhokshaja, Laksmi, Govardhanadari, Puspabharini etc. ⁵⁸.

In Lakshmi-Narasimha temple at Nuggehalli Mallitamma worked his name has been inscribed beneath Seventeen images. They are in South wall. Durga, Lakshmi, Vasudeva Naryana, accompanied by his consort Laksmi. In the north-west wall of the temple shows the ten-armed Varaha trampling the prostrated figure of the demon, the small images of Prithvi, Varaha, Krishna as the flute playing Venugopala.⁵⁹

Mallitamma's name was appeared in four female deities which are the two depict eight armed dancing Goddesses first is Lakshmi with her hands bearing the following symbols and mudras or hand gestures, a bhaya, Padma, Cakra, Svargahasta, Sankha Phala, Lambahasta,

danahasta. The second image represents the eight armed goddess Sarada. In her hands include the *aksamala* 'rosary' **phala, ankusa** elephant god, Svargahasta, Pasa, Padma, Lambahasta, and Pustaka.⁶⁰

Another was Mahisasuramardini and inscribed Durgi is another of the female deity carved by Mallitamma on the north wall of the temple. The fourth image was Laksmi standing stiffly in the Samabhanga pose; the four- handed holds *phala gada Khetaka* and *Kapala* and she is accompanied by two small attendants. Another images carved by Mallitamma at Nuggehalli, a large and heavily limbed sculpture depicts **Visnu's vehicle, the man-agile Garuda**. Another image was the Arjuna, Indra and his consort Sashi, who ride four tusked celestial elephant *Airavata*, another was Nagini or Sake deity.⁶¹

The Mallitamma last work is Kesava temple at Somanathpur. He was probably invited by Somanna-dannayaka the patron of this temple, when he was at Javagal Somanathapura is about 85-90 kilometers to the South-east of Javagal. According to the inscription Hassan district⁶² **Mallitamma's name has been inscribed thirty-seven times on the temple identified over eighty references to either his full name, part of his name or the first letter.**⁶³ Mallitamma and his workshop has attributed the seventeen images in this temple. These images include nine deities and eight maiden attendants.

Mallitamma was the foremost of the Hoysala sculptors. He led nearly sixty years of active life and participated in the establishment of some of the greatest temples his time.

Baicoja

The sculptor Baicoja of Nandi was second only to Mallitamma in importance among the sculptors of the thirteenth century and like him was the master of sizeable workshop. He worked alongside this master at the Laksmi- Narsimha temple at Nuggehalli.

The first sculpture carved by Baicoja as one circumambulates the temple from left to right, depicts the deity *Amaranarayana* or *Paravasudeva* who is seated on the coils of Ananta, the seven headed snake. The upper hands of the god hold the *cakra* and *sankha*, while an inscriptions along the upper section of the Pedestal records that the image of *Adimurti* was made by Baicoja of Nandi ⁶⁴

The *Ugranarsimha* image also the work of Baicoja an inscription found that place mentions that the sculptor Baicoja of Nandi made this ⁶⁵

The next image carved by Baicoja is the God *Trivikrama*. The deity holds the *Padma gada, cakra and Sankha*, and he is portrayed with his left leg firmly planted on the earth, while the right leg is raised above waist level as he prepares to cross the river Ganges. Beneath the deity, on the upper section of the Pedestal is inscribed the image of *Trivikram* made by the sculptor Baicoja of Nandi ⁶⁶

An inscription dated 1233 C.E. and 1244C.E. refers that Kalloja who built the temple of Kalideva at Nidagundi in Ron taluk also got the gift of land of 6 kam⁶⁷.

Cavana; A sculptor from Balligamre who worked on the Chennakesava temple at Belur, son of Dasoja,⁶⁸

Svasti srimath Balligrameya ruvari Dasojana Putra Chavana madida Putali machchhariipa- biruda- ruvari- Madana Mahesa Kesava -Deva madisida besa II

Svasti Srimatu Balligrameya Dasojana PutraChavana geyida Besa biruda -ruvari - madana-mahesa.

Drohagharattacari Architect of the Kanna basti at Kambadahalli, seems to have named himself after a title of his Patron, Gangaraja⁶⁹

Other artist under Hoysala are Chikka-Mallitamma, Honoja, Balla Somoja, Basavoja, Bayiroja, Bibbacari, Cakacari, etc.⁷⁰

The Sutratharis of the Vijayanagara period as follows;

The Vijayanagara temple art is largely anonymous in nature as far as the artists who built the temples are concerned. Though the constructional activities took place during the period on such an unprecedented scale, it is unfortunate that very little is known about the artists who made them. Only ten or twelve inscriptions furnish information about the artists in the vast corpus of records of this period. Highly beautiful work of art like the *Maharagamantapas* of Virupaksa and Vittala temples at Hampi, the *Kalyanamantapa* and the *Dvaramantapa* of Somesvara temple at Kolar, the reliefs on the Columns of Vitthala,

Tiruvengasanatha temples at Hampi and Mahaganapati temple at Kurudumale etc do not bear the names of their artists.⁷¹

The king Bukka I constructed the Siddhanatha temple at Chitradurga. Near Kalkoja, son of Somoja erected a gateway in front of the temples of Goddess Mahakali at Telanuru⁷².

An inscription of Bagepalli taluk refers that the famous Gadidim Venkataramana temple at Devaragudipalli was constructed by three masons namely *Kallukutiga* Nayonde, Kamoja and Bairoja one year after the construction of this temple, a grant of few villages was made to them.⁷³

The king Devaraya I constructed a temple for the deity Visvesvara and Lakshminarayan at Gulaganji in Kolar district. This temple was made by Muddoja son of Tippoja⁷⁴.

A record of Tekal presents a little detailed information about the artists who labored for the erection of the towered gateway of Kallavaradaraja temple of this place. For this work, it required the services of a carpenter and a blacksmith as well. Singaraja, the minister of Goparaja, the viceroy of Tekalnadu and a close relative of the king Devaraya II, felicitated the artist's Cola-Devoja and Anjala Lingoja by granting lands, houses and umbrellas. Cola-Devoja was a carpenter and Anjala Lingoja, a blacksmith.⁷⁵

Vallabharaja, the viceroy of Devaraya II, built a temple for god Hanumanta at Kundagala in Dharwad district. The temple and the sculpture of Hanumanta were made by an artist Kaloja, son of Bommoja in 1444 C.E.⁷⁶

Titles

The Architects and sculptors were the Visvakarmas in the heavenly abode of art history. They had gained various epithet from their art work is mentioned in following inscriptions.

1. Viswakarmasamanena
Visvakarmacharyenedam Sasanam
Likhitam⁷⁷
2. Biruda ruvarimukhatilakam
Vardhamanacari Khadarisidam⁷⁸
3. Dhareya ruvari Chakravarti Samatojara
Kandarane.⁷⁹

4. Ruvarivairibirudabherunda Chaudojan marmma Satojan besa ⁸⁰
5. Yi Kalla Madidata Kallukutiga Singoan maga Biroja, Atana birudu manthanisuvara Gantaragala, matsari suvar Manthanasula⁸¹

REMUNERATION TO THE ARTISTS

The epigraphs of ancient and medieval Karnataka record the land grants to the architects and sculptors who were responsible for building the temples, erecting memorial stones and engraving the epigraphs. In these cases, the grant usually stipulated not only the amount of land; its position and boundary lines, but also the type of land.

An inscription refers to the Visvakarmacaryya who was skilled in all the arts, including painting, was given a grant of four *Khandugas* of wet land and two *Khandugas* of dry land for engraving an inscription. ⁸²

An inscription dated 1067 CE states that the Rudra a sculptor, got epithet Mahakala Brahma was given a special grant by a temple priest called Savarasi in appreciation of his skill when he engraved a record, entering the letters with “elephants, lions, parrots and many other forms⁸³

The architect Malloja-Maniyoja, who was responsible for the construction of the Laksmidevi temple at Doddagaddavanahalli was paid 4 *salages* of wet land exempted from the taxes below the big tank.⁸⁴ Another architect referred to as Bammoja, son of Halloja, of Kikkeri was paid “1 *slage* and 10 *Kolages* of wet land, 15 *Kolages* of dry field for the construction of the Isvara temple at Tenginahatti ⁸⁵

In 1186, artists Bisadoja, Covoja and Singoja received 150 Kamma of rice-land from the raja-gurudeva for erecting “the mantapa of the God Kedara, within the contracted period”. This grant was to be enjoyed by them as long as the sun and the moon endured.⁸⁶

In 1340, the Brahmanas of Bahmasaudra agrahara gave a rent free estate to Damoja, son of carpenter Madivoja⁸⁷.

The Veeragal inscription dated 971-72 CE registers a grant of ten Kolagas of land to vibhoga, the sculptors as remuneration for

having got done the Veeragal to commemorate the heroic death of Anna Vasayya ⁸⁸

In 1380 three priests (Pujaris) presented to mandalapurausa, an acari (craftsman) for the work done for the temple. Land specified and a house too, exempt from taxes, with pouring of water. This disclosed how payment was made in kind not in case.⁸⁹ In 1387 another epigraphy relates how wages were paid for building a temple and a lamp- pillar (dipa male) in the form of eight kolagas of land. An inscription dated 1408 C.E. mentions that building the Visveswara and Laksmi Narayana temple Mudoja, the craftsman, was granted the Baireya Kula rise field⁹⁰

In 1431 C.E. for the carpenter Coja-Oja, who had executed the wood work of the door of the gopura of the mantapa facing the god Varadaraja and blacksmith Anjala Divinoja for setting up the door and performing the iron door work apparently of the same temple, were presented by Singa Raja, hereditary land, horse and umbrellas ⁹¹

1. Srimat Tilivalliya Birojana magma kaloja Sasanamam madida besakke Somesvara Panditar Varshamprati avalakkige Khanduga bhattaram Kottar,⁹²
2. Asandiya Somojana maga Hariyoja Satesvaradevar devalyavam Eradu tamrasasanavuvam geyda Haryojonge Satasamudrada KMelage gadde Ko,⁹³
3. Yi Sasanagalu hoyida Kakute tirumalage Varadarajadevar nirupadim Settehalyalu gadde 2 holanu 3 vanu kottevu ⁹⁴
4. Sri Hariharadevara maneya akkasale Niravrojana Manakariya Tipojanu yi Sasanava tiddidake Beluvadiya gramadallu Vokkulada yereya Boomiyanu Kotteu ⁹⁵
5. Yi Silasasanava barada akasale Siriyanage vakkutada Kaligambhada manya.⁹⁶

Some time the artisans work without their wages. An inscription dated 1189 state that “Kanchugararu devarupakaranagalellamam kuliyam kollade madi kuduvantagi bittaru”⁹⁷

GUILDS OF ARTISAN

The Panchalas (Vishwakarmas) trace their ancestry to the five sons of Viswhakarma, of whom the first-born was Manu, who worked in iron called Kammar; the second, Maya who worked in wood called Badagi; the third, Twasta, who worked in brass, copper and alloys, called Kancugara, the fourth, artisan Silpi, who worked in stone; and fifth, was Viswajna, who worked in gold and Silver called him as Akkasali. In ancient and medieval Karnataka the Panchalas (All five groups) had their own guilds mentioned their interests. The contemporary inscriptions of Karnataka mentions these guilds by such terms as *seni or Sreni, kottali, samuha, gottali, sameyangal hittu, or pittu simeyagal and okkalu*⁹⁸ The Laksmeswara inscription dated 725 refers to the guilds of the braziers.⁹⁹ The Yevur record of 1110 C.E. refers to the guild of the braziers (Kanchugar gottali) and Silpis. (*Kalkutiga gottali*)¹⁰⁰ Lakkundi inscription dated 1185 refers to the guild of Badiga and Kammar (*Badiga Kammararu vokkalalondu Horeyamam hanna sumdhannadalu ballavondumam bittaru*)¹⁰¹ Another inscription refers to the guild of Akkasali Badiga and Kammar (*Akkasali Badiga Kammara rokkala dondu tegeya hore hedageyaluppa mana 1 nulaparvvakkeyokkaladondu*)¹⁰²

It informs that there were separate guilds for the carpenter, the blacksmith, the braziers, the Shilpi and the gold smith. They were also paying taxes on their profession. An inscription mentions tax on blacksmith (*Kammara dere*)¹⁰³

Another inscription mentions tax on goldsmith (*akkasale acchina kammata dere*)¹⁰⁴

The credit of production of art and architectural remains with monuments, sculptures, paintings, copper plates and stone inscriptions goes to Visvakarmas. It has been shown from the above study. They are human beings and maintained their proficiency mainly on the art work either building the monuments or fashioning the designs on them and depict the sculptures with or without themes and gained the income by doing this type of work. The study further informs that they were getting more income in the cities than in the villages. These masterpieces are exhibiting the heritage glory of our ancestors in our country. They are the richness of our heritage and culture. The rulers of many dynasties gave patronage for the construction of these monuments, erection of the sculptures etc. When there was anarchy due to warfare and other natural calamity people might have died, but their production is living even today. They are telling their historical glimpses and it reflects their art contributions from the Visvakarmas in India.

Let me once again take this opportunity to place on record my sincere thanks to the South Indian History Congress for giving me this opportunity to deliver Professor T.R. Ramachandran Endowment Lecture.

Thanking you. I would like to thank professor S. Settar, Dr. Seelakanta Pattar and Dr.R.M. Shadakshara for their Valuable suggestions

PROF. B.C. RAY MEMORIAL LECTURE
IDENTITY, EQUITY AND INSECURITY : MUSLIM POLITICAL
DISCOURSE IN CONTEMPORARY IN INDIA

Dr. A Pahlithil

Muslims are much misunderstood in the contemporary society particularly India due to various historical and political reasons. The Muslim community across India constitute the second largest demographic section of the country. According to the census report of 2011, they comprise 14.4 percentage of total Indian population and is the largest minority community.¹ The bulk of the Indian Muslims are socially and economically, downtrodden and backward. Majority of them were converted to Islam from the lower strata of Indian society owing to various social and historical compulsions. The Muslim community leaders take up mainly their religious identity issues as their major political agenda instead of other larger political, social or economic issues.

The Colonial historians portrayed Muslims as conquerors and war monks, who were threat to Hindu culture and civilization. The Orientalist writers also depicted Muslim rulers of India as a brutal aggressive class and their warfare with native Hindu kings as Hindu-Muslim conflicts. The British prepared history continued the same narration. They divided the history into Hindu-Muslim and Modern periods and wrote that during the medieval period, Muslim rulers oppressed Hindu subjects and many of their centres of worship were destroyed or converted to mosques.²

During the time of freedom struggle the ideas of two nations theory forwarded by Muslim leaders and Hindu Mahajan Sabha led to put the communal rift and sowed the seeds of communalism in India. As a result, India witnessed the worst communal riots the eve of partition. Meanwhile, the Muslim elites (Ashraf) left India and gave an option to their fellow Muslim brothers to re-locate their homelands in India or Pakistan. These Muslim leaders presented the new country Pakistan before them as a **symbol of Muslim 'sacrifice', where, Muslims** would evolve as a moral community gaining economic and political justice.³ Still, majority of Muslims choose India as their homelands and

the leaders like Maulana Abdul Kalam Azad gave political leadership to them.

Post-independent Indian political leadership framed a secular constitution for the people of India in which equal opportunities and citizenships were provided to all people who were living in Indian territory irrespective of their caste, creed, religion or faith. Meanwhile, the Muslim leadership in India very effectively build an inter-community relationship which received wide acceptance among the general public of India. But the wounds of partition did not healed soon. The elements of communalism began to develop more vigorously and dangerously in India. A group of Hindu religious fundamentalists forcefully entered into Babri Masjid on December 22nd 1949, and installed the idol of Lord Rama in the mosque.⁴ It was great threat to the secular and democratic fabric of the country. Moreover, it was a major threat into the ideas of equity, minority rights in India.

During that time, the Muslim community leaders extended their support to the ruling congress party, by hoping that their community interests might be protected by the them. One of the major Muslim religious organizers called Jamiat-UI-Uma-Hind (JUH) was became a junior partner of the ruling party.⁵

Since 1961 the country began to witness several community riots in various parts of the country. The Jabalpur riot was one of such major riots of that time. These riots started merely one petty issues or economic interests,⁶ but it soon absorbed communal colour and spread to various parts of the country by killing innocent people and destroyed crores of wealth.

At the time of Indira Gandhi, particularly during the time of national emergency and the Hindutva groups and Jama-Ut-Islami mutually helped and explored further possibilities of mutual co-operations.⁷ These groups were co-sufferers and jail mates during that time. But this did not continue for a long time due to their own ideological contradictions. In the general election

of 1980, the Sangh Parivar Party formed their own political party called Bharatheeya Janatha Party (BJP) under the leadership of Atal Bihari Bajpai and L.K. Advani. They mainly uphold Indian nationalism, national epics, mythology, national heroes as their core national agenda⁸ and kept away from the ideas of socio-economic development and secularism.

Moreover, they widely propagated the politics of hatred and looked at minorities, **particularly Muslims as the 'other', and saw the creation of Pakistan as the handwork done by the Muslims, as an unforgettable crime done by them.** The present day Indian Muslims are seen as pro-Pakistanis, anti-national and extending support for cross border terrorism. They are the part of global Islamic terrorists and militancy. On the other hand, Hinduism is the religion version of Indianness and Indian nationalism.

These arguments were strengthened by the time of Shabano Case of April 23rd 1985 and its after effects. The case approved the right of Muslim women for maintenance until her remarriage from her divorced husband under the Indian Penal Code as similar to other communities of India.⁹ But the political and religious leadership of Muslim community claimed that the ruling of the court was against the Muslim personal law, Shariya. According to Muslim leadership marriage and divorce are religious issues in which court had no right to interfere in these issues. Meanwhile, Hindu fundamentalist groups demanded the implementations of Uniform Civil Code (UCC) and the right of Muslim for polygamy as one that would change the demographic balance of different communities in the country. They also pointed out that the articles 44 and 48 of Directive Principles of State Policy as attempts to secure for Uniform Civil Code for the all citizens of India.¹⁰

The Sangh Parivar Organizations alleged that Muslim population is increasing more than national average due to uncontrollable birth-rate, rejection of family planning measures, polygamy practices, migrations and mass conversions. They have a grand conspiracy to Islamise the country. But the reports of National Commission for Religious and Linguistic Minorities reveals that there is no significant differences between Muslims and Hindu birth rate among the families of same economic class.

Justice Rajendar Sachar Committee pointed out that the low socio-economic status of the Muslim population with high poverty, un employment are responsible for their backwardness.¹¹ The recently published National Citizens Report of Assam shows that, the legal migrants were more in numbers were not in Muslims but were Hindus. But the anti-Muslim propagations are being continued to achieve political ends.

When Rajiv Gandhi led the country as prime minister, the Hindus as well as Muslim fundamentalists groups were sharpening their communal agenda. The situation worsened when Rajiv Gandhi had enacted a law called Muslim Women (Protection of Rights in Diverse) Act in 1986¹² for satisfying Muslim fundamentalist groups by overcoming the Shabano Supreme Court verdict. Meanwhile, in order to please the Hindutva parties, the government had decided to open the closed doors of disputed Babri Masjid to Hindus for worship. ¹³ As a result fresh incidents of communal violence occurred in many parts of the country, particularly north Indian cities like Hashimpura and Bhagalpur. ¹⁴

The disputes of Ramajanma Bhoomi and Babri Masjid were spearheaded by Bharatheeya Janatha Party and other Hindu fundamentalist outfits. They claimed that they are the true representatives of Hindus of India and Hindu nationalism is Indian nationalism. It gave maximum political benefits to BJP and they became a major political opposition in the country. They also extended support to V.P.Singh government which was formed as an alternative of the congress party. In August 1990 the government decided to implement the Mandal Commission Report in the country which gave 27 percentage of reservation to backward community. ¹⁵ It stimulated caste consciousness among the people of backward caste. But the BJP a coalition partner of the government conducted a Rathayatra from Somanatha temple of Gujarat and he launched a massive attack against the ideas of secularism and national secular parties as pseudo secular parties. He also accused that these so-called parties are following a policy of appeasements towards minorities and using them as vote banks. ¹⁶

As a result of these developments was the further communalization and criminalization of the Indian politics. The inter-community

dialogues and communications also collapsed. On December 6th 1992 the disputed structure of Babri Masjid was demolished by a group of Hindutva fundamental forces. The demolition of the mosque was the violation of the rule of law and the breach of the court order of status quo. It was followed by series of Hindu Muslim communal riots and around 2000 people were died in these incidents.¹⁷ But this Babari Masjid **issue became spring ball for BJP's onward movements in national politics.**

One of the worst dangerous communal riots was the Gujarat riots of February 28th to April 2002 due to the Godhra train burning incident. Here also about 2000 people died due to the riots. The state had also seen many major communal riots since 1969. But the riots of 2002 killed more innocent people than ever before and destroyed properties worth of crores of rupees and thousands of people were displaced. Obviously, it was one of the dangerous riots India had ever experienced. It was created large-scale fear and anguish among the minorities, particularly Muslims who were the major victims of the riots.¹⁸

Meanwhile, the Hindu fundamentalist groups were campaigning against the love marriages between Hindu-Muslim in the name of **'Love Jihad'**. They alleged that the Muslim youths were purposefully trapping Hindu girls, Hindu love affairs and converting them into Islam. And, sometimes they were recruited in the ISIS Camps.¹⁹ At this juncture, a Home Coming Programme called **'Ghar Wappasi'** was introduced by Sangh Parivar to reconvert the Muslims and Christians to Hinduism.²⁰ Love jihad stories and exaggerated brutal stories of Muslim rulers in the past had always created an environment for communal hatred and riots. Of course, the Hindu militant organizations were waging a calculated move against the minorities while the Muslim fundamentalists groups were doing the same things in the Muslim majority area like Kashmir towards Hindu Pandits. The terror activities of Muslim fundamentalist groups in Jammu and Kashmir gave a jihadi image to Muslims and that was politically used by anti-Muslim groups

In most of the communal riots, the victims were largely poor slum dwellers but after the demolition of Babri masjid the elite Muslims also affected the communal attacks and police

brutality. Indian Muslims are not a single monolithic group in India. Each division has a different problem due to historical and geographical reasons. Backward Muslims constituted about 90% of Muslim population.²¹ The city dwelling north Indian Muslim are living with the past glory as a representatives of formal ruling class. A large majority of urban Muslim populations of these areas are economically poor, educationally backward and politically weak. Now the time has come to focus the attention of Muslim politics from communal politics to socio- economic issues of ordinary Muslim populations.

The agricultural changes due to green revolution did not bring much change in economic prosperity of Muslims due to their inabilities to use their modern agricultural technologies. Apart from peasantry a large number of them are working as artisans, coolies and menial workers. They are also working in industrial and mercantile sectors. After the gulf boom in 1970 large number of Muslims migrated to west Asian countries.²² Their earnings flowed largely to the country which has contributed greatly to the economic growth. But their presence in government jobs were very limited (4.4%). The dearth of Muslims in civil services, military or police services were reported by the Sachar Commission reports and many other commissions appointed for to study about the Muslim backwardness.²³

This was mainly due to the lack of education and network at the political and administrative level. In the state like Kerala where reservations are being provided to the OBC communities, Muslims are also getting their share in government jobs as per the law. Muslims are one of the educationally and socially backward communities in India. The reason for their backwardness can be located in the religious traditionalism. Similarly, their religious exclusiveness and regressive outlooks of the religious establishments are the other reasons for educational backwardness. Unemployment and poverty are other root cause of their lack of trust and backwardness.²⁴

The political or the community leadership of the country are not ready to address these issues. They are interested mostly to interfere in the agendas of caste and communal identities. In fact Indian Muslims are living and working in

conditions similar to their Hindu brethren than their core religionist of Muslim world.

A section of Muslim leaders accused that anti-Muslim riots are planned and executed to cripple them socially and economically. Undoubtedly, after partition, Indian Muslims are weak and frustrated. They knew that any deliberate migration on their part will lead to far reaching consequences. While, the Hindu fundamental groups claim that the riots were instigated by Muslim extremist groups who were acting on behalf of Pakistan for destabilizing the country. Often, the communal violence occur as the result of petty issues like discretion of Hindu gods the centres of worship, processions of music before mosques or throwing of coloured water towards people.²⁵

The Muslim community fear that the Hindu fundamentalists are trying to impose their cultural echoes which are threat to their religious identity and existence in the country. After the BJP led government came to power particularly since 2016, minorities are living in much fear and anguish, due to mob lynching of un- armed men particularly Muslims in the streets, trains and home. The crowds alleged that men had slaughtered cows or carried beef meat.²⁶

The passing of *Anti-Triple Talaque Bill* passed by Parliament in 1st August 2019 called the Muslim (Women Protection of Rights) Bill, 2019,²⁷ the right of Muslim men to divorce Muslim women through triple talaque known as *talaque-e-biddat* became illegal and punishable under communal law. According to a section of Muslim leaders it is against their personal law, Shariah which is divinely made and nobody has the right to amend it. Thus the centuries old custom is misused the Muslim men against married women in India. But the Muslim fundamental groups claimed that, it is an attempt to introduce Common Civil Code in the country.

For this movement, Jammu and Kashmir reorganization act of 2019 was passed by parliament under which J&K has lost the statehood and was divided into three union territories comprising Ladakh, Jammu and Kashmir.²⁸ Muslims considered it also a move to reduce Muslim area into a minority region and give away their special rights in Jammu and Kashmir.

Likewise, the constitutional bunch of Supreme Court of India has pronounced a momentous historical verdict in Babri Masjid and Ramajanma Bhoomi case on 9th November 2019. The court rejected most of the claims of Muslim party as well as Hindu party about the disputed sites. But, the court was settled the issue by handing over 2.77 acres of disputed land to **Diety Ramalalla and 5 acres in a 'prominent' place to Muslim Sunni Waquaf Board for constructing a mosque.**²⁹

The supreme court unanimously settled the century old Hindu-Muslim conflicts that had been in courts for 70 years. The entire county accepted the judgement without much hostility or discord. At the time of verdict, the country has been witnessed a rare kind of amity, brotherhood and understanding. No incidents of communal riots and protests were reported in anywhere of the country. Though the verdict itself emphasised **'fact or faith' dispute regarding mandir or masjid** and marks dawn of a new era in India.

The recently prepared National Register of Citizens (NRC) of Assam sees to omit those who were already living in India but non-citizens of India. As a result, a large scale of Muslims and Hindus were omitted from the NRC. In the meantime, the government of India decided to provide citizenship to Hindus, Sikhs, Buddhists, Jains, Paresis and Christian who were migrated from Pakistan, Afghanistan, and Bangladesh through Citizenship Amendment Bill (CAB) on December 11, 2019.³⁰

Muslims alone were excluded in the CAA Act which is a kind of discrimination against Muslims on the base of religion is that clearly spell out in this Act. Again, a kind of fear and unpleasant situation is being created in the name of NRC by the ruling people against the Muslims in the country. The anguish of Muslim community is that whether in the coming days they would live as the second-class citizens of the country, claiming no constitutional rights or privilege.

Since independence, India has been ruled by a single party, congress majority of Muslims extended support to them in many years³¹ as and when they felt having being betrayed by the congress party they shifted their loyalty to Janatha party in 1977 and Janatha Dal in 1989. The Congress government often failed to protect

their lives and properties during the period of communal violence. In addition to these they strongly believed that the Congress party failed to give them a fair share in education, employment and politics. Now the congress rule was replaced by BJP. Fundamentally, these two parties reflect the dichotomy with the liberals and conservatives. Most of them are religious who seek continuity with tradition and struggles for the questions of Hindu nationalism in the place of Indian nationalism. So, the voice of moderate Hindus and Muslims are less in contemporary Indian society. Their voices are submerged by the shrill sounds of so called 'nationalists'. Still the question before us is whether we need Hindu nationalism in a country where more than 80% people are Hindus.

