UGC CARE LISTED JOURNAL

EDITOR'S NOTE

These are hard times indeed but let us not forget that hard times create strong people and strong people create strong communities. I'm really proud and honoured to be a part of the Proceedings of the South Indian History Congress, a quality Journal that has maintained research status and UGC CARE recognition. History stands the test of time and provides scope for exploring the unknown frontiers of research and I applaud Annamalai University, the temple of intellect standing tall and firm in the area of multidisciplinary research. The Department of History has been making history with Eminent Scholars and Research giants over the years. The 40th Annual Session of South Indian History Congress was held at Annamalai University, Chidambaram. The Conference inspired and instilled the need for quality research focusing on originality and multidisciplinary insights.

The UGC has done much setting the standards for original research but when it comes to publications, we still have a long way to go. Competing with International Journals remains a cry in the wilderness. Content, language and methodology must be given in-depth study and learners must learn to unlearn and relearn in this digital era. Rome was not built in a day and hence, writing impressive research papers takes patient and unrelenting effort. However, there are a number of online courses and support platforms that train scholars in this aspect. It just takes heart and a little bit of time.

I conclude with humble pleas to all the researchers in the field to broaden their horizons and look out of the box to find new research zones. Creativity, ingenuity and resourcefulness are the stepping stones to success in research. Covid-19 has put us down but it has also taught us resilience. I urge the readers and researchers to look beyond – remember that even the sky can be conquered. I'd like to end with an inspirational quote by Ayn Rand, the novelist and philosopher: "Do not allow your fire to go out, spark by irreplaceable spark in the hopeless swamps of the not-quite, the not-yet, and the not at all. Do not let the hero in your soul perish in lonely frustration for the life you deserved and have never been able to reach. The world you desire can be won. It exists. It is real. It is possible. It is yours." So, let's put the past behind us and join together to create a research community that reaches out to instruct and to support.

Sri.Sakhariya .T (Thiruvananthapuram)	Dr. K. Vijaya Kumari (Thiruvananthapuram)
Dr. V. Kathiravan (Madurai)	K. V. Ramakrishna Rao (Chennai)
Dr. A. Baskaran (Virudhnagar)	Dr. Arjuna Rao Kuthadi (Osmania University) Co-opted.

GENERAL SECRETARY'S REPORT, 2020

The 40th Session of South Indian History Congress was held under the joint auspices of the History Wing, Directorate of Distance Education, and Department of History, Annamalai University, Annamalai Nagar, Chidambaram, Tamil Nadu on January 31st, February 1st and 2nd 2020. The event was held on the occasion of the 90th anniversary celebration of the University. Prof. K. Sankari, Professor and Co-Ordinator, History Wing was the Local Secretary. Prof. Sankari and her team along with the Head of the Department and faculty members of the History Department did arduous effort for the success of the event. The dedication, hard work and sincerity of the teaching faculties, non-teaching staff, researchers and students of both the departments are the central factor for the grand success of the Session. The University authorities wholeheartedly cooperated with the event by providing all the infrastructure facilities available in the Campus. I use this opportunity to congratulate them all.

The inaugural ceremony of the annual session of SIHC was held at Sastri Hall in the Campus at 10 a.m. on 31st January 2020. Prof. V. Murugesan, Honourable Vice-Chancellor of the University presided the inaugural session. Prof. Arun Bandopadhyay, Professor of History, Calcutta University, inaugurated the Session. Prof. N. Rajendran, Honourable Vice-Chancellor of Alagappa University and former General Secretary of SIHC delivered key note address. Prof. N. Krishna Mohan, Registrar-in-charge of Annamalai University, Prof. V. Thiruvalluvan, Prof. E. Selvarajan, Prof. A Rajasekharan and Prof. A Subbian delivered their felicitation speeches. In the function, Prof. Adapa Satya Narayana, Former Professor of History, Osmania University, Hyderabad took over the charge of General President from Prof. C. Somasundara Rao and delivered his presidential address. Prof. Selva Kumar of Tamil University, Tanjavur, delivered a special lecture. Prof, Sivadasan P, General Secretary of South Indian History Congress presented the annual report of the Organization. Sri. Arun Thomas, Research Scholar, Hyderabad Central University was honoured with the first 'Kasthuri Misro Young Historian Award' (2020). The Proceedings Volume of the 39th South Indian History Congress was released in the function.

The following were the Office bearers, Sectional Presidents, and Members of the Executive Committee for the 40th Session of SIHC at Annamalai University 2020.

President : Prof. Adapa Satyanarayana (Hyderabad)

Vice-Presidents : Dr. G. Anjaiah (Osmania University)
Dr. S. Jayakumar (Alappuzha)
Dr. B.C Mahabaleswarappa (Gulbarga), Co-opted

General Secretary	: Prof. P. Sivadasan (Calicut)
Joint Secretaries	: Prof. M.C. Raja (Annamalai University) Sri. Haridasan. V (Calicut), Co-opted.
Editor	: Dr. S. Ganeshram (Sattur)
Treasurer	: Dr. P. Balagurusamy (Dindigul)
Consultative Committee	: Prof. B.S. Chandrababu, Convener (Madurai) Prof. R.C. Misro, Member (Berhampur) Prof. D. Daniel, Member (Kanyakumari)

Executive Committee Members

Dr. P. K. Aneesudheen (Palakkad)	Dr. Konda Sreenivasulu (Andhra)
Dr. N. V Aski (Jamakhandi)	Dr. S. Nagarathnamma (Bangalore)
Dr. S. Babu (Pondicherry)	Dr. T. Jamal Mohammed (Thiruvananthapuram)
Dr. Balakrishna Hegde (Shimoga)	Dr. G. Dayakar (Hyderabad)
Dr. O.C Promod (Adoor)	Dr. P. Ramakrishna (Hyderabad)
Sri.Sakhariya .T (Thiruvananthapuram)	Dr. K. Vijaya Kumari (Thiruvananthapuram)
Dr. V. Kathiravan (Madurai)	K. V. Ramakrishna Rao (Chennai)
Dr. A. Baskaran (Virudhnagar)	Dr. Arjuna Rao Kuthadi (Osmania University) Co-opted.

Sectional Presidents

Political History	: Dr. Dr. H. Munavar Jan (Dharmapuri)
Social History	: Dr. Bhukya Bhangya (Hyderabad)
Economic History	: Dr. R. Abbas (Dindigul)
Cultural History	: Prof. Bhaskar Reddy (Thirupathi)
Historiography and Maritime History	: Dr. K. L.N Murthi (Belgaum)

Local Secretary

Prof. K. Sankari, Professor, History Wing, Directorate of Distance Education, Annamalai University, Annamalai Nagar, Chidambaram

Endowment/Special Lectures

- Kasthuri Misro Memorial Lecture : Prof. T. Manohar, Kakatiya University
- Prof. T.R Ramachandran : Prof. Iranna Pattar, Karnataka University
Endowment Lecture :
- Prof. B.S Chandrababu : Dr. Konda Sreenivasulu, Andhra Pradesh
Endowment Lecture
- Prof. B.C Ray Memorial Lecture : Prof. Pasilathil, SS University, Kalady,
Kerala
- Prof. Peddarappu Chenna Reddy : Prof. Rekha Pande, Hyderabad University
and Dr. Subhashini Endowment
Lecture
- Govt. Arts College Coimbatore : Mr. Raja Mohammed, Pudukkottai
Endowment Lecture
- Prof. Janaki Endowment Lecture : Dr. Y. Swarupa Rani, Hyderabad

The General Body meeting was held at 2 pm on 2nd February 2020 at the High-tech Hall of the Innovation Centre, Annamalai University. The valedictory function was held in the same venue at 4 P.M. The office bearers of SIHC, the members in the organizing committee of the Session and retired professors of the Department of History, Annamalai University were honoured in the valedictory function.

I use this opportunity to extend my gratitude to Indian Council for Historical Research for granting financial assistance to all academic activities of the SIHC. Sincere support and cooperation of the Office Bearers and Executive Committee members contribute much for the progress of the Organization. The 40th Session of SIHC was a grand success because of the extension of support by the well-wishers and members of the South Indian History Congress. The University made good arrangement for transportation, registration, presentations, food and accommodation. On behalf of the SIHC, I appreciate and congratulate the untiring efforts of the faculty members, researchers, and students of the Department of History, and the Vice Chancellor, Registrar and members of Staff of the Annamalai University for making the event a grand success.

Prof. P. SIVADASAN
General Secretary

GENERAL PRESIDENT'S ADDRESS

BUDDHISM AND THE IDENTITY OF TELANGANA, SOUTH INDIA

Prof. Adapa Satynarayana

Esteemed President, Hon'ble General Secretary, Respected Office bearers of the South Indian History Congress, Distinguished Chief Guest, Invitees, Learned Delegates, Research Scholars, Students, Ladies, and Gentlemen.

At the outset, I express my heartfelt thanks to the Executive Committee and General Body of the South Indian History Congress for electing me as the General President of its 40th Annual Session. I deem it a privilege and honor and accept it with all humility. I also consider this to be a kind of recognition of my modest work on the history and culture of modern South India, especially the Telugu-speaking areas. I am aware of the academic achievements of this prestigious academic association since its inception in 1978 and the contribution made by several distinguished scholars, including my Teacher late Professor Sarojini Regani. I am glad to be part of the notable contribution made by this Congress to several aspects of South Indian history and culture. Today, this Session is being held in the great historical and spiritual center of the South, hence I chose a topic related to the religious and cultural identity of the micro-region called Telangana, the youngest 29th State of India. On this occasion, I propose to deliver my address on the theme, **BUDDHISM AND THE IDENTITY OF TELANGANA.**

Sub-Regional Identity

The present-day Telangana was a part of the erstwhile Hyderabad State, which was the largest and the foremost Princely State in India. The State of Hyderabad under the Asaf Jahis emerged after the decline of Bahamani and Qutb Shahi Kingdoms and formed a polygonal tract occupying the center of the Deccan plateau. The medieval historians like Ferishta, Amir Khusrau, Abul Fazal, etc., have referred to '*Telinga*,' and '*Telingana*' as a distinct geographic, ethno linguistic region. Telangana region has also a distinct regional identity throughout the historical period. The Asaf Jahi State was a unique formation that inherited the composite culture of the Deccan region. The personality of Telangana and the Hyderabad culture represents mutual

interaction, co-existence and harmony of a heterogeneous society mainly consisting of Hindus and Muslims.¹

The distinctiveness of historical and cultural heritage of Telangana has been an integral part of the demand for separate statehood. The formation of new Telangana State in 2014 has brought forward several questions and challenges. At the popular level, there has been a feeling that Telangana has become a melting pot, and its identity and self-respect have been undermined. Thus it became a battleground of contending socio-political forces. Attempts are being made to assert its distinctiveness and difference and retrieve its past. Articulation of difference has led to the rediscovery of history and culture of Telangana. The distinctiveness of Telangana regional socio-economic formation, culture and its ethos/values formed a basis for the demand of separate statehood both during the pre and post-independence periods. When compared to other state formation movements in India, the Telangana movement occupies a unique place, as it articulated the collective cultural ethos and values, cutting across caste, community, and gender and asserted its separateness. The overarching macro-regional identity, solely based on language, subsumed specific sub-regional articulations, which were rooted in Telangana history and culture since times immemorial. Historical past and its memory formed part of popular imagination and consciousness.²

An examination of the course and nature of Telangana movements for a separate State since 1950s indicates that socio-cultural rather than the political assertion had played a significant role in the realization of the division of the united Andhra Pradesh in 2014. The State of Andhra Pradesh was formed in 1956 as the first linguistic State in independent India and it was a consequence of the popular movements for redrawing and regrouping of provincial boundaries on the basis of language. The roots of popular movements for redrawing and regrouping of provincial boundaries lie in the

divergent socio-cultural awakening, which can be traced to the early decades of the twentieth century. An accelerated sense of regional, linguistic identity and cultural consciousness, besides the rising tide of nationalism, successfully mobilized the support of dominant caste/class elite, based on landed property, wealth, education and profession. The articulation of such elites in terms of the unity of Telugu people on a linguistic basis sought to wipe out the sub-regional distinctiveness in the state. It also attempted to minimize the socio-economic disparities within the macro-region as well as to underplay the long-term damages to the backward sub-region. The sub-regional distinctiveness can be attributed to caste, cultural, linguistic and politico-historical factors. It can be said that sub-regional feelings are historically rooted in the popular psyche, for the Telugus were separated into two distinct political units, viz., the coastal Andhra and Rayalaseema regions were part of the Madras Presidency ruled by the British and the Telangana region was under the autocratic-feudal regime of the Nizams. Thus Telangana has a separate political history and socio-cultural experience of more than two centuries.³

The Telangana question has been unique in the sense that it raised a number of issues concerning the persistence of sub-regional identity and consciousness, rationale and justification of the creation of linguist states, linguistic nationalism and the imagining of the regional community, dynamics of regional social formation, and power structure. Since its inception, there were tensions between the three different regions of united Andhra Pradesh. The sub-regional distinctiveness was a consequence of politico-historical, caste/ community, and cultural factors. In particular, the Telangana region has a distinct political history and socio-cultural experience of about five centuries under the continuous rule of the Deccan Sultans, Qutub Shahis and Asaf Jahis. Ignoring the socio-cultural distinctions and disregarding the patterns of socio-economic transformation in the two regions of Seemandhra and Telangana has caused several problems for the unity of the Telugus in spite of linguistic unity. The merging of two unequal regions and the subsequent interregional mobility of people paved the way for local non-local /mulki-non-mulki conflicts in the Telangana region since the 1950s. In the

context of repeated demands and agitations for the disintegration of the State of Andhra Pradesh, the issue of Telangana and its distinct identity/personality has become the most contentious topic of discussion and debate. Recent movements for the creation of a separate Telangana State have raised fundamental questions regarding the formation of sub-regional identity and articulation of separateness. During the later phase of the Telangana movement, two opposing and mutually contradictory arguments were advanced by the protagonists and the adversaries of the new State. While the opponents tended to dismiss the articulation of separateness and creation of a new state, notwithstanding the linguistic unity, as selfish, opportunistic, and emotional, the supporters of the state asserted the identity of Telangana has been historically and culturally rooted since the ancient period.⁴ I am of the opinion that Buddhism had played a significant role in shaping the formation of sub-regional identity in Telangana.

The Spread of Buddhism in Telangana

The advent of Buddhism into Telangana has been traced back to the lifetime of the Buddha himself, viz., the 5th century BCE. Two of the Jataka Stories, Bhimasena Jataka and Serivanija Jataka refer to Andhra. The Suttanipata story of Bavari, the Brahmanical teacher who lived on an island between Assaka and Mulaka Janapadas helps us in determining the date of the advent of Buddhism into Telangana. Bavari was a contemporary of the Buddha. The Kathavatthu from the Abhidhamma Pitaka is the most important piece of Buddhist literature that vividly describes the part played by the commentary on the Kathavatthu. The fact that more than two millennia ago, Gautama Buddha's teachings had influenced the land and people of Telangana is attested by the Buddhist literature, Kathavattu/ Abhidamm Pitaka. Available historical, literary and archaeological sources indicate that Buddhism entered the Telugu country at Badanakurthi located in the ancient Asmaka Mahajanapada and from there it spread to other parts of Telugu Desa. An islet on the river Godavari called Badankurthi surrounded by the present-day districts of Karimnagar, Adilabad, and Nizamabad was then at the center of Buddhism. Even today, the islet is a symbol of

pride for the Telangana region. Badankurthi also boasts of being one of the first places where Buddhism had reached, though Gautama Buddha had not visited the place. Suttanipata also mentions that at the place where the Godavari splits into two and meets again creating an eyot (islet in a river) lived a Rishi known as Bavari. There is also historical evidence to prove that this place is Badankurthi. It is also mentioned that the islet is located between Assaka and Mulaka Janapaas, which are in the present-day Telangana and Maharashtra regions.⁵

The sage Bavari, who was at Badankurthi, had heard of the Buddha and deputed 16 of his disciples to hear his teachings. At that time, Buddha was said to be preaching at Venuvana in Vaishali. The disciples were identified from historical evidence as namely Ajita, Metta, Punnaka, Mettagu, Upasiva, Nanda, Dhotaka, Hemaka, Todayya, Kappa, Jatukarni, Udaya, Bhadravudha, Posala, Megharaja and Pingiya went to Magadha. They started from Badankurthi to Mulaka in Maharashtra and reached Vaishali in Bihar via Mahismathi, Ujjaini and Vidisha in Madhya Pradesh and Kosambi and Saketapura in UP. Bavari's pupils discussed and asked Buddha several questions, which were recorded in the Suttanipata. They were impressed by the preaching of the Buddha and got converted into Buddhism. Of the 16 pupils, only one, Pingiya, the chief disciple of Bavari came back and reported about the importance of the teachings of the Buddha. On Pingiya's return, Bavari too was convinced and converted to Buddhism and became ARHANT. Thereafter, his disciples started following Buddhist teachings and propagated the Buddha Dharma in the Telangana region. Thus Buddhism as a popular religion had a profound influence on the history and culture of the region for more than a millennium. According to archaeologists, Buddhism flourished between the fourth century and first century BCE in several places in what are now Karimnagar, Suryapet, Nalgonda and Khammam districts. At the ancient site located on the island on Godavari River in the vicinity of Bavapur village archeological remains of the earliest Buddhist Stupas were found. The strategic location of this stupa establishes its special importance. An archeologist noted that the Buddhist text Suttanipata furnishes the historical reference of the location of the place of

famous teacher Bavari, during whose time, Buddhism was propagated in the land of Telangana. The historical importance of the Buddhist monument at Bavapurkurru has come to light recently. It is found that there are three ancient brick structures located on the right side of the island, near the river bank. The first brick structure was huge and consists of three tiers. This structure is circular and has three tiers encircled by stones. On the basis of its architectural features, this structure has been identified by Buddhist Stupa. The brick sizes further confirm the antiquity of the Stupa as it seems to be belonging to the Early Satavahana period. In the vicinity of the main stupa, there are also remains of two brick-built stupas, which are uddeshika or votive stupas.⁶

In addition to the earliest stupa at Bavapurkurru in the erstwhile Adilabad district, there are several Buddhist sites which are now located Andhra Pradesh, like Jaggaiahpet in Krishna district, the ancient Amaravati in Guntur district and others near Visakhapatnam. After Buddha's Mahaparinirvanam, Asmaka ruler of the erstwhile Podali kingdom (now Bodhan in Nizamabad dt), was converted to Buddhism. Thereafter, Buddhism not only spread to Telugu regions but also to the rest of Southern India. Over hills and forests in the western part of India, Buddhism spread through the country along the Pranahita and reached the Godavari. Through boats in the monsoon and bullock carts in summer, it crossed the river banks and traversed across Dharmapuri, Kotilingala, Dhulikatta, Phanigiri, Gajulabanda, Tirumagiri, Nelakondapalli and Jaggaiahpet. It then crossed the Krishna River and reached Amaravati and Nagarjunakonda.⁷

As soon as Buddhism set foot in Telangana, it became a part of societal life and attained great importance. Buddhism spread from Badanakurthi through Kotilingala, Dhulikatta, Kondapur, Phanigiri, Gajulabanda, Nelakondapalli, and Nagarjunakonda. It further spread rapidly in the kingdom of the Satavahanas. According to archaeological evidence, along with Kotilingala and Dhulikatta, various other places in Telangana emerged as important Buddhist centers. Kotilingala, however, remains the cornerstone of Buddhist history right to this age. Kotilingala was the earliest capital of the Satavahanas and the excavations unraveled

Srimukha Satavahana's coins at Kotilingala. During the excavations carried out between 1979 and 1984, the historic city of Kotilingala came to light and it was the first site of entire South India /Telangana to have archaeological evidence of the first fort, the first capital, first dockyard, first mint, first inscribed coins in Prakrit/Brahmi/Telugu, first religions of Buddhism, Jainism, and Hinduism, etc. It spread over 120 acres. The archaeological excavations conducted in and around it proved that the site has material evidence from 4th century BC onwards. The excavations also revealed remains of wells, sophisticated drainage systems, and brick constructions. Roman coins were also found at the site, which shows that Kotilingala was a center of trade and commerce. The Stupa that was unearthed during the excavations was made of bricks which were unique to the Satavahanas. The inscriptions on the Stupa were written in the ancient Brahmi script. It has been ascertained that these inscriptions dated back to even Asoka's rule. It can be inferred through this that Buddhism spread in these parts a long time before Asoka's reign. It is estimated that the Stupa belongs to a period post-Buddha and precedes Asoka. It can be deciphered from the script on relics that they are from the 4th century BCE. Along with Kotilingala, Pashagam, Dhoolikatta, and Meerjampeta are some of the early Stupas in Telangana. None of the Stupas contained any physical remains of Buddha, which goes to show that these were some of the earliest Stupas. Though not on the banks of the Godavari River, Dhoolikatta, which is in Karimnagar and only a short distance away, is home to a Stupa belonging to the age of Asoka (3rd century BCE). It is believed that this Stupa belongs to the Theravada school of Buddhism. This was the first era in Buddhist art and architecture; a five-headed cobra was carved on the walls of the Stupa along with the statues of the Bodhi tree. Mahapadhi Nishkramanam and Buddha's feet were found here. An archaeologist noted that "We have found evidence of pre-Satavahana coins at Kotilingala which date back to the 1st Century BCE. The kings of those times promoted Buddhism".⁸ According to another study, after Buddha's Mahaparinirvanam, the present-day Bodhan in Nizamabad district, which was the capital of the King Asmaka of the erstwhile Podali kingdom, also converted to

Buddhism. Assaka and Alaka or Mulaka were said to be the two Andhaka kings.

The Asmakas or Assakas formed one of the Kshatriya tribes of ancient India. They are not mentioned in the Vedic literature but the epics and Puranas mentioned them. In an enumeration of the countries in Bharatavarsa, the land of the Asmakas is mentioned along with those of the most prominent Kshatriya peoples of ancient India.⁹ In Pali Buddhist literature, the name is Assaka. The Anguttara Nikaya, like the Puranas, mentions that Assaka was one of the sixteen Mahajanapadas of Jambudipa (India), which had an abundance of food and gems, and was wealthy and prosperous. From the Mahagovinda Suttanta, it is learned that Potana was the (capital) city of the Assakas. In the Suttanipata one of the oldest works of the Pali Buddhist literature, the Assaka or Asmaka country is associated with Mulaka with its capital Patitthana (Paithan), and mentioned as situated on the bank of the river Godavari. The legendary story of the origin of Asmaka, founder of the tribe, barely mentioned in the Mahabharata, is narrated in full in the Brahannaradya Purana. The Matsya Purana provides a list of twenty-five Asmaka kings, contemporaries of the Sisunagas. The Vimanavatthu commentary contains the account of the king of the Assakas who was ordained by Mahakatyayana, one of the foremost disciples of the Buddha. As per Vimanavatthu, a king named Assaka, whose capital was Potananagara reigned in the country of Assaka. The Mulakas were a small tribe, very closely related to the Asmakas of the South. In early Pali literature, Assaka is distinguished on the one hand from Mulaka in the north and on the other from Kalinga in the east.

"Buddhism flourished in many parts of the Telugu States for a long time. We are gathering evidence in many places including Badankurthi. Badankurthi is mentioned in some books. We are studying it and will develop the place," said Mallepally Laxmaiah, Special Officer of the Buddhavanam Project.¹⁰ Kotilingala, the capital of the Satavahanas, remains a cornerstone in Buddhist history even today. Archaeological excavations had unraveled Srimukha Satavahana's currency, remains of wells, drainage system, brick construction, Roman coins, indicating that it was a center for trade and commerce. Apart from Kotilingala, evidence of

Buddhist links have been found at Dharmapuri, Dulikatta, Peddabankuru, and Dhoolikatta in Karimnagar district; Phanigiri, Gajula Banda, Tirumalgiri Vardhamanakota, Chada, Tirumalgiri, Nagaram, and Singaram in Suryapet district and Nagarjunakonda (Sriparvatam) in Nalgonda district and Nelakondapalli in Khammam. Eight new sites that are suspected to have stupas, viharas, and aramas have been identified in Telangana state. The new sites are in Dharmapuri, Makkatropet, Nerella, Sarangapur, Buddeshpalli, Donuru, Pochampalli and Dharmaram. The other sites in the state with a significant Buddhist presence are Kotilingala, Pashigam, Sthambampalli, Dhoolikatta, Phanigiri, Gajula Banda, Tirumalgiri, Nelakondapalli, and Jaggaiahpetta.

Ethnic and Social Basis of Buddhism in Telangana

The earliest mention of the Andhras as a tribe is to be found along with the Savaras, Pulindas, Mutibas in the Aitareya Brahmana where all these tribes are referred to as Dasyus or non-Aryans. Vincent Smith is of opinion that the Andhras were a Dravidian-speaking people and were evidently the progenitors of the modern Telugu-speaking people occupying the deltas of the Godavari and the Krishna. The Brahmanical literature castigates them as mlecchasambhavas, who were outside Aryavata and were ignorant of the fourfold division of society. The Andhras were described as mlecchas because of their separation from the main stock of the Aryan community and their fusion with the Non-Aryans of Dasas. Historically, the Aryans expanded southwards subduing the local population and the Aryan literature refers to the latter as Nagas, Yakshas, Nisadas, Rakshasas, and Vanaras. The Dravidians were fairly widespread and they resisted the Aryan advance under the leadership of the local tribes. In its historical setting, the Ramayana represents the expansion of Aryan culture over Dekkan and South India.¹¹

Buddhism spread in the ancient Asmaka/Telangana region at a time when the process of Aryanization of the south India/Deccan began. According to Nilakanta Sastri, the Aryanization of south India was a slow process spread over several centuries. Beginning around 1000BCE it had reached its completion in the 4th century BCE.¹² The sages of Aryavarta

like Agastya, Kanwa, Bharadwaja, Bavari crossed the Vindhya and entered into Deccan, of which The Telangana region was an integral part and Aryanized the local people. Of all the epic tribes that made up the Andhra/Telugu race, the Nagas and Yaksas were very prominent. According to Fergusson, the Nagas were serpent-worshippers. The Sankhapala Jataka describes the mouths of Kanabenna, identical with Krisnaveni as Nagalogka. Buddhist literature refers to the Krishna-Godavari river valley as Nagaloka and the Telangana region was also known as Manjiradesa. Manjira is a tributary of the Godavari. A Buddhist work of the 3rd-century A.D. mentions that Manjusri lived at Dhanyakara in Dakshinapatha, and converted a large number of Nagas into Buddhism. Nagas were the indigenous rulers of South India. The Yaksas were closely associated with the Nagas. In the epics, the Yaksas are noted for their musical talents. Singing is the profession of the Jakkulas/Baindla/Pambala. The musical instrument played by them is called Zamidika. At ancient Buddhist sites such as Kondapur, many terracotta figurines of Yaksas and their king Kubera are found. According to Whitehead in all primitive societies, animism was the religion of the early people in south India. About the Nagas and Garudas, Rhys Davids remarks, that these were originally a tribe of actual men with an eagle and serpent as their totem on their banner. The Asmakas were called in the Mahabharata as the Asvakas, probably with reference to their totem, which is worshipped. The Naga worship which is still prevalent among the Telugus. From the earliest times, Telangana's geographical position made it the bridgehead between the north and the south. Situated between Aryavarta and Dravida, Telangana had the advantage of contact with both. Having assimilated the influences from both the regions, it represented the synthesis of cultures. Two non-Vedic religions, viz., Buddhism and Jainism were popular in Telangana for nearly one thousand years.

The process of Aryanization in Telangana was a slow but sure process, characterized by conciliation, compromise, and synthesis which laid the foundations of cultural pluralism. Aryanisation was affected by mutual acculturation, with more fruitful results in the south than in the north. The Aryan and Dravidian elements found it beneficial to coalesce with

each other, each absorbing what is considered to be the best in the other. The fact that the Dravidians had reached a high degree of civilization by the time the Aryans advanced to the south must have been largely responsible for this unique development. By about the first century CE, Brahmanical theology was already in existence and Hinduism made steady progress by captivating the minds of the local people by its mythology. According to BSL Hanumantha Rao " the progress of Brahmanism had universal appeal in Andhradesa. Nevertheless, people began to doubt the efficacy of Vedic rituals and the validity of caste distinctions. The spiritual unrest had its echoes in Andhradesa and the local non-Aryans did not fully subscribe to Brahmanism with its costly rituals and caste discriminations. Especially the erstwhile prominent tribes, like the Nagas and Yaksas expressed their discontentment and seized every opportunity to inflict insult and humiliation on the Brahmanical religion. Moreover, the economic activity enriched the gahapati, artisans, karmakara and setti sections of people who were mostly drawn from the non-Aryan races resented Brahmanism. These rich classes resented Brahmanism with its humiliating restrictions and preferred Buddhism through which they aspired for higher social status and dignity. The criticism leveled against the monastic system by the South Indian Sutrakaras, Baudhayana and Apastamba confirm the existence of Buddhist orders in Andhradesa. There was growing discontent in Dakshinapatha towards Brahmanism and as in the North, in the South also, "The time had already come for the thinkers like Satyavaha Bharadvaja who represent the common case of all who called themselves Sramanas against worldly Brahmanas, to uphold transcendentalism against both asceticism as largely practiced by the Vedic ascetics and worldly life as regulated with puritanical strictures by the Brahmana priests and jurists and thus to prepare the way for the rationalism of the Buddha who enunciated the Middle Path (*majjimapatipada*) and sought for a via media of thought and conduct and intellectual training". The sutra literature also confirms the prevalence of materialistic philosophy enunciated by the Lokayats and Ajvikas. The story of Dighanakha thus informs us that the Parivrajaka/ Sramana

orders have already been established in the south.¹³

The innumerable sites that dot Telangana region like Kotilingala, Dhulikatta, Phanigiri, Kondapur, Nelakondapally are a clear proof of the fact that Buddhism had a popular appeal. The recent excavations revealed that the building activity-began though in a humble way by the local Buddhists during pre-Asokan or at least Asokan times. It reached its zenith during Satavahana and Ikshvaku times in Andhra. The fact that it continued to flourish for another four hundred years (i.e, up to 700 A.D.) meant that the wharf and woof of the culture of this region was largely Buddhist. The art and architecture began and developed in the region mainly under the Buddhist auspices. There was a phenomenal rise of Buddhist institutions situated on the banks of rivers or administrative head-quarters which were connected with highway trade routes starting from Kotilingala, Sthambhampalli, Pashigaon and Dhulikatta in Karimnagar district; Kondapur in Medak district; Tirumalagiri, Phanigiri, Gajulabanda, Vardhamanakota, Yeleswaram in Nalgonda district; Nelakondapally, Mudigonda, and Karukonda in Khammam district. They were centers of attraction in the heyday of Satavahana and Ikshvaku rule. Some of them continued to flourish up to Vishnukundin period.

The archaeological excavations throw a flood of light on the historical background of Buddhism and its socio-economic base in the Telangana region. There were certain new socio-economic forces that strongly helped the rise and expansion of Buddhism and its establishments.¹⁴ It is significant to note that the patronage of the art and architecture of the Buddhist establishments did not come from Kings of either the Satavahana or the Ikshvaku dynasties. The patronage was in fact a continuous process that had its roots in the common masses like craftsmen, artisans, wealthy merchants, officers, ministers, noblemen and ladies of all ranks who encouraged it for the fulfillment of their religious, spiritual, social and aesthetic predilections and aspirations. The stupas and other structures, sculptures and label inscriptions on slabs, potsherds inscriptions on boulders and copper plates indicate the flourishing state of Buddhism. The Buddhist centers inspired the people of the day to dedicate themselves to the

propagation of the creed. Each unit of Buddhist establishments like the stupas, chaityas, etc., might have come into existence with the munificence of devotees and they were patronized especially by the Gahapati, Setti, and guilds of Artisan and Craftsmen, who formed the bulk of the population. Monks and nuns and laypeople like upasakas and upasikas and ladies of royal harem also contributed to it. In the course of time, the establishments became well developed with kind and cash as self-sufficient centers. Buddhist centers in Telangana consisted mainly of stupas, viharas, and Caityagrihas. They are mostly of brick-built except the rock-cut center located at Karukonda village in Khammam district. The history of the earliest Buddhist architecture in Telangana goes back to the time of Mauryas.

For about one thousand years (400 BCE-600CE), Buddhism flourished in Telangana and shaped the socio-cultural ethos in the most formative period of its history.¹⁵ The lower sections of Telangana society articulated their spiritual unrest, against the cruel sacrifices and unfair social distinctions perpetuated by the Brahmanical religion, philosophy, and ideology. They found in Buddhism a simple religion of self-improvement, which sought to eradicate social distinctions and discrimination. Available sources indicate that Buddhism spread like wildfire among the non-Aryan tribes than among the Aryans. Of all the non-Aryan groups Nagas and Yaksas, in particular, opposed the expansion of Brahmanism. Throughout India, of all the non-Aryan tribes, the Nagas appeared to have evinced special interest in the Buddha and his teachings. The Brahmanical literature describes the Nagas as vile and venomous creatures, disturbing the peace and social harmony. They became the most devoted worshippers of the Buddha and as the ardent followers of his gospel of non-violence. The stories of Naga Erapatra who eagerly waited for the appearance of the Buddha on the earth and that of Muchilinda who protected Gautama, the prospective Buddha from the raving storm created by Sakra are well known. The Nagas had their share in the relics of the Buddha on which they built the famous Stupa of Ramagrama. The Jatakas contain many stories about the mildness, kindness, charity, and generosity of the Nagas. Similar is the case of Yaksas. These accounts, connected with the Nagas and Yaksas, formed

the most favorable themes of the Buddhist sculptures and they reveal another important aspect of the historical mission of Buddhism. The local tribal groups and their kings enthusiastically welcomed Buddhism and greatly promoted its cause in their own regions. Buddhism was not only a revolt against the decadent Vedic ritualism but also an attempt at the synthesis of all the best elements in Aryan and Non-Aryan religions and it attempted at a synthesis of different practices and at social unity and cohesion. These aspects of Buddhism had a great appeal to the common people among whom it became popular in a short time. The Naga cult penetrated deep in Buddhism. Serpents coiling around the stupas, Nagarajahs, and their wives worshipping the stupas and listening to the Buddha's sermons, the Buddha seated on Nagas with their hoods above his head occur frequently at Dhulikatta, Amaravati and Nagarjunakonda.

Buddhism was a great social revolution that destroyed the foundations of the old tribal relations and introduced a new social order in Deccan. The caste system was devoid of the severity of its counterpart in the north.¹⁶ Buddhism, especially its Mahayana form, gave a tremendous fillip to man's creative activity. This revolution was a bloodless one. Human being's intolerance of oppression, his capacity for self-assertion and his spirit of revolt are the precondition that was fostered by the new class structure (caste-system), the new religion (Buddhism) and the new economic base (plow-agriculture, trade, and commerce). An interesting feature of Buddhism in Andhra is that to a large extent it progressed independently of royal patronage. Very rarely we come across donations by kings to the Buddhist Church and almost all the Buddhist monuments were the results of pious private munificence and at times of donations made by the ladies of the harem and they have encouraged Buddhism. In particular, some of the Satavahana queens and most of the Ikshvaku ladies were very liberal towards Buddhism. They included Gautami Balasri, Shantisri, Parama Mahadevi among others. The services of the artisan and the merchant communities to Buddhism were more important than those of the royal ladies. Longhurst remarks: "The Buddhists were largely recruited from the commercial classes, and it was also their royal masters to raise monuments of

such magnificence as those at Nagarjunakonda and Amaravati". There is ample epigraphical evidence in support of the above view.

In the Telangana area, at Kondapur extensive ruins of Buddhist institutions were brought to light. Kondapur was a great center of flourishing mercantile and artisan communities. Excavations conducted at Kondapur found extensive remains of brick-built stupas, chaityas, viharas, and a few secular buildings including a mint workshop and residential structures datable to the Satavahana period, first century BCE to second century CE. Six underground chambers containing coins, coin molds, seals and sealings, huge quantities of terracotta figurines, beads, bangles, ornaments made of gold and other metals were also unearthed. A gold coin of Roman pontiff Augustus (37 BCE-14 CE), about a dozen silver coins, 50 copper and a good number of lead coins were recovered. A noted scholar remarked, "Of all such donations, the most remarkable is the one made by cobbler Vidhika to the Amaravati Stupa. Vidhika was the son of Naga, who was a teacher (upajjaya). He was accompanied to the place by his mother, wife, brothers, sons, daughters, cousins, relations and friends. It clearly demonstrates the popular nature of Andhra Buddhism and the cosmopolitan spirit of the Buddhist institutions. Even the poorest and the lowest contributed their little mite to promote the cause of Buddha Dharma".¹⁷ Especially, the artisan and merchant communities were the backbone of the state economy during the rule of Satavahanas and Ikshvakus, hence the rulers also patronized Buddhism. Telangana, too, embraced Buddhism with great zeal. Buddhist relics like pottery, bricks, and limestone used for construction work were discovered at places like Nagaram, Yeleswaram, Panigiri, Gazulabanda, Tirumalagiri, Sanigaram and Vardhamanukota. Besides these, a big kiln of large-sized bricks was found at Nagaram. Sculptures and terracotta figurines were found at Panigiri and Gazulabanda. All these relics roughly belong to the first century BCE. The Korukonda hill near Aswaraopet in Khammam district yielded rock carvings belonging to the second/third century CE and they represented the Mahayana school of Buddhism.

Buddhism gained a large following in Telangana and the Satavahanas extended their

patronage to the Buddhist monasteries, monks and nuns whose influence changed the outlook of the social setup. Almost all the early caves so far found in the Deccan and dedicated to Buddhism were excavated during the Satavahana period. The Satavahanas and Ikshvakus did yeomen service to Buddhism and it became a popular religion in ancient Telangana. During this period the region became a pivotal center of Buddhism, as it littered with Buddhist monuments and there were a number of important Buddhist centers spread all over the region. Some of the monuments and institutions became very prominent and attracted Buddhists from distant places as revealed by the numerous votive inscriptions. Amaravati, in particular, appears to have attained the status of something like a renowned *tirtha* to which pilgrims flocked in large numbers, they came from close by as well as far off localities. Similarly, Panigiri, Kondpur, Nelakondapally in Telangana were also famous Buddhist centers, which attracted pilgrims and people from different parts of the country. In this respect, it may be compared to Sanchi and Bharhut in Central India and Bodhi-Gaya in Bihar which too attracted pilgrims from all over the country. It is interesting to note that the Nagarjunakonda became the center of Buddhist learning and Buddhist monks from different parts of India used to make a pilgrimage to it. It is interesting to note that the Nagarjunakonda became the great center of Buddhist learning and Buddhist monks from different parts of India and outside used to make a pilgrimage to it.¹⁸

Buddhism spread rapidly in the Telangana region because it preached non-violence, peaceful co-existence, denounced priestly domination, condemned caste-distinctions and social inequalities. Around the mid-6th century BCE, the Telangana society was still far from the caste-ridden and the village economy was dependent on cultivators/gahapatis, merchants/settis, and artisans/craftsmen.¹⁹ The unprecedented growth of trade and commerce in the 1-3 centuries CE, led to the expansion of Buddhism in Telangana. Almost all the Buddhist monuments here were the result of private donations of people, mainly of cultivators, traders, and craftsmen. This enthusiasm of the people was reflected in the liberal religious policy pursued by the Satavahanas, whose empire lasted for nearly four and a half centuries. The

craftsmen and artisans were organized into guilds. During the second century, CE money was deposited (in silver panas) by the lay worshippers of the Buddha with the potters', oil-millers' and the weavers' guilds for providing robes and other necessities for the monks. The craftsmen of the Satavahana period, organized in guilds, functioned independently. They could purchase raw materials and implements them with the money deposited with them and could pay the rate of interest out of the proceeds of the sale. Secondly, these guilds were stable enough to induce members of the royal family to prefer the guild to the treasury. The numerous Buddhist caves on the west coast were situated at places that were near trade-routes, and the larger ones were invariably near the junctions of such routes. Archaeological excavations in the Telangana region found many Roman coins at Kotilingala, Phanigiri, Yeleswaram, Nelakondapalli, etc. It also indicates trade relations between the Roman Empire and the Krishna valley in the second century CE. According to Kambhampati Satyanarayana, Buddhism with its philosophy of nonkilling/ahimsa gave an impetus to the development of agriculture, trade, and industry. The earliest monks traveled along primitive tracks. They were excellent food-gatherers, as attested by many Jataka stories, while caravans provided company. The cave monasteries of Buddhist monks which were already of considerable size before 150 BCE, continued to acquire wealth till about the early seventh century CE. The epigraphical evidence also confirms that caravan traders were generous donors. Many householders, along with their wives, sons, daughters, daughters-in-law, friends, and relatives donated for a pillar, for a cross-bar, for a slab, etc. Often a great banker or merchant, the wife of the caravan leader, the town folk, and cultivators made the donations. Perfumers and leather-workers did not lag behind the richest vanijas and officers of the king such as generals and superintendents. Buddhism, as the most powerful force in developing agriculture, handicrafts, trade, and commerce enjoyed great popularity, has been attested by innumerable gifts of all sections of Telangana society. The early Buddhist period was a period of expanding material culture, with far wider trade relations than in the previous period and much greater amenities of life for the wealthy.²⁰

There was a phenomenal rise in Buddhist institutions and monuments situated on the banks of rivers or administrative head-quarters which were connected with highway trade routes starting from Kotilingala, Sthambhampalli, Pashigaon, and Dhulikatta in Karimnagar district; Kondapur in Medak district; Tirumalagiri, Phanigiri, Gajulabanda, Vardhamanakota, Yeleswaram in Nalgonda district; Nelakondapally, Mudigonda and Karukonda in Khammam district. They were centers of attraction in the heyday of Satavahana and Ikshvaku rule. Some of them continued to flourish up to Vishnukundin period. It is significant that the patronage of the art and the architecture of the Buddhist establishments did not come from Kings of either the Satavahana or the Ikshvaku dynasties. The patronage was in fact a continuous process which had its roots in the common masses like craftsmen, artisans, wealthy merchants, officers, ministers, noblemen, and ladies of all ranks who encouraged it for the fulfillment of their religious, spiritual, social and aesthetic predilections and aspirations.

Impact of Buddhism on Telangana Society and Culture

The popularity of Buddhism for about a century in the Telangana region had a profound impact, as it shaped its personality and contributed to the emergence of composite culture. In the ancient period, Buddhism successfully contained the widespread growth and popularization of Vedic/brahmanical ideology and religion. Unlike in the Indo-Gangetic valley, the caste system of Telangana did not strictly correspond to the Vedic *Varnavyavasta*. For example, there was no pure Kshatriya Varna in Telangana. All the rulers of the kingdoms from Satavahanas to Padmanayakas were not Kshatriyas by birth. Moreover, the social formation was not as rigid as in the Indo-Gangetic Valley/Aryavarta, and the caste system in Telangana was more fluid and flexible. As Buddhism vehemently condemned caste hierarchy, social discrimination and women enslavement, ancient Telangana society evolved on the basis of the non-Aryan communitarian ethic. Elements of pre-Vedic social cohesion as prevalent in the tribal society were continued. The Vedic prescription of equating birth with occupation was negated and the influence of the organizing principles of

Buddhist Sangha could be found in society. Especially during the Satavahana and Ikshvaku period, the guild system, women's freedom, social cohesion could be noticed. For instance, the arts and crafts were not organized only on caste basis, but based on skill/ profession/ occupation; likewise, women of all social strata liberally donated to the Buddhist monuments, which indicate their empowerment and gender equality. Similarly, instances of a cobbler could visit, pray and donate to Buddhist Stupa indicates that the lower castes had social respect. Another interesting factor that acted as a check against the kings of this period to follow *varna-dharma* was the advent of the Buddhist monks, the followers of Buddhism. Buddhist monks and nuns began to receive the attention of the pious people, poorer laymen, cultivators, merchants and traders, and craftsmen. Thus flexibility crept into the social structure. It also reveals that Buddhism became the peoples' religion, where the rich and the poor enjoyed equality. Moreover, Buddhism did not give much consideration to caste. The Buddha maintained that just as after merging in the ocean the rivers lose their identity, in the same way, a man be he a Brahmana, Kshatriya, Vaisya or Sudra who seeks refuge with his order forsakes his former name, *gotra* or *jati*.²¹

The social and moral philosophy enunciated by the Buddhist monks/sramanas debunked the Brahmanical ideology and caste system. In essence Buddhist sangha represented the concept of social equality based on certain principles. The Buddhist monks/ sramanas/ parivrajakas challenged the authority of Vedas; they admitted into their *gana* or *sangha* everybody irrespective of his caste and asrama; they observed a set of ethical norms; they practiced a detached life with a view to liberating themselves from the bondage of the world. And finally, they could take to a life renunciation (*pravrajya*) any time after passing over the minor age. The *Sramanas* too observed the practice of begging the food (*bhikshacharya*). A perceptible scholar remarked thus: "The contribution of Buddhist *sanghas* and their role in transforming the Andhra society, culture and economy indispensable, as they were the institutions responsible and instrumental for the spread of Buddhist philosophy throughout the length and breadth of Andhra Desa". The fact that during the rule of Satavahanas and Ikshvakus professions

and occupations were not strictly organized on the basis of caste indicated social flexibility. Epigraphic evidence indicates that crafts and guilds were organized as corporate bodies rather than caste organizations. Crafts such as *Halika* (plowmen/ agriculturist), *Golika* (herdsmen), *Gadhika* (perfumers), *Vadhika* (carpenter), *Kolika* (weavers), *Tilapisaka* (oilpress), *Kamaka* (blacksmith), *Kularika* (potter), *Udayantrika* (skilled person in irrigation), *Dhannuka* (grain merchant), *Vasaka* (bamboo worker), etc.²²

As a consequence of the spread of the social philosophy of Buddhism caste rules were noted more for their violation than the observance. The Dasa Brahmana Jataka mentions ten categories of Brahmins engaged in unworthy occupations. Astrology was a "swindling trade", practiced by the Brahmins. They took to professions set apart for others, like trade, agriculture, carpentry, hunting, etc. The chandalas or untouchables were members of hill-tribes reduced to servitude. Yet there were instances of Vidhika becoming a teacher. In the Jatakas, we find parents often discussing the choice of a profession for their sons, which is an indication of the relaxation of caste rules. The Sudras became a collective name for all the low and toiling castes. Distinctions between the rich and the poor, rather than the high and the low castes became a decisive factor in judging one's status in society. Similarly, women, in general, occupied an honorable position in society. A great number of ladies offered a costly donation to the Buddhist monasteries. Women were also allowed to possess property independently. On the basis of literary evidence, it was found that youthful maidens wrote love-letters, enjoyed the company of boyfriends and danced with male partners. Tribal characteristics of freedom and equality persisted to a considerable extent. Promiscuity, faithlessness, and violation of the marriage bond were not infrequent. *Gadha Saptasati* provides a glimpse of various festivals, reminding one of those which prevailed in the megalithic age. The Holi festival, which is popular in Telangana even today, was a gala occasion of merry-making. Men and women, intoxicated to the full, swaying their bodies and running about, sprayed colored water. Although the fourfold social system prevailed in Ancient Telangana, caste rigidity was not widespread. It is known from *Kataasaritasagara* that inter-caste marriages have taken place.²³

The religious sects of early Buddhist age can be broadly referred to as Brahmanical and non-Brahmanical.²⁴ The Buddhist and Jain literature refer to all the non-Brahmanical systems as *Sramana*. And in the frequent expression '*samana va brahama va*'. *Samanas* are distinguished as those who are not Brahmanas by birth but have renounced the worldly life while Brahmanas are those who are born in Brahmana families and who are more interested in religion and philosophy than in secular affairs. The terms Brahmana and *Sramana* are found in combination in the works of Panini, Patanjali, and Megasthenese also and in the inscriptions of Asoka. Patanjali mentioned that the *Sramanas* and Brahmanas belonged to rival groups and they are like snake and Mongoose. In the Buddhist texts *paribbajaka* and *tapassino* are generally referred to as *Samanas*. In the *Papanachasudani* an Ajivika saint is described as a *Samana*. The Jainas and the Buddhists usually employ the term *Samana* for all the non-Brahmana ascetics. The attitude of the Brahmanas and the *Sramanas* towards ascetic life were basically different. Their differences emanated from their general outlook towards spiritual, religious, social and moral problems. Contrary to the Brahmanical spirituality and religious practices, Buddhism popularized the folk-centered religious system. Buddhism incorporated pre and non-Aryan spirituality into its religious practices and forms of worship. The presence of the Naga cult is a clear proof of it. In religious terms, what is really interesting about Buddhist centers like Nagarjunakonda and others is that the votaries of different Buddhist schools and the adherents of Puranic Hinduism lived at the same place and appeared to have led a cordial and harmonious life. Just as there were large Buddhist monuments temples dedicated to Hindu divinities were also built in a large number and *Vedic* sacrifices including *agnihotra*, *agnishotma*, *vajapeya* and *asvamedha* are known to have been performed with great enthusiasm.

Nowhere else one can find such a unique incidence of religious harmony, tolerance, and co-existence. A number of other Buddhist centers also flourished in the different parts of the Telangana region during this period, which exhibited socio-cultural and religious harmony. Since the early Satavahana period rulers and their alien adversaries vied with one another in

patronizing Buddhism as well as Brahmanism. New gods and goodness, developed, better suited to the rustic mentality of the people, like Siva, Parvati, Ganesa, Krishna, etc. New Brahmin scriptures were written for making tribal gods worthy of worship. Not only Krishna, but even the Buddha was also made an avatar. Worship of the sun, the Buddha's feet, and innumerable village deities developed side by side. So, the question of some king being a Buddhist or Hindu becomes insignificant. Kings or queens, merchants or artisans, officials or commoners could support the later Brahmin ritual; worship the tribal gods and goddesses, while simultaneously patronizing Buddhist monks and their institutions. Thus, the two radically different systems could coexist side by side without rivalry or conflict.

However, with the demise of the Ikshavaku dynasty popularity of Buddhism began to decline. Further, the rising of the powerful dynasties devoted to Brahmanism like the Pallava and the Chalukyas caused the collapse of Buddhism. But in spite of it, Buddhism and monasteries continued to maintain their progress in Telangana during the reign of some of the dynasties like Vishnukundis and other local kingdoms.²⁵ But by the 8th century CE the triumph of the Vedic creeds and Brahmanical ideology and philosophy over the native forms of social organization, spirituality, religious worship, and ritual had taken place. Consequently, the four-fold division of the society based on *varna* continued to flourish during the post-Satavahana period in spite of the presence of Buddhist monasteries. It appears that the Brahmanas occupied a place of prominence in the society and sought to protect, preserve and promote Brahmanical religion and *varna dharma*. Consequently, Buddhism eclipsed from the land of Telangana. Nevertheless, the legacy of Buddhist ideology and social philosophy continued in the region and its people throughout the medieval and modern periods. During the medieval period several ruling dynasties like the Kakatiyas, Padmanayakas, Qutubshahis, etc. followed the policy of religious tolerance and mutual co-existence of different religions. Although there were instances of religious conflicts, for example between Saivaites and Jains/Buddhists, etc. it did not lead to large scale religious wars/crusades and religious disharmony. Moreover, the growth Vaisnavism,

Saivism, Bhakti and Sufi movement undermined monolithic Hinduism and condemned social evils like caste and gender discrimination, and propounded social equality and justice. As time elapsed, the bhakti cult took a militant aspect. It assumed the forms of Vira Saivism and Vira Vaishnavism. Basaveswara was the first in south India, including Telangana to lead a mass revolt against the caste system. Just as in the case of Buddhism in the ancient period, the low and the down-trodden flocked to his banner and embraced the new creed in large numbers. The main principles of Buddhism like denouncing the medieval bhakti tradition and philosophy were championed by Basava, Potuluri Veerabrahmam, Yogi Vemana and Buddha they also opposed Brahman priestly dominance and caste discrimination and propounded social and gender equality.

The bhakti cult involves the personalization of God, the idea of avatar or incarnation and the rituals are simpler than Vedic ones. The fact is that a major trend of Buddhism, the Mahayana got absorbed in India in the Nirguna Sampradaya of the medieval saints' tradition. This tradition was mainly taken up by the Dalit-Bahujan castes in India. The bhakti movement also expressed the feeling and aspirations of the common people rather than of the priestly class. It brought forth lovely hymns sung in the language of the people. A plethora of temples, music, and dance, festivals and pilgrimages constituted the core of this movement. To a very large extent, the socio-religious reform movements in medieval Telangana asserted the core principles and philosophy of Buddhism to a very large extent. The fusion of Bhakti and Sufi religious and cultural practices represented by Darga, Urs, Jataras, and the celebration of Moharram festival cutting across caste, gender, and creed immensely contributed towards cultural synthesis, the hallmark of Buddhist philosophy.

Muharram, *Peerla Panduga* in local parlance is a festival celebrated by Hindus and Muslims in the Telangana State.²⁶ It is celebrated across the Sufi shrines called Ashurkhana and a procession of the relic, called *Alam* is taken out as a part of the festival. The Muharram ceremonies termed as Azadari by Shia Muslims was universalized during the Qutub Shahi period, especially in the Telangana region. The

non-muslims (Hindus) adopted it soon, as it was considered to be the choice of righteousness, piety, and piousness. The ceremonies performed by the Shia Muslims were adopted and practiced in rural areas, in which men and women participate without any distinction. Moharram festival fosters integrity, fraternity, and brotherhood. It is a living example of socio-cultural harmony. Along with mainstream society, *Peerla Panduga* has also been an inseparable custom for centuries among the Adivasi communities in the tribal hinterland of Adilabad. It appears that the festivity is believed to have embraced by the local tribes and non-tribes during the regime of Nizam. An insightful journalist remarked that "the beauty of this Mohammedan observance is that it gradually evolved into an Adivasi festival, besides attracting scores of devotees cutting across religions from neighboring districts and as well as Maharashtra. The three-day festival draws no less 1.50 lakh devotees, including Hindus and Muslims

The centrality of village Gods, popular deities and non-Brahmanic spirituality, priesthood and religious practices in rural Telangana contained noticeable Buddhistic/Sramanic elements. Invariably, in all the Jataras and celebration of folk festivals, the absence of a Brahman priest is conspicuous. Every village in Telangana has its own guardian goddess and especially in times of distress/calamity, the villagers visit her humble shrine rather than to those of the Brahmanical gods. The priests in these temples are mostly non-Brahmins, indicating the non-Aryan origin of the deities and their worship. The normal routine worship is done by the Sudras either the *Kummari* (potter) or the *Chakali* (washerman), but the buffalo-sacrifice is the monopoly of the Mala/Pambala/Baindla. Buddhism was not only a revolt against the decadent Vedic ritualism but also an attempt at the synthesis of all the best elements in Aryan and Non-Aryan religions. Basham opined that non-Vedic heretical religions- Buddhism, Jainism, and Ajivikism- sprang against "the primitive animist background". Therefore, following Buddhist philosophy, the folk culture in Telangana undermined Brahmanical religious practices.

Articulation of the Buddhist principles of solidarity, fraternity and brotherhood could be

found in the celebration Jataras.²⁷ Urs and Muharram festival in Telangana. First and foremost, they are celebrated by the collective participation of people cutting across caste, gender, ethnic and religious identity. Secondly, the priests in the Jataras are non-Brahmins and in Urs no mediation of a priest. Thirdly, visiting Jataras and Urs congregation is an act of pilgrimage, where people seek to obtain solace and happiness through devotion, playing music and collective singing. Jataras and Urs are spiritual retreats and have been part of the socio-cultural milieu of people in rural areas of Telangana. Basically the Jataras are started by rural folks and they are said to be offering a way out from monotonous life in agricultural fields and turn them devotional. In Telangana many Jataras take place beginning from January and continue till Maha Shivaratri in May. Very popular among them are Veerabhadra Swamy Jataka at Kuravi, Komuravelli Jataka, Inavalo Mallanna Jataka, Peddagattu Jataka, Kondagattu Jataka, Cheruvugattu Jataka, Nagoba Jataka, Sammakka Sarakka Jataka, and Edupayala Jataka. The majority of Jataras are celebrated at the Saivaitic religious centers, signifying non-Aryan traditions. In contradistinction to the Brahman priest centered savarna temples, the Jataka based temples are sites of collective pilgrimage devoid of caste and gender discrimination. The Jataka celebration has its roots in pre-Vedic cultural milieu, as the cult of Saivism, existed in the south before Aryanization of the south. It is to be noted that at many places it is the incarnation of Lord Shiva worshiped in different incarnations. Lord Shiva is worshipped as Mallikarjuna Swamy at Inavolu and at Komuravelli Jataka while he is worshipped as Sri Veera Bhadra Swamy at Kuravi Jataka. Lakhs of pilgrims from across Telangana, Andhra Pradesh, Maharashtra, and Karnataka come to the district to attend these jataras. Inavolu Jataka is mainly patronized by Yadava, Golla, Kuruma, and Balija communities while Peddagattu and Komuravelli Jataras are attended by the Yadava community. 'Siva Sattulu' and 'Pothurajus' dancing under trance while chanting invocations to God, women carrying 'Bonams' (sacred rice cooked in a new earthen pot) are the special features of these events.

Folk religion in Telangana is centered on Ellamma goddess, as she was considered the Mother Goddess and the protector of the

universe.²⁸ Folk religion in Telangana is centered on Ellamma goddess, as she was considered the protector of the universe and Adimata, the mother who was from the beginning. Ellamma means mother to all and is being devoutly worshipped by the people of Telangana, cutting across caste and creed. Ellamma is worshiped as the Goddess (Devi) of the fallen, and her devotees revere her as the "Mother of the Universe" or Jagadamba. Legends have it that Ellamma is the incarnation of Kali, who on one hand symbolizes the death of the ego, and on the other hand, is the mother who is compassionate about her children. There is also an alternative name called Jagadamba who is considered the same as Goddess Renuka. Ellamma is a patron goddess of Telangana and the deity is known by many names: Mahankali, Jogamma, Somamma, Gundamma, Pochamma, Mysamma, Jagadambika, Holiyamma, Renukamata, Yellamma, Mariamma and Renuka Devi. One of the old and among the most revered temples of Hyderabad is the Yellamma Temple located at Balkampet, popularly called the Balkampet Yellamma temple. It may be noted that Renuka/Ellamma has been more popular among the lower castes rather than among the Brahmanical groups. This may be due to the reason that the development of this cult largely occurred among the downtrodden communities, who have several other deities with similar mythical structures. One of the interesting features in Telangana is that the ritual performed by Matangi of the Madiga community is associated with Renuka shrines. In Telangana popular culture the *Gramadevata* is considered as one who protects the village and a number of goddesses are worshipped. They all have several similar characteristics such as they mostly will be female who guards the village, represented by any uncarved stone, tree or a small statue in a small shrine, having a direct association with the villagers. The Ellamma cult, based on the concept of Mother Goddess has been a legacy of pre-Vedic/non-Aryan/Dravidian the tradition preserved among the non-Brahmin castes/communities of Telangana.

The Revival of Buddhism in Telangana

The Brahmana and Sramana religious and spiritual traditions, representing the Savarnas and Avarnas (upper and lower castes) continued in the Telangana popular culture since time

immemorial. In modern times, the Buddhist thought and philosophy have been propagated by social reformers and anti-caste ideologues like Mahatma Jotiba Phule, Ayotidas, Periyar Ramaswami Naicker, and Babasaheb Ambedkar.²⁹ The emancipatory aspect of Buddhist ideology became the guiding principle of the theory of annihilation of caste. In fact, the multicultural/multi-religious composite cultural identity, cultural synthesis (*Ganga-Jamuna Tehjib*) and communal harmony of present-day Telangana was based on the non-Brahmanic (Sramanic) ideology and thought propounded by Buddhism. For instance, Bhagya Reddy Varma, the father of the Dalit movement in Telangana was inspired by Buddhist philosophy. The celebration of Buddha Jayanti had become an integral part of the Adi-Hindu movement and it signifies the revival of Buddhism. Historically, The Buddhist revival in India practically took shape under Anagarika Dhammapala, who established the Mahabodhi society in India in 1891. In the late 19th century CE, Ayotidas, an ardent critique of Brahmanism and the anti-caste crusader in Tamilnadu, having inspired by Dhammapala, established the Sakya Buddhist Society (South Indian Buddhist Association) in 1898 to propagate Buddhism among the people. He presented Buddhism as a religious alternative for the Dalits and he exhorted them to embrace Buddhism for annihilating the system of caste. Ayoti Thass' efforts created a broad movement amongst Tamil Dalits in South India till the 1950s. The Indian Buddhist Association, unlike the Dalit movement led by Ambedkar, adopted the Theravada Buddhism tradition found in Sri Lanka, where Thass had received his training and initiation in Buddhism. But, a definite turn to the Buddhist revival movement was given by Babasaheb Ambedkar, who embraced Buddhism, at an impressive and historic ceremony at Nagpur in 1956.³⁰ Under his influence, lakhs of Dalitbahujan communities across the country embraced Buddhism and it became an ideology of emancipation. Among different groups of Buddhists, the followers of Dr. B.R. Ambedkar, known as the neo-Buddhists form the most dominant group, especially in Telangana. Consequently, Buddhism in India has regained much of its lost prestige. Besides the manifold increase in population, presently the Buddha and the Buddhist heritage now

command respect and reverence, which was long their due.

Since the 1980's, the Ambedkarite thought and Dalit Panthers' movement had tremendous influence on the anti-caste and radical left movements in Telangana. In addition, the Dalit Mahasabha movement after the Karamchedu and Chundur massacres inspired the youth drawn from the downtrodden communities to launch militant anti-caste and anti-class movements on the basis of Ambedkarist and Marxist ideology and under the umbrella of Lal-Neel Flag. In the 1990s Several Buddhist monasteries and centers were established in Telangana and a noticeable number of educated youth, rationalists, political and social activists, Ambedkarists and leftists from among the Dalit Bahujan communities were attracted towards Buddhism. The Census data of the 2001-2011 decade indicates several thousands of people were recorded as Buddhists in Telangana. A report by a Journalist mentioned:³¹

In Telangana, scores have started following the eight-fold path. Driven by conviction, scores in Telangana have started walking along the eight-fold path of Ashtanga Marg to pursue the Buddhist way of life. The path which stresses on the pursuit of the right view, intention, speech, conduct, livelihood, effort, mindfulness, and concentration, has found a record number of 750 followers distributed across the 20 Buddha Viharas in Hyderabad, only the previous year. And 300 of those who adopted the religion did so at a Buddha Sammelan, a massive gathering organized by the Buddhist Society of India held at Nagarjunasagar of Nalgonda district in 2014.

Increasing enrolment in Ambedkarite organizations that follow Buddhism as a world view has directly contributed to improvement in the number of Buddhists. A sizeable population of those adopting Buddhism in Telangana is Ambedkarites who follow the ideology, life, and teaching of Dr. B. R. Ambedkar. "Following Dr. Ambedkar's teaching, I set aside 25 percent of my monthly salary to aid the propagation of Buddhism and also education among Dalits in the community," said M.B. Sudhakar, a Buddhist and deputy engineer at South Central Railway who started following Buddhism as early as in 1997. A look at growth in devotee figures in just one vihara tells it all. While in 2005 the number of devotees in Siddhartha Buddha vihara which

has seven resident monks was 530, currently the number is over 1,100. "Other than Ambedkarities there are people who become devotees to learn Buddha's teachings and his way of life. A lot of them are young professionals who work in Hyderabad," said a 'banteji' or monk, Khema Chara who resides at Siddhartha Buddha Vihar in Bowenpally. Apart from the Telugu-speaking population, those following the religion in Telangana include settlers from Maharashtra, Karnataka and Tamil Nadu", said Hyderabad monks.

The growing popularity of Buddhism has been reported by the print media and captions like "Conversions to Buddhism rising fast in Telugu speaking States", In Telangana, scores have started following the eight-fold path", "Telugu-Speaking Monks in demand", Buddhism slowly catching up in Hyderabad, Telangana Will Soon Be Home To One Of The Greatest Buddhist Theme Park, Converting to Buddhism as a Form of Political protest, etc., capture the new trend of religious change in contemporary Telangana. The most popular Buddhist center in Telangana is the Mahabodhi Buddha Vihara at Mahendra Hills in Hyderabad. Its main aim is to serve the cause of the Buddha Sasana. This Vihara is being developed into a full-fledged Buddha Vihara with the monastery and other Dhamma activities. Its broacher mentions that: "Welcome to Mahabodhi Buddha Vihara at Mahindra Hills. We present to you the Buddha's teachings for your contemporary life to enjoy peace, happiness, prosperity, and wisdom and to overcome stress, tension, worry, fear, frustrations and various kinds of dukkha". Available information indicates that the number of registered devotees is far less when compared to those following the tenets of Buddhism even as they do not officially convert to the religion, monks said. In Hyderabad alone, their combined count could be close to 10,000. "Many of those who follow the tenets for a few years later go for an official change in religion," Kema Chara banteji said. The biggest Buddhist Vihara in Hyderabad which belongs to Mahabodhi Society, Mahindra Hills, has around 45 monks. Most monks residing in Hyderabad are from Tripura, Bengaluru, and Maharashtra even as Buddhists in the city are in search of Telugu-speaking monks.

The aims and objectives of the Buddhist Centre in Hyderabad-Siddhartha Buddha Vihara Trust are:³²

1. To encourage the teaching, practice, and realization of Buddhist Principles with special emphasis on morality, Meditation wisdom, and compassion.
2. To establish suitable facilities for and support the invited Sangha so they may act as spiritual guides.
3. To provide a non-sectarian environment for all walks of people to learn and practice the Dhamma.
4. To Provide Libraries and facilities for writing, printing, and Publishing, distributing books.
5. To train Buddhist youth to do intensive propagation of Buddha Dhamma and to establish ourselves as a Learning Centre for teenagers, youngsters, adults in the near future all over India.
6. To encourage and promote the development of social welfare for all needy persons especially poor people.

In Telangana, a vast majority of the Buddhist population is in Adilabad due to its common border with Maharashtra and nearly 25,000 Buddhists reside there.³³ The number of Buddhist followers is also increasing in Hyderabad and Karimnagar districts. According to Kattaiah, a former railway employee, people are inclined towards Buddhism because it does not believe in cast distinctions. He remarks that "Buddhism is opposed to the caste system and regards people of all castes equally. Vexed with caste discrimination in the society Dalit, most of them Ambedkar followers are taking to Buddhism. Rationalists from backward and upper castes are also following Buddhism". The number of people getting inspired by Buddhism and its principles has been on the rise in the Telugu speaking states, especially in Telangana, in the last five-six years. Scores of people attending Buddha Jayanti meetings held every year on May 21 at Lumbini Park is a pointer to this. Senior Journalist Mallepalli Laxmaiah said that there quite a few popular Buddhist sites in Telangana like Nagarjunakonda, Phanigiri, Dhulikatta, Nelakondapalli sites by Hindus and

Buddhists. According to him conversion from Hinduism to Buddhism is easy, as Buddhism does not interfere with existing beliefs. One can be part-Hindu and part-Buddhist". Oral testimonies of some of the Buddhist converts confirm the growing popularity of the new religion in recent years. "I have been following Buddhism for the past year and I found it to be very simple and practical. Today, many young people like me are in search of peace and happiness and Buddhist philosophy to me is the answer to it," said B Rajkumar, a software employee of a multi-national firm in Madhapur, who reflects what hundreds of others are saying in Hyderabad. An insightful journalist summed up the recent history of Buddhism in Telangana/ Hyderabad as follows: "From a few hundred faithful followers in 2002 to at least 30,000 followers now, Buddhism is fast making a comeback in the city and elsewhere in the state which is dotted with more than 150 Buddhist religious sites, including the popular Buddha statue in the middle of Hussainsagar, all reminding of a glorious past. The religion was once very popular in the coastal regions of the state during 5th century BC with all three doctrines of Buddhism - Theravada, Mahayana and Vajrayana – practiced. While Hinduism and Islam flourished in the later centuries, Buddhism has forgotten which historians attribute to the destruction of important shrines and monasteries by Hindu and Muslim rulers during later years. Monks double up as counselors. The monasteries may have never been rebuilt, but Buddhism is slowly becoming popular in the hearts of Hyderabadis, many monks and locals vouch". Some of the prominent scholars influenced by the Buddha's life and teachings in Telangana included: R. Subba Rao (Retd. IAS), C. Anjaneya Reddy, (former Director General of Police, Veerananarayana Reddy, (Retd. IPS), Prof. Kancha Ilaiah, (Osmania University), Bojja Tarakam, (Senior Advocate), Prof. Ghanta Chakrapani, (Chairman, TPSC), Mallepalli Laxmaiah, (Journalist), P. Sivanagi Reddy, Borra Goverdhan, A. Venkateshwar Reddy, (Buddha Goshudu), D. Chandrashekar (Writer), K.K. Raja, (Philanthropist), Sheela Prabhakar, etc. Apart from the Telugu-speaking population, those following the Buddhist religion in Telangana include settlers from the states of Maharashtra, Karnataka, and Tamil Nadu.

Interestingly, the number of recent followers consists of young people in their twenties and thirties.³⁴ "Buddhism follows a middle path and not extremes which has even helped in my professional life. I exactly know how to deal with my noisy colleagues or unreasonable bosses in an effective way while retaining my calmness," said Raja Choudhury, who runs a job consultancy firm and recently had separated from his wife and kid. "Vipassana (a form of meditation) helped me sort out my inner demons and now I am back with my wife and child. I am a very happy man," he said. The reasons for moving towards Buddhist philosophy may vary from peer pressure, stressful professional lives, increasing relationship problems or a way to experience peace, say Buddhist monks of the city. The Ananda Budhha Vihara in Mahendra Hills, the largest Buddhist temple in the twin cities, witnesses a steady stream of visitors in the weekdays which may go up to a few hundred during weekends. Interestingly, the monks here double up as counselors. "The visitors here come and discuss their problems which range from professional and family troubles, relationship issues to poor performance in academics or poor health. They seek advice on how to address the issue and we are more than happy to help them," K Sangharakshitha Maha Thero, founder chairman of Ananda Budhha Vihara Trust said.

To conclude, from Asmaka Mahajanapada in ancient period to the end of Asaf Jahi rule in the modern era the Buddhist heritage and legacy prevailed in the land of Telangana and its people. The identity and personality of Telangana are historically rooted in Buddhism, as it shaped the distinct cultural synthesis of Deccan. For about a century the people of Telangana, especially traders, artisans and craftsmen, peasants, service and productive castes, Dalits, Adivasis practiced Buddhist religion and it significantly impacted the culture, traditions and world view. Buddhism not only emerged as an alternative religion to Vedic/Hindu religion but also threw up alternative ideology, spirituality, and religious practices. Available historical, literary and archeological evidence indicates that Buddhism was embraced by the vast majority of non-Brahman castes. Thus Buddhist Dhamma and its principles remained an integral part of Telangana society, culture, and ethos. In Telangana during the ancient period Buddhism,

Jainism, and other heretical religions contained the spread of Vedic religion and its ideology, while in the medieval period Saivism, Vaishnavism, Bhakti, Sufi movements propounded social equality and justice. In the modern period, anti-caste social reformers and Dalit-Bahujan intellectuals were inspired by the Buddhist philosophy and vehemently condemned the Brahmanical ideology and

launched militant movements for of equality achieving social equality and justice. In contemporary times, Buddhist principles of *ashtangamarga*, freedom, equality, and fraternity became the guiding force of Dalit-Bahujan identity and self-respect movements. Buddhism is preserved as an emancipatory identity in the present day Telangana society.

SECTIONAL PRESIDENT'S ADDRESS - POLITICAL HISTORY SECTION
NAWABS RULE IN THE CARNATIC REGION FROM 1690 TO 1855 AD
– A STUDY

Dr. H. Munavar Jan

Dear President, Secretary, Distinguished Professors and Delegate Friends.

At the outset, I place on record the sincere and deep sense of gratitude and thank the Executive Committee as well as the members of the South Indian History Congress for the honour and prestige they have done to electing me to preside over the Political History Section in the 40th Session of the South Indian History Congress being held at Annamalai University, Chidambaram from 31st January to 2nd February 2020. I prefer to present my address on 'Nawabs Rule in the Carnatic Region – A Study'.

In the Eighteenth Century, the Nawabs of Carnatic also referred as Nawab of Arcot ruled South India from 1690 AD to 1855 AD. They played a prominent role in the history of South India. We cannot imagine the Carnatic region without Nawabs in eighteenth century. S. Muhammad Husayn Nainar, in his introduction to the "Sources of the History of the Nawwabs of

the Carnatic" says, "*The rise of the Walajahi dynasty in the Carnatic at about the middle of the eighteenth century of the Christian era, was an event of the greatest historical importance not only to the Carnatic and her immediate neighbours but to India generally. It marks the creation of a Muslim Nationality and the genesis of political relations which affected the whole course of Indian history. This period of the Carnatic history is the starting point for the buildup of the British Raj in India and it indicates in fact the transition from the medieval to modern times*".

Location and Importance of the Carnatic:

The term "*Carnatic*" is derived from a definitive Sanskrit language, "*Karunadu*". According to Bishop Robert Caldwell, in his "*Comparative Grammar of the Dravidian Languages*", the term is derived from Karu, black and Nadu, country, i.e. the **Black Country**, which refers to the black soil prevalent on the plateau of the Southern Deccan.

The Carnatic consisted of the districts of Tirunelveli, Ramnad, Madurai, Trichirapalli, Tanjore, South Arcot, Chengelpet and North Arcot in Tamil Nadu and Chittoor and Nellore in Andhra Pradesh.¹

Carnatic Region Under Various Dynasties:

At the earliest period of which any records exist, the Carnatic region was divided between the Pandyas and Chola Kingdoms. The Pandya Kingdom practically coincided in extent with the districts of Madura and Tirunelveli. The Cholas extended along the Coromandel Coast from Nellore to Pudukkottai, being bounded on the north by the Pennar River and on the south by the Southern Vellaru. The government of the country was shared for centuries with these dynasties by numerous independent or semi-independent chiefs, evidence of whose perennial internecine conflicts is preserved in the multitudes of forts and fortresses, the deserted ruins of which crown almost all the elevated points. In spite, however, of this passion of the military classes for war, the Tamil Civilization developed in the country was of a high type. This was largely due to the wealth of the country, famous in the earliest times as now for its pearl fisheries.

The 4th Century saw the rise of the Pallava Dynasty, which for some 400 years encroached on, without extinguishing the Tamil Kingdoms. The power of the Pallava kings was shaken by the victory of Vikramaditya Chalukya in 740 AD, and shattered by the Aditya Chola at the end of the 9th century. The Chola Kingdom, which in the 9th Century had been weak, now revived, its power culminating in the victories of Rajaraja the Great, who defeated the Chalukyas after a four years war and about 994 AD, forced the Pandya kings to become his tributaries. His successors continued the eternal wars with the Chalukyas and other dynasties and the Chola power continued in the ascendant until the death of Kulottunga Chola III in 1278 AD, when a disputed succession caused its downfall and gave the Pandyas the opportunity of gaining for a few years the upper hand in the south. In 1310 AD, the Muslim armies under Malik Kafur penetrated into Carnatic and overwhelmed the Hindu states of Southern India in a common ruin.² Though crushed, they were not completely extinguished. This part of the country was known at that time as 'Malabar'. A period of anarchy

followed the struggle between the Chola kings and the Muslims. A Hindu dynasty usurped the throne of Kanchi for itself and continued to rule till the end of the 14th century. In 1365 AD, a branch of the Pandya dynasty succeeded to rule till 1623 AD. At the beginning of the 15th Century, the whole country had come under the rule of the kings of Vijayanagar. The Vijayanagar rulers administered the Southern Provinces through its Viceroys called the Nayaks.³ The powerful Nayaks of the Carnatic Region were that of Madurai, Tanjore and Senji. They remained submissive to their suzerain. However, in 1565 AD, the Battle of Talaikkotta brought disaster to Vijayanagar and hastened its decline.⁴ The Nayaks took advantage of the weakness of the Vijayanagar Empire made themselves independent only in their turn to become tributaries to the Qutub Shahi Kings of Golkonda and Adil Shahi Kings of Bijapur, who divided the Carnatic between them. Both the parts were respectively called the Hyderabad and Bijapuri Carnatic. Each of them was further subdivided into **Balaghat** (uplands) and **Payeenghat** (lowlands). Thus the suzerainty of Vijayanagar was replaced by that of Bijapur and Golconda.⁵

Carnatic Region Under The Nawabs:

The famous Maratha ruler Shivaji (1674 – 1680 AD) invaded the Carnatic during 1677 – 1678 AD. The invasion of Shivaji led to the conquest and establishment of Maratha rule at Vellore and Senji and exaction of the mandatory Maratha tax, the **Chauth** from the rest of the Carnatic.⁶ Harji Mahadik, the son of Shivaji, was made as the viceroy of Senji region.

After the death of Shivaji in 1680 AD, Mahadik assumed independent charge as Maharaja. As there was confusion, at that time Aurangzeb, the Mughal Emperor conquered the Marathas, the Sultans of Bijapur and Golconda and annexed Carnatic to the Mughal Empire.⁷ The Carnatic Region became a Nawabi i.e. an administrative unit of the Mughal Dynasty. After the death of Aurangzeb in 1707 AD, control of the Mughals slackened on the distant provinces. Taking advantage of the situation, the Carnatic Nawabs garnered more powers and became de facto rulers of the Carnatic.

The Carnatic Nawabi:

The Mughal Emperor Aurangzeb created administrative units called **Nawabis** in the newly

conquered territories. Thus the Carnatic was made a **Nawabi**.⁸ The Mughal official in-charge of the military and civil government of the Nawabi was called Nawab.⁹ The word 'Nawab' is Urdu derived from the Arabic word 'Naib' meaning deputy.¹⁰ Zulfiqhar Khan, one of the trusted Commanders of Aurangzeb was made the first Nawab of the Carnatic in 1692AD.¹¹ In Bengali, it is pronounced as 'Nabob', which appears to be derived from Spanish or Portuguese pronunciation.

The Nawab of the Carnatic was also referred to as the Nawab of Arcot.

The First Nawab of the Carnatic: Nawab Zulfiqhar Ali Khan (1690 – 1703 AD):

Zulfiqhar Ali Khan was the son of Azad Khan, Wazir of the Mughal Empire. He and his forefathers exercised powerful influence in the Court of the Mughal Empire.

The Emperor Aurangzeb sent an army to the south under the Commander-in-chief, Zulfiqhar Ali Khan. With him Cambuksh, the youngest son of Aurangzeb, also came to the South.¹² In 1698, Zulfiqhar Ali Khan laid siege to Senji.¹³ But in 1690 he was defeated by the Marathas. Aurangzeb created the title of Nawab of Carnatic and Zulfiqhar Ali Khan became the First Nawab of Carnatic. Though he was defeated in 1690 AD by the Marathas, Zulfiqhar Ali Khan was not to leave the Marathas to go on. He made all efforts to gather men, ammunition and money for a successful war with them.

Nawab Zulfiqhar Ali Khan had a friendly relationship with the East India Company and with Governor Yale in particular. Governor Yale assisted Nawab Zulfiqhar Ali Khan and secured from the English villages of Egmore, Purasawakkam and Royapuram for the consideration of ten thousand Pagodas.¹⁴ The British records mention the coinages as Pagodas (1 Pagoda = 3 ½ rupees).

He rose against the Marathas with strong reinforcement and defeated them near Tanjore in 1697. He recaptured Senji in 1698. Nawab Zulfiqhar Ali Khan renamed Senji as Nasrathgarh (City of Victory).¹⁵ He made the Maratha ruler at Tanjore a regular tribute. He made Daudh Khan as Khiladar at Senji.

Nawab Zulfiqhar Ali Khan, being the son of a responsible officer of the Mughal Empire, enjoyed great influence with the emperor, apart from being the Commander of the Mughal army. He was the Governor of all the Southern territories of the emperor. As the events went, it was the strong will and tireless efforts of Nawab Zulfiqhar Ali Khan that made possible the recapture of the lost territories of the Mughals from the Marathas. It can therefore be said that he had earned the title of the Nawab by dint of his tireless efforts rather than bestowed with it.

The Second Nawab of the Carnatic: Nawab Daudh Khan (1703 – 1710 AD):

In 1703, when Zulfiqhar Ali Khan returned to Delhi, Daudh Khan was appointed as the second Nawab of the Carnatic by Aurangzeb. During his tenure, he made frequent visits to Santhome and tried to develop it. But due to the efforts of Pitt, the then Governor of the East India Company, Daudh Khan had to defer his plans. In one of his visits to Fort St. George, the streets were lined with soldiers. The line of soldier was from the St. Thomas Gate up to the Fort and the certain of the inner Fort were manned by train bands. The Governor, Pitt, conducted him into the Fort, carried upto his lodgings. Under the orders from the Emperor Aurangzeb, Daudh Khan blockaded Madras for three months. After some negotiations between Daudh Khan and the East India Company, the blockade was lifted. He shifted his capital to Arcot.

Arcot – The popular Capital:

The hot climate of Senji did not suit the Nawab Daudh Khan. Hence he shifted the capital to Arcot, on the bank of the river Palar.¹⁶ Arcot became the popular capital of the Nawabs of the Carnatic and then the Nawabs of the Carnatic were also referred to as the Nawabs of Arcot.

In 1710, Nawab Daudh Khan was recalled to Delhi to discharge more responsible work as Commander-in-Chief of the Mughal Army.

The Third Nawab Of The Carnatic: Nawab Saadatullah Khan (1710 – 1732 Ad):

After the recall of Daudh Khan, Saadatullah Khan became the Nawab of Carnatic in 1710 AD. He carried his contribution wars to gates of Srirangapattinam and collected tribute from the rulers. His rule, which lasted till his death in

1732, was full of wars, mainly against local chiefs who withheld tribute. One of these wars was against Tej Singh. Swarup Singh, who was an army officer under the Mughals, was the Khiladar of Senji and he refused to pay the tribute to the emperor. When he died, his son Tej Singh became the Khiladar at Senji. He also refused to pay the tribute to the Mughal Emperor. Nawab Saadatullah Khan took a war against Tej Singh and recaptured Gingee fort and killed Tej Singh at Kadalimalai in 1713 AD. Immediately Tej Singh's wife committed Sati. Because of this incident, a town near Arcot was named as Ranipet.¹⁷

Another rebel was Shah Mir of 'Chinnapatan'. He had made money in trade and thought that he would become a ruler of his place. Gaining the support of people in Arcot and Vellore, he rose in revolt in Vandavasi. But he was quelled easily enough.¹⁸ Nawab Saadatullah Khan conquered the fort of Senji for the second time in 1717 AD. A military garrison was stationed there.

Zulfiqhar Ali Khan, Daudh Khan and Saadatullah Khan were appointed as Carnatic Nawabs by the Mughals. After the death of Aurangazeb in 1707 AD, the Mughal Empire declined, Nawab Saadatullah Khan accepted Nizamul Mulk of Deccan as his overlords. He established his own dynasty with his family name Nevayets. He was the first independent Nawab. He successfully ruled the country for about twenty years. He died on 28th September 1732 and he was buried in the compound of the congregational Mosque at Arcot.¹⁹

The Fourth Nawab Of The Carnatic: Nawab Dost Ali (1732 – 1740 Ad):

Nawab Saadatullah Khan had no issues and so he adopted his brother's sons, Dost Ali and Bokkar Ali. In 1732 AD, when Saadatullah Khan died Dost Ali ascended the throne.²⁰ This succession was confirmed by Nizamul Mulk Asif Jah and the Emperor Muhammad Shah of Delhi. Nawab Dost Ali wanted to be an independent ruler. He had two sons, Safdar Ali and Hasan Ali and several daughters. Chanda Sahib had married one of his daughters. After the death of Saadatullah Khan, Chanda Sahib had involved in active politics. As a great hero and administrator, he tried to bring the whole Tamilagam under the Nawab's control.

Nawab Dost Ali sent his son Safdar Ali and son-in-law Chanda Sahib to invade Tiruchirapalli, Tanjore and other southern states. As there was no unity among the southern kingdoms, they could not take any concerted action against the invaders. There was some internal problems at Madurai, Rani Meenakshi, the Queen of Madurai Nayak requested Chanda Sahib to help her. But Chanda Sahib helped and deceived Rani Meenakshi. He imprisoned her and conquered Tiruchirapalli, Dindigul and Madurai in 1736 AD.²¹ Chanda Sahib also invaded Tanjore and forced Raja Tukkoji to pay a large contribution.²²

The Marathas of Satara, on hearing the plight of the Maratha ruler of Tanjore invaded the Carnatic in 1740 AD. The Maratha army of Satara was led by two generals – Fateh Singh and Raghoji Bhonsle. It is said that Safdar Ali was jealous of the rising power of his brother-in-law Chanda Sahib and suspected his motives. Hence, Safdar Ali secretly invited the Marathas to invade the Carnatic.²³ As the Nizam also felt that Nawab Dost Ali was becoming authoritative, he encouraged the Marathas to invade his dependency.²⁴ The sudden invasion of the Marathas was an unpleasant surprise to Nawab Dost Ali. The Nawab at once collected an army and marched forth to meet the invading Marathas, who were coming from the direction of Cuddapah. The two armies met near Chandragiri. The Marathas were able to make an unexpected attack on Dost Ali's army, as it was guided their march by a traitor in the Nawab's army. The Marathas killed Dost Ali and his son Hasan Ali and routed their forces. The victorious Maratha army promptly marched towards Arcot.

The Fifth Nawab Of The Carnatic: Nawab Safdar Ali (1740 – 1742 Ad):

The success of the Marathas surprised Safdar Ali. He planned for a mock invasion and it turned out to be a real one. He was forced for a costly negotiation and purchased peace for a payment of one crore of rupees.²⁵ The Maratha army evacuated Arcot, after collecting the tribute. Safdar Ali felt safe and ascended the throne as Nawab of Arcot.

The attention of the Marathas turned from Arcot to Tiruchirapalli which was held by Chanda Sahib, brother-in-law of Nawab Safdar Ali. Tiruchirapalli was besieged by the Marathas

and Chanda Sahib defended the fort for more than a month, after which he could not withstand the siege of surrendered. The Marathas demanded one crore of rupees for the release of Chanda Sahib. Negotiations for the release of Chanda Sahib failed and the victors carried away the Nevayet General Chanda Sahib to Satara.²⁶ The Maratha General Raghoji Bhonsle appointed Murari Rao as the ruler of the conquered territory.²⁷ This marked the end of the Nevayet regime in Tiruchirapalli.

The Nizam-ul-Mulk of Hyderabad did not accept Safdar Ali as Nawab. Therefore, Safdar Ali shifted his residence to Madras as the British guest. Nawab Safdar Ali left his young son Sayeed Mohammed Khan in Madras and proceeded to Vellore to demand the tribute from his brother-in-law Murtuza Ali who was commanding the garrison at Vellore. Murtuza Ali murdered Safdar Ali while he was in asleep. Murtuza Ali next proceeded to Arcot where he proclaimed himself as the 'Arcot Nawab' in 1742 AD. The soldiers supported him as he promised to pay the arrears of pay immediately. When he could not pay the arrears, the soldiers were against Murtuza Ali and had to flee back to Vellore.²⁸

The Sixth Nawab Of The Carnatic: Nawab Saadatullah Khan li (1742 – 1744 Ad):

Sayeed Mohammed Khan, the younger son of Safdar Ali, under the protection of the English in Madras was proclaimed as the Arcot Nawab with the name of Saadatullah Khan II. In return to the help that the British rendered to his family, he gave Sadayankuppam, Perambur, Veppery, Pudupakkam and Ernavur to the British.²⁹

In 1743 AD, Nizam-ul-Mulk of Hyderabad arrived at Arcot and appointed his army General Khwajah Abdullah Khan as the guardian to the minor Nawab.³⁰ In 1744 AD, Khwaja Abdullah Khan died, Anwaruddin was appointed as the guardian of the young Nawab.³¹

In June 1744 AD, a function took place in the royal family and it was celebrated in the palace of Arcot. All went on well for a while, but suddenly, when the Nawab was descending the steps of the palace to greet his guardian, a soldier stabbed him to death.³² It has never been ascertained as to who was the originator of this plot. Many suspected Anwaruddin and Murtuza

Ali. But the question has been left for ever in doubt.

Anwaruddin, however, was the only one who derived any advantage from the death of the young Nawab Saadatullah Khan II. Anyhow Anwaruddin was successful in persuading his patron, the Nizam, of his innocence. The Nizam was more interested in the preservation of his influence than in the punishment of the perpetrators of the assassination; he appointed Anwaruddin of the House of the Walajahis as the next Nawab of the Carnatic,³³ which paved the way for the tragic eclipse of the Nevayets and the rise of the rule of the Walajahis.

The Walajahis:

'Amirul Hind Walajahi' was the title conferred on Nawab Muhammad Ali, son of Nawab Anwaruddin. This honorary title was given by the Mughal Emperor³⁴ became the honorific of the dynasty. 'Wala' is a word derived from Persian language and it means **superior** and 'Jahi' is also from the same language signifies **dignity** and the title stands for the great honour bestowed by Muhammad Shah, the Mughal Emperor.³⁵

The Seventh Nawab Of The Carnatic: Nawab Muhammad Anwaruddin (1744 – 1749 Ad):

Muhammad Anwaruddin was seventy years of age when he was appointed as the Nawab of the Carnatic. He had long administrative experience in various departments of the Mughal Empire. The Emperor Aurangzeb was very much pleased with him on account of his faithful work. He served as Governor of Surat and then he was transferred to Rajamundry where he served for several years as Governor. His ability, courage and experience enabled him to fulfill the responsibility given to him successfully.

Restoration of peace in the Carnatic:

Anwaruddin became the Nawab of the Carnatic when rivalries were ripe among the royal factions. Plots and counter plots plagued the country. Hence restoration of peace became the first priority of the newly appointed Nawab. He adopted strict measures to bring the Carnatic under his control. He suppressed his opponents by severe punishments like confiscation of properties, imprisonment and expelled some of

them from the Carnatic territory. The dreadful measures followed by the Nawab brought peace in the society.³⁶

Effect of the Austrian War of Succession in the Carnatic: The First Carnatic War – 1746 Ad:

The Carnatic was now disturbed by the opening hostilities between the French in Pondicherry and the English in Madras, was a result of the outbreak of the Austrian War of Succession (1740 – 1748 AD). Dupleix, the talented and ambitious Frenchman had become the governor of Pondicherry in 1742. The Austrian War of Succession (in which the English opposed the French in Europe) had broken out in 1740 and its repercussions came to be felt on the Coromandel Coast, where these two nations had competitive commercial interests. In 1745, an English fleet under Barnett appeared at Madras. Dupleix fearing naval action by the English requested Nawab Anwaruddin to enjoin upon the English not to indulge in warlike acts against anyone within his territories which formed part of the Mughal Empire; whereupon the Nawab of Carnatic called upon the English to desist from such acts. Though Nicholas Morse, the then Governor of Fort St. George replied that he had definite instructions from England to attack the French, the Nawab firmly stood his ground and refused to allow the English to attack the French.³⁷ So the English first sailed away.

But notwithstanding these transactions, with the arrival of the French Admiral Mahe de La Bourdonnais naval hostilities between the English and the French became unavoidable and the Nawab was in no position to prevent them. La Bourdonnais was about to bombard the English settlement in Madras. Madras easily fell into the hands of the French on 10th September 1746 AD.³⁸ Nawab Anwaruddin now realized that he had been tricked out of Madras by Dupleix's diplomacy and so demanded French withdrawal. The French Governor however insisted that he had recovered Madras only to surrender it to the Nawab himself; the Nawab preferred to take Madras from the French, rather than wait till the latter chose to present it to him. So he sent an army under his son Mahfuz Khan to Madras to help the English and defeat the French force. But the French army under Captain Paradis defeated the large cavalry force of the Nawab at Santhome and again at Adyar in 1746 AD.

Nawab Anwaruddin determined to assist the English, sent his son Muhammad Ali to Devanampatnam, the English settlement threatened by the French.³⁹ The English commander of the small garrison at Devanampatnam John Hinde was consoled and comforted. The Nawab's army defeated the French and saved the English settlement.⁴⁰

Treaty of Aix-La-Chapelle (1748 AD):

The conflict between the French and the English came to an end with the declaration of 'Peace of Aix-La-Chapelle' in 1748 AD. The Carnatic war also stopped. In the Carnatic, the conflict brought friendship between the Walajahis and the English. It had adverse effect on the relationship between the Walajahis and the French. This trend of harmony and hatred prepared the ground for the second round of encounter between the French and the English as supporters of rival native princes. The Treaty of Aix-La-Chapelle temporarily ceased the conflict between the English and the French in the Carnatic.

The Second Carnatic War (1748 – 1754 Ad):

Though the enmity between the French and the English ended in Europe, their rivalry continued in the Carnatic. The success of Dupleix against the Nawab's forces made him more confident and ambitious. Dupleix aimed to promote the French interests. He began to fit one Indian ruler against the other. The English were cautious and alarmed of the growing French influence.

Causes of the Second Carnatic War:

The Nizamul Mulk of Hyderabad died in 1748 AD. There arose a war of succession between Nasir Jung, the second son of the departed Nizam and Muzaffar Jung, his grandson. Muzaffar Jung sought the help of the French. Nasir Jung got the English help. This paved the way for the outbreak of the Second Carnatic War.

Another important cause for the outbreak of this war was the renewed challenge from Chanda Sahib. Chanda Sahib, the son-in-law of the slain Nawab Dost Ali was carried away as per prisoner by the Marathas in 1741 AD.⁴¹ Chanda Sahib was languishing in the Maratha prison for thirteen years. His wife and other

members of his family were left in Pondicherry under the protection of the French. Dupleix cleverly developed his scheme through the family of Chanda Sahib. He entered into negotiations with the Marathas through Chanda Sahib's wife. He purchased the release of their captive for seven lakhs of rupees.⁴² Chanda Sahib sought the help of Muzaffar Jung and the French to capture the throne of the Carnatic.

Course of the War:

A coalition was formed between Chanda Sahib, Muzaffar Jung and Dupleix to change the currents of the politics in the Carnatic. The massive army rose by Chanda Sahib and Muzaffar Jung marched towards the capital of the Carnatic. They were joined by Raza Ali Khan, son of Chanda Sahib who brought a contingent of French soldiers from Pondicherry with their artillery. The coalition army rapidly marched towards their destination and encamped at the head of the Ambur Valley in July 1749 AD.⁴³

Battle of Ambur (1749 AD):

Nawab Anwaruddin fully aware of the fact that Chanda Saheb, Muzaffar Jung and the French were against him. Seventy seven years old Nawab Anwaruddin, weakened by sickness and age, reached Kuthalchangam, the battle field with the idea of fighting the enemy merely for the purpose of preserving his honour and bravery.⁴⁴

Initially, Nawab Anwaruddin tried to dissuade Muzaffar Jung from joining the Nevayet Chief Chanda Sahib and the French. He reminded Muzaffar Jung of his friendship with his grandfather Asaf Jah and assured him of getting pardon and suitable Jagirs from his uncle Nasir Jung. Muzaffar Jung was impressed by the advice of Nawab Anwaruddin and hesitated to take war against Nawab Anwaruddin. But Chanda Sahib and the French secretly started the firing and threw the blame on Nawab Anwaruddin.⁴⁵ Nawab Anwaruddin was killed in this battle on 23rd August 1749. Chanda Sahib crowned himself as the Nawab of Arcot with the help of Dupleix and Muzaffar Jung. He rewarded Dupleix by giving the villages of Valudavoor, Villianoor and Bahur near Pondicherry.

Expedition and capture of Arcot:

Anwaruddin's son Muhammad Ali escaped to Tiruchirapalli and took refuge in the Fort of

Tiruchirapalli. It was besieged by Chanda Sahib. Muhammad Ali sought the help of the English to save him and attack Arcot. Robert Clive, an army officer of the English entrusted with the command of a small force of 200 Europeans and 300 sepoy with 8 Field officers, marched towards Arcot.⁴⁶

On 25th August 1751, the forces started from Madras Presidency and reached the camp with lightning speed. On hearing the arrival of the British forces, the enemies abandoned the fort. In the next day morning when Robert Clive reached the place, he met with no opposition and took the possession of the Citadel.⁴⁷ It was a remarkable event that a small band of bold veterans took the capital of the Nevayets.

Chanda Sahib on receiving the news of the capture of his Capital detached 4000 of his own troops with 150 French soldiers under the command of his own son Raza Sahib to recapture the fortress.⁴⁸ They arrived and attempted to capture the Arcot Fort. But Robert Clive defended it heroically for 53 days and Raza Sahib could make no progress.

After these victories, the Marathas and the British troops joined and made a triumphant march to Tiruchirapalli and joined with Muhammad Ali. The subsequent actions crippled the forces of Chanda Sahib and the French. With no other alternative, Chanda Sahib surrendered to the British. Muhammad Ali made a triumphant march to Arcot and proclaimed himself as Nawab of Arcot who held the title Walajahi – I.⁴⁹

The Eighth Nawab Of The Carnatic: Nawab Muhammad Ali Walajahi (1749 – 1795 Ad):

Muhammad Ali became the Nawab of the Carnatic in 1750 AD. Though Muhammad Ali wanted to assert his position as an independent ruler, he had to depend on the English support for his very existence. Nawab Muhammad Ali, sent his brother Mahfuz Khan in 1755 AD after subduing the Palaiyakkars of Manapparai, the army reached Madurai and occupied it after recovering it from the Pathan Chief, Miana, who held it. After consolidating their authority there, the Nawab's army marched still further south to attack the Palaiyallars there. Thereupon, Mahfuz Khan was appointed as the Nawab's 'rentier' at Madurai and Tirunelveli. But, as he found it difficult to suppress the Palaiyagars, the Nawab and the company sent the able General, Khan

Sahib, to Madurai who soon established the Nawab's power by suppressing the rebel of Palaiyakkars. Khan Sahib was appointed as the Governor of Madurai in 1756 AD, with the approval of the Nawab.⁵⁰

There was a further bout of Anglo – French conflict in the Carnatic when the Seven Years War was broke out in Europe in 1756. In the encounters between Haider Ai, the usurper in Mysore, and the English in the course of the Third Carnatic War, Nawab Muhammad Ali played no important role but was treated with great contempt by Haider Ali, who accused the Nawab of Carnatic of duplicity. The English who agree with Haider Ali on their estimate of Muhammad Ali, however, would not give up protégé on that account.

The Seven Years War came to an end with the Treaty of Paris in 1763. This treaty acknowledged him as the Nawab and ally of the King of England.⁵¹ In 1765, the Emperor of Delhi completely released him from all dependency and made him an independent sovereign ruler of the Carnatic.⁵²

Aggression on Tanjore:

Raja Singh, the ruler of Tanjore, signed a treaty with Nawab Muhammad Ali, by which the Maratha ruler was required to pay an annual tribute of twenty five lakhs of rupees to the Nawab. When Tuljaji, son of Pratap Singh defaulted the payment, the Nawab's forces twice invaded Tanjore i.e., in 1771 and in 1773 and the Madras Government helped him in these adventures.⁵³ Tanjore succumbed to military pressure, the Raja was imprisoned, and the government of Tanjore was taken over. For three years from 1773 to 1776, Muhammad Ali ruled Tanjore and assigned the revenues from that prosperous kingdom to his English creditors Benfield and others who did their worst exploiting the farmers of Tanjore.

Loss of Tanjore:

In 1775 AD, the Court of Directors condemned the proceedings of the Madras Council for the conquest of Tanjore and sent Lord Pigot as Governor of Madras to restore Tanjore to the rightful king. Lord Pigot restored Tanjore to Raja Tuljaji on 11th April 1776 AD.⁵⁴ The loss of Tanjore had very adverse repercussions on the Nawab. The unexpected

deprival of a source of revenue dislocated the Nawab's finances.

Subjugation of Marava States:

The Marava States were located in the eastern part of Madurai Country. These states maintained a status of independence during the rule of the Nayaks. In 1771 AD, Nawab Muhammad Ali represented to the Madras Council that the Marava rulers occupied government villages and neglected payment of tribute.⁵⁵ The Madras Council agreed with the views of the Nawab and decided to extend military support for the invasion of Sivaganga and Ramanathapuram. The combined forces of the Nawab and the English effectively stormed Ramanathapuram in June 1772 AD and occupied it. The invaders plundered the town and imprisoned the twelve years old Sethupathi Muthuramalingam and the Queen-regent. Afterwards the forces attacked Sivaganga and occupied the strongholds. As a result of these campaigns, the Walajahis established their sway over the Marava States.

The Nawab Muhammad Ali built the famous Chepak Palace in the year 1768. It comprised two blocks, the southern block called 'Kalas Mahal' in two floors and the northern block called 'Humayun Mahal' which contained the Diwan Khana. Further, Nawab changed the capital to Chepak, Madras.

The English debited all the war expenses to the Nawab of Carnatic. The English started to interfere more and more with the Nawab's power. In the beginning, they sent new servants from London with strict orders to conclude an agreement with the Nawab to pay off the outstanding debt, which in 1787 AD, amounted to about seventy five lakhs of pagodas. They forced the Nawab to transfer the collection of the Carnatic revenues to the Company servants.⁵⁶ But when they found out that the old terms in 1787 AD were too onerous, in May 1792 AD a new more efficient financial agreement was concluded. The settlement stipulated that in time of war the Carnatic revenues should be received and administered by the Company, but in time of peace the management of the revenues would rest with the Nawab, provided that he would pay nine lakhs of pagodas annually to the company for military services and six lakhs to his creditors.⁵⁷

In the late 1780s-1790s, the Carnatic Kingdom's natural resources, military and economic strength were seriously weakened by incessant wars. The Nawab had already been in failing health with his age over seventy. Moreover, Prince Amir-ul-Umara, the second son of the Nawab who carried out a strong policy against the English influence had already passed away. The circumstances thus allowed the British to gain more and more power without strong resistance from the Nawab. In June 1795, the English East India Company, under the command of Lord Hobart took an important step that showed that the local ruler had lost almost all of his power to the English; he proposed that from now on no money should be legalized in the Carnatic but only by the Company, though under the Nawab's name.

Nawab Muhammad Ali passed away on 13th October 1795, at the age of seventy eight, after ruling of forty six years. The Nawab hoped to secure his succession by nominating his second and favourite son, Amir-UI-Umara, but the prince died seven years before his father. Thus he was succeeded by his eldest son Prince Umdat-UI-Umara.

The Nineth Nawab Of The Carnatic: Nawab Umdat-UI-Umara (1795 – 1801 Ad):

Umdat-UI-Umara, the son of Nawab Muhammad Ali ascended the throne in the year 1795 AD. Lord Hobert, the Governor of Madras was offended by his neglecting to inform him the death of his father Nawab Muhammad Ali Walajahi, and more particularly for failing to invite him to his Coronation.

The Governor sent a message to Umdat-UI-Umara through his son that he should hand over some taluks to the English East India Company instead of 'Qist', that is a stipulated rate and time of payment of revenue; a tax. money. However, Umdat-UI-Umara was not agreeable to this and expressed to the Governor that the 'Qist' money would be paid only in cash, in accordance with the agreement signed between his father and Lord Cornwallis in 1787 AD. When this was brought to the notice of the Governor General in Council, he disapproved of the Governor's action and directed him to offer his congratulations on the Nawab's accession to the throne and also to accept the 'Qist' money in cash.

The rising power of the English East India Company and the waning authority of the Nawab of the Carnatic, created a situation favourable for the establishment of the British influence in the Carnatic region. The wars that Nawab Muhammad Ali fought with the aid of the Company against Chanda Sahib, the French, the Polaiyakkars, the rebels of Madurai, and the rulers of Tanjore, Vellore and Mysore contributed to his financial embarrassment and erosion of his authority. The treaties of 1787 and 1792 AD accorded recognition to the supremacy of the English in the Carnatic. The Treaty of 1787 AD was signed on the 27th February 1787 AD.⁵⁸ According to this treaty the Nawab should pay nine lakhs of Pagodas in support of the defence establishment created by the English. The Nawab was also to pay twelve lakhs of Pagodas annually to his creditors. During the time of war, the contracting parties should pay four-fifths of their revenues to the British East India Company. In case of non-payment by the Nawab, he should assign certain districts to the Company as security. According to the Treaty of 1792; the Nawab had to pay nine lakhs of Pagodas annually to the Company. Carnatic should be garrisoned by the British troops. British should collect the tributes directly from the Poligars on behalf of the Nawab. This treaty also authorized the Company to assume the administration of the mortgaged provinces on default of payment by the Nawab.⁵⁹ Nawab Umdat-UI-Umara strove hard to reassert his sovereignty but found his task insurmountable.

Lord Wellesley directed Lord Edward Clive, the Governor of Madras, to open negotiations with the Nawab and to announce the Company's decision to take over the administration of the Carnatic. But, by this time, Umdat-UI-Umara fell seriously sick and the Governor of Madras postponed the announcement for fear of disturbing the peace of a sick ruler. The Nawab passed away on 15th July 1801 AD. Before his death, he had nominated his son Ali Hussain, also known as Tajul Umara, eighteen years old, as his successor.

Soon after the death of Nawab Umdat-UI-Umara, Lord Edward Clive, the Governor of Madras deputed Webb, Chief Secretary to the Government of Madras to finalize a fresh political settlement with the new ruler. The

commissioners met the deputies of the Nawab and informed Tajul Umara of the Company's decision. But he refused to accept the terms. Then Azim-ud-Daula, the son of Amirul Umara, the second son of Nawab Muhammad Ali was offered the terms which were accepted by him. Azim-ud-Daula signed 'The Treaty of the Carnatic -1801 AD'. By this treaty, to quote the words of Arthur Wellesley, "This prince having agreed to the arrangement, a treaty was concluded by which the whole of the civil and military government of the Carnatic was transferred forever to the Company, and the Nawab, Azim-ud-Daula, and his heirs were to preserve their title and dignity and to receive one-fifth of the net revenues of the country".⁶⁰

Carnatic After 1801 Ad:

Under the terms of the treaty of 1801, Nawab Azim-ud-Daula had to give up the Civil and Military administration of the Carnatic to the British East India Company. Therefore he was the first titular Nawab of the Carnatic.

Nawab Azim-ud-Daula, as the titular Nawab of the Carnatic was allowed one fifth of the net revenue or one lakh forty four thousand star Pagodas annually, whichever was greater. He was given the honour of 21 gun salute. He died in 1819.

Nawab Azam Jah was the eldest son of Azim-ud-Daula. He became the second titular Nawab of the Carnatic in the year 1820, after the death of his father. His period also was an eventless one and he died in 1825, leaving a minor son, Ghulam Muhammad Ghouse Khan to continue as the Nawab.

Nawab Muhammad Ghouse Khan died in 1855 at the age of 31. He did not leave behind any male heir. The candidatures of Ghouse Khan's uncle Azim Jah, the only possible successor to the throne were set aside and the kingdom was formally annexed by the British East India Company as per the Doctrine of Lapse of Lord Dalhousie.⁶¹

On the death of the Nawab in 1855 AD, Azim Jah pressed his claims to the succession and was represented by legal counsel in England.

Creation Of Princeship Of Arcot By The British:

After several negotiations with Queen Victoria, Azim Jah was made a political pensioner and the new title of "HIS HIGHNESS OF THE PRINCE OF ARCOT" or "AMIR-E-ARCOT" was created in 1867 with several honours and privileges attached to the title in perpetuity.⁶² Prince Azim Jah was also granted

- i) The title of 'Prince of Arcot'
- ii) A salute of 15 guns
- iii) Permission to maintain a body guard of 50 sepoy, 8 troops and 80 artillery men and
- iv) Exemption from civil and military process.

Close members of the family of Prince Azim Jah were also given perpetual political stipends known as the Carnatic Stipends.

Azim Jah's litigious efforts and representations succeeded. On the 12th April 1871, His Excellency the Governor of Madras, held a Durbar in the Banqueting Hall, Madras, for the purpose of presenting to His Highness Prince Azim Jah Bahadur, the Letters Patent issued by the command of Queen Victoria, investing His Highness and his successors with the title and dignity of "Prince of Arcot" or "Amir-e-Arcot. Since the Kalas Mahal (Chepauk Palace) had been taken over by the Government in 1859, Prince Azim Jah moved to the 'Shadi Mahal' on Triplicane High Road and the Government was paying a monthly rent of one thousand rupees for his accommodation. As part of the settlement with Azim Jah, the Government undertook to build a palace, now known as "AMIR MAHAL" in Royapettah on lands belonging to the Nawabs.

Prince Azim Jah died in 1874 AD and was buried with full state honours. In the passage of time i.e. 1874 – 1993 AD seven successive successions took place and Muhammad Abdul Ali is the Eight and the present Prince of Arcot.

Conclusion:

The history of Carnatic from the beginning of the 18th century to the mid 19th century is indeed epoch making event. In the Eighteenth Century the Nawabs of Carnatic played a prominent role in the history of South India. It marks the creation of a Muslim Nationality and the genesis of political relations which affected the whole course of Indian history. This period of

the Carnatic history is the starting point for the building up of the British Raj in India and it indicates, in fact the transition from the medieval to modern times. The region of Carnatic and the period from 1700-1855 AD were in themselves highly important for the future of the Indian nationalism. The Nawabs of Carnatic, in spite of their fluctuating fortunes, extended a hand of benevolence towards their contributions.

The famous Nawabs like Nawab Saadatullah Khan, Nawab Anwaruddin, Nawab Muhammad Ali Walajahi had all the qualifications and characteristics of strong sovereign rulers. They were comparable to the

rulers of any other State of India in their political acumen, sagacity, as military commander and as administrators.

One of the most glorious aspects of Nawabs was their administration and their policy in general towards the public that set secular ideal for the betterment of the public. Therefore, Tamilagham is made to be a haven of peace today, because of the flow of humane quality, from the period of Sangam.

With this, I conclude my Presidential Address. Many thanks for a patient listening.

ROLE OF AYYANKALI MOVEMENT IN THE FORMATION OF ASABIYA AMONG THE DALIT COMMUNITY IN TRAVANCORE.

M.A. Abeenraj

INTRODUCTION

Ayyankali is the first social reformer and leader who united the disorganised and unprivileged class of people in Kerala. The struggles and its results initiated by Ayyankali had resulted in the shaping of unity among these classes of people both physically and mentally. The self-esteem created by Ayyankali in the dalits acted as the basis of a progressive social mobility among them.

The developmental sequels /modifications formed in a society is analysed by Ibn Khaldun on the basis of his theory Asabiya and came in to an interpretation that solidarity will become a reason for the birth of a civilisation, its downfall and then the birth of another different civilisation. While studying the social conscious attained by the dalit communities of Kerala, we can understand that Ibn Khaldun's theory Asabiya itself is the reason behind their social consciousness. While analysing the social journey that the dalit had travelled to reach the present world, we can witness the inclusion of asabiya in them.

ASABIYA AND AYYANKALI

The dalits have a past which tells the story of a multitude who were forced out of their own lands through caste formation and had to live in enslavement and had gone through constant persecution. "It is after 1910 that untouchables have their own land in Kerala"¹. Ayyankali is the one who convinced the people about the necessity of cooperation and mutual trust between them.

Untill the period of Ayyankali the dalits were an aimless group of people without a leader among them, where they couldn't see the leader in Ayyankali, there changes the history. The dalit unity behind the leadership of Ayyankali can be interpreted as a cross section of Ibn Khaldun's theory Asabiya which tells that there is a tendency in any society in approving a person from their own community as their leader."² Leadership over people who share in a given group feeling cannot be vested in those not of the same descend ". This argument can be substantiated by analysing the fact that the dalits never got attracted towards Chattampi Swamikal, Arattupuzha Velayudha Panicker, Ayya Vaikunda Swamikal etc. just as they got attracted towards Ayyankali.

According to Asabiya, the blood relations in a society is more intense than anything. "The group feeling results only from blood relationship or something corresponding to it "³. In 1907 the Sadhu Jana Paripaalana Sangham was formed to unite the whole dalits under a single shade. Without any sub caste barriers, but uniting the slave people inside a single premise named 'Sadhu Janata'.

Ayyankali had created a new bonding of the social blood relations among them. What Ayyankali fulfilled through Sadhu Jana Paripaalana Sangham was to unite a society through issues and subjects that affected them in general. Just like interpersonal blood relations, a new social blood hood had formulated in these societies by considering the social issues they had faced. The unity that had formulated in the basic people through Ayyankali movements had happened through the recognition of such a

common issue. Based on such social relations, Asabiya was formed among these people.

“Following the formation of Sadhu Jana Paripaalana Sangham , a new wave of community consciousness was formed among the basic people all over Travancore under the leadership of Kuppappuram Seethankan one of the followers of Ayyankali had started a movement in Kuttanadu from 1910 onwards”⁴. The dalits were united through an invisible loop which was formed by spreading about a social situation based on a common problem. The first organised peasant struggle under the leadership of Ayyankali that had started in 1914 and lasted about a year was the most visible example for this fact. The basic people who lived as different sub caste came together and lined behind Ayyankali because of the general nature of this demands and made the struggle a great success. This solidarity had worked as an energy booster for their later struggles.

The famous ‘villuvandi samaram’ conducted by Ayyankali in 1893 raised him to the position as a widely accepted leader. Though the entering of Ayyankali in the Popular Assembly as a member had strengthened this leadership, the strongest history of group consciousness among the dalits were evident in the One-year-long agricultural strike and its successful culmination.

Until 1911 P.K. Govindappillai, the chief editor of ‘Subhashini’, represented the Pulaya community in the Assembly. But from 1911

onwards Ayyankali was the representative. This led to a group consciousness among the dalits all over Travancore which had resulted in the Agricultural Struggle (1913-14). Based on Asabiya, it is said that blood relation is one of the reasons for group feeling. The actions of Ayyankali changed this subjective fact into a more wider concept called ‘social blood hood’ or ‘social blood relation’. This is the factor that united the basic people.

“Although sub caste representation was allowed in the assembly to break the popular movement, in 1917 Ayyankali had come as a mediator to solve a rebellion that broke out in Cherthala.”⁵ It was a fight between converted Christian dalits and other dalits. Ayyankali was called as mediator because he was a commonly accepted person in for both the groups. “There he advised them not to convert to Christianity”⁶. The perspective of blood relation put forward by Asabiya is shaping into a social blood hood. This is the reason behind the acceptance of Ayyankali among both the groups.

To Dalits, the social discriminations that they had gone through itself is the reason behind the formation of Asabiya. They had broken the barriers of separation that had been forced on them by the privileged castes, and formed a unity for counter acting their general issues. The later history tells that this became more visible with the arrival of Ayyankali and gave way to a new breakthrough.

ROLE OF CHATTAMPI SWAMIKAL IN THE SPHERES OF KERALA RENAISSANCE

S. Ardra

Introduction

Chattampi Swamikal was a Hindu sage and one of the greatest legendary social reformers in Kerala. His thoughts and works influenced the

beginning of many social, religious, literary and political organisations and movements in Kerala and for first time gave voice to those who were marginalized. The name of Chattampi Swamikal was well remembered, who initiated the social

reform movements among the Nair community. Through the Nairs belonged an upper caste, their position was inferior in the caste hierarchy. However, they had gained a dominant position in the society with their peculiar relationship with the Brahmins. Through the joint family system and Taravadu property, they had enjoyed financial soundness. The reformers introduced by the British paved way for the decline of the Marumakkathayam system resulting in the breakup of the Taravadu and joint family system. The emergence of new values in society, the introduction of western education, the growth of social consciousness among the lower caste etc contributed for the decline of Nair dominance in the society of Kerala during the second half of the 19th century. It was in the background of the decline of Nair dominance in the society of Kerala, the new generation of Nairs raised their voice for reforms. It was Chattampi Swamikal who initiated the social reform movements among the Nairs. He tried to put an end to the Brahmin dominance in religious rites and ceremonies. He ridiculed the caste system. He joined hands with Ezhavas in social reform activities.

Sree Vidyadhiraja Parama Bhattaaka Chattampi Swamikal was born on 30th August 1853 at Kollur in southern Travancore. His father was Vasudevan Namboothiri, A Nambuthiri Brahmin from Mavelikkara, and his mother was Nangamma, A Nair from Kannammoola. He was formally named Ayyappan but he was called by the pet name Kunjan. As his parents were not able to provide him formal education, he learned letters and words from the children of his neighbourhood who attended schools. He also learned Sanskrit by overhearing the classes at Brahmin house nearby. Knowing his thirst for learning an uncle took him to the traditional school conducted by Pettayil Raman Pillai Asan, who taught him without any fee. It was there that he earned the name Chattampi on account of his assignment as a monitor of the class. His thought were influenced all aspects of the Kerala society.

The aim of the Chattampi Swamikal was the building up of a Hindu society joining together an equal terms Nairs, Ezhavas, Nadars, Pulayas and Parayas. He was above the meaningless caste feelings. He believed every human being belonging to the same caste. His way of life was according to his thought. For him

all are brothers. Swami has not built up an organisation or a people's movement to fight against caste. But it is without doubt that he has planted the seed of a far-reaching revolution. Source of all revolution is the human mind. He attempted to build up a social system based on love and equality. His life and work formed the sources and inspiration for the social and political revolutions that occurred in Kerala during the first half of the 20th century.

Swamikal was born in the age that was darkest in history of Sanadanadharma. During this period the so called Hindus were prohibited from entering temples by the upper caste and were cut off from the main stream of social and spiritual life in the name of untouchability. To Swamikal, society and world was universal family of man without the barriers of caste and creed. He was not done anything directly for reforming social structure. But his life really influenced many leaders' movements for reforming religion and society. As per the laws and customs that existed in the 19th century Kerala a non-Brahmin has no right to learn Vedas or to have minimum education. The customs related untouchability and pollution that existed treated low caste as inferior even to animals. He strongly opposed the unjust customs and Brahmin domination. He forcefully stated that like food spiritual knowledge and education are basic requirements of every human being. He also stated that each and every human being is responsible to fight against any power for fulfilling his basic requirement. He was the first to infuse this thought into the low caste people of Kerala. His works, Pracheena Malayalam and Vedadikara Nirupanam contain this view. Swami also made people aware of their right to education and its need for their progress towards attaining equality in society. Sree Narayana Guru started and influenced the establishment of a network of schools all over Kerala for the lower caste people. Influenced by the ideas of Swami and a practical model suggested by Guru, the leaders like Mannathu Padmanabhan and K. Kelappan took initiative in organizing the Nair Service Society (NSS) and Sree Narayana Dharma Paripalana Yogam (SNDP).

Chattampi Sawmikal played a vital role in the history of the cultural renaissance and social reforms of Kerala. His teachings of Vedic concepts and Dharmas of life can easily be

followed by common man. The major struggles for the social and religious reforms starting with the famous Vaikkam Sathyagraha and Guruvayur Sathyagraha were influenced by the religious teachings of Swami, Guru and other disciples. Swamikal supported the temple entry movement ideologically. He was the first in Kerala to argue for the equal status of women and the abolition of absolute practices like Devadasi system. Gradually for improving the condition of women, Cochin and Travancore Government started banning Devadasi system in 1930.

Swamikal also worked for the emancipation of women and encouraged them to come to the forefront of society. He stated that ancient religion and law in India gave equal status to women and that their role is very important in family and society. He was very much in favour women being educated. Swami strongly opposes alcoholism. He belied that alcoholism would take the family life to a brink of disaster.

Swami respected the great principles enshrined in Christianity. But he severely criticized the baseless abuses that missionaries have thrown against Hinduism. His religious doctrines are yogic culture, non-violence, love and universal brotherhood. His view was that religion is not meant for the welfare of the inner

world of man alone. Swami's ideals inspired numerous socio-religious reform movements in different communities and castes. The system of inheritance, child marriage, polygamy and many other outdated customs (untouchability, Taliketttu Kalyanam, Tirandukuli etc) were stopped or reformed.

A majority of the followers of Chattampi Swami influenced by his teachings later became the revolutionaries and joint the left stream, which found the country's independence, social equality and democratic government.

Conclusion

Chattampi Swamikal was an evershining resplendent star in the history of modern Kerala. His life and works helped our society to make huge increases by transforming itself and revolutionizing our religious and social perspectives. Through his writings Swamikal critically analysis the social evils of the traditional caste based Hindu society. He was also a great advocate of equality. His main aim was to reform the Hindu religious thoughts and Dharma which come under the universal law of knowledge for all people. The socio- religious contributions of Swamikal and the change it has brought about and its relevance in the modern society were remarkable.

IMPORTANCE AND IMPACTS OF DR. A.P.J. ABDUL KALAM'S VISIT TO SOUTH AFRICA

E. Arunkumar

Introduction

India and South Africa have long historical relationships as both were British colonies. Both have contained social and cultural similarities.

During colonialism, a large number of Indians were taken to South Africa as indentured servants. Mahatma Gandhi was against any colonial and discriminatory regimes.¹

India is a crucial partner for South Africa in South Asia, and total trade has been increasing rapidly since 1994. South Africa and India have enjoyed strong historical ties, which have translated into a firm political commitment. In light of these shared historical links, closer economic ties are being fostered using initiatives such as the Joint Ministerial Commission (JMC) and the India-South Africa Commercial Alliance.² Developments in building economic relations with India are also expanding to include partners in Southern African Customs Union (SACU), as reflected in SACU's decision to pursue PTA negotiations with India. The proposed preferential negotiations between SACU and India should accelerate. Trade flows between the two economies, extend the range of traded goods and services and, more importantly, increase the proportion of trade in higher value-added products. The Apartheid government vanished between 1980 and 1994 by domestic pressures and international situation arise with the change in the international system.³

In this regard, a Comprehensive Strategic Partnership between India and South Africa, which was established through the Red Fort Declaration (March, 1997) that later reaffirmed in the Tshwane Declaration (October, 2006) which was hailed as an essential mechanism that has contributed in the past to both South Africa and India achieving identified national objectives. Both countries further committed to elevating efforts in achieving the goals set out in the Declaration.⁴

Exchange Visits

Ties among India-South Africa were advances strengthened several visits exchanged by dignitaries at all levels. The former Prime Minister Inder Kumar Gujral visited South Africa in October 1997. This was the first highest level visit by an Indian Prime Minister to South Africa.⁵ Indian Prime Minister Atal Behari Vajpayee go to South Africa during the Non - Aligned Conference in 1998 and the second time during the Commonwealth Heads of Government conference in November 1999. Further, in June, 1999, Shri Jaswant Singh, the then external affairs minister visited South Africa. In a similar vein, President Mandela visited India twice, in 1995 and once more in 1997. Former South Africa President Thabo Mbeki visited India as

Deputy President in 1996 and assume dan effective State Official visit in October 2003.⁶ At the invite of the former President of the Republic of South Africa Thabo Mbeki, The highest political level between the two countries was maintained with the visit of the former President of India Dr. Avul Pakir Jainulabdeen Abdul Kalam to South Africa from 14-18 September 2004. There have also been several ministerial-level visits exchanged between the two countries for support their ties.⁷

Importance of Kalam's Visit to South Arica

Three important agreements serve as the basis for the relationship between South Africa and India. The first is the Agreement on the Inter-Governmental Joint Commission for Political, Trade, Economic, Cultural, Scientific and Technical Co-operation engaged by former President Nelson Mandela and former Prime Minister NarasimhaRao on 25 January, 1995.⁸

The second significant foundation of the bilateral relationship between India and South Africa is the historic Red Fort Declaration on the bilateral partnership, which was engaged during former President Nelson Mandela's State Visit to India in March, 1997. The partnership is founded on a common commitment to economic development, social justice and co-operation for a global order that is marked by peace, security and equity.⁹

The third is the Delhi Declaration signed through the 2003 State Visit of South Africa President Thabo Mbeki, which reaffirms the strategic partnership between the two nations.¹⁰

The process of consolidation of the strategic partnership between India and South Africa relationships gathered further momentum in 2004. Dialogue at the highest political level between the two countries was maintained with the visit of the During President of India Dr.A.P.J. Abdul Kalam's to South Africa from 14-18 September,2004. This was the first visit by an Indian President to South Africa and marked a milestone in the bilateral relationship. The two Presidents exchanged views regarding the excellent state of bilateral relations, India Brazil South Africa Forum and issues of regional as well as global importance.an MoU on Cooperation in Information and Communications Technology was signed during the visit.¹¹

Addressed by the Kalam's to the Parliament of South Africa on 15 September, 2004. He spoke about the importance of Indo-South African friendship and working together. "India - Brazil - South Africa (IBSA) Forum signed among the three nations connecting Asia, South America and Africa is a valuable tool to further shape our friendship for the development of our nations. India-South Africa friendship and partnership is crucial to this forum as you are nearer to us geographically. I am thankful for the privilege of sharing with you and the people of South Africa whom you represent, our experience in our efforts to develop the nation socially and economically over the last fifty years. I do so in a spirit of understanding that we may learn from each other and strengthen our resolve to move our nations ahead to greater prosperity, happiness, and freedom from insecurity in the years ahead. Perhaps as we do so, we shall realize that we have so much in common that we shall wonder why we have not got closer together much earlier. Both our nations are free, independent states in an increasingly complex and interdependent world where the values of friendship and mutual assistance are of paramount importance. Now that our banners of freedom are unfurled, by the sacrifice of our political leaders and people, we should contribute towards happiness and peace in the world".¹²

Impacts of Kalam's Visit to South Africa

India and South Africa reaffirmed their support for the Asian-African Sub-Regional Organizations Conference (AASROC) development aimed at forging a New Strategic Partnership between Africa and Asia, incorporating existing advantages, exchanges of experience and best practices among the countries and sub-regional and regional organizations of Africa and Asia. Both countries expressed their resolve to ensure that this corporation will seek to translate ideas into reality and guide Asia and Africa toward an improved future based on their collective self-reliance. Considerations in this regard centred around the existing participation by India in Africa, including the India Africa Fund and the need to streamline and align these initiatives for coherence and maximum benefit with similar initiatives.¹³

The Pan African e-network Project is an initiative of former President of India Dr. A.P.J. Abdul Kalam, to use the Indian expertise in information technology to bring welfares of health care and higher education to all nations of Africa. He made this proposal at the inaugural session of the Pan-African Parliament in Johannesburg on 16 September, 2004. The President addressed the Pan African Parliament, the first Non-African head of state to do so.¹⁴ The project officially launched on 26 February, 2009 by former the External Affairs Minister Pranab Mukherjee (former President of India).¹⁵ The Network will be connected by a satellite/fibre (C-Band with INTELSAT-904/RASCOM), optical network to arrange for tele-medicine, tele-education and VVIP connectivity to these nations. The present total project cost is about US\$ 130 million, which will be a total funding from the Government of India. The Ministry of External Affairs, New Delhi is accountable for the project, while the Telecommunications Consultants India Limited (TCIL, a Government of India Undertaking) is the implementing agency. Each country of Africa is necessary to sign a Country Agreement with the TCIL to participate in this project.¹⁶

The Network will consist of 5 regional universities, 53 learning centers, 5 regional Super Specialty Hospitals and 53 remote hospitals in all countries of Africa. There will be 6 universities and 5 Super Specialty Hospitals from India linked into the Network.¹⁷

After taking into account the untapped potential for bilateral co-operation in certain areas, reiterated the need to expand bilateral trade, economic, scientific and technical co-operation. They also noted that the business and scientific circles of both countries should establish direct contacts for the implementation of industrial, scientific and technical projects. With To implement cooperation, the South Africa-India Memorandum of Understanding on Information and Communications Technologies signed on 15 September, 2004.¹⁸

The importance of the Joint Ministerial Commission, the India-South Africa Commercial Alliance, the India-South Africa Joint Committee for Scientific and Technological Co-operation and the India- South Africa Joint Committee on Defence Co-operation for the development of bilateral ties was reiterated and it was noted with

satisfaction that regular meetings were taking place.¹⁹

Conclusion

Dr. A.P.J. Abdul Kalam was affectionately conventional by the South African leadership and people on this first-ever visit by an Indian President to South Africa. The visit was described as significant and a reaffirmation of the time-established relations between the two nations and their peoples. India and South Africa agreed that the State visit of Kalam's to South Africa will unquestionably further consolidate and expand two-sided cooperation in all fields. They decided on the importance of increasing the frequency of two-sided visits at all levels including by dignitaries, ministers, officials, experts as well as people-to-people contacts.

Pan African e-network project is a shining example of India's partnership with Africa. It is an Indian satellite to help sub-Saharan Africa bridge the digital divide for e-connectivity. Institutions, hospitals in seven distinct regions in Africa have been linked with super-specialty hospitals of India, universities of Africa have been linked with the major universities of India.

In the previous alone, 25000 Africans have been skilled or educated in India. The Pan Africa e-network, which now connects 48 African nations, is becoming the new highway of

regional connectivity and social development. Under the India Technical and Economic Cooperation (ITEC) Programme, over 100 administrators from sub-Saharan Africa receive training annually in India. The continent's progress will add great stability and momentum to the global economy and advantage India as well.

Strong support for United Nations Security Council reforms. The endorsement of India's position at the WTO with regard to agrarian subsidies. An understanding of the South African position on developing mega free trade agreements like the US-led Trans-Pacific Partnership. Finally a 'Feel Good Factor' to deepen diplomatic relations with India and South Africa.

Kalam's visited the next four years impacts, the India-Africa Forum Summit (IAFS) is a celebration of the close corporation between Africa and India, started in 2008. It was decided to hold the summits every three years, alternately in India and Africa. New Delhi was the venue in 2008 and Addis Ababa in 2011. The third summit, scheduled to be held in 2014, was postponed because of the Ebola outbreak and held in Delhi from 26 to 30 October, 2015. African countries have insisted the next conference be held after five years, not three years. The next India-Africa Forum Summit will be held in September 2020.

UNITED KERALA MOVEMENT IN 1947- AN OVERVIEW

Asha Rajan

On 1946 saw in Cochin the some democratic upsurge as was then being witnessed in Travancore. The demand for responsible was rallying behind it all section of the people. Aikya Kerala Convention held on 26, 27 April 1947 at Trichur .5000 persons attended the conference Tickets were issued to Travancore peoples also. His Highness the Maharaja of Cochin inaugurated the conference. On the next day the conference passed a resolution under the leadership of K.Kelappan. The conference appointed a Aikya Kerala council to organize the people for the formation of the Aikya Kerala. The newspapers such as, cochin express, the Deepam, the Gomathi, the malaharmail the Navalokam and the Jenmabhoomi published detail information about the conference on the next day. The convention constituted a working committee of 15 members to organize the people for the formation of United Kerala. The Maharaja Cochin agreed to serve as the patron of the United Kerala movement. On June 2, 1947. The Mountbatten Plan as it was called, propose the division of India into two dominions India and Pakistan and transfer of power to take place on 15 August 1947¹. State Congress held a propaganda meeting at Thirunakkara maidan on June 3, 1947 under the presidentship of Pattom Thanupillai. In this meeting Pattom states that, 'representing the states have no relation with the states and asked' whom does, Sir C.P.Ramaswami Aiyar reiterated his plea for the immediate formation of an interim Government of the people .5000 persons gathered inside the maidan and 3000 persons outside it .

As against the United Kerala movement on 11 June 1947 the Dewan of Travancore announced that Travancore would assumed and maintain an independent state after the transfer

of power by the British². On 12 June 1947 The Diwan made an announcement on behalf of the Nizam that Hyderabad would set itself as an independent state when the Government of India invited Travancore to join the constituent assembly convened early in July 1947 Maharaja conveyed the decision of Travancore not to participate in its proceedings³. On June 4, 1947 State Congress propaganda meeting was held at Thiruvalla under the presidentship of Mannathupadmanabha pillai. In this meeting K.A.Mathew states that "*India attains freedom Travancore should also achieve freedom . the Dewas considers this state as his estate and that he could sell the people like sheep and cattle "*

On June 5, 1947 State Congress propaganda meeting held at Trivandrum on under the presidentship of Pattom Thanu pillai a resolution passed to protesting the present policy of the government towards Indian union. They requesting the government to establish an interim Government about 3000 persons attended the meeting, 200 womens were also present this meeting⁴. The political situation turned favourable for a renewed agitation. Taking this to its advantage the party with a view to securing the support from all section of the people. The KPCC, The Cochin Praja Mandalam and the Travancore State Congress declared in one voice that they were going to work towards the realization of the objective set before them by the 'Magnanimous' Maharaja.

They in consultation with several other organizations, setup a United Kerala Committee and began preparation for a United Kerala Convention Which was held in April 1947 Under the Chairmanship of The President of KPCC. As a next step Thanu Pillai called the

people to observe 13 June 1947 as Constituent Assembly Day and appealed to them to hold meetings and pass resolutions to the effect that the statements made by C.P. Ramaswamy. The administration instructed the police to concentrate their attention on important places and to break up meetings if attempted to be held. The Government invoked the Emergency power Act of 1946 under its provisions no public procession could be held for a period of six months from June 29, 1947⁵. On 11 July 1947 the advocates of 'Independent Travancore' held a public meeting at the V.J.T. Hall Trivandrum. When the organizers spoke supporting 'Independence' the state congress workers who attended the meeting opposed it. On 11 July 1947 the congress men and students took out a procession at Alleppey. The police made lathi charge and dispersed the crowd⁶. On 13 July 1947 the Travancore State Congress held a meeting at Petta under the presidentship of Kalathil Velayudhan and Pattom Thannu Pillai in this meeting the leader spoke the importance of responsible government⁷. The meeting was attended by more than 1000 people, the police entry into the meeting place resulted in a clash between the people and police. This resulted in a lathi charge by police. The Indian Express reported that 3 men have died in the spot and three more have sustained fatal injuries.

On July 28, 1947 Ernakulam State Congress Committee held a secret meeting and passed a circular and sent to all Taluk committees in Travancore to observe August 1, 1947 as "Travancore People's Day". A secret meeting of the Travancore state congress was held at Paravur under the leadership of Pattom Thannu Pillai and the meeting planned the programmes of coming struggles. This meeting was attended by the KPCC leaders like Kelappan and K.P. Madavan Nair. The meeting declared the aims of the state congress as the achievement of responsible Government, the joining of Travancore in the Indian Union and the formation of the United Kerala State⁸. The Travancore state congress established its centre at Ernakulam and from there it directed the struggles for responsible government. Several public meetings were conducted throughout Travancore against the 'Independent Travancore' declaration of the Diwan and for the responsible government in Travancore. Separate meetings and conferences were also held in

Malabar and Cochin in support of the struggle and the demands of the state congress. It decided to conduct the annual conference of the Travancore students congress at Travancore. The government banned the conference still the students conducted the conference defying the ban orders. On July 15, 1947 the students of the University College, Law College and Ayurveda College and several High schools in Travancore observed complete strike⁹. On July 18, 1947 the Maharaja issued a royal proclamation creating an independent Travancore. The strategy adopted by the government was to disperse the meeting and conference by using force, conducted anywhere in Travancore.

The police fired on a public meeting at 'Pettah' in Travancore three persons were killed in the 'Pettah firing' and this paved the way for the already tense atmosphere to become more conflicting. The people retaliated to the oppressive measures adopted by the Diwan to suppress the people's movement¹⁰. On 25th July 1947 an attempt was made to murder the Diwan C.P. Ramaswamy Aiyer at the Swathi Tirunal Academy Trivandrum. The king of Travancore understood that it was impossible to act against the will of the people of the country and he informed the Governor General of India Moutbatten, his willingness to integrate Travancore in the Indian Union. After the declaration of the king of Travancore C.P. Ramaswamy Aiyer resigned his post of Diwan on 19th August 1947. P.N.G. Unnithan was appointed as the temporary Diwan of Travancore. He started discussing the details of the responsible government.

Soon after this discussion the king declared the granting of the Responsible Government in Travancore on 4th September 1947. This marked a new era in the history not only in Travancore but also in Malabar and Cochin¹¹. State Congress held a meeting at Thirunakkaramaidan on 5-8-47 under the presidentship of K. A. Mathew. In this meeting he urged the need of the people is that the C.P. Ramaswami Iyer should quit Travancore¹². On August 17, 1947 State Congress held a meeting at Kallankode and passed a resolution demanding the resignation of Sir C.P. Ramaswamy Aiyer¹³. On August 18, 1947 State Congress held a meeting at Paravur under the presidentship of N.J. Thomas in this conference exhorted the labourers to work up from their lethargy to fight

for terminating the Dewan rule. They demanded to immediate responsible Government in Travancore¹⁴. A section of democratic people in Cochin and Travancore was made to accept the responsible government of Travancore however it was a step to realization of United Kerala for not only did it continue the multilingual character

of the new state of Travancore-Cochin. The same time perpetuated the rule of the maharaja of Travancore as the Rajpramukh of the new state and provided for the payment of nearly Rs 40 lakhs per year as allowance to the ruling families of Trvancore and Cochin. With this ended one phase of the struggle for United Kerala.¹⁵

THE PRESS IN KERALA

P. Ashmi Jenex

Introduction

The Press in Kerala has played a major role in the shaping of modern Kerala being a powerful device of information, instruction and propaganda, by opening a wide window to the happenings of the outside world and by mobilising public opinion on problems of varied nature. It was the Portuguese who introduced the first printing press in Quilon in Kerala and the next in Vaipinkotta, a suburb of Cochin. In the early stages, the press was concerned with the diffusion of knowledge of Christianity among the illiterate and downtrodden people of the country.

Vidyavilasini

The publication of Vidyavilasini in 1881 from Trivandrum was an important landmark in the history of journalism in Kerala. Its editor was Mullassery who published articles on literature. Mullassery got the patronage and support of literary giants like Kerala Varma Valiakoyil Thampuran whose translation of Kalidasa's Sakuntalam first appeared in the Vidyavilasini.

SATHYANADA KAHALAM

Sathyanada Kahalam, a fortnightly, was published by Rev. Fr. Candidus in 1876. Criticism of government policies by the press drew wide attention all over Kerala. The Sathyanadam made notable contributions to Malayalam literature and also in the social and political fields.

Kerala Patrika

In 1884, Kunjirama Menon, a teacher with great skill in journalism, published the paper Kerala Patrika from Calicut. The paper published national issues, and after the formation of the Indian National Congress in 1885, it came to be regarded as a Congress paper. Its editor 'Kesari' was fearless in criticising the government of the day.

Kerala Mitram

Kerala Mitram published by Kandathil Varghese Mappila provided a wide range of contemporary accounts maintaining a high standard. It published articles on general topics of public welfare. This paper produced a remarkable effect upon the political critics.

Nazrani Deepika

The Nazrani Deepika, published from Kottayam, stood for the social, cultural and political uplift of the Christian community. Gradually, it began to show interest in politics, literature and other topics of general interest.

Malayali

In 1886, the Malayali was published from Trivandrum. It spearheaded the crusade for political and civil rights. It played a positive role in the struggle for freedom, and fought against the authoritarian government of Shri C.P. Ramaswamy Iyer. West Coast Spectator, Kerala Sanchari and Deepika were the major organs of public opinion at the end of the 19th century in Kerala.

Malayalam Manorama

The Malayalam Manorama Company was started in 1888 by Kandathil Varughese Mappila, a man of deep understanding of human problems. In its early states, it got royal patronage from Kerala Varma Valiakoil Thampuran and Sri Moolam Tirunal Maharaja. In 1890, Malayala Manorama started publication as a weekly from Kottayam. It started as a literary publication to promote the growth of Malayalam literature, but in 1928, it was converted into a daily. Varghese Mappila was its first editor and organizer of the Malayala Manorama Company. He successfully projected the social, economic and political problems of the period. He organized the intellectual stalwarts of Kerala and made significant contributions to the promotion of Malayalam language and literature. This leading paper discussed problems relating to public health, medical facilities, plantation, economy, responsible government, civic rights, etc. In September 1938 the paper was confiscated by the Government, on the charge of having published seditious and provocative news. Its editor was arrested and sent to jail, and the paper discontinued publication till 1947. At present, this paper is published from Kottayam, Kozhikode, Kochi, Thiruvananthapuram, Palakkad, Kannur, Kollam and Thrissur and it has also the largest circulation among the Malayalam dailies in Kerala.

T.K. Madhavan through Desabhimani, C. Ayyappan through Sahodaran, C. Krishnan through Mithavadi, Murkoothu Kumaraj

through Vivekodayam carried on ceaseless struggle against social injustice.

Mathrubhoomi

Mathrubhoomi published from Calicut in 1923 was the most popular nationalist paper of Kerala. It published articles on a variety of subjects and its circulation extended to remote villages. The Madras Government banned the daily and the order invited an agitation for withdrawal of the ban. The Government withdrew the order after a few days. Diwan Sir C.P. Ramaswamy Iyer refused the entry of the paper in the princely state since he could not accommodate public reaction. Mathrubhoomi had to stay out, but made triumphant re-entry in 1947.

Al-Ameen

Al-Ameen, another popular daily, was started by Mohammed Abdul Rahiman Sahib. It was published from Calicut and it inflamed national feeling, which infuriated the authorities to issue orders for its discontinuance.

Prabhatham

E.M.S. Namboothiripad was the editor of the paper Prabhatham, published from Shorannur. It was the organ of the newly formed Congress Socialist Party. It published a poem on Bhagat Singh's martyrdom and therefore its license was cancelled.

Deenabandhu

During the period of the Quit India Movement, Deenabandhu, edited by V.K. Krishnan Ezhuthachan, was published. It echoed the sentiments of the radical nationalists. It had to face a lot of opposition from the authorities and it was banned by the Government. In spite of all these problems, Deenabandhu continued publication till 1962.

Kerala Kaumudi

Kerala Kaumudi earned an abiding place in the hearts of the depressed classes in Kerala. It started its publication in 1911 from Quilon by C.V. Kunhiraman, and later it was shifted to Trivandrum. With the death of C.V. Kunhiraman, the editorship was taken over by his son K. Sukumaran. He championed the cause of the backward classes and fought for responsible government in Travancore.

Samadarshi

Kesari Balakrishna Pillai edited the paper Samadarshi. Kesari was very popular as an essayist, critic, poet and public activist. He attacked the orthodox Hindus who denied the right of freedom of movement to the untouchables. Samadarshi was banned by the Government. Malayala Rajyam started publication in 1924. Freedom of the press was restricted by the Government with the intensification of the struggle for freedom. Stringent measures were taken by the authorities against editors who criticised the activities of the Government. Swadesabhimani Ramakrishna Pillai attacked the nepotism and corruption of the Government, and its measures of suppressing the agitation for responsible government. The Government arrested and deported him from the State and the paper and press were confiscated. The Government had passed regulations to control the press from 1903 by preventing the publication of seditious matter. In 1926, a Regulation Act was passed depriving the people of freedom of expression and thought. The Act insisted that a licence should be obtained from the Government for publishing a newspaper, and that it should not contain any matter that might promote disaffection towards the royal family and the Government, or promote feeling of hatred against various classes, or habitually disseminate false information. Public meetings were held and resolutions were passed against this Act of the Government. In 1926, the licence of Navasakti was cancelled and in 1927 the licence of such other small papers were also cancelled. In 1930, the Travancore Press Act was passed. It stipulated that an amount of Rs. 1000/- should be deposited as security before the District magistrate when the Manager of a paper sought licence for publication. The Government retained the power to forfeit the amount and property in the case of the abuse of the freedom of the press. The licence of Desham was cancelled by the Government in 1933 since it supported the demand of the communities like Ezhavas, Muslims and Christians for adequate representation in the legislature of the State of Travancore. Press Regulations were again issued by the Government in 1935 against the newspapers which offered sharp criticism of the policies and programmes of the Government.

Kottayam Patrika was cancelled in 1935 by applying the Regulation of the Same year. The Newspaper Regulation Act 1936 of Cochin was strongly protested by the people. The All India Journalists Association expressed deep resentment against the repressive legislation against the press. The Malabar Press Association of editors, printers and publishers of newspapers requested the repeal of restrictions against the press. In spite of public protest, severe action was taken against journalists who inspired the Civil Disobedience Movement and the agitation for temple entry.

Politics and Press

In the Pre-Independence period there was stiff competition among papers and a fierce struggle for survival. Journalism in Kerala became increasingly politically-oriented. In spite of political orientation certain standard newspapers searched for the root of the issues and tried to expose the truth to the public. Chandrika, the official organ of the Muslim League, started publication as a daily in 1939 from Kozhikode, Desabhimani, the official organ of the Communist party (M), became a popular daily from 1946. It was banned in 1948 by the Government, but it resumed publication in 1951. The Communist Party of India published Janayugam from Quilon, highlighting the problems of the working classes. The Malabar Mail of the Archbishop of Ernakulam published news relating to the Catholic Community of Cochin. There were papers having regional outlook like Pauradhwani, Paurakahalam, etc.

Conclusion

The History of the press in Kerala is one of repressions against the freedom of the press. In spite of repressions, the press in Kerala succeeded in spreading the ideas of freedom of thought and expression, civic, economic and political rights, freedom of movement, challenge against authoritarian rule, etc. At present, Kerala has about 70 dailies including both English and Malayalam like The Hindu, The Indian Express, Malayala Manorama, Mathrubhumi, Kerala Kaumudi, Mangalam, Madhyamam, Desabhimani, etc., more than 80 weeklies, about fifty fortnightlies and about a hundred, monthlies.

WELFARE PROGRAMMES TO TAMIL NADU POLICE PERSONNEL – A STUDY

A. Ashok Naveen

Introduction to Tamil Nadu Police Department

Tamil Nadu Police Department is the primary law enforcement agency of the state of Tamil Nadu. It is over 150 years old and is the fifth largest state police force in India. Tamil Nadu has a police-population ratio of 1:632. For administrative purposes, the state has been divided into four police zones – North, South, West and Central and each zone headed by an Inspector General of Police.

Inspector-general of police will be assisted by a Deputy Inspector-General Of Police with a jurisdiction of range comprising two or more districts. Each district is headed by a Superintendent of Police, whereas a major metropolitan city such as Chennai is headed by the Commissioner of Police equivalent to the rank of Additional Director General of Police. Madurai, Tiruchirappalli, Salem, Tiruppur, Tirunelveli, Coimbatore are headed by a City Commissioner Of Police equivalent to the rank of Inspector-General of Police.

The posts of Additional Director General of Police and Inspector General of Police have been created to take care of the welfare activities meant for the Men and Officers in the Police Department and also to redress their grievances.

The Government of Tamil Nadu has directed all Unit Officers to conduct the grievance day for the Police personnel on the scheduled dates earmarked for them.

All the SsP of districts should attend the AR parade and hold orderly rooms to listen to and to redress the grievances of the police personnel	Every Friday
All the SsP of districts should hold Grievance Day for Local Police personnel attached to the various units in the districts	Every Tuesday
Range DIGs should hold Grievance Days at Range Headquarters	Once in a Month
ADGsP/ Zonal IGsP/ IGsP of Special Units should hold Grievance Day	Once in two Month

DGP will conduct the Grievance Day once in three months in State Headquarters. To provide an opportunity for re-employment for retired Police personnel and Ministerial Staff, the details of Retired Police personnel who want employment with private agencies are made

available on their website. The details have been arranged as per their preference for place of working. A variety of police welfare schemes are created for the benefit of police personnels, their dear and near. Therefore, the purpose this article is to list out the welfare programmes created for the benefit of police personnels.

WELFARE PROGRAMMES TO TAMIL NADU POLICE PERSONNEL

Tamil Nadu Police Benevolent Fund

This scheme was introduced in the year 1957 with the objective of providing monetary and other relief to the Non-gazetted Staff and their Family Members. The government constituted the Tamil Nadu Police Benevolent Fund (TNPBF), for the benefit of Non-Gazetted Police and Ministerial Staff of the Police Department. This fund is being generated by way of collecting subscriptions from the Police Personnel as well as from the Ministerial Staff of the Police Department and also by way of donations from the Officers of the Police Department.

(a) Family relief of Rs.25,000/- is provided in the event of the subscriber's death and Rs.5000/- for death of family members of the subscriber.

(b) Centenary Scholarship for the children of employees of the Police Department ranging from Rs.4,200/- to Rs.12,000/- is sanctioned. Every year approximately Rs.3 crores is utilized.

(c) A special medical relief scheme of providing financial assistance to the subscribers of TNPBF up to 4 Lakhs as a one time measure for his entire service period and maximum amount of 1 Crore per year has been allotted from TNPBF towards the treatment of life threatening diseases.

(d) Medical relief of Rs.5,000 has been granted to subscribers and family members for three times only during the entire service.

(e) Financial Assistance to the subscribers of TNPBF up to Rs.4 lakhs is in vogue. An amount of Rs.2 crores per year is allotted from TNPBF Central Committee towards the treatment of the threatening diseases. During the year 2015, an amount of Rs.5.43 crores has been utilized from Tamil Nadu Police Benevolent Funds and 581 Police Personnel were benefited. During the year 2016 (up to 30.36.2016), an amount of Rs.2.95

crores has been utilized and 293 Police Personnel were benefited.

SCHEMES UNDER THE ANNUAL GOVERNMENT GRANT

Prize Scheme

In G.O. (D) No.8371, Government had issued orders with regard to the increase of Prizes under the Prize Scheme (in) from 3 to 10 both in 10th and 12th Standard in each District and Commissionerate and also the Prize Scheme is extended to the children of Ministerial and Auxilliary Staff. The Prize amount is also increased from Rs.6000/- to Rs.6500/-, Rs.4000/- to Rs.4500/- and Rs.2000/- to Rs.2500/- for 10th standard and Rs.7000/- to Rs.7500/-, Rs.5000/- to Rs.5500/- and Rs.3000/- to Rs.3500/- for 12th standard respectively. Similarly, the other seven prizes have been increased (i.e.) 4th to 10th ranked students of 10th and 12th standard from Rs.1500/- to Rs.2000/- and Rs.2000/- to Rs.2500/- respectively. Every year nearly about 750 children of Police personal / Ministerial staffs are benefitted under the scheme.

Tamil Nadu Police Centenary Scholarship

This Fund was introduced in the year 1959. The main objective of this scheme is to motivate the deserving children of the non-gazetted Police Personnel to pursue higher education through this scholarship. The Annual donations and Lumpsum contributions constitute this Fund. A sum of Rs.2,87,87,500/- was sanctioned during the year 2009-2010.

Tamil Nadu Government Special Scholarship Fund

In order to encourage and facilitate the bright and promising young children of the Employee of the Police Department, Government in their order has introduced the Tamil Nadu Government Special Scholarship to pursue their higher education and in which the first 100 wards who had secured highest marks in +2 standard will be paid Rs.20,000 or the amount paid to the institutions whichever is less for 4 years or till the course is completed.²

Tamil Nadu Government Special Scholarship

The Tamil Nadu Government Special Scholarship is granted to the children of Police

Personnel to pursue higher education. The First 100 students who secure highest mark in +2 standard are granted Rs.20,000/- or the actual amount paid to the institutions, whichever is less, for 4 years, or till the course is completed. Special Scholarship amount sanctioned to the wards has been enhanced from Rs.20,000/- to Rs.25,000/- by including hostel fees.

New Health Insurance Scheme

In G.O. No.174³ Government has issued orders for the implementation of the New Health Insurance Scheme with effect from 11.06.2008. Government of Tamil Nadu has engaged Star Health and Allied Insurance Company Ltd. to implement this scheme. Enhanced coverage upto Rs 2 lakhs for every 4 years period as compared to Rs. One lakh for the entire service period, No need to make payment to the hospital, Expanded coverage for more diseases, More number of new hospitals included, Treatment in approved hospitals outside state also made eligible for coverage are the highlights of the scheme.

Under this scheme, so far 69,575/- Identity Cards have been received from the Star Health Insurance Scheme and issued to the police personnel. Government Servants and their Family Members are eligible to avail the concession of Rs.2 lakhs for every 4 years for their Medical Treatment subject to certain restrictions laid down in the Government Orders referred to above.

Ex-Gratia Payment

The Government sanctions ex-gratia amount to Police Personnel who are killed / disabled/injured under heroic or tragic circumstances in the course of duty to compensate for their sufferings/loss ranging from Rs.10,000/- to Rs.5,00,000/-. The Police Personnel today face various challenges and threats while discharging their duties, particularly while handling crowds in Law and Order situation. They are exposed to serious injuries also. Therefore, Government have sanctioned ex-gratia payment for the heroic deeds of the Police Personnel to compensate for their sufferings/loss. The following amount is sanctioned as ex-gratia irrespective of the rank held by them and the unit in which they are serving as per G.O. Ms.No.284.⁴

1.	Killed	Rs.5,00,000
2.	Totally Disabled	Rs.2,00,000
3.	Single amputee and one eye blind, loss of toes, fingers precluding employment	Rs.1,00,000
4.	Burns Gun shot wounds multiple compound fracture	Rs.50,000/-
5.	Simple injuries for all ranks	Rs.10,000/-

In case of death in harness, the legal heirs of the deceased are paid along with the pay last drawn by the deceased Police Personnel as family pension till the date of superannuation of the deceased.

Appointments on Compassionate Grounds

Appointments on compassionate grounds are given to the legal heirs of the Government servants who die while in service. The appointments on Compassionate grounds are given only for the posts of sweepers, OAs, Data Entry Operators,/JAs and Gr.II PCs.

Three separate waiting lists for appointment on compassionate grounds to the posts of Junior Assistant/Typist including Data Entry Operator, Office Assistant and Sweeper are being maintained. These waiting lists are not permanent ones. The seniority of the candidates in the waiting lists may change whenever new candidates are included in the waiting lists on the basis of their date of preferring the first application.

Schemes in relation to Health of Police Officials

Certain health related issues are addressed in the schemes for the better performance of police officials.

Tamil Nadu Police Health Fund

During the financial year 2015 – 2016, an amount of Rs.1.50 crores has been allotted to the Police Health Fund Scheme to settle the pending have been provided with financial assistance.

Formation of Medical Out Patient Units

In G.O. (Ms).No.707⁵ the Government of Tamil Nadu has sanctioned the formation of Out

Patient Unit at 26 Armed Reserve (AR) Headquarters and 10 Tamil Nadu Special Police Battalion Headquarters for the welfare of Police Personnel and their family member. All Police Personnel and their family members are availing these facilities.

Master Medical Health Check Up

As per the Government of Tamil Nadu announcement, the Police Personnel who have completed 40 years of age are provided a free Master Health Checkup once in a year at Government Hospitals. Orders to this were issued in G.O. (Ms).No.142.⁶ During the year 2015, 87% of Police Personnel have availed of these facilities.

Police Hospitals

There are 12 Police Hospitals at present in various places i.e Chennai, Madurai, Trichy, Coimbatore, Salem, St. Thomas Mount, Vellore, Cuddalore, Virudhunagar, Tirunelveli, TSP II Bn. Avadi and TSP IX Bn. Manimuthar. It has been decided by the Govt. to upgrade the Police Hospital at Chennai as 100 bedded hospital with some specialities. It has also been decided to upgrade the Police Hospital at Madurai City with some specialities.

Tamil Nadu Police Insurance Scheme

Police Personnel of all ranks are covered under the existing Tamil Nadu Police Insurance Scheme. The legend heirs and the nominees are benefited under this scheme in case of death of Police Personnel. This scheme includes accidents resulting in death and permanent incapacitation or partial disability suffered during the course of their duties.