Indian Muslim Representations in Lokh-Sabha

Year	Number of Muslim Members in The Parliament	Percentage of Total Members
1947	31	13.01
1952	36	9.21
1957	24	4.74
1962	32	6.27
1967	29	5.68
1971	27	5.18
1977	32	6.03
1980	46	8.50
1984	41	9.60
1988	33	6.31
1991	28	5.03

Source: Muslim India, Journal (1983 and subsequent issues), p.190

However recently, Muslims found themselves in an undesirable position in the country. Once they were often part of the ruling class and freedom fighters. But the issues of partition reduced them to a weak and crippled section of Indian society. As a result, they often became the victims of communal violence and mob attack on petty allegations like carrying or keeping beef meat or kidnapping cows etc. Sometimes, government are reluctant to use strong force to suppress these riots. The nature of the riots is socially interrelated; violence does not change the nature of state and of the existing social structure. The Muslim community leadership are inherently incapable of mobilizing Hindu majority support in their genuine socio-political issues. Their success mainly depends on an alliance with other liberal, secular and democratic left structural forces of the country.

Religious identities are historically produced institutions that are constantly transformed due to socio-political reasons. The sentiments of religious minorities and majorities had to be respected by each other. The contemporary developments widely affect the economic and social upward mobility of all communities. The community leaders, particularly Muslims should give more attention to the political awakening, socio-economic upliftment of the community than petty communal or century old religious identity issues. They may uphold democratic and secular spirits and educate their community about the significance of social harmony in pluralistic society, socially and religiously expel those who are supporting terrorism or engaging in violence with the other communities of the society. Similarly, the ruling parties should break their silence on various issues affecting the minorities and take appropriate steps to make them confident. The minorities are an integral part of the society and their contributions are so vital for nation building. Muslims are not foreign but culturally, morally and politically Indians.

PROFESSOR B.S.CHANDRABABU ENDOWMENT LECTURE

INVESTIGATIONS ON THE MEGALITHIC CULTURE IN NINETEENTH CENTURY SOUTH INDIA

Konda Srinivasulu

Mr. President, fellow delegates, friends, ladies and gentlemen, I would like to thank the members of the Executive Committee of the South Indian Historical Congress for electing me to deliver Professor B.S.Chandrababu Endowment Lecture at the 40th Annual Session, being held at Annamalai University, Chidambaram, 2020. In this lecture, I would like to delve upon the megalithic burial practices. As you already aware, the word megalithic derived from Greek *mega* (huge) and *lithic* (stone) and megalithic culture is associated with the burial practices of ancient human beings from Iron Age onwards as they used large stones to commemorate and denote the dead may it be in the form of menhirs, dolmens, cists, sarcophagus, stone circles and the like elsewhere in the world. Investigations leading to the discovery of the Prehistoric monuments relating to Megalithic

culture of varied nature in the geographical area lying between the Western Ghats and Eastern Ghats of South India equipped with Deccan plateau adorned by different geological formations of granite-gneiss, quartzites, limestones, dolerites, schists, etc., in the form of hills and hillocks with varied ecological niches began in the first quarter of 19th century through many British Officials and amateur archaeologists, who were interested in Indian Culture. Among them Mackenzie (around 1800) was the first to record and Babington (1823) stood first to report and study these ancient monuments in the Malabar area followed by Ware (1830), Congreve (1840), Newbold (1852), Taylor (1851, 1873), Dali (1867), Mulheran (1868), Bowring (1869), Cole (1868-73), Lewis (1869), Oldham (1869), Ball (1872), Boswell (1872), Brecks (1873), Walhouse (1873-82),

Burgess (1874-1901), Murrey (1886), Bain (1890), Fawcett (1896-1901) etc. These monuments were named by their own terminology such as Cromlechs, Kistavaens, Tumuli, Scythian tombs, Crosses, Burrows, etc. or described with local names prevailing among the native population such as *Panducoolies*, *Muni-era* or *Mori-Munni* or *Mories*. *Topie kull* or *Kodey kull*, *Kuta-kallu* or *Kodi-kal*, etc. These investigations were illustrated both in the form of physical features in the shape of sketches and plans and cultural features comprising of pottery, iron tools, graffiti marks, etc. Keeping in mind the vastness of the subject, selected discoveries and notices of the megalithic monuments by British officials and amateur archaeologists in nineteenth century are taken for introspection in the present paper accommodating different typologies.

Knowledge about megalithic burials was known to the Indians in general and South Indians in particular since long time as attested by the information furnished in the some of the copper plate records from Andhra Pradesh and from the local tracts on the megalithic tombs collected by Colin Mackenzie from Andhra Pradesh and Tamil Nadu.

References of Megalithic Monuments in Copper Plate Records

Megalithic monuments were mentioned as boundary marks in some of the copper plate grants of early Eastern Ganga rulers as per the available evidences. The Purle plates¹ of Indravarman dated CE 647 while donating a piece of land in the village Purle near Palakonda in Srikakulam district mentions *Purushachchayaya pashanastayah* means 'three stones arranged to commemorate a human being'. The same epigraph also mentioned *Purushachchayaya arjunavrikshah* and *Purushachchayaya timira vrikshah* while mentioning other boundary marks. Similarly, the Tekkali plates² of the same Indravarman dated CE 652, while describing the southern boundary of the gifted land in the village Turiganna, mentions as *purushachchayaya pashanapanktih* which can be translated as 'a commemorative row of stones'. The noted epigraphist K.V. Ramesh³ states that in many cases trees, instead of stones, were planted as memorials in order to symbolize the belief that death is only a transformation and not an end in itself. If we

observe the burial practices of Savara, Gadaba and Valmiki tribes of the Srikakulam district in which these copper plates were found, the Savaras burn the dead along with their ornaments and implements. The ashes are collected the next day and buried in one square foot deep hole dug near the graveyard. In order to admit the dear into the ancestral world properly, a wooden figure is set up first to accommodate the soul of the deceased till the erection of a memorial stone. An elaborated ceremony called *guar* literally means 'erection of stone' is performed only after a good harvest. It is clear from the above facts that the original inhabitants i.e., Savaras fix wooden figure as memorial slab which in course of time is replaced with stone. It may be postulated that in medieval period they planted trees instead of wooden figures as indicated by the above said copper plate grants.

The Boddapadu plates⁴ of Vijrahasta III, dated CE. 1060, enumerate the boundaries as a grave on the south west (*Nairyatyah Garta*); a grave with *Arjuna* tree on the west (*Paschimatah Arjunakhya Garta*) and a grave with stone circle in the north west (*Vayavyatah Mandalakara Pashana sahita garta*) and two graves close to each other with *Arjuna* tree (*Dvaugartha Sangameva pavatah Arjuna Vrikshah*). All the instances stated above would come under the category of menhirs and stone circles of megalithic culture.

A question may arise as to why these megalithic structures were referred in the epigraphs while mentioning the boundaries. The simple answer for that was the natives dare not disturb or destroy such monuments by either respect or fear and at the same time those spots were well known to the local people.

Megalithic Burials as Recorded by Colin Mackenzie

Colonel Colin Mackenzie, a well known Indologist and the first Surveyor General of India, collected various manuscripts, coins, inscriptions, maps and plans bearing on the literature, religion, history and etiquette and customs of the people of South India during his stay in India. Most of them were collected between CE 1799 and 1820. He made use of the expertise of his assistants numbering more than twenty for collecting information from

various parts of South India. His vast collection at the time of his death in 1821 contained 1568 Literary Manuscripts in fourteen languages; 2070 *Kaifiyats* or Local Tracts in 264 volumes; 77 volumes of Inscriptions containing 8076 epigraphs in South Indian languages; 75 Volumes of Translations containing 2159 works; 79 Plans; 2630 Drawings; 6218 Coins; 106 Images and 40 Antiquities⁵. In fact, Mackenzie's Collection can broadly be divided into Manuscripts, Inscriptions and Evidence of the Material Culture.

Scholars opine that Babington was the first person who worked on megalithic culture.⁶ But the noted archaeologist Padmasri K. Paddayya opines⁷ that Colonel Colin Mackenzie noticed the megalithic burials even before Babington's discovery. Unfortunately, Colonel Colin Mackenzie died in 1821 before he could publish his works and his huge collection remained in the manuscript form. Interestingly, Babington and Mackenzie were in correspondence over the issue of archaeological remains. This is further strengthened by Babington's opening line of his paper which starts with "Like the *Pandoo collies* on the eastern side of the Ghats..."⁸ It is amply clear that he was aware of the discovery of megalithic burials on the other side of Western Ghats made before his work rather a knowledge gained, probably, through his interaction with Mackenzie who explored the Eastern Ghats.

Mackenzie's collections contain a number of references to megalithic sites. Though many of them were in vernacular languages of South India, some of them were translated into English.

In the translated works like 'Vessels Discovered in the *Pandukulis*'; 'Remarks on

Tumuli'; 'Tartarian Antiquities'; 'Remarks on Barrow'; 'Remarks on Cairns, and Sepulchers'; 'Observations on Tumuli, Cairns, Ancient monuments &c. in Ireland'; 'Observations about the *Pandu Cullis* in the Tamul Country' by Appavu; 'A particular account of *Pandu Cullis*'; '*Kaifiyats* of the Pandava Kulis' and '*Kaifiyats* of Appau, from 12th October 1816 to 7th January 1817 preserved in British Library, London, there were references to the megalithic culture.⁹ The present author was unable to procure the above mentioned articles as they were not published so far. However, some records were translated and published by certain individuals. Taylor translated Mackenzie manuscript on 'Account of Ancient Subterranean Dwellings from verbal accounts obtained in the Jaghire, and Arcot Districts' contains an account of certain subterranean, or excavations, as if they were tombs, discovered at various places: of the exact nature or character of these pits there appears to be no certain knowledge; but the writer has collected, and stated, the traditional accounts of people near the places where those excavations were found.¹⁰

Babington

While writing on the megalithic burials of the *Pandukullies* of the Eastern Ghats in 1823, Babington made some important observations on the nature of construction according to the soil or rock by the megalithic population. Firstly, if the soil is enough a *topi-kull* was built comfortably and secondly if the substratum of rock known as laterite or pudding stone was dug in the form of a cave called *kodi-kallu* in which megalithic depositions like bones, beads, arms etc was placed and buried as sepulchers.¹¹

Fig.1 - Kodey Kulls at Chataperambah

Notices of Welsh

Welsh, a military officer of Madras Presidency, mentioned the remains of megalithic culture in his autobiography 'Military Reminiscences' as follows. "Returning by the Pedanaig Durgum Pass, I must make mention of a race of Indians, now supposed to be extinct, who formerly inhabited certain strong holds in the country, and appear to have been entirely different from every other tribe, in their habits, manners, and customs. Approaching Naikenary, from the top of the Pass, the road winds along the base of a rocky hill, which leaving on the left hand, it crosses by the bund of a tank, within a few hundred yards of the wretched bungalow of that name. On the top of this hill, are the remains of a *stone village*, formerly inhabited by the *Paundway*, there may be *forty or fifty ruins*, and a description of - one, will answer for all. They are generally a *square of eight feet, and about five in height; the walls, floor, and roof, being formed of single stones, with two stones set in perpendicular, and rounded at top for the entrance: door it cannot be called, the only passage being cut in a small circle in them, exactly opposite each other; the two stones being set two feet asunder, and the whole strengthened outside by a buttress of loose stones, within others of four feet high above the earth, or rock, in which they are set, nearly perpendicular*. I have added a sketch of the one I found most entire, to explain this **incoherent description.**" He further adds "Every endeavour to get some authentic account of these people, failed: all I could learn was, that

they inhabited the hill country, had kings and laws of their own, never mingling with other natives, but plundering them and retiring to their strong holds, whenever they were pursued or successfully opposed. The whole in a body were called *Paundway*, or *Pandweh*, and one was styled a *Pandawur*. I have since met with *sepulchers* on the Malabar coast, which appeared to me to have some connexion with **the owners of these deserted hamlets.**"¹² (Italics are mine)

Medows Taylor Work in Shorapur

Another important contribution to the nineteenth century South Indian megalithic culture was done by Medows Taylor through measurement of megalithic monuments, plan of excavation, plotting of burials, and collection of skeletal remains especially skulls. He mentioned the disposal of dead in the principality of Shorapur in comparison of Scythian kings funeral as mentioned by Captain Congreve's account and said 'after the body has been transported through the various provinces of the kingdom, it is placed on a couch set round by spears, his concubines are then sacrificed and a mound of earth is raised over the king and his women'. In 1850 his remarkable observation on the large group of complex near Rajankollur called by the local people in the Kannada language "*Mori-munni* or *Mories*" houses and these believed to have been a dwarf race of great strength of the remote ages viz., Drucidical, Celtic, Scythian or Aryan remains.

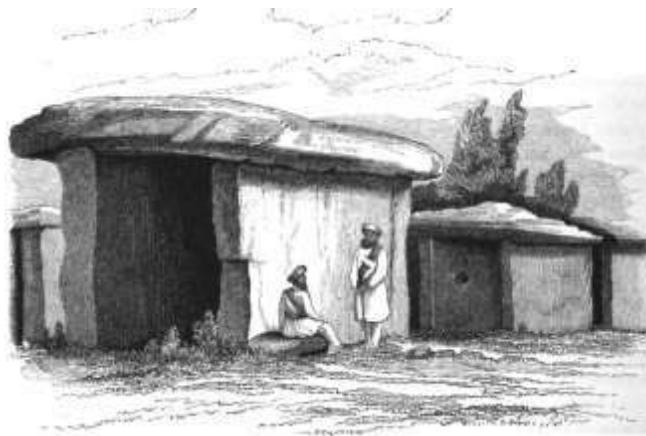

Fig. 2 - Cromlechs at Rajankollur

Another important contribution of Taylor with his limited but scientific observation was the existence of some tribes in India and the customs, beliefs and traditions followed by them in the form of megalithic monuments. His observations and classification may be astonishing. He classified them as burials into cromlechs or open monuments with and without circles of stones, containing no remains; Kistavaens with or without circular perforations in a side slab and without or with covering slabs containing human ashes, bones, and broken pottery; cairns and barrows with single, double and treble circles of rocks and stones containing cists and skeletons with traces of human sacrifice, pottery, arms, etc; others with cinerary urns interred in them without cists; rock temples with circles of stones round them as near Shahpoo, Tolijapoor and Shorapoor; lines of rocks placed to mark boundaries for cairns; square and diagonal platforms of rocks inclosing cairns and the great parallelogram and places of cremation at Shahpoo.¹³

John Lubbock in his 'Prehistoric Times' mentioned 'cromlech' or 'stone circles'¹⁴ while Lukas applies the word cromlech to all elaborate megalithic structures of one or more chambers. Hence to avoid the needless multiplications of examples, J.S.F. Mackenzie described various methods of disposal of the dead and classified them as barrow, tumuli, circles, cromlech, dolmens, cairns, kistavaen, and menhirs¹⁵ and his typology has been followed by many archeologists later.

Courtallam Cairn Circles

Several cairn circles with urn burials were accidentally discovered during excavations at Courtallam, in Tenkasi taluk of the former Tirunelveli district in 1859. Each circle contained an urn about 4 ft. high and 3 ft. in its diameter and was surrounded by a chamber, made of unhewn stones and boulders procurable in the bed of the nearby river. The urns were plain but for bead-moulding at the mouth and they were sturdy. The earth-filling contained with disintegrated bones, seemingly un-calcined. Several small pots consisting of conical bowls, flat bottomed, straight sided bowls or *lotas*, lids, ring stands, large-sized globular pots, besides the pyriform urns were also found here. At the bottom of the pyriform urns much corroded iron implements like a long leaf shaped spearhead, an

oblong ringed flat axe, a hog-spear, pieces of sword and other indeterminate shapes were found. On inspecting those cairns J. T. Kearns opined that "they are the sepulchers of the chiefs of the Aborigines; for they closely resemble the Cairns of the Aborigines of Ireland, wanting, however, that which would put the question beyond doubt, namely, any primitive weapon, such as a flint spear head, weapons which are invariably found in the Irish Cairns. Yielding to the doubt which this circumstance, and the apparently superior finish of the weapons and pottery (superior to anything Aborigines generally are found to possess) gave rise to, I felt inclined to assign to them a Budhic or Jainer origin, especially as the urns correspond exactly with others discovered by me at a place about 40 miles N. W. of Tuticoreen, and of whose Budhic or Jainer origin there can be no doubt, as they are found in a place, traditionally spoken of as having once been a great Budhist town, but of which, the only vestige now remaining is an image of Budh or the Jainet Maha Vera".¹⁶

Salem Tumuli

Maurice Phillips prepared a report for the Madras Government on the Tumuli in the Salem District in 1873. According to him the Tumuli found in the Salem District may be classified either according to their contents, into - (1) Tumuli without bones and urns; (2) Tumuli with urns but without bones; and (3) Tumuli with bones and urns; or, according to their internal structure, into - (1) Cromlechs and (2) Cairns. Cromlechs are those tumuli the inside of which is formed by four perpendicular stone slabs in the shape of a cist or a box. Cairns are those which have no internal lining of stone. They consist of two classes: (A) Cairns in which large earthen urns baked in fire, containing human bones, small urns, and or ornaments, are found-which urns appear to have been intended to incase the chamber instead of perpendicular stones; and (B) Cairns whose chambers have no artificial covering. The objects found in the tumuli may be distributed into four classes - 1. Pottery; 2. Human bones; 3. Ornaments and 4. Iron implements. The Pottery consists of urns, vases, and other vessels of different shapes and sizes. The large urns were so brittle that they invariably fall to pieces by their own weight as soon as the surrounding earth is removed, so that it was been impossible to procure one unbroken specimen.

Some vessels are red and some black; some are red inside and black outside, and *vice versa*.

Human bones consist of skulls, teeth, thigh, shin, arm and other bones. The ornaments found in them included round and oval beads of different sizes and colour similar to those worn by women as necklaces and bracelets. The beads were made of carnelian ornamented with a pure white enamel of considerable thickness, which has been let into the stone by grinding the pattern, filling in probably with oxide of tin and exposing the stone to heat. The small beads are made of white carnelian and ice-spar, a glossy felspar used by the natives to imitate diamonds. Besides these, a few were found made of quartz and of some dark-green stone. The iron-implements found in them were chiefly of knives or short swords. Some pieces of iron which appear to have been spear-heads, and some other things, have also been found. After a thorough analysis of the finds, Maurice Phillips opined that the Salem tumuli belonged to the Iron age; the men belonged to ordinary stature; they made earthen vessels for culinary and domestic purposes; the large stone slabs lining the interior and placed on the top of the tumuli must have been cut from the solid rock and carried from some distance and the objects

found in the tumuli represent the people in a comparatively advanced state of civilization.¹⁷

Cromlechs of Veerajapett by Cole

R. A. Cole discovered a large number of cromlechs near Virajenderpett in South Coorg in 1867. Among them there is a large double cromlechs which (No.1) is formed by six large unhewn stones, surmounted by one large flat stone of 13x 9.9 x 0.7 or 0.8 feet. The back was also formed by one large slab, as also each side. The front slabs were smaller, and divided by the large centre slab, which formed the enclosure into two compartments. These front stones have each a peculiar aperture, of an irregular segmental form, about one foot eleven inches by four inches, at the top, and immediately below the superincumbent stone. The stones at these apertures are sharp on the inside, and present a bevelled appearance outside. The inner rim is so sharp as to lead to the conclusion that these apertures could not have been used for ingress and egress. The centre stone projects to the front two feet eight inches, and the top flag projects over the left compartment to such an extent as to afford shelter, like a verandah. The interior measurements of the compartments reveal that each compartment was about 7 x 3.9 x 4 feet.¹⁸

Fig. 3 - Cromlech near Virajenderpett, Coorg

Nilgiri and Shivari Hills

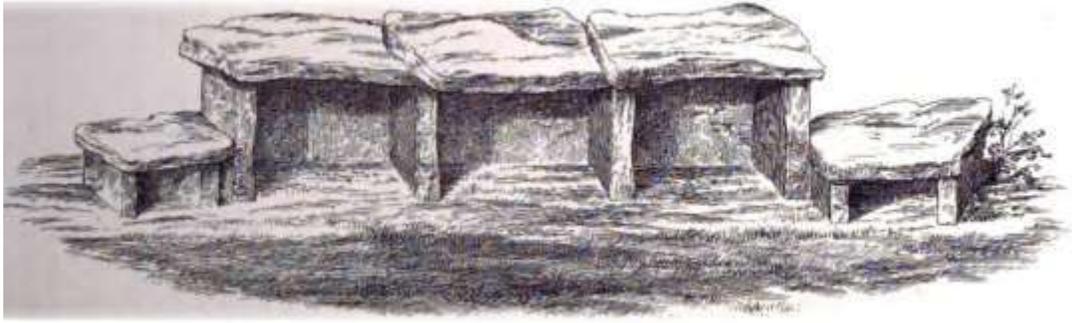

Fig. 4 - Five-Celled Open-fronted Dolmen, Near Nidi Mand, Nilagiri

Major Ross King described a two-celled sculptured dolmen, found by him on the southern edge of the Nilgiri plateau the inner face of each slab, covered over with carving.¹⁹ A temple-cromlechs in common use by the Malayalies (hill people) was discovered by Walhouse on the Shivari Hills, It was subsequently thrown down and destroyed to

make way for coffee planting. It consisted of three large central cells with a smaller at each end; the middle cells were roofed with large covering stones overlapping one another at the edges, and the supporting slabs were covered within by rudely sculptured hunting and processional groups.²⁰

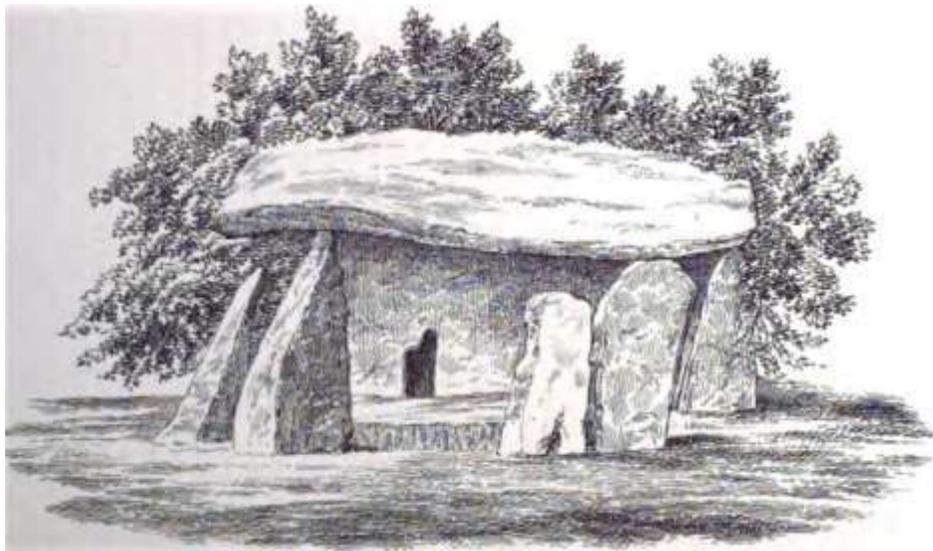

Fig. 5 - A Cromlech -Temple on the Shivari Hills

Padinyattamuri Caves

William Logan accidentally noticed four chambered cave at Padinyattamuri in 1879. The group of cells lies at a distance of about 6 ½ miles north of Calicut in the Padinyattamuri Desam in the Calicut Taluka while cutting blocks of laterite for building purposes at the western

end of the ground. The dimensions of the caves are-the one facing north, 4. 6 x 3. 4 ft; the opposite one facing south, 5.9 x 3. 9 ft; of those facing east, the southern one is 4 ft. 11 in x 4 ft. 1 in. and the northern one, 4 ft. 11 in. x 4 ft. Their entrances are 1 ft. 8 in. x 1 ft. 10 in. All the four chambers have single benches along one of their lateral sides. The benches are 9 in. high, 2 ft. 2 ½

in. wide on an average, while the north-facing chamber has a 2 ft. 6 in. wide bench. The chambers have a uniform height of 3 ft. 3 in. These caves are distinguished from the other caves as they are multi chambered, have rectangular floors and horizontal ceilings. All four cells were found to be about half filled with earth, and on clearing them out a large number of

earthenware pots, a iron bill-hook, a number of small iron chisels, scraps of iron which had formed portions of other bill-hooks or weapons, and a double iron hook for suspending a lamp or for some other purpose were found buried in the earth and the remains of the iron sword, about 26 inches in length, which was to be the first of a 'buried point upwards'.²¹

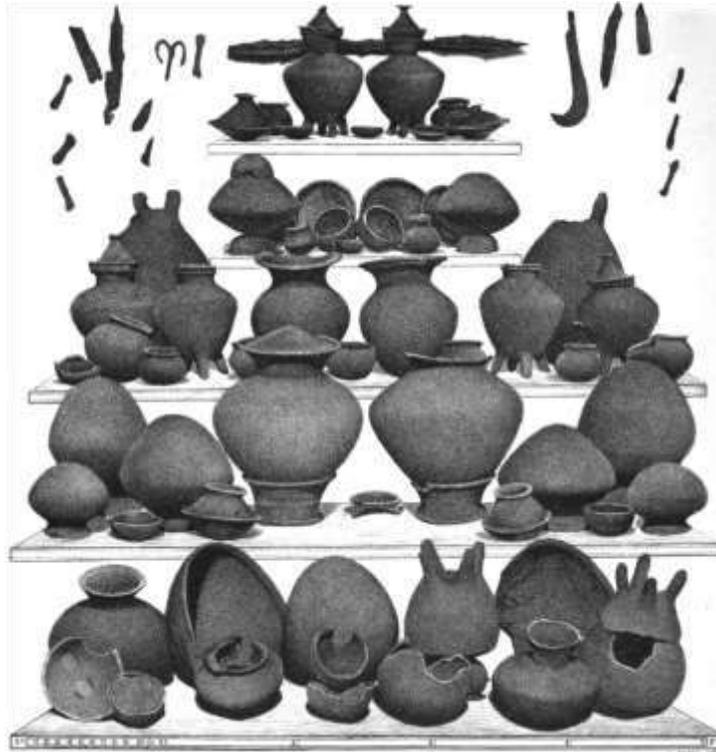

Fig. 6 - Pottery etc found in the cells at Challil Kurinyoli

Slab-Stone Monuments at Irlabanda

At Irlabanda near Palamaner in the Chittoor district Lieut - Col. B.R. Branfill recorded in 1881, about 600 tombs over an area of (500 x 300) 1,50,000 sq. yards. He divided the tombs in the cemetery into three classes, 170 were counted of the biggest, 210 of the second, and 200 of the third or smallest sort, a simple cist made of slabs from 2 feet square and upwards, more or less buried in the earth and without any circle of surrounding slabs or stones at all. And the whole place looks very much like a field of tombstones with many rude stone huts and kennels interspersed. The peculiarity of these consists in

having several circles of erect thin stone slabs alternately round, - and flat-topped, arranged in concentric rings close round the enclosed cist or cubical chamber. Many of the vaults were found vacant, but most had a deposit of soil from 1 ½ to 3 feet in depth, which, on excavation, yielded the usual sepulchral relics without iron weapons generally associate with such structures. There were many terra-cotta burial coffers and legged sarcophagus troughs. On examinations the Irlabanda group of monuments was much like those at Nayakaneri group as observed by Welsh. With an interest Branfill restored the monuments of Irlabanda.²²

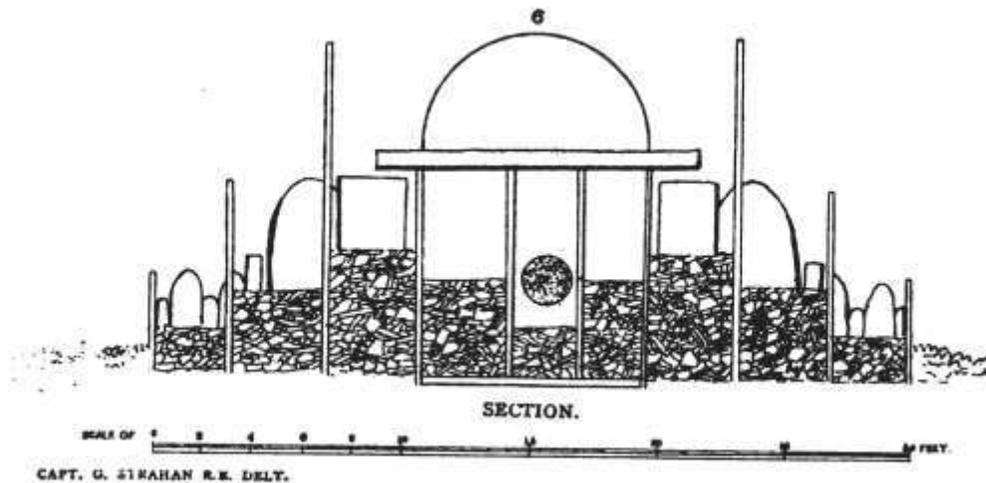

Fig. 7 - Slab-Stone Monuments at Irlabanda (After Restoration)

Conclusion

The British officials and military officers belonging to nineteenth century recorded their incidental as well as accidental notices of the megalithic monuments during their official duties. Their vivid knowledge of the ancient monuments in their native countries was reflected both in the physical description of burials but also the remains in the form of sepulchral and non-sepulchral and application of cultural remains of ancient Indians being important in visualizing and transforming the early knowledge of these very ancient people of

Indian population with iron technology. From the overall narrative, it is clear that the nineteenth century contributed a lot to the knowledge of megalithic culture of iron age people found everywhere throughout South India. In fact, the British civil and military officers were not trained in archaeology but made their revelations out of their personal interest and a quest for knowledge about India. Hence they can better be called as amateur archaeologists. Despite of their amateurishness, they were pioneers and made much headway in the subject and set examples for the future archaeologists working in the field.