The amount of insurance payment in the event of death of Police Constables to Inspectors is Rs.2.00 lakhs while for Deputy Superintendents of Police and Additional Superintendents of Police, it is Rs.4.00 lakhs. Insurance payment for disabilities suffered will depend on the extent of disablement.

Compassionate Ground Appointments

Steps have been taken to consider the 805 persons in the waiting list for appointment as Data Entry Operators who are waiting for an appointment for more than eight years. Government orders were received in G.O. Ms.

No. 9897. Out of 805 candidates 671 candidates have successfully completed the 3 months training from 14.02.2005 to 13.05.2005 & posted to all Cities & Districts in Police Stations on a consolidated pay of Rs.2500/-P.M.

Tamil Nadu Police Subsidiary Canteen

Benefits of this scheme are enjoyed by both serving and retired Personnel of Police, Fire Service and Prison Departments. At present there are 81,082 families which are benefitted by Tamil Nadu Police Subsidiary Canteen. During the last five years, Government of Tamil Nadu has started 47 Canteens at a total cost of Rs.7.56 crores at 32 District Headquarters and 15 Battalions.

In G.O. Ms.No.1162⁸ Government has issued orders for the implementation of the New Food Subsidy Scheme for the supply of some essential commodities to Police Personnel from the rank of Police Constables to Inspectors through the Public Distribution System at 50% rate with effect from 01.10.2008. As on to-day, 58,947 Khaki Cards had been issued to the Police personnel for the supply of Essential commodities.

Food Subsidy Scheme

Police Personnel from the rank of Constables to Inspectors are given 50% subsidy for essential articles bought through the Public Distribution System. They have been given distinctive khaki cards for this purpose. 70,973 Police Personnel have khaki colour Ration Cards and are purchasing the commodities at subsidized rates.

Tamil Nadu Police Welfare Co-Operative Societies

Several Magalir Sangams and Co-operative Industrial societies are functioning under the control of the Commandants. They mostly undertake the work of stitching the police uniforms and earn profits. Films are shown to the police personnel and their family members every week at the Battalion headquarters.

Recreational Facilities

Films are shown to the Police personnel and their family members every week at the Battalion Head Quarters. Apart from this, dailies, weeklies and other periodicals are supplied to

the personnel at the reading rooms. In all Battalions, Police stores are available and they cater to the needs of the Police personnel.

Tamil Nadu Chief Minister's Public Relief Fund

Relief from the Chief Minister's Public Relief Fund is sanctioned to the family of deceased Police Personnel.

Sanction of Discretionary Fund

The Government of Tamil Nadu in G.O. (Ms).No.838⁹ has sanctioned an amount of Rs.5.00 crores as discretionary grant to the Director General of Police, Tamil Nadu, for purchase of equipment and other requirements for the Police Department. A total of 4,315 articles were procured by different unit offices throughout the state.

Compassionate Grounds Appointments

Compassionate grounds appointments are given to the eligible legal heir of the Police Personnel who die in harness and the family is left in indigent circumstances. In the year 2016 only, Government of Tamil Nadu in G.O. (2D). No.102¹⁰ has sanctioned 96 Office Assistants under compassionate grounds appointments.

Conclusion

The creation and execution of such welfare schemes are essential for the better functioning and performance of police personnels. The life of staff and officers of Police Department must be comfortable and their basic amenities must be fulfilled. In order to provide a corrupt free police service these welfare programmes and schemes are mooted. Creation and right execution of these welfare schemes not only address the issues of Police personnel but also to their wards, dear and nears.

SARDAR PATEL AND THE POLITICS OF MADRAS PRESIDENCY

K. Ashok

Madras Presidency was a heterogeneous collection of autonomous territories in which the Tamilnad or the Tamil country has been described as " a country, almost a nation, on its own."¹ Madras Presidency represents a unique picture in the Political map of Colonial India. By the turn of the 20th century the provincial politics of Madras was dominated by the Brahmin, Non-Brahmin contest and challenges. The Congress party in Madras presidency from 1919-23 was also deeply divided along ideological, strategic

and factional lines.² The Congress party in Madras presidency was studded with many leaders such as T. Prakasam, Satyamurthy and later his disciple Kamaraj, Kesava Menon and Rajaji. Of all Rajaji was the leading political figure from Madras who had a close association with the National leaders like Gandhi, Nehru and Patel. Gandhiji used to call Rajaji as his "conscience keeper".³ Rajaji differed with the Congress on important issues such as the Quit India Movement and on the Issue of Partition.

In August 1945 the Government of India announced elections for the Central and Provincial Assemblies. With the announcement there was unrest in Madras Presidency for the post of leader, Gandhiji backed Rajaji, and Patel as the Chairman of the Congress Parliamentary Board and Maulana Azad as the President of the Congress Party tried to uphold the decision of Gandhiji. But Rajaji was attacked by Kamaraj from one end and Andhra Kesari, Prakasam on the other side. This was the first instance of successful defiance of the Congress High Command. This Paper deliberates on the correspondence between Sardar Patel as the Chairman of the Congress Parliamentary Board and the Congress leaders of Madras Presidency.

Sardar Vallabhbhai Patel who is known as '*the Deputy Commander*' of Gandhi was known for his organisational skills. His successful organised the Bardoli Satyagraha campaign which made the British to call him as *the Lenin of Bardoli*⁴ and after the Bardoli Satyagraha he was conferred with the title Sardar.⁵ During the Civil Disobedience it was Sardar who decided to break the law at Dandi, and the march was successful mainly due to his arrangements. In 1931 he was elected as the President of INC at the Karachi session and by 1936 he assumed the new role as the Chairman of the Congress Parliamentary Board. As Chairman he supervised the task of selecting the Congress candidates for the 1937 election.⁶ In addition he gave guidance to the Congress Ministers, to pull up defaulting party men, to smother revolts even by stalwarts and thereby discipline the party. In his capacity as the Chairman he had interactions with all the Pradesh Congress committees including the TNCC, where his advice was nullified.

Rajaji, the leader from the South was a son of a Brahmin village munsif, educated in Bangalore and Madras, and practiced his legal profession first at Salem and moved to Madras. He was very much taken by the programmes of Gandhiji and championed the Non-cooperation movement in South India. He organised a parallel salt march from 13th to 30th April 1930 from Trichy to Vedaranyam and was arrested. In 1937 when the elections were conducted based on the Government of India Act of 1935, the Congress party won the election and Rajaji became the Premier of Madras. Most of the

programmes of the Rajaji's Ministry ended up failure so he became unpopular. In 1940 he received a major setback in TNCC, his candidate C.P. Subbiah was defeated by Satyamurti's Kamaraj. Later he also differed with the Congress on important issues such as the Quit India Movement and on the Issue of Partition and resigned from the Congress.

On 21st August 1945 the Government of India announced elections for the Central and Provincial Assemblies. The Congress party went in action and set up the Central Election board with Azad as president and Sardar Patel as the chairman of the Parliamentary board. It was decided by the board on 25th September 1945 regarding the selection of candidates:⁷

(1) In the case of reports from a Pradesh Congress Committee containing the name of one candidate for a constituency, and where there was no contest among Congressmen, Sardar was given authority to approve the proposal.

(2) In other cases the names were to be circulated with Sardar's recommendations to the other members of the Board for their comments.

At that time Sardar was not well and was getting treatment at Nature Cure clinic Poona and the President of the Congress, Azad was also undergoing treatment at Bindhachal in United Provinces. On 15 October 1945 Sardar wrote a letter to Azad pointed out, if the procedure for circulation was followed, it would not be possible to dispose of the applications in time; that it was not possible to call a meeting which members of the Board could attend at short notice; and that in the circumstances he had no alternative but "to give a decision according to my own light in case replies are not received in time from the members of the Committee"⁸

Elections to the Central Assembly was done in 1945 and the Congress party was not performance was not so good in reserved seats. Sardar felt the selection of candidates was the reason for the mediocre performance of the Congress and decided for the Provincial election the final selection of candidates should be done by the Board. In his letter to Azad on 6th November 1945 he remarked, "we must send our instructions to the Provinces as soon as possible and must also decide about the

procedure to be adopted by the Board.⁹ Sardar wanted the Central board to function as a single unit and would recommend the names to the local boards.

With elections to the provinces were approaching faster, there was a spur of political activity in Madras Presidency for the post of leader. The TNCC Chief Kamaraj, Prakasam the President of the Andhra Congress and Madhava Menon, the leader of the Malabar Congress sought the advice of the Congress High command for the post of leader. Gandhiji backed Rajaji, and Patel and Azad tried to uphold the decision of Gandhiji. But Rajaji was attacked by Kamaraj from one end and Prakasam on the other side. This was the first instance of successful defiance of the Congress High Command.

Patel had a close association with Rajaji for many years. When he was behind the bars, he announced Rajaji as the acting president of the Congress in July 1932 to represent the Congress at the Poona negotiations and signed the Poona pact on behalf of the Congress Party.¹⁰ In 1937 Patel wanted Rajaji to be president of INC and by 1939 Patel and Rajaji wanted an agreement with the British for India's support at War. Later Rajaji openly opposed the Quit India Resolution and strongly supported the Issue of Partition. On 5th July, 1942 Kamaraj the president of TNCC issued a show cause notice why disciplinary action should not be taken against him?¹¹ Rajaji resigned his congress membership.

In 1945 many Congress leaders of Madras such as Prakasam and Kamaraj were released from jail. Rajaji was back in the Congress with Azad accepting him after his failure in bringing the Congress and the League on the issue of partition. Rajaji's re-entry to Congress created a general anger since he didn't take part in the Quit India Movement. The TNCC met at Ariyalur in 1945 and passed a resolution denying roles for those who stayed out of the Quit India Movement by 670 to 4 votes.¹² Hitting out Rajaji indirectly for his re-entry into Congress.

Sardar wanted Rajaji not only to be admitted but wanted him to take up the leadership due to his outstanding qualities. He remarked, "I would any day welcome Rajaji's coming back to the legislature, because I know

that he is head and shoulders above all Congressmen in the Province in ability, integrity and sincerity."¹³ He was in favour of Rajaji but didn't want to impose it from above and he left it to the provincial board to decide. Further to ease the situation, Sardar thought of nominating Rajaji to the Central Legislative Assembly and sent word through Kamaraj but the information didn't reach Rajaji and he mistook Sardar wanted him not to be at the centre.

In Oct 1945 the TNCC met at Tiruparankunram and it was decided not to accept Rajaji back into congress. In order to straighten the affairs Sardar appointed Mr. Asaf Ali to work with TNCC. But Asaf Ali was not able to bring a amicable settlement regarding Rajaji's entry. Kamaraj sent a telegram to Sardar if the high command takes any decision without consulting him, it would have unfortunate repercussions. In response to the telegram Patel wrote to Kamaraj on 25th December 1945: The working Committee naturally is anxious to see that the atmosphere in the province is settled before the elections, but it is unfortunate that your attitude is not helpful at all. Your telegram contains a veiled threat of indiscipline if not of revolt, there is no question of imposing any decisions from above but you and your colleagues must realize that the working committee has also a responsibility and it cannot abdicate its function if it has been approached by as many as about one third of the members of your Provincial Congress Committee.¹⁴

After this letter Kamaraj sent a telegram to Patel that the provincial election board has been constituted in consultation with Rajaji and he will consult with him at all stages of selection. The composition of the board was Kamaraj, Muthuranga Mudaliar, Ramasami Reddy, Avanashilangam, Mrs. Lakshmi pathi, Subbaiah, Muniswami Pillai and Annamalaipillai as members.¹⁵

In reply to the telegram Sardar wrote a letter to Kamaraj dated 30th Dec 1945, in this letter he noted " I am glad that at last you have all agreed on a joint formula....You also know that a deputation from England is visiting the country, rightly or wrongly Rajaji happens to be an international figure and the deputation would meet him without fail during their visit to Madras. It would be unwise to antagonise him altogether and throw him away. We must use him and his

talents for the good of the country as far as possible without compromising our principles."¹⁶

Later Sardar learnt that in the TNCC election board meetings Rajaji was not allowed to be present and Kamaraj simply consulted him after the decisions were taken. Sardar was very furious and send a strong letter condemning the action of Kamaraj. Kamaraj in his letter dated 23rd Jan 1946 noted, "I have been acting in full consultation with him and I am quite confident that he himself will have no occasion to complain to you in the matter."¹⁷ Sardar replied in his letter dated 27th Jan 1946 as you had given assurance to me you will consult him. "But if he has anything to complain regarding the settlement made with me, I will see that it is enforced in full. It would, therefore still be wise for you to act up to it without creating any trouble."¹⁸

Meanwhile Gandhiji visited Tamil Nad and wrote an article titled "Curious" in reference to situation of the Tamil Nad Congress. In the article he noted, " Rajaji is a great social reformer and his political wisdom and integrity are beyond question. I was therefore, pained to find a clique against him. It is a clique that evidently counts in the official Congress in Madras. But the masses are devoted to Rajaji. He also added I had no hesitation in saying that Rajaji was by far the best man for the purpose in the Southern Presidency and if I had the disposal in my hands I would call Rajaji to office."¹⁹ In reference to the article of Gandhiji, Kamaraj resigned his membership of the Parliamentary Board and sent his resignation by telegram to Sardar. Sardar felt disappointed with the action of Kamaraj.

To bring a compromise, Rajaji was offered a University seat but he decided not to contest and sent a letter to Gandhiji asking his permission to leave the Congress and for the University seat he suggested Sambamurti. Sardar in response to Rajaji's permission to withdraw wrote a letter on 22nd Feb 1946 noted, "How can anybody support you if you were to act like this?"²⁰

The personality conflict in the TNCC worried Patel. In his letter on 9th Feb 1946 to Dr. Subbarayan he expressed, "The Tamil Nad problem has been a constant source of trouble and anxiety to me. I am doing my best to be helpful but there are elements which seem to be

irreconcilable and although there is apparent calm over the surface. I sense there is a good deal of disturbance underground. I am longing for the day when this would disappear".²¹

The elections for Madras took place in March 1946 and Sardar wrote a letter to Kamaraj dated 19th March 1946 regarding the formation of ministry and leader of the Congress Assembly Party. He in his letter noted, " No time should be lost, therefore in the selection of the Leader. I should like to know whether you have thought of this questions and if so who is your choice. If you have not decided yet, some of you who count must meet immediately and let me know on whom the choice is going to fall."²² On the same day he wrote another letter to V.V. Giri in which he stated that there is a political vacuum due to the withdrawal of Rajaji and the Congress party will miss the keen intellect and guidance of Rajaji during the Parliamentary delegation visit.²³

Telegrams were sent to Gopala Reddi, Kamaraj, Rajaji and to Prakasam by Azad and Sardar in April 1946 asking them to come to Delhi for settling the Party Leader's Election at Madras. In his letter to V.V. Giri dated 6th April 1946 Sardar expressed his anguish, "Everybody is anxious to see that a proper selection is made but there seems to be enormous difficulties and the one man who could run the show with efficiency and integrity is not likely to be selected for various reasons...we have called some of the leading congressmen from the three provinces and if they come, we propose to enquire and give them our advice. More than that we cannot do."²⁴

On 18th April 1946 Sardar got a telegram sent by Parkasam, Madhava Menon, Kamaraj and Giri, and the telegram read:²⁵ *Madras Congress Legislature Party Met Today. 188 out of 196 Attended. Your Message Advising Rajagopalachari Leader and Subsequent Telegrams Placed before Party. After Full Discussion Party Recorded Inability To Accept Your Advice By 148 Votes Against 38 Neutrals. Meeting Adjourned for 19th 4 PM for Electing the Leader.*

In response to the telegram, Sardar wrote a reply to V. V Giri dated 20th April 1946 and noted: ²⁶ "All through this unfortunate controversy, I have advised consistently that the election of the leader rests with the party, we can only advice and it is for the party to accept or

reject it. *If democracy chooses to go wrong, it has a right to do so....* This is the first instance in Congress history where responsible Congressmen have failed to respond to a reasonable appeal from the leaders."

In July 1946, Nehru became the president of the Congress and recommended the name of Rajaji as the Premier of Madras with the support from Gandhi, Azad and Patel. This suggestion of

Nehru was put to vote in Madras Provincial Congress, it was defeated by 148 to 38 votes. Later Prakasam won the election and became the Premier on 30th April 1947.²⁷ Sardar's wish of Rajaji leading Madras turned true in 1952 but he was not alive to witness it. Sardar in spite of being the Chairman didn't enforce his decision and allowed the inner party democracy which is a classic style of leadership.

THE STRUCTURAL TRANSFORMATION OF PUBLIC SPHERE – RETROSPECTION IN THE LIGHTS OF PRINTING TRADITION AND PUBLIC LIBRARIES IN NORTH MALABAR

M. Babitha

One of the foremost ideologists has defined public sphere we mean a realm of our social life in which something approaching public opinion¹. The public sphere is a vital component of socio political organization it is the space where people come together as citizens and articulate their independent view. These views strengthen or influence the political institution of a society ²

This paper is an attempt to analyse the structural transformation of public sphere and how printing, Education, public libraries to

creating public sphere in North Malabar. Printing is prime symbol of formation of a public sphere in Malabar. The institutionalization of missionary Education and printing the missionaries were not only interested in educating the illiterate and ignorant but also to educate them in their way. Efforts at translation and printing began as the result of the realization that sufficient amount of textual material for religious teaching and secular education, the missionaries were in the danger of lapsing into

the methodology of indigenous education which they were opposing introducing new education was a risky affair. There was the justifiable suspicion among the people that the new schools were centers of conversion³. People were also suspicious of printed books. Hence *olas* were used in elementary schools, but the missionaries managed to make copies of several texts by using writes on *Olas* as well as on paper⁴. In 1835 a general permission was given by the British Government to start printing presses anywhere in Kerala⁵. Printing presses and the early Malayalam grammars and dictionaries provided the frame work for the production of text book in Malayalam. This text book contains moral lesson and imparting or served indirectly a hidden agenda as followed⁶

The public sphere was a place between private individuals and government authorizes in which people could meet and have critical debates about public matters. Education, Media, Letters, Books, Drama, and Art etc. This are the major symbols of Public sphere⁷. The government entry into printing was also inspired by the missionaries and adoption of modern education was facilitated by the transformation of public sphere in North Malabar⁸. Malabar government began to encourage Malayalam education during the 19th century onwards. In response to the gradually developing movement of the social depressed castes and sections of population and also as a part of the effort to check the growing influence of the missionaries⁹. Use of the new technology of printing which was popularized by the missionaries had the capability to breaking through caste and gender barriers in the dissemination of knowledge¹⁰. Thus literacy along with print was treated as important tool for creating a space in North Malabar, British had developed a scientific temperament in all walks of their lives. Now British states began to manifested their power through a gradual extension of official zing procedures that established and extended their capacity in many areas. They exercised their control by defining and classifying their space, making separation between public and private sphere, by recording transactions such as the sale of property by counting and classifying their population replacing religious as the registers birth, marriages and deaths, and standardizing language and script¹¹

Knowledge is the tool for creating active Public sphere in North Malabar realm the relationship between power and knowledge fruit fully worked during colonial North Malabar. Knowledge and information is the basic resource for individuals social and national development. A society with abundant physical resources but lacking information infrastructure registers slow development. There is a continuous shift in society from industrial economy to the information economy free access to information is a social right. The library is a social institution which collects, preserve, retrieves and disseminates information. Public library is the most dominant social institution that facilities the multifarious progress of the society it is the agency that support formal Education also. During 19th onwards many colonial officials took initiative for the establishment of formal and non-formal educational institution in North Malabar area¹²

The printing is the most powerful and effective mechanism to bring desired and progressive changes in the society. Printing is a common plat form for the people to discuss matters of public importance it discusses vital issues of the masses it is an agent of mobilizing public opinion on problems and prospects of humanity. North Malabar witnessed a rapid growth of printing press and also formal and informal institution than in other parts of Kerala¹³. Printing press create widening the scope of public sphere. Reformers and political leaders their work concentrated on formation of a formal and informal institution and publication of many books book produced certain knowledge that transferred from one generation to another thus libraries became the center of cultural heritage¹⁴. During Nineteenth century the intervention of the state in the sphere of education Government established formal and in formal institution like libraries, as a part of its programmed expansion of educational facilities in the state. Various social and political forces directly or indirectly contributed to the birth and growth of many libraries in North Malabar. The political consciousness and organized movement resulted in recognizing the increased importance of the individual to creating public opinion and spreading political ideas presupposed an educated and informed public political workers therefore gave more emphasis to social education activities which necessitated

establishment of libraries in all area of North Malabar¹⁵.

With the advancement of printing technology several literary publications came into existence. The first newspaper Rajayasamacharam by Basel evangelical mission at thalassery started publication in June 1847 and other newspaper like Kerala Sanchari, Malayala manorama ,Darpanam , panchika , Swadeshabhimani were emerged as a part of literary movement and these dailies were subscribe to libraries and people were very curiosity to know the issues and current events . Newspaper and other dailies served as an important means of mobilizing public opinion people often had to travel many kilometers for now the newspaper news this was one of the main causes for the birth of libraries and reading room in every nook and corner of North Malabar ¹⁶.The educational work of the Basel Mission in North Malabar was always directed educating the masses through primary education. The educational contribution the mission did not think of spreading Christianity but also in giving primary education to make the people of North Malabar literate .The Main aim of a mission emancipated the people from all kinds of social evils ,North Malabar experiencing from several types of caste bondage the Basel mission made efforts to eradicate the caste bondage .The mission started school and give admission to all caste group people the teaching also stressed upon unity and equality in humanity¹⁷. The Basel mission had a short span of activity in many areas of North Malabar promoting educational institution .it thus worked intensely in the field of

education, literature, etc the mission achievements contributed to the development of education that create equality and public sphere among people and modernization of North Malabar society¹⁸.

The North Malabar region was famous for the establishment of libraries some of the important libraries are Calicut public library [1890], Victoria memorial library now known as Azad memorial library in Thellichery [1901], Sree Narayana vilasam Vayanasala Kannur [1926], Aikya Kerala library at Kozhikode[1934],Tagore library and reading room New Mahe [1934], Gurudeva vilasm library and reading room Pathayakunnu ,Deshaposhini Vayanasala Kozhikode [1934] etc. These libraries are influenced intelligentsia group in North Malabar¹⁹.

The activities of libraries mobilized all sections of people; libraries possess many roles conducting educational programmers, Self-employment programmers, Cultural activity etc. Libraries strengthens the reading habit among the people. Library is the most dominant Social institution that facilitates the multifarious progress of society it supplements formal education and supports the non-formal education and continuing self-education it is the best institution for eradication of illiteracy

Formation and nature of public spaces are always transforming according to the needs of time and period. Both printing technology and education have made valuable contribution in the developments of Public sphere in North Malabar.

VELU NACHIYAR : A SYMBOL OF BRAVERY IN THE STRUGGLE AGAINST BRITISH POWER IN SIVAGANGA

A. Bala Mary & Dr. L. Selvamuthukumarasami

In general, everyone born in North India has a high reputation in all fields. Historians hail them to the world stage. But people who are born in the soil of South India inherit full of energy, knowledge and martyrdom but history does not recognize them. The first reason, the South Indians do not feel the best of ours. Even if they do, it is not appreciated. Velu Nachiyar was the first woman to fight the British regime. During those time after the death of her husband, it was the usual practice of the wife to commit Sati but Velu Nachiyar as a heroine avenged not only the victims who killed her husband, but also won 8 years of war to recover the lost state. That is why the heroic Tamil people glorified VeluNachiyaras a Brave Woman. Muthu Vadakanathar's wife Veera Mangai Velu Nachiyar, who fought against the British 200 years before Jhansi Rani Lakshmi Bai of Jhansi appeared in the North of Venkatam. It seems to refer Jhansi Rani as "Velunachi of the North" than to be called the Jhansi Rani of Tamil Nadu.¹

Birth and upbringing of VeluNachiyar

Velu Nachiyar was born on 3rd January 1730 A.D. in Ramanathapuram, Tamilnadu, India in the royal family of Ramnad Kingdom. Father was Raja Chellamuthu Sethupathy and mother Rani Muthathal Nachiyar belonging to the region of Sakandhi. Velu Nachiyar is the only child and her father provided skills in using the sword in the war and Velu Nachiyar excelled as a heroism.

Velu Nachiyar was excellent in archery, horse riding, *silambam*, a martial, and Handling of weapon *valari*. Velu Nachiyar had speaking and writing skills in several languages like Malayalam, Kannada, Telugu, Sanskrit, Urdu, English, French, learned scholar in Sanga Illakiam (Literature) like Mahabharatham, Kambaramayanam, Silapathikaram besides good administrative skills.² VeluNachiyar gained

all these skills within her age of 16 years and became famous Princess of Ramnad regime.

Velu Nachiyar ruled as the Queen of Sivaganga from 1780 A.D. to 1789 A.D. and during this term VeluNachiyar learned French language from Jose D. Bray, a catholic priest. Velu Nachiyar was considered to be a brave queen who struggled and recaptured Sivaganga during the war of Sivaganga which made the Nawab of Arcot and the British regime withdraw their force by looking at her bravery and finally fled away from Sivaganga.

Velu Nachiyar met Hyder Ali in Dindigul and conversed in Urdu and highly impressed him. This meeting paved the way for Hyder Ali to understand Velu Nachiyar's motive to chase out the British. Hyder Ali promised and provided full support to Velu Nachiyar to succeed in her mission to retrieve her Sivaganga Kingdom. Velu Nachiyar is also known as "Veera Mangai of Sivaganga or Veera Mangai Velu Nachiyar" which means the 'Brave Woman'.

Velu Nachiyar's marriage with Muthu Vaduganathar

In 1746 A.D. at the age of 16 years, Velu Nachiyar was married to Muthu Vaduganathar Periya Udaiya Thevar, in-charge of the administration of Sivaganga, son of Sasivarna Periya Udaya, the King of Sivaganga. The couple had a daughter named Vellachi after 20 years of married life in 1766 A.D.³

Death of King Muthu Vaduganathar Periya Udaiya Thevar of Sivaganga

King Muthu Vaduganathar Periya Udaiya Thevar ruled Sivaganga with the support of Thandavaraya Pillai and the Marudhu Pandya Brothers. In 1772 A.D. British regime had an eye to capture Sivaganga so various groups of forces marched towards Sivaganga. One group of soldiers under the British led by Commander

Joseph Smith, another group led by Umdat-ul-Umra, son of Mohammed Ali, the Nawab of Arcot and another group from the west side under the British led by Lieutenant Colonel Abraham Bonjour. These three groups of soldiers under different leaderships attacked from various sides and captured Cholapuram Military Station, Keeranur Military Station and region of Kalaiyar Koil. Muthu Vaduganathar, the ruler of Sivaganga did not expect this sudden attack and could not withstand the British soldiers on Sivaganga.⁴ Muthu Vaduganathar Periya Udaiya Thevar was treacherously killed by the British Lieutenant Colonel Abraham Bonjour in the Kalaiyar Koil War against capturing Sivaganga.⁵

This battle has killed many children, women and nobles. During this attack Velu Nachiyar stayed in Kollangudi with her daughter Vellachi, Minister Thandavaraya Pillai and trustworthy Marudhu Brothers who escaped from this battle. Velu Nachiyar on hearing the death of her husband Muthu Vaduganathar Periya Udaiya Thevar in the battle she fled with her daughter Vellachi to Virupatchi near Dindigul, stayed under the protection of Palayakarar Gopala Nayakar.⁶

Eight years of exile of Velu Nachiyar

After the death her husband Muthu Vaduganathar Periya Udaiya Thevar, the British forces under Lieutenant Colonel Abraham Bonjour targeted Velu Nachiyar of Sivaganga. The invading forces captured the region of Kalaiyar Koil and plundered gold ornaments worth of Rupees 50,000 and Sivaganga was annexed by the Nawab of Arcot.⁷ Velu Nachiyar underwent 8 years of exile in various Forts at Dindigul, Ayyampalayam and Virupatchi, under the protection of Poligar Gopala Nayakar.⁸ While staying in Virupatchi, Velu Nachiyar started to build her strong and a powerful army to fight against the British. Her main motive was to recapture Sivaganga and to chase away the British power. It was Velu Nachiyar and Marudhu Brothers who trained and well equipped the soldiers to fight the war.

Velu Nachiyar took support from Gopala Nayakar and Hyder Ali, ruler of the Kingdom of Mysore. She met Hyder Ali in Dindigul and conversed in Urdu and highly impressed him in her courage.⁹ This meeting made Hyder Ali to

understand Velu Nachiyar's intention to teach a lesson to the British. Hyder Ali gave full support to Velu Nachiyar in her mission to retrieve her kingdom.¹⁰ He allowed her to stay at Virupatchi and Dindigul Fort where she was protected and taken care. Financial support was granted to her to maintain the army.¹¹ In such a way, Velu Nachiyar gathered a big force from Hyder Ali with weapons to put up a tough fight against the British.

Restoration of Sivaganga by Velu Nachiyar

Velu Nachiyar with the help of Hyder Ali fought against the British power to recapture Sivaganga. The troops followed guerrilla warfare method and attacked their enemies. In 1780 A.D. Velu Nachiyar marched towards Sivaganga and attacked Commander Joseph Smith who had killed her husband Muthu Vaduganathar Periya Udaiya Thevar. Commander Joseph Smith not only withdrew his force by looking at her brave march but also fled away from Sivaganga. The role of Marudhu Brothers and recapturing Sivaganga from the British rule was noted remarkable.¹³ Velu Nachiyar was 55 years old when she recaptured Sivaganga from the British power and continued to rule as the Queen of Sivaganga till 1789 A.D. Velu Nachiyar was well known as Veera Mangai of Sivaganga or Veera Mangai Velu Nachiyar which means the Brave Woman.¹⁴

Velu Nachiyar's revenge on Lieutenant Colonel Abraham Bonjour

After the victory over Kalaiyar Koil, Velu Nachiyar gathered a force of 30,000 women soldiers to attack Lieutenant Colonel Abraham Bonjour at the Fort of Sivaganga. The Marudhu Brothers defended the British power to advance and continuously attacked the British troops during Vijayadasami, Navarathiri when Velu Nachiyar attacked Sivaganga. She utilised this opportunity and opened the main gate of the temple and made the people to enter and worship Raja Rajeswari.¹² Velu Nachiyar and her women soldiers entered the temple in disguise and mixed with the people and furiously attacked the British power which made them to run away leaving the land of Sivaganga.

Velu Nachiyar the First Freedom Fighter

In 1780 A.D. Velu Nachiyar became the First Queen of India to fight for freedom against

the British before the actual freedom struggle began in North India in 1857. Velu Nachiyar was famous for the destruction of the British ammunition store through human suicide attack.

Velu Nachiyar also had an adopted daughter Udaiyaal, who also sacrificed her life for saving Velu Nachiyar from the British but the disappointed British force mercilessly beheaded Udaiyaal in front of Kali temple. For this brave act of saving the life of Velu Nachiyar, a temple has been built in Udaiyaal's name. In gratitude, Velu Nachiyar presented her Thali to the temple and ordered continuous pooja to be performed. Till date this Thali has been the first ornament in Kollangudi Vettu Udaiyaal Temple.

Under the support of Hyder Ali, Velu Nachiyar reformed a Women's Troop and named it as "Udaiyaal Padai", after her adopted daughter. Velu Nachiyar succeeded to recapture the Sivaganga Pollam and ruled for the next 10 years while making her daughter Vellachi, the heir of the Kingdom of Sivaganga.

The First Human Bomb

Kuyili, a women soldier of Sivaganga troop and a loyal follower of the VeluNachiyar, came forward to carry out the mission as the suicide bomber. Kuyili, drenched herself with ghee on her entire body and set herself on fire and jumped into the British armory and blew it up, thereby procuring a victory for Velu Nachiyar. The British force under Lieutenant Colonel Abraham Bonjour, who killed her husband Muthu Vaduganathur Periya Udaiya Thevar, did not expect this vast destruction. Suddenly Velu Nachiyar attacked Colonel Bonjour and made him to fall prostrate, but Velu Nachiyar did not kill but pardoned Colonel Bonjour, though he killed her husband. Few historians believed that Kuyili was the adopted daughter of Velu Nachiyar. She was the First Human Bomb Suicider in India, and this was the first act of war against the British.¹⁵

Role of Marudu Pandya Brothers under Velu Nachiyar

Udaiyar Servai alias Moka Palaniappan and Anandhai alias Ponnathal belonging to Narikudi Mukkulam had 2 sons named Periya Marudhu and Chinna Marudhu. Udaiyar Servai was the commander of Ramanathapuram and his sons were brought up in the

Ramanathapuram Palace. The Marudhu Brothers came to Sivaganga to serve the kingdom. Both these Brothers were well known for their bravery. While hunting they bravely killed a tiger with their hands which tried to attack King Muthu Vaduganathar Periya Udaiya Thevar. On this act, King appointed Periya Marudha as a commander and Chinna Marudhu as a minister under his kingship. These Brothers had the authority of governance and supported the queens in their regime. Periya Marudhu was gifted Siruvayal and Chinna Marudhu with Puliadithan and raised to the level of Zamindars. Both the Marudhu Brothers served Velu Nachiyar in various aspects during her regime.

In 1780 A.D. Velu Nachiyar bestowed powers to the Marudhu Brothers due to their loyalty to administer the country following the restoration of her kingdom. Velu Nachiyar appointed Chinna Marudhu who was trained by Thandavaraya Pillai as her advisor and Periya Marudu was with her husband since childhood, accompanied him during hunting and in battle fields as his protector and well versed in the usage of war weapons as a commander.

A Symbol of Loyalty

Velu Nachiyar expressed her deep gratitude for the support provided by Hyder Ali to restore the power and constructed a Mosque and Church at Saragani. Hyder Ali earlier conveyed his true friendship by building a temple inside his palace with a goddess idol made up of gold. She had also sent a Golden Tiger to Tipu Sultan, the Son of Hyder Ali as a gift to show her gratitude and considered him as her brother. She also gave many gifts to the Muslim soldiers, who had helped her to restore her kingdom. Till her last breathe, Velu Nachiyar and Hyder Ali maintained a good and cordial relationship. Velu Nachiyar's daughter Vellachi succeeded her to the throne in 1790 A.D. as the Second Queen of Sivaganga and ruled till 1793 A.D.¹⁶

Incredible Achievements of VeluNachiyar

Velu Nachiyar constructed roads in the regions of Narikudi, Pamban, AzhaganKulam, Kudiyur, Manamadurai, Kundrakudi, Thirupathur. Planted trees on the roadside and built free food center for the travelers, pools, ponds and voorani were built. The Tower of Kalaiyar Koil was raised higher than its existence. A chariot made up of Marudha timber was contributed to Kalosan.

Illuminated Thiruvachi deepam throughout the day and subsidized some villages to cover the costs of the above maintenance. Contributed gold and materials for the welfare of the temples situated in and around Rameswaram. She arranged free marriages for the poor and necessary opportunities for their survival. In harmony with religion, a mosque for the Muslims and a church for the Christians were built in Sarangani by Velu Nachiyar.

Death of Queen Velu Nachiyar

Velu Nachiyar was famous as a great patriot, first freedom fighter against the British and courageous woman ruler in India. Velu Nachiyar was suffering from heart ailments and health became worse in her last days and underwent treatment in France. Finally died at the age of 66 years on 25th December 1796 A.D. at Virupatchi in Sivaganga, Tamilnadu, and India.¹⁷ Her mortal rites were sent to Sivaganga and buried in the east of Lord Anaimugan Temple with full respect. Her last rites were

performed by her son-in-law, Vengan Periya Udaya Thevar, in the place of her son and later he was heir of the kingdom.¹⁸

Conclusion

Velu Nachiyar was the First Queen of India who fought the British regime before the celebrated Jhansi Rani Lakshmbhai of Jhansi and Rani Chellammal of Kittur. Velu Nachiyar was a brave lady right from her birth, later struggled hard and almost lost everything in her life including husband and kingdom. Courageously defeated the Nawab of Arcot and regained her kingdom which concerned her love to the state and her people. After 8 long years of exile gathered the women force and attacked Nawab and brought down their flag and placed the Hanuman Flag in Sivaganga Palace. Velu Nachiyar lived in the history of the world and been an example for women who have gone through failures in their life.

THE KHILAFAT MOVEMENT IN TAMIL NADU (MADRAS PRESIDENCY)

P. Balagurusamy & S. Palanikumar.

This analysis on **The Khilafat movement in Tamil Nadu** (Madras Presidency) is an effort and endeavour undertaken mainly to explicate the different circumstances which led the Tamil Muslims of the contemporary period to join the Indian national movement especially the Non-co-operation launched by of Gandhiji during

the year 1920. This Khilafat movement was a movement one directed against the alien British rule's communal attitudes and approaches and its unjust treatment of Turkey after the first world war by imposing the treaty of Sevres in 1919. The meeting of the Indian Muslims held at Madras on 17, October 1919 insisted that

the British should always be cautious and careful in dealing with the Muslims as well as the Islamic sacred and holy centres¹. Subsequently on 25th May 1920 the Muslims arranged for another a meeting, just opposite to the Presidency College, Madras and in that meeting they vehemently criticised and condemned the British as people who aimed to bring the Muslims under Christian faith and supervision².

The meeting earnestly and sincerely made an appeal to the Indian Muslims to participate, without any partiality, in the Non-co-operation movement, the brainchild of Gandhiji. Further, Yakub Khan, the frontline Muslim leader of Tamil Nadu with the wholehearted support of Mohammed Ali, Shaukat Ali and Maulana Abul Kalam Azad stressed that the Khilafat issue should be converted into a mass movement for attaining much popularity among the Muslims³.

This Pan Islamic movement influenced and encouraged the Muslims of the Madras Presidency to offer a great stress to the importance of **ulema**, to spread traditional education, to follow Islam and Islamic principles and to also widen the adoption of Islamic law. Raising Funds and publication of pious Islamic literature were the other steps undertaken by the Muslims to achieve the promotion of the Khilafat activities in Madras⁴. With the thickened relationship between the Hindus and Muslims, the Khilafat movement was executed by both the groups, with all co-operation sincerely in a co-ordinated and combined manner⁵

That in turn enabled the Congress League Scheme signed on 31, December 1916, to be approved by both of the parties. Both the Hindus and Muslims in an united and cordial way carried out the different activities of Non-co-operation and Khilafat Movements simultaneously. The Hindus and Muslims were also allowed to safeguard the interests of one another in opposing and fighting against the alien British⁶.

The tightened and thickened relationship between Hindus and Muslims caused the real success of the Khilafat movement in India including Tamil Nadu⁷. This was a favourable and congenial factor for the Khilafat movement

to be continued in all possible and successful ways in the Madras Presidency too.

This issue created temporary friendly relationship among Hindus and Muslims but that cordiality and co-ordination did not last for a longer period.⁸ As it was a period of Indian freedom struggle, the attainment of **Swaraj** i.e., freedom to India alone was given top priority than that of the Khilafat issue of the Muslims⁹. Both the Hindus and Muslims co-operated with each other but with suspicion in their ways and minds. When the Hindus treated the Muslims as aliens, the Muslims felt that the Hindus would expel them from India at anytime after the attainment of freedom on the plea that they were foreigners¹⁰

There was mutual mistrust among them. Further in a despondent, state the Madras Muslims showed greater zeal and enthusiasm towards the Khilafat Movement but hesitated and unwilling to combine it with the Non-co-operation movement. Further they thought that a religious movement could not coincide with the political movement. They even treated the non-violent passive resistance programme as an ineffective one.¹¹

The Khilafat Movement made the Muslims of all parts of India to be very severe because they were ill-treated heavily by the foreign British rule as well as the native Hindus. Hence they diverted their entire energies seriously towards the Khilafat issue and the Muslims of Madras with the same mind too showed the same affinity¹² So the Khilafat movement was a well knitted and a nationwide movement in India.

The Mohammadans, by abandoning their usual traditional customs, habits and ideas of farsightedness and for the sake of Islam they were enthusiastic in carrying out the Khilafat issue in constitutional and methodical ways without any breach of peace at any level ¹³

In another meeting held at Trichinopoly on 15, March 1920, the Muslim leaders like Sayed Murtasa Sahib, Moosa Sait, Vallula Basha. Sahib, Nawab Gulam Ahamed and many other Muslim members firmly insisted the joint and united action of the Muslims and the Hindus in the anti-British fights and activities.¹⁴

The same stress was reiterated and insisted at another meeting arranged at Triplicane Beach, Madras on 18, March 1920¹⁵. From these things it is obvious and evident that the Khilafat movement was introduced among people through public meetings and also by the other ways. Hence it became a popular anti-British and but a Indian native movement acknowledged by all the Muslims.

When the mighty alien British administrators were so keen to obliterate the Muslims, Islam and Mohammedan customs, such things wounded and affected the feelings of the Muslims¹⁶.

The British also pointed out to the Hindus that the Muslims would derive benefits through India and its riches and from at the same time they would treat and rule the Indian as slaves.¹⁷

Such things promoted the Khilafat spirit among the Muslims. The British also teased the Muslims by saying that in the struggle between the Crescent and the Cross, during the Khilafat movement, the Cross would succeed finally at the end¹⁸. Perturbed by these multifaceted kinds of teasings, the Muslims took it as a challenge and maintained the Khilafat movement on the routine move constantly in all the areas of the Indian sub- continent. So the Muslims heartily combined the Khilafat issue with the Indian **Swaraj** issue¹⁹.

The problems posed to Turkey by the British also stressed and compelled the Muslims of Tamil Nadu and other regions of India to maintain the Khilafat spirit in all possible ways²⁰. This movement also succeeded due to the unity and solidarity among the Muslims, who were unanimous in their religious pursuits.

The Muslims wanted Gandhiji to take up the Khilafat issue along with the Non-co-operation movement. Gandhiji too unhesitatingly conceded. So the Muslims acknowledged the views and ideas of Gandhiji regarding the national movement²¹.

When Gandhiji asked the Hindus and the Indian Muslims to avoid all the supports rendered by them to the British government for upsetting the plans of activities of the British during the first world war period²², the Muslims

took that as an opportunity to maintain the tempo of the Khilafat movement in their favour. They started to render their support the British. Without minding the then prevailed political trend.

The participants of the Khilafat conference met at Madras between 17th and 18th April 1920 at an estimated cost of Rs.10,000/- to Rs.15,000/- openly declared that they would no longer be loyal to the British crown and would scrupulously follow only the dictates the Holy of Quran²³. Due to their zeal and enthusiasm over Khilafat, the Muslims paid a lot of money as donation along with regular subscription²⁴.

The Muslim educational institutions, with all seriousness infused the Khilafat spirit among all the Muslim students²⁵. Further the Muslim students, with great zeal and enthusiasm acted according to the decisions and directives of the All India Khilafat Committee²⁶. The Khilafat Committee, established on 20th March 1919 started to function with the sole aim of protecting the religious zeal and faith of the Muslims in addition to their allegiance to the Caliph²⁷. The Muslim newspapers like **Quami Report, Muslim Outlook, Jaridan-i-Rozgar** also encouraged and supported the Muslims to identify themselves with the Khilafat issue.

The Khilafat movement, being a religious movement of the Muslims, had its contact with the non-Muslims of India based on political grounds. But the Hindu-Muslim relationship was always an oscillating and unsteady one without any consistency. They never came so closer to each other in any aspect and they all moved according to their own individual traits and spirits. Anyhow the efforts and endeavours of Gandhiji brought unison and co-operation among them.

The Khilafat movement, not only encouraged Gandhiji to achieve Hindu-Muslim unity and communal harmony but also it offered ample scope for execution of valuable historical pursuits. So, when the Khilafat movement was associated with the Indian National Movement, the Tamil Nadu Muslims and the Hindu population approved and acknowledged the Khilafat issue with all earnestness²⁸.

The Muslims of Madras arranged for a meeting on 25th May 1920 just opposite to the Presidency College mainly to discuss and to deal with the Khilafat issue²⁹. In Tamil Nadu the Muslims were encouraged to follow different ways and means of their counterparts of the other parts of India with regard to the Khilafat movement³⁰.

Some of the Muslims of Madras independently and openly declared that they would no longer be loyal to the British and would adhere only the Quranic principles³¹ So, gave by giving priority to religion than to politics due to their piety, made others to note that religion is superior than politics.

The Khilafat movement in Tamil Nadu marked the arrival of an admirable and remarkable trend in the political progress of the native Muslims. This movement encouraged the conduct of many protest meetings against the British administration and policies. As the nature of the Khilafat movement was mostly communal in character, the field of action of the movement too became a restricted one.

Hartals and demonstrations uninterruptedly continued. Even the picketings in front of foreign cloth shops and toddy shops

were quite common. The involvement of the Indian youths and students was greatly beneficial and supportive to the organisers of the Khilafat movement. Anyhow the Khilafat movement did not achieve any solid success because of the sudden stoppage of the non-co-operation movement by Gandhiji due to the violent Chauri Chaura police station occurrence.

The non-violent nature of the movement was also a congenial and favourable factor only to the ruling British government all over India including the Madras Presidency.

Thus the Khilafat movement, though was for a noble cause, it could not successfully achieve anything tangible in favour of the Muslims. Anyhow this movement stood for united action of the Muslims at all levels without minding the success of failure. It was also a political as well as religious movement. It also helped the combined activities of the Muslims which further encouraged their unity and solidarity. Further it did not talk anything about the Hindu-Muslim unity or faction. Anyhow the Khilafat movement had its own impact over the politics as well as the social set up of the then Tamil country.

AMBEDKAR'S VISION FOR THE EMPOWERMENT OF DALIT WOMEN

B. Balasubramanian & Dr. V. Thirumurugan

It was Ambedkar's firm belief that women had a rightful role to play in the political process of change and in the pursuit of full and equal citizenship for both dalit men and women. He thus challenged widely prevalent Brahmanical notions of gendered spheres, constructions of 'ideal' womanhood and their nationalist reconstructions. The slogan of Ambedkar is 'Educate, Organize, agitate' applied equally to men and women, and Ambedkar called for the political participation of women belonging to all castes. His call for action evoked a phenomenal response from Dalit women whose participation grew from less than a hundred women in the early phases of the movement to 25,000 at the All India dalit Women's Conference in Nagpur in 1942. At the Mahad Satyagrahain 1927, which was launched to secure access for untouchables to a public water tank, Ambedkar's first deliverable was longest and most famous address to dalit women. He publicly acknowledged the deep esteem in which he held them, appreciated their special qualities of determination, fortitude and courage and lauded their contribution to the survival of dalit communities. Ambedkar advocated separate organizations for women's political mobilization and for the holding of separate dalit women's conferences. Ambedkar's gender agenda was made explicit in the personal campaigning that he undertook against the exploitative ideologies and practices of female sexuality and reproduction. He was an active campaigner of the dalit women's cause. A cultural politics of gender was a key aspect of women's political socialization. Ambedkar evoked the identity of motherhood to raise women's political consciousness, urging them to think deeply about their differential social valuation: why children born to them were considered impure, untouchable and undeserving of social worth, while those born to Brahmin women were not. By rejecting the derogation of motherhood, women's identity as mothers was deployed to reject the identity of untouchability, as well as to inscribe the equal social worth of, and the equal respect due to, all mothers. This was not a regressive extolling of woman's natural role or a move to stress femininity. Rather, it was an attempt to give motherhood a new social value

and to transform women as political agents. Women's roles as mothers now transcended the boundaries of the home and were reinvented to include the public roles of educators and community workers. This was different from the divine reverence that was attached to motherhood in our cultural thought. Further, the need to reject the dalit women's culturally constructed inferiority vis-à-vis high-caste women was a recurrent theme in Ambedkar's speeches. He advised the bold emulation of forbidden high caste practices, whether in dress habits or lifestyle. These seemingly mundane everyday acts were not meant to devalue dalit women, but rather to enable cultural resistance and the assertion of social equality.

Ambedkar was hardly unaware of the existence of traditional Hindu patriarchal norms in dalit communities and of dalit women's personal anguish on this account. However, he was constrained to choose the politically strategic option of prioritizing issues of caste and untouchability, and of caste-based sexual violence against dalit women. Yet along with the oppressions of public patriarchy, matters of familial patriarchy were also taken up. Rather than radical action, which would have hampered collective mobilization, Ambedkar advocated concrete and definitive action to challenge gender norms, giving women cues to think and behave in modern ways. Early marriage, he said, was an obstacle to the development of girls and ought never to be forced upon them. dalit girls were advised not to marry early and were urged instead to gain economic independence before marriage and equality within it. Thus, woman was to be a person with equal rights. She was to have equal moral and social worth.

Studies have shown that dalit women's activism long preceded Ambedkar's movement. Under his charismatic and inspiring leadership, however, it gathered greater force and autonomous strength. Hundreds of women, many braving family oppositions, participated in Satyagraha, meetings and marches. The decades of the 1930s and 1940s saw dalit women emerge as political activists and leaders, identifying with the goals and articulating the concerns of the Ambedkar movement. dalit

women became political organizers and thinkers, labor leaders, educational and religious activists, community social workers and rank and-file participants. While early female leaders hailed mostly from Ambedkarite families, being usually the daughters, wives and daughters-in-law of male activists, space was increasingly created for dynamic others. Women contributed in multifarious ways: organizing meetings and conferences, writing, participating in public speaking, teaching and engaging in awareness-raising activities. The proceedings of women's conferences were reported in the newspapers founded by Ambedkar: *Leader of the Silenced*, *Boycotted India*, *The People*, and *Enlightened India*. As public speakers, women political activists disseminated Ambedkarism and sought to awaken and conscientious masses of women. From this vantage point, they spoke on a wide range of topics: female education, 'decent' employment, child care and child development, community work and development, leadership development, good motherhood, home science, social work, personal grooming, religious conversion, etc. The impact of Ambedkarian lessons in rational critique, morality, equality and justice is amply evident in women's constructions and articulations, but, as will be revealed below, the women also made their own distinctive contributions. Caste, untouchability and the Hindu religion were central topics of critique. They encouraged women to repudiate demeaning caste-ascribed occupations and village duties, and self-destructive Hindu customs such as child marriage. Education was endowed with noble qualities and morality. The general apathy of poor dalit women towards education was a matter of great concern. Spreading awareness of the significance of education and campaigning for its popular acceptance were key agendas.

The 'community service' function of education was articulated in a variety of ways as women made important connections between society, community, politics and the self. Inflamed by the indignity of caste and untouchability, women described how they wished to change the social relations of power. Education became the site for rejecting caste morality and for asserting the right to progress and develop. Strong community identification governs the yearning to make the Dalit community 'strong, capable, and progressive'.

Empowerment of the self was defined in terms of a new dignity and self-respect, and an improved social status for individual women was seen as a corollary of community empowerment. Despite its prevalence, gender oppression within the community was generally underplayed. We lived in appallingly stagnant conditions, wallowed in wretchedness and were disabled and dependent. To add to this, we bore the stigma of untouchability. Ambedkar changed all that. Earlier reformers herded sheep from atop a camel, gave superficial messages regarding education, cleanliness, and neatness. The purpose of education is self-respect and promotion of egalitarianism, not trivial benefit. Woman should strive to gain wisdom. In order to impart inspirational education to their children, they should first be educated. To the dalit woman who has always worked (outside the home), the idea that work will bring liberation is strange. In urban areas, better-off middleclass women have just begun working. Widows need to earn their livelihood and therefore need vocational education. Education must bring self-respect, self-reliance, and freedom. Don't be hostile to men. We can still talk of women's progress. We need a system of adult marriages based on love. We must reject evil customs in order to control the stubborn dominance of unreasonable men. In these new times of equality and freedom, this is in our hands.

The responsibility of making the community self-reliant rests on the woman. Traditional women should be made aware of new ideas so that they don't become obstacles. Women should become members of the Independent Labour Party. They should overcome their shyness and become public speakers. Adequate educational resources should be set aside for women's education. They should be given health education so that they can care for the health of the community. Economic support is essential for poor girls to avail of an education. Women are trampled upon in the name of religion, and have suffered thousands of years of cruel tyranny. Our social status will be determined totally by our politics. There is no alternative to politics. We need to cultivate our intellect. Lacking this, we would be impoverished to the core. That is why we must all begin with education. A mother is the child's first guru. Without education a mother's first duty

cannot be satisfactorily performed. Today's children are tomorrow's respected citizens.

Because of Babasaheb, a feeling of self-respect was awakened in our minds. Baba would say, 'The pride of being human exists among everyone. Go to school, learn to wield a stick, a sword, learn lazy exercises. Just saying "Jai Bhim" won't do you any good. You must put it into action. Teach your daughters and sons. Throwing a few grains at Dalits so that they will dance to their bidding is the morality of the Hindus'.

In the aftermath of the conversion to Buddhism, many women spoke of the benefits that this had brought to the community. According to them, women had the major responsibility of spreading the teachings of Buddha. Every Buddhist must take pride in our religion. We must adhere to the principles of Panchsheel. We must become bearers of pradnya, sheel and karuna.

While the maintenance of gender harmony was the advice given consistently, an occasional voice also stressed the need to fight gender subordination. In addition, several women, armed with their newfound consciousness and strength, challenged gender norms and left bad marriages. Significantly, many of them were daughters of Ambedkar activists who received parental support and were themselves drawn to Ambedkarism. The period witnessed a phenomenal response from ordinary women to the call by Ambedkar and other social activists to pursue education. Poor illiterate dalit parents made education to the singular focus of their struggle activity and as a means of becoming involved in the larger political struggle. Thousands of laboring women waged inspired and tenacious struggles to educate their children. Family- and kin-based support networks were created for needy relatives. Despite abject poverty, Dalits even made donations to

educational institutions. Women also strove as first-generation learners to gain an education, fighting bravely against the constraints imposed by caste, poverty and gender bias.

Conclusions

This researcher has explored the complex political and educational roles played by Ambedkar, Ambedkarism and Ambedkarite women in early and mid-twentieth-century in challenging the social and cultural reproduction of the Brahmanical order. Together Ambedkar and dalit women changed the terms of the debate and discourse on what was to be women's new social position in the modern era and charted an ideological agenda for social action. While Ambedkar's political mobilization was primarily aimed at invoking women's agency in the struggle against caste, he also redefined the purpose of their lives in ways that questioned traditional patriarchy. Ambedkar's agenda of equal status and equal rights for women made it clear that it had no place for their subordinated existence. Rather, it envisioned new public roles for women in the development of new kinds of communities and of a society framed by a new value system. Thus, Ambedkar's imagining of the independent modern nation provided a different agenda for dalit women that of enlightened citizenship aimed at social transformation. This was opposed to the dominant ideal of an enlightened domesticity for women that would preserve the purity and conjugality of the traditional culture and home. Education was the site of caste contestation, was imbued with new values and meanings and was assigned multiple roles, both ideational and instrumental, in the task of social reconstruction. The women emphasized the importance of education in attaining the higher moral purposes and goals set by Ambedkar and for achieving the empowerment and uplift of the dalit community.

POLITICAL ACHIEVEMENTS OF HOYSALA KING VIRA BALLALA II

K.C. Basavanna

An attempt is made in this paper to explain about the Political achievements of Hoysala king Vira Ballala II. Vira Ballala II has been regarded as the outstanding ruler of the Hoysala dynasty. By his series of conquests, he not only extended the boundaries of the Hoysala kingdom in all directions, but also transformed it into a prosperous and powerful empire. Vira Ballala's long and glorious reign extending over a period of nearly half a century marks an epoch in the political and cultural history of Karnataka in particular and South India in general.

Vira Ballala II was the son of Vijaya Narasimha I and the queen Echaladivi. His name appears for the first time in a grant of 1153 A.D of Channarayapalna taluk of Hassan district. It may be inferred that he was born in that year because the palace priest figured prominently in the record. Probably this inscription refers to the naming ceremony of Vira Ballala II. Unfortunately the available records do not throw sufficient light on the early career of Ballala. Of course it was a custom in those days to give training in all branches of knowledge to crown prince. He must have been given proper training in political themy, administration and warfare. The very fact that he used to sign personally many of the documents including the inscriptions show that he was properly educated. His sign manual was "maleporeleganda Vira Ballala". Some of the titles of Vira Ballala like "Sarvajna Chudamani" and "Sabda Vidya Lakshna Sushikhita" suggest that he was well versed in literature. Undoubtedly he was a great warrior and was compared to many puranic heroes.

From the very young age Vira Ballala II actively participated in the administration of the kingdom. As Yuvaraja he played a major role. As Narasimha was suffering from ill health he allowed Vira Ballala II and other members of the royal family to take part in the administration

and share the administrative responsibility. A few records from the year 1168 A.D. state that "Snmanmahamandaleswara Asahayasura, Ekangavira Nissanka Pratapa Hoysala Vira Ballala Deva" and his mother Mahadeviyarasi were ruling the kingdom as regents. The crown prince also assumed the titles "Giri Vajradanda Ganda Bherunda". These titles of the prince suggest that he had successfully participated in many battles. He also styled himself as Kumara Vishnuvardhana Vira Ballala and set himself the ideals of Vishnuvardhana. Like his grandfather had the high ambition of securing the independent status.

Political achievements of Hoysala king Vira Ballala II

An attempt is made in this paper to explain about the Political achievements of Hoysala king Vira Ballala II. Vira Ballala II has been regarded as the outstanding ruler of the Hoysala dynasty. By his series of conquests, he not only extended the boundaries of the Hoysala kingdom in all directions, but also transformed it into a prosperous and powerful empire. Vira Ballala's long and glorious reign extending over a period of nearly half a century marks an epoch in the political and cultural history of Karnataka in particular and South India in general.

Vira Ballala II's Accession

Vira Ballala II ascended the Hoysala throne on Sunday the 22nd July 1173 A.D. which is recorded in several inscriptions. Ballala's coronation was hailed by the courtiers as the commencement of 'Ramarajya'. Ballala celebrated the coronation with all the magnificence that the event deserved and the dynasty. His coronation ceremony was conducted in a befitting manner. Arrangements for the special offerings and worship was made in almost all the temples of the kingdom and

several grants were made to temples and Brahmanas.

Vira Ballala's Conquests

From his accession till his death he constantly exerted himself for the prosperity of state and the people. His reign constitutes a landmark in the history of south India. Immediately after his accession to the throne Vira Ballala started a series of conquests in all directions. At the time of his accession there prevailed in the Hoysala kingdom disorder. Because of the civil war many feudatories had declared their independence on the northern frontier of the Hoysala kingdom. The political turmoil and insecurity created by the Kalachury usurpation posed a threat. The erstwhile Chalukya feudatories although subdued by the strong hands of Bijjala were still in sympathy with the Chalukyas. They were not prepared to continue themselves under the Kalachury hegemony. Moreover Chalukya Somesvara III who was the son of Nurmadi Taila spared no attempt to recapture the throne. In the meanwhile the other distant feudatories of the erstwhile Chalukya house like the Sevunas of Sevunadesa and the Kakatiyas of Andhra were active in carving out their own territories. Thus the fall of the Kalyani Chalukya dynasty had brought several problems in the Deccan. It was only during this period that Ballala II guided the fortunes of the Hoysala kingdom. He began a series of attacks on the feudatories to bring under his control. He marched towards Asandi, Hulyaru and the other places to establish order. Soon peace and order was restored in the kingdom.

The Changalvas together with the other petty chiefs in the hilly region invited his attention at first. The Changalva king who had supported Ballala during his revolt, now declared his independence and also assumed many Hoysala titles. Therefore Ballala dispatched an army under the command of Bettarasa Dandanayaka to Coorg. Bettarasa defeated the Changalva king and occupied Palpare. The defeated king Mahadeva took refuge in the interior hilly region. Afterwards he collected an army consisting of all the chiefs of Coorg. When Bettarasa was in possession of the fort of palpare in Kiggatanad the enemy under the command of Pemmanna Veerappa, son of Mahadeva surrounded the Hoysala forces.

When Vira Ballala heard this news he sent another army under a distinguished warrior named Madya Nayaka. In a terrible battle the Hoysala forces completely defeated and disbursed them. Madyanayaka who was responsible for the victory lost his life. For his dependents Ballala granted Nettaru Kodige. After this defeat Changalvas never attempted to lay their hands against Ballala. Bettarasa was appointed as governor and palpare became the headquarters of the Hoysala authority in Coorg.

The Kongalvas remained loyal to Ballala II. The Kongalvas had supported Ballala II during his revolt against his father. Vira Chola Kongaladeva accepted the allegiance of Ballala and granted certain concessions. He agreed to pay annual tribute to the Hoysalas.¹

Vira Ballala II brought under his control Tuluvas of Tuluvanad. Tuluvas became the feudatories of the Hoysalas from the time of Ballala II. Vira Ballala invaded Alvakhedra and brought the Alupa and the Tuluva rulers under subjection. It appears that one of the queens of Ballala II namely Tuluvala Devi hailed herself from Tuluva royal family.² As a result of this matrimonial alliance the friendly relations between the two royal families continued till the end of the Hoysala dynasty.

Then Ballala II turned his attention towards the north of his kingdom. The Santaras, Kadambas, Sindas and the Pandyas of Uchchangi who had been subdued by his grand father Vishnuvardhana and that they had turned against the Hoysalas during the weak rule of his father.

Subjugation of Pandyas of Uchchangi

Ballala first turned against the Pandyas of Uchchangi. It is stated that Uchchangi in those days was an impregnable fortress. The Chola king had failed to capture this fortress. The conquest of Uchchangi which was the capital of Pandyas in 1177 A.D.³ by Ballala II has been regarded as an important event. It was situated in a strategic place. Earlier Ballala's grand father Vishnuvardhana had subdued the Pandya king Raya Pandya and became the Hoysala feudatory. But during the reign of Narasimha he not only changed his allegiance but also caused a lot of disturbance on the border. In 1160 A.D.⁴ Raya Pandya was succeeded by his son Vijaya Pandya also known as Kamadeva Pandya.

Kamadeva began to rule like an independent king. But he was subdued by Bijjala and was forced to accept Kalachury supremacy. But immediately after the death of Kalachuri Bijjala and his eldest son Vira Sovideva, the Pandya king declared himself as the feudatory of the Chalukyas of Kalyana. During this period only that the Pandya king was attacked by Vira Ballala II. The Hoysala ruler himself led an army against Kamadeva in 1177 A.D.⁵ Kamadeva came out of his capital with his army. At a place called Ummaduru both the armies met and severe battle took place in which the Pandya army was defeated. Kamadeva retreated to his capital and took shelter there. The victorious Hoysala army chased the Pandyan army and laid siege to Uchchangi. The Pandya ruler could not withstand the attacks of the Hoysala army. Finally Ballala captured the fortress on Saturday. Kamadeva Pandya managed to escape, leaving behind his wives and the rich treasure. Ballala took possession of Uchchangi.

Kamadeva Pandya who had escaped from the capital, fled to the nearby forest. But the Hoysala army chased him and captured him. He was produced before Vira Ballala II. Kamadeva appealed to Ballala for mercy. Ballala took pity on the Pandya king and instead of putting an end to his life and he generously re-instated Kamadeva. After his victory Ballala assumed many titles. Since this victory took place on a Saturday he assumed the title "Shanivarasiddhi". He also took the title 'Pandayarajagajakesari' and 'Pandyaraja Prathishtapana Charya'.

Though Kamadeva got back his territory he could not enjoy his position for a long time. Kamadeva did not remain loyal to Ballala II. He changed his allegiance with the re-establishment of the Chalukya power. The grants issued by Kamadeva between 1183 A.D. and 1187 A.D.⁶ reveal that he remained loyal to Chalukya Somesvara IV. This became a sufficient plea for Ballala II to attack Uchchangi and put an end to the rule of the Pandya. Two records of the year 1187 A.D.⁷ suggest the second attack of Ballala on Uchchangi and its occupation. This was in all probability the end of Kamadeva. Further we do not hear him again after this date. Ballala assumed a fresh title namely "the smitter of Pandya" against the one

which he had assumed on previous occasion, 'Pandya Rajya Prathishtapanacharya'.

The death of Kamadeva resulted in the occupation of Nolambavadi by the Hoysalas. Ballala II appointed certain *Bebaya Dandanayaka* as the governor of Nolambavadi. A grant of 1220 A.D.⁸ of Holalkere taluk of Chitradurga district refers to the occupation of Nolambavadi 32,000 by Vira Ballala II. The incorporation of Nolambavadi not only increased the boundaries of the Hoysala kingdom but also it enhanced the fame of Ballala.

Soon after the first battle of Uchchangi in 1177 A.D.,⁹ Ballala sent two expeditions forward. One of the expeditions was directed against the Chola Chieftain Henjeru. The Chola ruler of Henjeru submitted to Ballala II. The other expedition crossed the Tungabhadra and attacked Kalachury feudatories. In support of Tailapa who was the son of Ekkalarasa of Udre. the Hanungal Kadamba territories were attacked and the outlying area was captured and given to Tailapa of Udre who remained loyal to the Hoysalas. The Sinda king Vikramaditya of Gutti was also attacked and defeated.

After these expeditions Ballala returned to Dorasamudra and stayed there for few days. After a brief stay he marched in 1178 A.D.¹⁰ towards the Tungabhadra region. He tried to establish his authority in that region. He soon attacked the Kadambas of Hanangal and penetrated as far as Halasige and Belavola which were once conquered by his grandfather Vishnuvardhana. However Ballala had to wait for a few years more to establish his authority beyond the Tungabhadra region.

Ballala II's policy towards Kalachuris and the Chalukyas of Kalyana

Vira Ballala was very much eager to extend the boundaries of the Hoysala kingdom on the northern side. He decided to establish his authority as far as the Krishna river in the north. He realized that the conditions were favourable for the establishment of the Hoysala authority there. He was aware of the contest that was going on between the Kalachuri and Chalukya powers. He learnt that the sympathy of most of the Kalachuri feudatories was towards Someswara Chalukya. He rightly calculated that

a severe contest between them was imminent. Hence he was carefully watching the developments.

In 1156 A.D. Bijjala occupied Kalyana by ousting Nurmadi Taila. Bijjala ruled upto 1167 A.D. Then he was succeeded by his eldest son Sovideva better known as Raya Murari Sovideva in 1168 A.D. He ruled till 1177 A.D. Sovideva was succeeded by his younger brother Sankamadeva in 1178 A.D. who ruled till the end of 1181 A.D.¹¹ It was during this period a series of conflicts between the Hoysalas and the Kalachuri took place.

The death of Raya Murari Sovideva symbolized the fall of Kalachuri power. Chalukya someswara appealed to the former feudatories of his house to come to his support to put an end to the dynasty which came to power as a result of usurpation. Moreover it appears that Sankama was forced to face opposition by his younger brother Ahavamalla Rayanarayana for power. It was during such a situation that Vira Ballala tried to extend the Hoysala territories at the cost of the Kalachuris.

Taking advantage of the conflict that was going on between the Chalukyas and the Kalachuri, Ballala attacked the feudatories who were under the control of Kalachuris. Since Sankama was preoccupied with the conflict with the Chalukyas, he was not in a position to fight against the Hoysala forces effectively. Ballala sent a force against Kalachuris under his general Bebaya Dandanayaka of Kabbahunad. He fought against Sankama. Ballala also marched to the north and attacked the fort of Udre and captured it from the governor of Sankama. In 1180 A.D.¹² Ballala himself marched and encamped at a place called Hallavuru and captured several fortresses of the Kalachuri empire. Many battles were fought between the Kalachuri forces and Hoysala troops. The results of these battles are not clear. The inscriptions refer to a treaty signed between the Kalachuris and the Hoysalas in 1181 A.D.¹³ However the details of the treaty are not forthcoming perhaps Sankama's pre-occupation was greatly responsible for this treaty. Ballala became the supreme master of the region below Tungabhadra, as a result of this treaty. Perhaps Sankama expected the help of Ballala in his conflict with Chalukya Someswara.

Soon after these developments Ahavamalla passed away. He was succeeded by Rayanarayana Ahavamalla as the Kalachuri emperor. He also could not enjoy this position for long. By the end of the year 1183 A.D.¹⁴ the Kalachuri power collapsed and from the year 1184 A.D. the Chalukya power was revived and Someswara became the emperor. The short lived Kalachuri dynasty no doubt maintained the Kuntala empire intact for a generation more.

Bijjala and of his all the four sons who came to the throne one after another in quick succession were the contemporaries of Ballala II. The Hoysalas and the Kalachuris tried to overpower each other. But both were not successful. On the other hand it must be stated that the Hoysalas by their continuous attack, constantly engaged the attention of the Kalachuris in the Tungabhadra region by successfully assaulting Uchchangi and defeating the other Kalachuri feudatories. Ballala II by his constant attack on the Kalachuri borders caused great damage to them and thus partly responsible for the down fall of the Kalachuris.

Someswara IV, who revived the Chalukya power had neither the energy nor time and resources to control the feudatories and to consolidate his position. At the same time Hoysala Ballala II from the south and Sevuna Bhillama from the north competing to establish their supremacy over the empire of Kuntala.

Ballala II from the southern side attacked the Chalukya empire. During this attack in 1188 A.D.¹⁵ a general Brahma boasted himself as having disbursed the army of Hoysala Vira Ballala. But his was a false boast. Because soon general Brahma received a severe blow at the hands of Ballala II.

It was in the year 1189 A.D.¹⁶ that the reign of Chalukya Someswara came to an end. Someswara IV and his trusted general Brahma disappeared soon after this date. Ballala marched towards the north in the middle of 1189 A.D. He attacked the Chalukya army. General Brahma was severely defeated which is clearly mentioned in the famous Gadag record of Vira Ballala II. The defeat of General Brahma was a severe blow to Someswara IV. After this event which took place towards the end of 1189 A.D. We do not hear of General Brahma and also

Chalukya Somesvara. Somesvara left Kalyani and took refuge under one of his feudatories. Ballala occupied the Chalukya territories as far as perdore including Kalyana.

Two grants of Vira Ballala confirm his conquests as far as Krishna. One of the grant records that Ballala having slain warriors took possession by the strength of his valour, Vishnu's conquests namely Halasige, Beluvola, Huligere and Lokkundi as far as Heddore (the Krishna). Another grant of the same year records that Vira Ballaladeva, putting down the evil and upholding the good ruling the kingdom as far as Heddore, including Gangavadi, Nolambavadi, Banavasi, Halasige, Huligere and Belvola.

In recognition of this great achievement namely the capture of Kalyana he assumed for the first time the imperial title "Pratapachakravarthy". This title clearly speaks of his exalted position of Vira Ballala II.

From the above narration it is clear that the year 1189 is a turning point in the history of the Hoysala dynasty and as well as in the history of the Deccan. After the disappearance of the Chalukyas of Kalyana much of their territory was brought under the control of the Hoysalas. A few parts were captured by the Sevunas of Devagiri. Vira Ballala declared himself the emperor of Kuntala. The collapse of the Chalukya dynasty gave way for a severe contest of supremacy between the two royal houses namely the Sevunas of Devagiri and the Hoysalas of Dorasamudra.

Conflict with the Sevunas of Devagiri

The collapse of the Chalukya dynasty of Kalyana in 1189 A.D. led to the beginning of a long struggle between the Hoysalas and Sevunas for supremacy in the Deccan. The Hoysalas, the Sevunas and the Kakatiyas of Warrangal emerged as independent powers on the ashes of the empire of the Chalukyas of Kalayana. The Kakatiyas did not come into clash with the Hoysalas. But they continued their struggle with the Sevunas. Both the Sevunas and the Hoysalas competed for supremacy after the fall of the Chalukyas of Kalyana. This rivalry, which was commenced following the collapse of the Chalukyas continued till the fall of the Sevuna dynasty.

After the capture of Kalyana in 1189 A.D.¹⁷ Ballala returned to Dorasamudra to celebrate his victory in the capital. Soon after his return the Sevuna Bhillama made an elaborate attempt to establish his authority over the southern part of Kuntala. Bhillama had already subdued the northern feudatories of the Chalukyas, collected a huge army and marched towards Kalyana and further. The Sevuna army reached Heruru in the early part of 1191 A.D. and encamped there for sometime. At Heruru Bhillama granted the village Hiriya Handigola to the ascetic Siddhanta Chandra Bhushana deva popularly known as "Satyavakya" of the shrine of the god Swayambu Thrikuteswara in 1191 A.D.¹⁸ The huge Sevuna army then moved forward and reached the village called Soraluru in Dharwar district. The army was led by Jaitugi who has been described as the right hand of Bhillama.

As soon as Ballala heard the news of the arrival of the Sevuna army marched with an army towards Soraturu. A severe battle took place in 1192 A.D.¹⁹ The Sevuna army could not withstand the attacks of the Hoysalas. There was a lot of confusion and chaos in the Sevuna army. A record composed by Janna describes this event in glowing words. Another Viragal mentions that Ballaladeva fought heroically in the battle of Soraturu and defeated Jaitrusimha. A number of records of the subsequent period contain the vivid description of the heroism and bravery exhibited by Ballala in the battle of Soraturu. The Sevuna army which fled from the battle field of Soraturu took refuge in the fort of Lakkundi, which is situated eight miles away from Gadag. The city of Lokkundi also known as Lokkigundi in Dharwar district is an ancient place and formed the sub-capital of several royal families including the Sevunas and the Hoysalas. It is described in the contemporary records as an impregnable fort. Ballala chased the enemy and laid siege to Lokkigundi. Another severe battle was fought before November 1192 A.D.²⁰ It is stated in many records that a large number of Sevuna soldiers lost their lives. Jaitugi the commander of Bhillama also lost his life in the battle. The fort was destroyed and Lokkundi was captured. The terror striker Sevuna army fled away in different directions. Rajaditya the famous scholar writes in his work Vyavaharanitha about the destruction of the Sevuna army of Ballala II. Bhillama fled from the

battle field with the remaining six hundred horsemen.

Ballala II after this great victory granted the village Hombalalu (modern Hombal) to the Acharyas of the temple of the God Thrikuteswara of Gadag known as Vidyabharana gurudeva also called Satyavakya from his victorious camp at Lakkundi in November 1192 A.D.²¹ This important record refers to the defeat of the Chalukya general Bomma and the death of Jaitugi at the hands of Ballala. Further it states that Ballala acquired sovereignty of the Kuntala empire by the grace of God Narayana. He assumed the imperial titles "Sri Prithvivallabha", "Samasta Bhuvanaraya" and "Tenkana Chakravarty" or emperor of South.

After conquering Lakkundi Ballala chased the enemy as far as Heddore. Billama also lost his life during this conflict. When he was fleeing Ballala captured him and killed him. After the capture of Lakkundi by Vira Ballala II, we do not hear the name of Bhillama. Afterwards his son Jaitru Simha succeeded him in the same year 1192 A.D.²² Further, the death of Bhillama at the hands of Ballala is confirmed by the Annigere record. Several inscriptions of Ballala also refer to the death of Bhillama. From the above narration it is understood that Ballala II killed the Pandya king Kamadeva. The Sevuna commander Jaitugi and the Sevuna king Bhillama.

The battle of Soratur is an important event in the history of the Hoysala dynasty. The Hoysalas claimed superiority over the Sevunas. The Sevuna menace temporarily disappeared. As a result of this victory Ballala soon took possession of a number of towns and cities like Kurugodu, the Matanga hill, Dorevadi Gutti, Guttavolal, Udre, Kaladi Bandanike, Ballare, Soraturu, Eramparge, Haluve, Manuve, Lakkundi and all the territories as far as Krishna and the Bhimarathy. Ballala assumed the titles like the "Dakshina Chakravarty", "Smastabhuvanaraya" and "Sriprithvi Vallabha". He also assumed the titles such as "Sevuna Badabanala Varidhi" and "Sevuna Katakasurekara". To commemorate this victory Ballala started an era of his own from the year 1192 A.D. It took several years for the Sevunas to recover from the rude shock.

Nearly for two decades the Sevunas could not lay their hands against the Hoysalas. Vira Ballala, as a result of this great victory became the emperor of Karnataka and the imperial status enjoying the prerogatives of influencing war or concluding peace in the whole of south India. Ballala appointed his generals and ministers as governors over the conquered area and returned to his capital. For more than twenty years there was no trouble from this quarter.

The Sevuna king Jaitugi was succeeded by his son Singhana. He began to raid the Hoysala border after few years. Vira Ballala II marched to the northern boundary of his empire in 1212 A.D.²³ Singhana was not in a position to meet the Hoysala emperor in a direct battle. Ballala returned to his capital. Again Singhana started attacking the Hoysala borders. In spite of these frequent attacks Tungabhadra river more or less became the permanent northern boundary of the Hoysalas in course of time.

Ballala II and the Cholas

The political conditions in Tamil Nadu also attracted the attention of Vira Ballala II. Kulothunga III began to experience some trouble in his kingdom and wished to maintain close alliance with the Hoysala neighbour. It is stated that one of the daughters of the Chola king known as Cholamahadevi was given in marriage to Ballala in about 1200 A.D. Later on the Chola king Raja Raja III married Somaladevi who was the daughter of Ballala II. Ballala II never entertained any territorial designs in Tamil country at this juncture. But towards the end of the year 1216 A.D.²⁴ a few developments took place in Tamilnad which led to Ballala's interference in the affairs of the Chola empire. The Chola emperor began to face lot of problems from the Pandyas of Madurai.

The Pandya ruler Maravarma Sundarapandya decided to put an end to the nominal Chola over lordship. He formed an alliance with the other Chola feudatories like the Banas and the Kadvas. Afterwards Sundarapandya then attacked Raja Raja III and humiliated him. The Chola king appealed to Ballala II for help. Ballala II decided to go to the rescue of the Chola king. Already both the dynasties had come closer through matrimonial alliance. Finally Ballala II sent an army to the

help of Chola king under the leadership of his son Narasimha II in 1218 A.D.²⁵

The Hoysalas had direct access to the dominions of the Banas. Atturu below the ghats was the center of Bana chief whose dominions stretched as far as Taramangalam eastwards, as far as Tittagudi on the Vellar and northwards to the Ponnaiyar including Tirava Sangam and Jamba. The Adijaiman ruled the valleys of Ponnaiyar including Tiruvannamalai. Narasimha II met the Adijaiman and Bana forces and defeated both of them. Then he reached the cauvery plain. He attacked the Pandya forces near Srirangam and defeated them. Certain Malleyanayaka showed great valour in disbursing the Pandyan army. By these exploits Pratapa Narasimha saved Rajaraja from the menace of his feudatories and returned to the capital. Thus for the first time Narasimha interfered in Tamilnadu politics and established the Hoysala protectorate over Tamilnadu. Prince Pratapa Narasimha assumed the titles 'Chola Pratishtapanacharya' and 'Adiyamayakagharatta' and 'Magara Rajya Disapatta'. Soon after the return of Narasimha the Vijayabhisheka ceremony was performed in the Hoysala capital and Vira Ballala II also assumed the titles 'Magara Rajya Nirmulava' (uprooter of the Magara kingdom), 'Tandya Rajya Gaja Kesari' (Lion to the elephant the Pandya king) and "Raja Raja Prathisthapana Charya", Rudra Bhatta, the contemporary poet also alludes to this event in his Jagannatha Vijaya by applying the epithet Rajaraja Prathisthapanaacharya to Ballala II. However it is for the first time that the Hoysala army marched into Tamilnadu as far as Kanchi and Srirangam. It enabled his successors, Narasimha II and Someswara to establish their supremacy in the Tamilnad. Ballala II gave proper training to his son Narasimha II in the art of warfare and administration and celebrated his coronation in 1220 A.D.²⁶

After an eventful reign of 47 years and elevating the fortunes of the dynasty to its climax. Vira Ballala II passed away in the year 1220 A.D. The queens of Ballala II also evinced a lot of interest in the administration of the kingdom. They also took interest in the social

wellbeing of the subjects. The crowned queen Padmala also known as Padmavathi who was the mother of Narasimha II was governing Belagavathinad. Queen Umadevi was a brave general and raided the Sinda kingdom twice. Queen Bommala devi was an accomplished lady who was wellversed in music and dance. Another queen Chola Mahadevi was ruling over Kembalanad as governor. Abhinava Ketaladevi constructed the famous Kedareshwara temple in the capital. The other queens Tuluvaladevi Bichaladevi and Santaladevi also evinced interest in promoting culture. They constructed a number of temples and tanks and gave grants. They patronized music and dance. A number of weekly fairs were also established. Thus they contributed a lot for the cultural development.

Death of Vira Ballala II

The farsighted king conducted the coronation ceremony of his experienced son Narasimha II, a few months earlier to his death. Ballala breathed his last in the heyday of his fame. His death was deeply mourned by his courtiers and subjects. His general and ministers Kuvara Lakshma who was also a garuda after setting up of the Veera Shasana at Halebeedu mounted up on the splendid pillar together with his wife Suggaladevi and his followers ended their life. This is how the people used to pay homage to princes and kings. It was a sacrifice befitting the heroic age.

Estimate

Vira Ballala II is undoubtedly the greatest ruler of the Hoysala dynasty. By dint of his ability he transformed the kingdom into a prosperous empire. He was constantly engaged in warfare against his neighbours and uniformly successful in almost all the battles he fought. His reign also witnessed the expansion of the Hoysala influence into Tamilnad and thus justified his title Dakshina Chakravarthy. He patronised learning, religion and art. The empire enjoyed unprecedented prosperity under Ballala II. The age of Ballala II witnessed remarkable progress and ensured itself into an epoch.

NO- TAX CAMPAIGN IN UTTARA KANNADA DISTRICT KARNATAKA

Basavaraj N. Akki

Uttara Kannada (North Kanara) district the Southern part of the Bombay Presidency lies between 13.55 and 15.31 north latitude and 74.9 and 75.10 East longitude. It has an area of 3910 square miles in 1881 and 10,327 sq. km. in 1983 and had a population of 4,21,840 in 1881 and 10,72,034 in 1981. This district was also known as Bombay Kanara to distinguish it from South or Madras Kanara. It was separated in 1862 from South Kanara. It's length is about 110 miles from North to South and from ten to sixty miles from East to West. The district is famous for its natural beautiful scenery of the Western ghats and endowed with variety flora and fauna. The district is bounded by Alnavar of Dharwad and Beedi of Belgaum districts in the North and Kalaghatagi, Bankapur and Hanagal subdivisions of the old Dharwad district in the East. Shikaripura of Shimoga in the South East and the South Kanara in the South. On the extreme West there is Arabian Sea and Goa State in the North West. These are the geographical features of the district. As on today the district has 12 taluks. They are Ankola, Bhatkal, Dandeli, Haliyal, Honavar, Joida, Karwar, Kumta, Mundagod, Siddapur, Sirsi and Yallapur. After the construction of dam at Supa the city was shifted to Joida and it is the biggest taluk in the district. The population of Sirsi was 53,071 in 1901, 47,875 in 1911, 40,987 in 1921, 37,000 in 1931 (because of epidemic disease and

declaration of reserved forest area the population declined considerably)

History of the District: The district was subjected to the rule of the Satavahanas from the beginning of the Christian Era. Later, the feudatories like the Chutus started rule from Banavasi. For some time the region was under the control of the Pallavas of Kanchi and the Northern part was under the control of Bhojas of Chandore in Goa. By the middle of 4th century A.D. the Kadambas of Banavasi extended their kingdom in the districts of Dharwad, Belgaum, Chitradurga and Shivamogga. The Kekayas, feudatories of the Kadambas administered some parts of the district from Haigunda, Honnavar taluk. The Chalukyas of Badami overthrown the Kadambas and took control over the entire territory. Then Rashtrakutas the successors of the Chalukyas took over the control of the district. It was at that time the Banavasi -12,000 was a province in which major part of the district was included. The other administrative units in the district were Haive-500, Konkan-700, Halasi-12,000, and Hanagal-500. There was also a branch called Kadambas of Chandavar. From the close of the 13th century the Saluvas of Gerusoppa ruled the district. The Hoysalas ruled for a short period. Then the Vijayanagar Empire established their trade centers in the district and ruled for a very long period. The Alupas and Saluvas were the feudatories of the Vijayanagar

empire. Bilagi and Sonda were also ruled by the feudatories of Vijayanagar. The Sondas ruled the district for a long period who were later on overthrown by the Adilshahis of Bijapur and the Marathas. In 16th century the Keladi were entrusted by the Vijayanagar rulers to administer the district. It was during the last quarter of the 18th century, Tipu Sultan captured the district from the Keladi's after defeating the Bilagi and Sondas. After the defeat and death of Tipu Sultan the district was part of the Kasaragod taluk and looked after by the British. Thomas Munro was appointed as the first Collector of the district in 1799. Later in November 1800 the district was divided into two divisions namely the Southern and Northern. Honnavar was the head quarter of the Northern division and the Kundapur was the head quarter of the Southern division and Uttara Kannada was in Northern division. In 1817 it was once again formed into one district, but in 1862 it was once again divided into South Kanara and North Kanara. And Uttara Kannada was then transferred to Bombay Presidency. As on today the district has 12 taluks with three sub divisions namely Karwar, Honnavar and Sirsi.

After the establishment of Indian National Congress the struggle for freedom took a definite shape against the British. The 1857 revolt was initiated by the selected Princely States for their personal cause, hence it was not a mass movement. The moderates who lead the first phase of the INC requested the British for few rights in polite manner. Their strength was not sufficient to fight united against the British in non-violent way. The second phase was lead by the extremists who believed in bloodshed and their activities were mainly violent in nature. Hence they could not attract masses towards them. But the British were terrified with their underground activities. They also took very harsh measures to suppress them. Hence there were incidents of hanging of Bagat Singh, Raj Guru, Sukhadev etc. in 1913, Jallianwallh Bagh tragedy in 1919. There was a group of leaders in these two phases of INC who guided the movement and took combined decisions. Hence the incidents failed to attract the masses and even the British. They wanted the British to quit India at the earliest, so in order to divide the movement the British directly supported to form the Indian Muslim League and partition of India. These events destabilized the unity of the country. The third phase of the INC was lead of

M. K. Gandhi who was the sole leader of the movement and followed the principles of non-violence, truth and satyagraha up to 1947. Those principles of humanism attracted women on large scale (who were half of the population), peasants, workers, students and educated class etc. The events like Non-Co-operation Movement in 1920, Civil Dis-obedience Movement in 1930, (Salt Satyagraha) and Quit India Movement in 1942 were organised systematically. They were held in different parts of the country. These national movements were successful in spreading the message of discontentment of the Indians against the British rule. The important demands of the INC were constitutional reforms, economic reforms, administrative reforms, education reforms and equality in government jobs, military services to Indians. Amidst all these activities Gandhi and Vallabhai Patel had made up their minds to start a No-Tax Campaign only at three places in India. They were held at Bardoli in Gujarat 1928, Midnapure in Bengal and Uttara Kannada 1931 in Karnataka. The real motive behind the selection of three places is yet to trace. The success of this movement in Uttara Kannada attracted the attention of nationalist leaders. Hence they called it as the Bardoli Satyagraha of Karnataka.

From the advent of Gandhi in the freedom struggle of India his influence was more on the people the State, hence the State was known as Gandhi Karnataka. The people of Bombay Karnataka were responded positively to INC and the call given by leaders like Gopal Krishna Gokhale, Bal Gangadhar Tilak and later on M.K.Gandhi. Since the inception of Indian National Congress the natives attended its annual sessions held in different parts of India.

After the sudden call given by Gandhiji to start the No-Tax campaign in the district of Uttara Kannada i.e. in the taluks of Ankola, Sirsi and Siddapur a committee was formed and deputed to the district to form the necessary preparations. It was decided to celebrate 26th January 1930 as Independence Day all over the country. Gandhiji convened the meeting of the Congress Working Committee at Sabaramati on 14th Feb. 1930 which was attended by Gangadhara Rao Deshapande and Dr. N. S. Hardikar leaders of Bombay Karnataka.

What is No-Tax Campaign? Farmers made up their mind rejecting the payment of land

revenue to the Revenue Officers of their respective areas. In case cases their land, property both moveable, immoveable were seized. And standing crops either destroyed or harvested by the Revenue Officials. Thus refusing to pay the land revenue, farmers invited economic sufferings. In spite of all this the farmers refused to pay the land revenue in the taluks of Sirsi, Siddapur and Ankola. of Uttara Kannada.

Formation of an organizing committee:

After the meeting of Sabaramati the leaders returned to Dharwad. They called a meeting in order to create awareness about which was consisted the leaders of Uttara Kannada district. Hence the leaders of the region had influenced the freedom movement in the district. Since the inception of the Indian National Congress educated people like N.G.Chandavarkar participated in the freedom struggle. *(Narayana Ganesh Chandavarkar was born at Honnavar in 1855. He took his degree from the famous Elphinstone College Bombay in 1877. He had obtained his LL.B. degree in 1881 and became pleader in Bombay High Court. He had attended the inaugural session of INC held at Bombay in 1885. It was his privilege to preside over the Congress session held at Lahore in 1900. All his life he was deeply interested in education and social reform. Lord Curzon made him a member of the Education Commission in 1902. It was there he was regarded as a first rate moderate in politics. He breathed his last due to heart attack in May 1923 at Bangalore. Since then the Congress workers started to take active part in the freedom struggle). But the district had no senior leaders. They were followers of the order given by the Karnataka Provincial Congress Committee. Hence all the main leaders were from Belgaum and Dharwad)*

Shri Ranganath R. Diwakar of Belgaum was the leader of the freedom movement in Bombay Karnataka. He was head of the Pradesh Congress Committee. Hence the responsibility of organizing the No-Tax Campaign was shouldered upon him and Karnataka Satyagraha Mandal was set up. It was decided to start the campaign in Ankola taluk because all the previous agitations like salt satyagraha, forest satyagraha, burning of foreign cloths were proved very successful. The participants must be land holders and ready go to jail and even to

starve along with their family members. This was the last step of the Civil Dis-obedience Movement. He along with Dr. N.S. Hardikar and Smt. Krishnabhai Panjekar travelled extensively in Ankola taluk. They met the Nadava leaders in a temple at Surve and discussed about the pros and cons of the campaign. Leaders of the Nadava community like Ram Nayak of Basagod, Bole Bommayya Nayak, Devanna Nayak, Kanagi Hammanna Nayak, Shetageri Jogi etc attended and addressed the meeting. Ranganath Diwakar explained the Bardoli Satyagraha and hardship faced by the farmers there. Dr. Narayan Kabbur from Dharwad also addressed the gathering. Then Diwakar conducted similar other meetings at Hichkad, Vasre, Hoskeri, Shetageri. Dr. Hardikar was declared as commander of the Nadavas in this campaign. Seven members team was formed to conduct the campaign in the district. They were Siralige Subbraya Bhat, Tarakhod Sitaram Hegde, Inkai Venkataramana Hegde, Hosakoppa Ganesh Hegde, Hobli Gangapath Bhat, Dasan Hudil Narayana Bhat and Dodmane Ganesh Hegde. One important aspect is that Shri K.V.Venkataramanayya and his Gouramma from Bangalore came to Siddapur in order to take part in the campaign. They settled at Siddapur and earned the good will of the people. He was a trainer of Hindustan Seva Dal and high School teacher at National High School, Bangalore. He was arrested on 30th Aug.1930 at Karwar. His Wife Gouramma too joined No-Tax Campaign. She opened Balaki ashram at Karwar and Shimogga.

Siddapur was the head-quarter of the Campaign. The other sub-centres were Shiralage, Bidarakhan, Korkisaval, Taresar, Herur, Hosatotu, Kanchikai, Kanasur, Tyagli, Kanagodu, Gunjagond, Bilagi, Kyadagi, Itagi, Lambapur and Dodmane.

Leaders of Sirsi taluk: Timmappa Nayak, Hodake Vamanarao, Manjunath Devaru Hegde, Kadave Ramakrishna Hegde, Ganapati Bhatta Bisalakoppa, Krishna Bhatta of Sogoanvi, Ramakrishna Shankarapa Hegde of Mandagesara, Paramayya Ganapati Hegde of Balagundi were in the organizing committee. For the successful conduct of No-Tax Campaign they selected seven of the taluk. They were Hegdekatte, Hulekall, Hulgol, Suganvi, Ekkumbi, Mundagesar, Harogar.

After the arrest of Manjunath Devaru Hegde there was protest march on 12th January 1932 and the satyagrahis conducted a jungle satyagraha. On that occasion they cut the sandalwood and other important trees in the forest area. The police tried to arrest them along with the wood. But they could not trace the wood that was cut in the forest. They conducted raids on the houses of the leaders to search the looted wood. They the police even brought carts to transport them. But by that time the wood was looted and transported from the police station. They made up their mind to conduct the satyagraha at Punchlingeswara temple at Shivalli village of Hegdekatte centre. The police succeeded in arresting Gopal Subbaraya Hegde of Kanalli, Subbaraya Ganapayya Hegde of Honnekatte, Ganappa Bhatta, Annayya Bhatta, Narasimha Bhatta Annayya Bhatta and Narasyan Venkappa Hegde were imprisoned them in Sirsi Police Station. They got six months rigorous imprisonment. Others were released without any action.

On 26th January 1932 processions in the streets, jungle satyagraha, salutation to flag were conducted as usual. They auctioned the sandalwood and Salt which was called as Gandhi Salt in the temple.

The congress workers decided to take the resignation of patels working in the Sirsi taluk. Hence Mahadev Subbaraya Shetty and Narayan Naranappa Hegde sought the resignation of Patels namely Ramakrishna Timmayya Hedge Kadabal, Subbayya Hegde Kanhalli, Subbraya Subbayya Hegde Hegdekatta, Subbraya Ramakrishna Hegde Hebbbar. But only first two Patels rendered their resignation. Other two took back their resignation after receiving a threat from their officers. For this criminal act two Congress activists namely Mahadeva Subbaraya Shetty and Narayan Naranappa Hegde were arrested and imprisoned for one year and fined Rs. 500/-. Local leaders like Kadave Ramakrishna Hegde, Soganvi Subbaraya Bhatta, Ganapati Bhatta of Bisalkoppa, Paramayya Hegde of Mundagesar jointly engaged in the preparation of the campaign. They toured the Sirsi taluk and created mass awareness among the people. They organised the campaign at Hegdekatte, Kadave, Mundagesar, and Soganvi in Sirsi taluk.

Manjunath Devaru Hegde was released on Ferule. On the way he met Kadave Ramakrishna Hegde and discussed about the successful campaign of No- Tax Campaign. Then they decided to meet K.V. Venkataramanayya and at Sagar and took guidance from him to conduct the campaign in Sirsi taluk. About 150 families assured to take active part in the campaign.

Campaign in Ankola Taluk: Dr. N.S. Hardikar who was entrusted the duty of training the workers travelled widely in Ankola taluk. He mainly concentrated the Nadava community. He addressed the farmers and informed them about the consequences of their involvement in the campaign. There was search warrant against Hardika. The police wanted to arrest Hardikar at any cost and to disturb the campaign. Volunteers were appointed to look after the needs of the training camps and supply them the essential goods. Local leaders were Shyamarao Shenai, Babu Kamat, Hari Pai, Subbraya were arrested on 6th January 1931. Other people conducted prabathaperies, salutation to flags, procession, salt manufacture, forest satyagraha. The people of Nadava community were fully involved in the campaign. Congress workers from Dharwad, Belgaum, Bijapur, Mangalore, Bangalore, Mysore and Coorga assumed the leadership of different training camps. Women and children were appointed for the postal duty. They secretly worked in transporting letters from camp to camp and village to village.

The Sixth Karnataka Provincial Political Council was held at Hukkeri in Belgaum district on May 26th to 27th under the Presidentship of Jamnalal Bajaj. Because of No-Tax Campaign the condition of the farmers of Sirsi and Siddapur was very critical. They were living without food grains and most of them were in a fear of utter poverty and starvation. Hence it was decided in the Council to help those farmers with necessary assistance. As a token of initial work Rs. 700/- was collected towards Assistance Fund. Mahatma Gandhiji requested Jamnalal Bajaj to tour the affected areas of Sirsi and Siddapur to study and survey the ground level condition of the farmers and report the same to the Indian National Congress. A Committee was appointed with Gangadhar Rao Deshpande, Shankar Rao Gulvadi, Ranganath Divakar, Hanumant Rao Kaujalagi, Vishwanath Rao Jog. They started their journey on June 1st and visited a small

village called Somanalli. They visited Sirsi, Siddapur, Bilagi, Tyagli, Kanasor etc. They conducted meetings with farmers of the villages and collected information about their sufferings and the treatment of government officials. In order to solve the serious problem a Local Committee in collaboration with Gandhi Seva Sangha was set up. Hence a Committee under the leadership of Shri S. N. Kehsvainar was formed. The other members of the committee were Kadave Ramakrishna Hegde, Timmappa Hegde Motensur, Vasudev Dhakappanavar (Tresurer), Nagesh Hegde Dodmane, Hanamappa Rajavaidya Bialagi, Timmayya Hegde Shigihalli, T.S Nayaka (Secretary). The members of the committee divided among themselves the place they had to visit in Sirsi and Siddapur taluk. Their survey report revealed the ground reality of the economic condition of the farmers in which they stated that the 145 families of the Sirsi had no food grains in the next rainy season time. In Siddapur the situation was very worst. 74 families were already suffering from starvation. Hence they thought they require nearly Rs. 20000 to feed those families for the next six months. Hence the Congress leaders of the other taluks come forward to collect the necessary fund to the farmers of Sirsi and Siddapur. Subbrao Haldipur the President of Uttara Kannada District with other taluk leaders like Shivarao Shastri, Shripadarao Kalyanapurakar, Narashimha Govind Shanbagh, Ganapat Ramrao Masur, B.M. Basrur, Ganesh Ram Yaji, M.P.Nadkarni requested the people to donate maximum amount to their best of capacity to the fund.

It was in the Hukkeri the Karnataka Provincial Political Council, Sadashiva Karnad was elected as President of the K.P. C. C., Ranganath Diwakar as Secretary joined by Gangadha Rao Deshpande, Hukkerikar, M.P.Patil issued a joint statement requesting for liberal donation towards that fund for the Sirsi and Siddapur farmers. June 26 was observed as Day of Fund Collection for the farmers.

The main features of the No-Tax Campaign are

1. To face the British openly by denying the payment of land revenue in Ankola, Sirsi and Siddapura taluks.
2. Participation of women along with their husband, sons and daughters

3. Resignation of Patels for the Government jobs and joining the movement,
4. Confiscation of property, houses and standing crops,
5. Rigorous imprisonment maximum period of 1 year.
6. It was a non-violent movement and not to run away from the agitation.

Training Camps for the Satyagraha: For the preparation of satyagraha training camps were set up in Ankola taluk. They were at Basagod, Surve, Shatageri, Bole, Vandige, Hosagadde, Kanagil, Hichakad, Sagadageri, Jooga, Adigon, Aggaragon, Mogata, Vasre, Kudrige, Shiragunta, Gundabale, Hillur, Agasur, Adlur, Belkere, Bhavikere, Uluvare and Avarsa. Thus there were 24 training camps spread across the Ankola taluk. Shri Ranganatha Diwakar requested the native Patel to resign for their posts and join the movement. Accordingly Subbaraya Nayak of Vasre was the first Patel to resign for his post. He was entrusted the responsibility of taking the resignation letter from other Patels of the district. The other leaders like Basagod Ram Nayak, Shetageri Jogi Nayaka, Vandige Hammanna Nayak, Bole Bommayya Nayaka, Hichkad Biranna Nayak and Ramachandra Nayak. They shouldered the responsibility of popularising the movement in the taluk. After making all the preparatory works Shri D. P. Karmarkar left to Dharwad to meet Diwakar and to seek further guidance in the matter. On 17th January 1931 Bhimaraya of Bevur and Krishnabhai Panjekar once again went to Ankola to spread the message and to create awareness about No-Tax Campaign among the people of Ankola taluk. Volunteers from different parts of the State including the Mysore came to the district to undertake all sorts of works. Balachandra Ghanekar and Anatharao Chikkodi from Dharwad also gave suggestions to the satyagrahi.

Krishnabhai Panjekar toured the rural areas and educated the ladies about the movement. She was really guiding force among the women of Nadava community. The campaign was started on 26th January 1931 which was celebrated as Independence Day from 26th January, 1930. Processions with National Flag, salutation to National Flag and taking oath of the

campaign were started on that day. All the land holders made up their mind to deny the payment of tax to the government. The Patels of Sirsi–Siddapur resigned for their posts at the time of jungle satyagraha. About 42 of them once again joined the service. In the same way 41 Patels of 63 were submitted their resignation to the government. On the same day Gandhiji and other top leaders of the INC were released from the Yarwada jail, Pune.

On 3rd March 1931 the Mamedar, Patel, Shanabhag of Ankola raided the houses of Subbaraya Nadkarni, Traimbaka Nadkarni, Radhabhai Nadkarni and seized the paddy. Similar raids were conducted at Belambara, Bhavikere, Gundubale, Shinganamakki, Surve,

According to Gandhi-Irwin pact which was signed on 5th March 1931 the No-Tax Campaign was stopped and the same message reached Ankola on 8th March and the people agreed to pay the tax to the government. On 11th March a function was organised in the Gandhi ground at Ankola in which D.P. Karmarkar and 30 to 40 volunteers who came from different parts of the State were honoured and felicitated for their whole hearted participation. Since the commencement of campaign there was a search warrant against Karmarkar and ban order against him for not to enter the district. In spite of that Karmarkar was travelled widely in the district and guided the people.

Main Events of the Campaign:

1. Kelaginmane Nagesh Hegde- An active worker arrested on 26-01-1931 beaten several times and sentenced. His first younger brother served a period of six months rigorous imprisonment and was actively working in the field. He was again sent to prison for one year, his two younger brothers and the wives of all three younger brothers have all been sent to jail. His mother was sentenced to one year. The members of the family that left outside the prison were his carrying wife and two small children.
2. Bommayya Pokka Naika of Surve was a No-taxer. His house was searched a number of times and properties attached. His lands were forfeited. The family consisted of three males, one female and five children. Out of these Bommaiyya Pokka Naik had been

sentenced to nine months rigorous imprisonment. On the ground that he was a congress worker and Venkanna Beerana Naik was sentenced to six months rigorous imprisonment under the forest law and observing general satyagraha. So all the males in the family were in jail. Only females and children were left behind.

3. Beeranna Devanna Naik Vasarkudrige was a Congress worker and a no-taxer. There was a lady and boy in his house. He was working in the Congress for the last eleven months. His moveable property was attached.
4. Mani Biranna Naik Magute was a no taxer and also a Congress worker. His moveable and immoveable properties were attached. His house was in the possession of the Police.
5. Honna Dasa Manigouda was not a tax payer. There were five men, three ladies and two children in the family. All the five males were sentenced to various terms of imprisonment in the jungle satyagraha, suagar cane satyagraha and planting. The moveable and immoveable property worth of Rs. 1000 was attached. Their house was taken possession by the government and ladies of the family were driven out.
6. Ramagouda Huliyyappa Gouda was not a tax payer in Ankola taluk. He was active Congress volunteer. His annual income was more than Rs. 1000. His properties both moveable and immoveable worth of thousands of rupees were attached. His house had been taken possession by the Government. The ladies and children were driven outside. Yet they continued as Congress volunteers.
7. Govinda Mankali Gowda was also no-taxer in the taluk with an annual income of Rs. 500/- had lost and there by sustained a loss of thousands of rupees. His house was locked by the authorities and the inmates were driven outside.
8. Devoo Huliyyappa Gowda was another no-tax payer. His house was locked by the Government. All moveable property was attached. His land was forfeited and the

- family was driven out. He had sustained a heavy loss.
9. Bhairu Timmanna Gowda was a not-tax payer with an annual income of Rs. 500/-. His immovable property was attached. His land was forfeited. His house was locked and sold by the authorities and the inmates left in the wilderness.
 10. Nagappa Buddagouda had an income of Rs. 500/- a year. He refused to pay land revenue this year. To recover the same number of raids were conducted on his house and moveable property was attached. He was a staunch supporter of Congress.
 11. Devu Tulasugouda was another no-tax payer in Ankola. His house was taken possession by the Government officials. There were ladies in the house and his son-in-law. He had been sentenced to six months rigorous imprisonment on a charge of harvesting crops in the forfeited land. Only ladies were living in the house. All of them were working for the congress day and night.
 12. Sjt. Nagesh Ganapayya Hegde Kelaginmane of Siddapur taluk was a staunch follower of Congress. He was a patel and resigned for his post during 1921 campaign. The annual remuneration was of Rs. 100. He too refused land revenue during this campaign and withholding Rs. 195. His house was searched nine times by the officials and property worth of Rs. 100 was attached. All his land was forfeited and auctioned but there were no bidders to purchase the land. Standing crops worth of Rs.300 was guarded by the police to prevent harvesting by the Khatedar. Pepper creepers were cut off by the police. Inmates were driven out of the house and the house had been locked and sealed. The house was raided in which nine ladies were residing and seven of them from same family. It was once again locked up.
 13. Katedar was an active worker and was very responsible man in the centre. Ramakrishna Ganapayya Khatedar's younger brother was sentenced to six months rigorous imprisonment and Rs. 50 fine was imposed in March 1932. Immediately he came out but soon he was arrested and sentenced to eighteen months rigorous imprisonment in November 1932. His two younger brothers were also sentenced to six months rigorous imprisonment each. The wives of the three younger brothers of the Katedar had been sentenced to one year rigorous imprisonment each for residing in the sealed house. Katedar's mother, sister and his sister's daughter were also sentenced to one year rigorous imprisonment for taking part in it. Another sister was also acquitted. Katedar's wife was pregnant and was not well so she was set free.
 14. Sjt. Mirabhatta Ramabhatta Kulibid was another no-tax payer in Siddapur and convicted to six months rigorous imprisonment. His brother's wife Ganapamma took part in Mavinagundi fasting satyagraha and convicted for 10 days. She was beaten up very severely. His crops had been attached and a loss of Rs. 200 had been thus caused to him. The inmates of the house were driven out and his houses were locked on 23rd Dece.1932 by the Government. Both the houses were raided by the officials and taken possession by the Government.
 15. Mr. Veggappa Manjappa Hegde of Honegara was a patel of two villages. He resigned for his post. He also took active part in the movement of 1921. His gun licence was cancelled by the Government. He was arrested in Ankola when he attended the District Political Conference as a delegate and sentenced to six months rigorous imprisonment. His wife Devamma took part in the Mavinagundi fasting satyagraha. So she was sentenced in December 1932.
 16. Mr. Subbaraya Soorbhatta Gunjagad was not a tax payer in the taluk. He too refused to pay the revenue of Rs. 146. Hence his house was attached and a loss of Rs. 800 was sustained to him. His wife was beaten on the day of Mr. Matters tour. His elder brother Timmanna Bhatta was sentenced to six months imprisonment. His brother's wife Smt. Mahadevamma was a captain of satyagraha in the taluk. She served a term of four months rigorous imprisonment and actively worked in the same capacity after

- her release. His son Gajanan was also beaten by the police. Thus the entire family was involved in the congress and took active part in the no-tax campaign movement.
17. Mr. Subbaraya Venkappa Hegde had refused to pay the land revenue of Rs. 260. Hence his property was attached at Rs. 250. His brother's wife and his own son were sent to jail. His garden and paddy fields were auctioned by the officials.
 18. Mr. Vamana Dasappa Madgaonkar Bilagi had also refused to pay the land revenue of Rs. 387. His younger brother Hari Rama Krishna Rajavaidya was convicted in Feb. for one year rigorous imprisonment. His brother's son Mahadeva Vithal Madagaonkar was arrested on "Independence Day" and sentenced to six months rigorous imprisonment and Rs. 150 fine or 1.5 months default. After his release he worked actively for the Congress. His son Gopal was also sentenced to one year rigorous imprisonment and Rs. 100 fine or three months default. His son Shrinivasa was also beaten in connection with flag salutation by the police and arrested. He was sentenced to four months rigorous imprisonment and Rs.25 fine or one month default. After his release from jail he actively engaged in the no-tax movement.
 19. The Kathedar was himself an old man of seventy years was sentenced to nine months rigorous imprisonment. Then he was released on the ground of parole notice. His son was an important office bearer of the no-tax campaign in Siddapur taluk. Smt. Laxmibhai Madgaonkar, Smt. Manjula Bai Rajawaidya and Smt. Ramabai Madagaonkar were arrested and let off in March for taking part in the flag salutation, protesting against the removal of the flag staff and taking part in the Ramanavami procession in Ankola. On 22nd May, 1932 Smt. Laxmi Madagoankar offered fasting satyagraha all along at Akkkunji. Smt. Sitabai Madgoankar with a child of four months and Smt. Laxmi Madgoankar offered satyagraha at the Murughamatta and at the house of Sjt. Ganeshappa Lakkappa. The latter was arrested to four months where as the former was sentenced for a day. Smt. Sitabai Madgaonkar was a Chairman of the reception committee of Siddapur taluk Political Conference. On 9th Sept. 1932 she was convicted to six months rigorous imprisonment. The Kathedars land worth of Rs. 5000 was sold in auction for Rs. 300. There were several attachments of his property.
 20. Timmanna Bhatta Kallal was sentenced to six months rigorous imprisonment. His son Mahabaleshwara Bhatt Kallal was beaten along with Sjt. Bulusa Subramanya of Andhra at Cacinada where he was conducting a training camp of the Seva Dal. He too was arrested and convicted to two years rigorous imprisonment. His daughter took part in the fasting satyagraha at Akkunji. His son-in-law was convicted for six months rigorous imprisonment. After his release again he started to work with the Congress. Timmanna Bhatta's wife Laksmibhai and daughter-in-law Kaveramma also participated in the fast satyagraha at Hechche, Siralagi, Akkunji and Mavinagundi. Smt. Lakshamma fasted for 21 days in the Mavinagundi Satyagraha. She was then sentenced to imprisonment for one day. She was the Chairman of the Reception Committee of the Siddapur taluk ladies conference held on 24th October, 1932. She was very badly beaten while she took part in a procession in connection with the conference.
 21. Smt. Kaveramma was severally beaten along with Gouramma on 16th and 17th April 1932. She was sentenced to six months rigorous imprisonment in connection with the Mavinagundi satyagraha. She was then released and continued her work in the Congress.
 22. Mukteswara Ramachandra Venkataramana Hegde Siralagi was sentenced to six months rigorous imprisonment. His son Shamayya was sentenced to one year rigorous imprisonment. His daughter Gangamma was also sentenced to four months. After her release from the jail once again she continued her work with the congress movement. His wife Kamamma was beaten for taking part in prabhata pheries. His land was sold in auction.

23. Ganapati Timma Bhatta Belguli was not a tax payer. But if he was active member of the Congress. He also refused to pay the land revenue of Rs. 340. So his land was sold in auction for Rs. 188 which was worth of Rs. 8300/-. He burnt the crop of his field with

the consent of the tenants. Both Ganapati Bhatta and his brother Ramachandra Bhatta were sentenced to six months rigorous imprisonment each. One lady and a child were left behind at home.

A BIOGRAPHICAL HISTORY OF A FREEDOM FIGHTER – V. M. OBAIDULLAH

P. Basith Assarani & M. Muthu Santhana Kumar

V.M. Obaidullah, a dynamic personality among the Muslim Freedom Fighters of Tamil Nadu. As a secular Nationalist, he participated in almost all the movements in freedom struggle from 1919 to till the achievement of Independence in 1947. His services to the nation are inalienable in the history of the Indian National Movement. From his childhood onwards, he was inspired by the ideas of freedom from the various national leaders and freedom fighters of our nation. He participated almost all freedom movement in Tamil Nadu with Kamaraj. He followed Gandhi's ideology of non-violence during his participation in the Indian National movement. When he was young, he interacted with the freedom fighters of Vellore, who frequently visited his father's betel-nut shop freeing India from the British yoke. He was one among the prominent leaders of Tamil Nadu along with Kamaraj, who influenced the public masses during Indian National Movement. A leading personality among the Muslim freedom fighters in the North Arcot District, V.M. Obaidullah of Vellore sacrificed everything for the cause of Indian Nationalism¹. The purpose of this paper is to highlight the selfless services of V.M. Obaidullah to Indian independence.

V.M. Obaidullah was born at Vellore on 2nd May 1905. His father Madhar Batcha Sahib migrated from Vaniyambadi. At a very young age, he was inspired by the great Indian National

Leaders like Mahatma Gandhi, Moulana Mohammed Ali, Soukath Ali, Abul Kalam Azath, Dr. Ansari, Nehru etc., who fought against the British rule in India. At the age of 15, in the year 1920 onwards he was involved with Kodai Idi Kuppasamy (thunderstorm of summer) in organising meetings, processions, rally etc., and both of them were called by the general public as "Twins of Vellore". The statistical and explanatory notes about the British atrocities on Indians, attracted the masses of the North Arcot district to march against the British rule in this region. His satire and sportive speech in the public meetings made the audience keep thinking about their servitude under British rule, which hooked and pulled the peoples of this region to participate in our freedom struggle. Santimay Ray states that in his book entitled "*Freedom Movement and Indian Muslims*", Peoples Publishing House (P) Ltd, New Delhi, 1979, p.p 53-54, as "*V.M.Obaidullah of Vellore was another great fighter who suffered years of imprisonment during national struggle since 1930*".

The Swadeshi movement started as an economic strategy aimed at removing the British Empire from power and improving economic conditions of Indians. Strong protests and slogans against British were raised everywhere supporting this movement. Protest meetings were organised by V.M. Obaidullah of Vellore

which aroused the anti-British feelings among the peoples of Tamilnadu and intensified their nationalist sentiments.² Tilak and Annie Besant started the Home Rule movement in 1916. Home Rule Movement became so popular. V.M. Obaidullah was spreading the message of Home Rule in many rural areas of Vellore district³.

He joined Khilafat Movement in 1920 and actively took part in it. The Khilafat committee decided to observe 19 March 1920 as a Second Khilafat Day. In Madras a public meeting was arranged in the Marina Beach opposite to the Presidency College at Madras. Muslim leaders from Vellore district, Abdul Hakkeem and V.M. Obaidullah spoke in the meeting. The observance in Madras was marked by a mass meeting of approximately 20,000 Muslims and Hindus⁴. Abdul Hakeem, Moulana Sherfuddin, V.M.Obaidullah and Abdul Rahman Beig of Vellore and Subramania Sastri of Ami were the important and active members in Khilafat movement of the Vellore District⁵. He toured every village in north Arcot district and provoked the masses to protest against the British rule. He started a Gandhi Sangam at Vellore and organised meetings, processions and spread the national spirit among the youths of North Arcot district.

Flag Satyagraha was a peaceful civil disobedience campaign during Indian independence movement. In connection with the Nagpur flag fight, public meetings were organised in Tamilnadu under the leadership of the various leaders, Volunteers from Madras took part in Nagpur Flag Satyagraha. In 1923, V.M. Obaidullah participated in the flag agitation. He was arrested and convicted for one-year imprisonment by the British government. He spent some months in Nagapuri jail for the above cause and again shifted to Amaravati jail for rigorous imprisonment⁶.

In 1928, Anti-Simon demonstration began immediately after the arrival of Simon Commission in Bombay. Similar protests were organised in the then North Arcot district also. The police had detained the masses of the protestation and ordered to disperse immediately to save their lives from their bullets. V.M. Obaidullah immediately tore off his shirt and bravely shown his chest straight to the gunpoint to shoot him⁷. This shows that he was ready to sacrifice his life for the cause of India's freedom.

The Civil Disobedience Movement took momentum in North Arcot District. V.M. Obaidullah Sahib of Vellore travelled the districts of Tamilnadu and appealed to the masses to join the Civil Disobedience Movement and strengthened the cause of nationalism.⁸ All Congress leaders actively participated in the salt satyagraha announced by Gandhi in the year 1930. Prominent leaders like T. Prakasham, Durgabai etc., were led the agitation in Chennai province. V.M. Obaidullah actively participated in the processions of 100 volunteers with Kodai Idi Kuppusamy Mudaliyar and Shanmughanandha Adigal. The procession went on walk to Chennai and was supported and encouraged by the public masses in every village on the way. In every village the peoples encouraged the procession with tea, snacks and food. A lot of volunteers voluntarily joined in this procession. V.M. Obaidullah participated the salt satyagraha at Chennai with all these volunteers. The British government convicted him with eighteen months' imprisonment at Alipuram jail, near Bellary for this action along with Kamaraj⁹. Since then they became close associates with each other both personal and political life till the death of V.M. Obaidullah in 1958¹⁰.

Due to the detention of Gandhiji on 23rd January 1932 by the British Government, the Civil Disobedience protest was held all over India. The protest was held in a peaceful manner in the way of Gandhiji's non-violence policy. However, the volunteers of the protest were brutally attacked by the police. It was severely condemned by all circles. V.M. Obaidullah was also one of the worst victims of this incident and also convicted with one-year imprisonment by the British Indian court¹¹. He was released from imprisonment and invited to speak at several villages and towns in Tamilnadu. He accepted the invitation and went to several villages and motivated the public through his inspiring speech.

During Indian National movement, most of the drama artists in Tamilnadu wore only Khadi dresses and portrayed the dramas with the theme of freedom struggle. S.S Viswanatha Dass was one among them sung a Nationalist song in all his dramatic play. His famous song "kokku parukkudhadi pappa" was familiar among the public masses of Tamilnadu. V.M. Obaidullah bravely invited him to hoist the tri-coloured

National flag in Vellore Municipal office during British rule and was praised by all, for this brave act.

Jinnah deplored the resolution of the Congress to start Quit India Movement and wanted the Muslims to keep away from the mass Civil Disobedience Movement. However, the Muslims in the Presidency did not go with Jinnah. Though the issue of Pakistan was rousing their tender feelings they weighed more with Gandhiji and a sizeable population extended support to the Quit India Movement. V. M. Obaidullah of Vellore was vehemently critical of the creation of Pakistan¹². The Muslim leaders at the national level convened an anti-separation conference at Kumbakonam in June 1941 and passed a resolution against the partition of India. They also condemned the stand of Rajaji's support of Pakistan. Obaidullah was one among them¹³.

In 1942 the resolution on the Quit India Movement was passed, the National Congress wanted the immediate end of the British rule in India. Thousands of freedom fighters were arrested all over India during the Quit India Movement in August 1942. V.M. Obaidullah was also searched by the police for arrest but he managed to escape and mobilized the people from various villages to participate in the August revolution. Kamaraj appointed V.M. Obaidullah as in charge of August Revolution before his arrest. The struggle took place on a large scale in Vellore and V.M. Obaidullah was arrested after Kamaraj under the Defence of India Rules and spent 26 months' imprisonment in Coimbatore, Vellore, Thiruchirappalli, Cuddalore and Thanjavur jails¹⁴.

He served as a Municipal Councillor of Vellore for over 20 years, Vice President North Arcot District Board for four years, Vice President of T.N.C.C for seven years, President Tamilnadu Congress Committee during 1940-41, Tamilnadu Congress Executive for over 17 years, Member in A.I.C.C for ten years, Member of the Standing Committee for the Ministry of Transport (other than Roads) from 1950-1951¹⁵, Member of Provincial Parliament during 1951-52, Member of the Council of States, Madras Presidency¹⁶ from 3rd April, 1952 to 2nd April, 1956¹⁷ and the Member of the Rajya Sabha¹⁸ from 3rd April, 1956 to 21st February, 1958, re-

lected to the Rajya Sabha and continued till the time of his death¹⁹.

The Sri Jalakandeeswarar Temple, Vellore Fort

The Sri Jalakandeeswarar Temple inside the historic fort in Vellore fort had stopped worship for nearly four centuries and the main deity 'Linga' was shifted to the Jalakanda Vinayakar Temple in Sathuvacheri. The Vellore Fort was handed over to the ASI for maintenance in the year 1921 and the status quo of the temple continued after independence. V.M. Obaidullah of Vellore raised this issue in the 15th session of Rajya Sabha on 18th December, 1956²⁰ during question hours and insisted to open the temple for the public to perform puja. The other Members P.S.Rajagopal Naidu, T.V.Kamalaswamy, S.N.Mazumdar, B.B. Sharma and Dawood Ali Mirza argued and supported the cause of V.M. Obaidullah, while the then Deputy Minister for Education Dr. Mono Mohan-Das quoting other reasons to justify the status quo of non-opening the Jalakandeeswarar Temple to perform puja. The worship was revived in the temple on March 16, 1981 and the first Kumbabhishekam of the temple was performed in 1982 after a prolonged struggle of two and half decades. He raised the issue of supply of irrigation water from Mysore to Madras through Palar River in the 15th session of Rajya Sabha on 20th December, 1956 during question hours²¹. He insisted the government to provide Financial Assistance to CMC, Vellore²² and the Opening of Gandhi Maidan, open ground around the Vellore fort for public meetings²³ was banned during freedom struggle, and for the remodelling of Virudhunagar railway station²⁴.

He passed away on 21st February 1958²⁵, at the age of 53. He was a sitting member of the Rajya Sabha when he passed away²⁶. After his death when the Tamil Nadu Government requested his wife Mrs. Zaibunisa Begum to accept some free land, she refused and declared that the service of her husband was invaluable and beyond any reward or award²⁷. The main Bus Stand in Vellore named after V.M. Obaidullah Bus Stand to honour him for his yeoman services to Indian Nation.

He strove for the Indian nation and for the peoples of India till his last breath. His dedication for the cause of Nation in various stages are noteworthy and should be memorable in the

history of Tamilnadu, but a meagre information's only recorded in the history of Indian freedom movement about him. So, the young scholars of history should concentrate, to record the

unrecorded contribution of the regional leaders and dig out the real facts about our freedom struggle in this current scenario.

THE ADMINISTRATION OF JUSTICE UNDER THE VIJAYANAGAR EMPIRE

S. Brindha

Introduction

The Vijayanagar Empire founded in 1336 flourished in South India up to 1565, till its decline in the battle of Talikotta. To recover Tamilnadu from the cruel yoke of Muslims, the Vijayanagar Empire was founded. It was founded on the advice of the Hindu Saint Vidyaranya on the banks of the river Thungabhatra very near to Chirunkeri Madam in 1336. Thus prevailed close contacts between Vijayanagar Empire and Hindu religion.

Harihara was the first great ruler of the Sangama dynasty. He ruled only a portion of Telugu and Kannada territories. The Vijayanagar was expanded during his reign. He annexed certain portion of Hoysala and Kadamba kingdoms with his empire. Then the Vijayanagar army invaded Tamilnadu. The aim of the invasion was to protect the people from his autocratic rule. To visualize his aims, he sent his brother Bukka I to Tamilnadu with an army.

Kumarakampana was the son and successor of Bukka I. His wife was Gangadevi. To know the historical Southern expedition of

Kumarakampana, literatures and inscriptions served as evidences. Further the inscriptions found at Tondaimandalam also gave valuable information about the Southern expedition of Kumarakampana. The historically important Vijayanagar Empire was ruled by the rulers of Sangama, Saluva, Thuluva and Aravidu dynasties. Among them, the rulers of Sangama and Thuluva dynasties were prominent.

Judicial system of Vijayanagar Empire

The Vijayanagar Empire founded during the first quarter of the fourteenth century, established its sway in Tamilnadu for nearly two hundred and fifty years. They introduced various administrative changes in Tamilnadu, during their reign. The Nayankara and Ayyangar system introduced during this period paved the way for the decline of the Sabhas, the traditional administrative bodies in the villages.

Vijayanagar rulers gave due importance to provincial administration. The administration which existed in the provinces was called as 'Nayankara System'. According to the system all the lands were owned by the ruler. He distributed the lands to his generals. They functioned under his control and acted as feudal lords. Vijayanagar kingdom slowly established their power in Tamilnadu. They established very good administration and judicial system.

Vijayanagar Kingdom has contributed lot to the judicial system. The king was the fountain head and followed by others in a hierarchal form¹. We come to know from the literary source that in ancient India the law was based on the principles of Hindu religious and a common ethics was found in the society. Thus the king had only to enforce the law. The Vedas are the main source of law. The Dharmasastra, which were based on the Vedas are mere codification of the customary law of the land. It is believed that the Hindu law was not made by man but it was the gift of God and man could either alter or change them².

The judicial system of Vijayanagar could be formulated by a study of the Vyavaharkanda of the Parasara Madhaviya, a legal treatise by Vidyananya, who is believed to have written it to provide the new empire with a fresh code of law.³

The Nayaks were the final authority on justice in the provincial system. The power was

distributed to sabha, ur, nadu and areas which played a supporting role in establishing justice. The local chieftain was called Arasu who had the power to investigate the cases within their own jurisdiction. Very elaborate ceremonial practices were followed in the court. The oral orders were noted down by the in traditional manner. The king was always dressed in white and wore a cap the model of Galician helmet, and was bare footed.

Judicial administration

The king was the supreme judge, but at times the disputes were settled by the state officials with the co-operation of the local bodies.⁴

The Imperial court or Provincial court

The emperor had made arrangements for the efficient administration of justice by constituting a series of courts in all the provinces. The provincial courts were presided over by the Mahamandaleswara, the supreme magistrate. Permanent courts were also established at convenient Centre to transact judicial business in their jurisdiction. Temple, Sabha, Nadu and Ur had their own courts.⁵

Judgment was given to the needy and those who done the crimes, punishments were severe and included mutilation, trampling, impaling and being thrown to the elephants.⁶ 'The people were so subject to the king that if you told a man that the king asked him to stand still in a street, holding a stone on his back all day till you released him, he would do it'. Courtesans played a prominent role in the life of the palace and city and were under constant state supervision. They contributed substantial sums to its revenue.

The imperial court was located at the capital and if had jurisdiction over civil and criminal cases. It consisted of the judge (emperor) and his two or more sabhyas. The Assessors constituted Bench. In addition, there was Lekhaka or the Bench clerk who had to take down the oral statements made in the courts by the parties and witnesses. Similar system prevails even today.

Customs and usages played on vital role in deciding communal disputes. This same way marriage related cases has been solved by the

existing courts. Many of the cases deciding by the people's own customs, and also acts regulated by the governments.⁷

The Ayagars functioned as Magistrate at times when the village assembly was not functioning properly. This shows that the Ayagars enjoyed a few judicial powers. Petty cases were most solved by the local peoples themselves, very rarely it was taken to the notice of the government. Only when they were not satisfied with the justice they approached the provincial or the imperial court.

The court decided the cases on its merits and pronounced judgment called Jayapatram. The punishments inflicted upon the criminal cannot be described to be mild. The provincial court tried cases not only at the first instance but heard appeals also. The emperor Krishnadevaraya, insisted that three appeals ought to be permitted for the criminal. This can be compared with the present judicial procedure where appeals are allowed according to the nature of the cases. From the lower court to the higher court.⁸

The central government did not maintain an elaborate judicial establishment. Justice was mostly administered locally by the village officers. Arbitration was largely in vogue. Even questions like seniority among brothers, which entitled such consequences as succession to property, etc., were settled by Arbitrators. Questions of a general nature, involving social and religious rights were heard by the king and his officials.⁹

Village courts and Caste guild organization

Village courts and caste guild organization tried minor offences and violation of caste and trade rules. Temple trustees were permitted to try petty criminal offences but their jurisdiction appears to have been confined to the servants of the temple and in such cases, the court of law was the known as Sabha.¹⁰ Such cases were not referred to the courts of the crown. In deciding doubtful legal points, the Smriti of Yajnavalkya and Madhava's great commentary on Parasara's code were made use of severe punishment was inflicted on guilty persons. These penalties were chiefly of four kinds – fines, confiscation of property, ordeals and death.¹¹

Generally cases were enquired in the halls of the village temples and sometimes judiciary met under the huge margosa tree or near the temple of the village for administering justice.¹²

Caste elders also had their own courts in their respective areas. They settled their disputes among their caste as well as the village cases related to worship, break of contract and violation of customary law. To decide the matter they met their Guru and Trade or business or contract related cases solving through arbitration system.¹³ It was already followed by the Vijayanagar Empire. Justice was administered by the Sabha. Amuktamalyata explains that the sabha was attended by the ambassadors from the foreign kingdoms also.¹⁴ If anybody disobeys the village sabha, he should be ex-communicated from the village.¹⁵

Immadi Narasimha's elder brother was murdered by Timarasa. He was punished to death. Ur and Nadu were led by 'Uravar' and 'Nattavar'.¹⁶

Criminal cases

The punishments were severe. Ordeals were common. These ordeals were aimed at reducing the crimes. The territorial head was given the administrative and judicial authority. He had to collect taxes and the defaulters were brought to the public court where they were given appropriate punishment.

The epigraphs of the reign refer to certain laws like law of reason and the laws of limitation. Treason was considered as heinous crime. One who perpetrated it was punished with immediate execution.¹⁷

The criminal laws were severe and harsh at times it was barbarous as per modern standards. Crimes like theft adultery and treason was given death sentence. Hanging sentences was given to the crimes like murder and outrages on women and virgins and impalement for traitors¹⁸. Sometimes the criminals were "cast down before the feet of an elephant that they may be killed by its knees, trunk and tusks". Official oppression in the sphere of justice was not absent but the state occasionally granted remedies against it, and it was also "sometimes successfully checked by the united opposition of corporate bodies".

Whatever theft is committed, however little it be, they forthwith cut off a foot and a hand, and if his theft be a great one, he is hanged with a hook under his chin, "Nobles who became traitors are sent to be impaled alive on a wooden stake thrust through the belly". In trial human evidence was made use of. Trial by ordeals was also made use of when human evidence failed.

The police system functioned together with the judicial system functioned fairly efficient. It was expected that the police officer must properly detect the theft or recover the property which was lost. They performed the duties of the modern CBI (Central Bureau of Intelligence) and kept the emperor informed of the wrong doings of the subordinates all over the empire as well as of the designs and involvements of the neighboring rulers.

Palayagars were allowed to maintain a considerable body of retainers to put an end to troubles from the jungle tribes. For this purpose, they were assigned Jagirs. In towns, the streets were patrolled regularly at nights. There was regular system of espionage. This is similar to the practice followed in the modern days.

The first mahamandaleswara, Kumara Kampana administered justice efficiently.¹⁹ Mahapradhani was chief judge. Mahapradhani mallarasar is mentioned the inscriptions.²⁰ He was empowered to settle the caste dispute.²¹ Krishnadevaraya's ablest minister Saluva Timma was designated as Dharmapradhi Palagar which denotes his power of administering justice.²²

Civil cases

Most of the civil cases were settled by people themselves through the local courts without any reference to the government. If satisfactory solutions were not offered the people appealed to the provincial court of the Governor and even to the imperial court of the emperor.

The office of Avasaram received information and complaints from the people and forwarded them to the authority. Rayasam was a clerk, through whom the court order was sent to local assemblies.²³ There was no report in any inscription about maladministration or mismanagement.²⁴

The members of Mahasabha were called Mahajanas and their main function was the

judicial work. These sabha took care of the civil courts of the empire.²⁵ Uravars were kept informed by mahamandaleswara of all the land transactions within the jurisdiction of their Ur.²⁶ The disputants stated their own cases and their emotion of certitude, with which they presented their plea had its effect on the minds of the judges as there was no advocates.²⁷

Nicolo Conti of Italy attests that trial by ordeals was in vogue in the Vijayanagar Empire. There was a boiling pan, with ghee, before the deity. The defendant put two of his fingers into the ghee. The fingers were tied with a cloth and were sealed. The third day it was opened and if there is no wound, he was acquitted. If a wound was noticed, he was adjudged a criminal and punished.²⁸

Talayari was held responsible for and theft that occurred in the village and it was the duties of Ganakas calculate the amount of money involved in the cases.²⁴ Court Bailiff should produce before the court the parties and witness concerned. He had to preserve the order in the court and execute its decrees.²⁵

When plaintiff appeared in a court to lodge a complaint, he had to file a document called 'Pratijna' which he had to describe his side the case.

Then the person against whom the complaint was lodged would be called upon to answer the charge. In civil cases, a period of time was granted to the defendant, if required to file his answer or 'Uttaram', but a person accused of some crime, should be ready with his Uttaram, on the day he was summoned to the court. No concession regarding time was given. To support his case he can produce both human evidence or documented evidences.

Nuniz narrates the manner in which some of the aggrieved parties brought their complaints before the emperor. The plaintiff would demonstrate how great his suffering was, by lying flat on his face on the ground till they ask him what he wanted. The divine evidence was invoked by ordeals and when the examination of the witnesses was completed. The place where the judge sat in the court while settling disputes, was known as the 'Dharmasana'.

Conclusion

According to the principles of Hindu political Dharma, the king or Emperor of Vijayanagar kingdom had to regulate Dharma, as laid down by the Dharmasastras. It was in fact one of the pillar on which the whole structure of administration rested. Thus a very good and efficient judicial system has been in practice during the Vijayanagar Empire. The king who

was regarded as the incarnation of God, he was supposed to be impartial and justice must be given on the basis of the Hindu Dharma, were it was essential to follow a code of ethics. The system of judicial administrators of Vijayanagar Empire can be compared with the present day civil and criminal code. This shows the richness of their judicial system.

ORIGIN OF THE KOCHES AND DRAVIDIAN THEORIES

Chandan Barman

Origin of the Koches and Dravidian theories

Present North Bengal, Assam, Meghalaya and Northern part of Bangladesh was the home land of the Koch community. Koches are the aboriginal people of the Kamata-kuchbehar region. Koches are the ancient tribes of the Kamata-kuchbehar kingdom. There are different theories about the origin of Koches. One of the most important theories is known as the Dravidian original theory. Now, the question arises when and how the Dravidians are entered to these regions or what is the relation between the Koches and Dravidians. In this research

paper attempt has been made to the study origin of the Koches and Dravidian theory.

Among the theories about the origin of the Koches are the following–

- (1) Mongoloid theory,
- (2) Australoid race theory,
- (3) Aryan and Dravidian origin.

Theory of these doctrines has not been analysis much in the historical context. The present research paper is mainly aimed to discuss the Dravidian theory of the Koches. At present Brahmaputra valley, Kuchbehar,

Jalpaiguri, Alipurduar, Rangpur, Dinajpur and Rajshahi areas of Bangladesh are located in the Koches. Not only that, the Koches homeland is the vast areas of Meghalaya and Assam. In analyzing the origin of the Koches, different types of Koches have been found. For example, it can be said that about Pani Koches and Poliya Koches, etc. Presently, known as Koches are familiar 'Radiances'. Naturally, these Koches renounced their little and became part of the Hindu community in the later eighteenth century and early in the ninth century. Not only that, these Koches ruled for a long time as the ruler of the Kamata- Kuchbehar state. The Koches were known as Kshatriya. H.H. Risley said that "there was no historical foundation of the claim of the Radiances to a provincial variety of the Kshatriya." ¹

From the literary sources we can find that among the oldest towns in the northern part of Bengal, the most notable *janapadas* were Pundrabardhana, Goura and Kamata states, etc.² The Pundrabardhana region was later dominated by the Kamrupa kings. Notable among the people who lived in this geographical location were the Pundrabardhana, Kirat, Kambaja people. From the *Aiterya Brahmins*³ it is known that the Pundra were non-Aryan peoples. On the other hand Kirat and Kambaja population were non-Aryans. Analyzing from the historical point of view⁴, it is possible that these Kambaja were later known as Koches. Suniti Kumar Chatterjee⁵ and others have been supported this view.

On the basis of the ethnological background 'Koches are brown skin or black skin color, thick nose and lips, fleshy cheeks, whiteface and stoned limbs, black hair, normal body-medium to high stature and both medium long and medium round shaped head.⁶ Reviewing the above mentioned characteristics can be noticed like Koches as Radiances. Koches are semi-Hindu indigenous peoples. Not only is that, the Koches, Rajbanshis and Khans of North Bengal and North-eastern India considered as single origin from a particular clan. There is no difference between them. According to scholars view, the Koches are Mongoloid. N.N. Acharya said that, Koches are come from Siberia.⁷ In view of Suniti Kumar Chatterjee⁸, Koches are from Mongolia. Gait said that Koches are "A mixed breed with the Mongoloid physiognomy."⁹

According to Dalton, the Koches are included of the Dravidian community.¹⁰ On the other hand, H.H. Risley said that, the Koch-Rajbanshi is same people called in different names and they all are of large Dravidian tribes.¹¹

One of the historical land marks in the Dravidian group of linguistic the Koches are specific social group of peoples from Dravidian origin.¹² From the point of view, the Dravidian language group has an unprecedented resemblance to the Languages of the Dravidian language group such as Tamil, Telegu, Malayalam and Kanada. Now the question is how the Koches are ancestor with South Indian language group. It is interesting to note that during the Chola invasion to the Bengal, a patron went to trade in North eastern India. The Chola king Rajendra Chola assumed the title of 'Gangaikonda' after the conquest of Bengal. It is assumed that some of the Cholas crossed the Ganga River into the ancient Kamata kingdom. As a result of the association with them, the words of many Dravidian languages were included in the language of the Koches. It is important to mention that the language of the Koches is known as Kamatapuri language. Under the leadership of the Koch rulers of the Kamata region in the early medieval age and medieval age, Kamatapuri¹³ language and literature became known as the rich language of the region. The Culture of the Kamata region is known as Kamatapuri Culture. As a matter of fact on search an admixture, the Cultural, a linguistic development took a new shape and we get this present language and culture. This languages date from the Charyyapada of between 8th to 12th century was the administrative and educational medium in the region of Kamatapuri kings from the 13th century down to the 19th century.¹⁴

The similarities between the Kamata language and the Dravidian language group:

In Tamil, mother was called as aya, aya, aya and in Koch language mother was called Aai. Arai in Tamil and Arai in Kamatapuri language literally mean half or two and half of one. Oti in Malayalam and otti in Koch word; Odi or Otti meaning the same, Which means 'plot of land, range of rice field border, etc. Not only that, the word Atai and the Arai or Ati of the Tamil word have the same meaning. In English, this is called shut or fester. Tamil word punal, Kamata

word pani literally means water. Not only is that, so many Tamil words and Kamata words used by Koches which have the same meaning and words are pronounced in the same pronunciation. As word Oi in Tamil, the literal meaning of the word Kamata is Gol, this are same means sound. The Tamil word Ottai is called in Koch Kamata language Otai, which means one. Tamil word Atanam Kamata word Atla literally means excess. The Tamil word Attam is known on the Kamatapuri language mirror. The word Kurukh means Gundgi in the Kamatapuri language meaning to sprout out. From the above discussion it can be said that the Koches once settled in this region from the Dravidian region. It is important to mention, however that these words were spoken by the people of the agricultural society of Koches. In most cases the above words vowel sound are closely related to phones mass. One of the reasons for this was that the Dravidians were well versed in farming and these languages were taken by the Koches.

The word Koch comes from Kuch + A-hba. This word is probably found in early Sanskrit literature. In the Jain Bhagwati sutras the reference is mentioned in the states of the Anga, Magadha, etc. The Koches were native people of the state. It is doubtful whether these Koches are from Northern part of Bengal. However, the Koches of North Bengal probably may be a part of the Kambaja.¹⁵ In *Yagintantra*, Koches have been called Kuvacha. In *Kalikapurana*, the Koches have been mentioned as Kacha and this Koches live in the country. There is no end to the debate about the origin of Koches. Another important aspect of the Dravidian region of the Koches is that Dravidian etiquette and clothing are quite similar to the Koches dress and eating. Sailen Debnath commented on the similarity of the costumes that 'the dress of Koch men consist of a long piece of white cloth tide round the waist and another piece around the shoulder and Brest and that nearly correspond with the South Indian men dress.'¹⁶

There are two types of female dresses available in this region. These are known as 'Rihe' and 'Mekhala'. Francis Buchanan says that, 'the female dress of the Koches was the same with female dress in Abha'¹⁷ and the shepherd tribe in Mysore.¹⁸ In view of this discussion, it can be said that the Origin of the Koches is

Dravidian. Not only that, the Koches came from Deccan, another great proof of this— the ornaments the Koch women is match with the ornaments of women in South India. The clothing matches, the Koches were originally a Dravidian stock.¹⁹ Kamata was mainly associated with the trade and commerce in the Kamata-Kuchbehar region, mainly Koch and Kamata. Not only that, A.K. Coomaraswamy mentioned that 'Early Maritime trade and fishing were exclusively carried on by the Dravidians. He also says that 'Bamboo-craftsmanship and the building of house-shoe-are roofs were the production of the early Dravidians artistic genius'²⁰ Kamata- Kuchbehar is the Indigenous home of the Koches. The Koch country is a reverie and a lot of bamboo also grown here and these Koches are deeply involved in bamboo-craftsmanship. Therefore many anthropologists support the Dravidian Theory of the origin of Koches.

In the religious field, the great resemblance to the Dravidians of South India is noticed with the Koches. The Dravidian region was dominated by the Shaiva country. The present North Bengal or ancient Kamata kingdom area was a land of the Aryans and God of the people in this region. Shaiva is known by various names in Kamata region or North Bengal— such as Gharbandhyadeo, Mashan, Shaiva, Buradeo, Mahakal etc. Lord Siva worshiped as the God Mashan. Mashan is probably another variant of Shaiva. Buradeothakur is worshiped as Shaiva in the village area of Kamata Kuchbehar region. Malakal Shaiva temple is famous in Jayanti region of Kamata Kuchbehar. Not only that, the Koches also worshiped Yaksha and Yakshini as a God.

Although, H.H. Risley the inventor of the Dravidian theory of Koches, Dalton also called Koches are Dravidian.²¹ Not only that, the Oldham is a proponent of Dravidian theory. But most historians such as Waddel, Hodgen, Gait, S.K. Chatterjee, think that the Koches belong to the Mongoloid race.²² It is to be noted that the Koches and Rajbanshis are the Mongoloid in origin. Later period, these Koch tribes converted to Rajbanshis. The Koches and Rajbanshis are not separated to each other. This tribal people are also known as Kshatriya. The Koches are the Kshatriya became the ruled this vast region. More than five hundred years. In this connection

Koches are the royal, so they are also Kshatriya in the sense of ruler. Probably the Koches are mixed in origin.

In conclusion we can say that colour of the Koches are black and dark that is why it may be said that the Koches are the Dravidians. But it is indeed to that the Koches are the Mongoloid in

origin. It is to be noted the origin of the Koches and the theory of Dravidian play and important landmark in the origin history of Koches. Binay considered that they belong to the Dravidian stock and probably a branch of the great Bhuiya family and the traditions of this Bhuiya family can be traced from present day North Bengal to Assam states.²³

LIBERATION OF THE PORTUGUESE TERRITORIES IN INDIA (1947 – 1961): A HISTORICAL PERSPECTIVE.

B. Deena Dayalan & Rev. Dr. Fr. Sebastian Mathai

Introduction:

After a prolonged struggle, India gained its independence from the British on the midnight of 15 August 1947 CE.¹ This new epoch raised the question of the state of Portuguese and French settlements in India. It was hoped that both the French and the Portuguese would quietly pack up, shake hands and smilingly wish us good luck in our future national career. However, nothing of that sort happened and both didn't budge an inch, claiming that their Indian possessions were part and parcel of Metropolitan France, that they were the cherished spots of French culture and Metropolitan Portugal and were the sacred spots

where Christianity and Western Civilization had been so assiduously nurtured for more than four hundred years and that it didn't matter much if they were separated from the mother countries only by some stretch of water. Nevertheless, after a prolonged struggle for liberation, the French realized that their hold on Indian possessions would be no more fruitful and when the assurance was given by the then Prime Minister Jawaharlal Nehru that their culture in all their possessions would be faithfully respected, they in a gentlemanly way asked Indian representatives to take possession of Yenam and on the verdict of a referendum for merger with the mother country, they surrendered the de facto possession of Pondicherry to the Government of

India in October 1954 CE, so only the *de jure* possession remained, which was surrendered too in 1956 CE by mutual agreement. However, the strong-headed government of Portugal gave India a rude slap on the face by obstinately clinging to Goa and the pinpoints of Diu, Daman, Dadra, and Nagar Haveli; its Prime Minister—the Dictator Salazar had promised to hold on to Portuguese possessions in India and declared that no one can snatch them.² However, Prime Minister Jawaharlal Nehru insisted that Goa, along with a few other minor Portuguese holdings, be turned over to India. In this regard, he addressed the assembly, “So far as independent India is concerned, we are in no way bound by any old or modern treaty between other countries in which we have not subscribed so that in no event we are concerned with the treaty between Portugal and England or other countries.... I submit that in the existing conditions, I play my case quite clearly. The Portuguese relation of Goa is a continuing interference with the political system established in India today. I shall go a step further and say that any interference by any other power would also be an interference with the political system of India today.... any interference by any foreign power in any way with India is a thing which India can't tolerate, and which, subject to her strength, she will oppose. This doctrine too applies to existing conditions to the Portuguese relations of Goa. Therefore, for a variety of reasons like national unity, national security, we can't possibly accept any interference or such foothold in India. It is the foothold of not that country, but a group of countries with a large number of alliances and therefore all kinds of possible dangers and entanglements might arise. Thus, from any point of view, there can be only one decision on this issue, that is “merger with the Indian union”.³ There was widespread public support in India as a result of the Portuguese attack on Indians. This led to the armed action, codenamed ‘Operation Vijay’, which in turn brought decisive victory for India within 36 hours and liberated Goa from the colonial rule of Portuguese on 19 December 1961.⁴

I

On the eve of Indian Independence, Portuguese colonial possessions in India consisted of Goa, Diu and Daman and its enclaves of Dadra and Nagar Haveli, with a total

area of 1,537 square miles. Administratively these territories constitute a province of Portugal consisting of three districts called Goa.⁵

Even today India is well known for its policy of non-violence globally. Mahatma Gandhi, the Father of India, became the role model for many in the world to achieve freedom and independence through non-violence. Thus, the policy of non-violence experimented with the British was carried further with that of the Portuguese. To add to this, India was a member of NAM. In short, India was bound by the practices which it followed for years and years to create a unique identity for itself internationally.

Thus India's policy of non-violence and the aggressive attitude of the Portuguese Prime Minister Salazar, raised a series of questions like:

- How and by what method would the Portuguese settlements be liberated?
- Through peaceful negotiations or violent methods?

In this regard, Mr. Narhar Vishnu Gadgil, a famous freedom fighter of Goa, wrote, “Obviously, there are three ways in which the problem can be solved: negotiation, military action or making Goa a completely independent state. So far as negotiations are concerned, I think the Prime Minister and the Government of India have offered enough opportunities from time to time. In fact, they have been charged by some critics that they have gone much too far, further than they should have, that in fact, they have departed from the self-respect of this country. To start negotiation with the Portuguese authority, the Prime Minister of Portugal says that there cannot be any negotiation unless you assure that the political sovereignty of Portugal will not be questioned. What is left for negotiation then, I do not know? So far as war is concerned, even the Portuguese Government admits, it is quite alive to the situation that a small country with limited resources cannot succeed. But so far as the third alternatives are concerned, the aspirations of the Goan people at one time, particularly in the early twenties, so far as I know, were that they wanted to be independent of Portugal, wanted to be a small state independent completely in all matters”. To supplement, Mr. Jawaharlal Nehru said that India had always stressed the method of peaceful negotiations and

would continue to do so. However, the situation in Goa and Portuguese repression had become intolerable. This was very clear from:

- A. The situation in Angola, where the Portuguese had murdered in cold blood about a lakh of simple defenseless people. No public reply seemed to have been made by them, though unofficially it is understood that they took the line that their overseas possessions formed part and parcel of the mother country and that consequently, no question of transfer or loosening its hold can arise.
- B. Apart from the political aspect, the economic aspect of the foreign pockets surrounded by the Indian hinterland is worthy of consideration. To both Pondicherry and Goa, flow goods of every kind, which continuously filter through into the Indian Territory without paying proper Indian duties. Reports would seem to indicate that these ports were largely used as smuggling centers for precious stones and bullion.⁶

Anti-colonialism was Mr. Nehru's oldest and deepest passion. If the right of a nation to eject colonialism from its soil is conceded, then its right to eject colonialism by force, when the peaceful method has failed, has to be considered. If 14 years of patient waiting and attempts of peaceful negotiation proved to be of no avail, what alternative other than force was left for India to get rid of Portuguese colonialism from its soil? India's critics in the west studiously avoided answering this pertinent question, apart from suggesting that India should have waited some more years for the problem to solve itself. The camouflage of renaming its colonies in Africa and India as "provinces" of Portugal, was an afterthought born as recently as in 1951 CE and while it deceived none, confirmed the belief that Dr. Salazar was determined to cling to his overseas possession by hook or crook. To Mr. Jawaharlal Nehru restoring and correcting India's image in the eyes of Afro-Asia was more important than entertaining the West's impression of it. If it was concluded that colonialism is immoral and outdated, then all those who believed that should honestly work for the obliteration of that evil from the world. India waited 14 long years for a peaceful solution

to the Goan problem in the hope that Dr. Salazar would see light and reason. Only when the hope of a peaceful solution had been blasted by Lisbon's attitude, India decided upon applying force towards the Portuguese colonial lesson from its soil.

Jawaharlal Nehru believed his policy towards anti-colonialism would help India understand which side the nations may lean thereafter and cautioned that India doesn't want any nation to intervene in the solution of the problem of Goa. In this regard, he said, "Goa has become a test for all nations. In the test, every nation is on trial because it must state clearly its stand on the questions of colonialism, or whatever you wish to call it. Goa can neither change the fate of India nor enrich Portugal. It is a symbol of the old colonial idea of one country ruling over another". He further said, "Goa is the oldest symbol of this colonial idea in India. It is an ugly pimple and if anybody says that we should continue to tolerate this pimple, then he has not understood our mind and heart nor of Asia. We do not want any nation to intervene in the solution of the problem of Goa. But we want every nation to search its head and heart to decide which side it would lean and what its advice would be in the matter of colonialism. This will show whether a nation has understood the new current and the new light in world affairs or whether it continues to be stuck in old grooves". Thus, we are now to watch and see towards which side the nation of the world lean in the matter of Goa and what advice they will give to Portugal. If the right kind of advice is given, then the problem of Goa will be solved peacefully. If wrong advice was given, then tension and conflict were bound to increase.⁷

Adriano Moreira in his speech quoted Nehru as 'Unfaithful disciple of Mahatma Gandhi, Father of India'.⁸ In an interview with *Diario Popular*, former Governor of Dio Captain Paiva Couceiro gave a brief comparison between Gandhi and Nehru. According to him, "Gandhi was a man of the highest moral principles, with close connections with Christian morality. Mr. Jawaharlal Nehru has always lived in the shadow of the Mahatma's prestige, who was a far more virtuous man and also much more intelligent. Gandhi knew the people of the Indian union and their structural weakness well but through the principle of non-violence, he made

his weakness into a source of strength. By his attack on Kashmir which in fact, and in law, belongs to Pakistan, Mr. Jawaharlal Nehru gave the first sign that he was not a pacifist. With his attack on Goa, he deliberately chose force as a means of fostering the Indian union's international policy. This gesture seems immoral and foolish to all those who, like myself, are familiar with the structural failings of the Indian people."⁹

Portuguese Prime Minister Dr. Salazar wrote, 'Nehru was the disciple of Gandhi, who based his struggle against Great Britain on the theory and practice of non-violence; he has now betrayed the Mahatma's doctrine and teachings. His betrayal has been even more in the brutal aggression against Portuguese in India than it is in the military occupation of Hyderabad, Junagadh, and Kashmir, more than in the harsh repression of the Nagas and Sikhs. All that led him to conciliate the principles of non-violence with violent action against Goa, Diu, and Daman. It is ironical that they attacked the territories about which Gandhi once said when he was sought out by some Goans with perfidious proposals for a fight with the Portuguese community. You form part of a nation which recognizes you the rights of Citizenship, without any restrictions.' Thus, he said, "You can't claim what you already possess, better go your way and be sensible."¹⁰

Firstly, the friendly countries of Portugal and their allies of NATO condemned India for using violence to force Portugal to surrender. In this regard, Jawaharlal Nehru said, "On the Goa issue certain people had held that India's policy of non-alignment and peace and befriending others had undergone a radical change. "I want to make it quite clear", he said, "that our policy has not changed in the slightest because of Goa. I don't understand how anyone can say that we acted in Goa by changing our policy or going against it." Further, he said he would have been happy if the Goa issue had been settled peacefully. But India was compelled by Portuguese intransigence to act. There was no other way. "It is correct that I was not very happy over sending our forces to Goa, but it was done because of compelling circumstances", he said. "You know that in this world, on various political and other matters we have to say and do things which we do not out of happiness, but because

of compelling forces." He did not know how Gandhiji would have felt over it, and what advice he would have given. But Gandhiji was up for seeing men and had blessed the moving in of the Indian armed forces to defend Kashmir.¹¹ He further staunchly denies that his use of force to wrest the enclaves of Goa, Daman, and Diu from Portuguese rule was inconsistent with his preaching of peaceful methods. He notes that New Delhi had tried repeatedly in vain to negotiate with Lisbon for the transfer of Portuguese possessions on the Indian subcontinent.¹² "Holding to non-violence," Mr. Jawaharlal Nehru commented, "his non-violence was more of the mind and thought also of action, but more than that. He said, if you have a dagger in your heart, pull it out and use it and not keep it in your mind and heart." Many westerners felt that Nehru's post-Goa comments merely reflected a searching for an excuse to justify an action that, had it been committed by another country, India would have condemned. To most Indians, the Portuguese enclaves represented the last vestiges of archaic colonialism that had lived far beyond its time. Some commentators felt that the United States, which was emotionally upset by the military takeover, should have used its influence long before to try to persuade Lisbon to consider a peaceful change. Another factor that probably helped to induce India was a threatened weakening of its prestige in Asian and African affairs. India's peaceful approach, although it had lent more than 5,800 troops, planes, and equipment to the UN force in the Congo and its troops with the UN in Gaza placed it out of step with the military anti-colonial clamor in parts of Africa. To many African freedom fighters, who had seen repression that was rarely known in India, the New Delhi approach was difficult to accept.¹³

Thus, ruling out violence, this was the only alternative left to her, consistent with honor. India had waited long enough. She could not wait any longer. Portugal, knowing India's non-violence attitude, took advantage of it. She had nothing to worry about. India must do something to show that she was quite serious about it, that she was vehemently in earnest and meant business this time. Let the moral issue come to the fore.¹⁴ In short, Mr. Nehru made it very clear in his speech at the public meeting at Chowpathy, as to why and what made him adopt objectionable

measures, as said by the world, to liberate the Portuguese territories in India.¹⁵

To these above-mentioned reasons, even Portuguese intolerable policies of the late 1960s forced Mr. Nehru to find immediate solutions to the issue. One of the events which take special mention is of preventing the people of Goa to meet Mr. Jawaharlal Nehru by passing the prohibitory order when his plane was stopped at Vasco Airport. The government officials who had volunteered to greet him were dismissed and charge-sheeted for treason.¹⁶

II

There were many reasons which forced the Indian government to intervene in the affairs of the Portuguese territories.

- A. Firstly during World War II, the strategic importance of Mormagao and Panjim came to be realized fully. German merchant ships took shelter in Goa and were found transmitting meteorological reports and other valuable information regularly to the German Navy. The situation was remedied by the Portuguese at Sir Winston Churchill's intervention.¹⁷
- B. Secondly, the Indian action did not come as a surprise because many governments knew that India had exhausted all methods open to it for a friendly parting of the ways with Portugal, as in the case of Britain and France. Soon after Independence, India sought diplomatic negotiations for the liberation of Portuguese settlements, but Portugal refused even to discuss the subject. Later, the people resorted to Satyagraha, a method successfully used against the British. The Portuguese failed to understand the spirit of Satyagraha and ruthlessly shot dead several unarmed and non-violent volunteers. After the indiscriminate shooting of the satyagrahis in 1955, the Government of India stepped in to stop the movement because it feared that if the merciless methods of the Portuguese were allowed to continue, they might produce strong and violent reactions in India and ultimately this

might lead to a clash between the two countries.¹⁸

- C. Thirdly, the revolts in Portugal itself had proved the unpopularity of Dr. Salazar's regime. Not only the Goans, but even the people of Portugal itself had started expressing their strong desire for liberty and a democratic form of government.¹⁹
- D. Fourthly, later, on 20 November 1961 CE, when a Sabarmati steamship was on its usual trip from Bombay to Cochin and back and was passing through the waters between the Anjadiv island, which was a Portuguese possession, opposite Karwar port and Karwar village, the Indian officer standing on the bridge was shot at by a Portuguese sentry from the Anjadiv island. Luckily he was not directly hit, but a splintered wood of the bridge that was hit went through his eye and he was almost blinded. But Portugal completely denied the firing.²⁰
- E. Finally, the growing demand for freedom by Goan freedom fighters like Sri Purushottam Kakodkar, Shri Evagrio George, Dr. Lohia and Satyagrahas throughout the Portuguese enclaves forced Mr. Nehru to liberate them as soon as possible from the Portuguese clutches. Thus, these factors gave greater urgency to the question of liberating the enclaves.²¹

Thus, India tried its best to stick to the non-violent policy but the violence and cruel methods used by the Portuguese Government on the nationalists and other freedom fighters but an acute frustration was developing among the brave Goans who had begun to feel that the Government of India was passive and not sincere in their protestations about freeing Goa.²²

In short, the above mentioned factors gave greater urgency to the question of liberating the Portuguese enclaves in India and the Indian government under the leadership of then Prime Minister Jawaharlal Nehru ended up in liberating them under the code name operation Vijay on 19 December, 1961.

POLITICS OF (UN) MIXED DINING: REVISITING COLONIAL MALABAR

G. Deepa

The late 19th century in India is seen as the period of the emergence of nationalism and the imagining of a national community. In Benedict Anderson's formulaic modular account, there is an element in the argument that is generally ignored by readers: the imagining of the nation is the result of a need to create a new kind of believing community following the erosion of religious certainty consequent to modernity¹

Jordons observes that it was among the English educated intelligentsia that several ideas of reform first arose. They were primarily trying to deal with a personal problem that affected their own lives very deeply constant contact with British and European ideas made them look upon some social and religious characteristics of their own society with horror and disgust.² Social reform in this first stage was mostly prompted by the desire of these people to cope with the difficulties which they experienced themselves. There was not as yet any concern for the mass of the people, or any desire to transform the structure of society at large. What they wanted was to reshape their lives according to the new standards and values they were discovering. They sought to clarify their own ideas, and propagate them among their kindred intelligentsia.

The socio-religious, cultural and political awakening of the 19th and early 20th centuries had its impact on the Malabar society also. The transformation of the public sphere in colonial India shows the increasing importance of religious movements and of the political use of religious images in new communication technologies.³ The critique of the caste system and untouchability which obstructed the progress of the society coupled with the challenges of colonialism provoked the elite class to take up issues relating to social justice along with political agitations.⁴ One of the specific features of a colonial modernity that one could address is the use of religion as a mode of self-fashioning, social understanding and public criticisms by Indian intellectuals. This paper is an attempt to analysis the various discourses of socio –religious movements in Malabar. This paper explore the politics of social reform movements in general and inter dining movement in particular.

By the closing decade of 19th century the social and structural changes took place among the society of India and also in Malabar. During the British rule several religious organizations were founded in different parts of the country to liberate Hindus from many evil customs and

superstitious beliefs and to promote education. M.N. Srinivas coined this as a part of Westernization among the upper caste people of south India.⁵ He argued that as a result of two centuries of contact with west the activities vein in Hinduism receiving great emphasis.⁶ Hindu community also was undergoing significant changes in the times especially higher caste people lived in urban areas. Parallel to these activities the non- Brahminical caste adopted the Brahminical rituals and ideologies in their daily life. M.N. Srinivas define the 'Sanskritisation' means low caste tries to obtain higher position by the adoption of 'Vegetarianism' and teetotalism and sanskritised their rituals and pantheon.⁷ Sanskritisation of caste would probably mean the introduction of major cultural and structural changes in the Hindu society as a whole. According to the social comparison theory, human always try to evaluate their attitudes, opinions and abilities because people desire social approval, they most likely to perform behaviours similar to social expectations and one's own self approval. or example the activities of social and religious organizations that emerged during this period was try to elevate the standardization of their social status similar to the western ideas and thoughts. The prominent members of these organizations were western educated Indians from upper caste families. These socio-religious reform movements spread egalitarian and progressive ideals.

Among the socio-religious reform movements, the theosophical society was entered first in Malabar. In 1882 the first branch of theosophical society was established in Calicut. In 1884 second branch of the organization started at Tirur. The activities of the theosophical society for the eradication of social evils among Hindu society were very admirable. They started many programmes for the eradication of un-touchablity and caste system among the Hindus. The society organized *Mishrabhojanam* at Calicut. In Calicut, under the auspices of the Theosophical Society inter - dining had become a common affairs. In 1914 Manjeri Rama Iyer and two students belonging to the Theosophical Society incurred temporary excommunication for participating in a marriage feast of a Thiyya youth.⁸ The Brahmin Volunteers with their family also participated in the function. They were expelled from the community for

violating caste rules. Brahamo Samjam also organized inter-dining programs at Malabar. The views and ideas of Sree Naranayana Guru in fight against untouchability and evil social customs among the Hindu society, was great emphasis. Sahodaran Ayyappan inspired by Narayana Gurus principles of casteless and creedless society, he started what is called Panthibhojanam or common feast for participating people belonging to various caste and communities.⁹ In 1917 inter- dining conducted by Sahodran Ayyappan at Cherayi was an important epoch in the history of fight against untouchability. At Cherayi he gathered a group of young men on the same wave length. The group comprising of 12 persons - K.A. Achuthan, P.N. Achuthan, K.C. Kesavan, K. Kumaran, A.C. Karthikeyan, A.T. Aandy, K.A. Krishnan, A. Raman Pillai, T.K. Kittan, Kooni Raghavan Master, Krishna Seeri Vaidyar and Sahodharan Ayyappan - issued a notice inviting the people to participate in a meeting on at Cherayi Thundara Parambil for discussing a serious issue on the destruction of caste system.¹⁰ The people who attended the meeting took the oath and signed an undertaking. At the end of the meeting, Sahodharan Ayyappan informed the gathering, 'some among us are prepared to take food with a Pulaya, if anybody likes inter dining and he can join us'.¹¹ Korui a boy of 14 years joined the inter-dining as a protest against the casteism.¹² Inter-dining becomes a powerful tool in the struggles against the untouchability. Inter-dining was powerful tool in the social reform movements, but at the same time the politics of inter dining was a critique one. As mentioned earlier the inter dining organized by the theosophical society and other organizations, the participants mainly came from the elite class peoples. For instance, the inter dining organized by Bombay Malayalee Samjam at in 1930 at Bombay. The Mathrubhumi Weekly published this event with photograph and detailed report that illustrated how the breakdown of traditional caste barriers among the Malayalees.¹³ In this photo a number of elite class people from different caste sitting together and ate their food in one place. The description of this photograph says that the 16 women's are participated in this function. These point out that the entry of woman in the public sphere of the society, and also pointed debate on between tradition and modernity. The members comprise

of T.C. Mayan, the president of Kerala Samajam. K.S. RamachandraAyyer the president of South Indian Association, Khan Bhadu Haji BachuAli J. P, Hassani Ibrahim Hajji, the president of Hajj Committee and Jhon Mattai and many other elite group members. These members were belonging to upper caste strata of the society.¹⁴ They organized this meeting to revolt against casteism, but division of class is keep in this meeting, so they organized a separate feast for the people who belongs to the lower class strata. The nationalists from Malabar also were the victims of the evil effects of caste.

The congress party in Malabar also propagated inter- dining movement among the people. They organized a cosmopolitan dinner associated with the historical conference held at Palakkad in 1923. The report of this conference described as that Malabar, especially Palakkad was a stronghold of orthodoxy and Brahmin supremacy.¹⁵ After the conference there a big cosmopolitan dinner was organized in which all castes and creeds of the people including Brahmins and Nayadis participated. KPCC conducted anti untouchability movement on behalf of Ganadhian polices, in all that meeting they usually conducted feast participating all members of different communities.¹⁶ There was a grand inter dining conducted at Calicut on 26th January 1930 in the honour of the first Independence Day celebration. Another important inter-dining function organized with the association of All Kerala Hindu Mahasammelan held at Tirunavaya in South Malabar in 1931. Pandit Madan Mohan Malaviya as the president and Dr.B.SMoonjee as principle speaker, thousands were present in this meeting.

The meetings passed a resolution favoured to anti-untouchability, and temple entry movements and stoppage of animal sacrifice in temple.¹⁷ Mathrubhumi reported an inter dining conducted at Azhiyur Koroth Hindu School in Mayyazhi to support Gandhi's programme of eradication of untouchability in India. A Pulaya boy named Gopalan, was denied to attend the programme. This incident questioned the credibility of such type of movements. Some of them participated and conducted these movements as part of self-fashioning themselves.

Undoubtedly it can be says that activities these movements helped to eliminate caste feelings among the society, in the early twentieth century, associations like the Samudaya Bahishkarana Sangham set up by K. P. Gopalan, a Thiyya Congressman, tried to weaken caste feelings by boycotting those who held caste prejudices and to encouraged inter dining among members of different castes.¹⁸ There were some upper caste social activists as well who were involved in such movements.¹⁹ A Gauda Saraswat Brahmin, Lakshmana Surendranatha Prabhu, a public prosecutor in North Malabar, as well as a freedom fighter, who had once led a hunger strike at the Tellicherry Saraswat temple demanding equality in worship, organized inter-dining at home.²⁰ Apart from the social reform movement, food used as powerful weapon in the political struggles against colonialism. Hunger strikes were one of the weapons used by Gandhi in his struggles against British colonial powers. The gastro political tools like interdining and hunger strike was effectively used by the social leaders in their struggles against the power hierarchies.

PROVINCIAL POLITY (PADAI KAVAL)

Dr. G. Devaraj

The term arasu denoted the local judicial and administrative chiefs on the Tamil Country under Vijayanagar rule. These local chiefs interfered in some of the administrative and judicial works in their locality. They were big landholders and law administrators. They had some powers over the local institutions like the ur, sabha and the Nadu. Few inscriptions refers to large extent of land and judicial power enjoyed by a local chief as arasukurur i.e. share due to the position of arasu. ¹This term arasu-kuru may be compared to the term arasusuvandiram.

Nearly thirty inscriptions mention the activities of arasu. Of them, seven inscriptions describe the relations between the arasu and the Nadu, five deal about the arasu, ur and the remaining inscriptions mention the independent judicial activities of six arasus. These inscriptions reveal the existence of six arasus.

They are,

1. The arasu of Perambur (1391-1421)
2. The arasu of Suraikudi (1415-1522)
3. The arasu of Arantangi (1453-1521)
4. The arasu of Koliyur (also known as Perungoliyur(1462-75)
5. The arasu of Sendavanmangalm (1366-1510)
6. The arasu of Valundur (1510)

A study of the inscriptions shows that there are some differences in the site of the different arasus. Of the above mentioned arasu the Perambur, Suraikudi and Arantangiarasu, were big in size and the Sedavamangalam, Koliyur and Valundurarasus were small in size.

Each of these arasu chiefs had district hereditary family titles. The Sendavamangalmarasu had the title dhanmarayar, the Aratangiarasu had the title of tondaimanar. The title Visaiyalayadeva had been suffixed to the names of the Suraikudiarasu. The title Pallavarayar had been suffixed to the names of Koliyurarasu.

When the arasutranscated the lands, the phrases 'Our ur'² (nammudaiyaurana) 'Our sirmai'³ (nammudaiyasirmaiyana), 'Our kani'⁴ (nammudaiyakaniyana) and 'Our farm'⁵ (nammudaiyapannaiparrana) are used in the inscriptions. This shows that the arasu transacted their own lands.

Tvilitturangumperumal Pallavarayar of Perungoliyurarasu made a gift to the temple as tax free kudiningadevedanam.⁶ An epigraph dated 1522 at Adanur refers to the gift of five ma of land to a temple as tirunamattukani by the arasu of Suraikudi.⁷ Another inscription of 1514 from Thiruvarangulam mentions that ponnambalanatha Tondaimanar of Suraikudiarasu granted some land in his own sirmai to a temple as tirunamattukani.⁸

The lands owned by the arasus were inheritable. The father used to pass on some share of his property even in his life time. One pillai Tiruvenkatamudaiyardhanmarayar of Sendavamangalamarasu gave his lands to his three sons (pillaikal) Irungulamittaperumal, Avudaiyanainar and Pandiperumal.⁹ Another inscription from Thanjavur dated 1366 registers that MudaliyarDhanmarayar of the same arasu gave in presence of Parakrama Pandya dhanmarayar and Yadavarayar, one village to his own son.¹⁰

An epigraph dated in 1453 registers that AlagiyamanavaleperumalTondaimanar of Arantangiarasu gave two villages in Palaiyurnadu as Kaniyatchi to his son Ilakkan Tondaimanar.¹¹

Almost all the inscriptions referred to just now, the sons who were given the kani right are permitted to enjoy all the judicial power and the right of taxation.

Arasu granted some lands to his soldiers. An epigraph from Kandisvaramudaiyarkoyil mentions that one Nadumadittavisaiyalayadeva of Suraikudiarasu made a gift of lands to some military commanders as Karanmai, i.e. right to cultivate the lands and enjoy benefits.¹² This shows that arasus at least the bigger of them, had their own military people.

One Nadumadittavisaiyalayadeva of Suraikudiarasu granted his own lands to the temple as tax free tirumnamattukani. He remitted the taxes vetti, mutti, verkari, sulavari, idaivari, narcour, viniyogam, kilakkai, paravukaikkai, etc. from the lands donated.¹³ Another epigraph dated 1403 registers that one Narasingadeva of peramburarasu made a gift of his kani lands to the temple as devadanam. Besides this, he remitted some taxes, viz. *kadamai*, *kudimai*, *narcoru*, *viniyogam*, *vettimuttaval*, *pattadai*, *sirrayam*, *arikadamai* from the said lands, himself taking responsibility for the taxes to be rendered to the government.¹⁴ An inscription of 1453 found at Palankarai refers to the remission of the taxes, *kadamai* and *viniyogam* when perumal Tondaimanar of Suraikudiarasu gave away his own lands to his son Tennayakka Tondaimanar.¹⁵

An epigraph of 1510 from Kudimianmalai mentions that one Viranarasinga Nayakka Pallavar of Valundurarasu sold the kani lands free of taxes to the temple in the local village.¹⁶ It is said that the lands were sold by the arasu to payoff tax arrears to the government. One Kulasekhara Tondaiman of Arantangiarasu determined the rates of taxes both in kind and cash and fines to be paid by the nattar of palaiyurnadu. The chief remitted the tax pillaivari on the karanams (accountants) and also the arasu suvandiram.¹⁷

The sale of makkalasuvandiram by the urs of Kilattaniyam, Melattaniyam Ollaiyurmangalm, Kilikudi, Karkudi, memananallur and

Kilmananallur to a son of Narasingadeva of Peramburarasu. These urars allowed the purchaser (arasu) to collect 1 *kalam* of paddy on every ma of land in their Villages.¹⁸ The nattar of Kananadu sold the makkalasuvandiram for five thousand *panams* to one Visaiyalayadeva of Suraikudiarasu and allowed the latter to collect 1 *kalam* of paddy from every ma of land within its jurisdiction.¹⁹

Arasus and Judicial Powers

They enjoyed the right to collect fines within their jurisdiction.²⁰ Sometimes, they voluntarily made pacts of peace with erstwhile enemies. Inscription dated 1419 mentions that three had prevailed enmity between the peramburarasu and the ur of Killaikurichi for a very long time. Narasingadevar of Peramburarasu voluntarily called the ur of Killaikurichi for entering into friendship treaty with the latter.²¹ Independent local administrative and Judicial authority, occasionally submitting to a higher authority, say the Empire. Some areas, they had under their direct control, but they also dominated the neighbouring countryside through the right of ArasuSuvandiram, which they enjoyed in return for providing security and protection to the concerned area. On occasions they also suffered from want of resources to pay the taxes demanded by the Empire.

The arasu institution is found only in the Pudukottai region as far as the available inscriptions indicate. From the Chola times, the arasus had been prominent in the local administrative and judicial affairs.²²

Punishment to the Brahmins

The Village assemblies had the responsibility of tracking crime. They had their own village officers whose special duty it was; when criminals were traced, they were brought before the assembly for punishment. The guilt was brought home to the culprit before the assembly, and the punishment was accorded according to law by the special body of Judges, who had knowledge of it, or by royal officers when once the guilt was proved to the satisfaction of the assembly. These assemblies went about administering Justice generally tempered with mercy.

Government assistance was invoked and was readily provided. A certain number of

Brahmans and others set up as dacoits, and earned on their depredations in defiance of the village authorities. The Village appealed to the local governor, who provided a section of the guards to arrest the criminals. They arrested the culprits once, who even went so far as to overpower the guards and escaped.

A second successful arrest was made, and among those arrested happened to be a couple

of Brahmans, who were ring-leaders. Then a question arose whether as Brahmans, they could be punished as robbers. A reference was made to headquarters and the ruling was obtained, that since they set up as robbers, they were guilty of an act unworthy of a Brahman and ceased to be such. They were liable to be punished according to the law like other robbers. The punishment was accordingly carried.²³

MADRAS AND SECOND WORLD WAR

Dr. K. Devendran

The Government of Madras immediately after the outbreak of Second World War, in order to create public opinion in support of its war efforts, started to interchange propaganda and publicity. As the Indian National Congress resorted to stage protests against dragging India into the war, it was imminent to the government to catch the public support. This situation created a mixed feeling of apathy and sympathy towards war-efforts. The Government triggered its administration to make a view among the public that the war was being waged by the Great Britain to defeat the axis powers in order to bring a world scenario, which was capable of rejuvenating democratic order in the world. The present chapter discusses the precepts and practices of the Madras Presidency Government, during the Second World War.

Recruitment

Recruitment for war service was encouraged by Madras Government assuring to give preference for civil employment for those

who served in the army during the war.¹ Besides direct recruitment, civilian government servants were given military training.² Sir Arther Hope, the Governor of Madras, inspired the recruits as well as the common public through his series of speeches at All India Radio, Madras and Thirachirappalli. In one of his speeches, through All India Radio, Madras, he explained the need for protecting the humanity from the Second World War peril.³

In Madras, a Provincial War Recruitment Committee headed by Governor of Madras was constituted on 1 June, 1940. In addition to this, district level recruitment committees were formed. The Provincial Committee which met on 1 June, passed a resolution that a full division of all arms should be recruited in South India and the training should start immediately. In addition, it was also resolved to revive carnatic regiment, to revive internal security and to constitute University Training Centres at Annamalai and Andhra University. The Chairman of the

provincial committee was K.V.Reddi and the members were, A.J, Happell, Lt. Col. D.M. Reid and M.C. Raja. E.V. Ramaswami Naicker was a special invitee of the occasion.⁴

The Government organized a separate branch of propaganda for recruiting purpose. This was first known as "Propaganda Branch". This wing dealt with news paper advertisements, printing of posters and leaflets in order to motivate youths to join the British army. The provincial war committee effectively controlled the functioning. Attached to the committee was one mobile cinema unit with a projector generating its own power and exhibiting films bearing on recruitment of war service. Funds were allotted by the General Head Quarters, Delhi.⁵

The youth intending was to appear before the Extra Assistant Recruiting Officer. After medical examination, he was declared either fit or unfit for the category of post for which he had applied. After recording physical measurement, educational and general qualifications enrolment of the candidate was made. Along with the documents, he escorted by the Assistant Recruitment Officers. The candidate after being subjected to a second medical examination by the District Medical Officers (D.M.O.) was marked as "Graded Recruit". Thereafter the candidate had to live in the barracks and attend parades. He was placed on the "Station Strength Register" until the opportunity arose for active service.⁶

When called for, the Assistant Officer chose the men from various grades, checked their documents and sent them for a third medical examination. Then the candidate was handed over to the commandant, Regional Recruitment Camp when the final selection was made. The recruit was dispatched to the respective units of the army allotted. This was the procedures adopted normally at lower levels. But there was several branches and the procedure adopted in respect of recruitment to each branch, necessarily differed.⁷

On September 14, 1940, the Government of India constituted a Tribunal at Madras, for the purpose of recruiting technical personnel to the war-industries. V.Ramakrishnan, I.C.S., then Commissioner of Labour was appointed as Chairman and subsequently he was made a full-time officer in January 1942. In May 1943, the

Government appointed a District Magistrate as the Chairman. The object was to secure greater publicity for the scheme and the decentralization of the selection of candidates and also to assist in the selection of candidates.⁸

The training of war-technicians was undertaken by Government institution.⁹ By the end of December 1942, there were eighty-two training centres and 520 men were under training in the province. Madras was the fourth in the order of importance from the point of view of the Engineering Industry and held the first place in the Government of India's Technical Training Schemes. The total number of technicians trained up to the end of September, 1945, was 24, 610 of whom 21, 609, were sent to the Defence Services. A batch of fifteen was sent to the United Kingdom for training. Among them six were from Tamil region in 1943.¹⁰

The Government of India sanctioned the formation of an Indian Army Medical Corps with effect from 3 April, 1945. It offered an improved status in the emoluments to licentiates, who were now recruited as Emergency Commissioned Officers. A serving officer of the Indian Army Medical Corps was also deputed to tour the presidency to give further impetus to recruitment. Up to the end of 1943, 176 applications were received for appointment in the Indian Medical Services and 150 were appointed.¹¹

Since April 1943 civil employment vacancies were filled by the men in war services.¹² During the Second-World War, over 50,000 men from the Madras Presidency rendered military services both in India and abroad.¹³ As a result of the cessation of hostilities, recruitment to the Indian Army was ordered to be suspended in August 1945. But from October 1945, recruitment to these services was re-opened on a limited scale. Consequently the Government of India decided to close down all provincial selection Boards. The District authorities were relieved to a considerable extent and primarily it became the duty of the Military Authorities. Due to the policy and practices the Madras Presidency government tackled the war situation positively.¹⁴

Fund Raising

The Governor of the Madras Presidency quickly realised the importance of raising funds. On September 1939, "Governor's War-Charities

Appeal Fund" was instituted.¹⁵ To begin with, contributions were subscribed to this Fund. With effect from 10 July 1940, the 'Charities Appeal Fund' was closed. Thereafter, all donations were received to the credit of the "Governor's War Fund" and the balance standing in the credit of the charities was transferred to the 'Madras Governor's War Fund'. The Governor issued a message on 26 June 1940 to the people of the Madras presidency outlining the scope and object of the 'Madras Governor's War Fund'. His Excellency solicited the co-operation of the people of the presidency and exhorted them to deposit money and donate materials not only for conducting the War, but also for the defence of India and Great Britain.¹⁶

The Government permitted all gazetted officers and all Tahsildars and Deputy Tahsildars to collect subscriptions to the Governor's War Fund. Permission was granted to all Government officers in all possible ways for making collection.¹⁷ But after receiving complaints of forcible contributions, the Government ordered that no police officer of whatever rank should take part in any form of collections towards war fund. The Governor requested all Government servants to contribute a day's pay every month to His War Fund and this was voluntary and left to the option of the employee.¹⁸ Non-gazetted officers drawing a pay of Rs. 100 and more per month, also subscribed for the fund.¹⁹

Pensioner's Association of the Madras Presidency passed a resolution to sacrifice a day's pension each month for a period of six months. This meeting of the pensioners was held at Theagaraya Nagar, Madras on Wednesday, July 26 1940. Rao Sahib P.Ranganayakalu Naidu was on the chair and he requested all pensioners for their contribution.²⁰

Rich industrialists, landlords and workers also contributed to the fund. At the insistence of the Secretary of a Match Factory Company, Thiruvotriyur, the workers contributed half-a-days' wage to the fund.²¹ As already stated, Simpson Company, Madras, presented a motor van equipped with cinematograph projector and sound recording apparatus. The Raja of Venkatagiri presented to the Governor Rs.10,000 personally. Besides, large amount was received by such entertainments enacted by reputed musicians. The Government granted exemption from liability to entertainment tax to

the entertainments intended for the benefit of the Madras Governor's War-Fund.²²

Fund also was raised by the sale of Defence-Bonds and the War-Saving Certificates. The Governor suggested that in each Department or Office, savings groups must be started. Officers and members of the savings groups must contribute Rs.100 for Defence Bonds and Rs.10 for Defence-savings certificates and those who were unable to invest so much, must join in Inter-installment savings groups.²³

In order to popularize defence savings certificates, "savings cards" were printed in all the South Indian languages and special arrangements were made by the postal authorities to safeguard post-office records in an emergency. District War-Committees were required to give due publicity of these arrangements. Defence savings-stamps were distributed as a permanent advance to Government Touring Officers. In January 1942, a conference was held at Madras to popularize the Defence Saving Certificates among employees. The certificates were available at the Reserve Bank of India, Madras and at all branches of the Imperial Bank of India in the presidency.²⁴

About the middle of the year 1942, the Government of India decided that an extra savings of Rs.100 crores in India before the end of the financial year, was needed. It allotted a quota of Rs.14 crores to the Presidency of Madras. The government of Madras fixed a target figure for each district and issued instructions regarding the appointment of honorary canvassers.²⁵

The Government introduced a scheme for collective subscription from villages. The subscription amount so raised was deposited at the interest with the Government of India till the end of the war, and spent on social-welfare such as, constructions of hospitals, digging of wells, establishment of schools and laying roads.²⁶

A Defence-Loan-Commissioner was appointed by the Government in June, 1943, to co-ordinate the savings drive in the districts.²⁷ The Madras Savings Canvassers campaign was continued during the first quarter of 1944, and Rs.12.03 crores were collected against the target figures of 14 crores.²⁸ By the end of March, a sum of Rs. 23.2 crores had been invested in

national savings in the presidency as compared with the target figures of 14 crores for the period of July 1943, to March 1944. There was some relaxation of effort during the second quarter of the year 1944, but primarily arrangements were made for the introduction of a new small savings scheme. The main feature of the scheme was the sale of National Savings Certificates through a large number of authorized agents who were allowed a commission of 20% on sale effect by them. The savings campaign was intensified in the third quarter and a target figure of 20 crores was fixed for the financial year 1944-45. A total of Rs. 12.14 crores was collected towards the target of 20 crores by the end of 1945.²⁹ The Government War-Fund was utilized for the British war purposes, Indian defence purposes, Royal Indian Navy, charity for deceased soldiers, providing amenities to healthy overseas troupes, Red Cross work, monetary help for blinded soldiers, ambulances, fighters, bombers, tanks, guns, bombs and others.³⁰

Provincial and Regional Propaganda Institutions

Before 1940, the Central Board of Information of the Government of India consisted of the Director General of Information, the Principal Information Officer, the Controller of Broadcast, the Chief Press-censor and Adviser, Defence Member drawn from the Military-Intelligence Branch, the Heads of all the various organizations, which were concerned with official publicity in any form. The Board was strengthened by the addition of the Director of Public Relations and the Economic Advisor of the Government.³¹ For purpose of War-publicity, their works were co-ordinated and controlled by the Director of General Information. The Director General of Information was responsible for control and censorship of the press, collection and issue of news relating to the war.³²

At the provincial level, the Madras Presidency had Publicity Department. The Department kept the public informed of what the Provincial Government was doing. With the Commencement of the war, a Special Adviser for Publicity Department was appointed for the Madras City on 13 Sep' 1939. He was also acting as the Information Officer and attended the work connected with the publicity of the activities of the various Departments of the Government.³³

The Provincial Propaganda Committee was constituted in 1940 with the Governor of Madras as the President and G.A.Natesan as the Chairman.³⁴ Early in 1941, a General Information Bureau was opened.³⁵ In June 1941, the post of Director of War-Publicity was created to co-ordinate and direct war-publicity activities of all kinds throughout the Presidency. In September 1941, at Madras "Victory House", a Central Publicity Head-quarter was opened with a Director of War Publicity to Head the House. He was to be assisted by a Deputy Director, Personal Assistant and a few subordinate staff.

The work of the Assistant Director consisted of maintenance of propaganda-vans and their equipment, to look into War-fund complaints, processing of the requirements of the Provincial War-Committee, District War Committee and their sub-Committee which required sanction of the Government of India regarding publicity and propaganda and preparation and supply of films, slides, gramophone record and weekly reports on radio-talks.³⁶

The Advertisement Section was an important appendage.³⁷ Its functions were: publishing of monthly review, preparation of pamphlets and distribution of posters. The District War Committees were constituted under the district Collectors in almost all the twenty four districts in the Madras Presidency of the total fourteen were functioning in the Tamil speaking areas. Each contained three sub-Committees namely finance, recruitment and propaganda.³⁸ The committees were working in Conjunction with the Provincial War Committee. The Most important function of the Committee was to give wide spread publicity with regard to the cause of the war, its progress and its objects.³⁹ Each District had a District Organizer, Honorary Divisional Organiser, a District Lecturer, Propagandists Inspectors, Ballad Masters and Village Guards.⁴⁰

Field-Publicity Organization

The Field Publicity Organization consisted of Districts Mobile Publicity Units, Regional Publicity Units and The Provincial Publicity Units. The District Unit consisted of whole time paid organizer, a singer and a propaganda-van equipped with a talkie film projector and a loud-speaker. Other Departments of Government

dealing with subjects such as co-operative credit, agriculture, health, education, etc., also joined the units to educate and advise the people on these matters. The Regional-Units were essentially for supervisory work. The unit consisted of a Regional Organiser with necessary staff.⁴¹ The Provincial Publicity Units were the agencies, which controlled and guided the Regional and District units. The control organization at Delhi gave suitable direction and supplied literature to the provincial publicity unit. The units were disbanded by the end of 1944.⁴²

Films

Films had a direct bearing on the masses and instructed them on war consequences in the province including the Tamil region. In the rural areas, particularly the villagers had no idea of the countries engaged in the global-war or the purpose for which the Government of India involved itself in the war. They had no idea of the methods of war-fare or the weapons of war. The Government was quick to realise the need for producing war-films.⁴³

Since the end of April 1941, thirty-seven war-films had been circulated with great success.⁴⁴ Some of the most popular films which had a thematic approach were "London Can Take It", "Drums in the Desert", "A Day with the India Army"⁴⁵, "The Air-Raid Precaution" and "Madras must not Burn", etc. They mostly covered the efforts and gave a good idea of what was being done by the Great Britain to defeat opponents. The Government authorized the production of a maximum of five films on general subjects and four films per year on military subjects.⁴⁶ Three films under the first category and one film under the second were produced during the year 1942. They were released in the Madras – city as well as in different parts of the Madras Province. These films carried running commentaries in Tamil, Telugu and Urdu.⁴⁷

During the year 1943, owing to shortage films could not be produced as per schedule in the Madras Presidency.⁴⁸ The Director of Information, Bombay, supplied films. 16 mm films were received at the rate of six per month and were distributed to various institutions.⁴⁹ To facilitate the production and distribution of documentary films, a Films Advisor of Board was constituted with Head-Quarters at Bombay. It also had its branch at Madras with members of

leading producers and distributors in India. The films publicity attracted a large number of people of the presidency and this was a powerful weapon of propaganda about the war efforts of the Great Britain.⁵⁰

Performing Arts

The Government of Madras, took measures to attract the people through performing arts which was imbibed in the hearts of the Tamil society. The art-variety ranged from "therukkuthu" (street act) to highly sophisticated classical dance, drama and music which were part of performing items. Generally an artist troupe was consisting of singers, ballad masters, musicians and actors along with gramophone records and other accessories. Each troupe was provided with a van for transportation. People in the habit of listening and enjoying the fine arts largely attended the performances and this media contributed a great deal toward augmenting people's support to war-efforts by means of contributing men and money to the Government. The Government encouraged participation of the common folks in the endeavour, by conducting competitions periodically.⁵¹

The Ballad-masters who attended propaganda meetings sang and encouraged others to learn the songs. They were appointed at the rate of one per each district. In April 1943, the Government of India instituted a Song-Publicity Department with an officer for each language area in the presidency. The Madras Song Publicity Section composed several songs, which were broadcast over the All-India-Radio and many gramophone records were produced.⁵²

Special songs on subjects such as national war front, war recruitment, red cross, national savings and anti-hoarding were composed. Song books were published and distributed in the appropriate Tamil areas. The entire programme regarding choice of centres, days of composing, remuneration and perks were controlled by the Director of Song Publicity at the centre and the Song Publicity Officer in the province of Madras.⁵³ A special drive was taken to organize *Bhajan kuzhu* (devotional singers troupe) and *Kathaa Kaalatshepam* (oral discourse) to influence the rural communities in Tamil Nadu as

well as in the rest of the province who were known for their religious sentiments.⁵⁴

Village Guards

A scheme of village security was introduced in order to foster and improve the co-operation between the villages and the troupes and to provide better communication of vital importance. The scheme was also meant to inculcate responsibility and confidence in villages and also the spirit of compliances with civil and military regulations. Ultimately the scheme aimed at creating mutual understanding and co-operation in war efforts. The scheme was introduced in the coastal districts of Chinglepet, South Arcot, Tanjore, Ramnad and Tirunelveli and in the inland districts of Coimbatore and Tiruchirappalli.⁵⁵

Units of Mobile Publicity

The mobile vans rendered yeoman service by carrying on publicity in remote villages. The Simpson company, Madras, made a gift of a van fully equipped.⁵⁶ The van was used to exhibit sound-film, to exhibit silent films, to play gramophone records, to amplify speeches made from the van and to re-broadcast programme from any Indian Broad-casting station. The van denoted made successful tours and proved its potency. The Government decided to buy more vans on the Simpson- Model and equip them further by adding magic lantern slides, and screen.⁵⁷ Seven out of the eight propaganda vans purchased, worked efficiently and carried on propaganda and publicity work in the Districts.⁵⁸ Provision was made to supply at least one van to each District. In each van, there was a qualified operator and a driver.⁵⁹

Fifteen more vans were acquired during the year 1943.⁶⁰ They visited 2,188 villages and organized 2,107 shows. District Lecturers at scheduled places gave lectures about the war. The mobile units targeted pilgrims so as temples were the camp-sites of these vans. During the "Deepam" festival at Tiruvannamalai as well as "Sathaya vizha" at Tanjore, the vans camped five and seven days respectively. The vans were also used in special campaigns such as "Grow More Food" and "Savings". In 1944, almost all the Districts had a propaganda van, well equipped. One van was set apart exclusively for the entertainment of troupes in camps. The van allotted for the entertainment of troops in the city

of Madras was very useful on entertaining not only units stationed at Madras but also soldiers on leave. The Secretary of the Madras Provincial War Committee was responsible for the maintenance and use of the vans. He kept accounts of the cost of maintenance and submitted estimates to the Government for necessary sanction in advance.⁶¹

Press

Press is considered as the fourth estate of democracy. During the Second World War, the press played a vital role in shaping the public opinion in favour of the British. The Ministry of Information, London, sent many magazines to the Central Board of Information, New Delhi.⁶² These were intended mainly to refute the misleading Broadcast of the enemy countries particularly Berlin and Tokyo. Copies were distributed to the persons engaged in war propaganda work in the districts. Some districts produced their own local journals.⁶³ The monthly magazine, "War of Pictures" published in English, Tamil and Telugu attracted the villagers as they conveyed the message in simple caricatures.⁶⁴

Other newspapers "The Victory" and "The Madras News Letter" were sent to the Government Head Quarters, New Delhi, to broadcast to prisoners of war.⁶⁵ "Madras Calling" was intended for serving Madras soldiers who were serving outside the presidency. The "Madras War Service" was another noteworthy English weekly published by the Government of Madras. "Yuddha Sanchikai" in Tamil, Malayalam, Urdu and Kannada, was yet another popular weekly. Such publications provided full time employment for many journalists and encouraged budding journalists. The "Pudhukkottai Samasthana Yuddha Arivippu Nilayam", published the war-news in Tamil. A number of maps and souvenirs to mark special occasions were also published.⁶⁶

Regional Radio Broadcast

The All India Radio, Madras arranged for Broad-casting speeches and short plays.⁶⁷ In 1942, there were 1937 talks on war-subjects over this radio.⁶⁸ It also introduced a daily half-an hour programme of news and entertainment for Indian troops overseas. Short plays in Tamil broadcast in 1943 were including "Kaalathirku Yetra Pechchu", "Irattai Nakku", "Yuddha Kalam"

and "Amaithiyilum Vetri". The programme during peak-hours reached an audience of over half a million and thus the Radio proved a powerful medium of mass-communications.⁶⁹

National War Front Organization

The National War Front was inaugurated in the presidency on 23 May 1942.⁷⁰ The objectives of the organization were, to strengthen the force against War-activities among the people and to eradicate spurious writings and rumours to give confidence and strength to the people to fight the forces of evil i.e. nazism and fascism, to protect women and children. This was not a political organization. Members could hold their own views about politics or Government functioning.⁷¹ It was declared that "any who wanted to save the honour of India" might join the organization.

Madras Fire Services

In June 1942, the post of Deputy Commissioner, Madras Fire Services was abolished and the Director of Fire Services created. The Moffussil Fire-Services were also placed under his direction. The first batch of National Fire-Service Officers from England arrived in August, 1942 and they were placed in charge of the various fire stations in the city of Madras. The executive command of the Madras city section of the Madras Fire-Services was given to the Chief Fire-Officer, Madras. Firemen were recruited and enrolled early in 1943 in I and II class towns and in those III Class towns where municipal water-lorries were available.⁷² Early in April 1942, the Madras Harbour area which until then had been under the responsibility of the Port-Trust, was taken over by the City Fire-Services to ensure unified control of the Fire-Services throughout the city.⁷³

Lighting Restrictions

When War was declared, the Fortress commander forwarded to the Government a draft order which he wished to issue to impose drastic lighting restrictions within the Madras fortress area. Street lighting on the Marina was prohibited and else-where all street-lights were ordered to be screened. The question of allowing the light in the Light-House was considered and eventually it was decided that the Light could be put out in thirty seconds nothing further need be done. A little later "Black-out" in the Marina area was relaxed and accordingly alternative lighting arrangements were made and shaded.⁷⁴

The question of removing some of the shades in side-streets was taken up a little later. As a result, the Commissioner of the Corporation was authorized to remove shades in the side-street, where people had complained of inadequate lighting.⁷⁵ He was required to obtain the concurrence of the Fortress Commander and the Commissioner of Police. Under their authorization, he ordered to remove the shade of four hundred and ninety six street Electric Lamps in two installments.⁷⁶

The question of further relaxation of the lighting restrictions came up in March, 1940. The Mayer of Madras drew the attention of the Government that in Bombay, Calcutta, Cochin and Ernakulam, the lighting restrictions were not so severe as in Madras. But in view of the continuing hostility it was decided that the Lighting-Restrictions should not be further relaxed.⁷⁷

The Fortress Commander was enforcing the restrictions as the Commissioner of Police carried at the order. These restrictions even involved danger to the civil-liberty of the citizens. But realizing the danger, the population of the presidency admirably co-operated with the authorities and observed orders of the latter.⁷⁸

THE URDU PRESS ABOUT THE PRO-TURKISH SENTIMENTS OF
MUHAMMADANS OF MADRAS PRESIDENCY DURING FIRST WORLD WAR
1914-1918

M.S. Fathima Begum

INTRODUCTION:

The outbreak of World War I in 1914 was not without its impact on the press as it mirrored the turns and twists in the Country's political life. India was being asked to give her support to a war to defend the principle of self-determination; Muslims and Hindus took part in them, the former being particularly "out of humour" with the British on account of their attitude towards Turkey, whose Sultan was **Khalifa** to the Islamic world. The Congress and Muslim League (1906) supported the war in resolutions of loyalty, but the country's temper was different.¹

The First World War brought crucial changes in the politics of India. The Congress extended full support to the British in their war efforts and in return they expected concessions from Britain after War.² The change of the attitude of the Islamic press towards the British became evident when the partition of Bengal was annulled in 1911 and the Caliph of Turkey was humbled during the Great war. During the Great war, the Presidency underwent political changes, for the Home Rule League and the non-Brahmin movement were organized in 1916.³ The *Aftabi Dakhan* of November 12, 1914 from Madras which was received on 23rd December had the following article. The writer of the article was a military officer. He wrote that Germany would be defeated by France and the French, Russian armies would advance on Berlin and place Berlin in a dangerous position. The writer explained that how Germany and the Austro-Hungarian Empires and their possession would be dismembered and to what extent the two Governments would be reduced.⁴

URDU PRESS ABOUT PRO-TURKISH FEELINGS DURING FIRST WORLD WAR:

On November 1, 1914, Turkey joined war against Allied powers. It was the beginning of hard and tender time to examine the patience and fortitude of the Indian Muslims owing to Turkey alignment with Germany. The Indian Muslims wanted a great Turkey but at the same time they were also devoted to the British Government. Hence, they did not know what to

do as they could not give up their loyalty towards the British and the only thing to do was to feel in low spirits. At that time there were two well established political parties in India formed by the major communities Hindus and Muslims, the All Indian National Congress and All India Muslim League respectively.⁵

Shams-ul-Akhbar wrote about the Naval defeat of Germany. She arranged for herself small fleet in a way as to destroy English trade and provisions. The following article was published by *Quami Report* Jamal pasha had sent a telegram to the American ambassador from Smyrna which contained the threat to England and France. He informed that if the British and French squadrons bombard the undefended parts of Syria he would kill three French and British subjects for each Turk killed by them. It was officially announced in Rome that the Porte had informed Italy that Turks would not interfere in the sailing of ships in the Suez Canal.⁶ *Jarida-i-Rozgar* received the telegram and it was published. The Germans with a view to increase the influence on Turks the Germans assured that they were celebrating Islamism.⁷

The organization of Turkish army was described in detail by *Liva-ul-Islam* of Madras. In the battle between the Turks and the Russians on the border of Persia. The former won a number of victories, took thousands of Russians as prisoners and that they were advancing upon Badoum. Further it published an extract from the Turkish official report received at Amsterdam, which stated that the Turks came out victorious in every engagement with the Russians. Germany made mighty preparations to conquer England. Kaiser was determined to take that guns to Calais at any cost and bombard England there from. The German plan was to capture Calais then to sweep the English channel of the mines placed there in by the British, for which purpose they built special motor boats, and then they made an attack on England in which aero planes, several submarines and German men of war took part. She decided to transport an army of 2,50,000 men into England in this manner

and she thought that such an army would be sufficient to carry on the war in England.⁸

Germany was busy in building numerous submarines and all of them were expected to be ready within three months.⁹ An Urdu notice entitled *Ilani-i-Jang* (Declaration of war) published by Ghadr party blamed the British for having put the Indians in great difficulties and suffering. The author stated that, "Feringhees took possession of our beloved country of India. They ruined the civilization and morals of India. Three crores of persons died from famine, plague and daily disgrace. As a result, Indians begin to emigrate to other foreign lands" Another Urdu leaflet entitled '*Indian Insurrection*' said that, "No European should be left alive in the world. Kill them secretly, kill them openly". Laying stress on self sacrifice, the author stated that, "Let the spirit of self sacrifice animate every vein and hair of your badness"... The pamphlet which concluded with the observation "Rise! Rise united Rise at once!... Do not hesitate now! Do it to-day", called upon both Muslims and the Hindu to join together and hoist the national flag which symbolized Independence.¹⁰ An Urdu leaflet entitled *Zamena Bagwat Hindustan* dated 8th January 1915 adopted the extreme stand and extended its support to Germany, Italy and Turkey. The author of the leaflet exhorted the young men of India who aspired for self-government to arise from their slumber and eliminate the British. He also referred to the misdeeds of the Government. The temples and mosques were destroyed and the British education in India left many illiterates. Further the author of the leaflet draw the attention of the youth to unfair treatment meted out to the natives by the British.¹¹

The Islamic press entitled *Shams-ul-Akhbar* stated that the Italian papers wrote that the Italian Government was anxious to the procedure of Sulaiman Pasha a partisan of Anwar Pasha, Italy was a party in the Triple Alliance. As Germany had advanced towards France and she centered the French frontiers and France had to face boundless difficulties and hard ships and Germany would covered the whole of France in a moment of true. At the outset the German forces pasted over France with such vehemence that the Paris would come within a range and the Government of France had to transfer its seats to Bordeaux. Germany

sent a small Cruiser the Emden to the Indian ocean and that ship found an opportunity first in the Bay of Bengal then off the Madras coast and then off the Maldives Island etc to commit raids. In all the ocean of the world the fear of the Emden was created and every ship was fearful. Russia the member of Triple Entente concentrated her forces on the Austrian frontiers and in two three attacks made Austria her case. When the forces of 'Triple Entente' advanced towards Germany. Austria was her ally, the aid she expected from her could not obtained. Three months before to the declaration of the war the Ottoman Government had been from giving assurances of neutrality. Turkey was ready to wage war against the 'Triple Entente'. There was Turkish skirmishes in the Caucasus against the Russians and in Basra and in the Persian Gulf against the English.¹²

The *Mushir-i-Dakhan* wrote that the Muslims of the world and the well wisher of Turkey were desirous that Turkey should not take part in the war. The Muslims of India and of other places sent telegrams and advised her with sympathy to hold herself aloof from to war but among Turkish party. The Germans created fervor by deceit; owing to that they never allow Turkey to paid attention to the Muslim world. The Muslims of India and other places declared their astonishment and wonder at the Turkish conduct and kept quiet. She faced Italy in Tripoli and Balkan states in Europe. Japan had no reason to become a party to the war with the hope of gaining benefits in future proclaimed war on Germany and enter into Triple Entente following Japan, Portugal joined with Triple Entente against Germany. The Triple Entente was acted with great foresight in that it assumed the Muslims under it that their sacred places would remain safe. The lawyer of New York stated that the war would terminate is April.¹³

Germany sent the following message to South Africa, "Belgium is our possession. The greater part of France is also in our hands. The Russians were driven back as far as Warsaw. We have taken six lakhs of them prisoners. Our ships visited the English coast twice. Eight cruisers and several other ships belonging to the British have been sunk by our submarines. The English ships have not attacked us. One of our ships was sunk by the English near Falkland. The Turks have proclaimed a religious war against our foes. They

are successful in the region of Caucasia and are advancing on the borders of Egypt."¹⁴ *Sajphul Islam* of Vellore reported the Bagdad correspondent to have written to a Parsee paper that on account of Turkey's precautions, the British was not able to advance even an inch to the interior of Bess rah and that as the English was not given Egypt back to Turkey not finding any other opportunity for recovering it, had to take part in that war.¹⁵ *Liva-ul-Islam* wrote that four Turkish submarines were patrolling the mouth of the Bosporns. A large quantity of war materials and food stuffs was sent to Adrianople. The old forts in Turkey were repaired. The new forts were constructed. A Turkish battalion left from Damascus. Forty thousand troops were expected to reach Iskenderun. No one can deny the strength of the German guns.

A news was published in the paper which was received from America by a Japanese paper. The Turks were reached the Suez Canal. A battle was fought and some British soldiers were taken as prisoners. In a battle which took place in 18 miles east of the Suez Canal, the British retreated. The Turks were advancing towards Batouns. They captured Al mang in the south. In Shattel-Arab the losses of the British amounted to 750 killed and more than 1000 wounded.¹⁶ In 1918 the allies were riding on the wave of victory. Germany surrendered on November 11 and Turkey had capitulated on October 31. The Ottoman empire lay shattered. The Arabs incited by the British revolted against their sovereign and Caliph. The Greeks encouraged by Lloyd George claimed the coastal Strip including Smyrna.¹⁷

In December 1918 both the Muslim league and the Congress had met in Delhi. The chairman of the Reception Committee was Dr. Ansari. He denounced Sharif Husain of Mecca

who raised the standard of rebellion against his acknowledged sovereign. He demanded under the maintenance of the integrity and independence of the Muslim States and the restoration of Jazirat-ul-Arab(the Arab region) containing the holy places of Islam to the Caliph.¹⁸ The Urdu leaflet entitled *Zamena Bagwat Hindustan* dated 8th January 1915 adopted the extreme stand and extended its support to Germany Italy and Turkey.¹⁹ The author described the tyranny of the British as follows, "There is no country as prosperous as India so far as produce is concerned. But it is a matter for regret that lakhs of our brethren have died of Lunges crores are living on half meals. Lakhs of our brethren have died of hungry crores are living on half meals. Lakhs are becoming victims to poverty... the tyranny has reached its limits. Arise! Brethren Arise! Gods help is with you. Wreak vengeance on the tyrants for wrong done to the oppressed. Remove the tyrannical English from our country".²⁰

CONCLUSION:

The war was not started to decide the fate of Constantinople or to wipe, out the name of Turks, getting France and Britain apart, even Russia entertained no idea. The war was the direct result of German ambition cherished for forty years. Hence the allies were engaged in the destruction of German ascendancy and the dispelling of her vanitation. There was an undercurrent of pro-Turkish feeling amongst the Muslims in Madras and the news of the sinking of the Allies ships in the Dardanelles received with some satisfaction as an indication of the failure of the operation against Constantinople; but in the district the attitude of Muslims reported to be satisfactory.²¹

INFLUENCE OF CASTE WITHIN THE CHRISTIANITY

K. Gangaiah

This paper is an attempt at the existence and the extent of the practice of caste discrimination within Christian Church with special reference to the Roman Catholic Church in South India. The Hindu Society is one of the most complexes of societies. Peculiar only to it is the caste-system. It was on the axis of caste-system that the institutions revolved and social relations were based. Caste system has been inextricably interwoven in the Hindu Society. Many stories have been woven round the emergence and the growth of the Hindu Caste-System. Downtrodden class in India has always been victim of unequal treatment, casteism and social exploitation. In order to seek solace and relief from their pathetic condition they are still coming under the aegis of church for the last 3 or 4 centuries. But, here, too, they have been exploited in the name of caste and race. The hope with which they had come in the Christianity seems to have forfeited. On the contrary, they are now entangled in even deeper quagmire of inequality. Dalit Christians are the backbone of Catholic Church in India but their participation in the structure of Catholic Church is zero. Bishop, Father and Cardinal from this class are rare to find and those who somehow managed after hard fought struggle are standing marginalized in the society. They are being treated differently by their upper-class brothers (Bishops and Fathers).¹ The Christianity in India is a hinduised idea which has incorporated all socio-cultural caste rites and rules of the Hindu community into the practices of Indian Christianity.² Dr. Ambedkar in his unpublished essay "Christianizing the Untouchables and Condition of Converts" describes how caste system had invaded the Christian religion in India.³

No aspect of Dalit Christian life has received more scholarly attention than has the role which caste play within the Christian

community and churches. In South India, where several castes of different status, converted into Christianity in a large numbers, thus in the South India there are some villages where both the Dalits and the dominant castes are Christians, where as in the cities, caste can provide a basis for potential alliances in church politics. But, this is not cause in the North India, where the local Christian Population is overwhelmingly Dalit background. Even in the cities there are not enough Christians from one dominant caste to make caste the basis for political alliances

Theoretically, there is no place for non-equality and racism in the Christianity and when it is attached with identity of Catholic Church; the concept of caste automatically vanishes like camphor as the word 'Catholic- means- Universal'. There is only one head of this universal community of people and that is none other than representative of Vicar of Christ which is responsible for recruitment of Bishops in order to guide their disciples. In that way Holy Father/Pope are responsible for maintaining 'Kingdom of heaven' on the earth.

Caste has not affected Christian prayers or Christian rite as such. It has affected the place Dalit and non-Dalit Christians occupy and the roles they play in regular Sunday prayers and in special Christian rite. In Kerala Dalit Christians were given separate place of worship in the roman Catholic, Mar Thoma and Church of South India Dioceses, at least until late 1960s.⁴ In the South India caste has played a little role in Protestant Church than in Catholic churches, where separate seating for upper caste and Dalit Catholics still continues. There are also separate burial places in Catholic cemeteries as well. Dalits communities have been assigned inferior roles in the Catholic mass, in Catholic funerals, and in the celebration of Christian festivals.⁵ Congregations are made up of People from

different castes, including Dalit communities, but similar classes. Caste Christians avoid marriage alliances with Christians known to be Dalit communities, but not necessarily with those of the same classes who are "casteless" are whose castes are unknown.⁶

Catholic Church has completely failed in its duty to provide equality and justice to that majority of converted people under the structure controlled by the Pope. The resources have been captured by upper-class Christians. After independence of India Catholic Church has immensely progressed which is reflected from heavy increase in the number of schools, colleges, social institutions, new diocese, Fathers, Bishops, nuns and their followers however, despite this entire progress one thing that has not changed is the status of Dalit Christians.⁷ Thousands of organizations related to education, health and non-governmental organizations are being run by church and right to run these institutions has been conferred by Indian constitution. The structure of church being run under Vatican has failed to do justice to the Dalit Christians. Understanding the gravity of the situation Pope John Paul-II had severely criticized the attitude of unequal treatment and discriminatory approach in the church. In 2003, he had said that Bishops were appointed to look after lambs and it is their duty to abolish any kind of discrimination prevalent in the Catholic Church.⁸

One of the studies of Catholic villages in the Ramnad district of Tamilnadu that for Christians as for Hindus "the cultural definition of pollution in inter-caste relation includes notions of service and subordination."⁹ These may be Exceptions rather than the rule, but they do indicate that caste still functions in times and places Christians consider sacred

The castes backgrounds of the clergy than that the lay leadership of the churches. Indeed, not surprisingly, Dalit inclusion in the Christian clergy follows the pattern of Dalit place and role in Christian worship. In Kerala there were no Dalit priests in the Mar Thoma or Jacobite churches of Kerala by 1968, where as there were 13 "Backward Class" clergy in just the Madhya Kerala diocese of the Church of South India by that time.¹⁰ A study of the Roman Catholic clergy in Tamilnadu in the late 1980s showed that a mere 3.09% were Dalits; in 1990 the percentage

in Pondicherry was 12.8%, and perhaps somewhat higher in Andhra Pradesh.¹¹ Almost all the clergy in the Protestant Church in Andhra Pradesh are from Dalit communities. Dalits have made more progress in the Protestant churches. At present many of the bishops and church of South Indian have been Dalits. Most recent development in church of south India in Andhra Pradesh the women Bishop has been appointed, this appointment is the first in India a women has being a Bishop named Rev. Pushpa Latha. She also hails from downtrodden communities. Rev. will head Nandyal Diocese spread over districts in Rayalaseema and part of Prakasam district with a membership of 90,000 people. In the world she stood second women Bishop where as the first is Rev. Patricia from the church of Ireland.¹² While statistics on the Protestant clergy are not available, but where ever we go in South India the Protestant clergy are from Dalit background, a survey of theological students and faculty in the mid-1980s. Indicated that just over half the students but only 13% of the faculty were Dalits.¹³

It is the urban elites and middle classes, both classes, both clergy and laity, who have controlled the structures, institutions, and projects of the churches in both the North and the South India. Caste has certainly played its role in their struggles for power within the churches, at least in the South. Where caste provides the basis for informal political alliances from the congregational level on up, the basic division has been between Dalits and non-Dalits, except among Andhra Pradesh Protestants, where the rivalry between Madigas and Malas has been even more serious because by using the caste the leaders try to capture the administrative positions in the administration of the Churches. The politics of caste affects not only elections to positions of leadership and power, but also appointments and promotions in Christian institutions.¹⁴

Since it is the urban and middle classes, whether Dalit or non-Dalit, who dominate the decision-making bodies of the churches, their priorities in ministry and mission, rather than those of rural, uneducated or poor Christians, whether Dalit or non-Dalit, have been the churches' priorities. Thus, while considerations of caste or caste hierarchy have not been involved in determining the churches' priorities, those

priorities which have been set have benefitted those categories of Christians in which Dalits are fewest at the expense of those in which Dalits form the vast majority. Moreover, as with the government so also in the churches, it has been less in establishing than in implementing policy and program that Dalit interests have suffered most. Only in the mid-1970s did the churches begin to take note of specifically Dalit grievances within the Christian community and begin to address them. However, even after that, in local caste conflicts the church authorities stood behind the dominant caste Christians rather than the Dalit Christians.¹⁵

According to official estimates of government, there are 30 million Christians in the country and 70 percent of this population has directly come from socially and economically downtrodden community popularly known as 'Dalits'. However, as per unofficial figures the population of minority Christians is not less than 60-70 million. Irony is that; these people have been constantly suppressed and exploited even under the structure of Catholic Church. They are ridiculed for their sacrifices made hundreds of years ago for the church. They don't command equal status in the existing structure of church and this has made the sacrifices futile. According to Christianity scriptures that God has created people with his own image and this has become founding stone of equality of human values in Christian society. But, they are continuously meted out differential treatment in the name of caste and birth.¹⁶

Dalit Christians have protested against this bias in the church in a variety of ways. In 1964 a group of "Backward Class Christians" under the leadership of the Rev.V.J.Stephen left the Madhya Kerala Diocese of the Church of South India of form the Travancore Cochin Anglican (C.M.S.) Church. This was one of the more recent revolts in a long series which had resulted in Dalit Christians leaving one church to either join or form another in protest against caste discrimination. A Church of South India commission investigating the grievances of Dalit Christians, whether they split off or remained with the Church of South India, First and foremost is the feeling that they are despised, not taken seriously, overlooked, humiliated or simply forgotten. They feel that again and again affairs in the diocese are arranged as if they did not

exist. Caste appellations are still occasionally used in Church when they have been abandoned even by Hindus. Backward class desires and claims seem again and again to be put on the waiting list, while projects which they feel aim chiefly at the benefit of the Syrian community seem to get preferential consideration. In appointments, in distribution of charity, in pastoral care and in the attitude shown to them, in disputes with the authorities, the treatment they receive, when compared with that received by their Syrian brothers, suggests a lack of sympathy, courtesy and respect.¹⁷

The second and third reasons given were "a very serious failure in the pastoral care of these people" and their obvious under-representation in the diocesan council and its boards.¹⁸ A Dalit was elected assistant bishop as the Commission had recommended and in 1974 became bishop of the diocese for six years. A Dalit was appointed diocesan development officer only in 1972. However, the procedures for Council elections, which heavily favored the Syrian minority over the Dalit minority, were not changed. Thus, when a Syrian became bishop in 1980, the situation reverted to what it had been in the 1960 except that the new bishop faced a highly politicized and well-organized Dalit Christian movement which had developed during his predecessor's time. In 1982 they demanded not only changes in the election procedures but also, quite significantly, that half of "all Diocesan job opportunities and key positions like Diocesan Secretary, Treasurer and other [be reserved] for the Backward community."¹⁹ These demands were backed up by large and persistent demonstrations, picketing and fast through 1986.²⁰

A more serious form of revolt has been conversion to other religions. There were Dalit Christians in villages near Meenakshipuram who converted to Islam along with other Dalits in 1981. In investigating these conversions in tow Protestant villages Andrew Wingate noted that in one Dalits suffered from almost total pastoral neglect, whereas in the other pastoral visits were regular but perfunctory. "They come, they preach, they eat in the teachers' houses, and they go" the way how the people described them.²¹ During roughly the same period (July 1980 – February 1983) another study reported that 2564 Dalit Catholics in Tamilnadu reverted to Hinduism

because of caste discrimination in the church²² while large number in Andhra Pradesh were won back to Hinduism.²³ If the petitions of the large conference of Dalit Christmas from Tamilnadu, Andhra Pradesh and Karnataka held in Vellore on January 14,1982 is indicative of wider Dalit Christians sentiment, then the dominance of higher caste Christians in church bodies and their use of this power to give their own people access to educational opportunities and jobs at the expense of Dalit Christians is the form of caste discrimination most resented.²⁴

The National Christian Council of India, the Catholic Bishops' Conference of India, and the Catholic Union of India jointly sponsored a National Convention on the Plight of Christians of Dalit Origin at Bangalore in June 1978, because this did so much to publicize severity of the problem at least within the Christian churches.

The convention was a large gathering of over 200 people which included some of the top leadership of the churches. Dalit Christians were present, and presented papers, and shared in the leadership of the conference. The emphasis of the programme was on sharing information and organizing for appropriate action. There was a background paper summarizing the churches' efforts since Independence "in the cause of Christians of Dalit origin."²⁵ Presentations were made on the legal aspects of the problem, on the harsh realities Dalit Christians faced, and on casteism in the churches. The Convention both made social justice its priority concern and focused attention primarily upon the Christian community. In its recommendations and closing message, it stated that the churches had to clean house by ending discrimination and injustice within the Churches and in the Christian community, they had to be educated about the plight of Dalit Christians and to align themselves with the poor and oppressed, they had to take steps to end discrimination against Dalit Christians by the government and society at large.²⁶ The delegation of Dalit Christian Liberation Movement (DCLM) had a petition to Pope John Paul- II Regarding the problem of about 20 million Dalit Christians who form a great majority within the church and of about 200 million Dalits in the whole of India. Their request for an appointment for a delegation of Dalit Christian Liberation Movement (DCLM)

during His Holiness Pope John Paul II India's visit in November 1999, to meet him and make representation on the problems of Dalit Christians in the Catholic Church in India.²⁷

Except in the matter of religious belief there is absolutely no differentiation between the converts and their Hindu brethren. In a Caste ridden society as we have in India, Caste practices and prejudices die hard. Hence Christians of Dalit origin suffer from disabilities of the practice of untouchability.²⁸

There is caste in the churches. However, it is not the same in all the churches. In the North caste has been largely replaced by class within the Christian community, but a sacral view of caste continues to define Dalit Christian relations with dominant castes of other religions, especially in the villages. In the South the associational view of caste predominates within the Christian community, largely because of the existence of large bodies of Christians belonging to Castes of different status: Kammas and Reddys vs. Malas and Madigas in Andhra Pradesh; Vellalas and Nadars vs. Adi Dravidas in Tamilnadu; Syrians vs. Pulayas and Parayas in Kerala. However a sacral view of caste has not yet died out in the churches, especially in Kerala, and outside Kerala especially in villages and among Roman Catholics. Caste plays too strong a role in south Indian church politics to say that it has been replaced by class, even in the cities. Second, while the church in its role as educator and employer has played in significant role in the creation of Dalit Christian middle class, it is finding it increasingly difficult to continue to do that. Competition for education and for jobs has become so acute that the churches cannot satisfy all applicants. In the competition the elites, among whom Dalits are few, have a great advantage because of their superior social networks and access to people with the power to decide. Thus the vast majority of Dalit Christmas is in double bind of increasing intensity: no room in Christian places of employment and no places outside because they are not included in scheduled Caste quotas. For this reason economic issues have come to play a key role in Dalit Christian politics.

In fact, the caste system has been a unique phenomenon in India alone. Elsewhere in the world, there were Christian denominational divisions as in Europe, tribal divisions in Africa,

sectarian differences in the Muslim world. Sometimes as in Africa and the Muslim world, these artificial divisions result in sanguinary fights, and sooner they end in some settlement. They do not split the entire society so brazenly as the caste-system in India. In fact, every lane and by lane in India stand divided on caste-lines.

We are happy that the Church itself has now come forward to take up this cause. But the question still remains that before it tells the govt. to give reservations to Dalit Christians, it must reserve 80% of the positions and privileges to Dalit Christians inside the Church.²⁹

MORAL OUTRAGES AND RELIGIOUS SPACE: A STUDY ON THE PEASANT MOBILIZATION DURING 19TH AND 20TH CENTURY OF SOUTH MALABAR

Hamza Thodengal

In south Malabar during 19th and 20th century faced many uprisings against their colonial masters and land lords. The rioters of them were mostly from the community of Muslims. The Muslims in Malabar area were called Mappilas. They were the majority of this area. The causes of the Mappila outbreaks have been a subject of controversy among scholars and administrators. Some attribute resentment against British rule and agrarian grievances against Hindu landlords. The other group argued that extreme indigence as the root causes of these civil disturbances, while some others impute a compound of ignorance, superstition, lack of education, poverty, religious fanaticism and malformation of character of this community.

The Muslims of Malabar generally known as *Mappilas*, are either descendants of Arab traders or of 'Hindu' converts to Islam. Malabar was the chief center of Arab trading activities right from 4th century AD and by about 7th century AD and several Arabs had taken permanent residence in some port cities of Malabar.¹ Hence it is probable that Islam came to Kerala almost immediately after it was founded in 7th century AD. Several foreign accounts have mentioned about the existence of considerable Muslim population in coastal towns of Malabar between 9th and 16th century AD. Duarte Barbosa, who lived in Malabar during the first decade of 16th century, observed that 'the Muslims were so rooted in the soil throughout Malabar that it seems that they are a fifth part of its people, spread over all its kingdom and provinces.'² Shaik Zainuddin in his *Tuhfathul Mujahedeen*, written in 16th century, placed *Mappilas* at 10% of the total population. Up to 16th century, as noticed by the contemporary observers, these *Mappilas* settled mainly along the coastal tracts. However between 16th and 19th centuries, the *Mappilas* had shifted to the interior parts of Malabar and so far no plausible explanation has been given to this shift. K.N. Panikkar is of the view that it was due to the increase in conversion and European intervention in Malabar that began in 16th century, which forced *Mappilas* to settle in the interior taluks of Malabar.³

When we analyze these various components, it will be found that most of them were common causes of resentment among both Hindus and Muslims alike in Malabar. Only in the case of two, namely, antagonism against the British, and religious extremism, Muslims were different from the Hindus. Through this paper I am try to analyze the root causes of Mappila outrages in south Malabar and the social ecology in south Malabar during the time of colonialism.

With the coming of Europeans, the *Mappilas* who had been participants and collaborators of Arab trade were looked upon as enemies and as a consequence, a good number of *Mappilas* employed in ports might have been forced to migrate to the interior in search of alternate employment. What is relevant in this context is the fact that by about 20th century the Mappila population became predominantly rural. Unlike the coastal *Mappilas* who engaged in trade, the interior *Mappilas* were cultivating tenants, landless peasants and petty traders.

The British census data tell us about the steady growth of the community in Malabar. From 1, 70,113 in 1807, the strength of the community rose to 10, 04,321 in 1921⁴. The census tables show that the growth rate of Mappila population was much higher than that of other communities. Another notable aspect of demography of *Mappilas* was that 60% of them were concentrated in three southern Taluks of Malabar - Ernad, Walluvanad and Ponnani. By the census of 1961, the *Mappilas* constituted 31.43% of the total population of Malabar area, which comes around 67% of the total Muslim population of Kerala. As Gleason stated, 'Looking at a map there is no area so extensive with so concentrated a Muslim population in all of peninsular India as in Malabar.'⁵

Encounter with the Portuguese

The Portuguese arrival to Kerala during 15th and the 16th century in which affected the political balance of the Malabar Coast. As the main motivation for the Portuguese expedition was to establish a direct trade route with India, the conflict between the Muslim population and the Portuguese was predictable from the

beginning. The main reason that the Portuguese established their earliest trade center in the city of Cochin, not on the port of Calicut where Vasco Da Gama first anchored his fleet, was the conflict between the Muslims of Calicut and Da Gama's fleet. Traditionally, the Muslims played a major role in Calicut society as the military leaders, foreign ambassadors, or merchants in the overseas trade. Therefore, when Vasco Da Gama, who mistook the Zamorin as a Christian king, asked the Zamorin of Calicut to exclude the Arab merchants in favor of the Portuguese, the Zamorin refused. This became the seed of long-lasting enmity between the Portuguese and the Zamora's Calicut. Sixteenth-century Portuguese historian Gaspar Correa records this incident as blaming the "Malabar Moors" that "they all agreed that with all the power of themselves and their property, they should get the Portuguese turned out of the country, which they would also do in all the other parts, in such manner as that they should not be able to trade nor profit, nor establish men at arms, whom the Portuguese would be unable to maintain because they were from a very distant country; and in navigating to India the sea would swallow up so many that a sufficient number of them never could come up to India to make themselves masters of it, and take possession of countries, and deprive them of the great footing and powers which they held in India". Although Correa's account is certainly biased against the Malabar Muslims, it is indicated in this passage that the Muslims in Malabar Coast and the Portuguese had clashing commercial interests. In this conflict, the response of Muslim population was as negative as that of the Portuguese; fearing that they would lose the privileges they enjoyed, the Muslim merchants of Calicut acted against the Portuguese. Because of the conflicting economic interests, the Portuguese sank ships of Muslim merchants, massacred many Muslims, and demolished mosques

The conflict between the Muslims and the Portuguese had another reason other than economic interest; the religion. The Portuguese were ardent Roman Catholics, and the hostility between the Muslims and the Christians in the Iberian Peninsula made the Portuguese consider the Malabar Muslims as their enemy from the beginning. On 3 January 1510 the Portuguese burned down the chief mosque in Calicut. There was also an incident in which a Portuguese boy

was taken to Mecca and converted to Islam; the Portuguese retaliated by attacking the ships going to the pilgrimage to Mecca, massacring the adult passengers, and converting the captured Muslim boys to Christianity. Also, after the establishment of the Goa Inquisition and arrival of the Jesuits, Muslims were persecuted and sometimes forced to convert to Christianity. This indicates while the religious hostility also played a role in the cultural conflict between the Muslims of Malabar and the Portuguese, the primary reason of their clash originated from the conflict of interest.

Encounter with the British

Under the British rule which lasted from 1795 to 1947, there were many conflicts between the British and the Malabar Muslims, and also between the Hindus and the Muslims. The main reason for such conflict were religious tensions which increased through the series of Mysore invasions, the will for freedom, and most importantly, some British policies which intentionally or accidentally proved to be more harmful to the Muslims than to other groups of indigenous population. The Background of the riots shows the misunderstanding of the local culture by the British. Traditionally the land tenure system in Malabar region included the Jenmi, Hindu landowners belonging to Brahmin caste who were forbidden to cultivate their own lands. The Nairs, were responsible for the security and supervision of the land and distribution of respective shares of produce, and the Thiyya (Hindu) and Mappila (Muslim) classes were the actual cultivators of the land. In this system all three classes harmoniously coexisted. The Jenmi was not allowed to evict the tenants under him unless for non-payment of rent, and the rights of the actual cultivators of the land were also respected as well as the rights of the Hindu landowners. However, lacking this knowledge, the British superimposed their own juridical concepts, most importantly the concept of absolute property rights, upon the existing legal system and customs of Malabar. As a result, all of the lands suddenly became the private property of the Hindu landowners and they were also granted the rights to freely evict the tenants and raise the rent. As a result, great hostility grew among the Mappilas against the Hindu landowners and the British colonial power.

British control of Malabar was established in 1792 following a costly war with Mysore. The immediate problem for the state was establishing a social base for their authority and recovering the war costs via tax collections. Land taxation requires identifiable property rights; in recognizing the Nair and Namboodiri claimants as "lords of the soil," the British effectively restored "the landed aristocracy of Namboodiri *Jenmies* and Nairs"⁷. Land taxes were over the course of the century recognized by subordinate colonial officials as excessive. Not only was the tax burden heavy, but its incidence was unequal; less well-connected villagers were over-assessed, the well-connected lightly assessed⁸

Malabar under colonial rule became in many ways the archetypal disintegrating agrarian system. With the introduction of colonial law, particularly the imposition of a legal system based on the absolute notion of land as private property, traditional overlords were able to evict tenants and raise rents according to the familiar rule of "what the market would bear," enforced by the police powers of a colonial state. Clearly the great transformation from above was one in which property claims were disentangled from their broader social moorings, and thus functions. As courts and administrative law protected the property claims of landlords, the necessity of good patron-client relations diminished; control of economic assets was guaranteed by higher authority. Within the landlord-tenant dyad, land revenue ultimately became the tenant's burden, concentrating the social pain of taxation both on weaker owners and on tenants in particular. As a consequence of the settlement, holdings in Malabar were far more concentrated than in the rest of Madras Presidency and the extent of landlessness much greater⁹

Resulting agrarian violence was expressed in the idiom of Islamic community and identity; the "Mappila outrages" which broke out during the nineteenth century were couched in oppositional terms of a Muslim community against a European state and Hindu landlords.¹⁰ uprisings began in 1836 and continued sporadically until the final dramatic outburst in 1921.

The original colonial diagnosis of the uprisings was "religious fanaticism" because of

the modes of organization, symbolism and ethnicity of participants and victims. Mappilas believed that to kill a landlord was not only no sin, but a source of religious merit. To die fighting the colonial state in *jihad* ensured the benefits of martyrdom. Conrad Wood (1978:133) goes so far as to argue that "the defining characteristic of the Mappilas, who had been peacefully in possession of the lands since the time of Hyder Ali's conquest, felt it no doubt as a bitter grievance that the Jenmies should have obtained the power to evict them, a power which did not intrinsically belong to them, and the influential men among them, looking about for means to protect themselves, set fanaticism in motion..."¹¹

The Mappila risings illustrate two points about the origins of mobilization of agrarian under classes for redress. First, in line with social theory on the causes of agrarian protest, an agrarian structure characterized by high levels of insecure tenancy, extreme inequalities in land ownership, and the resulting miserable terms of exchange between landed and landless generated the structural potential for agrarian radicalism. Secondly, "defensive reactions" of elements of society to dislocations engendered by market acting on new property rights drove extreme responses aimed at re-establishing traditional security.

The Moplah Rebellion illuminated and attacked the structural unity of landlordism and colonial rule. The colonial government was quite explicit in its recognition of dependence on the landed elite for continued hegemony and the landlords reciprocally depended on the colonial state's machinery to quash challenges to their local authority.

There are three major causes arguments by deferent scholars in this respect. The first discussion of land reform was generated within the colonial administration. Second by orientalist focus on "religious fanaticism," associated with the views of T.L. Strange.

There is a third view that the outbreaks had the character of religious colorings or fanaticism from the very beginning. The rebels who went on the war path had always the blessings of a 'thangal'. The rebels were adherents to their faith in the 'millenarian ideology' which Islam offered. In 19th century the 'Sufis' also influenced the Mappilas. The role of Ummer Khasi in the anti

tax campaign against British was well-known to the Mappilas. They were understood that the fight against their enemy was moral duty as Islam taught. In the words of Stephen Dale, "Fanaticism or agrarian discontent alone cannot be considered as the cause of the outbreak. The connection that existed between the two is important. There was real agrarian distress. These took the form of fanatical outbreaks due to the forces of history"¹³

'Religious spaces' and disputes are the other reason for the outbreaks. The Mappila settlements were found within a wider Hindu countryside, dominated by the Nambodiries and Nayars. Like any Muslim settlement in the Islamic world, the Mappila settlements grew around the center of Muslim worship, the Mosque. In the acquisition and construction of mosque lands for the purpose, the question of "religious space" was often contested by the Hindu community from the 19th century. Particularly in south Malabar where the janmitten relations were quite fragile, coincidentally, since the bulk of the tenants in the Eranad and Valluvanad taluks were Mappilas. The contestation of 'religious space' by the wider Hindu society became imminent in the wake of the peasant uprisings in the nineteenth and twentieth centuries¹⁴

As Stephan Dale has observed, the sense of economic insecurity and dependence among the Mappila tenants of south Malabar was also reflected in their inability to acquire mosque lands. Therefore, when disputes over mosques arose, they resented their subordination in a corporate sense, as member of a religious community.¹⁵ One of the social consequences of the uprising particularly that of the twentieth century episode was the friction over places of worship, which sometimes took violent forms. The economic rivalry between prosperous Thiyya toddy owners and the Mappilas took religious overtones in the form of building Thiyya temples and mosques. Within the Mappila community there was a contest between

various status groups over 'religious space' in the form of graves and burial grounds.¹⁶ In 1874, a proposal was made by the Mappilas for the introduction of a Bill into the Legislative Council of Madras, for the purpose of enabling them to acquire, by a compulsory process, land upon which mosques could be constructed and burials take place within the district of Malabar. After much hesitation, the Madras government enacted the Malabar Religious Sites Act in the same year to facilitate the acquisition of land for the construction of mosques or other places of worship and for burial grounds in Malabar¹⁷

Fanaticism of this violent type flourishes only upon sterile soil. When the people are poor and discontented, it flourishes apace like other crimes of violence. The grievous insecurity to which the working riots [peasants] are exposed by the existing system of landed tenures is undoubtedly largely to blame for the impoverished and discontented state of the peasantry, and a measure to protect the riot, of whatever class, is the means which seems to commend itself the most for amelioration of their condition. With settled homesteads and an assured income to all who are thrifty and industrious... it is certain that fanaticism would die a natural death."¹⁸

Conclusion

The long experience of peasant mobilization in Malabar depended not only on central facets of agrarian structure, which is historically given and not easily reducible to choice in any endogenous way, but on broader social ecology and political structure as well. Solution to the collective action problem could not rely on selective incentives, but did depend on organic political theory derived from praxis. "Moral outrage" was as important as material interest in motivating powerless people to face a repressive social order in rational expectation of deprivation or worse.

REPORT OF T. L. STRANGE AND ITS IMPACT UPON THE MAPPILAS OF MALABAR

V. Haridasan

Introduction

Malabar, the northern part of present Kerala state, came under the British rule in 1792. In the third Anglo-Mysore war Tipu Sultan was defeated by the English East India Company with the support of the Marathas and the Nizam of Hyderabad. By the treaty of Sreerangapattanam, political control over Malabar was taken over by the Company. Till 1800, Malabar was under the government of Bombay and after that under the Madras Presidency.¹ When the monopoly of trade, for which the European powers had struggled for centuries, came under the British, they undertook measures to enhance its volume. They also wanted to increase their income by collecting maximum revenue from the district. Immediately after the Sreerangapattanam treaty, the Bombay government appointed a Commission under Major Alexander Dow and William Samuel Farmer to administer the territory and report on the condition of the district and suggestions for future administrative plans. Later Jonathan Duncan and Charles Boddam, representatives of the Governor General joined in the Commission.² The second part of the report describes the steps taken by them for the consolidation of the political power of the Company at Malabar.³ The administrative arrangements made by the Commissioners led to many protest movements in the district. These movements were led by the native *rajas* and chiefs, the tribals, and the peasants. The revolt of

Pazhassi Raja (1793-1805), resistance by *Mappila* chiefs like Manjeri Attan Gurukkal, Unni Moosa and Chempan Pocker, and the Kurichiya Revolt (1812) were the important protest movements in the early period of the British rule in Malabar.

After the Kurichiya revolt of 1812, for more than two decades, the peace of Malabar was not seriously disturbed. During these years, the administrators of the English East India Company were engaged in reforming the system of revenue collection in the district. The Cornwallis system followed in the district from 1792 was critically examined and new reforms were introduced on the basis of the recommendations of Thomas Munro. Many regulations introduced in Madras Presidency with the aim of enhancing the collection of revenue. The powers and responsibilities of the village and taluk servants were redefined. Foremost aim behind the reforms was to regulate the revenue and judicial systems. The report of Graeme in 1822 on the revenue administration of Malabar and the subsequent changes introduced by the district administrators increased the hardships of the peasants.⁴ Naturally, the peasants began to protest against the unpopular policies of the British. A series of disturbances of the *Mappila* peasants of Malabar started in the thirties of the nineteenth century and it continued all throughout the century and reached its zenith in 1921.

Plight of the *Mappila* Peasants

Mappilas are those Muslims who are living in the coastal area of south-west India.⁵ The Muslims came to Malabar along with Arab traders and settled in the coastal regions of Malabar. By the advent of the Europeans the Arabs lost their domination in the Malabar Coast and it adversely affected the job opportunities of the Muslims. Gradually they migrated to the interior parts of Malabar through the river routes and settled in the plains of the district. They resorted in agriculture and petty trade activities for their livelihood. When *Mappilas* became tenants under the Hindu land lords the religious harmony hitherto existed was disturbed and it took a serious nature during the Mysorean rule over Malabar. The revenue reforms introduced by Hyder Ali and Tipu Sultan completely restructured the old system. They made cultivators as the owners of land and taxes were collected directly from the cultivators. Though the rate of tax fixed by the Mysore rulers was high, the cultivators felt security in their occupancy of cultivating land. The new reform raised the status of the cultivators as the owners of land.

The British occupation of Malabar completely changed the situation. The British triumph negatively affected the interests of the rural *Mappila* population. Because of two reasons they could not put up with the British. Firstly they defeated Tipu Sultan, a Muslim ruler. Secondly, the system of administration introduced by the British was against the interests of the *Mappilas*.⁶ They lost their occupancy rights over the land. Besides, the British reinstated the social and economic dominance of the Hindus in the rural society. The land lords, mostly Hindus, enjoyed the rights of coercion and eviction over their tenants. The regulations and rulings made by the courts and officers of the British robbed the rights of the peasants one after another.

The revenue demand of the Company immediately after its ascendancy in Malabar was very high. The local rajas and chiefs could not collect it and so the government directly took the charge of collecting revenue.⁷ Majority of the cultivators were *Mappilas* and they revolted against the new reforms. At the beginning of the nineteenth century the British monopolized the trade of salt, tobacco, timber and spices. It led to loss of livelihood to many villagers especially the

Mappilas. There was strict vigilance to prevent smuggling. Those who engaged in illegal traffic of these goods were captured by the guards and severely punished. As a result of the monopolization of production and distribution of goods, its prices began to increase. It again increased the hardships of people. The peasants and agricultural labourers were the worst affected group by the monopolization. Many of them were either deprived of their sources of livelihood or their additional income. The unscientific methods of collection of revenue, the one-sided attitudes of the government servants, illegal exactions by the *Janmis* were other important reasons for the plight of the peasants and poor people of Malabar. Protest of the people was expressed through the regular occurrence of revolts, thefts and social banditry.⁸

***Mappila* Outbreaks**

Though the sufferings by the above described issues were affected all sections of the poor people in the villages of Malabar, *Mappilas* alone were able to convert discontent into organized action. The first recorded outbreak was on 26 November 1836 at Pandalur *desam* in Ernad taluk. A *Mappila* named Kallingal Coonjolen stabbed one Kaneeshan Chackoo Panicker who subsequently died of his wounds.⁹ It was followed by a series of outbreaks in different taluks of South Malabar. In the period between 1836 and 1853 about twenty-two outbreaks took place besides numerous unsuccessful risings and conspiracies.¹⁰ The Manjeri outbreak of 1849 was one of the bloodiest among them. The participants of these revolts were generally poor and illiterate *Mappilas*. The *Ulemas* and priests of *Mappila* community preached their illiterate followers that the murder of a landlord or his agent will lead them to heaven. If one dies in an encounter with their enemies, he may go to heaven. It is clear that religion was an element in these revolts. But agrarian discontent and despotic nature of the government were the real reason behind the wrath of the poor peasants against their masters. The continuance occurrence of outbreaks made the government to think in terms of a serious enquiry about the matter. In 1852, Mr. Canolly, the district magistrate of Malabar, in a letter suggested to appoint a commission to report on the question of *Mappila* disturbances generally.¹¹ Canolly, in his letter to the government, regretted

that no measures taken by him till that time had reached the root of the evil and it was growing in place of decaying. The government decided to accept the suggestion of Canolly and appointed Mr. Thomas Lumsden Strange, popularly known as T.L. Strange as Special Commissioner for enquiring into the *Mappila* disturbances, their causes and remedies. He was directed to enter into the free interaction with all classes. He had the duty to ascertain the causes of the outbreaks and submit suggestions to prevent such outbreaks in future.

Report of Strange Commission

T.L. Strange was chauvinistic in preparing his report. His conclusions about the Muslim community of Malabar had far reaching impact in the Malabar politics. He opined that religious fanaticism was the most important reason for most of the outbreaks. In his report he made detailed analysis about all incidents. All persons involved in the 31 cases, only 14 for whom were any personal cause of provocation.¹² In seven cases land was the reason for quarrel. In nine cases the parties were instigated to engage in crime by others. He concluded that 'in no instance can any outbreak or threat of outbreak that had arisen be attributed to the oppression of tenants by landlords'. Strange in his report gave clean chit to the landlords of Malabar. He reported that the general character of the dealings of the Hindu landlords towards their tenants, whether *Mappila* or Hindu is 'mild, equitable and forbearing'.¹³ On the other hand the *Mappila* tenants of the affected areas of South Malabar were very prone to evade their obligations and to resort to false and litigious pleas. In his report Strange made some observations about the *Mappilas* of Malabar. The *Mappilas* of interior Malabar were always lawless, even in the time of Mysore rule. They were steeped in ignorance and susceptible to the teachings of ambitious and fanatical priests. As a result of that the Hindus in those parts of outbreaks were lived in fear. The Hindu landlords were not daring enough to evict the *Mappila* tenants who did not pay their rent.¹⁴ Desire for plunder was an important motive behind these outbreaks. Strange had the opinion that the Hindus of the district were living in a deplorable condition and the prestige of the British government traumatized.

Mr. Strange submitted his report in September 1852. He suggested many reforms to prevent the recurring of *Mappila* outbreaks in Malabar. He observed that the weakness of the existing police system was an important reason for failure in defending the outbreaks. He recommended establishing a trained police force to check the *Mappila* outbreaks and to create confidence among the Hindus and executive officers of the government.¹⁵ The inefficiency of the police force always necessitated the interference of military to suppress outbreaks. Presence of the military will increase the fear of the inhabitants and strengthen protests. So he proposed force of 200 with a monthly expense of rupees 1140. He also proposed to meet the amount from the fines imposed upon *Mappila* communities.¹⁶

Strange gave consent to the measures already in practice in the affected areas. They were escheating the property of those *Mappilas* who were guilty of fanatic outrages, fining the '*Mappila* districts' where such outbreaks occur, deporting the suspected and restrictions on the possession of arms like *peishan cutti* or domestic knife.¹⁷ He proposed three other acts to suffice the existing punitive measures. He asked to stop the unrestricted construction of mosques by the *Mappilas* in the district. Strange had the opinion that fining of the convicted alone is not enough to prevent such crimes. So he proposed to extend punishment to the families of the convicted and chief people of their caste, as they are cognizant of their designs and could check them.¹⁸ Another important recommendation of Strange was to organize a special police force to suppress the *Mappila* uprisings in future. Further, this force should be exclusively composed of Hindus. He was against the use of European force for the suppression of *Mappila* outbreaks.

Many proposals in the report of T.L. Strange were accepted by the government and laws and acts were passed accordingly. Acts XXIII and XXIV were passed in 1854. The first Act was intended to fine the entire *Mappilas* of the localities disturbed. Strange in his report proposed to use the amount collected as fine to meet the expense of the new police force. The new police force was established in 1854. Act XXIV of 1854 was to prevent the possession of war knives by local people. It empowered the District Magistrate of Malabar to conduct search

by his police force to any place suspected to be kept the *Ayudha Kathi* or war knife. The persons who were found to be kept such weapons can be punished with a fine not more than fifty rupees or imprisonment of six months or both.¹⁹ Canolly and his assistants conducted searches for weapons all throughout the district and captured many weapons. The target of the government through this Act was the *Mappilas* of Malabar. The *Kolkars*, the executive assistants of *Adhikaris* were the chief instruments for the searches. They also served as the chief informants.

Conclusion

T. L. Strange, while preparing his report, did not consider the real factors behind the outbreaks. The *Mappila* outrages were directed against social and economic domination of upper castes and the political authority of the British. Strange deliberately ignored this facts and portrayed it as communal uprisings. The report reflected the prejudice of the British towards the Muslims of Malabar. He tried to whitewash the cruelties of the landlords and government servants. T. L. Strange prepared a report that was expected by the government. It was proved by the steps taken by the government after the submission of his report. Almost all his suggestions except Hinduisation of the new police force and restriction for constructing mosques were immediately implemented by the government. The new police force was an instrument of suppression in Malabar. The raids for war-knives, fining of

villages, and deportation of convicts made the condition of Malabar more turbulent.

The *Mappila* Outrages Act of 1854 and its periodic renewal was an outcome of the report of Strange. This Act was used against all suspected *Mappilas*. During the period of the revolt of 1921, the British government attempted to arrest M.P. Narayana Menon, a Hindu Congress leader, under this Act. Strange's report and consequent reforms and approaches of the government towards the *Mappilas* of Malabar widened the gap between Hindus and Muslims of Malabar. Abhorrence of the *Mappilas* towards the colonial government was also increased by the reforms in accordance with the report. The immediate effect of it was the murder of Canolly, the Collector of Malabar. The failure of Mr. Strange and the government to realize the real factors behind the *Mappila* unrests caused for the continuation of such outbreaks all throughout the British period. Mr. Strange could not identify landlord as a chief wrongdoer. Instead he blamed the poor peasants for the entire tragedies. Though religion was a factor in the outbreaks, agrarian discontents dominated that. It was underlined in another report submitted by William Logan, thirty years later. That view was not accepted by the government. So the views of T.L. Strange towards the *Mappila* community of Malabar continued as the official view of the British till the time of independence. The negative attitude of the administrators adversely affected progress of the *Mappila* community in colonial Malabar.

MUSLIMS AND THE ANTI - HINDI AGITATIONS IN TAMIL NADU

L. Jafarunnisa Begum

The Congress adopted the policy of obtaining a single language for the entire sub-continent and sought, from 1918 onwards to introduce Hindi in south, even though it employed Tamil for propaganda and mobilization. The effort to popularize Hindi among south Indians (the 'Hindi movement' as it was called in Congress circles) was inaugurated by M.K. Gandhi in June 1918, the Dakshin Bharat Hindi Prachar Sabha was founded in Madras to spread the knowledge of Hindi in the linguistic region of south India. Through the late 1920s and 1930s, the Congress pursued a self-assured policy of Hindi popularization, C. Rajagopalachari, S.Satyamurti, and K. Santhanam Designating it the lingua franca of the India-to-come, and advising Tamils to adopt it. This propaganda was funded by north Indian sources and attempts were made raise money in the south as well.

The work of the Hindi Prachar Sabha had been effective for more than a decade. In 1931 Kaka Saheb of the Gujarat Vidhyapith, Ahmedabad, declared that the Hindi Prachar movement had done 'splendid work' and that he was highly impressed with the enthusiasm and response for Hindi among south Indians. Further within south India, certain areas were more enthusiastic than others, Andhra seems to make a heroic attempt to learn Hindi. The all-India nationalist movement propagated Hindi as the Language that would bind all Indians. Incidentally placed its hopes in Tamil as the bond that would die together all Tamil speakers, Hindu, Muslim, and Christian. But Tamil opposed it strongly. Resistance to Congress initiatives for the spread of Hindi from the late 1930s to 1960s formed the cornerstone of Dravidian Tamil nationalism. The Dravidian movement for its part voiced its fear that 'Aryan culture' would be imposed in south to the neglect of Tamil.

For Ramasamy, one of the means by which Tamils could recover their self-respect was opposition to Hindi as the Sanskritic imposition of Brahmins. He was consistently opposed to Hindi propaganda in the south even as early as 1924-5. This resentment against Hindi was transformed into a mass agitation when the Congress government in July 1937 made Hindi

a Compulsory subject for the first three classes in 125 identified secondary schools. Ramasamy consciously incorporated Muslims within the Dravidian movement against Hindi by affirming that Muslims were Tamil. Muslims in turn responded through a significant participation in the anti-Hindi agitations. This clearly reflected their aspiration to be part of a Dravidian / Tamil 'community'. Tamil Muslim leaders were central figures in the anti-Hindi agitations and the meetings of the Tamil Nadu Muslims League between 1937 and 1940 provided a forum for protesting against Hindi. In fact, P. Khalifullah, a Muslim Leaguer and member of the Legislative Assembly, enjoys the distinction of being the first Tamil to raise his voice against the imposition of Hindi.

Subsequently when P. Khalifullah became a minister in the Interim Congress Ministry in Madras, he endorsed Urdu in the Hindi-Urdu controversy in north India. In 1937 he maintained that Urdu was a finely developed, majestic, and beautiful language. He argued that the Congress, in promoting Hindi, was trying to give life to a dying language and Urdu should instead be the lingua franca in order to give real significance to Hindu-Muslim unity. Other Tamil Muslims echoed Khalifullah's perspectives. K.M. Hanif of Coimbatore stated, if Hindu becomes compulsory, Muslim culture and civilization would surely be affected. For if Hindi becomes compulsory, then Muslims students would find it difficult to learn Arabic, Persian, and Urdu. Sultan Baghdadi, the editor of the Tamil Muslim journal samarasam, along with C.N Annadurai and Navalur Somasundara Bharathiar, participated in a meeting in Madras on 5 September 1937, to plan the first anti-Hindi agitation. Sharfudeen from Vellore and Mohideen from Tripipur were the other Muslim personalities who accompanied Khalifullah.

Muslim participation in the anti-Hindi agitations took different forms. S.K Mohammed Haneef composed a song asking Muslims to protect Tamil by taking part in the anti-Hindi agitation. Reminding his people that they belonged to the heroic community. Khaja Mian Rowther provided support to Ramasamy in August 1939 at Trichy. More than 2000 Muslims

turned up at a public meeting in Vaniyambadi to protest against Hindi. Moulvi S. Mohideen Baqawi, a Muslim Leaguer joined in the black flag protest at poraiyar in connection with the anti-Hindi agitation. At one anti-Hindi meeting on the Madras Triplicane Beach Muslims turned to face west to offer namaz, and then turned east to listen to the speeches of the meeting, Vellore Sharfudeen of the North Arcot Muslim League had spoken at this meeting in praise of Ramasamy and the agitation.

The dynamic and reciprocal nature of the interaction between Islam and the self-Respect movement was exemplified by the manner in which Ramasamy were invited to speak at the Prophet's Birthday celebrations and Daud Shah and Khalifullah proved to be a unique presence at these conferences. P. Khalifullah proved to be a unique presence at these conferences. He presided over the second north Arcot district self-Respect conferences at Ambur in November 1937 and hoisted the Tamil flag at the Coimbatore district Muslim League conference, and also spoke at the commencement of the anti-Hindi procession which left Trichy for Madras in August 1938. Khalifullah presided over a mammoth meeting of 50,000 Tamils in June 1938 on Madras Beach, and later in October 1938 condemned the arrest of the editor of the Dravidian paper Viduthalai.

The Tamil Nadu Muslim League's opposition to Hindi was both an opportunity for it to follow the central League leadership's policy the Hindi-Urdu issue as well as to maintain a local alliance with the self-Respect movement. Significantly, while Jinnah used the term 'Hindu' elsewhere, in the context of Madras, he likened Congress attempts to introduce Hindi for Muslims children in schools to thrusting a compulsory 'Aryan religion' on them. The self-Respect movement and the Muslim League had valuable allies in each other on the Hindi issue. The Congress argued that the propagation of Hindi/ Hindustani would promote Hindu-Muslim unity. Through such an argument, the congress sought to wean Muslims away from participation in the anti-Hindi agitations. It presented 'Hindi' to Tamil Muslims as 'Hindustani', and suggested that since Hindustani was, in its perception, a language of the 'Indian Muslims', Tamil Muslims could have no objection to it. In the manner,

Congress policy treated Tamil Muslims primarily as an all-India religious community.

Tamil Muslims were not persuaded by congress propaganda and continued their agitation. M.A Rahman, a Muslim Leaguer from Coimbatore, was unambiguous in his criticism of Rajagopalachari's claim that Muslims were in favour of Hindi. Rahman was critical of Muslims who endorsed the positions of Rajagopalachari in favour of Hindi. Congress assumptions regarding Indian religious communities was most visibly demonstrated in the nature of its propaganda material for the Muslim Mass Contact Campaign of 1939. It did not arrange its propaganda material in Tamil for Mass contact in south India. M.K. Kader, Secretary of the Kayalpattinam Town Congress Committee in Tirunelveli, was told by the All-India Congress Committee office in Allahabad that they did not possess this literature in English, but they did have some pamphlets in Urdu. It appeared that the congress took Muslims mass contact rather more seriously in the north than other part of India. M.K. Syed Ahmed, also from Kayalpattinam wrote to the AICC complaining that the Tamil Nadu Congress Committee (henceforth TNCC) was indifferent by informing the central leadership that it was enrolling Muslims briskly.

Another factor played a not insignificant role. If Tamil Muslims rejected the Congress contention that the adoption of Hindi would promote Hindu-Muslim unity, Dakhni Muslims, whose mother tongue was Urdu, accepted it more readily. The Tamil Muslim rejection of Hindi/Hindustani was not just a rejoinder to Congress policy but simultaneously challenged the power of Dakhni Muslims who were part of the Congress party in Tamil Nadu. When the subject of Hindi being introduced in the Madras presidency was debated in the Urdu Press, Nehru as AICC President enquires from Rajagopalachari, the Chief Minister of Madras, about the facilities available for those preferred to learn Hindustani in the Urdu rather than the Hindi script. In response Rajagopalachari hurried through a public statement, to make the position of his government and that of the Provincial Congress clear on the choice of script.

We have no such intention of forcing either the Devanagari or the Urdu script, but have definitely decided on leaving it as a matter for

option. It will be open to Mussalman children or others who prefer the Urdu script, to use and to be taught through and it would be equally open to those who prefer the Devanagari character to use it for learning the language. Rajagopalachari issued orders to the Madras Education Department to prepare and publish Hindustani books in both Devanagari and Urdu scripts. To approve these manuscripts, he also sought the help of a respected Muslim academic, Mohammed Abdul Haq of the Government Muslim College, Madras. The Education Department voiced Rajagopalachari concern regarding the recruitment of Hindustani teachers capable of handling the subject in the Urdu script. The reality was that many Hindustani teachers did not know the Urdu script. This seemed to justify the fears of Tamil and Dakhni Muslims that learning Hindustani would mean doing so in Devanagari. This was proved by a departmental survey which showed that Muslim students learning Hindustani in the Urdu script were only 325 in number, or one –third of all Muslim students enrolled in the compulsory introduction scheme in the Madras Presidency.

This offer a 'choice' on the question of the script appeared to prove attractive to Dakhni Muslims. However, Tamil Muslims found such a 'choice' over script meaningless when Hindi was

made compulsory. The very idea of Hindi was abhorrent, it was perceived as a mean of Brahmanization. Tamil Muslims rejected the communal harmony argument for promoting Hindi, Khalifullah, Jamal Mohammed, and V. Abdul Hakeem gave expression to this position. Consequently, the attempt of the Congress to make Tamil Muslims adhere to its language policy hardly made any headway. The communal harmony argument or the nationalist ideas regarding Hindu-Muslim unity was not relevant to Tamil Muslims, because through Ramasamy's leadership, community- formation in Tamil Nadu did not proceed along the lines of Hindu or Muslim but was subsumed under Dravidian and lower-caste solidarities.

The self-Respect movement accepted a multiplicity of identities as part of its Dravidian community-formation process, and Muslims were beneficiaries of such a process. The nature of the interaction between Muslims and the Self-Respect movement was dynamic and reciprocal. If the movement provided an occasion for Ramasamy to endorse Islam in Tamil society the anti-Hindu agitations gave Muslims an opportunity to assert their Tamilness. The relationship between the self-Respect movement and the Muslims in Tamil Nadu showed the latter's aspirations to be Dravidian and Tamil.

THE ROLE OF PRESS AND WOMEN ISSUES IN TAMIL NADU – A STUDY

K.S. Jagadeesan

Introduction

Man from time immemorial has been curious to know about what, why, and how events have occurred. He tried to overcome the lack of information, knowledge, and communication gap in various ways. Finally, by his continuous striving and experimentation, the press came to the forefront.

Press is both an art and a profession, which records events and opinions and seek to interpret and mould them for the benefit of the educated public. The 'press' is the instrument for the growth of women's emancipation.¹ The term 'Press' is used in different senses in different contexts. It may also mean a medium of publication, namely any printed periodical work containing public news or comments on public news. In this sense, it covers newspapers, magazines, news services, etc, in general or the persons who wrote them, journalism or journalists.² In the words of the American Journalist G.F. Mott, 'The press is a full-fledged institution in our modern world and the various media utilized by the press are generally called by and now professionally united under the common name of journalism.'³

The role of the press is to keep the people well informed.⁴ Its functions are to inform, educate and entertain the public. While the primary function of the press is to provide the comprehensive and objective information in all aspects of the country's social, economic, political and cultural life, it has to play an educative and mobilising role.

Printing Press

The Portuguese introduced printing press in India in 1550.⁵ In 1674, the English East India Company started a press in Bombay. James Augustus Hickey, published the first Indian weekly, the *Bengal Gazette* in 1770.⁶ Gangadhar Bhattacharya was the first Indian to start the newspaper in 1816. '*Bengal Gazette*' following this, many newspapers were started and Indian journalism developed from the last quarter of the Eighteenth Century.

Dawn of the Press in Tamil Nadu

The genesis of the press in Tamil Nadu can be traced to the Sixteenth century. Christian Missionaries took the initiative in this direction and introduced printing press in Tamil Nadu. The first book printed in Tamil was '*The Holy Bible*' in 1573.⁷ Richard Johnston, a government servant started *Madras Courier*, the first English paper in the Madras Presidency in 1785.⁸ The *Government Gazette* and *Madras Gazette* were started in 1795.⁹ The '*Diravartamani*', a weekly reached the public in 1856. The Gantz Brothers founded the '*Madras Times*' in 1860.¹⁰ The Anglo Indian Journal '*Madras Mail*' appeared in December 1867 and the '*Madras Standard*' was started in 1877.

In 1878, G. Subramania Iyer, M. Veeraragavachariar, P.V. Rangachariar, D. Kesava Rao Pant and N.Subba Rao Pant founded a nationalist weekly, '*The Hindu*'. It was a tri-weekly in 1883 and became a daily from 1st April, 1889.¹¹ During the early part of Nineteenth Century a number of journals in the vernacular languages began to grow. The role of Lord William Bentick the Governor General in developing the vernacular press was marvelous.¹²

The twentieth century witnessed the emergence of many papers in English as well as in the vernacular languages in Tamil Nadu. Certain Tamil papers like *Ananda Bodhini*, a monthly from Madras, *Ananda Vijayan*, a monthly from Coimbatore, *Ananda Vikatan*, monthly from Madras, *Bharata Mitran*, a weekly from Tanjore, *Desabhaktan*, a daily from Madras, Margaret Cousins edited a journal of the Women's Indian Association for many years and the name of the journal was '*Sri-Dharma*'.¹³ She established more than forty branches of the association all over India. *Swadesamitran* was followed by numerous publications in Tamil. In this period there was an increase in the number of Tamil journals. They played a pre-dominant role in the development of women's emancipation.

The first issue of *Desabhaktan* appeared on 7 December 1917. It was started by Subbaraya Kamath. The editor of *Desabhaktan* was Thiru. Vi. Kalyanasundaranar. Annie Beasant, the first

women president of the Indian National Congress, founded the journal *Desabhakthi* in 1917. *Navasakti* was started by Thiru. Vi. Kalyanasundaranar in 1920. The weekly *Kudi Arasu* started its publication on 2nd May, 1925. The editor of this journal was E.V. Ramaswami Naicker.¹⁴

Varadarajulu Naidu a freedom fighter started a daily on 14 April 1926, called *Tamil Nadu*. The editor of *Tamil Nadu* was T.S. Chockalingam. After leaving from the journal *Tamil Nadu*, Varadarajulu Naidu became the editor of *Gandhi*. It was started as a bi-weekly on 14 April 1931. The second issue of *Gandhi* was published on 17th April, 1931. On women's issues and concerns the multidimensional and crucial roles played by the print media are well known. The newspapers and magazines have been taking up pivotal issues concerning women.¹⁵

The newspapers and magazines published in the period of 1891 - 1947 were helpful for the growth of the freedom movement to a great extent. The news about women's activities were not given much importance. Only a few journals highlighted the emancipation of women. The contribution of the press and its role in independent movements was unique and memorable. Newspapers published episodes of the histories of the oppressed and suppressed women. The journals gave a deep knowledge to the public about the women's emancipation.

The press played an important role in spreading the importance of the womenfolk. The emergence of women's journal was indeed a glorious tribute to the reform movement.¹⁶ Some worthy achievements by women in different fields appear in daily newspapers from time to time, and almost all Indian language dailies carry a weekly women's section.¹⁷ A content analysis of this section would be needed before any comment be made on the subject matter of the sections and their views on the role and status of women. Press played a vital role to reflect the opinion of the people on various subjects. It was a powerful and popular media, which fought against a number of socio-economic political atrocities throughout the world.¹⁸

"Mathar Marumanam" encouraged the men to marry the widows by publishing proverbs and stories.¹⁹ Journal *Stri- Dharma* work for

women's labour to liberate the womenfolk from social and economic inhibitions.²⁰ The press like *"The Hindu"*, *Madras Times* and some other newspapers also supported the Age of Consent Bill of 1891, and many newspapers were brought out to work for the uplift of the women society. At the beginning of the twentieth century, there had been different interpretations of the origins and dynamics of subordination of women. Family had been viewed as the major site of women's oppression by the feminist writers. The feminist perspective emphasised the ideological dimension of family and its crucial role in women's subordination.²¹

There was large number of extended families in Tamilnadu in the dawn of the twentieth century. Though there were some merits in the system of extended family, the social scientists considered the system as anti-feminist. The Indian Ladies Magazine pointed out that a joint family life was a very fine thing when taken in the right spirit but it was always hard from the point of women liberation.²² A woman is the important member of the family and she acts in various roles as wife, mother and daughter. At the beginning of the twentieth century, the family was the place where women suffered a number of tensions. Women had suffered due to the heterogeneous nature of the society with its structure based on social and economic inequalities. With the result, widows not only suffer with social and economic sanctions but also face many psychological consequences, loneliness and in many cases deprivation causing emotional disturbances and imbalance.²³

There were different categories of widows: the aged, the destitute, the young and even widows of tender age etc., and each category of widows had their own problems. They might be considered by others to be dangerously inauspicious.²⁴ The extended families did a little bit of good to the young widows.²⁵ The *Kudiyarasu* revealed a shocking report that according to the senses of 1921, there were 11,892 child widows in Tamilnadu.

The Kudiyarasu expressed its different view to proclaim the sufferings of the widows to the world that sati was painful for one day whereas widowhood was most painful for the lifetime. E.V.Ramasamy wrote in the Kudiyarasu that Rajaram Mohan Roy should be blamed and

responsible for the tears and moans of widows, unless he worked hard for the enactment of the Abolition of Sati Act, the widows could be immolated with the dead bodies of their husbands. "Madhar Marumanam" was a journal published by Maragathavalli from Karaikudi from 1936. The Tamil heading itself means widow re-marriage. This was the only magazine which worked for the cause of widow re-marriage.

Home Imprisonment

Isolation and imprisonment of widows inside the dwelling was considered the manifest destiny. It was the compulsion of the time for widows not to see the outer world but settle in the murky corners of the house. It suggested that the sastras should be amended, in favour of widows, and as per the amendment, the widows should without much ado be allowed to move liberally in the outer world.²⁶

Wifehood problems

For a girl, her birth place was not considered her enduring living place. It taught them how to be enslaved in their husbands' place. In short, it served as a seminary for the young girls who were liable to be shifted, to another place.²⁷ The parents and relatives imparted the conservative thoughts in the minds of the girls. After marriage, their beliefs on those ideas strengthened due to the new circumstances. The women's slavery was tightened one more time in the name of chastity. It is known 'Karpu' (Chastity) in Tamil. The fundamentalists made it female oriented."

The Parental Attitude

The parental attitude towards their daughters extensively differed from that towards their sons. Particularly in the matter of marriage the parents exposed uneven attitude towards their daughters. They always showed their great interest in arranging marriage for their sons, whereas they felt their daughter's marriage as an unbearable burden. They used to utter the phrase 'blaze in their stomach' regarding their daughter's life.²⁸

It was considered a basic necessity to shatter the conservative family laws.²⁹ The Stri-Dharma supported the initiative of the Government of Bombay in enacting the law to prevent the unequal marriages, like marriages

between a man of 48 and a girl below 18. It requested the Government of Madras to bring in such law to protect women's rights.

Immoral Traffic of Women

Journal, *Stri-Dharma* published articles to highlight the importance of the suppression of brothels and immoral traffic. At the instigation of Women's Indian Association and press, the Suppression of Brothels and Immoral Traffic Act was introduced in Madras Legislative Council in December in 1927 by K.R. Venkatarama Iyer. The journal, *New India* remarks, the Madras Legislative Council deserves to be congratulated warmly on the passing of this measure.³⁰ It is to be hoped that the government will take steps to bring it into force as early as possible.

Journal, *Dravidian* observes: This Bill should be enforced throughout the Madras Presidency, if the traffic in girls for the purpose of prostitution is to be completely got rid of.³¹

Journal, *Swadeshbhimani* wrote thus: This Bill has been passed into law. But we do not know on whom the responsibility of showing them a way thereafter, to learn a decent living has fallen. The government do not provide for their livelihood. Then, they should get themselves married.³² If even that was not possible, providing for the educated among them with such appointments as teaching and clerkships may perhaps enable them to lead decent lives. The Journal, *Catholic Leader* wrote that it was a pity the government declined to take financial responsibility for the organizing rescue homes where the girls whom the law saved might lead a new and a pure life.

Devadasi System

Press and the social reformers of the Nineteenth Century raised a cry against the prevalence of devadasi system. The discountenancing of the system was begun by missionaries and taken up by Brahma Samaj and other social reformers. The Secretary of State to the Government of India sent a dispatch.

Indian Ladies Magazine observed while the legislature measures were going on in one side to eradicate the devadasi system, the Self-Respecters were also propagating the evils of dedicating girls for prostitution in the name of religion. *Indian Ladies Magazine* again reported

that owing to the pressure from the public and government the number of those dedicated was declining and many temples stopped the services of the devadasis in the temple premises. To educate people on this issue, he used his creative talent and wrote a satire, *Vesypriya Prahasanamu* in which he ably met all the arguments of the reform, for example, the possible damage to music and fine arts if the devadasi system was abolished.³³ *Satyasam Vardhani* a monthly journal, stated a movement against devadasi system at Madras. In the Madras Presidency meetings were held by the Women's Associations to get the support of the public and press to the Bill.

'The Madras Hindu Religious Endowments Act in 1929', which provided the devadasis the rights of holding and enjoying the imams. But they did not stop the practice of prostitution and dedication of girls as devadasis. The amendment act was also silent. Hence, Muthulakshmi Reddy decided to enact a new act to put an end to the devadasi system.³⁴ In 1929 she prepared a Bill to be introduced in the Madras Legislative Council. Newspaper, *India Today* wrote that the efforts of the press, social reformers, education of the people, the oppressive measures of government on prostitution, and the enactment of the devadasis prevention act resulted in the abolition of the age old devadasi system in Tamil Nadu.

Women Labourers

The press, the Women's Indian Association and some other societies took an effort to elevate the economic position of women. There were a number of meetings called especially for women labourers by the various unions and took up special schemes like baby welfare, crèches, etc., for the women workers.³⁵ These women workers were becoming active in the labour movement of the city.

Dowry

Almost all the papers of that time insisted on the evils of the dowry system often. The deprived unmarried girls were mostly affected by this social evil. Even after knowing that it was a social evil, most of the grooms accepted or demanded dowry without any hesitation. To escapee from the questions of the society, the grooms laid blame on the women of the family.

The Madhar Marumanam listed the demerits of the dowry system as follows:

- It deteriorated the female value in the society
- It made marriage a commercial deal
- It created unhappiness, while a female child was born
- It resulted in female illiteracy
- It resulted in late marriage of deprived girls
- Even good-looking and brilliant girls could not get married
- It created bewilderments inside the family
- It resulted in extravagancy and
- Moral degeneration of the young men who got married to rich girls.

The magazine requested the society to avoid such practices of dowry; the dowry system should be abolished.

The Press and the Right to Divorce

According to the Kudiarasu, the marriage was nothing but an agreement between husband and wife. In course of time if they felt to break the bond, they could go for divorce without any hesitation. It considered the right to divorce to women as a symbol of liberation. A Women's Conference held in Madras on November 16 and 17, 1929 resolved in favour of the right to divorce women. The Kudiyarasu unequivocally welcomed it. The paper said that it was nothing but a legal safeguard for women and it would not increase the numbers of divorcees. It counselled the protesters not to be frightened of the act. It opined that it would certainly not ruin chastity. When the "Justice", the paper of the Justice Party.

The Hindu and **The Mail** wrote against the resolution, the Kudiyarasu expressed its shock and criticised their opinion. It regularly insisted on the necessity of the right to divorce women.³⁶

Press on the Women's Health Awareness

Next to education, the most vital need for women is health. The health of a nation's women is the greatest asset, because only healthy women can produce healthy children. The out

reach of health services was very poor in respect to women of Tamilnadu in those days. Examinations of in-and-out patients' records of medical institutions made known that for every three men who benefited of these facilities only one woman did so. Knowing the facts, the press in Tamilnadu observed this problem as socio-health problem. The Kudiয়ারasu published an article on the evils of purdah system. The Sri-Dharma argued that purdah did not have spiritual and religious authority either in Islam and Hinduism.

The Madhar Marumanam criticised the conservatives who safeguarded this system by parcelling the women within the cloth in the name of purdah system and put them in house imprisonment. Even though the liberal press in Tamilnadu voiced for removing the purdah, the tone was not sound enough to succeed. Few journals pointed out the evils of this system whereas few journals made efforts in the form of soothing the Muslim community. But the majority of the Muslim press vehemently opposed the elimination of the socio-health evil.³⁷

There was no doubt that the women suffered a lot of issues inside and outside of the family such as wifehood problem, widow hood hardships, conservative social ideas, lack of health consciousness, and the problem of dowry. The male chauvinistic society didn't consider their sufferings. Even the affected women willingly accepted the sufferings as God's gifts. Thus, public opinion was created by the press, which broke the social impasses against women in the subsequent days.

The term, "Press", at present, refers to dailies, weeklies, monthlies and journals. In the words of A.R. Desai, the Press in India was an effective weapon in the hands of social reform groups to expose social evils. The Press in the Colonial Tamil Nadu, during the period of this study, richly contributed to the growth of the social reforms movement also, which, to a large extent was part of the national movement. Sita Ram Singh observed, that nationalism and social reform 'went hand in glove' during the national movement in India. What he said about the close alliance between nationalism and social reform in India between 1885 and 1947, was true of the Colonial Tamil Nadu during the period between 1891 and 1947.

Majority of the nationalist press in the Colonial Tamil Nadu, supported the various issues connected with social reform. However, a few papers, like the *The Hindu*, *Swadesamitan*, *New India*, *Indian Patriot*, *Tamil Nadu*, *Swarjya* highlighted nationalist ideas and expressed very conservative opinions on aspects connected with the social reform. Finally, the Bill was passed. The Madras Devadasis (prevention of dedication) Act (Act No XXXI of 1947) was passed on November 25, 1947 by which the devadasi system was ultimately abolished.

The important newspapers were *The Madras Mail*, *The Hindu*, *Swadesamithran*, *Kudi Arasu*, *New India*, *Sri-Dharma*, *Madhar Marumanam*, etc. The *Madras Mail* commented that women should be given equal rights with men in all spheres of life.' The deplorable condition of women in the society was highlighted time to time. Child marriage was condemned in the editorial of *Madras Mail*.

It received great importance in *Hindu* and *Swadesamitan*. The *Madras Times* congratulated a group of social reformers who endorsed a petition to the Government of India to pass the proposed Bill on the Age of Consent. Annie Besant wrote in *New India* about the abolition of child marriage. *New India* supported the Post Puberty Marriage Bill in the Central Legislative Council. Again she emphasized in the paper, *New India* that "only if they educated the girls, the country will show progress.

Madhar Marumanam, a journal from Madras, encouraged men to marry the widows. Widow remarriage was highlighted in this journal. Now, articles related to women in the journals are very few in number". *Sri-Dharma* appealed to the Government that "women should have the right to vote and then only women would have an equal share in the society".³⁸

Conclusion

There was no doubt that the women suffered a lot of issues inside and outside of the family such as wifehood problem, widow hood hardships, conservative social ideas, lack of health consciousness, and the problem of dowry. The male chauvinistic society didn't consider their sufferings. Even the affected women willingly accepted the sufferings as God's gifts. Thus, public opinion was created by the press,

which broke the social impasses against women in the subsequent days.

In 1937, the Government of India passed the Hindu Women's Right to Property Act in the Central Legislative Assembly. *Kudi Arasu* propounded an alternative idea that "giving a share of our property to our daughters, the daughters-in-law will also bring in their share of property to our family. Today, the modern women of Tamil Nadu realise the fact that home

is not the only environment of activity. In spite of education, Tamil Nadu remains one of the upcoming states in women's literacy. At present, women's movements are trying to build up a new womenhood. In this way, the press plays a commendable role in the evolution of women's emancipation. Therefore, the problem of women are discussed today even by illiterate people. There is no doubt that even in future, the press will analyse women's problems and publish them for the benefit of the people.

MADRAS I.C.S. MEN AND THE CAUSE OF NON- BRAHMINS' COMMUNAL REPRESENTATION

R. Jaganath

The paper attempts to highlight the favourable stand of the Madras Government and Madras I.C.S. Men in promoting the interests of the non-Brahmins and their demand for

communal representation in the erstwhile Madras Presidency in the second decade of the Twentieth Century. More immediately, the Governor of Madras, Lord Pentland, and his

Executive Council, including Sir Alexander Cardew, directly helped the non-Brahman cause by insisting communal representation as the basis for the entire Reforms scheme. A number of Madras I.C.S. men actively assisted the non-Brahmins, and in particular the Justice Party, in their demand for communal representation as the best way of modifying Brahman supremacy. These British Officials began to realize that, the preponderance of the Brahmins in Indian National Congress and in British Administrative and other state services would be dangerous to their prosperity. Hence, they attempted to check the influence of the Brahmins in all possible ways.

I.C.S. Officials

The ways in which officials in the Madras Government assisted the Justice Party cause differed according to the persons involved and the situation. Sir Alexander Cardew, a Member of the Madras Executive Council in his evidence before the Public Service Commission in 1913 described in detail about the relative positions of the Brahmins and the non-Brahmins in the public service of the Madras Presidency. He also viewed that if simultaneous examinations in England and India for admission into the Indian Civil Service were introduced, the Brahmins, whom he characterized as "a small rigidly exclusive caste" would swamp civil service.¹ According to Kasturi Ranga Iyengar, editor of the *Hindu*, even before the Reforms Scheme was published one senior member of the I.C.S. in Madras, H. F. Gillman, told K. Vyasa Rao, a journalist and a Brahmin, to stop supporting the Home Rule movement.² T.M. Nair declared this to be false.³ But it is undeniable that a member of the I.C.S., a former Vellala converted to Christianity named Kumaraswami Tampoe, actually joined the Justice Party,⁴ and another Indian member of the Madras I.C.S., a Beri Chetti named V. Venugopal Chetti, a senior man in the service by 1917, played a very active role as Collector in increasing the proportion of non-Brahmins who were recruited to government services.⁵

Madras Government's Stand on Franchise Scheme

In answer to an inquiry from the Government of India as to the nature of the franchise structure preferred by the Madras Government, the Acting Chief Secretary in

Madras wrote back that the Governor was convinced that it was quite premature to implement any scheme of franchise for Madras Presidency "on accepted theories," even though he recognized that the Government of India had pledged itself to some advance in this direction.⁶ If the burden of the Montagu-Chelmsford Report was to transform the Provincial Legislative Councils from advisory bodies to ones possessing mandatory powers, the Madras government stated that a council of this nature would not represent the interests of the Presidency. Any scheme that employed a system of franchise using territorial electorates would result in most of the seats being captured by Brahmins, as the exclusive spirit of the Brahmins would secure a solid Brahmin vote in favour of Brahman candidates."

In answer to the argument that the great majority of voter who would be enfranchised would not be Brahmins but in fact non-Brahman caste Hindus, the Madras government posted that as the right to vote moved further and further down the social hierarchy the more the lower castes were under the control of the Brahmins. They believed that this control would express itself in the election of a large number of Brahmin politicians by a largely non-Brahman electorate. To substantiate their claim, they pointed to the results of elections to the Legislative Councils under the Minto-Morley Reforms. In 1909, out of 13 seats that were "open" electorates available to members elected by local bodies (the indirect system by which elections to the Legislative Councils were held), 9 seats went to non-Brahman caste Hindus and only 3 to Brahmins; in 1916, out of 15 seats then open to such representatives of local bodies, 10 went to Brahmins and only 5 to non-Brahman caste Hindus. It was the opinion of the Madras government that these Brahmins had been elected not only by Brahmin voters (there were 1,921 in 1916) but by a considerable number of non-Brahmin caste Hindu voters (3,495 in 1916).

Against Broadening Franchise and Territorial Electorates

The Madras Government rejected both the broadening of the franchise and the construction of a franchise system based on territorial rather than communal electorates. First of all, these measures would give the vote to a large number

of illiterate voters. Secondly, untouchables, Indian Christians, Anglo-Indians (i.e., Eurasians), and Europeans would find no representation on the councils. Thirdly, a sufficiently trained staff to manage the elections involving a large number of illiterates would be unobtainable. A widening of the franchise would simply not represent the interests of the "great mass of the people of the Madras Presidency."⁷ To meet the fears of the non-Brahmin caste Hindus and to ensure proper representation of all interests in the Madras Presidency, the Madras Government recommended a franchise system which would "provide communal electorates freely" wherever possible, and under which nomination would be resorted to only when communal electorates could not be used. But since the Madras Government had been requested by the Government of India to provide a scheme based on territorial constituencies, it did so, but it also drew up its own franchise structure based on communal electorates in which non-Brahmin caste Hindus would have reserved for them 30 out of a total of 76 seats open for election.

South borough and Feetham Committees in Madras

The authors of the Report on Indian constitutional reforms though outlined the general principles, left the details regarding the nature of the new franchise system and the exact divisions of the functions of government to be worked out and decided by two important government committees called, the Southborough and Feetham Committees. The composition of the Southborough Committee became a controversial issue. It totally excluded non-Brahmins but included two Brahmins, one from Madras, V.S.Srinivasa Sastri (the political opponent of T.M.Nair) and other from Bengal, Surendranath Banerjee. They were Congressmen and staunch opponents of the non-Brahmin Movement and its demand for communal representation.⁸ The newspaper, Justice described V.S. Srinivasa Sastri as 'pronounced Madras Brahmin' and 'the advocate in the Imperial Legislative Council of Brahmin Oligarchy.'⁹ By the time the Southborough Franchise Committee and the Peetham Function Committee finally arrived in Madras, T.M. Nair and other Justice leaders had decided not to appear before the Southborough inquiry,¹⁰ and the Madras Executive Council and Madras

Governor Pentland had hardened in their opposition to either a broadening of the franchise or the creation of territorial electorates. Southborough pleaded for an increase in the electorate from Lord Pentland's proposal of 0.8 of one percent of the population to the one percent or even two percent of the population which other provinces had considered reasonable, but the Madras Government was unwilling to give in at all.¹¹ The Feetham Committee, concerned with the division of subjects between reserved and transferred departments, fared no better. M. E. Couchman, who represented the Madras Government on the Feetham Committee, would not recommend the transfer of "any subject in Madras. unless separate provision [in the Legislative Council] is made for the non-Brahmins,"¹² and he was unwilling to transfer even fisheries to Indian control because the "higher castes, who take the leading part in political life in the Madras Presidency, do not themselves eat fish and have so far displayed little interest in the subject of Fisheries."¹³

Non-Co-operation of the Madras Government

The Madras Government did not cooperate with either the Southborough Committee or the Feetham Committee, and its simultaneous insistence both upon communal representation and upon a very limited broadening of the franchise can be considered in part as a means by which a bureaucratic government was protecting its interests against pressures from Britain and to some extent from the Government of India to make the government of the Madras Presidency more of a popular institution. The Madras Government's refusal to compromise was also basically connected with its fear of a Brahmin take-over was well pointed out by Lord Southborough when he appeared before the Joint Select Committee in London in 1919 thus: I am not sure that we could not have made an arrangement with the Madras Government as to the number of electors and the franchise if there had not been overlying difficulties surrounding us, the principle of which, as the Joint Committee know was the quarrel as to communal representation for the purpose of putting a check to the preponderance of power alleged to be in the Brahmin community. . . I could not point to any assent on the part of the Government of Madras, but I think the dissent of the Government

of Madras, when we concluded our labours with them, remained on the communal questions, and not with regard to the electorate.¹⁴

The Madras consultations were unpleasant for Southborough and his committee members, and he had little hesitation about pointing it out to the Joint Select Committee. The non-Brahman demands for communal electorates were, Southborough said, "as a detailed question, as distinct from all-overriding difficulty . . . the most awkward thing we had to deal with. It was really a question peculiar to Madras."¹⁵

Stand of Feetham and the Southborough Committees

Both the Feetham and the Southborough Committees entirely disregarded the protests of the Madras Government. Couchman's pleas that excise and fisheries should remain reserved departments were overruled by the Feetham Committee, and the Southborough Committee went about constructing a franchise system for Madras which applied communal representation only to Muslims, Europeans, Anglo-Indians, and Indian Christians, and used territorial constituencies for the remaining electorates which represented about 1.3 percent of the total population.¹⁶ The Southborough inquiry considered not only a system whereby the number of Brahmins elected to the Legislative Councils could be limited,¹⁷ but also a system giving reserved seats for non-Brahmans in plural member constituencies. The latter system provided that if there were two seats in one territorial constituency (a district or Madras city) and one of these seats was reserved for a non-Brahmin, the non-Brahman who polled the highest number of votes would win the reserved seat; the other seat could be held by any one, Brahmin or non-Brahmin - whoever polled the second largest number of votes. This proposal, for reserving a certain number of seats for non-Brahmins in constituencies where either Brahmins or non-Brahmins could vote appealed to the South borough Committee, and it recommended that this line of inquiry be taken up in future negotiations.¹⁸

Apart from these rather hesitant attempts to solve the impasse created by the Madras situation, the Southborough Committee was frankly unwilling to go along with the views of the Madras Government, or of the Justice Party,

especially since T.M. Nair, P. Theagaraya Chetty, and K. V. Reddy Naidu had refused to appear before the committee and had therefore deprived it of "all power of intervention and made a settlement by consent impossible."¹⁹ The Committee was baffled by the uncompromising attitude of the Justice Party (the Madras Presidency Association did appear before it) and offered a word or two of advice. "We cannot but think," the Southborough Report stated (p. 9), "that, if the capacity already devoted to politics among the non-Brahmins were utilized in organising this great majority, the non-Brahmins would make itself effectually felt despite the power and influence of the Brahmins."

Resentment of the Madras Government

In all this, it was fear of the Brahmins usurping political power in an electoral structure without communal electorates that determined the attitude of the Madras Government. Both the Southborough and the Feetham committees found the Madras Government quite as impossible an institution as had Montagu a year before, unwilling to change its conception of its role and demanding that problems in Madras were unique and required special handling. In the same way as the Madras Government had resented the release of Annie Besant as the instigator of political agitation supported by south Indian Brahmins, so also it found the demands of the Secretary of State that it widen the franchise and expose the non-Brahmans to Brahmin politicking gratuitous and unnecessary. T.M. Nair's unwillingness to cooperate with the Southborough Committee sprang partly from the Justice leadership's awareness of the feelings of the Governor and his Council toward the Justice Party's demands, and suggests an amazing confidence in the belief that its boycott of a governmental body would not harm its chances of ultimate victory. The boycott move was viewed by a few Justicites as a bad political strategy. But T.M.Nair's conviction on the issue ultimately prevailed over them. Even he was aware on the risks of antagonizing the committee. However, the support the non-Brahmin leaders expected from the Madras I.C.S. Men and Lord Pentland perhaps took them to such an extreme step of boycott.²⁰

As the upholders of communal justice, some Madras I.C.S. British Officials with the sense of fairness, equity and justice like,

Governor Wenlock, Governor Elphinstone, Governor Pentland, Charles. Todhunter, M.E.Couchman, W.R.Carnish and Alexander Cardew realized that the Brahmins unduly usurped and monopolized most of the posts. With the idea of providing reservation, and clipping the feathers of the Brahmin dominated Congress, the British Government willingly came to the rescue of the non-Brahmin leaders like T.M.Nair, P.Theagaraya Chetty and Natesa Mudaliar. The British Administrators like Alexander Cardew provided necessary data

about the domination of the Brahmins in all the State and Public Services. The injustice rendered to the non-Brahmins in the administrative set up, made the British to evolve reservation policy aiming at communal representation to all. The Madras Government strongly opposed the ulterior motives of the Southborough and Feetham Committees. T.M.Nair, the captain and guide of the non-Brahmin Movement, in the version of P.Rajaraman, openly boycotted the Southborough Committee on the encouragement renders by the Madras I.C.S.Men.

A FRAGMENTARY NETWORK: THE JUDICATURE OF PRE-BRITISH COCHIN

Jose Kuriakose

The beginning of British rule in India was a major turning point in the history of India. The colonizer has used different tools for the subjugation of the natives such as colonial education, survey, census, mapping, environment etc. Making of judicature and the introduction of a new legal system is such a tool to anglicanise and control the native society. Tracing the history of jurisprudence¹ is a very interesting task for the scholars of law but for a student of History it is the study of evolution through ages. The current legal system that we are practicing is not the result of a single day of practice but it is the product of evolution. Making of judicature is a part of judicialization. It is concerned with the working of judiciary rather than the science of law.

India is a land of personal laws².

The judicial system based on 'Rule of law' was a tool to make a uniform pattern of legal system based on codes. For this British had a definite plan and they played a key role in the judicialization of the country³

The system of Judicature of the Portuguese and the Dutch

In 1791, Raja of Cochin put an end to the Mysore connection and entered into a treaty with the English East India Company. Cochin became a subsidiary ally in 1809. After this Britain began to control the native society of Cochin. There was a drastic change in the system of administration of justice, when Colonel Munro became the Diwan in 1812.

The pre-British legal system had some similarities in Travancore, Cochin and Malabar.

Adjudication in these areas was based on prevailing customs and *Maryadas*. It was different from religion to religion and caste to caste.

The Hindus, Mohammedans, Christians had different judicial systems based on their beliefs and customs. But it is interesting to note down the different punishment system existed for different communities. In the case of *Brahmins* they were exempted from death sentence. The *Jews Vaniyans* and *Kongani* community was also enjoyed some privileges in Cochin in the pre-British period. Customs and *Maryada* was the basis of law and *Dharmasastra* considered as the supreme code of law.

The punishment for the crimes was were very cruel and harsh. The Village assemblies based on their customs and practices pronounced judgements. Sometimes the punishment was based on a moral sanction inflicted upon the culprit. During the time of Sakthan Thampuran more centralized mechanism of legal order came into existence

The early colonial legal engagements of the Cochin were by the Portuguese and the Dutch. The Portuguese had a short time in Cochin even though they had established their own legal system. They didn't acknowledge the authority of Cochin Raja in legal matters⁴. The openly proclaims that they were under the Portuguese law and the authority of the Pope. They insisted that all the Christians in Cochin had to be under the control of the Portuguese legal machinery. But the legal ambitions of the Portuguese was short lived as they were conquered by the Dutch.

The Dutch had a clear cut legal system in Cochin. The system of appointing government pleaders was started by the Dutch. The government pleaders were known as *Advocate-Fiscal*, by this he had to contest on behalf of both the parties⁵. The peculiar thing is the procedure was in Dutch language. There was interpreters helped the parties to understand the language. The Christians comes under the Dutch domination by the treaty of 1663⁶. Judicial authority of the raja of Cochin was encroached by the *Konkani* community of Cochin. They were given special concession in the Dutch rule.

Judicial Administration in the Pre-British Period

The King was the final authority of law. King was helped by a group of ministers in the judicial administration. Under the King the *Naduvazhis* had exercised judicial powers. Caste assemblies during this time was very powerful and it seems that this assemblies based on their rituals and tradition had the complete authority in judicial matters.

Severe punishments were inflicted by the assemblies. Even the trial was sometimes very cruel that it leads to *trial by ordeal*. To prove the guilt, harsh methods were used. If the parties are Christians or Muslims the decision was largely based on Christian law and Mohammedan law respectively. Caste offences are generally referred to caste assemblies. The evidence of the women and slaves were generally not accepted. The complaints in the serious case were subjected to *trial by ordeal*.

The kings of Cochin followed *Sukraneethi* and this code describes the rules and procedures for the kings. It tells king is the protector of the universe. He has to give extra care to the widows and orphans. His duty is to kill the enemies. He has to keep the *Dandaneethi*⁸ and by this his subjects should fear their ruler. For the administration of justice he has to make tours all over the country in disguise. Even the ministers should be punished with iron hand. A powerful king should rule the state as per the *Neethi sastras* such as *Sukraneethi*, *Danda neethi*, *Agni Puranokthithi*. The ruler should try his best in the impartial administration of justice. His judgments were closely resembled in the Principles embodied in the *Varnasrama Dharma* and *Yajnavalkyasmrithi*.

During the period of Sakthan Thampuran, administration of justice had done with an iron hand and he had a clear vision of justice. His period from 1791 to 1805 was an epoch in the judicial history of Cochin. Sakthan was so efficient in the administration of justice. He had a hawk's eye in the administration of justice.

The Rajah exercised *Danda Neethi* which imparted severe punishment for every wrongs committed by the wrong doer. He directly confiscated the property of the corrupt official in to the central treasury.⁹ Attempts of rape, poisoning and attempt of murder with a weapon should be given capital punishment. The corrupt officials, who had the responsibility to protect the

people should be expelled from the country after confiscating the property.¹⁰ The environmental consideration of Sakthan Thampuran was amazing in the administration of justice.

Codes of Procedure

Prior to the British rule, customs or *Maryadas* were the foundations of the administration of justice in Princely Cochin. These customs were believed to be more or less based on the *Dharmasastras*.¹¹ *Maryada* (custom) was the basis of administering judicial administration. The administration of justice was based on text of *Dharmasastras* and, *Vyavaharamala*. In special cases other *vedic* text like *vedas* and *Upanishads* were also followed. The legal system in the pre-British period was not uniform. As mentioned earlier caste assemblies had a dominant role in the administration of justice.

Vyavaharamala was the law book of Travancore and Cochin written during the late medieval period in Kerala by Mazhamangalam Narayanan Namboothiri. The text is 500 years old. It was a law code with punishments prevalent before the 19th century.

The role of religion can be well understood by the practice of *Smarthanvicharam*. It is a case of sexual misconduct committed by a woman. The caste assembly had a major role in conducting the enquiry. If the suspicion persists even after the enquiry, the matter is reported to the Rajah. With the permission of the king the *smartha* of the suspected lady was conducted in a cruel manner. If she found guilty, she has to reveal the name of the persons involved otherwise the members of the family prostrate before the accused for the wrong they had committed. This ceremony is called *Kshamanamaskaram*.¹² A case of *Smarthavicharam* was reported in Cochin in 1829¹³.

The Role of Kariagars in the Administration of Justice

The *karyagars*, who were the collectors of revenue, managed the administrations of justice before the judicial reforms. The feudal chieftains lost power by the treaty of 1762 and *karyagars* were entrusted the duty of revenue collection. By

this time the Cochin state had an administrative unit called *Taluks*. The *karyagars* were rough and very stiff in their civil administration. These functionaries were not only revenue officers, but also judges, magistrates, and police officers and to a more limited extent, military governors of their respective districts. The *karyagars* became very powerful and they enjoyed extra ordinary powers. This *karyagars*, who applied pure commonsense and they are unaware about the laws in the *Dharma sastras*.¹⁴ The Colonel Munro became the First *Diwan* of Cochin in the year 1812. When he became the *Diwan* he was already entrusted with the *diwanship* of the princely state of Travancore. The first step of the Diwan was to suppress the extra ordinary powers exercised by the *karyagars*. According to the Colonel "The authority of the *kariagars* enabled them to prosecute the system of rapine, fraud and coercion, which I have described, and it was essential to the purity of the revenue administration of the country that they should be divested of the magisterial functions which they possessed. But the views which I have stated could not be accomplished by any half measures; they could be accomplished only by reducing the *kariagars* merely to the office of revenue servants and depriving them of all direct authority over the persons or property of the people"¹⁵. Thus by the early attempts of the Diwan, *karyagars* were divested of their judicial and police powers and their duties were confined to revenue collection only.

The legal system currently in India bears very close resemblance to what the British left to us.¹⁶ The East India Company, which ruled parts of India in the eighteenth century, took steps to introduce their own judicial and political administration in its territories. When the British came to India they realized that there were dispute resolution systems of various types in different geographical regions. Cochin was not an exception. As a result, a new hybrid legal system with the elements of English institutions, Hindu and Muslim elements began to slowly emerge in Cochin. British in Cochin never rejected the existence of judicial system in India. However, they saw these as 'primitive'. As per the needs of the changing times, amendments were made, but still the procedure, which is followed at present, has its roots of colonial period

CONTRIBUTION OF DIFFERENT SOCIAL GROUPS TO HOME RULE MOVEMENT IN TAMIL NADU, 1916-17

K. Kalaiarasi

With the launching of the Home Rule Movement, geared up by spirit of nationalism and longing to acquire self-rule, the heterogenous social groups started to shoulder the Movement, by resorting to organize Home Rule meetings, classes, drills etc. This article tries to account the contribution of different social groups for sustaining of home rule surge in Tamil Nadu.

Public Involvement in Home Rule League Branches

Mrs.Besant's Home Rule League was important in Madras. By August 1916 it had 110 branches in the Presidency, which was more than all the branches in the other parts of India.¹ Later in September 1917, there were 132 branches including 65 in Tamil Nadu, 46 in Andhra, 12 in the Kannada speaking areas and 9 in Malabar.² In a letter to *New India*, Arundale stated that the Home Rule League had 5000 members in the Madras Presidency.³ According to a government record there were 147 branches of Home Rule League in Madras Presidency by the end of 1917. By this time, the subscriptions to the 'Besant Fund' amounted to Rs.52391.⁴ This reflected the strength in those areas of the Theosophical Society nearly 40% of whose Indian members and 56% of whose lodges were in Madras Presidency.⁵ The theosophists comprised a proportion of the membership of the League of one-sixth. The members of the Home Rule Leagues were largely drawn from the same

groups and the carried on the agitational demand for self-government. They were very much consisted of villagers and as well as townfolk.⁷ In Tamil Nadu the league branches varied widely in size. The Salem branch claimed 60 in December 1916. The branches also varied widely in the scope and intensity of their activities: some published pamphlets in the regional languages, some sent lecturers and organisers into villages and a number of them opened libraries and reading rooms of Home Rule material. Many branches organised discussion groups and most, ranged public meetings and lectures to discuss and foster the demand for self-government at the end of the war.⁸

The press played an important role in the Movement. The newspapers *New India*, *Swadeshmitran*, *Indian Patriot*, *The Hindu* and *Prapanchamitran* had the largest circulation in Tamil Nadu and they were housed in the libraries.

The Home Rule Movement contained a considerable number of non-Brahmans, however, including such figures as P.Kesava Pillai, V.O.Chidambaram Pillai, P.Varadarajulu Naidu, Adhinarayana Chetti, T.V.Kalyanasundara Mudaliar, K.P.Raman Menon and George Joseph. They formed the Pro-Home Rule Madras Presidency Association.¹⁰ Although supported by some wealthy landowners and traders, the

Madras Presidency Association did not have adequate financial resources. It claimed a much larger membership of 2,500 in 26 branches and it published a Tamil newspaper, *Desabhaktan*, and the English *Indian Patriot*, which ran at the contribution made good by merchants who supported Mr. Besant's agitation.¹²

A number of non-Brahmin caste associations such as the Vanniakula Kshatriyas, the Arya Vaisyas and the Kammas also backed the Home Rule Movement.¹³ Even the Home Rulers sought and won support among the relatively compact urban proletariat and low caste groups. The First World War drew up prices and this contributed to an outbreak of strikes in later 1917. The Home Rule League and the Madras Presidency Association assisted strikers with funds and advice and went on to organize trade unions among railway workers and mill workers in Madras, Nagapattinam and Madurai.¹⁴ The pro-Home Rule non-Brahmin bodies in order to compete successfully for the non-Brahmin support, they demanded safeguards and opportunities for the acquisition of power by the non-Brahmin communities. Hence, Madras Presidency Association demanded separate electorates for some depressed communities and occupational groups in which non-Brahmins figured prominently as well as the reservation of two-thirds of the seats in general constituencies for non-Brahmins. Aiming constitutional prestige, some of the non-Brahmin forms patronized the Home Rule Movement and they were active members of the Leagues.¹⁵

The year 1917 witnessed a quickening of national consciousness throughout India and widely popular agitation in favour of Home Rule. Home Rule League branches were established all over Tamil Nadu. Madras government brought repression on the political agitation.¹⁶

Young Men's Indian Association

A Home Rule League meeting was held at Young Men's Indian Association, Madras on 13 October, 1916 with Mrs. Besant in the chair for the purpose of inviting suggestions to the formulation of a definite programme for Home Rule Movement. A special Home Rule classes twice in a week were held in the Association premises.¹⁷

The Association took part in the distribution of political pamphlets of Mrs. Besant.

Mrs. Besant and other top rank leaders took active part on student affairs and interacted with them through the organisation of Boys Scouts and sports. The members of the Association made debates, mock parliaments, libraries and reading rooms for creating the political consciousness among the youths. It organised group discussions mostly based on the subjects of Indian finance, Local self-government etc. Mrs. Besant concentrated on the student community, middle class merchants, lawyers, and youths to create the political activity towards attaining of self-rule. She instituted home rule classes. Mrs. Besant strongly felt that drill, physical exercises, games, fencing, Indian sword play and science of self-defense must be trained to students and it should be a part of curriculum. Boy Scout and cadets must be trained. Patriotism nourished by Indian History.¹⁹

Arundale served and guided the students and teachers in colleges and he inspired the student community with his patriotic ideals. Mrs. Besant asked the Boys Scouts and volunteers to involve and to do social work and help the poor.²⁰ Mrs. Besant clearly stated that our policy to encourage students to study life around them to work with motives of patriotism, religion and service, to read news papers, and study the thoughts and listen to the world of public men though not take active part in politics.²¹ On 1 March, 1917, a meeting was held in the Gokhale Hall, Young Men's Indian Association under the presidency of Mrs. Besant at which 500 people reported to have their names. C.P. Ramasamy Iyer, Advocate, A. Rangasamy Iyengar, Journalist were among them.²² On 27 February, 1917, a Home Rule meeting was held at the Association to protest against the orders passed by the Punjab Government and by the Chief Commissioner of Delhi prohibiting Tilak and B.C. Pal from entering into their respective Provinces.²³

Home Rule Volunteers Corps

Home Rule Volunteers Corps training was held on 14 November, 1916. The primary purpose of the Home Rule Volunteers Corps was to keep up order at league's meetings. The volunteers wore crimson turbans with the prescribed uniform. Home Rule classes for volunteers were held most of the cities in Tamil Nadu including St. Joseph College, Trichirappalli, Government College, Kumbakonam, Youth

Association, Dindigul and Mission's college, Cuddalore. In most of the times, the proceedings were interrupted by police and consequently resulted in abrupt end.²⁴

Theosophists

The Theosophical Society of Tamil Nadu stood in support of the Home Rule Movement. The Theosophical Society founded in New York in 1875 by Colonel H.S.Olcott and Madame H.P. Blavatsky. In the words of one of its founders, aimed at three main objectives to promote a feeling of brotherhood among men regardless of race, creed or colour; to promote the study of Aryan and other religions, philosophies, and sciences; and to promote experimental research into the hidden laws of Nature and the latent capabilities of man.²⁶ Consequent on their arrival in Bombay, the theosophist leaders were flooded with inquiries, emanating as much from Indians including Tamilians.²⁸

In 1893, when Mrs.Besant arrived in Madras to join Olcott, the Theosophical Movement had found a fresh impetus and had begun to recapture some of the popularity that it had enjoyed in Tamil Nadu especially in Madras city. In this revival, Mrs.Besant played a crucial role. Possessing considerable personal charm, she toured many parts of Tamil Nadu and stirred the audiences by the eloquence of her lecture and by her knowledge of Hindu philosophy, religion and science. The Theosophist leaders had brought back to Hindu the vital spark of self-respect which were about to lose".²⁹ The Hindu social reforms, for their part lamented that Mrs.Besant strengthened the spiritual pride of the Hindus "with a bigotry and plausibility of reasoning unknown to the orthodox".³⁰ This reform group was essentially force of change offering alternative models for achieving social modernization within the Hindu community. Reformers sought to inspire change along rationalist lines and in the light of western social experience, the revivalists wanted to find largely Indian prescriptions to regenerate their society. That the later were committed to change was attested by their decision to organise the Madras Hindu Association in 1904.³¹ Mrs.Besant organised a meeting of the theosophists, at Adyar in September, 1916, and put forward a fourfold plan of reforms for religious practices, education, social customs, and politics. The four point programme corresponded to the four fold

constitutions spirit, mind, emotion, and physical body.³²

The Theosophical Society established the Theosophical Educational Trust in 1913 to spread out in the country.³³ The Theosophical Society started the Central Hindu College at Benaras in 1898, a successful institution in which Hinduism is an integral part of the education. After fifteen years of independent life, being recognised as the leading National Hindu Institution, it was handed over to the Hindu University as the University college, then expanding into fuller and larger life. The Society has founded five girls schools as well as boys in different parts of Tamil Nadu. The Society has also a number of schools for the depressed classes five in Madras.³⁴ The Theosophists had instituted training centres and they were attended by thousands of people. Thus the Theosophical society and its elite men rendered a great service in the field of education through these various institutions. The theosophical institution helped to grow the Indian nation along its own lines and to develop in its own way the boy scouts formed by the society helped to develop a character among the boys.³⁵

The new political development under the banner of Home Rule League resulted in numerous speeches, processions and strikes by the theosophists all over Tamil Nadu.³⁷ Further, these anti-British activities took concrete shape with the ramification of a number of branches Home Rule League branches at Chinglepet, Vadalore, Ariyalur, Thirumayim and other places in 1916-17. To spread theosophical ideologies, Theosophical lodges were constituted widely in Madras Presidency. A report from Thanjavur District Collector reveals that V.K.Ramanuja Achariyar, President, theosophical Lodge, Thanjavur, hold a Home Rule meeting inspite of local objections against using the lodge for political purposes. Thirteen people attended it out of the whole of Kumbakonam. The Madras government very much concerned with political interest of theosophical lodges and as a result used to launch such organizations.³⁸ The members of the league have organized lectures and group discussions in cities like Madurai, Madras, Trichireppalli and other places.³⁹

Harisarvothama Rao who was the Secretary for Andhra Branch of the League, wrote several pamphlets for propaganda of the

Movement the titles were 'Why Swaraj' The Idea and the Ideal of Home Rule'.

Mrs. Besant pleaded for establishing of home rule organisations at district, taluk and village levels. She said that, the increase in the number of district committees was one of signs of growing political life of the country. The network of political agitation and association spread over the country, supporting and strengthening of each other, ready to move in common direction, and to organise the expression of public opinion. The district and taluk committees could act as instrument for educating the people by distribution of literature, by lectures, by discussions by the establishment of free-reading rooms. This was an established fact that there were more than 127 Home Rule branches at different levels.⁴²

Madras Parliament

Mrs. Besant established the 'Madras Parliament' a debating society to popularise parliamentary forms and methods. This Parliament discussed all public questions and remedy political and social deadlocks. The valuable series of papers and pamphlets published by the Home Rule League and also on self-government bills were discussed in Madras Parliament.⁴³ Apart from these, it stood to promote the civic Education of the citizens.⁴⁴ Several prominent political leaders became its members. In Madras, Justice Sadasiva Iyer was induced to join the 'Madras Parliament'. By constant and vigorous efforts of Mrs.Besant, many leaders joined the Home Rule Movement from all Tamil Nadu. Among them were S.Subramania Iyer, A.Rangaswamy Iyengar, C.P. Ramaswamy Iyer, V.S. Srinivasa Sastry O.P. Ramasamy Reddiar and many others. The Madras Parliament meeting was held on 26 November, 1916 for discussing separation of executive and judicial functions. Mrs.Besant herself took part in the debates for the purpose of answering the arguments from the Home Rule leaders and spectators. A number of meetings of Madras Parliament were held in 1916-17. In March 1917, Madras Parliament session was held where in religious education bill and emigration bill were discussed.⁴⁵

Women's Contribution

The active participation of women in the Home Rule Movement, calls for specific reference. On the 14 September, a special meeting was held in a Triplicane Mandapam, attended by some three hundred ladies, mostly Brahmins but also Vaisyas, and including Mrs.Jinarajadasa and another English lady from the Adyar settlement. The meeting was addressed among others by Mrs.Sivakamu Ammal and was followed by a procession to an adjacent temple, bearing a portrait of Mrs.Besant and flying a large Home Rule flag. The women's procession was avowedly undertaken in order to test whether the police would interfere, having regard to the orders previously issued prohibiting general processions.⁴⁸ Mrs.Audinarayana Chetti is one of the women Home Rulers endeavor to stir up her fellow women to be more active in politics by citing the life of the Rani of Jhansi.

As a result of their Home Rule agitation, Margaret Cousins was inspired to organize a protest meetings in Madras, Villupuram, Tindivanam, Kumbakonam and other places.⁴⁹ In 1917 the interest of the women in the movement for Home Rule was deeply stirred and stimulated by the internment of Mrs.Besant Besant and hence the Women Indian Association branches took active part in obtaining her release. As the Home Rule agitation became vigorous everywhere it made the government to come out with an announcement on 20 August 1918 that the ultimate goal of the British in ruling the country was to a responsible government. This announcement was made by Montague, the secretary of state and was called the August Declaration. He visited Bombay in December 1917 and met the leaders of the Home Rule League Tilak, Mrs.Besant and Jinnah. Montague Chelmsford report was published in July 1918, formally announcing responsible movement as the goal for India. This was followed by the release of Mrs.Besant and other agitators. Mrs.Besant withdrew her Home Rule movement as she felt that no more propaganda was necessary for the Home Rule because the Movement achieved its main objective with Montague declaration.⁵⁰

"CONTRIBUTION OF BRITISHERS TO MOUNTAIN RAILWAY AND COMMUNICATION IN NILGIRI DISTRICT"

P. Kanni

The natives of the Nilgiris developed no technique of transport. Before the advent of the Europeans, the hills had neither wheeled vehicles (including the cattle drawn traditional carts) nor improvised roads. The steep slopes and rough terrain often intercepted by swamps, sholas and streams posed challenges to means of communication, which the natives hardly cared to respond. Herding the cattle patch and Swidden cultivation did not demand any transport messages were passed from person to person. Their produces like ghee (Clarified butter) honey and other minor forest products were carried of human shoulders as far as

Sirumugai, Karamadai, and Gundalpet. They exchanged them for grains, cloths and other essential goods.¹ Movements were entirely on foot only. Hence beaten foot- paths alone were the links between the hamlets and between the plateau and the plains. The hill communities have developed a good custom of hospitality on this background that any new – comer or passers by is freely offered a drink. This culture was nothing but their past necessity to treat the weary travellers.

A goods transport system is indispensable for the Nilgiris plantations, farming and such

other activities. The Indian princess, the European planters and officers and the tourists brought upto date vehicles to the hills.

Marvels of the Nilgiris Mountain Railway

The Nilgiris Mountain Railway was one of the marvels of the European engineering skill. Its introduction provided another opening into the tight shells of the hills. It added one more feather in the proud crown of the 'Queen of Hills'. Its bearing on the Nilgiris economy and tourist industry for nearly one century is of great importance. The Railway line underlines the Europeans deeds.

The proposal for a railway up to Coonoor was mooted in 1854, long before the completion of Coonoor ghat. On completion of broad gauge between Podhanur and Mettupalayam, in early 1870's several proposals were made for mountain line. The engineers of Darjeeling Railways expressed their enthusiasm in establishing a mountain railway in Kotagiri valley, Wellington and Ootacamund². M. Riggerbach, a Swiss Engineer and the very inventor of the Rigi system of mountain railways offered to take up the constructions, in 1876, on the same conditions. Government poured cold waters on this scheme. The hybrid project of Railways and Ropeway. Proposed by the duke of Buckingham in the following year also met the same fate. The Planters and the residents formed the Nilgiris Rigi Railway Company Limited in 1880 and Riggerbach assisted by Major Morant, the District Engineer made preliminary investigation.³

The terms and conditions between the company and the government could not be finalised and the company was squashed soon. A new company, called the Nilgiris Railway Company, was formed in 1885 with a capital of Rupees 25 lakhs, raised in London. After a contract made with the Government, and a survey made by W.G.Gilchrist, a state Railway Engineer, the company commenced the work with the first sod cut by Lord Wenlock, Governor of Madras, on August 3, 1891.⁴ However the company was not able to complete the construction of the line was liquidated in 1894. A new company was turned and it purchased and completed the line in 1898. The line was handed over to the Madras Railway company. But a severe cyclonic storm damaged it soon.

The rebuilt line was opened in June 1899. The Government purchased the line on January 1, 1903.⁵ The total cost of the Mettupalayam – coonoor line came to Rs 38,00,000 /-.Nineteen viaducts several of them are 60 feet high and 13 tunnels, the longest being 481 feet length, were the reasons for a huge initial cost. ABT rack type or Rigi system of track was laid between Kallar and Coonoor. The method consisted of two steel racks laid in the centre of rails and bolted to the sleepers. The engines were provided with two sets of cylinders whose pinions engage with the teeth of the racks. This system ensures smooth and safe climbing over the rugged hilly track. This is the only one of its kind in India and second in the world.⁶ The primary objective of the work is to trace the course of transport and communication in the Nilgiris. To learn the reasons that led to the development of transport and communications. The contribution of the various levels of administration The line render the hills more accessible from other parts of South India. The slow train journey through the wooded slopes, precipitous cliffs and gushing mountain streams, has never failed to thrill the passengers then or now.

Postal

Postal service was extended to the residents of Ootacamund as early as 1826. The first post office in the Nilgiris was opened in Ootacamund in that year.⁷ Though the actual location of the first post office is not known, Fredrick Price says that it ought to have been in the original, travellers' bungalow. The post office was changed to many places in Ootacamund. A room in the public quarter No. 1 was appropriated for post office.⁸ It finally came to the present building (Head Post Office, near the Collectorate) built originally for the Commandant's office and other public offices in 1829. The Collector's office was constructed in 1866. The public offices were shifted to the new building placing the entire old building at the disposal of the post office, which occupied only a portion of it till then. The first post office when was under, military hand had one writer and two delivery peons.⁹ This post office delivered 2,000 covers per day during the summer and 700 during the off season and earned a revenue of Rupees 68,000 per year.¹⁰ Before postal stamps were introduced postage was calculated taking the weight and distance into account. It costed 8

annas (Rupees 0.50) for a letter weighing up to one tola to reach Madras from Ooty. It took five days.¹¹

Postal stamps were introduced in 1854 and the criteria of distance disappeared. Relay runners were posted in both the Coonoor and Gudalur ghat. Horse were employed for quick services. Another post office was opened in the stables of the Commandant of the Madras Regimental Centre, Wellington in 1855.¹² This served the military station and later on was called as Wellington, Barracks, Post Office.¹³ There are certain interesting points to be noted here, letters on arrival were collected by the addressees. However, those need peons for delivery. The arrival and departure of overland mails were marked by hoisting flags.¹⁴

Arrivals of pay were also made known to the residents of Ootacamund by the same method perhaps using different colours of flags. Flag staffs were erected by private subscriptions in 1856, in front of the public office which was replaced by new one at a cost of Rupees 354 from the government.¹⁵ There is also references of the post offices working in the evening and during night. Money order facilities were extended to Ootacamund and Coonoor. The business was conducted not by post offices but by the Treasury department, the commission was 2 percent.¹⁶ The residents of the Nilgiris were very keen in the table functions of the post offices for it was an important link with their mother countries. These were occasions of removal of lapel peons for misconduct.¹⁷ The abolition of present system and the introduction of Tongas in 1878 ensured quick service.¹⁸ The postal service's literally crossed the mountain barriers.