PROF. PEDDARAPU CHENNA REDDY & DR. SUBHASHINI
ENDOWMENT LECTURE

RETHINKING WOMEN'S HISTORY AND WOMEN IN THE MARGINS

Rekha Pande

Dear Ladies and gentlemen, it gives me a great pleasure in delivering this Prof. Peddarapu Chenna Reddy & Dr. Subhashini Endowment Lecture at the 40th South Indian History Congress and I would like to thank the organizers for giving me this opportunity. In requesting me to render this enormous task I feel the organizers have given importance and recognition to a hitherto neglected and marginalized area of history. I have known Prof. Reddy as a very soft spoken, committed historian dedicated to research and teaching. In today's paper I would like to speak on Rethinking Women's history and marginalized women: Making history inclusive. Besides making a case for women's history, I would like to focus on the problems in the reconstruction of women's history, look at how we understand the different categories of women and would like to make an argument that we look at the different categories of women and develop frameworks out of the patriarchal understandings and we need to think out of the box, and develop new categories in order to evaluate the past. History writing has never been an innocent enterprise. The project always involves silences, selectivity and homogeneity and as a result major section of the people in the margins, especially temple women, courtesans, Concubines and prostitutes get left out and are never the part of the main stream discourse. Some thing common for all these

categories of women was that they were involved in sex either an individuals or as a group. Society practices a double standard. These women are universally condemned. They are supposed to be women with out any morals and literature refers to them as, Vishyas, Randi or Twalfs. There is hardly any literature referring to the men who patronize them and use their services. In contrast little is said about the men who are their customers. The notion of condemning the behaviour of the male customers in commercial sex transactions is outweighed by widespread social attitudes of acceptance of the "naturalness" of male sex urges, and by extension the appropriateness of men seeking sexual satisfaction outside of marriage. The treatment of women as commodities was not limited to Java, but in fact was common throughout Asia, where slavery, systems of indenture and lifelong servitude were common feudal forms. Feudal systems did not contain the fully commercialised sex industry which we associate with modern industrial societies, but they did provide the foundation for the industry through the identification of the value of women as commodities to be exchanged and accumulated in the constant male quest for power and wealth. By taking these examples of women in Medieval Deccan , I would attempt to show how these women occupied a space which was beyond the realms

of the family and hence do not fit in the traditional understanding of women and we need to evolve new categories.

Why Women's history?

I would like to start by asking, **Why women's history? The answer is very simple.** If as historians we are hopefully working towards recreating a total picture, moving away from the hitherto male and elite perspective, and then unless the history of women is studied and researched the picture of the past shall continue to be a partial one. **The feminist movement of the 1960's and the consequent development of Women's studies have drawn attention to the fact** that, though women like men have been actors and agents in history, their experiences and actions are not recorded. Traditional historiography has always focused on areas of human activities in which the males are dominant, ie. War, diplomacy, politics or commerce, as worthy of studying and women's participation in agriculture, animal husbandry, family ritual, folk art are regarded as unimportant and outside the realms of study of history.

Men's history has been presented as universally human. The framework, concepts and priorities of these universal histories reflect male interests, concerns and experiences (Baldock, et.al. 1985). Activities which are mainly female like child bearing, cooking, women's work in agriculture, husbandry, magic, folk art and traditions have been generally regarded as unimportant and unworthy of study and as such outside the purview of the academic discipline of history (Pande, Kameshwari, 1987:172). Traditional historiography has thus either ignored the positive role of women or portrayed it as insignificant. In many of the undergraduate books earlier we often had a chapter at the end of , let us say Vedic period, later Vedic period, Vijaynagara period, entitled women, and this has a discussion of dress, Jewelry, festivals and pastimes. While this may be important it in no ways does justice to the role of women, rather it reinforces the prevailing prejudices of representing women and also serves to divert the focus from the millions of toiling women who have contributed to the making of history as much as men. In any case the contributions of women to the past and in shaping its religion, politics and society have not been fully brought out. Recently there have been attempts to

rehabilitate the many aspects of women's lives particularly the royal women. Anila Verghese links up the dress and other aspects of women's lives. She links this to the architecture of the zenana and since women in the Vijaynagar empire lived in separate spaces they set up new styles which were not under patriarchal control (Verghese, 2000).

In a patriarchal society, men work in the public domain and women are to be restricted into the private domestic sphere. Since it is the public domain, which is considered important, women become more passive participants in the historical process. This is reflected in the lack of any substantial and substantive documentation about them. There is no doubt that a social science, which ignores the role of women, can be a social science which can only give a distorted picture of society as a whole.

Problems in doing women's history:

To many, women's history is not "intellectually interesting". A wide spread impression is that it is held in low esteem and the field itself lacks legitimacy. One of the reasons for this lies within the practice of women's studies where according to Naomi Wolf we find two types of feminism, victim feminism and power feminism (Wolf, Naomi, 1993). It is time now that we move from victim feminism to power feminism, not only to make women's history more broader in focus but also signal a vibrant shift that moves beyond a critique to essay the role of women as much as men. Many feel that the study of women must be the ultimate harbinger of scholarly chaos. Scholars suffering from lingering, "Victorianism" might well feel that women are too eternal or unworldly to have much to do with politics and economics (Johansson, 1976).

Historians who work in the field of women's history find it necessary to develop an "underlying conceptual framework", for their field primarily due to three interrelated reasons. First, a low evaluation of past work in the field closely related to skepticism about its legitimacy with in the discipline of historical study. Second its unique character of the group which the field seeks to study and third the existing tradition of theories attempting to explain the historical experiences of women (Carroll, 1976). The

reluctance to accept work in women's history for its own sake is a reflection of the low esteem and stereotype image in which women are held. **Women's history besides trying to set the balance right could also be for its own sake.** One does not ask a Jew, Chinese, a Black or a Dalit to justify their interest in their history.

Perspectives on women's history:

As history has been taken away from women it is necessary to put them back into the picture and document their role and work, a task which may take many years of painstaking work. However this is not enough as women have to recover their lost self i.e. womanhood. The effort **is not just to tackle women's history to the existing framework but to work for a better understanding of the past, to understand myth evolution of an ideology, social relations and institutions that led to the subordination of women.** This perspective has proved extremely fruitful both in terms of theoretical insights as well as in detailed empirical studies. For example **even while talking of dress, Tarlo's book on clothing focuses on what to wear rather than what is worn and how different individuals and groups have used clothes to assert power, challenge authority, define or conceal identity, and instigate or prevent social change at various levels of Indian society.** She has pointed out that the early ethnographic accounts of Indian dress were collated by men like Colonel Dalton who were heavily involved in the Colonial administration. These works which have come down to us have cast a great deal of influence on the practice of history writing and have to be deconstructed (Tarlo, Emma, 1996: 3).

The starting point of women's history is that although men and women are different what is historically significant is that, women constitute a social group as opposed to a biological group. Biological explanations are contradicted by the fact that the behaviour prescribed for women and men vary enormously from one society to another. There are also large variations in gender roles from one time period to another in the same society. Social forces are crucial determinants of the opportunities and limitations available to individual women (Davidson, 1975).

Primarily due to the contributions of feminist sociologists and anthropologists and **people's historians new paradigms have emerged.** Women's Studies approach to the study of women in different historical contexts has enabled us to have a better and fuller understanding of women, their status and relations with the rest of the society. Gerda Lerner was a pioneer in emphasizing that, Women have a history and women are in history. **She remarks, "Women have "made history," yet they have been kept from knowing their History and from interpreting history, either their own or that of men" (Lerner, 1986: 5). These words have gone a long way in thinking about gender.** Instead of accepting feminine identity as natural and essential, historians and other social scientists are now treating this as being constructed.

Approaches to women's history:

In the west there have been three general **approaches to women's history. The earliest of these was additive history, which is history written after a reexamination of the sources to discover the contributions and role of women.** The second approach, gendered history, draws on feminist perspectives to rethink historiography and make gender differences a key to the analysis of social relations. A third approach, contributory history, privileges female agency while recognizing how patriarchy **impedes women's actions** (Forbes, 1998: 2).

A big lacuna in most of the works related to **Women's history are that they are based in European context, and there are very few works which have attempted to look at women within the historical context in ancient and medieval period of India.** The problem is more so and twin pronged with the medieval period with its male biased and elitist sources. Hence, to write a new history worthy of its name we will have to recognize that no single methodological and conceptual framework can fit the complexities of historical experiences of all women (Lerner, Gerda, 1979). In order to construct a new **women's history we have to relook at the existing material, chronicles, literature and archival information and to read between the lines and ask for each and every aspect, "what about the women". Here it may be pointed out that there are certain facts and figures which cannot be generalized.** Therefore the history we

read ignores this and becomes a master discourse or a meta narrative which explains why different people at different times and places have used generalization with out emphasizing these facts. There fore the history that has been handed down to us becomes a series of accepted generalizations (Bentley, 2002: 868).

Women as a Category:

Women as a category in history have always been distinct from men and their activities. Sexual divisions have been one of the most basic distinctions within the society encouraging one group to view its interests differently from another. Sex has always been used to create a separate identity for men and women and divide them as is done in the case of caste and calss. By studying the history of men and assuming that this would include women **too, we cannot get any information on women's** lives during any given period. Gender like any group, class or race has always been a very powerful factor in history. It is therefore **necessary to view the development of women's** history from the feminist perspective of women as a distinct sociological group which experiences both overt and covert controls through legal, political and social restrictions (Pande, Rekha, 1999).

Though gender becomes a useful category of analysis for elucidating the many ways in which relations of power are constructed and represented in society, this is easier said than done. The major problem comes with regards to sources. Most of the historical sources of the earlier period generally refer to elite group, the King, the court and the rich merchants. We have to infer about other sections of society from indirect references. If there is some reference to women it is primarily from the aristocratic classes. The women of aristocracy were regarded as gentle creatures, the mother of future rulers. Marriage was frequently a disguise for a political alliance and for those of lesser standing a means of mobility for the family. The aristocratic woman led a well protected and isolated life. Reference to women from respectable homes moving about veiled goes back to early centuries A.D. and the purdah of Islam intensified the seclusion of women (Thapar, Romila, 1975: 8).

The women of the artisan families and those of the peasants had a less relaxed life. Here the pressure was not so much from social mores as from the needs of economic survival, where leisure was limited and women participated in the professional works of men. Perhaps the most independent among the peasant woman were those who had distinct economic role, where they had individual access to local markets. Hence the pressure of seclusion and purdah as a moral code was less strictly enforced on these women. Hence it would be wrong to generalize that purdah intensifies and became strictly enforced on women after the coming of Muslims in India. Such misconceptions are part of the general societal domain and concern all not just women.

The task of writing women's history in Medieval India is problematic and has to be seen in as an exercise of rehabilitating women back to history. Women have had no history because the expropriation of history is an important mechanism for reproducing in the ideological sphere social inequality. In the economic realm the relations of domination and subordination are reinforced by the expropriation of the economic surplus. So expropriation of history from women means reimposing male domination. Women are ignored in history because of the assumption that they did not play a part and were behind the scenes. With this belief we continue to get a partial picture of His-Story and not Her- Story. In order to make this Our story, we need to get the history of women too. There is a need to evolve a methodology of **locating women's history by using the category** of gender and contextualizing the same. We have to use methods not only from history but also subjects as diverse as folklore where we get such facets of life that are scattered (Patton , 2002: 256).

Women do not form a single group. The material context and the social worlds which they inhabited were diverse. They were from different modes of surplus appropriation, there developed many layers of intermediary. However the general understanding of women in all historical literature based on thenotion of respectable and non respectable , the moral codes of the patriarchal family (Pande, 1999).

There were a large group of women who were outside the patriarchal families and served the society as fallen women the prostitutes, courtesans and the Twaifs and have had no history. People without histories are social and political out castes and are people chastised and neglected in history (Vijaisri, 2004:10). Many of the of women do not fit into these divisions and in medieval Deccan, the temple dancing girls are one example.

Marginalised Women:

Many postcolonial writers and theorists have challenged the representative claims to marginality of the elite or dominant classes in postcolonial cultures and societies. For example, drawing on the Italian Marxist thinker Antonio Gramsci's idea of the subaltern – elaborated in his prison notebooks, written during his incarceration under Mussolini's fascist regime in the 1930s – the South Asian historians known as the Subaltern Studies collective have sought to recover the histories of insurgency and resistance in South Asia from the perspective of subordinate social classes. As Ranajit Guha puts it in 'On Some Aspects of the Historiography of Colonial India', which forms the introductory essay to the first volume of the series, *Subaltern Studies*, the elitism of Indian history, whether colonialist or bourgeois nationalist, has excluded **the, "subaltern classes and groups constituting the mass of the labouring population and the intermediate strata in town and country – that is, the people"**(Guha, 1982: 4). What Guha means by subaltern, therefore, is not only the labouring population but **"the general attribute of subordination in South Asian society whether this is expressed in terms of class, caste, age, gender and office or in any other way"** (Guha, Ranajit , 1982). Gramsci notes that the history of subaltern social groups is always intertwined with the history of States and groups of states, and as such it is necessary to study their active or passive affiliation to the dominant class, political formations, their attempts to influence the programmes of these formations in order to press claims of their own and the consequences of these attempts in determining processes of

decomposition, renovation or neo--**formation"**(Gramsci, A. 1971)

Foucault refers to "repressive hypothesis." When he talks of the history of sexuality. He points out how since the rise of the bourgeoisie, activities that involved pleasure were looked down upon. Sex was a private affair which takes place within the confines of the family between husband and wife. Sex outside these confines is simply prohibited. Foucault asks three questions, (1) Is it historically accurate to trace what we think of today as sexual repression to the rise of the bourgeoisie in the 17th century? (2) Is power in our society really expressed primarily in terms of repression? (3) Is our modern- day discourse on sexuality really a break with this older history of repression, or is it part of the same history? (Foucault, Michel, 1990).

bell hook talks of a different way of seeing reality, **featuring a new preface, "Seeing the Light: Visionary Feminism," which was published in 2000.** In the preface to the first edition, hooks, talking about black Americans in her hometown, **discusses the meaning of her title's "From Margin to Center."** **"Living as we did—on the edge—we developed a particular way of seeing reality. We looked from both the outside in and the inside out. We focused our attention on the center as well as the margin. We understood both. This mode of seeing reminded us of the existence of a whole universe, a main body made up of both margin and center"** (bell hooks, 2000)

Sources:

We have a variety of sources, which give us a lot of information about the temple girls, courtesans, Concubines and prostitutes and helps us in locating them within the politico, social-economic milieu. The sources for the study are inscriptions, literature and travelogues of the Portuguese, Venetian and Muslim travelers. We have a number of inscriptions about the endowment made by the Devadasis or the gifts they received and the services performed by them. We have a large number of donative inscriptions, which consist of the records of gifts made to the temple and public works such as tanks, choultries and satras. Inscriptions published in South Indian Inscriptions, Vol. 4,5,6,9 part I and II, 16, Inscriptions of Warangal,

Nalgonda, Karimnagar Districts, Tirumala Tirupati Devasthanam inscriptions, Epigraphia Indica and Epigraphia Andhrica, Epigraphia Carnatika, Vijaynagara Inscriptions, Inscriptions of Andhra Desa etc. further give us much information on temple girls.

The indigenous literature of the period, *Andhra Mahabaratam* of Nannaya and Tikkana (Nannaya and Tikkana, 1919), *Kumar Sambhavam* of Nannechoda (Mahadeva Sashtri (Ed), 1987), *Basava Puranam* and *Sri Panditaradhya Charitra* of Palkuriki Somnatha (G.V. Subramanyam (Ed), 1968), *Prataprudra Yashobhusanam* of Vidyanath (1972), *Kridabhiramam* of Vallabhacharya (Veturi Prabhakar Sashtri Manimanjari, 1960), and *Amuktamalyada* of Krishnadevraya (Reddy, 2011), give a vivid picture of the court life, temple festivities of the dancing girls in the Vijaynagar period. *Kasikandam*, *Palanativiracharitra*, *Sivaratrimahatmyam* of Srinatha, *Simhasana dvatimsika* of Koravi Goparaju, *Vijnanesvaram* of Ketana throw a flood of light on different aspects of the lives of the temple girls and prostitutes. The accounts of the Portuguese writers Domingo Paes and Fernao Nuniz (Domingo Paes), Abdur Razzak a Persian ambassador who was sent to Zamorin on an important mission (Abd al-Razzaq Samarqandi, 1857), is also very useful. The Portuguese traveler Duarte Barbosa also leaves a rich narrative of the Vijaynagara empire (Sastri, 1990: 30-32). Futuh-us Salatin of Isami also touches upon the Vijaynagara rulers (Husain, 1967) and the Dutch traveler Huighen Van Linschoten who visited around 1583 also leaves us some information (Sastri, 1946: 6-32).

Geo- Political Milieu:

The Deccan region is an amalgam of many Eco zones, from the arid rocky plateau of the Rayalseema to the bountiful coastal Plains flanked by the eastern and western Ghats to the vast hinterlands with agricultural Plains and forests such as Coorg and Dandakarnya with its varied social formations, agrarian, pastoral, hunting-gathering, artisans and other forms of production to which many great dynasties made their contributions. This region in the medieval period witnessed many transformations in the

politico-economic and socio-cultural spheres. Politically, the state gradually transformed into a multi-centered power structure, fragmented and segmented at different levels, owing to the extensive growth of socio-religious, philanthropic and service tenures, which operated with in the matrix of tax-tribute - plunder. The dharmic kingship of ancient times transcended into ritual kingship, further legitimized by the performance of *Dana*, *dakshina*, *tiitha*, *darshana* etc. Deforestation and land reclamation during the kakatiyan (1000-1323 AD) and Vijaynagara times (1327-1600 AD) contributed to the growth of brahminical institutions, brahmadeyas and devabhogas on the one hand and the growth of industries and agricultural expansion on the other. This resulted in the consolidation of the peasant and non-peasant groups like the merchants and artisans into guilds; the caste cum professional organizations, but also the temple as an institution that controlled the power structure of state and society (Pande, 2004:39).

The medieval period in Deccan was a period of the rise of various feudatories to power and in order to give legitimacy to their power they used the support of the Brahmin priests, the temples and the tribals. Prior to the coming of Kakatiyas the Andhra region especially the deltaic strip formed the peripheral part of the empire either in Karnataka as in the case of the western Chalukyas or Tamilnadu as in the case of the Chalukyas Cholas. The upland region as it was sparsely settled was seldom incorporated. Now when the Kakatiyas came to power with their base in Telengana, we find a shift in the political, economic and cultural activity from the coastal region to the interior Andhra.

It has been pointed out that in the early medieval period when the archaeological data is corroborated with the inscripational evidences, we find that land grants were given in a large scale to priests and the temples. Most of these land grants, between the 5th to 7th century AD were concentrated in tribal areas of Bengal, Assam, Orissa, Madhya Pradesh, Maharashtra and Andhra Pradesh (Sharma, 1974: 177). During this period a large number of tribal and sudras also came into the fold of Brahmanism. The spread of Brahmin ideology in new areas gave a legitimization to the state because the Brahmins

by advocating Varnashram Dhrama and respect to the king brought in stability to the empire and removed any dissenting voice. In fact the medieval period saw a gradual establishment of a process started much earlier in early medieval times with the clearance of forests, system of land grants to Brahmins and monastic establishments, recruitment of sudras as artisans and agricultural laborers and contact with different forest dwelling communities (Sharma, 1974:). Kingship assumed a dualistic sovereignty incorporating both the political and ritualistic aspect. While the kings stabilized their political power by coercion, they established their ritualistic power by conciliation and giving gifts. The earlier Vedic sacrifices were now replaced by *Dana* and *dakshina* as a legitimizing factor for kingship. This reveals a shift from dharmic to ritual kinship. Gifts giving included land grants to the temple, Brahmins, monastic establishments and the construction activities under the ideology of Saptasanta.¹ The example of the ruler was followed by the ruled. Thus the state polity backed by the dharmic ideology fostered the temple building activities.

The Temple Girls:

These temple girls, commonly referred to as Devadasis in popular literature and dedicated to the temple and performing sacred duties have become an object of reminiscences of the past. They were employed in the temples as dancers, singers, musicians and for offering certain services to the deities. Often they were not allowed to marry a mortal man. Some of them were responsible for the smooth functioning of the temple administration. They have been regarded as a *nitya sumangali* an ever auspicious one, an entire tradition as part of the *sacer ludus* of Hinduism and investigated as an example of traditional arts (Kersen boom- Story, 1987).

So far the researches done in this regard represents the temple girls either as performer-cum prostitutes or performers (A.K. Singh, 1990), echoing their indexical status in the society, despite their professional scholarship. The institution of temple girls is viewed as an isolated entity, but not as an associated component of sacred complexes which were one of the power

loci of the state and society. The transformation of sanis into devadasis is not highlighted in terms of changes in status of temple institution. It becomes very important to see the rise of the temple girls with in this context of medieval Deccan.

During this period we find that there was a mutual exchange of honors between the kings and the pontiffs of religious institutions, the former for legitimization of their ritual status and the latter for protection of their tenures. The sectarian religions, Saivism and Vaishnavism, their leaders and institutions like temples, pithas and mathas through the ideology of the bhakti, manipulated the political base of the state. In other words the temple became a nexus of power that gradually transformed into a state in miniature and appeared homologous to political center. It had a huge bureaucracy at its command amongst which the temple girls or the sanis, who were employed in the service of God deserve special mention, since they formed significant officiating dignitaries. These were the most important ritual performers and no festive occasion was complete in the temple with out the performance of the temple girls (Pande, 2006:493). Hence, the employment of these dancing girls became customary on the part of the devasthanas, which gradually institutionalized into a professional organization.

A study of the institution of the temple girls becomes very important in this connection because it helps us in understanding the role of women in perpetuating a particular ideology and **understanding the complexity of the women's** situation in terms oppression with in a patriarchal structure. These temple girls, commonly referred to as Devdasis in popular literature and dedicated to the temple and performing sacred duties have become an object of reminiscences of the past. They were employed in the temples as dancers, singers, musicians and for offering certain services to the deities. Often they were not allowed to marry a mortal man. Some of them were responsible for the smooth functioning of the temple administration (Pande, 2011, 255).

Temple building activities:

Temples were expected to confer on the builder several merits and benefits such as longevity, health, wealth and prosperity in this world and religious merit known as *Sapta santanas*.¹ We had kings building temples in token of gratitude for victories². Sometimes temples were raised in the name of the dead person.³ Many a times vassals erected temples in the names of their overlords⁴. Temples were built for the merit of parents and preceptors⁵. We also have instances of temples being built for self-merit or to establish the religious merit of their *gotras*.⁶

The various economic functions of the temple made it a citadel of economic power enjoying a status co-equal to that of the state. Temples directed agricultural development, through the endowments it received. Endowments were made in order to provide income for temple maintenance, for festivals honoring the deities and for food offerings to the deities. The endowments involved made provisions for a perpetual service for the merit of the donor or someone designated by the donor. Of the land endowments, which the temple received, it did not have ownership rights but had a major share in the income. The money investments received by the temple were frequently loaned to the village assemblies and commercial firms for a perpetual interest and these added to the income of the temples (Stein, 1984:162). Temple became the citadel of the socio-economic activities of the people. It was the nucleus around which village, towns and commerce flourished. The temple was closely associated with the territorial and communal bodies in the administration of local areas. It was both a landlord and an employer. Its treasury was a bank, which received deposits and lent money.

Thus there was a total institutionalization of the temple. These temples flourished because the ruling warrior groups (Stein, 1984), provided them with support and protection. A vast range of officials and warlords came to exercise a lot of control over the temple functioning. Besides these functionaries there was also a substantial participation by pilgrims.

Homologisation of the God and the King:

There was now a perfect homologisation of the God and the king. Along with the growth in the number of temples there was a growth in the number of rituals performed in them. It now became necessary to employ a number of specialized priests to perform the daily rituals. They were supported by a large group of people belonging to various professions. These included weavers, potters, carpenters, musicians and a large number of girls. The temple girls were thus a very necessary and integral part of the socio-economic and political set up of medieval times (Jeevananadam S, Pande, 2017).

The temple firmly established the agrarian feudal order. The rise of the devotional bhakti literature also suggests this. There are a number of attempts to authenticate and legitimise the new feudal polity of the period through a parallelism between the deity and the king. (Narayanan and Veluthat, 1987:348). In fact the deity in the temple is equated with the king and a parallel world of authority is reconstructed on the spiritual plane. Ritual worship in the temple is conceived on the same lines as ritual services offered to the king.

Since the temple and the God were homologous with the royal court and the king respectively, the *Devasthanam* had to maintain the same bureaucracy as that of the *Rajasthanam*. Elaborate temple rituals were developed. These were of two kinds, *Angabhoga*- the general worship services and *Rangabhoga*, which were special services performed at the *Rangamantapa*, either daily or on festive occasions and constructed for this purpose. All these services meant that god was an earthly king and like the king in the court his daily needs had to be taken care of right from the beginning of the day to the mid night service. In both these places the temple and the court women were employed in large numbers. In fact we often find the distinction between the Devas and the king's court diminishing with certain inscriptions interchangeability of women in the temple services with those of the king's court.