Telegraph system

Introduction of telegraph was another milestone in the progressive European impact in the Nilgiris. It took one century for telegraph to reach from the land of its origin. Command of France invented telegraph in 1787. The British laid the first line in India between Agra and Calcutta in 1853 which went a long way in quelling the Indian Mutiny of 1857. The Nilgiris was fortunate to get the service within two years of its introduction in India.

The residents in the hills were numerous. European Regiments were stationed at Jakatalla. The role of the telegraphic line between the capital and important stations in North India during the mutiny was well known. These things could not bring enough pressure on the government but the proposal visit of marquis of Dalhousie of the hills in 1855 compelled the authorities to provide Ootacamund and Kotagiri with telegraph.¹⁹

A temporary line which was made for the convenience of the Governor General was completed between Bangalore and Ootacamund in February 1855. The line was established through Srirangapattanam, Mysore, Gundalpet and Sigur. The bamboo poles were replaced by solid teak poles. Lord Dalhousie received the first message through this line on April 1, 1855.²⁰ The telegraph office was opened on May 4, 1855. On the slope behind the library, the rates were Rupees 1-0-0 for 6 words with India and Rupees 1-8-0 for 8 words to Burma and Ceylon.²¹

Memoranda were received by Lord Dalhousie for extension of the line to Coonoor, Coimbatore and Palghat. He sent directions to the Madras Government accordingly. By the end of the year 1855 Ootacamund was connected with Callicut. The Ootacamund-Mettupalayam-Madras line was completed at a later stage but not until 1871-72.²² Telegraph communications system between the Secretariat offices and the Government offices residing in Ootacamund was established in May 1883.

The development made by the Europeans in the fields of transport and communication were the gifts to the hills. Novel railways system, efficient post and telegram system which were installed by trained hand of the Europeans and enormous manpower of the pioneers and convicts.

The hills originally had no wheeled vehicle and road. By laying paths, construction of roads in the 1820's the European pioneers successfully responded to the challenges of hard ground, the severity of which was too much to the slender tribal's of the Nilgiris hitherto.

DEVELOPMENT OF PRIMARY EDUCATION FROM 1947 TO 1986

P. Kantharuby

Introduction

The development of education in India has a long history. A number of historical accounts on indigenous education have been documented. Apart from the accounts derived from Greek and Chinese travelers, many inscriptions also survive to highlight the activities of ancient educational institutions of India. They include the universities of Nalanda and Taxila in the north and the famous Ghatika of Kanchi in south India. It should be noted that there was Exchange of knowledge not only between different parts of India but also between various parts of the world during ancient times. For example, there are accounts of more than 200 Chinese scholars who spent extensive periods of time in India during the first millennium. Amartya Sen has elaborately dealt with the epistemic process between India and China in his book of the *Argumentative Indian*.¹

Educational Status in India during the Pre-British Period

The information on indigenous education for the pre-British period has been compiled by many scholars. Among them the work of

Dharampal, the well known Gandhian and historian of Indian Science, is a detailed account of me extensive indigenous system of education that was thriving in India before me British. The book is tided as *The Beautiful Tree*.² It is significant to mention that indigenous education was carried out through *pathshalas*, *madrassahs* and *giiruhilas*. These three institutions were the source of traditional knowledge systems in India and played a very significant role in the Indian education. Dharampal quotes Sir Thomas Munro, the famous British Governor of the Madras Presidency during the first quarter of nineteenth century, who observed that "every village had a school".³ Further, William Adam's observations that there existed about 1,00,000 village schools in Bengal and Bihar around the 1830s confirms Munro's remark on the state of indigenous education in India during the pre-British period.³

Education in India had witnessed a significant change after the commencement of the British rule. Not only the method and content of education got transformed but also the percentage of population who had access to education was considerable dwindled. The

English East India Company government's policies such as the introduction of western system of education and English as medium of education proved detrimental to the growth of indigenous system of learning. Mahatma Gandhi observed during the early part of twentieth century two main points on Indian education: "(1) Today India is more illiterate than it was fifty or hundred years ago; and (2) The British administrators instead of looking after education and other matters which had existed, began to root them out".⁴ In fact, Gandhi described the traditional educational system as a beautiful tree that was destroyed during British rule.

In its judgment in Unnikrishnan Case, 1993, the Supreme Court held that: "The citizens of this country have a fundamental right to education. This right flows from Article 21 of the Constitution. The right is however, not an absolute right. Its content and parameters have to be determined in the light of Articles 45 and 41 of the Constitution. Thus, every child, who is a citizen of this country, has a fundamental right to free education until he completes the age of fourteen years. Thereafter, his right to education is subject to the limits of economic capacity and development of the state."⁵

The Supreme Court emphasized that, "the State should honour the command of Article 45. It must be made a reality, at least now."⁶

National Policy on Education-1968.

The recommendation of the Kothari Education commission were considered by various educational organizations and institutions. A number of debates and conferences were held on these recommendations. The Commission recommended that the government of India should issue a statement on the national Policy on Educational policy on Education which should provide guidance to the State Government and the local authorities in preparing and implementing educational plans. Therefore, the Government of India constituted a committee of Members of Parliament on Education to prepare the draft of a statement on the National Policy of Education.⁷ Later, this draft was considered by the Central Advisory Board of Education, the highest policy-making body in education. Based on a general consensus arrived at the Board's deliberations, a Resolution on the

national policy on education was adopted in the Indian Parliament in 1968.

Growth of Primary Education in Tamil Nadu

The Tamil Nadu State has always been in the forefront of the spread of elementary education. The idea of universalization of primary education became vibrant in Tamil Nadu when K. Kamaraj was the Chief Minister of Tamil Nadu (1954 - 1963). When C. Rajagopalachari was the Chief Minister, he made an attempt to introduce the system of education based on one's family vocation - *Kula Kalvi Thittam*.³⁰ It was strongly resisted by Periyar E.V.R. and other Dravidian leaders. Within the Congress Party, Kamaraj and some others opposed this reactionary move in the educational.⁸

When Kamaraj became the Chief Minister of Tamil Nadu in 1954, he got rid of Rajaji's *Kula Kalvi Thittam*. Instead, Kamaraj worked hard to expand the primary education through the nook and corner of the State. He reopened the 6000 schools closed by the previous government for financial reasons and also added 12000 more schools in the state. In fact, Tamil Nadu State made immense strides in education during the rule of Perunthalaivar Kamarajar.⁹

New schools were opened, so that poor rural students were to walk no more than three miles to their nearest school. Better facilities were added to existing ones. No village remained without a primary school and no village panchayat without a high school. Kamaraj strove to eradicate illiteracy by introducing free and compulsory education up to the eleventh standard.

Kamaraj had also introduced the Mid-day Meal Scheme to provide at least one meal per day to the lakhs of poor school children. It was considered the first time in the whole world. There is an interesting story about how Kamaraj got the idea of a noon meal scheme. The spark is said to have occurred in a small village called Cheranmahadevi in Tirunelveli District of Tamil Nadu. Kamaraj was a very simple person who used to travel in his car and was not accustomed to convoys. On one such journey, he had to stop at the railway intersection in Cheranmahadevi and got out of the car and waited. He saw a few boys busy with their cows and goats. The Chief Minister had asked one small boy, "What are you doing with these cows? Why didn't you go to

school?" The boy immediately answered, "If I go to school, will you give me food to eat? I can learn only if I eat." The boy's retort sparked the entire process into establishing the Mid-Day Meal programme.¹⁰

He also introduced free school uniforms to weed out caste, creed and class distinctions among young minds. Kamaraj remained Chief Minister of Tamil Nadu for three consecutive terms. Kamaraj noticed that the Congress party was slowly losing its vigor. He came up with a plan which was called the "Kamaraj Plan". On October 2, 1963, he resigned from the Tamil Nadu Chief Minister Post. He proposed that all senior Congress leaders should resign from their posts and devote all their energy to the revitalization of the Congress.

In order to honour the services of Kamaraj, who opened many schools in Tamil Nadu so as to remove the darkness of illiteracy and worked hard for the improvement of education, the Tamil Nadu Government declared 15 July, the birthday of Kamarajar as the "Education Improvement Day". Arrangements have been made in the schools so that school children are celebrating the birthday of Kamaraj by decorating the portrait of Kamaraj.¹¹

Later, when M.G. Ramachandran became the Chief Minister of Tamil Nadu, the Mid Day Meal scheme was revamped. There was a public debate at that time about the pioneer of the meals scheme provided for the school children. It was found that one of the pioneers of the scheme is the Madras Presidency that started providing cooked meals to children in corporation schools in the Madras city in 1923.

The programme was introduced in a large scale in 1960s under the Chief Minister ship of K. Kamaraj. But, the first major thrust came in 1982 when the then Chief Minister of Tamil Nadu, M. G. Ramachandran, decided to universalize the scheme for all children in government schools in primary classes.³⁴ Subsequently, the programme was expanded to cover all children up to class 10. Tamil Nadu's Mid-Day Meal programme became popular through out the country. Thereafter, several other states of India also emulated Tamil Nadu and introduced mid-day meal programmes. The most notable among them is Gujarat that has had it since the late 1980s. Kerala started providing cooked meals in schools since 1995 and so did Madhya Pradesh and Orissa in small pockets. On November 28, 2001 the Supreme Court of India gave a landmark direction, which made it obligatory for the government to provide cooked meals to all children in all government and government assisted primary schools. The direction was resisted vigorously by State governments initially, but the programmed has become almost universal by 2005.¹²

In fact, Tamil Nadu remains the pioneer in providing Noon Meal Scheme to school children through which the most important impediment in the spread of primary education has been removed. Thus, the process of universalization of primary education in Tamil Nadu was based on the cooperation of the Government of India and the Tamil Nadu State Government. Both National and regional leaders took efforts to spread the primary education in Tamilnadu. The formulation of National policy has reached another land mark in the form National Education Policy in 1986.

THE ROLE OF DALIT WOMEN IN HYDERABAD FREEDOM MOVEMENT, SPECIAL REFERENCE TO T.N. SADA LAXMI

Kishore Sirgamalla

The dominant politics in Telangana in both colonial and post independent India are challenged by Dalits. The Dalit leadership during colonial period was emerged from various streams like Congress and Gandhian, Hindu reformist and Arya Samaj traditions and Amedkaarite politics. It is worthy to recognise that along with Dalit male, and Dalit women emerged as powerful leader and politician such as TN Sadalaxmi came from Congress and Gandhian influence, she has played critical historical role in democratizing mainstream politics and advancing the Dalit discourse.

TN Sada Laxmi was born on 25th December 1928 in Bollaram in a place called Pensionpura Mehthar Basthi. Her parents were Karre Gopamma, Kondaiah.¹ A reformer named Chaduvu Puli Narsimlu encouraged Sadalaxmi to pursue education, with his encouragement she joined in Middle School Bollaram, later she continued her education in Keys High School². With support of then education minister, BS Venkat Rao, she joined in Nizam College and due to some reasons she shifted to Madras Quens Mary College. She had to come to Hyderabad and enter into active politics without by dropping her education at her plus two level education. She actively participated in the struggles against then Nizam. She participated in the movement called Join India. She was greatly influenced by Gandhi and Ambedakar. Subsequently she married her childhood friend TV Narayana.

Dr. B. R. Ambedkar was the first man who thought intellectually to redeem women from uppercaste and dalit women from lower caste from the bandage of Indian Hindu caste system and Hindu Patriarchy. This was a beginning of new era for dalit women's empowerment. Is 'educate, agitate and organize' have faith in yourself? With justice on our side, I do not see how we can lose our battle. The battle to me is a matter of joy. The battle is in the fullest sense spiritual. There is nothing social or material in it. For ours is a battle not for wealth or for power, it

is a battle for freedom. It is a battle for the reclamation of human personality.³

Her life not only revolves around political events but also takes a social revolutionary standing to oppose the hierarchical structures of society. Here, Sadalakshmi's social activism is much more influential, revolutionary and progressive than that of her political activism. Her interest to participate in socio-political activities has developed from her childhood onwards. She has always derived her strength from the basic teachings and speeches of Dr. B. R. Ambedkar and from her political guru Babu Jagjeevan Ram. She has shown keen interest in participating in the socio-political activities taking inspiration from these great ideologues and intelligentsia. These influential events have driven her towards a democratic society. Therefore, Sadalakshmi is not typically seen as a political activist but as a social activist, social reformist, and social revolutionist who asserts claiming of her rights, voice and opinion for which lead empowering herself and empowering Dalit communities.

Sadalaxmi had to experience many ups and downs in her political career. She contested for the MP from Sulthanbad constituency in Karimnagar District⁴. Then she was the congress candidate. She could not win in that elections due to massive influence of communist parties even Congress party stalwarts like PV Narasihma Rao lost in those elections. But Sadalaxmi could not give up her efforts she actively continued her political life. In 1957 she contested from Kamareddy constituency in Nizamabad district then onwards she progressed in her political life by occupying various positions in the government and political parties where she worked in. In the tenure of Neelam Sanjeeva Reddy, the Chief Minister of the erstwhile Andhra Pradesh State, she served as the as the Minister for Endowment department, when Damodaram Sanjeevaiah was the Chief Mibnister she was made as the Deputy speaker⁵, thus she is considered to be the first deputy speaker in the state history. When Ayyadevara

Kalaeswara Rao, then Speaker of the Assembly, was ill she acted as the speaker and effectively conducted the business in the assembly. In the government of Kasu Brahmananda Reddy she was taken as the Minister for Social Welfare Department. As the minister for the department of endowment she succeeded in the affairs of assets of Nizam Trust.

Through this revolutionary stand T. N Sadalakshmi could challenge the dominant hegemonic ideological structures. This demonstrates her self-assertion, self-affirmation and activism towards social democracy stemmed from her struggles to survive.

T. N Sadalakshmi through her power politics could transform and reform the ministries in which she took charge. As a minister of Endowment, Social welfare and as the Assembly speaker, she has brought tremendous reforms in these portfolios. Yet there was huge criticism and opposition to her considerable democratic deeds. But she never bent down to the criticism and carried out her policies and implemented them very successfully in a democratic manner. This shows her activism and assertion within political life and reminds us that if a dalit woman like Sadalakshmi has power, there will be no question of inequality, poverty, discrimination and injustice. Also one can imagine a society's progress keeping in mind all sections of the society. Without T. N Sadalakshmi's assertion of the self through activism be it social and political, there wouldn't have been the realization of Telangana statehood. She was the forerunner of separate Telangana state agitation movement during her life time. Though she faced double oppression from social and political sphere she never stepped down and never bowed down to any oppression. During her life time, she had given more importance to socio-democratic values which would establish human spirit and harmony in the society.

She worked in Congress for thirty years till 1977, when Babu Jagjeevan Ram resigned from Congress and established Congress for Democracy, she followed Babu Jagjeevan and joined in that party, soon after this party merged with Janatha Party. In 1977 itself she worked as the Secretary and President at national level.

In 1982 when Telugu Desham Party was established she was invited and was offered vice-

President position. In election manifesto she ensured large proportion of representation for Arudatiray's. She supported the SC categorization movement subsequently extending her support to Madiga Dandora movement.

T. N Sadalakshmi's life long struggle was not for political cause and concern but for the social cause and concern of Dalit of women to provide adequate resources to rejoin her Dalit women and create a home of egalitarianism and humanitarianism on the ground of social cause. This reflects her consciousness of Dalit intellectual thought. Sadalakshmi says "I don't know why I am so interested in socio-political activities. Before my marriage I was involved in activities and after marriage also I am engrossed in activities. As a student I was so active. So much zeal I have." ⁶

Even though she was exploited and discriminated in the hands of dominant caste groups, she was firm and determined to pursue social justice without any inhibition. In one of her speeches she very firmly and rigidly says that "Even if they were scornful of me, yet I'm determined to carry out my responsibility as a representative of my community." ⁷ (Shyamala, 143) This was the strength and courage of T. N Sadalakshmi's activism and assertion. Through her ideal speeches she tries to implant the seeds of socio-political activism in the minds of Dalit Bahujan communities.

T.N Sadalakshmi as a woman and as a downtrodden woman at that time had encountered double oppression in terms of caste and gender. She clearly repudiated these forms of oppression and raised her voice against such inhuman practices. For instance, when she was a member of Congress party, she had participated in campaigns. After the campaign all party leaders had gathered for a lunch break in a house of a dominant caste member. All members belong to dominant caste were having lunch inside the house but members belong to lower caste were given lunch outside the house. This type of discrimination on caste lines had irked and infuriated Sadalakshmi much. She instantly ran into the house and questioned the upper caste members for their inhuman treatment of Dalit communities within the realm of one political party. This made her realize that leadership and politics is a different sphere. They

needed strategies and wisdom to tame the dominant spectrum of society.

In 1968-69 Jai Telangana Movement started, in that movement she played a vital role. Sadalaxmi Presided the first meeting of Telangana Prajasamithi in Reddy Hostel. She gave inspiring speeches during Telangana Movements. When Chenna Reddy was arrested in this movement, Sadalaxmi took up complete leadership responsibility of the movement and ran the movement. As she became a threat to the government as she was getting overwhelming response from the people, she was arrested and was put in Chenchalguda jail. She grossly condemned the leaders who sold out the Telangana movement.

T.N Sadalakshmi as a downtrodden woman primarily stood for dalit women's cause and rights to uphold their interests in every sphere. She was always objective in the perception of her role as a dalit woman to work independently without giving chance to others to define what her position is. She led a women's procession from Keshav Memorial School, Narayanaguda to the Assembly and appealed to women to participate in the 'Chalo Assembly', procession to prove their unity and determination that they were prepared to sacrifice themselves for the preservation of

democracy and achieve a separate state for Telangana. She gave a slogan that "Women warriors, arise to speak up."⁸ For this, she worked day and night knowing her limits of reason and wisdom. Swathy Margaret underscores that "If we do not define ourselves for ourselves, we will be defined by others, for their use and to our detriment."⁹ T. N Sadalakshmi's voice needs to be looked at from dalit feminist point of view as it is a representative of all dalit women who are oppressed and silenced.

Subsequently, she won in the elections when she contested representing Telangana Praja Samithi Party. That was evident how people were committed to Telangana movement under the leadership of Sadalaxmi. As Telangana Praja Samithi was merged with Congress, she joined the Telanagana State Congress party which was founded by Konda Laxman Bapuji and contested from Secunderabad constituency but she could not win in that election. Sadalaxmi dedicated her life in uplifting downtrodden. In this process she started many organizations such as Bandhu Seva Mandali, Arunditeeya Mahasabha, Backward Class Federation, Babu Jagjeevanram Trust. She worked as the chairman for Lead Cap. She continued her political life actively for four decades.

ERODING COLONIAL LEGITIMACY THROUGH MASS MOBILIZATION: A CRITIQUE OF GANDHI'S POLITICAL STRATEGY

P. Laina

The present paper is an attempt to highlight Gandhian political strategy in the context of the Indian National Movement. Mass mobilization is considered as an important aspect of his strategy. Though large elements of the strategy adopted by the Indian National Congress evolved during

the Moderate and Extremist phases of the movement, it was structured and completed during the Gandhian phase of the movement and in Gandhi's political practice. Present paper focuses on the period, 1917-47. The work is both interpretative and analytical.

The British who took India by force consolidated their rule in India by introducing the rule of law, western education, representative institutions etc. Colonial policy depended on the nature of politics and economy in the Metropolis as well as the emerging trends in the colony. Its interest was to prolong its rule as long as possible for which the colonial masters changed their policy from time to time depending on the nature of exploitation. Colonial state in India cannot be considered as autocratic or authoritative in nature nor as hegemonic in character. The western models that British introduced in India included the mechanisms of civil society. The public meetings, press campaigns against the government, interview with the government officials etc. were allowed in colonial India. The existence of the Indian National Congress, which organized mass mobilizations against government on such a wide a scale shows that the British state was not purely autocratic or authoritative state. The rule of law which the British government established in India was in a limited sense when compared to that of a modern state. The colonial ideology behind the introduction of rule of law and education was not basically for the improvement or modernization of Indian society. Instead it was through which they tries to get support of a section of the people to their rule.

The political strategy that Gandhi evolved was conditioned by and suited to a semi-hegemonic state like colonial India. The British who took India by force consolidated their power in India by adopting some measures to collaborate with the native people. The central question of Gandhian strategy was how to organize mass action against the colonial government. The basic assumptions on which Gandhian strategy depended were that individuals are the ultimate source of power, no government can rule without the consent of the ruled and modern state intruded into areas which were once considered private. With the introduction of rule of law, western education and representative institutions etc. they established their legitimacy in India. Gandhi's effort was to erode this legitimacy by withdrawing the consent of the masses to the colonial authority. Gandhi's struggle against the British was a fight against power. According to Burrowes, Gandhi's struggle in India was based

on his understanding that "illegitimate power can work only in certain circumstances"¹.

The Non Cooperation Movement of 1920 was aimed at withdrawing the consent which a government obtained from its subjects. The non-cooperation movement involved the deliberate withdrawal of cooperation with the state by organizing strikes, boycotts, no-tax campaigns, boycott of British courts, legislative bodies and elections. Political non-cooperation included acts of civil disobedience – the deliberate, open and peaceful violation of particular laws, regulations, or instructions believed to be orally objectionable or unreasonable.² Non Cooperation with the government results in the loss of prestige of the government. Thus the government lost its prestige during the non-violent non-cooperation of 1920, which it never regained. "Titles, law courts, educational institutions no longer inspire the awe they did in 1920"³

Gandhi offered non-violence as the means to make non-cooperation effective against British rule in India. He chose non-violence not only for ethical reasons but also for its practical utility. In a letter to Viceroy Chelmsford he wrote ... "half of India is too weak to offer violent resistance and the other half is unwilling to do so"⁴. Only a non-violent movement could get the support of the masses. Large scale mass participation on the lines of non-violence alone could make non-cooperation successful. Acceptance by the Indian National Congress of his non-violent technique was not a moral or religious act but a political decision because Gandhi offered a course of action which was seen to be practical and effective.

Governments find it difficult to take action against non-violent movements: "Repression against non-violent resisters can alienate various groups further so that it actually weakens the opponents and strengthens the non-violent group"⁵ The government at first decided not to take any action against Gandhi while the non-cooperation movement of 1920 was going on. George Lowndes, a British Officer, wrote in August 1920 that, "To take any legal steps against him [Gandhi] now would be merely playing into his hands. If we leave him alone the non-cooperation movement with it his personal influence will die of inanition. I should however rather like to get our reasons into the public press and to make it known that we no longer regard

him as worth powder and shot. It might be put rather neatly, I think, the Government now refuse to "co-operate" with the Mahatma!"⁶

Later during the Salt March of 1930 also the government decided not to take any action against the march so long as it was conducted peacefully. "So long as it is conducted peacefully there is no provision of law which permits prohibition of the March"⁷ But the government was forced to change its policy and resort to repression once it found that its authority was getting eroded.

The issue of salt did not alienate the Congress Moderates. It had a widespread popular concern which helped in mobilizing a mass following. It had no divisive potential. It enabled the participation by different sections of the society. Large-scale participation of women was a notable feature of this movement. The movement really demonstrated the mass following of the Congress.

The two-fold programme of Boycott and Civil Disobedience had a two-fold objective. The Boycott was directed against the ignorance and selfishness of the British public and the Civil Disobedience was directed against the arrogance and political stupidity of the Bureaucracy.⁸ Civil Disobedience came to an end with the Gandhi-Irwin pact of 1931.⁹ The movement which later resumed, sauntered on for two years and came to an end in 1934. Gandhi now turned his attention to the Constructive Programme.

Gandhi worked at two levels. He worked with the Congress and also through his Constructive Programme. His strategy was based on a specific technique. Gandhi had shown an amazing degree of adaptability. He took up immediate issues at stake to organize the masses around these and through the specific issues he questioned the existence of the colonial authority. His Non-Cooperation and Civil Disobedience movements questioned the hegemony of the British power in India. His method was to slowly erode the British hegemony. So he did not make 'unreasonable' demands. Except during the Quit India movement, complete independence was not made the immediate demand.

Gandhi prepared a comprehensive plan of action before starting a movement. He chose

particular and inclusive issues.¹⁰ Gandhi chose immediate issues to start a movement. Except Quit India movement, which was a fight to the finish, no other movement had its declared aim as complete independence Swaraj. He chose "petty and collateral issue of Rowlatt Bills for the inauguration of Satyagraha, although there was before India the mammoth issue of Self-Government.....In 1920 when the Punjab tragedy and the Khilaphat wrong were made by him the issue on which to inaugurate the Non-co-operation movement, - not Swaraj."¹¹

Gandhi launched movements only when he was convinced that masses would enthusiastically participate in them. Knowing the limitations of the masses he called off the movements whenever they were at low ebb. He kept masses active through his constructive programme. His constructive programme, which was intended to restructure the social and economic life of all Indians, was a vital part of his strategy. It was an attempt to strengthen Indian society socially and economically without depending on British power: "The constant internal strengthening of Indian society and its institutions was seen by Gandhi as leading to the inevitable end of British rule"¹²

Gandhi's fasts could also be considered as part of his strategy. The colonial government was of the opinion that Gandhi's fasts were for political ends and in order to gain prestige.¹³ With the exception of his first fast during the Ahmedabad Mill Strike in 1918, all other fasts coincided with serious internal crises in the Congress, usually due to dissensions over policy of violence or non-violence, when Gandhi's leadership was seriously threatened; it resulted in immense increase in popularity and prestige of Gandhi at a time when this was most needed by him; enabled him to re-establish his personal ascendancy.

For the purpose of organizing a mass movement, Gandhi tried to put much emphasis on the class conciliation. He totally rejected the notion of class struggles put forward by the leftists. For him the necessary and important struggle that had to be waged was the anti-imperialist struggle. His attempt was to organize the masses in order to question the hegemony of the colonial power. His programmes were designed to forge a broad united front against the colonial power. Gandhian techniques were

equally against strife and internal conflicts. Gandhi deferred class revolution for the sake of achieving independence. Through his methods he tried to make the country fit for freedom though not for socialism¹⁴.

Even though the leftists and the revolutionary terrorists also had their own programmes to mobilize masses they were not successful in their task. Kerala provides an example of a different kind of mobilization. In Kerala, mass mobilization took place based on class struggles and without Gandhism. Here it was the leftists who undertook the task of mobilizing the masses. Kerala had its own

specific conditions and that were crucial to the leftist success. It shows the complexities and possibilities that existed within the national movement.

The Indian national movement witnessed the evolution of a practical strategy in terms of the Gandhian method of struggle. He represented the needs of his time. His strategy was suited to the nature of semi-hegemonic state that existed in colonial India. His techniques and programmes were developed to meet the immediate social and political needs the success of which depended on the context in which it is applied.

INFILTRATION OF COMMUNISTS INTO CONGRESS SOCIALIST PARTY

S. Lalitha

1930's witnessed the rapid growth of socialist ideas within and outside the congress. In 1929 there was a great economic depression in the United States which gradually spread to the rest of the world. The world depression brought the capitalist system into disrepute and drew attention towards Marxism, Socialism and economic planning. Consequently social ideas began to attract more and more people, especially the young, the workers and the peasants.

Socialist ideas:

The masses wanted economic freedom. They had to create a new age in which all should

work to the best of their abilities and take only what was absolutely necessary for them. The majority class must make organized efforts to put an end for all time, to poverty, ignorance, inequality, injustice, high handedness and exploitation going on in the world. The labour must have the right to enjoy all the fruits of his labour. Every one ought to get the necessary facilities to live and grow. The horrible distinctions such as master and servant, landlord and tenant, the rich and the poor, the employer and the employed must be obliterated. In short, the principle aim of socialists was to overturn the whole structure of society, wanted to bring about revolutionary changes and establish universal

fraternity, natural unity and real happiness there in.¹

The primary duty of the Indian socialist at present was to form an independent political party for the labouring class. Indian socialism can be established firmly only by organizing a separate political labour party.² Socialism is consistent with the real self respect of the human beings in the world, it is the duty of youths to establish it to do away with anything, which opposes it, and establish a rule which is based upon respect for man.³ In 1924 the Servants of the People Society started a weekly newspaper in English "*The People*" and some of the editorial staff got into touch with the advanced socialist party in Bombay. This paper came to an end in 1930 as consequence of publishing objectionable communist articles.⁴

The aim should be simply to put good tools into the hands of the workers to enable them to produce more abundantly for their own benefits.⁵ Socialism cannot be killed by repression, capitalism and the competition. For selfish gains is the root cause of all the troubles in the world today. It is only if the Government accepts the principle that both the employers and the employed are entitled to the fruits of their joint labours equally and help the latter in their struggle to win.⁶

Formation of Socialist Party:

The idea to form a socialist Party on all India level originated in the minds of a few prisoners of the Civil Disobedience Movement lodged in the Nasik Central Prison. Persons who propagated this idea were Jayaprakash Narayan, Ashok Mehta, Achyut Patwardhan, Yusuf Meherally, M.R.Masani, N.G.Gore, S.N.Joshi and M.L.Dantwala. These socialists were dissatisfied with the policies of the congress.⁷ They entertained doubts about the efficiency of Gandhian tactics and felt the necessity to direct the National Movement on the socialist lines to make it effective.

They recognized the Indian National Congress as the main National Organization in the country, the chief platform to carry on the struggle for freedom.⁸ They held the view that by working outside the National Congress the socialists would isolate themselves from the Nationalist Movement. The achievement of political freedom was the primary task for them.

There was only one movement which was capable of removing the defects existing in India and that was the socialist movement. Everybody in the country should enlist support for it. The congress should become socialist in character.⁹

The masses were numerically larger. The needs of the Indian democratic movement also required an alliance between the lower middle class and the masses. Congressmen had been approaching the masses in the name of democracy and political freedom.¹⁰ The formation of the Congress Socialist Party in 1934 with in the congress became a landmark in the growth of socialist movement in India, which had been gathering strength for a decade. Moreover it gave a definite shape of the radical thinking within the Indian National Congress.¹¹

Communist Infiltration

The emergence of the Congress Socialist Party in October 1934 paved the way for the communists to rally under its banner and revives its organization and influence the society. Both the Congress Socialist Party and the Communist Party were making vigorous attempts to establish influential contact with the different sections of the society, such as the labour, the peasants and youth through various kinds of organizations such as workers union, youth league .etc. to gain their support and sympathy to their party activities and programs. Though they were not able to get the people's support in the beginning, their constant social interaction enabled them to win people's confidence.¹²

Socialistically minded congressmen decided at the conference held at Patna on 17th May 1934 to organise an All India Congress Socialist Party with provincial branches. Congressmen with socialist views in Madras, headed by Sripad Shankar and K.S.Gopala Krishnan, held a meeting on the 1st July 1934 and decided to form a Tamilnadu Socialist party with head quarters at Madras. Jaya prakash Narayan, General secretary, All-India Congress Socialist Party came to Madras in 1934 but it was not materialised due to C.Rajagopalachari's opposition on the ground that this would create the impression of a split in the congress.¹³ Jayaprakash was both a socialist and a nationalist. He tried his best to win over both the communists and the congressmen for creating a broad socialists front to fight imperialism.¹⁴

Among the voluminous material on the birth and development of the Congress Socialist Party, a prominent place should be given to a book written by Jayaprakash Narayanan under the title, 'Why Socialism', that opened the eyes of a large number of young congress men and women who were grouping towards a new path since they had become frustrated with the utter futility of the programmes and practices adopted by the right wing leaders of the Indian National Congress. The ideology of socialism enabled the radical congressmen to rally the masses of working people in the struggle for freedom.¹⁵

The party aimed at the destruction of private property and the establishment of a dictatorship of the proletariat by means of a revolution. The party's objects were the achievement of complete independence of India by the violent overthrow of British rule and the establishment of a Soviet Government, the confiscation without compensation of all the lands and properties of the rulers, princes, landlords etc. The party fought to secure these objects by organization a general strike of workers culminating in a general political strike.¹⁶

In 1936 under the Presidentship of Dinker Mehta, a provincial Congress Socialist party for TamilNadu was formed. District Congress Socialist Party meetings were held at Madurai, Dindigul, Tanjore, Tuticorin, Tirunelveli and Madras. In the meetings, the socialist advocated the establishment of a social state as a panacea for all ills. They preached class consciousness. Members of the party continued to inspire the activities of the Madras Students' Organisation.¹⁷

The Communists utilized the platforms of the congress and the congress socialist party to the maximum to spread the ideas of Marxism-Leninism and carry on other mass activities.¹⁸ The communists worked in alliance with the congress socialists and soon made a deeper impression on young socialists and radicals. The result was that along with the formation of the Congress Socialist Party, there was a rapid growth of communist influence and of the communist party.¹⁹ Nehru propagated the ideas of socialism and declared that political freedom would become meaningful only if it led to the economic emancipation of the masses, it had to therefore, be followed by the establishment of a socialist society. Nehru in his presidential

address to the Lucknow Congress in 1936, Nehru urged the congress to accept Socialism as its goal and to bring itself closer to the peasantry and the working class.²⁰

When the Madras Provincial Congress Socialist Party was formed in 1937, Jeevanandham became its first secretary. According to P.Jeevanandham the congress was interested only in the political freedom of the country and was not serious about social justice or ending economic exploitation. He was convinced that only socialism could bring about the total liberation of the people. This conviction inspired him to join the socialists, who were then functioning within the congress fold.²¹ P.Jeevanandham explained the principles of the socialist movement and stated that it is only the labourers that form the backbone of the movement.²² Socialism had been trying to free the land from these two, to bring about real equality, and to establish people's Government in the country. Socialism is the only means to remove communal bickering and riots. Socialism is the creed which diverts the youth from constitutional methods on the one hand and terrorism on the other. It takes him along a different path from a merely petitioning body.²³

To form a provincial party in Tamilnadu and get it affiliated with the All-India Congress Socialist Party a conference was held at Salem on the 28th and 29th November 1936 under the presidentship of Dinker Mehta at which a provincial Congress Socialist party for Tamilnadu was formed. At the conference office-bearers were elected and the District parties in Madras city, Coimbatore, Salem and Trichinopoly were recognized as branches.²⁴ A congress socialist party had been formed in the South Arcot district and it was reported that a similar party was to be formed in the Tanjore district.²⁵

The socialists organised a Lenin Day meeting in Madras on the 21 January 1937. Socialists have succeeded in forming a student's association under the name of 'The Madras City Student's Organization'. The objects of this association include 1) the preparation of schemes to relieve unemployment, 2) the promotion of Swadeshi, 3) the formation of volunteer corps and 4) rural reconstruction. It is intended that similar associations should be

formed in the mufassal and affiliated to the city association.²⁶

By the beginning of 1939 the communist had gained enormous benefits from their penetration of the Congress Socialist Party, for it had given them opportunity not only to capture

units of that organisation but to influence its mass audience in India. The communist party had grown tremendously multiplying its membership many times over in the space of three years. The most important benefit however, was access to the Indian National Congress.²⁷

THE LEADERSHIP AND PERSPECTIVE OF VARIYAM KUNNATH KUNHAMMED HAJI IN THE ANTI COLONIAL UPSURGE OF 1921

K.B. Latheeb Kumar & Dr. N. Kanakarathnam

Background and perspectives

The Malabar rebellion was an *exciting* chapter in the history of the freedom struggle in Kerala. This heroic struggle ended with a tragic episode was differentially viewed by the historians and the writers with vested interests. The fight, which lasted for nearly a year, has been marked by some historians as a part of the national movement.

As Mahatma Gandhi took over the leadership, the National movement achieved a new passion and vigor. In December 1920, at Nagpur Congress, it was declared that the aim of Congress is to achieve Swaraj and it should be through non-violence. The Khilafath movement also was getting stronger at this time in India. Gandhiji utilized this chance to attract Muslims who were generally reluctant towards the

National Movement. The Congress also lent its full support to the Khilafath cause, which had been agitating the minds of the Indian Muslims. The issue concerned the shabby treatment meted out to the Sultan of Turkey (the Caliph of Islam) by the British at the end of the First World War. Regarding the Muslims, the holy movement Khilafath was the basement of their belief. So Mappilas came forward widely to assist and support this movement. They considered it as a religious duty to fight in defense of the Khilafath till the last Muslim is done away with¹.

Mahatma Gandhi and Shoukath Ali reached Malabar in August 1920 as a part of All India campaign to enrich the non-cooperative movement and Khilafath movement. This was a diversion in the politicalisation path of the Mappilas. Gandhiji gave a detailed speech about

Khilafath problems at a big rally in Calicut beach. "I have understood about the feelings of a Musalman about Khilafath issue. So, I, do hereby declare, the government has wounded the beliefs of a Musalman as never before". If the Indian Muslims hadn't controlled their feelings, if the message of non-violence were not conveyed to them and if they were not ready to approve that message, there would more blood shedding². The speech made by Shoukath Ali was more passionate. "If you are strong and capable, then it is your bounden duty, so long as one Musalman breathes, to fight the unjust king, the unjust government that proved to be an enemy to your faith and to your God. If you are weak and could not cope physically with your opponents, then it is incumbent for you to go, migrate, to another country and leave that unjust kingdom and that unjust tyrant king"³.

In short, the visit of Shoukath Ali and Gandhiji recharged the passions of Muslims and by the end of 1920; Khilafath ideas were circulated in Malabar. Khilafath committees had come in to being in almost every village in the Mappila zone. K. Madhavan Nair, K.P. Keshava Menon, M.P. Narayana Menon, Kattilassery Mohammed Musliyar etc. considered Khilafath movement as a part of a non-violent great war against colonial rule. But for religious leaders who played a crucial role in mobilizing the Mappilas and for their followers at lower levels, the Khilafath movement was basically a religious question and its anti-imperialist character was only incidental⁴.

That is, as the Congress leaders were stressing on the necessity of non-violence, non-co-operation and Hindu Muslim unity, a sort of undercurrent of violence was included from the very beginning of Khilafath movement in Malabar. The campaigns made by Ali Brothers on All India level were explained here as a declaration that "if we are strong enough, then we must fight with the British". E. Moidu Moulavi told an audience at Cannanore that the Indian Muslims ought to have fought a war in revenge for the wrongs done to Islam and he deplored the want of arms to undertake such a venture⁵.

Similarly authorities like E.F. Thomas (District Magistrate) also had feared that it would be more spreading and violent, hadn't it stopped in the very beginning itself. So he banned the Khilafath meetings wherever possible. Banning

of Khilafath meetings created a very volatile atmosphere in Malabar area.

The Khilafath explanation meeting under the leadership of Yaakoob Hussain on 15th February 1921 in Calicut was banned and Yaakoob Hussain, U. Gopala Menon and K. Madhavan Nair were arrested. The police arrests and treating were more helpful to anti government uproars. Madhavan Nair states that Malabar area, which was gradually woke up, became asleep⁶. The arrest of Congress leaders set a stage for a big rally of protest – which led to a complete *hartal* in Calicut. The Yaakoob Hussain episode proved to be a turning point in the Khilafath movement as it evoked a decidedly hostile and aggressive attitude among the Khilafath activists. The government retaliated by suppressing Khilafath activities, filing false charges and closing Khilafath newspapers. A newspaper 'The Muslim' estimated the incidents, "the repressive policy of Mr. Thomas in Malabar is now reported to have taken a new form. Finding that the imprisonment of those who are working for their religion and country, it is not possible to force them to give up their efforts, the authorities have now begun to inflict frightful torture. It is now an open secret that the police do seize Khilafath workers and non-cooperators and take them inside the police stations where they Barbourously beat and threaten them.

Interpretations and Actuality

The arrest of the Vadekke Veetil Muhammed the Khilafath volunteer and the rumour in which the Tirurangadi mosque was attacked were just some of the events led to the final battle. The British authorities had to work hard to suppress the resistance of a people who had suffered the feudal exploitation and colonial encroachments. So many well known and unknown brave patriots participated in this heroic struggle in Malabar. It is not a proper approach to observe and analyze history through an individual. Yet in some cases individuals may take history to their way quiet unexpectedly. Variyam Kunnath Kunhammed Haji was such a patriot in the Malabar rebellion. He was born in 1866 at Nellikuth in eastern Earnad as the eldest son of Chakkiparamnbath Variyam Kunnath Moideenkutty Haji and Kunhayissu Umma, to a well – to – do family. He was the descendant of the Ali Musliar who played a

leading role in the Malabar Rebellion. He, like his predecessors and his family members, had an anti colonial attitude and had been deported and imprisoned many times. Kunhammed Haji returned to Malabar at the end 1913 or early in 1914. In 1915 C A Innes, district Majistrates, Malabar, reporting about a Mappila outbreak of that year, had occasion to comment on Kunhammed Haji and he wrote that " Variyam Kunnath Kunhammed Haji whether deservedly or not as the reputation of being the most dangerous man in Malabar" ⁷.

Polity and Policy

In the beginning stages of the riot, Kunhammed Haji was against framing Hindus or compulsory conversion of religion. Knowing that the British and their auxiliaries were the real opponents of this country, he followed a strict policy that should not be against Hindus and the riot should not be a communal one. He had special arrangements for punishing the Muslims who helped the British, as well as punishing the Muslims who framed Hindus. The killing of Retired Inspector Khan Bahadur Chekutty has great relevance to this context. Chekutty Sahib was a well-known person in south Malabar, a staunch supporter of the government. As the authorities trusted him he acted as a liaison between the government and the *Mappilas* whenever their relations became strained⁸. Kunhammed Haji had an earlier revengeful feeling against Chekutty Sahib because he was the main reason behind the exile of Haji and his father. Haji invaded Sahibs house and killed him, and his head was carried on a pole and returned as a processions. These acts of Kunhammed Haji indicate his determination to punish those who helped the British government and opposed the rebellion, especially the *Mappilas*⁹.

The Manjery declaration by Kunhammed Haji after Chekkutty sahibs assassination is a proof of his attitude towards the Hindus. In his speech he reminded the people "this is not the war between Hindus and Muslims. British, landlords and loyal *Mappilas* are spreading news like this and they want to divide us on the basis of religion and kept majority of us as their slaves but we are not their slaves. We do not hate Hindus but we will punish the British supporters and the people who betray this state. Hindus are our natives, and one who attack the Hindus without any provocation will face punishments

by the government and our intention is not to form an Islamic state or to destroy the properties of the Hindus. By 28 August 1921, Hitchcock comments that the murder of Chekutty was part of Kunhammed Haji's measures to start a reign of terror to counter act the defeat of the rebels of Pokkottur¹⁰.

Martial trial and execution

When the rebellion broke out he assumed its leadership in eastern Earnad and proclaimed himself raja of the Hindus, Amir of the Musalmans and the colonel of the Khilafath army¹¹. But later when the Military intervened to suppress the riots, many Hindus helped the raids of Police and Military as a part of their opposition against the Muslim attacks. Even Madhavan Nair admits that only after this, he started to harm those Hindus and to compel them for religious conversion. By the last stage of the riot, Kunhammed Haji was captured at Veetikundu on Chokkad hills, east of Nilambur Kalikavu road in the Western Ghats. A platoon of the Malabar Special Police formed to suppress the riots had surrounded the place of Kunhammed Haji. After some negotiations the leader of the special police party Ramanatha Iyer, met Kunhammed Haji alone on 6th January 1922 and Haji with 21 followers surrendered lying down their arms consisting of one 303 rifle, 14 other guns, 4 swords and one spear and a quantity of ammunition¹². Kunhammed Haji and his men were marched 13 miles to Wandur guarded by a platoon of 2/9th Gurkhas from Kalikav and later they were taken to Manjery.

Kunhammed Haji was summarily tried by the martial law court sitting in the office of the Sub- Divisional Magistrate; the trial was held in the presence of R Gelli the collector, Robert Howard Hitchcock, army officer Hamphri, Amu sahib DYSP and Narayana Menon the Circle Inspector and others at Malappuram and sentenced to death. When the police officers began to cover to his eyes with a towel tied his eyes he refused by saying that "usually you used to shoot a person from the back side after chained his hands. But keep my eyes open and avoid the hand chains the bullets that ruin my life should come and fall on my chest. I want to see it and die in this soil." He was shot on 21st January 1922¹³. His comrades were also shot at the same place Kottakkunnu. The bodies were cremated fearing that the grave may become

further inspiration for the rebels. All the records connected with the Khilafath Raj were burnt in order to make the people to forget the Khilafath rule of six months. Variyam Kunnath

Kunhammed Haji was an eminent opponent of British government in Malabar rebellion, one the most aggressive revolts occurred after the Sipoy Mutiny in 1857¹⁴.

‘SAKTI’ AS THE WAR GODDESS: A STUDY OF MADAYI KAVU, KANNUR DISTRICT, KERALA

V. Lijin

The Sanskrit term *tantra* derives from the verb *tan* meaning to expand, and thus, it literally denotes anything that can be stretched or extended like threads on a loom. In its developed form, Tantra refers to a complex cultic practices, rituals, mysticism and secret rites that are based on a philosophy and deep spiritual devotion centring on the concept of supreme power. That power called sakti, has diverse manifestations¹. Those who worship the supreme deity exclusively as a female Principles are called Sakta.² In Tamilakam Korraivai and Aiyayi are the names by which the Mother Goddess was known to early Tamil writers. The Eyinar and Maravar, two ancient Tamil Warrior classes, propitiated her as the Goddess of victory by bloody sacrifices accompanied by ritual, music and dancing.

Bhagavati (The Goddess) is the predominant Hindu deity of Kerala³. Every community in Kerala worships her in a distinct way ranging from simple Kavu traditions to elite temple culture. Many ritual traditions associated with the worship of Bhagavathi can be studied in the backdrop of Kerala's eclectic historical and social development.⁴ There are thirteen Sakteya Kavus mostly concentrated in northern Kerala, (erstwhile Malabar) and each of them are noted for unique customs and ritual practices. Of these,

Madayi Kavu (12° 2'5.02"N; 75°15'40.59"E) situated in Pazhayangadi of Kannur district is one the important Kavus in the history of the region.⁵ Extending over an area of 2 hectares, the Madayi Kavu is located amidst thick green vegetation cover which supports a wide variety of endemic species of flora and fauna. The temple complex consists of two *Srikovils*: of Siva facing east and that of Bhadrakali facing west; *namaskara mandapam*, sub-shrines, *chuttambalam*. The sub shrines are for associated deities such as Ayyappan, Saptamatrikas, Bhairava as Kshetrapalaka, Veerabhadra, and Ganapati. In the vicinity of the *Madayi kavu*, major ponds are *Aryamvilikulam*, *Jutakulam*, *Kshetrakulam*, *Prakulam*, *Vadukunna thadakam*, and *Yakshikulam*⁶.

Tradition says that the term, ‘Madayi’ is derived from two Malayalam words *mad* means land and *ayi* means formed (Madayi = formed land). Madayi has an important place in the political history of Northern Kerala. Several lines of Kings such as rulers of Mushaka Vamsa, Ezhimala and Kolathiri ruled over this region. Kerala Varma Kolathiri who ruled over the place in the middle of the 14th century built the temple at Madayi. The *Madayi kavu Bhagavati* is the tutelary deity of the Kolathiri ruler of Kolathunadu.

The Legendary Accounts

There are many legends associated with the goddess of *Madayi kavu*. One of the myths says that after Bhadrakali killed Darikasura on this plateau, she refused to give up her anger and started the 'Killing Dance', God Shiva appeared before Bhadrakali and persuaded her to take a bath to cool down mentally as well as physically. For this purpose, Lord Siva created a lake with his *Trisoolam* and God along with Devi took bath in this 'Vadukunna Lake' to make her mind calm.

A peculiar feature is that the concept of the goddess Bhadarakali here is of Rurujithvidhanam⁷. Hence the temple is on par with similar temples like Mannanpurath Kavu, Kalarivaathukal temple, Thiruvaiyanatkavu, Thirumandhamkunnu temple, Kodungallur Temple and Panayanar Kavu. Toddy, meat etc are offered to the deity of Madayi at the time of madayamma puja.

DEITIES

Thiruvarkat Bhagavathi

Thiruvarkat Bhagavathi is the Tutelary deity of the Kolathiri Raja.⁸ She is bhagavati the chaste virgin, famed all over Malabar for her 'titanic warfare against demonic forces. She is conceived as Kali born out of the third eye of Siva to accomplish the annihilation of Darika⁹. Having vanquished darika she sets to Kizhlokam. Within a short while she drained off an ocean of unfathomable depth and turned it into matayi or sterile land¹⁰. Henceforth, she came to be known as Matayi Kavil acchi or the grandmother of Matayi Kavu. The Kolathiri Raja, ruler of Kolattunad accepted her as his tayi and began worshiping her¹¹. The tottam songs of Thiruvarkatu Bhagavathi praises the goddess as war deity.¹² The goddess Madayi Kavilamma was generated 'to destroy the lineages of enemies' in 'great affection for the King' as 'Kerala hero would not falter' and she was the personification of the *diksha* that was enjoined to protect the entire lineage of the Kolathiri King.¹³

Kolathiri Raja had another temple as same like the Madayi kavu known as Kaalarivathukal Bhagavathi temple. Here the deity Kalarivathukal Amma also worshipped as the tutelary deity of Kolathiri as the Kalari devatha (deity of Martial art Kalari) In malabar Nayars are the martial

community and they following the sakteya form of worship in their cultic spaces like sacred groves and Kalari.¹⁴

In the realm of Tantra, the central theme is the divine energy and creative power (sakti) that is represented by the feminine aspect of any of various gods; personified as a devi, or goddess, she is portrayed as his wife, above all as the wife of siva. The tantric texts usually take the form of a dialogue between Shiva and sakti. Kali or Kalika, is one of the many forms of sakti, whose name and form parallel that of the particular aspect the god takes, such as Kala and Kali.¹⁵

Bhairavan

Bhairava (frightful or terrible) is a fearsome manifestation of Shiva, whose icon has long fangs. He is sometimes called Kalabhairava or Kalaraj, Lord of time (as Kali is seen to be the Mistress of time), and is seen to control time and the world.¹⁶ Bhairava has been renowned god in the tantric circle and usually worshipped in the left-hand practice (vamacara) with liquor, meat and other unconventional ritual items.¹⁷

Saptamatrikas

Saptamatrika is a well-known alphabet goddess mentioned in many tantric texts, irrespective of their age or affiliation¹⁸. Matrikas are group of Hindu goddesses, who are always depicted together. They are Brahmani, Vaishnavi, Maheswari, Kaumari, varahi, Indrani and chamunda.¹⁹ In madayi Kavu saptamatrikas are placed in the southern side of the Kavu. These are the life size figures. The arrangement of matrikas are not usual sequence starts right from Camunda, Brahmi, Maheswari Kumari, Vaisnavi, Varahi and Indrani are flanked by Ganesa on the right and Virabadra on the left side respectively.²⁰ Saptamatrikas emerged into the mainstream of Hindu religion as Tantric deities.²¹

Another important deity in these Kavu is Lord Siva is installed in the form of *sila-linga*. The idol of Goddess Bhadrakali is made of Katusarkkara yogam. In sitting pose with the right leg on the base and the left kept on Darika and piercing him with the trident. The vigraham of the Goddess has eight arms with two tridents, sword, shield, skull, rope, hook, and serpent in hands. On the right and left sides of this idol, there are images of Bhairavan and Bhairavi. The idol of Lord Bhairavan and sree Bhairavi are

made of granite stone. Sree Paathala Bhadra is symbolized by an ashta dala Padma type sila. Since Goddess Bhadrakali (facing west) Lord siva (facing east) and Kshetrapal are installed within the same akathe balivattam and considering the sankalpam of the Goddess. On the southern side of the temple in a rectangular shrine saptamatrakas is placed. These are life size figures. The temple is classified under the Rurujit Vidhanam. But the type of saktism have been found in Madayi Kavu is similar to folk or tribal saktism. Nandakam the sword of Thiruvarkat bahagavathi also worshipped in Mdayiakavu²²

RITUALS AND FESTIVALS PITARAN

Daily ritual in Madayi Kavu is carried out by a section of Ambalavasi, who, according to Mr Logan 'drink liquor, exorcise devils, and are worshippers of Bhadrakali or of Sakthi²³. The Pitarar serve as religious specialists in the sakttheya Kavu where the goddess Kali is worshipped. People do not have a clear cut idea about their origin. Some believe that they have migrated from Bengal where Kali worship was foremost. This belief got its root because the Namboothiri Brahmins in Kerala strictly abstain from the consumption of non-vegetarian diet. This is a peculiarity in which they find themselves with the Bengali Brahmins.²⁴ They eat animal flesh drink liquor. The Pitarar worshipped the royal goddess Thiruvarkat bhagavathi inside the temple with the blood sacrifices of cocks and offering of liquor and the flesh as naivedya as part of the regular services on Tuesday, Friday and other time of special request. The fundamental scriptures prescribing the rituals of these deities are said to be Matsadbhava and seshasauchya²⁵. But the ritual system in both of these texts is representative of typical Kerala Brahmanical ritual mode and Pitaran community of North Malabar they did not following these texts they rightly following certain manuscripts handed down for generations. Another view about the rituals following in these Kavu is Kaulachara (left handed) practices in Tantra.

Rituals practiced in Madayi Kavu is Sakteya form of Worship. The significant ritual of the madayi Kavu is known as Vatakken vathil²⁶ dedicated to god Bhairavan cock sacrifice liquor parched cereals placed as offering also to the goddess Badrakali. Madya(liquor), Matsya (fish)

And Mudra (parched cereal) are generally included in the tantric system of worship.²⁷

Kameluthu also practiced in Madayi kavu as the part of festivals. Kameluthu is the drawing of certain aniconic/symbolic and anthropomorphic figures of deities using powders of certain specific colours²⁸. In Madayi Kavu symbol of badarakali drawn in the floor with different colours. The cultic practice of Kameluthu is the extant tradition of the tantric cults of Malabar.²⁹

On the other hand ballads and hymns of the goddess in different vernacular languages exist in considerable number.³⁰ In Madayi Kavu songs to Kali (*pattu* and *totta*) are used as mantras During the ritual worship and recently these songs were treated as a secret tradition.³¹ Thus in the ritual context these songs replaced the Sanskrit mantras, stavas, puranas and mahathmyas Which used to occupy that final position.³²

Theyyam also performed in the festive occasion in Madayi Kavu. Thiruvarkatu bagavavathi considered to be as the swaroopam deity of Kolathu raja. The Kolathiri raja also patronised the Thiruvarkat Bhagavathi³³ and deities like Thiruvarkat Bhagavathi, Someswari, Kalariyil Bhagavathi, Chuzhali Bhagavathi, Paadikutti Bhagavathi, Veera chamundi Vetuva chekavar, Kshetrapalan³⁴ etc appeared before devotees in the form of Theyyam. Another important theyyam performed in Madayi Kavu is the Mari theyyam by the Pulaya caste of north Malabar. Mari theyyam is celebrated on the 16th day of the Malayalam month Karkidakam to ward off endemic diseases³⁵. But the Maari theyyam not performed in the temple premises. In theyyam performances of north Malabar, tantric ritual is a regular feature in which Pancamakaras are offered.³⁶

KALASAM

The most important object of worship in the Theyyatam of Madayi Kavu is Kalasam a term derived from Sanskrit Kalasa, which denotes the womb of the mother earth. Filled with toddy or arrack, the kalasam or pot is richly decorated with tender coconut leaves and areca seeds. Procession of Kalasam is taken round the shrine thrice. Wherever the performance takes place and whichever is the caste that shrine belongs to the kalasakkaran (the kalasam bearer)

ought to be a man from Tiyya caste.³⁷ The primary of Kalasam bears allusion to the origin of the teyyam as it derived from ancient fertility cult.

SOCIETY

Generally Kavus have been dedicated by local communities to their ancestral spirits or deities. In Madayi Kavu we can see the participation of different communities assigned for different rituals and the devotees also participated the festive occasion of these Kavu. For daily ritual Toddy are carried out by Thiyyas. Thiyyas are the toddy drawing castes of Kerala.³⁸ The community of Pulayas have the right to

carried out Paddy rice to these Kavu. Pulayas are traditionally agricultural labours in Kerala. Madayi Kavu is often treated as a centre of communal harmony where various communities participated in these ceremonies. The festival of Madayi Kavu known as Poora mahotsavam. Poorakali is performed during pooram festival.³⁹ It is a very rare festival and it should be considered as the festival of fertility rather than considering it as the festival of northern Kerala. When we go through these ritual, there can be see many symbols related with fertility and ritual for production etc.⁴⁰

A BIRD'S EYE VIEW OF PONVILAINTHAKALATTUR

S. Loganathan

The Land of Tamilcountry was divided into five regions based on their natural phenomenon such as hill, pastoral, forest, coastal, and desert, which is mentioned in Tamil literature as Kurunji, Marudham, Mullai, Neidhal and Palai.¹ The village Ponvilaintha Kalattur (or) Kalattur is associated with the Marudham region, because the village is filled with rich cultivable lands. This article deals with the epigraphs of Kalattur i.e., Ponvilaintha Kalattur, Kalattur nadu of Kalattur Kottam, Tondaimandalam.

LOCATION

At present this village is located in the Kanchipuram District, formerly incorporated with the Chingleput District – Geographically it lies in 79°59'04" E and 12°36'58" N.² It lies 10 kms South of Chingleput and 10 kms West of Tirukkalukkunram and 60 kms from Chennai.

This village formed part of Tondaimandalam region. Kalattur seemed to have been the headquarters of Kalattur nadu of Kalattur Kottam. Tondaimandalam was divided into 24 Kottams and ruled by the Kurumbar, which was captured by the Pallavas.⁴ Later on Kalattur Kottam was one among the 24 Kottams of Tondaimandalam and listed as 9th kottam by the historian Dr.C.Meenakshi in her book *"The Administration and Social Life under the Pallavas"*.⁵

This village is embellished with three important temples such as Lakshmi Narasimhar Temple, Meenakshi Amman Samathe - Sri Munkudumesvara temple, Panchali Samathe - Dharmaraja Temple and at 4 kms distance there is another temple - Pon Panthir Kudam, Chaturbhuj Raman is located. Of these temples the Munkudumesvara was the oldest temple of this region.

ETYMOLOGY

Etymologically the name of the place can be split as Pon + Vilaintha + Kalattur. The term 'Pon' denotes 'Gold' 'Vilaintha' means 'Cropped' or 'harvested' and Kalattur is divided into the Kalam + Ur, Kalam bears several meaning.

LEGEND ASSOCIATED WITH PLACE NAME

A devotee of Lord Shiva was employed under a Brahmin to look after his land. The Brahmin offered a place of his land to the devotee as remuneration for his work. The devotee was looking after the land belonging to both. The Brahmin came to know that paddy sown in a specific period in the portion of the devotees land would yield golden paddy. To devotees get the golden paddy, the Brahmin asked the employee that it would be enough if he gave him paddy grown in specific field and offered the entire crop grown in other portion land. The devotee obliged and agreed to give the golden paddy. The people of the village knowing the Brahmin's trick asked him to give the employee a share in the gold paddy, which the Brahmin refused. The cause was taken to the king, who ordered the whole gold paddy should be paid into the Government's account. The Brahmin lost both shares. The employee got excess yield by the grace of Lord Shiva. As gold paddy grew in this land, the place came to know as Ponvilaintha Kalathur, which means Pon – gold, Vilaintha – growing, Kalathur the name of the place.⁷

During the 7th C.E., one among the 63 Nayanmars, Sri Kurruva Nayanar is said to have lived in this village. During the Chola period, Pugazendhi Pulavar, who wrote Nalavenba, was born in this village.⁸

LEGEND ASSOCIATED WITH THE TEMPLE

Pon Vilaintha Kalattur has small temple for Lord Siva. The main deity is called as Sri Munkudumeesvara and goddess Meenakshi Amman, and the temple was built by king Rajendra I. According to a legend,⁹ there lived a king, who was ruling this part of the country in ancient days. He was an ardent devotee of Lord Shiva and had a habit of getting Prasad from his temple every day before starting his routines. The priest of the temple used to perform daily routine pooja to the lord and carry the prasadam to the palace to submit to the king. The king was having his bath, the priest has to wait till he return to accept the prasadam, in the mean time the queen saw the priest waiting and enquired him, the priest told the reason and The queen liked the fresh flower and picked it and wore it on her plait. The priest was shocked and told the prasadam was meant for the king and grabbed the flowers from the queen and kept them in the plate.

The king arrived and accepted the prasadam with devotion, but he was shocked to see a single long hair got mixed up with flowers from the temple. The king got angry and enquired with the priest. The priest got frightened he could not tell the king that queen was responsible for it, but the priest told that the Lord in the temple had a long hair and hence the flower taken from the Lords idol had a hair mixed up among the flowers. The king warned the priest if the Lord does not have the hair, the head of the priest will be cut down.

The priest returned and cried and prayed to the Lord. The next day the priest and the king arrived at the temple for morning pooja, when the priest opened the sanctum, he was astonished to see a tuft near the forehead of the shiva Lingam. The priest was in tears realising the mercy of the God, to whom he was doing poojas with full devotion. On seeing the tuft the king apologised to the priest for suspecting him. As the Lord has a tuft towards his forehead, he came to be known as Munkudumeeswara. Even today we can witness the tuft on the Lord Lingam's head. Sri Munkudameesvara is bold and beautiful and facing east. The temple is situated on a vast area amidst the paddy fields in the calm village and is now protected and maintained by the Archaeological Survey of India.

SRI MUNKUDUMESVARA TEMPLE

A Chola temple is found in the village called Sri Munkudmeesvara temple. It is to have been built by Rajendra I. The temple would have been in some form during the Pallava period, because there is an epigraph of Pallava Nandivarman III.¹⁰

ARCHITECTURE OF SRI MUNKUDUMESVARA TEMPLE

The architectural features of the temple reveal the fact it can be assigned to the Chola period. The temple has the following components viz., Garbagriha, Ardhamandapa, Mahamandapa, Muhamandapa, Nandhi and Balipitha. The Garbagriha facing east is built in apsidal form. The adhisthana, consists of Upana, Jagati, Muppattai kumudam and Pattigai, the height of the adhisthana measures two feet. The pilaster consists of half pillar and Devkostha. The Devakostha enshrines Vinayaka and Dakshinamurthy on the south, Vishnu on the west, Brahma and Durga on the north. The half pillar has the usual parts of the pillar the pot, the palagai, the corbel, the bhutagana, the prastara has kudu motif. The pillars are beautifully built. The apsidal vimana rises above the prastara, which is built in stucco. The devakostha has Torana decoration on top of it, with miniature sculpture. The ardhmandapa and mahamandapa bear similar architectural feature. The mahamandapa has 32 pillars. The Nandhi, Balipitha and flag staff are placed in an axial line to the garbagriha. The Greeva and Sikhara are built in gajabrishta style. The stupid is placed on east and west. The parivara deities are Vinayaka and Subramanya on the west prakara.

MINAKSHI AMMAN SHRINE

Minakshi Amman shrine is located on the North east of the prakara facing south. The outer circumambulation has two entrances one on the east, other on the south side, which is devoid of gopura. The outer wall and the entrance are built in stone.

SCULPTURE

The sculptures enshrined in the devakostha are Vinayaka, Dakshinamurthy, Vishnu, Brahma, Durga, Chandikesavara Subramanya and Bhairava Navagrha.

BRONZE

The imperial Cholas were pioneers in metal bronze images. Chandrasekhar, Minakshi Amman, Pillaiyar, Valli, Deivanai, Murugan, Kurruva Nayanar. The bronze images bear similar features as that of stone sculptures, which is assigned to the Chola period.

The panel sculptures are found in the pillars of the temple, and these panel sculptures and the structure of the pillars are assigned to the Chola period.

Nearly 21 epigraphs have been reported from the temple of Munkudumeswarar, of which one record is assigned to Pallavas and another one is assigned to Vijayagandagopala, four records to the Pandyas and the rest 15 epigraphs are assigned to the Cholas. Of the twenty epigraphs, eight speak about endowment of lamp and twelve are related to grant of land to the temple. It is to be noted here that dancing girls played a vital role in the temple activities.¹¹

ENDOWMENT OF LAMPS

The Munkudumeswarar temple is mentioned in the epigraph as Peruntirukkoil Mahadeva, Aruvivaram udaiya Mahadeva. A solitary record of Nandivarman Maharaja identified by T.V. Mahalingam as Nandivarman III, dated in the 14th regnal year (860 A.D) mentioned the existence of the sabha and Perumakkal which assigned 1/3 of the share of the income from the lake. The income was endowed to the Paramesvara of the temple.¹²

Despite the fact that the temple is said to have been built by Rajendra Chola, but the earliest inscription is assigned to Kulottunga I, dated in his 46th regnal year (1116 A.D) It registers the provision for burning a twilight lamp in the Arulisvara Udaiya Mahadeva at Kalattur of Kalattur Kottam of Jayankonda Chola Mandalam. The endowment was given by Uttama Vadugayyan.¹³

Yet another inscription of Vikrama Chola, dated in his 15th regnal year (1133 A.D) records gift of two lamps to the temple of Peruntirukkoil Mahadeva at Kalattur by a brahman of Kalattur village.¹⁴

During Kulottunga II's period, (1138 A.D) money was gifted for burning two lamps¹⁵ Yet another epigraph Kulottunga III begins with the

epithet that he conquered Madurai and the head of the Pandya king, which mentions the endowment of three lamps.¹⁶

GIFT OF LAND

A record of Kulottunga, which may be assigned to Kulottunga II or III, (1138 & 1183 A.D) mentions certain land in the village Siru Tandalam was endowed by Parikirattu pendugal of Valudalai of Valudalai Mambakkam in vellanadu, a sub division of Damar Kottam to the temple of Avudaiya Nayanar at Kalattur.¹⁹

CREATION OF DEVADANA VILLAGE

A record of Tribuvana Konerimaikondan Kulottunga II, issued in his 12th regnal year (1145 A.D) mentions an order issued on 293 day by the chief Tondaiman, the land were clubbed and created a new devadana village Kulottunga Chola Tiruttodatogainallur, where in a flower garden was also created. It mentions the name of the Royal secretary (Tirumandira olai) Anabaya Muvendavelan. Anabaya was the title borne by Kulottunga II, who covered the Perambalam with gold. In this place, the Royal secretary is mentioned as Anabaya Muvendavelan.²⁰

During the reign of Kulottunga III (1190 A.D) land was endowed by a dancing girl (devaradiyal) to the temple.²¹ Yet another record of the same king mentions two dancing girls endowed land to the same temple. The name of the village Kalattur is said to have been changed as Gangaikonda Chola Chaturvedimangalam.²² It is well known that Chaturvedimangalam was the settlement of the Brahmins learned.

CONSECRATION OF IMAGE

Another inscription engraved on the south wall of the central shrine of Munkudimisvara temple mentions the name of the king as Tribhuvana Chakravartin Rajarajadeva, T.V. Mahalingam has assigned it to either Rajaraja II or Rajaraja III, (1154 or 1224 A.D) It speaks about the consecration of the image of Chandesvara in the Peruntirukoyil and endowed money for burning a perpetual lamp in the shrine. The image was gifted by the Devaradiyal Aravindavalli of Tiruvorriyur and the lamp stand was donated by the merchant of Mayilarpil. The Devaradiyal and the merchant hailed from Puzhal of Puliur Kottam respectively.²³

CONSECRATION OF THE IMAGE OF KSHETRAPALA

In the year 1191 A.D, during the reign of Kulottunga III, two sisters, who were the dancing girls of the temple endowed land for the consecration of the image of Kshetrapala in the Peruntirukoyil of Kalattur Pallipakkam, which was the hamlet of Kalattur.²⁴

VIJAYAGANDAGOPALADEVA CONSTRUCTION OF A SHRINE

The Telugu Cholas ruled northern part of Tamilcountry as feudatory under the Cholas, there were two rulers called Vijayagandagopala and Viragandagopala. Vijayandagopala issued a record in his 15th regnal year (1565 A.D) and the epigraph mentions that one Arulalapperumal constructed a shrine for the goddess and granted land to the same deity. The temple construction was made for the merit of the mother of Arulalaperumal.²⁵

PANDYAS AND KALATTUR

After the decline of the imperial Cholas, the Pandyas emerged as supreme power and extended their rule in Tondaimandalam also, four records have been assigned to pandyas. Three epigraphs were issued by Maravarman alias Tribhuvana Sundra pandya and were dated in his 14th regnal year. All the three records mentions the endowment made by the Kaikkolars. The name of the Kaikkolas mentioned in the epigraphs is the Kakkanayakkan, Aludaiyanayakkan and Mallandai. It is to be noted there all the three of them were brothers and endowed lands to the temple of Peruntirukkoyil Mahadeva,²⁶ for the offerings to the temple. The place Kalattur is also mentioned as Gangaikonda Chola Chaturvedimangalam. The name itself reveals the fact that it was named after the Chola king Rajendra I, the Chola ruler. Yet another record mentions the Brahmanas were settled in this village.²⁷

DIGGING OF WELL IN THE TEMPLE

An epigraph, palaeographically assigned to 13th C.E, engraved on the south wall of the Central shrine in the Adhipurisvara temple. It states that one women Uyyavandans sempon constructed a well in the premises of the temple, for the sacred bath of the God.²⁸

TIRUNAMATTUKKANI

A record, Palaeographically assigned to 16th C.A.D, mentions the village Mosipakkam village was granted as *tirunamattukkani* to the deity Bhairava in the temple of Adipurisvara. Yet another epigraph registers the gift of the same village - Mosipakkam in Kalattur Sirmai for the worship of the god Bhairavamurti by Papparasar, as the gift of Vasal Rayappa Nayaka and the agreement of the uravar of Kalattur to maintain the offerings and the lamp in the temple. On the same wall is a fragmentary inscription of the 11th century A.D. which mentions the assembly of Gangai kondasola Chaturvedimangalam in Kalattur nadu and a temple of Pillaiyar.²⁹

THE POET PUGAZENDHI

The popular poet Pugazendhi, lived during the medieval period, under the Cholas. He is said to have been a contemporary of Ottakuttan, a native of Kalantai, in Tondainadu.³⁰ But it is identified with the place Kalattur. He is said to have been known by his Nalavenba, a poem narrating the story of Nala in about 400 stanzas. K.A. Nilakanda Sastri has written that the age of Pugazendhi cannot be established by the evidence. Ottakuttan was a contemporary of Vikrama Chola and two other kings. Pugazendhi would have lived during Kulottunga – II, because one of the official of the temple borne the title of the king as Anapaya Muvendavelan.³¹ It is to be noted here that Kalandai and Kalattur seem to have been the same place. The popular poet of the Cholas period belongs to this place. Dandiyalankaram, in some of the stanzas are in praise of Anapaya Chola. Anapaya was the title of Kulottunga II who covered the Perambalam with gold.³²

THE ADI-ANDHRA MOVEMENT IN TELUGU REGIONS DURING 20th CENTURY

Dr. Mahammad Sharif

The Burmese factor also played as the base of the movement. Thousands of Dalit labourers, especially Malas, Migrated each year for spells of work on the docks at Rangoon in Burma from the late-nineteenth century onwards. Some of them stayed back even after their contract ceded and managed to learn new trades. In Burma they availed education and earned money, and on return some of them took direct part in the movement, others enthusiastically financed it. Many Dalit leaders, later visited Burma to collect funds for their movements. Most of the Dalit leaders who were active in 1920s were the product of *Sevasram* established by a Brahman reformer, Guduru Rama Chandra Rao, at Gudivada in Krishna district in 1912. He invited Dalit activists to work in the *asram* to train the untouchable cadre who later worked in the rural areas. These included Sundru Venkayya, Kusuma Venkatramayya, Naralasetti Devendrudu, Kusuma Dharmanna and many others.

The term **Adi-Andhra** arose in the post-1917 period when the Dalits all over the South, influenced by the 'non-Aryan' theories of the Dravidian movement, were identifying themselves as **Adi-Dravidian**, **Adi-Karnataka**, original sons of the soil. The **Adi-Dravida Mahajanasabha** came into existence in 1890, but was then named the **Pariah Mahajana Sabha**. During this period the untouchables of Madras made a couple of representations to the government to recognize a new name for them, reiterating the demand they had presented to

Montague at the time of Constitutional hearings in Madras. "We should be designated as Adi-Dravidas or the original Dravidas, thus bringing us into line with the non-Brahman Hindus who are called Dravidians". Then the Legislative Council recommended to the government that the term *Panchama* or *Pariah*, used to designate the ancient Dravidian Community in Southern India, should be deleted from the government records and the term **Adi-Dravida** in the Tamil and **Adi-Andhra** in the Telugu districts be substituted instead. The identity of 'Adi' ideology was also spreading among the North Indian Chamars who adopted the Sanskrit term *Charmakari* (Leather worker) at this time, claiming to be the exploited and conquered original inhabitants. Partly-educated Dalits and the radicalization of Dalit movements throughout the South brought an identification with the *Adi* ideology. The untouchables, to a great extent, changed their nomenclature to **Adi-Dravidians and Adi-Andhras**⁴.

Nevertheless, for coastal Andhra the decisive year was 1917. At this time caste-Hindu reformer Guduru Ramachandra Rao called a conference in Bazawada, which was labeled the '**First Provincial Panchama Mahajana Sabha**' (4-6 November 1917) at the big dramatic hall of Mylavaram Rajah. The Hyderabad leader Bhagya Reddy Varma Presided and Sundru Venkayya was the Chairman of the reception committee. On the very first day of the conference, in his presidential address, after mentioning the atrocities of caste-Hindus on

untouchables and their miserable plight, Bhagya Reddy Varma stressed that the so-called untouchables were the original inhabitants of India and he condemned the term *Panchama* and justified the use of the term *Adi-Andhras*. Thus, the Dalit Movement in coastal Andhra began to be called **Adi-Andhra Movement**. He argued that the term *Panchama* (the fifth order) was nowhere to be found in *Puranas* or other Hindu scriptures and that untouchables were the sons of the soil who had been the rulers of the country, surprisingly the very next day all the banners and signs of the venue changed to **Andhra Desa First Adi-Andhra Mahajana Sabha**. The delegates rejected the term *Panchama*⁶.

The conference was held for three days. The first conference is an important landmark in the history of Dalit movement as it has set a new course to the movement and widened its base. Numbers of resolutions were passed in the conference. One of the resolutions is to change the name *Panchama* to **Adi-Andhras**. Most of the resolutions were in the nature of demands on the government to nominate **Adi-Andhras** to statutory bodies, right from the Panchayat Boards, to admit their children into common schools, wherever free admission to schools was not possible, the resolution was passed urging the government to start separate labour schools in Mala and Madiga areas; and to sink separate wells to provide drinking water for them⁷.

Another noteworthy feature of the conference was distribution of literature pertaining to the Dalit upliftment to the members. The book '*Nirudha Bharatam*' the poetries composed by Mangipudi Venkata Sarma of Pippara, West Godavari District were freely distributed to all the delegates. An important consequence of the first Adi-Andhra Conference was the institutionalization of the Harijan movement. In response to the Dalit movement activities in Andhra and in the Country as a whole, the government of Madras appointed from 1920 onwards Commissioners of labour to look after the welfare of the depressed classes. Though the concept of Dalit movement was not new to the political parties of those times, but this conference definitely attracted the attention of a number of political parties, which in turn started emphasizing on needs for Harijan upliftment. From then practice of holding Dalit conferences were started. After this conference a provincial

'*Adi Andhra Sangham*' was formed and its office bearer and members of the Executive, were elected every year in the conference itself. A Constitution of Sangham was formed and the District Committees were also constituted⁸.

The 1920s was a decade that witnessed the growth of consciousness. The conferences held at provincial as well as district levels influenced the Dalit youth and made them conscious of their social, political and economic degradation. The youth later carried on a ceaseless fight against the social system. Conferences were held regularly in 1920 at Gudivada with Bhagya Reddy Varma as president and Sundru Venkayya as reception committee Chairman; in 1922 at Eluru with Bhagya Reddy Varma and Naralasetti Devendrudu; in 1924 at Guntur with Kusuma Venkataramayya and Nutakki Venkateswarlu; and in 1925 at Anantapuram again with Bhagya Reddy Varma as president - in which they passed altogether fourteen resolutions including a resolution demanding the right of untouchables to use water from common wells. These conferences also recommended the formation of working committees consisting of leading *Adi-Andhras* in various villages¹¹.

In 1926 they had their sixth *Adi-Andhras* Conference at Venkatagiri in Nellore district with Naralasetti Devendrudu as president and Kamatam Shanmugam as the Chairman of the reception committee. The seventh conference at Narsapuram in West Godavari district again with Bhagya Reddy Varma and Gottimukkala Venkanna, and again at Bezawada in 1929 with Prattipati Adinarayana and Vemula Kurmayya followed by another in 1930 at Anantapur presided over by Naralasetti Devendrudu.

In 1935 the tenth conference was organized at Rajahmundry, East Godavari district with Kusuma Venkataramayya as president and Kusuma Dharmanna as its reception committee Chairman. This conference was inaugurated by M.C. Rajah, one of the leading personalities of the Dalit movement in the Madras presidency. The eleventh Conference was held in 1936 and the twelfth at Tallarevu East Godavari district in 1938, again with Bhagya Reddy Varma as president and Vundru Subbarao as the Chairman of the reception committee. The resolutions included as demand for reserved seats for *adi-Andhras* from the Panchayat level to the

legislature assembly; sanction against those opposing the presence of untouchable children into schools; job reservations and formation of labour cooperation and credit Banks; and a demand for distribution of waste lands to the Dalits¹³.

Between 1917 and 1937 nearly fifteen conferences were held in different parts of Andhra districts ventilating the grievances of the Dalits. The geographical spread of these conferences (provincial, taluk, town and village levels) suggests that Adi-Andhra Mahasabha succeeded in drawing the rural masses into its fold. A content analysis of the resolutions passed by the Adi-Andhra conference indicates that Dalits were essentially resentful of the monopoly of socio-economic resources by the Caste, Hindus.

The Mahasabha also urged Dalits to give up drinking of alcohol and abolish intra-community/sub-caste divisions, and stressed the importance of unity within the community¹⁵.

Adi-Andhra Conference:

Under the influence of state-level Adi-Andhra Conference resolutions, local level organizers organized many district-level conferences. The first district-level Adi-Andhra conference was organized in 1921 at Amalapuram by Vundru Tatayya (1850-1930) with the help of Talari Gopala Rao Naidu, the then Assistant Labour Commissioner of East Godavari district. Many Dalit Activists such as Nakka Venkata Reddy and Tadepalli Tatayya played a major role in mobilizing the masses and local activists to come to this conference. Most of the younger Dalit leaders, including Chuttugulla Venkayya, B. Didla Pullayya, Ambati Gangiseti and many others, were influenced by conferences in their areas.

Conferences were held at Ramachandrapuram in 1930 with Pamu Rammurthy presiding; at Rajolu in 1933; at Vijayanagaram in 1936 with Kusuma Dharamanna presiding; at Ramachandrapuram in 1937 with Pamu Ramamurthy; at Tallarevu with Gotimulla Venkanna and Bhagya Reddy Varma; at Euluru in 1938 with Vundru Subba Rao, inaugurated by V.T. Muniswamy Pillai; at Peddapuram in 1939; at Kakinda in 1940 with Eeli Vadapalli and another conference at Oyata Korangi in 1940 and in 1943 at Kakinada with

N. Sivaraj, another leading Dalit leader of the Presidency.

Conferences were arranged at taluk and firka levels also. At Korukonda in 1933; in 1938 at Korangi with Janipelli Venkatarao and in the same year at Challapalli with Geddada Brahmayya; at Tandavapalli in 1940 with Jala Rangaswamy and in many places including Paddapalem, Rajolu, Chandrapuram and at village level associations in almost all villages such as Tanuku, Relangi, Kanteru, Volamooru, and Martooru.

All these village and taluk-level organizations had their executive committees which maintained regular contacts with their district-and state-level organizing committees. All these associations had a common code of conduct and common demands but separate constitutions of their own¹⁷.

The integration of the Adi-Andhra movement into other movements may be characterized as insignificant. Later, the most striking development was the cooperation of many Dalit leaders into the major political parties of the time, the Indian National Congress and the Communist Party¹⁸.

By the turn of 1940s, the Dalit movement in coastal Andhra region gradually faded away due to several reasons. The process of accommodation and absorption within the pattern of Hinduistic reform, the method of Congress led by Gandhi was at its zenith, on the one hand and the Communist movement on the other, eroded the base of the Dalit movement by systematically organizing landless agricultural labourers in many villages. B.S. Murthy, Gaddada Mahalaxmi, Vemula Kurmayya, Chuttumalla Venkatramam, Jala Rangaswamy, Vundru Subbarao, Naralasetti Devendrudu and many other who were active in 1920s and 30s were gradually joined the Congress. On the other hand, the militancy of lower-class Dalits was increasingly being expressed in Communist agricultural labour organizations. Many young Dalits joined the movement from 1940s including Guntur Bapaiah, Prasada Rao, M. Sriramulu, Koneru Rangarao, R.A. Kottayya, K. Nagabhushanam, K. Mohanarao, and Konda Surya Prakasarao. These two organizations systematically moulded Dalits in to their respective parties.

As mentioned earlier of the organizational level the Communists were unwilling to accept any kind of Dalit autonomy and at the level of culture and identity their failure to provide an alternative to the Brahmanized Hinduist interpretation of Indian history was a retrogressive feature. This was because all the Communist leadership of 1930s and 40s remained in the hands of either Brahmans or high-caste Hindus. By then, the establishment of Congress hegemony was almost complete.

Both, the Congress and Communist opposition, helped to create an anti-Ambedkar atmosphere and also factionalism among the autonomous Dalit movement in Andhra. After the death of Bhagya Reddy Varma in 1939 both regions, Hyderabad and the coastal Andhra, suffered due to lack of effective leadership. Taking this opportunity, the caste-Hindus absorbed them into their respective parties, providing meager concessions and successfully created factions among them. Apprehension about this was expressed by Dalit leaders before the Simon Commission. For instance, there was a conflict between Golla Chandraiah and Kusuma Veeraswamy, president and executive member of the *Adi-Andhra Sthai Sangam*. Consequently, Kusuma Veeraswamy left the organization, followed by Pandu Laxmanswamy and Nakka Venkata Reddy and formed another organization¹⁹

In September 1944, the visit of Dr. B.R. Ambedkar to Andhra energized the young Dalits and branch of the Scheduled Caste Federation was formed under Buldas Swamy. Nandanar Hari and Eeli Vadapalli played a major role in inviting Dr. B.R. Ambedkar to develop the organization. Ambedkar addressed many public meetings, notably three at Rajahmundry, Rama Chandrapuram and Kakinadada presided over by Jala Rangaswamy, Eeli Vadapally and Pamu Ramamurthy respectively.³¹ Among those other places visited by Ambedkar were Anakapalli, Visakhapatnam, Guduwada, Kavvali, Eluru and Nellore. He received rapturous welcome in all these places, and there was total acceptance of his utterances among the Harijans and the progressive thinking persons among the upper caste Hindus. For example, the *Vaisya* Association, Backward Classes Association and

Prema Samajam presented him with welcome addresses Ambedkar found the Vaisyas as persons with correct thinking on social and economic issues²⁰. Inspired by his speeches, leaders of *Adi-Andhra Mahasabha* of East Godavari District collected young cowherds in the fields, and put them to school.⁴¹ Pamu Ramamurthy, Eeli Wadapalli, Gollipalli Gavi Raju, Undru Subba Rao and Golla Chandraiah should be mentioned in this connection. They received assistance from Kasinadhuni Nageswara Rao. Undru Subba Rao started a paper, *Harijan* and galvanized the Harijans.⁴² Kusuma Dharmanna appealed to Dalits to unitedly fight for socialism because it was through social equality that they could hope for decent living and self-respect. Socialism according to him (*Samyavadam*) meant 'a society where there would be no place for discrimination and internal rivalry. He was also bitterly critical of Brahmanical Hinduism. In his long poetic work, *Makoddi Nalla Dorathanam* (We don't want this Black Lord's rule), he portrayed the miserable condition of the Dalit masses. He lamented that the caste Hindus.⁴³ He was a prolific writer and also founder editor of the magazine called '*Jayabheri*'. It focused on contemporary political and literary trends and aimed at the development of the depressed sections of society. His another work '*Harijana Satakam*' is of great importance, for it gives a clear picture of socio-economic conditions of the Dalits. He was an Ambedkarite thinker²¹.

Gradually, the largest section of Dalit leadership got absorbed into Congress with its Harijan identity and its reiteration of Hindu identity. Among the few who opposed this strongly, such as Kusuma Dharmanna, were discredited by their Pro-Muslim stance. He called upon the Dalits to convert into Islam in his *Jayabheri*, which was the mouthpiece for Ambedkrite group. In many ways the reformist Hinduisation can be traced to the writings of Boyi Bhimanna, a Dalit Congressman, who was described by many Congress Dalits as their guiding spirit. In mid-1940s, Dalit employees formed their employees associations but could not take any steps to organize the masses or form any movement.

H.V. CONOLLY AND HIS VISIONARY ACTIVITIES IN MALABAR: AN APPRAISAL

I. Muhammed Saddam

Introduction:

H.V. Conolly was an able and foresighted British civil servant officer who owns the credit for establishing a systematic teak plantation at Nilambur in Malappuaram District of Kerala, that is the oldest man-made teak plantation in the world, and for constructing canals and roads in various parts of Malabar. Conolly is one of the few District Collectors of Malabar whose names are repeatedly remembered by the people of Kerala especially of Malabar because they left something notable as a part of their colonial administration. William Logan and Robinson are the other two. As far as Conolly is concerned, his name is ever significant as long as Conolly's Plot at Nilambur and Conolly Canal exist, which were significant initiatives of Conolly. While the earlier one was to fulfill mere the vested colonial interests and needs, the latter one cannot be taken in the same sense. The prime motive behind the establishment of Nilambur Teak Plantation was strong pressure on Conolly from the officials at Bombay to provide logs of teak in large quantity. Then the later one, that is the construction of the canal, was not result of any such pressure from above. It was to develop the means of transportation in which Malabar was very behind than Cochin and Travancore. This paper highlights the major genuine initiatives of Conolly in fifteen years of his administration, which expresses his firmness in going forward

with bringing into force what is believed by him as the right action as per the time needs.

Teak Plantation

Conolly proved his ability and wisdom as an administrator mainly by establishing an unexemplary teak plantation to meet the increasing demands of world-famous teak woods for the shipyards in Bombay. Of the experiments made in the Madras Presidency to propagate teak the most important and most prosperous were the efforts made by Conolly. His object was to establish nurseries, in order to replenish the teak forests, which were rapidly becoming thinned; the demands for the timber were being so great, and so steadily on the increase, as to indicate, at no distant period, a scarcity of large-sized logs much to be deprecated. This scarcity was realized that so much was required to meet the purposes of the Railway Department. Besides, from the fact that teak, especially Malabar teak, was acknowledged to be the most valuable timber for ship-building purposes, and consequently always preferred at British Government dockyards.¹ In 1840s so many letters were sent from Bombay dockyards and Government of Bombay to Conolly to provide enough teak logs.² The works of plantation started in 1844, were completed in 1854.

Conolly as a man of vision and foresight is recognized by anyone who goes through the history of his administration. When W.D. Simur, the secretary to Madras Government, asked Conolly about the circumference of Nilambur Teak Plantation, its expenditure, and expected profit, he answered 'we have nine lakh Teak plants one year to nine-year-old. We planted Teaks for the first time in 1843. Until this day we expended 40,000 rupees. When plants grow up, we will get market rate. Now we have got nothing as income. In the last ten years, five to thirty rupees was rate of a single Candy (12 cubic feet).³ This denotes that Conolly was very optimistic and confident in his project of maximum profit making by planting teaks which will bring its profit only after years. Of the 1500 acres of old Teak Plantation, five acres were later protected by the Government in 1943 named as Conolly's Plot. There are now more than one hundred teak trees left.⁴

Tile Roofing of Market Buildings

Another progressive undertaking of Conolly is related with eradication of a superstition in the society and welcoming modernity. In 1840s, in the days of Conolly's sway over Malabar, there was a belief among the common people that only the roofs of temples and royal palaces would be tiled. The hay-thatched shops in Calicut and its suburban areas, especially Valiyangadi (Big Bazaar), drew the attention of Conolly. In those days, the buildings of Malabar were thatched by hay and there was a high possibility of fire always. This danger compelled Conolly in 1847 to take needed measures in this regard for roofing market shops with tiles ignoring the prevailing superstition. It is worth mentioned here that this was before the establishment of tile factories at Calicut by the Basel Evangelical Mission. Therefore, this is also an evidence for the fact that tiles had been indigenously made in Malabar utilizing local technologies even before the establishment of Basel Mission's Tile Factories.⁵

Construction of Canal Network

During the British colonial period, British Companies had made attempts to urbanize Malabar. The construction of artificial canals also can be taken in this regard. Getting inspiration from the history of canals and innovations in transport sector by waterways, Conolly

expressed extreme interest and determination in canal projects in Malabar at the risk of heavy expense and adverse geographical features in some areas.

Rivers and backwaters were the main channels of trade and passage in Kerala as these afforded the easiest and cheapest means of communication in times when wheeled traffic and pack bullock traffic were unknown. During the medieval period, two-wheeled carts weren't widely used in Kerala. Goods were carried on back of bullock or as head loads. Only for the traffic of heavy goods carts were utilized as well as used for traffic of articles of elite groups.⁶ Due to the absence of roads, the inland communication was carried out through waterways till the advent of the Mysoreans in the latter half of the 18th century. When Haider Ali conquered Malabar, he felt the necessity of connecting the places by digging canals. The work was carried out by his commandant Ali Raja of Kannur and the Ramapuram River⁷ was connected with the Thalipparamba River⁸ by an artificial canal which is called even now the 'Sultan's Canal'. Its length is 3.8 km. Though confined in a small area, this helped the navigation and easier transport in the coastal belt of Malabar.⁹

The land of Kerala isn't plain as of neighbour state Tamil Nadu. This was a challenging factor in the construction of roads here. The presence of short and long rivers whose number exceeds forty became an obstacle to road making. In addition to this, according to the weather condition of Kerala, about half of the year is monsoon season in which many of these rivers overflowed. Hundreds of bridges had to be built upon the rivers as well as lakes, backwaters, lagoons, etc. No doubt this was impossible in early period. Later, during the period of little expansion of technology also, this was very expensive. While Rajas of Cochin and Travancore initiated some kind of construction of canals and road making Zamorins of Calicut showed little interest in this regard. Serious efforts to build bridges were taken by Tipu Sultan and that was for carrying cannons during the Malabar expedition. He sought help of French men from Pondichery for road making and building bridges as a part of mutual understanding between Tipu and the French authority.¹⁰

After Malabar came in the hands of British, the colonial Government was concerned about the condition of transportation in Malabar and was seeking suitable means of communication and transportation. The communication and transport system in Malabar was poorer than in Cochin and Travancore. The climate and the nature of Malabar were alike unfavourable for road-making. In this background the colonial state introduced a systematic scheme of gradual developing communication and transport facilities which underwent three distinct stages. The three stages of transport infrastructure development are marked by the beginning of artificial canal construction, the road construction and the introduction of railway.¹¹

In the first stage the colonial state planned the project of linking the different rivers in Kerala flowing to the west to meet the newly rising requirements. Greame, the Special Commissioner for Malabar in 1822, conceived the idea of extending the water communication from Kavvai¹² to Chetuva. A scheme was prepared to excavate a distance of 209.2 km and the proposed canal was to touch such important places as Kavvai, Valapatanam, Kannur, Thalassery, Kozhikode, Tanur, Ponnani, and Chavakkad.¹³ The idea of construction of canals for navigation was very successful in Europe. Greame was thus very optimistic in putting his idea in front of the Government officials and he firmly believed that implementation of his idea will bring fruitful and successful result. Though the estimates were submitted to the Government the whole scheme was dropped in 1824 on the score of expense.¹⁴

Nothing further was done until H.V. Conolly (1806-1855) became the Collector of Malabar on 21st January 1840 and in 1845 he caused to dig a canal connecting Elathur and Kallayi.¹⁵ He proceeded with other canal projects. On 27 January 1854 W.D. Simur, Secretary to Madras Government, asked Collector of Malabar, Conolly what about the canals? He replied 'we determined need of a waterway from Chavakkad to Kavvai, with 142 ½ miles in length. I have completed a canal linking two lagoons near Vadakara expending 1195 rupees. Similarly, I have constructed a canal of five-mile-long at Kozhikode from Elathur River to Kallayi River, expending 19360 rupees. Yet there is little more to be completed.'¹⁶

As an administrator of Malabar, Conolly proved his foresightedness, initiating network of canals in Malabar. Confidently he came forward with the project which was dropped earlier, and convinced the authority the possibilities that can develop the infrastructural and commercial prosperity of the region as well as make easy the colonial administration. C. Balan justifies this: "The administration of Conolly as the collector of Malabar marked a revolutionary phase in the development of water transport. He was in full support for any effort for the fruitful realization of major projects of canals."¹⁷

The name 'Conolly Canal' is the general nomenclature of all artificial canals between Vadakara and Kottappuram. The canal is also known by different names in different areas, like PC Canal (Ponnani-Chavakkad Canal), TK Canal (Tanur-Koottayi Canal), EK Canal (Elathur-Kallayi Canal), Vadakara Canal, Payyoli Canal and Canoli Canal (Elathur-Kallayi Canal). The total length of waterway between Vadakara and Kottappuram is 207.90 km, of which 103.873 km is natural reach while 104.023 km is artificial.¹⁸

Construction of Conolly canal and its proper maintenance were very expensive in those days of less technological advancement and huge amount of money was expended in the project, looking into the future advantages and innovations. The following table shows the different reaches of the canal, its length, original cost of construction before 1856-57 and expenditure sum up to 1873-74:

Table 1: Expenditure on Conolly Canal up to 1873-74

Section of the Canal	Distance (Mile)	Original Cost of Construction before 1855-56	Expenditure sum up to 1873-74
Badagara	3	795	9632
Payyoli	1.5	1195	-
Elathur-Kallayi	6	19360	525
Tanur-Koottayi	15.5	19017	7475
Ponnani-Chavakkad	15	12410	3849

Calicut Bazaar	1	2350	11424
Edathiruthy	1	-	-
Total	43	55127	32905

Definitely there would be certain relevant intensions behind the construction of any artificial canal especially one with more than hundred km in length. Almost all canals may be either an irrigation canal or navigation canal. Conolly Canal comes under the second category, the navigational canal, seeking a remedy for lacking suitable means of navigation to meet increasing needs and demands of the period and to accelerate urbanization process expected at areas such as Calicut.

RESERVATION IN TAMIL NADU FROM 1921 TO 2009 – A STUDY

H. Munavarjan & K. Sabapathy

Introduction

Reservation as an arrangement has been prevailing since thousands of years in India. It is legally adopted. Thousands of years ago our religious books were the main source of law during English empire. In the courts of the kings the punishment was imposed on the basis of these religious books. The Hindus of higher castes have been getting hundred percent economic and social reservations since immemorial time in the name of caste and creed. After independence, Dr.Ambedkar arranged in

constitution social and economic equality, which is called reservation arrangement. Thus to help the depressed and backward classes economically and to provide facilities is also the reservation arrangement.

History of the Reservation System

The reservation in Indian continent is an age-old traditional system sometimes mentioned as equivalent to apartheid. Every person's occupation or job status was fixed by birth. Not only that even who will get education or not, who will live where, who will be allowed to avail

social amenities or not was also determined by birth. The British understood their psyche very well and gave it a legal and constitutional acknowledgement.

Present Reservation system has a long history and has been debated before and after Indian Independence from the British in 1947.

The scheme of giving appointments to different communities in administration began in the Madras Presidency with the B.S.O. 128(2) of 1854.³ It aimed at ensuring that the subordinate appointments in districts are not monopolized by members of a few influential families.

The Hunter Commission (1882) found Muslims underrepresented in education and the British implemented a policy of reserving certain places for them in educational institutions.

The Madras Government framed Grant-in-Aid Code in 1885 to regulate financial aid to educational institutions providing special facilities for students of depressed classes.

The administrative jobs in the former princely State of Travancore in Kerala were monopolized by non-Malayalies, particularly the Tamil Brahmins. So the Malayalis petitioned to the Maharajah in 1891 to give due share to them. The subsequent steps taken by the Travancore Government secured jobs only to Nambudiri Brahmins and Sudra upper Caste Nairs. So a delegation of the lower caste Eazhavas and Thiyyas under the leadership of Dr. Pulpu met the Rajah and pleaded to give them representation in the government appointments (1895). Their demands were gradually fulfilled. And then came the turn of Pulayas and other of the depressed classes.

In June 1895, the Mysore Government issued a circular reserving certain posts in favour of backward castes. In 1918, the same government appointed a committee under Sir Leslie Miller, the then Chief Justice. On the recommendation of the committee, reservations were made in appointment to non-Brahmins, including Muslims.

Sahu Maharaj of Kolhapur state in Maharashtra reserved 50 per cent of jobs in his native state in 1902 for the lower castes.⁴

The Muslim League was formed in 1906 and it demanded representation for the Muslim

community through separate electorate. Their demand was met by the Indian Councils Act of 1909 under the Minto-Morley scheme. The act introduced communal representation in the legislatures. In the Madras Presidency two seats were provided for the Muslim Community among the nineteen elected members.

The Government of India Act of 1919 under the Montagu-Chelmsford reforms provided for the reservation of seats in general non-Muslims Constituencies to non-Brahmins in Madras Presidency.

Justice Party and Communal G.Os in Madras Presidency

After securing communal representation for different communities in the political field, the Justice party aimed to secure the same in the field of administration regarding appointments to government departments, and in the field of education regarding the admission of students.

The Government issued the first Communal Government Order on 16th September 1921. It extended the principle of the distribution of appointments among various castes and communities which was already observed in the Revenue Department to all other departments of Government.

The Government issued a Second Communal Government Order on 15th August 1922. It extended the principle of proportionate representation for various communities in appointments to the realm of promotions also.

S. Muthaih Mudaliar, a minister in Dr. P. Subbarayan's government issued a Third Communal Government Order on 15th December 1928 that for the first time made communal representation defined and effective. The G.O. provided 5 places for the non-Brahmins out of the 12 vacancies. Of the remaining seven two were allotted to the Muhammadans, 2 to the Christians, 2 to the Brahmins and 1 to the Depressed Classes respectively.⁵

Congress Government and Reservation

The Madras government under the Chief Minister O.P. Ramasamy Reddiar, issued an order on 21 Nov., 1947.⁶ It recognised 'Backward Classes' as a category, eligible for separate turns in the order of communal rotation for recruitment to Public Services.

This reservation policy was put into practice and the problems and the difficulties which arose in its wake were handled accordingly. The guidelines issued on 30th April, 1954, (as per Ms. No. 2643) when K.Kamaraj was the Chief Minister, directed that in a unit of 100 appointments, 16 should go to the Scheduled Castes and Tribes 25 to the Backward Classes and 59 to be filled up by open competition meant for all. It also prescribed a rotation system for every 25 appointments.⁷

The Constitution (First Amendment) Act, 1951 is related to matters dealt with in the Articles 15, 29, 31. Of those matters, the issue of reservation required addition of clause (4) to Article 15. In the provisions 15(1) and 29(2), the addition of clause (4) to Article 15 is very significant and fundamental from the point of view of promotion of Social Justice.

M. Karunanidhi and Reservation - I

The cruel hands of death snatched C.N. Annadurai away from the people of Tamil Nadu on 3rd February 1969. Kalaingar M. Karunanidhi succeeded him as the Chief Minister on 10th February 1969. He appointed a Backward Class Commission under the chairmanship of A.N. Sattanathan with the retired district judges Chinnappan and Jamal Hussain as members to give recommendations to improve the welfare of the backward class people. Later, accepting the recommendations of the Backward Class Commission, the government increased the reservation quota of the backward classes in the educational institutions and government appointments from 25 per cent to 31 per cent and for the scheduled castes from 16 per cent to 18 per cent. Urdu-speaking Muslims and Kongu Vellalas were included in the backward classes list.⁸

M.G. Ramachandran and Reservation

M.G. Ramachandran became the Tamil Nadu Chief Minister in 1977. His Government issued a G.O.⁹ it declared that only those Backward Class persons whose parents' total gross annual income from all sources did not exceed Rs. 9000/- would be eligible for the benefits of reservation policy. The attempt of the State Government under M.G.R. was against the long recognized policy of reservation for socially and educationally backward classes as defined by the constitution.

Fierce opposition arose to the order that fixed an income ceiling to the B.Cs for getting the benefit of reservation. The ADMK faced a shabby defeat in the 1980 Lok Sabha election and struggled hard to survive in politics. MGR came forward to restore justice to the 'socially and educationally' backward sections of the society. His government issued an order to abolishing the notorious Rs. 9000/- order based on economic criterion. By another G.O. in 1980, MGR raised the reservation quota of the Backward Classes from 31 per cent to 50 per cent.¹⁰

M. Karunanidhi and Reservation – II

Certain castes among the backward classes agitated that they should be given separate allocation under the category of Most Backward Classes. When M. Karunanidhi became Chief Minister in 1989, he passed a G.O. considering the reasonable nature of the demand. His government issued G.O.¹¹ it declared that from out of 50 per cent reservation available for Backward Classes, 20 per cent should be reserved for the Most Backward Classes and the De-notified Communities. Later his government allotted one per cent reservation separately to the Scheduled Tribes. So the reservation scheme in Tamil Nadu is as follows:

Scheduled Tribes	:	1 per cent
Scheduled Castes	:	18 per cent
Backward Classes	:	30 per cent
Most Backward Classes	:	20 per cent
Open Competition	:	31 per cent

J.Jayalithaa and Reservation

The quantum of reservation currently is 69 %; far beyond the Supreme Court limit of 50 %. The Tamil Nadu Backward Classes, Scheduled Castes and Scheduled Tribes (Reservation of Seats in Educational Institution and of appointments or posts in the Services under the State) Act, 1993 was included in the 9th Schedule through the 76th amendment of the Constitution.

M. Karunanidhi and Reservation – III

In 2007, The Tamil Nadu Backward Class Christians and Backward Class Muslims (Reservation of Seats in Educational Institutions

Including Private Educational Institutions and of Appointments or Posts in the Services Under the State) Act¹² was provided 3.5% quota each for Muslims and Christians within the BC share of 30%. Christians found this compartment restrictive for students and job aspirants, as they stood to gain more if there was no Christian quota. This quota was withdrawn, but the BC-Muslim category of reservation is being successfully implemented.

This was followed by The Tamil Nadu Arunthathiyars (Special Reservation of Seats in Educational Institutions including Private Educational Institutions and of Appointments or Posts in the Services under the State within the Reservation for the Scheduled Castes) Act¹³ in

2009, provide a separate 3 per cent reservation for Arunthathiyar, Chakkiliyar and a few other sub-sects within the existing quota (18 per cent) for the Scheduled Castes. So now the reservation scheme in Tamil Nadu is as follows:

Scheduled Tribes	: 1 per cent
Scheduled Castes	: 15 per cent
Scheduled Castes (Arunthathiyar)	: 3 per cent
Backward Classes	: 26.5 per cent
Backward Classes (Muslims)	: 3.5 per cent
Most Backward Classes	: 20 per cent
Open Competition	: 31 per cent

DALIT'S POLITICS IDENTITY IN COLONIAL TAMIL NADU

V. Murali

The early 19th century was a significant period in the history of the Dalit liberation movement. From 1909 there emerged a number of Dalit (then referred to as "Depressed classes" by the colonial government) liberation movements across the subcontinent. The organizations became widespread due to the spread of English education and public employment among the Depressed classes which were made possible during the colonial rule.¹

Dr. Babasaheb Ambedkar viewed that the war between settled (Dalits) tribes and nomadic tribes (Aryans) in the primitive stage of their development, was nothing but a war for economic benefits and existence. "The purpose of Aryan war against Depressed Classes, according to Dr. B.R. Ambedkar, was (1) stealing

the cattle, (2) stealing women and (3) stealthily grazing of cattle in the pastures, belonging to other tribes.²

Iyothee Thass and Politics

Iyothee Thass's 'The Buddha and His teachings' was primarily embodied within Tamil Dravidian Traditions, contesting the conservative Vedic perspective of the Indian cultural and historical traditions. It is to be reconstructed on the main force of socio-cultural rationality.³ Iyothee Thass pursued a relentless and sustained campaign against swadeshi reforms while writing in his *Oru Paisa Thamizhan*. He viewed that there did exist a casteist edge to swadeshi pronouncements.⁴

Iyothee Thass's re-reading of history and literature reflected a concern and anxiety over the

Semitic import of the term, '*Paraiyah*'. He vehemently condemned the nationalist social reformers for addressing depressed classes as the *Paraiyas* and *Chandalas*. He observed that for him and his people, the advent of the White Man ushered in the liberation of subaltern class because the British brought with them a learning that was available to all and caste-indifferent.⁵

As soon as the Adi-Dravida Mahajana Sabha was organized in 1891, education of the depressed classes seemed to have been one of the principal aims of the Sabha. The British Government in Madras had been undertaking some ameliorative measures for this class of people. It was in 1893, that the Government of Madras had announced the need of the depressed class children to study on par with other Caste Hindus.⁶

Thus, Demand No. 1 requested that 'an Act may be enacted with provisions to punish whoever expresses or addresses as *paraiyah*, to ridicule the depressed classes, should be awarded deterrent punishment'. Demand No. 6 requested that 'equal respect and treatment should be given to the depressed class members in running the administration of panchayats and municipalities'. Demand No. 7 called for a repeal of Rule 464 of the Jail Manual which empowered authorities to force *Paraiyahs* to perform 'demeaning' tasks. Demand No. 9 asked that 'the existing restriction preventing the depressed classes from entering or sitting near the premises of courts and offices, where Hindus are employed, should be abolished. In each of these instances, the petitioners may be seen displaying an awareness of rights that are indivisible and universally applicable. One may also discern here a sense of comparative worth and a resistance to the violation of the self by others.⁷

It was observed that a village magistrate can confine a man of the depressed classes any time that he likes and he went on to say that even such things as "laziness in tending the cattle shed, disobedience to the order of the landowner, can bring the depressed brother the punishment of confinement in the stocks". In 1913, the Fourth Depressed Classes Conference, held at Mayavaram, had resolved to entreat the Government to remove this obnoxious practice. Narasimha Iyer, acting on this resolution, had gone on to introduce a Bill, calling for the abolition of the use of stocks as punishment.

Nearly a decade later, in his welcome address to the First Non-Brahmin Confederation, held at Madras in December 1917, Theagaraya Chetty, also drew attention to the Brahmins proclivity to remain exclusive and constitute an oligarchy which historically had successfully resisted all revolts against it.

In striking contrast to the privileged Brahmins were the segregated Panchamas who were called untouchables. They constituted 15% of the population. They established parallel societies, the members having their own roads, wells, their own shops, hotels, barbers and washer man, deities and priests, their own burial grounds from which all Caste Hindus kept away. This elaborate system of apartheid segregated the members of the Panchama Society and kept them at the greatest physical, cultural and economic distance from the Caste Hindus.⁸

Originally, they were casteless but later they formed their own castes. They did not intermarry but were collectively known as the depressed classes and the Harijans. The Adi Dravida Mahajana Sabha, which advocated the cause of untouchable castes, was founded in 1892 and on many occasions, the Sabha represented to the Government the grievances of the *Paraiyahs*. In the 1921 Census, 15,025 retained their caste name as *Adi Dravida*. On repeated petitioning to the Government, it recognised the new name by an order issued which directed that the term *Adi -Dravida* should be recognised in Tamil Districts and *Adi Andhra* in Telugu Districts in the place of the word, *Panchama* or *Paraiyahs* or similar names.⁹ The cause for the change may be due to the feeling of respectability that the change in name gave them.

Paraiyar Mahajana Sabha

In 1777, in Madras, there was a major protest which Rettaimalai Srinivasan has recorded in his autobiography. There was an inquiry held in Madras St George Fort, concerning a Dali murder and there was a serious riot at that point. Linked to that conflict, there was a rise in Dalit consciousness and mobilization. Since then, there had been continuous struggle but there was a lack of organisation at that time that hindered the opportunity for greater change. In 1840, the term *Adi-Dravidar* was introduced as a sociopolitical

name, meaning 'original' or 'indigenous' Dravidian. Subsequently, in 1880, the Adi-Dravidar Mahajana Sabha (Adi-Dravidar People's Organisation) was formed as a structured movement, followed by the Paraiyar Mahajana Sabhai (People's Organisation of Paraiyars) in 1890, and the Dravida Mahajana Sabhai (People's Organisation of Dravidians) in 1891. In short three very significant movements started operating between 1880 and 1891. All Dalit movements today may be seen as offspring's of these organisations. The ideals they articulated and the demands they presented, were precisely the ones that are being followed today.¹⁰

In Madras, he strove hard for three years to uplift the Paraiyahs and made them enjoy the equal rights which were hitherto enjoyed by other communities and also to give them a respectable position in the society.¹¹ Srinivasan established and led the Paraiyar Mahajana Sabha in 1891, which later became Adi-Dravida Mahajana Sabha in 1893.¹²

He felt that the Pariahs should be freed from the semi vile condition under which they lived by such measures as allotment of land for tilling and special facilities for education. Separate Primary Schools were established for pariahs and at the turn of the Century social and political leaders began to stress a need to extend philanthropic activities towards the lowest caste. The Adi - Dravida Mahajana Sabha sent petition to the Government in 1896. In 1898, it made specific request for lowering, in the case of Pariahs, the standard of the qualifying test prescribed for admission to subordinate medical services. In 1916, the Depressed Classes Society held a conference and requested the government to enquire into the exact condition of the depressed classes and to make recommendation to secure freedom and justice for the depressed classes.¹³

M C Rajah

There was specific socio-political context in which M.C. Rajah developed his ideology for the empowerment of Dalits. The three major social groups of Tamil Nadu were Brahmins, Non-Brahmins and Dalits and by the beginning of the Twentieth Century, due to the contribution made by European and Indian scholars, a dominant view emerged that Non-Brahmins were

Dravidians and original settlers of the land and Brahmins were Aryan invaders who imposed Sanskrit culture over Tamil land. Brahmins, because of their dominant socio cultural position, occupied most of the administrative and educational jobs in government although they comprised only 3.2 per cent of the total population of Tamil Nadu. This domination of the Brahmins was skillfully used by Non-Brahmin leaders to create a separate Dravidian cultural identity, with the tacit support of the British Government, in the early years of the Twentieth Century.

M.C.Rajah was nominated to the Madras Legislature in 1920 and became a prominent member of the ruling Justice Party. Communal reservation for the dalits was given under the Act of 1919 and they were nominated to the legislature from 1920. But for the continuous struggle of the dalits, this reservation would not have been given to them. In 1918, M.C.Rajah with his men met the South Borough Committee and appealed for the right to vote and representation in the legislatures. In 1919, he convinced the Weston Committee and succeeded in getting the famous Meson Award.¹⁴

He was the first member of the community, in the whole of India, to be nominated to the Provincial Council. His Excellency Lord Willington, when he assumed charge of the Governorship of Madras, nominated Mr. Rajah to the Madras Legislative Council in 1919 (Minto-Morley Reforms Council). In the Council, he rendered useful service to the Depressed classes in particular. He nominated in 1921 and again in 1925 and 1926. In the council his matured wisdom and sane views were recognized by all and he was elected to various important committees. As a member of the Madras Publicity Board, the Madras Soldiers Board, the Madras Labour Advisory Board, the Public Services-Communal Representation Committee and The Madras Widows Home Committee, he rendered meritorious service to the public.¹⁵

Popular representation in the Madras Legislative Council started from 1861 onwards. Until 1919, no nomination for depressed class representative was made in the Madras Legislative Council. When the Minto-Morley Reforms of 1909 were introduced, a principle that representation to all communities would be

made in the popular council was insisted upon by the reform. Accordingly, to begin with, a separate representation for Muslim was ensured by this reform. Appreciating the Minto-Morley Reforms, *Tamilan*, a pro-non-Brahmin newspaper in Madras, appealed to the new Governor, Sir Thomas Carmichael of the Madras Presidency, to help the Depressed Classes secure membership in the Legislative Council as that would help remove their hardships to a great extent¹⁶

Adi Dravidars and Non-Brahmins

The Justice party approached Dalit issues as distinct from the Dravidian ideology. They maintained a separate identity for themselves. They considered Dalits an integral part of the non-Brahmin movement for all political purposes but not for social issues. Their approach did not vary from that of the Congress formula for betterment measures, without disturbing the federal and capitalist structure. Even doubts were raised by some within the Dravidian political parties whether to include Dalits in the non-Brahmin fold or not. Some reforms were executed by the Justice Party by opening of schools for Dalits, access to common areas in villages and reservation in government jobs, establishment of special schools, and financial aid for health among Dalits, wells and burial grounds in colonies.¹⁷

Dalits began to form their independent political and social organisations in the 1920s. The first independent dalit political platform in India was Depressed Classes Federation, established in Maharashtra, under the encouragement of the Bombay Presidency Social Reform Association.¹⁸ Its initial purpose was to pressurize the Indian National Congress to include in its main planks the removal of untouchability. Consequently, the Indian National Congress had incorporated this into its agenda, adopted in its annual secession held at Calcutta in 1917. It is interesting to note that the Indian National Congress, after 32 years of its

formation, had adopted the agenda of the removal of untouchability,¹⁹ which was in effect manifestation the of its neglect about a grave problem affecting millions of human beings.

Afterwards, the political climate in the country changed substantially. The Government of India Act, 1919 explicitly provided for communal representations in the Indian Parliament. This stimulated the formation of new dalit organizations, which aimed not only to secure benefits for the dalits but also to organize them into coherent political blocks. No doubt, there grew general concerns among the untouchables or the depressed classes for forming their separate autonomous political organizations throughout India during the early 1920s. As the social, economic, political and geographical realities of the various regions in India were different, so were the dominant issues related to the emergence of autonomous dalits leadership. Each region had different level of social – political consciousness about oppression and exploitation of the Untouchable.²⁰

Adi Dravida' politics, which had lost much of its dynamism prior to 1947, became divided along lines of personalities, ideologies and political strategies, after independence. The Adi-Dravida leaders in the post 1947 period, preferred to align themselves with the more dominant political streams within the Province as well as the Nation. The political behavior of the 'Adi Dravida' leaders brought several interesting issues to the forefront. It, thus, becomes imperative to understand whether the Brahman-Bourgeois Congress, which had successfully appropriated 'scheduled caste politics during the last phase of colonial rule, was mainly responsible for the decline or Adi Dravida' politics in Tamil Nadu. It also needs to be explored as to whether the lack of colonial patronage made this decline an irreversible moment in history.²¹

THE SIGNIFICANCE OF POLITICAL ADMINISTRATION IN TIRUNELVELI DISTRICT

A. Muthukutti

INTRODUCTION

The Pandyas were the rulers of one of the three great kingdoms into which Southern India was divided in the earliest times. Thenpandinadu of the early Pandyas, Mudikonda Cholamandalam of the Imperial Cholas and Tirunelveli Seemai of the Nayaks rule, Tinnevely district of the East India Company period and the British administration and Tirunelveli District of Independent India became Nellai-Kattabomman district. The Nellai-Kattabomman district was subsequently renamed as Tirunelveli-Kattabomman district. In July 1997, the government of Tamilnadu took a decision to call all the districts only after the headquarter towns of the districts. Accordingly, Tirunelveli-Kattabomman district has since become Tirunelveli District.

Tirunelveli was not a significant town or for that matter not a town at all during the Sangam Period. The writing of the early Greeks and Sangam poets do not mention the town Tirunelveli. Tirunelveli was just a chief town of the Pandyas to the south of their capital.¹ During Nayaks period, it became the capital of their southern province.³ Since then, it was known as Tirunelveli-Seemai. Tirunelveli Sthalapurana prescribes a tradition for the origin of the name Tirunelvili.⁴

HISTORICAL SIGNIFICANCE OF TIRUNELVELI

Tirunelveli is one of the Southern districts of Tamilnadu and it has a hoary past and plays a major role in the economic and political spheres of this state being a part of the ancient Pandya country, this district was known for its busy sea trade through the port 'Korkai'.⁵ In the modern period, Tuticorin serves as one of the important harbours of Tamil Nadu. Politically speaking in the nineteenth and twentieth century's no district in Tamil Nadu was as active as this district in the freedom struggle of India. Great leaders like Veerapandya Kattabomman, V.O. Chidambaram, Bharathi etc., hailed from this region and this district served as a centre for extremism.

Lying on the riverbeds of Tambraparni, Tirunelveli has a remote antiquity. From the evidences of some artifacts, the archaeologists opine that there existed an advanced civilization on the banks of the river Tambraparni in the 3rd millennium B.C.

Besides, it is found that even in 1200 B.C. itself, paddy cultivation and the use of iron implements were in practice in this region and iron implements were sent to the South Asian countries. The excavations in this region brought out some Roman coins, urns, precious stones and incalculable ancient remains. Based on the intensive research, the historians arrive at the conclusion that the findings at Tirunelveli region are similar to that of Indus Valley civilization. They also reveal the fact that the civilization that

had developed on the banks of river Tambraparni was the fore-runner of the Indus Valley civilization.

However, in course of time, the civilization in the Tirunelveli region disappeared. Many historians have been tracing the reasons for its disappearance. Rea, a historian and excavator of Iron Age cemetery at Adchanallur⁶ stressed that Adchanallur once served as the port of Pandyas but later became a tiny village due to the running of river Tambraparni and recession of the sea. Subsequently, Korkai on the seacoast developed as a port and pearl fishing centre.⁷ The archaeologists also confirm that the territory lying between Adhichanallur and Korkai must have submerged under the sea.

IMPORTANCE OF SOUTHERN 'PANDI MANDALAM'

The Pandya rulers were known for their patronage of Tamil language. They evinced keen interest in the growth and development of Tamil throughout Tamil Nadu and other parts of South India. They were said to have established Literary Society (Sangam) to review the literary works of Tamil poets and writers. The Pandya country, in the past, had been divided into two parts viz., Vada Pandi Mandalam with Madurai as its head-quarters and Then Pandi Mandalam with Tirunelveli.

Now geographer's states that the port Korkai must have been located at 8.40 N and 78.5 E at the Southern end of the Eastern coast. During the Sangam period, the Tirunelveli region had been considered as a country and was made the Pandya Kingdom to be vast and spacious.¹²

ADMINISTRATION SYSTEM OF PANDYAS

The ancient Pandya rulers ruled the Tirunelveli Seemai by dividing it into many subdivisions. They were Kallakanadu, Karungulavala Nadu, Kannipurathaya Nadu, Keelavembu Nadu (Tirunelveli and Sevalapperi), Ten Arya Nadu (Sankarankoil), Manadu, Meelavembu Nadu (Cheranmadevi and Suttamalli), Mullai Nadu (Ambasamudram and Kallidaikurichi), Vala Nadu, Valudhivala Nadu (Karukkurichi), Vanavan Nadu (Kalakadu), Vaikuntavala Nadu, Najil Nadu (Nagercoil and Kanyakumari),¹³ Vadavari Nadu (Vasudevanallur), Arasur Nadu (Kayathar) and Anma Nadu (Cholapuram). In fact these divisions

clearly indicate that the Pandya rulers of Tirunelveli had their sway over the present districts of Tirunelveli, Ramanathapuram and Kanyakumari.¹⁴

NAYAK RULE IN TIRUNELVELI

The Vijayanagar rule in Madurai was founded by Kumara Kampana on the decline of the Madurai Sultanate rule. The King Achyuta Raja, the founder of Madurai Nayakdom anointed Viswanatha Nayak as the ruler of Madurai and the Nayak of Madurai loyally served the sovereign. Viswanatha Nayak divided the Nayakdom of Madurai into seventy two Pollams and assigned each to a poligar.²³

The Southern poligars had their pollams, most probably in the Tirunelveli region.²⁴ The Southern poligars were thirty four in numbers. Among them, except Ramanathapuram and Sivagangai poligars, the other thirty-two were generally called as Tirunelveli poligars.

BRITISH ADMINISTRATION

The year 1781 A.D. marks an important epoch in the history of the Tirunelveli district and of the Carnatic provinces in general. The close of the year the Nawab assigned by treaty to the East India Company the management and control of the whole of the revenues of those districts, on the condition that he should be allowed one-sixth part of them for his personal uses.³⁰ Superintendents were appointed to the districts to administer them on behalf of the Company and to receive the revenues. Mr. George Proctor was posted in 1781 A.D. to Tirunelveli. His management gave general dissatisfaction and in 1783 A.D. he was succeeded by Mr. Irwin.³¹ The improvement in the situation promised by the concentration in the hands of the Company of all control, both civil and military, was short lived for in 1785 A.D. the Assignment was surrendered and Mr. Irwin, under orders handed over the management of the district to the Nawab's Amuldars.³²

When the Carnatic treaty of 1801 A.D. put an end to the Nawab's sphere of influence in the Tirunelveli Province, the Madras Government appointed S.R. Lushington as the first Collector of Tirunelveli on 8 August 1801 A.D.³³ Tirunelveli District, situated in the extreme Southern part of the Madras Presidency is bounded on the North by Ramnad, on the East

and South by the sea and on the West by Travancore. The British assumed the administration of the district, it was divided into 19 taluks and 15 polayams that came to be called as Zamins and smaller Zamins as Mittahs. The Zamins were Ettayapuram, Melmandai, Attankarai, Kadambur, Maniyachi, Sivagiri, Talaivankottai, Avudayapuram, Naduvakurichi, Alagapuri, Uttamalai Surandai, Chokkampatti, Urkad and Singampatti.³⁴ The names of the 19 taluk could not be traced but, they were reduced to eleven by reconstituitrion. The eleven taluks were Nadumandalam, Sankarankoil, alwartirunagari, Srivaigundam, Panchamahala, Kaldadu, Nellaiyambalam, Vidugramam, Tenkasi, Seramadevi and Brahmadesam. In the year 1838 the taluks were reconstituted by bringing the total number of talks to 13. On reorganization, the Nadumandalam taluk was done away with as it was bifurcated into Sattur and Srivilliputhur taluks. Alwartirunagari taluk was rechristened as Ottaapidaram. On the abolition of Kalakadu taluk Nanguneri and Vallioor talks were established.³⁵

In the year 1860, the 13 taluks were reduced to nine by territorial redistribution. By the reconstitution, a new taluk, Tenkarai taluk was created by merging for former Srivaikundam and Panchamalai taluks. The Nanguneri and Vallioor taluks were merged and Called Nanguneri taluk. By merging the Nellaiyambalam and Vidugramam taluks, Tirunelveli taluk was created. The former taluks of Seramadevi and Brahmadesam were put together and named as Ambasamudram taluk. Later in the year 1893, Tenkarai taluk was renamed as Srivaikundam taluk. The taluks of Sattur, Srivilliputhur, Ottaapidaram, Sankarankoil and Tenkasi continued to function without any territorial change.

AFTER INDEPENDENT ADMINISTRATION

In the year 1933, though there were no changes in the total number of taluks (i.e) eight Ambasamudram, Nanguneri, Tenkasi, Tirunelveli, Sankarankoil, Srivaikundam, Tiruchendur and Koilpatti, there were sub-taluks

with headquarters at Vilathikulam, Thoothukkudi, Palayamkottai, and Radhapuram.³⁶ Later by 1970, the district was arranged into four divisional charges and nine taluks. The four divisional charges are Tuticorin, Seranmadevi, Tirunelveli and Kovilpatti. The nine taluks are Srivaikuntam, Tiruchundur, Ambasamudram, Nanguneri, Tirunelveli, Tenkasi, Anjengo, Kovilpatti and Sankarannayinarkoil.³⁷

When Tirunelveli district was bifurcated into Tirunelveli – Kattabomman and V.O. Chidambaranar districts with effect from 20 October 1986, ten of the taluks have Tirunelveli district. There are Tirunelveli, Palayamkottai, Sankarankoil, Ambasamudram, Nanguneri, Radhapuram, Tenkasi, Veerakeralanpudhur, Sengottai and Sivagiri together formed Tirunelveli Kattabomman district. Of the ten taluks, that constituted the district, Veerakeralanpudhur is an additional taluk while the other nine are full-fledged taluks. Administrative steps have been taken to upgrade Veerakaralanpudhur into a full-fledged taluk.³⁸

CONCLUSION

The British records show that the term district was initially used not in the present connotation, but to denote an administrative unit either big or small. When the British consolidated their possessions in the Carnatic and demarcated it into viable administrative divisions, the 'districts came into being. The districts were mostly named after the towns where the headquarters were located. On acquisition from the Nawab of Arcot in 1801, the British named it as Tinnevelly district through their headquarters was first located in Palayankottai the adjacent town, where their military headquarters during their operation against the Palayakars of the south on behalf of the Nawab. Two reasons may be attributed for naming it after Tirunelveli. One is because, it was and is the chief town of the district and the other is that it was already called as Tirunelveli Seemai under the Nayaks and the Nawab. Both Tirunelveli and Palayamkottai grew as the twin towns of the district.

RISE AND FALL OF NAXALBARI MOVEMENT IN KERALA (1967-1980): AN OVERVIEW

Omalo Aloysius

Introduction

My research paper is an attempt to analyse the unique factors behind the rise and fall of Naxalbari movement in Kerala in the period between 1967 and 1980. It seeks to evolve a theoretical perspective on the topic. List of Primary and secondary sources on the topic are given as end notes. Writing style is descriptive and analytical.

Roots of Naxalbari movement

In the post Second World War period communist party of India lead popular mass agitations, mobilized the peasants and workers against the exploiting classes of land lords, Money lenders and Reactionary Local Monarchs. Communist leadership was dreaming of Liberation of Subaltern classes through an armed revolution following Marxian principles of 'class struggle' and 'overthrow of capitalism through an armed insurrection lead by the Proletariat'. Communists launched a violent movement against Dewan C.P in Travancore at Punnapra-Vayalar where workers and other subaltern classes were on the forefront. In

Telangana communists organized an armed revolution of the peasants against Land lords and Nizam of Hyderabad.¹ Second Party congress of the communist party was held at Calcutta and B.T Ranadive was elected General Secretary of the communist party. He proposed a resolution for the immediate overthrow of Bourgeoisie government led by Jawahar Lal Nehru through an armed revolution of the Proletarian classes, which he claimed to be a Democratic revolution-more familiar with the title Calcutta thesis. But the Brutal suppression of Punnapra vayalar upheaval and Telengana armed peasant struggle, combined with the ultimate failure of the attempt at overthrow of Nehru government through an armed insurrection, as originally envisaged by the Calcutta thesis, forced the communist party to have a rethink on the strategy to be adopted to bring in Communist revolution in India².

As part of changed strategy from 1950's onwards communists in India began to involve actively in electoral politics and neglected the path of armed revolution. But within the communist party a radical section was not

willing to give up Marxist Leninist ideals of Proletarian armed revolution.³ Ultimate victory of communist forces in China in 1949, under the leadership of Mao Ze dung, after more than two decade long protracted civil war, taught new lessons to the people of third world fighting against imperialists as well as Reactionary Bourgeoisie. Success of the Cuban revolution in 1959 and the heroic resistance of the Vietnamese people against Yankee imperialists in 1960's induced new hope and confidence among the radical section within the communist party who were still unwilling to give up the Marxist Leninist ideals of Proletarian revolution. Memories of the great communist martyrs like Rosa Luxemburg and Karl Liebknecht continued to inspire the radicals within the party. Undying spirit of Ernest Cheguera, great Argentine revolutionary instilled new enthusiasm among the communist youth and pushed them towards a search for renewed prospects of armed revolution for the over throw of reactionary bourgeoisie government in India.⁴

In 1957 First communist government captured power in Kerala through the ballot paper, it was first of its kind in the whole world. Though it was ousted from power by an infamous Liberation struggle launched by reactionary forces in the state, within a decade after its dismissal communists returned to power in the form of CPI(M), offshoot of erstwhile undivided CPI, by forming a seven party alliance with the so called communal and Bourgeoisie parties⁵. In west Bengal communist party of India (Marxist) became a party in power after 1967 elections, as constituent of united front government and Jyoti basu eminent Cpm leader became Deputy Chief Minister. Radicals within the Pro Chinese communist party of India (Marxist) were expecting Revolutionary social transformation under democratically elected communist governments. But legal constraints and limitations of federal structure raised barriers on the path to radical social change, and slowed down the pace of socio-economic reforms. Idealists in the communist party who were still dreaming of a proletarian armed revolution capable enough to over throw reactionary bourgeoisie government as in India, felt, communist leadership even though claiming to follow Chinese mass line, had betrayed the cause of revolution. They alleged that participation in the parliamentary democracy had corrupted

erstwhile communist revolutionaries and lead to lose of their idealism and revolutionary ardour. According to them electoral politics is reducing the revolutionary ideology of communist party to a moderate form of social democracy. So they were eager to liberate the communist movement in India from the perverted clutches of revisionism⁶

Naxal bari and the rise of Ultra-Left in India

On 2nd of March 1967, as I have mentioned before communist party of India (Marxist) came to power, for the first time, in west Bengal, as a constituent of United front government. Jyoti basu C.P.M leader became the Deputy Chief minister and Eminent C.P.M Peasant Leader 'Hare Krishna Konar' sworn in as Land revenue minister. Extremists within the C.P.M were demanding immediate action against Land lordism and seizure of the surplus land and its distribution among the land less at the earliest. But once in power communist ministers realized legal constraints in the implementation of Land reforms. But the extremists within the CPM were forcing the communist leadership to emulate mass line introduced by Mao in China. Mao's dictum 'Political power grows out of barrel of a gun' and 'surrounding the cities from the countryside' became guiding tools of this group of extremists. In the Naxal bari village of Siliguri subdivision in Darjeeling district, Within sixteen days after the sworn in ceremony of United front government communist leaders Charu Mazumdar, Kanu Sanyal and Jangal Santhal gave a call for abolition of monopoly of land lords over land, land distribution through peasant committees, armed resistance to land lords, United front government and central government. This was the beginning of Naxal bari peasant uprising and Left extremist movement in Independent India⁷. Mainstream CPM leadership now caught in a dilemma, as part of government they could not approve the actions of the naxalbari comrades. When efforts at mediation failed CPM expelled the dissidents from the party, and waves of repressive measures unleashed by the state government could suppress the movement at naxalbari.⁸ But it added a new element in to the politics of India 'Violent form of Left extremism or The Ultra left'. On 22nd April 1969, Within two years after the Naxalbari uprising, All India coordination committee of the communist revolutionaries

(AICCR) took the initiative to form Communist party of India (Marxist-Leninist) Under the leadership of Charu Mazumdar, Kanu Sanyal, Jangal Santhal and Saroj Dutta which marked the beginning of organized form of Left extremism in India.

Violent phase of Naxal bari or Ultra-Left Movement in Kerala

Reverberations of Naxalbari uprising fell upon the radical sections within the communist party of India (Marxist) in Kerala as a wakeup call which aroused them from slumber and sowed the seeds of Ultra left movement in Kerala.

The Communist Party of India (Marxist) came to power in Kerala as a major Partner in the seven parties Alliance. Communist Leader E.M.S Nambudirippad sworn in as the Chief Minister of Kerala for the second time, who claimed to follow ideological strands of Chinese communist party. But radical section within the CPM was drifting towards revolutionary path inspired by sacrifices of the Naxalbari comrades.⁹ Attempt by the Pulpally devasvam to evict immigrant peasants from its land with the help of Malabar special police¹⁰, and subsequent police excesses¹¹, even at time, communist chief minister was ruling over the state raised doubts in the minds of many CPM cadres about the efficacy of Parliamentary path for the attainment of communism, they now chose to take up arms emulating the peasants of Naxal bari, and took the crucial decision to attack Tellichery and Pulppally police stations in the year 1968¹². Attack on these police stations marked the beginning of violent phase of left extremism in Kerala.¹³ Closing years of 1960's and 1970's witnessed long series of Naxalite violence in Kerala. 'Historic eight documents' of Charu Mazumdar became a guiding tool for a section of left extremists in Kerala. His call for elimination of individuals identified as class enemies inspired the naxalites in Kerala to act against oppressive land lords. Vasudeva adiga, a land lord in Wayanad, Chekkutty (Land lord or Police informer?)¹⁴, Infamous Land lord Narayanankutty Menon in Kongad, Land lord Shankhara Narayana Aiyer and his servant Uthaman pillai in Kumil (Kadaikal), Kesavan Potty and Gopalakrishnan Potty in Nagaroor, Business man and money lender Padmanabhan in killiroor, Joseph an estate owner in Vellathooval...lost their lives in these operations. Kuttyadi police

station attack in the year 1969 was another important episode in the history of naxalite movement in the state. Kunnikkal Narayanan, Areekad Varghese, Kisan Thomman, Philip M Prasad, K.Ajitha, Vasu (Better known as Grow vasu), Venu, Ram unni, A Achutan, Madhu Master, Kunhiraman.. were the leading figures of left extremist movement in Kerala. Upto 1970 December 31, State witnessed 39 Naxal related violence in which 10 Persons were killed. Cases were registered against 343 persons and 244 persons arrested¹⁵. Six Naxalites Kisan Thomman, Koyippalli Velayudhan, A.Varghese, Chandi, Pareed and Abdussalam sacrificed their lives for the cause of revolution. Second E.M.S Ministry fell down on November 1st 1969. On October 4th 1970 Communist party of India-termed as Right communist party by CPM Ideologues-formed a ministry lead by veteran communist leader C.Achuta Menon in alliance with Congress and other casteist and communal parties¹⁶. Following the soviet line, CPI in those days was collaborating with 'Indian national congress under the leadership of Indira Gandhi. Indian National Congress was viewed as 'Party of the Progressive National Bourgeoisie'. K.Karunakaran, The congress leader sworn in as home minister in this ministry. Thereafter Police unleashed waves of brutal repressive measures against left extremists¹⁷. Proclamation of Emergency on 26th of June 1975 which lasted upto January 1977 added more tooth and nail to repressive state machinery. Many suspected Naxal sympathizers were tortured and even. Many of them were sentenced to various terms of imprisonment. In Tellichery-Pulppally police station attack case 8 convicted out of 149 accused. In Kuttyadi police station attack case 11 convicted out of 165 accused. In Tirunelli-Thrissilery action case 31 persons chargesheeted, out of which 8 were Tribals¹⁸.

Causes for the decline of violent form of Naxalbari or Ultra Left Movement in Kerala- an Anatomy

Post emergency period witnessed decline of violent form of Left extremism in Kerala. Many reasons are attributed to failure of naxalite movement in Kerala. R.K Bijuraj, A Journalist who had authored a brilliant work on Naxalism with the title 'Naxal dhinamgal' identified three important factors for the decline of violent form of naxalbari movement in Kerala. First of all

Naxalites failed to raise an organisational structure, instead they focused on localised heroic exploits. Secondly Growing Internal dissensions destroyed unity of the revolutionaries. Finally strategy of annihilation of individual class enemies led to the rise of reign of terror and turned public against them¹⁹. In her memoirs Ajitha expressed similar feelings on the impact of individual killings. According to her it isolated naxals from general public. It became a tool in the hands of reactionary state to project them as terrorists and soulless criminals²⁰. According to Sebastian joseph revolutionary terror, Retaliation of the Indian state by operation steeple chase-Operation against Naxals launched by Indian armed forces- and subsequent alienation of people from revolutionaries led to its decline.²¹ Gulf boom in the 1970's and 80's created new avenues of employment for Un employed youth in Kerala.²² Gradually land ceased to be a major source of

income. Left extremists who were primarily concerned with the issues of land and peasants began to lose their relevance in the society of Kerala. Philip M Prasad while analysing the decline of violent form of Naxalbari movement in Kerala says 'It was not need based in Kerala' while it was 'Need based in Naxal bari, Andhrapradesh and Bihar'²³ Agrarian expansion with primary focus on cash crops created a large section of rich self-cultivating peasants who were Unsympathetic to an armed revolution proposed by left extremists. Gulf migration and expansion of cultivation of cash crops created new classes of emerging petty bourgeoisie who were reluctant to welcome an armed revolution, which they equated with chaos and anarchy, and remained staunch defenders of status quo. In addition to it Ideological struggle waged by mainstream left parties against Far left extremism may have also contributed towards its decline.

AN OVERVIEW ON HISTORICAL IMPORTANCE OF DMK IDEOLOGY IN TAMILNADU

A. Prabhakaran

Introduction

Due to the persistent efforts of the DMK, the Central Government has declared Tamil as a Classical Language. But yet, Tamil has not

found its place so far, as an official language of the Centre. Right from the days of Annadurai, the DMK has been continuously insisting that all the national languages should be made as the official languages of the Centre, as such

constructive approach alone will be a permanent solution to the language issue. The DMK also insists that all speedy steps should be taken according to law by the Government of India, to declare Tamil as the language of the Courts, including the High Court. The DMK tries to get Thirukkural declared as the National Book. The DMK also insists that opportunity should be given to write all the examinations in Tamil, conducted by the Union Public Service Commission.

Self-Respect and Inter-caste Marriage

The DMK is very sincere in upholding the Dravidian practice set by Periyar. One of the major sociological changes introduced through the Self-Respect movement was the Self-Respect marriage system, where by marriages were conducted without being officiated by a Brahmin priest. Periyar had regarded the then conventional marriages as mere financial arrangements and often caused great debt through dowry. Self-Respect marriages encouraged inter-caste marriages and arranged marriages to be replaced by love marriages. It was argued by the proponents of Self-Respect marriage that the then conventional marriages were officiated by Brahmins, who have to be paid for and also the marriage ceremony was in Sanskrit which most people did not understand, and hence were ritual and practices based on blind adherence.¹

Social Justice

The current trend in the sphere of social justice reveals certain demands made by the DMK. It insists on the Central Government to bring necessary amendments in the Constitution for the removal of 'Creamy Layer' concept from reservation for Backward Classes. It tries to take steps to implement 69 per cent reservation in Tamil Nadu without any impediment by expediting the case pending in the Supreme Court and trying to get an appropriate judgment. It expects the Central Government to amend the constitution so as to enable the State Governments to decide the quantum of reservation to SCs/STs, BCs and MBCs based on the size of their population. It insists on the Central Government to implement 27 per cent reservation in admission of students in the Central Government-run IITs and other educational institutions and in the

appointment of teachers as per Mandal Commission's recommendation. It also insists on reservation in private sector and extension of reservation in such of those Government and Public Sector Undertakings where reservation has not been implemented so far.²

Priesthood for Non-Brahmins

It is unfair to discriminate one's community as a qualification for performing poojas for God at places of public worship. Based on this ideology a Government Order has been issued declaring that Hindus of all communities may become Archakas in Hindu Temples if they possess the required qualifications and necessary training. On this basis four Saiva Archaka Training Institutes have been started in Tamil Nadu at Madurai, Palani, Thiruchendur and Tiruvannamalai and Vaishnava Archaka Training Institutes have been started at Chennai and Srirangam. Totally 207 students including 34 Scheduled castes students, 76 backward Classes students, 55 Most Backward Classes students have completed the one year "Junior Archaka Certificate" course and have received the certificates.³

Due Place for Tamil in Temples

All the Tamil Savants had extolled in their enchanting verses in Tamil only the praise of God in temples where they visited. Thirumandiram, Devaram, Thiruvagasam, Nalayira Divyaprabandam, Thirupugazh etc., rendered by the Savants have helped for the growth of the Tamil language. The DMK government has taken several steps to fulfill the wishes of the public and devotees to Worship in Tamil in the temples and to make Tamil reverberate in the Holy shrines forever. Many Religious discourses and Music recitals are organized to be performed in Tamil. To perform Archana for the deities in Tamil, "Archanai Potri" books have been published. To encourage the Archakas performing Archanai in Tamil, prizes have been announced.⁴

State Autonomy

When the United Progressive Alliance Government was formed at the Centre after 2004 Parliament Elections, due to the insistence of DMK, the Central Government appointed a Commission headed by Justice

Poonchi in 2007, as a part of the Common Minimum Programme, to redefine the Centre-State relations for devolving more rights on the States. The DMK Government setup an Expert Committee and sent suitable replies and recommendations to the Commission on behalf of the State Government. In 1969, the Government setup an Expert Committee under Justice Rajamannar for reviewing Centre-State relations in fulfillment of the last wish of Annadurai. The DMK had been constantly urging that the Centre should take up the recommendations of that Expert Committee for full discussion. The DMK also insists that these recommendations and the recommendations of Justice Sarkaria Commission appointed by the Centre in 1983, besides the recommendations given by Justice Venkatachaliah Commission in 2000 should be considered for the amendment of Constitution in order to give more autonomy to the States.⁶

Sri Lankan Tamils

The DMK has been, for a very long time, giving its voice and agitating continuously for a proper and congenial atmosphere to be created for the Tamil People who have been living in the neighbouring Sri Lanka from time immemorial to enjoy a peaceful living with dignity and self-Respect, with all the Constitutional and political rights and protection guaranteed to them. As early on 29-1-1956, in the General Council Meeting of the DMK held at Chidambaram, in accordance with the instructions of Annadurai, Karunanidhi proposed the Resolution demanding protection of rights of the Sri Lankan Tamils which was seconded by Thiru Ponnambalanar.⁷

The DMK organized a massive strong Rally of five lakh people in Chennai on August 24, 1977 to focus attention on the problems of Sri Lankan Tamils and made the world comprehend the sentiments of Tamils.⁸ After the dissolution of the DMK Government on 31-1-1976,⁹ the then Prime Minister of India, Indira Gandhi spoke in the Chennai Beach Meeting on 15-2-1976 that Karunanidhi was responsible for straining the relations between India and Sri Lanka. He immediately replied, "If that was the reason for the dissolution of the Government, the DMK would be proud of it."¹⁰

Karunanidhi was arrested on September 15, 1981 on the Sri Lankan Tamils' issue by the then ADMK Government.¹¹ Condemning the arrest, on 16.9.1981 behalf of the DMK a very big Rally was conducted in Chennai, in which eight lakh people participated.¹² This Rally made the world turn its head towards the issue of Sri Lankan Tamils.¹³ On 10-8-1983, Karunanidhi and Anbazhagan resigned their membership of the Tamil Nadu Legislative Assembly, urging the Central and State Governments to pay adequate attention to the issue of Sri Lankan Tamils.¹⁴

A new organisation called Tamil Ealam Supporters' Organization (TESO) was formed on May 13, 1985 to support the cause of Tamil Ealam People in Sri Lanka, with Karunanidhi as its Chairman and Anbazhagan, K. Veeramani, Pazha Nedumaran and Ayyanan Ambalam as Members.¹⁵

On 30-3-1990, in the Tamil Nadu Legislative Assembly, a question was raised as to why Karunanidhi, as Chief Minister, did not go to receive the IPKF, which arrived from Sri Lanka. While replying in the House, he read out a letter written by Prabakaran on the conduct of the Indian Army in Sri Lanka in 1988 and explained that he did not receive the IPKF, as it attempted to crush the Tamils in Sri Lanka, though the DMK had all respects for the Indian Army; the Army could not be supported when it erred, though it deserved all reverence.¹⁶

Even after the War had ended in Sri Lanka, the DMK has been democratically agitating and demanding for Justice to be rendered to Ealam Tamils at least now and for guaranteeing protection of their life and peaceful living. The DMK has been condemning in stronger terms the massacre of innocent Tamils committed by the Rajabakshe Government in the war in Sri Lanka; flagrant violations of Human Rights; War crimes in total disregard to the International Law; Sexual onslaught on Tamil Women and brutal killings and merciless butchering of Children and Old People.¹⁷

The DMK has been continuously insisting that the Government of India should take all necessary steps to find a lasting political solution, devolving equal rights and equal share in administration to the Sri Lankan Tamils, as in the case of Sinhalese. Further, it urges that the Government of India should take effective steps

to prevail upon the Sri Lankan Government to take determined action required for peaceful living of the Ealem Tamils.¹⁹

Conclusion

In other words the ideological orientation of the DMK in broad perspectives can be conceptualized as follows: Protection of Tamil language and culture, Rationalism, Non-Brahmin

welfare, Casteless society, Gender equality, Social justice, Federalism and State autonomy, and Pan-Tamil Movement. These issues have been historically addressed by the DMK in three dimensions as social, cultural and political movement, electoral politics and governance and public policy.

CHILD MORTALITY AND HEALTH: TRENDS IN TAMIL NADU AND GOVERNMENT RESPONSE

B. Pramila

Childhood is very important as it has impact throughout the life of an individual, and it determines the growth and development of the child. However, due to various reasons right to life is denied to children all over the world. The death of children under – five is due to many factors, such as lack of health services, poverty, women education, differentials of urban – rural areas, malnutrition, etc. Child Mortality Rates is considered as the important indicator of quality of life and socio – economic conditions of a country. Child mortality refers to the death of children between birth and before attaining the age of five in a given year per 1000 live births. Child Mortality includes Prenatal, Perinatal, Neonatal, infancy and Under – 5 mortality. Prenatal mortality is child death before birth, Perinatal is known as child death before one

week of birth, Neonatal is child death before 28 days of birth and infancy is the death of child before 1st birthday. Neonatal and Post Natal Mortality are the components of Infant mortality. Under - 5 refers to any deaths from birth to the 5th birthday.

The objective of this paper is to study the situation of Child Mortality in Tamil Nadu from 2007 to 2017, and to examine the determinants of Child mortality, especially child health with the available data from the Census Reports, Sample Registration Surveys, Reports of the Ministry of Statistics and Programme Implementation, Government of India UN, UNICEF, WHO, National Family Health Surveys, Public Health and Preventive Medicine, etc.

TABLE – 1

BIRTH, DEATH AND INFANT MORTALITY RATES IN TAMIL NADU-SRS (Sample Registration Survey)

YEAR	TAMIL NADU						INDIA

Source: Director of Public Health and Preventive Medicine, Chennai, Sample Registration Survey, and the Office of the Registrar General of India.

Table-1 provides the trend in IMR in Tamil Nadu and also at the nation level from 2007 to 2016.¹ There has been a significant decline in infant mortality rate. From the table it is understood that the child death rate and the infant mortality rates are relatively high in the rural when compared to the urban areas. As far as under-five mortality rate is concern, in the rural areas of the state it was 23 and in urban areas it was 15 in 2016 (p.164) to the national statistics of 43 and 25.

The infant mortality rate in Tamil Nadu according to NFHS-4 is estimated at 20 deaths before the age of one year per 1000 live births, down from the NFHS-3 estimate of 30, the

NFHS-2 estimate of 48, and NFHS-1 estimate of 68.² In Tamil Nadu, all infant and child mortality rates are lower for girls than boys. In fact, 1 in 34 boys die before the age of five, compared with 1 in 42 girls. Children born to mothers under age 20 and age 30-39 are more vulnerable to death during infancy than children born to mothers in the prime childbearing ages (20-29 years). Infant mortality is 23 per 1000 live births for teenage mothers and 27 per 1000 live births for mothers age 30-39, compared with 19 for mothers age 20-29.³

Table - 2 gives district wise details on infant deaths, still births and maternal deaths in Tamil Nadu.⁴

TABLE –2

DISTRICT - WISE INFANT MORTALITY RATE IN TAMIL NADU (2015)

Districts	Infant Deaths	Still Births	Maternal Deaths
Chennai	1712	1077	62

Tamil Nadu	10743	7048	550

Source: Director of Public Health and Preventive Medicine (Civil Registration System), Chennai.

It is alarming to note that among all the districts in the state, the district of Chennai leads in terms of infant deaths, still births and maternal deaths followed by Madurai and Vellore districts. Karur, ariyalur, Thiruvallur and Nagapattinam

Districts fare good as far the statistics on infant deaths, still births and maternal deaths.

HEALTHCARE

Death of children under – five is due to many factors such as lack of health services, poverty, women education, differentials of urban – rural areas, malnutrition, etc. However, lack of health care is the major factor responsible for

high mortality rate in children. Table - 3 provides the details on child death at different stages in the State. Health care is important not only during Pre-Natal, Early- Natal, Neo-Natal Periods, but also very important to protect children from various diseases. Medical care in the rural areas are not adequate compared to urban areas.

TABLE – 3

NEONATAL, EARLY NEONATAL, PERINATAL, STILL BIRTHS AND CHILD MORTALITY

Year	Tamil Nadu			India		
	Total	Rural	Urban	Total	Rural	Urban
Neo- Natal	11	14	8	23	27	14
Early Neo-Natal	8	11	15	18	21	10
Peri-Natal	11	15	7	23	26	15
Still Births	3	5	2	5	5	4
Child Mortality	19	22	17	37	42	25

Source: The Office of the Registrar General of India and Director of Public Health and Preventive Medicine, Chennai.

In India, evidence of child health inequalities exist along several dimensions. There are huge differentials across states and socio-economic groups in terms of health outcomes, access and utilization of health services. Disparities in health services are explained not only by disparities in utilization of services, but also by the differential pace of economic and social development, differentials in the distribution of the benefits of development and the inadequacy of the public health care systems to deliver equitable health services.

An estimated 6.3 million children under the age of 15 years died in 2017 out of which 5.4 million were under the age of 5 and 2.5 million of those children died within the first month.⁵ The leading causes for under-5 mortality are Preterm birth complications, health issues and Malnutrition. Child survival is a field of public health concerned with reducing child mortality.⁶ In developing countries, child rates related to respiratory. In Tamil Nadu 3 percent of children under 5 years had symptoms of acute respiratory infection, overall 8 percent of children under 5 years had diarrhea, and other childhood diseases.⁷

Malnutrition is one of the main cause for child mortality.⁸

Maternal Mortality Ratio represents the most sensitive and key indicator of women's health and their status in the society. The Government of Tamil Nadu desires to ensure that all women go through the pregnancy and its outcome with equity, respect, dignity and social justice through better access to quality maternity and child health services especially during pregnancy, child birth and post-partum period. The district wise details are discussed in Table 2.

MALNUTRITION

Children in India are vulnerable to malnutrition because of low dietary intakes, infectious diseases, lack of appropriate care. During National Family Health Surveys all children under -5 years of age were weighed and measured to assess the nutritional status. In Tamil Nadu, the deaths due to malnutrition are 93, 88 and 63 in the years 2013, 2014 and 2015 respectively. Percentage of stunted, wasted and underweight children are 27.1, 19.7 and 23.8 are recorded in the year 2015-2016.⁹ Every

country and the respective governments have made every possible effort to tackle down the prevalence of underweight children. According to World Health Organization, 43 percent of Indian children are underweight.¹⁰

FINDINGS :

- Child death rate and the infant mortality rates are relatively high in the rural when compared to the urban areas.
- Infant and child mortality rates are lower for girls than boys.
- Child mortality rate is high with children born to teenage and old age mothers compared to mothers of prime childbearing age between 20-29.
- Health care plays a significant role in reducing child mortality.
- Antenatal visits and Postnatal care are important to reduce child mortality.
- Vaccination of children is very important to protect them from diseases like Tetanus, tuberculosis, diphtheria, polio, pertussis and measles.
- Breastfeeding also play an important role in combatting childhood diseases.

GOVERNMENT RESPONSE

In 2005, Government of India launched National Rural Health Mission (NRHM) on 12 September 2000 to improve the availability and quality of accessible healthcare, especially for those residing in rural areas with accent on the poor women and children.¹¹ The major goals of the mission are to reduce the Infant Mortality Rate (IMR) and Maternal Mortality Rate (MMR) and improve universal access to public health services.

Tamil Nadu's performance in health sector has improved significantly over the past decade. The State has witnessed improvements in primary and secondary care facilities through the establishment of several professional medical teaching institutions, and significant improvements have been made in the higher secondary and tertiary care facilities.

The effective implementation of NRHM, and the State Health System Project (SHSP) with the support of the World Bank and State

government, since 2005,¹² have contributed significantly in improving the quality and quantum of services delivered through public healthcare facilities in the State.

The budgetary provisions for public healthcare delivery system has steadily increased and in 2015-16 this was Rs. 8245.41 crores.¹³ Strengthening of Primary Health Centres (PHCs) and Health Sub Centres (HSCs) – during 2005-2015, about 200 new PHCs are built with adequate infrastructure using NRHM funds.¹⁴ Maternity Benefit Schemes to protect women during pregnancy and provide them pre-natal health care.

Maternal and Child Health Coverage under Reproductive and Child Health (RCH) component of NRHM, including provision of 24x7 delivery services, ensuring availability of emergency obstetric care and setting up of NICUs, have been designed to improve Maternal and Child Health (MCH).¹⁵ Muthulakshmi Reddy Maternity Benefit Scheme also played a significant role for maternity care.

The Integrated Child Development Services (ICDS) programme provides nutrition and health services for children under the age of six years and pregnant and breastfeeding women, as well as preschool activities for children between 3-5 years. These services are provided through community based anganwadi centres. Sixty-one percent of children under six years have received services of these kind through anganwadi centres.¹⁶

According to the S R System Bulletin, the overall mortality rate of children below five years in Tamil Nadu came down from 20 per 1000 live births in 2015 to 19 in 2016, reflecting the decline nationally.¹⁷ In 2015, there were 43 deaths per 1000 live births in the country. This was brought down to 39 in the succeeding year. In addition to the decline in child mortality, its maternal and child health indices – has been bridging the gender gap between boys and girls. In 2017, infant mortality rate for Tamil Nadu was 16 per 1000 live births. Infant mortality rate of Tamil Nadu fell gradually from 35 per 1000 live births in 2007 to 16 per 1000 live births in 2017.

Tamil Nadu has one of the very low MMR among the major Indian States. In 2013-14, Tamil Nadu reports 727 Maternal deaths

amounting to a MMR of 68 per 10000 live births. In 2011, there was four point difference between the mortality rates among boys and girls. In 2014, the scale tilted in favour of girls. However, the state lost its momentum and the scale swung back in favour of boys in 2015. The then Director of Public Health K. Kolandaswamy said the reduction in the gender gap is a process that has began a decade ago. J. Kumutha, expert advisor to the state government on child health under the National Health Mission, said officials are striving to bridge the gap. Although the 2016 report was encouraging for public health officials in the state, some numbers remain a cause of concern – 71.7% of infants death continue to happen at the neo-natal stage, with 53% happening in less than five days.¹⁸ There was also a chasm between the number of children saved in rural and urban areas. While under – five mortality rate stood at 15 in urban areas, it was 23 in rural areas. The state has come out with a slew of

initiatives in the last four years, including setting up a network to mothers and their infants through the facilities under the health and social welfare departments.

CONCLUSION

To conclude, as far as Child Mortality is concerned it is happy to note there is gradual improvement in the state from the past decade. The measures taken by the government are appreciable. However, it should not be forgotten that disparity in residence and gender still exists in acquiring medical care and in few districts in the state the Child mortality and maternal mortality are still very high and alarming. If the schemes are properly implemented at the grassroot levels and periodical surveys are done in terms of neonatal, postnatal and maternity care, it will be easy to bridge the gap and child mortality could be easily reduced.

MYSORE - FRENCH RELATIONS DURING THE REIGN OF HAIDER ALI

D. A. Prashanth

The relationship between the kingdom of Mysore and the kingdom of France is an important area of historical importance. If these contacts which started during the days of Haider Ali and continued throughout the period of Tipu Sultan had become mutually fruitful, the 18th and 19th century history of subcontinent would have been different.

Haider Ali gained de-facto control over Mysore in 1761A.D. He was responsible for transforming Mysore from a small principality of the southern of present Karnataka into a vast kingdom of South India with the military help and technical advice of the French.

On the Indian side, several powers, notably Mysore wanted French intervention to make themselves free from the British influence. Initially, the French wanted a formidable alliance of the Nizam, Mysore, Marathas, Travancore and also Delhi. The question before the French Government was first to assess whether there was possibility of a comprehensive alliance in India against the East India Company. And if any possibility¹ existed, how a French naval and military operation could take place in order to deal a decisive blow to the English in the sub-continent. Information reached Paris from various sources including those officers who served in India during the Seven Years War. Along with these many French civilians, who were acquainted with Indian politics, sent reports on the conditions of the Indian states and suggestions for alliances with Mysore, Hyderabad, Lucknow and Delhi.

As in the case of America, in India also, it was decided to send special agents to conduct enquiry and send reports. Palebot de Saint Lubin who was initially in the army of Lally in 1757-62² came back as an intelligence agent to Mysore³ in 1766-1769 and returned to Pune in 1777. Lubin⁴ was active during the early days of Haider Ali's rule. Another special agent was Montigny who was in Surat, Agra, Hyderabad and Goa. In order to co-ordinate the work of the intelligence agents, Governor of Chandranagore sent Visage and other agents to Delhi.

As they did in North America, the French decided to reinforce the Indian states by sending

volunteers, officers and engineers under civilian cover. They even allowed the French soldiers to join the Indian princes under the pretence of desertion. By 1770 an office headed by Marechal de Camp Baudoin was in charge of these operations. Under this programme Col. Hugel and his Hussars stayed in Mysore to provide military training and technical advice there.

In order to have any future military or naval operations it was necessary to have upto date maps of the Indian coasts. Therefore, in 1777 Lafitte de Braissler, a French Engineer sailed along with Admiral Tranjoly in his flagship De Brilliant and prepared maps of Eastern coast of India, till Pegu, Ache, Sumatra and Nicobar Islands. In 1778⁵ he extensively mapped Malabar Coast. The purpose was to improve the existing naval maps, so that the French could keep a naval squadron in the Indian Ocean. This could be one with the assistance of Mysore or other Indian rulers.

However, on many occasions, the French civil and military leadership failed to act on time. In 1778, Admiral Tronjoly arrived on the Indian waters with a squadron of D'orves. This was an attempt to keep a balance of naval strength between the French and the English. In February 1781, D'orves made demonstration in the Coromandal coast, but did not come to the help of Haider Ali who wanted 800 gunners and marines to crush General Coote near Cuddalore. The French Admiral D'orves even refused to blockade⁶ Gen. Coote by Sea, while Haider Ali was attacking on land. Piveron de Morlat, who headed the negotiations with D'orver on behalf of Haider Ali, was extremely critical of him. It was a historic opportunity to eliminate the British power in South India.

In the meanwhile preparations were going on in France to send a strong squadron and an army to India. Bussy was to be the commander-in-chief of the land and naval forces⁷. Bussy wanted 8000 troops and 10 million livres. He was given 4000 troops from France and to set another 4000 from Mauritius. He received 5 millions in cash and bonds for 5 millions drawn on the Dutch East India Company. The king of France instructed Bussy that France had no

territorial ambition in India and that all the territories recaptured from the British would be returned to their legitimate rulers⁸. Since Bussy was expected any time at Ile de France and was supposed to follow up the first French military detachment to India with all his forces, the French officer Duchemin, who had only a small army under his command was instructed not to fight the British before the arrival of Bussy and his army of 8,000. Duchemin was put in-charge to negotiate and draft a Treaty with Haidar Ali for military alliance with Mysore. But these efforts did not succeed immediately because the Wakil (Lawyer)⁹ of Haidar Ali posted at the French camp, was infact working for the English. The French Admiral Suffren was¹⁰ in the meanwhile chasing the English navy near Ceylon and fought a major action at Providien on 12 April 1782¹¹. However on 30 April at Batticoala (Ceylon) he received ministerial orders to return to ille de France and wait for Bussy. He however decided to disobey, the order because it was suicidal to leave the Indian waters when the British army was still around. Other French officials, Piveron de Merlat and Moissac had informed him that only his naval victories would help in preventing a break up in the Mysore-French relations.

The naval actions of Suffren had tremendous impact on Haidar Ali. Therefore Suffren decided to come back to the commercial coast and Nabob Haidar Ali agreed to the meeting which took place at Cuddalore from 26th to 29th July 1782. According to the available information, the men were greatly impressed with each other. On 28th July de Launay, Commissioner General of Bussy had arrived at Cuddalore. He informed about Bussy's arrival at Ile de France. He also informed Haidar that Bussy would soon reach India with reinforcements and he delivered a letter of Bussy which contained the paragraph of Louis XVI's instructions to Bussy. The French objectives¹² were read out in the Durbar in the presence of the representatives and Wakils of the Indian powers accredited to Haidar Ali. On 1st Aug. 1782 Suffren's forces sailed from Cuddalore. On 26th he landed his navy at Trincomale in Ceylon which captured the city. On September 3, 1782 Suffren had another battle with the Royal Navy. Peynier had disembarked 1400 soldiers and arrived on 29th July 1782¹³. Unfortunately almost 1032 of them were critically ill due to an

epidemic. Bussy wrote that 448 of his soldiers and officers had died of the epidemic. Bussy himself was sick for a couple of weeks. It was only by December 1782, Bussy could reach India with 2275 sick soldiers. This was a great disappointment for Bussy, because he wanted to command at least 10,000 soldiers. In July 1782, when Duchemin fell ill¹⁴, he gave command of the army to Hoffelize. Hoffelize was informed by Piveron that Haidar Ali had great respect for the French and he was waiting for Bussy for a joint operation against the British. Hoffelize immediately offered all his assistance to Mysore. Haidar immediately asked him to train his infantry according to the French pattern. This training was not something new¹⁵. Ever since Dupleix detached some French military instructors to Haidar Ali, for more than a quarter century, the training programme went on smoothly.

Haidar Ali had promised Suffren that he would wait for Busy near Cuddalore. When Piveron left for Cuddalore he learnt of the disaster of the battle of the Saints in which part of the French fleet was destroyed.

There was a second tragedy at Soulanges in April 1782, while bringing 4000 men in 4 ships of the line and several other transports to help Bussy and Suffren. He also learnt about Bussy's own illness.

It was here that they learnt about the epidemic and about Bussy's own difficulty in leaving the Ile de France. On the top of these tragedies, Haidar himself fell ill seriously. There French physicians, Rousseau Rochard and Noel (Surgeons of the French army) attended him. But Haidar was against undergoing a surgery for his stomach ailment. And when he finally agreed, for a surgery, it was too late. Nabob Haidar Ali died at 8.30am on 7th Dec. 1782. The French officials under the leadership of Piveron took a historic decision to keep the news of Haidar's demise a top secret in order to prevent any coup within the kingdom to capture power. Tipu was away in Malabar with his army. Piveron assured the Mysore authorities that the French army was backing Tipu without any reservation. The French moved their forces till Jinji and stayed¹⁶ there till the arrival of Tipu from Malabar on 28 Dec. 1782. Tipu thanked the French profusely for their timely help.

EXISTENCE OF TAMIL PEASANTS IN THE PROGRAMMES OF INDIAN NATIONAL CONGRESS DURING GANDHIAN ERA

S.P. Prem Singh Muthubalan

During the first three decades of the establishment of Indian National Congress, it neither passed any resolution nor put forth any definite economic and agrarian programme.¹ During this period Congress had been an elite body dominated by the professional middle classes mostly from the presidencies of Bengal and Bombay.² At the end of First World War, there was change in the leadership of the Indian National Congress and the nationalists had begun to champion the agrarian causes.³ The new era of Indian National Congress started towards the close of the second decade of twentieth century. Reason for this change was the entry of M.K. Gandhi. From this period the agrarian tenet of Congress was raising considerably.⁴ Gandhi initiated the process of transforming it from the organisation of the elitist to that of the masses.⁵ After his arrival a large number of rich to marginal farmers joined the Congress.⁶ Gandhi familiarised himself with the peasants of Champaran in Bihar and Kheda in Gujarat where the two revolts occurred under the leadership of him against the injustice of indigo planters and the land revenue collectors respectively.⁷

During this period Gandhi was unknown to the people of Tamil Nadu. He neither conducted any Satyagrahas nor had any disciples in that part. In 1919 the Congress survived in Tamil Nadu as a small political club of wealthy upper-class people. The Congress was overshadowed

by the Justice party up to end of second decade of twentieth century.⁸ But it succeeded in mobilizing the youth, women, the urban petty bourgeoisie, the urban and rural artisans, peasants, workers, merchants, capitalists, and a large number of small land holders⁹ of Gujarat, the United Provinces, Bihar and the Andhra region of Madras.¹⁰

Nearly a decade from 1920 the Indian National Congress was not firm in its policy concerned with the problems of peasantry. Some of its leaders like N.G. Ranga made attempts to organize the peasants in certain parts of Madras Presidency. However, their organizational work among the peasantry was not fully appreciated by other Congress leaders. During this time Ranga felt that the peasants should be organised within the Congress not separately.¹¹ In 1920 Gandhi stressed that the peasant's assistance is much needed to attain swaraj. During this time the Congress also understood the latent power of the peasantry.¹²

Non-cooperation Movement:

In July 1920 a committee headed by Gandhi drafted the non-cooperation plan which conceived triple boycott of government run courts, colleges and councils.¹³ On 4th September the agenda of Gandhi secured sufficient support from the Congress special session held at Calcutta.¹⁴ This Session considered and approved the proposal of the

non-cooperation movement.¹⁵ Gandhi had captured the attention of the Indian National Congress through this Session.¹⁶

In December, the annual session of the National Congress, held at Nagpur which confirmed the resolution already passed at the special session of Calcutta.¹⁷ Further the Session propounding the non-payment of taxes, impressed the peasants who responded instantly to this movement.¹⁸

The non-cooperation movement was initiated in 1920 after the strenuous endeavours of Gandhi.¹⁹ He toured several places and addressed numerous public meetings for the support of the movement.²⁰ The rural masses, already politicized by the tireless efforts of the regional leaders were brought into the orbit of National Movement.²¹

Gandhi undertook a tour of Madras for propagating the ideas of non-cooperation among the youth of Madras Presidency. The tour had its desired effect. According to the government report, Gandhi created a tremendous enthusiasm and attracted enormous crowds wherever he went.²²

C. Rajagopalachari, S. Satyamurthi and E. V. Ramaswami Naicker, the President of the Tamil Nadu Congress Committee, were the important leaders of the non-cooperation Movement in Tamil Nadu. During the Movement temperance campaign was conducted in many parts of the Madras province especially in Madurai.²³ The anti-liquor agitation of Tamil Nadu (July 1921) was a spontaneous move by the common people and was then taken up by the Congress.²⁴ In the Madras beach meeting held on 12th August 1921, Gandhi declared that non-cooperation (Khilafat) is a just and religious doctrine; it is the inherent right of every human being and it is perfectly constitutional.²⁵ Chris Baker has opined that the non-cooperation in the Madras presidency was 'nothing more than a few attacks on liquor shops by zealous advocates of temperance, and some scuffles involving the police with forest tribesmen'.²⁶

Participation of Peasants in the Vedaranyam march:

The annual discussion of the Congress was held in Lahore in December 1929 under the presidentship of Nehru.²⁷ During this time

Gandhi had decided to protest against salt tax based on Salt Act 1882.²⁸ Salt Sathyagraha was a part of the civil disobedience movement. On 12th March 1930 Gandhi marched to Dandi with his followers to break the salt laws.²⁹ This movement quickly spread throughout India.³⁰

The radical leaders of the Congress utilized this peasant unrest for Congress campaign. Other leaders also kept in touch with the equally disgruntled landlords and moneylenders.³¹ No tax, no rent and forest satyagrahas of several provinces were merged with this movement to redress economic grievances of the peasants.³² The growth of peasant organisations wielded considerable pressure on the Indian National Congress.³³

The Gandhi's Dandi march was followed by Rajagopalachari (Rajaji), the Tamil Nadu Congress Committee President, along with T.S.S. Rajan and others.³⁴ Rajaji addressed several meetings during this period at Thanjavur, Mayavaram and other places in Thanjavur District.³⁵ The Vedaranyam march began on Tamil New Year's Day on 13th April 1930. Nearly hundred Tamil volunteers under C. Rajagopalachari set out Vedaranyam to offer Salt Satyagraha against Madras Salt Act.³⁶ In the beginning neither the people of Thanjavur district participated in the march nor did they show any practical sympathy with it.³⁷ The volunteers mostly participated from the other districts, viz., Madurai, Tiruchirappalli and Tirunelveli.³⁸ J.A. Thorne, the Collector of Thanjavur, warned that anybody who gave assistance to the Congress group would be punished.³⁹

The shortest route to Vedaranyam was not followed by them. It had taken sixteen days to reach the destination. They went to Kumbakonam on the 20th Morning where they were accommodated in the house of V. Panthulu Iyer, a leading and influential mirasdar, a staunch Congressman, Ex-M.L.C and a member of the working committee of the Tamil Nadu Provincial Congress Committee. After five days they reached Thiruthuraipoondi where they were warmly welcomed by Ramachandra Naidu, a wealthy and influential landlord of the place. After passing 22 miles finally they reached Vedaranyam on the 28th evening. The next day was observed as a day of fast and prayer. Rajaji

was convicted two days later on 1st May and imprisoned in Vellore jail.⁴⁰

The participation of Tamil Nadu peasants in the Vedaranyam march was quite impressive. The government arrested nearly 350 participants at the end of the march but it did not enlist the persons' status except the leaders. The available records provide a general list of persons.

It is clear that the representation of peasants in the Tamil Nadu Congress

Committee was not getting much importance during the cited movements of Indian National Congress. While the spontaneous peasant movements occurred on the lines of caste movements. Some instances were Tiruchirappalli, Lalgudi taluk peasant agitations against Brahmin landlords. In the latter they rack rented the Pallar tenants.⁴¹ In Ramanathapuram district, the agrarian protest was in the form of clashes with dominant castes.

GENESIS OF THE PURE TAMIL MOVEMENT IN TAMILNADU

G. Premkumar

The pure Tamil movement was a purist movement started by Maraimalai Adikal¹ (1876-1950) to rid Tamil writing of the various non-Tamil especially of Sanskrit words, which have gained currency in ordinary usage. Tamil egalitarian ideas were partly rediscovered by nineteenth century Christian missionaries, and they left their impress of the unique antiquity of Tamil language, literature, history and culture of the Natives. It made the natives to realise that their mother tongue was in no way inferior to the North Indian Sanskrit. It widened the scope of the in-depth study of the languages, literatures, history and cultures. Moreover, it asserted the superiority of the Tamil language and stressed that it is free from the influence of any other language. Considering these characteristics of the Tamil language, a few learned scholars came forward to purify Tamil of its alien influence. This resulted in the form of a movement, which its founder called as 'Taniitamil movement' in Tamil language which means 'Pure Tamil Movement'. In this paper an attempt is made to trace the factors which contributed to the genesis of pure Tamil Movement.

The Influence of Missionary Writings

Certain statements by European missionary scholars like Percival, Winslow, Caldwell, Pope and others kindled a sense of pride among Tamils about their heritage. The enthusiasm and thrill with which the European savants presented the salient features of Tamil language, literature, antiquities and religion also instilled in these Tamil scholars a notion of uniqueness about their past glory and set them apart from other races and peoples of India, especially the Brahmin community (broadly identified as Aryans)²

Rev. P. Percival was the Professor of Vernacular Literature at Presidency College, Madras during 1860s and collected nearly 5000 proverbs and edited them. Thus he laid the

foundation for linguistic research.³ Following in his footsteps Winslow, an American born Missionary scholar who settled in Madras and published a Dictionary in 1862. He is well-known to the Tamil world through his Dictionary. In his research work, he said that while all the vernaculars of India had been enriched by Sanskrit, that wonderful language has borrowed from the Dravidian group of which Tamil is the oldest⁴. It also strengthened the ideas of Percival about the glory of the Tamils.

An outstanding scholar among the Christian Missionaries, Bishop Dr. Robert Caldwell (1814-1891) had strained his every nerve to resurrect Tamil from the dustbin. Caldwell is considered in Tamil Nadu as a prophetic scholar, the memory of whom in Tamil Nadu has been very sacred to the Dravidologists. It was he who resurrected and coined the word Dravidian to mean all the South Indian Languages. He studied them deeply to many years so that he could announce to the world authoritatively that the Dravidian languages did not originate from the Aryan family or do not belong to that family that their origins should be discovered somewhere else⁵.

Caldwell's thesis dispelled the darkness that satisfied the antiquity of Tamil and its family and dismantled the hegemony of Sanskrits, that it was the mother of all the world language, awakened the world of scholarship to Tamil studies and helped to remove all the prevalent fallacies about the Dravidian family of languages⁶. In his studies he showed the relations that prevailed between Sanskrit and the Dravidian group of Languages. He without any prejudice made it known that Telugu, Kannada and Malayalam had borrowed a lot of words from Sanskrit. As far as Tamil is concerned he said that it functioned independently. It is very difficult to avoid the impact of Sanskrit on the functioning of Telugu, Kannada and Malayalam, but Tamil

has independent standing and requires no support of Sanskrit. In his analysis he first of all spoke about purity of the language. Then he emphasised the ancient glory of Tamil of all the Dravidian languages¹⁰. According to him Tamil is the classical and well matured language.

Caldwell's rare discovery, resurrection and his installation of Tamil on the high pedestal really startled the world of scholarship. But after sometime the Tamil world got awakened to the realities and started to continue the path identified by this great linguist¹¹. The immediate impact of his writings and findings on Tamils was the redemption of Tamil from the hegemony of any alien dialect, hence Pure Tamil Movement.

Another very leading Tamil Missionary scholar was G.U Pope (1820-1908). He worked as a Lecturer in Tamil and Telugu at the University of Oxford from 1884 to 1896. He translated Tirukkural, Tiruvacagam and Naladiyar in to English¹². His translation of the sacred Kural, the first of its kind into English with all its couplets, numbering a total of 1330, is considered as an example of his command of the subject matter in Kural.

Conceptualisation of the Dravidian Idea by Prof. Sundaram Pillai

The European missionaries, particularly Dr. Robert Caldwell and Dr. G.U Pope, opened up the flood gates of Dravidian studies which in fact led to the rediscovery of the Dravidian past. The rediscovery of the Dravidian antiquity and history, language and literature culture and thoughts, in turn, led to the Dravidian awakening. Influenced by the missionary zeal and enthusiasm of westerners Professor P. Sundaram Pillai¹⁶ conceptualised the Dravidian idea. He gave the rediscovered idea a shape, inner meaning and the coverage. As an ardent admirer of the Tamil language, its literatures and culture, Prof. Sundaram Pillai rose above the petty linguistic prejudices of South Indian, i.e. the Tamils, Telugs, Kannadigas and Malayalees, and gave them a new common bond of union on the geo-physical (regional), racial, linguistic and cultural grounds. The Tamizh Thaivazhthu (invocation of mother Goddess) of his famous drama Manonmaniyam (1891) reverberates this common bond of union¹⁷. It makes a clear demarcation of the land of the Dravidians as the

South of India being occupied by the race speaking a family of language.

Further, the author compared the works both in Sanskrit and Tamil and asserted that Tamil works are superior in their imagination morality piety, social justice and relevance. For instance, he said that those who knew the Kural well would never accept the laws of Manu, which discriminates between different castes and prescribes differing moral codes and justice. Likewise, he said that those who are captivated by the enthralling Tiruvacagam would not waste their time in chanting the vedas²⁰.

De-sanskritisation

In the days of C.J Beschi (1680-1747) the need to preserve Tamil was felt. He criticised excessive Sanskritisation in children's theological literature²³. Therefore personal names were de-sanskritised. A wrong impression was created that it all started with Swami Vedachalam calling himself MaraiMalai Adikal²⁴. Even in the 16th century Fr. Henriques signed his name as Andrikku Pathiriyar²⁵. Robert DeNobili (1577-1656) translated his name in the spoken Tamil usage of the elite of his age in to Thathuva Pothakar²⁶ and Fr. Beschi called himself Veeramamunivar²⁷. In conformity with the literary tradition of that era. Prof. V.S. Manickam considers professor Vi. Ko. Suryanarayana Sastri (1870-1903), a British scholar of high repute, who lived in the beginning of the 20th century, as the forerunner of the Pure Tamil Movement²⁸. He thereby advocated the independence of Tamil, particularly in his Tamil book. A Comparative Grammar of the Dravidian or South Indian Family of Languages. Prof. V.S. Manickam observes that the Professor himself in his zeal for pure Tamil, in his last days, changed his Sanskrit name 'Surya Narayana Sastri' in to Tamil name 'Parithimar Kalsignar'²⁹. Getting inspired by Prof. Parithimar Kalsignar's spark, Prof. Marai Malai Adikal spearheaded a movement for purifying Tamil of its Sanskrit bias and preserving the pristine purity of Tamil.

Early Influences of MaraiMalai Adikal

Before launching the Pure Tamil Movement, Swami Vedachalam had a preparatory period during which he had the benefit of learning and discussing matters with active and eminent personalities like Prof. Sundaram Pillai, Nallasami Pillai and Prof. Surya

Narayanasastri, who were propagating the ideas concerning the antiquity and cultural self-sufficiency of the Dravidians. It is probable that there were also other influences that shaped Swami Vedachalam's ideas³³. He published his first book in 1898 with the opening lines of Tirukkural. From, then, on a stream of varied publications in Tamil and English came out from his prolific pen. In 1902 the Adikal started a monthly journal viz Gnanacakaram. In the first issue itself he started to trace the origin of Tamil. He gave a lecture in the anniversary at the Madurai Tamil Sangam on 24 May 1904. It attracted the audiences who again invited him for the fourth anniversary of the sangam. There after he met the Tamizh Thatha U.Ve.Saminatha Iyer on May 26, 1906 in its fifth anniversary. The TamizhThatha (grand old man of Tamil) had all appreciation for the efforts of MaraiMalai Adikal³⁵.

Conclusion

The process of Dravidian awakening was not a systematic attempt on the part of the Tamils to purify their language and culture from alien influence. It was the spontaneous outcome of the rediscovery of the greatness of ancient Tamil classics in comparison with the North Indian works. The spontaneity was revealed in the outpourings of those connoisseurs of Tamil Language, literature, history and culture. This Dravidian awakening cumulatively brought into existence the Pure Tamil Movement. It is indeed interesting to speculate on its timing when we recall the fact that the Justice Party³⁹officially called at the beginning, South Indian Liberal Federation (SILF), which came into being from 1916 onwards. The organisation announced its birth with the publication of the 'Non Brahmin Manifesto' and proclaimed its aim to promote and protect the political interests of the non-Brahmin caste Hindus.

A CRITICAL STUDY FOR THE DELAY IN THE ENACTMENT OF 73RD AND 74TH AMENDMENT ACTS IN FREE INDIA

C. Priyalakshmi

Introduction

India is a largest democratic country in the world. The success of democracy only lies in the devolution and decentralization of the powers to the local bodies. Indian modern system of Panchayat is based in part on traditional Panchayat Governance on the vision of

Mahatma Gandhi that "gram swaraj" and in part by the work of various committees to harmonize the highly centralized Indian governmental administration with a degree of local autonomy.¹ The result was intended to create greater participation in local government by people with more effective implementation of rural and urban

developmental programmes. The new Constitution of India stresses the need of the Panchayat Raj system in India. But due to the internal and external problems of India, the 73rd and 74th Constitutional Amendments came into force only after the 1992. These Acts are the major sources to provide the Constitutional status to the villages and gram sabhas.

Constitutional Backgrounds

Due to the external and internal problems of India there was a long gap prevailed in between 1947 to 1992 for giving Constitutional status to the Local Bodies. However, it is noteworthy that several legislations of provincial governments on Panchayati Raj carried over to the Post-Independent scenario were legislated between 1947 and 1950 (i.e. prior to the adoption of the Constitution) All of them provided for Panchayats by and large co-terminus with administrative units like the Village, Taluk and District. The provincial governments jealously guarded their interests by providing powers to the collector to supersede the decisions of apex level district bodies. Since 1992, local governance in India takes place in two distinct forms that is urban and rural. The urban localities covered in the 74th Amendment to the Constitution, have Nagar Palika which derive their powers from the individual state governments. But the powers of rural localities have been formulated under the Panchayati Raj system, under the 73rd Amendment to the Constitution.

While distributing powers between the Union and the States, the Article 40 of the Indian Constitution (Directive Principles of State Policy) vested local bodies and Panchayati Raj as a subject with the states but did not further elaborate on the relations between the states and this third tier form of government. Because Article 40 of the Constitution is an important authoritative affirmation and impetus for the laws in states under general guidance of union government.² Many measures were taken by states to bring their laws in conformity with Article 40 of the Constitution. In the states, where no law existed to provide for Panchayats, no new laws were passed. By 1951 – 52 there were over 70,000 Village Panchayats functioning in the country.³

Main causes for the Delay

From the 1920s to 1947 the Indian National Congress had been emphasized the idea of all India Swaraj, and organized movements for independence under the leadership of Mahatma Gandhi. But the spirit of devolution of power to grass level was completely neglected as a result. There was no consensus among the top leaders regarding the status and role to be assigned to the institution of rural self-government; rather there were more focused on independence of nation.

While Gandhiji favoured village Swaraj and strengthening the village Panchayat to the fullest extent but on the other end, Dr. B.R. Ambedkar opposed this idea. Because Ambedkar believed that the village represented regressive India, a source of oppression. The model state had to be build safeguards against such social oppression and the only way that it could be done through the adoption of the parliamentary model of politics.⁴ But finally the view of Mahatma Gandhi only optly came into reality after many effective measures.

During the drafting of the Constitution of India, Panchayati Raj Institutions were placed in the non-justifiable part of the Constitution, the Directive Principles of State Policy, as Article 40. The Article read "the state shall take steps to organize village Panchayats and endow them with such powers and authority as may be necessary to enable them to functions as units of self-Government". However, no worthwhile legislation was enacted either at the national or state level to implement it. But since 1950, the major landmark in the evolution of Panchayati Raj system in India have been launching of Community Development Programme and National Extension Service, (1952), appointment of Balwantrai Mehta Committee (1957), introduction of three-tier system of Panchayati Raj, appointment of Ashok Mehta committee (1977), reform efforts by union-state governments and the Constitutional Amendments. All the above committees recommended that local self-government should be constitutionally recognized, protected and preserved by the inclusion of new chapter in the Constitution.

For the first four decades of the independent India, since the adoption of the new Constitution, Panchayati Raj Institutions have travelled from the non-justifiable part of the

Constitution to one where, through a separate Amendment, by which a whole new status has been added to their history.⁵ The suggestion of giving Constitutional status to the Local Bodies was opposed by the Sarkaria Commission, but the idea, however, gained momentum in the late 1980s especially because of the endorsement by the late Prime Minister Rajiv Gandhi, who introduced the 64th (now 73rd Amendment) and 65th (now 74th Amendment) Constitutional Amendment Bills in 1989, on August 8, with his vision of "power to the People".

The Parliamentary Debates and Proceedings

In a nutshell, we can say that the establishment of community development blocks in rural India marks the beginning of the process of empowerment of citizens of India in 1952. The Balwanthrai Mehta Committee in 1957, the Ashok Mehta Committee in 1977 and the Sarkaria Committee in 1986 advanced this process through debates, but with varied conclusions. The concept of district planning was a major step in further pushing the debate on decentralization.

Rajiv Gandhi's Period

The 64th (now 73rd, Amendment) and 65th (now 74th Amendment) Constitutional Amendment Bills recommended some major structural changes in local governance, to ensure the functioning of local bodies as democratic units and result in greater participation of the people at the grass roots in decision making. It thus reduced the role and control of politicians at the state level in local governance, which was seen as a threat to political control by leaders in the state legislature. The rationale behind the decentralization process in India was explained by the then Prime Minister Rajiv Gandhi, while introducing the earlier 64th and 65th Amendment Bill in 1989, although his main emphasis was on the Panchayat Bill but the Nagar Palika Bill came as its companion piece. According to him, "the irregular and uncertain elections, the wide gap between the people and the implementing authority were the main reasons that had ignited the need for decentralization in governance."⁷

During the debate in Rajya Sabha regarding the Bills of Panchayat Raj and Nagarpalika began on 14th August, 1989,⁸ many states which were led by the opposition parties

including the opposition party leader L.K. Advani opposed the Bill.

After forceful deliberation on the 64th and 65th Bills the motion was put to vote. There were 83 Nays (No's) and 157 Ayes (Yes), there short of the requirement of two-third majority of the total of 240 members present and voting as a result the motion was announced defeated. Apart from the parliamentary debates, there was also an ongoing public debate. Eminent jurists wrote in the newspapers to enlarge the scope of the Bill so that the Panchayat could also function as the village judiciary with power to release bonded labourers and against discrimination of Dalits and women.⁹

V.P. Singh's Period

After the general elections in 1989, the National Front coalition formed the Government under the leadership of Prime Minister V.P. Singh and affirmed its intention to strengthen the federal structure through Panchayati Raj, as it was part of its manifesto. It asked the Law Minister to prepare an integrated Bill instead of two separate Bills. V.P. Singh also indicated its intension to introduce a new Panchayat Bill in the Parliament with a view to create a new work of democratic self-government institutions all over the country. It favoured grant of greater powers to Panchayat Raj Institutions and wanted their involvement in the formulation of plan as well as their implementation. Prime Minister V.P. Singh had appointed a committee under the Chairmanship of S.R. Bommai. In his report, the committee appreciated the Amendments for making the Panchayats and local bodies' effective units, but also proposed a few alterations.¹⁰

Later in September, 1990, the then Law Minister introduced the Bill in the Lok Sabha which was not substantially different from the drafts of Rajiv Gandhi. Here also Article 40 of the Constitution was the source of inspiration. Moreover, the Bill recognized the same statement of objects, reasons and inadequacies as the last draft (including the absence of regular elections, prolonged suppression, inadequate representation of the weaker sections, insufficient devolution of powers and lack of financial resources).¹¹

This time the Amendment Bill added a new part titled "Local authorities", covering both the

municipalities and Panchayats. Though the Bill was framed like former draft a few new provisions were appended. The important provision contributed by the V.P. Singh Government was to recognize the Gram Sabha as the General Assembly. It also incorporated the provision of proximity between the people and their representatives. These Gram Sabhas (two or more) would constitute Panchayats at the village level comprising the elected representatives from territorial Constituencies. Apparently, the state Governments were at liberty to decide on two or three-tier set up at other levels. But unfortunately, before the Bill could be introduced in Parliament for consideration, the Mandal issue had aggravated the situation followed by agitations on the Babri Masjid issue. Consequently, the BJP withdraw its support and the V.P. Singh government was defeated by 346 votes to 142.

P.V. Narashima Rao's Regime

P.V. Narashima Rao came to the power in June 1991 he introduced the Panchayati Raj and Nagarapalika Bill in September 1991. It was in the form of two separate Bills, the 72nd (now 73rd) Amendment Bill for the rural local bodies and the 73rd (now the 74th) Amendment Bill for municipalities. The two Bills got final approval only after the 15 months gap by the joint Select Committee of the Parliament. Finally the committee passed Bills as the 73rd and the 74th Amendment Bills in the month of December, 1992.

The redrafting of the Amendment Bills continued as two separate exercises, pursued by two separate Ministers. On September 16, 1991, Sri Venkataswamy and Smt. Shiela Kaul¹² separately introduced the 72nd (now 73rd) and 73rd (now 74th) Amendment Bills in the Lok Sabha, towards the end of the monsoon session, on 16th September 1991. Both rural and urban ministers referred the two Bills needs to two separate Joint Committees of both Houses of Parliament. The motion was concurred in Rajya

Sabha on 21 December 1991.¹³ There were no objections on the provisions of reservations and direct elections from territorial Constituencies for the 73rd Amendment Bill. However, the Joint Parliamentary Committees recommended direct elections at all levels.¹⁴

On 23rd December the Rajya Sabha approved the two Bills without much debate.¹⁵ Narashima Rao pushed for and obtained a consensus on what was feasible. The Bills were passed, which required ratification by half of the states in accordance with Articles 73rd and 162 of the Constitution, as the Amendments sought collision between the Union and States on the exercise of executive power. The Amendment Acts were ratified and were renumbered as 73rd and 74th Amendments.

Both 73rd and 74th came into force in throughout India on April 23, 1993 and December 22, 1993 respectively. In April 1993 the President gave his assent to the same. The state governments were asked to align the laws of Panchayats and municipalities in accordance with the amendments by April, 1994. Interestingly, the process of decentralization was implemented more effectively in the States where non-Congress Governments were ruling after it was passed by a Congress Government led by Narashima Rao (example: Kerala's Left Front Government)

Conclusion

The present study draw to conclude that the several circumstances that led to the delay in the enactment of 73rd and 74th Amendment Acts. We have keenly seen and come across several circumstances which were led to the delay in the enactment of 73rd and 74th Amendment Acts due to drafting deficiency of Indian Constitution with non-justifiable part of Article 40, forming of many committees with more inadequate recommendations and time consuming in defective debates of Parliamentary Houses.

MOB LYNCHINGS ON THE RISE: THE UNABATED FEAR AND VIOLENCE THAT HAUNTS INDIA TODAY

P. Priyadarsini

Mob Lynchings are so common in India today and the fear it creates in the minds of people continues unabated. Due to malice politics, the life and liberty of the people are being infringed upon everywhere. It involves a group of violent people attacking a person, on the lines of religion, caste based discrimination and targeting of a particular community. This paper intends to examine the increasing role of mobocracy in silencing the minorities and the so called 'others' of the society. Myths and Real life incidents from time immemorial have seen the power of the mobs attacking the poor and the marginalised sections of the societies.

The recurrence of Mob killings in history would frighten anyone by the excruciating pain it inflicted upon the victims. It has found expression in the numerous plays and novels written in different times. The death of Farkhunda Malikzada, a 27 year old woman in Afganistan in 2015 sent shivers down our spines. She was attacked by an angry mob for being not religious and the police who initially tried to protect her and disperse the radical mob, but were overwhelmed by the mob's number and fury.¹ Khalid Hossaini, a very famous Afgan author wrote that he felt depressed that a defenseless woman was beaten to death by a mob of men. Her body was dragged and burned in the bed of a dry river.² He lamented for the fact that it did not happen in a remote conservative village in Afghanistan but in Kabul, an urban city

embodying what passes for progressive thoughts in Afghanistan. Way back in 2007, Hussaini had written a novel, *A Thousand Splendid Suns*, in which the protagonist Mariyam who got arrested by the Taliban was stoned to death. The novel speaks a lot about the suffering of women during the Taliban regime.³

The word lynching which is used for mob killings originated in the US in the mid-18th century. Lynching is a pre-meditated extra judicial killing by a group. It is most often used to characterize informal public executions by a mob in order to punish an alleged aggressor or to intimidate a group. It is often conducted with a display of a public spectacle for maximum intimidation.

In the US, lynching of Afro Americans became frequent in the re-construction era (1863-1877). Abraham Lincoln's emancipation of slaves had set free the blacks with a lot of civic rights. The white supremacist vision that intended to preserve the traditional cultural standards and elitism of the whites was at loggerheads with the emancipationist vision which sought total freedom for Afro Americans.⁴

It would be interesting at this juncture to enquire about the history of violence in our own country.⁵ The view that Indians are culturally non violent and our culture promotes peaceful coexistence does not stand up for historical

scrutiny. There are ample evidences of enormous cruelty against demons and outcastes in *Ramayana* and *Mahabharata*. Wasn't *Shurpanaka*, the demon mistreated by Rama, the *Maryadapurushothama* for her innocent proposal? The epic says the His brother *Lakshman* chopped off her breasts and nose which left *Shurpanaka* embarrassed and humiliated. Characterising Indian culture as intrinsically peacable is thoroughly incorrect as we find our epics and scripture being totally unfair to *shudras*, women and downtrodden. Political violence in Ancient India written by the prominent historian Upinder Singh delves into the concept of nonviolence myth associated with ancient India. Singh argues that during the national movement Gandhi and Nehru helped to create a myth of non-violence in Ancient India that observes a troubled complex heritage.⁶

However it seems to be strange that there is indeed no word for lynching in most Indian languages. This is in spite of the fact that in India the marginalised always had a tough going and were ghastly lynched even for very small crimes. Harsh Mander writes that Dalits have been lynched for growing a moustache, riding a horse or even building a two story home.⁷ He also writes that single women have frequently been lynched through centuries, branded as witches. Nowadays lynchings in the name of cow vigilantism is so common that it creates a fear psyche in the minds of all. Though it targets legal cow smugglers, but in some cases even licensed cow traders have swelled in the last couple of years. A total of 63 cow vigilante attacks had occurred in India between 2010 and 2017.⁸

Cow protection groups are gangs who patrol highways and roads at night, looking for trucks that might be smuggling cows across the state borders.⁹ These gangs are unorganised and are hard to control when it comes to the display of violence and anger¹⁰. Christoffer Jafferlot writes that the *Gau Rakshaks* do the jobs for some state governments. By letting vigilantes harass the minorities openly they keep majoritarian feelings satisfied.¹¹ They even were provided police uniforms to do such heinous crimes. After all the people's will is beyond the law; it is the law. This is something the judiciary has started to internalise as shown by courts factoring the religious sentiments of the people (of the majority to be precise) in some of their

decisions. The 2015 *Dadri* Mob lynchings, 2017 *Alwar* mob lynchings and a lot more of the same type where the minority got targeted bear testimony to the patriarchal, feudal mind set of the powerful majority. The total undermining of laws in the Mohammed Akhlaq case at *Dadri* and the Pehlu Khan case at *Alwar* has truly resulted in the collapse of the constitutional laws.

It would be of utmost interest at this juncture to enquire about lynchings in our own state of Kerala too. Experts say that only a specific section of people are targeted – Dalits, migrant workers, transgender People and women. Only those who belong to the above mentioned list or those who are from the lower strata of the society are victimised by mobs in this so-called progressive and 100% literate state. It has now become the norm in Kerala to blame migrant workers or tribals or transgender people or Dalits if something goes missing in any locality. Manik Roy from west Bengal was lynched to death for a silly allegation – stealing a hen. In 2018, a tribal man Madhu was lynched to death for stealing food in Attappady in Palakkad district.¹² This incident triggered national outrage as the event went viral with the culprits themselves boasting the video of lynching in the social media. The rise of violence is a reflection of lawlessness and loss of moral quotient in the society and the recent trend has baffled social scientists. It is alarming to know that Kerala has reported the highest number of mob violence with respect to its population.¹³ An apparent atmosphere of impunity for attackers with the social media encouraging criminal elements to take law into their own hands has led to the increase in the lynching rates in the state.

It is the duty of the state to ensure that the machinery of law and order functions effectively in maintaining peace, so as to preserve our quintessentially secular ethos and the pluralistic social fabric in a democratic set-up governed by rule of law. The state has to act positively and responsibly to safeguard and secure the constitutional promises to its citizens. The crowd is of a general perception that if judiciary and police administration cannot provide them justice, they should own it by themselves even if the person has committed a minor offence such as theft. Reviving the lost trust and faith of the people in judiciary and police system may help

to lower such horrendous crimes. It would be possible to an extent if lynching cases are dealt without politicising it. If India wants to be a progressive country, it need policy

implementation that curtails mob lynching from its roots. An act that strictly punishes the culprit will only help to uphold the pluralist and secular ethos of the nation.

RADICAL AND RATIONALISTIC IDEOLOGIES IN SNDP YOGAM – A HISTORICAL PERSPECTIVE

Dr. O.C Promod

The 19th century Travancore witnessed many superstitious customs and rituals in society. Untouchability was a great problem in the entire Hindu community and the Brahmins were the only community skipped from it in India during those days. The system was introduced for the sake of minority group of Brahmins in society and crores and crores of majority class lower community suffered much in this system. It is a funny thing that, most of the lower class was not ready to occupy powers from Brahmins. It is the victory of Brahmin community to mould a lower-class society for the betterment of upper class community in the erstwhile Travancore region. The educated Brahmins also orally taught to the un-educated lower class that, it is sin to behave in manner-less to the upper class Brahmin community, because they are associated with supreme god!! By the system, each and every Hindu class have to maintain a specified distance from other communities. A king (if he is non-brahmin) shall maintain two feet from Brahmins, while *Nairs* 3 feet from them. *Ezhavas* maintain 12 feet and *Pulayas* keep a distance of 54 feet and *Parayas* 64 from the Brahmins.¹ Another funny thing is that, most of them were happy, because most of them were superior among their lower classes. A dress code was also prescribed depending on the status of community. Education was restricted on the

lower class and they had no right to enter their temples. Lower classes were taxed heavily on various accounts.

On this context, the *Sree Narayana Darma Paripalana yogam (SNDP)* was organized in 1904 on the grace of Sree Narayana Guru and his disciples. He had made verbal struggles against the prominent upper class sections in society during those days. To criticise the Hindu texts, were not only sin, but also a punishable crime in Travancore area during those days. Therefore nobody was ready to questioning the existing rules in society. Narayana Guru was the first person questioned the existing caste rules in the erstwhile Travancore. He strongly opposed the *Chaturvarna* system in Hindu society.² That is why Narayana Guru is considered as the father of social reform movements in Kerala. He raised his voice against the predominance of the Brahmins in all spheres of life and he worked for the establishment of a classless and casteless society.³ He was born in an Ezhava family at Chempazhanthi in the erstwhile Travancore state. Ezhava community was a leading Hindu lower class community at Travancore region. After the formation of SNDP, Narayana Guru gave shelter to the all other lower class communities, who were even the lower status in social strata than Ezhavas. But SNDP was

always on the hands of Ezhava community and SNDP leaders were also unofficially the spokesmen of all other lower class. The members of Ezhava community and other lower class considered inferior to Ezhavas had no right to wear *dhoties* (long plain cloth) below their knees and not allowed to cover-up their breasts/bosoms by using blouse or shirts and not allowed to wear nose-studs or other precious ornaments. Sree Narayana Guru was the greatest revolutionary in Kerala society and his teachings resulted major socio-religious reforms and also had repercussions in the various aspects of social life like art, literature, education, religious practices, dress, manners, etc. He came from a community, which was totally outside the four-fold varnas of Brahmins, Kshatriyas, Vaisyas and Shudras.⁴ The *Sudras* never got chance to the better education and the Hindu philosophy never accepted it. Criticizing and questioning of *Sruthies* and *Smrities* were not possible and it was not only a sin but also a punishable crime in accordance with the existing Hindu laws. But the introduction of missionary school of Europeans paved the way for development of education from Manglore in the north and to the Kanyakumari in the south.⁵

The entries to the temples were restricted only to the upper class community on those days. Therefore Narayana Guru consecrated a *Siva* idol at Neyyattinkara near Trivandrum in 1888, which was a revolutionary step ever in the history of Travancore.⁶ The consecration of idols were the right of upper class Brahmin community and by questioning the aspect, Guru had done a revolutionary step in the religious history of Travancore. While upper class questioned the matter to Guru he simply told them that, he was consecrated only the Ezhava *Siva*, not the Brahmin *Siva* and he also permitted all other communities to make worship at the temple. On the wall of the temple it is seen that, *this is the ideal house, where all live in full fraternity without distinction of caste or prejudice of creed.*⁷ Afterwards he had appointed some Ezhava priests in the temple and given instruction to start a school nearby the temple irrespective of considering their gender or creed. Weaving has been the traditional profession of Ezhavas and Guru encouraged establishing a weaving mill nearby the temple.⁸ He had denied other bad demon worship like *chathan*, *Badra Kali*, *Chamundi*, *Marutha* etc and discouraged

killing of cocks, consumption of arrack and black-art. In the next annual year of Aruvippuram idol consecration, Sree Narayana Guru consecrated another idol at Kunnumpara near Kovalam at Trivandrum. On the request of devotees, he had consecrated at Mannanthala (Trivandrum), Kulathoor, Vakkom, Murikkumpuzha in later years.⁹ In total Guru consecrated nearly 100 idols in different temples in south India.

In 1904 Narayana Guru presided a meeting of Ezhavas at Paravur in Kollam district. Guru had taken strong stand against the evil practices such as *Thalickettu*, *Tirandukuli*, *Pulikudi* etc and encouraged modern marriage alliance among Ezhavas. On 7th and 8th January 1905 the second annual meeting of SNDP yogam held at Kollam under the president-ship of Dr. Palpu. In addition to agricultural and industrial exhibition, Guru asserted that the superstitions in all forms should be discouraged and encourage all forms of virtues in religion.¹⁰ The funny thing is that almost all leaders in every religious community strongly oppose all type of superstitions in society. But they cannot separate which one is belief or which one is superstition? Most of the superstitions of others are the mere belief of the believers. Opposing superstition is in fact the destroying their own religion in other aspect. Even though Guru and his followers preached against *thalickettu kalyanam*,¹¹ some of the members in Ezhava community continued their rituals by neglecting SNDP yogam. On the context in one instance, Guru reached at a house at Karimkulam near Neyyattinkara, Trivandrum, where the parents of a girl planned to conduct *thalickettu kalyanam* on that day. Guru directly advised the parents and their close relatives attended there and Guru himself announced that the programme is cancelled and given fruits and flowers to the girl. *Tirandukuli*, *Pulikudi*, *Poligamy* and *polyandry* were discouraged by Guru at every context.¹²

Meanwhile the ideology of radicalism developed in SNDP yogam and the people became aware of *Aham Brahmasmi* and *Tatwamassi* from Guru¹³. At the context, while the construction of Adwaita Ashrama at Aluva became over, Guru consecrated 'nothing' at there. It was a revolutionary step not only among Ezhavas but also in the history of Kerala. Sree Narayana Guru was also the strong upholder of

Adwaita philosophy¹⁴. Even though the esteem of Adwaita philosopher, Saint Sankaracharya crossed the boundaries of Hinduism, nobody dared to criticise him except Sree Narayana Guru. Guru opined that, whoever even the God discouraged a *Sudra* for studying Vedas, we cannot accept it any instance. One caste, One Religion, One God to man was the slogan of Sree Narayana Guru, which asserted the oneness in humanity irrespective of caste, creed, religion, gender etc.⁵ SNDP yogam engaged itself in the laudable efforts of eradicating untouchability and voicing the fundamental human rights of the working class. These efforts actually paved the way for many of Guru's followers to accept later the Marxist interpretation of socialism as their most acceptable ideal.¹⁶ Narayana Guru's sanyasi disciples are Sivalinga Swamy (Nair), Bodhananda (Ezhava), Sree Narayana Chaithanya (Nair), Swami Amritananda (namboothiri), Swami Govidananda (Ezhava), Swami Dharma Teertha (Nair), Swami Ananda Teertha (Shenoy), Swami Sakaranda (Ezhava), Swami Guru Prasad (Thiya), Swami Vidyananda (Ezhava), Swami Atmananda (Ganeke). Sanyasins are never considered to belong to any caste or tribe. The Guru even gave sanyasa to an English man by name Ernest Kirk. The Guru advised Kirk to continue in his western mode of clothing and to retain his own Christian name. In the Ashram the Guru took young boys from among the so-called untouchables, particularly from the *Pariah* and *Pulaya* communities, and made them chant the Upanishads, offer worship in the temple and cook and serve food to the residents and visitors at the Sivagiri Mutt.¹⁷ A world religious conference was convened by SNDP yogam in 1924 at Adwaita Ashram, Aluva. It was the first one ever in the history of India. The representative of different religion had delivered their messages there. The message of Sree Narayana Guru was the essential one and he pointed out that all religions are one and there is no need to quarrel each other. He also added that the doctrines of all religions will be taught to the proposed school at Sivagiri.¹⁸ Sahodaran Ayyappan was one of the notable disciple of Sree Narayana Guru had taken so many drastic measures against casteism and social evils in society. By the grace of Guru he had started Sahodara movement aimed to inter-religious marriages. He had good contact with the lower

class community including that of Pulayas and he had directly participated and associated with inter-caste dining with them and became outcasted from Ezhava community and known as 'Pulayan Ayyappan'. Ayyappan had a major role to develop radical and revolutionary thinking in Keralas. Keralites heard about socialist revolution through the Russian revolutionary V.I Lenin and Sahodaran Ayyappan. Vykam satyagraha (1924) was started by T.K Madhavan who was an another disciple of Sree Narayana Guru. It was a *satyagraha* of lower class community demanding to give the freedom to walk on the road nearby Vykam temple. Sree Narayana Guru, Gandhiji, Mannath Padmanabhan, E.V Ramaswami Naikkar from Madras, Akalidal leaders from Punjab etc were actively participated in it. Eventhough the satyagraha failed to achieve its aim, but it eventually get permission to temple entry in 1936.¹⁹ During the time of Gandhi's visit to Sivagiri Ashram, Gandhiji enquired a doubt to Guru. The doubt was connected with caste system and Gandhi asked to Guru that, all leaves in trees are not alike as if, the argument of caste Hindu may be true. In reply Guru finely answered that, leaves may be different, just like human beings, as humans are different in their physic, but when we take the juice of leaves, the tastes are same in every manner. Just like the leaf juice, all virtues are same in all human beings.

The nature of consecration of idols of Sree Narayana Guru can be seen differently in different periods. In 1888 he had proved and challenged that all person has the right to consecrate any idol irrespective of considering his colour, creed, religion etc. Guru never believes in idol worship but, the consecration of Siva idol at Aruvippuram in 1888 has considered a revolutionary step in the religious history of Kerala. In later years, he never uplift the ideology, but consecrated mirror as idol at Kalavangodam in Alappuzha and written the Sanskrit word of 'Ohm'and a lamp at Karamukku, Trissur and announced that 'let light radiate'. It is interpreted that light is knowledge and darkness is the evils in society. He never consecrated any idol at Adwaita Ashram, Aluva and given the ideological stress of *Aham Brahmasmi* at there.²⁰ In 1917 he asserted to the public that do not encourage the establishment of temples. Schools should be considered as temples and raise money to establish number of

schools and the main temples should be the schools in every aspect. Guru preached 'to be an intellect by acquiring better education'. The advice of Guru became fruitful when one of his disciples R Sanker became the Education Minister of Travancore and implemented to establish number of schools in different part of the state. He allotted number of schools to SNDP yogam along with other communities. Guru used religion as a tool for gathering a society and temple acted an auditorium for the public. He insisted the society to be clean both in body and mind while enter in to the shrine. But gradually he knows the fact that the temples are separating the society on the basis of caste. Finally he found that better education is the solution to evict communal divisions and asserted that don't give money to construct temples and it is the wastage of money. In another context Guru asserted that sufficient water flowing bathrooms are necessary to the public than the temple ponds. He also stressed that there is no need of elephant and crackers during the time of festivals, because it is the wastage of money and he had suggested that money from temples can be utilized for the poor in society. At this juncture he also raised a slogan that, 'whatever be one's religion, it is enough if the individual becomes good'. After the submission of Ezhava memorial, the government of Travancore instructed to start school for Ezhavas, but there is no provision added that the Ezhava students can also admit in other schools. The situation is that, Ezhava students could not study along with other students. The Nair community openly opposed the entry of Ezhavas in schools and which led to violent clashes between two communities and many such incidents occurred in Kollam district. ²¹ Whenever the superior communities stood against the entry of Ezhava students in schools, Sree Narayana Guru led a silent revolution against the system and gradually Ezhava students became permitted to study in all other schools irrespective of caste or creed. ²²

The higher cadre officer posts in Travancore government were handled by Brahmins of others states. Even though there were number of educated Malayalees in the state, the post Diwan and other prominent cadres were reserved to the outsiders. No Malayalee was earning the monthly salary of even Rs.500 and no Ezhava in Travancore state service earning more than Rs.5 per month. The people of

Travancore prepared a memorandum signed by 10037 people and submitted the petition to the royal government in 1891. Dr. Palpu, the disciple of Sree Narayana Guru signed in it as the third person. ²³ Kerala Brahmins, Nairs, Ambalavasies, Christians, Ezhavas etc. duly signed in the petition. The memorandum became known in history as 'Malayalee Memorial' ²⁴. Even though the Travancore royal family was belonged to the Hindu community, they never gave any facilities to Ezhava community. The denial of educational facilities and government jobs to Ezhavas were common in Hindu kingdom. If anybody converted to other religion, they may get all facilities and other virtues. The educated Ezhavas were numbered as 25,000 but nobody got a government job with the salary of Rs.5 or more per month. Therefore Dr. Palpu made a memorandum in 1896 and 13,000 Ezhavas signed in it and submitted to Sreemoolam Thirunal, the then ruler of Travancore and the memorandum became known in Kerala history as 'Ezhava Memorial'. At the same time, the Ezhavas got facilities to study and work in neighbouring kingdoms. The Travancore government neglected the Ezhavas, even though they had given an alert in the form of a memorandum. In 1913 the Diwan of Travancore defended the government reluctance to employ Ezhavas in certain government departments on account of their caste. He added that, if too many Ezhavas are taken, the work may be obstructed as they could not enter all places freely such as temples, Brahmin houses and the like. ²⁵ That is why we can conclude that the caste based social setup is the evil in Travancore society. Dr Palpu put up these matters to the British parliament with the help of his friend Barrister G.K Pillai. The matter noticed in British Common Assembly and the atrocities on Ezhava communities by the forward class in Travancore became an issue in different dailies in England and India. The humiliating news compelled the Travancore authorities to open their blind eyes towards Ezhavas and became ready to change their policies in near future. ²⁶ Dr. Palpu's family in three generations themselves faced such atrocities from the Travancore government. Even though Palpu's father was an educated, but never got an employment in Travancore government. Even though Palpus's elder brother was a BA degree holder, but never given any government job in Travancore. Palpu himself not allowed

studying medical degree at Travancore, even though some of his lower ranks in marks received such opportunities here. After his completion of medical degree from Madras, his application for job was not considered at Travancore due to communal issue. Dr. Palpu's son Natarajan (later Nataraja Guru) was also a well educated trained post graduate, but doors were closed on him.²⁷

In 1932 Travancore government introduced some administrative reforms, which were against the Ezhavas, Christians and the Muslims. They boycotted the elections held in the state. Thus they made a Joint Political Congress and demanded reservation in state service. On 11th May 1935 an Ezhava leader named C Kesavan addressed a public meeting at Kozhencherry and strongly criticised the inhuman policies of government. He became get arrested and imposed sabotage on him and imprisoned for two years. It provoked the agitators and spread the strike to the nearby areas also. The government finally surrendered before the agitators and approved their demands and Public Service Commission became constituted in 1936¹ The organized victory of SNDP yogam, tempted other communities to form their own organization on the pattern of SNDP yogam. Thus different community based organization came into existence in Travancore-Cochin and Malabar areas. The social movement banked heavily on rationalist and egalitarian world views in providing a radical critique of caste which had a remarkable impact on other castes. Thus Sadhu Jana Paripalana Yogam formed in 1905 by Ayyankali of Pulaya community in Travancore. Vala Samudaya Parishkarini Sabha in 1912 by Karuppan, Darma Paripalana Sangam, Nair Service Society in 1914, Yoga Kshema Sabha in 1908 etc. Guru's ideas of temperance were also concerned with the social and economic improvement of the Ezhava and other backward communities. The identification of Ezhavas with liquor further strengthened the movement of Narayana Guru.²⁸ Guru declared that, 'Liquor is poison and it should not be manufactured, served or drunk. The toddy tapper's body will stink, his clothes will stink, his house will stink, and whatever he touches will stink.' Due to the influence of the Guru and the consistent work of T.K Madhavan and Sahodharan Ayyappan, a number of people stopped drinking and toddy shop agents and

toddy tappers relinquished their profession. As a result of their activities, in 1922 the number of auctioneers was less than the total number of shops and therefore the government suffered a loss of four lakh rupees from the items of Abkari.²⁹ Though Ezhavas are prominent number in Hinduism, the forward class humiliated them in every aspect in social strata. They could not enter the temples and considered them as untouchable. Public roads leading to temples were blocked on them but even pigs, dogs and cattle can easily enter the road. Likewise, during the time of festivals in temples like *Trissur Pooram* the Ezhavas and other untouchables, who were living on the road-side, were required to vacate their houses to avoid pollution to the procession which carried the idol of God with the retinue of the Brahmins and other upper caste Hindus.³⁰ Naturally the backward communities felt these disabilities as humiliating and seriously affecting their self-respect. These matters became an issue among Ezhavas and other downward classes. The funny thing is that, those who desire to convert to other religion are freed from these inhuman atrocities on the basis of caste. Wide discussion developed among these lower class communities and a big group among them decided to convert to other religions to skip from injustice in Hinduism. The challenges of Christianity and Islam already a threat to Hinduism and they became alert in the current situation. Other Hindu organizations joined hands with each other and informed the serious situation to the Travancore government created by SNDP leaders and other backward communities. The forward Hindu groups initiated steps on war-like basis to console lower class and started to reinterpret the Hindu Sastras. They convened broad Hindu meetings and encouraged inter-caste dining and never opposed inter-caste marriages. The leaders of different communities initiated efforts to change the attitude of the members of their castes towards those castes which had traditionally been held inferior to them.³¹ As a result the Travancore government decided to open the place of worship of Hindus (temples) through a Temple Entry Proclamation in the year 1936.³²

It is very sad to announce that, our history is biased well and even the prominent Indian historians are concentrating into some specified areas. Most of the time, the history of south were neglected or not noticed or studied well. One or

two sentences may be enough to prove this argument. In 1923 Rabindranath Tagore, the great poet of India desired to meet Sree Narayana Guru and informed the matter to Sivagiri Mutt and thus the permission granted to him and he spent some hours with Guru. Afterwards Tagore opined that, "I have got many chances to visit many countries and talked with many saints and leaders around the world. But proudly admit that, I never seen such a person with high spirituality and never seen another person equal to Sree Narayana Guru".³³ C.F Andrews, an English by birth but spent his time for the national movement of India with other nationalist leaders and achieved the name '*deenbandhu*' recalls that, "I saw God in the form of a human being, and the divinity is seen at the southern part of India and his name is Sree Narayana Guru."² The great Gandhian Acharya Vinobha bhave opined that Sree Narayana Guru is one of the incarnations of India. Gandhiji addressed Guru as His Holiness Swami Sree Narayana Guru and Sir C.P Ramaswami Aiyar, the Diwan of Travancore opined that, Guru was a messenger of God, because before the temple entry proclamation and the abolition of social evils and ending of caste discrimination, Guru worked hard to end the practise in the state of Travancore. He always stood for social harmony and universal brother hood.³ Sree Narayana Guru was the great opposer of religious conversion even though Ezhavas faced atrocities from upper class Hindus. He opined that in every religion good and bad people can be seen.

Basically all religious aspects are good, but its preachers are thinking differently. On the context he opined that, 'whatever be one's religion, it is enough if the individual becomes good'. When flow of lower classes Hindus to other communities Guru choked such flow and saved Hinduism forever. If he permitted the flow, the entire lower class in Hinduism in Travancore-Cochin area may merge with other religions. But the pity thing is that, Sree Narayana Guru is not considered as a prominent one in the heart of upper class Hindus even today. It is true that the people are blinded with their casteism and they cannot admit a lower class figure in their minds. But Guru became the leader of majority class marginalized people in Kerala. The historians of north India has given much importance of Brahma Samaj and Arya Samaj and its leaders. The thing is that the SNDP and its activities influenced much of the people compared to those organizations in north India and Guru became the leader of more than 20 lakhs people and he directly or indirectly consecrated more than 100 temples within a short period of two decades by challenging the upper class Hindus and he insisted people to start educational institutions, industries by the side of temples. It was a revolutionary step initiated by Guru but ignored by the upper class in Hinduism. The early historians were the representatives of upper class and deliberately neglected Sree Narayana Guru in all aspects. But the truth will shine well and one day the whole world will consider Sree Narayana Guru and his teachings in hearts.

1. Pulayas were considered as untouchables in the past and today they are in SC category. Ezhavas are belonging to OBC category at the present situation. Even though Nairs are come under sudra category in *chaturvarna* system, but they are considered as forward class in the present context. The Brahmins used the Nair ladies to satisfy their lust in the past days and it was considered as a prestige to the Nair family. Naturally Brahmins considered Nairs as superiors even though they are actually hailed in sudra family.

NATIONAL EDUCATIONAL POLICY ADOPTED BY INDIA FROM 1947 TO 2015 – AN OVER VIEW

R. Rajeshwari

INTRODUCTION

Education holds an important place in the history of India right from the ancient time onwards. In ancient times, India had the Gurukula system of education in which the student stayed along with the Guru for long years in his place by doing all the activities of the teacher. This taught the disciple not only the essence of education but also the entire things which would be practised in the life. This created a strong bond between the teacher and the student and Guru taught everything the child wanted to learn from Sanskrit to Mathematics and Meta physics. The most important achievement in this system was that it leads to perfection of state and mind of man because it laid emphasis on discipline and punctuality. All learning was closely linked to the nature and to life and not confined to memorizing some information. There was perfect autonomy in the education system. Access to good education depended not on wealth but on talent. Some of the best known universities in India are Ancient *Nalanda, Takshashila, Kanchipuram* and so on.

The Modern school system was brought to India; including the English language originally by Lord Macaulay in the 1830s. Now the teaching method underwent a drastic change. Teaching was confined to classroom and the link between nature and persons slowly diminished. The Uttar Pradesh Board of High School and Intermediate Education was the first Board set up

in India in the year 1921. Several boards were established in the later years in some of the states. In 1952, the Constitution of the Board was amended and it was renamed as Central Board of Secondary Education.

Education in the Post Independent era

Education has been given a great value by the great leaders of the Indian National Movement. Gandhiji formulated the scheme of education which harmonise intellectual and manual work. Many other leaders made a great contribution to national education before independence. In the post- independence period a major concern of the Government was the improvement in the educational policy for the progress and security of the country. In 1952 Universal Education Commission and the Secondary Education Commission were formed. Again in 1964 the Education Commission was formed with a view to enlarge the scope and pattern of education. The general policies and principles of all levels and aspects were discussed. Thus National Education Policy emerged in the course of these discussions.

National Policy on Education

The Indian Government had introduced various programmes to solve the illiteracy in the country soon after its independence in 1947. Maulana Abul Kalam Azad, India's first education minister envisaged strong central government control over education throughout the country

with a uniform educational system. The Government established the University Education Commission (1948-49) and the Secondary Education Commission (1952-53) to develop proposals to modernise India's education system. For the development of high quality scientific education system institutions like IIT was introduced during Nehru period. In 1961, the Union Government formed the National Council of Educational Research and Training (NCERT) was formed which would advise both the Union and state government on implementing educational policies.

This policy was formulated by the Government of India for the promulgation of education in the country irrespective of caste, and region. The first NPE was promulgated in 1968 by Indira Gandhi and the second by Rajiv Gandhi in 1986. The first policy on Education called for a 'radical restructuring' and equalise educational opportunities in order to achieve national integration and the socio-economic development. Language learning became more important in order to avoid social stigma among the people. Moreover the policy also called for education spending to increase to 6% of the national income.

In May 1986 during the tenure ship of Rajiv Gandhi a NEP was introduced on education giving more 'emphasis of the removal of disparities and to equalise educational policy'. This policy laid emphasis of Indian Women, Scheduled Tribes and Scheduled Caste communities. It called for a 'child centred approach' in primary education and launched Operation Blackboard to improve primary schools nationwide. Another hallmark of this policy was the Open university system with the Indira Gandhi National Open University, which had been created in the year 1985. Moreover this policy recommended for the creation of rural university model on the philosophy of Mahatma Gandhi to promote economic and social development in India.

The 1986 NEP was modified in 1992 by Narasimha Rao Government. This policy aimed to promote national progress, a sense of citizenship and culture and to strengthen national integration. It laid emphasis on the need for a radical reconstruction of the education system, quality improvement in all levels giving much attention to science and technology and

cultivating values among the educated and the masses. The policy emphasized on enhancing education for physically challenged students, early childhood care and education. It focussed on **Common Minimum Programmed** which envisaged common entrance examination on all India basis for admission to professional and technical programmes in the country.

Sarva Shiksha Abhayan or SSA (Education for all Movement) was introduced by former Indian Prime Minister Atal Bihari Vajpayee, This Programmed aimed at the universalisation of elementary education as mandated by the 8th Amendment to the Constitution of India making free and compulsory education to children between the ages of 6 to 14. However it had its roots back to 1993-94 when the District primary Education Programme was launched. This covered nearly 272 districts in 18 states of the country. However there was a criticism from the people that this DPEP impact on children was less impressive especially among the girl children. Thus **Right to Education Act** (RTE) came into force on 1 April 2010 believing that it would give necessary legal force for SSE implementation. This programme made an attempt to provide an opportunity for improving human capabilities to all children through provision of community owned quality education in a mission mode. With the passage of RTE Act, changes have been incorporated into the SSA approach and norms. Convergent and integrated of educational management was the pre-requisite for the implementation of RTE law. Moreover a National Programme for Education of Girls at Elementary level (NPEGEL) was launched for the improvement of girls education in India.

Rashtriya Madhyamika Shiksha Abhiyan (RMSA) was launched in March 2009 for the improvement of secondary education in public schools throughout India. This scheme includes a multidimensional research, technical consulting, various implementations and funding support. The main aim is to provide universal education for all children between 15-16 years of age. This also aims to remove gender, socio-economic and disability barriers and to provide universal access to secondary level education by 2017. This scheme had under taken various programmes which falls under four major categories which includes Quality improvement,

Information Communication technologies, Access and equity. Despite the increase in the number of secondary schools, there are regional disparities and gender gaps in existing condition.

Rashtriya Uchchatar Shiksha Abhiyan (RUSA) is a scheme for development of higher education in India initiated in 2013 by the Ministry of Human Resource Development, Government of India. This aims at providing strategic funding to higher educational institutions throughout the country. Its main target is to raise the gross enrolment ratio to 32% by the end of XII Plan in 2017. Rusa funds are provided by HRD directly to the state and UT Governments. The state government disbursed the funds to the individual institutions. The amount of funding to states would be made on the basis of critical appraisal of state plans for higher education plans. The amount of funding from the central government will be 65% of the total grants and 35% will be contributed by state /UT as their share. One of the core ideas of RUSA is to ensure adequate availability of quality faculty in all higher educational institutions by creating an atmosphere in the higher educational institutions to devote themselves to research activities. Another aim is to improve equity in higher education by providing adequate opportunities of higher education to SC/ST and socially and educationally backward classes, promote inclusion of women, minorities and differently able persons.

The Ministry of Human Resource Development (MHRD) is currently developing National Education Policy 2015-16. The Government of India Would like to bring out a New Education Policy to meet the changing dynamics of the population's requirement with regards to quality education, innovation and research aiming to make India a knowledge superpower by equipping its students with the necessary knowledge and skill. The main objective of NEP 2015 is to formulate a new education policy for the country through an inclusive, Participatory and holistic approach. The 33 themes identified for the discussions are divided under the two heads of school education and higher education. For school education the themes includes improving learning outcomes, extending outreach of secondary and senior secondary education, strengthening of vocational education, reforming school

examination system, accelerating rural literacy, improving teacher education, reforming school examination system, accelerating rural literacy, improving teacher education, promotion of language and comprehensive education. For higher education the themes are governance reforms, ranking of institutions and accreditation, quality of regulation, roles of central institutions, improving state public universities, integrating skill development, promoting online and technology enabled learning, addressing regional, gender and social disparities, cultural integration, private sector partnership, internationalisation, industry engagement to link education to employability, research and innovation.

CONCLUSION

Education is the most powerful component to develop the children and build the future. Today there is an undue importance on knowledge oriented education, which pays attention to the intellectual growth of the student. Education has an immense impact on the human society. It is through education that knowledge and information is received and spread throughout the world. The Quality of human of a nation is easily judged by the number of literate population living in it. This is to say that education policies is a must if a nation aspires to achieve growth and development and more importantly to sustain it. And in today's world, the role of education has become even more vital, and is an absolute necessity for economic and social development of any nation. The National Education Policy, 2019 is out in the public domain, drawing inputs from the T.S.R Subramanian Committee report and the Ministry of Human Resource Development (MHRD), the K.Kasturirangan Committee has produced the policy document. The policy aims to universalize the pre-primary education by 2025 and provide foundational literacy for all. It proposes new curricular and Pedagogical Structure, with 5+3+3+4 design covering the children in the age group 3 to 18 years. Suggestions of the National Education Policy will play a critical role in the transformation of the Indian education system it is expected to help India in reaping its demographic dividend. However, the Draft National Education Policy has certain sore points that need to be relooked as for the benefit of teachers and students alike.

“A NEW NOTE ON THE WESTERN GANGAS AFFINITY WITH TAMIL KINGDOMS AS A VASSAL OF THE RASTRAKUTAS AND THE CHOLA CONQUEST OF GANGAVADI (817 A.D TO 1024 A.D)”

V. Raju

The western Gangas ruled the province of Gangavadi 96,000 for nearly six and half centuries, that is from fourth to the beginning of the eleventh century A.D. and were one of the illustrious rulers of south Indian History. From the inception the western Ganga dynasty was closely associated with the Tamil Nadu politics. They served as an appendage of some imperial powers. The dynastic struggle of the Cholas, the Gangas and the Pallavas and the rise of great empires of the Chalukyas and the Rashtrakutas were in one way or other influenced by the geography of this region. So there is no wonder that the Pallavas, the Chalukyas and the Rashtrakutas often relied on the loyalty of the Western Gangas to strengthen their position.

Beside the western Ganga main line there was a collateral line which came to power in the beginning of the 9th Century A.D. They also actively participated in the affairs of the Tamil Country and contributed much to the consolidation of the imperial cholas.

The present paper is an endeavour to establish western Ganga's affinity with Tamil Kingdoms as a vassal of the Rashtrakutas and the impact of that relationship on the overall politics of this region.

Rajamalla Satyavakya I (817 A.D - 837 A.D):

Rajamalla Satyavakya I succeeded his uncle Sivamara Saigotta to the throne of Western Ganga in the main line in 817 A.D.¹ He was the son of Sivamara Saigotta's brother Vijayaditya.² When Rajamalla came to the throne he inherited a Kingdom considerably shrunk in size. The Rashkutas had a good part of the Western Ganga Kingdom under their suzerainty. The condition of the Gangavadi at the time of his accession needed great strength and energy to

regain its lost glory. He found confusion and Chaos in the Rashtrakuta Kingdom during the early years of Amoghavarsha I's reign and made over the kingdom in favour of him. He entered into an alliance with his neighbour Nolambas. Rajamalla Satyavakya I gave his daughter Jayabee to the Nolamba prince Polachora and himself married a grand-daughter of Nolamba simhapota.³ In alliance with these Nolamba Kings Rajamalla, Satyavakya I overthrew the Rashtrakuta yoke and rescued his country. This is stated in an inscription as "Vishnu in the form of a boar rescued from the earth from the infernal regions".⁴ The Kreregodi Rangapura Grant⁵ refers about the successful termination of the Rashtrakuta overlordship from Gangavadi as the Kingdom lost in the less skilful hands of Sivamara saigotta being regained by Rajamalla. The Goddess of sovereignty sad owing to the seizure by the Rashtrakuta King was once again made cheerful by auspicious anointment and adornment of good qualities by Rajamalla."

Ereganga - Deva (837 A.D. – 890 A.D.):

Rajamalla I was succeeded by his son Nitimarga I in 837 A.D. He was also known as Ereyanga or Eregang Deva and his other titles were Ranavikramayya⁶ and Permannadi.⁷ The Kudlur grant called him as Nitimarga Konganivaram-dharmamaha-rajadhiraja paramesvara.⁸

The notable achievement of Nitimarga I was a great victory over the Vallabha army at Rajaramudu, which is to the north of Kolar.⁹ The vallabha army which fought with Nitimarga I was identified with the army of Rashtrakuta King Amoghavarsha I, 868 A.D. was the date of battle.¹⁰ The Keregodi Rengapura plates indicate the allies of the Rashtrakutas, the pallavas, the

Kuru, the Magadha, the Malava, the Chola, the Samvalla and the Chalukya Kings.¹¹

This battle was described in the Kudlur grant as "in the rainy season of a terrible battle fought at Rajaravadi accompanied with initial rain drops of arrows shot from the bow, lighting of fierce sword dark clouds of infuriated elephants, high winds of horses and streams of blood, this eminent king defeated with ease his powerful enemies. The vallabha army terrible with towering elephants and horses which was commanded by the Pallavas, the Rashtrakutas, the Kuru, the Megadha, the Malavas, the Cholas, the Samavalla and The Cha-lukya Kings and others, he caused to fall down in battle together with the tears of their wives.¹²

Finding it futile to continue the war with Nitimarga I, the Amoghavarsha I concluded a peace treaty with Western Gangas. This treaty was sealed by a marriage between Butuga I the son of Nitimarga I and Abbalabba, the daughter of the Rashtrakuta emperor, Amoghavarsha I.¹⁴ Butuga's wife is called as Chandra-bbalabba in the Gattavadi plates.¹⁵ The another daughter of Amoghavarsha I called Sankha was given in marriage to the Pallava King Nandivarman III.

The hostile relation of Nitimarga I with the Pallavas of Kanchi, in his early period came to light by the battle of Rajaramudu. We are not aware that the victory of Nitimarga in the Rajaramudu battle caused any superior influence over the Pallavas. Butuga I, the son of Nitimarga I and the Pallava King Nandivarman III became co-brothers by marrying two daughters of the Rashtrakuta King Amoghavarsha I. This exhibited the cordial relation between the Pallavas of Kanchi and Western Gangas in the last days of Nitimarga I.

Rajamalla Satyavakya II (870 A.D. – 907 A.D)

Rajamalla Satyavakya II the eldest son of Nitimarga I was the next successor who ascended the throne in 870 A.D.¹⁶ The Husukuru inscription¹⁷ says that Butuga I or Butarasa was Yuvaraja under his elder brother Rajamalla satyavakya II. Butuga I was governing the Kongaland and Pannad provinces.¹⁸ Butuga I continued to hold this charge till his death in 886 A.D. The glory of Rajamalla's reign was nothing but the achievements of his brother Butuga I.

Butuga I was praised in the Keregodi Rangapura plates as "the harasser of the pallava family by his prowess.¹⁹ This was the period when the pallavas and the pandyas came into hostile contact with each other in Tamil country. Till the important battle at sripurambiyam in 880 A.D., it was a continuous struggle between these two leading powers for gaining supremacy in the south. Srimara I was the contemporary Pandyan ruler of Rajamalla II. Nandivarman III occupied the throne of the Pallavas of Kanchi. The Western Gangas had dynastic ties with the Pallava rulers. Butuga I and Nandivarman III married Chandrabalabba and Sankha, the two daughters of Amoghavarsha I respectively.²⁰ It was therefore, not surprising to find the Western Gangas figuring in the Kudumukku²¹ battle on the side of the Kanchi ruler Nandivarman III. Nandivarman III²² and Butuga I were defeated in this battle by the Pandya King Srimara I. Srimara I assumed the title Parachakra Kolahala due to commemorate this victory.²³

The last day of Butuga I witnessed a success over the Pandyas of Madura. Nirpatunga Varman, the son of Nandivarman III Succeeded to the throne of Kanchi. Butuga I and his nephew Nripatungavarman jointly carried a war against Srimara. The defeat of Srimara Pandyan was stated in the Bahur Plates as "The army of the Pallavas which on a former occasion sustained defeat at the hands of the Pandyan King was by the grace of this King Nripatungavarman, able to burn down hosts of the enemies together with the prosperity of their Kingdom on the bank of the river Ariciti.²⁵

After the death of Butuga I in 886 A.D., his son Ere-yappa or Nitimaraga III become Yuvaraja under his uncle Rajamalla Satyavakya II²⁶ Ereyappa was associated with his uncle in the government.

Nitimarga II (908 A.D. – 920) A.D):

Nitimarga II, the nephew of Rajamalla Satyavakya II came to the Western Ganga throne after a long period of apprenticeship as Yuvaraja in 908 A.D.²⁷ The Kudlur grant of Marasimha² called him as Nitimarag Kongamivaram – Maharajadhi – Raja Paramasvara and Komaravedenga³.

The Rashtrakuta – Western Ganga conflict was revived during the reign of Nitrimarga II⁴. A Virakal at Karbail in Nagamangala taluk refers

Nitimarga's war with the Rashtrakuta King Ballaha Krishna II.³⁰ Nitimarga II was defeated and the Rashtrakuta overlordship was imposed on Gangavadi.

Another threat to Nitimarga II's reign was the challenge of Mahendra, the son of Nolambhadhiraja Polakhora and Jayabbe, the Ganga Princess. He was the Viceroy of Kirutore Province.³¹ He challenged the overlordship of Western Gangas. Begur Virakal, now in the Bangalore Museum, recorded that Nitimarga II slew the Nolamba King Bira-Mahendra in the battle at Tumbepadi.³² Nitimarga II, thus, saved his kingdom and assumed the title Mahendrantaka.³³

Parantaka I Chola was the contemporary of Nitimarga II. He put an end to Pallava supremacy and established their own suzerainty over the disintegrated Pallava dominions. A part of the Ganga Kingdom, probably the portion about the present Kolar District, was under the control of Parantaka I Chola.³⁴ The administration of this region was carried out by the Banas. Suddenly Parantaka I uprooted the Banas and conferred the Bana sovereignty on the Ganga Prince Prithivipati II and entitled him as Hastimalla.³⁵ The Cholas did not interfere in the affairs of the main line of the Western Gangas.

Nitimarga II married Jakabbe, the daughter of Chalukyan king, Nijagali.³⁶ Nitimarga II appears to have more than one wife. The Buraganhalli Virakal states that Mahadevi as his elder queen.³⁷ Of the three sons of Nitimarga II, the reign of the eldest son Narasimha was very brief and uneventful. Then he was succeeded by his brother, Rajamalla III.

Rajamalla III (920 A.D. – 937 A.D.):

Rajamalla III came to the western Ganga throne after his elder brother Narasimha-Deva. The Sudi Plates,³⁸ identified him as Nitimarga Konganivarman-dharma-maharajadhiraja Paramesvara. He was also known as Kachcheya-Ganga, which means the quarrelsome or fighting Ganga.³⁹ The Kudlur grant of Marasimha describes the famous victory of Rajamalla III in the Kottamangal battle as "slaying foot soldiers with his arrows, horses with his sword and elephants with his single-scent elephant. King Rajamalla conquered and put to flight the Anniga in the famous Kotamangal battle, and taking pity

on the trembling enemy, took him under his protection."⁴⁰

The Anniga referred in the grant was identified with the Rashtrakuta king Krishna III.⁴¹ Rajamalla III successfully overcame the Rashtrakuta suzerainty. No records give information about Rajamalla III's affinity with the Tamil kings. The period of Rajamalla III was a colourless one for our field of interest.

Butuga II (937 A.D. – 960 A.D.):

Butuga II was the brother and successor of Rajamalla III. He slew his brother Rajamalla III and obtained the Western Ganga throne.⁴² The other names of Butuga II were Butayya, Nanniya, Gunga and Ganga Gangaya.⁴³ The Sudi plate states that he married, Amoghavarsha III's daughter Revaka.⁴⁴

The matrimonial alliance renewed the cordial relation between the Western Gangas and the Rashtrakutas. After the death of Amoghavarsha III, his son Krishna III ascended the throne of the Rashtrakuta empire. Butuga II helped Krishna III or Kannara to save the throne for himself from Lalleya, the rival for the Rashtrakuta throne.⁴⁵

When Butuga II was on the throne of the western Gangas, the Rajaditya Chola was in charge of Tondimandalam. Rajaditya Chola consolidated his father Parantaka's conquests in Banavasi and other places. This gave displeasure to Krishna III and he decided to attack the Chola kingdom. As a result of Krishna III's desire, a war broke out. Krishna III along with Butuga II met the Rajaditya Chola army at Takkolam near Arkonam in 947 A.D.⁴⁶ Butuga II rendered a great service to the Rashtrakuta King Krishna III in the battle at Takkolam and slew the Chola crown prince Rajaditya in the battle field.⁴⁷ The victorious Rashtrakuta King Krishna III occupied the Tondaimandalam and besieged Tanjavur, Kanchi and Nalkote.⁴⁸ Krishna III was efficiently assisted by Butuga II in these campaigns. So Butuga II received Banavasi 12,000 province as a reward for his praiseworthy service in these campaigns.⁴⁹

The share of Butuga II in the battle of Takkolam had historical importance. The effect of the Takkolam battle was ruinous to the extreme and the Cholas took some years to come up from that effect.

Marasimaha (960 A.D. – 973 A.D.):

Marasimaha was the last great ruler of the Western Gangas line. He ascended the Western Gangas throne in 960 A.D. after the death of his father. From the inscriptions, we know that Marasimha bore the titles Calad-Uttaranga, Dharavatara, Jagadekavira, Jagadekvavira, Gangara Simha, Gangovarjra, Ganga Kandarpa, Nolamba Kulantaka, Ganga Chudamani Vidhyadhara and Muttiy Ganga.⁵¹

During his reign Marasimha led a successful expedition against Gujjare or Gujarat King on behalf of Rashtrakuta King Krishna III. After his victory Marasimha assumed the title Gujaradhiraja.⁵² Then Marasimha defeated Vajjala, the younger brother of Patalamalla, the ruler of Banavasi and captured all his possessions.⁵³ He also fought against the western Chalukya Prince Rajaditya.⁵⁴ Inscriptions state that Marasimha led a large army against Nolambas and destroyed them.⁵⁵ This expedition of Marasimha gave him a title Nolamba Kulanataka.⁵⁶ The last days of Marasimha had made extensive conquests in the south as far as Tanjavur.⁵⁷ During his reign, the Kingdom of the Western Gangas extended as far as the river Krishna and included the Nolambavadi 32,000 Gangavadi 96,000 the Banavasi 12,000 and other provinces.⁵⁸ Marasimha was the last great ruler of the Western Ganga dynasty.

Rajamalla Satyavakya IV (947 A.D. – 985 A.D.):

Marasimha was followed by Rajamalla Satyavakya IV in 947 A.D. He was the eldest son of Marasimha. An inscription states that Rajamalla Satyavakya IV assumed the title Jayadekavira.⁵⁹

When Rajamalla Satyavakya IV came to power, the important feudatories of the Western Gangas were setting up independent rule in their dominions. Panchaladeva was the Governor of Puligere and Belvola which comprised thirty villages. In 975 A.D. Panchala-Deva called himself as Mahasamantadhipati and set an independent rule.⁶⁰ Rajamalla Satyavakya IV directed his Minister Chaundarya to subdue the rebel government. Chaundarya successfully

carried out the task and killed Panchala – Deva in the battle field in 975 A.D.

The rebel policy of Panchala-Deva was followed by another feudatory who was known as Mudu Rachayya. This rebel went a step further than Panchala-Deva and assumed the titles chala-deka Ganga and Gangarabanta. He besieged the Ganga capital to capture the throne of the Western Gangas. First Chaundarya's brother Nagavarma was sent to subdue the rebel feudatory. But he was repelled and killed by Mudu Rachayya. Then Chaundarya himself met Mudu Rachayya in the battle Bageyur and killed him.⁶¹ For this service Chaundarya was honoured with the title Samara Parasurama.⁶² Rajamalla was assisted by his Minister Chaundarya in the administration as well as in the battle field.

Rakkasa Ganga (985 A.D. – 1024 A.D.):

Rajamalla Satyavakya IV was succeeded by his younger brother, Rakkasa Ganga in 985 A.D.⁶³ He was the governor of Baddoregere when his brother Rajamalla Satyavakya IV was the ruler of Gangavadi. He ruled the Gangavadi as an independent ruler till the conquest of the Cholas in 1004 A.D.

The rising power of the Cholas under the energetic Rajaraja I and his valiant son Rajendra I gave a death blow to the Western Ganga dynasty. In 1004 A.D. Rajendra I the glorious son and general of the King Rajaraja I conquered Gangavadi along with Nolambavadi and Tadigaipadi.⁶⁴ The imperial Cholas of Tanjavur put an end to the Western Ganga dynasty which held sway for nearly seven centuries in the Gangavadi 96,000 province.

The last ruler of the Western Ganga dynasty Rakkasa Ganga had matrimonial alliance with the Pallavas of Kanchi. Thus the ancient glorious dynasty was brought to an end by the Cholas of Tanjavur.

Though the Western Gangas had a long affinity with the Tamil Country, from the second half of the 4th century A.D. to the beginning of the 11th century A.D. did not influence the Tamil society in any manner.

COLONIAL DESIGN : THE MISSION OF NON-BRAHMIN MOVEMENT FOR POWER AND POSITION IN MADRAS PRESIDENCY

S. Ramesh

The paper attempts to highlight the role of colonial British administrators and missionary scholars in creating and pushing a non-Brahmin community with Dravidian identity in claiming bureaucratic power in the Madras Presidency during the early decades of the Twentieth Century. Indeed, the British administrators of Madras Presidency were successful in distinguishing Brahmins from Non-Brahmins in their rules and regulations.¹ These distinctions had an important impact when they began to

access to resources or power. Successive Madras governments were especially keen to use the state machinery as a device to reflect or represent the population they governed. ²In August 1919, an order was issued. It stated that the time would appear it is desirable to obtain in the administrative machinery of this country the services belonging to all various large sections of the community in India and it is impossible to do this unless special facilities are offered to Panchamas and other backward classes.³

Previous Madras governments had realised since the late Nineteenth century, the lower castes needed positive discrimination programmes in the realm of education because they were concerned by the over-representation of Brahmins in the administration.⁴ The classification they used was to have long-term effects. The Education Department divided first the Hindus into Brahmins and 'other Hindus' in 1870, then into Brahmins and 'Hindus not Brahmins' in 1874, into 'Brahmans, Vaishyas, Shudras and other Hindus' by the early 1880s, and, by the turn of the Twentieth Century, the classification had simply become Brahmin and non-Brahmin.⁵

This dichotomous categorisation was internalised by the low castes which were included among the 'non-Brahmans'. They realised that by presenting themselves as 'non-Brahmans' they would form a large, influential group. Again, this new identity was over-determined by the quest for empowerment. This qualitative change was evident from the Non-Brahmin Manifesto. This text marked the formation of the Non-Brahmin movement in Madras.⁶ Among the 40.5 million people, only 1.5 million were Brahmins. Regarding their position in 1913, out of 128 District *Munsifs*, 93 were Brahmins. The same preponderance of the Brahmins prevailed in the University, in the assembly and in the Congress. Out of fifteen representatives of the Madras Presidency Congress to the All India Congress Committee, there was only one non-Brahmin. The Brahmins had taken almost complete possession of the Congress. The non-Brahmins' political interests as compared with those of the Brahmins, had materially suffered because they did not maintain proper organisation for protecting or promoting their common interests. Hence the formation of the Justice Party took place by the promoters of the Non-Brahmin Manifesto.

The Justice Party used the British mapping of Indian society, based on the division into Brahmins and Non-Brahmins for affirmative action programmes. These positive discrimination policies developed a common sense of purpose among low castes who had not previously collaborated but now they had to defend shared interests. The castes in question were not the lowest, however: Dominant castes like the Vellalas and the Kapus and merchant

castes (mainly Chettiars) were at the helm, namely those groups ranking below the Brahmins who were eager to supplant them. This common aim became an even stronger motivation when the British implemented a new reservation policy in the Legislative Councils.

The preparation of the Montagu-Chelmsford Reforms in 1917-1918 helped the Justice Party to consolidate its social base since it could make representations to British officials on behalf of Non-Brahmins. Interestingly, this category was not used systematically from the outset. In the memorandum that the Justice Party presented to Montagu in December 1917, there was a strong plea to grant Non-Brahmins a quota in the legislature and in all the branches of the administration. But the party did not rule out separate representations being given to the five Non-Brahmin groups, the Balija Naidus, the Pillais (a sub-caste of Vellalas), the Mudaliars (also a Vellala sub-caste), the Chettis and the Panchamas (Untouchables).⁷ The Montagu – Chelmsford Report that was published in 1918 eventually denied a communal representation to all groups except Sikhs and Muslims but Non-Brahmins sought to influence the drafting of the Government of India Bill which was to implement the reforms. At this juncture the Justice Party considered only Non-Brahmins as a relevant category, thereby trying to subsume all sub-groups. K.V. Reddi Naidu, a Kapu, presented a memorandum before the Joint Select Committee in charge of finalising the Bill in London by endowing this administrative category with a strong separate identity. He exposed a basic racial difference that separated Brahmin from non-Brahmin. The former were Aryans and the latter were Dravidians.⁸ Both notions - Non-Brahminism and Dravidianism were then coterminous in the discourse of the Justice Party.

The Justice Party's claim was accepted by the British and therefore Non-Brahmins were granted reserved seats in the Government of India Bill. However, in April 1920, Lord Chelmsford received a Memorandum protesting against the reservation of only 28 seats out of 65 for the Non-Brahmins in the Legislative Council of Madras. Again, the signatories emphasised their caste and ethnic differences in justifying their claim. They viewed that the Brahmins were

differed from the non-Brahmins in caste, manners, customs and interests and even in personal law in some respects. The former were Aryans and the latter are Dravidians and thus they differed in race. In the past the Brahmins had practically monopolised all or almost all the seats in the Local and Imperial Legislative Councils. The disabilities under which the Non-Brahmins had been suffering were fully set out in the Memorandum which K.V. Reddy prepared and submitted to the joint Select Committee on Government of India Bill.⁹

During the 1920 election campaign, the leaders of the Justice Party requested all non-Brahmins in the Madras Presidency to immediately organise, combine and carry on an active propaganda so as to ensure the return to the reformed Council of as many non-Brahmins as possible.¹⁰ This tactic yielded dividends since the Justice Party came first in the elections and formed the government thanks to the sympathetic attitude of the British.

The First Communal Government Order, in 1921, asked the chiefs of all administrative services, the collectors and the district judges, to issue every six months a list of their recruits classified in six categories, Brahmins, Hindus non-Brahmin, Christian Indians, Muslims, Europeans and Anglo-Indians and others.¹¹ From the second half of 1921 onwards, a readjustment started as the administration recruited 22% of Brahmins, 48% of non-Brahmin Hindus, 10% of Christian Indians, 15% of Muslims, 2% of Europeans and Anglo-Indians and 3% of others. In 1922, a Second Communal Government Order extended these quotas to all services and to all promotions.¹² In 1928, new quotas were established in the administration, due to the passing of the Third Communal G.O. by S.Muthiah Mudaliar.¹³ Nearly 42% for non-Brahmins, 17% for Brahmins, 17% for Muslims, 17% for Anglo-Indians and Christians and 8% for the Depressed Classes whose leaders had claimed that they were left out by the previous quotas.¹⁴

The commitment of the Justice Party's governments confirmed that the hunt for empowerment was one of the driving forces sustaining the Non-Brahmin movement in Madras. The positive discrimination helped forge a coalition among a wide array of castes. However, the Panchamas were left out by the

Justice Party as soon as it gained power.¹⁵ On the other hand, though limited, this coalition was more solid, because Dravidian identity acted as a cementing force. Thus 'social change occurred based on pragmatism and utility rather than the existence of ideology or the extent to which that ideology was believed in by members of society.¹⁶ Such distinctions between ideas and beliefs on the one hand and material interests on the other are not really relevant. In the case of Dravidianism and Non-Brahminism, both dimensions are intermingled and reinforced each other. The hunt for empowerment had been the most powerful driving force behind the mobilisation of Non-Brahmins but their movement was sustained by the emotional appeal of their ethnic Dravidian identity. Politicians certainly instrumentalised the Dravidian stock but identified with it at the same time. The fact that the hunt for power was a basic motivation behind the demand for reservations was made unambiguous in 1917 by one of the founders of the Justice Party, T.M. Nair who said that the non-Brahmins claimed their social, moral and political rights, and share of government appointments, not because they thought that government appointments would transform the Non-Brahmin communities into the most prosperous of mankind, but because government appointments would carry with them political power, of which. As lords of the soil and inheritors of noble traditions, they must have their legitimate share.¹⁷

This discourse obviously showed that, while empowerment was a priority motive of the Justice Party, such a transfer of power was legitimate because Non-Brahmins were Dravidian sons of the soil.¹⁸

The Non-Brahmin Element in Tamil Congress

The rise to power of the Dravidian/Non-Brahmin movement obliged the Congress to democratise itself more significantly than in most other regions of India. As everywhere else, the party was dominated by Brahmins until the 1930s.¹⁹ This Brahminical domination was the main reason for the exit of non-Brahmin Congress activists like Naicker in the 1920s. In the 1930s Congress leaders began to realise that the Justice Party and the Self-Respect Movement were forces to be reckoned with, and they made attempts to incorporate even the lowliest groups under their leadership.²⁰ They focused on the

Untouchables as usual. But the Party was also able to attract low castes like the Maravars who were considered as being almost a Criminal Caste by the British²¹ and Nadars. The rise to power of Kamaraj epitomized this new accommodating attitude of the Congress party. Kamaraj, who had joined Congress when most of the Nadars regarded the party as Brahmin-dominated, was offered the chance of contesting successfully on a Congress ticket to the Legislative Council in 1937 and was elected President of the Tamil Nadu Congress Council in 1940. No other regional branch of the party had such a low caste leader at the helm at that time. These developments attracted Nadars to the Congress Party in large numbers.²² However, C. Rajagopalachari, a Brahmin, remained the towering figure of the Congress of Tamil Nadu. He became Chief Minister in 1937 and again in 1947 but Kamaraj succeeded him in 1954. At that time, Brahmins represented only 5% of the

MLAs, as against 17.2% in 1937,²³ which means that in the early 1950s, the representation of the Brahmins in the assembly was almost proportionate to their share of the population. In contrast to what had happened in most of the rest of India, the Congress had accompanied a dynamic of democratisation in Tamil Nadu.

Thus Tamil Nadu had evolved of a pattern of low caste mobilisation of which ethnicisation and empowerment were the key terms. This pattern was engineered by the Colonial British administrators for their political gains which were hampered by the Brahmin dominated public life and the Congress organization. In fact, the non-Brahmin bureaucracy was the creation of the British colonial administered to undermine the influence of the Brahmins in Madras politics and in the national movement which was in full swing in 1920s

4. From 1892 to 1904, 15 out of 16 recruits to the State Civil Service were Brahmins, as were 77 out of 140 deputy collectors and 15 out of 18 deputy judges in 1912 (Irschick, Eugene, F., *Politics and Social Conflict in South India: The Non-Brahman Movement and Tamil Separatism, 1916-1929*, Berkeley: University of California Press, 1969, p. 223). This preponderance of Brahmins in the administration resulted from their over-representation in the University. In 1913, even though they represented only 3% of the population, Brahmins accounted for 72% of graduates in Madras University. (P. Radhakrishnan, 'Backward Class Movements in Tamil Nadu' in Srinivas, M.N., (ed.), *Caste - Its Twentieth Century Avatar*, Delhi: Viking, Penguin India, p. 368).

14. These quotas benefited mostly the non-Brahmin elite. Its first critics, therefore, were the Untouchables. In 1923, M.C.. Rajah led a delegation before the Madras Government to protest against the neglect of the Depressed Classes by the Justice Party in the distribution of posts in the administration. He claimed a quota of 30%, and while he did not win the case the 'Depressed Classes' were added to the categories used so far. (Radhakrishnan, P., *loc.cit.*, p. 115).

17. *Ibid.*, p. 43.
18. The rise of the Justice Party could be explained by at least two factors: on the one hand the resentment of non-Brahmins vis-a-vis the Brahmins' domination of the administration and the emergence of a non-Brahmin elite suffering from acute frustration because of this state of affairs and, on the other hand, the fact that the work of Robert Caldwell, J.M. Nallaswami Pillai and V. Kanakasabhai Pillai on the origins and nature of Dravidian civilization had met with a large, and growing, readership among first generation college-educated non-Brahman caste Hindus (Rengaraju, G., *Colonial Design and Dravidian Awakening in Tamil Nadu*, Chennai : Pavai Publications, 2006, p.xiii).

THE POLITICS OF SCHOOL TEXT BOOKS : THE CASE OF COLONIAL MALABAR

C. Ratheesh

"If textbooks are treated as a vehicle for education. The living word of the teacher has very little value. A teacher who teaches from textbooks does not impart Originally to his Pupils. He himself became a slave of text books and has no opportunity or occasion to be original. If therefore seems that the less textbooks there are the better. It is for the teacher and his pupils."

Gandhi – 1939

The school textbooks play a vital role in shaping the outlook of young generation. It is this generation which determines fate of the state. Moreover, the school textbooks play a vital role in spreading the ideology of state among the children and it is an Integral Part of the Political System. As a result, Most of the states enforce its ideology among the People through the school curriculum and text books. How did the colonial government manage the school text books in Malabar? Answer to this question will help us to understand the way in which colonialism was intervening in the everyday life of the People in India to accomplish its goals.

The Europeans in Colonial India, constructed a notion of the 'other', to describe oneself as 'enlightened' Meant that someone as 'Savage', to describe oneself as 'Modern' meant that someone is 'Primitive' or 'backward'. It is one of the British ideologies of creation of doubleness. As the British defined themselves as 'British' and thus as 'not Indian' they had to make of the Indian Whatever they choose not to make of themselves. Thomas Smith has argued that the 'God has given the English responsibility to inhabit and reform,'¹

The word 'text' stands for written words, usually given some kind of authority. For literary scholars, A 'text' is a work of literature, for historians, a 'text' is a historical document.²

Number of textbooks were increased by implementation of Printing Mechanism. Printing in India dates to a sixteenth century, when the Portuguese set up the first printing press on the subcontinent. Missionaries needed printing for evangelical purposes. The east India company promoted printing to prepare and preach its regulations, train civil servants and for the benefit of British orientalist scholars. The Calcutta school book society. Set up in 1817 and committed to supplying standard school text at cheap rates to elementary Vernacular schools, also had many of its publication printed at the Mission Press.⁵

The colonial intervention through the school textbooks in Malabar is underlining the importance of 'language of power'. The state represented by the British and the local landlordism forced the student to study prescribed textbooks which stood for upholding the privileges of the rolled in India and Malabar.

Lord Macaulay described that, the former Indian empire was always looked upon as something unnatural and alien. 'The strongest of all political anomalies.' The Missionaries of English civilization in India stood openly for a policy of assimilation. Britain was to stamp her image upon India.⁷

Colonialism produced public spaces in the form of educational institutions as schools, colleges etc. Henry Lefebvre's idea of 'Production of Space' is noteworthy in this context. What was the strategy behind the formation of educational institutions in colonial India/Malabar? How did it contest with the existing school system in India/Malabar? The modern school was unfamiliar to the people and the caste and religion based education system was challenged by the colonial system through its schools.

Through the work '*History textbooks in India*', K.N. Panikkar, speaks, all governments of

India, beginning with the colonial role have been alive to the importance of textbooks as a means to ensure their future interest by hegemonising the young. Taking keen interest in the nature of instruction they tried to shape the text books according to their ideological feeds.⁹

The British had set up textbook committees in the beginning of their rule, and these committees laid down guidelines for the preparation of textbooks and to orient their character to compliment the colonial world view. It helped the interest of the colonial rule by crafting the textbooks, in conception and content to fulfill a legitimising role for colonialism. The textbooks carried in them the political purpose of creating consent in the mind of the subject. Basically, the colonial education was looked upon essentially as an instrument for bringing the 'natives'¹⁰ under its hegemony.

Through the article, *text books and education culture*, Krishna Kumar, who express the roots of colonial education in British India, and its policy developments. The roots of the text books centred curriculum can be traced to the nineteenth century, especially the decade following 1835, during which colonial policies in education took shape. The colonized Men is made to look at himself from the point of view of the coloniser and which helped through a transformation of identity. Colonial education serves a major role in this transformation. Through this article Krishna Kumar detailing about in the second quarter of the nineteenth century. English colonial roles took many important decision on the education policy of India. Such as, the government took a new system of education under state control. Second, the aim of the new education system would produce a class of Indians,¹⁴ acculturated in English life style, attitude and perception, the teaching of English would be a means of this acculturation. English as the study of culture and not simply the study of language.¹⁵

The History debate and school text books in India: a Personal memoir by Romila Thapar,¹⁶ an article which deals the politics of school text books especially on History text books, and how it works in a silent and invisible ways. Through in the 1960s, and 70s NCERT produced a series of text books as new in its standards. Written by some of the eminent historians of the time, Bipan Chandra, Satish Chandra, R.S. Sharma, Romila,

Thopper, the attempt of the new way of looking at the past. Who criticised colonial and communal stereotypes and presented a history that was secular and national. One of the article of Neelendra Battachary, related to the school text books, discussed that, the new text books of the 1960s had some objectives. The first and most one is to decolonized the text. Existing text books often borrowed uncritically from the writings of colonial officials like Alfred Lyall and Vincent Smith and offered students reading of the past shaped by colonial stereotypes and assumption. These colonial accounts. Presented Indian society in a backward and stagnant society, dominated by the caste system and by barbaric practices. Politically them was no sense of order, no laws, and no rational government. India was a country of death, malaria and smallpox. Only with the canoing of the British did everything change, law and administration were established, a rational and efficient system of governance was set up, courts were instituted, and the economy began to grow.¹⁷ These are the main colonised feature of school text book in colonial India, as locally in colonial Malabar. Who taught this kind of selective information through the minds of students, for controlling the upcoming subjects of the state.

The new text book treated as a different way of narration of history, that the pre-colonial past was a history of fluxal change, development and dynamics, technology and economy. Market and trade, agriculture and crafts all showed a linear process of growth. The new text books opened its politics that, the colonial rule was a tragic time of decline and impoverishment, backwardness, deindustrialisation and agricultural backwardness.¹⁸

As part of research in Malabar, the imposing at the British National Antham in the front page of our text books is a classical example to explain how the text books was used as a tool to legitimate the colonial intervention. The national anthem of the period started with 'God save our gracious king, long live our noble king, God save our king' and it ended with, 'God save us all.' The student was forced to understand the greatness of the British King and his responsibility to respect him as his god.

In a Malayalam school text book of 1934, an article entitled *Innathe Vidyalayavum Nammude Yuvakkalum* written by R. Iswara

Pillai, stated clearly the utility of text book in perpetuating colonialism in India. The lessons were taught in English and thus, the native language became irrelevant as a medium of communication. Finally, R Iswara Pillai commented that the education was to be

challenged by the new youth to defeat colonial system in India. In the context of colonial Malabar, with the state's keen interest in shaping the text book committees in the beginning of their rule to orient the character of the children in the country.

SERANMADEVI GURUKULAM ISSUE: A TURNING POINT OF PERIYAR'S LIFE

G. Ravi

The beginning of the twentieth century Brahmins played vital role in every part of life. The Provincial Congress Madras Presidency also under the control of them like Salem Vijayaragavachari, Rajaji, Satyamurthy, etc. Therefore the Non Brahmins criticized the attitude of Brahmins and began a political party which was known as Justice Party. The growing support of Non Brahmins towards Justice Party, bewildering the Congress leaders. Hence they gave some importance to non Brahmins in congress. Rajaji gave supported E.V.Ramasamy latterly known as Periyar while Satyamurthy supported K.Kamaraj. Periyar and K.Kamaraj sincerely worked to promote congress in next level. Periyar tried to improve social setup rather than political activities.

He stressed the need for communal representation and insisted that a provincial congress conference should be held at Erode wherein a resolution on communal representation should be passed.¹ During the years 1919 to 1925 he continuously fought vigorously for communal representation. His demand for passing resolutions on communal representation was rejected in the Congress sessions of 1919 (Tiruchi); 1920 (Tirunelveli); 1921 (Tanjore); 1922 (Tiruppur); 1923 (Madurai) and 1924 (Tiruvannamalai)².

Though this issue forms part of a political issue, it has to be discussed at length for its importance. It is worthwhile to know the event that happened in the Provincial Congress held at Tirunelveli in the year 1920. S. Srinivasa Iyengar was in the chair. In collaboration with V.O. Chidambaram Pillai, Periyar. Drafted a resolution demanding communal representation in the government service. When this resolution was proposed at the session the Brahmin leadership set about threatening the party³.

They made Diwan Rama Rao to declare categorically that if that particular resolution was passed then all Brahmins would resign from the Congress Party en masse. But the Periyar and his non-Brahmin supporters did not yield to that threat. Then the Brahmins assembled and after long deliberations they decided to table an amendment. The amendment as proposed by Rajaji replaced the words "Percentage" by "Adequate representation". They convinced Periyar that both the words had got the same meaning. It was complained by him that they had manipulated the resolution in such a way that the hands of Muslim members also were raised when the amendment was put to vote.⁴

In the above Conference the resolution which had been adopted by the subjects

committee with a majority of six votes, was eventually turned down in the final stages by the Chairman of the Conference S. Srinivasa Iyengar who characterized the resolution as one 'detrimental to national unity'.⁵

In January 1925, Periyar. Received certain complaints from the students of Seranmadevi Gurukulam including one from the son of O.P. Ramasami Reddiar (a later Chief Minister of Madras) about the enforcement of separate dining among Brahmin and non-Brahmin boys.⁷ There was a storm of protest against such discriminatory practice from the non-Brahmin members of the Congress as well as from those who had donated liberally for the establishment of the institution. Periyar could no longer remain an idle spectator of the scene. Being answerable to the various interest which had helped the establishment and running of the Gurukulam, it was time for him to intervene and to do something to set things right. A committee constituted to investigate the allegations also learnt that V.V.S. Iyer himself had given permission to two Brahmin boys to dine separately on the insistence of their parents.⁸ Popular resentment arose and since V.V.S. Iyer was running institution on communal lines, it was demanded that either he should return all the donations received from the Tamilnadu Congress and non-Brahmin members or he should agree to change the character of the institution. V.V.S.Iyer's supporters pointed out that inter dining was not in practice either in society or in educational institutions run by the government. So they maintained that in the absence of such a custom in society it would be senseless to beg that the Gurukulam alone should implement inter dining among its students. Although Periyar and Varadarajulu Naidu had differences of opinion on various political questions, they held identical views on the Gurukulam issue. Periyar made a speech at Salem in April 1925 about this affair.

Gandhiji's interference in the Gurukulam issue also did not solve the problem. Gandhiji advised that the two Brahmin students should be allowed to dine separately, as it had been agreed to already but in future no such restrictions should be encouraged or imposed in the Gurukulam.⁹ Apparently the meeting with Gandhiji failed to satisfy the parties concerned. Periyar. and Varadarajulu Naidu gave vent to

their feelings against the Gurukulam and what they considered to be Brahmin dominance in Tamil society, through the columns of their Tamil Papers "Kudi Arasu" and "Tamil Nadu" respectively. T.V. Kalyanasundaram Mudaliar who was considered by his contemporaries to be a more balanced person than either Naidu or Periyar. appealed to Iyer to change the character of the institution from Seranmadevi to another centre.¹⁰ But V.V.S.Iyer not merely turned a deaf ear to this but also criticized him for lending support to malicious campaign in Tamil Nadu.¹¹

The situation grew increasingly tense and called for some more drastic action. Some efforts were made at the Tamil Nadu Congress annual meeting to settle the issue of jurisdiction over matters concerning a private institution. Nonetheless Varadarajulu Naidu who did not fully succeed in raising the Gurukulam issue at the Congress meeting held on 29 April 1925 succeeded in limiting the agenda specifically to the question of inter dining .

At the conclusion of his presidential address he moved a resolution which expressed the regret of the Tamil Nadu Congress at having paid five thousand rupees to the Gurukulam.⁷ But his resolution failed to get the approval of the Committee. Rajaji moved a resolution which said that the internal management of the Gurukulam should be left to the people who run it but that the pupils of the institution should dine together without discrimination.¹² This resolution of Rajaji was also not approved by the committee. Finally S. Ramanathan's resolution which recommended that the gradations of merit based on birth should not be observed by any organization participating in the national movement was approved and V. Thiagaraja Chettiar of Devakottai, Ramanathan and Periyar were appointed to help the Gurukulam to implement this principle.¹³ Out of twenty six members nineteen voted for it and seven against it. Rajaji, Rajan, Vijayaraghavachariar, K. Santhanam, Dr. Swaminatha Sastri and N.S. Varadachari (all Brahmins only) opposed the resolution.¹⁴ This confirmed the belief of Periyar that the Brahmins whether traditionalists or progressives, were essentially communal in outlook. At this time a censure motion which was moved against Varadarajulu Naidu condemning him for endangering national unity by promoting communal ill-feeling in Tamil Society was

rejected but it helped to widen the split with the Tamilnad Congress.¹⁵

In his capacity as the Secretary of the Tamil Nadu Congress Periyar refused to pay the balance amount of Rupees Five Thousand due to Gurukulam until and unless the common mess system advocated by Gandhiji was practised. V.V.S. Iyer and his band of associates, therefore decided to get the money without Periyar's knowledge; and they succeeded in doing so. They got the cheque from the joint secretary K. Santhanam, a Brahmin. This also made Periyar to declare an "all-out war" on the Gurukulam. M. Baktavatsalam criticized Varadarajulu Naidu only.¹⁶ But this incident developed a deep animosity in the heart of Periyar and hastened his decision to quit the Congress.

In the Conjeevaram Conference of the Tamil Nadu Congress in 1925, he therefore, decided to get his most-disputed resolution passed at any cost. His endeavour in this proved to be his last attempt to remain in the Congress. Periyar. believed that since the All India Congress Committee at the Patna session in September 1925 had given a mandate to the Swaraj Party to carry on the work inside the Central Legislature and Provincial Councils on behalf of the Congress, the Tamil Nadu Congress Committee would take a decision on the Patna resolution.¹⁷

When the resolution of Council entry was taken up for discussion S. Ramanathan insisted that the allied question of communal representation should also be discussed at the same time. Thereupon the Committee considered the resolution put up by Periyar demanding proportional representation on the basis of population strength for the non-Brahmin communities.¹⁸ The resolution failed to gain support from the members of the subjects committee, who rejected part 'A' of the resolution but adopted part 'B' in a modified form.¹⁹

As Periyar, was not satisfied with the conciliatory move, he informed the committee

that he would again bring up both parts of the resolution at the main session of the conference itself.

Thiru. Vi. Ka. who was the President of the Conference suggested that Periyar might do so provided part 'A' of his resolution won the support of 25 delegates. In the meantime Srinivasa Iyengar had withdrawn his resolution as he considered that it was this resolution which motivated Periyar. To urge his policy of communal representation. It was expected that in the light of this new development he would not make an issue of it. Nevertheless he decided to stick to his decision.²⁰ The lack of consensus among the various non-Brahmin groups led to the defeat of Periyar's resolution. At the instance of Periyar. a meeting of the non-Brahmin delegates attending the conference was held at the Kamakshi Theatre in Conjeevaram under the President ship of T.A. Ramalingam Chettiar, a former Just cite. After a prolonged discussion at this sitting of the meeting a general resolution requesting the Tamil Nadu Congress to put up for the next general election, candidates 90% of whom should be non-Brahmins of this 33 % should be from the Depressed Classes.²¹

The practical minded politicians both in the Brahmin and the non-Brahmin groups of the Tamil Nadu Congress were aware of the prevailing mood among the followers of Periyar. But they failed to move the Congress machinery to take positive step to suggest a solution for this communal problem. Periyar felt that the Brahmin leaders on account of their vested interests were opposed to any measure that sought to improve the political fortunes of the non-Brahmin community.

Further he felt that this communal representation was the much needed arrangement for the development of the country and for the unity and equality among the people. So he quit from the congress party and began self – respect movement through this movement he came to limelight of Tamilnadu.

CONNECTION BETWEEN SOUTH INDIA AND MITHILA: A STUDY

S.K. Rijul Midde

Mithila has an important place in the history of Indian Civilization. Mithila, the country of the Maithilas (Videha, Tirabhukti or modern Tirhut) is the name for the tract lying between 25°28' and 26°52'N. lat and between 84°56' and 86° 56'E.long. It is bounded on the north by the Himalaya and on the east, south and west by the rivers Kosi, Ganga and Gandaki respectively. It Comprised the present districts of Champara (East & West), Muzaffarpur, Darbhanga, Sitamari, Samastipur, Madhubani, Katihar, Saharsa, Purnia and Begusarai and the Terai under Nepal lying between these districts and the lower ranges of the Himalaya.¹

The association of the Karnatas with South India can be traced back to the Pala Inscription (8th-12th century C.E) which leave no doubt that they originally belonged to the south.²Like his counterpart in Bengal,³ Nanyadeva, (1097-1147 C.E)ruler of Karnata dyanasty In Mithila is called *Karnatakulabhushana* and *Karnatakshatriya* in the Mithila tradition. The Senas (11th -13th C.E.) are also known as the *Karnatakshairiya* from verse IV of the Madhainagar grant and the Naihati grant of Ballala sena(1160-1179 C.E)⁴ the Sena ruler. It can be safely assumed on the basic of this grant that some Karnata officials actually acquired political power and set out independent kingdoms for themselves.

We know that the storming of the capital of the Parmara king Bhoja-I (1010-1055 C.E.) and the destruction of the Kalachuri king Karna by Somesvara I(1040-1069 C.E.) facilitated the path for Karnata domination in the north Indian

Politics. The Karnatas of Mithila hailed from the Deccan in the wake of Chalukya invaders, Somesvara I and Vikramaditya VI(1076-1126 C.E).⁵ Vikramaditya VI's son Somesvara III is described as having placed his feet upon the heads of the kings of Andhra, Dravida, Magadha and Nepala.⁶ Their Emergence in north Indian Politics ushered in a new epoch. The destruction of the Parmaras by the Chalukyas is supported by the Basahi Plate of Govindacandra Gahadavala⁷ of KanaujThe dyanasty of Kanauj, Mithila and Bengal were the direct results of the Chalukya invasions of north India. R.C.Majumdar has rightly observed that, "the deluge of the Karnata invasion ushered in three new dynasty at Kanauj, Mithila and Bengal".⁸

The frequent mention of the Karnatas in Pala inscription leaves no doubt that they were employed by the Palas as important official and they took the advantage of the situation when the supreme authority became weak. The Karnata invasion from the south helped in realization of their ambition. Aca, a feudatory of Vikramaditya VI is represented to have conquered large territories for his master. The Tamil poem *Kalingattuparanai*, describing the Chola conquest of north Kalinga and gives a long list of peoples who paid tributes to Kulottunga, The Chola⁹ king(1070-1118 C.E.). The Conquest included Vanga, Vangala and Magadhas. It was about this time that Karnatas were also heading towards this region. The Pala territory which included Mithila seems to have been invaded by these two groups southerners and Rampala might have sought an alliance with the Colas for

securing support against the common enemy, i.e. the Karnatas.¹⁰ Sandhakara Nandi's *Ramcharita* suggests that "Varendri was successfully guarded against the Karnatas". While Aca carried arms into Bengal, the Palas¹¹ had to face two rising Karnata Chiefs, viz., Vijayasena in Bengal and Nanyadeva in Mithila.

Another important theory put forward by a set of scholars is that the Karnatas were merely the results of the revival of the eclipsed Karnata power in Magadha.¹² The supporters of this theory believe that Rajendra Chola Gangaikonda had a powerful imagination and grasp of the political situation of North India and he made a bid for supremacy in that part. The Tirumalai Inscription and inscription no.44 at Kolar¹³ give the achievements of his conquest in the following words: ".....attacked Vangaladesa from which Govindacandra fled and took the territory where the monsoon never ceases".¹⁴ He is said to have defeated Mahipala.¹⁵ A critical study of the contemporary records shows that the Chola conquest did not affect in any way the political condition of Bengal and Neighbouring countries. M.Ramakrishna Kavi believes that the Rastrakuta were the Karnatas and after their decline in 970 C.E. in the south, they moved towards the north. Though Mr.Kavi fails to give any plausible explanation for the so-called migration of the Rastrakuta from south to north. If the view about the Rastrakutas' expansion in the north be accepted, it is quite likely that Karnatas moved along with the Colas and when further strengthened by the fresh Chalukya invasion, they asserted their independence in the last decade of the eleventh century of the C.E.

Kshemesvara's *Canda-kausika* says that Mahipala of the Pala dynasty defeated the Karnata Raja who had invaded Bengal.¹⁶ The MSS is dated 1331 and refers indirectly to a contest between Mahipala and the Karnatas. The Chalukyas of Kalyana were at this period rulers of Karnata but none of the contemporary inscriptions of Chalukya sovereigns refer to any conflict with Palas. R.P. Chanda is of opinion that Karnatas were soldiers who were known to have invaded Mahipala's kingdom.¹⁷ H.P.Sastri believed that the people defeated by Mahipala might have been connected with those Karnatas who are believed to have established later on in Bengal and Mithila. In the present state of our knowledge, it is very difficult to be precise with

regard to the time as to when those Karnatas first settled in Bihar and Bengal. The series of Southern invasions of northern India may have quite possibly been responsible for the regular inflow of Karnata settlers in Bihar and Bengal. The fresh wave of *Karnatakendu* Vikramaditya IV only gave them impetus to stabilize their position as independent rulers after the local central authority had become weak.¹⁸ and incapable of keeping in control the forces of disintegration.

The reasonable view seem to be that before the Palas could take advantage of the difficulties of the Kalachchuries, the Palas had to face an invasion from the Chalukyas of Karnata.¹⁹ The earliest raid of the Chalukyas must have taken place before 1053 C.E.²⁰ Another important Chalukya expedition was taken towards Vanga and neighboring countries at the close of the eleventh century.²¹

The commentary on Bharata's *Natyasastra* reveals to us that he was called *Karnatakulabhushana*. K.P. Jayaswal believes that this name is only a Sanskritised form of Dravidian 'Nanniya' meaning affectionate.²² Nanniya, Nanyupa other such names of Nanyadeva are known to us from traditions current in Mithila and preserved by such traditional writers as M. P.Jha in his *Mithilatat tvavimarsha* and Rasbehari Das in his *Mithiladarpana*. The Deopara inscription unmistakably calls Vijayasena a scion of the Karnata race and Nanyadeva is also mentioned therein. In the last quarter of the 11th century C.E., when the southerners were disturbing the political life of North India, the Karnatas gained a permanent footing in the eastern part of north India and carved out for themselves small independent kingdoms which were destined to play very important role in the following centuries.²³ Nanya or his ancestor seems to have asserted independence.²⁴ The Revolt must have coincided with the Chalukya invasion during the reign of Vikramaditya VI. Karnatas of Mithila have been referred to in epithets like *Karnatacudamani* in the Nepal.²⁵ inscriptions, *Karnatavamsodhava Karnatdhipa*²⁶ by Chandesvar, Kanadda speaking barons²⁷ from the Deccan, a southerner, in a recent Marathi²⁸ work and *Karnatakulalakshmi* in the Sena inscription.²⁹

As late as 1162 C.E Nepal is mentioned as a vassal state of Somesvara III in the Pattadakal stone inscription³⁰. The unstable condition of Nepal and surrounding area is well attested by number of epigraphs and Vamsavali sources. In view of all this it is Plausible to hold that "the forefather of Nanya established themselves as feudatory chiefs in Tirhut, on the border of Nepal, as a result of the successive raid by the great Chalukya prince to the foothills of the Himalayan range...and after the withdrawal of the strong Chalukyan arm, they rose to pre-eminence, broke off their allegiance and established themselves as rulers of Tirhut" Nanya was first ruler of this dynasty. S.Levi holds that Nanyadeva at first accepted service under some unknown king, and taking advantage of the weakness of the master, wielded sovereignty. It is a well-known fact that even the Pala rulers had appointed sufficient number of Karnata officers under them.

D.G. Ganguly is of opinion that Nanyadeva was an officer under the Pala and established a kingdom in Tirabhukti during the Kaivarta revolt. "A new danger" which confronted Rampala on the eve of his fight with Kaivarta Bhima, mentioned in the *Ramacharita*, may be referring to this incident.³¹ According to a tradition which id not to be rejected outright, Nanyupadeva, or more correctly Nanayapadeva founded in the year 1097 Simarouna, the ancient capital of the province of Mithila situated in the Nepal terrain, in the ruins of which statues and idols have been found.³² During the reign of Ramapala they took advantage of the weakness of the Palas and established an independent dynasty. The Karnatas ruled Mithila from 1097-to 1324-25 C.E.

A.S. PONNAMMAL - A RENOUNCED ASSEMBLY MEMBER IN TAMIL NADU

C. Rouccoumany

Under the State Reorganization Act of 1956, the new Kerala state was formed with the exchange of few territories of Madras State.¹ The Madras State was renamed as "Tamil Nadu" on 14 January 1967.²

Tamil Nadu Legislature has recognized the services rendered by women wherever it is possible. This was clear when A.S. Ponnammal (1926-2015) who was elected to the Tamil Nadu Legislative Assembly on seven occasions as a

candidate of various political parties. She was fondly known as 'Akka' (elder sister) in political circles and among colleagues in the Tamil Nadu Assembly.³

A.S.Ponnammal, born in 1926, was the former Member of Legislative Assembly from Nilakottai. When she was first elected on an Indian National Congress ticket from the Nilakotai Constituency, she was only 31 years. The name Nilakottai became the part of her identity as she represented the Reserved Assembly Constituency six times even though she lost the seat in the 1967 and the 1971 elections. She was continuously elected to the Assembly till 1996 though she changed her Constituency once and switched her political allegiance.⁴

In the Second General Elections for Madras Legislative Assembly of 1957, A.S. Ponnammal, has been elected as the Legislative member from the Nilakotai Reserved Constituency, Madurai District. Of the twenty four women contestants thirteen belonged to the Indian National Congress (INC), two from Praja Socialist Party, one from Dravida Munnetra Kazhagam (DMK) and seven independents. In that election, twelve were elected in which eleven belonged to the Congress and one from DMK.⁵ K. Kamaraj, a Congress leader was the Chief Minister of Madras State from 1954.⁶ He was continuously elected as the Chief Minister of Madras State in 1957 also. The number of women legislators in the Madras Legislative Assembly had increased from two in 1952 to thirteen in 1957. The ratio of women to men among those elected was 1:187 in 1952 and 1:16 in 1957.

In the Third General Elections for Madras Legislative Assembly of 1962, twenty three women contested. Of them, thirteen women were elected, eleven belonged to the Congress, one to the DMK and one to the Swatantra Party. A.S. Ponnammal was elected in 1962 as Indian National Congress candidate. The valid votes of

ELECTED MEMBER OF THE GENERAL ELECTIONS FOR MADRAS LEGISLATIVE ASSEMBLY FROM 1980 TO 1996

Name of the Candidate	Constituency	Year
Ponnammal, A.S., Independent Candidate	Nilakkottai, Reserved, Madurai District	1980
Ponnammal, A.S., Indian	Nilakkottai, Reserved, Madurai District	1984

elected women members in the Third General Elections, shows their awareness in the politics.⁷A.S. Ponnammal served as a Member of Madras Legislative Assembly from 1957 up to Fourth General Elections of 1967.

In the Fourth General Election for Tamil Nadu Legislative Assembly of 1967, A.S. Ponnammal was defeated by A. Muniyandi, DMK party in the Nilakottai Constituency.⁸ In 1967, DMK, led by C.N. Annadurai became the Chief Minister of Tamil Nadu, died in office in 1969 and V.R. Neduncheziyan, DMK party, took over as acting Chief Minister. In the Fifth General Elections for Tamil Nadu Legislative Assembly of 1971, A.S. Ponnammal, NCO (National Congress Organization) party, from the Nilakottai constituency, was defeated by A. Muniyandi, DMK party.⁹

In the Seventh Legislative Assembly Election to Tamil Nadu in 1980, A.S. Ponnammal was subsequently elected to the Legislative Assembly as an Independent candidate in the Nilakottai (SC) Constituency.¹⁰ In that election, ADMK, won and its leader and incumbent Chief Minister, M.G. Ramachandiran was sworn in as Chief Minister for the second time.

In the Eighth General Election for Tamil Nadu Legislative Assembly of 1984, A.S. Ponnammal was elected in the Nilakottai (SC) Constituency as an Indian National Congress candidate.¹¹ She served as a Member of Legislative Assembly in Tamil Nadu under the Ministry of ADMK leader, M.G. Ramachandiran (1984-87). Though the DMK party or ADMK party came to the ministry, as an Indian National Congress candidate, she was elected as the member of Legislative Assembly to Tamil Nadu in 1980 and also in 1984 and served up to 1989.

The following table shows her continuous services in different periods.

Congress	Madurai District	
Ponnammal, A.S., Indian National Congress	Nilakkottai, Reserved, Madurai District	1989
Ponnammal, A.S., Indian National Congress	Nilakkottai, Reserved, Madurai District	1991

Ponnammal, A.S., Congress Tamil Maanila Congress (Moopanar)	Nilakkottai, Reserved, Madurai District	1996
--	--	------

Sources: Tamil Nadu Legislative Assembly Debates, Official Report, 11th August 1980, Vol. VIII, No.1. xii; April 10th and 11th 1984. Vol. LXV. No. 1 & 2; Report

In the Ninth, Tenth, and Eleventh General Elections for Tamil Nadu Legislative Assembly, A.S. Ponnammal was elected as the Member of Legislative Assembly from the Nilakottai (SC) Constituency in 1989, and 1991 as an Indian National Congress candidate and in 1996 as a Tamil Maanila Congress (Moopanar) candidate,¹² under the Ministry of M. Karunanithi, (1989-1991), J. Jayalalitha, (1991-1996) and M. Karunanithi, (1996-2001).¹³

A.S. Ponnammal tirelessly served from 1989 to 2001, under various party leaders, even though she belonged to Congress party.

Social Activities

As a member of the Legislative Assembly, A.S.Ponnammal provided more facilities to the common people. Education is considered as a source of illumination which feed students from darkness to light. It is an important factor in shaping the personality of an individual and an important input of human resource development at each and every level. In Nilakkotai, there was no government college for women up to July 1998. All her strenuous efforts culminated into a great success when the Chief Minister M. Karunanidhi announced the inception of a new Government Arts College for Women in Nilakottai. With the generous contribution of Rs. 50,00,000/- by A.S.Ponnammal from her

on the Ninth General Elections to Tamil Nadu Legislative Assembly 1989, Madras. 138; Tamil Nadu Legislative Assembly Debates, Official Report, 9th September 1991, Vol. V, No.1. xxii; 27th August 1996, Vol. 15, No. 1. xxiv.

Constituency Development Fund and Rs. 50,00,000/- by the Member of Parliament C.Srinivasan, the foundation stone was laid. This college dawned in the year 1998-1999 as the result of the constant and continuous effort of the former MLA of the Nilakottai Constituency A.S.Ponnammal. Hundreds of village Women around Nilakottai, are getting higher education from this institution.¹⁴

A.S. Ponnammal was a very pleasant person and articulated well the requirements of her Constituency in the Assembly. In 2001, A.S. Ponnammal quit the Tamil Manila Congress and joined the Congress Jananayaga Peravai founded by P. Chidambaram as she could not get a seat in the 2001 elections. Subsequently she was not active in politics. From 1957 to 2001, she rendered a valuable services to the politics and especially to the Nilakottai Constituency. She died on 24th November 2015, at the age of 88.¹⁵

A.S. Ponnammal's 54 years ie., from 1957 to 2001, political career, is the best example for the present politicians. By her interest and involvement, her close identification and contribution in developing the society, she is always living in the minds Of the Tamil Nadu people.

READING ROOMS AND NATIONALIST CONCIOUSNESS IN COLONIAL KADAPA DISTRICT 1858-1947

G. Samba Siva Reddy & A. Ramanjul Reddy

Introduction

Growth of education and press led to the establishment of reading rooms or libraries, though in a humble way initially, to cater to the needs of readership due to the growing interest of the people during the colonial political and national developments in the country. This was particularly so in the second half of the 19th Century and first half of the 20th Century in the backdrop of Indian nationalist scenano.

Origin of the idea for Starting Reading Rooms

The concept of reading rooms and libraries is not new to India. In fact, history of libraries is as old as civilization and human culture.¹ In the olden days, books in libraries were written on palm leaves, pieces of stones, clay tablets, pieces of cloth, wooden tablets, silver and copper plates, and pieces of animal skin. The sources available in the ruins of Nalanda, Taxila and other ancient cities and towns of India prove this.² This tradition survived through the Sultanate and Mughal times in various forms with an improved style and elegance as the time passed on.

With the advent of British administration in India, the libraries acquired more popularity as centres of knowledge. The British took several steps to systematise the entire administration, including the maintenance of libraries, in India. In course of time, they gave utmost importance to the development of libraries. This gave impetus to the modern libraries in India, including Madras Presidency,³ of which Andhra was a part till the latter's formation as a separate state in 1953.

In Andhra, the Paravasthu family of Visakhapatnam founded the first library in 1800. Though it was for a chosen few in the beginning, it was, later, thrown open to public and became Arsha Grandhalaya.⁴ Subsequently, the invention of printing in Telugu in 1806 and the publication of Telugu books from 1834 onwards gave fillip to the growth in the number of libraries in different parts of Andhra during 19th Century. As a consequence, James Thomas, a British Judge, established a Library at Rajahrundry in 1839. Every day, hundred members visited this library. Books were sent to readers in the villages located around Rajahmundry in order to educate the rural people. Books in English, Telugu, Tamil and Urdu languages were available in this library. This arrangement heralded the concept of public library in Andhra⁵ in all respects.

Inspired by these developments, the Bellary Club Reading Room was established at Bellary in 1863, the first of its kind in Rayalaseema of which Kadapa district is a part. Its main objective was to provide newspaper reading and debates on the general conditions of society of those times.⁶ This example provided inspiration to Kadapa district. As a result, the first reading room was started at Madanapalle, then in Kadapa district, in 1870 by a Christian Mission and it was named as American Arcot Mission Reading Room.⁷ However, the first reading room to have been started by local people in this district was the Jammalamadugu Jubilee Club (1881) at Jammalamadugu. The declared objectives of this Reading Room were to uplift the people in the field of 'Social Education'⁸ and to 'spread the information'⁹ among people about the library movement.

Subsequently, several Reading Rooms, Debating Clubs and Literary Associations came up at the places like Madanapalle, Jammalamadugu, Kadapa, Proddatur, Kadiri, Vayalpaduu, Pulivendula, Piler, Siddhavattam and Rayachoty during the second half of the 19th century.¹⁰ These libraries were started with the declared objective of providing amenities for Scientific, Literary, Moral, Mental, Social and Physical improvement of their members in particular and the public in general, besides providing reading material like newspapers, books, magazines and journals and conducting debates and seminars on the festival and other auspicious occasions.¹¹

Like majority of the ancient and medieval libraries, the modern Literary Clubs, Societies and Associations initially catered to the needs of only those who had membership in these organisations.¹² However, with the advent of the concept of Universal Library, these organisations were thrown open to all sections of the people.¹³ Universal Libraries came up in all districts, including Kadapa district, of Andhra Pradesh in the last decades of the 19th century, owing to the growing nationalist consciousness among the people. In Andhra, the first library of this kind was "Saraswathi Nilayam" of Visakhapatnam, started by Mantena Adinarayana Murthy, a school teacher, in 1886.¹⁴ Then it was the turn of Kadapa district, where "Saraswathi Vilasamu" was established in 1889 at Pulivendula.¹⁵ It is significant to note that these two early universal libraries were named after "Saraswathi" ¹⁶ (Goddess of Learning). These modern libraries were also called Free Public Libraries. They were started mainly to see that every citizen had free access to them, and the service of a library to the society would be a continuous process. Voluntary organisations and individuals, who wanted to do social service, and also some other private organisations played a key role in the establishment of such libraries in the last years of 19th century and the first half of 20th century.¹⁷ For instance, in Kadapa district, scholarly and public-spirited persons like Vedam Venkatakrisna Sarma, Bhadri Sitaramayya, K.Gundu Rao, Viruru Pitchaiah, Vellala Ramakrishna Sastry and Gullapalli Venkata Punnayya Sastry played a significant role for the spread of library movement.¹⁸ With the inspiration provided by

these developments, libraries were started even in small villages also, in addition to the taluk headquarters and small towns in the district. These factors are an indication of the growth of awareness in people about the utility of library.

Number of Reading Rooms/ Libraries at Different Periods

An analysis of the spread of libraries in different places at different periods in the Kadapa district will be an interesting study.

The introduction of adult literacy programmes also resulted in the growth of a number of reading rooms in Kadapa district. As in other parts of Andhra Pradesh, majority of the libraries and reading rooms in the district were started and strengthened by the efforts of private enterprise and voluntary associations or organisations. For instance, the Sri Ramakrishna Samajam and the Theosophical Society of Kadapa and the Arya Vysya Samaj of Proddatur did yeomen service to the cause.¹⁹ Particularly, the Sri Ramakrishna Samajam of Kadapa played a significant role during the first half of the 20th century.²⁰ It also sold books and photographs of Sri Ramakrishna Paramahansa and Swami Vivekananda to all sections of people, in addition to the regular library activities.²¹ This was obviously intended to remind the people about India's heritage thereby inculcating in them a sense of Indian nationalism. Every year, meetings were held under the auspices of this organisation on the special and auspicious occasions like the birth or death anniversaries of Sri Ramakrishna Paramahansa and Swami Vivekananda. Special cultural and spiritual programmes were arranged at every meeting. The Samaj started Sri Ramakrishna Paramahansa Memorial Free Reading Room in 1910 at Kadapa. Several persons of repute were invited by the Samaj to give their speeches on puranic accounts of legendary character, apart from expressing their views on various issues facing the society. For instance, the President of the Ramakrishna Mission, Madras, Srimat Paramahansa Parivrajaka-charya Swami Sarvananda, and Sub-Editor of *The Hindu*, Madras, P.S. Sivaramayyar besides other persons of the district like N.Narasinga Rao, Advocate, Proddatur, A.Narayana Swami, H.S.A.M.Manjumiya Saheb, G.Venkata Ranga

Rao, and A.Narayanayya were invited to participate in the meetings held on 18, 19 March 1916. They spoke in Telugu, English and Urdu languages on different themes like religion, society and education, and spiritual, cultural and moral values. Thus, inter-district exchanges of views became a possibility through these libraries. Free food was provided to 500 poor people on that occasion. It was one of the earliest and important meetings conducted by the Sri Ramakrishna Samajam.²²

More meetings of that nature were conducted by it throughout the first half of the 20th century to enlighten the people and society as well.²³ The Nawab of Banaganapalli (now in Kurnool district) also visited the library of this Samaj on one important occasion and appreciated the efforts made by the management and members.²⁴ This library also started one voluntary organisation, namely, *Harijana Seva Samithi* (Society for service to Harijans) to do service to the Harijans in all fields.²⁵ This was followed by other Reading Rooms and Libraries of the district, such as AndhTa Bhashabhivardhani Samajam, Proddatur (1912),²⁶ Arya Vysya Reading Room and Library, Proddatur (1919),²⁷ Sri Sita Ramachandra Library, Vallur (1923), the District Board Library, Kadapa (1930-31),²⁸ Swatantra Bharat Library, Vemula (1940),²⁹ Pulivendula Reading Room, Pulivendula,³⁰ and Sri Bhavanarayana Library, Pullampet.³⁰

Meetings and the activities of these libraries influenced people of the district so much that many new libraries were started at different places. Political and national organisations such as the Madras Mahajana Sabha and the Indian National Congress had an impact on the district in 1880s. The launching of socio-religious reform movement in the 19th century by Kandukuri Veeresalingam Panthulu and the nationalist movements like the Vandemataram and Home Rule Movements (1907 and 1916-1918) in 20th century also turned the attention of the Andhras, including the people of Kadapa district, towards the nationalist movement.³² As a consequence, Telugu journalism flourished and the number of universal free public libraries increased substantially. At the same time,

establishment of public library system by the ruler of Baroda, Sayaji Rao Gaekwad, under the influence of William Borden, an American,³³ attracted many intellectuals and social workers of Andhra. Inspired by these developments, the educated elite of Kadapa district started many new libraries during the first half of 20th century. Several major panchayats like Nandaluru, Jammalamadugu, Badvel, Pulivendula and Rajampet also established libraries of their own between 1939 and 1947. The other types of libraries started in the district were *Grama Sangham* Libraries and the Co-Operative Libraries. The Sri Rama Krishna Library, Khajipet (1946) belonged to the former category while the Co-Operative Library, Venkataramaiah (Rajampet taluk) (1947) belonged the latter category. Among the municipalities of the district, the Proddatur Municipality established a library in 1947.³⁴

In addition to those mentioned earlier, several individuals from the cross section of society also contributed to the establishment of these libraries. Polepalli Venganna Sreshty,³⁵ Janamanchi Seshadri Satma,³⁶ Koppurapu Subbaiah Sreshty,³⁷ N. Narasimha Rao, D.Rajasekharam, Gadicharla Venkata Rao,³⁸ Boddapati Seshagiri Rao,³⁹ G. Venkata Sastry, Kantham Narasimha Rao, L.Venkataramaiah, S.Chennaiah, K. Ramaiah,⁴⁰ N. Ranga Raddy,⁴¹ and Kadapa Koti Reddy took lead in this activity.⁴² These leaders belonged to the middle and lower middle classes of society and came to have their own niches in the library and national movements at different stages in Kadapa district under the influence of the leaders like Ayyanki Venkataramanayya, Gadicharla Harisarvothama Rao, Pathuri Nagabhusanam, Velaga Venkatappayya, and Suri Venkata Narasimha Sastry of the provincial stature. A great leader, freedom fighter and social worker, Vavilala Gopala Krishnaiah, also toured many places like Rajampet, Rayachoty, Kadapa, Proddatur and Jammalamadugu in the district for the cause of the library movement. Prominent leaders of the district such as Janamanchi Seshadri Sarma, Vavilikolanu Subba Rao, A.K.Muni, V.Chithanandam, Vellala Ramakrishna Sastry and Parthasarathy accompanied him during the tour, thus enhancing the scope of awakening in the district.⁴³

Of all the factors that contributed to this movement, the influence of the *Swadeshi* and Vademataram, Home Rule, Non Co-operation, Civil Disobedience, and Quit India Movements was noteworthy.⁴⁴ Besides providing reading facilities, the publicity for Khaddar dress, promotion of music and other folk arts, installation of printing machines, conducting training camps for Scouts and Guides, re-organisation of national physical education activities and the regeneration of indigenous industries, establishment of co-operative societies and conducting national festivals also became a part of the library movement.⁴⁵ Under the influence of these nationalist activities, the strength of libraries increased appreciably. But during 1921-1924 the public attention was diverted completely towards political activities, and a number of the activists went to jails.⁴⁶ Hence, there was a minimum number of libraries in the district during the period. However, subsequently the momentum picked up once again as a result of the fast spreading nationalist consciousness⁴⁷ and the growth of nationalist movement.⁴⁸

Leaders and libraries of Kadapa district made sincere efforts for the promotion of library movement in the second half of 19th century. Even some of the English Officials contributed their mite in this direction. For instance, C.P.Brown (1798-1884), a great patron of Telugu literature, created library awareness about libraries in the people of Kadapa district by establishing his own library at Kadapa in 1826.⁴⁹

Financial Management of the Reading Rooms

All the reading rooms that were established under private enterprise were maintained by the subscriptions of their members and donations collected from different sections of the society.⁵⁰ In the beginning, they were started and strengthened by co-operation of the public without any help from the Government.⁵¹

This general scenario of the reading rooms is noticed in Kadapa district also. Data relating to the second half of 19th century could be collected from one of the libraries, the Pulivendula Reading Room, namely, Saraswata Vilasa Mandiram. It was established

in 1889. It was run in its own building worth about Rs.3000/-. Total subscribers for this library were 25 members and the total amount of monthly subscriptions was Rs.24/-. Its average monthly expenditure was Rs.18/-. It had an amount of Rs.200/- as reserve fund for its maintenance.⁵² Among the remaining libraries in this period, starting from American Arcot Mission Reading Room (1870), Madanapalle, down to the Kadapa High School Union (1896), Kadapa, majority of libraries had got their income from public subscriptions. But some of the libraries had got their income in the form of both endowments as well as subscriptions. For instance, Madanapalle American Mission Free Reading Room (1870), Madanapalle Library Union (1885), and Madanapalle Association (1892), all the three at Madanapalle, Vayalpadu American Mission Reading Room (1886) at Vayalpadu, Jubilee Club (1887) at Proddatur, Reading Room (1892), and Jubilee Literary Association (1896) both at Rayachoty got their income in the form of endowments and subscriptions. Their income through these means ranged from Rs. 15 to Rs.225 per annum. The reading rooms such as the Madanapalle American Mission Free Reading Room (1870) and the Field Games Association (October, 1892) both at Madanapalle, Vayalpadu American Mission Reading Room (1890) at Vayalpadu, Saraswata Vilasa Mandiram (1889) at Pulivendula, and Kadapa Literary Association (1882) at Kadapa had got better financial position with an annual income ranging from Rs.225 to Rs.400 when compared to other libraries. Some of the reading rooms like the Literary Association (1892) at Kadapa, Madanapalle Hindu Association and Madanapalle Association (1892) at Madanapalle, Pulivendula Association (1893) at Pulivendula, Proddatur Reading Room (1884), Proddatur Reading Club (1884/1895) and the Jubilee Reading Club (1885), all the three at Proddatur, Vayalpadu American Mission Reading Room (1886) and Vayalpadu Association (1896) at Vayalpadu, Rayachoty Association (1896) at Rayachoty, Literary Society (1887) at Pulivendula, and Reading Room (1889) at Piler were each maintained with an average income ranging from Rs.120 to Rs.196 per annum. All other libraries survived with

meagre and poor financial position during this period. In spite of the Government's indifferent attitude and the district's backwardness in the fields of economy and higher education, the number of libraries kept growing in the district at different times during the second half of 19th century. This was possible due to the commitment of people and the growth of public and nationalist consciousness in the people due to the influence of political and nationalist movements.

In the first half of 20th century also the British Government did not extend financial assistance to libraries.⁵³ On the other hand, it tried to curtail and even to stop the grants it had earlier sanctioned to many libraries.⁵⁴ It also watched, very keenly, the growth of nationalist consciousness among people and sensed a danger from it. So, it rejected the applications for recognition and grant-in-aid for libraries during this period. It further went to the extent of saying that the maintenance and administration of the libraries would not come under the jurisdiction of local self-governing bodies.⁵⁵

Many a time the Government stopped grants to libraries that used to subscribe for the nationalist newspapers. The visitors used to go to these Reading Rooms, wearing *Khaddar* (a coarse, hand-spun cloth) dress. But, on the contrary, the government used to sanction total grant to the libraries that were started by the Justice Party leaders who were pro-British.⁵⁶ The Government also framed many stringent rules and regulations in addition to the Madras Public Libraries Act of 15 August 1933 to collect cess from the libraries and to curtail the number of reading rooms.⁵⁷ But the leaders like S.Radhakrishnan,⁵⁸ V.S.Srinivasa Sastry,⁵⁹ Ayyanki Venkataramanayya,⁶⁰ *Desabhakta* Konda Venkatappayya,⁶¹ Sir V.S. Sivaswami Ayyar,⁶² Vavilala Gopala-krishnaiah⁶³ and V.Ramadasu Panthulu,⁶⁴ and the Andhra Library Association.⁶⁵

Types of Newspapers Subscribed

Reading room, by implication, procures reading material consisting of newspapers, magazines, journals, manuscripts and books according to the interests of the readers. The effect of libraries on readers has been positive from the Indian national point of view.⁶⁶

Similarly, newspapers are one of the effective channels of the reading room to publicise its activities.⁶⁷ A good newspaper or journal would radiate views and news effectively.⁶⁸ It is the most important means of general publicity. It comes as near to being read by everyone as any medium can.⁶⁹ Majority of the readers, irrespective of their age, begins evincing interest in public affairs and politics by reading newspapers.⁷⁰

Keeping this importance of the newspapers and contemporary factors in view, the reading rooms of Kadapa district subscribed for newspapers besides other types of reading material such as books and journals. In fact the main objective of the majority of the reading rooms was the promotion of reading habits of the public besides organising debates and lectures, and the improvement of scientific, literary, moral, social and intellectual matters of the public.⁷¹

The newspapers subscribed for were of different categories - linguistic, religious, caste-based, sectarian and nationalistic. Linguistic papers were again of different categories, such as uni-lingual i.e., Telugu or English; or Urdu or Tamil etc; bi-lingual i.e., Telugu-English, or English-Telugu, or Tamil-Telugu, and tri-lingual i.e., Telugu-English-Tamil, or Telugu-English-Kannada, or Telugu-English-Urdu. Religious newspapers concentrated mainly on religious aspects of the people and society. Caste-based papers were patronised by certain castes or communities, and they covered the issues relating to their respective castes and communities. Nationalist newspapers gave importance to the problems of all sections of the people and over the country. The papers were in different periodicities like Weeklies, Fortnightlies, Monthlies and Bi-monthlies.

Reading Rooms in the district subscribed for all types of newspapers during the period reviewed in this study. Details on the starting and the spread of newspapers and content thereof, as traced in the preceding chapter, prove this point. Among reading rooms of the second half of nineteenth century, the Saraswata Vilasa Mandiramu (1889) of Pulivendula subscribed for two Telugu newspapers and five English newspapers.⁷² During the first half of 20th century, the Vayalpadu *Swadeshi* Reading Room of Vayalpadu subscribed for three Telugu

newspapers and two English newspapers,⁷³ and Sri Ramakrishna Paramahansa Memorial Free Reading Room of Kadapa subscribed for six Telugu newspapers and eight English newspapers.⁷⁴ Sri Ramakrishna Samajam of the same town subscribed for ten newspapers (both Telugu and English).⁷⁵ In 1912, another library, namely, Andhra Bhashabhivardhani Samajam of Proddatur purchased eight Telugu newspapers.⁷⁶ Yet another reading room was Sri Vagvadhunilaya Grandha Bhandagaramu of Nemalladinne of Jammalamadugu taluk. It subscribed for six newspapers. Gnanodaya Nilayamu of Railway Kodur (Rajampet taluk) subscribed for ten newspapers.⁷⁷

Among the newspapers so subscribed by reading rooms in the district,⁷⁸ there were weeklies and monthlies. For instance, of the papers subscribed by Saraswata Vilasa Mandiramamu of Pulivendula, two Telugu newspapers were weeklies,⁷⁹ while of the five English newspapers, three were monthlies and the remaining two were weeklies.⁸⁰ Sri Ramakrishna Paramahansa Memorial Free Reading Room, Kadapa, subscribed for six Telugu newspapers, of which two were monthlies and the remaining four were weeklies. Of the total eight English newspapers subscribed by it, six were monthlies and two were weeklies.⁸¹ Andhra Bhashabhivardhani Samajam of Proddatur subscribed for eight Telugu newspapers, of which three were monthlies and the remaining five were weeklies.⁸²

The Vayalpadu *Swadeshi* Reading Room and the Kanyakaparameswari Reading Room (1908) of Vayalpadu subscribed for Telugu newspapers, the *Desabhimani*, the *Andhra Kesari*, *Andhra Patrika* and the *Krishna Patrika* and three English newspapers, *The Madras Standard*, *The Industry* and *The India*.⁸³ The Free Reading Room of Jammalamadugu subscribed for three English newspapers like *Swarajya*, *Amrita Bazar Patrika*, and *The Hindu* in addition to Telugu newspapers.⁸⁴

Freedom Fighters of the district such as T.Chandra Sekhara Reddy (Mahadevapalli), Y.Adinarayana Reddy (Tsundupalli), Bandaru Gandrayudu alias Gandanna (Vurutur) (though originally he belonged to Vurutur of Kamalapuram taluk, he settled at Kothapalli of

Rayachoty taluk), V.Venkata Subbayya (Muddanur), P.Veera Reddy (Alamkhanpalli), D.Ramakrishna Reddy (Pulivendula), P.R.Sanjeeva Reddy (Peddapasupula), M.Venkatanarayana Gupta (Porumamilla), C.Subbarama Raju (a native of Sanepaya of Rayachoty taluk but settled at Railway Kodur), and K.Ranga Reddy (Old Kadapa) opined that among the Telugu newspapers, *Andhra Jyothi*, 1941-46, a monthly; *Yuva*, January 1947, Children's monthly newspaper; *Chandamama*, July, 1947, a monthly Children's magazine; *Vanitha*, 1947, a monthly magazine; *Andhra Bhumi*, a monthly newspaper; *Andhra Patrika*, *Krishna Patrika* and *Andhra Prabha*, and among the English newspapers, *The Hindu*, *Indian Express*, *Free Press Journal*, and *Madras Mail* were either subscribed by the libraries of the district or were in circulation in the district.⁸⁵ In addition to these, a few more newspapers published within the district and in the neighbouring districts, as noted in the preceding chapter, were also subscribed by the reading rooms.

Readership

Among the ingredients of any reading room such as finance, infrastructure including reading material, staff and visitors, numerical strength of readership also contributes for the development of libraries. In the beginning, readers used to assemble at some spot and read the journal or newspaper for themselves or some one used to read the news for others. Readers were numerous though the newspapers in circulation were a few. As the number of readers began growing, the need for qualitative reading material and sufficient accommodation was felt.⁸⁶ This led to the formation of societies, clubs and organisations known as Literary Societies or Associations, Debating Clubs and several private and voluntary organisations to cater to the needs of the growing number of readers. A great leader and one of the luminaries of library movement in Andhra Pradesh, Suri Venkata Narasimha Sastri, also recognised the role of readership in the development of libraries and said: "the readers are the life of the reading room. Unless and until their strength increased and their knowledge or intelligence expanded, they will be in a depressing condition instead of glorious situation".⁸⁷ So, reading rooms are

necessary tools for the growth of knowledge among people. Establishment of libraries also attracted people and diverted their attention towards the utilisation of reading material.⁸⁸ These reading rooms subsequently got transformed into modern libraries with all the required facilities.

This general picture can be applied to the reading rooms of Kadapa district. During the second half of the 19th century, the libraries like Jammalamadugu Jubilee Club (1881) and Jammalamadugu Reading Room Society (1881), both at Jammalamadugu, Literary Society (1887) at Kadiri, Mission Reading Room (1887) at Vayalpadu and Reading Room (1889) at Piler recorded the lowest readership at the rate, not exceeding six members per day. The libraries of the Kadapa High School Union (1896) at Kadapa, Popular Scientific Literary Association (1896), Vayalpadu Students Union (P.V.C.School) (1896) and Vayalpadu Association (1896), all the three at Vayalpadu, Elocution Society (1894), Field Games Association (1892), Madanapalle Youngmen's Mutual Improvement Society (1886), all the three at Madanapalle, Proddatur Reading Club (1884) at Proddatur and Kadapa Literary Association (1882) at Kadapa recorded the highest and appreciable readership at the rate, ranging from

32 to 120 members per day. The remaining reading rooms recorded an attendance ranging from 10 to 20 readers per day.

During the first half of 20th century, the Vayalpadu *Swadeshi* Reading Room at Vayalpadu, Sri Ramakrishna Samajam (1910) and Sri Ramakrishna Paramahansa Memorial Free Reading Room (1910) at Kadapa, Andhra Bhashabhivardhani Samajam (1912) at Proddatur and Sri Vagvadhunilaya Grandha Bhandhagaramu (1915) at Nemalladinne (Jammalamadugu taluk), recorded the attendance of readers at the rate, ranging from 8 to 45 members per day.

Conclusion

The functioning and the activities conducted by these reading rooms and newspapers subscribed by them paved way for the growth of awareness among people of the colonial Kadapa district towards the contemporary problems and nationalist developments in the country. Further, the reading rooms or library movement and the nationalist movement went hand in hand, supplementing each other in colonial Kadapa district along the lines of general trend in the country to strengthen nationalist consciousness from different dimensions and perspectives.

CHRISTIAN MISSIONARIES : THE QUESTION OF CASTE.

Sandeep Kumar Dasari

One of the major social issues that the missionaries had to deal with was the question of caste, a unique aspect of Indian social order. Caste was an important factor influencing conversion and creating distinctions within the Indian Christian community. This paper examines several different aspects of this issue.

In Indian social order the caste system played an outstanding part. It was once the product of Hinduism. Census of India defined it as follows: "Caste has been defined as an endogamous group or collection of such groups bearing a common name and having some traditional occupation the members of which are so linked together by these and other ties, such as the tradition of common origin and the possession of the same tutelary deity and the same social status ceremonial observance and the firmly priests, that they regard themselves, and are regarded by the others, as forming a single homogeneous community"¹.

J. Pickett's opinion was "a Caste is an exclusive endogamous, hereditary cooperative group, bound together by the tradition of a common origin and a body of common custom"². When discussing the economic aspects of caste some missionaries declared that originally caste had some economic advantage because of the fact that occupations were

hereditary, the knowledge and skill acquired by the father descends to the son. In this way the Indian crafts had reached certain levels of perfection. But the essence of caste system was not to admit to change, because of this technical and industrial arts of Europe soon outstripped those of India. By making occupations hereditary by caste, this may have encouraged development up to a point, but it wasted the talent of those who were more suited to employment in something more than hereditary occupations and successfully prevented the infusion of new ideas³. J.N. Farquhar declared that old caste restrictions prevented the development of lower caste by the tyranny of caste⁴.

Roman Catholics never attacked the caste system directly by talking about Caste in the early churches. They recognize Caste in its social aspect as an inevitable feature of Indian life and therefore allowed for a caste-wise stratification which tolerated untouchability. It was hoped that a gradual growth in Roman Catholic Church, for instance, would bring about some change⁵.

St. Francis Xavier on the Kerala fishery coast allowed the emergence of different Churches. In the 17th century, Fr.De-Nobili allowed different castes in the same building in different places with a low wall of separation.

Even the Lutheran mission of earlier time regarded Caste as a social phenomenon and with few exceptions tolerated Caste division among their converts⁶. Caste based distinctions within the early Catholic congregations did not come under very serious attack until the 19th century when the Anglicans entered in the Indian missionary scene⁷.

In the North Indian churches, Caste was apparent among the converts. In the Bengal and Bombay presidencies the missionaries had insisted on its exclusion from the churches from the very beginning. However in South India, where the Caste feelings in general were stronger than in the North⁸, the Protestant missionaries had allowed some Caste practices within the Church⁹. Caste had become strongly entrenched especially in some areas for example the Society for Propagation of the Gospel (SPG), Anglican missions originally conducted by the Danes. A survey conducted in the Tanjore mission in 1828 revealed, for example, that in churches the Christians of high caste still sat on the right side of the pulpit, and also the high caste Christians still refused to intermarry or eat with the lower caste converts¹⁰.