Linking the sacred and the secular:

Therefore the temple girls were the link between the God and the king and served to establish the power of the lord and give it legitimacy in the eyes of the people. In this background of medieval times it was these girls who crossed from one boundary to another with ease and were the objects of ritual exchange **between the king's court** and the temple. These girls could also with ease cross another boundary set up by our traditional scriptures that of an ideal traditional woman, who is a pativrata and tied to the home, by not being tied to one man but to an immortal god and the temple. All **these girls were regarded as "Nityasumangali"**, women who were auspicious because since these women were married to God an immortal, there was no chance of their ever becoming a widow and being deprived of their marital status and the toe ring which was a symbol of this status.

The elaboration of temple ritual and homologisation of God and the Lord necessitated the expansion of the temple hierarchy, especially the sanis or dancing girls. All the temples in medieval times had anywhere between 300 to 500 of these girls depending on the location and importance of the temple. These girls were employed to perform dance and play music before the deity, sing mangalgitas and namasankirtanas, wave fly whisks in the presence of the God, carry on administrative responsibilities and clean and decorate the temple premises(Pande,2004 a).

The kings, noblemen, vassals and their generals donated some of these girls. Nearly thirty daughters from the Nayaka family of Kalinga mandals were donated to the temple of Mukhalingam by an officer of Eastern Ganga to execute various deeds specified in the records (*South Indian Inscriptions*, Vol. V. No. 1083).General Jaya donated 300 girls in the age group of eight years to the temple at Cherbrolu(*Temple Inscriptions of Andhra Pradesh*, Vol. I , No. 264, Sri kakulam District).A record dated 1390 AD records that the king Achyuta Raya ordered the daughter of Ranjakam Kuppasani to serve as a dancer in the temple of Sri Venkatesa at Tirumalai in the year 1531(

Tirumala Tirupati Devasthanam Inscriptions, Vol. III, No.2, p.23). Hanumasani, the daughter of Uddida Timmayan was also sent by the king Achyut Raya to serve in the temple at Sri Venkatesa (*Tirumala Tirupati Devasthanam Inscriptions*, Vol. IV, No.142, p.262). Another record indicates the donation of a girl, Bhanaramu Akkama as sani to the temple at Velpuru by Ganapatidevraya, son of Kota Bayyaladevi. He also donated lands and gardens as vritti to her (Yasodadevi: 147).

Social background of the temple girls:

In medieval times the temple girls came from different social backgrounds, each having to perform a different ritual and they had a different status. Some of these girls participated in charities, public utilities work and were also involved in elaborate ritualistic services. Few of these women were the honored ones because the king did himself their appointment. Probably their public appearances were restricted to certain ceremonial occasions. These girls represented the hereditary class namely, sampradayamuvaru or kanya sampradayamuvaru. They came from elite and royal families and attached themselves to the service of the temple and the deity. Next to these were the sanis described as nartakis(dancers) or gayaki(singers). These were followed by the fan bearing sanis. Besides these there were a large number of temple girls who did menial jobs and came from lower sections of society. They performed duties like supplying flowers, decorating the floor. Sometimes to supply flowers to the Gods, flower gardens were raised and temple girls were in charge of maintaining these temple gardens (Pande, Rekha, Jeevanandam, 2013).

Another important category of temple girls, often from menial castes were those who were offered or dedicated to female deities or the village goddesses. The worshipers of village deities or goddesses belonged to the lower orders of society. The Brahmins helped in directing few parts of this worship by standing at a distance for these goddesses were considered to be very powerful and could not be neglected. There were gods belonging to the family (Kul deva), those belonging to the place (Ur Deva) and lineage (Kula). There were both dangerous goddesses and friendly goddesses and the

women were dedicated to these. The fierce village goddesses were called Sakti. Hence the term temple dancing girls or devadasis cannot be used as a blanket term but it had various categories and differences with in it.

The Courtesans:

A Courtesan or Tawaif in medieval Deccan was a woman of stature and culture, who was who was a dancer in the court and often associated with aristocracy. Providing entertainment they often went into prostitution too. A courtesan literary means, a woman of the court. In medieval times the courtesan was an embodiment of a culture and artistic talents well versed in music and dance. We have a large number of miniature paintings in medieval period where some courtesans are portrayed. These paintings highlight the luxurious life styles of these women who were very wealthy and had a luxurious life style.

Bridging the public private divide:

The courtesans in the pre modern period were the few women who came to public space by crossing the boundaries of private. Most of the respectable women were confined to the four walls with in the homes. It has been **conventionally defined that the women's place was primarily in the home and it's her destiny to** organize the household and to rear children. Thus the early women were by and large in private domain. In rural societies women were participating in the agriculture fields along with their men. Where as in urban centers 'courtesans', 'tawaifs', 'annas' and 'mamas' (zanana servants) came to the public domain in order to earn bread for their families. In Deccani context the word *tawaif* was coined for singing and dancing girls and not for prostitutes (Kazmi, 1988: 25). These women were skilled entertainers and trained in this art. These were women much respected for their skills and were especially invited during marriages and birth of a male child to provide entertainment. The Nizam patronized *tawaifs* by establishing office known as '*Daft-e Arbab Nishat*'. In the Asaf Jahi court during the period of Nizam Ali Khan, a sum of rupees twelve thousand per month was spend towards salaries of *tawaifs* (Kazmi, 1988: 25). The *tawaifs* held very respectable position in

Nizams society, they were looked up as artists. There are a number of photos which are taken during the period of the Nizams and after a *nikah* a group photo was taken for the sake of remembrance and in the group *tawaif* also given place. *Tawaifs* were an integral part of various festivities—marriage celebrations, Bismillah ceremonies and Urs (death anniversaries of Sufi saints). Kazmi talks of marriage ceremonies in which there is a *takht-e-rawa*, which was a movable throne on which the *tawaifs* used to sing and dance(Kazmi, 1988: 65)

Tamkeen Kazmi postulates that there are two kind of professional women in this period—prostitutes and *tawaifs*. Even though *tawaifs* **might not always be "married and never contact another man" but they were usually, "highly cultured women, very disciplines, and trained in etiquettes and mannerisms...they were also teachers in mannerisms...**(Kazmi, 1988: 65) In Hyderabad society *tawaif* was known for decency, politeness, manners and culture. They had their own place of pride; many elite families send their boys to their doors for the learning of culture. Umda Jan, Elahi Jan of Meerut, Jaddan Bai, Akhtar Jan of Surat, Benazir Jan, Nazir Jan all came from North India and established themselves in Hyderabad. In suburban area of Hyderabad there were 20,000 registered tawaifs at this time and an annual budget of 3,24,000 rupees was used for their salaries (Kazmi, 1988: 64).

The singing and dancing girls performed in *mehfils* and behind from *purdha* the ladies of *zenana* also enjoyed, especially on occasions such as marriage and the birth of male child. All these proved to be entertainment of high class, **especially Muslims aristocrats. "It was through a very lavish and luxurious life style that the Nawabs of Hyderabad become financial bankrupt"** (Sarma, Rani, 2008). The general public was not cautioned about this and had no inkling. One of the correspondences collected in Hyderabad in 1890 and 1891: *Comprising all the letters of Hyderabad Affairs written to the Madras "Hindu: by its Hyderabad correspondent during 1890-1891* reads, "I wrote to you sometime ago about how a prominent nobleman

in the city amused himself at times...I am informed of a game of *chausar* which is played by the means of three dice and eight wooden pieces representing equal number of men and women...his way of playing the game was so original...he hates having to deal with inanimate objects and picked women and men from dancing girl class and eight men from his companions—all in flesh and blood”(Sarma, Rani, 2008)

Mahlaqa Chanda:

We get some information on a courtesan named Mahlaqa Chanda during this period. She had already compiled her first collection of poetry and attained fame when legendary Urdu poet Mirza Ghalib was just a year old. As per Dr. **Shahid Naukez Azmi**, “There are a number of women poets in the Deccan and Mahlaqa Bai Chanda was the first *Sahib-e-Dewan*, woman poet of Hind. In the recent research it has been proven that Lutf-un-nisa Imtiaz was the first women poet but the crown is still on Mahlaqa Bai Chanda’s head”(Vedagiri Rambabu, 1991: 73). Various sources suggest that Mahlaqa was born in 1766 AD. Her father Bahadur Khan belonged to an illustrious family. Her mother Maida Bibi also came from a family of repute in Gujarat. Maha Laqa grew up in the lap of her elder step-sister, who raised her in a mansion called *Zenana Dewdi*. She must have received the best aesthetic education that money and prestige could buy. She was taught Persian, wrote poetry in Urdu, learned dance and studied classical music under her **Ustad, Hus Hal Han Kalawant. He was a Shi’i musician who, as indicated by his title Kalawant was an exponent of Dhrupad and Khayal styles. She also associated with her mother’s old friend, Šah Tajalli ‘Ali, the poet, historian and illustrator. As she matured and began to *Courting ‘Ali.***

She was given the name of her maternal grandmother Chanda Bibi. Her paternal grandfather Basalat Khan was a noble. According to Rahat Azmi, her name was Chanda Bibi and the title Mahlaqa was bestowed on her by Nizam II and her poetic name was Chanda Bai was added because of her profession. She was the court singer of Nizam II, Nizam III, Prime

Minister Arastuja, Mir Alam, Raja Raurambha, **Maharaja Chandulal Shadab. Mahlaqa’s jagirs** included Adikmet, Sayyadpalli, Hyderguda, Chandapalli, Pallebhaad, Alibagh. Various *tawafis* Mahlaqa Bai Chanda, alongwith Hasan Laqa Bai, Husn Afza Bai, Mama Chameli constructed a number of buildings at and around the mount of Hazrat Maula Ali. A significant indicator of Mahlaqa’s status in her contemporary society was that she was very close to the Nizam II and used to accompany him when ever he toured. She also went with the Nizam to the battle of Pangal (Azmi, 2010 :11)

She learnt music and singing from Ghulam Mehdi Shah Nazir, Pannalal Bhaant. Her contemporary poets Shah Nasir, Shah Mohd. Khan, Imaan Hafiz, Siddi Qaiz, Mir Alam, Goin Baksh Ziai, were all well acquainted with her. All of them applauded her poetry. Also Mir Alam, Imaan Hafiz and Jauhar wrote poetry on her. *Mahanama* or *Tariq-e-Dilfaroz* written by Ghulam Husain Khan Jauhar revolves around Mahlaqa— **it’s about her ways, morals, mannerisms and character, while poet Shah Kamaal is believed to have said, “ How should I not call Mahlaqa a rare and precious pearl, her lips put rubies to shame... and anyone who sees her all decked up would lose their minds”** (*“Mahlaqa ko nayaab aur kimti moti kaise na boloo, inke honton ko dekh kar laal kimti patthar bi pareshan hai...aur uski saj dhaj dekh kar koi bhi deewana kaise na ho?”*) (Azmi, 2010:11). Even noblemen like Chandulal were completely in her spell, “I have no respite without seeing you Mahloqa, I am thirsting to see you, show yourself to me.” (*“nahi hai chain bin dekhe mahlaqa tujhko, daras ko mai to pyaasa hoo, daras apna dikha de mujhko.”*) (Azmi, 2010:12). Her poetry, filled with “Religion, music and fun” (“mazhab, mosiqui, masti”) was collected and published after her death, as *Gulzar-e-Mahlaqa* (Mahlaqa’s garden of flowers). She calligraphed her Urdu Diwan of 125 Gazals herself and this is still preserved in the British museum in London. She built a tomb when her mother had died. And in 1792, it costed Rs.one lakh. An Ashur-khana, 'baodi', naqqar-khana and dalaan were part of the complex. She was buried next to her mother after her death.

Mahlaqa's library was well-known for her collection of rare books and manuscripts. She had a number of writers, 'Kaatibs', in her personal service, for copying texts for her library. Whenever she found out about a new or rare book, she would somehow get hold of it and ask the *Kaatibs* to prepare a fresh copy for her library. She built mosques like Masjid Baitul-Atiq a hospice for Musa Qadri, baradari for Sufi Taar Shah other than construction of *dalaan* for the pilgrims at Maula Ali shrine. She was associated with six royal courts starting from Ruknuddaula, followed by Nizam Ali Khan to Sikandar Jah, Arastu Jah, Maharaja Chandulal Shadaan and Raja Rao Rambha. Rahat Azmi, who painstakingly collected details about Mahlaqa Chanda's life writes that this famous Urdu poet of Deccan was a contemporary of renowned poets like Mir Taqi Mir, Sauda and Dard in North India. Mahlaqa had received early education under the watchful eyes of Nawab Ruknuddaulah, Madarul Maham of Asafia dynasty. Apart from fine arts and training in music, she also learnt horse riding and was imparted military training. She became adept at dancing and music. She was the staunch upholder of shite piety in a kingdom that was recently conquered by the sunni overlords after the Mughal invasions in 1688A.D. She helped to create a dignified place for shite devotion in a sunni court through her poetry, patronage and personality (Scott Kugle, 2010 a:127) Because her poems were written to be performed in dance and were informed by the experiences of women performers, her gazals speak of feminine sensuality more boldly than that of men gazal writers. The poem presents the female beloved as embodied, with her pale silvery bosom, her radiant gaze like moonlight her silvery lips. Her grace affects the male lover so deeply that it ironically inverts the reality of social power. The man declares that he is her slave and she is his lord, where as in reality the dancer who might perform these couplets was raised as a slave girl and elevated by her skill and artistry to a courtesan (Kugle, 2010 b:84).

At the age of fifteen she accompanied Asaf Jah II in battles. She was a well known singer of *dhrupad* and *khayal tappa*. A prominent

personality, she lived in Khasa Mahal with hundreds of khadims at her disposal. Mahlaqa's estate was spread over Syedpalli, Chanderguda, Chandapeth, Ali Bagh and several other areas. She was a generous woman who spent lavishly on the preparations for Khat Darshan Mela and Gyarahvin Sharif. For Muharram and Jashn-e-Haidari, she prepared for months in advance. She threw banquets in the honour of visiting poets and also patronized poets and artists. This form of patronage is not imperial or sub-imperial patronage but a different form of patronage that has not been problematized or analysed. Once she accompanied Asif Jah II to Madhav Rao's court in Pune. When she saw Nana Phadnavis turning away a French trader who had brought rare breed of horses for sale and Phadnavis refusing to pay more than Rs 1,500 apiece, she offered him Rs 12,000 and bought all the six steeds. There are several such tales about Mahlaqa. She died in 1824. It is said that she died during the outbreak of an epidemic in Hyderabad.

Courtesans and dancing girls also played a major role in the Court. Some well known courtesans in Hyderabad were, Kamini Murad and Muneeraji. They used to get a monthly salary from Nizam and nobles and often gave public performances. The Asaf Jahis established an office known as *Daftar - e- Nishat* or *Kanchan Kacheri*. The superintendent of this office was lady called Mama Sharifa, who held a high status in the palace and society. She was assisted by a Jamadar and four other subordinates. And was very influential among all Mamas of the palace during Nizams VI reign. From the records of Kanchan kacheri, it can be said that the courtesans were exempted from tax and payment of Nazarana in the city and districts. The nautch girls of Outb Shahis on other hand were registered but paid no tax for their professions.

Nawab Rafat Yar Jung Bahadur turned his attention towards this evil, which none of his predecessors had ventured to face in the past and raised his voice against this evil practice. Nautch women adopted girls with the immoral motive of benefiting by them in later years. The Nawab first ascertained whether such girls

related to the nautch women or were obtained during famine or in any other way. According to the information obtained, he compelled them to deposit securities where by they was forced to lead a life of decency and later arrangements were made for their marriages with worthy persons. On marriage, they were given a few useful articles, clothes and a little cash to start their fresh lives. Yet, this profession continued both at societal and royal levels and in particular they remained as an important components of royal harem, with whom royalty passed their leisure hours and hence, the paintings of the time depicted such themes highlighting the activities, features, garments and ornaments of these women, who remained as part of sexual life of royal sphere.

Yet the courtesans were not the only persons involved in the profession of commercial sex. Lower than the *tawaiis* in rank and accomplishments were two other categories of women known as *thakahi* and *randi* who lived in the market area and catered for lower class clients including the labourers. A courtesan was usually part of a household establishment under the chief courtesan or *chandhrayan*. The latter owned and maintained extra apartments, having acquired wealth and fame through her beauty and musical and dancing abilities. Typically a wealthy patron, often the King himself, would set her up in agreeable quarters and support her household in the style in which he wished to be entertained and she would recruit budding young singers and dancers to compete with other reputable establishments. Every reputable house maintained a team of skilled male musicians who were often connected to famous lineages or *gharanas* of musicians thereby enhancing the prestige of the establishment. Doormen, touts and other male auxiliaries screened the clients at the door (Chandraiah, 1996:51).

These dances were regarded as a social event even by the British, and in the early days of the East India Company the "native" way of entertaining the *Sahebs* was through a feast following a *Nautch*. This developed into a new

"custom" which had its roots in the early history of Calcutta. Traditional festivals like *Durga Puja*, originally an occasion when the family got together with men travelling from far off work places to their ancestral village houses, were transformed in Calcutta. The urban *Babus* seized the celebrations as an opportunity to invite the *Sahebs* to their homes and offer them lavish entertainment. For European artists like Belnos and Solvyns these feasts offered a colourful opportunity to look at the "native" household and its luxuries of which the dancing girls formed a part. To the artists the dancing girls, the dancing hall and its mixed audience of Indians and Europeans provided a colourful background. The British refused to recognise these hierarchical differences among "prostitutes" in Lucknow out of administrative convenience, and though the officials went to *Nautch* parties, they looked upon the dancing girls as products of the "native society" to be left alone. So the laws, especially that of clinical examinations in lock hospitals were uniformly forced upon all prostitutes. This completely alienated the women who were accustomed to see themselves as the pivot of aristocratic cultural practices. To be equated with a common bazaar prostitute was to them an extreme degradation. When asked by Talwar Oldenburg they expressed their common bitterness: The soldiers, they said, had no *tamiz* (manners) or *tahzib* (culture), we could not speak their language, nor they ours. For them we were no different from *randis* and they seldom wanted to stay for the time, nor money to partake of the pleasures of the *Nautch* (Talwar, 1989: 134-35).

Slave Girls, Concubines and Prostitutes:

We also find a large number of slave girls, concubines and prostitutes in medieval India. When ever a royal princess got married she brought with her a large number of servants and *bandis*. When ever a war took place during raids and campaigns a large number of girls being made slaves The *Chachnama*, gives us various such details (Asif, 2016). Besides doing domestic work the slave girls often performed sexual services too. These slave girls and maids

were as much in demand as *kanchanis* or dancing girls, concubines or even free born women. Whether they were purchased in the open market or captured during war (Abd Al Razak Samarqandi , 1857). During the medieval times the rulers generally demoralised the conquered enemy, first by enslaving their women then by making them sing and dance. A more severe punishment would be to give their daughters to the dancers 'to make them dance in the streets and the bazaars by the state. Ibn Batuta speaks of a select class of musicians for whom an open pavilions of forty pillars, called Tarababad was established (Ibn Batuta,1956-71: 625). Ordinarily the dancing women used to 'dance in the principal open places in the city, beginning at six o' clock in the evening and going on till nine, lighted by many torches and from this dancing they earned a good deal of money (Manucci, 1906-08: 189). There was a strict stance taken by the Mughal state against prostitution. Badauni stated that the prostitutes should be kept in separate quarters of the town(Badauni, 1865: 302). As filth needs to be covered up and care taken so that entire city does not get contaminated. Their locality was named Shaitanpura and their trade was to be regulated by the state. The state was to register the names of men who visited the prostitutes and

only with official permission could one take a prostitute home. A strict state system of license (*bekaara*) was to be applied to the Emperor if a person wanted to take a virgin prostitute home. the same time, prostitution wantonness in females. An imperial Order states that if a women was found running about and while so doing she became unveiled, she should be sent to take up the profession of prostitutes. Different classes of dancing girls appear in the 16th century account - the Domnis, Patars, Kumachnis, Pari- Shans and Lulis (Shadab Bano ,2009-2010 : 254).

Conclusion:

Therefore to conclude, we need to write a **new women's history of medieval India not from the patriarchal point of view** where we talk of only the royal elite women and the common women based on their class divisions but we need to even consider the marginal women. These women are central to society and yet we always look down upon them and never question the men that are involved. The title of respectable and non respectable is given by a patriarchal society where there are double standards. The same men who visit these women and are talked about but the women are seen as not being respectable. We need to write a new history that recognizes the marginal women ,women in the temples, courtesans and prostitutes and their contributions to society.

Notes:

1. There are seven pious deeds known as Sapta Santanas . **These include having one's own son, adopting a son,** composing a literary work, and gifting an agrahara, a garden, a tank or construction of a temple. See P.V.Parabrahma Sastri, *The Kakatiyas of Warangal*, Government of Andhra Pradesh, Hyderabad, 1978, p. 281.
2. Kakatiya king Rudradeva built shrines for Surya, Rudra and Vasudeva at Hanamkonda after defeating several chieftains. *Kakatiya Sanchika Inscriptions*, No. 18, pamphlet, p.389.
3. The Kota queen Ganapamba constructed a temple for God Betesvara in the name of her father in 1172 AD *Epigraphica Indica* , Vol. III, pp.94-103.
4. In 1153 AD Jaya the General of the kakatiya king Ganapati Deva, built a temple and installed in it Ganapeswara, named after the king at Dvipa. *Epigraphica Indica*, Vol. III, p. 82.
5. In 1059A.D. a Reddy of the Kondapamati country built a temple of Somesvara at Gonyipundi for the merit of his parents. *Tirumal Tirupati Devasthanam Inscriptions*, Vol.III, pp 73-74.
6. In 1176A.D. Hacialamba the daughter of king Allugi, the lord of the town of Morata founded the shrine of Hacaesvara, after her own name, *Pushpagiri*, 304 of 1905, p.25.

GOVERNMENT ARTS COLLEGE, COIMBATORE; ENDOWMENT LECTURE

TAMIL MUSLIMS – DRAVIDIAN IDENTITY AND CHALLENGES.

Dr.J.Raja Mohamad

President, fellow deligates and distinguished scholars, I am extremely thankful to the President, General Secretary and the members of the Excutive Committee of SIHC for nominating me to deliver the prestigious, Government Arts college, Coimbatore, Endowment Lecture, in the 40th Annual session of SIHC to be held at Annamalai University, Annamalai Nagar, from 31st January to 2nd February 2020. I feel indepted to the organisation that my services are recoonised and I am truly honoured. I feel previlliaged to **delivere my lecture on the topic “Tamil Muslims – Dravidian Identity and challanges.”**

The Tamil Muslims are the indigenou people of the Tamil country and followers of Islam. The vast majority of them are converts from other religions generations back. They are ethnically Dravidians. Tamil is their mother **tongue**. . **The word ‘Dravidar’ connotes the people who speak Tamil, the Dravidian group language.** They are the part of history of Tamilnadu and Tamil Culture.

But the Tamil Muslim society is in the margin of understanding and the writings on them are full of distortions and speculations and hence there is a need to portray their history and identity to situate them in correct place in the

Tamil society. An authentic history on Tamil Muslims is due and researches are untaken in the recent years and in progress.

Islam is the second largest religion in India **with 14.2% of the country's population** or roughly 172 million people identifying as adherents of Islam as an ethno religious group.¹ Islam stepped in to South Indian coasts right from the later part of 7th century C.E. The coming of Islam is not an accident, but it is the continuation of the ancient Arab trade contact with South India as attested by Sangam Tamil literature of 2nd century C.E.² After the birth of Islam by about 620 C.E. in Arabia, the Arab merchants who frequented the port towns on the west and east coasts of the peninsula came as **"Arab Muslims", embracing the new faith, Islam.** The Hindu rulers extended them concessions, privileges and encouraged their settlements. The earliest mosque in Tamilnadu, dating H.116/734 C.E. is found in Tiruchirappalli (near Uraiyur), the erstwhile capital of the ancient Cholas. A few Arab Muslim merchants who stayed here for a long period settled along the coast and married local women in accordance with local customs. The children born out of this **union belonged to mothers' stock and thus the ancestry of the Tamil Muslim community was inaugurated.**³

The Arab Muslim merchants carried with them the new faith, Islam, along with their commodities. These merchant missionaries moved close to the people and peacefully preached the teachings of Islam. The social condition was favorable for such a process. The rigid caste system had inflicted inequality and injustice on a section of the people. They were untouchables, oppressed and never to rise in economic and social status and often harassed by people in the upper strata. In the situation, the teachings and principles of Islam attracted such people. Islam symbolized to them emancipation, equality and prosperity and hence drew flocks of such people in to the fold of Islam and by conversion they entered the brotherhood of Islam with opportunities of uplift and social mobility. The off springs from the intermarriage referred supra, mingled and merged with the converted lot and thus an ethnic group, the Tamil Muslims, emerged by early 8th century C.E., in the Tamil country with a distinct identity within the composite Tamil society. Islam penetrated

gradually in to the hinterland of the Tamil country in the subsequent centuries. Commerce had been the main agency in creating such a new world order. Thus the spread of Islam in Tamil country was peaceful and the myth that Islam was spread with sword has no relevance, as rightly pointed out by Ram Gopal, **"As a knife goes in to the melon without much effort so did Islam penetrated in to South Indian castes.**⁴

By about 12-13th centuries the chain of port towns and the adjoining hinterland on the east coast of the peninsula, Pulicat, PortoNovo, Kovalam, Nagapattinam, Thondi, Kilkkarai, Kayalpattinam, Colochel etc. became strong holds of Muslims. The early Muslim population on the coastal belt, a vast majority of them, descendants of the converts, were people associated with maritime activities. They were sailors, boatmen, pearl and chank divers and fishermen. Many among them climbed up the social ladder and became maritime merchants and ship-owners. They had developed a wide trade net work in South Indian ports and as well as across the oceans.⁵ Their trading activities continued amidst the European completions till about 1900. The Tamil Muslims were successful in their economic activities and seldom were partners in political activities of the land till 1900, but they co-existed within the larger society as **'Tamils' in the Tamil society with** elements of Tamil cultural background and continue to be so to this day.

In spite of such a long history of 1400 years, the Tamil Muslims society is largely misunderstood with distortions marching over the historical facts. A study of evolution and conditioning of the Tamil Muslims from historical point of view help us to understand the bottom of them and their role in the Tamil society, as followers of Islam. Every individual lives with certain attachment to his birth place, religion, language, family, culture, society and descent. Such attachments are rooted by even biological and genetic in nature and origin.⁶ The conditioning also depends up on the influence of various factors enumerated above that act up on the every individual, based on the environment and milieu in which he has born and happens to live and training and education in various stages in his life. A reference to the political scenario of Tamil country would show that there was no direct Islamic rule till 17th century (baring a short

and confused rule of the Madurai Sultanate in the 14th century). Due to this political condition the divisions between the Hindu Tamils and Tamil Muslims did not appear very glaring on the basis of religion in Tamil districts, (unlike that of in North India).⁷ With this background of conditioning a look in to their historical and cultural aspects will give a clear picture on the subject.

Islamic Tamil Literature serves as a mirror which reflects the life of the Tamil Muslims, their tradition, beliefs and values. It sheds some light on their origin and evolution in a predominantly Hindu social milieu. The Tamil Muslim poets have contributed their due share to the development of Tamil literature with their literary works numbering about 2000, which is less known.⁸

In the ancient Tamil Literary works the word **“Yavana”**, denotes the Romans, Greeks and as well as the Arabs. However at a stage it stayed for Arabs only. In the medieval and modern Tamil the word **‘Sonagan’** is used to designate the Muslims. . In Arab tradition the pepper is spoken as their favorite as **‘Yevana Priyam’**. Sonagar, Thulukkar, Rawthar, Anjuvannam are the early names of the Tamil Muslims. Nachinarkkiniar the commentator of *Pathuappattu*, uses the word **‘Sonagar’** where ever the word **‘Yavana’** occurs.⁹ The term was gradually extended to refer the native Tamil Muslims also in the Tamil country.* Thus . ThivakaraNigandu (on meanings of words) of 8th century C.E. calls the Yavana as Sonakar (Muslim).¹⁰ In Sinhalese tradition, the Yavanas were called Yonakars based on Pali Yonna, meaning Arbas. Later the word Yonakar is said to have corrupted in to Sonakar and the Sonakars were recognised as the descendants of the Arabs. So Yonakar and Sonakar were used to denote the same people. In Ceylon, Sonakar street is also known as Yonakar street or Yon street even to this day. The official records of Ceylon call the Muslim population in Ceylon as Sonakar. The earliest settlers among the Muslims of Ceylon were called Ceylon Sonakar and the recent South Indian Muslim migrants were known as Indian Sonkar.

Inscription of Raja Raja I in the Thanjavur **Big temple record a Muslim merchant, “Sonakan Samur Paranchothi”**¹¹, and another inscription mention an ornament as **‘ Sonakan Sidukku’**.¹²

An inscription of Maravarman Sundara Pandya (1238-1257) mention an endowment to a **mosque, ‘Sonakan’ Palli**¹³. We find ample references about Sonakar in Tamil Literature¹⁴. The Mapillas of Malabar were known as Sonaka Mappillas. Property documents of Muslims in Tamilnadu record them as Sonakar even in the 19th century.¹⁵ The Muslims engaged in fishing in the coastal towns are called as Sonakar to this day. There are many place names with prefix Sonakar (e.g. Sonakan Vilai) The Muslim habitation areas in Kayalpattinam, Cuddalore, Tuticorin, PortoNovo, Thondi , Mandapam, Kilakkarai, Vedalai etc. are known as Sonakar street to this day. The long association of the Muslims-Sonakar in seafaring and fishing is suggested by the names of some species of fish with prefix Sonakan (e.g: Sonakan Thirukkai = Sting-ray)¹⁶. All these will go show the antiquity of the Tamil Muslims in the Tamil landscape.

The Tamil Muslims were also known as Thulukkar along with the name Sonakar. Thulukkar – native of Turkey. The possible migration of Muslim merchants from Turkey to the Tamil country in the early years and the later, the Delhi Sultans of Turkish influence may be the reason behind such an appellation. However this name was very popular in Tamilnadu to this day, among the fellow Hindus. Adiyarkkunallar the commentator of Silappathikaram translates the **world Yavana as ‘Yavanthurukkar’**. Several inscriptions also mention Thulukkar.¹⁷ Thulukkar settlement was a known as Thulukkanam¹⁸. There are names of flowers with prefix Thulukkar (e.g: Thulukka Samanthi = African merigold) and place names (e.g: Thulukkan kulam – Aruppukkottai Taluk).¹⁹

The early Muslim merchants on the east coast had functioned as trade guild for themselves, known as Anjuvannam like the merchant guilds of the Hindu merchants, like Ainooruvar and Valanjar. Anjuvannam is referred to in inscriptions of the period from 12th to 15th century.

Rawthar is another early name of Tamil Muslims who were associated with horse trade, horse riding and training and cavalry men. The name is well referred to inscriptions and Tamil literary works. Thurston would say that it was the title of the Jonakan Muslims. The Arabs and Persians could have been employed by the Hindu rulers for manning horses. Those people

who stayed here had contracted marriage with the local women and their descendants came to be called as Rawther.²¹

At present the Tamil Muslims are organized in to Social Segments or subdivisions. They are : Rawthar, Labbai, Marakkayar, the last two in usage from 16-17th century. There are also territorial names like Kayalar (the natives of Kayalpattinam). These sub divisions among the Tamil Muslims cannot be called as castes. They are not hierarchically ranked. Islam does not recognize caste. There is no prohibition for interdinning and intermarriage among the subdivisions. There is no discrimination on the basis of birth, colour or region and in prayer congregation.

In the strict Islamic sense and practical life the term Labbai (also Lebbai) denotes the religious officiants or priest or Khazi and it **accords with the Hebrew word 'Levai', meaning priest.** It is correct to inter this term in this sense. The Labbai is **also known as 'Levai' among the order generation.**²²

'Labbai' was considered to be a class name for the purpose of educational and job concessions by the government of Tamilnadu.

The Marakkayars are the dominant segment among the Tamil Muslims in numerical strength and wealth. Most of the Marakkayars were associated with maritime activities. The European Trading company records contain a lot of information on Marakkayars. While writing on Marakkaryas, scholars have been confused and associate the name Marakkayar indiscriminately with other subdivision as caste hierarchy and fanciful derivations on etymology are also posted. In the available indigenous records, this term find place in Islamic Tamil literary work of 16th century only. It is the Portuguese records that introduce the title Maracar to a chosen few prosperous Muslim traders. However the term originates from **'Marakkan' in Malayalam, meaning ship commander and title of some Muslims.**²³

Given this situation where does the standard template used by scholars come from. Thurston had to define Muslim communities in his *magnum opus* Castes and Tribes of Southern India, in order to include them in the catalogue of castes and tribes. All the sub divisions are shown as separate castes. For instance while

writing on Labbai he quotes from the Madras causes Report of 1901 claiming that they are distinct from the Marakkayars²⁴ Further he uses the word Labbai as the umbrella term for all the Tamil Muslims. Similar things could be stated about the terms Marakkayar and Rawther. The way in which these terms are commonly understood usually owes very little to the context in which scholars encounter them and much to Thurston and few other census ethnographers who designed the Muslim castes for the sake of colonial administration.²⁵

Another presumptive notion of misunderstanding had arisen on the identity of the Tamil Muslims as descendants of Arabian lot. The Arab descent is brought forward by some divisions of Tamil Muslims themselves and self identity, most notably **the 'Marakkyars'** **"According to the common popular version of this story, this elite Mulsim groups are descendants from the families of Arab traders, who came along with their women folk and settled on the Coromandel coast (the east coast) and later practiced marriage with local women.** There is of course little doubt that the Arabs, much as Muslims of many other ethnic origin, at times settled in the trading ports of the Coromndel coast, much as the Coromndel traders themselves settled in other parts of the Indian Ocean and intermingled with the Muslims and non Muslims population of those places. It is important to stress two elements inherent in this common origin of this myth, as far as Tamil country, the sources do not account. First the common account assumes that there was a sort of foundational Arab settlement, a more or less single event rather than a continuous process. Second this settlement is assumed to have a homogenous community with a clear cut identity, origin myth and consciousness of ethnic differences. But in contrast the sources present us with an image of this process which was continuous and individual rather than foundational and communal. In the vast majority of cases, the elite members of the Tamil Muslims society claim descent from Prophet Mohamed (PBU) or one of his close companions, on the contrary neither the place of origin or any ethnic or communal identify figures prominently in pre nineteenth century records.²⁶

The root of the claim of Arab descent by some Tamil Muslims lies in Wilks, Historical

sketches of South India published between 1810 and 1917.²⁷ In this work the Navayaths of West coast and the Labbais of the east coast are **described as descendants of 'house of Hashem.**²⁸ But due to the black complexion of the Labbais, it was attributed due to the intermarriage of the local women, and also they had a resemblance of native Abyssinians.²⁹ **This is an incredible account. Thus Wilk's account is** not about individual families but with larger population and race becomes the central factor to suit the racial sensibility of British officials. This account of Wilks had become a source to write the origin of Muslims of South India in general and Tamil Muslims in particular.

Such a fanciful derivation of Arab descent is put forth by the Marakkayars. It is an attempt to earn the capacity to defend their elite status in the local society and as well as to envision this noble trait, eradicate the official view of the **'mixed blood' which marked them inferior to the Urdu-Speaking Muslim Ashrafs - the "pure blooded"**. **Thus the claim of Arab descent** developed in the Tamil country in the context of political struggle of certain section of Tamil Muslims against both the aspiration of the non-elite section of their own society and the claim to the superior status of Urdu-speaking Muslims the fading elites of the Mughal order and their British successors.³⁰

The pseudo claim of a section of the Tamil Muslims over Arab descent is against the facts of their origin and conditioning. In conformity with the Islamic ideology and egalitarian principles, it would be right to assert that the children born from the union of the Arabs and native women union of the early century of Hijira, had mixed and mingled with the converted lot and no traces of them separately, could be attributed.

The Central and State governments in India had formulated policies of development, amelioration of inequalities and positive discrimination. In that the Labbais were first classed as backward in the Madras Presidency. This is primarily due to the dependence of the post colonial census ethnography. The problem was that both colonial and post colonial States were confused about the multiple meanings of the term Labbai which could variously refer to all Tamil speaking Muslims, such as religious specialists, merchants, honorific titles etc., The policies were intended to benefit a particular

community, the fact that the term had been used for a long time to cover all the Tamil Muslims, enabled even richest coastal merchants including the so called Arab descent elite Marakkayars and the former professionals associated with horse trade, Rawthars, who identify themselves as Labbai and thus to access the benefits provided by backward label, although they did not consider and call themselves as Labbais in their real life. In this way the confusions on identity multiplied.

Thus the historical conditions, social classification, the utilization of media and the State have given rise to different configurations of Tamil Muslim society. Hence we have to engage more seriously with the identity of the Tamil Muslim society.

The Tamil country had always been the meeting ground of various cultures. Hence the Tamil culture has always been one of synthesis and continuity. In that the transfusion of Hindu superstitions and customs, in Tamil cultural milieu in to Muslim Society is noticeable. The betrothal or matrimonial engagement ceremony and as well as several other wedding ceremonies found their way in to Muslim society, the tying of Thali-the marriage badge and singing of songs during wedding ceremonies, lighting of lamp (Kuthuvilakku) during auspicious occasions like marriage came to be adapted by the Muslims. The birth, puberty ceremonies have been copied from Tamil Hindu society. According to Islamic law, it is the bride groom to pay dowry amount (Mahar) to the bride, but Muslims have fallen a victim to the much reprehensible customs prevalent in the Hindu society demanding dowry from the bride. Belief in omens such as the **crossing of one's path by cat**, the cries of some animals, insects and birds to predict the success **or failure of one's errand has found its way into** Muslim society. The Hindu superstitious beliefs like demons and ghosts dwelling in grave yards and haunting some houses also crept in to **Muslim society. The Hindu practice of 'Arati' had** been copied by the Muslims. The veneration of **'men of god' the Hindu way of worship crept in** to the Dargah worship where the practices and rituals are similar as in a Hindu folk temple.³¹ Thus the converts from the Hindu social order, the Tamil Muslims could not give up their ancestral folk and cultural practices and tradition

in toto even after several generations, which is a point to fix their ancient identity.

The Islamic Tamil Literary works contain valuable details regarding religious, cultural and social life of the Muslims. A large number of the Islamic Tamil literary works are written in Islamic themes and in praise of Allah and Prophet Mohamed (PBU). Many other works deal with Islamic theology, morals and Jurisprudence. Tamil Muslim poets have adapted all the Tamil literary forms in the creation of such works. Some poets also wrote poems in Arabic Tamil. Muslim philanthropists encouraged the poets to produce fine literary works in Tamil.

Generally, it is said that the Islamic Tamil literary works date back to 16th century. But a part of the work Palsandamaali, is considered by many scholars to belong to 13-14th century. It gives some interesting information like the early name of the Tamil Muslims, the Sonakkar and Anjuvannam. From 16th century we get full pledged literary works. Ayiramasala, Mikurasu Malai and Yakobu Siddar Padalgal are the earliest Islamic Tamil literary works of sixteenth century. **Umaru Pulavar's Sirapuranam of 17th century** is the crown jewel of the Islamic Tamil Literature. It contains the vivid description of **Prophet Mohamed's (PBU) Life**. Though the historical characters of this epic belong to Arabia, the story is portrayed as if happening in Tamil land. Though Umaru depicts the Tamil Hindu country side, its people and customs are exposition Islamic principles. This shows the fundamental concern of Umaru was Islam and he makes use of the Tami Hindu features to drive home his message among the predominantly non-Islamic population. This adjustment is not a compromise their Islamic beliefs but to stamp their Tamil Muslim identity. By this adjustment Tamil Muslims seems to have asserted themselves as a distinct group in Tamil society. The profound linguistic dimension of Tamil **Muslims'** historical evaluation reflect their Tamil identity.

Thirunerineetham, Kanakabisheka Malai, Thirumanakkatchi etc., are the other literary works in 17th century. Rajanayakam, Kutub nayakkan, Thirumani malai, Navamani malai and a host of other works were produced in the subsequent countries. Hagiology were produced on the life and miracles of the Sufi saints, buried in various places in Tamilnadu. In Muslim

religious life in Tamil country there are two orientations, the mosques and the darghas. While the mosque based traditions are deeply Islamic the dargah oriented traditions contain many un Islamic features which had been inviting criticism from the orthodox quarters. However these features do not deny the centrality superiority of Allah and the Prophet hood of Mohamed (PBU) and it has to be viewed as the vestiges of original folk tradition of their ancestry.

Sufism – Muslim mysticism – is regarded as the love of supreme Beauty, Omnipresent. The essential of a Sufi cult is adoration of god. There are many comparable points between Sufis and Hindu followers of Bhakthi Movement. Influence of Islamic Sufism was attracted by the Vedanta school of Sankara (d.820) and classical Bhakti cult of Ramanuja, the great religious movement of Ananda Thirtha. Islamic monotheism and Sufism ushered a new wave of theistic urge among the Hindus. Some Tamil Siddars vented their spleen on the idol worship ridden with superstitious and customs and rituals. Muslim mystic poets like Kunankudi Masthan, Sadakkathullah Appa and Pir Mohamed Appa were important Tamil Sufi mystics. Some of the Muslim Mystics were included in the order of the Tamil Siddhars. Thus the age long association of the Tamil Muslims with Tamil culture comes to light through the life and works of the Muslim Sufis.

The contact of Islam with the languages of the region had changed the character of the languages by imposing Arabic script on them adding a new dimension to them. This resulted in the growth of Arabic Tamil, by which the Muslims used to write the Tamil language dialects in Arabic script.

Many of the Islamic Tamil works now in Tamil script might have been in Arabic Tamil. Later on when necessity arose, they were produced in Tamil itself. A large number of literary master pieces on Islamic themes, commentaries on Holy Quran, dictionaries, poetry, prose works on Islamic mysticism are in Arab Tamil and they are well preserved. Thus the Tamil Muslims had contributed their due share to enrich the Tamil language.

The Muslims were the minority community in the Madras Presidency. They were

not participants in the political events for very long time. But when they peeped in to the political arena at the dawn of 20th century, the Muslim politics was conditioned on the basis of linguistics in the Madras Presidency, though the Islamic society is one and indivisible. Among the Muslims of the Presidency the Tamil speaking Muslim were in majority and the Urdu speaking population was lesser. But the Urdu Muslims based at Madras dominated the politics of the Presidency. The Tamil Muslim could not get access in to the political portal mainly due to language barrier.³² However they participated in the Kilafat and Non-Cooperation Movement, which were the part of the struggle for Indian independence under the leadership of Mahathma Gandhiji and established their sense of committed nationality and patriotism.

E.V.Ramaswamy Naikar was a member of the Indian National Congress Party till 1925. Disillusioned with the policies of the party he left it and founded the Dravidian Self Respect Movement. The movement was anti-Brahmin, anti god and anti caste in its ideology. The movement caught the attention of the sizable Hindus. Some Tamil Muslims were also drawn towards it. The Self Respect Movement was declared as Non-Brahmin Movement and E.V.Ramaswamy characterized the Brahmins as Aryans and the non-Brahmins including Tamil Muslim as Dravidians. He also held that Dravidian Tamil Hindus, the Tamils, and Tamil Muslims were from the same mother.³³

The failure of the Kilafat and Non-Cooperation Movements was a period of disenchantment to the Muslims. They were not happy over the activities of the Congress Party. The Tamil Muslims were also dissatisfied with the Non-Brahmin rule of the Justice Party in Madras Presidency in 1930s. At this juncture, E.V. Ramaswamy came more close to the Tamil Muslims and in fact it was reciprocated well by the Tamil Muslims and he was invited to their social functions.

E.V.Ramaswamy allowed the Muslims to air their grievances and views on social matters through the organs of the movement. The awareness kindled by E.V.Ramaswamy worked in the right direction. E.V.T Sheik Abdul Kadar of Salem, a social activist, claimed, **“One who has Tamil as mother tongue and settled in Tamilnadu, including Muslims were Tamils’**. B.A.

Ismail of Authur, claimed that **“racially too the Muslims were Dravidians”**³⁴. P.Dawood Sha, the most vociferous social reformer and journalist, claimed that Tamilians (Hindus), Christians and Muslims were all Dravidians, though they have different customs.³⁵ Thus the self Respect Movement’s press organs had played a crucial role in bringing the thoughts and feelings of the Tamil Muslims to the attention of the general public.³⁶ The Self Respect Movement thundered that the real way to freedom and equality lay in the conversion of the untouchables to Islam³⁶. Thus E.V.Ramaswamy was considered as the well wisher of the Tamil Muslims. E.V.Ramaswamy wrote that Islam was Dravidian Religion which had a concept such as one god, a god without image, unity of humanity and brother hood.³⁷

Thus the self Respect Movement brought awareness among the Tamil Muslims. It enlightened their Dravidian identity and distinct Tamil consciousness. The Tamil Muslims also realized their Dravidian factor to defend their future political and cultural activities because they were historically part of it ethnically, linguistically and culturally. These factors surfaced in the anti Hindi agitation in 1937 in which the Tamil Muslims participated in large numbers along with the Self-Respectors. Thus the Tamil Muslims asserted their Dravidian identity ethnically and linguistically.³⁸ The press organs played a crucial role in bringing thoughts and feelings the Tamil Muslims to the general public, the Tamils of other faiths. Print has contributed to reforming and strengthening Islam in Tamilnadu. The retention of All India Muslim League as Indian Union Muslim League in Tamilnadu and Kerala (became defunct in rest of India) in post independence days and the support enjoyed by it in the successive elations is no doubt an emphatic public expression of separate historical, Social, cultural and religious identity of the Tamil Muslims.³⁹

We have traced the history of the Tamil Muslims, the process of evolution and conditioning with the help of archeological evidences, the archival sources from the European trading company records in connection with their traditional maritime activities and diaspora. About 2000 Tamil literary works were produced by the Tamil Muslims themselves. There is no better way of

studying the past of a community than to take in to consideration the literature produced by the members of that community. The past conditioning largely regulates the present. Therefore the study of the past of the society in its historical setting is necessary to study that community at present.

Our survey and analysis of the origin of Tamil Muslim society and sources there on clearly points to the separate foundation on which they have been evolving from the time they originated and conditioning to which they have been subjected in the course of their long

history. These conditioning, as we have seen, were essentially Islamic. This distinguishes them invariably from the rest of the Tamil Hindu society. The Tamil Muslim society had gathered strength in the course of its evolution and shows the powerful expression of separate social, cultural, religious and historical identity within the larger Dravidian milieu and Tamil Culture.⁴⁰ However in spite of all these antiquity of about 1400 years, they have the challenge, to prove, their twin identify as Tamils ethnically and Tamilness culturally and as Tamil Muslims religiously. The crisis is a head.....

SYMPOSIUM

PROBLEMS AND PROSPECTS OF SOCIAL JUSTICE IN SOUTH INDIA : A POST-INDEPENDENT EVALUTION

IDEA OF SOCIAL JUSTICE AND DALIT PREDICAMENTS IN POST-COLONIAL SOUTH INDIA

Y. Chinna Rao

This paper is divided into four sections: the first section will deal with the history of social legislations in south India on the one hand and the debates on social justice policies in the Constituent Assembly and how finally they were incorporated in the Indian Constitution. The second part will focus on introduction of the special central assistance (SCA) to special component plan (SCP) from Fifth Five Year Plan (1980-85) onwards in the states, and thirdly, analyse the manner in which sub-categorization issue had occupied central stage of Dalit politics, along with a brief look at the nature of atrocities on Dalits and its implications on the struggles, and finally the passage by the Legislative Assembly of Andhra Pradesh the historic Andhra Pradesh Scheduled Caste Sub-Plan and Tribal Sub-Plan (Planning, Allocation and Utilization of Financial Resources) Act, 2013 on 2nd December, 2012, and its implementation will be discussed.

On 29th November, 1948, Professor K.T. Shah (who was a product of London School of Economics, and former professor of Economics at Mysore university), honourable member of the Constituent Assembly of India, recommending reservation provisions for the Scheduled Castes and Tribes argued that:¹

In regard to the scheduled castes and backward tribes, it is an open secret that they have been neglected in the past; and their rights and claims to enjoy and have the capacity to enjoy as equal citizens happens to be denied to them because of their backwardness. I seek therefore by this motion to include them also within the scope of this sub-clause (2), so that any special discrimination in favour of them may not be regarded as violating the basic principles of equality for all classes of citizens in the country. They need and must be given, for some time to come at any rate, special treatment in regard to education, in regard to opportunity for employment, and in many other cases where their present inequality, their present backwardness is only a hindrance to the rapid development of the country. Any section of the community which is backward must necessarily impede the progress of the rest; and it is only in the interest of the community itself, therefore, that it is but right and proper we should provide facilities so that they may be brought up-to-date so today and the uniform progress of all be forwarded. I have, of course, not included in my amendment the length of years, the term of years for which some such special treatment may be given. That may be determined by the circumstances of the day. I only want to draw your attention to the fact that there are classes of our citizens who may need through no fault of theirs, some special treatment if equality is not to be equality of name only or on paper only, but equality of fact. I trust this will commend itself to the House and the amendment will be accepted.

The Constitution of India has solemnly promised to all its citizens social, economic and political justice; liberty of thought expression, belief, faith and worship; equality of status and of opportunity; and to promote among the all fraternity assuring the dignity of the individual and the unity of the nation. Social justice is one of the main objectives of the Indian Constitution. The discourse of social justice in contemporary India and the ways in which it arises out of the intersection of caste and politics.

Historically, India has witnessed sustained interventions by social reformers who have worked consistently towards disseminating awareness about the lack of any rational basis for discrimination on caste considerations.² Such awareness led to the assertion of rights by the 'Depressed Classes'

and was responsible for the signing of the Poona Pact on 24th September, 1932 between Gandhi and **Ambedkar**. **This pact provided for the equitable representation of the 'Depressed Classes' in governance and the amelioration of their socio-economic conditions.** The pact was significant because it became the basis for subsequent constitutional/legislative safeguards and other measures for the social integration of the Scheduled Castes.³

Social Protection Legislations before Independence

Even before the Constitution of India came into force, several legislations had been enacted and various measures initiated for an inclusive development of the Scheduled Castes. These legislations were localised to an extent. Some of the prominent one were as follows:⁴

Kannada Region:

1. The Removal of Civil Disabilities Act, 1943 (Mysore Act XLII of 1943)
2. The Mysore Temple Entry Authorisation Act, 1948 (Mysore Act of XIV of 1948).
3. The Coorg Scheduled Castes (Removal of Civil and Social Disabilities) Act, 1949 (Coorg Act I of 1949).
4. Coorg Temple Entry Authorisation Act, 1949 (Coorg Act II of 1949).

Kerala region:

1. The Travancore-Cochin Removal of Social Disabilities Act, 1825 (Travancore-Cochin Act VII of 1825).
2. The Travancore-Cochin Temple Entry (Removal of Disabilities) Act, 1950 (Travancore-Cochin Act XXVII of 1950).

Madras Presidency:

The Madras Removal of Civil Disabilities Act, 1938 (Madras Act XXI of 1938).

The government's approaches and interventions towards the uplift of the Scheduled Castes are primarily based on two major considerations: first, to overcome the multiple deprivations that Scheduled Castes have inherited due to exclusion in the past and to the extent possible, bring them at par with others in society. Second, to provide them with protection against exclusion and discrimination in the present by encouraging their effective participation in the social economic and political processes of the country. To achieve these goals, the government's approach meant a two-fold strategy consisting of anti-discriminatory or protective measures, and development and empowering measures.

Untouchability and Social Protection Measures

Historically, the caste system classified people by their occupation and status. Each caste had a specific place in the hierarchy of social status.⁵ However, since the 19th century, the link between caste and occupation has become less rigid as it became easier for the people to change their occupations. This change has accelerated with the economic boom which has taken place in India since the early 1990s. Legally, untouchability was prohibited by the Constitution of India. To give effect to this Article, the Parliament of India had enacted the Untouchability (Offences) Act, 1955, based on Article 17, Abolition of Untouchability. It had its scope over the entire country and its provisions were implemented by the respective State Governments and the Union Territories and coordinated by the Government of India. The Act provided with the penalties for enforcing untouchability or any disability arising thereof – preventing a person from entering a place of public worship and offering prayers or taking water from a sacred tank, well or spring. To make the provisions of this Act more stringent, the Act was amended in 1976 and was also renamed as the Protection of Civil Rights Act, 1955 [PCR Act]. Under the Act, the Government of India also notified the PCR Rules, 1977, to carry out the provisions of this Act. As cases of atrocities on Scheduled

Castes /Scheduled Tribes were not covered under the provisions of PCR Act, 1955, the Parliament passed another Act in 1989, to take measures to prevent the atrocities committed against them. This Act, known as the Scheduled Castes and the Scheduled Tribes (Prevention of Atrocities) Act, 1989, became effective from January 30, 1990. For carrying out the provisions of this Act the Government of India notified the SCs and the STs (Prevention of Atrocities) Rules, 1995 on March 31, 1995. Based on the provisions of the Scheduled Castes and the Scheduled Tribes (Prevention of Atrocities) Act, 1989, caste-based atrocities committed against the members of the Scheduled Caste and the Scheduled tribe is an offence punishable under the law. Offences under the PCR Act are cognizable as well as non-compoundable. The number of cases registered under PCR Act is an indication of the continued perpetuation of untouchability, violation of human rights, committing atrocity and discrimination.

However, the fact remains that the caste based discrimination and atrocities against the Dalits is increasing across India at an alarming rate that it leads to brutal killing of Dalits every day. The extent and occurrence of atrocities on Dalits is rampant like an epidemic in many parts of India. In many states such as Bihar, Maharashtra, Haryana, Punjab, Rajasthan, Gujarat, U.P., M.P., Karnataka and several parts of Tamil Nadu and A.P. the violence against the Dalits has attained greater proportions. **The severity of violence's against Dalits is beyond any human comprehension as Dalits are lynched, murdered and mutilated.**

TABLE 1
DENIAL OF ACCESS TO BASIC PUBLIC SERVICES ⁶

Forms/Sites of untouchability Practice	Percentage of Villages where Form is Practiced	No. of villages where Form is Practiced	Total Surveyed Villages
Denied access to water facilities	48.4	255	527
No entry into villages shops	35.8	186	519
No access to restaurants/hotels	25.6	92	359
No entry into private health centre/clinic	21.3	74	348
No access/entry to public transport	9.2	41	447
No entry/seating in Cinema Halls	3.2	6	187

There is hardly any day when Dalits are not killed, harassed, socially boycotted by the upper castes. Dalits houses are burnt, physical violence against Dalit woman like rape, terrorizing by parading naked on streets, cutting genitals of Dalits, beating etc. are rampant and it is like an epidemic in rural areas and villages across India.⁷ In the recent past, the European Parliament had taken a resolution on the human rights situation of Dalits in India.⁸ It mentioned that the National Human Rights Commission of India has reported that the implementation of the Scheduled Castes and Scheduled Tribes (Prevention of Atrocities) Act remains very unsatisfactory, and it even has published numerous recommendations to address this problem. Let me put forward some harsh facts of caste discrimination and Dalit atrocities by presenting some of the governmental and non-governmental figures.