The Caste system was very prominent among Kerala Christians. For instance, high caste converts though within the social sphere were absorbed as the Syrian Christians, there was a lot of distinctions among higher and lower caste converts. Castes like Ezhavas, Palayas and Harijans, even after conversion was treated as untouchables in the church. The old Christians were called as Syrian Christians and the Harijan Christians were called as Puttu Christians (New Christians), the Chamar Christians, Pulaya Christians, etc. The Syrian Christians were considered superior to all others. This discrimination is reflected in the organisation of the Catholic church. A similar phenomenon is seen in Andhra as well. The new caste problems and tensions were brought into the churches such as those between converts from the main and Madiga castes in Telugu country¹¹.

In the Catholic churches in Kalvanoor there were many converts from the lower Castes. Untouchables make up 83 per cent of the Catholic Christian population in Kalvanoor parish. We find the effects of caste within the Church, the untouchables and Malainam,

Udayam Christians sat in different places in the church¹². This development can be traced from the 17th century when Fr. De Nobili allowed different castes in the same building in different places with a low wall of separation. It was with the arrival of the new Anglican missionaries early in the 19th century that sensitive question was brought to a climax when they witnessed a number of high caste converts refusing to sit with low caste converts and refusing to have any social dealings with them.¹³

As a result of the growth of cities, the introduction of the new methods of transport, spread of education, the new system of equality before law and other reforms, the caste system was becoming more flexible. Attitudes towards caste, especially among the educated classes and the authority of caste councils was in some cases undermined and many caste observances were no longer performed with such regularity. The missionaries played a part in this process of social change. Their arguments and agitations against caste probably had an influence. Hindu reformers stimulated a desire for change. They publicised the condition of the outcaste and, through their examples stimulated Hindu attempts to improve the lot of the Pariahs. To eradicate caste in Christian community was a real problem. It was a delicate issue to tackle because the influence of the caste within the converts was such that they slipped into either Hinduism or another Christian congregation whenever they encountered a specific problem with caste. So this was also a practical reason why missionaries did not insist on the removal of the caste.

There is very clear evidence available on the different approaches of the Protestants and Roman Catholics towards caste. The Catholics with their own internal hierarchical pattern for instance of the Laymen to Bishop, had little moral difficulty in allowing caste distinctions in their congregation. For the Lutherans, the problem was more serious. They believed in the brotherhood of the community with no hierarchy, and this was precisely the reason why the Lutherans fought against the caste system. While the missionaries played a part in making the system more flexible and enforcing some change, they were not successful as they wished in destroying caste consciousness.

ROLE OF ANJALAI AMMAL IN QUIT INDIA MOVEMENT

R. Santhiya

Introduction

The history of Indian struggle would be incomplete without mentioning the contributions of women, because the sacrifice made by the women of India occupies the foremost place. They fought with true spirit and unafraid courage and faced various tortures, exploitations, and hardships to earn us freedom. When most of the men freedom fighters were men, the women whose names have gone down in history for their dedication and undying devotion to the service of India is a long one. And, women's participation in the Indian freedom struggle added to the legitimacy of the Indian freedom struggle. Their active participation not only changed their goals but also organized the activities.¹

Gandhiji first gave public expressions to the theory of Quit India Movement published in the "Harijan" in an article on the 26th April 1942, After deploring the introduction of foreign soldiers into India to and in India's defense, Gandhiji asserted that if the British were to leave India to her fate, as they had to leave Singapore non-violent India would lose nothing and Japan could probably leave India alone, "whatever the consequence, therefore to India", he continued the real safety and Britain's too lie in orderly and timely British withdrawal from India.² During the period of the Quit India Movement there were a few other development which exercised considerable influence on the freedom movement³. The Quit India Movement of 1942-44 is the next stage in the history of the freedom movement. It is also the final stage the period of struggle which began in 1920 came to an end with it and a period of negotiations started which

in about three years resulted in the withdrawal of the British and the achievement of freedom.⁴

There are some women who have been mingled in the freedom struggle and have gone to prison for the sake of freedom. South Arcot District in Tamil Nadu was considered to be important for the individual Satyagraha movement initiated by Gandhiji. Among many others, the prominent women who participated in it were Anjalai Ammal, Lakshmi Amma, Pathanji, Krishnaveni Ammal, Muthu Lakshmi Ammal, Aranganayaki Ammal and Jagadambal. In this research paper an attempt has been made to throw light on the participation of Anjalai Ammal in the Quit India Movement from Tamil Nadu.

Career of Anjalai Ammal

Anjalai Ammal was a social worker and reformer from Cuddalore. She started her political activism in 1921 with the Non Co-operation Movement and later took part in Neil Statue Satyagraha, Salt Satyagraha and Quit India Movement. Even though it was recorded in history records, one of the names *Cuddalore Mail* is one of the most popular names among the people and it is none other than Anjalai Ammal. Her husband was a martyr and her daughter and son- in-law were also martyrs.⁵ Anjalai Ammal was born in a simple family on 1890 at Mudhunagar, which is located in Cuddalore. When she was studying in school, during the year 1921, she started to participate in the freedom struggle at the age of thirteen and became the first women freedom fighter in Tamil Nadu.⁶

There was an image of Colonel Neil in Madras and the struggle was started to remove the statue, considering the cruelty of this tyrant in the city of Madras, considering the atrocities committed to the Indian people and soldiers during the first war of independence. The great leaders like N.Samayazhulu also participated in it. In 1927, Anjalai Ammal was the first to participate in the struggle to remove the statue. And it is to be noted here that she was elected from the Cuddalore constituency in the assembly election held in 1929.⁷ This was followed by the Salt Satyagraha in 1930, and in 1933, she participated in the Individual Satyagraha movement during the years 1940 and 1941, and in the year 1942 she also went to prison and her life has often been spent in prison.

Role of Anjalai Ammal in Quit India Movement

The Quit India Movement which broke out in the year 1942 was the last of all Satyagraha conducted by Gandhiji on the Indian soil. The beginning of the movement can be traced back to the World War II which broke out in 1939. As a true satyagrahi, Anjalai Ammal said she would write to and meet the Viceroy and appeal to every Briton to realize their wrong and Quit India after giving her complete independence.⁹ Gandhiji called off mass satyagraha on 14th July 1933. However, he allowed the people to court arrest individually.¹⁰

On 7th April 1934, Gandhiji withdrew the movement completely and invited people to work for the removal of untouchability and for the implementation of other items of constructive programmes. In the history of the freedom movement of India, the Quit India Movement of 1942 was really a soldier's battle, in which the soldiers gave a good account of themselves and laid down their lives as martyrs to the cause of their country's freedom.¹¹

The 'revolt' of 1942 made the British nation realize that their rule was no longer wanted by India.¹² Let every man and women in the country carry on his or her person a badge bearing the motto 'Do or Die'. This well proclaim our determination to be free or perish in the attempt to be free.¹³ A 'leaderless movement and the men folk being behind the bars the women were active throughout the movement. There was direct involvement of women in the extremist activities. Huge numbers of women martyrs were

listed in this movement. The struggle for Indian independence introduces Indian women to a new kind of liberation movement. A sense of responsibility and dedication towards one's own country led them to organize and fight for achieving the ends. In a mood of desperation, the Congress Working Committee passed a resolution in July 1942 calling upon the British to withdraw from India the all India congress committee which met in Bombay on 7th and 8th August 1942 endorsed. The All India Congress Committee met in Bombay on the 7th and 8th August 1942 and ratified the resolution, which had been passed by the congress working committee deciding inter - alia to start a mass struggle for independence on non - violent lines on the widest possible scale under the leadership of Mahatma Gandhi. After two days discussion it was passed by an over whelming majority.¹⁴

Anjalai Ammal participated in Quit India Movement struggle and also suffered many years in the prison. She was pregnant when she was arrested and sent to Vellore jail. And after sometime she was released for child birth and she was sent to Vellore jail again. She sold her family lands, her house and spent the money for India's struggle for freedom. She also made her nine year old child to participate in the struggle for removing Neil's statue and went to jail along with her daughter. Once Gandhi came to Cuddalore, the British government prohibited him to visit Anjalai Ammal. But she came in a horse with him and due to her courage Gandhi called her as South India's Jansi Rani.¹⁵

Mahatma Gandhi who enjoyed her patriotism took Anjalai Ammal along with him to the Wardha Ashram.¹⁶ The courted imprisonment of Anjalai Ammal is as follows:

- 1931 – 6 months
- 1933 – 3 months
- 1940 – 6 months
- 1941 – 18 months
- 1943 – 8 months
- 2 weeks – kept in Cannanore, Vellore and Madras jails.

She began to be called popularly as Cuddalore Mail.¹⁷

Conclusion

"When the history of India's fight for independence comes to be written, the sacrifice made by the women of India will occupy the foremost place", Mahatma Gandhi. The systematic study of women's past began when students of history recognized that they are witnessing a revolution. The Quit India Movement opened a new vista for Indian women. They got introduced with a new kind of

liberalism and social status which was unknown to them before. Quit India Movement drew the largest number women to the fore front. It was a struggle substantially waged by the womanhood. The sacrifices made by the teen aged girls, mother with babies in their wombs and old woman and their defiance of bullets and lathis speak of their valour, spirit of nationalism and patriotism.

CONTRIBUTION OF ANNIE BESANT TO JOURNALISM

T. Sangamithirai

Introduction

Annie Besant optimized the use of press and its power to preach and promote Theosophical thoughts, knowledge on Indian culture, importance of education, necessity of social reform, rationalism and need of Home rule. Annie Besant prompted that Indians should remember their ancient and medieval principles through her writings. Being a journalist, Annie Besant carried out valuable works and there prevailed a pleasant association between her political and journalistic works. Her articles in the newspapers picture her political views and the political needs of the massive Indian at the time of British rule. Her love for theosophy was also catalytic agent in fighting for the mission of freedom for India. She utilized the press as a powerful medium in awakening the Indian

people from their deep slumber. She was in contradiction of illiteracy, ignorance, blind beliefs, social unfairness and economic inequalities. Annie Besant entry into Indian politics not only coincides with her journalistic activities but also her contributions to India as a journalist opened up a new path in the freedom struggle of India besides raising her position and place as a Nationalist.

Role of Press in Indian Freedom Movement

The introduction of printing press in India was an event of revolutionary implication in the life of Indian people. The Press of all kinds and categories played an unarguably essential role in the Indian National Movement. It contributed to social reforms and advancement of Nationalism in India. The Press promoted the ideas of nationalist organizations. It propagated and educated the common people with regard

to political matters and developments. The Press was an authoritative factor in building and emerging Indian Nationalism and the Nationalist movement, Social, Cultural, Political and Economic. The press was a strong weapon in the hands of the Nationalist group who used to popularize their respective political programs, policies and methods of struggle and to form organization with broad popular basis among the people. The National movement, on its political side was possible because of the facility of political education and propaganda provided by press. The Indian people gained knowledge in worldwide events through the press.¹

Many newspapers emerged during Indian National Movement under eminent and fearless journalists, These include The Hindu and Swadesamitran under G. Subramaniya Aiyar, The Bengalee under Surendranath Banerjee, Voice of India under Dadabhai Naoroji, Amrita Bazar Patrika under Sisir Kumar Ghosh and Motilal Ghosh, Indian Mirror under N.N. Sen, Kesari (in Marathi) and Maharatta (in English) under Balgangadhar Tilak, Sudhakar under Gopal Krishna Gokhale, Hindustan and Advocate under G.P. Verma, and Commonweal and New India under Annie Besant.²

Annie Besant and Home Rule Movement

"Mother India is sleeping Indians! Awaken your mother. It is your patriotic duty to break the chains of slavery of your motherland"³

"Early in the war, I ventured to say that the war would not end until England recognized the autocracy and bureaucracy must perish in India as well as in Europe. The good Bishop of Calcutta with a courage worthy of his free race, lately declared that it would be hypocritical to pray for victory over autocracy in Europe and to maintain it in India."⁴

With these impressive words, in her presidential address at the All India National Congress session at Calcutta in 1917, Annie Besant shook thousands of Indians and galvanized them for the emancipation of India. Later, Besant wrote and published her own book advocating birth control entitled "The Laws of Population". This idea of a women advocating birth control acknowledged wide-publicity.⁵

Annie Besant came to India in 1893 and lived at Adyar in Madras, which became the headquarters of the Theosophical Society. Annie Besant was much impressed by Redmond's Home Rule Movement in favour of Ireland. At first, she felt that India needed to educate herself before she was capable of self-government, but by the outbreak of the First World War she was campaigning for self-government.⁶ She argued the case of India was likely to be more dependable friend of Great Britain than a dependent one. She said, "I am an Indian Tomtom, waking up all the sleeping sleepers so that they may wake and work for their motherland... This is my task."⁷ In 1914, she joined Indian National Congress and in 1916, she started Home Rule League. When Annie Besant approached Gandhiji to join her in founding a Home Rule League he refused that he did not wish to embarrass the British Government during the war.⁸ At Madras session of the Congress in 1914 she said, "India was not prepared to be any longer a child in the nursery of the Empire, and that it was necessary to confer self-government on her". In 1917, she was elected as President of Indian National Congress at the Calcutta session.

B.G. Tilak and his extremist group agreed to the policies and programs of Annie Besant, and together they provided an alternative style of leadership to Home Rule Movement.⁹ Annie Besant started the Home Rule League at Gokhale Hall, Madras in September, 1916 and B.G. Tilak simultaneously started the same Home Rule in Poona. The Home Rule League elevated the motto of Swadeshi, national education and home rule for India. Annie Besant's Home Rule League with 2,600 members in Bombay city, held meeting at Shantaram's Chawl area inhabited by Government employees. The activities of the Home Rule League involved in organizing discussion groups and reading rooms in cities, mass sale of pamphlets, and lecture tours. The Madras Government imposed restrictions on the movement and Annie Besant was arrested along with two co-workers, Sri Aurobindo and Sri Wadia. The highhandedness of the authorities raised tempest of protests all over the country, public rage compelled the Government to release her. Annie Besant sent a stirring message to the British Labourers concluding with the following words:

"Help us to become a free commonwealth under the British Crown and we will bring our manpower to secure world peace. Our people have died in your war for freedom. Will you consent that the children of our dead shall remain a subject race?"¹⁰ Annie Besant and her Home Rule Movement, which was then a dynamic stream which expressing to the Indian People's restless desire for freedom. The Home Rule Movement which marked the foundation of a new phase in India's struggle for freedom, placed a concrete outline of Self-Government.

Annie Besant, a Journalist

Annie Besant started a weekly paper 'Commonweal' in the year 1914. In the same year she purchased a monthly paper 'Madras Standard' and inaugurated its publication under a new name 'New India'.¹¹ Through these journals, she won incredible support in favour of cause of Indian independence through political reforms by peaceful means. As editor of a newspaper New India, she attacked the British Government of India and called for clear and significant moves towards self-rule. New ideas were flooded through papers, journals and books. Home Rule Agitation, which is organized through the two Home Rule Leagues of Tilak and Annie Besant announced their plans for such agitation in September, 1915 and worked in achieving the globe through her Newspapers New India and Commonweal. She wrote an article in the name 'Indian Self-Government' on 9th March, 1915 in The Commonwealth where she explained the techniques of governing a nation by saying "when the war was over, India might be ready to take her rightful place in the Empire". It motivated the minds of Indian people to march positively towards freedom.¹² Annie Besant in her another article 'The Chance' which was published in The Commonweal on 4th June, 1915 said "English education had imbued the flower of the Nation with ideals of Liberty and public spirit". Annie Besant consider U.P. Governor-in-council League as a sign of the change. In the article, she expressed her strong belief in India's freedom.¹³ Annie Besant confidently quoted "Time is with us, all lovers of Liberty are with us, God is with us, and Victory is assured" in her article named 'The National Movement' which was published on 2nd June, 1916¹⁴.

Annie Besant also played an vital role as an orator in Indian Freedom Movement. She incited Indians with truth in her speech. Annie Besant fearlessly said: "Soon I am going back to India, to strive there to increase the movement for India's freedom. That has a great part in this future, because as long as India is outside, a subject Nation, a War of colour may break out at any moment— the most disastrous War to which any civilization can be exposed. Before we can look for United States of Europe, we must make friends with our coloured brothers everywhere; and India is the one place where that is at once possible, because she is within the realm of what should be the great British Commonwealth of Free Nations instead of an Empire ruling over a subject people..."¹⁵

In her lecture on 2nd October 1927, in Federation of European States. Annie Besant encouraged brotherhood among Indian through her speech in 1910 on 'The Birth of New India' by Saying

"I am a Madrasi; I am a Punjabi; I am a Bengali; I am an upcountry mam, leave all that behind and teach your boys and girls to say 'I am an Indian'....."

Hindus, Musalmans, Parsis, Christians, must join hands, for all are Indians"¹⁶

Annie Besant's work entitled The Seven Principles of Men, Reincarnation were published by her in 1892. In 1895, Besant founded the journal called Arya Bala Boodhini chiefly to promote the Hindu faith. Subsequently in 1896, various theosophical literatures under the titles In the outer court Karma, The path of Discipleship, Bhagavad Gita and Man and his Bodies were published. In 1897 due to an increase in the number of members of the Theosophical Society from 281 to 1184, Besant published The Secret Doctrine. The Story of the Great War, referring to the Mahabharata published in 1898 shaped the foundation for her journalism. Annie Besant edited a journal called Lucifer after renaming it as The Theosophical Review. In 1900, she retitled the journal as Central Hindu College Magazine. Advance TextBook of Hinduism and the work Shri Ramachandra, the Ideal King published in 1901. It was also a practice of Annie Besant to compile her speeches and publish it in the form of a book. In 1903,

her lectures were published under the title *A year of Gratifying Success*. She wrote a book in the title "How India wrought for freedom" in the year 1916 and presented it by saying, "I fearlessly place this volume before the public, as a proof of India fitness for Home Rule."¹⁷ All these facts reveal that Annie Besant was a prominent writer and served as an impetus for her to be a journalist.

Conclusion

Unarguably, Annie Besant played a significant role in Journalism with her artistic way of writing. All her views about Home Rule, National Education, Augmentation of the status of Women, the Conditions of the Labourers, Spiritual thoughts etc., are brought in her writings. India of her contemporary period widened her opportunity of communicating her opinions and thoughts through pen and paper.

SELF HELP GROUPS AND WOMEN EMPOWERMENT IN DINDIGUL DISTRICT

A. Sangili & A. Anglin Sahaya Matey

Introduction

"Women's Empowerment" is a concept and a construct which is used by everyone in the world in all dimensions to indicate the increased activities of women's advancement.¹ Pandit Jawaharlal Nehru Former Prime Minister of India described 'the status of women indicates the character of the country'. Tamil Nadu is a pioneer in many respects for the empowerments of women to start with a group of many enthusiastic persons. E.V. Ramaswami Naiker's self-respect movement was started for women. It is the grassroot for women empowerment. 'Tamil Nadu Corporation for Development of Women Limited' was started in 1983, especially for the economic, social and political empowerment of women in the society.³ The social standing of any society is determined by

the social status of the women. The status of women in the society depends on the role played by them and how others look at the role.⁴ Women empowerment refers to increasing spiritual, political, social, educational, gender and economic strengths of individuals and communities of women. Self-help groups (SHGs) play today a major role in poverty alleviation in rural India. A growing number of poor people in various parts of India are members of SHGs and they actively engage in savings and credit, as well as in other activities.⁵

Self-help groups are generally facilitated by NGOs and increasingly advise and train members in a variety of on-and off-farm income-generating activities.⁶ Self Employed Women's Association in Gujarat and Madhya Pradesh, Mysore Resettlement Development Agency in

Karnataka, Professional Assistance for Development Agency in Rajasthan, Association of Sarva Seva Farms (ASSEFA) in Tamilnadu, New Public School Society in Uttar Pradesh and SAMBHAV in Madhya Pradesh have remarkable contributions towards the use of microcredit by Self-help groups.⁷ In order to enable all women living below poverty line to join and benefit from the self-help group movement, it has been estimated that one lakh new SHGs have to be formed in the State.⁹

Gender equality and women's development are being given newer dimensions on the international stage after the Beijing Conference in 1995. Realizing the goals of uplifting women, Government of India declared the year 2001, "Women's Empowerment Year". A National Policy for Empowerment was announced on 20th March 2001, with the purpose of ensuring women to acclaim their rightful place in the mainstream of the nation's social, political and economic life. The policy visualizes women empowerment besides empowering women to participate in decision making process.¹⁰ According to Mahatma Gandhi, intellectually and spiritually woman is equivalent to a male and she can participate in every activity with equal competence as a man.¹¹

Origin of Self Help Groups

Self-Employed Women's Association (SEWA) is the pioneer self help group and it was started in 1972. SEWA was started as a trade union for women in the unorganized sector and it had networked many co-operatives and emerged as the largest federation of co-operatives in the country. In 1976, Mohammed Yunus started women's groups in Bangladesh. Now, it has been developed into a bank named 'Bangladesh Grameen Bank'. Its report in February 1998 states that the bank has 1,138 branches and covers 39,572 villages and it has 23,67,503 members with men and women.¹⁵ Integrated Rural Development Program was the only self Employment Program for rural poor. A number of allied programs such as Training for Rural Youth in Self Employment (TRYSEM), Development of Women & Children in Rural Areas (DWCRA), Supply of Improved Tool kits to Rural Artisans (SITRA), Ganga Kalyan Yojana (GKY), and Million Wells Scheme (MWS) have been added with an intention to serve specific

areas to prepare the rural poor for self employment. In order to rectify the situation, the Government has decided to merge the entire above scheme in to a simple scheme called Swarnajayanthi Gram Swarozgar Yojana (SGSY). SGSY will focus on group approach Self Help Groups will be formed and steps will be taken to nurture these groups to enable them to function effectively and to choose their economic activity, efforts would also be made to involve women members in each group. In the G.O (Ms.) No.54 Rural Development and Panchayat Raj (GS.3) department, dated 28.3.2008, the Government has ordered the transfer of SGSY from the Project Office, DRDA to Project Office, Mahalir Thittam.¹⁶ Dindigul district was identified for the analysis because it is one of the backward districts as identified by the National Planning Commission based on certain yard sticks (2004) for implementing Rashtrya Sam Vikas Yojana (RSVY). Reddiyar Chatram Block has selected the criteria for the implementation of schemes in the districts.¹⁷ The social enhancement could be achieved by organizing them into Self-Help Groups which would provide them power base for self level. These groups are under taken by Non-Governmental organizations i.e Association for Sarva Seva Farms (ASSEFA) and Centre for Rural Education Research and Development Association (Centrereda). The numbers of members in self-help groups are minimum twelve to twenty. They get loans to run small scale industries like making perfumne sticks, dairy farms and flower shops etc.,. In each group, there are leaders, secretary and treasurers, to discuss financial matters. They conduct meeting once in a week. Special meetings are conducted once in a month to discuss the general and main facilities for women. They also discuss education and they also take efforts to create awareness on health and women empowerment.¹⁸

Mahalir Thittam

Mahalir Thittam scheme has been introduced by Government of Indja and in Tamilnadu during the year 1989.¹⁹ Mahalir Thittam program is implemented in partnership with Non- Government Organizations (NGOs) and community based organizations which are affiliated with TNCDW after due process. In Tamilnadu 3,91,311 SHGs have been formed

as on March 2009 with 62.93 lakhs women members including NREGS women workers and 9,696 SHGs were formed in the Village Panchayats where the SHGs coverage is inadequate and 10,000 SHGs were formed exclusively in urban slums. The members and office bearers of the SHGs promoted by Mahalir Thittam are provided with systematic training to bring about qualitative changes in their attitude and to promote cohesion and effective functioning of the group. All the SHG members are imparted with training in four modules for four days to orient them to the SHG concept. The office bearers of the SHGs are given training in three modules for six days to enhance leadership quality, team building and books keeping in Athoor Block of Dindigul district.²⁰ There are 10,971 Mahalir Self Help Groups functioning in Dindigul district.²¹

SHGs Economic loan in Dindigul

In 2009-2010, the target of the economic loan was given to 280 self-help groups, but now it is benefited by 327 self-help groups. The bank allotted total amount of Rs.11.50/-crores. The loan was 862.65/- and the subsidy was Rs.287.55/- crores. In 2010-2011, the achievement of self-help group target was Rs.75.00 crores.²⁴

Swarnajayanthi Gram Swarozgar Yojana Prodigames in Dindigul district

Swarnajayanthi Gram Swarozgar Yojana (SGSY) Scheme was introduced in Dindigul district from 15th April 1999. Self-help group women are supported under SGSY scheme and revolving fund associated with subsidy and loan are given by the government and banking sector. The women are able to create their own assets and manage their problems.²⁸ Components of SGSY are providing Revolving Fund to SHGs, Economic Assistance to SGHs, Qualitative Skill Development Training through reputed institutions and Infrastructure Development and Training. In 2011-2012, a sum of Rs.135.25 crores has been allocated for the implementation of the scheme with a credit target of Rs.284.10 crores.²⁹

Financial Achievement of SGSY Programs in Dindigul district

Year	Amount allocated	Amount utilized	Utilition level (%)
------	------------------	-----------------	---------------------

1999-2000	220	150.29	68
2000-2001	375	215	57
2001-2002	109	153	140
2002-2003	144	223	155
2003-2004	NA	NA	NA
2004-2005	147.92	383	259
2005-2006	197	231	117
2006-2007	219	228	104

During the year 2009-2010, the government has allotted the fund for Dindigul district through various schemes. 450 SHGs were benefited through the Mahalir Thittam, and 750 SHGs through SGSY schemes. Total by 1200 groups were benefited by getting the revolving fund. On 16th February 2010, Hon'ble Rural Development Minister and Local body distributed the revolving fund to 301 SHGs through Mahalir Thittam and 499 SGSY scheme, SHGs were benefited. Golden Jubilee was celebrated by SGSY on 27th March 2010. Revenue and Housing Development Ministers distributed revolving funds to 149 SHGs through Mahalir Thittam and 251 SHGs through SGSY scheme.³¹

Non-Governmental Organization in Dindigul

The totaling NGOs are available in Dindigul and they are Gandhigram Trust (1947), The Gandhigram Institute of Rural Health and Family Welfare Trust (GIRHFWT-1959), Council for Health Education and Rural Upliftment (CHERU-1978), Axiom Social Service Society (1986), Centre for Rural Education Research and Development Association (CNRERDA-1986), Centre for Women Development (CWD-1986)³³, Dindigul Multipurpose Social Service Society (DMSSS-1986), Sigaram Federation,³⁴ Mother Saradadevi Social Service Society (MSSSS-1988), Palani Hill Conservation Council (PHCC-1988), Society for Serving Humanity (1988), Rural Welfare Organization (RWP-1989), Saraswathi Women Education Service Training Improvement Centre (1990) and Group Initiatives By Motivational Educational for Development (1990) etc.³⁵

Village Extension Wing Activities in Dindigul district

The village extension wing function in Gandhigram Trust runs income generation units such as sandal garland, candle making, instant sambirani, wax toys, preparation of snacks, oil extraction, silk cotton processing and neem fertilizer production, Mushroom cultivation, Maintain herbal nursery etc. through Self-Help Groups.³⁷ SHGs Women also take up manufacturing and marketing businesses in the small scale level like bakery, readymade garments, embroider³⁸ and other activities such as fruit and vegetables selling running provision stores, coffee shops, tailoring, etc. The World Bank in Chennai conducted a program on 'Team Building Exercise' among the workers and the program explored the skill livelihood activities. Around 320 self-help group members participated in the program and gained knowledge.³⁹ Village extension team arranged training program on Watershed Development. One hundred and ninety Self-help group members participated and learned micro enterprises activities from Vayyampatti, Musiri, Marungapuri and Thittiyarn block in Trichy district. The major topics covered during the training programs are agriculture related livelihoods, micro enterprises, Vermi compost, pesticide control measures and exposure visit to Gandhigram Trust in Gandhigram in Dindigul district.⁴⁰ Providing access to finance is a form of empowerment of the vulnerable groups and it acts as a liaison between banks and village people through their self help groups for engaging themselves in income generating activities. Training is also imparted to them to acquire necessary.⁴¹ Sigaram Federation has 132 SHGs and there are 1,580. Dindigul Multipurpose Social Service Society (DMSSS) has 112 SHGs and there are 1,344 members.⁴²

During the year 2012, Dindigul district has 12,850 SHGs and in rural areas 1,98,827 members are in the groups. 4,077 SHGs are functioning in urban areas with 62,502 members in the groups. Totally 16,927 groups and 2,61,328 members are benefited by SHGs.⁴³ The village extension wing is also working on promoting the sustainability of Self Help Groups, empowerment of women and strengthening the federations. Athoor, Dindigul, Nilakottai and Vedsandur of Dindigul district

have 845 Self Help Groups with 6000 members from in 21 villages. These Groups are organized into 25 federations, out of which 8 federations have been registered under Trust Act. The trust has also extended its service to the remote areas of Kodaikanal Block and 55 women Self Help Groups are formed into three federations. The members of Self Help Groups are given capacity building training, skill training, leadership training and training on entrepreneurship and skill development. Gandhigram Trust has equipped the members to manage their accounts and to start self-employment ventures through training programs.⁴⁴ Related to saving and Credit details of self-help groups in 2007-2008, total saving amount is Rs.55,66,208, total credit amount is Rs.3,70,75,055 and subsidy given amount is Rs.30,70,000.⁴⁵

The award is given to the self-help group which is functioning well. Ten awards are given to the best self-help groups at the State Level. Two awards are given to best self-help groups at the District level. Certificate is given to the best self- help group at the Union Level.⁴⁸ Gandhigram trust was awarded by Makkal TV for the best extension work in 2007. Canara Bank awarded Gandhigram Trust for its best performance in Self Help Group management. Gandhigram SHG Federation has received the Manimegalai in 2007, from the government of Tamilnadu.⁴⁹

Conclusion

India is a developing country but grappling with several problems in various aspects such as social, economic, political and cultural. Self Help Groups help the people to reduce these problems with some techniques, tools etc. Nowadays, many NGOs are planning, implementing and monitoring the Self-help groups. It is one of the best available models to achieve sustainable development and eradicating poverty among the rural areas. Self help groups look strategically at how programs can actively promote gender equality and women empowerment. Most of the women in the study area are uneducated and they do not make any efforts to have higher education. This may hinder the empowerment of women.

EXPERIENCING HISTORY THROUGH VIRTUAL REALITY: A DISCUSSION.

Sarath A Pradeep

Introduction

"History provides us collective memory; it gives us a sense of connection to place, time and community"¹. The collective knowledge of the past is one of the reasons for the success of humans as a species. Collecting and archiving knowledge was an integral part of the human race and this habit definitely impacted the way we survive. The transfer of this collected knowledge to future generations is a mandatory process for the existence and progress of the humankind. Technology has always aided us in this transfer and collection of knowledge². Three generations of educational computing have passed and we are in the early stages of fourth³ with Virtual Reality, Augmented Reality and

Mixed Reality technologies disrupting the way people learn. This paper aims to introduce the Virtual Reality innovations and approaches in the various parts of the world.

Virtual Reality

Virtual Reality as a technology is not very new to academia, the technology has proved its efficacy in providing life-like learning and training scenarios. Virtual Reality is the collective term used for a set of disruptive technology that enables the user to be present in a digitally created virtual environment by using computer technology⁴. According to William R Sherman, it is a communication medium⁵ and it has the ability to create a sense of presence needed to

initiate the necessary drive for learning in the students⁶. Virtual Reality has the ability to create real-world experiences in the user's mind which translates to the feeling of being present in the real world while being in the virtual world. The experience of Virtual Reality can be classified broadly into three. The first one is the computer-generated simulation in which the whole environment is created by animation. The second is the 360-degree videos or pictures which are the actual real-world footages shot using a 360-degree camera. The third is the combination of both the computer animation and real-world footages. Virtual Reality can also be classified by the technology used in achieving immersion. There are standalone Virtual Reality Head-Mounted Displays (HMD) like Oculus Go, Mobile Virtual Reality like Google DayDream and High End fully immersive Virtual Reality like HTC Vive and Oculus Rift. The various projects that apply Virtual Reality to teach or aid the learning, and recreate or preserve the historically important places digitally are discussed in the coming section.

Google Expeditions

Google Expeditions⁷ is an initiative that provides Virtual Reality and Augmented Reality content for learning. The user can experience the content available using a mobile device equipped with the Expeditions app, addition to this a Cardboard or a Daydream viewer will enhance the experience. The tours available in the app is curated by reputable organisations like National Geography, American Museum of Natural history, Guggenheim Museum etc. Few examples of the history related google expedition tours are given in the table below.

Open Heritage Project

Open Heritage Project⁸ is an initiative by the Open Heritage 3D Alliance (OHA), which aims to provide free access to high-resolution 3D data of cultural heritage sites across the world. It is a joint venture by CyArk, Historic Environment Scotland and the University of South Florida Library with the support of Google. The project maps and creates detailed three-dimensional models of the ancient heritage sites which can be accessed from the website. The project allows the users to experience 26 world heritage sites that are in 18 different countries in Virtual Reality.

Name of the Tour	Description
7 New Wonders of the World	This tour is a collection of the new seven wonders of the world in a unique aerial view.
Chhatrapati Shivaji Maharaj Terminus, Mumbai	This tour examines the architecture of the Chhatrapati Shivaji Maharaj Terminus (CSMT) was built in 1887. This is a World Heritage Site.
Devprayag	This tour takes the user to Devprayag, a town situated in Uttarakhand, which is a holy pilgrimage site for Hindus all over the world.
Jaipur, India – The Pink City	In this tour, the user will experience the city's landmarks, culture, and science. The city was Established in 1727 by Maharaja Sawai Jai Singh II.
The Past and Present of India's Railways	This tour takes us through the various places in northern India that preserve India's railway history.

Some of the open heritage projects that have captured the world attention are given below.

Name	Country
1 Apollo 1 - Grissom White and Chaffee Memorial at Launch Complex 34	United States of America
2 Pompeii	Italy
3 Temple of Apollo - Portara	Greece
4 Teotihuacán - Pyramid of Quetzalcoatl	Mexico
5 Masjid Wazir Khan	Pakistan

Nearpod VR

Nearpod⁹ is a commercial educational content provider which can be termed as an integrated platform for interactive learning. Their lessons are in the Virtual Reality field trip model, which integrates quizzes, videos, 360-degree images and videos, weblinks etc to provide a rich experience to the user. Nearpod employs Virtual Reality as a tool along with the traditional text, image and video modalities to enhance the learning experience. Nearpod provides Virtual field trips on, "The French Revolution", "The Holocaust", "Exploring the Magna Carta", "Ancient Greece", "World History: The Bolshevik

Revolution” etc. Nearpod allows the students to use a couple of Virtual Reality content without payment by creating a free user account.

ClassVR

ClassVR¹⁰ is yet another commercial player in the Virtual/Augmented/ Mixed Reality Educational landscape. They also allow the teachers to add their own content into the package. ClassVR also provides standalone Virtual Reality headsets which do not need a mobile phone to operate and these headsets are gesture controlled. They provide Virtual Reality content in American History, Ancient Britain, Ancient Cambodia, Ancient Egypt, Ancient Greece, Aztecs, Holocaust etc.

There are different Virtual Reality experiences available apart from the above-mentioned content providers. The app, “Lithodomos VR” provides the user with an experience of the ancient city of Jerusalem under the Roman rule in the first century. Sibro¹¹ a Virtual Reality platform for educational content created Virtual Reality tours on the first world war sites in collaboration with world war historian Peter Barton. “Acropolis”, “Rome”, “Stonehenge” and “Titanic” etc. The Design Innovation Centre of the IIT Hyderabad spearheads an ambitious project of documenting, preserving and conserving the heritage monuments and architecture of our country.

Conclusion

Technology has always improved the way we learn and Virtual Reality is the latest addition to do the same. The above-mentioned

applications use Virtual Reality to enhance the way we learn and teach. Google Expeditions is one among the most readily available and cost-effective tool to teach or learn history in Virtual Reality. The abundance of content, comparatively inexpensive HMDs and the flexibility to create content makes Google Expeditions the first choice to introduce Virtual Reality learning among the students. The Expeditions application is a gateway to many of the historical and heritage locations that are not readily accessible to the students. Museum tour in the google expeditions allows the users to experience a museum virtually without physically going to the place. The Open Heritage Project provides the Virtual Reality content of places that are now restricted to the public. For example, the Ananda Ok Kyaung temple in Bagan, Myanmar was mapped prior to the earthquake that hit the monument in 2016. Both Google Expeditions and The Open Heritage Project can be accessed with low-cost VR equipment like google cardboard or mobile VR. The other applications discussed, the Class VR and Nearpod are commercial applications which provide full VR educational content to the educational institutions, they aim to bring forth VR as a medium to enhance learning.

Virtual Reality has proved its effectiveness in teaching and learning. Virtual Reality experiences create a lasting impression in the minds of young learners. The faster we adopt this technology into our history teaching curriculum the better our students can cope with the future learning goals. Early adoption of innovative technologies like Virtual Reality will definitely improve the quality of education in our country.

THE REVOLT OF THE RAJAS OF SOUTH CANARA AS RYOTWARI REBELLION (1799-1800)

Satish Gatti

Nature of the Rebellion

Munro, the first Collector of Canara, Munro opines that under native rulers the ryots barring few never resisted the oppressive and exploitative administration and they were in general submissive to the government.¹ Quite opposite to this opinion of Munro, the submissive and weak ryots of Canara organized series of revolts against company's oppressive revenue policy and small revolts were occurred in 1804 CE, 1810 CE and 1828 CE in South Canara. Other notable Rebellions are 'Koot Rebellion 1830-1831 CE' and 'Amara Sullia Revolt 1837 CE'. The ryotwari revenue system was responsible for these series of rebellions. In this article the native raja's rebellion in 1799-1800 was critically analysed.

The colonial officials depict the local rajas revolt as an act of rebel and equates with banditry. The forceful attempt to regain lost power by the raja of Vittal was considered by a colonial official as 'terror' and 'social banditry'.² Interestingly the same banditi Raja's were supported by the company government in their rebellion against the rule of Mysore Sultans.³ The scholars like Tara Chand, M.V. Krishna Rao and G.S. Halappa, K. Rajayyan and T.T.Sharma have identified similar resistance movements elsewhere in India and interpreted them as 'war of Independence'. He further opines that the revolt of the raja's were 'restorative rebellions'. Bhat states that the re-establishment of the feudal authority was the motive for these rebels. According to him, it was 'backward looking', 'social banditry' with a thin veil to conceal the economic grievances.⁴ Though Bhat Shyam N. argument is in totality a critique of colonial government, yet the word 'restorative' in a way places the local Rajas in old feudal set up and

portrays colonial rule as a 'saviour' of native people from the exploitation of the native rajas.

Rajayaan identifies, British deliberately depicted the rebels as a group of lawless banditry and it was an attempt of maligning the victim.⁵ It was not restorative or backward looking because even prior to the British rule, the raja's of South Canara opposed the high handedness and excessive demands of Keladi and Mysore Sultans.⁶ It was to oppose the excessive revenue demand of Hyder, raja of Vittal joined with the British.⁷ Even the effort to restore the rule of Fateh Hyder as successor of Tipu Sultan was not convincing. The local rajas rebelled when the new collector Munro was not interested to divest power with them and in the name of ryotwari tries to reduce their position before their own subjects.

The Rebel Raja's

The native raja's Vittal, Kumbla and Nileshwara with small principalities of South Canara ruled under Keladi and Mysore Sultans. In between the fourteenth and nineteenth century, the Heggade family of Vittal ruled the nineteen villages of Vittal 2000 *sime*.⁸ The raja of Vittal came under the control of Keladi in 1608 CE and then under the Mysore Sultans in 1763. The rule of Kumbla Raja's also historically situated in between the fourteenth and the nineteenth century. Its territory bounded by the Nethravathi in the north and Chandragiri in the south and the Western Ghats in the east and the Arabian Sea in the west.⁹ The king of Kumbla Ramantharasu had authority over Bekal Taluk which contained sixty four villages.¹⁰ The Raja of Vittal and Kumbla in their fight against the Mysore Sultans sided with the British and tried to acquire the power over their principalities. Both, raja of Vittal and the raja of Kumbla took

shelter under British at Tellicherry and received pension. The raja of Nileshwara remained aloof from the power struggle between company and the Mysore Sultans. The king Rajavarma Raja tried to establish his authority over Nileshwara.

In 1799 CE, after the acquisition of Canara by the East India Company all these local rajas wanted to establish their authority over their own territory.

Munro as a colonial master wanted to increase the power and authority of the company and to reduce the position of the native rajas and hence he introduced ryotwari. In ryotwari the local rajas were termed as mere amildars and not the rajas of the region.¹¹ Munro states that, 'Heggade though usually styled Rajah by the company servants as I believe has no right to that title, his ancestors were the Head men of vittal and of ever they had any Rajahship both the name and substance being long been done away for under the Rani of Biddenor, the uncle of the present men was no more than the amildar and renter of vittal.'¹² The right of rent collection denied to the raja's of South Canara and they were sent to Tellicherry.

The revolt

During 1799-1800, rebellion of the local rajas of South Canara were vividly depicted by the colonial officials. Munro charges that, Vittal Heggade and his nephew were responsible for dissuading the ryots paying their rent to the company government.¹³ According to Munro, the patels did not come to the collectors office along with the ryots because they were threatened by Heggade.¹⁴ Munro narrates, after escaping from Tellicherry the Vittal raja along with followers plundered the temple of Manjeshwar and entered his principality mounting on an elephant. The raja's and his followers act in the region depicted by Munro as 'banditi'.¹⁵ The plunder of the temple by the raja of Vittal consider by Bhat Shyam N. is an attempt of a retaliatory nature because of the non-payment of land rent by the temple authorities.¹⁶ The nephew of Vittal raja residing at Ponnayee stationed his men at nearby places to control movement of grains and other articles and gave orders to the ryots, not to go to 'Captain Munro'.¹⁷ Later the rebels occupied Uppinangadi, plundered Bantwal and established their authority over Puttur.¹⁸ Munro states that, during

the rebellion, Heggade of Vittal has collected *kists* from the ryots. He informs that, raja of Vittal by the assistance of his personal following armed with some of the inhabitants took oath of obedience. With the help of them, he organized pillages along with a guard of 300 people. He collected five percent sarkari revenue from those regions of the neighbouring district. He levies heavy fines from person, whom he suspects of disaffections and confiscated the whole property of the inhabitants.

Couple of Hundred Thieves

According to Munro, the revolt of South Canara in 1799-1800 CE was an attempt to establish the rule of Futeh Hyder and as successor of Mysore.¹⁹ Futeh Hyder also got support of Subba Rao and Krisna Naik/Timma Naik. Bhat Shyam N. opines that Fateh Hyder in reality was Mahtab Khan a native of Coorg and was employed by Haidar and later by Tipu at Srriangapattana. Subba Rao also joined with them rebels. According to Pundikai Ganappyya Bhat this Subba Rao may be Pattumudi Subba Rao referred in Jamalabad Kaifiyat. Bhat Shyam N. opines that these rebel chiefs sent their emissaries in the name of Fateh Hyder, son of Tipu and prisoner at Vellore, to the villages and enlisted the support of the disbanded troops of Mysore and the deserters from the forces of the company.²⁰ With Timma Naik support, Fateh Hyder established his authority over Bailangadi in Puttur Taluk. Krishna or Timma Naik valiantly fought against the British at Jamalabad fort. Munro equates the above rebel group, including native raja's of South Canara as 'couple of hundred thieves'.

Raja of Kumbla in his attempt to regain power successfully prevented the inhabitants of his region from making a settlement with the British for a period of two months. Along with a body of armed men the nephew of the Kumbla Raja tried to rebel against the British at Adoor. Raja of Nileshwar also resisted the British occupation of his territory and made his ryots oppose to have any settlement with the Company.

The king of Vittala was hanged and raja's of Kumbla and Nileshwar accepted British supremacy and signed a treaty with them.

Conclusion

The name of ryotwari was not only effectively used by Munro to justify the British rule but also through it the company government completely excluded the local rulers from their positions. After the death of Tipu the rajas of South Canara wanted their power back Through ryotwari, Munro denies any role to the chieftains, feudatories or local raja's in colonial power structure. For him there were only two parties one is king or government another is cultivator. The local rajas according to him becomes mere amildars or revenue collectors. The ryotwari system did not attach the real authority or power with the ryots in the local level, but with the manageable small proprietors who were known as mulawargdhars Munro was well aware the real positions of the native kings of South Canara, yet he wanted to remove them to establish direct rule of the company government in the name of ryotwari. As a pensioner Vittal Raja, Ravivarma Narashima Domba Heggade lead a very difficult life at Tellichery. He had to pay money to several persons and institutions. Thus without any error of natives, they were reduced from the position of local raja to mere

amildar, the small proprietor who owns large tracts of land becomes mere ryot and the position of ryots further reduced as tenants, agricultural labourers. Prior to the introduction of ryotwari, Munro also recognized the rebellious raja's were the raja's of the region. Raja of Vittal wanted to take possession of Vittal by paying its present assessment.²¹ When it was opposed he revolted against the British. Thus. in the name of ryotwari the native raja's were dethroned and new revenue officials were appointed for the revenue collection. The process of revenue collection by the Company revenue officials forcefully stopped by the rebellious rajas and they instructed to the natives, not to pay revenue to the company government. The ryotwari was also used as a training opportunity for the company officials, as a tool of accumulation of knowledge and a system of control. The 'ryotwari system' created a wrong image as a 'just revenue system' among the nationalist historians.. When the nationalist historians praised the ryotwari system without knowing its inner dynamics, it became a legitimization tool for the company to colonizing the mind of the Indians.

THE CULTURAL EMPOWERMENT OF WOMEN THROUGH NAIR SERVICE SOCIETY

S.R. Saumya Raj

Women Empowerment means to make one woman powerful or equip one with the power to overcome the challenges of life, to face the disabilities and inequalities. Through this they occupy greater ability to plan their lives, autonomy in decision making, greater control over the circumstances that influence their lives and freedom from the shackles imposed on them by custom, belief and practice.

Our Indian Constitution provides provisions to secure equality. The Parliament also enacted various laws to fulfill constitutional obligation of women empowerment. Though these policies and programmes, the conditions of women has improved in a significant way by the Government of India but the changes visible only in urban areas not much in semi – urban areas and villages. For this purpose several Self Help Groups (SHGs) and Non-Governmental Organizations (NGOs) working for social, economic and political empowerment of women.

In Kerala, from the ancient period onwards there was a favorable ground setup for women and it paved the way for the outstanding success of women's development. With the support of NSS, there were several empowerment programmes organized through *Karayogams*, taluk unions and other institutions. The women members of each *Karayogams* were actively participated in all these programmes.

The culture of Kerala is treasure including art forms, language, festivals, music, literature, architectural style, heritage centres, archaeological monuments and so on. The Kerala culture is the synthesis of Aryan and Dravidian culture.

The Nairs are the integral part of Kerala culture. Traditionally this warrior groups made a strong history in Kerala. They have a unique culture and followed by joint family system. *Kalaripayattu*, *Thiruvathirakkali* and *Kathakali*, etc., were the important art forms Community also contributed much in the field of literature too.

On the basis, the development of Malayalam literature has been divided into three

named periods such as ancient, medieval and modern. All these three period the field of literature has developed a lot. The ancient and the medieval period the literary field was fully occupied by the Brahmins and they never allow any other community to enter in this field. When the Malayalam literature originated, the same period is also considered as the growth of Nair community.

In the field of Malayalam literature Niranathu Panikkanmar (Madhava Panikker, Sankara Panikker, and Rama Panikker) were the first to contribute from Nair community. Their writings were helped the Nair community to achieve a strong position in the society. Madhava Panikker was the first person from Malayalam literature, who translated *Bhagavath Gita* in Malayalam. The *Unarthupattu* (awakening song) was written by Ayyappilli Asan also belonging from Nair community. Another famous personality belongs to Nair community was Iravikkutty Pillai. *Ulakadaperumal Pattu* and *Panchavankattuneeliyude Pattu* were famous in Northern Travancore areas had much importance in that time. In *Vadakkan Pattu*, *Kalaripayattu* and local ballads, we can also witness the influence of Nair dominance. In all these evidences we can understand the position of Nairs in the medieval and modern period of literature.

During the 18th century witnessed the two great changes in the field of Malayalam literature such as the Nair women entered into the field of literature and the literary field was fully under the control of the Nairs. The first Nair woman who entered into the field of Malayalam literature was Kunjukkutty Thankachi, the daughter of Irayimman Thampi. The beginning of the 19th century witnessed the origin of Nair Service Society (NSS) under the leadership of Mannathu Padmanabhan. This organization promoted all the cultural activities among the Nair community. Kalamandalam Kalyanikkutty Amma and Thankamani Amma, spend their entire life for the growth and development of *Mohiniyattam*.

Most of them were the wife of prominent Nair personalities. Their husbands were greatly supported them. Some others were came into prominence with the influence of their father or brother P.C. Kalyanikkutty Ammm, the famous writer in Kerala entered into this field with the influence of her husband with T.K. Krishna Menon. Gomathi Amma, who has entered into this field with the support of her husband Barrister A.K Pillai, P. Kamalamma came into the sphere of literature with the help of V.K. Parameswaran Pillai, the famous historian. The other women writers such as Ambadi Karthyayani Amma, Thottakkattu Gaurikkutty Amma, Ambadi Ikkavamma, K.P.Kunjulekshmi Amma and K.P.Gaurikkutty Amma were entered into literature only through the influence of husbands as well as NSS.

In the modern period the name of Balamani Amma can considered as the shining star in the field of literature. She contributed much to the field of Malayalam as well as in English. Like Balamani Amma, her daughter Madhavikkutty (Kamala Surayyah) also contributed much too both languages.

The other such activities promoted by the NSS for the development of culture such as the publication of the monthly magazine named as 'Service'. It mainly discuss about the cultural activities of each and every *Karayogam* under NSS in all over Kerala. The first part of this magazine covered by the articles related to spirituality, speeches delivered by Mannathu Padmanabhan and some other articles, poems and short stories written by the members of various *Karyogams*. The second part of this journal starts with the news relates the services of Nairs includes yearly Kalamelas, workshops, seminars, discussions, festival celebrations, commemoration day celebrations, campaigning programmes, cultural programmes, admiration programmes, language skill programmes etc.

In every year, the NSS was conducting Mannam Kalamela for the purpose of the reunion of the family members of all *Karayogams*. It's also promoting the cultural activity of the members too. For that they were conducting the different cultural competitions in the field of painting, story writing, essay writing, bharathanatyam, mimicry, light music, mono act and malayalam recitation.²⁴ The NSS also organizing workshops for different aspects such as motivational

programmes, career guidance, spirituality and pre-marital canceling.

For the formation of cultural clubs in all over India the NSS Co-ordinate seminars. Through these seminars the members spreaded messages, basic formulas of NSS and list of cultural activities in all *Karayogams*.

Commemoration day celebrations were conducting by the NSS in every year, especially for Chattampi Swamikal, Mannathu Padmanabhan, Pattam Thanu Pillai etc. In that particular days they were conducting some special programmes ²⁵

The NSS was promoting the cultural activities. In every year the month of Ramayana (*Karkkidakam*) they are conducting the quiz programmes and the debate competitions related to Ramayana. During the time of *Onam*, the national festival of Kerala the NSS organizing lots of traditional arts forms such as *Thiruvathira*, *Kalaripayathu*, *Vallam Kali* (boat raise) and *Kadhakali*.²⁶ And also honoring the famous personalities in the field of Thiruvathira (Prasanna R. Warriar) and Vanchi Pattu (Asan Gopikuttan Nair).

The language skill programmes were undergoing with the support of NSS for the members of Mannam Bala Samajam. In these programmes some eminent persons took classes about the life style, child deceases and how we can avoid this decease through our daily life style. All these programmes conducted by the NSS for the development of culture among the Nair community as well as for others.

Except that the personalities in the literary field were includes Vallathol Narayana Menon, V.C.Balakrishna Panikker, O.Chandu Menon, Vengayil Kunjiraman Nair, E.V.Krishna Pillai, Kesava Dev, Thakazhi Sivasankara Pillai were contributed a lot in the literary field. In the field of Malayalam poems O.N.V. Kurup, Kavalam Narayana Panikker, Sugatha Kumari, Kadammanitta Ramakrishnan, S.Ramesan Nair and Gaurisapattom Sankaran Nair were contributed.

The Nair community also made tremendous achievements in the field of Malayalam drama also. The persons include Swadesabhimani K. Ramakrishna Pillai, C.V.Raman Pillai, M.G. Kesava Pillai, Thoppil

Bhasi, N.Krishna Pillai, K.Padmanabhan Nair, Kavalam Narayana Panikker, Kalanilayam Krishnan Nair etc., were paid much for the developments of culture. The historians such as Sankunni Menon, K.P.Padmanabha Menon, Sardar K.M.Panikker, T.K.Velu Pillai, V.R. Parameswaran Pillai, Elamkulam Kunjan Pillai, S.Gupthan Nair, V.D.Induchudan etc., made valuable contributions. In the field of science fictions the names of Dr.K. Bhaskaran Nair, P.D.Bhaskara Panikker, Prof. P. Ramachandra Menon, Dr.T.K.Sathish Chandran and Dr. K.Sivadasan Pillai were contributed for the growth of culture among the Nairs.

All these persons are belonging to Nair community. The film directors like Adoor Gopalakrishnan, Bharathan, G.Aravindan, P.N. Meon, M.Krishnan Nair, P.Padmarajan, Priyadarsan and the actors such as Mohanlal, Jayan, M.N.Nambiyar, Sukumaran, Suresh Gopi etc., and the actress includes Jayabharathi, Seema, Ragini, Padmini, Lalitha, Shobana, Navya Nair etc., and the singers includes P.Leela, Malaysia Vasudevan, K.S.Chitra, G.Sujatha and M.G.Sreekumar were made immense contributions to the cultural field of Kerala especially in Nair community. The NSS was always giving full support to the cultural activities of all these personalities.

VIOLATION OF BRITISH LAW BY DIFFERENT CENTRES OF ROYAL INDIAN NAVY IN 1946: A HISTORICAL STUDY

Saumyaranjan Behera

INTRODUCTION:

British Royal Indian Navy was very strict on their rules and regulations. To maintain Discipline in the Armed Forces, there was a punishing system that uprooted indiscipline, before it could spread among the Military Personnel. In fact, during war and peace, the defense force is a major role. But in 1946, as India was governed by British Government. The act of violation started by the Royal Indian Navy Ratings for many causes. There were 9 'mutinies or violation against British law' between 1942 and 1945 and inquiries which pursue some of the mutinies administration.¹The Royal Indian Navy revolt also called violation of British Law by Royal Indian Navy ratings or Bombay Mutiny which was started from Bombay and spread by Indian ratings on board Ship and establishment throughout from Karachi to Calcutta and also abroad on 18 Feb 1946². The strike started from the Signal Training Establishment HMIS Talwar,

Bombay in which around 1000 ratings were participated. During the World War I and II, the RIN ratings were came contact with the other Navies and realize the standard of lives and rules and regulations. They also inspired by Subash Chandra Bose who stated that The German and other countrymen joined with INA for independence of India, where as Indian Military personnel were supporting the British. The Ratings gathered at Bombay Parade ground and formed a revolution committee in which, they selected President as M.S.Khan, Vice-President, Madan Singh and Secretary V.Akbar and the committee consisted of 14 members. The main demands of the Committee were as follows³:

- (i) Release of INA and other prisoners.
- (ii) Action against the British Officers who badly treated and used rude language to the crew.
- (iii) All the facilities should be provided as per Royal Navy.

- (iv) Better accommodation and Indian Food.

The ratings hoisted Indian National Congress and Muslim League flags by removing British Flags from the Ships. British Government punished them in different ways after termination of the Violation.

According to P.E Roberts "A short period of naval revolution played a big contribution for Indian freedom struggle in February 1946 and revealed the narrow margin by which the British continued to maintained order of a kind"⁴

THE VIOLATION OF NAVAL LAW SPREADS ALL OVER INDIA AND ABROAD:

At Bombay, the ratings started general strike on 18 February in which all the workings class people and all other personnel joined in the revolt. They closed the city transports, railway workshops and all the textile mills. British Government sent two army battalions to restore the revolt. They fired against the Civil people in which around 228 civilians killed and 1046 injured.⁶ This crudeness of British Government spreads all around RIN centers. Bombay and Karachi were main and large centre at that time, the strike of violation was speeded different centre of RIN like fire.

The Principal centre of Royal Indian Navy was Bombay, in which large number of ratings with big barracks and around 20 ships in the harbor were based. The revolt spread all over India and abroad which involves more than 78 ships of various RIN centers like Madras (Chennai) Karachi, Calcutta(Kolkata), Bombay (Mumbai)⁷, Mandapam, Vishakhapatnam (Vizag), Cochin and Andaman and only two shore establishment and 10 ships were not joined the mutiny.

After Bombay and Karachi, Calcutta was one of the most important centres of the RIN. The ratings of Calcutta also started violation by stopping the work and continued it up to 6 days although the ratings of Bombay and Karachi had surrendered. Soon after got the news of Bombay and Karachi strike of RIN ratings, They also spared the news from shore establishment to ships in the port⁸ in which there were one women's unit of RIN (WRIN) which was also gave their hands with the violation on the second day of strike, 20 February, The WRIN came

around the ships and also shredded the news. It showed a heroic role by these girls during those frantic days ⁹.As the men ratings does not want to involve the WRIN ratings, so that they sent them to Royal Indian Naval Ship Hoogly¹⁰. The ratings of HMIS Rahjaputana also joined in the violation. On 25 Morning, British Royal Indian Navy Officers sent the revolutionaries for the imprisonment in a camp¹³

On 19 February, the same violation was also seen in Madras. There were no ships. But around 150 ratings of HIMS Adyar participated one day strike which only affected the functioning of working and was soon finished after they had the surrendered news of Bombay. The civil people of Madras were also joined the one day strike in which they possesses the slogan 'Jai Hind', 'Bombay Strike' and 'Release INA men' in which the driver of trucks and buses were also shouted the slogans and spread the news in every street of Madras¹⁴.

On February 24, strike seen in Royal Indian Air Force (RIAF) Centre which was a transportation camp near Red Hills Lake in Madras. Around 150 personnel of the RIAF joined in a hunger strike. The mutiny was stopped after they meet with their Squadron Commander Hardings with their memorandum of grievances. They claimed for equal provision as per Royal Air Force (RAF), reduced the working hours and better travelling facilities.

The Naval strike was also spreads into the ashore establishment of Royal Indian Navy Centre Valsura which was located in Jamnagar, Gujarat. The total strength was 326 ratings.¹⁵ In the evening time they heard Godfrey's broadcasting and encouraged a lot by the broadcasting and they pull down the congress and Muslim league flags while flag of communist party of India was kept flying.¹⁶ The commanding Officer of Royal Indian navy Ship Valsura announced in the broad cast RIN establishment Valsura Had not taken part in the violation.¹⁷

On 20 February the ratings of naval base Vizagapatam (now Vishakhapatnam) also started violation. Other ships like HMIS Shillong, HMIS Ahmadabad, HMIS Sonavati and HDMC Flotilla¹⁹. The ratings removed the arms and ammunitions from the ships. Also the civil people of Andhra Pradesh joined with the naval ratings.

The students went on hunger strike and stopped the railway activities in Guntur. The youth from different cities like Hyderabad, Karimnagar, and Suryapet of Andhra Pradesh also joined their hands with the naval mutiny.

At Karachi the mutineers threatened to commit acts of violence. HMIS Hindustan was forcibly taken over by the ratings and were bombarded to the town from the ship²⁰

At Cochin also the violation in the form of hunger strike was seen after hearing through the BBC news from the Information room and local newspapers on 21 February evening. Cochin was a large harbor of RIN in which many ships were anchored. The Naval shore establishment of Cochin was HIMS Vendurthy. On the next day the ratings formed a committee and raised their demands by pasting on the notice board. They had gone on hunger strike to demand better food and basic needs²¹.

The Naval ratings marched to Ernakulam Street with slogans as 'Cease fire in Bombay' and 'Indian navy Zindabad'.

Royal Indian Naval Headquarter was situated at Delhi, there was very small establishment HMIS INDIA containing mainly signal and telegraph ratings. All the communications and administrative works were stocked off.

Violation in the form of strike was not only spread the RIN center in the country but also the Indian rating overseas. At Aden around 48 ratings went on hunger strike. The primary cause of the event at Aden W/T station was a desire of the great majority of the RIN ratings to show a spontaneous display of their violation with the RIN ratings in Bombay.

There were the seven ships of the 37 mine sweeping flotilla viz. Rohilkand, Deccan, Bengal, Karnataka, Kistna and Baluchistan were located at Andaman and Nicobar Island.

Violation also started in Japan because HIMS Cauvery was on detached duty at Japanese port, and also they spared all over Japan and the ships which were patrolled in Japan Sea also joined their hands.²⁴

CONCLUSION:

For the first time civil people joined their hands with defense personnel and whose blood flows for the same cause. Finally on request of Mahatma Gandhi and Sardar Ballavavai Patel, the Revolution committee decided to end their strike and issued a bulletin to say that they had surrendered to their national leaders not to the British Government. From the beginning violation had some merits and demerits. Royal Indian Navy forwarded one step for Indian Independence. The mutiny, its popular support and its spread, bring out the complexities of the Indian struggle for freedom, it is hoped, make its own contribution to a better understanding of Indian National Movement, one of the greatest mass movements of the twentieth century. The question of 'violence' has been taken up for discussion. The lack of support from nationalist leaders cannot be ascribed to the fact that the RIN Mutiny was a violent one. Exchange of fire took place only once, otherwise the effort was to avoid armed confrontations. The one which occurred was more defensive in nature. Moreover forms of struggle are determined by the circumstances under which they break out and can be evaluated only contextually.

BHAGWAN BIRSA MUNDA – AN ADIVASI RESURGENT AND REVOLUTIONARY FREEDOM FIGHTER

T. Seethalakshmi

Introduction

'Free India' was a dream of all Indians under the British rule. Everyone during that British common aim of ending British and other colonial authorities in India. After a century of revolutions, struggle, blood shedding, battles and sacrifices, India finally achieved independence on August 15, 1947.

Jharkhand played a significant role in the Indian freedom movement. The pain and sacrifices of Birsa Munda, an Adivasi Resurgent and Revolutionary from Jharkhand, fought against the British Government, will be always remembered.¹

Early Childhood and Education

Government have accepted that Birsa was born on 15 Nov 1875 at Ulhiatu in erstwhile Bengal presidency, now in Khunti district of Jharkhand. Birsa Munda was son of Sugana Munda.

He received his early education from a school at Salga. He joined the German Mission School but had to convert to Christianity. He became Birsa David which later became Birsa Daud. The family moved to Chaibasa in 1886 and there Munda came to develop anti-government sentiments. In 1890 he and his family renounced their membership in the German mission.²

Birsa Munda and his struggle in colonial India.

As he was an Indian freedom fighter and a tribal leader who he played a crucial role in liberation of his community, the tribal people.

The Britishers banned the Adivasis from utilizing the forest resources. Adivasis who lived in these forests, and even protected and worshipped the forests. At the same time, Hindu

businessmen and money-lenders started exploiting the Adivasis who were ostracized because of the caste system. Apart from these two groups, Christian missionaries started trying to bring the Adivasis into their fold through conversions.

Agrarian Crisis

During the 1890s Birsa started creating awareness among his people about the British exploitative policies and practices. He took on the twin problems of agrarian crisis and cultural belittlement by the British. The Mundas traditionally had a system known as Khunkhatti. The coming of the British replaced with Zamindars, other farmers and middlemen. This made the peasants suffer in poverty and indebtedness. They became forced farm labourers. Birsa Munda proclaimed his rebellion in 1894 which was directed against the British and the dikus (outsiders). This is called the **Munda Ulgulan**. He asked people to stop paying rent and taxes.

As a Religious Leader

He also became a religious leader of his people. He exhorted the tribal people to return to their roots and shun Christianity. He asked people to renounce alcohol. People started referring to him as 'Dharti Abba'. He was also believed to be a prophet. His new religion was called Birsait. Many Mundas and Oraons became Birsaits. He was arrested by the government and imprisoned for two years before being released in 1897.

Tribal Movement

Munda launched his armed struggle in 1899. Under his leadership, the people burned police stations, houses of the landlords, churches and British property. His slogan was '*Abua raj*

seter jana, maharani raj tundu jana: His rebellion forced the government to enact the Chhotanagpur Tenancy Act, 1908 to put restrictions on tribal land.

He suffered a lot due to the British oppression. Later he involved himself in the popular agitation movement against the unjust laws enforced upon the traditional rights of the Mundas in the protected forest in the Porhat area.

He emerged as a successful leader and revolted against the dual challenge of agrarian breakdown and culture change. Under his leadership, the tribal movements gained momentum and numerous protests were staged against the British. The movement demonstrated that tribals were the real proprietors of the soil and also demanded the expulsion of middlemen and the British.

The army responded with movements and protests against the injustice and treachery of the British Raj. His influential personality and motivational speeches encouraged the public to believe in the power of freedom and to dream of a different world than the one they lived in.

In the late 19th century, colonial India witnessed a massive upsurge in resistance movements led by Adivasi (indigenous people) in the eastern part of the country called Chota led by the young tribal freedom fighter Birsa Munda.

The new laws followed an imperial legal framework that worked on individual ownership, and rights. The legal-political changes penetrated the country's social folds and disrupted the harmony that had been sustained for generations.³

Birsa Munda mobilised the tribal community and rose against the British, missionaries and the zamindars (landlords). He rallied people by employing a method of religiosity. His methods are critically studied by the millenarian/messianic movement which often considers that the core of such movement lack a substantial agenda, and is led by the force of misguided liberation.

Achievements

His rebellion was a representation of lived experiences of a Munda as a convert Christian, who was raised in a colonial state under a belief

system that belittled his own. This was also at a time when tribal people were losing their history and culture.

Unlike other rebellions that are documented in historical texts, Birsa Munda's achievements have received little recognition.

Arrest and Death

On March 3, 1900, he was arrested, along with his tribal guerrilla army, by the British troops in Jamkopai forest, Chakradharpur. On June 9, 1900, he died at the age of 25 in Ranchi Central Jail where he was imprisoned. British government declared that he died of cholera although he showed no symptoms of the disease, fuelling rumors that he might have been poisoned.⁴

Honour

Birsa Movement was led by Birsa Munda in areas of modern Bihar and Jharkhand. Though he lived a short span of life, Birsa Munda is known to have mobilised the tribal community against the British and had also forced the colonial officials to introduce laws protecting the land rights of the tribals.⁵

To honour his revolutionary, a number of institutes/colleges and places have been named after him. Some of the prominent ones are Birsa Munda High School, Bokaro, Jharkhand, Birsa Munda D.A.V. Residential Public School, Ranchi, 'Birsa Institute of Technology', 'Birsa Agricultural University', Birsa Munda Tribal University, Rajpipla, (Narmada District), 'Birsa Munda Athletics Stadium' and 'Birsa Munda Airport', Birsa Munda Express Train.

Birsa Munda's birth anniversary is celebrated officially at his Samadhi at Kokar Ranchi, Jharkhand. He is revered as a great freedom fighter by tribals and non-tribals alike. Many folk songs have been created to commemorate his life and bravery. India Post released a stamp in his honour in 1988. Priyanka Gandhi paid tribute to tribal leader and freedom fighter Birsa Munda on his 144th birth anniversary.⁶

Conclusion:

The struggle for freedom in India is one of the liberative moments in India. Men and Women in freedom struggle of the country have

contributed significantly. Birsa Munda was a revolutionary freedom fighter who struggled against the British government. He was the only tribal leader who started agitating against the British government which could snatch the rights of tribal people to access and utilization of resources of the jungle, and also made his army of guerrilla people who fought with the Britishers. Birsa Munda became a god-like figure among the tribal people in Jharkhand, India. Birsa's achievements as a young tribal revolutionary has continued to be celebrated over decades now and he has successfully carved out a space for

himself in popular and folk literature, academia, and mass media.

This research work shows the role of Birsa Munda in unifying the Adivasi and bringing up the self identification in them by his movements. He tried to give them freedom from British rule and zamindari.

Salute to great tribal Leader Birsa Munda for his works lived for almost for 25 years but he aroused mindset (thinking) of the tribals and mobilized them for land rights. He truly proved that life should be great not long.

RULE OF NAWAB MUHAMMAD ALI WALAJAHI IN THE CARNATIC REGION FROM 1749 TO 1795 AD AND HIS SOCIAL AND COMMUNAL HARMONY - A STUDY

T. Shafeeque Ahmed

INTRODUCTION:

The Nawabs of the Carnatic ruled the Carnatic region as deputies of the Nizams of Hyderabad with Arcot as the capital. They ruled Carnatic region from 1690 AD to 1855 AD for about 150 years.

Nawab Muhammad Ali Walajahi was the son of Nawab Muhammad Anwaruddin, the Seventh Nawab of the Carnatic (1744-1749 AD). He was born in 1717 AD. As a prince, Muhammad Ali represented his father as Nizam at Hyderabad. Later he became the Governor of Arcot, Trichirapalli and other Subhas. As a brave commander, he defeated the French army in Devanampattinam and forced Dupleix to vacate Fort St. George.

Muhammad Ali became the Nawab of the Carnatic in 1749 AD. His cabinet had powerful, influential and confident ministers and officials to favour the public. He appointed Raja Sampath Rai as his Dewan. Robert Clive spoke highly of

the Nawab's great qualities in London and paid glowing tributes about his sincerity and majestic ruling. He said "His words were more trustworthy than of any all have ever known".

AGGRESSION AND LOSS OF TANJORE:

Raja Pratap Singh, the ruler of Tanjore, signed a treaty with Nawab Muhammad Ali, by which the Maratha ruler was required to pay an annual tribute of Rupees twenty five lakhs to the Nawab. When Tuljaji, son of Pratap Singh defaulted the payment, the Nawab's forces twice invaded Tanjore i.e., in 1771 and in 1773 and the Madras Government helped him in these adventures. In 1775 AD, the Court of Directors condemned the proceedings of the Madras Council for the conquest of Tanjore and sent Lord Pigot as Governor of Madras to restore Tanjore to the rightful king. Lord Pigot restored Tanjore to Raja Tuljaji on 11th April 1776 AD. The loss of Tanjore had very adverse repercussions on the Nawab. The unexpected

deprivation of revenue sources dislocated the Nawab's finances.

SUBJUGATION OF MARAVASTATES:

The Marava States were located in the eastern part of Madurai Country. These states maintained a status of independence during the rule of the Nayaks. In 1771 AD, Nawab Muhammad Ali represented to the Madras Council that the Marava rulers occupied government villages and neglected payment of tribute. The Madras Council agreed with the views of the Nawab and decided to extend military support for the invasion of Sivaganga and Ramanathapuram. The combined forces of the Nawab and the English effectively stormed Ramanathapuram in June 1772 AD and occupied it. The invaders plundered the town and imprisoned Sethupathi Muthuramalingam and the Queen-regent. Afterwards the forces attacked Sivaganga and occupied the strongholds. As a result of these campaigns, the Walajahis established their sway over the Marava States.

CONSTRUCTION OF NEW PALACES:

The Nawab Muhammad Ali built the famous Chepauk Palace in the year 1768 at his own cost. It lies in an area of 121 acres from the Cooum river to Pycrofts Road. It comprised two blocks, the southern block called 'Kalas Mahal' in two floors and the northern block called 'Humayun Mahal' which contained the Diwan Khana. Further, Nawab changed the capital to Chepauk, Madras.

SOCIAL AND RELIGIOUS HARMONY OF THE NAWAB:

Muhammad Ali Wallajah had not only mixed moderation in his politics, but also in religion. The Nawab respected all religions. Most of his trusted officials were Hindus. In spite of the presence of many Muslims in his Court, he entrusted the work of maintaining his personal diary to Kishan Chand, as he considered him a man of high integrity. He donated vast lands for the construction of mosques, temples and churches and maintained perfect religious harmony and unity amongst the members of different religious communities. It is a well-known fact that the land of the Sri Padmanabha Swamy temple in Srirangam near Trichy was a gift of the Nawab, with a sizeable estate, which

is called "Nawab Thottam" even today. Similarly in Tirupati, Tiruvarur, Tirunelveli and Madras lands were donated for Hindu temples.

In 1773, some sepoy attempted to enter a temple at Tiruvarur, in spite of the objections of the 'Pandits'. On hearing this, the Nawab gave instructions to his officials that religious places should be respected and that the traditions of the places of worship should be maintained at all times.

The Nawab had his own permanent staff stationed at Makkah in Arabia for the distribution of charity to the poor there. He supplied a ladder covered with gold and silver at Makkah to enable the pilgrims to get into the precincts of the Holy Kaaba during the Hajj. He provided carpets and lights to the Prophet's Mosque in Madinah (Masjid-e-Nabavi).

The Nawab purchased two ships, 'Safinathullah' and 'Safinathun Nabi' for commerce and trade. But they were mainly used for transporting Hajj pilgrims from the Carnatic region. The Nawab also purchased lands and constructed Rubats (Lodgings) which are known as 'Arcot Rubats' in the holy cities of Makkah and Madinah for the benefit of the pilgrims of South India. To this day, a number of pilgrims from Tamil Nadu blessed with the benefits offered to them by the present Prince of Arcot.

During his reign, he did a great deal for the upliftment of the people of South India. The Nawab evinced great interest in the welfare of the people of South India. He built a large hospital in Madras, where the poor were given free medical treatment. He gave strict instructions to Hakim Ghulam Ali Khan, the head Hakim of the hospital that poor patients should be treated with utmost care and courtesy.

The Nawab also permitted the establishment of the Christian Church in South India and not only gave lands to Christian mission, but also was present in person on the occasion of the inauguration of Dr. Schwartz's School in Trichy.

One of the finest works of Nawab Muhammad Ali Walajahi was the installation of the Chronogram that was written by Raja Makhan Lal Khirad above the Mehrab of the Chief Congregation Mosque of Madras City, the Walajahi Mosque. The Chronogram depicts the

year of the construction, the name of the Nawab, the beauty of the mosque and the praise of Allah. No other mosque in the world carries above its niche chronogram written by a non-Muslim. It shows that Nawabs are pure and unbiased with their blissful thoughts.

CONTRIBUTIONS DURING NATURAL CATASTROPHE:

The Nawab had hashed out through his letters to collectors, governors and Khiladars about the people who were subjected to famine, droughts, floods, epidemics urgent requirements, in order to give them redress from these calamities. Hence, Nawab Muhammad Ali Walajahi strictly commanded the collector of Arcot to deduct the prices of all eatable items and to arrange a place for distributing the rice to the destitutes. During his reign the physically challenged received an allowance every month.

Nawab Muhammad Ali Walajahi had passed an order on 2nd May 1774, mentioning that the local officials were incharge of the arrangements of the camps separately for the affected Muslim and Hindu destitute to feed them and provided with the basic necessities. The Hundreds of bags containing food grains and vegetables were dispatched for this purpose. And the Nawab ordered the collectors of Portonovo (Mahmud Bandar) through his letter dated

26th June, 1774 that they should quit selling the poor children to the Europeans, due to poverty. He wished them to start some camps

for serving food free for the poor. The Nawabs tried his best to make the people to overcome from their sufferings and difficulties as much as possible and became very popular among people and even he became as hero for the suffering people.

One of the most glorious aspects of Nawab was his administration and his policy in general towards the public that set secular ideal for the betterment of the public. Therefore, Tamilagham is made to be a haven of peace today, because of the flow of humane quality, from the period of Sangam.

CONCLUSION:

On 30th October 1795, Nawab Muhammad Ali, the most popular of the Carnatic rulers passed away at the age of seventy eight after a reign of forty six glorious years. His name is commemorated by a bastion and gate at Fort St. George and by the bridge outside the fort. The road which leads from Triplicane to Chepauk Palace is still known by the name Wallajah Road. There are towns like Walajahbad and Walajahpet named after this Nawab. He was buried at the Santhome and after two years his remains were transferred to Trichirapalli according to his wishes with due respect and buried at the feet of the Holy Saint Tabrey Alam. A historical study on this noble and majestic ruler would help us to understand the characteristics of a person who was literally the most powerful personality in Tamil Nadu in the second half of the eighteenth century.

CONTRIBUTION OF VARADARAJULU NAIDU TO THE LABOUR MOVEMENT OF TAMIL NADU

M. Shankara Pandiyan

In the second half of the 1910, the period immediately saw Gandhi coming into the National Movement. During this time Varadarajulu Naidu emerged as a powerful speaker of the congress party in the state. He was also a distinguished labour leader, an eminent journalist, an ardent champion of the causes of handloom weavers, Small Scale and cottage industries and a spirited advocate of interests of politically and socially disadvantaged sections of the society. He was being hailed as the Bala Gangadharar Tilak of the south India, he was regarded as part of the Political triumvirate, the other two being were T.V.Kalayansundaranar i.e (Thiruvika) and E.V.Ramasamy (Periyar). At the time of his death in the year 1957 Rajaji called him as a "one of the most intelligent and imaginative brains we had in the early congress of Madras State with a background of the week among the masses". He was born in Rasipuram near Salem. He qualified himself as a Practitioner of Indian system of Medicine.

The labour problems which were going on other side. After seeing this he who undertook a major Vernacular speaking tour through the Tamil country till his death.¹ He spoke in the Madras Provincial labour conference that "Although some people slandered Lenin, when the face of the world changed from capitalism to the rule of the toiling people, Lenin will come to be regarded as one of the true saviours of the world" Considering the fact that any open repression or admiration for the Russian Revolution invited harassment from the government.

Royal commission on labour in India Vol VII-Part I, he says about conditions of labourers in the Textile mills in Madura. The recruitment is done through the maistris and jobbers. It can be safely said that non get employment in the mills unless he pays some bribe. There is no arrangement made for sick leave or privilege leave. The D.M.O., I am told is the consulting doctor, only attends sick the Europeans assistants.

There is no place for the workers to take their midday meal. They take in the sitting on the road in the hot sun. No maternity benefit is being given to them. Women are sent away during pregnancy. Hundreds of women were sitting in the very insanitary condition for feeding of their babies between 9 and 9.30 am. No attempts has been made to open schools, situated to them, either by the employer or by the municipality. The percentage of illiteracy know either to read or to write. The percentage of illiteracy is greater than among the labours in the Madras city. There has been universal complaint against 10 hours of work, as that it felt as a heavy strain on workers. They suggest for the 8 hours of day. Only the Madura mills company have built about 176 houses for its workers. But I have come across many cases where no compensation has been paid after the Act come into force, who are still working inside the mills. They have been paid for the period they were in hospital half wages.

All festival holidays have to be compensated by the following Sunday.³ During that time he was a secretary of the labour union, suggested to the commissioner of labour that "the dispute might be settled if the management were to modify the punishment of these 15 men into suspension or something less drastic than dismissal". He also often warned the workers he and advised them to have confidence in the congress ministry and to support the congress. He and his supporters of local congress leaders gave tough stand to the British Capitalists.⁵ When he was a organizing secretary of the All India Trade Union Federation, interviewed the labour commissioner Madras on 25-06-30 he represented him the grievance of the workers in the textiles mills of Madura, Tuticorin and Ambasamudram. He next drew the attention that the employment of women in certain departments that works involves risk and danger. Half-timers were being compelled to work for more than six hours a day. Frequent use was also made of section 144 of the Criminal procedure code, in dealing with industrial disputes. Finally, Mr.Naidu requested the Labour Commissioner to use his influence to see that a

Conciliatory Policy was adopted by the Government in the matter of labour disputes. The labour Commissioner is said to have promised Mr.Naidu that he would look into those matters and asked for a written representation. He was also being invited by the District Congress Committee to organize a demonstration and procession round Ambasamudram and Kallidaikurichi for the Collection of a relief fund for the poor strikers. By this time he also bought Rs.300/- with him from Madras and the Congress gave him Rs.1000/- towards union expenses. He got public opinion through the columns of Swarajya. It carried a letter written by him in its issue dated 21 February 1930. He explained the miserable living and working conditions of the workers in the mills. He pointed out that the wage of workers in Papanasam were lower than what was paid in the Maduai and Tuticorin mills under the Same Management. According to him several requests of the Workers for an increment in their wages met with only an elusive reply from the manager. Moreover, the Manager used a few insulting expressions towards the elderly men when they told him that they had four to six children. He explained how appointments, Promotions and dismissals were all done on the representations of the ministries and clerks only. It brought to the notice of the public the plight of women workers. He wrote: "The plight of women workers is more pitiable. They have to leave their children in the department which is full with cotton dust. They have to work under the men maistries and are subject to the same ill-treatment in a greater measure, being women. The accumulation of these sins of Commission and omission is responsible for the present strike. He saves coal and incidental expenses, which form a consideration part of working expenses in a textile mill. His market in China and in the East is in no way a negligible factor. It can be truly said of his yarn that it is of Indian Cotton, Indian Labour and for local Weavers and Merchants. When he and others began to organize a Social boycott of these black legs. The result what they received from the local administration was form of an order under the section of 144 I.P.C. The district Superintendent of Police applied to the sub-Magistrate for a general order under Section 144 against Varadarajulu Naidu. The District Magistrate, Tirunelvely directed the Police official that any

order under Section 144 should not be general (Stopping the Naidu activities altogether but specific, stopping of organisation of a social boycott and should be directed against all persons attempting to organize such a boycott. Moreover, he also summoned the village headmen to appear before him and show cause why he should not be suspended.

The Second class Magistrate, Ambasamudram, ordered him under the section of 144 C.P.C. not to deliver Speeches in their the jurisdiction of this Court tending to incite the social Boycott or dishonor or a Violence against any person lawfully employed in such mills or seeking employment therein or tending to the boycott threatening assault or dishonouring of any such person. He also ordered the other persons then S.R. VaradarajuluNaidu not to deliver speeches as referred to above not to commit the accts advocated in them. The next development was that a general meeting of the union was held under the presidency of Varadarajulu on the 20th March 1930. The Harvey Mills issued notice on the 14th of April inviting labourers to being work on the 16th April inviting labourers to being work on the 16th No terms of settlement of the labour dispute were mentioned. At the instances of some workers, He arrived at Vikramasingapuram. The Sub Magistrate, Ambasamudram issued an order under section 144 I.P.C. on the 19th April 1930 directing him not to enter or remain within a radius of 4 miles of the Papanasam Mill nor to lecture to any mill worker there for a period of 10days from the date of the Service of the notice. The resistance of the workers collapsed with this removal of the leadership from the scene. This economic struggle thus ended in failure.

He requested Mr. Grey to visit Ambasamudram; But Grey did not consider his request. In the Course of the strike, the Workers formed an union, and he became its President. He was the guiding factor and source of inspiration to the mill workers. He kept in touch with the officials at the local and state level. He toured the villages, Conducted regular meetings and in this way inspired the workers. He got the attention of the public through the press and the speaker's platform. In spite of this officials treated him as an outsider.

"Varadarajulu Naidu was a boy at the Madanapalli Theosophical College, when I was collector of Chittoor. I told him that he was not to have himself appointed an office-bearer of the union to be formed; and had better collect facts and figures before applying for a court of enquiry. Let the workers by all means register themselves as a trade union and make out a case". During the Papanasam workers strike he also congratulated the women workers on their brave stand, with the assurance of paying them higher wages, and yet they remained firm.

It was the general Policy of the Indian National Congress to favouring in establishment of trade unions for the Welfare of the labour. So the Varadarajulu Naidu started the South Indian Railway workers union at Nagapattinam in 1919. His Scarificial involvement in the Harvey mill strike in 1918. He also presided over the first South Indian Railway Labour Conference at Nagapattinam. During the podanur Railway strike they selected him when he was then touring Ramnad district in connection with the District Congress Conference. They requested him to pay visit to the various Railway centres and to advise them on their future plans and actions. When he got invitations from the workers during that time, what railway authorities and P the Police have done was they obtained an order under 144 G.P.C. and prohibited him from entering Coimbatore. The railway labour unions had already planned to welcome him with all honour which he

deserved richly. They had also collected a small amount of money and had spend it on the construction of stage. The prohibition spoiled these plans and the workers suffered on unexpected hurt.

He was being served with a notice at Olavakkod. So, he could not continue his journey to Podanur, once again, Podanur witnessed him to return to Preside over the South India Railway Labour union special Conference on 19th and 20th July 1924. (285.GO.No:869) , Public (Confid) Department, 11.1:2.1924. PP 22-24. In his speech, he did not openly refer to the Podanur station but he eloquently advocated the unity of workers of all industries.⁷ He also played an important role in strike at Salem. He arrive in Suramangalam at 9.00 am on 13th June 1924. He distributed food stuffs to all men on strike. He announced that he would offer such rations even for five years to come if this state of deplorable conditions continued. He made known that rations would be given for a week in advance on Mondays.⁸

Though he dedicated his entire life for the Cause of Welfare of labours by withdrawing from his Doctor Post, there is no memorial Exclusively for him. But A Memorial of AshokaPillar in Salem city has a plaque that display his name. He not only contributed for the labour Movement there are so Many who left there life entire life for the growth of Labour movement of Tamilnadu.

NATIONAL MOVEMENT AND TAMIL POET OF NATIONALISM IN SALEM DISTRICT

P. Singaram

Introduction

The Indian national congress of started in and ages of 1884 in Hindu mahana sabha at Madras. Had been transformed it was the political it also was seen some of the places in Tamilnadu.¹⁰ There was reported all the toddy shops in Salem District, the suppression of in separate of Tamil news papers in Tamilnadu, Swadesamitran, Desabhaktan, The Hindu, The Freedom Movement of political and social like of confined. The start of Madras provincial congress committee leadership kasturanga Iyengar and some of the Rangasamy, Sathyamoorthy and vary rank of congres leader in Tamilnadu, C.Vijaraghavachari and C. Rajagopalacharai. It was believed in the in social caste of through India such of in Mahatma Gandhi supported of Rajagopalachari joined The Freedom Movement and Prominant of Salem District in Congress men. The anti British of the involvalment of social groups in nationalism poet.¹ 19th century of Indian nationalism and prevailed in India. The rich of the peoples. The Indian languages of poets like that sanskrit, persian, Arabic and present in Indian languages for taugh of people was not the important knowledage in English other of Indian languages.² The through Indian national congress metings and one of the eminent and participated of people in India. The both and education about the development countries. The national movement of Tilak. Nivedita Devi and social reform in Aurobind in the Bhrrarathi poet.³ In the Queen Victoria with of qualities of growth of the Indian freedom movement. The swedesi movement in the time of the rich the people advised to collect many for the would create partiotic feeling of generation of the attainment of our goal.⁴

The Tamil Poet of Nationalism in Salem District

The Besides of the above and the personalities. C. Rajagopalachari, E.V. Ramasamy Naikar. Namakkal Kavinjar Ramalingam Pillai and moved of the wheel of patriotism in Tamil Nadu. Their sensitive of sentimental of Tamil poets of songs in nationalism of Tamilnadu.⁵ The Rajagoplachari

was leading advocate in Salem and support of Annie Besant in 1916 of congress. The national movement was Tilak of Jioned of non cooperation movement 1920. In to became sacrificted and Khilafat movement, salt satyagraha movement. It was Tilak of editor of "Young India". At antiwar held to the Salem districts on June 2nd of 1919.⁶ There were tasks of the Hindu had been to Indian public and political and social Development of Indian people. The fire of patriotism and need to the nationalism wrote in 1883.⁷ The Hindu reverted of 1884 in the consider all sorts the facilities of our freedom strugle character. The Rajagopalachari realised to the need for reaching some sort of understanding. With the Muslim league of the partition issue other-wise the constitutional halted. In April 23 and 1942 and managed to get a resolution passed. The congress members in the Madras.⁸

The congress was formed to win freedom for the Indian national as a whole country. The Rajagoplachari resolution but also passed in state of territorial.⁹ The Mahatma Gandhi that once in India became free there was likelihood of people and the congress political party, the freedom struggle of many to T. Prakasham and Andhra 'Kasari.' In the popularly and participated in the freedom movement activities of India national congress in 1885, both of among in the people growth of origin in India National Congress.¹⁰ The people of India thought that it was only and Indian National Congress in could help and them to active of Independence. The British government on this part tried to crash of National movement activities of leaders arresting. The leader was organizers and declaring to the congress and the founded of Indian national movement.¹¹ The British administration in to regions of Tamilnadu and the India, including of South India. The Mahatma Gandhi was in leader of Indian national congress and freedom movement of thought. The political action due to the grand success of the movement.¹² In to the mass movement and including illiterates. The poor and all people in India his struggle and against in the British rule. The Mahatma Gandhi that his believed in the

paper and proposed in would to the entire of Indian society. The people of British rule and India make of great British settlement of political to deaded to lack of India.¹³

The growth of Madras during the 19th century was remarkable and it was all other of Indian towns of Tamilnadu. The like of Salem Districts.¹⁴ The Hindus in Madras were not of aided of the political establishment of British power in the area of Tamilnadu. The political organization of Madras from to Bengal and British Association of Indian in 1851. The affairs of the English East India Company and representations.¹⁵ To the missionaries of preceding decade consisted mainly of Tamil and Telugu. The poverty of believed that the British rulers. The to part to bringing about this transformation and wanted the Indian give of whole country. He believed that such ties of would strengthen and goodwill. Between the India and west of European countries of help regeneration of Indian people. The local leaders of Salem District of start of founded to political activity.¹⁶

The Indian national congress and need for information had been in South India. The since of Madras native association became in the 1860 and political expression in South India during the 1870 of Indian association at Calcutta in the first to make of impact. The political was such provincial of association in Madras presidency.¹⁷ The membership of Rangiah Naidu in president and Balaji Rao elected in vice, the Brahmins and non Brahmins Christians, Muslims of Indian leadership of societies and organizations, in the region of 1885 to members and above of two hundred of political freedom struggle.¹⁸ The provincial and commenced of December 29, 1884 and majorities people and second time of 1885. The background of Indian national congress at beginning in the freedom struggle of Madras Mahajana Sabha, in started of time. Indian freedom struggle of Tamilnadu peoples. In the congress was first session in met December 27 in 1885 of Indian nationalist and to 1887 and prominent leaders of participated in Tamil leaders of the nationalism and news papers The Hindu, Swadesamitran of information of the British rule, the propaganda of national congress in press inspired of Tamil language. The nationalism 1894 and political problem N Subbarao securing socio-economic

and national awakening among the Tamil districts in Salem, Coimbatore, Trichy, Madurai and organised. In 1904 the leaders of Subramani Siva, and Annie Besant, Subramania Bharathi, Ramalingam Pillail of the political activities in national movement of the people of Tamilnadu.¹⁹ There was only twelve district associations in the Madras presidency and these were reorganized order to established in mass people of information. The people of modrates and Madras areas V. Krishna Swami Iyer, V.S. Srinivasa Sastri of organizing in Madras national congress session.²⁰ Throughout the Tamilnadu people of congress committee in Salem C. Vijayaraghavachari and C. Rajagopalachari were against the holding of these committees in Madras. He also participated Salt Satygraha 1930 and one year jail of Tamil poet of Ramalingam Pillai in freedom struggle in national songs.

The Mahakavi Bharathi he was a pioneer of modern Tamil poet and is considered. One of the greatest Tamil literary figures of all time and works nationalism songs and patriotism of Indian national movement.²¹ The newspaper The Hindu, Bala Bharata Vijaya Swadesamitran and India was in 1908, an arrested warrant of British government. The movement of in Punjab 1918 the language of favorite language of Tamil.²² He covered of political social and spiritual themes. The songs of Tamil poets in Tamil cinema. The Joined Bharathi editor, Swadesmitran, Tamil daily, 1904. The attended all India congress was considered Nivedita, national congress session at Culcutta in freedom fighters Dadabhai Nooiraji which demanded of Swaraj. Tamil weekly and the English Newspaper, 1906, started of Kuyil Pattu, Panchali Sapatham, Kannan Pattu, and great vedic literature, and 1912,²³ in entry of Bharathi Cuddalore Jail 1918, for three weeks Nov. 20 to Dec. 14, Annie Besant, C.P. Ramasamy Iyer, of following in Mahatma Gandhi 1919, and Swadesimitran from 1920, of Madras. The through Bharathi of Tamil people of poet and Karungal Palayam at Erode in Salem districts and prominent Tilak, Gandhi, Lajpathirai, Shakti, Vinayagam, Murugan, Sivan and various language of Indian national reform leaders, there is no caste system and like Tilak Swami Vivekananda, Aurobindo, V.O. Chidambaram Pillai, V.V.S. Iyer in the national poet.²⁴

"We make Dresses from silk and cotton
 In quantities as large as mountains
 They bring lot of wealth,
 The traders around the world
 To whom we give it"²⁵

- Mahakavi Bharathi

Conclusion

The role in the national movement of survey, the Indian Independence movement will show clearly that the national movement of the British challenge of the whole country of India. The commonality in this area of Tamilnadu district of Salem took active part in the activities of the Indian national congress which was started in National congress leader C.

Vijayaragavachari, Subramaniya Bharathi, Kavimani Desigavinayagam Pillai, Subramaiya Siva and soul stirring of the patriotic of Tamil poet and development in freedom movement in Tamilnadu fervor among the minds of the people. It was acquired the political, economic social religious and British imperialism. The rise of India nationalism and development of anti British sentiments of patriotic songs of nationalism poets knowledge peoples, and entry the Gandhiji in national congress and freedom struggle principles of Mahatma Gandhi enthusiasm of people of Salem District. The activity of fact in non cooperation movement, civil disobedience movement salt Satyagraha, individual satyagraha. August revolution, and Quit India movement. The people of the Salem District activity in C. Rajagopalachari gave clarion call to the people of India.

A NEW NOTE ON - PALUVETTARAIYARS

N. Sivaraman

The Paluvettaraiyars were a prominent feudatory family ruling over an area comprising Melappaluvur, Kilapaluvur and Kilaiyur in the Ariyalur Taluk of the Trichirappalli District. Kilapaluvur is situated about three miles east of Kilaiyur and Melappaluvur is only a mile away from Kilaiyur. Melappaluvur was popularly known as Mannuperumpaluvur¹ and Avanigandharvapuram.² Kilapaluvur was also known as Chirupaluvur and Tiruvalandurai. Pagaividai-Isvaram was their headquarters.³ The place where the Paluvettaraiyars built a number of structures with their palace is called now Maligaimedu.

Historians of South India interpret the term "Paluvettaraiyar"⁴ perhaps the chieftains, who ruled the area, once a forest of banyan trees were called after the place as Paluvettaraiyars.⁵ They are described as Kerala kings in the Chola records of the tenth century A.D.⁶

There are many theories regarding their origin. There is a legend in this area that Parasurama was absolved of his sin of killing his mother by taking a bath in the sacred tank in Chirupaluvur. Sambandar's hymns⁷ also refer to the Malayali brahmin priests of the temple at Paluvur. S.R. Balasubramanyam holds the view that they were in charge of the temple at Paluvur.⁸ But these references are not helping us in any way to trace their migration from Kerala. It is only from the time of Parantaka I, that we find these chieftains figuring as Chola vassals. However there is every possibility of the Paluvettaraiyars settling down in the Paluvur area sufficiently before the accession of Parantaka I to the Chola throne.

In his campaign against the Pallavas, Aditya I was assisted by the Kerala king Sthanu Ravi. An inscription at Tillaisthanam⁹ mentions that Aditya I and Sthanu Ravi conferred certain honours on one Vikki-Annan. H. Krishna Sastri has identified Sthanu Ravi, the ally of Aditya with Kokkandan Ravi, the vanquisher of kings mentioned with another Chera king, Vokkandan Viranarayana of the Chandraditya family.¹⁰ The friendly relations that existed between the Kerala king Sthanu Ravi and Chola king Aditya I led to

the marriage of Aditya's son Parantaka I with the daughter of Sthanu Ravi mentioned in Udayendiram Plates.¹¹

The Anbil Copper Plate grant issued in the reign of Parantake II gives many details about the latter's ancestors. It mentions that Parantaka I married the daughter of a Kerala king, Paluvettaraiyar. Paluvetta is alluded to in three inscriptions at Tiruvaiyaru. In one of them, it is stated that Paluvetta's daughter was the queen of Vikram Chola Ilangovelar. Since the last title means 'Yuvaraja' or heir apparent, it is likely that before Parantake I ascended the throne he was known as Vikrama Chola.¹² In another inscription, it is mentioned that a Paluvettaraiyar princess Nakkankaranangaiyar, the daughter of Paluvettaraiyar Devanar, was given in marriage to a Chera prince.¹³ These instances clearly indicate the matrimonial alliances among Paluvettaraiyars, Cheras, and Cholas in those days. This matrimonial relationship coupled with the legend of Parasurama seems to suggest the Chera origin of the Paluvettaraiyars. The expansion of the Later Chola power encouraged the immigration into the Tamil Country of a good number of people from Kerala, especially the Paluvettaraiyars.

Pagaividai Isvarattu Devanar

The first known ruler of this family was Pagaividai Isvarattu Devanar.¹⁴ His name is mentioned in an inscription in the Agastyesvara temple at Melappaluvur. In this inscription, he is referred to as the father of Paluvettaraiyar chieftain Kumaran Kandan.

Kumaran Kandan (C.881 A.D. – 893 A.D.)

Kumaran Kandan was the son of Pagaividai Isvarattu Devar. Aditya I was his contemporary. Another epigraph¹⁴ from Tiruvaiyaru in the Thanjavur District, dated the 10th regnal year of Rajakesari Aditya I mentions Paluvttaraiyar Kumaran Kandan masakkal.

Kumaran Maravan (C. 893.A.D. – 913 A.D.)

An inscription¹⁵ of Rajakesari mentions his name as Kumaran Maravan. He also served as a feudatory of Aditya I and Parantaka I. An

inscription¹⁶ found in the Saptarishisvara temple at Lalgudi, dated in the 5th regnal year of one Parakesari, identified with Parantaka I registers a gift of gold by Adigal Paluvettaraiyar Kumaran Maravan for a lamp to the temple. A certain Tippanju Alagiyar Maran and Kumaran Maravan jointly made a gift in the 6th regnal year of Parakesari, identified with Parantaka I also confirms the above mentioned statement.¹⁷ Parantaka I is said to have married the daughter of Kumaran Kandan or Kumaran Maravan.

Kandan Amudanar (C. 913 A.D. - 921 A.D.)

He was the most popular chief among the Paluvettaraiyars. He ruled as a subordinate of Parantaka I. An inscription ²⁰ of Parantaka I Chola dated 12th regnal year describes the part played by his Paluvettaraiyar in Parantaka's war with Rajasimha III Pandya. The battle took place at Vellur about 919 A.D. The Pandya king and his ally the Ceylonese ruler were defeated by the Chola army led by Kandan Amudan. He died in 921 A.D. One Akkaranangaiyar, the daughter of Devanar of Avahikandarpa Isvaram figures as the donor in an inscription of Rajakesari dated the 6th regnal year ²¹. The Rajakesari of this record can be identified with Gandaraditya.²² This Akkaranangaiyar is stated to be the wife of the Chera prince (Pillaiyar Seramanar).²³ This reference is suggestive of their origin.

Kandan Tappilidharman (C. 957 A.D.-960 A.D.)

A Parakesari inscription ²⁴ from Udayarkudi dated 2nd regnal year, mentions a Paluvettaraiyar by name Kandan Tappilidharman. It has been wrongly assigned to Uttama Chola I ²⁵ Kandan was a surname of Rajaditya, son of Parantaka I.²⁶ As the Paluvettaraiyar chieftain had the surname Kodandan prefixed to his name, Parakesari might be Arinjaya who ruled after Rajaditya. Nothing more is known about this ruler.

Maravan Kandan (C. 960 A.D.-985 A.D.)

The next known Paluvettaraiyar chief is Maravan Kandan. It seems that he was the son of Kandan Amudan.²⁷ He acted as a vassal both under Sundara Chola and Uttama Chola.²⁸

Kandan Maravan (C. 985 A.D. - 1000 A.D.)

Kandan Maravan, the son and successor of Maravan Kandan probably came to power in 985 A.D. He was a feudatory of both Uttama

Chola and Rajaraja I.²⁹ He seems to have ruled unto 992 A.D. probably he is identical with Sundara Chola mentioned in some Parakesari records assignable to Uttama.³⁰ Kandan Sundara Chola made endowments for feeding five Brahmanas daily in the temple of Tiruvanantisvara at Viranarayana Chaturvedimangalam. Rajaraja's queen Tillalagiyar, alias Panchavan Mahadevi, was the daughter of Kandan Maravan. Her name has been wrongly identified with a Pandya princess.³¹ the inscription clearly states that she was a daughter of Kandan Maravan. His rule came to an end sometime before the 22nd regnal year of Rajaraja I.

Kumaran Maravan C. 1007 A.D.-1020 A.D.)

This king was probably the son and successor of Kandan Maravan.³² He figures in an inscription³³ of Rajaraja from Lalgudi, registering a gift of gold by Adigal Paluvettaraiyar Kumaran Maravan.

After Rajendra I we do not hear anything about Paluvettaraiyars except a stray reference. It is of interest to know that an inscription³⁵ belonging to the 22nd year of Tribhuvana chakravartin Rajarajadeva II, refers to a Paluvettaraiyar chief of Vanagopadi, a Chola official. The subsequent history shows that they lost their identity and totally merged with the Cholas.

The Paluvettaraiyars were influenced by the Chola administration. Their inscriptions mention the officials were of two cadres, Perundaram and Sirudaram. Thus, for example, the epigraphs of Adigal Maravan Kandan state that the rate of taxation adopted by him in Paluvur area was the same as that of Nandipuram i.e. Palayari, the early alternate capital of the Later Cholas.³⁶ They seem to have enjoyed some measure of freedom in the administration of their territory.

The Paluvettaraiyars were Saivites. Their inscriptions mention various gifts to many temples particularly to those of Kilapaluvur and Melappaluvur. The temple of Maravanesvarar at Kilapaluvur makes it certain that it must have been built by a Paluvettaraiya chief probably Adigal Maravan Kandan.³⁷ His successor, Kandan Maravan constructed the temple of Tiruttoremudaiyar (identical with Sundaesvara temple) at Melappaluvur.³⁸

The famous Sundaresvara temple attributed by the inscriptions to Kanndan Maravan is as much to be noted for its architectural style. This temple built of stone is the symposium of their different architectural features. It consists of a garbha griha small arthamandapa, mahamandapa and finally an open pillared portico. These structures were protected by a compound wall. The entrance of the temple is on the eastern side with a gopura.

The Sikhara is four sided. The garbha griha is square and its basement is plain, and it is bereft of pancharas over the sanctum. There are subshrines with the original sculptures of Ganesa, Subramanya, Chandesvara and Stamasrikas, sure features of its early age. There is an old

gopuram with dvarapalas on either side which seem to be of about the ninth century A.D. It may be of the same age as that of Avanikandarpa Isvaragriham at Kilaiyur.

The present deity of the temple of sundaresvara was, according to an inscription of the 5th regnal year of certain Parakesarivarman (unidentified), known as Pagaividai Isvaragrihattu Mahadeva. In another inscription of the 10th regnal year of Parak-esarivarman, who may be identified with Uttama Chola, the deity is called Paluvur Nakkar. The Lord of this temple is believed to be the deity worshipped by Jamadagni, the ³⁹ father of Parasurama of Puranic and epic fame. There is a stone sculpture of Jamadagni in this temple.

BUREAUCRATIC RECRUITMENT AND SUBORDINATION OF NATIVES IN COLONIAL MALABAR

M.T. Souda

The East India Company which ruled parts of India in the eighteenth century took steps to introduce separate judicial and political administration in its territories. As Bernard Cohn says, "In the second half of the eighteenth century, the East India Company had to create a state through which it could administer the

rapidly expanding territories acquired by conquest or accession. The invention of such a state was without precedent in British constitutional history".¹ The political authority of the colonial state gathered upon many mechanisms like the legal system, bureaucracy, education etc., for conserving and applying its

power which was necessary for the formation of the colonial policy. Throughout the colonial period in India, the employees of the company were recruited from the native populace, who carried out administrative tasks, particularly in relation to the collection of revenue and the lower judiciary along with British officials. It made a situation where the British and the Indians worked either separately or in co-operation, but native officers had distinct duties and positioned into a subordinate administrative category under a single government.

Subordination of Natives in Bureaucratic Recruitment

The subordination among colonial administration and in bureaucratic recruitment in Malabar shows the actual character and methods of the colonial state in recruiting and disciplining its subordinate employees. Indians were positioned directly or through Indian intermediaries under the direction of the European officers.

The native participation was indispensable to carry out the judicial administration at the lower level. Different branches of tribunals, including provincial courts, Faujdari courts, local and subordinate courts, and native courts, were established in Malabar.² The District and Sessions Judges were usually recruited from the members of Indian civil service, but almost all the posts inferior to that of a District or Assistant judge were filled by natives.³ Within the local judicial administration, the British employed local people as court administrators and policemen also. The selection of native judges recognized two sets of rulers inside the province, the hegemonic British judges, and subordinate natives.

The subordination in the police was a result of the initiatives of the colonial state that a district police organization was created in Madras presidency. The formal structure of police bureaucracy established in Madras province owed much to the model of the Irish Constabulary and the London metropolitan and country police forces in England and Wales. The principle was that "Europeans must occupy a supervisory position was further supported by a fundamental distrust of Indians and a low view of their abilities and character, except within a system of European direction and surveillance".⁴

The subordinate officials, primarily the agents of the state and the uniformed embodiment of state power.

The police reform of the 1850s formally enshrined the supervisory principles. Blaming the lack of close European supervision over revenue and police peons for the deficits of the old police system, the government wanted to remedy past imperfections by creating a squad of European police superintendents. David Arnold points out that the Madras constabulary reveals a more complex relationship between people and state, elite and subalterns that can be encompassed by the term 'collaboration'.⁵ In this way, the police acted as the second agency of European control in the districts while the remaining areas were under the direct control of the district magistrate.⁶ At the lowest level of the police organization, it was envisioned that the constabulary would connect and communicate with the village community through close cooperation between the watchmen and constables on rural areas and through the appointment of non-official inspectors for every group of villages.⁷ The employees were considered merely as the agents of colonial law.

The subordination of natives was visible from the assignment of their duties and payment of salary to the native officers and European officers.⁸ For example, the payment of 50 native officers was equal to the salary of one Senior European officer.⁹ The government paid different amount of salaries to natives and European officers even if they were serving same post.¹⁰ It denotes that the administrative costs could be kept low by recruiting more number of natives instead of recruiting European officers for menial policing duties with more payment.

Sometimes the Members Malabar Special Force or native forces were used for menial jobs like road works, sapping and mining. In 12 December 1855, Hartley wrote a letter to the Collector, saying that the construction of a road from Calicut to Palakkad passing through Malappuram will be made by Malabar Special Force if the government gives the salaries of sappers and miners to his force.¹¹ Sometimes, the force was recruited men directly to army when it was needed. Natives were also recruited, often directly and at times from the inspectors for the higher ranks in the police from the beginning of the twentieth century. Even so, the most senior

positions in the Madras police remained in European hands until Independence.

In the civil service, the subordination and exclusion of natives took place not only in the administration and criminal justice but also in the revenue departments. Indians who manned the lower strata of the administration were called "uncovenanted servants". According to Cornwallis and other European officials of the time, natives of India were corrupt and also held an extremely low opinion of Indian ability, integrity, and character. But Thomas Munro believed in the ability of Indians. He argued that the natives are no longer inferior to Europeans in talent "if it be admitted that the natives often act as wrong, it is no reason for not employing them; we shall be wrong ourselves".¹² Indians seem a low minded, deceitful and dishonest is due to the fact that the British administrators were trying to disassociate them from the administration.¹³

Caste and Community Elements in the Bureaucratic Recruitment in Malabar

Caste and community were considered as a decisive factor in matters regarding the administration of Malabar from its early period. In the pre-colonial Malabar polity, military and administrative functions were performed by the Nairs. In the initial stage, the British in Malabar appointed several Mappila chieftains as Daroghas or native judges with magisterial powers who were allowed to retain a considerable portion of their armed followers. They continued to be employed as Police Officers up to the introduction of the Cornwallis System in Malabar. Immediately after the annexation of Malabar, British employed personnel from upper caste Hindus. The village revenue officials known as *prabhuttis* and *menons* were almost exclusively drawn from upper caste Hindus. The great majority of tahasildars, the police and the recruits of local courts were also from the upper caste Hindus. On the other hand, the British hired separate groups of soldiers from *Tiyyas*, *Mappilas*, and *Mukkuvans* and maintained them on regular payments.¹⁴

In pre-British days administration of justice was based on the *maryada* or custom of the land and Brahmins were the interpreters and law givers.¹⁵ The British took over the responsibility of the administration of justice from their hands.

Even in the judiciary the lower courts were controlled by the caste elites. From the mid-nineteenth century, the Martial Race theory shaped recruitment policy both in army and police. Hindoos, Mussalman and other sections like *Vellalan*, *Rajput*, *Nairs*, *Mappilas*, *Ilavas*, *Parayas*, and *Tiyyas* were entitled.¹⁶ Still, the superior posts were reserved for upper-class people.¹⁷

In 20th February 1855, Hartley send a letter to Collector to inform that it was difficult to get the venerable people from Nair community to the Malabar Police Force since when they were facing the recruiting parties, they were hiding collectively by abandoning or throwing their weapons. So the posts of Subadar and Jemadar were empty.¹⁸ Hartley welcomed the Mappilas to the Malabar Special Corps only because of non-availability of people and also the Mappilas' martial skill. For getting Mappilas into the troop, Hartley appointed a Mappila juvenile from Eranad as Subadar to assert the fact that, the Muslim community had the courage to admit the police force. What made the Nairs the best was not just their military tradition but the fact that they were land owners, higher caste, and prestigious people in the society.

With minor modifications, the Martial theory remained in operation until the first decade of the twentieth century. One of the ironies of the Martial race theory, as it operated in Madras Presidency, was that it reduced its eligibility criteria for military service to members of communities who were largely excluded from the police and who were indeed the main targets of police coercion and surveillance. Even though Mappilas possessed certain martial traits, they were seen as a danger to the Anglo-Nair hegemony and only of value as policemen when they could be deployed against the fanatics of their community. At the same time, they were also excluded. It was held that they could not carry out the basic police duties such as conducting searches, making arrests and patrolling caste Hindu areas of towns and villages.¹⁹

Police Commission in 1903 proposed that recruits should be men of classes which are usually regarded as respectable, for this would correspondingly enhance the prestige and strengthen the authority of the colonial police.²⁰ In 1920 there were 2919 Nair constables, nearly

a tenth of the Madras constabulary. In Malabar, Nair accounted for only 14.5 percent of the total population but held just over 64 per cent of constabulary posts (1149 out of 1785).²¹

The racialization of soldiering in India was also a complex process involving multiple interactions between British officers and administrators, Indian communities and local elites, each framed by the economic, social and cultural contexts of nineteenth-century colonial India. As befitted their martial status they were disproportionately represented in the armed police too. Among the Malayali communities, the Nairs were ranked first. They were considered as high-minded, intelligent, active. In Madras all "pariahs and Christians" constituted no more than 5 per cent of the army, and in only a few units did the percentage of these groups rise to 10 percentages between 1780 and 1880.²²

When we go through the establishment lists of gazette and other officers we can find that the caste Hindus of Malabar especially Nairs, Menons, were occupied the major posts of Indian Civil Service and Madras Civil Service.²³

Although by the second half of the nineteenth century, the general policy of the British on papers was to appoint natives from all castes and communities. They had declared in 1833 that, no person would be disabled from holding any office or employment on account of his "religion, place of birth, descent or color".²⁴ Further, the Board of Revenue's proceedings of 1854 specified that the Collectors should be able to see that the subordinate appointments in the districts are not dominated by the members of

few influential families.²⁵ The same has been recommended in 1922 and additional instructions were dispensed which clearly stated that appointments are to be divided among the several communities.²⁶

In spite of the directives from the policy makers, the lower ranks of colonial bureaucracy in Malabar were drawn chiefly from the Nair community. The Nair domination in the colonial bureaucracy was one of the sensitive issues taken up by the *Tiya* and other backward class elites in their campaign for building up caste solidarity.²⁷ Series of memorandums were submitted by the *Tiyas* and other backward communities of Malabar demanding representation in the bureaucracy and the deliberations in the Madras legislature regarding the statistical data of different castes and communities in Government jobs.²⁸ The very few from backward communities who got education were not considered for appointments on fragile grounds. In spite of different standing orders, appointments were given to failed Nair candidates ignoring the qualified depressed class candidate.²⁹ The consideration given to the "nominations made by his (appointing authority) assistants", "local influence" of the person appointed etc. also highlighted.³⁰ This reveals the strategy of the upper class to exclude the untouchable communities from the domains of power. This situation disabled the depressed classes to get an appointment in the military service. Later, a minimal number of the ex-service depressed class got an appointment in the Government service.

KANDUKURI VERESALINGAM PANTHULU - RAJA RAMMOHAN ROY OF SOUTH INDIA – A NEW PERCEPTION

K.V. Sreedhar Goud

INTRODUCTION

In pre-British India the entire life of an individual was organized within the concept of caste and tradition. The British introduced a uniform system of administration and western thought of the English education system in India. The impact of the British rule in India was tremendous and resulted in several changes in the 19th century Indian society. The Renaissance and reformation movements in India had its impact even in Andhra. In other words Andhras welcomed the Hindu Renaissance movement particularly in the sphere of culture and society.

KANDUKURI VERESALINGAM (1848-1919A.D)

Veresalingam shook them out of their medieval stupor; he whipped them out of their ignorance; he purged them of many of their superstitions; and he gave an altogether modern, progressive and humanistic turn to their life and thought.¹ Andhra people could not be what they are if Veresalingam had not arrived to vitalise them. He was one of the great men of India, of keen insight, great courage and dynamic energy. He fought against untruth and championed the cause of progress with herculean vigour.²

Sri Veresalingam Panthulu was one of the earliest pioneers in south India to demand and work for radical changes in our society. Like all pioneers who are ahead of their time, he suffered misunderstanding and persecution. We owe it to his memory to work for social regeneration even as he did, braving all ridicule and danger.³

Veresalingam is the greatest Andhra of modern times. He sums up in his personal history the evolution of an epoch... Most people live without illuminating the epoch in which they live. They neither give nor catch the light. The hero is he who both catches and generates new spirit that fecund principle of change and advancement without which life becomes mere stagnation and a nuisance. Veresalingam reflected the new age because he was one of its creature for only they create who allow themselves to be impregnated by the time spirit themselves to be impregnated by the time spirit.⁴

The above tributes reveal the personality of Veresalingam who was born at Rajahmundry on 16 April 1848. His father Subbarayudu was a poor Brahmin. His mother was Purnamma. Veresalingam lost his father when he was only four years old. In spite of her poverty Purnamma wanted to give her son the best possible

education. So she sent him to the government District School. He passed the Matriculation examination in 1869. He worked as a teacher at Korangi and Rajahmundry as senior Telugu Pandit.

His literary activities were varied. He wrote the first novel in Telugu, Rajasekhar Charitra. He was the first to render drama in Telugu. The first Telugu books on natural sciences and history were written by him. He was the first to write in prose for women. In fact, he was the father of the renaissance movement in Andhra.

EDUCATION FOR GIRLS

Traditionalists strongly opposed education for girls. They also opposed western learning and social reform. Veresalingam took part in the controversy by championing women's education. To propagate his views effectively, Veresalingam started his journal 'Vivekavardini' in 1874 at Rajahmundry. In order to ridicule the opponents of women's education, he wrote many satires, iam poems and dramas like 'Brahma Vivaham', criticising early marriages, Kanya Sulkam and marriage of old men with young girls.

To practice what he had preached, he started a girls' school at Dawaleswaram in September 1874. It was the first institution of its kind in Andhra. Its headmaster was Malladi Achanna Sastri. In 1881, he established another school for girls at Innispeta in Rajahmundry. He had also educated his wife Rajyalakshmi, so that she could help him in his social reform activities. Besides the school for women, he started schools for Harijans and night schools for the working classes. He was also the first in Andhra to encourage co-education. He admitted girls in the educational institutions started by him.

WIDOW-RE-MARRIAGES

Veresalingam's pioneering work in the emancipation of the Andhra widows overshadows his achievements in other branches of social reform.

In 1874, a widow Re-Marriage Association was started in Madras with much fanfare. Some of the eminent citizens of Madras like Dewan Bahadur R. Ranganatha Rao and P. Chenchal Rau were its members. But within two years, the association became moribund. In 1875,

mahamahopadyaya Paravastu Venkata Rangacharyulu of Visakhapatnam published a book called "Punarvivaha Sangrahamu" favouring the re-marriage of widows. Kokanda Venkataratnam was outraged by the very idea of widow re-marriage. He took up the cudgels against Rangacharyulu and tried to enlist the support of Veresalingam in spite of the fact that he and Veresalingam were not on cordial terms. Veresalingam, whose sympathies were on the side of the widows, however, felt that by merely indulging in debate and discussion, the movement for widow remarriage could not be carried forward. So he bided his time.

By 1875, Veresalingam developed contacts with influential British officers and eminent citizens of Madras and other towns of the Presidency. E.P. Metcalfe, the popular principle of Government Arts College, Rajahmundry, took keen interest in the activities of Veresalingam and enrolled himself as a subscriber of 'Vivekavardini', the journal of Veresalingam and supported his activities. In September 1878, Sanga Samskarna Samajam (Social Reform Association) was established at Rajahmundry.

In order to convince the orthodox leaders, like Kokanda Venkataratnam and Vedam Venkataraya Sastri, that re-marriage of the widows was not prohibited by the old Dharma Sastras, Veresalingam began to address public meetings where he quoted chapter and verse from the Sastras to prove his point. On 3 August 1879, he delivered his first lecture on the re-marriage of the widow at Maharaja's girls' school. The speech created a sensation throughout the Andhradesa. On 12 October, he delivered his second lecture at the same place. The orthodox leaders took up the challenge and organised special meetings to counter the arguments of Veresalingam. In these public debates held at Rajahmundry and Kakinada, the opponents of widow re-marriage could not prove their point. So they encouraged the rowdies to physically assault Veresalingam, but he was saved by his students.

In 1880, Veresalingam, with his two steadfast friends, Challapalli Bapayya and Basavaraju Gavara Raju, formed the widow re-marriage association. After creating the necessary psychological background, Veresalingam plunged into action. He sent his students to different and remote places to find out

persons who were prepared to marry widows but the most difficult part was to find out persons who were prepared to marry widows but the most difficult part was to find parents who were prepared to get their most get their daughters re-married. Veresalingam came to know that a mother of a young widow was anxious to get her daughter re-married. So he sent his students to the remote village where the young widow lived and with great difficulty brought her safely to Rajahmundry. The name of the widow was sitamma. She was married to Gogulapati sriramulu on 11 December 1881 at Rajahmundry. Thus, the first widow re-marriage in Andhra from the higher castes was performed. The marriage was performed in a tense atmosphere. The orthodox leaders of Rajahmundry tried their best to break up the marriage. The students and the follower of Veresalingam were equally determined to see that the marriage was performed. The political had guarded the entire locality where the marriage took place. After failing in their attempt to frustrate the marriage, the orthodox leaders excommunicated 31 families who took part in the celebration.

The second widow re-marriage took place four days after the first. On 15 December 1881, Racharla Ramachandra Rao married a widow named Ratnamma. By 1892 twenty widow re-marriages took place. In his efforts, Veresalingam was financially supported by Pyda Ramakrishnayya a philanthropic merchant of Kakinada, who on different occasions gave a total amount of Rs.30, 000. To look after the widows, who were not re-married, and disowned by the parents, Veresalingam built a widow's home at Madras in 1897 and at Rajahmundry 1905.

In 1883 Veresalingam started a monthly magazine called 'Satihita Bodhini' for women. The news of Veresalingam's activities spread to the different parts of the country. Religious and social reformers like Iswar Chandra Vidyasagar, Mahadev Govinda Ranade, N.G.Chandravarkar and Maharishi D.K.Karve highly appreciated the work of Veresalingam. His fame spread abroad. Miss Manning of the United Kingdom left 50 in her will for the widow home of Veresalingam. The government in appreciation of his work conferred on him the title of 'Rao Bahadur' in 1893. Highest recognition from the people came when he presided over the Indian social reform congress held at Madras in 1898. In this meeting Mahadev Govinda Ranade acclaimed Veresalingam as 'Iswar Chandra Vidya Sagar of the south'.

In 1899, Veresalingam was appointed as the first Telugu Pandit in the presidency college, Madras. He retired from the position in 1904 and returned to his native town Rajahmundry. After his retirement he continued his work by establishing a Rescue Home (vitantu Saranalayam) for widows and an orphanage. On 15 December 1905, he established Hitakarani Samajam to run the institution he had established Hitakarani Samajam to run the institutions he had established. On 2 may 1908, he got the Samajam registered and endowed it with all his property worth about Rs. 50,000.

He died on 27 may 1919 at Madras. His contributions to social reform, specifically to causes such as widow remarriage, are well-remembered in Andhra Pradesh. Kandukuri Veeresalingam Panthulu had done in South India, what Raja Rammohan Roy had done in North India. In this way he is as considered Raja Rammohan Roy of South India.

HISTORICAL GEOGRAPHY OF RAYADURGA RAJYA UNDER THE RAYAS OF VIJAYANAGARA –AS DEPICATED IN INSCRIPTIONS

E. Sreedhar

Historical geography is the study of geography based on Historical data. For the purpose of effective and easy administration, the ruler's divided the Empire into major as well as minor administrative units in a hierarchical order. However, the exact extent of these divisions is not known. The study and identification of the administrative divisions referred to in the inscriptional records of a particular territory should reveal the approximate extent of that territory.

The Vijayanagara Empire is divided into many provinces. The term used for the province during the Vijayanagara period is Rajya.. They were located in strategic places. These Rajyas comprising many subdivisions which in turn contained smaller units. There were 12 Rajyas covering the Telugu linguistic region of Vijayanagara empire. Among them Rayadurga Rajya is one which extended from 1428 to 1584 A.D, which covers the four Dynasties of Vijayanagara.

The present paper deals with the historical geography of all the administrative divisions that flourished within the jurisdiction of the Rayadurga Rajya during the Rayas of Vijayanagara and identified with their modern parallels as accurately as possible. Data are drawn from the epigraphical sources.

Rayadurgam was the important hill fort during the Vijayanagara period. As the very name suggests it had a fort built by a king (Raya). It is said that Rayadurga was a stronghold of bedars (Boya palegars) whose disorderly conduct compelled the Vijayanagara kings to send an officer named Bhupatiraya to reduce them to submission. He turned them out of the place and ruled it himself and the hill was thus called Bhupatirayanikonda¹(Rayadurga) after him. The earliest reference to the Vijayanagara rule over Rayadurgam found in an inscription dated 1428 A.D. In addition to being the capital of Rajya, it was also the head quarters of Sima, Chavadi,, Nadu. Sthala, Vente.

Territorial appellations :

I Administrative Divisions of Rayadurga Rajya under Sangama Dynasty.

1. RAYADURGA SIMA

An inscription dated 1428² A.D, during the reign refers this Division. It refers that the village Setturu was situated in Rayadurga Sima. The chief town of this division is identical with modern Rayadurga, the Headquarter of the same Mandal. The inscriptional village Setturu is identical with modern Settur, the headquarters of the same Mandal. Hence this division consists of the regions of modern Rayadurgam, Settur Mandals (some parts of Western portions of Anantapur District.)

II Administrative Divisions of Rayadurga Rajya under Saluva Dynasty.

1. RAYADURGACHAVADI

An inscription from Agali dated 1497 A.D.³. Records that the village Paliganahalli was situated in Agali sthala in Rayadurga Chavadi. The inscriptional village Paliganahalli is identical with modern Pillenahalli in Gudibanda Mandal. The chief town of the sub division Agali is identifiable with modern Agali. The chief town of this division is identical with modern Rayadurga, the Headquarter of the same Mandal Hence this division comprised the region of Gudibanda, Agali and Rayadurga Mandals in Anantapur district.

2. RAYADURGA STHALA.

An inscription from Ramapuram dated 1485 A.D.⁴. Records the grant of the land in Agali village in the Rayadurga sthala. Inscriptional village is identical with modern Agali, Headquarters of Mandal. The find spot of the inscription is in Kambadur mandal.. The chief town of this division is identical with modern Rayadurgam, the Headquarter of the same Mandal. Hence this division comprised the region of Agali, Kambaduru and Rayadurga Mandals of Anantapur district.

III. Administrative Divisions of Rayadurga Rajya under Tuluva Dynasty.

1. BUDIGUMMA STHALA:

An inscription from Budigumma dated 1537A.D⁵ registers the grant of the village Maredumanipalle alias Hanumanthapuram in Budigumma sthalam in Kundurpi sima included in Rayadurga. The grant village is not identified in the modern context. However the find spot of the inscription and the chief town of this division Budigumma is in modern Belaguppa Mandal in Anantapur district and hence this division can be identified with the region around the Belaguppa Mandal in Anantapur district.

2. KUGARI NADU:

An inscription from Bhairasamudram dated 1522A.D⁶ registers that the village Bhairasamudram was situated in Kugari Nadu, a subdivision of Kundurpi sima in Rayadurgam. The inscripational village Bhairasamudram is identified as modern Bhairasamudram in Brahmasamudram Mandal. The chief town of this division Kugari, however, cannot be identified on a modern map and hence it can be presumed that this division corresponded to the region around Brahmasamudra Mandal of Anantapur district.

3. KUNDURPI SIMA:

This Division is mentioned in couple of inscriptions. One inscription from Bhairasamudram dated 1522 A.D⁷ and another inscription from Budigumma dated 1537A.D⁸. It consist of two subdivisions namely Kugarinadu and Bhudigumma Sthalam. The chief town of this division Kundurpi is identical with modern Kundurpi, headquarters of the mandal. On the basis of the identification of the said subdivisions in the modern context, this division formed with regions of Kundurpi, Brahmasamudra, Belaguppa Mandals of Anantapur district.

4. RAYADURGA NADU:

An inscription from Chyabala, dated 1556 AD⁹ records that the Agrahara Tavaregala was situated in Urvakonda, a division of Rayadurga nadu. The Agrahara village Taveragala cannot be identified on a modern Map. However, the find spot of the inscription is identical with Chabala in Vajarakarur Mandal. The Headquarters of the subdivision, Uravakonda is identified with modern Uravakonda, headquarter of the Mandal. The chief town of this division is identical with modern Rayadurgam, the Headquarter of the same Mandal. Hence this division corresponded

to the region Rayadurga, Uravakonda and Vajarakarur Mandals in Anantapur district.

5. RAYADURGA RAJYA

This division was mentioned in the inscriptions of Sri Krishnadevaraya onwards¹⁰ Three inscriptions i.e. one dated 1522A.D From Bhairasamudram¹¹, another inscription dated 1537A.D. From Budigumma¹² last inscription from Chinnahotturu dated 1556A.D¹³ Mentions this Division. It consisting four subdivisions namely Kugari Nadu, Budigumma Sthalamu, Kundurpi Sima and Uravakonda Venthya

On the basis of the identification of the said subdivisions in the modern context, this division formed with the regions of Kundurpi, Brahmasamudra, Belaguppa, Vajarakarur, Uravakonda and Rayadurgam Mandals of Anantapur district.

6. RAYADURGA SIMA:

An inscription dated 1556A.D. from Kanekal¹⁴ records that the village Kaniyakallu was situated in Rayadurga sima. The grant village is identical with modern Kanekal, Kanekal Mandal in Anantapur district. Another inscription dated 1556A.D From Kudluru¹⁵ Records that the Kudluru comprising of the villages Katepalle and Muddalapuram was situated in Rayadurga sima. The inscripational villages are not identified in the modern context. However the find spot of the inscription Kudluru is identical with modern Kuduluru in D.Hirehal Mandal, Anantapur district. An inscription dated 1556A.D From Rayadurga¹⁶ Records that the village Baginayanipalle to the north of Rayadurga Venthiam was situated in the Rayadurga sima. The village Baginayanipalle is identical with modern Baginayakanahalli in Rayadurga Mandal.

On the basis of the identification of the inscripational villages in the modern context, this division can be identified with the regions of Kanekal, D.Hirehal and Rayadurgam Mandals of Anantapur district.

7. RAYADURGA VENTHE

One inscription from Ragulapadu dated 1554 A.D¹⁷ and another inscription from Pennahobilam dated 1556A.D¹⁸ Mentions this division. It consist the major subdivision namely Uravakonda Sima. On the basis of the

identification of the inscriptional villages in the said subdivision in the modern context, this division formed with the regions of Kanekal, Belaguppe, Garladinna, Kuderu, Vajrakarur, Uravakonda mandals of Anantapur district

8. URAVAKONDA SIMA:

An inscription from Ragulapadu dated 1554 A.D.¹⁹ records that the village Ranganahalu was situated in the Uravakonda sima, a subdivision of Rayadurga Venthe in the district of Mudanadu in the Hastinavathi Valitha. The village Raganaholu is identical with modern Ragulapadu, Vajrakarur Mandal in Anantapur district. Another inscription from Pennahobilam dated 1556 A.D.²⁰ records the villages included in this division are Anadale, Nimbegolu, Rayanahalli, Tavaregala, Chikapepali, Thimmapura, Hoturu, Benakanahalli, Antarasanahalu and Kamalahalli, which are identical with modern Bennikal, Thumbiganur in Kanekal Mandal; Yerragudi in Bellaguppa Mandal, Sirivaram in Garladinne Mandal, Thimmapura in Kuderu Mandal, Chinna hotturu, Kamalapadu, Ragulepudu in Vajrakarur Mandal; Nimbegallu, Rayanapalle in Uravakonda Mandal of Anantapur district.

On the basis of the identification of the inscriptional place names in the modern context, this division formed with the regions of Kanekal Belaguppa, Vajrakarur, Garladinna, Kuderu and Uravakonda Mandals of Anantapur district.

9. URAVAKONDA VENTHE

An inscription from Chinnahoturu dated 1556 A.D.²¹ records that the village Pinahoturu was situated in the Uravakonda Venthya, a subdivision of Rayadurga Rajya. The village Pinahoturu is identical with modern Chinnahoturu in Vajrakaruru Mandal. The chief town of this division Uravakonda is identical with modern Uravakonda, head quarter of the same Mandal. On the basis of the identification of the inscription place name, this division consists of the regions of Vajrakaruru, Uravakonda Mandals of Anantapur district.

IV. Administrative Divisions of Rayadurga Rajya under Aravidu Dynasty.

1. AGALI SIMA

An inscription from Ratnagiri dated 1586 A.D.²² refers the village Bhuttenahalli in

Ratnagiri sthala, situated in Agali sima, a subdivision of Rayadurga rajya. The inscriptional village Bhuttenahalli is identical with modern Bullenahall in Amarapuramu mandal. The chief town of the subdivision Ratnagiri is identical with the same name in Rolla mandal. An inscription dt1604 A.D. from Ravudi²³ records that the village Ravidi was situated in Madhuvidi sthala in Agali sima, a subdivision of Rayadurga venthe. The village Ravidi is identical with modern Ravudi in Agali Mandal. The chief town of the subdivision Madhuvidi is identical with modern Madhudi in Agali

The Head quarters of this division Agali is identical with the same name. Hence this division identified with the region around Agali, Amarapuramu, Rolla, mandals of Anantapur district.

2 RAYADURGA RAJYAMU

This division was mentioned in two inscriptions of Sri Rangadevaraya. One dated 1584 A.D. From Srirangapuram²⁴ Another inscription From Ratnagiri²⁵ it consisting two subdivisions namely Veparala Venthe, and Agali Sima. On the basis of the identification of the said subdivisions in the modern context, this division formed with the regions of Rolla, Amarapuramu, Agali, Belaguppa and ,Rayadurgam Mandals of Anantapur district.

3. RAYADURGA VENTHE

One inscription from Ravudi dated 1604 A.D.²⁶ and another inscription from Kodihalli during the reign of Srirangadevaraya²⁷ Mentions this division. It consist Two subdivisions namely Sirenadu Sima and Agali Sima. On the basis of the identification of the inscriptional villages in the said subdivision in the modern context, this division formed with the regions of Agali and Rolla mandals in Anantapur district and some parts of Sira taluk of Tumkur district of Karnataka State.

4. SIRE NADU SIMA:

An inscription during the reign of Srirangadevaraya from Kodihalli ²⁸ records that the village Kodihalli was situated in Role sthala in the Agali Sthala in the Sire nadu sima belonging to the Rayadurga venthe. The inscriptional village kodihalli is identical with modern Kodihalli in Agali Mandal. The chief

town of sub divisions of Agali sthala and Rolla Sthala can be identified with modern Rolla and Agali in Anantapur district. The chief town of this division Sire is identical with modern Sira in Tumkur district. Hence this division comprises the regions around Rolla and Agali Mandals in Anantapur district and some parts of Sira taluk of Tumkur district of Karnataka State..

5. URAVAKONDA SIMA

An inscription dt1636 A.D. from Narimettla²⁹ records that the village of Narimetta was situated in the Uravakonda sima. The inscriptional village Narimetta is identical with modern Narimetta in Gooty mandal. The name of the chief town of this division Uravakonda is identical with modern Uravakonda, Hence ,this division consists of the regions of Gooty and Uravakonda Mandals in Anantapur district.

6. VEPARALA VENTHE

An inscription from Srirangapuram³⁰ records that the village of Eragudi was situated in the Veparala Venthe, a subdivision of Rayadurga rajya. The chief town of this division, Veparala is identical with modern Veparala in Rayadurga Mandal. The inscriptional Village Eragudi and find spot of inscriptions is identified with Yerragudi and Srirangapuram in Belaguppa Mandal. Hence this division in identified with the regions around Belaguppa and Rayadurga Mandals.

On the basis of identification of the administrative divisions in the present context, the jurisdiction of the Rayadurga Division during Sangama period extended over the regions of present Rayadurgam and Setturu mandals of Anantapur district. During Saluva period extended over the regions of present Gudibanda, Agali, Kambaduru, Rayadurgam mandals of Anantapur district. **During Tuluva period extended** over the regions of present D.Hirehal, Kanekal, Rayadurgam, Kundurpi, Brahma samedram, Belaguppa, Kuderu, Garladinne Uravakonda, Vajrakarur mandals of Anantapur district. i.e. **Entire western and Northern portion of Anantapur district.** During Araviti period extended over the regions of present Agali, Rolla, Amarapuramu, Rayadurga, Beluguppa, Uravakonda and Gotty mandals of Anantapur district. i.e. some parts of South West, western and Northern portion of Anantapur district and some parts of Sira taluk of Tumkur District of Karnataka state.

South Eastern part of Anantapur district, which was constituted as a part of Rayadurga Division during Saluva period, made a part of Nidigallu Rajya during Tuluva period and a part of Penukonda Rajya during Araviti period. It shows that territorial Adjustment was done while taking into consideration of the Administrative necessities.

AN APPRAISAL ON THE MANY FACES OF GANDHIAN 'VIOLENCE'

Sreevidhya Vattarambath

About the relevance of Mahatma Gandhi in the 21st century, Raghunaanth Mashelkar once said that it is*"not just mere a collection of thoughts. Collectively it is the road map or the way of life, it is the anchor for a youngster in search of inspiration"*. The Gandhian technique of mobilizing people has been successfully employed by many oppressed societies around the world under the leadership of persons like Martin Luther in United States, Nelson Mandela in South Africa and many others.

Even though he adopted nonviolence as his weapon, it was the violation of the existing situations, which itself is 'violence'. His life itself is thus 'violence' in the sense that he curtailed all the existing dogmas of life and he tried to practice whatever he thought and write and tried to keep all these till death. He worked with in the contradictions and he himself was in conflicts in many times. This paper entitled **An Appraisal on the Many Faces of Gandhian 'Violence'** is an attempt to reread the life, ideas and activities of Mahatma Gandhi in a different angle. An attempt is being made to use his idea of nonviolence in a sense of 'violence'. It also tries to make a critical analysis on some of the contradictory attitude of Gandhi in some mass movements like Khilafat and Noncooperation Movement.

Mahatma Gandhi was an ideal even long after his death. He used tools such as truth and nonviolence for struggling with the existing situations, which itself was "violence". He tried to practice his violence" in a nonviolent way. There are lot of studies on his ideologies and practices, but all these are based on his nonviolent method. The major challenges to Gandhi's theory of non-violence usually come in the form of questions about how a non-violent approach would respond to a particular form of violence. Since Gandhi often explained non-violence with reference to forms of violence, this theory of non-violence cannot be understood apart from his theory of violence. However, as with most of his thought, Gandhi did present his views on violence in a systematic form. On the surface, Gandhi seems to take a contradictory position on violence. On the one hand, Gandhi claims that a world devoid of violence is not possible. On the other hand he often make statements such as " I

object to violence". He said the goal of a non-violence practitioner is to minimize violence by organizing life in ways that emphasize the non-violent aspects of human experience.¹

His life, ideologies and activities are full of *violence*, if examining in deep. His *Hind Swaraj*, which was the fundamental book of his ideologies, itself reflects his ideologies which he practiced throughout his life. It was the seed from this the tree of Gandhian thought has grown to its full stature. He announced his own life mission through this work. It was written in Gujarati and later he himself translated it in to English. It was through this English text that he hoped to use the British race for transmitting his 'mighty message of ahimsa to the rest of the World'.² It was through *Hind Swaraj* that Gandhi first announced his own life mission. To him the meaning of Swaraj was the distinction between Swaraj as self government or quest for home rule or good state and Swaraj as self rule or the quest for self improvement.³ This text he set aside throughout his career as a source of inspiration. Through this, he presents the basic ideas, their proper relationship to one another and announced his own life mission.

The many sides of Gandhian ideologies and practices

Gandhi was, after all, a life-long practitioner of conducting major public conflicts and a profound conflict theorist. He tried to practice all his ideologies in its real sense; but in many times, it will be conflicting with the situations. Sathyagraha and nonviolence were two most important weapons which Gandhiji tried to practice in a 'violent' way ie. by struggling with the existing situations. To him Sathyagraha is a way to purify oneself. It is Gandhi's way of nonviolent activism. Gandhian nonviolence is the domain of his personal creed, convictions or commitments. It was truly a valid license for open mass movement. Gandhi's concept of nonviolence has been democratic influence. Through it, Gandhi propagated and popularized the democratic milieu in Indian society without co-opting in the electoral politics based democracy.⁴ His nonviolence was a democratic way of revolutionary politics in the society like

India. Sathyagraha is Gandhi's technique of nonviolent activism. The term has been variously translated as 'passive resistance', 'non-violent resistance', 'non-violent direct action' and even 'militant non-violence'.⁵ For Gandhi, it was also a way of life, of living in truth.

To many of the Gandhians, Gandhism (Gandhian Ideologies) was communism without violence. Gandhiji was the child of his time. Gandhi has been considered by many as a representative of Bourgeoisies. But he considered the upliftment of the downtrodden and poor sections of the society as his main duty. He raised some valuable ideologies and kept these throughout his life and tried to practice. Really his ideologies were the call for the whole nation to come in to the forefront of a revolution. His ideas of love, truth and justice were great inspirations to the common man which were novel to them. Here we can see the 'many sides' of Mahatma-as he was considered by different sections as their own leader. On the one side the common man and the workforce saw him as their own leader who stood for and justified their cause and on the other side of the middle class intellectuals and bourgeoisie considered him as their leader who stood for their cause. He welcomed the peaceful revolution, which means to introduce changes.

There are lots of examples to be pointed for his call for revolution. When the Ahmadabad Mill Strike was started on February 1928, the intervention of Gandhiji in it was one of the most important examples of his call for peaceful revolution. The way that he used to develop 'Gandhian Trade Unionism' and of the development of labor movement got great attention in every part of the world itself. He introduced a new tactic here - non-violence and also told the strikers not to accept anything free from anyone and he advised them to seek other jobs to feed their family. The mill owners were not ready to bow their head before the strikers and they began to use a divide and rule policy in between the strikers. There happened no change even after 21 days and the strikers were having a feeling that Gandhi was fucking them and they complaint that "Gandhi shahib had no worries to say us to fight till death, but we are the ones who have to starve."⁶ By hearing this Gandhiji proclaimed that he will starve until the employers will continue the strike till compromise is

reached or tell the mill completely This was a shock to the strikers. They didn't expect such an act from Gandhiji and they apologized and showed readiness to continue the strike. Here Gandhi stood not for the cause of his political party, but for the poor labors and all his early strikes were rehearsals to further ones. At the same time EMS Namboodiripad criticized his attitude towards the entering of Indians in the British military at the time of First World War as a bourgeoisie one. He criticized that Gandhi had no guilt to send the poor youth to the war field, while preaching on the horror of nonviolence itself.⁷ Here, a conflict in the ideologies of Gandhi is discernible.

The Khilafat and noncooperation movement which were started jointly by Congress and Khilafat leaders all over India was the first mass movement in India against the British Government. It was the charismatic character of Mahatma Gandhi which made it more popular. This was very much evident at Gorakhpur district in Eastern UP. Shahis Amin pictured this very interestingly thus:

"Gandhi visited the district of Gorakhpur in UP on 8th February 1921, addressed a monster meeting variously estimated at between 1lakh and 2.5 lakh and returned the same evening to Banaras. ...Gandhi, the person, was in this particular locality for less than a day, but the 'Mahatma' as an 'idea' was thought out and reworked in popular imagination in subsequent months".⁸

But this 'deified' image of Gandhi fell down after the rioting at Chauri Chaura in early 1922 and the subsequent withdrawal of the Non Co-operation Movement.

Even before the Chauri chaurra incident, there happened a more violent Rebellion at Southern Malabar in the Madras Presidency as a part of the Khilafat and Non co-operation Movement in 1921 itself which was characterized by the British authorities as Mappila Rebellion and others as Malabar Rebellion of 1921. It was started as a violent action against the Jenmies and the British authorities by the Mappila peasants of the area, but it turned to become more violent and the life of thousands of people lost their life and a reign of terror was established in the area for long. The brutalities of the Rebels and the police caused the

life of the people in the region more horrible for long. But Gandhi was silent when all these cruel incident had taken place and he was not ready to disburse the Khilafat and Non co-operation Movement. Instead he also tried to picturise it as 'an action of a group of Mappilas against the Hindu brethren and he described the Rebellion as an act of 'Moplah madness'.⁹ When the Rebellion broke out, the Congress leaders kept away from the area because of the deviation to the Khilafat Movement from a nonviolent path into a violent one. They considered the armed struggle of the Mappilas as a violation of the principles of nonviolent non co-operation.¹⁰ Even C. Rajagopalachari, the congress leader, condemned the uprising as a 'mad outburst with terrible consequences'.¹¹

Even after this horrible incidents, Congress and Gandhi, whose 'deified' image caused for the popularity of this movement, were not ready to withdraw this movement and they ignored the pathetic condition of the people of the rebel area. There arouse some questions like what was the main reason for such a deviation of the movement from a nonviolent path into a violent one? Why Gandhi didn't withdraw this movement even after the violation of his principle? The Congress really ignored the inability of the poor Mappilas¹² of Malabar to understand the value and meaning of

nonviolence. Without giving them adequate training in nonviolence that Congress and Gandhi dragged them into the Khilafat and Non co-operation Movement. In real sense, even Congress itself has not imbibed the principle of non-violence. Then how could they impart it on others? Congress and Gandhi faced more criticisms in response to the suspension of Non co-operation Movement on its very crucial period on February 1922 following the Chauri chaura incident. Even congressmen criticized the decision of Gandhiji. Moozhikkunnath Brahmadathan Namboodirippad, who was a Congress leader and a victim of police repression, remarked that "if Gandhiji had taken the same stand that he took in the Chauri Chaura incident, the Malabar Rebellion would have been ended at the starting point itself".¹³ Gandhiji himself agreed that he did a blunder in connection with the Rebellion. . While cancelling the Non co-operation movement, he commended that "the Malabar Rebellion was a warning to me, but ignored it.

Now, that warning has been reiterated".¹⁴ He was not having any doubt that the police at Chaurichaura created provocations. Even the incident was happened due to this,he was not ready to mitigate. He had no doubt that such incidents will repeat again and thus he had withdrawn the movement.

PROHIBITION POLICY UNDER D.M.K. GOVERNMENT

Dr.S. Srinivasan

Dravida Munnetra Kazhagam came to power in Tamil Nadu. Under the Chief-Ministership of C.N. Annadurai in 1967. In 1968, C.N. Annadurai visited the neighbouring states along with Kamaraj. He offered Satyagraha, if necessary to implement prohibition of Tamil Nadu to the interest of the younger generation. He added, that he did not want his son to see the ugly scenes of drunken street which existed frequently among the youth. He was the chairman of the reception committee for the fourth All India Prohibition Conference at Madras 1968.¹ The Fourth All India Prohibition Conference placed on record its warm appreciation to the establishment of the National Committee in the name of Gandhi's centenary birthday celebration. The President of India, the Vice President of India and the Prime Minister of India, were the participants of the conference. They are confident that it would organize the celebration in a truly befitting manner throughout the country.

C.N. Annadurai government passed the Madras Prohibition (Amendment) Act 1967 amended section 21-A of the Madras Prohibition Act 1937 (Madras Act x of 1937) so as to increase the rates of sales tax on the foreign liquor to permit holders from fifty paise to seventy five paise per rupee.³ The Madras Prohibition Act of 1937 was amended in 1952 during Rajaji's second ministry provide for levy of sales tax in the rate of eight anna per rupee or at any rate that the state government.

Prohibition continued to be in force throughout the state of Tamil Nadu during Annadurai's rule; the overall administration of the Tamil Nadu Prohibition Act, the Dangerous Drugs Act and the Medicinal and Toilet Preparation (Excise Duties) Act, etc. was vested with the board of revenue to attend to the supervision and checking of the various types of licenses and permits. Under the Tamil Nadu Prohibition Act, Opinion Act and the proper realization of the revenue occurring thereunder.⁴

The rules framed by the State Government under the spirituous preparation (Inter State Trade and Commerce) Control Act, 1955 the notification issued under section 16 of the

Madras Prohibition Act, 1937 the Madras spirituous Essence Act Rules. 1959 the Madras Denatured Spirits Methyl Alcohol and Varnish (French Polish) Rules, 1959 were in operation.⁵ The Director / Assistant Director of the Government of India / Tourist Office were authorized to issue tourist / temporary permits for a period of three months at a time.

There were 31 licenses in from F.L.I. for the sale of bottled liquor to permit holders and clubs and 13 from F.L. 3 licences for possession of foreign tourists and Indian made foreign spirits in hotels run on western style for supply to foreign tourists and resident foreigners holding liquor permits and staying in the hotels. Indents for the supply of ganja to licences for the manufacture of medicinal preparations were continued to be met from the confiscated stock stored at the excise and prohibition wing of the Tamilnadu Forensic Science Laboratory.⁶ Though Government of Tamil Nadu did not get aid from the centre, Annadurai was keen in enforcing prohibition laws. The Congress Governments in Tamil Nadu (T. Prakasam, P.S. Kumarasamy Raja, Rajaji, Kamaraj, and Bhakthavachalam) also did not get any aid from the centre to compensate the loss of revenue by the introduction of Prohibition.

Prohibition under Karunandhi 1969-1976

After the sudden demise of Annadurai in February 1969, M. Karunandhi became the Chief Minister of Tamil Nadu. He held office from 1969 to 1976 until his ministry was dismissed by the Central Government.

In the beginning he continued the policy of Prohibition. Then he wanted to relax it. He said that the various state of Indian union had one by one gradually given up the policy of Prohibition had gradually withered away in the southern states of Mysore, Andhra, Kerala, and nearby Pondicherry. Surrounded as it was by "wet" states, Tamil Nadu found it difficult to enforce Prohibition. This difficulty was further enhanced by severe constraints in resources.

The government of Tamil Nadu appealed to the centre that either Prohibition should be implemented as a national policy all over the

country, or in the alternative, the Tamil Nadu Government should be reimbursed the loss in revenue consequent on the enforcement of Prohibition. It was therefore with the deepest regret that, notwithstanding his deep faith in the essential validity of Prohibition, he had to announce the government's decision to suspend, with effect from 30th August, 1971 enforcement of Prohibition laws in the state till such time as the Central Government came forward to enforce it as a national policy all over the country.⁷

Karunanidhi wanted to implement Prohibition effectively and vigorously, but he wanted the Union Government to compensate the loss of Rs. 40 crores per annum on account of Prohibition. The Prime Minister Indira Gandhi replied that the centre was unable to do so.⁸

Acute financial stringency forced the Government to suspend Prohibition. In 1971 there was a deficit of Rs. 76 millions. In order to meet the deficiency M. Karunanidhi, Chief Minister of Tamil Nadu, scrapped Prohibition straight away in the place of Prohibition law and the Abkari Act 1886 came into effect.⁹

In the statement of objects and reasons in the Assembly the Chief Minister said that the Abkari Act 1886 was enacted a century ago, and the Government proposed to bring forward comprehensive legislation in due course after ascertaining the position in the states of Andhra Pradesh, Mysore, Kerala and Pondicherry.¹⁰

The enforcement of Prohibition laws was suspended in the state of Tamil Nadu with effect from 30th August, 1971 by the Tamil Nadu Prohibition suspension of operation Act, 1971 (Tamil Nadu Act 33 of 1971). This Act suspended operation of the Prohibition Act only in so far as it related to liquor; its provisions continued to be effective in regard to intoxicating drugs.

The Tamil Nadu excise Act, 1971 (Tamil Nadu Act 34, of 1971) was enacted to amend the law relating to the production manufacture, possession import, export, transport, purchase and sale of liquor in the state of Tamilnadu.¹¹

After the removal of Prohibition on August 30, 1971 the total revenue of the state increased. The total revenue for the year 1971-72, was 40,034.34 lakhs as against as 37,740.48 lakhs

anticipated in the revised estimate for that year showing an increase of Rs.1,817.86 lakhs. Thus there was a surplus of Rs. 649.95 lakhs in the revenue account as against Rs. 174.25 lakhs anticipated in the revised estimate for 1971-72 and also according to the budget estimate for 1972-73, the revenue account was expected to close with a surplus of Rs. 249.23 lakhs.¹²

The auction of over 10,000 toddy and arrack shops during May 1972 had brought a total income of over Rs. 16 crores for the seven month period in a full year and the income was bound to much more than that besides the toddy and arrack shops the number of wine shops too were being increased. When the government decided to allow bars to be opened in big hotels. They too would be an additional source of income.¹³

Agitation Against Karunanidhi's Policy

A strong agitation was building against the decision of the Tamil Nadu Government to re-open the toddy and arrack shops that remained closed for more than twenty years. K. Kamaraj, Kakkann and other leaders of the congress had declared their total support to this agitation. Yet Kamaraj thought that this agitation should not be taken up as an agitation by a political party but should be headed by the Sarvodaya Sangham.

When unitary decision on lifting prohibition was taken, Rajaji told that the steps taken by the government might be wrong from a political point of view. In all their political activities the political parties in the opposition should engage themselves both from a sense of justice and righteousness. Lifting prohibition was not only an unjust act: it was a step taken legally by a government.

Therefore the political parties which considered the Government's move a wrong one had the right to oppose the government's move by all possible means. It was their duty as well. No political party need hesitated or fought shy in opposing the government publicly not only from a moral point of view but also from a political point of view.

Rajaji further stated that not only enough members of the DMK party supported the Government due to party discipline, all people in the country opposed this move. This was not a measure to be governed by the consideration

that it would contribute to the government's treasury, when thousands of toddy and arrack shops were opened, these were adding to the crimes to be investigated by the police. The government's expenditure would go up on this count. Everyone knew the evils that would accrue to the poor because of drinking opening a large department to cause sufferings to lakhs of poor. People would not be considered as good government.

It could not be called a socialist measure. It would be an enormous act of injustice to open thousands of toddy shops that tempt people to patronize them all because a few persons violated the law and went in for illicit liquor. These shops were going to rob the poor of their paltry income and corrupt their minds. Kakkan, congress leader, permitted the congress man to take part in the struggle against the repeal of the prohibition law. Rajaji said that such a permission should be deemed as an order congressman of the old congress should participate in this struggle openly and passionately All Congress supporters acclaimed Rajaji's call.¹⁵

When prohibition suspension legislation was introduced in the Tamil Nadu Legislative Assembly T.N. Ananthanayaki (Congress party member) told that the government was passing a prohibition suspension legislation affecting crores of people. The law makers must give thought to it. After drinking liquor, the drunkards would indulge in mindless and violent acts such persons should be punished sternly. The drinking habit would head to a situation where women and children were beaten up in their homes. This problem was going to undermine the very basis of society. The Government should not consider this as a matter of revenue but a matter that affected society. When the Government passed a number of disciplinary measures, they should see to it that unnecessary demonstration, violent attack on women were put down with a firm hand. The government should view the problem with concern, the problem was not one of revenue to the government, but one that affected society deeply. The Government success would depend upon the extent to which they viewed the problem

from society's point of view. Therefore the Government should drop the idea of scratching prohibition.¹⁶ Dr. H.V. Hande, another member of the legislative assembly, opposed the bill to scratch prohibition with all the emphasis at his comment on two distinct grounds: Firstly, on the ground of morality it was a well known fact that the prohibition policy had been effective in the state. Even after 1967, during the period of Annadurai, it was going on well. When several incidents like deaths due to drinking Varnish were brought to the notice of Annadurai and a suggestion was made that the prohibition policy should be reviewed, Annadurai said; "I am not going to revoke Prohibition Act and I am not going to bring Abkari Act. I would try to plug the loopholes and not completely do away with the Act."¹⁷

Then H.V. Hande came to the constitutional propriety. There had been a very serious constitutional impropriety in bringing this bill. This was a very serious matter in which H.V. Hande would request the law minister to give careful consideration there was not a single incident in any part of the world where a repealed act was revived without any statutory authority.¹⁸

The DMK government under the Chief Ministership of C.N. Annadurai even though not wedded to the ideology of the congress party, continued the policy of prohibition. Chief Minister Annadurai even participated actively in the Fourth All India Prohibition Conference. But his successor Chief Minister Karunanidhi questioned the wisdom of this prohibition tradition and favoured earning revenue from selling liquor. Thus tempted by financial consideration, Karunanidhi suspended prohibition in Tamil Nadu in August 1971. However three years later he was compelled to reintroduce prohibition because of the able and active opposition of the congress party under the leadership of Rajaji. Thus congress party had the unique distinction of introducing a novel social legislation relating to prohibition. Such kind of moral and legal restraints on liquor habits of the Tamil people also enriched the cultural heritage of the Tamils.

GEORGE JOSEPH: A PIONEER FIGHTER OF CRIMINAL TRIBES ACT IN MADURAI REGION AND INDIAN FREEDOM STRUGGLE IN MADURAI

J. Stella

During the late 1970s and early 80s, subaltern historiography emerged as an alternative to the nationalist, Marxist and colonial historiography, accusing the latter of robbing the common people of their agency. However, within the nationalist historiography there were attempts to marginalize nationalists owing to religious reasons. One such marginalized person was George Joseph (1887-1938), who was always seen as a Christian nationalist. A multifaceted personality, he was a famous lawyer, journalist, a trade unionist, a champion of subaltern, and Indian Freedom Struggle.