A recent study of untouchability in rural India covering 565 villages in 11 States, found that the public health workers refused to visit Dalit homes in 33% of villages, Dalits were prevented from entering police stations in 27.6% of villages, Dalit children had to sit separately while eating in 37.8% of government schools, Dalits did not get mail delivered to their homes in 23.5% of villages, and

Dalits were denied access to water sources in 48.4% of villages because of segregation and untouchability practices. Untouchability in schools has contributed to far higher drop-out⁹ and increase in illiteracy levels of Dalit children than those of the general population. This 'gap of illiteracy' between Dalits and non-Dalits is hardly changing since India's literacy rates for Dalit women remaining as low as 38 percent in rural India.¹⁰ About half of India's Dalit children are undernourished, 21 percent are 'severely underweight' and 12 percent die before their fifth birthday.¹¹

It is seen that Andhra Pradesh tops the list in terms of reported cases, while UP and Bihar where one third of the country's Dalits live report very little. The data needs to be taken with much caution since many of these practices are considered as part of the existing social rules and norms and are accepted even by the Dalit community as owing to their 'lower' social and economic status. Another record shows that 27 officially registered atrocities are being committed against Dalits every day, police often prevent Dalits from entering police stations, refuse the registration of cases by Dalits and regularly resort to the practice of torture against Dalits with impunity. Despite the fact that many Dalits do not report crimes for fear of reprisals by the dominant castes, official police statistics averaged over the past 5 years show that 13 Dalits are murdered every week, 5 Dalits' homes or possessions are burnt every week, 6 Dalits are kidnapped or abducted every week, 3 Dalit women are raped every day, 11 Dalits are beaten every day and a crime is committed against a Dalit every 18 minutes.¹²

TABLE 2
CASES REGISTERED UNDER THE PCR ACT IN 2000 AND 2002

Sr. No.	State/UT	Number of cases registered during the year 2002 ¹³	Number of cases registered in 2000 ¹⁴
1.	Andhra Pradesh	343	284
2.	Karnataka	101	95
3.	Maharashtra	41	98
4.	Pondicherry	18	--
5.	Madhya Pradesh	07	27
6.	Orissa	07	00
7.	Himachal Pradesh	03	--
8.	Jharkhand	02	--

11.	Delhi	01	--
12.	Bihar	--	06
13.	U.P.	--	18
	All India	526	631

In addition to the PCR Act, crimes against Dalits are also registered under the SC/ST Prevention of Atrocities Act, 1989 and other sections of the Indian Penal Code (IPC). All India level 25,093 cases in 1999, 25,455 in 2000 and 33,501 in 2001, (Table-4). This is an annual average of 28,016 crimes. It is inferred from the data that during the period 1999-2001, the most intolerant states as far as crimes against the Dalits are concerned were Uttar Pradesh, followed by Rajasthan, Madhya Pradesh, and Andhra Pradesh respectively. It is strange that UP and Rajasthan show a very small

record of cases registered under PCRA in the same years. West Bengal consistently claims that there is no practice of untouchability in the state.

TABLE 3

STATE WISE INCIDENCES OF CRIME-CASTE DISCRIMINATION AND ATROCITIES AGAINST SCHEDULED CASTES IN INDIA, 2000

State/ UT	Murder	Hurt	Rape	Kidnap & Abd.	Dacoity	Robbery	Arsen	P C R A c t	PO A A c t	Other Offences

All-India	473	3139	992	225	35	82	251	631	6350	10440

Cases also go unreported owing to the dependency of Dalit communities on the perpetrators for their livelihood as they hold social, economic and institutional power in the area. Dalit victims also do not receive any support from the police or administration to register human rights violations against them. From its review with various state governments, the SC and ST Commission viewed that **“a large number of cases of atrocities go unregistered, mainly because of reluctance on the part of police officers to register the cases...”**¹⁵

The notions of purity and pollution have been particularly resilient in relation to drinking water sources. The study also confirmed the fact and found that persistent conflicts were reported with regard to drinking water. While complete denial of access to a particular water source (well, tank, tube-well and so on) as designated for the upper caste was quite common, what was even more common was the imposition of differential behaviour on Dalits. In over one-third (about 36 percent) of the villages surveyed, the Dalits were denied entry into village shops. This usually meant that the Dalits were not allowed to come up to the counter like other customers, but were made to wait outside or at some distance from the shop. In about one-thirds of the villages, the tea shops discriminated against the Dalits by asking them to be seated separately and widespread practice of the two-glass system. The social status of the castes providing services such as washer men and barbers is dependent on their denying the services to Dalits. Such denial of services to Dalits is always demanded by non-Dalits. Discrimination by washer men and barbers was found to be present in as many as 47 percent of the villages.

Cases pending	6537 (81.42)	107204 (92.5)	100891 (86.88)

This sad status of Indian society is never displayed in detail by digital media. Each year on Dasara day, the triumph of good over evil is celebrated with ritual and symbolic splendor in northern India.

The day marks the defeat of Ravana and his forces by Rama. But the year 2002, killing of five Dalits of Haryana, turned out to be the day of victory over evil. On October 16, the VHP and the Bajrang Dal took out a victory procession in Jhajjar, in which the people responsible for the killing of the Dalits were honoured, congratulated and lauded. In New Delhi, the VHP's then senior vice-president, Acharya Giriraj Kishore, defended the VHP's position stating that it was more important to ascertain if the men had actually killed the cow or were skinning a cow that was already dead. He quoted Hindu scriptures to say that the life of a cow was more precious than that of a human being. But this did not appeal to the upper caste urban mass media as a case of human rights violation. Similarly, the **mainstream media's negligible concern over the Khairlanji atrocity** even weeks and months after an entire Dalit family was humiliated, raped and killed; the tenor and limits of media discourse on Dalits became apparent once more.¹⁸

The reservation policy in the government services, state-run and state-supported educational institutions, and various democratic political bodies is part of the anti-discriminatory or protective measures. The measures ensure proportional participation of the Scheduled Castes in various public spheres, which would not otherwise have been possible because of the prevalence of exclusion and discrimination. However, both the scope and extent of the reservation policy are confined to the state-run and sponsored sectors. The Scheduled Caste workforce in the private sector, which employs more than 90 per cent of the Scheduled Caste workers, remain unprotected from possible exclusion and discrimination.¹⁹

Reservations in South India²⁰

In Tamil Nadu, the reservation is 18% for SCs, 1% for STs, 30% BC and 20% MBC (69% total) based on local demographics. Providing reservation to OBCs in the State level Services as under: for the Backward Classes 26.5%; Backward Classes Muslims, 3.5%; and for the Most Backward Classes / Denotified Communities 20%.

In Karnataka, the reservation is 15% for SCs and 3% for STs, 32% OBC (50% total) based on local demographics. Providing 32% reservation to OBCs is for the purpose of admission to educational institutions and for employment in State Civil Services and Government of Karnataka undertakings. In Kerala, the reservation is 8% for SCs and 2% for STs, 40% OBC (50% total) based on local demographics and providing 40% reservation to OBCs. In Andhra Pradesh, 27% of educational institutes and government jobs are reserved for OBCs, 33.33% for women, 15% for SCs, 6% for STs. Reservation to OBCs in State aided Educational Institutions and in State services is 29%. It is divided among five groups as under: BC-A=7%, BC-B=10%, BC-C=01%, BC- D=07%, BC-E=04%.

In the absence of legal provisions for an affirmative action policy, the state has been using **'general programmes' for the inclusion, uplift and empowerment** of the Scheduled Castes. Measures related to economic empowerment are linked through programmes for improving the private ownership of fixed capital assets, the development of human resource capabilities, to develop and enhance the business capabilities and skills of the Scheduled Castes so as to enable them to engage in self-employment, and efforts to engage labour households in wage employment.

The educational development of Scheduled Castes is a major area of thrust for the government. **At the core of the Scheduled Castes' educational problems are** low literacy rate; high dropout rate at the primary, secondary and higher secondary levels; low quality education; and the existence of **highly discriminatory and exclusionary practices, which deny Dalits' access to education altogether.** Therefore, the government attempts to qualitatively improve the educational infrastructure, especially in areas inhabited predominantly by the Dalits; ensure implementation of reservation in educational institutions; provide financial support in terms of scholarships and fellowships at local, regional, national and international levels; provide remedial coaching facilities to the social group to build their qualitative capabilities; provide special hostels for both boys and girls; and ensures equal opportunity to them by emphasizing specifically on girl/women education.

Budget and the Scheduled Castes and Scheduled Tribes

It is legally mandated that every ministry and department should earmark 16% funds for schedule castes and 8% for schedule tribes, making up 24% of the total Plan outlay. This earmarking policy is called the Scheduled Castes Sub Plan (SCSP) and the Tribal Sub Plan (TSP). Let us give a broad look at how the six five-year plans earmarked the funds for these marginalized communities to deliver the so called social justice in numbers.

In 2012-13, Rs 3,592 crore of SCSP funds and Rs 1,526 crore of TSP funds were not spent.²¹ In 2011-12, Rs 2,899 crore allocated funds for dalits remained unspent. Similarly, Rs 1,013 crore of funds meant for adivasis were unspent. When one speak about the Highlights of the Union Budget 2018-19, The due Allocation for SC Rs.1,39,660 Crores and the total allocation Rs. 76,801 Crores (8.16%), out of the total allocation for SCC Rs. 35,409 the non-targeted schemes got Rs. 29,919 corers, that have no direct benefit.²¹

Union Budget trends for the Scheduled Castes for the Financial Years 2015-2020.²²

2015-15	6.63 %
2016-17	7.06%
2017-18	8.91%
2018-19	7.18%
2019-20	8.16%

Scheduled Castes Component (SCC) and Scheduled Tribes Component (STC) budget for the Years 2014-2019. The total Allocation for SCC was Rs. 39,549.66 Crores; and the Expenditure as Rs. 35,771.35 Crores.²³ The unspent amount Rs. 3,778.31 Crores, means that 10% of the allocated amount remains unspent.

Dalits and the issue of Sub-Categorization

This was exactly the reason, for sub-categorization issue in Punjab four decades back. During the 1960s, in Punjab 30 percent of its total population being Dalit, they started asserting and staging walkouts in unison, cutting across political lines against atrocities, and demanding separate budget for Dalit uplift. The Congress government under the leadership of Zail Singh, the then-Chief Minister, divided the Scheduled Caste list, sowing the seeds of divisional politics. The 30 percent strong assertive Dalits were split into Ad-Dharmi-Ravidasi group and Mazhabhi-Balmiki group. The inter-group animosities pushed them into virtual political insignificance with no decisive say in the Punjab politics. In Punjab, the initiation of Dalit division took place in 1975, and it needs to be reiterated that this was processed without any deliberations or transparent procedures. It was a decision that the state government planned and issued a notification to divide Dalits.²⁴

Haryana state partly carved out of Punjab, adopted the policies initiated by the Punjab government. It had another political dimension, though the rise and spread of influence of Bahujan Samaj Party (BSP) in Uttar Pradesh and spread adjacent regions was a cause of concern. With the rise of BSP in Haryana, the Congress government under the leadership of Bhajan Lal in 1994 revised the Scheduled Caste list of Haryana and introduced elements of internal dissension.²⁵ The 20 percent strong Dalit population that was reclassified and they have never had a significant voice since then. That was because the groups led by dominant Chamar and Balmiki castes were at loggerheads over the distribution of benefits. Ironically, sizeable populations of literate Dalits in these two states are **unaware of the government's policy of classification and divisions.**

As mentioned earlier, the Government of Punjab initiated the policy of sub-categorization of the Scheduled Castes through executive orders in 1975. It was consequently followed by Government of Haryana in 1994.²⁶ It is mentioned in the executive order²⁷ that the **“government has decided that henceforth, fifty percent of vacancies of the quota reserved for Scheduled castes would be offered to**

Balmikis and Mazbhi Sinks, if available, as first preference from amongst the Scheduled Castes candidates, in direct recruitment only and not in promotion cases. It has also been decided that **promotion cases already decided in the light of aforesaid instructions are not to be opened**".

Similarly, following the suit was Karnataka where the State Government appointed a judicial inquiry committee, to study the imbalances among different communities in utilizing reservation facilities among different communities in the Scheduled Caste and Scheduled Tribe, under the chairmanship of Justice Sadashiva Judicial Inquiry Commission.²⁸ Its broad parameters were specified by the Justice Sadashiva and no new communities were to be included in the Scheduled Castes list as claimed by different Dalit organizations. He stated that after the reorganization of the State in 1956, the communities which were in the Scheduled Castes list in the regions which were merged with the then Mysore state were included in the Scheduled Caste list. The Government had set a deadline of September 27, 2007 for the commission to submit its report. However, the later developments remain ambiguous. The Commission held its sitting and recorded the pleas of different communities in 17 of the 27 districts, and would complete the public hearing in the remaining ten districts before the end of February 2007.

In Bihar, the Nitish Kumar government set up a commission known as "Maha Dalit Commission" to suggest ways for the uplift of the most deprived communities from amongst the Scheduled Castes. The commission was headed by Viswanath Rishi²⁹ and K.P. Ramaiah³⁰ as its Secretary along with three other members in August 2007.³¹ The Commission submitted its report in November 2007, a 186 page report comprising 116 recommendations to improve the condition of what it termed as 'Maha Dalits'.

Through the passage of the bill of 2012, Andhra Pradesh had become the first state to make such legislation, by giving statutory status to the Scheduled Caste and Scheduled Tribe sub-plans by ensuring allocation of funds to these sections in proportion to their population. The legislation would be helpful in ensuring the right to equality for Scheduled Castes and Scheduled Tribe communities apart from being effective in ensuing social security and social justice and hence the comprehensive development of these communities. Before we proceed further on this issue, let us give a look at the how each state in south India reservation points were allocated and working. In Karnataka an Act for Scheduled Castes and Scheduled Tribes Sub-Plan was passed in 2015. In Tamil Nadu, a Bill was introduced in 2013, but never seen the light after that.

So, what we discern from the above discussion is the interest and enthusiasm shown by the political masters to divide dalits into various groups and sub-groups. **They don't show even basic minimum concern to deliver the welfare measures that are constitutionally mandated for these marginalized communities. Finally, what we could conclude is that, we have 'social justice' only on paper, and in practice, everywhere and at every stage of life, we get to see the discrimination and exclusion of these communities from the mainstream developmental issues.**

An earlier version of this paper was presented at a symposium on "Problems and Prospects of Social Justice in South India: A Post Independence Evaluation", South India History Congress (40th Session), held at Annamalai University, 31st January 2020. I am thankful to the organizers for extending the invitation and particularly to Prof. B.S. Chandra Babu and Dr. B. Ramachandra Reddy for the comments.

PROBLEMS AND PROSPECTS OF SOCIAL JUSTICE IN SOUTH INDIA: A POST INDEPENDENCE EVALUATION

Dr.N.Shaik Masthan

Introduction:

The meaning of the term 'Social Justice' according to the oxford English dictionary is 'justice in terms of distribution of wealth, opportunities and priviages with in a society. Social justice is a concept of fair and just relations between the individual and society, as measured by the distribution of wealth, opportunities for personal activity, and social privileges. However, recent researches have proved that the use of the expression 'social justice' is older, even before 19th century.

A Brief Historical Survey:

Ever since the formation of human social order, it has become a practice that there has been a unequal treatment of the people on the basis of gender, caste, creed, colour, religion, language and region, not only in India but in many parts of the world as well, for one reason or the other. The dominant always discriminated the weak, the vacillating and the poor. This was practiced in early savagery, the ancient past, the medieval feudalistic societies and in the modern democracies, of course with a degree of difference in its advocacy. In ancient India and South India during the ages of dynastic rules, the kings and emperors followed the philosophy of welfare state concept and the wellbeing of their subjects was their at most interest. Though they believed in the principle of equal treatment and just rule they did not realise that there was an element of inequality due to the underlying principle of raja dharma guided by Varna, Ashrama and so on. While the medieval state was driven by the element of faith and religion and the division of society on the basis of rule and the ruled. Whereas the modern Indian society was not free of the ghost elements of ancient and medieval forces of division protected

and promoted by the divide and rule policy of the colonial powers.

However, at every given point of time, whenever the social unjust crossed the limits of tolerance, there were attempts by social reformers, the intellectuals and the profounder of Bhakti movements. In Ancient India there were reformers like Mahaveera and Gautama Buddha, while in south India there were Nayanars and the Alwars. The medieval Indian society saw the emergence of Bhakti saints. In Karnataka there was Dasa and Vachana Movements and modern India witnessed social reformation from people like Raja Ram Mohan Roy. Similarly the attempts of Mahatma Puley, Dr.B.R.Ambedkar, Periyar and Narayana guru are true attempts towards bringing Indian society towards social justice and vigourity of modernity. Hence the onus of creating an equal society, equal treatment with welfare oriented social justice became the prime responsibility of free and independent India.

Modern Concept of Social Justice:

In the Indian context, the constitution makes envisaged a concept of social justice which involves the establishment of an egalitarian, social order where there was no discrimination among individuals on the basis of caste, creed, religion, race, sex or place of birth. The Goals of political, socio and economic democracy have been sought to be implemented through certain political and socio economic rights. These conditions were to be established by adopting a socio economic model of development through a policy of socialism. The Indian constitution have provided necessary safeguards by certain provisions which make positive discrimination in favour of the weaker and disadvantaged sections of the society so that they could be able to avail the same

opportunities as being availed by well off sections of the society.

The concept of social justice emerged out of a process of evolution of social norms, order, law and morality. It laid emphasis upon the just action and creates intervention in the society by enforcing the rules and regulations based on the principles in accordance with social equality. Social justice ensures liberty, equality and maintains their individual rights in the society. In other words, securing the highest possible development of the capabilities of all members of the society may be called social justice. In modern liberal philosophy "justice" is defined in terms of rights not as duties. Thus the notion of social justice requires the equal distribution of economic goods and opportunities. Social justice means availability of equal social opportunities for the full development of human personality to all the people in the society, without any discrimination on the ground of caste, sex or race etc. The challenges are to establish social justice so that disadvantaged sections may enjoy equal status in socio cultural sphere. (Dr. Paras Jain. (2017). "A STUDY ABOUT STATUS OF SOCIAL JUSTICE IN INDIA." *International Journal of Research - Granthaalayah*, 5(5), 240-242.)

Indian Constitution and Social Justice:

The constitution of India was adopted on November 26, 1949. Some provision of the constitution came into force on same day but the remaining provisions of the constitution came into force on January 26, 1950. This day is referred to the constitution as the "date of its commencement", and celebrated as the Republic Day. The Indian Constitution is unique in its contents and spirit. Through borrowed from almost every constitution of the world, the constitution of India has several salient features that distinguish it from the constitutions of other countries.

Bharat Ratna Babasaheb Dr. B.R. Ambedkar, the Chief Architect of Constitution of India, is the man of millennium for social justice, in the sense that he became the deliverer of or the Messiah of the Dalits, the erstwhile untouchables, Other Backward Classes (OBCs), and women, all constituting 95% of Hindu population. That big segment of population had been forced to live at a sub-human level from

time immemorial, under caste system, sanctioned by Hindu scriptures. He was the first man in history to successfully lead a tirade of securing social justice to the vast sections of Indian humanity with the help of a law and legislation.

Social Justice is the foundation and the corner stone of Indian Constitution. And the makers of Indian Constitution were well aware of the use and boundaries of various principles of justice. They wanted to search such form of justice which could fulfil the expectations of whole revolution. Pt. Jawahar Lal Nehru put an idea before the Constituent Assembly as the "First work of this assembly is to make India independent by a new constitution through which starving people will get complete meal and cloths, and each Indian will get best option that he can progress himself."

Social justice found useful for everyone in its kind and flexible form. Although social justice is not defined anywhere in the constitution but it is an ideal element of feeling which is a goal of constitution. Feeling of social justice is a form of relative concept which is changeable by the time, circumstances, culture and needs of the people. Under Indian Constitution the use of social justice is accepted in wider sense which includes social and economic justice both. The preamble to the Constitution of India is a brief introductory statement that sets out guidelines, which guide the people of the nation, and to present the principles of the Constitution, and to indicate the source from which the document derives its authority, and meaning. The hopes and aspirations of the people are described in it. The preamble can be referred to as the preface which highlights the entire Constitution.

WE, THE PEOPLE OF INDIA, having solemnly resolved to constitute India into a SOVEREIGN SOCIALIST SECULAR DEMOCRATIC REPUBLIC and to secure to all its citizens, JUSTICE, social, economic and political;

LIBERTY of thought, expression, belief, faith and worship;

EQUALITY of status and of opportunity; and to promote among them all

FRATERNITY assuring the dignity of the individual and the unity and integrity of the Nation;

IN OUR CONSTITUENT ASSEMBLY this 26th day of November 1949, do HEREBY ADOPT, ENACT AND GIVE TO OURSELVES THIS CONSTITUTION.

According to former Chief Justice Gajendragadkar, "In this sense social justice holds the aims of equal opportunity to every citizen in the matter of social & economical activities and to prevent inequalities".

Thus, The Constitution of India has solemnly promised to all its citizens justices-social, economic and political; liberty of thought expression, belief, faith and worship; equality of status and of opportunity; and to promote among the all fraternity assuring the dignity of the individual and the unity of the nation. The Constitution has attempted to attune the apparently conflicting claims of socio-economic justice and of individual liberty and fundamental rights by putting some relevant provisions.

Articles Ensuring Social Justice:

Article 19 enshrines the fundamental rights of the citizens of this country. The seven sub-clauses of Article 19(1) guarantee the citizens seven different kinds of freedom and recognize them as their fundamental rights. Article 19 considered as a whole furnishes a very satisfactory and rational basis for adjusting the claims of individual rights of freedom and the claims of public good.

Articles 23 and 24 provide for fundamental rights against exploitation. Article 24, in particular, prohibits an employer from employing a child below the age of 14 years in any factory or mine or in any other hazardous employment. Article 31 makes a specific provision in regard to the fundamental right to property and deals with the vexed problem of compulsory acquisition of property.

Article 38 requires that the state should make an effort to promote the welfare of the people by securing and protecting as effectively as it may a social order in which justice social, economic and political shall inform all the institutions of national life. Article 39 clause (a) says that the State shall secure that the operation of the legal system promotes justice, on a basis of equal opportunity, and shall, in particular provide free legal aid, by suitable legislation or schemes, or in any other way, to ensure that

opportunities for securing justice are not denied to any citizen by reason of economic or other disabilities.

Article 41 recognizes every citizen's right to work, to education and to public assistance in cases of unemployment, old age, sickness & disablement and in other cases of undeserved want. Article 42 stresses the importance of securing just and humane conditions of work and for maternity relief. Article 43 holds before the working population the ideal of the living wage and Article 46 emphasizes the importance of the promotion of educational and economic interests of schedule castes, schedule tribes and other weaker sections.

The social problem presented by the existence of a very large number of citizens who are treated as untouchables has received the special attention of the Constitution as Article 15 (1) prohibits discrimination on the grounds of religion, race, caste, sex, or place of birth. The state would be entitled to make special provisions for women and children, and for advancement of any social and educationally backward classes of citizens, or for the SC/STs. A similar exception is provided to the principle of equality of opportunity prescribed by Article 16 (1) in as much as Article 16(4) allows the state to make provision for the resolution of appointments or posts in favour of any backward class of citizens which, in the opinion of the state, is not adequately represented in the services under the state. Article 17 proclaims that untouchability has been abolished & forbids its practice in any form & it provides that the enforcement of untouchability shall be an offence punishable in accordance with law. This is the code of provisions dealing with the problem of achieving the ideal of socio- economic justice in this country which has been prescribed by the Constitution of India.

The social justice scenario is to be investigated in the context of two streams of entitlements: (a) sustainable livelihood, which means access to adequate means of living, such as shelter, clothing, food, access to developmental means, employment; education, health, and resources; (b) social and political participation (enabling or empowering means), which is built on the guarantee of fundamental rights, and promotion and empowerment of the right to participation in the government, and

access to all available means of justice, and on **the basis of which “justice as a political programme” becomes a viable reality. We require** therefore a study based on select illustrations of various issues relating to government policies on topics such as: (a) the right to food and water; (b) housing, which includes resettlement and rehabilitation; (c) access to education, (d) access to provisions of health and healthcare, (e) right to work, and (f) access to information and the right to communication.

In short, one of the important ways in which the inquiry will proceed will be through taking stock of various forms that have occasioned the articulation of ideas of social justice. Governmental justice consists of various welfare schemes, law, legal literacy, administrative forms of arbitration such as tribunals, boards, courts, public interest litigation, new legal education, plus the constitutional idea of protection of weaker sections of the society and introduction of positive discrimination.

A Challenges to social justice:

Even After 73 years of independence, with 12 Five Year Plans, hundreds of laws leading to a veritable forest of rules offering a variety of special facilities to the underprivileged ranging from scheduled castes and tribes to women, in matters of education, employment, housing, etc. **social justice is far from a reality. 21.9% of India's population are under the poverty line i.e. unable to spend even a dollar a day on bare necessities. A mere 8.5 % of households enjoy the ‘luxury’ of electricity, drinking water and toilet facilities.** This percentage is 3.9% if only rural households are taken into consideration. 65.46% of our women are illiterate. Barring a few states like Kerala and Tamil Nadu, rural health care is a sham and almost non-existent. Then there is the problem of the millions of the educated unemployed.

Though in any society some form of inequality is unavoidable, the persistence of large-scale economic disparities and the undignified living conditions of millions of Indians is a reality that cannot be overlooked. The satisfaction of a set of basic needs must have the highest priority, for, without food, shelter, clothing, health care and primary education a person cannot become a human being. The widespread caste prejudices and the continuing discrimination against the lower castes are a

threat to social stability and peace. The social and educational backwardness of a vast section of the population inhibits its participation in the process of social and economic development, not to mention human development. Hence, the reduction of discriminatory social practices is an important part of the movement for social justice. Women suffer from historical, social and economic disadvantages. Even among the other categories of deprived communities, they are the most deprived group. A liberal society must attend to demands of gender justice seriously.

The conception of social justice also encompasses firm commitment to the protection of human rights and civil liberties. Disabilities and problems of other groups like the physically disabled, child labour, tribals and those affected by environmental pollution also form the agenda **of social justice. And these are India's most critical problems.** These are at the root of much of the political unrest, social and ethnic conflicts, and the growth of collective violence and the weakness of democratic structures in our country.

The institution of caste in our society is very effective and powerful one, which is not a phenomenon in western countries. While, the main objectives of social justice are compulsory and equal education, casteless society and employment to each and every citizen. Economic exploitation is also a big factor and all these do not allow the true realization of democracy. When India is passing through social and caste discrimination, economic crisis, unemployment, communalism and lack of basic needs, is it possible in such circumstances, to reap the fruits of the system which we have adopted? I believe, a party of substance committed to people and Democracy is needed which acknowledges and addresses the problems of social and economic deprivation.

The Meaning of ‘Justice’ doesn't need to be further defined as it is bounden to give justice to all those who have been or being denied from generations.

Social policy: Politics is reflection of the society. If castism, regionalism and communalism are part of society, they will go in to politics also. Those who are born and die in discriminatory environment, how is it possible for them to have different mind-set? During

elections, this mind-set takes precedence over development, science, honesty, integrity, ethics and morality etc. Though political parties aim to capture political power but they are equally responsible to fight out social discrimination while making it important agenda. Till ideal situation is attained, it will not be possible to capture political power through agenda like development, education, health etc. Recently French Government banned students from wearing religious symbols in schools and similarly we also have to take hard decisions to do away with vestigial institutions like caste. Due to increasing consciousness among dalits and backwards, they are also striving to have participation in political power and it is leading to a situation where elections are being fought more between the castes than parties. Earlier, dominant castes used to fight elections mainly and now backwards have also started contesting and a day will come erstwhile dominant castes will be out of power owing to their smaller number. For all of us it is essential to remove rotten values and social system.

Economic policy: The distribution of income among individuals or households at the local or national level, based on classifications such as socio-economic status, profession, gender, location, and income percentiles, is the most widely used measure of the degree of equality or inequality existing in a society. For most contemporary societies, income distribution remains the most legitimate indicator of the overall levels of equality and inequality. Gap between rich and poor is wider in our country. Besides historical reason, there are many reasons which are producing poverty. Governments are morally bound to provide education, health, employment and other basic needs. Due to globalization and privatization, it is now being debated that the Governments are not supposed to do business and provide employment but are for maintenance of law and order and foreign policy etc.

Dalits: Dalits have been exploited for millennia. No society or country can make the requisite progress while depriving such large number of people of dignity and respect. A country is an extended version of a family, if a family member is half fed or sick, peace and happiness will not come to it and similarly deprivation of dalits has cost and is costing India

dear. Dr. Ambedkar was for nationalization of land but Dalits have forgotten this economic agenda. Dalits have made a little progress in government jobs and politics due to reservation but in other fields like industry, market, profession, media, hi-tech, art & culture, stock **exchange, they are yet to begin. Dr. Ambedkar's** plank to establish casteless society through Buddhism was implemented in 2001 when lacks of dalits embraced Buddhism.

Tribals: Tribals have escaped from caste discrimination but are the worst victims of economic poverty. They have been traditionally fed on the roots and shoots and other available natural resources but this also has declined. With increasing pace of industrialization and urbanization there is no alternative left except to integrate them into the main stream of the nation. Though they had been provided reservation but most backward tribals have been hardly benefited.

Minorities: Being in minority should not be a curse in democracy, yet in a country like ours, majority pocket the main benefits. Christians have introduced and cultivated science, engineering and modern education but are becoming subject to persecution on day to day basis in the name of conversion. Jains, Sikhs and Buddhists have not been given status of being separate religious groups, this shows the plight of minorities. Muslims and Dalit Christians are worst sufferers and hence priority should be given to ensure health, education and jobs to them. Muslims are very small in Government jobs and police and they should be ensured participation according to their population in such areas. During communal riots, they do not face the wrath of majority only but also of police and paramilitary forces. Therefore it is must to ensure reservation in police and paramilitary forces. The recommendations of Justice Sachar Commission, hardly been implemented and in fact many Muslims have a minimum knowhow of this commission as such.

Backward Castes: Backward castes population is more than any other group but they are a most divided lot. The recommendations of Mandal Commission were implemented because of Dalit struggle but divided and unaware backwards could not even use the benefits. Thus the saga of most backwards castes is really deplorable. A fresh look is needed to ensure the

benefits to them of reservation and other safeguards.

Women: Women are the worst sufferers in this socio-economic setup. Even able women are not in a position to get the returns they deserve. Since childhood, they are taught that they belong to their in-laws' house and their salvation lies in surrendering to their husbands. This generates that mind-set, consciously or subconsciously, that women are meant for enjoyment and progeny. This must be attacked otherwise even women will not come forward to ask for their rights. Dowry, rape and torture are the by-products of this mentality. At present, Muslim women are the worst sufferers due to increasing fundamental tendency. Where ever there is a larger participation of women in various fields there is higher production and growth recorded. Not only for the sake of humanity but also for overall growth of the nation, women will have to be integrated into social, educational and political system. Through various cultural fora like cinema etc. women are projected as beautiful objects and epitomes of purity but not certainly meant to compete with men. This complex problem is not going to be tackled merely by governmental efforts; therefore political parties also share the great social responsibilities. The slogan of '**Beti Bachao and Beti Padhao**' remain merely as political stunts more than actuals. Atrocities on women are ever increasing, as a shame to Indian democracy.

Farmers: Farmers and peasants do not get the return of what they toil for. The prices of their produce like wheat, paddy, vegetables etc. have not increased to the extent of commodities like soap, cosmetics, steel and other articles manufactured in industries. In places like Mumbai and Delhi, small shops can have turnover of millions and billions but farmer owning hundred acres of land cannot afford to lead the life a small businessman and government servant can do. World Bank and developed countries are exerting continuous pressure on our Governments that they should reduce the subsidies on fertilizers, pesticides and seeds etc. whereas they pamper their farmers like anything, i.e., a farmer is given Rs. 400 per day to maintain a cow in England. Switch on the television or open pages of newspapers, you will find news about stock exchange but what about farmers and crops. Equity and shares do not

have more than 10% value of country's assets. Good rain has helped farmers to grow more crops. When there is drought, Sensex at stock exchange falls. Justice has not come to the farmers and to secure it, agricultural products must get their due price and subsidies, if required, be increased. Computerization, mobile revolution, hi-tech have benefited a few living in urban cities and this cannot be yardstick to measure the progress of farmers and labourers. We should modernize rural India as well so that the children of rural areas also avail the same opportunities. Till this is done, we will not concede the so called achievements in computerization and hi-tech etc. there is no social justice.

Labourers: Whatever production was done by thousands of labourers in the past, now it is being done by few labourers so that the profits of businessman go up. We should not oppose hi-tech and mechanization but is in favour of those industries and services who absorb more people. These days businessmen are employing labourers on contract basis and this has unleashed more exploitation. Recently, Supreme Court pronounced a judgment which curtails the freedom of agitation and struggle of employees and labourers. The higher judiciary is favouring disinvestment and privatization which is precipitating further exploitation of workers. We feel that exploitation by industrialists and businessman should be curbed.

Landless People: About 65.97% population living in rural India is landless and **Dalits' ratio is even higher. In developed countries like Japan and Europe about 40 % rural population does not depend on agriculture but derive their subsistence from agro based industries, cottage industries and soil conservation activities etc. We have ample opportunities to go for mass scale agro based industries which will not only provide employment but also stop migration to urban areas.**

So whereis The Solution?

The solution to attain social injustice lies within us only. We should be aware of the expressions the poor, the backwards, social justice which are being used to undermine standards, to flout norms and to put institutions to work. Despite the well intentioned

commitment of ensuring social justice through equalization or protective discrimination policy, the governmental efforts have caused some tension in the society. In the name of social justice even such activities are performed which have nothing to do with social justice. The need of the hour is to ensure proper and balanced implementation of policies so as to make social justice an effective vehicle of social progress. While Liberalism puts freedom first it is conscious of the fact that such freedom is hollow unless it is accompanied by a sense of security, protection and equality.

Conclusion:

A liberal social policy should aim at providing the most disadvantaged with access to opportunities and, at the same time create a social net that strengthens their ability to cope with crises. Successive governments have attempted to meet the basic needs of people by spending large sums of money on various subsidies, a variety of employment generation and poverty alleviation schemes. While these schemes have created a huge distributive bureaucracy only a small percentage of the sums sanctioned actually reach the intended recipient groups. They have bred corruption on a massive scale.

A phenomenal amount of resources are wasted, destabilising public finances, harming

economic development and burdening future generations. Along the measures to liberalise the economy that would create new employment opportunities, there is need to encourage entrepreneurship and self-employment particularly in the light of fast developing technology. This would spur an upward movement of people and each entrepreneur can provide work for one or more persons. Jobs and self-employment opportunities have to be encouraged in sectors like agriculture, plantations, and in a variety of infrastructural activities, etc. Employing techniques that involve a judicious mix of machines and manual labour, **the country's enormous economic potential can** be exploited to the benefit of the less fortunate and most exploited sections of the population. Without administrative and political decentralisation the goals of **'social justice'** may ever remain a dream. Letting people to decide their needs of development not only generate social and political awareness among them but also instil a sense of self-respect and build strong leadership at the local and community levels. *(Shashi Kant, Roll No. 10402003, Department of Chemical Engineering. IIT Mumbai)* I am highly grateful and acknowledge both Dr. Paras Jain and Shashi Kant for their scholarly articles on Social Justice which I have used in my paper.

STRUGGLE FOR SOCIAL JUSTICE AND ITS IMPACT ON TAMIL NADU: A POST-INDEPENDENT EVALUATION

Prof. B.S. Chandrababu

I

The constitution makers of India have adumbrated the need to ensure the concept of Social Justice in our constitution in the Preamble itself. The very first sentence of the Preamble declares, **“We the people of India having solemnly resolved to constitute India into a Sovereign Socialist Secular Democratic Republic and secure to all its citizens Justice-Social, Economic and Political”**. No constitution of any country emphasized Social Justice to the extent as our constitution has stressed.

In compliance with the constitutional guarantee, today the country has recognized that Social Justice improve the quality of life for the oppressed and depressed classes in our society and promote their welfare in an orderly

disciplined manner. It ensures equality of status, equality of opportunity and developmental facilities to all.

South India in particular is a pioneer in upholding and promoting this concept, not only after independence, even prior to it and the emerging scenario consequent upon this testify to it. In this context, the role and contribution made by Tamil Nadu is path-breaking in the history of the sub-continent.

The British paramountcy was established in India more or less in full from the 19th century. Their capitalistic and monetisation of economic policy, annihilation of rural industries, uniform civil and criminal administration, exploitative land revenue system, and new education policy with a thrust on near-liberal orientation and their

efforts at promoting English education, introduction of new transport and tele-communication system have not been the “colonial burden” as it was claimed by the colonists but facilitated the “economic drain” of the country in their favour. These have in contrast to their expectations, have also contributed among the Indian beneficiaries and sufferers a sense of unity and awareness about their rights.

Thus with the emerging changes in the socio-economic and political space in the Indian landscape, impacting Tamil Nadu as well, from 19th century onwards, had prompted individuals and other organizations to launch struggles to secure social justice to its people. Such struggles took social religious and radical dimensions enlisting and enrolling different sections of the affected people, in their avowed goals.

During 19th and 20th centuries, those struggles and upheavals include, social and religious equality of the community of people on par with the advantaged castes, equality in the available opportunities to grow by freely opening avenues in education and jobs for those who have been denied such rights, emancipation of Scheduled castes, Tribes and Women from exploitation and gender-bias.

The communal G.O. and the reservation policy of the State that ensures equal opportunities to the deserving men and women of all hues with the exception of a few well-to-do historically advanced communities, in the spheres of polity, education and jobs, has become a phenomenon, is the result of the **relentless struggles launched by Periyar EVR's** Self Respect Movement and Dravidian Association, some progressive political parties, the Dalits and Women organizations as also peasants in Tamil Nadu. It is a saga of unending struggle of the stake-holders, because of its magnitude and the volume of resistance it has to encounter while achieving justice.

The paper besides examining and evaluating the contribution made by the above organised efforts to secure Social Justice for the people of Tamil Nadu, assesses the impact accruing from its present status on society.

II

The issues and themes that social activists, political parties and other organisations had **taken up among others, realise the goal of ‘Social Justice’ continued with vigour and enthusiasm** trading upon constitutional guarantees in the post-independence period till date.

Certain provisions and clauses are found their inclusion as essentials and directions to establish a society based on equity and social justice in our constitution as a gift, guide-book and manual of the post-independent India. Most important among them are as below:

- i) Abolition of untouchability and reservation for Scheduled castes and Tribes in education and jobs as also in the political space.
- ii) Equal opportunities to all in all societal avenues to grow economically as well; irrespective of caste, creed, religion, race and sex.
- iii) Abolition of slavery in any form in any sector

In addition the constitution also facilitated some amendments to get passed in future to make good the loss towards securing Social Justice to the people hitherto not accommodated in the provisions of the main constitution.

At the national level Dr.B.R.Ambedkar and **in Tamil Nadu Periyar EVR from 1920's onward** still their death and Dr.Ram Manohar Lohia in the North from 1956 to 1967 championed the cause of the Scheduled castes and tribes and non-Brahmin Backward classes for communal reservation according to their population.

The communal Reservation policy followed by Ministries of Madras and Tamil Nadu State after independence has inherited a two-decade history of communal reservation **policy adopted since 1920's.**

The Justice party Ministry in the Madras Province first introduced Communal Reservation system by issuing a G.O. in 1922. This G.O. ensured reservation to non-Brahmins, minorities and Scheduled castes along with Brahmins as well in education and government services in the Presidency. But this G.O. was implemented from 04/11/1927 only with a break-up detail comprising five categories as below :

Brahmins : 16%
Muslims : 16%
Indian Christians & Anglo-Indians : 16%
Non-Brahmin Hindus : 44%
Scheduled castes : 8%

Further , till 1947, i.e. prior to independence, with a change in thrust in identifying and revising the Communal Reservation System, the following pattern was followed :

Non-Brahmin Hindus : 44%
Brahmins : 16%
Muslims : 8%
Anglo-Indians : 8%
Other Minorities : 8%
Scheduled Castes : 16%

Finding fault with this new distribution of reservation, Periyar EVR at a Non-Brahmin Conference held in Thiruvavur in 1941, said that the well-to-do among the non-Brahmins were principal beneficiaries, in this arrangement and therefore it should be revised to accommodate the poor among the backward classes.

The communal GO giving representation to various communities, till the congress government took over the reins of the government of Madras State in 1947, had been subjected to revision in order to bridge the gap between the high caste non-Brahmins and low caste non-Brahmin representation. Accordingly the government under the Chief Minister-ship of O.P.Ramaswamy Reddiar issued a G.O. on 21/11/1947 detailing the communal representation as under:

High Caste Non-Brahmins : 44%
Backward Caste Non-Brahmins : 14%
Brahmins : 14%
Muslims : 7%
Indian Christians & Anglo Indians : 7%
Scheduled Castes : 14%

This communal reservation policy was challenged in the High Court of Madras and the

Supreme Court of India in 1950. The courts struck down the communal reservation system of the Madras Government terming it unconstitutional. Periyar EVR along with like-minded political parties launched a state-wide mass protest against the court judgement. Jawaharlal Nehru, the then Prime Minister of India, responding to the just demands of Periyar **EVR's protest, came forward to introduce an amendment legalising the communal reservation policy of the State in 1951.** The role and contribution made by Dr.B.R.Ambedkar in bringing this first Amendment to the constitution passed in the parliament is praiseworthy.

After obtaining this constitutional guarantee and in deference to it the Madras government in September 1951 issued a new G.O. that ensured 60% reservation for General category of people, 25% to Backward classes and 15% to Scheduled castes and tribes. Subsequently, the Madras government under the Chief Minister-ship of K.Kamaraj issued a new G.O on 30-4-1984 reducing the General category Quota to 59%, and increasing the Scheduled caste and tribe quota to 16%.

When the Communal Reservation System was almost resolved at the time, a fresh issue was raked up with the introduction of new elementary school scheme (Kulalavimurai) by the then Chief Minister of Madras State C.Rajagopalachari in 1953. Periyar EVR, the Communist Party of India, the DMK, and Muthuramalinga Thevar opposed this new education policy on the ground that if it is implemented it would deny the opportunities of the socially, educationally and economically backward classes and the Scheduled caste pupils to choose a vocation of their choice instead of taking up hereditary professions of their parents and ancestors. In the midst of massive protest across Tamil Nadu, C.Rajagopalachari, the Chief Minister of the State resigned, and K.Kamaraj of the Indian National Congress succeeded him as Chief Minister in 1954. Immediately after assuming power, **K.Kamaraj revoked the order on the "caste occupation curriculum" passed by the past Chief Minister.** Above all, for the first time, in the post-independence Madras State, an ordinary person belonging to backward class became the Chief Minister. This is a victory for the struggles launched by the socially conscious people of the

State. It is the pride of Tamil Nadu, with this precedent set in motion by K.Kamaraj, M.Karunanidhi of DMK, with similar class and caste background became the Chief Minister of Tamil Nadu in 1969.

It was during the Chief Ministership of K.Kamaraj education was made free to children upto 11th class along with free uniforms to weed out caste, creed and distinctions among young minds. Besides, the State under his stewardship had tried to build at least a primary school in every village. An enlarged Noon Meal Scheme was also introduced in schools. This had helped increase the enrolment of first generation learners largely belonging to Backward and Most Backward classes and Scheduled Caste/Tribe children. Indian Institute of technology was established in Madras due to his efforts. Coming to the rescue of agricultural sector, K.Kamaraj was instrumental to boost **State's irrigation by building a number of dams and canals across rivers.**

Soon after constitutional amendment ensuring and enabling the States to frame appropriating laws under article 15(4) of the constitution of India, the Government of India to assess and quantify the legitimacy of reservation of backward classes appointed two commissions; one under the chairmanship of Kaka Saheb Kalekar in 1953 and another one under the chairmanship of B.P.Mandal in 1979. The Report of the first commission was not considered favourable by the Union Government and the recommendations of the Mandal commission was after a long delay and in the midst of stiff resistance of the vested interests implemented by the then Prime Minister V.P.Singh in 1990 ensuring 27% of reservation to backward classes in education and in all government services and other private institutions which were directly or indirectly received assistance from the government. Cowed down by the resistance and due to number of legal challenges, P.V.Narasimha Rao who succeeded V.P.Singh as Prime Minister of India and to placate the rightist forces with a Supreme Court ruling introduced a creamy layer concept in the Backward class reservation, thus tried to eliminate a some-what well-to-do from this class. Further, the Supreme court in different judgements pronounced in 1992, 1998 and 2003, denied reservation in private institutions

and ruled that the reservation cannot be applicable to all higher posts in government services too.

Meanwhile Periyar EVR demanded that the reservation for Backward class be raised from 25% to 33% and claimed that even this increase was not in proportion in the State. Responding **to Periyar EVR's demand, the DMK government** under the Chief Ministership of M.Karunanidhi constituted a Backward classes commission under the chairmanship of A.N.Sattanathan in 1971. The aim and objective of the commission was to assess the progress made by Backward classes in the fields of education, economic status and employment in government services. In deference to the report, the DMK Government in 1971 revised the percentage in the communal reservation scheme as under :

Backward Classes : 31%

Scheduled Castes & Tribes : 18%

Surprisingly in yet another Supreme Court ruling given in 1976, that in view of the increase in the population of the Backward classes in States, giving adequate representation to them may not violate article 16(4) of the Indian constitution. This judgement enabled the State of Tamil Nadu to further increase, the percentage of communal Reservation over and above 50% stipulated by the earlier Supreme court judgement, to 68% by the AIADMK government headed by M.G.Ramachandran on 01/02/1980 as below:

Backward Classes : 30%

Most Backward Classes : 20%

Scheduled Castes & Tribes : 18%

For the first time a separate communal reservation was made for the Most Backward classes as per the recommendations of the Sattanathan commission and J.A.Ambasankar commission.

Again when DMK was in power between 1989-90, as per the Supreme court judgement instead of 17% and 1% reservation to be given to Scheduled Castes and Tribes, the government increased their reservation as 18% and 1% respectively and thus increased the percentage of total communal reservation to 69%. When this increased communal reservation was again

challenged in the court of law in 1993-94, the then AIADMK government under the Chief Ministership of J.Jayalalitha, along with the support extended by DMK and other political parties passed a resolution unanimously in the State Assembly urging the Union Government to amend the constitution appropriately legalising the States Communal Reservation System. Subsequently a Bill on these lines was passed on 31/12/1993 and sent to New Delhi seeking the consent of the President of India. Responding positively, the Union government recommended the President to give his consent to which he obliged favourably. However even this **arrangement is not free from court's intervention.** Therefore, all the likeminded parties along with Dravidian Political Parties are still urging the Union government to bring in necessary changes in the article 15(4) and 16(4) of the **constitution and free the State's Communal** Reservation policy from being scuttled by the court. The struggles continue till date with a more than a nine decades of legacy behind to serve as source of inspiration.

III

Both the National and Regional parties, operating in Tamil Nadu with separate women wings attached to them besides few other independent women organisations, have been taking up the cause of women problems, their rights and issues impacting their self-esteem, dignity and empowerment either in co-operation or in confrontation with the changing establishments since independence – both Central and the State Government of Tamil Nadu. A host of laws and legislations followed by constitutional guarantees against gender-bias, have placed women in a positive transformatory situation. Periyar EVR and his Self-Respect Movement and Dravidar Kazhagam since **1920's have played a seminal emancipatory** role for them through a series of demonstrations, speeches and writings for well over seven decades. The communist party of India along with its Tamil Nadu Democratic Women Federation, both Congress and Dravidian political parties that have ruled and presently ruling have ensured their rightful place in the society on par with their men-folk by taking up various welfare measures.

The DMK government under C.N.Annadurai and M.Karunanithi have legalised

the Self-Respect marriages and passed Property Inheritance Rights for Women legislation. The Self Help group Scheme introduced by the **government in 1980's is really a significant** economic activity meant for women. These measures have really helped to give a dent to the caste-ridden and tradition bound society to an extent besides empowering at least a section of women to a greater extent.

Likewise AIADMK's M.G.Ramachandran's Ministry, introducing a world acclaimed Noon-Meal Scheme in Schools across Tamil Nadu on a larger scale and thus contributed a lot in the increase of girl student enrolment in schools. Under the Chief Minister-ship of J.Jayalalitha, among a number of welfare measures launched for women and child development she made education free for women upto college education and equipped them with necessary education facilitating logistics. By and large, the women belonging to the Backward & Most Backward classes and Scheduled caste and tribes who constituted the majority in the total population of the State stood to gain a lot by these measures.

While positive aspects of Women development and empowerment are being pictured, the incidents of crimes against women and atrocities committed on women as also honour killings have been on the increase and it **draws everybody's attention today.** It **belies** hopes of many in a welfare State like ours when half of the population is being placed at the receiving end. According to an article of Ramesh Chakrapani, published in Frontline magazine, dated April 15, 2016, in the name of Honour Killings as many as 81 suspected murders and suspicious deaths of young girls and boys who married outside their caste have been reported since 2013 in Tamil Nadu alone. And of the 81 deaths, nearly 80% caste Hindu girls who married Dalits were murdered by their family members. Further the majority of Dalit girls who had married caste Hindu youths were either driven out of their **husband's houses or** abandoned.

IV

No other State in India other than Tamil Nadu which had a consistent and long history of opposing caste distinctions and untouchability tooth and nail and in this like Dr.B.R.Ambedkar, Periyar EVR and his Movement had the

distinction of attacking the ideological basis of the caste system and there was absolutely no place for untouchability to exist in their agenda.

In deference to the constitutional guarantees, The Protection of Civil Rights Act, 1955, Protection of Civil Rights Rule 1977, The Scheduled Castes and Scheduled tribes (Prevention of Atrocities) Act 1989, The Bonded Labour System (Abolition) Act, 1976, The Child Labour (Prohibition and Regulation) Act, 1986 and The Forest Conservation Act, 1980 were passed by the Central Government and are in force all over India. In addition to those, the states like Tamil Nadu have opened a separate department for looking after the welfare of Scheduled Castes and also a separate ministry is functioning in the state to develop the enforcing authorities and to prevent the recurrence of atrocities committed on this section of people. In January 1972 the Home Department of Tamil Nadu Government had set up Mobile Police Squads in Coimbatore, Madurai, South Arcot, Tanjavur, Thiruchirappalli and Thirunelveli for prevention of such cases. By making the practice of untouchability a cognizable offence that invites arrest and fine, the governments at the centre and states have been committed to the cause of the Scheduled Castes. In contravention of all these guarantees, safeguards and punishments especially after Independence, about fifteen major conflicts between Scheduled Castes and Non-Scheduled Castes took place leaving behind hundreds of lives lost, crores of rupees worth private properties and public properties either looted, torched or destroyed in Tamil Nadu. The police reprisals also contributed to these conflicts and resultant loss of lives. Except one incident which became an event later, that is the Meenakshipuram conversion incident wherein we found about 282 families embraced Islam protesting against the discriminatory attitude of the non-Scheduled – caste population, all the other communal conflicts started with violence and ended in inflicting hardship on the Scheduled-Castes whose sufferings far surpassed the non-Scheduled-Castes. All of them provoked conflicts and consequent reaction of the Scheduled-Castes was to show their assertion against discrimination and exploitation.

These violent rank caste conflicts took place between Scheduled-Castes on the one

hand and the caste-Hindus on the other backward classes, like Nadars, Kallars or Mukkulathor, Vanniars, Reddiars, Pillaiars and Nayyakars on the other. Most of these provoked conflicts were for want of basic civil rights and cultural participation in festivals and access to other public utility places. For claiming rights over panchami and poramboke lands and while demanding government notified wages, these Scheduled-Castes were made the target of attacks. On few occasions, when the Scheduled-Caste womenfolk were sexually abused and assaulted by the non-Scheduled-Caste youth, it triggered off violent opposition from the Scheduled-Castes. Some of these conflicts even spread like a wildfire to other adjoining districts putting people to untold miseries. At Keezhvenmani, in Thanjavur district in 1968, when the Scheduled-Castes associated with the Farmers Association led by the communists, demanded increase in wages as per the government regulated wages and made known to the caste Hindu landlords, their boycotting work, in the event of their demands not met with, the landlords without trying to understand the rationale behind their demand in a fit of anger torched their houses in which more than fifty Scheduled-Caste workers perished.

The communal conflict that broke out in Bodi-Devaram, Madurai district in 1989 and spread to 53 other villages cost the lives of 26 people. Six of them died in the police firing alone. Began with the Scheduled-Caste demand for better water, road and electricity facilities, the non-Scheduled-Caste village administrator to whom these problems were addressed got engaged and his desire to teach a lesson to the Scheduled Castes in violent conflict, rocking two to three districts of the state.

In 1996, opposing tooth and nail the election of Scheduled-Castes as village Panchayat President and Vice-President, the non-Scheduled-Caste population in Melvalaru Village, Madurai, in a most brutal way butchered seven Scheduled-Castes including the Scheduled –Caste Village President in broad day light. All civilized societies should hang their heads in shame for this act of barbarity.

In spite of 'Untouchability' has been legally abolished, even today the stigma of 'untouchability' still exists in its violent form in remote villages in Salem and Virudunager

districts of Tamil Nadu. In village tea-shops, a two-tumbler system is in vogue, according to which, one steel tumbler for non-Scheduled-Caste and another separate tumbler made of aluminium for Scheduled Castes are kept for serving tea.

What do these struggles, conflicts and crimes placing the Scheduled-castes always at the receiving end, ultimately reveal to humanity? Who is to blame for all these? Have we to blame the authorities for their failure in enforcing the laws and regulations effectively on the perpetrators of violence? In fact, the systematic failure of the establishment and the lack of attitudinal change among the perpetrators of barbarity have undoubtedly stirred the conscience of the Scheduled-Castes who, towards achieving equity and justice, had to react and fight. The role played by Viduthalai Chiruthaigal Katchi (Scheduled-Caste Panther Party) of Mayilsami and Thirumavalavan, **founded in 1980's, Pudhiya Tamizhagam (New Tamil Nadu)** of Dr. Krishnasamy, yet another of socio-political outfit of Scheduled castes **emerged in 1990's and the left parties both CPI and CPI(M)** in Tamil Nadu in integrating and sensitizing these people for achieving equality and social justice are really significant. Especially the left parties in Tamil Nadu have been in the Vanguard of integrating the conflicting castes for a common cause of abolishing caste completely from society and uniting the poor landless exploited sections belonging to the non-Scheduled Castes as well with Scheduled Castes against exploitation and discrimination perpetrated by the rich and high Castes. By and large, the Scheduled-Caste problems are of social, economic, political and cultural in nature. Until they are addressed both by the Non-Scheduled Castes and establishment by strictly enforcing laws, such conflicts would continue.