CRIMINAL TRIBES ACT¹

George Joseph's main contribution was against the disciplinary powers of Criminal Tribes Act, 1911, by which members of the criminal tribes had their fingerprints taken and their mobility restricted. Under Section 10(a) of the Act, hours were fixed for them to report to the police every night between 11 p.m. to 4 a.m. stayed in the station.

KALLARS' RIOT AT MADURAI²

At this juncture, in the year 1919-20, about 1,400 Kallars were brought under Section. 10 (a) of the Act. The hours fixed were 11 p.m. to 4 a.m., which compelled them to sleep at the police station every day. This made life difficult for the Kallars and the women in the community had no safety. In the meantime, on 3rd April, 1920, the

Piramalai Kallars rioted in Perunkammanallur sixteen members were shot dead by the British Officials to suppress the riot in Madurai region and a subsequent official enquiry at which George Joseph was present directed that Section 10(a) be applied more sparingly in future. Representations made by him and others resulted in a more humane approach by the government against these communities. His 1936 - diary contains entries regarding visits by delegations of Kallars who had come to him for advice on various issues. Perunkammanallur tragedy martyres memorial was laid by Usillampatti Priranmalai Kallar State federation at Perunmammanallur unveiled by Thiru. R. Muthaiah, then the former Member of Tamil Nadu State Assembly on 19.09.1992 and every year leaders of the same community and other political party leaders salute the great martyred and remembered their sacrifice for the social cause. The sixteen martyrs of Perunkammanallur are Thiru. C. Mayandi Thevar. Thiru. C. Periya Karuppath Thevar, Thiru. S. Virumondith Thevar. Thiru.P. Sivankalaith Thevar, Thiru A. Periyandith Thevar, Thiru. S. Muthukaruppath Thevar, Thiru. P. Chinnath Thevar, Thiru. S. Mayandith Thevar, Thiru. S. Mayandith Thevar, Thiru.P. Udayath Thevar. Thiru. U. Chinnamayath Thevar, Thiru. M. Periyakaruppath Thevar, Thiru. N. Veeranath Thevar. Thiru U. Muththaiah Thevar, Thiru.P. Veerath Thevar, Thirumathi P. Mayakkal.³ Among the 16, Mrs. P. Mayakkaal was the only

lady, who died for the social cause which made it clear that women were also took part in public meetings and ready to sacrifice their life for nation.

HOME RULE MOVEMENT

In 1916, Lucknow pact created a new hope in the minds of the Indian masses. The Home Rule leaders wanted to make awareness in the minds of the common people about the importance of the pact. George Joseph became an ardent supporter of the demand for self-government. In Madurai, George Joseph started a campaign to secure the support of the people towards the Lucknow Pact. George Joseph had a key role in organizing this movement in Madurai. As per an order issued by the British government on 7th June 1917, Mrs. Annie Besant and other leaders of the Home Rule League were banned from visiting urban centers' like Madras and Madurai. The British government also prohibited students from attending any Home Rule League agitation. George Joseph condemned all such actions of the government through various meetings held in Madurai. On 25th June 1917, a meeting was organized by the members of the Home Rule League including George Joseph in Madurai, in which he made an eloquent speech demanding the release of Annie Besant.⁴ Madurai became a major centre of the Home Rule Movement and consequent agitations. Another meeting was held in Madurai in February 1918, in which George Joseph commented that for achieving Home Rule, people should agitate within India and he also recommended for sending representatives to England for demanding self government to India.⁵

POLITICAL ENTRY

In the meantime, there was a severe famine and unemployment followed by the war created turmoil in the Indian society which created a wider scope for the Indian struggle for freedom from Imperial Britain. In order to curtail the growing agitation, the British brought out a new act known as Rowlatt Act. On 10th December 1917, the British Government appointed a Sedition Committee headed by Sydney Rowlatt, to investigate the growing revolutionary movement and agitations against the British. Gandhi could invite several supporters from different parts of India. On 22nd March 1919,

George Joseph was invited to meet with Gandhiji in Madras on the Marina beach at the propagation to his civil disobedience movement and also to exhort the people to observe a hartal on 6th April, 1919 to protest against the Rowlatt Act, which made him a great impact on George Joseph.⁷ C.Rajagopalachari, Sarojini Naidu and T.Satyamurti were also invited by Gandhi.⁸ George Joseph drew much inspiration from Gandhi, brought out crucial changes in him. On the day of hartal George Joseph provided an active leadership to the programmes and activities in Madurai. He asked the people to boycott all work on that day and to take fast and do prayers. The people of Madurai took this direction seriously and provided their full support for the peaceful carrying out of the hartal, George Joseph and his associates spread the messages given by Gandhiji among the common masses. He stressed the importance of non-violence and self-restraint and the hartal day was more peaceful without any violent action.⁹ Later, Gandhi came to Madurai on March 26, 1919, and stayed at the residence of George Joseph, who played a leading role in organizing a public meeting for Gandhi in Madurai on March 29, 1919, in which 20,000 people were attended with great enthusiasm.

PROTEST AGAINST ROWLETT ACT AT MADURAI

On April 5, 1919, Joseph organized a huge procession in Madurai. At the meeting, he appealed to the people to stop work and observe fast the next day. This was translated into rebellious action by a large section of people and all shops remained closed on April 6, 1919. Joseph became the trusted lieutenant of Gandhi in Madurai from that moment. They were administered the 'Satyagraha pledge' as an act of resistance to the Rowlatt Act. A resolution was passed at this meeting to the effect that the people of Madurai were fully prepared to observe a hartal on April 6, 1919. During this time George Joseph was immersed in Home Rule activities drive him to involved in Non - Co-operation Movement and Satyagraha Movement and its principles of non violence brought a new thinking into the mind of George Joseph.¹⁰ He himself involved in boycotting foreign goods and set fire it renounced his western life style and entered into the political arena of India. At that juncture George Joseph was having a lucrative

legal practice but Mahatma's call pushed him into the mainstream of national movement. Both together decided to leave all comforts in life and set out for Sabarmati Ashram in Ahmedabad, where they started the actual political life in a total Gandhian perspective. After leaving Madurai, Joseph and family reached Sabarmathi Ashram (hermitage). They were attracted by the simple life at the Satyagraha Ashram at Kochrab and later at Sabarmati.

They started their political career from Sabarmati after embracing the call of Mahatma, George Joseph started his political career as an integral part of the national struggle for freedom. The simple life in Sabarmati Ashram was a new experience for George Joseph and Susannah Joseph, where they stayed for a short period.¹¹ Life in the Ashram made them to have contacts with numerous national leaders. Meetings with some eminent leaders stimulated the urge of George Joseph for his entry into the national struggle.¹² Joseph's enthusiasm and spirit for national freedom created a strong impression among some of the national leaders like Motilal. Joseph was invited to edit the newspaper 'The Independent', started by Motilal Nehru.

ENTRY INTO NATIONAL POLITICS AS A JOURNALIST

In February 1920, Motilal Nehru made Joseph the Editor of 'The Independent' newspaper in Allahabad. During this time, Joseph was arrested with members of the Nehru family on the charge of sedition on December 6, 1921. On September 27, 1923, he assumed the editorship of Gandhi's 'Young India' from Rajaji. The tenure lasted for about six months. Motilal Nehru chose Barrister George Joseph to edit his paper. In a letter to Jawaharlal Nehru, Motilal had written thus "*I think you had, better get Joseph for your editorship*".¹³ In another letter to Jawahar, he had pointed out that *he was dissatisfied with the editorship of Ranga Iyer*. He feared that if the paper is continued under him, it would loosen its demand with the public. He also mentioned that Joseph would be a thousand times better than Ranga Iyer.¹⁴ It was Jawaharlal Nehru, who recommended the name of Joseph for the editorship of the Independent. He could find that Joseph is the apt person to chair the editorial post of the paper in such a critical period.¹⁵ Joseph could easily take over the task. He was a strong critic of the activities of the

government. He himself contributed various articles to this paper by severely criticizing the government.

During his editorship, Joseph could acquire close relationship with some important personalities. One among them was R.Venkatraman. He was a South Indian lawyer, Gandhian, and later became the Indian President. Like George Joseph, he too gave up his practice and set out for North India. He became a close friend of George Joseph.

Sadanand was another one who considered himself as the 'adopted' son of George Joseph and Susanna Joseph. The third friend Joseph got from the editorial staff was Mahadev Desai who later became the personal secretary of Gandhiji and wrote the famous book, *The Epic of Travancore*.¹⁶ In a letter to Jawaharlal, Motilal insisted that he should arrange hotel rooms for George Joseph and make him aware of the present situation.¹⁷ George Joseph had to learn well the present situation before taking charge of the editorship to grasp the political circumstances in which the paper was run. He regarded it as a favourable opportunity to criticize the government and its heinous policies and activities. It was a golden chance to attack the British government in a mature manner through his writings and speeches. George Joseph himself contributed such articles showing his anger and distrust towards the Government.¹⁸ The Independent was a true propagator of the ideas of the non-cooperation movement.

On 31st October, George Joseph delivered an inspiring speech on freedom and its relevance. He pointed out the importance of boycotting of government schools and colleges thus, the ultimate aim of all programmes and policies was the achievement of freedom. Freedom was the highest political goal. Only freedom can enable the people to have equality before the law. He added that the citizens should keep an infinite readiness to maintain their freedom.¹⁹ The editorship of the Independent provided him with enough space to express his views against the action of the government. His stay with Gandhiji accelerated the nationalist spirit and the editor of the Independent led to a close relationship between his family and Nehrus' family.

Lord Reading took charge as the Viceroy of India on 2nd April 1921. He was a Jew and had a good career at the Bar. Lord Reading might be a familiar person to George Joseph during his days in London. George Joseph wrote an article in the Independent, entitled 'Terrorism Run Mad', in which he mentioned about Lord Reading as a gentleman, interested only in fair dealings. He was against any kind of violence and as such the post of Viceroy does not suit him much.²⁰ Gandhiji's non co-operation movement was wholeheartedly support of people cause for successful popular movement.

On 6th December, 1921 both Motilal and Jawaharlal were arrested in the congress office at Allahabad with an arrest warrant.²¹ At soon as George Joseph's house was searched by some police officers and completed their search of the house within a few minutes. The officer was so courteous and a gentleman who apologized to Joseph said "you might take your tea Mr. Joseph, our officer want to arrest you also". He put the warrant of arrest under section 17 (b) before George Joseph. He treated it as he was longing for an arrest and accepted it without any hesitance. He left home by saying good bye to Mrs. Joseph and his little daughter. They both left with the same feeling and said good bye to Joseph with a smile.²² He regarded it as his duty to go to the prison for the sake of his own country. Various articles appeared in the Independent gave a severe headache to the British government and curtail the press rights by arresting leaders.

Chief secretary to government, sent letters to George Joseph and C.B.Ranga Iyer dated 11th June 1921 and pointed out attacking action both would be given a chance to express their regret. This letter also demanded promises that they would not repeat such articles which provoke violence, in future. If both accepts these demands, he wrote, no action would be taken with regard to these articles.²³ On 5th July 1921, George Joseph sent a reply to this letter, in which he expressed his gratitude for giving a chance to regret. But he showed his hesitation to accept the warning forwarded by the government "not to publish in future, statements directly or indirectly inciting violence or calculated to create an atmosphere of readiness for violence". He wrote that the articles did not contain any incitement to violence and even if it was otherwise, he told he

would not render his apology in order to purchase freedom from a government with which he would not co-operate. George Joseph again stated that he was pledged to the creed of non violence, and if the passages bore any words which promoted violence, he would certainly have apologised to the public.

TRIAL AGAINST GEORGE JOSEPH

There were mainly two cases against George Joseph. Only about forty people were allowed to attend the trial.²⁴ The first case was to be as printer and publisher of the Independent, where he published an article entitled "*Reception to the prince*" in the issue dated 26th November 1921. He committed the offence of aiding persons to assist in the operations of an unlawful association. The first witness of this case was S. Newby, the superintendent of police. He admitted that he was a subscriber of the Independent and has received a copy of the issue at the 26th November which was containing the article. Joseph kept silence through out the trial and never gave answer to any question. The public prosecutor at last said that the article entitled "Reception to the prince" has a good role in encouraging the people to join in an unlawful organisation.²⁵

The second case charged George Joseph for the publication of the manifesto of the U.P congress committee in the issue of The Independent dated the 6th December, under the heading U.P's answer to Government together with list of signatories to the volunteer's pledge. He assisted in the operation of an unlawful association.²⁶ The government found Joseph guilty of publishing such articles and inciting violence.

RETURN TO SOUTH FOR VAIKKOM TEMPLE ENTRY

As a socially engaged leader, Joseph, after coming to South India, participated in the Vaikom Temple entry struggle in March 1924, much against Gandhi's dislike. Gandhi wrote a letter on April 6, 1924 stated that temple entry was a problem of the Hindus and let them solve it themselves. In his words, "I think that you should let the Hindus do the work. It is they who have to purify themselves. You can help by your sympathy and by your pen, but not by organizing the movement and certainly not offering Satyagraha."²⁷ Joseph did not look at the

Vaikom struggle as an isolated movement for temple entry but perceived it as a denial of basic Civic Right of free entry to public space for the 'untouchables' and participated in the struggle. In January, 1925, Joseph and his wife returned to

Madurai where they took up Gandhi's constructive programmes, which included promotion of khadi, removal of untouchability and restoration of communal harmony.

HISTORICAL IMPORTANCE OF THE MAMANDUR – A STUDY

R. Subramanian

Introduction

Mamandur is located between 12.75° and 12.85° of the north latitude and between 79.70° and 79.85° of the east longitude. It is east of Thiruvannamalai District and nearby Kanchipuram, the headquarters of the Kanchipuram District. It's flanked on the north by Arakonam, on the south by Uthiramerur and Vandavasi, on the east by Chengalput west by Arani in Tamilnadu. The Pallava ruler Mahendravarma – I was excavated a cave temple in Mamandur. It is called as second cave of Mahendravarma. So, it is one of the earliest cave temples of Mahendravarma – I. It is faced on east.

The art and architecture of the Pallavas form a very brilliant chapter in the history of South Indian Art. Their productions provided the foundation of Dravidian style.

The Pallavas built large number of temples in Tondaimandalam. Pallava inscriptions describe elaborately about the temples in Kanchipuram. Pallavas were instrumental in the tradition from rock cut architecture to stone temples. Starting with rock cut temples, Pallava sculptors later graduated to free standing structural shrine which inspired Chola temples of later age. Moreover Pallavas were started to draw on honored titles in their inscriptions³.

Almost all the Pallava rulers had made substantial contribution to religion and temple building. These religious institutions stand as testimony to the notable development of art and architecture under the Pallavas.

Mahendravarma – I (580-630 AD) inherited the Pallava throne from his father Simhavishnu and with it a large and settled empire extending from the Krishna river in the north to the Kaveri in the south. He was an

exceptional and unorthodox king, whom Prof. Dubreuil referred to as one of the greatest figures in the history of Tamilian civilization. A many sided and gifted personality, musician, poet, builder and statesman, it was he who called forth the immense flowering of culture and art which would spread all over South India and overflow to other countries of Asia, and finally even survive the decline of his own dynasty and empire⁴.

Mamandur Inscription of Mahendravarma – I :

Mahendravarma is also known as the author of a short play, 'Matavilasaprahasana'. In it, the king criticizes in a humorous yet scornful way, the followers of different religious sects in his capital without sparing any of them. Buddhists, Kapalikas and Pasupatas are ridiculed for their hypocritical devotion and for trying to find scriptural justifications for all their personal weaknesses. It is an interesting little farce, rather free in its spirit. Another play 'Bhagavadajjukam' shows similarity in style and verse and is obviously the work of Mahendra too: both plays are mentioned in the Mamandur inscription as being written by him⁸.

Little would be known about his inclination for the art of painting if it were not for the mutilated inscription in one of his cave temples, the northern Mamandur cave. When studying its fragments it becomes clear what a rare document it would have been had it been intact-full of important and genuine information about Mahendravarma and his time.

"Classifying (the subject) from (an old) kalpa (i.e. work on the subject), he caused to be compiled a commentary (vrttz), called Daksina Cittra (i.e. South Indian art of painting) following strictly the methods and rules laid down for such a work"⁹.

Painting :

Mahendravarman I was famous as a patron of painting. At Sittannavasal, one sees a rock-cut temple very similar in style to the one found at Mamandur and we have specimens of painting fairly clear on the ceiling and fading ones on other parts of the temple. This fresco represents a tank covered with lotuses.... The decoration of the pillars in the facade is well preserved. It consists of lotuses whose blooming stems intertwine with elegance. The two pillars in the

passage are adorned with figures of dancing girls. Dancing as an art, it is permissible to presume, was encouraged by this king, who perhaps wrote or caused to be written a grammar of dancing called Dakshin Chitra¹⁰.

The Mamandur inscription, as far as it is legible, records further that the king was and adept in music too, a fact which is already implied by his biruda 'sankirna jati', meaning expert in the exposition of sankirna or mixed ragas or jatis. (jati was the term for raga in ancient music). The sankirna raga is a mixed raga in which traces of two or more ragas are discernible. As for the fragments on music in the Mamandur inscription, I refer to Dr. Minakshi who says, "The reference to **Orvasai sarva sobhana**'-Orvasi of all round splendor and of 'Gandharva Sastram'-the science of Gandharvas, i.e. music, in the Mamandur inscription of Gunabhara alias Mahendravarman, strengthens our conclusion that the king was an adept in music. The inscription also records his literary achievements, but it is disappointing to note that the portion that speaks of music in details is much damaged. However, from what I am able to make out of the broken sentences, I have no hesitation in stating that herein the king has recorded his composition of the Kudumiyamalai music and his experiments with it on an instrument¹¹.

Mamandur Cave Temple:

The northernmost cave temple in the chain of granite hills is called Mamandur. It is a small, very attractive chapel where a different layout was attempted indicating that by now the Pallava architects were familiar with the techniques and basic plans of Mahendra's rock architecture and ventured further to realize new ideas. They simplicity here is not the austere bareness of Mandagapattu but intentional. The basic idea obviously was to focus attention on the single shrine by projecting it from the back wall of the temple and leaving the space in front of it unobstructed by the otherwise almost obligatory second row of pillars. Thus, a small but well-proportioned empty hall was created. The projection of the shrine is further emphasized by a rounded cornice above and a molded base below; No further ornamentation was needed for this kind of design and even the dvarapalas have been omitted here¹².

Into the southern wall of this hall the inscription by which the temple gained fame is carved. Though badly damaged with big pieces of granite missing here and there indicating that at least part of the mutilation was arbitrary. It is yet a unique document from which much valuable information can be gained.

The façade of the cave temple consists of two pillars and two plain pilasters at either end. The lower sadurams (square) of the pillars are considerably higher than the top ones, the latter looking almost odd in their reduced height. The kattu is between is elongated. Into the top and

bottom sadurams (square) circular lotus medallions in a square framing are carved. The single shrine chamber is excavated well above the level of the hall and entered by the two rock-steps with the semi circular stone (chandra sila) at the bottom. A platform with a square pit is carved from the back wall of the shrine. Traces of old paint and plaster are found all over the walls. The corbels of the pillars, for example, are decorated with painted circular lotuses against a red background, similar to the ceiling patterns in Sittanavasal. The granite of the temple is darkened and eroded and shows arbitrary mutilation in places¹³.

WOMEN DURING GANGA PERIOD AS REFLECTED IN INSCRIPTIONS

N.C. Sujatha

Introduction

The civilization, culture, education system, of any country are deeply intermingled with the status of women of that dynasty. The country which is more conscious about the all round development of their women are considered to be more progressive one. We are proud to say that from time immemorial India has shown great respect to women.

The concept of a full-fledged Strirājya and the role of queens and royal consorts have been unknown to India from very early times. Ladies as heads of the state and administration have adorned the pages of Indian History.

According to Manu, women should not be allowed to enjoy full freedom or authority. But in practice, she exercised great influence owing to her spirit of service and sacrifice. She was a very important member of the family. As a mother she was responsible for the bringing up of children and as the lady of the house had to look after the

interest of every member. No feast, festival or religious ceremony was complete without her participation. Manu went to the extent of saying that where women are honoured there gods are pleased. Women of the Elite class held important positions. During the Gaṅga period R^ovakanimmadi, daughter of Amoghavarsha and wife of Eregaṅga administered the region of Eḍetore-nāḍu.¹ Būtuga II's queen was in charge of Kurugal.² Śrīpusha's daughter-in-law Kañchiabbe who was the wife of Duggamāra was entrusted with the task of governing the territory of Aḡaḷi.³ One of the queens, Sōviyabbe accompanied her husband to battle, and fell fighting at his side.⁴ Śrīpurusha's queen, Viniyavatin, governed over Malavellur.⁵

Some women of the Elite class were learned in fine arts such as dancing, music and decorative arts.⁶ Princesses generally received good education in literature and arts.

A few were proficient even in medicine, the Dharmaśāstras, in the Science of war, and

exposition of high ethical and philosophical truths.⁷ A few had earned vibhutipatta or a mark of high distinction for erudition and scholarship. We also learn from inscriptions that cultured and educated, women renounced the world and observed Jaina practice of retreat. An inscription from kadur taluk records that Butaga's sister and senior queen of Dorapayya by name Pampabbe made her head bald and performed penance for thirty years observing the Jaina vows.⁸ Many of the Jaina women patronized great poets like Ranna, Ponna and others. According to the *Kāvyaśāra* of Abhinavavidyanandana, Attimabbe of the tenth century got the work.

Dānachintāmani written by Ranna, the greatest poet of the day.⁹ Again the same Attimabbe was responsible for making Ponna, another luminary in Kannada literature, prepare a thousand copies of the *Śānthipurāna*.¹⁰

Thus many women members of the royal family and upper classes earned a high place in society by their interest in education and learning. Many of them endowed lands for religious and charitable purposes. When Nitimārga was the king, the elder sister of the Nolamba made a grant of land of the *Mālavakkaluru* free of all taxes.¹¹ An inscription of Būtuga II states that his queen Galabbe caused a temple to be built and conferred a grant of land on it.¹² Chāttaladevi, the adopted daughter of Rakkasagaṅga was a very pious lady. She set up the Pañchakuta-basadi and made grants to it.¹³ Thus the women of the upper classes played a vital role in social and religious life of the times.

Kulastri or Family Women

The second category of women who were very large in number happened to be the family women or Kulastri. They formed the bulk of the women population. Their duties were management of house, devotion to husband, taking proper care of children, service to the elders and observe age old family customs and traditions, she was a legally wedded wife of the man and her responsibility was very great. Her role as grihapathni or mistress of the house, kept her engaged from dawn to dusk looking after the needs of the various members of her family, cleaning of the house, cooking food, washing cloths and vessels and odd jobs kept her busy throughout the day.

Women of the higher castes were confined to the house hold affairs, but women of the agricultural class and other lower sub-castes worked outside as well. They had to fetch water assist men in the field, carry food to them and do all other sundry physical work. In a way women worked for longer hours and took greater share of the household responsibilities than men whose main work was to earn and provide for the daily requirements. Thus the mother happened to be the keystone of the main arch in the family.

The third categories of women were the courtesans or the Bōghastrī. But the number of such women was always very limited. The Bōghastrī was looked down upon by the society. She was mostly attached to courts of kings, provincial governors and temples. They were proficient in music, dancing, and other fine arts. Gunavarma, the contemporary of Eregaṅga, mentions in his work *Śūdraka Kāvya* the existence of prostitution in his time. The prostitutes lived in separate quarters. An inscription of *Nitimarga* records that the wife of a commoner Permadi Gounder of Sīdanāḍu and daughter of Jōgabbe was a courtesan.¹⁴

Inscriptions of the period mention dancing girls and singers, who were considered as an essential part for the temple activities.¹⁵

Devadāsīs

The devadāsīs were the servants of god as they were permanently attached to the temples. Many of the singers were also ladies. But, those who adopted the profession of courtesans led altogether a different life from that of the strict and rigorous schedule of a house wife. These courtesans were free and independent to lead a merry life of their choice. Many a time they were accomplished in dancing, singing and other traditional arts, and also noted for their religious fervour and charity.¹⁷ The court used to patronize them. A record mentions about a great dancer Bāchaladēvi, who attracted the king by her dance and won the king as well as the title of Patrajagadōle.¹⁸ Those who were attached to the temple were different from the courtesans. The devadāsīs were a socio-religious institution of south India. But sometimes this institution was put to abuse and the devadāsīs did not perform strictly religious functions in the temple.

In the ancient work these dāsīs have been classified into seven categories, the datta or one who gave herself as a gift to a temple, Vikrita, or one who was sold for the same purpose, bhṛityu, or one who acted as a servant in a temple for the prosperity of her family, bhakta or one who joined a temple out of devotion, hirita or one who was enticed away and presented to a temple, alaṅkara or one who was presented by kings and nobles to enhance the charm and magnificence of the temple and Rudraganika or Gōpika who received regular wages from the temple authorities for singing and dancing.¹⁹

It is the opinion of few scholars that the dāsīs of the earlier period were persons of culture and devotion. They were primarily intended for temples, although, sometimes they were companions of one person or another. They danced and sang before the deities at specific periods daily. They were maintained out of the funds of the temple. An inscription from Honalli taluk mentions the grant of lands to dancing girls.²⁰ Yet another inscription from Shimoga district records a similar grant to dancing girls.²¹

Education of Women

Concerning the education of women it may be said that imparting of formal education was not considered as an important duty either by the state or by the family. Women were certainly given some training, but it was all from the point of utility in their later life. Such kind of arts as dancing, music, singing, cooking and decoration were taught to the girls. But reading and writing and study of arithmetic, grammar, poetry, and philosophy were not included in the curricula of studies for women. Ladies of the royal family were given training in the art of fighting and even state craft. One of the Gaṅga inscriptions records that Sōviyabbe accompanied her husband to the battle field. She is shown in the sculpture as an amazing riding a horse and flourishing her sword with a man on an elephant opposite to her.²²

Sati

The Gaṅga records are silent regarding the practice of sati during this period. According to the practice, the wife was expected to fall with the corpse of her husband into the funeral pyre. Likewise the practice of tonsuring widows was unheard of during the Gaṅga period. Again we do not come across any epigraphical evidence concerning widow remarriage and Sati.

Sallekhana

Among the Jains, the practice of Sallekhana was common. It was a striking illustration of the self controlled and self annihilatory character of Jainism. Whenever a Jaina was infected with an incurable disease or became a victim of utter disappointment or any other misfortune, he would withdraw from active social life and would hasten his death. Although Jainism strongly opposed the taking of life in any form, sallekhana was an exception to the rule. It was considered as the highest form of self control and the highest proof of one's spiritual victory over physical desires. The Gaṅga rulers being Jains were not averse to this practice. According to this practice the devotee would renounce and possessions and earthly ties, give up food and slowly invite death.

Mārasimha III observed this rite of sallekhana for three days and passed away in AD 974.²³ Jaina Srāvakis and nuns often starved themselves to death by over-serving the rite of Sallekhana. A record of Butuga mentions that his elder sister Pamabbe ended her life through Sallekhana.²⁴ Similarly Jakiabba who was holding the office of Nāḍ-gaunda of Nagarkhand 70, when she was afflicted by some bodily ailment resigned everything to her daughter and expired while performing the Jaina rite of fasting.²⁵

Conclusion

Thus on inscriptional basis we can summarize that during the Gaṅga period women took active part in politics, social and religious life, shouldered the responsibilities of administration and war. They were held in esteem in the society.

A PROCESS OF URBANIZATION OF BANGALORE – UNDER THE DIWANS, SIR.M.VISHVESWARAIAH AND SIR.MIRZA ISMAIL

S.M. Suresh Kumar & N. Shaik Masthan

Introduction

Bangalore is a Historic City.¹ Its recorded history can be traced back to the period of western Gangas of Talakad. Because of its strategic location in the center of the southern peninsula. Straddling the overland trade routes Bengaluru and environs surrounded by Durgs or Droogs, formed an important part of the Ganga, Chola, Hoysala and Vijayanagara empires.² Bangalore is draped over the Deccan Plateau at an altitude of 3000 feet above Sea level, which gives it possibly the best climate among all the cities in India.³

The present-day city was designed by Kempegowda 1 in the year 1537.⁴ He also built numerous lakes, temples and also invited various craftsmen from different parts of South India to work in his new city which became a famous trading center.⁵ Kempegowda's son Kempegowda II. erected the four watchtowers to mark the boundaries of Bangalore which are traceable even today and they stand almost in the heart of the present city. In 1637, the Bijapur army led by Ranadulla Khan and Shahaji Bhonsle captured it from Kempegowda II.⁶

In 1689 Mughals Aurangzeb's army captured Bangalore and sold it to the Chikka Devaraja Wodeyar of Mysore for 3 Lakh pagodas.⁷ In 1759, Hyder Ali, the general of the Mysore army, got Bangalore as a Jagir from Krishnaraja Wodeyar II. Hyder Ali and Tippu Sultan fortified the southern fort and made Bangalore an army town. When Tippu Sultan died in the 4th Anglo-Mysore war in 1799, the

British got the kingdom, including Bangalore. Under the British influence, Bangalore bloomed with modern facilities like the Railways, Telegraph, Postal and Police Departments. In 1881, British returned the city to the Wodeyars of Mysore.

Nalvadi Krishnaraja Wodeyar a King of Mysore State and **Dewans Vishweswaraiiah, Mirza Ismail** were the pioneers to help Bangalore attain its modern outlook. From then on, Bangalore city has grown in magnitudes, Bangalore is India's fifth largest and fastest growing city in Asia presently.

Diwan Sir M.Visveswaraiiah

Sir M.Visveswaraiiah became the Diwan of Mysore state in 1912 under the King of Nalvadi Krishnaraja Udayar. He was a clever and very good statesman. In Mysore State a number of projects and industries were implemented during Sir. M.Visveswaraiiah's Diwanship. In bangalore we found the Mysore Bank (1913) with bangalore as the headquarters of Mysore State. He was also responsible for the founding (1916) the Mysore Chamber of Commerce and Industries at Bangalore. Special steps were taken to encourage founding of modern hotels in Bangalore with view to promote tourism. The government Engineering College was founded at Bangalore, at present it is famously known as the Visveswaraiiah College of Engineering. The agricultural School was founded at Hebbal in 1912 which was to be the nucleus of the future UAS.

In Visvesvariah Diwan period so many industries were established. In 1915, United Breweries Ltd. was established. Bangalore Printing and publishing Company Ltd. was started in 1916 for publishing and printing work. In 1916, the Sandal Oil Factory was started. It was amalgamated with the Mysore Sandal Oil Factory, Mysore in 1920.⁸

Diwan Sir. Mirza Ismail

Sir.Mirza Ismail was appointed Dewan post in 1926. And the period of his administration was an eventful one. He built superstructure of the Bangalore growth. His period saw the Bangalore city making substantial progress in the fields of industries both in the private and public sector. The Tippagondanahalli Reservoir was completed to supply water to Bangalore. In his period the Russel Market of Shivajinagara, one of the few buildings in civic-amenities group was built in 1927.⁹ The Containment people decided to build Russel Market, which even today is synonymous with quality and variety of food in its raw form.¹⁰ Now a days this market is one of the famous commercial market in Bangalore city. In Mirza's Diwan period, Kalasipalya Bus stand was founded and the Capital investment on it was Rs.1.50 lakhs initially.¹¹

In Mirza Ismail Diwan period so many industries were established. In 1930, the Elgin Flour Mill was opened. The Industrial and Testing Laboratory (Later MITL) was started in 1931 with a capital of Rs. 1.34 lakhs and had 200 persons in its employment. In 1932, the Government Porcelain Factory was established at Malleswaram. Later it become a part of the BHEL.¹²

In 1934, the Government Electric Factory was founded for manufacturing of electric appliances and transformers, rotary machinery such as motor generators, electric switch gears, telephone components and industrial essentials, plastic covered wires and cables, etc. The Capital investment on it was Rs.5.50 lakhs initially. In 1934, the AMCO Ltd., was started with a capital of Rs. 9.50 lakhs. It manufactures batteries for motor cars, farm lighting, telegraphic apparatus, radios, etc.¹³

In 1935, Sri Balakrishna Flour Mills was started in Bangalore on the Old Madras road. the KAR Mobiles Ltd., was also established in 1936

for manufacture of valves for intra-combustion engines. during 1987-88 it provided employment to 580 persons. The Mysore Lamp works was started in 1936 with initial amount Rs. 5 lakhs at Yeswanthpur. during 1987-88 it provided employment to 1650 persons. The Mysore Stone-ware Pipes and Potteries Ltd., was started in 1937 at Chikkabanavara.¹⁴ The Mysore Vegetable Oil products was started in 1938 on the Platform Road, Bangalore for manufacture of Vanaspati and refined Oil.¹⁵ In 1939, the Mysore Glass and Enamel works Ltd., was established at Malleswaram.

Sir Mirza Ismail established the Hindustan Aircrafts Ltd, in 1940. It was founded with an authorized capital of Rs.4 Crore and established its factory on the east of Bangalore. During 2000-01 It provided employment to 18,551 persons at Bangalore.

During the Dewan period of Mirza Ismail few Banking companies were founded in Bangalore. In 1926, the Mysore Oriental Bank, in 1930, Vysya Bank Ltd., in 1933, Kaniyara Bank Ltd., in 1936 Provincial Bank of India Ltd., and Nataraja Bank Ltd., etc. In course of this time many more banking companies with Bangalore base and outside also entered in to the banking of city mainly because of the frowning importance of the Bangalore city's trade and commerce of industries.¹⁶

When we look at all the Dewans Nalvadi Krishnaraja Wadiyar appointed, Sir Mirza Ismail would probably stand out for his pragmatism. Mirza Ismail had several advantages for his work including being a personal friend of the Nalvadi Krishnaraja wadiyar and sharing the modernist aspects of Krishnaraja wadiyar's vision.¹⁷ Nalvadi Krishnaraja Wadiyar appointed Mirza Ismail as the Diwan of Mysore , the Diwanship in the state was by no means a bed roses. Still Mirza Ismail remained at the helm of the State for 16 years from 1926-41. His appointment, though decried at first, was, however later hailed. Here with a ruler of Hindu faith and a Diwan who is a Muslim, Mysore stand as an example of Peace and harmony.¹⁸

Nalvadi Krishnaraja Wadiyar passed away in 1940 sir Mirza Ismail resined his Diwan post in 1941. Sir Mirza Ismail period of rule was the golden age of not only Bangalore, Mysore state also. Mysore saw all round progress during his

time. It came to be known as a model princely state. Not only agriculture and industry progressed but cultural activities were also fostered.

Conclusion

Visvesvaraiiah (1912-1918) and Mirza Ismail (1926-1941) both Dewans constituted the period when they held sway over the territories of Mysore, Bangalore, as the headquarters of the trade and Commerce an enviable position. Its future greatness as an important City in India and its later growth as the metropolis of the greater

Mysore State were entirely due to the useful role it played as the administrative centre of the Mysore State during this period. But those eighteen years also constitute a period, which for the time interrupted Modern authority over Bangalore and other areas of this part of Karnataka. In its overall assessment it can be said that all the administration measures, Banking, Industries, economic developments and social concern of the Diwans led to the development of the city of Bangalore

FORMATION OF KERALA AND THE ROLE OF AIKYA KERALA MOVEMENT; AN ANALYSIS

J. Suresh

Among the democratic agitations for the formation of modern Kerala, Aikya Kerala Movement attains much significance. The course of incidents in relation to Aikya Kerala Movement reveals the maturation of polity from being a monarchical one to a new setup in which democratic institutions held power. Primarily by incorporating all the Malayalam speaking people and regions, it gained momentum and finally culminated in the successful unification of the *Malayalees* as Malayalam was the chief language among the people of Travancore, Cochin and Malabar, this spirit intensified a feeling of natural cultural unity among the people. As a result by surpassing a long process of historical evolution, by discarding the discontent forces, cultural, political, administrative and linguistic unification

of the native states and Malabar was achieved. Thus the formation of modern Kerala is the product of successful amalgamation of socio-political, cultural, linguistic and administrative factors.¹

All-India political forces deeply influenced the demand for the formation of United Kerala. In the Nagpur session of INC in 1920, a resolution was passed for the re-organization of provinces on linguistic basis. It fuelled the thoughts of a Malayalam speaking State. In 1921, the Kerala Provincial Congress Committee was constituted with the representatives of Travancore, Cochin and Malabar.² By this time, media attention especially Newspapers intensified the feelings of oneness

among the people. In 1923, K.P. Kesava Menon in his editorial in the first Issue of *Mathrubhoomi* wrote about Aikya Kerala. A series of resolutions were passed and meetings were innumerable held in this direction in those days. Another vernacular Newspaper particularly '*Malayali*' invited the immediate attention of the Malayalam speaking people to support the idea of a unified Malayalam speaking State³. In 1927, the INC adopted another resolution and it reaffirmed its adherence to the linguistic principles in the following years.⁴

Conventions like *Naturajya Praja Samalenam*, All Kerala *Kudiyam* Meeting, the political Meetings of Payyannur, Vadakara and Calicut expressed their views and passed resolutions for the formation of Malayalam speaking state.⁵ On 24th February, 1935, the KPCC appointed a sub-committee to investigate the question of the formation of a Kerala State.⁶ Meanwhile major organizations like NSS, SNDP, *Samastha Kerala Sahitya Parishad* and *Cochin Praja Mandalam* included the idea of United Kerala in their political agenda.

The formation of United Kerala Issue was discussed as it was the prime need of the day in the Congress Working Committee Meeting held at Wardha in 1938 and also in the Bombay Congress Conference in 1939.

Aikya Kerala Movement gathered momentum in the 1940, along with Indian National Movement. This period also marked the journey of Communist Party of India as a mainstream political party with clear cut ideological perspective based on language and culture. This idea was popularised by E.M.S. Namboodiripad through his writing especially his book entitled '*Onnekalkodi Malayalikal*' in 1945-46.⁷ Towards the end of the year 1945, leaders of the Malabar Provincial Congress, Kochi Rajya Praja Mandal and Travancore State Congress - political parties of Malabar, Cochin and Travancore respectively – resolved to work towards the formation of United Kerala. By this time, the Cochin Raja expressed his wish to his Kingdom with Malabar and Travancore. On 29th July 1946, Sri Kerala Varma, the Maharaja of Cochin announced in the Cochin Legislative Council about his cherished desire to merge with United Kerala.⁸ It gave great inspiration to the leaders of United Kerala Movement, especially KPCC. They conducted a meeting at

Cheruthuruthy in which K.P. Kesava Menon, Vallathol Narayana Menon and other personalities were participated. After every preparations, a United Kerala Convention was held at Thrissur under the Chairmanship of K.Kelappan in 1947.⁹ It was inaugurated by this Highness the Maharaja of Cochin. In the occasion hundreds of delegates from different parts of the State representing the political parties and cultural organizations participated. Among the outside *Malayalees* who participated in this Conference, V.K. Krishna Menon deserves special mention.¹⁰ The convention constituted a committee to organise people for creative action. In 1949, a similar conference was held at Alwaye for taking speedy steps for the formation without any delay.

In the meanwhile, the Tamil speaking people of Travancore expressed their discontent to merge the Southern Areas in a Malayalam Speaking State. *Diwan* C.P. Ramaswamy Iyer declared that the formation of a Malayalam speaking state was not possible and there was no intention on the part of Travancore Government to surrender its sovereignty to any such union.¹¹ The Maharaja Sri Chithira Tirunal now rose to the occasion and telegraphed to the viceroy intimating the acceptance by Travancore of the Instrument of Accession and the standstill agreement as already agreed to by him earlier in consultation with the *Diwan* P.G.N.Unnithan, who had taken the place of C.P. Ramaswamy Iyer under the orders of the Maharaja.¹² It is noteworthy in this occasion that even from the beginning of the idea of United Kerala or the formation of a Malayalam speaking state Cochin Raja expressed his open stand to merger with the union.

In the meanwhile, discussions were held at Delhi with the Ministers of Native States of Travancore and Cochin by Sardar Patel. Later on an April, 1949 the Government of India issued a press release accepting the proposal. A re-organization committee was constituted V.O. Markose, a Minister of Travancore, Panampilly Govinda Menon, a Minister of Cochin as Members, M.M. Thomas as Secretary, N.M. Buch Joint Secretary, to the Government of India as President.¹³ The Committee held meetings on 13th May 1949, 21st May 1949, 27th May 1949, 28th May 1949 and discussed the matters and put forward the suggestions for the integration of

Accounts and Audit Departments, Preparation of Travancore/Cochin Budget for the ending 31st March 1950 and suggested the preparation of new heads for the consideration of two governments.¹⁴

However some sections expressed discontentment in this occasion. K. Kelappan expressed his dissatisfaction for the integration of Travancore and Cochin. The anti-integrationists in Cochin led by C.V. Iyer, Kunjirama Menon and others formed a party called 'Cochin Party' in 1949.¹⁵ They were in fear of getting their due share as Cochin was small in size and states' share than Travancore. They insisted that High Court of Kerala should be at Ernakulam itself.¹⁶

The attitudes of the kings of both the States is noticeable in this regard. The Maharaja of Travancore insisted that he should be 'Raja Pramukh' for life and the title should be '*Perumal*'.¹⁷ But the Cochin Raja open heartedly accepted the proposal; his only demand was the free copies of Panchangam or Almanac published by the Government of Cochin. Praising this spirit full and ready co-operation, C.Rajagopalachari, the Governor-General of India, in his message expressed his deep gratitude and the appreciation of the prompt and generous manner in which the people and rulers of Cochin State have helped to achieve this Union and integration involving a degree of self-effacement. The *Raja Pramukh* was granted a privy purse of Travancore Raja was fixed of 18 lakhs rupees, a remuneration of Rupees 3 lakhs per annum, and an addition of 66,000 was also given for his establishments on the centres' insistence, the Maharaja surrendered, the whole of *Kandu Krishi* lands to the extent of 60,000 acres to the State Government.¹⁸ The Cochin Raja's Privy Purse was fixed at 2, 35,000 Rupees.

The rulers of Travancore and Cochin entered into an agreement on 1st July 1949 and transferred that sovereignty to the newly formed Travancore-Cochin State.¹⁹ A committee headed by E.John Philipose was constituted to celebrate the inauguration of Travancore and Cochin State consisting of Forty six members like T.K. Velu Pillai, T.M. Varghese, C. Kesavan etc. The integration of Travancore-Cochin State was inaugurated by Vapal Panjumni Menon on 1st July, 1949. The United State had a total area of 9155 square miles and a population of 75 lakhs.

Later the state forces too were integrated. The United States of Travancore and Cochin adopted a new emblem in which the Chakra was given a more prominent place than the conch for the new state.

Soon after the formation of the First Parliament of Independent India in 1952, the agitation for the linguistic States was revived and through the passionate campaign of the *Telugus* in the Andhra region. Following the success of the Andhra Movement States Re-organisation commission was constituted. In December 1953, the Government of India appointed states Re-organisation committee under the chairmanship of Fazil Ali. The commission conducted an All India Tour, visited Travancore-Cochin State, it recommended the formation of a United Kerala State comprising *Malayalee* dominated areas.²⁰

In the meanwhile, the political parties of Tamil Nadu demanded the merging of Tamil speaking areas of Travancore with the Tamil Nadu.²¹ During that time some leaders like T.M. Varghese, C. Kesavan and Pattom Thanu Pillai, joined together and formed a platform for '*Akhanda Keralam*' which opposed merging of Tamil speaking areas of Travancore with Tamil Nadu.²² In this issue the states Re-organisation Commission recommended that the Southern areas of Travancore like Thovalai, Agastheeswaram, Kalkulam, Vilavencode and some other parts of Cherkkottai were given to Tamil Nadu and the Malayalam speaking areas of Kasarkodu Taluk of South Canara transferred to the new Malayalam speaking state. The main addition to the new state of Kerala as envisaged by the SRC was the geographically contiguous district of Malabar.²³ The commission added that there was no justification for Kerala's claims for the whole of South Canara district and Coorg.²⁴ It was a fatal blow to the vital interests of the Kerala State to transfer the fertile southern positions to merge with Tamil Nadu.

The new state of Kerala envisaged by the commission thus consisted of the erstwhile State of Travancore-Cochin less the five Tamil Taluks of Thovala, Agastheeswaram, Kalkulam, Valavancode and Shencottai plus Malabar district, the Kasargodu Taluk of South Canara district and the Laccadive islands.²⁵ The state thus constituted had an area about 14, 980 square miles, which is linguistically homogeneous and geographically compact.²⁶

The proposal for an ideal state of Malayalam speaking was fulfilled when the states Re-organization Commission report was implemented by the Central Government on 1st November 1956.²⁷ The office of the *Rajapramukh* was abolished, P.S. Rao assumed office as the Acting Governor of Kerala.

The formation of the modern state of Kerala was the net result of the various under currents and agitation experienced by the people for several decades. Social, Political, cultural and even psychological factors played their role in the genesis and growth of unification process of

Kerala by forgetting the regional variations, political ideologies, caste discretions, and people marched untidily to achieve this goal. As it was inevitable and was the prime need of the day, the movement received a most support. Political parties played an important role irrespective of INCC or Communist Party. Media support was also decisive to get a vibrant form to the movement. The writings of the great poets like Uloor, Vallathol, nurtured and nourished the dream goal of United Kerala. Side by side the social reform movements awakened the people, become conscious of their rights and accelerated their march to democracy.

THE IMPACT OF FLOOD IN CUDDALORE (1904) – A HISTORICAL STUDY

I. Thamizharasan

Introduction

Natural disasters like cyclones, floods, earthquakes and landslides affect almost all countries in the world. They destroy substantial human and economic resources, and stand as formidable barriers against regional, national or global development at regular intervals, almost every year. Tropical cyclones can be considered

to be the most destructive natural hazard when viewed in terms of their occurrence, intensity and area affected by the disaster.¹

Amongst the average of 80 to 90 cyclones recorded per year all over the world, at least five to six occur in the Indian subcontinent. India ranks high among the countries prone to cyclonic storms. This is because of the special

nature of the coastline, the shallow coastal ocean topography and the characteristics of tides in the Bay of Bengal region. Further, the high density of population, low awareness of the community about cyclones and their risks, inadequate preparedness and cyclone warning systems add to the severity of the problem. India has a coastline of about 7,516 km, 5,400 km along the mainland, 132 km in Lakshadweep and 1,900 km in the Andaman and Nicobar Islands.²

History of Cuddalore

South Arcot was a district in the Madras Presidency of British India. It covered the area of the present-day districts of Cuddalore, Viluppuram and Thiruvannamalai in the Indian state of Tamil Nadu. The district was divided into eight taluks and covered a total area of 13,510 square kilometers (5,217 sq mi). The administrative headquarters was the town of Cuddalore.³

In ancient times, South Arcot was a part of the Chola and the Pallava kingdoms. British presence in the district dates to 1690 when the British East India Company set up a factory at Fort St David near Cuddalore. South Arcot was the scene of confrontation between the British and the French and the British and Tipu Sultan. The British took over the administration in 1781 and established full sovereignty in 1801⁴.

Flood in 1904

The worst floods the district has ever known were those of 1904. There were two of these ones in November and another even more severe in December. In both, the occurrences, the Ponnaiyar River, Gadilam River and Vellar River were overflowed, and the Gingee River in the Tindivanam Taluk was also affected by the heavily.

From 15th November to 16th November, the rainfall at Cuddalore was no less than 32 inches, and 11 inches was registered on the 7th alone. The stop bank at Edaiyar River constructed to keep the Ponnaiyar from flowing down its old bed the Malattar in flood time was breached, and part of the fresh in the Ponnaiyar consequently swept down the Malattar into Gadilam and two rivers overflowed. The railway lines were breached in two or three places between Cuddalore, Panruti and Port Novo, and also the running of the trains was stopped all the

three check dams on the Gadilam were damaged, and tanks and roads all over the eastern part of the district were washed away⁵.

Cuddalore New Tow was significantly suffered. The Gadilam overflowed to its right bank just above the railway bridge near the town and poured into Tirupathiripuliyur by way of a strip of low lying ground. The place was flooded, and as the height of the embankment on which the railway then ran barred the water from escaping to the sea for some time many houses were destroyed, and some lives were lost. Four arches of the road bridge connecting Manjakuppam and Tirupathiripuliyur over the Gadilam River near railway station collapsed, and the Maidan in Manjakuppam was underwater.

On the 16th December heavy rain again fell the amount received from then to the 20th was no less than 25.05 inches, and 14.40 inches were registered on the 19th alone. The remainder of the Edaiyar River stop bank collapsed, and the Ponnaiyar rushed into the Gadilam with even greater impetus than before. From the afternoon of the 18th till the evening of the 19th, the combined waters of the rivers swept through Manjakuppam and Pudupalayam to the sea. The flood was five feet deep on the Maidan at Manjakuppam and lads were carried away by the force of the current just opposite the judges' house. The then the Collector of South of Arcot District, Huntley Gordon also protected in a boat a man who was being brushed away near the time gun on the maidan. Tirupathiripuliyur was flooded 3 ½ feet deeper than in November, and eleven lives were lost and nine more of the arches of the Gadilam bridge leading to it were destroyed and the Ponnaiyar bridge gave way in the evening of the 17th and during the night its arches were heard to breakdown one after the other with a booming as of heavy guns up until by the morning and thirteen of them had disappeared⁶.

Outside the headquarters, the damage was also considerable. The bridges over the two mouth of the Gingee River the Kilinjyur River and the Ariyankuppam Stream were also destroyed and so was that across the Malattar River on the road from Panruti to Tirukkoyilur all the three check dams (anicut) on the Gadilam once more suffered and the Pelandurai Anicut was again breached the Wallajah lake and the

Perumal tanks under the Lower Anicut was one sheet of water. The railway was swept away in slashes of places to an aggregate length of same four miles the worst times of damage being the seven 150 foot spans of the bridge over the same river on the Pondicherry branch. The Ponnaiyar River and Gadilam River girder bridges stood, but the water was within 5 feet 10 inches of the rail level of the former and within 1 feet and 3 inches. Communication with madras was cut off for more than a month and with the south for an even more extended period⁷.

The collector reported that 956 irrigation sources 177 imperial and 776 miner works were breached twenty bridges large and small wrecked or injured and according to the village officials figures, 13,595 habitations were destroyed and 13,724 cattle sheep and goats were drowned⁸.

To minimize the damage liable to occur in Tirupathiripuliyur from a repetition of such a flood an embankment was made from the edge of mount capper near the Tiruvanthipuram Anicut to keep the Gadilam within confines the height of the railway bank from the bridge over the Gadiam down to Cuddalore Old Town Railway Station was lowered to allow the water to discharge across it to the sea and additional channel was provided in this part of the line. The Edaiyar Dam was also again rebuilt to keep the

Ponnaiyar from spilling into the Gadilam. The four ruined bridges between new town and Pondicherry were eventually reconstructed at higher levels. These steps prevented the great flood at the end of 1904 referred to below from making as much mischief as it would otherwise have affected.⁹

CONCLUSION

Among the natural hazards, cyclone is one of the devastating phenomena that strike the Coromandel Coast. Tropical Cyclones are intense low pressure systems which develop over warm sea. They are capable of causing immense damage due to strong winds, heavy rains and storm surges. The frequency of the Tropical Cyclones in the Bay of Bengal is 4 to 5 times more than in the Arabian Sea. About 35% of initial disturbances in the north Indian Ocean reach Tropical Cyclone stage of which 45% become severe like cyclones and storm surges.

So finally this study concludes that soil, slope and rainfall are plays common role creating flood in the Cuddalore District. Finally the study suggests that the ancient drainage areas must be reclaimed or new drainage canals should be built in the zones of high flood risk to avoid flood in Cuddalore District of Tamil Nadu.

PROPORTIONAL REPRESENTATION AND RESERVATION IN TAMIL NADU – A PARADIGM SHIFT

A. Thennarasu

Reservation is one of the mechanism of preferential treatment, as a "social policy of the state enshrined in the constitution to ensure the participation of the traditionally neglected

section of the society".¹ Proportional representation is a policy of giving due representation based on numerical strength of every segment.

India, a nation of plenty of resources and wealth but persisted with socio-economic inequalities among the different compartmental social groups. To tackle this perennial issue various measures were adopted in the Madras presidency ever since the times of British period. One of such measures at later evolved was communal reservations. In fact, the centre-stage of politics itself for a long time lies on the issue of reservation and it determined by and large, the political course of Tamil Nadu.

The non –Brahmin movement in south India was evolved during the latter half of 19th century. The movement was forwarded into a giant leap in 1917 when the South Indian Liberal Federation was formed. Soon the nomenclature of the federation was changed into Justice Party. The party was prepared enough to contest the election for state legislature in 1920 based on the recommendation of Montagu Chelmsford Act,1919. In this context, this paper traces the evolutionary process towards proportional representation in the Madras Presidency and its subsequent developments in the state of Tamil Nadu.

Evolutionary Process of Proportional Representation

Justice party's election manifesto of 1920 promised to provide the proportionate representation for all castes and communities in the public services and educational institutions.¹¹ The first election held in November 1920 was fought on only one issue namely, the Brahmin versus non-Brahmin.¹² This issue dominated even in the subsequent elections. The extension of the franchise in elections to masses resulted in the downward trend of Congress, which in turn, served the non Brahmins for the emergence of a powerful force in legislature.

In 1925 the government appointed a committee to enquire into and report on the working of the system of communal representation under the chairmanship of Diwan Bahadur Krishnan Nayar.¹³ However the committee not submitted its report. The non-Brahmins were under-represented in public services even after the six years of first communal order issued in 1921. As the pressure was from all quarters in favour of proportionate distribution of government appointments, the government formulated its own policy on the

basis of communal compartmental reservation system.¹⁴

For the first time, in recruitment to government public services communal basis was regularised and a definite quota for different communities was prescribed in 1927.¹⁵ This was a great turning point in the history of communal reservations since this order was implemented effectively. The credit of issuing and implementing this order was attributed to S. Muthaiah Mudaliar, the then Minister of Registration in the Independent Ministry of Dr. P. Subbarayan Periyar viewed that S.Muthaiah Mudaliar issued and implemented what justice party failed to do so.¹⁶

Table - 1

Scheme of communal reservation under the communal order of 1927

Category	Vacancy Position	Proportion out of 12	Percentage of reservation	Percentage of population
Non-Brahmins	1,3,6,8,10	5	41.6	72
Brahmins	5,12	2	16.7	3
Anglo-Indians and Christians	4,11	2	16.7	4
Muhammadans	2,9	2	16.7	7
Depressed classes	7	1	8.3	14

In an unit of twelve appointments, the proportion of every category was fixed as follows; five for Non-Brahmin Hindus, two each for Brahmins and Muhammadans, two for Anglo Indian and Christians including Europeans and one for others including Depressed classes.¹⁷ Also, it prescribed the rule of communal rotation,¹⁸ while maintaining the communal proportion at the same time. The recruitment to services was fixed in a rotation order as shown in the table¹⁹.

Carry forward rule ²⁰ had been adopted in respect of some services and posts to which the communal rotation rule applied. In respect of other services and posts where communal proportion rule applied, comparatively the least represented community was given preference in every recruitment according to the prescribed

rules.²¹ Though government considered the reservation in promotion as laid down in the Second communal G.O., it did not act so. Muslim members in Legislative Assembly alleged that the communal G.O. was not followed in respect of services like secretariat, Judicial, Police, Educational, Agricultural, Engineering and Medical Departments as they were leastly represented in those departments. Also they demanded to reserve three places exclusively for them in a unit of fourteen.²² However, it was reported by the government that the proportion of Muslims in the Madras presidency was only 7.9 percent and accordingly they should have given only one seat out of 12, instead they were given two seats which means double to their population.

Though measures were taken since 1920s to debrahminise the state services, the predominance of Brahmins' representation was not much altered even in early 1940s.¹⁴⁵ For example, between the years 1923 and 1941 in the Gazetted posts of Madras Provincial services the percentage of Brahmins' representation was narrowed down only to some extent from 38.87 per cent to 35.95 per cent²³ However it must be admitted that though their virtual domination still existed the trend showed the beginning of loss of monopoly. Also the representation of non – Brahmins as a whole shows the upward trend from higher to lower services

The Madras provincial Backward Classes League, which was founded by some members of MLC in 1932, demanded the revision of communal G.O. by making an exclusive quota and a provision entrusting reserved seats in legislatures and local bodies for the Backward classes.²⁴ Further, the league demanded reservation of 50 per cent of seats in technical institutions for the backwards classes. The position of different communities in 1944 in Gazetted post of the government of Madras presidency were as follows.²⁵

Table 2
Performance of various communities in
Gazetted posts of the Govt. of Madras
Presidency in 1944

Communities	Percentage of population	Number of	Percentage of posts
-------------	--------------------------	-----------	---------------------

		Gazetted Posts	
Brahmins	3	820	44.21
Ind. Christians	4	190	10.24
Muslims	7.4	150	8.08
Depressed classes	14	25	1.35
Forward N.B	22.6	620	33.43
Backward classes	49	50	2.69
Total	100	1855	100.00

Note: The percentages of population and the posts of each community are only the rough figures as claimed by the Backward Classes League.

Forward N.B. - Forward Non-Brahmins

The above table illustrates the absolute dominance of Brahmins, while the Indian Christians and Forward non-Brahmins attained far better results than their proportion and the Muslims for their due share. However the Backward classes apart from the Depressed classes were in dire straits. As per the proportion, the backward classes lost 859 posts while the depressed classes lost 235 posts. The extension of franchise to the masses further changed the course of political fortunes in favour of non-Brahmins. They were largely represented in the Legislative Assembly for which elections were held in 1937 and in 1946 under the Constitution Act of 1935.

Out of 215 seats, the non-Brahmin Hindus had secured 127 and 136 seats (apart from the 31 and 28 seats of Depressed classes and one seat each by backward Hindus) which the Brahmins got 31 and 28 seats each respectively. The Brahmins got 31 and 28 seats respectively. The other religious communities got 41 seats each under these both elections.²⁶

The non-Brahmin leaders fought fight to secure communal representation in three major spheres i.e., legislative, government services and education. Their objective was first succeeded in the sphere of legislature. The following table proves this point.

Table 3

Representation of communities in the Madras Legislature

Year	Total seats	Non-Brahmins	Brahmins	Depressed classes	Backward classes	Others
1920	98*	57	17	-	-	24
1926	98*	56	18	-	-	24
1937	215	127	15	31	1	43
1946	215	136	9	28	1	41

* The figures only represent the elected members of legislative council in the respective years

Depressed classes were given representation in proportion to their population in the Madras Legislative council in 1930. For the first time, they got a representation in the top most executive in 1937. when M.C Raja, a Harijan leader was secured a berth in the ministry of interim government²⁷.

Non- Brahmins and Brahmins Across Political Spectrum - Third Communal G.O.

The Communal order of 1927 was issued by the Independent Ministry headed by Dr.P. Subbarayan. Till now, Justice party was considered as the sole representative of non-Brahmins, but the issue of Communal representation united the non-Brahmins across political spectrum. And hence, the interest of non-Brahmins conveniently protected by every party. The Justice party even favoured the entry of Brahmins into its fold to attract Nationalist non-Brahmins of congress party.²⁸ To admit the Brahmins a resolution was passed.²⁹

Since the Congress accepted the principle of communal representation, non-Brahmin leaders such as R.K. Shanmugam Chetty, P. Varadharajulu Naidu, T.V. Kalyana Sundara Mudaliar, E.V. Ramaswami and A. Ramaswami Mudaliar not averted of non-Brahmins joining in the Congress party but stressed unity of non-Brahmins irrespective of the party which they belong.³⁰ In the earlier phase of the Congress movement, the majority of Brahmins attached to it were reluctant to recognize the communal G.Os of 1920s. However, the transformation of the Congress became evident in the 1940s when the party broadened the base under the leadership of C. Rajagopalachari [popularly

known as Rajaji] by influencing non-Brahmins and it eroded the influence of mass base which paved the way for the downfall of Justice party.

Table 4

The state of category-wise Communal representation in the Government services of Madras Presidency as on 11.04.1947 (in Percentages)

Rank	Total Appointments	Brahmins	Non-Brahmins	Scheduled Castes	Muslims	Anglo Indian s & Indian Christians
Gazetted	2876	40.51	39.94	1.36	6.95	16.24
Non Gazetted	68636	27.86	48.18	2.83	11.00	10.13

Source: Report of the Backward Classes Commission 1970 Vol I(T) p.21.

The Harijans demanded to increase their allotment since they were inadequately represented in both public services and educational institutions Table 10 shows the poor performance of Scheduled Castes in both the Gazetted and Non-Gazetted posts of Provincial services. In 1947 the leaders demanded reservation of atleast eighteen and one-third percentage in services as adopted by the Central Government and some other preferred 20 per cent of vacancies in proportion to their population.³¹

In 1944 the Justice party and Self-Respect League were merged and reconstituted as the Dravida Kazhagam which was infused with not only an anti-Brahmin, anti-North, anti-Hindi ideology, but also with separatist sub-nationalism.³² These issues were dominated in the principles and programmes of the party cadres during and after the 1960s. Dravida Munnetra Kazhagam which was formed in 1949 by delinking from the parent Association, Dravidar Kazhagam on ideological ground. The party had political ambitions and this dream came true in 1967 when it formed government. Since the party was considered as the successor of Justice party, question arose whether the party will revive the Communal order and provide proportional representation.³³ However, the Dravidian parties were able to provide reservation to a large section of society despite of legal challenges confronted the successive governments.

MEDIEVAL POLITY OF VALLUVANAD

K. Ummul Hasna

This paper tried to focus the political structure of Valluvanad in medieval period. Traditionally Valluvanad considered to the strongest political entity during the medieval period. It traces back to many features connected with the political background of Valluvanad, particularly the geographical features, presence of suicide squads and ritual practices etc. it strengthen different sources like Valluvanad and Tirumannamkunnu Grantavaries, *Unnichirudevi charitham* and *Kokasandesham* etc.

According to the British settlement registers, during the medieval period Valluvanad was the largest geographical division of Malabar. On the topographical position Valluvanad northern part it was bounded by Ernad Taluk for 69 miles, by the crest of the Koondahs (Nilgiris) to the North East by the Coimbeture province, and the Nilagiris for 69 miles, to the South by Nedunganad for 56 miles, to the South West and West by Bettadanad and Shernad for 13 miles.¹ Most of the parts Mountains, rivers and forests

directly bounded by Valluvanad, so that it resisted the neighbouring attacks.

Political structure of Valluvanad, inter connecting the collapse of 2nd Cheras in 12th century. The emergence of nadus or different small political units, like as Eralnadu, Valluvanadu etc. The political fragmentation also changed in medieval polity. *Swarupams* was the power centers of nadu, like Nedyirippu swarupam- Eralnadu, Arangottu swarupam- Valluvanadu etc. Political authority of nadu system maintained *Kurvazhcha* or *stanam*.² It implies to privileges and rights each one in ruling family. It decided to their kuru and position among the royal members, known as the pyramidal structure of king, chiefs and land lords. *Kurvazhcha* linked with taravadu in matrilineal joint family. The Tavazhi and Taravadu ensured the political judicial authority in the medieval polity.

The Valluvanad raja was also known as Arangottu *Udayavar*. K.P.Padmanabha Menon translated as the chieftain who holds the country on the other side of the river. His dominion lay to the north of the Ponnani river. According to the *Keralolpathy* when Cheraman Perumal made his partition of Kerala he gave Tirunavaye sand bank and country and privilege of conducting *Mamakam* festival with 10,000 Nairs to with *Valluvakonathiri*. There are several titles used by the head of the *swarupam* of Valluvanadu, such as *Valluvaraja*, *Vellattiri*, *Valluvakonathiri*, *Arangottu Udayar*, *Arangodan*, *Chatan Kotha*, *Rayiran Chatan*, *Vallabhan*, *Valluvanattu Udayavar*.³ Name *Vallabhan* from the Pallava race. According to M.G.S. Narayanan, Irinjalakkuda inscription reveals the strength and status of hereditary governor as well as southern extension of his district into the neighbourhood of Makothi. The chaver song *Chengazhinambiyar pattu* contain reference to the seeking of the grace of Pazhayannur Bhagavati, which may indicate the Connection of Valluvanad, with Pazhayannur. In the same way, the existence of hills by name *Vellattiri mala* at Vandazhi, Palakkad, may also suggest connection with *Vellattiri*. The rise and growth of the kingdom Valluvanad's capital transformed from Arangottukara to Angadippuram. The *swarupam* initially held a small territory which was considered as the original place from where rulers and chiefs moved or expanded to a larger

territory. In fact, in the case of the *swarupams* in medieval Kerala they were known after their original village as in the case of Arangattu swarupam.⁴

Arangottu Swarupam

In the case of Valluvanadu, location of Arangottukara, a small village is at near the Makkaraparamba, hence it was referred to as Arangottu swarupam. The name of the *swarupam* linked to the geographical location of the house. The territorial authority indicated far more than location of the house. Because *swarupam* maintained several powerful lands owning houses who acquired political – judicial authority over particular territories. Valluvanadu raja, he acquired territorial control of Arangottu Swarupam. *Swarupam* had the composition of an extended joint family resided in *Kovilakam*. The succession of all *swarupams* inherited to determine by matrilineal joint family system. The Male members of the house had to assume *Muppu* on the basis of their direct kinship relation with the women of the houses, as uncle, brothers or sons. The segmentation of the houses based on the mother –figure, segments were called *Tavazhis*.⁵ Which were distributed in the regions of political authority.⁶ Four *kovilakams* under the Arangattu swarupam, was the *Kadannamanna Kovilakam*, *Mankada Kovilakam* known as *cherukatta Tavazhi*, *Aripa Kovilakam* and *Azhiranazhi Kovilakam*. *Valluvanadu udayavar* belonged to these four *Kovilakams*.⁷ Political authority over the nadus followed the form of *Kurvazhcha*, which can be rendered as paracellised authority. *Kurvazhcha* implies a gradation of rights and privileges within the ruling houses, with the *Muthakur*, Also implies a seniority order with the *Ilamkur* having claims to succeed the *Muthakur*. The system *Mupumura* Connecting the *kuru*, all members female and male had *kuru*. *Kurvazhcha* mentioned in the *swarupams* with male and female members occupying separate *kur* having land and privileges.

Kurvazhcha in Valluvanad,

- Valluvakonathiri was *Muthakur*, known as *Kothaikadungonaya Kovil Karumikal*.
- Second *Vellalpad* or *Valluvanattukara Nambiyatiri* Tirumulpad or Vellat *Ilamkur* Nambiyatiri

- Third *Thacharpad* or Tachanattukara Moonamkur Nambiyatiri.

- Fourth *Edathralpad* or Edathunattu Nambiyatiri Tirumulpad

These were main *kur* of Valluvanad and fifth Kolathur Mutha vallodi Thirumulpad. Kolathur Thamburatti Muthakur and secondly Kadannom Mutha Thamburatti in women seniority order. Kolathur Tamburatti is called Vedapuratti.⁸ Sometimes the *kur* right would result in the formation of separate ruling houses, was *kovilakams* with *kur* right would also result in certain *kovikams* establishing authority through actual territorial control. Other dignitaries consisted of sixteen chiefs or land lords, including Valluvakonathiri and his four *kurs*. Two Nairs, two Nambutiris, two persons of the royal houses, four *Panikkars*, *Elampulakatachan*, *Kulathur Varier*, *Uppamkalathil* Pisharody, Kakoot Nair, Mannumala Nair and Cherukara Pisharody, they helped to Valluvanad raja. Valluvakonathiri known as Vellodi or Velappanattu Nambidi, this name linked with his caste, his joint family including five families, these were Kadambot, Mulath, Nemmini, Kuttikattil and Pathiramanna.⁹

The presence of Suicide squads or *Chaver*, it is the most attracted one in Valluvanad. It changed the political structure of Valluvanad connecting with rituals, particularly the *Mamakam* festival. Traditional history proves that the Valluvanadu had got the privilege to conduct *Mamakam* festival from *Chera* Empire after their decline. From the known history *Mamakam* was considered to a religious ritual practice but gradually it acquired a political character and it became the symbol of political supremacy. Consequently, continuous warfare took place among the neighbor *swarupams* of Valluvanadu for claiming the Rakshapurusha power of the *Mamakam* festival. Finally, the Zamorin of Calicut was able to capture the above stated position and automatically he became the supreme king of Malabar region. Obviously, it was a bitter experience to the ruler of Valluvanad and he thought to regain the status of Rakshapurusha from Zamorin. It results the origin of suicide squads in Kerala, especially Valluvanad suicide squads. Suicide squads or *chavers* are the special forces of medieval kings and they were considered as a property of territory. Thus the Suicide squads of Valluvanad

were decided to fight up to their death for returning Rakshapurush power from the Zamorins.

Another one is the political legitimacy through the ritual practices performed by the rulers. It is very clear from Valluvaraja's right to conduct the great festival of *Mamakam*. One of the best examples was that he conducted the *Mamakam* festival till twelve or thirteen century A. D.¹⁰ Then he was conducted Tirumannamkunnu *pooram* festival. The main ceremonies like *Kottichira ezhunallippu*, *Kudipooja* and *Thekkottirakkam*. *Kottichira ezhunallip* was the day when the king arrive the temple after *Ariyittuvazhcha*. *Kudipooja* was the special ceremony of king, it headed by Kuttaloor Nambuthiri at the northern side of Thirumannamkunnu temple. *Kudipooja* functioned after the Raja's *ariyittuvazhchza* for blessing of king.¹¹ The *thekkottirakkam* ritual was Valluvakonathiri procession to meet *pooraparambu* with royal guard and this was the ceremonial event of the king's heart to meet the *Malayakutti* (the elder member of Malaya community) and the Panar mooppan (the elder member of Panar) in the presence of the people.¹² It point out the intimate relation to Valluvaraja and his people, it helped to ensure his political legitimacy trough the rituals. Valluvakonathiri legitimized his rule symbolically through political and ritual action. The *ariyittuvazhcha* and the eleven day *pooram* festival in reverence of the goddess Bhagavati blessed to empower the king, Attaches importance of not only the *pooram* but also to the religious festivals and ceremonies. Because king's observances imperative for his sacral legitimation. Valluvanadraja helped to construction of *Tirumannamkunnu* temple and other shrines like modified the Tali Shiva temple.¹³

Another notable feature of this political structure is that the Valluvakonathiri couldn't make any decisions under his own opinion. So that he arranged the *nattukuttam* at his kovilakam. This opinion strengthening with Grantavari, in the problem of Indianoor desham, *deshavazhi* Karuvayoor Moosath and Chandrottil Panikkar conflicted case of Indianoor, in this situation Raja discussed with fourteen chiefs of Valluvanad, including Parakkattil Ittunniyama, Aaru Panikkar,

Vayyankara Chata Panikkar, Unnikothangocha Vellodi, Unni Raricha Eraldi, Thalachola Chatara Menon, Pulikkott Itti Chatar, Ittichirama Pisharody, Naduvilappatt Komacha Panikkar, Ittikotha Warriar, Konnan Pisharody, Nechikkattil Komacha Pnikkar, Ukkandan Pothuwal and Arangottu Unnikannan. He forbidden the Indianoor deshams, and after one year he resolved the problems of Indianoor with the opinions of chiefs.¹⁴ Valluvakonathiri gave a conch and ghungroo to informing *nattukootam* for solving their problem with help of chiefs and ghungroo used to disperse the *nattukootam*. It was the evidence of *nattukootam*.¹⁵

CONCLUSION

This paper tried to identify the political nature of Valluvanad connecting to several

aspects like geographical features are necessary to evaluate the political boundaries of this area. The *Swarupams* were very common in medieval Kerala history and most of them played a seminal role in the politics of that society. In the part of it political power maintained pyramidal structure like *Muthakur*, *Vellalpad*, *Thacharpad* and *Edatharpad* in Valluvanad. The ritual practices and legitimizing rule through the *Thandettam* ceremony and *Kudipooja*, *Kottichira ezhunallip* and *Thekkottirakkam* were including Valluvanad polity. Presence of suicide squads inter connecting with *Mamakam* a special ritual practice carried out by Valluvakonathiri was a symbol of political hegemony in that time. These features strengthen the political entity in medieval period of Valluvanad.

A NEW NOTE ON 'NIDUGAL CHOLAS'

N. Velu

During the period from eighth to thirteenth centuries A.D., a family of Chola feudatories known as Nidugal Cholas ruled the north eastern part of Karnataka with Penjeru or Henjuru, now known as Hemavathi, and Nidugal as capitals.¹ The former is situated in the Sira Taluk and the latter in the Pavaguda Taluk of Tumkur District. Their inscriptions are found in the Tumkur, Chitaldrug and Bellary Districts. The provenances of their inscriptions in these Districts show the area of their sway.

These local chiefs called themselves "Chola Maharajas" and "Lords of Uraiyur", a

place near Tiruchirapalli, and claimed descent from the Solar race of Karikala, ² the most important of the early Chola rulers of Tamilnadu. The origin of these Nidugal Cholas and their migration from kaveri basin to Anantapur and Tumkur Districts in the Karnataka and Andhra States are interesting. The Kaveri basin is the early home of the Cholas. We have early records in which the Cholas identify themselves as belonging to the suryakula or the solar race. The early Cholas of the Kaveri basin seem to have occupied parts of Southern Karnataka and Andhra. We get frequent references in the Tamil

classics to the Vengadam region. Tolkappiyam³ refers to Vadugars (Telugu speaking people) and Vengadam as the northern boundary of the Tamils. The northern parts of Tamilagam in the Sangam age are spoken of as an area where the language changes (molipeyar deyam).⁴ It is quite possible that the areas north west of Tamil country were also under the control of the Sangam Cholas for some time. The Vadugars were referred to as having been routed near the North West region of Tamil country by a Chola king in the Sangam literature.⁵

There is a reference in the Pattinappalai to Karikala's conquest of the Dakshinapatha which he distributed among the Vellala chiefs from the north.⁶

From these references, we may summarise that the Sangam Cholas, particularly under Karikala, extended their power upto Cuddapah and Kurnool. The sudden emergence of a tribe called the Kalabhras and their occupation of the Tamil country deprived the Cholas of their traditional territory. Subsequently, Cuddapah was under the rule of the Renandu Chola chiefs. During the period of the Pallava Chalukya wars, one branch of the Renandu Cholas from Cuddapah seems to have migrated to Nidugal and Erikalvadi in the Anantapur and Tumkur Districts of the Andhra and Karnataka States. They were the "Cholas of Nidugal".

The earliest reference in inscriptions is to a Chola Dhananjaya Eriga⁷ ruling over the Alvadi Six Hundred, along with one Cholika Muttarsa⁸ as feudatories of Western Gangas in 750 A.D. But B.L. Rice⁹ mentions that Dhananjaya must have been a subordinate to one Gangul Pallava Raja. Most probably, these chiefs shifted their loyalty to the Pallavas when they were actively engaged in the war with the Chalukyas of Badami. By the middle of the ninth century A.D. their country was overrun by the Rashtrakutas, and subsequently by the Imperial Cholas.¹⁰ but the Hoysalas were hostile to them throughout the period. Inscriptions of the period refer to frequent raids in the areas controlled by the Nidugal Cholas until finally Nidugal was annexed by Hoysala Narasimha 112 in 1285 A.D.¹¹

The later line of the Nidugal Cholas commenced its rule in the beginning of the twelfth century A.D. and continued to flourish till

the dawn of the thirteenth century A.D. Robert Sewell and S. Krishnasamy Aiyangar¹² have given a genealogical table of the Nidugal Chola family. But their dates of succession, periods of rule and the extent of their territories are not very much known to us. Their genealogy gleaned from epigraphs is as follows:-

1. Jata 2. Brahma Bhogendra 3. Mangi or Kalimangi 4. Bichi or Babbe 5. Govinda 6. Irungola I 7. Malli Deva 8. Brahma Nripala or Bammi Deva 9. Iruhola II or Irungonadeva 10. Vira Bomma 11. Ganesa

Jata was probably the earliest known member of this dynasty, who was succeeded by his son Brahma-Bhogendra. His son Mangi, the destroyer of the Matangas, promoted the fortunes of the dynasty. In an inscription of Vikramaditya VI, a chief named Mangarasa, Lord of Uraiyur and a resident of Kaneyakallu is mentioned. The chief Mangi of Nidugal could be identified with Mangarasa on the basis of area, period and relationship with the Chalukyas. Mangi was succeeded by Babbe deva or Bichi who slew his inveterate enemy Hosagaramesvara. Bichi was succeeded by his son, Govinda and grandson Irungona successively.

Irungona or Irungola Chola I (1101 A.D. - 1128 A.D.)

The most prominent member of the Nidugal Chola dynasty was Mahamandaleswara Virapandya Irungola Chola I, a contemporary of Kulotunga I.¹⁴ The title Virapandya adopted by this ruler would indicate that he was having, close association with the Pandyas of Uchchangi. An inscription describes him as the 'boon lord of Uraiyur, born in the Solar race of Karikala Chola'.¹⁵ His kingdom comprised Rodda Three Hundred, Sira Three Hundred, Haruve Three Hundred and Sindavadi Thousand which may be identified with the region surrounding the peak of Nidugal. He clashed with the Hoysalas. The Hoysala ruler Vishnu-varadana defeated him in 1128 A.D.¹⁶ and captured the powerful Irungola's fort.¹⁷ though he suffered defeat at the hands of Vishnuvardana, his position was little affected. He continued to rule his territory, as a sub-ordinate of the Hoysala king.

The connection between the Nidugal Cholas and the Cholamandalam could be established through inscripational evidence.

Irungola I was the son of Govinda and Mahadevi.¹⁸ There was also another Mahadevi who was the second wife of Ereyanga the Hoysala king and who constructed a tank at Tereyur located in Tumkur.¹⁹ Probably she was a local Chola princess of Nidugal and belonged to the Suryavamsa.²⁰ It should however be added that her father Irukkapala belonged to a family of Uchchangi Pandyas. In 1068-69 A.D., Irukkapala's father who was a Uchchangi Pandya helped Chalukya Vikramaditya VI to regain his throne by defeating and driving out his brother Somesvara II. This, he should have done with the help of a certain Muvendavelan, an Irukkuvel chief of Kodumbalur a famous general of Virarajendra.²¹ He helped him in the battle of Kudalsangamam, against the Western Chalukya, Somesvara II.²² Virarajendra also states in his Tamil records to have conquered the Rattapadi Seven and half Lakh Country and later granted it to Vikramaditya.²³

It seems that in the above mentioned war, Irukkuvels of Kodumbalur established a close relationship with the Cholas of Nidugal, though the exact nature of this relationship is not clear.

The name Irukkupala and Irungola a corrupted form of Irukkuvel are found in the records from the Tumkur and Anantapur Districts.²⁴ The name itself indicates strongly the intimate relationship between the Irukkuvels and the Nidugal Cholas. The epigraphs also affirm their long standing traditional friendship with the Cholas. Some Kannada inscriptions found at Kodumbalur also suggest this connection.²⁵ We have an inscription²⁶ of Irungola I which speaks of him as Mahamandaleswara Irungola Chola Maharaja who made an alliance with Rachamalla, the Sinda ruler of Kurugodu.

Mallideva 1128 A.D. – 1179 A.D.

He was the son and successor of Irungola I, also called Bhogi²⁷. An inscription from Pavaguda states that he was the lord of Uraiyur who claimed descent from the solar race of Karikala Chola of Kasyapagotra. Mallideva appears to have been a co-ruler with his father even in 1108 A.D. He became independent when the western Chalukya monarchy was weakened by the usurpation of Bijjala Kalachuri in 1157 A.D.²⁸

Two of his inscriptions²⁹ from Hemavathi describe his valour. One of them dated Saka

1090 (=1168 A.D.) refers to a Chalukya Chakravartin Vikramadeva. The other inscription in Tamil, dated in the 2nd year of a certain Tribhuvana Chakravartin Kulottunga Chola refers to Malli Deva as the lord of Uraiyur. The Chalukya Chakra-vartin Vikramadeva has to be identified with the Chalukya Chakravartin, Taila III.³⁰ The date also corresponds to the last year of Taila's reign after which the Kalachurya Bijjala's usurpation took place. Evidently the chief, Tribhuvana Malli Deva Chola Maharaja threw off the yoke of the Chalukya sovereign immediately after the Kalachurya usurpation in 1168 A.D.³¹ The name Vikramaditya given to Taila III occurs in inscriptions for the first time. Both the title and the surname were borne by his famous grandfather Vikramaditya VI. The king Tribhuvana Chakravartin Kulottunga Chola has to be identified with Kulotunga II and not with Kulotunga III since Malli Deva's last regnal year was 1179 A.D.

He had two wives, namely, Lakma Devi and Sita Devi. The latter made a grant to the temple of Nolumbesvara which is described as the Ghatika-Sthana (Educational institution) of Henjerapattana.³² This is the only inscriptional evidence we come across during the rule of the Nidugal Cholas regarding the educational institutions of their time.

Bammi Deva C.1179 A.D. - C. 1190 A.D.

Bammi Deva or Brahma Nripala mentioned in an inscription of 1190 A.D. was the next ruler of Govindavadi Kingdom (Nidugal).³³ He is also described as the boon lord of Oreyurpura. His wife made a grant for the renovation of the temple at Henjerapattana.³⁴

In one of the undated inscriptions of that period, Brahma Deva Chola Maharaja is mentioned as the ruler of Govindavadi and a feudatory of the western Chalukya king Jagadekamalla. The Chalukya Jagadekamalla mentioned could be none other than Perms Jagadekamalla II.³⁵ In that case, Brahma Deva Chola Maharaja could be identified as Bami Deva Chola Maharaja, the father of Irungola Chola Deva.

Irungola Deva II C. 1190 A.D. - C. 1278 A.D.

Bammi Deva was succeeded by his son Irungola Deva (II) Chola Maharaja, who ruled Nidugallapattana independently.³⁶ The same

king is mentioned in another inscription³⁷ (Saka 1200 or 1278 A.D.) as Irungona Deva Chola. He is described as a ruler "born of the Solar race", 'lord of Uraiyur', 'protector of the Rodda Country' and 'Nissanka'.

In one of his inscriptions³⁸ found at Hiriyur (1247 A.D.) he is called "Danava Murari" indicating that he was a Vaishnavite. Though a Hindu, he made a liberal grant to a Jaina Basthi at Niduga^{1.39}. One of his subjects made a grant of 2000 areca palms to Brahma Jinalaya in Nidugal. The Jina Brahmana, the donee, hailed from the village Bhuvalokanatha in Ponnamaravathi Vishaya. Ponnamaravathi is situated in the Pudukkottai District of Tamilnadu.⁴⁰ These facts indicate the religious tolerance practiced by the Nidugal Cholas.

His period witnessed the full fury of the Nidugal Chola-Hoysala conflict. He obtained the support of the Yadavas and invaded the Hoysala territory. In 1269 A.D. the entire force of Irungola together with those of a local chieftain named Guleya - Niyaka raided Anebidra rasinad which was under the control of the Hoysala minister Kumara Vira Chikka Ketaya Nayaka.⁴¹ Again in 1276 A.D., the Irungola king in alliance with Saluva-Tikkamma marched against Dorasamudra.⁴² This was really a rash step since Irungola was no match for the Hoysala king. Immediately after, the Hoysala minister Chikka-Ketaya-Niyaka carried out a successful expedition against the Irungola king.⁴³ The latter fortified himself against further attacks. In 1278 A.D. the Hoysala directed his minister, Becha to build impregnable forts at Nidugal and Haniyadurga "on account of enemies who would not submit".⁴⁴ In 1285 A.D. Narasimha III himself marched at the head of an army to Nidugal and destroyed a village called Bageyakere.⁴⁵ This prolonged struggle ended inconclusively.

Bhoga C. 1278 A.D. - C. 1288 A.D.

No information is available from the inscriptions regarding Bhoga, the son of Irungola who ascended the throne in C. 1278 A.D. and ruled till C. 1288 A.D. From the inscriptions we gather that his son Bamma constructed several fortresses between Haniyadurga and Nidugal.⁴⁶ Bamma had four sons⁴⁷ viz., Bijana Deva, Baira Deva, Irungola Deva, and Bavantiga Deva. Not much could be gleaned from the records about them. This may be due to the fall of Nidugal into

the hands of Hoysala Narasimha III. The last of the Nidugal Cholas, Ganesvaradeva⁴⁸ seems to have exercised his power with Moreyur⁴⁹ as his headquarters.

Finally, the Nidugal Chola rule was brought to an end by the Harati chiefs who were the feudatories of Vijayanagar. After the conquest of Nidugal, the Harati chiefs of Aymangala came to be called as Harati chiefs of Niduga^{1.49}. According to tradition the founder of the family came from the Bijapur country. Before his death, he divided his territory (Chitaldrug District) among his seven sons. Later, they were dispossessed of their territories by the Bijapur army. After this event, one of the sons who ruled Dodderi, retired to Nidugal, which his descendants held till the time of Tippu Sultan. The last representative of this family was put to death by Tippu Sultan who annexed their territory to Mysore in 1761 A.D.

Thus the Nidugal Cholas were a branch of Renadu Cholas who claimed Karikala as their progenitor. They originally belonged to Kaveri basin. They migrated to Cuddapah and Kurnool in Andhradesa during the period of Karikala and then drifted to Nidugal in Karnataka probably in the first half of the seventh century A.D. They were fortunate in establishing their rule in Karnataka with Nidugal as their capital. For six centuries they were ruling their kingdom braving several onslaughts from the Chalukyas, Hoysalas, Vijayanagar rulers and their rule was finally brought to a close by the Haratis.

In their heyday, they maintained a powerful army and a well organized local government. The town assembly of Nidugal was known as Pancha Maha Sabha. The chief of Nidugal, as Mahamandaleswara had the responsibility to protect his subjects by enforcing law and order.

Though the Nidugal Cholas were saivites they patronized all religions equally. This can be observed from the regular grants made by them to the temples of different sects at Nidugal and Hemavathi. The Brahmanas continued to exercise tremendous influence on the mind and faith of the people. Sanskrit continued to be the language of religion and philosophy. Kannada also received equal attention from the rulers of Nidugal. During this period, bhakti also received a new emphasis.

Trades were organized by the guilds. Nidugal and Hemavathi towns seem to have been important trade centres. Spices, leather goods and textiles formed the principal items of sale. The Nidugal Cholas followed a type of

measure called Rajaraja sanchika ⁵⁰ probably named after Rajaraja I. Building activity also received considerable attention from the rulers of Nidugal. They constructed several temples and excavated several tanks and canals.

THE RISE OF TAMIL MUSIC MOVEMENT AND ITS OUTCOME IN MADRAS PRESIDENCY

P. Vijayalakshmi

Introduction:

Tamilnadu is a state rich in age old tradition and culture. Music plays a vital role in the life of Tamil people. The Carnatic Music is more popular not only in Tamilnadu and India but also across the overseas. Tamil Isai is the Tamil Music (Tamil Songs) was also very Popular from the ancient period. Tamil Music was well sung and popular in the age old sangam period but slowly lost its familiarity in due course of time, during the Vijayanagara period and the Nayak's rule in Tamilnadu. More Telugu and Sanskrit songs were sung in the musical concerts. The

negligence of Tamil Music were noted by the Tamil laureates ,Political leaders and they surprised why Tamil songs were not sung in these popular concerts. The question raised in the minds of the people in Tamilnadu. At this juncture in the third decade of the 20th century, to rejuvenate Tamil Music(Tamil Isai),to Propagate and popularise Tamil songs "Tamil Music Movement"(Tamil Isai Iyakkam) was originated. In this paper I am going to focus on the Rise of Tamil Music Movement and its outcome in Madras Presidency.

Tamil Music Movement (Tamil Isai Iyakkam 1935-1944):

The intellectual commitment to retrieve the lost glory of Tamil cultural heritage made its appearance at the end of the nineteenth century. It was an effort to secure a significant place in the domain of modern public sphere. Thanks to the intervention of colonial power, the idea of identity – uniqueness sought to have gained greater currency heralding an era of intense politicisation. The Historical context an attempt to reconstruct the history of Tamil music was said to have begun with the rediscovery of Tamil classical works.¹ In the initial stages there was no specific demand for popularising Tamil songs. But at the same time scholars like Subramanya Bharathiyar, stressed the importance of singing in Tamil. The demand for popularising the Tamil songs became a prominent issue in the second quarter of the twentieth century as a result of caste politics and cultural nationalism. The recent progress achieved in the field of theoretical musicology also further precipitated the Tamil Music Movement.

The real effort in this direction of popularisation of Tamil songs came only in the thirties. The efforts of the Organisers to revive Tamil Music in general may be said to have begun since the holding of the 42nd congress session in Madras (1927). On the sidelines of the conference, a musical session was also conducted with a view to restore the national culture to their pristine glory. It was in this session that a decision was taken to establish Music academy for the promotion of South Indian Music.² The Academy came into being in 1928 and soon became a centre for classical music and dance. The success of the Music Academy stimulated other volunteer associations to undertake similar efforts. In this connection, a plea for the inclusion of Tamil songs in musical performances came to be made in the beginning of the 1930s.³

In the musical concerts Telugu songs and Sanskrit songs were sung. Many Tamil scholars emphasised the need for the inclusion of Tamil songs in the classical concerts along with other vernaculars. This was a quite new situation that no Tamil songs were sung in the musical concerts of Madras Presidency. The people of Tamilnadu could not hear songs in their own mother tongue Tamil.

Causes for the Movement:

In the 1930s and 1940s, in the Carnatic music concerts mainly Telugu and Sanskrit songs were sung from the beginning and it was given more importance. Only at the end of the concert, 3 to 5 minutes which is called as post-tani "Tukkada" segment, the Tamil songs Devaram or Tirupugazh was sung. This was quite disgusting. The audience has to attend the whole concert, waiting to hear the song in their Mother tongue. As a people of their own land they were not able to hear songs in their own mother tongue. This was not the case in any other place other than Tamilnadu. This was said to be the main cause for the origin of Tamil Music Movement.

A plea for the inclusion of Tamil songs in musical performances came to be made from the beginning of the revival of classical music. E. Krishnan, Secretary of the Indian Music Academy, wrote saying that "though most of the kritis are either in Telugu or Sanskrit, pieces in other languages like Tamil should also be sung."⁴ C.R.Srinivasa Iyengar, while delivering a lecture at the summer school of Indian Music organised by Y.M.C.A. referred to the decline of Tamil songs and said that "at the time of his own youth it was the custom to sing the songs of Anantha Bharathi, Kavi Kunjara Bharathi, Gopala Krishna Bharathi and Arunachala Kaviraya at music performances."⁵ He also deprecated "the general tendency of Tamil musicians of today sing nothing but Telugu and Sanskrit songs", and said that "the compositions of the Tamil singers he had mentioned would bear comparison with many of the best Telugu songs."⁶ In a lecture at Madras on 'The Music and Musical Instruments of the Tamils' Dr.U.V.Swaminatha Aiyar discussed the questions of 'Pan' which formed an important feature of the ancient Tamil Music and said that these corresponded to the Sampoorana ragas.

Under these Circumstances the demand for Tamil Songs accelerated among the Tamil People and the voices of elite personalities also gained momentum. R.K.Shanmugam Chettiyar., Bharathiyar, Rajaji, Rasigamani T.K.Chidambaranatha Mudaliar, C.N.Annadurai, Kalki Krishnamurthy, Bharathidasan, Thiru.vi.Ka, E.V.R.Periyar, Raja Sir Annamalai Chettiyar and many more raised the voice for Tamil songs to be given first preference in the musical concerts.

But on the other side ,it was sniggered that Tamil was a non-musical language with hardly any songs. There was no songs in Tamil with suitable Raga and Tala.The Tamil Protagonists opposed this criticism tooth and nail. They said the singers who sung Telugu and Sanskrit songs even doesn't know its meaning.In Tamil language ,we had a treasury of Tamil Songs.It was in vogue from the early sangam period. There was plenty of Tamil songs written by the triumvirate of Tamil Isai Mutthuthandavar, Marimuthappillai and Arunachala Kavirayar. In due course of time,it had lost its fame and popularity. Arikesavu Nallur Muthaiya had sung Tamil songs in a concert at Pachaiyappa's college in 1933. Nayinappillai , his forerunner had sung many Tamil Songs. Abraham Pandithar said "Tamil Music is the first and foremost of world Music, and it is the Origin point of all other music."⁷

"When we sang and hear in our own mother tongue we will be fully satisfied.Our beloved God too hear it" said Rajaji. "As I was born as a Tamilian,I want Tamilisai,Whatever the music in Tamil is there is enough for me" was the thundering speech of the Economist and first Finance minister Sir R.K.Shanmugam Chettiyar. C.N.Annadurai said "The audience before whom the song is being sung, it must be in the language that was understood by them.Then only music will be pleasant and heart-dwelling". Raja Sir Annamalai Chettiyar who was born and brought up with Tamil and Tamil songs like Devaram, Thiruvagasam couldn't tolerate the criticisms on Tamil songs. He insisted "only when we sing in Tamil our mother tongue people will understand the sweetness of music".⁸ The first successful attempt to include music in the curriculum of higher education was made by Raja Sir Annamalai Chettiyar.He started a Music college in 1929.Here Devaram,thiruvagasam,Nalayira divya Prabhandham, Tamil Songs and playing of musical instruments like veena, pitil, mirudhangam etc.were taught. Thus Annamalai Chettiyar avowed the purpose of conserving the musical talent of South India.⁹

Origin of the Tamil Music Movement:

Raja Sir Annamalai Chettiyar was disappointed to see the apparent neglect of Tamil in the development of music. At the same time a number of articles appeared in Periodicals pointing out the excellence in ancient Tamil and

a number of meetings were also held in which the subject matter was Tamil music.¹⁰ All the Tamil Supporters joined together and they decided to start a movement in popularising Tamil songs. Thus the "Tamil Music Movement" (Tamil Isai Iyakkam) was started.

The Tamil Music Movement was an outgrowth of changing patronage and political structures in South India in the late nineteenth and early twentieth century .Madras city, as the centre of colonial administration, grew as the status of princely states. "We want more Tamil in Carnatic Kutcheris",the pro-tamil protesters announced insisting that audience will enjoy the pleasure only when the sahitya was in their mother tongue.In 1933 Annamalai Chettiyar presided the South Indian Music conference and said "always we should safeguard and work for the growth of our Isai(Tamil Music)".In all over Tamilnadu,where there might be sabhas only Tamil songs should be given first and foremost preference and Tamil songs should be sung in major part" – was the first righteous voice given by Raja Sir Annamalai Chettiyar.This gave birth to the Tamil Music Movement. This Movement was started by Raja Sir Annamalai Chettiyar along with the prominent Tamil Supporters, Tamil Poets, Pandits and Tamil Laureates. They all joined hands together with him to revive Tamil Music. Important personalities of this movement were R.K. Shanmugam Chettiyar, Rajaji, T.K.Chidhambaranatha Mudaliar, Kalki Krishnamurthy, C.N.Annadurai, Bharathiyar, Bharathidasan, E.V.R.Periyar, Thiru.Vi.Ka and T.S.Chokkalingam.

Raja Sir Annamalai Chettiyar said, "The main motive of Tamil Music Movement was that Tamil songs should be sung and given first preference in the Musical concerts in Tamilnadu. Hearing good songs with music that too in our mother tongue will give more satisfaction to the people. So, I am requesting the singers to sing more Tamil songs".He played a vital role in Tamil Music Movement.The Music college started by him became the bastion of the Tamil Music Movement. The first attempt in encouraging the learning of Tamil Songs came in 1935 when a prize of Rs.750 was instituted for the best manuscript in Tamil on Indian Music suitable for use as a textbook .

Impact of the Movement:

The mass phase of the Tamil Music Movement began with a Tamil Music Conference in Annamalai University in the early 1940s, where Raja of Chettinad offered a special endowment to the Annamalai University to encourage the study and propagation of Tamil songs. It soon spread to other places. Many public meetings were held in the mofussil towns to create awareness among the common people to garner their support. Tamil Music Conference was convened in 1941 in Annamalai University with the objective of finding out the ways and means of popularizing Tamil songs.¹¹ The subject committee in the conference passed a resolution asking All India Radio authorities to give prominence to Tamil songs in their programs intended for Tamil audience. Sangeetha Sabhas should give due place to Tamil Keerthanas and Pathams. There was a strong opposition for the Tamil Music Movement. In the tenth musical conference on December 3rd, 1942, in Thanjavur Raja Sir Annamalai Chettiyar reiterated that one could only understand and appreciate the beauty, emotion and aesthetic value and style of songs rendered in the mother tongue, then only art can prove itself. He stressed again and again that the Tamil Music Movement is purely for the promotion and development of Tamil Music and Tamil Musical Compositions and there was no communal or cultural prejudice nor it had anything to do with the politics of the state.¹²

Conclusion:

Tamil songs became very popular that it reached the nook and corner of Tamilnadu. Devaram Thiruvassagam, Nalyira Divya Prabhandham, like that of many Tamil poems were set into music and sung. Bharathiyar Songs were sung. M.M.Dhandabhani Desigar had sung many Tamil songs and he has written songs in Tamil not mixing even a single Sanskrit word. He had set music to Thirukkural and sang. Many Carnatic music singers were in the need to sing Tamil songs in the musical concerts compulsorily as it was the wish and demand of the people. M.S.Subbulakshmi had sung many Tamil Songs and it became popular all over Tamilnadu. Nowadays many Popular singers like Sanjay Subramaniam has keen interest in singing Tamil Songs. The Tamil Music Movement has achieved its goal of popularising Tamil songs and it was successful in its aim. It faced so much criticisms. Some has even called it as extremist movement. To all these criticisms the founders of Tamil Music Movement pointed out again and again that their desire is to listen to music set in their mother tongue rather than mere musical sounds. The Tamil Music Movement originated initially as a cultural expression of the Tamil intellectuals and later turned out to be a Popular Movement.

THE ROLE OF E.V.RAMASAMY IN SELF- RESPECT MOVEMENT

R. Vijimol & R. Edwin Sam

Introduction

After leaving the congress party E.V.Ramasamy did not start a new movement immediately. E.V.Ramasamy having great popularity among the people was invited by the leaders of the Justice party to join them. Being E.V.R expected congress party to change its attitude for the welfare of the society. Acting quite contrary to the expectations congress merged in to a political movement. E.V.Ramasamy started a new movement in 1925. That movement was self- respect movement.

Early life of E.V.Ramasamy

E.V.Ramasamy was born on 17th of September 1879 at Erode as the son of Venkara Naicker and Chinnathai Ammaiyar. He had his early education at the primary school of Erode. His teacher certified him as unfit for school education. E.V.R. was discontinued in school education. After he started a business and kept it as his occupation. When he got interested in the social service, he left his business. Deeply interested in the poor and untouchable in the society he made close contact with them. At this moment he undertook a religious tour to the North which could not give him peace to his problems. He was involved in the struggle for freedom. He was first social reformer to be born in Tamilnadu.

Joined the Congress Party

He joined the congress party which fought for the freedom of the land.

Attended the Non-co-operation Movement

He participated in the non- co-operation movement which was held in 1920 and was sent to prison twice. Attaining the respect of common people. He was elected chairman of Erode Municipality in 1917. But he resigned his Chairmanship in 1919. He was elected secretary of the state congress committee in 1921, and later as its president in 1923, when the prince of Wales visited Tamilnadu in 1922. The state wide strike became highly successful in Erode.

Struggle at Vaikom

As the member of the Congress party E.V.R. himself completely in the socio-religious problems. In those days low castes were not permitted to enter the temples by Brahmins. E.V.R. started a revolt against temple movement. The struggle attracted E.V.R. He also participated in the struggle with his wife Nagammaiyar and Ayyamuthu. Leaders including E.V.R. were arrested. By his participation as a common leader in the inspiring struggle. E.V.R. was called Vaikom Veerar by the people.

Prohibition struggle

Deeply wounded by the consequences of liquor drinking E.V.R. He was determined to start a struggle against the anti- social evil. That time he picketed a toddy shop at Erode in 1921. His wife Nagammaiyar and sister Kannammal also participated the struggle. The first ladies who were arrested for picketing toddy shops in Tamilland were Nagammaiyar and Kannammal. This created a stir among the ladies of Tamil land. Propagating in favour of prohibition E.V.Ramasamy. He cut down his palm and coconut trees worth Rs.10000 which were used for preparing toddy.

Rejected the Congress Party

He rejected the congress party, reason for dominated the Brahmins rules only. The three percent of the Brahmins held 99% of the high posts. Protesting the E.V.R. brought a resolution in the congress conference held at Kanchipuram District to get the support of the Brahmins, the congress neglected and dismissed this resolution brought by E.V.Ramasamy. He and V.V.S.Iyyar also condemned in holding separate rows for Brahmins in gurukulam at Cheramadevi.

The doctrines of Self-Respect Movement

The doctrines of the movement found expression in the speeches of E.V.Ramasamy to the People between 1926 and 1973. This movement insisted Self-Respect, opposed the supremacy of Brahmins and instigated people against it. The self –Respect movement of

E.V.Ramasamy based on some aims and principles was registered legally in 1925.

The principal aim of the movement was to create awakening among the illiterate right less people who were under the clutches of high castes. The movement was very particular about bringing in the life of people self-respect through self- thinking and relief from slavery. The unnecessary rituals and superstitions, followed by the Hindu religion were severely opposed by the movement.

Opposing the existing defective social system, the movement requested the government to give equal rights to all the people. It wanted to bring about changes in the marriage system and severely criticised and opposed child marriage.

Spreading of the doctrines

The doctrines of the self- respect movement were spread among the people through public meetings and dramas held by E.V.Ramasamy. For the purpose he toured the country frequently. Newspapers were published to add to its effect. His public meetings at Madurai, Chengalpattu, and Viruthunagar were of great historical importance. In these meetings, resolutions were passed against untouchability, caste system and capitalism.

Awakened by the inspiring doctrines of E.V.Ramasamy countless Hindus, Christians and Muslims participated in public meeting and conferences held by him. Many books containing advanced thinking were published by him. So many organisations were constituted by the movement against caste atrocities and religious superstitions. Among them 'Superstition Eradication Conference' held at Salem in 1971

was of great importance. In the procession in connection with the conference the idols of gods were carried and cowdung and chappals were thrown on them. Through he opposed and fought against social maladies courageously and with iron determination.

Anti- Hindi agitation

The Congress party was victorious in the election of 1937 and the ministry was formed under the head of Rajaji. Then learning Hindi became compulsory in schools. E.V.Ramasamy made this issue in to a political storm. Anti- Hindi agitation by thousand of students and common people spread all over Tamilnadu. Police opened fire to suboue this riot, in which Thalamuthu and Naderajan were killed. Several leaders including E.V.Ramasamy were arrested and imprisoned. E.V.Ramasamy was given imprisonment for a year. E.V.Ramasamy who lived in the hearts of people, was elected as the leader of Justice Party in 1940, when he was in prison.

Dravida kazhaham

The Justice party began to decline in importance with its failure in the elections of 1937. Under these circumstances. E.V. Ramasamy reconstituted the doctrines of the party and formed a new party called 'Dravida Kazhakham.'

Conclusion

A number of Political Parties in Tamilnadu, such as Dravida Munnetra Kazhagam and All India Anna Dravida Munnetra Kazhagam owe their origins to thy Self-Respect Movement, the letter a 1972 breakaway from the DMK. Both parties are populist with a generally social democratic orientation.

SANSKRIT AND STATE – GOA FROM 400 AD TO 1024 AD

Aditi Shukla

This article deals with some aspects of the history of Goa from 400 AD to 1024 AD. It is an attempt to inquire into the universality of Sanskrit in Goa. During this period, Goa was a part of larger kingdoms of South India and was ruled by the vassal kings of those kingdoms. The inscriptions issued by the Bhojas, Konkan Mauryas, Chalukyas of Badami, Goa Shilaharas kings were studied and analysed in order to examine the prevalence of Sanskrit in Goa. It also analyses the use of Sanskrit by the kings in the

religious, political, social and administrative aspects of their states as well as in establishing the legitimacy of their kingdom. This included the delegation of political authority to Brahmanas, system of land grants, making the gifts of lands tax-free for the donee Brahmanas, dominant role of Brahmanas in state administration and religious works. Such practices were seen from during the Bhojas rule up to the end of Shilahara dynasty in 1024 AD.

IDOLATRY & HERO WORSHIP IN THE POLITICAL CULTURE OF PUDUCHERRY: A READING & ANALYSIS OF THE VISUAL CULTURE OF PUDUCHERRY THROUGH THE BANNERS AND POSTERS OF N.RANGASAMY

U. Ananthkrishnan & Dr.V.Santhi Siri

The paper analyses the posters erected during the birthday of Puducherry's ex-chief minister Mr. N. Rangasamy. It attempts to decipher how posters are employed in Puducherry's popular culture to create a personality cult that actualizes or normalizes hero worship and how it reinstates the common perception of Political/Social personalities. The Tamil Popular Culture has a complimentary and trajectory relationship between movies, film stars and political leaders.

This paper argues that the poster culture has a long standing and echoing effect on how the

'Hero' is manufactured through the culmination of multiple popular culture tools like Films, myths, religion, archetypes etc. They are created with specific interests and also to (re)establish certain relations between the hero and the society that will add to the status quo and power of certain individuals and communities. The construction of such a Hero Image within a particular cultural-political context and infusing them into a single poster creates the perfect concoction for public consumption that instigates fanatic Idolatry.

NAXAL MOVEMENT IN PALAKKAD, KERALA

P.K. Aneesudheen

Naxalism is one of the serious threats to the integrity of India as well as to the Kerala state also. In India the emergence of Naxal movement can be traced back to 1967 with the uprising in the village of Naxalbari area of west Bengal. It was necessitated by the revolutionary politics and ideological differences within the Communist Party of India in 1964, and subsequently Communist Party of India (Marxists) (CPM) was born. The CPI(M) was in favour of actively participating in parliamentary

politics and postponing armed struggle to the day when a revolutionary situation prevailed in the country. It participated in the 1967 election and formed a coalition government with the Bangla Congress in West Bengal. This led to a split in the party. A section of the party, most of them were youngsters, accused the leadership and demanded the immediate starting of armed peasant insurrections in rural areas and gradual extension of the armed struggle to the entire country. They launched a peasant uprising in the

small Naxalbari area of northern West Bengal. Immediately the CPM leadership expelled the rebel leaders and soon they were joined by other similar groups from the CPM in the country. Later they came to be known as Naxalites. Similar parties and groups were also formed in Andhra, Orissa, Bihar, Uttar Pradesh, Punjab and Kerala.

The term Naxalism is also used to denote or designate Maoism for comparing a more global phenomenon as it appears to follow Mao Tse-tung's approach which ideally looked at the agrarian class rather than working class, as the key revolutionary force which could transform the capitalist society towards socialism.

ACCAMMA CHERIAN: A WOMAN FREEDOM FIGHTER FROM TRAVANCORE

Anjana Aby

The first decades of nineteenth century witnessed an increased participation of women in the Indian National movement. Kerala witnessed widespread struggles like Vaikom Satyagraha, Guruvayur Satyagraha and Temple entry proclamation for democratic society.

Malabar, Kochi and Travancore were the main regions in connection with national movement in Kerala. While Malabar was directly ruled by British, the presence of nationalist movement was eminent there. The rest were princely states. So activities of Indian National Congress (INC) were comparatively weak in those princely states during the early phase of national movement. Formation of Travancore State Congress to achieve responsible government in 1938 and its ban by the princely state led to the rise of Mrs

Accamma Cherian in Travancore politics. The major political event led by Accamma Cherian in Travancore was the famous Rajadhani March, which brought national attention to her.

The mass movements all over India initiated by Mahathma Gandhi had a prominent role in the increased participation of women in Indian political struggle. Annie Beasant, Sarojini Naidu, Suchetha Kripalini and Aruna Asaf Ali emerged as strong women freedom fighters in the Indian soil. The history of Accamma Cherian (1909 - 1982) the freedom fighter from Central Travancore is not adequately discussed and remembered in the Indian freedom struggle. My attempt is to place Accamma Cherian and her role in the Indian freedom struggle.

THE EMERGE OF POLITICAL AWAKENING IN ANDHRA PRADESH : A HISTORICAL PERSPECTIVE

Annapurna.C

In this paper an attempt is made to identify the role played by the Regional Political Party and the awakening in Andhra Pradesh after independence. The Indian Independence movement was a mass-based movement that encompassed various sections of society. The emergence of Regional economic imbalances in India has also been a factor in the emergence of regional parties. Several regions of the country have registered a relatively high level of economic development while many others continue to lag behind. The local leaders, particularly who belong to the economically backward or lowly developed regions, cry often exploit the local feelings and form regional parties for representing the regional interests as

well as for strengthening their bargaining power vis-a-vis the national leaders. The emergence of Asom Ghana Paris had, Telugu Desam Patty is an example. The period between 1858 and 1885 saw the growth of several vernacular newspapers and literary associations in Andhra in tune with phenomenon throughout the country. The first Telugu Journal to be published is believed to be the *Satya Doota*, a missionary journal for the propagation of Christianity by the Christian Association of Bellary. To counteract the missionary propaganda, a few Telugu newspapers were started, the most notable among them being *the Tatwa Bodhini* in 1864 by the Veda Samaja of Madras.

MONSOON THROUGH DOCUMENTARY EVIDENCE: IN THE PERSPECTIVE OF ENVIRONMENTAL HISTORY

Febin Sithara

Today, climate change has emerged as the most important environmental issue all over the world. India has a total geographical area of 3.29 million sq.km or 329 million hectares due to the vastness of the country, its different regions have varied climate and rainfall patterns. India has a great diversity of climates with many striking contrasts of metrological conditions. The diversity is perhaps greater here than in any other area of similar size in the world. Kerala enjoys a wonderful diversity in its geography and this is reflected in the diverse climatic trend across the state. Nature has bestowed Kerala with abundant rainfall. The average annual rainfall of the State, situated in the southwestern corner of the Indian peninsula is about 300 cm, which is about three times the average for the whole of India. Kerala is one of the smallest states of India and has an area only a little more than 1% of the country as a whole. The High-

ranges have a cool and refreshing climate throughout the year, while the plains are hot and humid. As part of the changes in the global climatic conditions, Kerala climate also have been changing. Rainfall pattern in Kerala exhibits Uncertainties during the recent decade. Considering the overall climatic distribution of the state, there are four seasons in Kerala that are, Monsoon, Post- monsoon, winter and summer. The average level of annual rainfall in Kerala is quite high when compared to other Indian states.

Various studies have reported significant seasonal monsoon precipitation, on regional and sub-regional scales over South Asia, during the second half of the 20th century. This paper is describes an analysis monsoon through documentary evidence in the perspective of environmental history.

GANDHIAN NON-VIOLENCE AND ITS RELEVENCE IN CONTEMPORARY TIMES- A DESCRIPTIVE STUDY

G. Gnaneshwari

India carries somewhat of a reputation globally as the home of spirituality and a champion of non-violence. The combined legacies of Emperor Ashoka, Gautam Buddha, Mahatma Gandhi, and many other renowned gurus and sages have left an imprint on the way India seeks to carry itself on the world stage and also to an extent on how the rest of the world perceives it. Even India's road to independence from colonial rule was paved with the asphalt of non-violence. While

there were elements that fought the might of the British Empire with fire, it was ultimately the peaceful mass movements like non-cooperation, Satyagraha, and civil disobedience that captured the world's attention. Of course, Britain's post-war decline contributed to its inability to hold on to its colonial possessions, but the headlines and history books will always cite the non-violent rebellion as a landmark.

DAWN OF THE INDIAN INDEPENDENCE STRUGGLE : VELLORE MUTINY- 1806

P. Jayachitra

Early in the morning of *10th July 1806*, at approximately quarter past two, a heavy and prolonged firing of musketry was heard within the walls of the fort of Vellore. Indian troops, employees of the British East India Company, had mutinied. They had begun to attack and kill the British officers attached to their battalions, as

well as a detachment of British soldiers from *His Majesty's 69th Regiment* which happened to be stationed at Vellore. Indian troops formed the basis of the East India Company's power and influence. They far out numbered their British counter parts in the Company army. For example, at the time of this dramatic massacre

there were some 383 British troops garrisoned at Vellore, as against at least 1500 Indian sepoys. Even this proportion of British to Indians was relatively high in comparison to the situation in the Madras Presidency as a whole. The total figures for the Madras army in 1806 were 55,050 sepoys and 7,900 British forces. For an appropriate final comment on the Vellore mutiny

and on its historiography, it is necessary to return to *Rosselli, Bentinck's* most recent biographer. He neatly sums up the problems that faced those who investigated the mutiny at the time and that have continued to face those who have attempted to write its history. Vellore remains unexplained.

MAHARAJA SRI KRISHNARAJA WODEYAR- IV AND HIS CONTRIBUTION TO MODERN MYSORE STATE- AN ANALYSIS

K.C. Mahadesha

An attempt is made in this paper to analyze the Maharaja Sri Krishnaraja Wodeyar - IV and his contribution to modern Mysore State. If Karnataka is today considered as a pioneer in software industry & Knowledge hub, part of the credit must go to Maharaja Krishna Raja Wodeyar IV. Born in 1884, he lost his father when he was just 11 years old. His mother ruled the state till he attained the age of majority in 1902 which heralded a new era for the erstwhile state of Mysore. He wasted no time in triggering a slew of reforms with emphasis on education & industrialization. One of the most admired qualities of the Maharaja was his art of delegation which was rarity among leaders those days, but it is now recognized as one of the top lessons in management. With the interests of the state in mind, he would put all the

necessary efforts into understanding a project and identify the right person who had relevant qualities & qualifications for that project. He would then delegate the project to that person and give him complete freedom (and necessary motivation as well without interfering in the job) to carry out the project. For example, when Sir M Visvesvaraya (Sir MV) was serving as engineer for British India, it was Maharaja Krishna Raja Wodeyar who persuaded Sir MV to quit his job and offered him the post of Dewan of Mysore (Prime Minister) and give him complete authority to carry out large scale projects including infrastructure, industrial, banking & more. Similarly, he identified the right people for promoting Yoga, Music, Arts, Education, Infrastructure and delegated such projects to them.

LABOUR ISSUES IN TAMILNADU DURING THE COLONIAL PERIOD

E. Manikannan

The role played by Thiru. Vi. Kalyanasundara Mudailar (Thiru.Vi.Ka.) and P.Varadarajulu Naidu as Congress Leaders in the labour activities and working class movement in Tamil Nadu is remarkable one. Both of them were not only as Labour leaders of the Congress but also a frontline Freedom Fighters of Tamil Nadu. Born on August 26, 1883 at Thullam in Tiruvarur in Tamil Nadu, in 1917, Thiru.Vi.Ka joined the Congress with the firm belief of rendering service to the Country. Thiru.Vi.Ka. became more and more a disseminator of Gandhian political ideas to the people of Tamil Nadu since 1920. The arrival of Keir Hardie, the chairman of the Labour Party in England had a

salutary effect in the history of the Labour activities in Tamil Nadu. His short stay in Madras and publication of his life history in Newspapers influenced Thiru.Vi.Ka. Then Thiru.Vi.Ka. became a prominent Tamil Nationalist and journalist and also one of the founders of the 'Madras Labour Union' (MLU). Textile Mills contributed much to the numerical strength of the factory labourers in Tamil Nadu. Madras, Coimbatore, Madurai and Tirunelveli were the important centres of textile industry in Tamil Nadu. A good beginning towards organised labour movement was made among the textile mill workers in the Madras city by Thiru.Vi.Ka., B.P. Wadia, and others who took the cause of workers and motivated them.

FORMATION OF VIDUTHALAI CHIRUTHAIGAL PARTY A STUDY

K. Rajendra Prasath

The Indian Politics has incorporated with democracy, equality and religious non-dependency which can highly called as Multidimensional. Even though, Our Indian penal code 17 severely condemned Untouchability. Yet, it has its traces in the disguise of post modernism. Several parties protest against this cruelty. The Viduthalai Chiruthaigal party is the prominent one among them. The party remains as the representative of the Dalit's by voicing against untouchability through their politics and protests in the history of Tamilnadu.

In 1982, under the leadership of Sapitha, wife of Dr. Ambedkar, the Bharath Dalit Panther Movement has laid its foundation at

Tamukkam of Madurai City. A.Malaichamy, Advocated, prosecutor, has taken the responsibility of being the state level organizer of the movement. Later, a public meeting of the administration council of Bharath Dalit Panthers movement was held on 21, January 1990. The members of the movement have nominated Thirumavalavan as the leader of the party. Immediately, he has taken the charge as the leader of the movement and changed.name of the into Movement name of Indian Subaltern Panthers insured of Bharath Dalit Panthers. Later on in the 1991 against the name of the movement was again changed into the Viduthalai Chiruthaigal lyakkam.

'COMPENSATORY DISCRIMINATION' POLICIES AND 'SOCIAL JUSTICE': A HISTORICAL INTERPRETATION.

R.N. Reshma

In this paper : In attempt has been made for a historical exploration and understanding of the concept of reservation. Can social and economic justice reconciled with the contemporary democratic principles? This is what attempt to delve into here. Social Justice theories are still catching up with experience and social realities. While advancing understanding of social justice is both Social justice is a mandatory and progressive concept and the value of social justice can be taken as criterion of radical social change in public sphere and it does so by reflecting the specific contingencies that have marked its colonial past and historical present. The shadow of historicity conditioned the mechanism of coloniality of compensatory policies which must contextualizing an

interactions within and between a multitude of settings.

This paper investigate whether and ,if so ,to what extent, state's policy of reservation and choice of social justice principles are related to the type of colonized state regime they live under, as well as to relook the most crucial policy formulations in three phases ie, The first part deals with Pre- independent period the how British government policies working for the Compensatory Discrimination programmes and their implementation in Indian society . The second part Specifying the evidence of lower caste movements in 'colonial' India and emerging manifestation of reservation.

FINANCE ASSISTANCE FOR WOMEN SELF HELP GROUPS IN TAMIL NADU
(2001-2010)

S. Sumathi Kamalam

In the year 1983, Tamil Nadu Corporation for Development of Women Limited was established with the primary goal for the development of socio-economic and empowerment of rural women. The corporation was under the control of Social Welfare Department administration from inception up to 2006. In July 2006, the corporation was come under the control of Rural Development administration and Panchayat Raj Department to bring greater teamwork and superior coordination in executing multiple schemes for Self Help Groups. The vision of Mahalir Thittam of Tamil Nadu Women Development Corporation is "Empowerment of one million women in Tamil

Nadu with special emphasis on the poverty-stricken and deprived. Empowerment of social-economic condition and building of capacity are the goals of the Mahalir Thittam for which the Self-Help Groups are supported as tool. This research work is being focused on fund allocation through which the status of economically backward people to grow from grass route level. It is not only fulfilling the economic needs of the people but also stimulate the social condition of the people which indirectly help their children to good education and other aspects of life. The members of SHGs women became bread winners of their family as men.

SECTIONAL PRESIDENT'S ADDRESS – SOCIAL HISTORY SECTION

THE MAKING OF THE SCHEDULED TRIBES IN INDIA

Prof. Bhangya Bhukya

I am extremely grateful to the Executive Committee of the South Indian History Congress for this unexpected honour it has conferred on me by asking me to deliver the Sectional President's Address of Social History of its 40th Annual Session. I feel privileged as my name will be listed among the stalwarts who have delivered this address earlier. I think this is indeed a great honour conferred on my humble work in history. As some of you may know, my major research concern is the histories of subaltern communities, particularly nomadic and *adivasis* (aboriginal people) whose history has largely been neglected in our mainstream history. In this Address, I intend to speak on the ways in which the category of the scheduled tribes was created under the rule of the British colonialism.

The first Prime Minister of India, Jawaharlal Nehru, once said, "I have always been vaguely interested in the so-called tribes of India. Why they are called tribes, I do not quite know, because, in a sense, all of us can be called tribes. However, I suppose that there is some suggestion in the use of the word 'tribal' of relatively less development".¹ Nehru thus willingly or unwillingly endorsed the use of the term 'tribal' a category that emerged in the course of the colonial administrative-political practices. And the 'suggestion of relatively less development' has come to be deeply embedded with all its negative implications in the public psyche to the present day.

In the course and as a function of subduing and maintaining its dominance over the sub-continent, the British colonial-Indian state in collaboration with anthropologists, missionaries and influential native informers produced a large body of knowledge concerning various aspects of the life of the subject peoples. Such a production of knowledge necessarily involved classifying, categorizing, naming and also ordering a bewildering variety of formations and groups. In this obviously complex process, those communities and groups which lived for the most part in the more inaccessible hill and forest tracts and survived largely from hunting-

gathering or rudimentary and swidden agriculture, were separated from the others and categorized as 'aboriginals' or 'early tribes'. They were distinguished by their 'clan-based systems of kinship and 'animistic' religious beliefs. Sometimes, they were also defined in terms of their habitat, as 'jungle tribes.' Those amongst them who were constrained to take to 'raids' even occasionally, were branded as 'criminal tribes'. In this way, putting together different related aspects, a category of 'tribe' was created, a body of knowledge about it, and this knowledge was preserved and reproduced in the forms of anthropological and ethnological notes, gazetteers and census reports. Needless to say it was this knowledge that became the framework as well as the guidelines for the administrative practices. As a sub-process, these scattered communities in different places also came to acquire an internal unity they had not hitherto possessed. The common experience under the British colonial rule was crucial in forging this unity between the *adivasis* or indigenous people.²

From the last decades of the nineteenth century, the colonial state adopted a policy of *protectionism* towards these social groups, administratively separating them from their caste-conscious neighbours, as there was intense conflict between the *adivasis* and the non-*adivasis*. This led to the designation of these groups as Scheduled Tribes and their habitats as Scheduled Areas. Importantly this creation of an administrative boundary between the plain and forest areas had many implications for these forest societies.³ Particularly it created an artificial divide between the plains and the hill people. And the *adivasis* were stigmatized as remnants of ancient people. However, the forest-based and plains-based people had been living together both in harmony and tension despite the historically embedded differences between the two. Although this project of protectionism eventually failed in many respects, it ended up stigmatizing the forest communities as primitive, unpredictable, uncivilized, isolationist, barbaric, violent, human sacrificers, criminal, backward,

and different from that of the normal human species in mentality and mode of living.⁴

Parallel however, to this colonial and degraded categorization, these forest communities themselves, provoked perhaps by this very process, were becoming conscious of themselves, their relative historically evolved distinction from their neighbours and the current imperative for self-consolidation. In the late nineteenth and early twentieth centuries they put forward and elaborated self-given identities for themselves in the emerging public sphere. Along with this new-found self-identification, went the demand for the right of self-direction and self-determination. They claimed in contrast, to be the 'original' or 'indigenous' people of the subcontinent who had been deposed and also displaced by later interlopers. They deployed the Hindi term for 'indigenous'- that of '*adivasi*', to describe themselves. The term *adivasi* is a combination of *adi* (earliest) and *vasi* (resident) meaning original inhabitants. It is said to have emerged first in Chotanagpur or erstwhile Bihar in the early decades of the 20th century and widely popularized by a social worker A.V Thakkar in subsequent years.⁵ The nationalists and anthropologists who later came to know about this concept were largely uncomfortable with this term as it interrogated their description of these communities and more importantly their own presumed Indian origin, and they also saw it as a challenge to the type of Indian nationalism they had begun to articulate. The sociologist G. S. Ghurye, for example, preferred to use the term 'Backward Hindus' and endeavoured to place the *adivasis* within the hierarchies of the caste society itself.⁶ Thus the colonial state and various other parallel interest-groups designated the forest communities with different terms and names, but always with the 'suggestion of relatively less development.' Following however, these communities own self-descriptions, we use the term '*adivasi*' in this chapter to refer to them, thus avoiding the colonial derogatory. In this chapter I examine the ways in which the colonial state classified the indigenous people as a separate knowledge-administrative category, and how that categorization has affected their society and culture and even their own self-perception. Attempts will also be made to explore the politics articulated around the colonial project of knowledge creation in general. Let us

now begin by asking how the colonial anthropology came to construct the term 'Tribe'.

Tribe: A category of Lesser Humans

The construction of the notion of the Tribe with all its implications can largely be attributed to the colonial state and its anthropology. This is not to suggest that the notion is purely a colonial invention, for, the derogatory descriptions of the *adivasis* in the Hindu *sastras* (religious texts) also played equal role in its creation. The Hindu *sastras* postulated the forest communities outside the grand *chaturvarna* (four *varnas*) scheme, designated them as *Vanavasis* (forest people) and sentenced them to live in pits and eat creatures from holes.⁷ There are many such derogatory descriptions of the *adivasis* available in the Hindu *puranas* particularly in the *Mahabharatha* and *Ramayana*. These descriptions became the basis and pretext to the colonial state and its anthropological investigations in setting up a separate category of the *Scheduled Tribe* as the other of and opposite to the caste-Hindu society. The influential, mostly Brahminical native informers had been the teachers and interpreters of these Hindu literatures to the Colonisers. It has been well established in many recent studies that the creation of knowledge about the subject races was a major genre within the colonial milieu as an important means for the extension and sustenance of the colonial power and that this project was clearly a collaborative one. Such a project has resulted in massive literature on almost all communities and was used as a source for legal and general administration. The colonial state interestingly had been widening and reorienting its project of colonial knowledge creation as its control expanded and penetrated farther and farther.⁸

Until the beginning of the nineteenth century the European colonisers did not see much distinction between the castes and tribes. All the Indian communities were treated by the colonisers as tribes and they were divided into four categories. When the term 'caste' which originated from the Portuguese and Spanish, came to be used to describe the plains people, more clearly those following the Brahmanical ruling values, a divide was created between the plains and the hill people. The hill people were considered as primitive tribes or as remnants of Indian civilisation.⁹ A clearer demarcation came

to be drawn further from their encounter with the hill people during their early establishment of Pax Britannica. The encounter of the Colonisers with the hills people everywhere more or less was uniformly violent and bloody. Resistance was indeed stiff and pervasive. The colonial expansion into the forests and hills was first resisted violently by the Pahariya Sirdars of Bihar in 1778. With the Assam tribals' revolt of 1816-24, the British approach to the indigenous people changed and they began understanding them as a distinct entity. The Santhal revolt of 1855 was another such landmark, which led to the commissioning of a number of studies of their material and cultural conditions.¹⁰ Thus, resistance or 'revolts' in the colonial language lead the rulers to treat the indigenous communities as tribes, separate and different mostly in the negative sense from the others.

Treatment of the indigenous as a separate species or subhuman was the predominant character of the colonial anthropology and it had another root to draw inspiration from that is, anthropometry.¹¹ The Darwinist (taxonomies of race) anthropology of colonial India developed within the larger framework of the nineteenth century - European racial theories, which in India served the legal and administrative purposes, as well as helped maintaining British hegemony over the inferior races.¹² Much of the early work on racial classification was, as in Europe, undertaken by biologists, and based on a hierarchical classification in which tribes were identified with older races and languages. Biologising of race by anthropologists involved the dividing of human species based on their physical measurements. It grouped the round-headed with new races, and the long-headed with old races.¹³ Based on this distinction, it was argued that elements of the Negritos, one of the oldest races, could be found in the Kadars of Cochin State in South India, and those of the Australoid (brown race) in the some of the other southern Indian hill and forest *adivasis*. Similar primitive groups, according to them, were the Mala Pantarams of Travancore, the Paliyar of Madura district, the Malavetans, Thantapulayan and Urali, all of whom were said to share strong Proto-Australoid traits.¹⁴ Indologists, working on language, claimed that the tribal languages were the oldest ones spoken in India. They unearthed thirty different groups of languages, and asserted that half a dozen of these belong to the family

known as Austric, which was the oldest, and that these were spoken by the tribes. They also argued that probably the most ancient types survived in South India, where the climate favoured the growth of heavy forests that provided a refuge for these primitive social groups.¹⁵

While abstract ideas of racial theory continued to influence scholars throughout the period of colonial rule, there was a shift during the closing years of the nineteenth century towards establishing racial classification based on measurable physical traits. The foremost figure in this exercise was H.H Risley of the Bengal Civil Service. He was the pioneer of the anthropometric survey of Bengal and under his influence the Government of India resolved to carry out an ethnographic survey throughout India at the time of the 1901 census. Edgar Thurston carried out this work for Madras Presidency.¹⁶ He was an anatomy lecturer at the medical college in Madras, and had experience as Superintendent of the Madras Museum. His long association with the Anthropological Survey of India produced seven volumes on the *Castes and Tribes of South India*, a study of the *Todas*, and the famous *Ethnographic Notes* on South Indian castes and tribes. In all his works, the anthropometry that he had imbibed from Risley provided the dominant methodology.¹⁷ Body measurement provided the main criteria for his classification of human species; he measured the foreheads of 30 to 60 members of a caste or tribe, and mapped them under certain racial categories. In some cases only 6 to 7 individuals were measured.¹⁸

Thurston's *Ethnographic Notes* is a huge volume that deals with marriage customs, idolatrous cults, sacrifices, hook-swinging rituals, witchcrafts, mantras (spells), earth eating, and other exotica. With regard to the tribes, he either tries to link their practices with those of the Hindus, or exaggerates their idiosyncrasy as evidence of a supposed primitivism.¹⁹ The sort of descriptions, which merged the identity of the *adivasis* into the Hindu fold, was later replicated by Hindu propagandists. The Hindu organisations like RSS and VHP have, taking their cue from such texts, been converting *adivasis* into Hinduism by sprinkling Ganga *jal* (water of the Ganga) over their heads, a sort of purification act.²⁰ In other respects, Thurston's

primitivism had branded the tribes as Homo Dravida and similar to the Australian aboriginals. He exoticises them in a number of ways.²¹ The *adivasis'* common practice of making fire by friction with two pieces of wood is depicted as a 'primitive' custom.²² This gave a negative connotation to the *adivasi* life and culture; they were portrayed as examples of primitive civilisation and 'museamized'. The supposed primitivism of the *adivasis* was also emphasised in the writings of missionaries from the early nineteenth century onwards. The implication here was that such communities could only be saved and civilised through conversion to Christianity²³

In this way, the colonial anthropology and state had constructed a category of primitive tribe or simply tribe. These classifications of races, languages and bodies continually recurrent in census reports, monographs and ethnographic notes pushed the *adivasis* to the bottom of the colonially imagined civilizational ladder. The *adivasi* culture was branded as uncivilized, while the Aryan (Brahman and the educated) race and Indo-Aryan languages were considered by Orientalist scholars to be more civilized.²⁴ Unfortunately, this stigmatization of the *adivasis* continues to inform the understanding of them in India to this day.

Criminal Tribes: A category of aberrant subjects

Criminal Tribe is another sub-category of the *adivasis* created by the colonial state and colonial anthropology. Under the British rule, the communities found involved in group-robbery were identified and classified as Criminal Tribes under the Criminal Tribes Act of 1871. Although mainly nomadic communities were classified under this category, many *adivasi* communities also particularly those who were involved in raids were also brought under this category.²⁵ The colonial definition of Criminal Tribe was framed in terms of caste, religion, and the supposedly fanatical, deceptive and cruel characters of the subject race.²⁶ The state largely conceived such notions from the Orientalists' imagination of India by extracting once again from the rhetoric of the Hindu classical texts. In this case, the Orientalists had deployed texts that associated each caste or community with particular social and occupational traits. These stereotypical traits were then reproduced as sociological facts in colonial administrative

reports.²⁷ Thus, stereotypical notions about the thugs, the *dhartoora* (poisoners) and the *budhuks* were derived from the Indian notions of 'otherness'. The phenomenon of 'thuggee' was viewed by the colonial authorities as characteristically Indian, a practice sanctioned and perpetuated by Hinduism.²⁸

These notions however were also sought to be methodically proven by the colonial science. The colonial anthropology, indeed, established a biological basis of the criminality of the *adivasi* communities. It has been pointed out in some recent studies, how the ideology of the colonial state on dacoity was an echo of the European concept of the 'dangerous class'. Important in this respect was Lombroso's theory of the 'born-criminal,' that rested on a belief in criminality as an innate biological and heritable trait. Building on Lombroso's work, Bertillon developed an anthropometric system that claimed to be able to identify criminality on the basis of physical measurements. Such theories and practices provided the scientific veneer for the idea of the 'criminal tribe,' which further legitimised the harsh and punitive measures taken against groups that were already marginalized generally.²⁹

The racial studies of the nineteenth century Europe had encouraged anthropometric studies in India. Indeed, during the course of the nineteenth and early twentieth centuries, the colonial state became increasingly fixated on delineating and identifying India's various racial and ethnic groups. George Campbell, Lieutenant Governor of Bengal, remarked in 1866 that 'this country, in a far greater degree than any other in the world, offers an unlimited field for ethnological observation and enquiry, and presents an infinity of varieties of almost every one of the great divisions of the human race.'³⁰ These ethnological studies, often deploying anthropometric methods and practices, largely focused on the physical and cultural peculiarities that were entrenched in India's diverse demography. Certain tribal communities were branded as habitual criminals on the basis of their physical features, and this provided a basis for the need for police surveillance and control of these communities. Every police officer and station was equipped with a notebook of criminal tribes of the region, and books by Gunthorpe and Mulla on criminal tribes and Thurston's

ethnographic notes were very popular in police training centres in South India. Thurston was often requested to speak at such places. The ability to carry out anthropometric measurements also enhanced promotion prospects within the police force.³¹

Interestingly, many police officers also began to carry out their own ethnographic studies of 'criminal' communities. These studies not only outlined the morphological traits of each community but also the methods and tools employed by it during a dacoity. As particular modes of robbery were attributed to particular communities and this was seen to help police identify a group responsible for an unsolved crime.³²

This project was largely sponsored by the state. It was an established practice that whenever any gang committed a theft or dacoity, the colonial state would immediately call for a study of that gang. If it were found that the gang had no specific occupation or fixed residence, it would be notified as a criminal tribe or caste under the Criminal Tribes Act. The colonial state went on to publish details about the group and circulate the material among all the Provincial Governments and Princely States. The colonial state thus created a body of knowledge regarding the 'criminal' communities throughout the subcontinent.

In addition to the anthropological studies, the census reports and gazetteers were another cherished achievement of the Indian colonial state. Together, these provided for the bureaucracy the knowledge of the racial and morphological character of each community. These studies were produced and reproduced throughout the colonial period in various forms. In this process, many lower caste Hindus and the *adivasi* communities were marked as criminal, as they were considered the oldest races and with no specific occupations and/or a permanent shelter. Every province and state police department was equipped with a huge stack of such ethnographic notes.³³

As I have argued somewhere else, taking to dacoity was neither an inborn trait nor a hereditary practice in the communities of India or for that matter anywhere else. Rather, some communities took to dacoity when the colonial interventions destroyed their longstanding

livelihood practices and threw them into perpetual impoverishment. In other words, the phenomenon of this sort of dacoity was a response to the vicissitudes of the colonial rule.³⁴

This was because dacoity was generally seen by the state as a political rather than a criminal act. The colonial state had successfully criminalized the political expression of the *adivasi* communities. Historically, it represented a form of *chout* (tax) collected by groups such as the Marathas and *adivasi* chiefs. It was more prevalent in Udaipur, Gujarat, Khandesh and the Nizam's territories in the eighteenth and early nineteenth century, when power was being centralised in their territories. Skaria shows us how the Bhil's raids in western India at this time constituted a demand for their *haks/giras* (share), symbolising their right to collect an amount as a due from a village. This tax collection was crucial to their exercise of political authority. He says the 'raids could be about demonstrating a raja's authority, or responding appropriately to challenges to that authority.'³⁵ Nevertheless, as stated above, these activities were judged to be criminal acts by the colonial state, with some such groups being branded as criminal tribes and reined in under the Criminal Tribes Act.

Some communities had embraced dacoity and indulged in petty thefts during distress created by recurrent famines. This was compounded by the colonial techniques of surveillance, that is, with the criminal stigma attached to their community in fact pushing them further into dacoity. An administrative category of criminal tribes was created when they were enumerated separately from the 1911 census. Although the colonial state managed to suppress dacoity to some extent by the 1940s, and many communities settled down as peasants and agricultural labourers, the criminal stigma attached to certain communities not only hampered their engaging in an honest livelihood but also severely tarnished their social standing and reputation. Even after decolonization, the Indian government declared about millions people to be 'Ex-criminal Tribes' or De-Notified Tribes.³⁶ Such an identity as 'criminal tribe' continues to be a major concern for millions in their everyday struggle as poor and subordinated communities within the postcolonial India.

Scheduled Tribe: A Category of Isolated People

The creation of the Scheduled Areas or Scheduled Tribes was part of the colonial state's policy of protectionism. The colonial rule had ruthlessly destroyed the long established livelihood practices of the indigenous people and thrown them into acute poverty and scarcity. The indigenous people were banned from utilising the now 'reserved' forests for continuing their old ways of hunting, gathering, shifting agriculture, or grazing livestock. The migration of the land hungry dominant peasants and moneylenders into the hills made the indigenous people life impossible. In general, the tribals, whether living in the plains or in the forests, suffered increasing marginalisation throughout India under the colonial rule.³⁷ This pushed the subordinate castes and classes to adopt more violent methods of resistance to the colonial rule. This was more apparent in the forest and hill areas. This led the colonial state to adopt a policy of protectionism from the last decades of the nineteenth century in order to pacify the toiling *adivasis*. As a part of this project the colonial state had created new administrative categories of *Scheduled Tribe*. The professional anthropologists, who were greatly inspired by the Western romanticism, were crucial in advocating such Scheduled Tribe protectionism.

There was a strong strand also of romanticism in the Orientalist understanding of India that grew out of the eighteenth century Western romanticism. This outlook was shared by certain colonial officials, Indologists, historians, sociologists and anthropologists.³⁸ The romantic understanding of the *adivasi* society was not confined to professional anthropologists but many colonial administrators also internalised these values very strongly. Hardiman and Skariya have shown in a revealing way how tribal masculinity was celebrated by colonial administrators and forest officers in Western India. They equated the egalitarian values (honesty, frankness, communal life) of the tribals with Rousseau's state of nature, seeing them as innocent and childlike. They depicted them as noble, honest, loyal and ruggedly independent. Some officials internalised the *adivasi* values and culture to the extent they took to drinking and hunting along with them. As Skariya says 'this celebration is ethnocentric and ethnocentrism is anti-

ethnocentric.'³⁹ Indeed, the underlying intention was to acquire more knowledge of the *adivasi* world and then encourage them to adopt more 'civilised' ways of life. The officials, after acquiring acquaintance with the *adivasis*, gradually directed them towards settled and commercial agriculture and encouraged outsiders (moneylenders, traders and peasants) to come into the forest so as to incorporate *adivasis* within the wider civilization, supposing that it would then be easy to control them.⁴⁰ Many colonial forest officials were *shikaris* (hunters) and they needed the assistance of forest-dwelling *adivasis* in their hunting. With this intension, the forest officials developed rapport with the *adivasis* by internalising *adivasi* culture and methods in hunting, but this process went hand-in-hand with the exclusion and subordination of the *adivasi*, the *adivasi* free hunter being reduced to a mere labourer serving the interests of British trophy-hunters. As Skariya puts it, 'colonial celebration of the wild and the forest are best understood as a civilized dalliance with wildness - the dalliance that often goes by the name of primitivism.'⁴¹ In fact this primitivism was premised on domination and mastery. Their celebration of primitivism itself alluded to their domination over subordinate *adivasis*, and it all served to extend their control over them. Eventually, it was all to lead to the brutal eviction of *adivasis* from the forests in a phased manner and also serve the forest conservation agenda of the colonial rule.

With the entry of the professional anthropologist from the early twentieth century, the romantic understanding entered a new phase. Anthropologists went into the *adivasi* areas with some presupposed ideas that *adivasis* were uncivilised, innocent and honest, but taken advantage of by unscrupulous outsiders. They tried to immerse themselves in the lives of those they studied, even in some case marrying tribal girls to prove their commitment to tribal culture and life.⁴² Among them Verrier Elwin and Haimendorf were two stalwarts who worked with the *adivasis* of central and southern India; the *adivasis* in these places still have great reverence for them, not realising the wider implications of their work.⁴³ Haimendorf asserted that *adivasi* society was exclusive and isolated, so that any intervention was likely to cause devastation of their simple and naturalistic life. He argued that much damage had been done

by outsiders, including state bureaucrats, and suggested that enhanced powers be granted to tribal leaders along lines adopted by the British in areas of indirect rule.⁴⁴

At one point, partly because of the professional anthropologists' advocacy for the *adivasi* protectionism, the government encircled the *Adivasi* tracts and excluded them from general administration under the Act of 1935. The encircled tract was called Partially Excluded Areas or Tribal Agency Areas.⁴⁵ The history of the creation of a tribal agency goes back to the early nineteenth century when the East India Company formed separate corps to crush the Bhil and Gond chiefs after the conquest of the Marathas. A separate force called Khandesh Bhils Corps was created in 1825.⁴⁶ Similar corps was also formed to check the raiding Gonds in the Narmada valley and Chanda territories.⁴⁷ As mentioned above, after the British took over the Gond territories, they separated the hill and forest tract by keeping them under the Gond zamindars who were again checked by a manager appointed by the colonial administration.⁴⁸

Simultaneously attempts were also made by the colonial state to separate the *adivasi* areas from the general administration. This policy was first started when the Rajmahal Hills tract was withdrawn from the jurisdiction of the ordinary courts in 1782. These rules were made into law by Regulation I of 1796. The tract was administered by the collector without any of the regular laws of the British Government made applicable there, making his own rules for the conduct of affairs. This regulation was subsequently replaced by Regulation I of 1827.⁴⁹ With the introduction of famous Wilkinson rules' under regulation of 13 of 1833, a considerable change was brought in in the administration of the *adivasi* areas. This regulation abolished military collectorship of hill areas and put them under a special officer, designated 'Agent to the Governor-General', after which the *adivasi* areas were called as Agency Areas. The Agent was made responsible for the civil and judicial administration of the Agency areas.⁵⁰

Almost all the *adivasi* areas in India were brought under special administration under one or another regulation, excluding them from the general administration. Further, all the Agency areas were brought under a common rule with the introduction of Scheduled District Act of

1874. Following this Act, many densely populated *adivasi* regions were received the status of Scheduled Districts and the *adivasis* living in those districts were designated as Scheduled Tribes. This Act was aimed at providing complete protection to the *adivasis*, protection particularly from the land hungry non-*adivasi* migrants from the plains and moneylenders.⁵¹

Where the *adivasis* were not covered under this Act, they were protected by separate regulations from the late nineteenth century. These regulations banned land transfers from *adivasis* to non-*adivasis* as in the Agency Areas.⁵² A clear and further demarcation of the *adivasi* areas was laid down in the Government of India Act of 1935, under which the Governor could notify any *adivasi* tract as a Partially Excluded Area. The main difference between the Partially Excluded Areas and the rest of the province was that the Acts passed by the Central or Provincial Legislative Assembly would not apply to the Partially Excluded Areas unless the Governor, by notification, so directed; he was empowered to make special regulations for the better administration of the areas. This policy of exclusion of the *adivasi* areas became a political controversy. There were interesting debates between political leaders and colonial administrators. In 1936, all Legislative Assemblies opposed this exclusion. The Indian National Congress, in its Faizapur conference, denounced exclusion as another attempt to divide the people of India into different groups. However, there was a change in the attitude of the political leadership of India on exclusion and the provincial acts were passed by respective Legislative Assemblies to that effect.⁵³ In the Act the *adivasis* were designated as Scheduled Tribes.⁵⁴ This policy, indeed, was aimed at providing self-governance to the *adivasis*. But the colonial state was always suspicious of the *adivasis'* ability to manage its own affairs and never allowed self-rule in the forests and hills. The forest and hill areas were meticulously ruled by the Agents of the Governors.

The Government of India Act of 1935 provided a model for the new Constitution of the independent India. Indeed there was not much discussion or debate on the *adivasi* question after independence. Most of the intellectual baggage that was carried into the Constituent

Assembly drew heavily on the colonial model. The Advisory Committee on Fundamental Rights appointed two Sub-committees in 1947 to report on the future administration of the Excluded Areas in Assam and Excluded and Partially excluded Areas other than Assam. These committees submitted separate interim and joint reports largely recommending the same colonial model of administration of the *adivasi* areas. The Constituent Assembly accepted these committees' reports without any discussion on them. The *adivasis* thus came to be designated as Scheduled Tribe and their habitats as Scheduled Areas in postcolonial India.⁵⁵

Although the Partially Excluded areas were not inhabited solely by the *adivasis*, they were stigmatized as primitive people. The fact is that *adivasis* lived in both excluded and non-excluded areas. Thus, the colonial divide between the mainland plains and the hills and forests was dubious. The historically built divide between the two territories was more a political rather than a sociological as constructed by the colonial state and colonial anthropology. Indeed the new divide was an artificial one that served to exoticise and stigmatise a minority of the *adivasis*. The colonial project of *adivasi* construction was in fact designed to deny self-rule and self-determinism to *adivasis*.⁵⁶

Animists: A Category of Primitive Religion

The colonial state also endeavored to carve out a separate religious category called the 'Animists' for *adivasis*. This was largely done through the Census enumeration. Sometimes the terms tribe and animists were used interchangeably to designate the *adivasi* religion as well as the *adivasis* in the colonial census.⁵⁷ In the colonial census the *adivasis* were, irrespective of their will, enumerated as Animists from the 1871 census onwards. However, they were given liberty from the 1891 census to claim any religion. There was mixed response from the *adivasis* to such enumeration, some claimed Hinduism and those who responded with their community names were enumerated as Animists. In subsequent censuses in 1931, all the *adivasi* communities were classified as Hindus.⁵⁸

In the beginning of the twentieth century, it was reported that the *adivasis* were increasingly adopting Brahmanical practices and

worshipping Hindu Gods, and that this allowed them to adopt, not only a 'civilised' life but also modern forms of cultivation and other livelihood practices.⁵⁹ In fact, the colonial rule aggravated the processes of Hinduisation and Rajputisation in the hill tracts. Not only the *adivasi* chiefs, their people too began imitating caste-Hindu practices and often claimed Rajput, and thus *kshatriya* status within the *varna* hierarchy. The colonial state also encouraged such claims, for it held that caste society was more civilised than that of the *adivasi* society; the interaction between the two societies would make the latter more civilised and sober; and it would be then easy for the colonial state to control them.⁶⁰

Following this, there was a debate on how the religion of the *adivasis* should be classified in the census reports. Ghurye argued that the *adivasis* of India were Hindus for the simple reason that they were born on Indian soil, worshipped Hindu gods, and spoke the same regional languages as the caste-Hindus. He also strongly opposed their enumeration in the census under the separate category of 'animists'.⁶¹ Verrier Elwin, who lived for many years among the Gonds, and considered to be a champion of the *adivasi* rights, argued, 'the religion of the Indian aboriginal outside Assam should be regarded as a religion of the Hindu family, with a special relation to the exciting, dangerous, catastrophic, Shaivaite type, but as having a distinct existence of its own. For purposes of the Census, all aboriginals should be classed as Hindus by religion but separate returns of their numbers by race should be provided'.⁶² This was also asserted by Grigson, an officer on special duty to investigate the conditions of the aboriginal communities in the Central Province.⁶³

In these ways, the colonial governmental project ruptured the fluid boundaries between religious identities that had existed in the pre-colonial period and tagged each caste/community within a discreet and particular religious category.⁶⁴ The phenomenon can however be understood differently. As Hardiman has argued: 'it is a historical and dialectical process that in any given society is a synthesis arising out of pre-existing social systems'.⁶⁵ The interaction between twice-born castes and lower castes and *adivasis* produces over the years a fresh synthesis that might not be unambiguously

'Hindu.' Kosambi illustrates the coexistence of mixed cultures where Guru Nanak and Kabir were worshiped by subordinate groups.⁶⁶ They could not be understood as either 'Hindu', 'Sikh' or 'Muslim'. Although while it is true that many communities tended towards the Hindu model, their demand emerged within the colonial context and within the demographic politics of colonial rule, and it was as much a socio-political as a religious one. Interestingly the same *adivasis* who demanded Kshatriya status put forth a serious cultural challenge to the onslaught of Hinduism, in the process, asserting their own cultural practices and values. This was gradually turned into identity politics in late colonial period.

Conclusion:

The colonial state and colonial anthropology imagined the indigenous people of India as a singular and distinct social group. This imagination derived largely both from the Indian notion of 'otherness' as well as capriciousness of European science. The process of homogenisation and individualization of the subject races was tirelessly carried out throughout the colonial period. Indeed the colonial administration and colonial anthropology had worked hand in hand in the homogenisation of *adivasis*. Further, this was transmitted through the creation of colonial

administrative categories of the *scheduled tribe*. Ironically the postcolonial state espoused the self-same colonial imagination of the *adivasis* and continued to designate them in the same terms. However, the forest communities by and large do not assert their identity through the colonial administrative categories, but through their own historically built community names, such as Gonds, Santhals, Bhils etc. And in modern times, responding to the changed circumstances, they perceived themselves mostly as the *adivasis*, meaning the original and genuine. In other words, the terms 'Tribe', 'Scheduled Tribe' Criminal Tribe and 'Animist' designated by the colonial administration hardly matters to the *adivasis* in their articulation of self-consciousness, unless and only when they approach administration for availing special development schemes. However, the way in which these communities were constructed and designated as distinct social group by the colonial state and colonial anthropology is seriously problematic. The process of homogenization of the *adivasi* communities not only excluded them from the larger society but also stigmatized them, that they were criminal, uncivilized and primitive people. As they are judged to be 'primitives' they are considered not deserving self-rule even today!

INFLUENCE OF MADRASA MOVEMENT IN THE SOCIO CULTURAL FORMATION OF KERALA MUSLIMS

T.B. Abdul Kareem

Introduction

The history of Kerala Muslims can be traced back to the life time of Prophet Muhammad. The ancient trade relation of Arabs with Kerala coast (Kurup, 1975)¹ and many historical evidences suggest that there was a considerable Muslim Population in Kerala at least¹ since 8th century A.D. In course of time many scholars and missionaries came here to guide the Muslim community and further propagation of Islam. Malik ibn Dinar and his companions built ten mosques in various parts of Kerala (Shah, 1974).² These mosques were not only centers of worship but also acted as centers of religious education. It was the early Islamic educational system in Kerala. In the early days the students of these centers were the native newly converted Muslims. So the chief aim of this system of education was to impart basic knowledge about the basic principles, beliefs and rituals of Islam. It was aimed to acquire the capacity to read the Quranic Verses, the knowledge of performing the compulsory rituals like five times Prayer, Zakat, Fasting in the month of Ramzan, and Hajj. The medium of instruction was Malayalam. These primary religious schools were known as 'Othupally'. There was only one teacher in an Othupally. The teachers were known as 'Mullaka'. Usually they were the Imams of local Mosques. There were no prescribed Text books or organized curricula for these Othupallies. By the influence of colonial system of Education there aroused the new Madrasa system in Kerala. It was formed by Chalilakath Kunjahmad Haji (M, 1998)³. He was a great reformer of religious education in Kerala. He was appointed in Drul Uloom, Vazhakkad in 1909 A.D. He introduced class system according to the standard of the students. For the first time in Kerala he provided benches, desks and black boards in a Madrasa. He himself prepared text books like ' Talim al Quran', 'Diniyat', and

'Amaliyat' etc. He even appointed a special teacher for teaching Malayalam in Darul Uloom (Poolappoyil, 2014)⁴. The unique Madrasa system of Kerala under various Madrasa Education Boards of religious organizations like Samastha, Dakshina and Samsthana etc. with systematic curriculum and holds a remarkable role in the socio cultural formation of Kerala Muslims.

Samastha Kerala Islam Matha Vidyabhyasa Board (SKIMVB).

In British India there were religious teachers in Public Schools to attract the Muslim students. After the Independence of India the Government of India banned religious education in public Schools. Sayyid Abdul Rahman Bafaqi Tangal, asserted the urgent need for a systematic set up for imparting primary religious education in his Presidential address of Samastha Kerala Jamiyathul Ulama at its 16th annual conference held at Kariavattom in 1945 (M, 1998)⁵. In the 19th session of Samastha Kerala Jamiyathul Ulama long discussions were held on the subject of Madrasa education and at last they formed the Samastha Kerala Islam Matha Vidyabhyasa Board in the year 1951. Paravanna Muhiyuddin Kutty Musliyar was the First Chairman of this Board. The aims of this Board were as follows 1. To establish Madrasas were ever needed. 2. To introduce systematic syllabus and curricula for Madrasa. 3. To prepare Text Books. 4. to conduct Examinations. 5. To arrange periodic inspections and impart training to the teachers of Madrasa. It was a turning point in the history of Islamic religious education in Kerala. Thus hundreds of Madrasas were established and it revolutionized the primary religious education of Kerala Muslims. In later years, for the effective management of the system, it had been decentralized into different ranges. Now more than Ten thousand Madrasas were affiliated to

this Board. Above One Lakh Teachers (Muallim) are working in these Madrasas. Samasthalayam at Chelari in Malappuram District is the Head Quarters of this Board. They provides educational inspectors (Mufattish) to inspect the standards of each Madrasa. The SKIMVB conducts regular refresher courses and training classes for teachers. They are publishing an educational journal in Arabi Malayalam known as Al Muallim. Many reforms were done in the curricula in the recent years.

Normally a Madrasa provides classes at least up to 5th standard and it provides up to 12th standard. The class timing is from 7.00 am to 9.30 am. Children at the age of 5 were admitted to the first standard. In the primary classes one should acquainted with the Arabic alphabets and basic moral lessons of Islam. After completing three years student can read Quranic verses and he may be taught the basic principles of Islamic Faith, rituals and History of Prophet. Up to Third Standard the Text books are in Arabi – Malayalam Language (Malayalam written in Arabic letters – a language formed by Muslims of Kerala). From fourth standard onwards the Arabic language, Fiqh, Deeniyath, Sirah and Akhlaq etc were taught in Arabic language. Samastha Kerala Islam Matha Vidyabhyasa Board directly conducts half yearly and yearly examinations and Centralized Public Examinations are conducted in standard V and VII (Hudavi, 2019)⁶. The Board issues Certificates to those students who pass this Examination. Many Madrasas have Secondary and Higher Secondary Classes. The Samastha Kerala Islam Matha Vidyabhyasa Board now runs Madrasas all over Kerala, some parts of Tamil Nadu, Karnadaka, Maharashtra, Lakh Dives, Malaysia, UAE, Bahrain, Kuwait, KSA, Qatar and Oman. More than 25 Lakhs of students are studying in these Madrasas. There is an organization of the teachers of the Madrasas under this Board which is known as Samastha Kerala Jamiyathul Muallimeen. The 60th anniversary of this Organization was held at Kollam on 26th December 2019. The Smsthana Kerala Jmiyathul Ulama and Samastha Kerala Sunni Jamiyathul Ulama under A P Aboobaker Maulavi also runs hundreds of Madrasas in this same pattern. There is a kind of healthy contest among these organizations in the field of Madrsa education.