CONCLUSION

The Communal Reservation policy is based on the principle that in a society of opportunities denied to people and the inequality and discrimination that is meted out to the aggrieved as a result of this, it is the responsibility of the Welfare and democratically elected State to render justice to the affected by correcting it appropriately. Of Course, the Communal **Reservation System is not a "be all and end all"** arrangement in a welfare State. It is one of the

means to reach out to the disadvantaged. Therefore, as alleged by its critics, it is not a charity-induced system. It is the human right of the excluded, marginalised and those who are denied of opportunities to grow and lead a decent life. People mobilisation is essential to see that such a system is effectively implemented with necessary changes effected in the constitution so that there may not be any judicial road-block.

The DMK government under the Chief Ministership of M.Karunanidhi attempted to socialise the Priest/Archakas post in temples in favour of non-Brahmins on par with the hereditary priests of the Brahmin community, by passing an Act in 1971. Till date, it has not been implemented due to opposition and judicial obstruction. The concept of Social justice also stresses that irrespective of caste all are equal before God and are entitled to serve God like others. Social Justice Struggles should have this issue in agenda even Backward classes and Scheduled caste trained aspirants in this field must be permitted to serve in the temples as Archakas as most of the Archakas serving in temples are paid by the government.

Despite several laws and legislations passed by the Union Government and the Tamil Nadu Government, from time to time, to safeguard the rights and interests of women, still their status, condition and issues concerning their empowerment have not been the subjects of complacency. Dr.B.R.Ambedkar has said that **the real Scheduled castes with all their "slapped ignominy" were the women-folk** belonging to that community. It is true that they are more exposed to sexual-abuse, harassment and exploitation due to gender-bias at the hands of non-Scheduled castes in society. This issue needs to be addressed with deep social concern. Besides, mostly the women belonging to Backward classes, Most Backward classes and Scheduled castes are very badly affected by the incidence of Honour Killings that are denting the human conscience of society in Tamil Nadu. A legislation followed by a stringent action on the promoters and perpetrators of this heinous crime is desideratum now.

Among several measures that both Union and State of Tamil Nadu have been taking, a much more importance and encouragement given to Self-Help Groups would go a long way

in making women self-assuring both socially and economically. Further, like their 50% reservation of seats given in Local Body Elections by the Dravidian Political parties in power, a similar effort to extend reservation to State Legislatures and parliament would help enhance their participatory role in the development activities of the State. The central government should be prevailed upon in this issue.

It has been estimated that about 50% of Backward and Most Backward classes population and nearly 70% of the Scheduled Castes and Scheduled Tribes either as small land owners or landless agricultural labourers in the State are dependent on agriculture for their livelihood. The Land ceiling Acts passed by the State of Tamil Nadu since independence have not met the genuine demands of the majority of the landless peasants in the State. It has been noted with dismay that out of 2.5 lakh acres of Panchami lands distributed by the colonial government in Madras between 1892 and 1941 till date, only 70,000 acres of such lands were located and traced and the remainder of 1,80,000 acres of lands of the Scheduled Castes have been illegally owned by non-Scheduled Castes across the State. It smacks of social injustice until they are recovered and redistributed among the real beneficiaries. Also the Tribal Forest Act of 2006 passed by the Union Government enabling the tribals living in the forests and hilly

areas of Tamil Nadu to claim and own the lands and get unhindered access to forest products in their respective areas of habitation, the Tamil Nadu government is yet to come to these hapless tribals' help citing some imaginary litigation.

Eventually and essentially, in this context a larger issue remains unaddressed. Does the reservation in education and jobs for the SC/ST and BC and MBC in state aided and funded institutions, excluding private institutions, which right, the Champions of Social Justice, vociferously demanding not with standing, alone suffice to socially, educationally, economically and politically help to empower, both men and women to these classes? Could we be complacent with these measures in this age of alarming rise in the unbridgeable gap between the rich and the poor?

How can it be a real social justice rendered when the wealth of this country is not evenly distributed to these people? There should be a justifiable and reasonable distribution among them with regard to natural resources like land and water, educational institutions, road, transport and communication avenues, electricity, hospitals, banks and insurance companies, cultural nuances like art, literature, faiths and festivals. We can achieve real Social Justice if we enlarge the scope of our struggle further to realise this goal.

SOCIAL JUSTICE AS GENDER JUSTICE

Dr. T.K. Anandi

Social Justice is a vast subject as we all know which cannot be discussed in a couple of hours. Very many areas come under SJ. Health, Education, welfare of vulnerable groups, Human resources, poverty, Hunger, empowerment, movements, organizations, women, children, SC and STs TGs etc. etc. All these areas demand welfare programs any human needs in a just society. Just society in the sense, where one have democracy and secularism spread throughout the society. But now in India, **even if you don't have neither democracy not secularism ...it has been proved that even though you don't have any of these, you can discuss social justice.**

Here I would like to discuss justice of genders as a crucial element of social justice.

Social Justice is not possible without strong and coherent redistributive policies conceived and implemented by public agencies. If we believe truth and justice are concepts independent of gender, the forces of progress are null and you are an enemy of social justice,

The only institution capable of imposing social justice is the state or the Government. Self-declared champions of social justice believe that state can remedy all perceived wrongs. Anyone who disagree is an enemy of social justice.

Gender parity is essential for Social justice. In South India there are only 11 women members in the Lok Sabha who come to 2%. The development indices of a country are decided by the social location of women. In that, when we discuss Kerala scenario I give below the details:

There are a number of studies regarding Kerala women calling it a paradox- Enigma etc.

Kerala Sex- ratio is 1000:1084 population % 48% : 52 %

48.82% of the live births are female. Mothers with antenatal checkups 96.1 with 94.5% in rural areas.

MMR below 130 - 1,00,000 live births

Education - at the elementary level, girls (95.65) tend to perform better than boys (95.25)

Kerala have reached near equality in youth literacy during 1991 to 2001 (youth literacy for male- 99.04, female - 99.03). 49.9% higher education 78%

Kerala is the only state which has introduced gender budgeting and gender auditing.

Challenges; Kerala seems to be aging fast with people who have above 60 years forming 12.65 percent of the Total population and the percentage of Female population in 60 plus age group is about 55.04 %.

CAW - 11302.

As per the reports of Sample Registration System, in Life Expectancy at birth, Kerala stood first among the states of India with 72.2 and 77.9 years for males and females respectively.

Kerala's infant mortality rate was 9 deaths per 1,000 live births for boys and 11 deaths per 1000 live births for girls, against the National average of 33 and 36 for boys and girls respectively.

With low economic growth high social growth is possible in Kerala. That is what had made her known as Kerala Model.

Major Schemes under department of Women and Child development

The Department of Women and Child was established in 2017 bifurcating The Social Justice Department. The Department of Women and Child Development started functioning in 24.11.17 for ensuring the holistic, physical, psychological, cognitive and emotional developments of women and children and a gender sensitive family- community program and policy for the development and protection of women and children.

The Department of Women and Child Development provides policy guidance, designs targeted programs and projects for women and children, strengthens capacity development for gender and child rights mainstreaming, coordinates, monitors and evaluates effective service delivery, for the empowerment of women and children.

- There are 292 Offices and 44 Welfare Institutions working under WCD Department.
- Under WCD centrally sponsored program ICDS is functioning and there are 16 District Program Officers, 258 ICDS projects, and 33,115 Anganwadis are working under ICDS.
- Under this project, child protection society, state Adoption Resource Agency, 14 district child protection units etc. are functioning. Apart from this, 27 child care institutions like

15 childrens' home

9 Observation homes

2 special homes

1 place of safety is functioning.

- There are 12 Mahila Mandirams working under WCD.
- There are 2 After Care Homes, One Short Stay Home, One Rescue Home, and One day Home under WCD Department.
- There are 13 Nirbhaya Shelter Homes under WCD for providing better protection services to survivors of sexually abused with grass root level interventions and community surveillance mechanisms, enabling the unfortunates to emerge as survivors through effective rehabilitation and after care programmes.
- There are 14 Women Protection Officers (WPOs) in all the districts to handle the cases that comes under Domestic violence.
- *Directorate of women and child initiates many schemes for the overall well being of children in the State. The Schemes are*

Mobile Creche

- Care of the children of migrant labourers.
- In Kerala Mobile Creche started in 9 districts
- Government has given Sanction to start in all the 14 districts.

National Creche Scheme

571 creches have been taken over by the Government from the NGOs out of which 485 are functioning well.

Government is providing 30% of the working fund for the crèche.

Abhaya Kiranam

- Protection of Poor widows
- Monthly Rs. 1000/- is given to each
- 700 of them are the beneficiaries

One Stop Centres

- These centres will provide a range of integrated services under one roof to the women affected by violence. Intended facilities and services at OSC include transportation, medical assistance and facilitation in dealing with the police, legal aid, psychosocial counseling and temporary shelter if required. In Kerala 14 One Stop Centres are working in all districts.

Mangalya Plan

- The Government of Kerala envisages the scheme called Mangalya to encourage widow remarriage. The scheme imparts financial assistance for the widows / divorced to remarry.
- Financial Assistance of Rs.25000/- is provided to each.
- Financial Assistance given to 253 widows for remarriage

Sahayasthanam

It was started in 11.09.2018. This Scheme is for Widows below 55 years and her Annual income is less than one lakh rupees. An amount of Rs. 30,000/- is given for starting a business. It is given to 10 widows in one district . 140 Widows got this help .

Ujjawala Scheme

- To prevent trafficking of women and children for commercial sexual exploitation through social mobilization and involvement of local communities, awareness generation programmes, generate public discourse through workshops/ seminars and such events and any other innovative activity.
- To facilitate rescue of victims from the place of their exploitation and place them in safe custody

- To provide rehabilitation services both immediate and long-term to the victims by providing basic amenities / needs such as shelter, food, clothing, medical treatment including counseling, legal aid and guidance and vocational training
- To facilitate reintegration of the victims into the family and society at large.
- To facilitate repatriation of cross-border victims to their country of origin

Aaswaasanidhi

The survivors both children and women of severe cruelty are given immediate financial help. 19 of them are given help.

ATHIJEEVIKA

This Scheme is mainly used to help the destitute women whose husband died, or bedridden due to illness or accident.

An amount of 50,000 is given as one time financial Assistance

One-Day Homes to provide safe accommodation for women (Ente Koodu Or My nest)

Social Justice Department has been working collectively with other departments for effective implementation of various women related schemes and strengthening of women empowerment programs. As part of new initiative, Department has devised a scheme to open 'One-Day Home' to ensure safe accommodation for women who travel alone and reach the capital for various purposes and can stay there at affordable rates.

Women who come from other places to cities for personal as well as various other purposes such as writing tests, appearing for interviews or attending meetings can stay in the one-day home for a short period. The main objective of the scheme is to provide a safe stay and food at a reasonable rate.

During the initial stage of the project the space available at the 8th floor of the Kerala State Road Transport Corporation building in the heart of the city has been identified for the purpose. The pilot phase of the scheme is being launched as a joint venture between Thiruvananthapuram Corporation and Social Justice Department.

PRATHYASA

"Prathyasha" is an innovative programme launched as a joint venture amid Individuals, Corporates and Kerala Social Security Mission (KSSM). Without any doubt, marriage is part of the social agenda of human life, but in poor families' parents are not able to afford the escalating marriage expenses. The main objective of this Prathyasha scheme is to help economically poor parents in getting their daughters married.

Kaithangu

- This Scheme is to Protect violence against Women & Child
- It was done through Kudumbasree, Asha workers, Prerakmar, Mahilapradan Agents, Janamaithri Police, Youth Clubs, Residents Associations.
- In our state "Kaithangu Karmasena" was introduced in 70 Pachayats and 350 wards.

Website

'E-Jeevika' is a new website introduced for the public to know about the Schemes and works of the Department

With the help of NIMHANS, School Counsellors and Voluntary workers of the WCD Department give Counselling to women and children in the flood affected areas.

CHILDREN

Our Responsibility to Children (ORC)

The project ORC is designed to address the increasing tendency among the youth and adolescents to indulge in deviant behavior. The project ORC is a planned community intervention that connects with children and young people between the age of 12-18 years and to create a multi- collaborative platform for Government agencies and professional agencies, parents and teachers to equip youth with appropriate know-how to face the challenges of the world they live in.

The proposal is to develop a state level programme with community participation to offer psycho-social and emotional support to children to prevent social deviation and to rehabilitate socially deviant children. This can be materialized with the support of the following

stakeholders like police, education, social Justice, LSGD, health etc. The project has already been implemented in 93 selected schools and it is proposed to extend the program to 67 schools in the state through Integrated Child Protection Scheme during 2017-18.

Total Rs. 4,19,61,386/- spent under this scheme.

The beneficiaries of this scheme are the children of 304 Government /Aided school.

Kaval

KAVAL is a community based approach to reach out to children in bail and providing psycho-social interventions through trained social work professionals in NGOs by entering to a working partnership with the Non-Governmental organizations. The psycho-social care model was developed and implemented through a five tier approach comprising:

- 2425 Children are the beneficiaries of this scheme
- under this scheme an amount of Rs.1,34,81,875 spent.

Saranabalyam

Towards child beggary free, child labour free Kerala

- Triggered by the child beggary/labour incidents in connection with the Sabarimala pilgrimage
- Piloted in Pathanamthitta District
- Extended to four more districts
- Project components :
 - Rescue officers at DCPU level, in collaboration with departments of Home, Labour, LSG etc and society.
 - Field visits to identify children
 - DNA test identify the person accompanying the child and necessary legal actions.
 - Rehabilitation with the help of CCIs
 - 65 children rescued so far

Balanidhi

- Constituted under the section 105 of JJ Act, to mobilize funds from public, to ensure better care and protection of children under the purview of JJ Act.
- K.S Chithra as brand Ambassador

- Mobilizing maximum resource for the well being of children
- Financial support to six children - Rs. 131853/-

First 1000 days

- This scheme is implemented to give importance to the first 1000 days of a **child's** life to know the growth and development of new born baby from pregnancy period to two years of age. First 1000 days is the most critical and crucial period of the **child's** life.
- This scheme started in Attappadi. Now this project spread to ICDS Vellanad, Ranni Additional, Nilambur Additional, Manathavadi, Iritti, Kasargod Additional.

Vignana Deepthi

- An initiative by State Government to overcome the insufficiency of funds under central sponsorship scheme
- Rs. 2,000.00 per child per month for supporting education
- To avoid institutionalization, and restore children in their own homes
- As of now, 1000 children are supported under this programme

Foster Care

Fostering is an arrangement whereby a child lives, usually on a temporary basis, with an extended or unrelated family member. Such an arrangement ensures that the birth parents do not lose any of their parental rights or responsibilities.

This arrangement shall cater to children who are not legally free for adoption, and whose parents are unable to care for them due to illness, death, desertion by one parent or any other crisis. The aim is to eventually re-unite the child with his/her own family when the family circumstances improve, and thus prevent institutionalization of children in difficult circumstances. Foster care refers to physical custody/ care of the child till he/she is able to return to biological family as soon as family circumstances improve and shall not exceed one year.

Ujwala Balyam

Awards for children excelling in arts/ sports/ literature/ social/ cultural avenues.

Gurukulam

Strengthening the mental health and academic skills (Mathematics, Science and Arts) of children of CCIs, through Theatre Workshops, Group Therapy, Behaviour Modification techniques etc.

Thalolam

Thalolam scheme aims to provide free treatment to the children below age of 18, who are suffering from Kidney diseases, Cardiovascular diseases, Cerebral Palsy, Brittle Bone Disease, Hemophilia, Thalassemia, Sickle Cell Anemia, Orthopedic deformities and other Neuro- Developmental Disabilities, Congenital anomalies (Endosulfan victims) and accident cases which needs surgery.

A patient will be eligible for an initial assistance of Rs. 50,000/- only under this scheme.

Additional financial assistance can be met based on the decision of the Superintendent, Head of the concerned

Childline Services (1098)

CHILDLINE is a national emergency toll free phone out reach service for the children in need of care and protection operates on the 1098 number, and is supported by the Ministry of Women and Child Development (WMCD), Government of India and works in partnership with state governments, NGOs, Bilateral/Multilateral Agencies and Corporate Sector. CHILDLINE India Foundation (CIF) has been appointed as the Mother NGO for setting up, managing and monitoring the CHILDLINE 1098 service all over the country. CHILDLINE 1098 service is cited by the Government of India as India's response to commitments under the Child Rights Convention of the United Nations to which India is a signatory.

The service focuses on the needs of children living alone on the streets, child labourers, domestic workers, run away children, Children of sex workers and sexually abused children.

CHILDLINE has responded to a total of 15194271 Calls from inception till December 2008. These calls have been for medical assistance, shelter, repatriation, missing children,

protection from abuse, emotional support and guidance, information and referral to services, death related calls etc. For more information www.childlineindia.org.in

Sponsorship

Sponsorship is the provision of supplementary support to families to meet medical, nutritional, educational and other needs of their children with a view to improving the quality of the life. It is a conditional assistance to enable children who were at risk from being removed from school and send for work, to continue their education.

Types of Sponsorship:-

Rehabilitative Sponsorship:- Rehabilitative Children placed into Institutions by families as a poverty coping measure to reunite them with their families

Preventive Sponsorship:- Preventive Support to families living in extreme conditions of deprivation or exploitation to enable the child to remain his or her family.

Sanadha Balyam

The scheme aims at providing foster care placement for orphaned or abandoned children and its major achievement has been that child-care centres in the State now know what to do with the adoptable children they shelter.

A good number of such children have been adopted by eligible families since the start of the programme. Databases of adoptable children in every district have also been compiled. The **programme's** vision is ensuring a healthy and joyful family life to every orphan, destitute and abandoned child. Its mission is getting all such children out of institutions and controlling the social factors that lead to destitution. It aims to do this through strict enforcement of the provisions laid down under the Juvenile Justice Act and Orphanages and Other Charitable Home (Supervision and Control) Act.

Sruthitharangam

Sruthitharangam (Cochlear Implantation Scheme) envisioned to provide free cochlear implantation surgery for the children in the age group of 0-5 years, who are hearing impaired. The early identification and intervention procedures initiated within six months of age

should be the golden standard for the holistic development of a child with hearing loss. Cochlear Implant is a proven option for the treatment of profound hearing loss. The children from poor families whose annual family income is below Rs. 2 lakh is eligible to get the benefit of this scheme. This scheme is implemented through Government as well as selected empanelled private hospitals in this field.

The objective of this project is to provide cochlear implant to children selected by Regional and State level technical committees for cochlear implantation and to provide financial support for auditory verbal habilitation (AVH) to operated children through empanelled hospital/ centers.

Transgenders

Apart from the above said details Kerala Government under the aegis of social justice department has brought a Transgender Policy in the year 2016.

There is a State cell working under the government. And we have special programs for the Transgenders. ID card given to the TGs.

1. Financial help for Self Employment
2. Financial help for educational development known as “Samanwaya”
3. Skill development training
4. Training in driving to TGs.
5. Scholarship program for students
6. Financial help for conducting marriages of TGs/
7. Financial help for the Sex Assignment Surgery
8. 24 X 7 help line service for Transgender people.

The above said programs and projects are running at present in Kerala. We have three Homes also for the TG people for the post surgery stay.

These are some of the [projects done under Social Justice department and Women and Child Development department till the year 2020. Very many schemes are in planning.

XXXVIII	2018	University of Calicut, Calicut
XXXIX	2019	Osmania University, Hyderabad
XXXX	2020	Annamalai University, Chidambaram

RULES AND BYE-LAWS

(as adopted in 1979 and amended in 1994, 1997 and 2006)

- 1. Name:** The Association shall be a national organization for historical studies on South India and shall be called South Indian History Congress. It shall steer clear of ideologies and ideology-oriented associations for purposes of affiliation and shall maintain its individuality.

2. Office: The Central Office of the said Congress shall be located at School of Historical Studies, Madurai Kamaraj University, Madurai. The working hours of the office are from 10a.m. to 4 p.m. on all working days.

3. Objectives:

- a) to promote historical studies on South India,
- b) to co-ordinate research on historical trends in South India with sister organizations,
- c) to serve as forum for exchange of views through annual sessions and special conferences,
- d) to help in the preservation of historical monuments, relics and records,
- e) to honour historians, who made substantial contributions to scholarship on South India.
- f) to receive and administer funds for the implementation of the above said objectives

4. Membership and Subscription:

- a) As a national forum, the Congress admits as members those who are interested in historical studies on South India, irrespective of any regional consideration. Members of the following categories are admitted:
- b) **Annual Member**, paying Rs.500/- as annual subscription.
- c) **Life Member**, paying a subscription of Rs.4000/-
- d) **Representative Institution**, paying a subscription of Rs.5000/-
- e) **Donor**, paying a subscription of Rs.10000/-
- f) **Patron**, paying a subscription of Rs.10000/- or more. Year is reckoned with the calendar year, i.e. January to December.
- g) Persons seeking membership are to apply in writing or in prescribed form to the Treasurer and send the subscription to him, subject to approval of admission by the Secretary.

5. Privileges of Members

- a) Members are entitled to attend the academic session of the Congress, present papers and participate in discussions. They are eligible to receive printed copies of the proceedings of the Congress at the annual conference on availability.

- b) The following members shall be entitled to vote/contest in the elections for the Executive Committee / Consultative Committee, except otherwise provided i) Patrons and Donors, ii) Representative Institutions, iii) Life Members who have attended at least one session (excluding the current session).
- c) The list of Life Members, eligible to vote/contest in the election shall be displayed at the Secretary's office on the first day of the annual session.

6. Academic Session : The Congress shall meet for its academic session usually in January every year. There shall be a general session presided over by the President or in his absence the senior Vice-President. This will be followed by sectional meetings, organized on thematic basis and each presided over by the Sectional President. The papers that are presented for discussion and accepted by the Sectional President will be considered for publication in the proceedings of the Congress.

7. General Body and Business Session

- a) The General Body is the Supreme authority on policy decisions. It shall consist of members who are eligible to vote as per Article 5 (b). However, members not having the voting right, are eligible to attend the meeting of the General Body and participate in the discussion, unless otherwise decided by the Executive Committee.
- b) The members shall be given notice of 21 days in advance about the meeting of the General Body. This will be held during the annual session of the Congress. One-tenth of the members present shall form the quorum. Resolutions duly seconded may be moved with atleast one day's notice and with the permission of the chair.
- c) General Body shall be the competent authority to take decisions on policy matters. It shall elect members of the Executive Committee and Office-bearers and Convener and Members of the Consultative Committee of the Congress. It shall have the authority to remove any member/ any Office-bearer from respective positions, provided it is by a two-thirds majority of the members present.
- d) It may approve the annual report and the annual budget and ratify the decisions of the Executive Committee / Consultative Committee.

8. Executive Committee

- a) Executive Committee shall be responsible for implementing the policies, programmes and directives of the General Body. It shall consist of a President, three Vice-Presidents, (two elected and one nominated), a Secretary, two Joint Secretaries, a Treasurer, an Editor and fifteen members. All the office-bearers and members, except the President and one Vice-President shall be elected by the General Body.

- b) The President and Sectional Presidents shall be nominated by the Executive Committee.
 - c) The out-going President shall be nominated as one of the Vice-Presidents by the Executive Committee.
 - d) The Convener and members of the Consultative Committee shall be Ex-officio members of the Executive Committee.
 - e) The President shall hold office for one year. The two elected Vice-Presidents, General Secretary, Joint Secretaries, Treasurer and the Editor and members of Editorial Committee and 15 elected members of the Executive Committee shall hold office for two years; but are not eligible for seeking election for the same office beyond two consecutive terms. The Editor and members of the Editorial Committee shall be nominated by the Executive Committee.
- 9. Elections :** The elections will be conducted during the annual conference of the Association, when members of the General Body will be present. The Secretary shall appoint the Returning Officer with the approval of the Executive Committee to conduct the election by single, direct and secret vote. The newly elected Executive Committee shall take charge from the day after the election results are announced and shall be in office until the next Executive Committee is elected. Any interim vacancy in the Executive Committee shall be filled in by nomination by the Secretary in consultation with the President/ Convener.

10. Office-bearers and their Responsibilities

A) President: The President shall have the overall administrative control of the Congress. He shall give his presidential address at the academic session and preside over the meetings of the General Body and Executive Committee. In case of a tie in the voting process, he shall have the casting vote.

B) Vice-Presidents: The Vice-Presidents shall assist the President. One of the Vice-Presidents i.e. the senior among them, shall act for the President in his absence. They shall be in-charge of the enrolment of members in areas assigned by the President and assisted by members of the Executive Committee and report to the General Body.

C) General Secretary:

- a) The General Secretary shall hold charge of the Central Office. He shall be responsible for the implementation of the decisions of the General Body and the Executive Committee.
- b) The Secretary shall maintain the records of the Congress and attend the correspondence. It shall be his responsibility to convene meetings of the Congress

and record its minutes. He is to report the activities of the Congress to the General Body. Also he is to represent the Congress in legal and official transactions.

D) Treasurer

- a) Treasurer shall be in charge of the finance of the Congress.
- b) He shall raise contributions, collect membership fees, issue receipts and maintain accounts.
- c) He shall deposit the funds in the name of South Indian History Congress in the State Bank of India or any other bank, as decided by the Executive Committee and to be operated jointly by the General Secretary and Treasurer. The Treasurer shall submit audited report and annual budget to the General Body.
- d) He shall have an imprest amount of not more than Rs.500/- at a time, to be recouped periodically. He shall release funds for purpose authorized by the Executive Committee or in case of the emergency with the approval of the President / Convener and report the same to the Executive Committee.

E) Joint Secretaries

There shall be two Joint Secretaries-one to be elected by the General Body and the other to be nominated by the General Secretary in his local area to assist/ act for him.

F) Editor

The Editor shall be in-charge of publications of the Congress. He is to collect from the Secretary the papers that are presented at the academic sessions, edit, print and publish them in the proceedings in the name of General Secretary as its publisher. The Editor and members of the Editorial Committee are to be nominated by the Executive Committee.

11. Auditor:

The General Body shall appoint a qualified auditor at its annual meeting to audit the accounts of the Congress for the year ending 31st December.

12. Local Secretary:

The Local Secretary is the representative of the institution, hosting the annual session. He is to raise contributions and obtain grants from funding agencies. The local secretary is to submit details of audited statement of accounts to the funding agencies and the General Secretary Treasurer within six months after the session is over. The host Institution / Local Secretary is to exempt all office-bearers and members of Executive Committee from the payment of conference delegate fee.

13. Consultative Committee

- (a) There shall be a Consultative Committee. It shall consist of a Convener and two Members elected by the General Body from among senior members of the Congress to hold office for Three years and three ex-officio members - President, Secretary and Treasurer of the Congress.
- (b) In case of any possibility of constitutional breakdown, caused by any act of commission or omission on part of any functionary or otherwise, the Convener is authorized to take necessary steps as warranted by the situation in consultation with the Members of Committee, so as to ensure the smooth working of the Congress. He shall report such instances to the Executive Committee / General Body.

14. Amendment to Bye-Laws:

Any amendment to the rules and bye-laws shall be done by specially convened meeting of the General Body with 21 days prior notice and with the approval of two thirds of the members present.

15. Dissolution:

The Congress shall not be dissolved except by a motion passed by three-fourths majority of members