Dakshina Kerala Islam Matha Vidyabhyasa Board (DKIMVBoard)

The second largest traditional Madrasa Board of Kerala is Dakshina Kerala Islam Matha Vidyabhyasa Board under Dakshina Kerala Jamiyathul Ulama. Their head quarter is at Kollam. It was formed in the year 1968 (P.K, 1984)⁷. The first chairman of this Board was Alavi Kunju Maulavi. Present Chairman is A K Ummer Maulavi . The activities of this Board are confined to the Districts from Thrissur to Thiruvananthapuram. It covers the central and southern Districts of Kerala. More than three thousand Madrasas were affiliated to this Board. For the ease of administration these Madrasas were divided under 47 Mekhalas. The teachers of the Board formed an association named Dakshina Kerala Lajmathul Muallimeen. This Association organizes art and literature festivals for the students of the Madrasas every year in Madrsa, Mekhala, Dstrict and State levels. Al Busthan is a monthly Malayam educational magazine by this Organization.

Dakshina Kerala Islam Matha Vidyabhyasa Board is more liberal and reformist in nature than other Sunni Madrasa Vidyabhyasa Boards. They introduced Malayalam text book for the study of the History and culture of the Muslims of India. The syllabi and curricula of D K I M V Board is very simple and easy to study for the children. Students were admitted in the first standard at the age of 5. Every the Board organizes Pravesanolsavam to attract new students to Madrasa education. The Board conducts centralized Public Examinations in Standard V and VII. The students who pass these Examinations were given certificates By the Board. About 6 lakhs of Students are studying under this DKIMV Board.

Kerala Nadwathul Mujahideen Educational Board

The educational wing of Kerala Ndwathul Mujahideen runs more than six thousand Madrasas all over Kerala. The Salafi oriented organization and education board imparts more liberal and modernized madrasa education. Their text books are in pure Malayalam language and they included Arabic as a language in the Syllabus. The students under this Borad study the translation of the Quranic verses in Malyalam language.

Majlis al Talimil Islami

The Jamaath e Islami formed an educational Board for organizing its religious educational institutions in 1980. It is known as the Majlis al Talimil Islami. It is now known as Majlis Education Board. There were about three hundred Madrasas under this Board in various parts of Kerala (Maulavi, 1989)⁸. This Board prepares text books and other study materials for the students of these madrasas. They also conduct Examinations and art and literary festivals for the students. The text books of this Board is in Malayalam language. They impart a more liberal and rational attitude in Madrasa Education. The students are able to read and write Arabic Language after completing the course. The translation of Quranic verses are also the part of curriculum. More emphasis is on the moral and social values of Islam given in their syllabus.

Features of Madrasa Education in Kerala

The Madrasa education in Kerala holds many peculiar characteristics. In many ways it is distinct from that of the rest of India and abroad. First of all the entire Madrasa system in Kerala are under private Madrasa education Boards, headed by various religious Organizations. The expenses for the establishment, running and modification are met by the respective Organizations. No Grants or government aids are provided for Madrasa Education in Kerala. The entire system runs only by the donations from the community and fees from the students. The second feature is that it is so universal like universal primary education system by the Government. We can see Madrasas in nooks and corners of Kerala state. The third feature is there is a systematic and well organized educational management system runs in the sphere of Madrasa education in Kerala.

Madrasa Education and Socio Cultural formation of Kerala Muslims

Madrasa education provided ample circumstances for the socio cultural formation of Kerala Muslims. The Arabi Malayalam

(Malayalam written in Arabic letters) language which specially formed for the purpose of imparting religious education in primary level acted as a window to the world of knowledge for each and every person in the community. In this Arabi Malayalam Language there was 100% literacy among the Muslims of Kerala. Many works were published in this language, even novels and dramas were written. The literacy rate among the Muslim women were very poor if it was calculated according to the knowledge of Malayalam language but it was 100% when it was calculated according to the knowledge of Arabi Malayalam Language. Thus the Madrasa Education empowered the community through effective communication by Arabi Malayalam language.

The Madrasa education imparted the value of social equality because the students of a Madrasa comprised of all strata of the society, irrespective of their socio economical status. It inculcated among the students of Madrasa the feelings of equality, which radiated to the society through the students. The primary Madrasas acted as centers of learning at each and every Mohallas of Kerala. The value based education in an early age molded the students in good character and conduct. Many teachers of Madrasa became the role models of a number of students.

Kerala model of Madrasa can be termed as self financed system of Madrasa. The system runs with its own economic support. No student is denied madras education because of money. The income from the Waqf and donations from the public helps the smooth running of Madrasas. Above all Madrasa system in Kerala provides thousands of job opportunity as teachers of Madrasa (Elippakkulam, 2018)⁹. Now at least one and half teachers are earns their livelihood under various Madrasa Boards of Kerala. The religious harmony and toleration of Kerala also owes to the Madrasa education. In the syllabi of each and every Madrasa Board the importance of religious harmony is included. The real spirit of every religion is love of God and his creatures irrespective of cate and creed.

FORGOTTEN VOICES OF MUSLIM WOMEN IN PRINT CULTURE IN COLONIAL TAMIL NADU – A STUDY

R. Abida Begum

Cultural development cannot occur in a vacuum it has to be seen in association with contribution of factors like literacy levels, education and mass awareness. Muslim women in India viewed as stereotyped with traditional notions. They were marginalised as minority within minority on the basis of community and gender. While tracing the intellectual perspectives of Muslim women it is quite embracing that Muslim women of colonial Tamil Nadu excelled in the intellectual field and shown their best output through their writings. In the period when Muslim men themselves were voiceless under colonial regime, Muslim women raised their voices to fight against the social customs and traditions, which played a remarkable role in their emancipation. The literary participation of Muslim women in the social reform movements is largely unexplored. The huge gap in the historical documentation invites serious research whereby the contribution of Muslim women to the social, political and cultural realms can be outline. Thus I want to explore the contributions of Muslim from colonial Tamil Nadu to the print media which had remarkable impact in the empowerment of Muslim women.

Origin of Urdu Journals

Muslims adopted the print technology to contest and reform their natives' cultures. In India the printing press changed the nature of social discourses in colonial period. In 1822, the first Urdu newspaper *Jam-i-Jahan-Numa* was published from Calcutta. The role of Urdu journals is found to be the most crucial and catalyzing in Muslim women's emancipation. Women's journals became informative and inexpensive way to exchange the ideas to

secluded women, who were confined in their homes. As such, they are often the only windows available upon the hidden lives of Muslim women.¹ In the beginning many magazines for women were edited, and also written by men later their family women involved in this work.

Urdu journals provided a space to the women which were previously unavailable to them. Using this space, Muslim middle class Urdu speaking women wrote about their ideas and exchanged them with other women. Gail Minault argues in her study on *Early Twentieth Century Urdu Women's Magazines* that despite some limitations of access and ideology, the magazines at least gave women a place where their voices were heard.² It is however not easy to find these journals even in major libraries. The vast collections in libraries seldom saved women's magazines. Also the standard histories of Urdu literature and journalism rarely mention them.

Pioneer Muslim Women's Journals

Tahzib-un-Niswan, *Khatun*, and *Ismat* were the major early women's periodicals in Urdu, two of them lasting until after independence and many of them edited by women. Some of the articles written by women between 1911-1927 in magazines like *Tehzeeb-un-Niswan* from Lahore, *Ismat* and *Ustani* from Delhi, *Awaz-e-Niswan*, *Payam-e-Ummeed* from Sitapur, *Khatun* from Aligarh, were published in a book form titled *Kalam-e-Niswan* (women's writing) in Hindi transliteration. *Kalam-e-Niswan* systematically chronicles issues of culture, education, curricula, governance, right to women's suffrage, gender relationships and women's rights movements from across the world. It also presents the socio-

economic and educational situation of those days.³

Core Agenda of the Journals

Women print culture played a transformative role in the lives of women. The women's journals not only acted as a means to challenge the patriarchal notions of the society but they also expanded the frontiers of women's roles and consciousness. They give insight into the issues of women and provide an opportunity to discuss their realistic-life in order to emancipate women from their confined situations. Some women break their silence and attempt to document the stories in the form of oral paintings. Women authors recommend living with self-perpetuated creativity denying emotional, social and psychological dependence on others. The growth of women's journals and women's associations increased public discussion of purdah, and the interpretation of Islamic law in ways favourable to greater freedom and rights for women, which were among a few of the social developments indirectly related to the movement for Muslim women's education and empowerment⁴.

Media for Muslim Women's Educational Movement

Education of women became an important element of the entire social reform project. The role of Urdu journals is found to be the most crucial and catalyzing in women's emancipation, through providing female education.⁵ The reformers started establishing schools for girls and published reading material for them. As a part of their educational mission, Muslim women through print media carved out for themselves in a literary space by means of short stories, novels and magazines etc. Petitions, memorials and articles in newspapers and journals demanded schools for Muslim girls. Muslim philanthropists rarely contributed to opening schools that imparted English education.

Muslim Women Writers in Urdu Journals

Muslim women themselves were actively started working for reform. They wrote books, edited magazines, founded schools and training centres, and set up women's associations. As an outcome of the writings of Muslim women and various organizations for women a feminist trend emerged in India. The first Urdu journal was

Akbar-e-Nisa (Women's Newspaper) started in 1887. However, the first important paper was *Tahzib-e-Niswan* begun in 1898 by Mumtaz Ali and his wife Muhammadi Begam and later edited by his daughter Waheeda Begam.⁶

Atiya Fyzee was one of the first elite Indian Muslim women to receive a modern education, made important contributions to reformist journals for women in Urdu, including *Tahzib Un-Niswan* and *Khatun*. While studying at a teachers training college in London in 1906-7, she also kept a travel diary which was published as *Zamana-e-Tahsil* (A Time of Education) in 1921.⁷

Attia Hosain involved with the All-India Progressive Writers' Association, a group of socialist writers. She also began to write short stories. A long-time BBC Urdu programme presenter to both India and Pakistan, she also had a successful career in theatre and other media for half a century until she died on January 23, 1998.⁸

Roushan Begum, an educated woman wrote about the Hindustani life in families and expressed how with the help of education got respect, fame and wealth. The book discusses on the thoughts of conservative and moderns ideas.⁹

Rashid Jahan penned short stories and plays. Though she trained as a gynaecologist, Rashid Jahan had a strong interest in writing short stories. She published *Angaaray* in 1931 which got caught in a lot of controversies. *Angaaray* was a collection of short stories that talked about the struggles of women in a patriarchal society, double standards of clerics and the inequalities in the society. Also, she started the Progressive Writers' Movement in 1936.¹⁰

Jeelani Bano was one of the foremost Urdu writers. She had written short stories, novels, radio-plays, screenplays, stage plays, essays and children's stories. She dealt with social and cultural oppression, bonded labour, poetry, powerlessness, the stress of urban life, and the suffering of women.¹¹

Ismat Chughtai emerged as a prominent independent feminist voice in the world of Urdu literature in South Asia. A lot of her work was considered controversial and thus, was banned

in South Asia. She wrote about male privilege, injustices, sexuality and struggles that women have to face in a patriarchal society. Her most notable and controversial work was *Lihaaf* (The Quilt), which dealt with the issue of homosexuality, in Aligarh.¹²

Qurratulain Hyder, popularly known as Ainee Apa, she was a short story writer, Urdu novelist, an educationist and a journalist. Her most notable work is *Aag Ka Duriya* (River of Fire). Her short novels *Dilruba*, *Sita Haran* and *Agle Janam Mohe Bitiya Na Kijo* explore gender injustice in the sub-continental context. She managed to change perceptions regarding gender stereotypes through her writings. She portrayed the fate of Muslims of India before, during and after the partition.¹³

Begum Sharifa Hamid Ali formulated a model *Nikahnama*, or marriage contract, says that women should have right of divorce.¹⁴

Rokeya Sakhawat Hossain considered being the pioneer of women rights movement in Bengal. A writer, philosopher, educationist, activist and feminist, she has a long-lived legacy when it comes to advocating women's rights through her works and writings. Her most notable works include *Sultana's Dream*. She used her writings to promote gender equality. She founded the Muslim Women's Association in 1916.¹⁵

Razia Sajjad Zaheer represented the new woman who questioned social restrictions and began to assert herself in a male world through her novels, *Sar-e-Sham*, *Kante*, etc.¹⁶

Wajida Tabassum was an Urdu language writer of fiction and songs. Wajida received a degree in Urdu language from Osmania University. She started writing in the monthly publication called *Beeswin Sadi* (Twentieth Century).¹⁷

Iqbalunnisa Begum obtained her BA degree and a gold medal by correspondence in 1930. In 1933, she travelled to the UK for her Master's in Education at Leeds University, thus becoming one of the few middle class Muslim Women from India to obtain a degree from the UK. She represented India at the Twelfth International Women's Congress at Istanbul in September 1935 and was a keen member of the

All-India Women's Conferences. She is the author of several books including *Changing India: A Muslim Woman Speaks* (1940) and *Purdah and Polygamy: Life in an Indian Muslim Household*.¹⁸

Most of these writers belonged to traditional households, with traditional education, except a few, who dared to set up new trends in education and media. Later, these journals started publishing such material which was both educative and conscious-raising. The benefits of education mentioned by him indicate grooming of a good personality, good morals, as well as 'civilized nature, enjoyment of life for husbands, service of the husband and in-laws, better household work according to religion.' This style of argumentation is found in many writings of the day.¹⁹

Muslim Women Writers in Tamil Nadu

In Tamil Nadu, women were not different from rest of India in the field of literary and reform movement. There were many intellectual Muslim women in the colonial period, were not came to limelight instead of their great social works and literary genius in Arabic, Persian and Urdu languages. Their works were published in Journals like *Asmat*, *Mushir-e-Niswan*, *Bazm-e-Adab*, *Tehzib-e-Niswan*, *Khatun*, *Maghzar*, *Al-Nisa*, *Zenana*, and *Taj*.

The unknown Muslim women Urdu writers from Tamil Nadu were Haleema Bi, Hasina Bi alias Bi Sahiba, Amtul Rahem her famous book was, *Unwan-e-Athfal*, and she wrote for *Daily Machha*. Abbasi Begum, Nayeema Begum, Nawab Begum Amtul-Hai-Mubshir Unissa Begum (Haya), Amtul Azeez Begum, Habeebunissa, Hijab Imtiyaz, Hajira Begum, Amtul Rab Begum, Khadija Zia, Aadilah Begum, Amtul Wali alias Walia Begum, Dr. Zakira Ghouse, Husna Begum, Hajira Begum alias Hajira BiBi, G.Z. Raziya Begum, Sayeda Athaullah, Naseema Khadri, Amtul Batool, Faiz Unissa, Nayeema Parvez, Kazima Begum, Rathima Rayis were some of the notable Muslim women Urdu writers in Tamil Nadu. Their writings were preserved in Madrasa-e-Muhammadi Library and Amanati Library, Chennai and also published many other journals of North India.²⁰ Even though they well versed in literature and other fields their voices were

curtailed by the society, so they were not come into prominence.

Tamil Muslim Writers and Social Workers

Tamil Muslim women not lag behind in the literary field. Siddhi Junaida Begum is a decisive and liberating woman from Nagore in Tamil Nadu. She started writing at the age of sixteen, desired to change the status of women. Siddhi Junaida Begum published *Kadhala kadamaiya* (Love or Duty) in Tamil on 2/2/1-28 at Nagore. But it was reported as an adaptation of Anthony Hope's novel called *Prisoner of Zenda*. Shenbagavalli Devi or the South African Appalachian Family written in 1947, Islam and Women A collection of essays, published in 1995, King of the Mountain - Noorul Islam continued in the press. Halima or Karpin Manifestation, Woman's Husband published in 1946. Khaja Hassan Fasari (Rah): The History of the Muslim Highness A series of articles in Noorul Islam.²¹

In a modern Tamil fiction, Salma has written a full length novel on Muslim society in Tamil Nadu, *Irandaam Jaamangalin Kathai* (The Story of the Midnight), delineating especially the Muslim women's aspirations and their struggles. The novel deals with the oppression that a Muslim woman faces in her family and society. The anthologies are titled *Oru Malaiyum, Innoru Malaiyum* (One Evening and Another Evening) and *Pachai Devadhai* (The Green Goddess).²²

Impact of Journals on the Empowerment of Women

Writing about themselves gave women immense pleasure and confidence which helped them to contest those cultural notions which deemed women intellectually weak. The new information available in women magazines enthralled women because they considered it

very important for their intellectual development. All most all women magazines continuously gave coverage to the various women organizations by publishing their activities. This connected women to the public space without even crossing the threshold. The foundation of progressive writer's movement in 1934 provided a new stage to many vociferous women writers who openly challenged the patriarchal elements of society. However, it was not possible without the base prepared by the earlier women writers for them.

Conclusion

Knowledge pools created by women, like writings and oral traditions, offer an insight into their individual perspective as also of the community of a specific period. The vision that home and the world were interdependent was entirely in keeping with the ideology enunciated by male social reformers in the late 19th century, in which women were to be trained better to fulfil their traditional roles, not to undertake new ones. More specifically, Muslim social reformers had plenty of precedents from their own tradition to call upon in meeting modern challenges. All these themes appeared in the literature of social, religious and educational reform and were repeated, with variations, in the periodical press. Women authors and editors developed their own variations on these themes but did not challenge the basic ideology. Many changes were reflected in the pages of these Urdu journals, the growth of women's education and activities, and the parallel increase in the range of vocabulary, subject matter, and views were expressed. These, in turn, were the keys to the spiritual reform and the worldly advancement of the Muslim middle class as it confronted the economic and political challenges of the 20th century.

TRACING THE ROOTS OF INDIAN TAMILS IN SRI LANKA – A STUDY

J.J. Ahilan Joe Woutres

Introduction:

The relationship of South India with Sri Lanka is more than 2000 years old History. Socially, culturally, politically Sri Lanka is very close with South India. This closeness came through the geographical proximity of these two Lands. The story of Migration from South India to Sri Lanka was started from the dawn of Historical period onwards. But this process of migration was minimal. The flow of Emigration reached to the peak during the British colonial domination of South Asia from the last two decades of eighteenth Century. Emigration is the relocation of people from one country to reside in another. People emigrate for many reasons; include increasing one's chance of employment or improving quality of life.¹ Dr.kingsly Davis the demographer explains the two factors controlling the emigration pattern of Indian labourers. First factor was the economic condition of Host country and the second one was the Legislative enactments in India.² This paper attempts to provide understanding about the Colonial emigration pattern of South Indian Tamils to Sri Lanka from the nineteenth to first half of twentieth century. The paper also explores the economical transformation of South India as well as Sri Lanka under the colonial domination of British rule. This also explained the major difference between the Indigenous Sri Lankan

Tamils and Indian (Hill) Tamils. This research article critically examine the creation of Sri Lankan Plantation fields as well as to answer the question like, why the indigenous labours of Sri Lanka were not recruited in the coffee plantation and later in the tea plantation. This paper traces the reason for the attraction of British capitalist to the Tamil labour community for their tea plantation in the Kandyan Hills.

Historical relationship of Tamil Nadu and Sri Lanka:

The urbanization in South India had possibly started from 1st and 3rd centuries A.D. onwards, in the period known as 'Sangam' after the name of the Sangam academies in Madurai. Sangam literatures are believed to have been written during this period. The south Indian sources like Sangam poems, has mentioned facts about the Yavanas bringing goods by ship into the port of South India located at Coromendal Coast where especially they set sailing for Southeast Asia through the Sri Lanka. The trade with Roman declined in the third and fourth century AD, and India, especially South India traders turned to Southeast Asia and China. The ancient trade route from South India to China was through Sri Lanka and Kadaram (present day Singapore). The Kaveripattanam and Perimula (Situating Near to Rameswaram) were the two import trading centers of Ancient

Tamilaham. These centers were closely associated with the Sri Lanka, especially with northern coast of Sri Lanka. Tami Nadu and Sri Lanka had maintained close contacts since protohistoric times due to their geographical proximity.

From the early period onwards, the South Indian mercantile communities like Vanijha, Sattu, Aiyavole, Nanadesis and Tisai Aiyirattu Ainurruvar and their medieval associated Military communities like Varakkotiyar and Velaikkarar in different periods played an important role in the economic and political history of the Island.³ The traces of inter-regional trade can be substantiated with archaeological evidences like grave goods or raw-materials used for making the ornaments. Especially in the peninsular region, there had been network extended along the Andhra and Tamil coast into northern Srilanka and Southeast Asia in accordance with the deposits of copper, iron and highquality garnets. The important ports such as Mammalapuram and poompuhar had been splendid from pallava period then Nagapattinam became the richest port of this region during Chola time. The scenes of the flourishing markets and buildings are vividly described in the Tamil literatures. Under the Chola rule merchant associations appear to have dominated the internal and external trade of south India and parts of Srilanka from the last ninth century to the thirteenth century. The Chola Kings Rajaraja-I and his son Rajendra-I had occupied the northern part of Sri Lanka and appointed their own viceroy named as 'Chola-Lankesvara'. Polonaruwa was the seat of Chola rule in Sri Lanka.⁴

British Colonial Establishment in South India and Sri Lanka:

The age of geographical explorations begun from the second half of the 15th Century CE onwards. Different European countries sailed to east among them Portuguese were the pioneers to found the sea route to India. Following to the Portuguese, Dutch, Danes, English and French came and did trade with South Asia. Among these countries British established the political supremacy over the South Asia from the mid of the 18th Century onwards. And they have ruled the South Asia more than two hundred years. British had a very humble beginning in India. The English East

India Company (EEIC) was formed in 1599 under the auspices of a group of merchants known as the Merchant Adventurers. Then this got the royal charter from the Queen Elizabeth on 31 December 1600.⁵ 1707 with the demise of Aurangzeb, the Mughals declined rapidly and many senior officials tried to become independent of the Mughal central government in various parts of India. Among the 'successor states' set up by such senior officials in South India was the Nizams of Hyderabad and the Nawab of Arcot⁶. Conditions in the South India were more favorable to the English, because they did not face a strong power in South India⁷. Through the Victory of three Carnatic Wars and four Anglo- Mysore wars British established their political paramountcy in the South India.

The Madras presidency was created at 1802. In Sri Lanka, 1505-1656 Portuguese occupied coastal regions. Then the Dutch East India Company (1656-1796) succeeded the Portuguese in the maritime provinces of Sri Lanka both politically and economically. The Dutch retained the indigenous administrative system which the Portugues had inherited from the Singhalese Kings. Nevertheless, the British had more significant impact on Sri Lanka than the Portuguese or the Dutch. As a first step, The British colonized the costel regions of Sri Lanka taking it from the Dutch in 1796 and it continued to capture the whole Island by 1815⁸. British found Sri Lankan mountains were suitable for the coffee plantation. In the beginning British concentrated to the cinnamon trade, after the 1830 they have shifted their concentration to the coffee plantation.

Coffee plantations were the major modern enterprise in Sri Lanka set by the British capital during the 1830s. Between 1835 and 1837 four to five thousand acres of forest land had been cleared and planted with coffee around Kandy. The area devoted to coffee expanded to 31,843 hectares within a span of five to six years. In 1841 alone 14,973 hectares was planted. Most of the initial entrepreneurs were employees or ex-employees of the East Indian Company. Coffee production went into a decline afterwards due to a fungus outbreak, shrinking from 1, 01,981 hectares in 1880 to 39,659 hectares in 1886⁹. For the plantation work they need more labour force, that labour force they got from the

Madras presidency through the Emigration process.

Tamil Labour Emigration:

Tamils were well aware about the concept of emigration and its importance from the ancient period onwards. There are plenty of literary works deals with the early Tamils emigration to other countries. Till the eighteen century the emigration was happened through the self interest. After the Colonial establishment that has changed based on the colonial masters interests. The 1830's saw the advent of the 'coolie migration,' when large number of Indians, particularly Tamils were forcibly taken from their homeland to work as indentures labourers in British plantations in the West Indies and the South Seas, as well as countries in Asia and Africa such as Burma, Ceylon, Malaysia, and Mauritius.¹⁰

Tamils were emigrated across the sea in nineteenth and twentieth century through the Indenture system, Kangani system and Maistry system of recruitments. The British colonialism was the major cause for this mass emigration of Tamils in the nineteenth and twentieth century. Before the abolition of slavery in the First half of nineteenth century many people went to the West sugar plantation fields as an Indenture labourers. Then after the abolition of Slavery (1833) this emigration pattern becomes the mass Emigration circle. Compared with the west countries Tamils were emigrated at large number to the South East Asian countries. This emigration is merely temporary, and by no means in the nature of permanent expatriation. Emigrants were worked as a harvester in the Ceylon tea estates, in the Strait Settlements emigrants worked in the rubber plantations; and in the case of Burma emigrants were worked in the rice mills.

Tamil Labour Emigration to Sri Lanka:

Ceylon was come under the British Indian administration province of Madras presidency until the 1798. After that Ceylon was became separate colony under the British crown. From the first half of eighteenth century onwards the process of emigration started from the Madras to Ceylon. But this was not that much successful one. In the year 1815 the Madras government requested to the Tanjore collector to send the Coolie labourers to Ceylon.¹¹ In 1818 the

assistant commissioner-general, Ceylon wrote to the collector that the government had entered directly into a contract with *Maistries* who had agreed to find 600 labourers from them.¹² but this system was failed. Many Labourers came back due to the hardship of the agricultural farms. After the year 1830 the coffee plantation was developed in Ceylon. British capitalist invested huge money for Coffee plantation. They imported the labourers from the Madras presidency for clearing the forest and other works in coffee plantations. From the year 1839 onwards many recruiters known as *Kangany* came to Madras presidency and took labourers with them. In 1847 the emigration to Ceylon from Madras was not considerable, but in later years it increased very substantial; between 1843 and 1867 there were 1,446,407 emigrants from Madras to Ceylon, of whom 839,897 returned.

The Ceylon records give figures of emigration from and to Ceylon from 1871 onwards. The Ceylon census figure for 1871, 1881 and 1891 show that 98 to 99 percent of the foreign born in Ceylon were of Indian origin. It has been estimated that about 90 percent of the Madras. Emigration to Ceylon reached a peak of 150,000 in 1877-1878 following the great famine. Emigration declined sharply with the collapse of the coffee plantations from 1880 to 1890 but was revived again by the growth of tea and rubber production in Ceylon.¹³ In the report on the Ceylon census of 1891 it is stated that 234,957 'Tamils' and 24,559 Moormen (Musalmans) were born in India. Probably at least 255,000 of these were natives of Madras. In 1881 the number of 'Tamils' who 'had their origin in the Madras presidency' was stated to be 256,611.¹⁴ Emigration to Ceylon, Selam, Coimbatore and north Arcot to give a few examples, are unrepresented.¹⁵

Registered Emigrants from Madras to Ceylon.1911-1922

Year	Number of Registered Emigrants
1911	72,549
1912	93,925
1913	97,564
1914	70,654

1915	83,742
1916	99,643
1917	42,877
1918	41,961
1919	103,580
1920	38,126

Source: Census Report of India (Madras), 1922, p.49

The number of emigrants registered by Ceylon labour Commission in the decade was 7,44,621. For the years 1911 to 1914 particulars are given for men, women, Children and infants, who emigrated in the proportion of 601, 203, 132 and 64, and although these details have not been tabulated of recent years there is every reason to suppose that the proportion remains fairly constant; infants are children below five years of age. Children are male between 5 and 14 and females between 5 to 16. For the years 1917 to 1920 figures are given separately for emigrants proceeding to Ceylon for the first time and those who have been there before. It was only in 1919, the year of bad season and high prices, when the number of emigrants rose with a bound that the new emigrants Out- numbered the old; in the other three years those returning to Ceylon after one or more visits numbered about 78,000 and those going for the first time were only about 44,500. The Ceylon Labour Commission recruits only for estates,

consequently practically all those who emigrate through its agency are agriculturists by occupation. The majority of them are drawn from the Parayan, Kallan, Vellala and Pallan castes who together have contributed 6,19,000 out of 7,44,500 who have emigrated during the decade. Most of them are from the Trichinopoly.¹⁶

Conclusion:

Indian Overseas emigration was obviously the result of the working of British colonialism both in India and abroad which is highlighted by the fact that the vast majority of Indians migrated particularly to the British colonies. While the expanding capitalist economy of the British Empire generated a great demand for labour and non-labour in India.¹⁷ The majority of Indians who emigrate gain little from their emigration: they exchange one situation of casual, intermittent, poorly paid labour for a similar situation in the new country.¹⁸ The Tamils who were settled in plantation fields of Sri Lanka faced the high level exploitation from the colonial masters. And there struggle is continuing in the second decade of the 21st century too. This emigrated Tamils were known as Hill Tamils. They faced lot of exploitation under the colonial masters as well as after the Sri Lankan Independence of 1948 onwards they are facing struggle to get their right under the Sinhalese Governments.

SOCIAL STRATIFICATION IN MEDIEVAL KERALA; AN ANTHROPONOMICAL ANALYSIS OF INSCRIPTIONS

K.R. Ajitha

Social stratification refers to a system by which a society ranks categories of people in a hierarchy. Anthroponomastics is the study of personal names. The study of Personal names gives an interesting glimpse of the culture, the political and social organisations, the religion, the various castes, and mutual relationship among them, it also shows the thoughts and customs of the inhabitants. It is well known that in case of ancient South Indian states Epigraphy and Archaeology form the most reliable source of information¹. Panini observed that changes in naming pattern from period to period show changes of belief, social customs, society as much. The present paper is based on inscriptions of Kerala. They were studied from a different perspective to study the naming pattern, society and culture.

The personal names are studied in different parts of India. However no serious study has been done on the personal names of medieval Kerala. The main purpose of naming is to provide a symbolic system of identification. The relationship between the name and the bearer is a complex one. The inscriptions, most of which are from temples contains names of large number of individuals figuring as witnesses to transactions donees and also numbers of managing committees of temples. The names generally consist of three segments. The name of the family, fathers name and the ego's name eg; Vanralaicceri Kotai - Iravi. In a few cases there would be one more segment before such three segmented names eg; Mulikkalattu Kurrampalli Chuvakaran Tamotiran. Where the first segment signifies the village from which the individual originally hailed. There are however cases where one or more of these segments are omitted.

Identification of Brahman and Non-Brahman names.

In studying these names Elamkulam Kunjan Pillai did not distinguish the members of the temple committees from the donors and witnesses to the transactions². There are certainly names of non- brahmanas but they figure mostly as donors. In other cases it can be demonstrated that the names are of brahmanas. However the absence of the brahmanical suffix 'sarman' the total absence of references to names of gotras and the transformation of personal names in to unrecognizable dravidian forms (like Cattan for Sastrasarman, Kantan for Nilakantha, Rupan for Subrahmania Uruttiran for Rudra etc.) led Pillai to assume they were names of non brahmanas. Apart from the absence of gotra names or the Sarman suffix, what stood in the way of Pillai's appreciating the brahmanical character was the inadequate consideration of the context in which the records appear. His lack of familiarity with conditions in central and northern Kerala from which regions most of these records come may have prevented him from appreciating this. In fact many of these records are from temples which are reputed as gramakshetras of brahmanas- a tradition which Pillai ignored. Nor did he knew that many of the houses mentioned in them survive to this day and that they are brahmana houses. This knowledge is essential to realize that the names of those who figure in the records in the capacity of witnesses and members of the sabha are brahmanas. But then Pillai mixed up all names figuring in records and argued somewhat theatrically, that a large number of them were non-brahmanas. The reality however is that the list included many brahmana names which he failed to identify as such. Such non-brahmanas as are present are in the capacity of donors or tenants and not as those who controlled the land of temples. It was this failure in the understanding which initiated his findings in relation to the

character of the temple centred agrarian corporations in Kerala³.

Toponymy of Personal Names

Place names are hidden treasures. They often hide fragments of history and geography. The geographical features of a country are best preserved in its placenames. The importance of placenames studies is clearly described by F.T. Wainwright as quoted below.

"Place names supply in full measure linguistic information of a kind that is absent in archaeology and usually blurred in the historical record. They also supply fairly precise conclusions on the intensity of settlement, linguistic boundaries, origins, and relationships with occasional comments on social and economic conditions"⁴. As I mentioned earlier the first part of a personal name consists of a place name of that person. Placenames like Palli, Ambalam, Kottam came from the influence of Jain and Buddhist religions⁵. Similarly the influence of nature is also manifested in placenames. Godavarma points out that in any country, the place names can be seen as having a large part of them based on different aspects of the landscape of nature. Place names were also influenced by Aintinai mentioned in the Sangam literature. The place names like Neythal mangalam, Mullakkal, etc. show the influence of Aintinai.

There are placenames with *Palli* seen in inscriptional records along with personal names. *Kanayapalli, Kamakanapalli, Kurumpalli, Koyipalli, Pullipalli, Velliyampalli, Malayipalli, Muthampalli, Makkandapalli, Njayaripalli, Kanjirapalli, Varikkampalli, Sivaripalli, Tevarpalli, Palliviruthi, Mullapalli* etc.. The term *palli* indicates the Jain or Buddhist connection. Jainism in Kerala has a long history about one thousand years. The place names with *kulam, kuttam, aru, eri, chira, moozhi, mada* etc. show the presence of water bodies. For example *Cherumattapuzha, Attoor, Vanjipuzha* etc.. There are many place names in personal names. For example *Pazhavor, Kannanur, Nalur, Kunnalathur, Panthavur, Panavoor, Attor, Punalur, Vevoor, Maranellur, Kizhperur, Kalloor, Vayakanellur* etc. The place names ending with *Kottam* show the Jain influence. For instance, *Chirayankott, Perumanaikottath, Varanakottath, Kummarkottath* etc.. Place names were also

influenced by the names of plants and trees. For example *Tekkinkavil, Mulakkad, Tirunelli, Kamukancheri, Panamattam* etc.. Placenames like *Pichakacheri, Mullakkal, and Mullapalli* denote the name of flowers.

Land terms with prefix *kadu* also indicate the existence of productive spaces near the forest or the formation of such spaces out of forested areas because of slash and burn and forest clearance⁷. The terms found in the inscriptions either suffix or prefix such as *kadu, kara, thuruthi* indicate the forest clearing, reclamation of estuarine lands and water-laden areas. The conjoining together of *kadu* to the terms denoting lands in these areas and terms signifying the agriculture practice in the flood plains, waterlogged areas and estuarine regions indicates the process of agrarian practices⁸. There are a number of *kari* lands in the inscriptions of the area, *Kirankadampanar kari, Chennan Chennanar kari, Uralachennankari, Govindanarkari, Paravanar kari, Indranilan kari, Pattiarkari*. Thiruvalla copper plates mention a number of *kari* lands. The *kari* stands for the land spaces reclaimed from the estuarine and waterlogging areas. *Parambu* as mixed crop cultivation space began to be developed in the laterite areas in the midland because of the proliferation of settlements and clearing of forest in this region. *Thottams* are monocrop gardens. *Kirankadampanarkari* and *iyankattumattam* mentioned in Vazhapalli Copper Plate indicates the process of reclaiming lands so created for cultivation. The peoples like *Kirankadampanar* and *Ayyan* or their ancestors might have engaged in the creation of these lands for production operation. It was because of this that their names were attached to the lands and these land names continued to appear even in the land deeds⁹.

Religion and Personal Names

Shramanas interacted with Saiva Vishnavites resulted in cultural blend and transcendence. The following are the examples for this.

Jain + Vaishnavam : *Iyakkam Govindan, Iyakkam Inthirayudhan* and *Kannan Iyakkam*.

Jain+Buddhist ; *Yakkam Chathan*.

Jain + Regional ; *Yakkam Keralaan, Yakkam Kuntapozhan* and *Iyakkam Kothai*.

Jain + Saivism ; Iyakkan Chirikantan and Irayiran Chathan.

Vaishnavism + vaishnavism ; Kannan Vikkiran, Kanta Kannan, Kanta Narayanan and

Kantan Kiruttan, Kannan Kumaran, Kannan Chuvaran and Kanta Tevan.¹⁰

The ancient Yaksha Yakshi a concept was adopted by the Brahmanical, Buddhist and jaina religions in many ways. The terms Iyakkan for Yakshan and Iyakki for Yakshi are used in Tamilakam. The terms Yakka and Yakki is closely related with the Yakkan and Yakki in Buddhist language Pali, and Jakkan and Jakki in Prakrit, the Jain language. Many temple inscriptions in Kerala mentions people with names like Yakkan and Yakki. They were generally speaks about the gifts given to the temple. From ninth century onwards more than twenty yakkans are mentioned in more than ten temple records. Important among them was Tiruvalla Copper Plate related to Tiruvalla temple, it includes 41 copper plates, a few of these leaves have been lost. If we exclude the Tiruvalla copper plates the term Yakkan first appear in Kandiur temple inscription of AD.947. The Chera inscriptions like Kollam Rameswaram inscription of AD 1102 and Perumchellur Copper Plate of 1145 also mentions about Yakkan. Thrikkakara, Nedumpuram, Trikkadithanam, Tiruvannur, Thazhakkavu inscription and Tirunelli Copper Plate also mention yakkan. These inscriptions indicates that the Yakkans were landlord and prominent men of highrank.

Dr. V.V. Haridas in his work *Yakshisankalpam* has putforwarded the hypothesis that Yakkan were jains¹¹. They might be Jains and later became Saiva Vaishnava believers. The purpose of this landgrants may be to show their loyalty to their new faith. Persons like Yakkan Govindan an administrator under the Kizhmalai chief made donations to Tiruvalla temple. Amayamangalath Yakkan Chathan of Tiruvalla copper plate was a witness of donations. When we analyse the structure of names the word Yakkan is usually appear in middle part. The only exception for this is Kumaran Iyakkan and Chuvaran Iyakkan. For atleast two generations ago the name Yakkan may have been used for the Jains. As per the

available inscriptions so far, only one Yakki appears in the inscriptions. It is Yakkiamma, the wife of Pallath Kuntan Iravi mentioned in Tiruvalla copper plate. The Thiruvannur temple inscription indicates that the Yakkan is the name of a jain believer or trace of jain relationship. Kanayapalli Yakkan Chellan in this inscription shows that his personal name was Chellan and his fathers name was Yakkan. The term kanaya also refers to Jaina connection. M.R. Raghava Varier points out that the Kanam or Ganam was a Jain group in south india. From tenth to twelfth centuries Yakkans are found in inscriptions. They are generally obscured in later writings and texts. The following table shows the names that contain Yakkan in the inscriptions of medieval Kerala. This table will help us to understand the use of Yakkan and Yakki names in medieval Kerala¹²

Table 1 : Names of Yakkan and Yakki found in inscriptions

Kandiyoor inscriptions	AD 947	Punnacherri Iyakkan parameswaran, Iyakkan Keralan.
Thrikkakara	AD 950	Pantithuruthi Yakkan Kuntapozhan.
Thrikkakara	AD950	Pantithuruthi Yakkan Kuntapozhan.
Nedumpuram Tali	AD 950	Manalmantathu Iyakkan Inthirayudhan
"	"	Nedumpurayur Iyakkan Ayyan.
"	"	Iyakkan Chathan
"	"	Manalmattathu Iyakkan
Tirunelli Copper plate	AD 1005	Amayamangalathu Yakkan Chathan.
Trikkadithanam	AD 1010	Mulakkad Iyakkan Govindan

Tiruvannur	AD 1044	Kanayapalli Yakkam Chellan
Thrikkadithanam	AD 1050	Manalmattathu lyakkam Chirikantan/lyakkam Srikantan.
Tazhakkavu	AD 1051	lyakkam
Tiruvalla Copper Plate	AD 900-1100	Yakkam
"	"	Peruvayalur Yakkam Kotha
"	"	
"	"	Kidangupara; Ponni Yakkamayan
"	"	Kumaran lyakkam
"	"	Yakkam Govindan
"	"	Mayi Yakkam
"	"	Yakkam Amma
"	"	Pakaiviruthi Kumaran lyakkam
Perumchellur Copper Plate		Cherpalaikattu Chuvaran lyakkam

The personal names in medieval Kerala will also help us to understand the nature, designation, titles of administrative machinery of medieval period. Personal names helps us to understand the persons occupation, position, caste, etc. of people. Masculine gender, feminine gender, geographical features, flora, fauna, caste, religion etc, can be understood from the personal names. The study of personal names embody alot of things underlying them. They give us insights in to the culture, political and social organisations etc.. The names and their laws on naming and caste , religion of people, professions can be understood from them. By studying all peronal names in medieval kerala we can understand that certians names are frequently used by people the table given below illustrate this. The repotation is mostly due to the naming convention followed.

Table 2 : Frequency of Names in Inscriptions.

NAME	REPITATION	NAMES	REPITATION
Narayanan	88	Vikraman	15
Kumaran	47	Tamotiran	13
Kantan	41	Pozhan	12
Tevan	30	Tuppan	9
Kovinnan	32	Ayyan	9
Kothai	30	Chikantan	9
Kannan	29	lyakkam	13
Chathan	28	Tayan	8
Chankaran	22	Purayan	7
Chennan/Chennanar	22		
Keyavan/Kesavan	19		

Women names appear in inscriptions. They were given in the table below.

Table 3 : Names of women in Inscriptions

Tillaisthanam	Kadamba queen wife of vikkiannan
Chokoor inscription	Chuzhiyil chittarayil Nangayar
Thrikkakara	Kizhanadikal
Tirunandikkara copper plate	Murukan chenthi
Kollur madam copper plate	Deviyar, mother of Vallabhan Kotha
Kilimanoor Copper Plate	Umayamma (mother of Manikantan tiruvadi)
Mampalli Copper Plate	Thrikalayapurath Athichan Umayamma

Kilimanur Copper Plate	Kizhperur Manikandan Mathavi alias pillayar tiruvadi
Chitharal Thirucharanam Jain Document	Naranakuttiyar
"	Kunanthakikurathikal
"	Pathmini padar
Kadinamkulam Inscriptions	Umayamma (Mother of Sri Veeraraman)
Keralapuram Inscription	Neelammakutty (daughter of Mathamma) Mathamma (daughter of Eechakutty)
Tiruvalla Copper Plate	Illamkunnunadu Nangayar Ekkiamma (Ponpallath Kunnan Iravi's wife)
Panthalayani Kollam Inscription	Eeswaran Nili (daughter of Chiyamanapollamma Nayithi)

From this table we can assume that only a few names of females appear in inscriptions. Many of them were ruler's wife, mother or daughter etc. They were not find any existence of their own. A kind of male dominated society existed in medieval kerala as like those of other parts of India. The inscriptions of Kerala are not unhistorical thoughts it is true that they fail to yield as much political history as those from other parts of india¹³. The greater majority of these inscriptions are not royal grants or charters but resolutions of village assemblies or the executive committees. Religious toleration of rulers can be seen from Paliyam copper plate, gift to Srimulavasam. The chronology of the rulers and naduvazhis and their titles can be studied from inscriptions. For example the only copper plate of Rajasekhara opening with the benedictory phrase 'namasivaya' describes him as 'Raja Rajarajadhiraja Parameswara Bhattaraka'. The second name of Bhaskara Ravi remained unknown till recently. The discovery of Pullurkoduvalam inscription has cleared the point and proved that he was known as Bhaskararavi alias Manukuladitya. The inscriptions also provide the names of different

occupational groups. Kurumbranattu Kunjikutta Varman's Tirunelli inscription mentions about the Vellalars. At that time people were known by their local names. Examples are the Paraiyan Kalkarai, Pantithuruthi Yakkan Kuntapozhan of Nedyatali, which are found in later inscriptions. Family names appear when talking about Tali's and Uralars. Family names of four tali members were available from inscriptions. There are only names of local rulers appear in inscriptions on a few among them their areas also mentioned. Various brahmin families receive their share of (Padakaram) in brahmin villages. So they were known by family names¹⁴. The later chera period witnessed the growth of temples. In the temple there were a growing number of people managers like santi's, Potuvals, temple servants like bartenders, oil suppliers, wickers and tenants paying for various expenses were grown up of all these except the santis came from non brahmanic sect. Various occupations related to temple also developed Stone carvers, carpenters, goldsmiths, and other metal workers, oil bearers and others are prominent among them. Another group was army of three hundred, six hundred and a thousand of local rulers or naduvazhis. Terisapalli copper plate mentions about Adhikaran, prakriti, nizhal, athikaran, panyum nadu vidava kaiyum jointly made the facilitation of the temple. All these evidence shows the growth of officers and military groups surrounding the rulers. It was from them the upper sections of later period emerged. Inscriptions gives us valuable insights into culture, political and social organisation, religion, and various castes existed in medieval Kerala. Medieval period witnessed the development of caste and its rigidity.

The inscriptions are windows into the past. Anthroponomy will help us to understand the naming pattern of that period which indicates the social ideology. This paper tried to analyse the naming patten of medieval Kerala and its structures. How the social stratificaton existed in medieval Kerala and how it can be identified from the inscriptional evidences etc., the formation of castes and its growing rigidity, the spread of agrarian practices and how it affected the social stratification etc were analysed in this paper. Toponomy and Anthroponomy gives us valuable insights to the social stratification existed in medieval period.

CHALLENGES AND PROBLEMS OF MARGINALISED: HISTORICISITY OF PANIYAN EDUCATION MILIEU

C. Althaf Hussain

INTRODUCTION

Education as a process, it has a supreme importance in empowering people, especially the weaker sections of the society. Through which one becomes politically responsible to the fellow beings and thereby enhances their individual and collective well-being in the society. In the context of the marginalized sections, education is claimed to be the weapon for their liberation and an agency that enhance their radical expressions and negotiations. But rendering of education in the present contexts are observed to be the reproduction of certain hegemonic power structure in the society. The paternalistic natures of the urban and middle-class consciousness are deep rooted in the pedagogical operations by providing little concern to the knowledge systems of the marginalized section legacies by the influence of the colonial education.

In the whole educational processes the values of democracy have been violated by providing no equality in terms of knowledge and culture. The long histories of exploitation and oppression continue to operate in the tribal mindset and consciousness in the very corner of their lives. As such, emancipation from these exclusionary mechanisms requires a negotiating and contesting self-determination from the oppressed voices. To materialize this ideal, the process of education has to perform an important role. Dr.B.R. Ambedkar's vision becomes

extremely importance in this scenario. He envisioned education as an instrument to liberate the marginalized sections from illiteracy, ignorance and superstitions and thereby enable the tribal people to fight against injustice, exploitation and oppression. It should be understood that education has an inherent relationship with the culture and locality of the specific people since their way of life is very much bound with it so that it has to perform particularly a major role in the tribal societies.¹ As Choudhury (1982) points out, the tribal's are victimized by development projects and external interventions and have been exploited to a large extent by taking advantage of their relative state of backwardness. Those measures have been mainly in the form of constitutional safeguards, legislations, financial incentives, reservation in educational institutions and so on.

Nevertheless, contemporary researches show that the tribal children are not really attracted to the processes of formal schooling and there exists a wide educational gap and inequality between the tribes and other weaker sections in Indian society. There is strong consensus that development efforts made in the country have not succeeded in empowering the tribal communities, but in fact, have arguably created a subjugated consciousness among the tribal people. It also reinforced the unequal exchange of socio-economic resources between the disadvantaged and privileged sections. This

phenomenon is applicable to the educational arena also to a large extent. Researchers have founded that along with many other constraints prevailing in tribal education, the alien contents and irrelevant information provided by the curricula have become the main cause of students' disinterest towards the schools.² The high dropout rate and low enrollment status shown by the tribal students are not only due to the physical constraints such as access to schools, but also have some relationship with the existing patterns of curriculum and knowledge imparted thereby. Hence, the present inquiry on the school education system among the tribal people is done by analyzing the different contexts which finds critics in the existing patterns. The learning environment in school, the socio-economic profile of tribal students, their own stated preferences and perceptions, and hindrances faced by them are examined in this study. The inquiry tries to assess qualitatively how far the indigenous know-how is important to the tribal people in the present context and how much the formal education system has recognized the importance of such indigenous values.

HISTORICAL BACKGROUND OF PANIYAN TRIBES

The major communities in the district are Paniyan (44.77%), MulluKuruman (17.51%), Kurichian (17.38%), Kattunaikan (9.93%), Adiyar (7.10%) and UraliKuruman (2.69%). They are categorized in three major types, as agricultural laborers, marginal farmers and forest dependents. Paniyan and Adiyar communities who were traditionally bonded laborers and UraliKuruman, traditionally artisans constitute the major part of agricultural labourers. The Paniyas are the largest scheduled tribe in Kerala among other 36 tribal groups in Kerala in which altogether contribute 22.5% of the total tribal population. They spread in Wayanad, Kannur, Kozhikode, Malapuaran and Palakkad districts and in some parts of Karnataka and Tamil Nadu states. The overwhelming majority (72%) of the total Paniya population in the state is concentrated in Wayanad district. Earlier most of the Paniyan population resided in the hilly tracts of Wayanad and portions of Ernad, Calicut, Kurumranad, and Kottayam, taluks of the Malabar, ahashams of the Nilgiri District and other areas.³ These districts formed part of Kerala

when many areas in Kerala including Malabar were under Madras Presidency before 1956. Damodaran has noted Paniyan as shy and hidden tribes.⁴ Though much cannot be evidently said about historic past of the Paniyan but details recorded by Gopalan Nair, Somasekharan Nair Aiyappan and Kulirani reveals the Paniyan led a food gathering way of life. According to anthropological descriptions, they are dark in skin, long headed with broad noses, short physique and curly hair. There is a long wide variety of features regarding the ethno history of Paniyas. Historical studies show Paniyars were first considered as hidden tribes and led a food gathering way of living. When they were exposed to people from outside, diverse changes occurred in their socio-economic and political life. In a later stage, they were made bonded labourers by the landlords.⁵ Over the years, the living contexts and surroundings had changed by the influence of migrants who being planters and cultivators established their dwellings in the district as settlers. The transformation of Paniya from being a bonded laborer to a wage laborer occurred during this period. The settlers more precisely the Christians and Muslims who migrated from the southern part of the state extracted labour from the Paniyas at abysmally low wages. These exploitations have created the major shuffle in the socio-economic condition of the tribes in this region.

The livelihoods of Paniyas were based on forest and their knowledge systems were closely linked to nature. They practice unique models of indigenous systems against their social occasions like many other tribes in the region. They have a primitive model of problem solving mechanism in which they discuss their problems and find solutions by sitting together in the presence of a chief (Chemmi) and thereby retained a logical way of maintaining social justice.⁶ This is one of the examples for indigenous self-governing system. A modified or different form of this is common in many rural villages of south Indian states about their own practices to solve the issues.

THE LEGEND OF THE ORIGIN

There are many opinions regarding their origin of the Paniyan. About the Paniyan, as mentioned by Thurston a common belief based on their general appearance prevailed among the

European planting community that the Paniyan are of African origin and descended from ancestors who were ship wrecked on the Malabar Coast.⁷ This theory however, breaks down on investigation. Of their origin, nothing definite has been brought into light. It is a commonly believed among the Paniyan, being adivasis that they were the original habitants of Kerala. The Paniyan claim that a Malabar king had brought them to Wayanad. They are not very sure of this as whether they came from a different place or have been in Wayanad always. Most probably, more advanced groups might have compelled them to move from plains to hills. However, nothing can be said authentically about it. The Paniyan themselves have much to say about their origin. The legend about their origin as described by Somshekarani takes us back to *Vaalarnkotamala*, a hill in north Wayanad. They claim to be known as *ippimala makkal*, 'the children of a legendary mountain range'. The story begins as, at first there were only two people a brother and a sister, *angala* and *pengala* who did not have even cloths to put on.⁸ It unfolds that the brother and sister were subjugated by the Gounder and Uralikurumba, an artisan tribe. The Gounder, a Jain i by religion are a small group of Kannada speaking cultivators who pioneered the colonization of Wayanad from the Kamataka side. Further it narrates, the ancestors of the Paniyan, sister and brother who were young (girl older to boy) were trapped by the Uralikurumba for his Gounder master and reared in captivity. When they grew up they were to treat themselves as brother and sister only from waist up and were permitted to be husband and wife below the waist. Thus they reproduced and had ten children; again five boys and five girls who were also allowed to marry among each other when they grew up.⁹ The Paniyan refer to the above twelve ancestor as *pantheerappanmara*, (who are venerated as their early ancestors). Another version of the legend as quoted by Thurston "The Nair Janmis say that, when surprised in the act of the some mischief or alarmed, the Paniyan calls out 'Ippi! 'Ippi!', as he runs away and they believe, this to have been in the name of the country from they came originally; but they are ignorant as to where Ippimala, as they call it, is situated ".¹⁰ It further states that the Paniyan may recall of different places as their home land but are not very sure about. They do not know about their arrival in

Malabar. Somsakaran writes about them as though fear was their family member, fear was their '*kudaparuppe*'.¹¹ They use to run with fear whenever they saw a stranger. As the legend continues, the Paniyan used to destroy the cultivation of the outsiders at night. The Gounder and the *Chetti*, a merchant saw this practice and both of them wanted to catch the Paniyan. One night they planned to trap down at least one of them. A Paniyan man was trapped in the net that they had prepared for him while others ran away. Thus they took the Paniyan and trained him, or '*innaki*'. They gave him to eat and then sent him away. This was a trick. The man, who was brought from the forest, had seen the world outside and could understand the life waiting for them so he persuaded others to follow. Thus he brought others and they started to work for the *Chetti* and Gounder, and thus they became slaves from *ippima*.¹² The Gounder and *Chetti* realized that the Paniyan work very hard and it was better and profitable for them to make the Paniyan settle in the village. Since then they never went back to dense forest to settle down except on occasions. Briefly, the forest dwellers, food-gathering, roaming tribe, the ippimala children were trapped by Gounder and Chetti to work as slaves. Somsakaran explains the situation as follows: "It may be true; the clever people train animals for their use and the cleverest make humans work by training them". Earlier they were known as '*Cheetiyana Paniyaru*', the Muslim Paniyan. '*Thiyana* ', the '*Thiyar Paniyan*' and '*Achana*' the Kurichar Paniya and they liked to be known in the same manner".¹³ The masters under whom they work were commonly called as the *mellala*(superior person). They themselves call *kachavamaru* (inferior) while comparing to the *mellalvarum*. This was the beginning of the enslavement of the Paniyan tribe by the landowners. Gradually they came under the control of the big *Janmi*, the Namboodri and Nair and others who controlled the land. Purchasing and selling of the slave became a common thing for the landlords. The historical developments in both Wayanad and Malabar bear importance to the historical changes in the Paniyan community in the entire region. Before coming to the details of their life under circumstances of slavery it would be enriching to have a glimpse of the history of the districts which were home to the Paniyan. Wayanad has been called as tribal land. Though

the Paniyan were mostly concentrated in Wayanad they were linked to their kinsmen in other parts like Kozhikode and their frequent migration to different parts. In ancient times, this land was ruled by the Rajas of the Veda tribe. In the medieval period the Vedar king of Wayanad was defeated by the combined force of the Malabar Kshatriya Rajas of Kottayam and Kurubarnad principalities that paved way for a long period of feudalistic rule of Wayanad by the Nayar gentry of Malabar.

With Wayanad coming under the rule of the Pazhassi Rajas of Kottayam royal dynasty, there were little changes in the mode of treatment meted to the Paniyan by the landlords. Under the feudal administration the entire land was the property of the king and the janmis such as the Nairs, their custodians.¹⁴ The cultivators like the Wayanadan chetty, Embrandiri, Gounder Kurichiyar, Mullukuruman and others were retainers or tenants of the janmis. The Paniyan among other tribes like Adiya were bonded labourers under various ownership categories. Later, Wayanad was restored to Kottayam Raja under the ruler ship of Tipu Sultan after the Sreerangapattanam truce he made with them. But qualitatively this event did not change the livelihood pattern of the communities like that of the Paniyan. At the political level the Sultan appointed new Nayar janmis in the place of those who were loyal to the Rajas of Malabar.¹⁵ Wayanad had further interference from outside as there developed encounters between the British and Kerala Varma Pazhassi Raja of Kottayam. The British acquired control over the area against the Pazhasy Raja of Kottayam and his tribal militia of Kurichiyar and Mullukurumar after the fall of Srirangapatanam in 1792. Thus Wayanad fell into the hands of British which brought a turning point in the history of this area. Even the British regime did not change the tenant system based on janmi-kudiyan (feudal lord and tenant) system nor did they take any action against the enslavement. Though, according to Aiyappan : the East India Company had attempted to stop slave trade from Malabar Coast by the early 19th century it continued for a long time till the first decade of 20th century.¹⁶

PANIYAN EDUCATION

The language of Paniya tribe is 'Paniya'; a mixture of ancient forms of Malayalam and Tamil which has no script. For any indigenous

community, the role of language is not merely limited as a medium of communication rather it conveys the history of their culture and knowledge. The legends, myth, history and struggles are conveyed and transmitted by folk songs and stories through oral communication. Animals, birds, trees, God etc. are become the characters of these traditional chants. These traditional songs can be seen as the strong narrations of their culture and identity. In many songs, they convey several myths about their origin and exploitations experienced in their history. Their struggle against oppression and exploitation is embodied within these songs.⁵

In terms of the schooling of the children it is observed that School dropout is one of the major problems prevailing in the study area. The dropout rate for the Wayanad district in the three stages of schooling (lower primary, upper primary and high school) put together is 6.6%, which is the highest in comparison with all the other districts. For the lower primary school level as well as upper primary school level, the dropout rate is highest for Wayanad district. However, dropout rate for ST students of Wayanad district at high school level is lower than many other districts. It is very common in the area that most of the parents prefer to stop their children's education in the midway. There are some habitations where the Paniyas did not even think about sending their children for schooling. When the children reach the age of six, they participate in the income earning processes of their household. Boys will go for working as agricultural labourers, and girls will assist in household activities like looking after the infants in the home. In short, the schooling of children in these communities is so much dependent on the household's decision. The child's interest is the underlying causes which thwart them to withdraw.

CONCLUSION

The opinion collected from the students establishes the fact that majority of the students are facing difficulties in understanding subjects taught in the class. It is quite surprising that the major difficult subject is Hindi, which signifies the role of language in the learning process. The perception as such negotiates for the inclusion of indigenous language for their learning process. The traditional art forms like folksongs and group games emblematically represent the tribal

culture and the very part of indigenous knowledge. However, the new generations of school going children are weak in acquiring these folkways. A majority of the students are not aware of any of the traditional art forms of their community and no encouragement is given for those who interested to perform in the schools. The majority of the students have a good interest in their traditional occupation like farming and agriculture.

From the teachers' point of view, it is authentically substantiated that tribal students are facing difficulties in understanding subjects. Students' disinterest in attending school as well as classes is the main problem. The issues such as unfamiliarity of contents in the curriculum, difficult topics in the subjects are also the main hurdles for students. Teachers strongly agreed that students are interested to have the indigenous knowledge in the curriculum. The majority of the teachers observed that tribal students participate more actively in the classroom when the discussions are being held on community related topics. Moreover, the teacher respondents have represented their own

critiques on the existing curriculum, and agreed to include the indigenous knowledge in the curriculum for the effective practice of education for tribal children.

The community people consider traditional knowledge as an important part of their culture and they would like to preserve it through younger generations. However, the new generation children are not showing much inclination in learning it the community knowledge. The community gives prime concern for education of their children. They strongly believe that education is the only aspiration that can bring progress in their community. The sustenance of the traditional knowledge system of the Paniya community is heavily dependent on the new generation particularly the students. In the same way the social activists explored the socio political aspects of the problem which becomes very relevant in the tribal educational regime. Tribal students face social exclusion in the name of caste, colour and language from the society and the school as well. These practices often lead students to get de-motivated and humiliating through the pedagogical practices.

CHILDREN AND EDUCATION: SOME ASPECTS OF TEA PLANTATION LABOUR IN MUNNAR

S. Anagha

There cannot be a capitalist production without the working class¹. The colonial regime in India was not only created an administrative structure it also triggered up the process of capitalist production in India. The nineteenth century in India witnessed the emergence a working class population in the plantations, cotton and jute mills, mines, railways etc. This was the period of industrialization of the economy by the foreign capital.

The land of Kerala was never in the industrial map of the country except for the spices and other agricultural products. But the dense forests in Western Ghats attracted the planter community among the colonizers and they established the plantations along the Western Ghat region. The emergence of plantations created new socio economic scenario in the hills. The planters brought migrant workers from distant lands. Most of this migration was family migration.

Coercion, low wages and immigrant labour were initially the three important or rather, inseparable, components of the plantation system.² Even though most of the plantation regions are sparsely populated the workers never got any benefit from the owners. During the formative years, plantations faced the problem of acute labour shortage.³ In many cases the workers were brought to the plantations by coercion sometimes the poverty lead them to the area. The labourers were permanently settled by the planters in and around the plantations mainly because recruitment was family based, which saves recruitment cost. Also this supplemented assured labour supply to plantations with wages determined by planters.⁴ They preferred the additional income added to the families by the children.

The International Labour Organization(ILO) defined child labour as the work that is mentally, physically, socially or morally dangerous and harmful to children and interferes with their schooling by depriving them of the opportunity to attend school, obliging them to leave school prematurely, or requiring

them to attempt to combine school attendance with excessively long and heavy work.⁵

This paper is trying to delve into the problems created by the industrial capitalism on the children giving particular reference to the plantations. Most of the tea plantations were owned by the Britishers and a very few were owned by the Indian capitalist class during the nineteenth century. Most of these plantations employed migrant labour and the production was based on the family labour. The geography and other conditions forced them to employ the family instead of individual workers for the need of maximum exploitation. The plantations created a distinct form of social relation in the working class people. It is the only industry which employed women than men. The family recruitment policies also accelerated the employment of children in the plantations. Even in the post independent era the employment of children in the plantations continued.

The people in the plantations were migrant labourers in most cases and planters welcomed the family migration by giving them housing and other menial jobs to the entire household. In the hill regions of Kerala were the population density was very low necessitated the migration of labour. Most of these migrations took place from the neighboring state of Tamilnadu. The recruitment and organization of plantation labour was done through institutionalized intermediaries called kanganies, remarkably similar to the jobbers on plantations the world over. They thus appeared in dual roles: as recruiters in the villages, who then reappeared as supervisors on the estates earning a double income in the process in addition to enticing the workers with promises that were more imaginary than real, coercion and brute force were used unhesitatingly to mobilize the workers and to retain them as resident captive labour directly under the sway of planter capital, with limited opportunities of out-migration.⁶

The workers were permanently settled by the planters in and around the plantations mainly because recruitment was family-based. In the earlier period the planters encouraged families

rather than individuals to migrate for work on plantations. This served two purposes. Firstly, since the planters wanted cheap labour they had to have workers who would be permanently settled in the industry and who had no scope for alternate employment. Therefore, by encouraging families to migrate they ensured that the workers were more or less cut off from their places of origin and were settled in the plantations which were isolated from the outside world. The entire family-male, female as well as children-worked at wages the planters determined. Secondly, family migration ensured that labour could be reproduced thus solving to a large extent the problem of further recruitment in future.⁷

The plantations processing a dual identity they were porous yet they were enclaves.⁸ An understanding of the plantations in this sense is necessary when giving special emphasis to the education sector. Most of the hill stations in the colonial times worked as colonial enclaves and they were separated from the main lands.

Education was denied to the children in the plantations as they became the workers. Even parents were not concerned about the problem in the initial periods because most of them were trying to cope with the conditions in the area and were illiterate. In the pre independent and for long time after the independence the planters controlled the system of education. The government's absence and the negligence shown by the company resulted in the backwardness of the area in education. This can be seen in some of the official correspondence of the government and company.

In a letter no.B1-14/50 dated 30-1-50 from the inspector of primary and middle schools, Muvattupuzha to the division inspector of schools, Muvattupuzha stated that "The Malayalam P.S. is at present run by the K.D.H. P Co. as a result of the earnest request of the Malayalam speaking people of the place. The company has agreed to run the school for only this year. They have informed me that they will stop running the school next school year irrespective of whether the government starts a new school or not. If such a contingency arises the Malayalam speaking people of the place, especially government servants will be put to very great difficulties in the education of their children".⁹

In another letter the inspector of vernacular schools Travancore wrote to the director of public instruction Travancore that "The attendance of pupils in the Kanthalloor primary school in Devicolam taluk has been going down in the month of makaram 1105, the average attendance was only three and that the villagers do not care to send their children to school.

In the circumstances, I request you to be so good as to permit me to close the school temporarily. The only teacher in the school may be transferred to a permanent vacancy in another school, the place at Kanthalloor being left vacant".¹⁰

The workers were in the initial periods also preferred to send their children doing some menial jobs in plantation or in the household itself. So most of them didn't send their children to school. Also the distance from their place of living to the schools and lack of transportation facilities accelerated the decrease in the number of children in the schools.

Despite the fact that the authorities disregarded the region they paid attention to the problems of the planter's issues. In a letter by the Anglo Indian and domiciled European association of southern division to the dewan of Travancore persuading him for sanction in teaching in their mother tongue English. "We are proud to see that the schools have commenced to teach all the subjects in the mother tongue of students. Thus a familial or a malayalee student is able to understand and study his lessons in his own mother tongue Tamil or Malayalam. But at the same time Anglo Indian children whose mother tongue is English find it extremely difficult to study the subjects in Tamil or Malayalam. As a result most of our children are forced to join the European schools at cochin and Malabar side incurring heavy expenditure and the few that and learning in the Munnar school find very difficult to learn all subjects and keep their standard equal to the other children".¹¹

The director of public instruction Travancore in a letter to the chief secretary to government for the permission for changing the school timings for Munnar private English school. He mentioned that he accepted the need for changing the working hours in Munnar secondary school in the high ranges after understanding the circumstances explained in the letter from the

manager of the school. Also the working hours remained the same. He requests the government to sanction his action.¹²

In another letter the director of public instruction Travancore to the chief secretary discussed the wages in the schools in high ranges. "The annual expenditure under grants in aid to the vernacular schools in the high ranges as per the present rates is Rs. 3,072 and that as per the rate proposed in my letter no 1057 dated the 26th July 1935 it would be Rs. 3,384. In this connection I would invite the kind attention of the government to the fact that as reported in my letter (no.1057) referred to above, the teachers of the Anglo vernacular school Munnar are already in receipt of higher rates of aid. This school is at present in receipt of an annual receipt of an annual grant of 1,104".¹³

The company at the same time paid attention in extending their help in education at other part of Travancore. Kannan Devan trust was formed for the object of giving endowments to the students for their academic excellence on post graduation level research in agriculture and other technical subjects in 1939. The endowment amount was one lakh British rupees¹⁴.

Though the education of the worker's children was not a priority of the planters and the government, there were few reports and regulations in the end of 1930's. In the royal commission on labour report of 1930 it is stated that the "The regulation of the labour of children has always been bound up with the question of their education. We feel that the case of the plantations presents certain characteristics which make it not unreasonable to look to the employer for a bigger contribution towards the education of the actual and potential child worker. Their labour has been recruited from a far field and frequently brought into an area populated by an alien people. Moreover the bulk of the plantations are situated far from government educational facilities. Nor does the provision of land for a school site or the cost of erection of a suitable building provide any of the initial difficulties in respect of scarcity of floor space and high costs of construction which often characterize the problem in a big city".¹⁵

The most important intervention on the working of children was plantation labour act.

This act of 1951 made some intervention for the welfare of women and children. The important provisions were 1. Crèches—(1) in every plantation wherein fifty or more women workers are employed or were employees on any day of the preceding twelve months, there shall be provided and maintained by the employer suitable rooms for the use of children of such women who are below the age of 6 years.

(2) Such room shall—(a) Provide adequate accommodation (b) The adequately ventilated and lighted (c) Be maintained in a clean and sanitary condition and (d) Be under the charge of a woman trained in the care of children and infants. 2. Recreational facilities—the state government may make rules requiring every employer to make provisions in his plantation for such recreational facilities for the workers and children employed therein as may be prescribed. 3. Educational facilities – where the children between the ages of six and twelve of workers employed in any plantation exceed twenty five in number, the state government may make rules requiring every employer to provide educational facilities for the children in such manner and of such standard may be prescribed. 4. Prohibition of employment of young children—no child who has not completed his twelfth years shall be required to allowed working in any plantation. Night work for women and children—except with the permission of the state government, no woman or child worker shall be employed in any plantation otherwise than between the hours of 6 AM and 7 P M.¹⁶

In the report of the minimum wage committee for plantations Travancore and Cochin mentioned about a few things regarding education and children's right. Most of the estates run primary schools for the benefit of the children of the working classes but the standard of educational facilities offered varies considerably. The majority of the schools are unrecognized and many of the teachers employed are unqualified. Also mentioned about the free noon day meal for children between the ages of 2 and 12 years is a practice in many estates. There is further a cash allowance of 5 paise a week being paid to the children of this group in most estates where a grain compensation allowance is paid.¹⁷

Despite these acts child labour continued in the plantations for a few years. The insufficiency of the basic educational facilities leads to the

denial of the children from moving out the plantation system. Most of these children continued working in the plantations rather than opting other professions. Even after the

independence the systematic efforts by the planter community in controlling the labourers continued.

AN INTRODUCTION TO THE INQUIRY ON EARLY ISLAMIC PRESENCE IN NORTH KERALA

C.A. Anaz

The monsoon wind system made the vast maritime expanse of the Indian Ocean navigable and, to some degree, predictable; it also favoured some routes and connections over others, shaping the very structure of communication, commerce, and cultural change between the coasts it buffets. (Sebastian R. Prange, *Monsoon Islam: Trade and Faith on the Medieval Malabar Coast*, Cambridge University Press, UK, 2018, p. 27)

Early medieval is a contextual term in historical studies which deals the origin of the change in socio-economic structure that coined as feudal. Internationally, the periodic division of history has been continued mainstream academic real with critical norms. In Indian history, the sense of division is very evidently using to denote the feudal structure of socio-economic status quo. When we consider the Kerala history the 'divisional dilemma' is more crucial for lack of evidence in many areas.¹ The

paper 'An Inquiry on Early Islamic Presence in North Kerala' intended to seek the early establishment of institutions and social formations of Islamic society in Northern Kerala.²

North Malabar- geographical location

North Malabar refers to the geographic area of southwest India covering the state of Kerala's present day Kasaragod and Kannur Districts, the Mananthavady taluk of Wayanad District, the taluk of Vatakara in the Kozhikode District of Kerala and the entire Mahe Sub-Division of the Union Territory of Puducherry. North Malabar begins at Korapuzha in the south and ends at Manjeshwaram in the north of Kerala and traditionally comprises the erstwhile princely principalities and fiefdoms of Kolathu Nadu, Kingdom of Kottayam, Kadathanadu and southern part of Tulu Nadu.³

Indian Ocean Trade Network

K N Ganesh's analysis goes, "Eleventh century marked the beginning of a major expansion in the Indian Ocean Trade. The Abbasids and Fatimids in West Asia and Egypt, the Sung state in China and the kingdoms of South East Asia and the Chola State in South India emerged as the major states linked by this trade. The trade organization was apparently initiated by the Fatimids of Egypt, in which the Karimi merchants played a central role from the later half of Eleventh century. Merchants from Persian Gulf, Yemen, Iran and even from Armenia became active in the Indian Ocean by thirteenth and fourteenth centuries. Development of Indian Ocean network resulted in the more frequent visit of ships in the ports of trade in Malabar Coast, both from West Asia and South East Asia. The geographical features of the Malabar Coast enabled the merchants to use the coast as an effective stopover, and the merchants also gathered the spices and forest products from Malabar.⁴

Cheraman Legend

According to the traditional oral narration deals that the last Chera ruler Cheraman Perumal converted to Islam and visited the Prophet Muhammad at Mecca during the 7th century. It is a legendary story about early Islam in Kerala. Keralopathy and Kerala Mahatmyam which are the two historical chronicles that tells the story. Historically it was in the 12th century event that the ruler was Ramavarma Kulasekhara (980-1122).

A description shows to the location mapping of the northern part of Malabar; read, "On the basis of the survey of source materials related to the region of Kolathunadu of different periods, the present study puts forward certain premises on the extension of the nadu. Ezhimalai and its surrounding hillocks and its slopes had witnessed the formation of early settlements. In the early medieval or even in the medieval time, Kolathunadu seems to have been existed between the Perumba river in the north and Valapattanam in the south. The core area of the nadu developed in the surrounding resource area of three rivers Perumba, Kuppam, and Valapattanam rivers. It extended to Madayi creek of Ezhimalai in the West and Western ghats to the East. It further extended beyond the south of

Valapattanam river in the colonial times, under the rule of Chirakkal Kovilakam.⁵

Some of the tomb stones Pantalayani Kallam dating to AD782 are Maimun Ibn Ibrahim, Muhammad Ibn Mahin Ali, Uthman Ibn al..all signify a considerable Pardesi Arab presence. Regarding to MGS Narayanan, "With regard to the religion of Islam we have even less of tangible evidence. The relation between the last Ceraman Perumal and the introduction of Islam in Kerala, as reflected in Hindu as well as Muslim tradition, has been discussed before. Suleiman, the Arab merchant of the middle of the 9th century, who wrote with knowledge about the kingdoms of Western India, says expressly that "in Malabar he did not know of anyone of either nation (Chinese or Indian) that had embraced Mohammadanism or spoke Arabic". However, it has been pointed out that graveyard inscriptions found on the beach outside the mosque in Pantalayani Kallam record the death of one Abbu Ibn Udthorman in Hijra 166. These are certainly old tombstones and the mosque itself contains a fragmentary inscription of Bhaskara Ravi. However, the date of the tomb deserves to be re-examined. Masudi of Bagdad (896-956 AD) speaks about contacts between Malabar and Arabia and this is confirmed by Ibn Kurdad Bah (869-885 AD) and Abu Zaid of Ziraf (916-AD). These early contacts increase the possibility of the Ceraman legend being genuine. Moreover, the plaque at the mosque of Madayi recording its foundation shows the year 1124 AD. This agrees with the last known date of the last Ceraman, i.e. 1122 AD and supports the tradition that the first ten mosques of the West coast, including Madayi, were founded by the friends of the converted Perumal who was the last of the Ceraline.⁶

"According to the legend, Sarafibn Malik, Malik Ibn Dinar, Malik Ibn Habib, Ibn Malik, and their wives and friends were responsible for the establishment of the first mosques at Kodungallur, Kollam, Maravi, Fakanur, Manjarur, Kanjirakkuttu, Jarfattan, Dahfattan, Fandarina and Caliyath. Of these places Fakanur (Barakur), Manjarur (Mangalore) and perhaps Kanjirakkuttu (Kasergode) lay outside the Cera kingdom. Maravi is the present Madayi mentioned as Marahi in the Musakavamsakavya. Jarfattan may be identified as Kharapattana, now known as Kari patt, where, according to Keralolapatti, a

palace of the Kolattunatu kings existed. Dahfattan may be Dharmapattana, now known as Dharmatam. Fandarina is the same as Pantalayini Kollam, known to Arab merchants as Fandarina. Chali yath is the same as Chaliyam near Beypore. All these places developed into big centres of Muslim in the later period and this may be taken to signify the truth of the tradition. Moreover, Calicut or Kozhikode, which became the greatest centre of Muslims in Malabar in the medieval period, is left out of the list and this indicates that the tradition itself was formed before the rise of the principality of Calicut-an event which followed the disintegration of the kingdom of Makotai. Thus the common tradition that Islam was propagated in Kerala towards the close of the Cera period with the goodwill and blessings of the last Ceraman is acceptable to the historian as it is confirmed by all available circumstantial evidence.⁷

A run Thomas describes with the help of some important early sources, "The port town referred in classical accounts as 'Naura', was identified as Cannanore. Valapattanam, Matayi and Dharmapattanam were mentioned by travellers as medieval trade centers. Matayi is situated on the bank of a large river, the Taliparamba (Killa). Ibn Batutha, recorded Matayi as a "large and well built town situated on a bay navigable for large ships." Matayi is described by Duarte Barbosa as a Mappila centre, there were, however, Jewish and Hindu merchants engaged in various business. Valapattanam, situated on the south bank of Valapattanam River, was the royal city of Kolathunad as well as one of the early ports of Ezhimala kingdom. Dimishqi and Ibn Batutha mentioned it as 'Buddfattan'. Ibn Batutha noted that it was under the rule of Raja Kawayl (Kolathiri). During the medieval period, Cannanore had no importance because of the presence of Valapattanam and Matayi very near to it. But during the time of Portuguese, it became a major trading centre of Malabar. According to Tome Pires, "The Kingdom of Cannanore is large and has a large city and much trade and many people."⁸ The presence of the plaque is also attested by William Logan, District Collector and Magistrate, Malabar District.⁹

Medieval Madayi

The local legends, both Islamic and Hindu, say of the arrival of Malik ibn Dinar and his company with them royal letters from the

Ceraman Perumal [the last king of the Cera Perumal Kingdom, c. 1089- 1122 AD] to different native chiefs seeking their assistance to the missionary activities and establishment of mosques. the Madayi Mosque was built with the assistance of the Kolattiri Raja to whom also there was a letter from the last Cera Perumal. According to Shaikh Zain ud-Din Makhdam, the first *qadi* of the new mosque was Malik ibn 'Abdu Rahman.

The mosque contained a marker/plaque listing (Arabic inscription) the year 124 AD (H. 518) as the date of its construction. As a part of renovation, the old structure was pulled down in 2006, and a new structure in Indo- Saracenic model has been built on the old foundations; the marker is preserved and incorporated into the floor of the new building, but the original date is no longer legible. Madayi Mosque Inscription is this; "In the name of God, the Most Gracious, the Most Merciful. The mosques of God shall be visited and maintained by such as believe in God and the Last Day, establish regular prayers, and pay zakat, and fear none except God, it is they who are expected to be on true guidance. Dated on the 5[18]th year on Friday of Rabiul Akhir"

At the rear of the mosque an old wall has been retained incorporating the original mark of the qibla, while beside it stands the first pulpit (mimbar), a simple and visibly ancient raised stone platform; the second mimbar, also old, has been retained in the new mosque. It has four carved wooden posts holding up a flat canopy that is covered with painted flowers on its interior.

Medieval Ezhimala

Ezhimala was also a flourishing seaport and center of trade at least by the start of the Common Era; and later was also one of the major battlefields of the series of Chola-Chera Wars in the 11th century; some believe that Lord Buddha had visited Ezhimala. *Mooshika Vamsham*, written by Athulan in the 11th century, throws light on the recorded past of the Mushika Royal Family up until that point. The first recorded king of Mooshika Vamsham (the Mooshika Dynasty) was Ramaghata Mooshika and his capital most probably was *Pazhi* (ancient Pazhayangadi). Athulan describes the later kings of this dynasty who are now better known as the Kolathiri Dynasty. King Ramaghata Mooshika's

successors shifted their capital to Ezhimala, Valabhappattanam (Valapattanam), and eventually Chirakkal, among other nearby places, over the following centuries.

In brief, the investigations are facing difficult to connect one another in chronologically. Recent archaeological excavations are may lead some clarification on the gaps between the centuries. The paper is only a preliminary one in this sense.

1. Early medieval, mature medieval and late medieval are the general splitting up of the history. In Kerala history this division is not clearly working when we looking at the features of medievalism. An observation about the dilemma of sources: "The regional history of Malabar has a great vacuum of information and it is very difficult for the Malabar historians to coin the historical development of the Pre-Portuguese Malabar due to unavailability of the original trustworthy documents and lesser accessibility to source materials. The petty kingdoms of Malabar did not bother about their cultural and political history. The only available sources were mainly indebted to the foreign travelogues." FEMALE HEALTH REGULATION AND MANAGEMENT IN COLONIAL TRAVANCORE: CONSTRUCTION OF VICTORIAN MEMORIAL HOSPITAL

P.R. Anjaly

The introduction of western medicine in the Indian subcontinent by the British was a landmark in the area of health care. Indigenous medical system followed by the natives and which was closely connected with the religious beliefs and ritual practices of the people. Colonialism strictly opposed indigenous system and argued for western medicine. It became a crucial component of the project of colonial modernity. The process of eradication of indigenous medicine had come through the dissemination of scientific medicine and it became part of the colonizer's civilizing mission. The Indian Medical Service was established for the medical needs of Britain in India in 1764 was the first step taken for the expansion of western medical science. As a part of this civilizing mission in the field of medicine, Calcutta Medical College was established in 1835¹. Following the year's number of medical institutions established different parts of the country especially in Madras and Bombay presidencies. Women health was a major concerned area of

the civilizing programme and western medical system directed at Indian women on a large scale began with the coming of missionaries. Dr. Clara Swain, an American and the first female medical missionary to India arrived in 1869. Missionary also sponsored for the medical care of Indian women.

The health of women come under the interested area of colonial medical gaze because they were considered as one of the deprived and marginalized sections. The medical care for women folk was actually an agenda of colonialists who sought to legitimize colonial health policies. The colonizers considered women health was the best platform for the spread of colonial medicine in India. Making of an imperial empire was somehow a major goal of British colonialism. Western medicine played key role in the process of colonization and used as an instrument for making an empire. According to David Arnold, colonialism used or attempted to use, the body as a site for the

construction of its own authority, legitimacy and control². Through the creation of colonial institutions, they create an authority all over the country and exert power up on the body. At the same time female bodies were subjected to increased regulation, constant monitoring discipline and surveillance. For beginning their authority over the women medical field first they concerned about the creation of lock hospitals mostly for prostitutes harbouring venereal diseases near the military cantonments. The second field of medical intervention centred on the Maternity health care measures was seen on the mortality rate of women during their delivery time. It was a striking challenge to the European desire to show the colonial pride in the medical arena.

At the prompting of Queen Victoria the Vicereine in 1885, Lady Dufferin launched the National Association for Supplying Medical aid to the Women in India. It was the first systematic attempt to extent the western medicine to Indian women. As a part of Dufferin Fund, number of female health care programmes were launched. Women health care gained much importance in Travancore later the second half of the nineteenth century. For the treatment of women sanatoriums were started and among them the most prominent was at Thycaud during this time. Therefore this paper is an analytical study of the regulation and management of female health in the princely Travancore on the context of Countess of Dufferin Fund and the establishment of Victorian Memorial Hospital at Quilon. Though the welcoming of maternity hospitals, disciplinary control over the women through the western medical system is started. Hence the study stated that, the Victorian hospital at Quilon was not the first maternity hospital in Travancore but it was established with a special agenda of the native rulers. This paper is the analytical observation of the formation of Victoria hospital on the context of the women health policies which was vested on the interest of native rulers.

In nineteenth century various types of hospitals existed in India and they placed under four broad categories. First category comprised of military hospitals, second is consist of all such hospitals either at the metropolis or the district. The third group encompassed of general hospital and the fourth and last type was the

charitable hospitals which were mostly the outcome of native efforts³. Travancore rulers take initiatives for the women health and they established Lying in Hospital. It was the European forms of postpartum confinement, the traditional practice involving long bed rest after giving birth which was created because of the influence of colonial medical sciences. Travancore state started a Charitable hospital at Thycaud later emerged as a Lying in hospital, which was the first effort taken by the government for the women health.

In 1865, there were four hospitals at the capital of Travancore, the newly opened civil hospital to which was attached a Lying in Hospital, the Charity Hospital, the Jail Hospital and the Brigade Hospital. There were also hospitals at the Quilon and Alleppey and dressers where located other principal towns of the state⁴. The medical department of Travancore appoint a matron for the Lying in hospital in 1865, and this hospital introduced a new health care policies among the Travancore native women. The medicalization of women bodies started with the emergence of these new women hospitals.

On this health context, the colonial government introduced Dufferin Fund for the Indian women. It was the first program with authorized aid to focus on medical care for Indian women during the colonial epoch. The central mission was to provide scholarship, train doctors, nurses and sponsor hospitals and dispensaries for women⁵. The Dufferin Fund was Queen Victoria's personal. According to them it was introduced because of queen's concern about the lack of western medical care for Indian women. The purpose of the Fund was 'to bring medical knowledge and medical relief to the women of India' by providing women health care workers⁶. It focussed on three areas of women health includes,

- Medical training to women as physicians, hospital assistants, nurses and midwives.
- Establishing hospitals and dispensaries for the treatment of women and children in the colonial India.
- Trained female as nurses and midwives to care for women and children in hospitals and private houses.

Another fund raising programme during this time as like countless fund was the Jubilee collection in 1887 to commemorate the fiftieth anniversary of Queen Victoria's ascension to the throne. Both Dufferin's Fund and Jubilee collection aimed at the progress of Indian women in the field of medicine and the spread of western medical ideas among the native women. According to Maneeshalal, Dufferin Fund constituted the single most important factor in the institutionalization of gender in the history of colonial medicine.

Travancore was a princely state come under the indirect rule of the British Crown. His Highness, Sree Moolam Thirunal ruled Travancore at the time of the implementation of the Fund. In 1885, a central committee of national association was formed and by 1886 onwards financially and administratively independent branches of the committee founded in the provinces of Bengal, Bombay, Madras, Burma, the Central Provinces, Oudh and Punjab⁷. In Travancore, the Fund implemented as a part of Madras branch of female medical agency and done their work through the creation of women and child dispensary. Following the Fund, midwives of the state attended hospital or in the patient houses⁸. The colonial authority opposed Indian system of medicine and followed the superiority of the western medicine, which was evident in the implementation of the Dufferin Fund. Travancore rulers not opposed the western medical systems and they also encouraged the medical activities of the Britain.

VICTORIAN MEMMORIAL HOSPITAL-QUILON

One of the major initiative taken by his Highness maharajah of Travancore for the wellbeing of female healthcare was the establishment of the Victorian Memorial Hospital at Quilon. It was opened as a part of the Golden Jubilee celebration of the late Queen Victoria and Dr. E Poonen, who was placed in charge of the hospital. This hospital leads to the expansion of western medicine among the women and the East India Government paid more interest to the maternity health care system and the fund was a strong action from their side. The Maharajah sanctioned for the establishment of a school at Quilon mainly to train up midwives and nurses and also provide donation to the hospital for the Gosha women⁹.

In its initial stage, the Institution began to function as a training institution and which trained girls belonging to several castes. Strict instructions for the midwifery pupils was implemented by the durbar physician part of this new institution¹⁰ Important rubrics were: the midwives come under the immediate orders of superintend, regular time schedule given for them, they must pay special attention to personal cleanliness at the time of emergencies, they shall take night duties at the hospital etc., Under these rules a strict governance over the midwives was carried out by the durbar physician which create a uniform system of medical care to the women. This rules and regulations shows that western style of women medical care and institutionalisation of female health was one of the speciality of this newly formed institution.

A detached Gynaecological ward was constructed in 1894 in order to provide better treatment for the pregnant women admitted to the hospital¹¹. In the last decades of nineteenth century Victoria hospital became a centre for the maternity healthcare in Travancore, 144 lying in and 400 Gynaecological cases were treated in the hospital and a batch of pupil midwives trained in the following years¹².

The traditional medical system of Travancore was male-oriented and they largely ignored women diseases. The traditional medicine for the women also concentrating on the obstetric matters. In colonial period, spread of western medicine made impact upon the female health practices. The Victorian Hospital had certain peculiarities compared to the other maternity hospitals in Travancore, because it was constructed by the Travancore ruler in order to support the colonial authority in their medical practices. As a princely state, Travancore rulers followed favourable attitude towards the medical practices of the imperial authority. Interpreting to the British view point, they imposed western medical system among the Indian women for making India into a progressive one. For getting the status and recognition to the princely state's they blindly supported the policies of the Britain. In the case of Travancore the Victorian hospital started by the native government to get recognition and to create the state in to a civilizing one.

CONCLUSION

Travancore was a princely state and not free from the clutches of colonial power. The introduction of western thoughts and ideas was come as a part of continuing the power and sustaining the authority of Travancore rulers over the state. There had a necessity among the rulers to follow new health care policies introduced by the Britain. The creation of Victorian Jubilee hospital at Quilon and the implementation of Dufferin Fund are two major steps taken by the princely state for westernizing female healthcare system. Both these steps are directly and indirectly sponsored by the colonial authority. Indigenous medical systems followed by the natives of Travancore and there were no separate medical system for the women can be existed before the coming of colonial power. But under the medical efforts of the British

government they expanded their control over Indian female subjects and make female body as a medical object. Body is considered as an important tool for the empire during the colonial period. Female health regulated and managed through the introduction of new institutionalised forms of health care measures. The process of medicalization of women body emerged with the formation of new hospital system. It can be also seen in the medical reforms in the realm of women's health introduced by the Fund. The new medical knowledge and reforms about the gynaecological knowledge further contributed the stereotyping of women. As a part of this process new gynaecological wards in Victorian hospital and medical institutions for the female health were established. Both colonial and native power groups contributed for the women health of the state.

HANDLOOM WEAVING IN KERALA SOCIETY : TRADITION AND MODERNITY

S.R.Arya Kumari

India was a forerunner among the countries of the world in the performance of the beauty, art and texture of the hand-woven cloths. It was the most famous cotton manufacturing region in the world before nineteenth century. England, China, Burma, Japan, Europe, part of Africa and Persia were the prominent nations in the world which consumed the Indian hand-woven textiles on a large scale in those days. It is a traditional and hereditary calling which used traditional methods of production of cloths through their best craftsmanship. Handloom cloth meant any

cloth woven from any material including silk, cotton, artificial silk, staple fibre and wool, on looms worked by manual labour. A French traveller Francois Pyard De Laval argues, "The Indian cotton fabrics clothed everyone from Cape of Good Hope to China, man and woman from head to foot.

The handloom weaving industry in Kerala could enjoy the patronage of the rulers in the initial stages of the establishment of the trade in the state. But in due course, it lost its support and

protection on account of the advent of the mill made fabrics from the west.¹ The colonial administration was also silent about the encouragement of the traditional handloom weaving industry in the state. Of late, the colonial administrators also came forward to extend helping hands to the handloom weaving industry in the state.² But it was not sufficient to enable the industry to get out of the troubles in which it was overwhelmed.

In the post independent era also the position of the handloom weaving industry in the state was no better. It continued to falter year after year. Though there were handlooms in several houses in the state the number of houses with handloom weaving continued to decrease every subsequent year. The only exception was that there was an increase in the number of weavers' co-operative societies in the state. Neither the number of looms in the handloom industry nor the number of co-operatives increased over the years.³ Massive amounts of money were wasted every year in the guise of the protection of the handloom weaving industry in the state.

The handloom weaving industry was an important source of livelihood for two hundred and fifty thousand people of Kerala. There was one lakh twenty-five thousand looms there. In the past Kerala formed a part of the ancient *Tamilakom* and in the early centuries of the Common Era textile production was next only to agriculture in *Tamilakom*.⁴ Being one of the three necessities of life such as food, shelter and clothing that man might have learned the art of weaving either from the birds or the spiders. These excellent weavers of nature weave their nests and webs beautifully with artistic perfection and dexterity from the very beginning of civilisation in this part of the earth. At the commencement of the Common Era, cloth constituted one of the seven commodities being traded by the merchants of *Tamilakom*.⁵ Gold, grains, salt, oil, plough and jaggery were the other six items which belonged to the group. It is "evident from the available literature that the production of hand-woven fabrics in the state was either domestic or local market-oriented. In those days the weaver would exchange his products with the local people for his requirements. In due course, there was an expansion of the textile market which induced

the local artisans to cater to the needs of an expansive consumer hood. The weaver was a poor person having no additional resources to procure the raw materials required to continue his works uninterruptedly.

Handloom Weaving as a Monopoly

Traditionally handloom weaving was the monopoly of certain communities who were engaged in the art for several generations together. However, in due course, this custom had undergone tremendous changes, and even the people belonging to the non weaver castes joined the trade. It was the hereditary occupation of certain specific classes like the *Saliyan*, *Devangas*, *Kaikolans*, and *Khatris*.⁷ The Jolahas or Momins among the Muslims were also traditional handloom weavers in the northern parts of the country. Therefore 'the skill and secret of the job were passed on from father to son for countless generations together.'⁸

The *Saliyans* were the major weaving community in the Malabar district during the colonial period, and their presence was experienced everywhere in the district, except Waynad. They were also found in considerable numbers in the different taluks of the erstwhile princely state of Travancore like Agastheeswaram, Kalkulam, Shertalai and Vaikom at the end of the twentieth century.⁹ The *Saliyans* of the taluks of Vaikom and Shertalai were also called *Pattaryans*. The settlers of the Southern Travancore spoke Tamil, and the Northern part spoke Malayalam. The former claimed their descent from the Gujarat region and the latter, the Gangeticplain.¹⁰ The *Pattaryans*, claim that they were brought to Kerala by one of the Cheraman Perumals of Thiruvanchikulam and in due course, they moved to Shertalai and Vaikom which became their permanent seat. Though there is no sound evidence to prove the migration of the handloom weaver castes into Kerala, it is accepted that some of them were the migrants from Kanjeeपुरam and Tanjore in the Tamil country in the past. Ernakulam, Alleppey, Kottayam and Thrissur were the main areas of concentration of the *Pattaryans* in the state.¹¹

At the beginning of the nineteenth century, Francis Buchanan made a mention that in Kollengode in the Palghat district weaving was carried on by a very few number of Weavers

belonging either to the *Devanga* caste or the *Kaikolarcoste*.¹² They wove coarse varieties in a small scale which was found inadequate to fulfil the requirements of the local people. The *Chaliyans* and *Kaikolans* of the Princely state of Cochin also undertook the practice of weaving the counts of yarn up to the twentieth century. Their coarse varieties were in high demand among the poorer sections of the society, and they had ready markets for their commodities in their vicinity even during the early part of the twentieth century.¹³ In Trichur, the *Padma Saliyas* were the dominant weaver caste, and the *IdangaiSaliyans* were dominant in such places like Cannanore, Mangadu, Payyannur, Nileswaram, Kurinjimangalam and Kanjankau. At the same time, the *ValankaiSaliyans* were prominent in Azhikodu, Idaikadu, and Tellichery. They were also found in Mannayard, Kannadiparamba, and Kuthuparamba besides Cannanore. In the Malabar district, each amsam had its own Weaver groups. However Panniyangara and Kacheri in the suburbs of Calicut, Kizhakkethara, a hamlet of Kollengode, Palappuram in Walluvanad, Taliparamba, Chirakkal and Tellicherry had larger colonies of weavers in the district during the colonial era.¹⁴ The migrant weavers of Travancore were the people from Nagercoil and its vicinities and settled at Balaramapuram, Amaravila and Unnamalakkudi. Most of the *Saliyan* streets in Vadasseri in Nagercoil were named after the Travancore Rajahs such as Ravivarman Theru, RamavarmanTheru, Lakshnipuram Vadakke Theru, and Lakshnipuram Thekke Theru, who ruled over this extensive tract of land in the olden days. Lakshnipuram represented Sethu Lakshmi Bai. The Saliya weavers of Cannanore were engaged in the weaving of handloom fabrics using handlooms as well as pit looms.

The weavers of Kuthampully are called *DevangaSaliyar*. They resemble the Saliyans in some ways like their life in the *theru* or street, weaving as the traditional occupation, and the sale of their products.¹⁵ *Devangas of Kerala* was believed to have been the migrants from Mysore. *Chettiyar* and Chetty were the other names in these people were known to the society.¹⁶ The term *Seniyan* was used to denote the sale Weavers. However, at Konjeevaram it was applied to Canarese Devangas. The *Devangas* spoke both Tamil and Telugu, and the Tamil speakers did not intermingle with the Telugu

speakers. The *teunSedan* is a synonym for the *Devangas*. They worshipped Chaudeswari as their tutelary deity. Most of them were Saivites. It is believed that the Weavers of Kuthampully were the soldiers who, during the invasion of Tipu Sultan, got lost their direction and settled in this region.¹⁷

The *Kaikolanweavers* were found in the Chittoor and Thalappillytaluks in the erstwhile Cochin state in the early twentieth century. They were the Tamil immigrant community and were called Kerala Mudaliyar or Mudaliyar in the Palghat District.¹⁸ They were believed to have migrated from Coimbatore and Tamil constitutes their mother tongue. Mattison Mines has presented the *Kaikolan* community in south India as a predominant community in the medieval period with all the power to exercise their will whenever necessary. Handloom weaving was their traditional calling. The whole community had their separate areas of concentration or settlement, and they co-operated each other in the completion of their works.

However, most of the communities in the Cochin state were engaged in various activities associated with the textile industry. These were the Arayans, Konkani Brahmins, *Chaliyan*, *Chetti*, *Devangan*, *Duvan*, *Kaikolan*, Kammalan, Kanakkan, Kaniyan, Kavundan, KudumiChetti, Nair, Veluthedan, Vettuvan, Jonakan, Ravuthan, I Anglo-Indians, Indian Christians, and White Jews. In the princely state of Cochin, the Syrian Christians were also engaged in handloom weaving. The *Kaikolans* wove coarse clothes and the *Pattusaliyas* weave silk fabrics. The *Kaikolans* were also considered to be a group within the *Padmasaliyans*.¹⁹ The Weaver castes never valued education, and in the early decades of the twentieth century, only fifteen per cent of the *Chaliyam* in Cochin State were literate. It was 22.7 per cent for the *Devangas*, and 8.8 per cent for the *Kaikolam* respectively. However, female education was neglected among the weavers.²⁰ Moreover, 84.43 per cent of the Chaliyans, 85.7 per cent of the *Devangans* and 95.5 per cent literates among the *Kaikolam* were males.²¹ The career of a weaver starts at the very tender age,¹²¹ and once he was initiated to the looms, his whole life was tied to the loom, and he had no freedom whatsoever. He remained illiterate throughout his life.

In the initial stages, the *Saliyans* did not give any importance to education and boys were introduced to the pit loom at very tender ages and were tied to it until their death. He never got freedom from his inherent poverty and though clothed the society for centuries together his lot was not improved.²² The handicraftsmen inherited the crafts from their ancestors, and they were men of no serious ambitions. Most of them were illiterate, and they never quit their traditional callings even though it did not give them any sufficient means of subsistence at all. Since a sort of conservatism was the leading force behind them, they valued customs and relationships than anything, till the advent of new lights into their own lives. The use of fly shuttles, however, has led to an increase in the output of cloth to two-fold.²³ The handloom weaving industry in the state was organised mainly on three lines consisting of the organised private sector, the co-operative sector and the unorganised private sector comprised of master weavers and individual weavers. The organised private sector was constituted by the registered factories in the state. During the post re-organisation era, the process of organisation of the handloom weaving industry in the state on co-operative lines has assumed new heights.²⁴

In the initial stages of the settlement of the *Chaliyans* in Travancore, they, received good

support and encouragement from the royal family and were concentrated in the manufacture of finer varieties. However, with the expansion of the surges of the most famous industrial revolution which revolutionised the whole textile industry in the world along with other industries in the nineteenth century, the hand-woven finer fabrics gave way to the attractive, cheaper and finer mill made cloths.²⁵ The royal family also found it attractive and was more affordable even to the poorest in the society. The handloom weaving industry was found scattered in almost all the thirty-three taluks in the suff. In the absence of an agency to organise the industry, the poor weavers were dependent on the merchant intermediaries for financial support. The advancement of education among the weavers had forced many a weaver to leave his traditional calling it was felt *infra dig* to him.²⁶ The traditional Handloom weaver always had a hand to mouth existence everywhere in the state. The manufacture of handloom fabrics in the state in those days was local-market-oriented.

Though the state is said to have been a land known for the manufacture of handloom fabrics, experiences would show that it was never sufficient in the production - of handloom fabrics as it was forced to import textile fabrics from the outside world to meet the cloth requirements of the people of the land in the past.

WOMEN EMPOWERMENT AND SOCIO-ECONOMIC STATUS: A REVIEW OF KUDUMBASHREE IN KERALA

S. Aswathy

Women empowerment -The Concept

The word empowerment has multiple meanings and different authorities have been describing it in different ways to suit their purposes and that its definition varies with time and in context. Empowerment is a process having personal, economic, social, and political dimensions; with personal empowerment being the core of the entire empowerment process. The most noticeable feature of the word empowerment is that it comprises the term 'power'. It is a process of creating challenges against the existing power relations and of gaining greater control over the source of power, wisely called 'Empowerment'.¹

However, empowerment of women is a global issue and it is an active multi-dimensional process that enables women to recognize their full identity and powers in all spheres of life. It involves social, political and economic changes in the process of development. In case of poor women she cannot overcome powerlessness in individually. This can be only achieved collectively by women by organising and contributing equally in decision making, collective control over resources and managing the mechanism for sustaining this gain. This collective mechanism offers a great access to knowledge, information and resources, self-learning, more independence in decision making, better capability to design lives, greater control over situations which influence lives, and freedom from rituals, traditional barriers and practices.

The Genesis of Kudumbashree and its objectives

The Kudumbashree mission is a registered society under the Travancore Cochin Literary, Scientific and Charitable Societies Acts 1955 and has become an all endeavouring Self -Help Groups (SHG) in Kerala. The mission was officially inaugurated by the Prime Minister of India Mr Atal Bihari Vajpayee on 1st May 1998 at Malappuram. It is part of a State Poverty Eradication Mission which have been built around three crucial components namely, Micro Credit, Entrepreneurship and Overall Empowerment.² The Government of Kerala in 1991 introduced an innovative poverty reduction technique as an experiment in seven wards of Alappuzha municipality with community participation, which acted as its precursor.³ As a part of this experiment, a three-tier Community Based Organizations (CBO) of poor women was formed to implement Urban Based Services and Urban Basic Services for the Poor programmes. For identifying the poor families' nine non-monetary parameters were used. This was women oriented participatory and convergent approach to eradicate poverty was later known as 'Alappuzha Model'. This fetched enormous responsiveness and was further experimented in all thirty six wards of Alappuzha municipality in 3rd February 1993. In 1995, as a measure to scale up this programme, the state government introduced it in entire urban areas. In 1997, a Commission was formed including three erudite scholars/administrators namely S.M.Vijayanand (Central Ministry of Housing and Urban Poverty Alleviation), Dr T. M. Thomas Isaac (State

Planning Board) and Dr Prakash Bakshi (NABARD), for studying the validity of the project. The Commission submitted its report at the same year and recommended to form a State Poverty Eradication Mission.⁴ Further on, the 1997-1998 Kerala State Budget included the Commission recommendation with its importance and formed the State Poverty Eradication Mission on 1998 later it was merged with State Urban Development Agency.⁵

The success of Urban CDS model paved way for the expansion of this model to the entire State under the name of Kudumbashree in 1st April 1999. Kudumbashree in local language means 'prosperity of the family', which enables to utilize the economic opportunities by a good number of poor women in rural and urban Kerala.

Objectives of the Kudumbashree mission

As outlined earlier, the state poverty eradication mission prominently called Kudumbashree mission introduced by the Government of Kerala is considered as a massive poverty eradication programme. The main objective of the mission which is reflected in its statements, 'to eradicate absolute poverty within ten years through concerted community action under the leadership of local self-governments, by facilitating organisation of the poor combining self-help with demand-led convergence of available services and resources to tackle the multiple dimension and manifestations of poverty, holistically'.⁶ In short the principle objective of the mission is absolute poverty eradication from the state of Kerala. The other objectives of the mission are following,

a) **Empowerment of poor women-** Women empowerment is the major thrust area of the mission. Kudumbashree mission is working for the uplift of women folks in improving their individual capabilities by organising them into NHG (Neighbourhood Groups) at local level, ADS (Area Development Societies) at the local government ward level and CDS (Community Development Societies) at local government level.

b) **Self-identification of the poor families -** It expedites self-identification of poor families through a nine risk index composed of generally accepted indicators of poverty through a participatory survey.

c) **Confirming better health and nutrition-** Kudumbashree mission ensures better health and nutrition for the economically backward families.

d) Access to **basic** amenities-ensuring access to basic facilities to the poor like sanitary latrines, shelter, drinking water and healthy environment.

e) **Educational developments-** another important objective of Kudumbashree mission is to promote functional literacy among the poor and provides opportunity to continuing their education. The mission stands for ensuring zero drops out in schools for all children who belonged in lower strata of society.

f) **Annihilate social evils-** Kudumbashree mission objectives included to make the poor to fight against the social evils like gender religious and caste discrimination, violence against dowry, alcoholism, smoking and drug abuse, etc.

g) **Promote administrative participation of the poor-**enabling the lower strata of society to participate in the decentralisation process through the community development society, as a sub system of local governments.

h) **Creation of employment opportunities-** in order to eradicate absolute poverty from the state, the mission acts to improve the income of the poor through up gradation of vocational and managerial skills and to increase self-employment and wage employment.

i) **Develop saving habit among the poor-** the inspiring motto of the mission is to encourage the poor thrift and credit habits, by developing community development societies to work as informal banks of the poor.

Structure of Kudumbashree Mission

The community development programme Kudumbashree consists of a three tier system. The mission begins its function from the lowest stratum of society. The needy women are organized through prominently called 'Ayalkootam' in local language (the Neighbourhood Groups) consisting of 20-40 members with five volunteers. The volunteers are the Community Health Volunteer, Income Generating Activity Volunteer, Infrastructure Volunteer, Secretary and the President.⁷ The

NHG members meet every week in the house of a member and their thrifths are collected for impending needs. The NHG members also discuss upon different issues faced by each member and the emerging problems are resolved amicably. This in turn empowers them with a sense of courage, individuality and problem solving skill. In each Neighbourhood group from among the poor women, five volunteers are selected from undertakings various functional responsibilities. They are community health volunteer, she deals the health related issues of the members including children, women and the aged. Important programmes undertaken by community health and social welfare department are also facilitated under the leadership of community health volunteers. The collections and consolidation and maintenance of book of accounts and register in connection with thrift mobilization are looked after by income generation activities volunteer. Infrastructure backwardness of the groups is with the help of various ongoing programmes tackled were dealt by infrastructural volunteer. Finally recordings of proceedings of meeting and provide necessary leaderships and guidelines to the group members are the duties of the secretary and president respectively.

Empowering the Destitute

In order to contain the most marginalised sections of the society which were still unaware of the benefits of such missions and implementation, in 2003, the Government of Kerala introduced an anti-poverty sub plan in all local self-governments under which a participatory micro-level planning would be done by the three-tier community based organization (CBO) of Kudumbashree, which would be adopted by the local government. It was further decided that the social strength of the CBO could be utilized to extend social security in its widest sense to the ultra-poor. This gave birth to 'Asraya' a project of hope for the excluded as a distinct component of the anti-poverty sub plan.⁸

The 'Asraya' programme is created to rehabilitate the destitute families and attempt to integrate them with the mainstream. The destitute are the poorest of the poor. They are identified through the transparent Nine Risk Index⁹ and a participatory need assessment is

made to assess the needs of each family. If a family satisfies seven out of nine point's criteria and with checking one additional point, the family is considered as a destitute and will be a beneficiary of the plan.

The 'Agathirehitha Keralam' or the Destitute Free Kerala follows a multidimensional approach. It is different from other poverty eradication methods in the sense that instead of concentrating on a particular aspect of poverty, it endeavours to look into various dimension of the society.¹⁰

GSLP-Initiatives for Women empowerment

In 2007, Kudumbashree devised a special project called the Gender Self-Learning Programme (GSLP) that directly caters to women's empowerment.¹¹ The intention behind the programme was to understand the importance of self-learning and using it to take advantage of the innate potential of women. The GSLP re-interprets the concept of learning by positioning women in multiple roles such as participants, information providers, and knowledge creators.

Firstly as participants, women take part in Neighbourhood Group (NHG)-level discussions on subjects and situations where they believe a disparity in treatment or discrimination against them as a gender exist. Secondly as an information provider's women converse on their rich life experiences (including both discrimination and recognition) and in the process provide valuable pieces of information. Finally as knowledge creators, a gender sensitive knowledge base is created at the grass root that can be recognised as such or contested through participation. At the same time, this knowledge base is integral to the local planning and implementation processes. In short, GSLP takes the collectives through all dimensions of discrimination and disparity and shows women how to analyse their plight and raise their voices against everything unjust in it.¹²

Kudumbashree provides learning ground for all the 2, 60,362 NHGs in the GSLP network presently. The main objective of the GSLP programme is to convey the perception of women's rights, status, equality, and justice towards the society and women itself. The other important objectives being ;to initiate women to have access to, and control over assets,

widen the platform for participation in local development, analyse gender status on the basis of rich life experiences, equip women against domestic violence, strengthen the network beyond collectivization etc.¹³

An adoption of innovative method for imparting deep-rooted learning is an effective way of Kudumbashree. Differing to conventional learning, the rich life experiences of women are translated into percept's for practice, thus developing them as 'knowledge base'. Cascading channels of resource persons, mostly women, are capacitated and trained for this purpose. Resource persons at the state, district, block, panchayat, ward levels, and facilitators in each NHG, play a pivotal role in taking the learning process further down to the grass roots module-based discussions are conducted at the grass roots and consolidated for preparing status report.¹⁴ The status reports are then integrated with local plans and Community Development Society (CDS) action plans for implementation. Observing events specifically significant for women '*vanithasabhas*', or women's councils and recasting age old proverbs into gender-sensitive ones are some of the major tools that supplement learning.

Gender self-learning programme functions through a theme based modules that capture the life experiences of women from different socio economic sectors. Each module caters to a theme such as women and work, women and health, women and sexuality, women and the environment, women and power, and so on.

There are innumerable activities working under Gender Self-Learning Programme for women empowerment. Women councils are the creative learning groups of Kudumbashree women. In the councils, women share, understand and recognize experiences. They come up with concerns and solutions that eventually influence policy decisions. '*Pusthakayathra*' is another programme organized to collect the books published by Kudumbashree CDSs containing life experiences of Kudumbashree members during their course of Kudumbashree activities. These experiences can be regarded as a learning tool for Kudumbashree members themselves and also act as a research material for those who venture

to comprehend about Kudumbashree and acts as a study material for Kudumbashree to revise the existing programme.

Community theatres popularly known as '*Rangasree*' also functions under Kudumbashree GSLP programme. Women belonging to neighbourhood groups, who have clandestine talents, get a platform to exhibit their skills through it. It acts as a support system for making social change with aims to disseminate the messages of social justice, equality and sustainable development.

Nirbhaya, is a well organised programme launched by Government of Kerala to prevent sexual abuses against women and children. It to be acquainted with the problem and has declared its serious commitment to end sexual violence, child abuse, and sex trafficking in the state.¹⁵ This programme is linked with all the agencies working for women issues. Likewise, the Department of Social Justice selected Kudumbashree mission to take up this project for the initial grass root level implementation, owing to its strong network of women force within Kudumbashree units throughout Kerala. This was implemented through different levels such as NHG, ADS, and CDS. More than 5000 trained resource persons coordinated the Nirbhaya scheme. Panchayat level training and crime mapping process was also introduced in the selected CDS. It is a process of learning and self-learning, to analyse the present situation of women in Kerala and existing gender disparities.¹⁶

Kudumbashree and Tribal Empowerment

Kudumbashree's effort for the empowerment and rising of tribal womenfolk is indeed commendable. In 2016, tribal empowerment was flagged off the then by Minister for Social welfare under the banner, '*GotraPraveshanam*'. It is an event marking the completion of the formation of Kudumbashree neighbourhood groups (NHGs) among tribal women at Kambalakkad in Wayanad district.¹⁷ It is the first district that has completed the constitution of NHGs among tribal women in the state. During this period 43,556 women got registered under the Mahatma Gandhi National Rural Employment Guarantee Scheme.

Several issues contributed to the backwardness of tribal community like poor self-esteem, low income, domestic violence, and malnourishment and so on. Kudumbashree tries to address these key areas through building up of neighbourhood groups and developing activities based on that platform, based on their inherent capacity. Well organised and empowered exclusive tribal NHG in tribal hamlet will help in instigating self-esteem, negotiation power, critical analysis of life situations and collective work towards social transformation. Kudumbashree tries to reconstitute the drained tradition of tribal culture and connect to them into outside world through skill training. For promoting their employment skills and to improve marketing abilities, mission organised food, art and craft festivals within the time intervals.¹⁸

Education is an important tool for women empowerment. In tribal hamlet this system is weak because many show inconsistencies in studies and they need special help to overcome the causes of being a drop out like, poor self-esteem, and inequality faced at educational institutions and language related issues. Kudumbashree mission organised bridge courses for tribal improvement.

In Thiruvananthapuram, Kudumbashree tribal Units is spread over four Panchayats i.e, Nedumangad, Kuttichal, Kattakada, Vithura where the Kanis form the majority of the population.

Peppara Kudumbashree Unit: A Case Study

Peppara wild life sanctuary is situated in the western slope of the southern region of the Western Ghats in Nedumangad taluk of Thiruvananthapuram district. 5.82 sq.km of this zone is the water spread area of Peppara reservoir. The tribal community were the most affected owing to the construction of the reservoirs. Ten Kani villages were totally or partially submerged with in this area. After the establishment of Peppara dam, Kani villages were forcefully displaced and hence had to succumb to several socio-economic and cultural hazards. They lost their productive assets, source of livelihood, homesteads, cultural identity, families and kinship, social relations, community structure, traditional authority and potential for mutual help that come

out of these relationships.¹⁹ The rehabilitated Kanis, have suffered impoverishment in different ways. This was the then hoary situation of the Kanis. However, in the later period, new initiatives were implemented by the various Governments of Kerala for the betterment the tribal community.

The initiation of the Kudumbashree mission was a boon to the all deprived tribal community of the region. The Kudumbashree initiated a Tribal Special Project in collaboration with the Tribal Department to address the special issues of the tribal population in the state in a systematic manner. The main aim of the project was to bring the marginalized tribals under the aegis of the Kudumbashree network and provide them with facilities which were otherwise less accessible or denied, as part of its poverty eradication mission. Case studies reveal that Kudumbashree's intervention made drastic changes in the socio-economic life of tribal women folk in Peppara tribal area alone.

Presently there are 19 Kudumbashree units functioning in Peppara. Among them one of the most productive units was taken for a brief survey on the effect of Kudumbashree on the socio-economic status of the tribals and their empowerment.

The Kudumbashree unit named 'Aavani' that commenced in 2013, includes twelve members and is functioning exemplarily well within their confines. Most of the members of the groups belonged to Kanikkar tribes. They are engaged in micro enterprises like handicrafts, handloom, tailoring, and agricultural activities. Their products especially the mats, baskets, handicrafts etc., made of *eeta/eera* (*Ochlandratravancorica*) canes are of high demand in which two members of the unit concentrates. The handicrafts unit or bamboo products are manufactured in the name 'Maatrika'. The unit often participate in the Fairs organised by the government and other bodies, exhibit their products and fetches considerable financial benefits. The food products were also supplied during Kudumbashree fairs. The members of the units feel that they are self-reliant and confident enough to run households with the benefits of Kudumbashree, and are free from domestic bondage; they are in high praise for the initiatives and are well satisfied with the

financial aid they receive from it. However one has to note that the needs and value of money is considerably different from that of the urban area. For the forest dwelling people, even a mere 10 rupee is a substantial sum to meet their needs.²⁰

Jayakumari, a sixty year old Kani who is one among the trained in the production of handicrafts made of *eeta/eera* is of high praise for the initiatives, for the remuneration she gets on selling the products has been more than her wants. The products are being sold to both the Government and private agencies. She was jobless and depended on seasonal agriculture which rarely satisfied her needs and of her family.²¹

One respondent named Basurani, 25 years old observe; "I got 35,000 rupees under Kudumbasree tribal schemes. I used few parts of the amount for my house maintenance and remaining amount was used for my children's educational purpose. In my personal experience, Kudumbasree paved way for our better life'.²² Another respondent's Kausalya, 55 years old Kanikkar women says, "I belonged in Kanikkar community. My son is presently an employee in the agricultural department. So, as a mother of a Government official, I was denied loans from Government on being applied. But after joining of Kudumbasree units, I get some incentive from it. This supports me in satisfying my personal needs without depending upon anyone else".²³

Third respondent Lethika,³⁴ years old women, who is the President of the unit, was much responsive in delineating the activities and influence of Kudumbasree in their lives. To her; "I joined Kudumbasree unit before six years. I received 22,000 rupees loan as a Kudumbasree member from the Government. I used the amount for agricultural purpose and also used for meeting domestic needs. I am personally very satisfied with Kudumbasree activities because instils upon us an ability to take self- decision and provide a lot of self-confidence".²⁴

Another lady Lelitha of 58 years too responded that she was able to raise a loan of Rs.19000 to facilitate her agricultural needs. She is proud to tell that she is the mother of a teacher. Her daughter teaches in a school within the

Nedumangad town and the former assures that she could keep the house needs going with the savings from the Kudumbasree activities.²⁵ Each and every Kudumbasree group in peppara tribal community functioned in a systematic manner. They collect Rs 50 rupees in monthly basis especially for urgent hospital needs from each. The particular collected amounts are used for meeting the member's personal requirements inclusive of healthcare, marriage needs, and other unanticipated requirements.

Lethika, President of the Unit revealed that the total monthly savings until December 2019 amounted to Rs 8570. This would fetch to about one lakh rupees annually. Though meagre, to the underprivileged tribals, this amount ought to be a considerable sum which is much sufficient to meet their limited requirements. They deposit the same in the banks and withdraw in case of need. In the case of tribal women folks, Kudumbasree has not only contributed for their personal benefits but also for the wellbeing and empowerment of one's family and community. To Lethika; "Kudumbasree has enhanced entrepreneurship and leadership and skills of tribal women to work together and earn together."²⁶

Education and awareness is imparted in the unit's Balasabha and Bala panchayats, an initiative of Kudumbasree that enables to impart voice, face and power to the children hailing from poor and vulnerable socio-economic backgrounds. The children's issues and concerns are brought to the notice of the local development planners or the LSG's.²⁷ The unit president observes; "the Balasabha focussed on providing rights based debating space on the one hand and opportunities for involving children in local development oriented activities. They are introduced to awareness programmes on various issues, residential camps, science study classes, nature camps, '*krishipaadham*', holistic health programs, co- living camps, and children's parliament." She says that "these initiatives of the Kudumbasree have instilled confidence among the vulnerable tribal children to confidentially assert their privileges and know the rural urban divide to a large extent. Most of their wards are enrolled in Government schools and has less drop outs. It was surprising to find successful graduate and post

graduate students pursuing higher studies in city based colleges. It was due to the earnings and savings that we acquire from the Kudumbashree activities enable us to provide fair education to our wards. We expect more constructive programmes in future for our elevation".²⁹

CONCLUSION

The achievements of Kudumbashree mission have been very remarkable. Studies on Kudumbashree women oriented programme has revealed that all of their welfare activities have taken into account the experiences, needs, and contribution of women by removing structural barriers. This gender focused programme has created awareness among the women as well as sensitized the society around. Women in rural and urban area equally showed self-confidence and self-worth. Kerala had a massive educational system for women at all levels, favourable gender /human development indices, and good utilisation of services and awareness leading to multiplier effect of Kudumbashree. Kudumbashree provides

opportunities for saving and credit and it has directly linked to panchayat administrators. This means that women are directly linked with state machinery. Women are still agents of development, but with added earning capacities and the expectations is that they will continue to play a central role in producing development, with innovative bureaucratic support. The establishment of SHGs as a basis for the social and economic empowerment of deprived and disadvantaged women especially the tribal ones, have been found to be successful mechanism for the organisation, mobilization and self-department of women. Kudumbashree has been welcomed all over Kerala on this context. Its influence and drastic changes brought forth in tribal community within southern Kerala is seldom studied. In case of tribal women folks they reveal that the activities have instilled in them unity and problem solving skills, self-respect in family and society as wage earner, lessened domestic violence and above all empowered them socially and economically than ever before.

VIRUTHI: THE SYMBOL OF OPPRESSION IN TRAVANCORE

A. Balakrishnan

Viruthi was a kind of bonded labour system in Travancore. The word *viruthi* is the Tamil form of the Sanskrit word *visti*. The word *visti* means the obligation to render labour services. It was a permanent tenure so long as the holder continued to render service regularly. They rendered certain services on the prescribed occasions in temples and charitable institutions like *uttupuras*. In return of their services, the *viruthi* holder received land on light assessment. This land was known as *viruthi* land and the holders of the *viruthi* land were called *viruthikkars*.

Viruthi was purely a land oriented system. It is an important tenure under the *sirkar* lands. Under this tenure, the holder did not have any permanent right over his land. The *viruthi* holders paid several taxes to the government. During the times of exigencies, additional services were demanded from the poor ryots. Those *viruthikkars*, who failed to do the service, were severely punished. If a *viruthikkaran* failed to perform the prescribed duties for three times consecutively, without genuine reasons, he was irrevocably expelled from the land he possessed.

In the early period, the *viruthikkars* were obliged to render military services to the society because, they were primarily a military class. In lieu of their services, the *viruthikkars* were assigned tracts of land. But in the later period, the *viruthikkars* became mere suppliers of provisions and materials to the temple *uttupuras* and royal palace. In return of their services, the *viruthikkars* were paid certain *pathivu* or fixed rates which were below the market rates. There were different types of *viruthis* for different services in Travancore. The *viruthikkars* formed the lowest rung of the official hierarchy in Travancore. In the beginning stage, the system of *viruthi* was a fair

contract, but later it lost its old vigour and elasticity

The *viruthi* system was found in the early years of the Kulesekharas of Mahodayapuram. Reference to *bhattaviruthi* has been found during the period. The Manalikkara Inscription of 411 M.E and the Padmanabhapuram Inscription of 412 M.E throw some light on the *bhatta-viruthi*. But the authors of the Land Revenue Manual were silent on the *viruthi* system of the period.¹ During the time of MarthandaVarma (1729-1758), the services of the *viruthi* holders were classified by his minister Ramayyan Dalawa.²

In Travancore, the system of *viruthi* was found in all taluks except Thovala, Agestiswaram and Shencotta. In Travancore, different caste groups received *viruthi* land from the government. Various services were rendered by them, but the main duty was to supply articles of provisions at the *ulsavamattam* on occasions of *ulsavam* and *bhadradeepam* festivals in the Sree Padmanabha Swami Pagoda at Trivandrum, during Maharaja's birthday, *murajapam*, *tulapurushadhanam*, *hiranyagharbam*, royal marriage, *thirumadambu*, *punnyaham* and other ceremonies.

The Nair *viruthi* system incorporated all the lands granted at concessionary rent or tax in return for the performance of certain services.³ The Nairs were the major caste group in Travancore and got *viruthi* land from the government. The Nair *viruthi* formed an important class of tenure during the 18th and 19th centuries. It was otherwise popularly known as *oozhiyam* or *irayali*.⁴

On the basis of its nature, the system of *viruthi* was categorized as personal *viruthi*,

munnila viruthi, *vazhathoppu viruthi* or *kandukrishi viruthi* and *viruthis* for the collection of vital statistics. The personal *viruthikkar* rendered certain personal services to the temples, Brahmins and the *uttupuras*. In return of their services, they received land. The *munnilaviruthikkar* assisted the village authorities or *proverthikkar* in times of tax collection. They also acted as supervisors to collect materials and supplied labour services to the government and *devaswams*.⁵ Besides the supply of provisions and materials, they were used for certain manual services to public work. The village authorities had the right to demand additional duties from the *viruthikkar* in times of emergency. They were also used to carry head loads from distant places to the capital. All these supplies and services were nominally paid by certain *pathivu* or fixed rates, which were always below the market rates.⁶

The *viruthikkar* forcibly rendered *oozhiyam* services to the temples. Apart from the professional caste, the temple had a lot of non-specialized workers who performed various menial services to the temples. The *atikkumavar* or sweepers, *virakitumavar* or suppliers of firewood, *ilayitumavar* or suppliers of plantain leaves, *vayirkkalanirkkumavar* or gate keepers, *arikuttumavar* or rice-pounders, *vilakketukkmnambi* or the lamp-attender and *atakkainalkumavar* or distributor of areca nuts.⁷ In the temples, different types of sweepers like *akattatikkumavar*, those who swept the holy courtyard of the temple and *ecciliatippan* or those who swept the dining hall of the *uttupuras* prevailed in the state.

In Travancore, different kinds of tenures and *viruthis* were granted for different services in the temples, *uttupuras* and the government. There was *canti viruthi*, the land allotted to the priests and the *panikal viruthi* that allotted to the temple servants. In addition to this, there were *kotttatikkal viruthi* or land allotted to the drummers, *panicca viruthi* or land allotted to the *panikkar* or fencing masters, *palli viruthi* or land to the servants of the *palli* etc. *Kaval viruthi* or the land of the watchman, *parayana viruthi* or land of recitors of epic poems, *thirunandavana viruthi* or land assigned for the livelihood of gardeners, *cakkaimar viruthi* or land assigned to the traditional actors were some of the *viruthis* that prevailed in Travancore. *Urpotuval viruthi* or

land assigned to the village secretary, *uvacca viruthi* or land assigned to drummers, *tali viruthi* or land for temple officers, *purappotuval viruthi* or land given to the village secretary for outside services, *kalavaniya viruthi* or land assigned to the potters also mentioned in Kollur-Madham Plates of 1189 A.D, which are claimed to be the re-issue of a prasasti of the time of Srivallavan Kota.⁸

The *viruthikkar* forcibly rendered gratuitous services such as constructing sheds, finding supplies during the royal tours, thatching public buildings and performing other miscellaneous functions.⁹ They also assisted the village officers to collect taxes from the people and also the police to maintain law and order. The *oozhiyam* duties inside the temples was performed by the Nairs because the untouchable *oozhiyam* servants strictly kept the distance fixed by a kind of arithmetic precision from the temples and the higher castes. The *viruthikkar* were also used to carry palanquin of the rulers and Brahmins in times of their travel.

The village authorities compelled the *viruthikkar* to supply paddy, rice, fruits, plantain leaves, milk products, coconut, gram, jaggery, sugar, molasses, salt, oil and firewood to the *uttupuras*.¹⁰ At the time of festivals like *murajapam* and *lakshadeepam*, thousands of Brahmins arrived in Trivandrum and were freely fed in the *uttupuras* at the cost of poor *viruthikkar*. The *Viruthi* Committee Report shows that during the extra-ordinary festivals of Sri Padmanabha Swami Temple at Trivandrum such as *bhadradeepam*, *tirumasam*, *thulabharam*, etc., nearly 3000 Brahmins had to be freely fed on all days at the *uttupuras*.¹¹

The living condition of the *viruthikkar* was abject and deplorable. They suffered heavily from the government authorities and the Brahmin land lords. Ramayankar, the settlement Dewan Peishkar of Travancore writes that "the *viruthikkar* were reduced to destitution and formed a class of semi-serfs struggling to draw a bare subsistence from their hated *viruthi* land from which wretchedness there is no escape. It is impossible to overrate the evils of this state of things in its bearing on the trade and industry of the country."¹² Sir.T.Madhava Rao, the Dewan of Travancore, also wrote about the *viruthi* system that "it involved a good deal of oppression and vexation and interfered with the

freedom which industry of all kinds is entitled to".¹³

Nagam Aiya, the Settlement Dewan of Travancore, was also severely criticized the system of *viruthi* and *vilayartham*, the levy imposed upon the *viruthi* land. According to him the system universally complained of serious grievances to the ryots all over the country.¹⁴ He also warned that the government should immediately amend the laws and avoid unnecessary pain and heartburning of the ryots.

During the 19th century AD, large scale religious conversion happened in Travancore. Large number of low castes embraced Christianity; they feared that otherwise they would be forced to lead the life of slaves. With the help of the Christian missionaries, they submitted several petitions and memorandums to the authorities for abolishing the social evils such as slavery and *viruthi*.

Sree Moolam Tirunal (1885-1924), the ruler of Travancore took certain measures to improve the socio-economic condition of the *viruthikkar*. The Royal Proclamation of 1886 abolished the old system of paying remuneration to the *viruthikkar* on the basis of the fixed rates but they would pay at the market rates. The Proclamation also made a careful scrutiny and revision of the services of the *viruthikkar*. Their services were in the form of supplying vegetables and provisions or providing labour and building materials on specific occasions and the future requisition for such provision and labour being reduced and restricted.¹⁵ The Travancore government also issued a notice of auction sale of contract for the supply of fire wood and other articles for *mathilagam*.¹⁶ Such notices were published in different divisions of Travancore like Kottayam and Kollam for the supply of vegetables and provisions to the *uttupuras* on contract basis.¹⁷

In 1887, the Government of Travancore appointed the *Viruthi* committee to examine the Nair *viruthi* system and to suggest measures for reforming the system accordance with the Royal Proclamation of 1886. The committee submitted

its reports on, 12 June 1889, which recommended several measures for the amelioration of the *viruthikkars*.¹⁸ The gist of their suggestion was that the *viruthi* system should be retained only for more personal service.¹⁹

The *Viruthi* Committee recommended that the *viruthi* land should be either publically sold or confirmed to occupants on payment of a fair value²⁰ Later, the *viruthikkar* were relieved from the duty of supplying provisions and rendering personal services during the royal tours, the *swamyars*, the *koiltampuran*, *Namboothiripad* and other privileged persons

There were a number of legislations that were framed for completely relieving the *viruthikkar* of their *oozhiyam* services. After the Royal Proclamation of 1886, a number of *viruthi* services were put to an end. The Royal Proclamation of 1897 notified that such *viruthikkar* who had only *muthalelpu* advance and no land given to them in return for their service, were at liberty to repay the advance received by them and thus relieve themselves of the *oozhiyam* services. The cess *chumattupanam* was also abolished by the Proclamation of 1897.

The government took measures to complete relief to the *viruthi* holders. In 1906, the levy, *vilayartham* from the original holders of *viruthi* land was abolished. The system of *munnila viruthi* for revenue collection and collection of vital statistics were ordered to be dispensed. Besides, the *viruthi* services for the Ambalapuzha Temple, for rowing boats and the boats of Tekkedathu Bhattathiri, carry the rice to the palace were also discontinued. On 12 October 1909, the Government of Travancore issued another Proclamation, in which the *viruthi* services for rowing boat in Ambalapuzha Temple, the boats of the Tekkedathu Bhattathiri and boat carrying rice to the palace were abrogated. The same year witnessed the eventual abolition of the *viruthi* system itself and thousands of *viruthikkar* were relieved from the *oozhiya-viruthi* services.

PLAGUE AND ITS IMPACT ON MADRAS CITY, 1896 – 1930 : A HISTORICAL ANALYSIS

K. Balaram

A Study of Plague

Plague is primarily caused by the micro-organism, "Pasteurella Pestis" or "Yersina Pestis".¹ Plague occurs enzootically, epizootically, sporadically and in epidemic forms, including anthroponotic and primary pneumonic forms. Despite the enormous body of knowledge regarding Plague, this communicable disease continues to pose a threat to humanity.² Epidemics of Plague are mentioned in the Bible. The association of plague with rats was known to the ancients. It is mentioned in Bhagwat Puran that as soon as the dead rats are seen, the residence should be immediately abandoned. Down the ages, Plague was known as "Mahamari", the Great Death.³

Dr. Viegas, a private medical practitioner of Bombay, discovered cases he believed to be Plague, about the year 1896. The Government of India at once deputed M. Haffkine, the Bacteriologist, to Bombay to investigate the disease, which was officially affirmed to be Plague in 1896, and the statement was shortly afterwards confirmed by M. Haffkine. The disease was mild during the year 1896.⁴

In Madras City of the Madras Presidency, the seasonal incidence of plague was fairly prevalent in all infected areas. This regularity should assist in the forecasting, some months ahead of the probable course of events. To determine the seasonal trend, the average

monthly plague death in the Presidency as a whole, and for each of the infected area, could be computed.⁵ The maximum incidence was reported in the cold weather months of December, January and February and the disease was at its lowest during the hot weather months of April, May, and June, with the absolute minimum in May.⁶

The water supply is said to be a possible source of danger, and no doubt it should be the subject of careful monitoring. Surgeon William stressed this possible source of infection. The drains were also regarded by some persons as a probable means of spreading infection.⁷ The first imported case of Plague was discovered in Salem District, at Hosur, on 28th August 1898, the victim being a weaver from Bangalore.⁸ Three thousand thirty three Plague deaths were recorded in Madras Presidency, during the year 1901, and 10, 795 deaths in 1902.⁹ In 1920, Madurai, Dindugal, Palani and Madras were chiefly affected and death rate was high in the towns of Dindugal, Madurai and Madras.¹⁰ After 1920, Plague had continued to ravage and in 1921, the infection was severe in Madras City.¹¹

Prevention and Control of Plague

The Madras Municipal Commissioners were advised to provide and maintain in such localities, whether within or without municipal limits, suitable and sufficient accommodation as approved by the Health Officer and by a Medical

Officer, deputed by the Surgeon General or, in the absence of any such officer, by the surgeon of the district for the isolation and treatment of persons affected by the Plague and for their detention until they were certified to be free from infection.¹² In the places so provided, the Municipal Commissioners furnished such hospital establishments, equipment and supplies required by the Health Officer and made arrangements for feeding the persons detained under any of the regulations prescribed, on payment of the cost but in the case of indigent persons, the Commissioners supplied them with food, free of charge, provided that any person so detained might cater for himself subject to such rules and conditions as the Health Officer prescribed.¹³ The Government appointed many competent medical officers and assistant surgeons, hospital assistants and a lady druggist as inspecting officers. On 29 March, 1906, the Government of Madras, appointed the services of Civil Assistant Surgeon, Khaja Latifuddeen Sahib, at Madras Corporation, for plague duty.¹⁴

Arrangements were made to ascertain the existence of plague cases by compulsory report, registration at burning and burial grounds, house to house visitation, and other means. This was a fundamental measure. Plague patients were treated in special hospitals constructed with a view to the segregation of the sick. Corpses were disposed in a manner calculated to prevent their breeding infection. The segregation of persons, who were living with persons suffering from Plague, the evacuation of infected buildings and localities, the inmates being accommodated in carefully supervised and health camps were arranged.¹⁵

The spread of infection by persons travelling by sea, vessels sailing from ports in the infected area, and in cases of vessels sailing for ports out of India, from other principal ports in India, were inspected before departure and cases of plague discovered on board were removed. Quarantine was also imposed against the infected ports in India. Arrangements were made for the proper disposal of the dead. This had always been a source of difficulty. Burial was not left to individuals and private undertakers took it up without careful supervision. Hence special organization was created to deal with the work immediately as the mortality rose to a great extent. This organization functioned effectively

and ensured the most sanitary method of disposal.¹⁶

A medical service was kept in a state of readiness for the hospital and health campus and for medical inspection, inoculations and other medical measures necessary for the town or locality for treatment. Similarly, a nursing service was provided, and a special Plague service under the control of the medical service to carry out the removal of the sick, the transportation of the healthy from infected houses to the reception houses, the cleansing and disinfections of infected houses, the removal of infected articles for destruction or disinfection, destruction of rats, the inspection of houses, lodging houses, rag stores, ware houses, grain depots, corn and oil chandlers, etc., in the infected locality. Both the Special Plague Service and Ordinary Sanitary Service were under the direction of the permanent health officer of the town, assisted by a special and adequate medical staff. If there was no medical officer of health, then a special officer was appointed.¹⁷

Many competent District Medical Officers and Sanitary Officers, Divisional Officers, Assistant Collectors and Special Plague officers were appointed by the Government. Municipal chairpersons were separately appointed by the Government to be Special Plague Officers. The powers to be exercised by these officers were determined by the Collector. Passport works, in municipal areas under observation, were supervised by the District Medical or by Divisional Officer or by the Municipal Chairman or by a Special Officer as a matter of convenience.¹⁸ The service of Civil Assistant Surgeon, Khaja Latifuddeen Sahib, was placed at the disposal of the Madras Corporation for plague duty, with retrospective effect from the year 1907.¹⁹

If the Collector or an officer deputed by him in his behalf suspected that the water in any well, tank or other place was likely to engender or to cause the spread of the Plague, he could prohibit the removal or use of the said water.²⁰ The Government provided pure water in Madras under plague preventive measures.²¹ The destruction of any hut or shed, if found necessary, was done to prevent the spread of the Plague. The President or any officer specially authorized by him could summarily take measures for the destruction of such hut or shed

and of the materials of which it was constructed.²² The Government sanctioned the fund for construction of new sheds in many of the places in the Madras Presidency.²³

A number of hospitals and dispensaries appeared in Madras for Plague Preventive Measures. These institutions were maintained by municipal and local funds. Also many of the Plague Medical staff, Inspectors, Plague Police,

Subordinate staff and their pay and allowances (Pony allowance, travelling allowance, Special Plague allowance, hill allowance) had been disbursed from Municipal and Local Funds.²⁴ Every year the Government had allotted a huge amount to prevent the spread of Plague in Madras City and as a result, the spread of Plague was controlled to some extent and the Government also gradually reduced its monetary assistance for preventive measures.

WORKERS OF COMMUNISM : SUDRAS OF HINDUISM

(Periyar's Perception)

K.I.N. Deiva Akandan Paraman

Time moves forward and forces the people to move ahead along with it, which in turn created many phases of human history like ancient age, medieval age, modern age etc., The modern age began with a bang with Renaissance which gave birth to many movements like geographical discoveries, industrial and agrarian revolutions, American war of independence, French Revolution, Russian Revolution, British Bloodless Revolution, imperialism, Two World Wars, Cold War, Economic Recession, establishment of World Bodies like League of Nations and U.N.O.,

Liberation of Asian and African Countries from Western Imperialism, Triumph of Democracy etc.,

Karl Marx's scientific communism which was the child of industrial Revolution attracted the attention of many intellectuals, academicians, leaders, artists and others. Periyar was one such tall leader in Tamil Nadu. He equated the Sudras and Panchamas of Hinduism with the workers of communism. He tried to liberate these suppressed communities from the cunning clutches of Brahmins Varnashrama Dharma. He believed that his self-respect movement was

serving the same cause of Karl Marx's Communist movement and Russian 1917 communist revolution. He believed that social equality must precede the economic equality in given Indian condition.

Affinity and Adoption:

Periyar E.V.R was attracted towards the philosophy and practice of communism. He made arrangement to translate the 'Communist Manifesto' of Karl Marx, which was published in 1847 in England in Tamil Language and published it continuously in his journal, 'Kudi Arasu' from 04.10.1931 onwards. Many articles on communism and Russian Revolution written by M.Singaravelu and other marxist thinkers were continuously published in 'Kudi Arasu' which showcase his interest and inclination towards the welfare of workers.¹

When speaking in the Thiruthurai Poondi conference, he confirmed the opinion of others as true that he was combining the philosophy of Communism with the philosophy of self-respect movement and was doing the propaganda for the same.²

He undertook a tour to the European Countries and U.S.S.R on 13th December 1931, (13.12.1931) and returned back to Tamil Nadu on 11th November 1932. In this approximately 11 months of Tour, he spent more time in U.S.S.R only.³

After his return from U.S.S.R, a plan of socialist programme was drafted by the great Thinker Comrade M. Singaravelu was discussed by the followers of Self – Respect movement on 28th and 29th December 1932 in Erode at the residence of Periyar E.V.R.⁴ Periyar E.V.R was seen travelling to many parts of Tamil Nadu, addressed many meetings propagating the Erode plan of socialism in the year 1932.

He began to address everyone including his wife 'Nagammai' as 'Comrade' after his return from U.S.S.R. Periyar was always heard telling "From the day I started Self – Respect movement, it was called socialistic movement by many. Whenever I was telling the end aim of Self – Respect movement I too was telling about the above said philosophy of socialism"⁶

When addressing the meeting at Triplicane Marina Beach in connection with the

strike of Buckingham Carnatic Mill workers, he passionately uttered. "Even though you are all workers, we are your servants. We are living for you only. understand this".⁷ He declared that Dravidar Kazhagam was workers movement. Even he preferred to be called an atheist if needed to be a communist to serve the cause of suffering workers. Once, Thiru.Vi.Kalyana Sundara Mudaliar of Congress party wrote an article in the Newspaper 'Navasakthi' under the title, 'Naikkar' in which he raised some questions and gave a few counsels to periyar E.V.R. Though Periyar E.V.R was a close ally of Thiru.Vi.Ka, he forcefully retorted to it penning the following and printing the same in Kudi Arasu: "Ramasamy knows socialism. He also knows when to do propaganda and how to do it".⁸ This angry reaction even to his friend was enough proof for his adoration to socialism.

It is pertinent here to mention the remarks of Dr. K.Veeramani, President of Dravidar Kazhagam, which goes as follows: "Self – Respect movement of Thanthai Periyar is not different from communist movement. There is no need to see them as different".⁹ Even the prominent communist leader R.K.T.K. Thangamani paid a glorious tribute that the two leaders M.Singaravelu and Thanthai periyar alone would be remembered in the Indian history for further period of five hundred years.¹⁰

Views on U.S.S.R:-

He wrote and spoke very appreciatively many times about the success of socialism in U.S.S.R. In his journal 'Puratchi' once he argued vehemently that when 3 to 4 crores of people are suffering on account of unemployment in the capitalistic Countries, Russian movement ensured that nobody suffers unemployment and removed the fear of uncertain future in their country. Implimenting five year plan, the production of Goods increased in excess and also Handicrafts industry too vastly expanded and improved in U.S.S.R.¹¹ He was very proud to say that there was no political dominations and there was no religious domination in Russia. He was very happy to note that youths of Russia did not know what is politics and what is religion. Even they did not know the meaning of rich and poor.¹² He appreciated Russia in so many words from which one is able to understand his passion for socialistic pattern of society. He deduced that the reason for enthusiastic happy

living of Russians was that they give importance to social service and co-operative living.¹³

His Idea of Socialism:-

Periyar was explaining his idea of socialism as follows: "As all property, Income, business, Profit and Loss, Joy and suffering, enjoyment of worldly pleasures, responsibility and worry are shared by all the members of family, so also all the above said things should be shared by all in a village, in a city, in a state, in a Nation, and in the world. To put it briefly the policy and principle of the socialistic party is that the whole world is one family.¹⁴ When he was talking about socialism very next year, he repeated the same philosophy of him as: "Are not each and every member of a family doing a work each and happily living, eating and dressing equally?, So, all the people living in a village, in a district, in a State, in a Nation should enjoy the wealth of the world like the members of one family. No one has the right to enjoy as they like. All people must work together each doing a work and eat, dress and enjoy life which is socialism.¹⁵

Worker:-

Once he defined and explained who is a worker. According to him there is no worker in India, labourers only are living. As per his idea, a worker is the one who learns a trade for the good of his country and practice it freely so that the benefits of it are enjoyed by him as well as the people of his country.¹⁶ On another occasion, he said that worker is one who practices his profession as he wishes and enjoy its benefits fully. He also said that those who are working as per the direction of the capitalist and doing strike to get extra wages are not workers at all.¹⁷ He was of the opinion that those who are working in an industry should be like partners. He condemned it as stupidity, slavery and disrespect less to be a wage earning labourer. The benefit of work should fully reach the worker. This is socialistic living in modern civilization. If this equal socialistic living does not happen to anyone in the world population, It is a barbarian uncivilized living as he thought.¹⁸

Workers movement:

According to Periyar E.V.R's idea, if anyone feel Jealous about the profit an employer makes, if anyone demand wage increase above one's talent, if anyone thinks that work cannot be done

without them, if anyone don't permit others to do the work, and if anyone striking with the intention of bringing loss to an employer, it is a labourers movement and not worker movement.¹⁹

Union Leader:-

Periyar hated the idea of Non-workers becoming the leaders of workers. He said that if the workers cannot find a leader from among them, there need not be a trade union or workers union at all. He asked the workers to trust in workers like them to strive for their progress and prosperity. He revealed that the workers were getting cheated by the sweet tongued public persons.²⁰

If a politician became a leader to the workers, he believed that it was like a Brahmin becoming a leader to non-brahmins and European becoming a leader to Indians.²¹ He advised the workers that they should not go to politics, but politics should come to them.²² He exposed the fraud that many so-called-patriots get bribe from business people and divert the attention of the workers towards the Government. He said firmly that the reason for the present predicament of workers was not the Government, as the workers were thinking.²³ He firmly believed and proclaimed the same that it was a conspiracy of Brahmin Leaders of Chennai who said that they alone were interested in the welfare of the workers and they alone could ensure the welfare of them on the condition if they join the Congress Party.²⁴

Attitude and atrocities of capitalists:-

Periyar regretted about the attitude and atrocities of Capitalists, who have been thinking that it is business talent and mangement skill to cheat and exploit the workers.²⁵ He was angry to see that capitalists grieve when their pet dogs, birds and buffalows die but they don't seem to worry when a worker dies.²⁶ He asked the workers to be careful and vigilant when an employer hike the salary of the workers because he would take it back from the workers by raising the prices of goods and services sold to the workers.²⁷

Warning the workers:-

He warned the workers to be careful about political parties and politicians too. He exposed

that congress party was a capitalists party. He gave a few examples to prove his observation. When Bombay industrialists issued a declaration that they would not join congress party since Jawaharlal Nehru was the president of congress party. Nehru rushed to Bombay to meet the Bombay Billionaires to pacify them saying that his talk of socialism was only for political propaganda purpose only.²⁸

Mr.Sathyamoorthy also said to the Europeans when he was addressing them that socialism was not the aim of congress.²⁹He warned the workers not to believe Mr. Varadarajalu Naidu and Dr.Annie Besant either who employ more and more Brahmins only in their offices.³⁰ Also he exposed the useless empty rhetoric of labour party of England which say sweet things but do sour things,³¹

Passion of Periyar:-

In the workers meeting at Erode, he passionately promised to help them with men and money on the condition that they don't resort to violence.³² He raised the voice of revolt against the allotment of separate dining arrangements in the Thanjavur Railway Station for Brahmins and Non-Brahmins.³³ He appreciated the workers union of Nagapattinam in Tamil Nadu for selecting their leader from among them.³⁴ He was very happy to know that some sort of amicable arrangements were made with regard to transfer of Nagapattinam railway workers to Ponmalai.³⁵ But he was very sad when there was a strike at Coimbatore textile factory.³⁶ He asked the general public to extend their full support to the workers of South Indian Railway, When they went village to village, town to town, city to city throughout Tamil Nadu to tell their grievances and get their support for the solutions they had.³⁷ He condemned in strong words when the communist party was banned in Tamil Nadu after West Bengal.³⁸

Condolences to Communist Leaders:-

He was deeply upset when great Communist leaders passed away. He expressed his deep condolences on 26.01.1936, 29.03.1931, 16.02.1948 and 25.8.1940 to Saklathwala, Bhagat Singh, M.Singaravelu, and Trotsky respectively when they were snatched away from the midst of the people and passed away.He tried to abolish the Jamindari system which was sucking the blood of poor peasants.³⁹

Also he conducted a lot of non financiers conferences , non- capitalists conferences, Non-industrialist conferences, Non-House owners conferences, Non-Land owners conferences, Non – high caste people conferences, Non- rich people conferences, etc. He conducted such conferences because of his passion to help the poor people.⁴⁰

MAY DAY:

He appreciated the celebration of May Day on 1st of May every year in many Countries, in many fashions. He asked his followers too to celebrate MAY DAY like this conducting procession and meetings in a just, orderly way.⁴¹

Workers and Sudras:-

Sudras and workers are one and the same in the Indian context according to the belief of Peiyar E.V.R. As per the Hindu code for Indian Society which was based on the Varnashrama Dharma, The Sudras are placed in the fourth and Panchamas in the fifth of hierarchy of Hindu social order to serve the other three communities, Brahmins, Shedrias and Vysias who were placed high above them in the social order of Hinduism. Like the workers in the Communist countries, Sudras and Panchamas also are the workers of the Hindu society in the Indian sub-continent. That's the reason why Periyar E.V.R. said that as long as the caste system exist, whatever the socialistic plans and programmes happen in India, Brahmins life will go on as before.⁴² Ironically he assured that as long as Hindu Religion exist, nobody need to fear the coming of the Communist Party in India.⁴³ He felt that Brahmins Varnashrama Dharma is the main cause in determining even the class of communists.⁴⁴

He was of the opinion that socialistic feeling must have come to India at first even before U.S.S.R. He strongly believed that Hindu religion, Hindu Gods, Hindu Philosephy and Hindu fatalism destroyed the education, knowledge worldly wisdom and socialistic feeling and have been kept India in a savage state.⁴⁵ He wanted to destroy the social inequality at first. Then only it could be possible to destroy the economic inequality.⁴⁶

He asked the people: "Who are workers? Are they Brahmins? Are they Shedriyas? No, only Sudras are workers like this; who is this

Sudras? We, the Dravidians only are such Sudras? As per the Law of the Land, as per the scriptures, as per the God's creations, as per the daily practice, Dravidians only are the Sudras. The people who thus humbled and humiliated only are carrying the flags and banners of congress party and serving Brahmins like Hanuman.⁴⁷

He said that each and every God is earning crores and crores of Rupees and hence they are the stone Capitalists.⁴⁸

He observed that Indian Social system created rich and poor, labourers and people living with Luxury is based on birth. He cites the example for the Indian society that all rich people belong to higher castes and all poor labourers belong to the lower caste⁴⁹

Finally he came to the conclusion as follows regarding socialism: "Like Blind man want to see like a King, it is a waste of time and simply a hypocrisy to talk about economic socialism, Marxism, Leninism in a country like

India where Parayans, Sakkili, Brahmins and Sudras live. Therefore forgetting the scolding the wealthy people for some time, let us struggle to create Social Equality and Social Revolution by abolishing the Caste system. If the situation becomes favourable, by some unexpected events, then let us think about economics".⁵⁰

Epiloque:-

Periyar E.V.R. the workers of communism with the Sudras and the Panchamas of Hinduism. By working for the welfare of sudras and panchamas, he used to get the Joy of serving the workers in India. So he was so focused in abolishing the caste system of Hinduism. Since caste system creates the class system, economic equality of workers cannot be created in India without abolishing the caste system of Hinduism. He had his own utopian idea of worker, workers movement, socialistic society sans hatred and violence. Time and people will decide in the methods to be selected to achieve their dream of ideal society.

CONTRIBUTION OF MADRAS MAHAJANA SABHA TO THE PROMOTION OF INDIGENOUS MEDICINES IN MADRAS PRESIDENCY

D. Dharani

Introduction:

India is the vast country with a rich cultural heritage. It has been the seat of ancient civilization. At the time when many of the advanced nations were either grouping in the dark to know the fundamentals of civilization, India could boast of its high degree. This was the main reason which attracted many foreign invaders right from Alexander the great to the British. The conquest of South-West Asia by the Turks closed the old of channels of commercial communication that led to the discovery of new sea routes. Thus many Europeans like Portuguese, Dutch, French and British have entered the country.

In 1600, with the permission of the Queen Elizabeth they landed in India under name of East India Company. The advent of British in India began in the South. The city of Madras has been rightly described by some Englishmen as the Birth place of British India¹. In 1640, Francis Day procured from a petty Hindu Raja, a narrow strip of land about 230 miles south of Masoolipattinam with permission to build a fortified factory and named it as St. George². During 19th century, different phases of Indian life permeated with the spirit of renaissance and awakening. This led to the social changes that ultimately created the national oneness among the Indians.

A number of Indians understood the need for agitation. The first Indian organization was formed in England through which they represented their grievances. Thus Bombay Association in 1869, The Poona Sarvajanik Sabha in 1867 and a few others were started. On the similar line, the Madras Native Association

was founded in 1852. When this Association lost its popularity, another organization named Madras Mahajana Sabha has been formed by Messers V. Veeraraghavachari, P. Anandacharlu and Mr. Rungaiyah Naidu which played a vital role in the political History of Madras. Apart for creating the national spirit, it also wanted to promote the richness of the native people. They started focusing on the social, cultural and indigenous health care practices and represented the government to improve them for the betterment of common people.

In 1919, the Madras Mahajana Sabha wrote to the Government of Madras about the importance of indigenous medicines and implementing them in the health care programmes. The objectives of their request were as follows:

- a. Giving a sound vernacular indigenous medical education to the children of this country
- b. Affording cheap but good medical help to the public
- c. Systematizing the existing indigenous medical help
- d. Creating public opinion in these subjects
- e. Taking steps to establish schools in respective areas for teaching the Ayurvedic and Unani systems of medicine
- f. Maintaining medical registers to record about the practitioners of Ayurvedic and Unani systems.
- g. Permitting the Municipalities and Taluk Boards to set apart a sum of Rs. 600 every

year to award honorariums for Ayurvedic and Unani medical practitioners who maintained schools and dispensaries.

- h. Setting apart a sum of Rs. 20,000 from the provincial funds to distribute among hundred different important centers for the up-keep of libraries consisting of books relating to Ayurvedic, Unani, Agastya traditional medicine and other systems prevailing in different localities.

The then Government of Madras sent this representation of Madras Mahajana Sabha to some experts for their opinion³.

Mr. C. Krishna Reddy while giving his views said that his sympathies were with the movement since in rural areas the people did not have any medical support except the one given by quacks who had no formal training in the medical art. It was Dr. G. Srinivasa Murthi, a strong votary of indigenous medicines, despite being a modern medical practitioner, appreciated the approach as excellent and requested the government for manpower and funds to implement the scheme.

Mr. J. V. Ramaswami Naidu, the third expert said that the scheme was meant for the development and spreading the knowledge of indigenous medicines and extended his support.

Development of Indigenous Medicine in the twentieth century:

In the beginning of the 20th century, there was a national awakening of all arts and sciences and accumulated knowledge of India. Several national and provincial committees were formed to study the status of Indian Medicines and ways and means of developing it. The first investigation at Madras Presidency by the British government was done by Doctor Koman⁴. He visited many districts and collected a lot of material for investigation. His report contained seven annexure that covered the following points.

1. Notes on drugs and compounds used in the indigenous medicine should be investigated thoroughly.
2. Summary of the notes on medicines should be discussed in detail.

3. The composition and the methods of preparations should be standardized,
4. Statement showing the diseases treated at the General Hospital with Ayurvedic medicines and the results should be maintained.
5. Chemical Examiner's report on analysis of drugs should be maintained.

For this purpose, he referred many ancient medical treatises such as *Charaka Samhita*, *Susruta Samhita*, *Vagbhata's Astangahridaya* and *Madhava Nidana*. Apart from this, he also went through many Tamil literary works.

In 1921, the Raja of Panagal, the then Chief Minister of Madras Presidency who was also in charge of Public Health, appointed a committee under the Chairmanship of Sir Mohamed Usman to report on the question of recognition and encouragement to the indigenous systems of medicine in vogue in the State⁵. He wanted to popularize the systems of *Ayurveda*, *Unani* and *Siddha* among the people and make them flourishing and self-sustaining systems. He was also interested to establish medical centers to offer medical education to people on Indian systems of medicine.

The Usman Committee submitted its report on February 17, 1923 and the then Government of Madras has taken the following actions based on its recommendations⁶.

1. Established the Government school of Indian Medicine in Madras in 1925 to teach Ayurveda, Siddha and Unani besides the essentials of modern medicines.
2. Agreed to establish provincial rural dispensaries and Municipal and District Board dispensaries to be staffed by the Diploma holders of the above school.
3. Established in 1926, a Government Hospital of Indian Medicines attached to the School.
4. Instituted a post-graduate course in 1930 in Indian Medicine for the graduates of Western Medicine (F.I.M – Fellow of Indian Medicine) and a course in Modern Medicine for practitioners of pure Indian Medicine in Modern Medicine (A.L.I.M –

Associated Licentiate in Indian Medicine). The latter course was abolished in 1941 and the former course was renamed as A.I.M (Associate in Indian Medicine) afterwards.

5. Constituted a Central Board of Indian Medicine to act as then recommending authority to the Government for registration, supervision of pharmacies and teaching institutions.
6. Established a College of Indian Medicine in 1947.
7. Gave sanction for starting a research institute in 1947.
8. Sanctioned 'VillageVaidyas Scheme' in February 1947.
9. Considered a draft bill governing the registration of practitioners of Indian Medicine.

Also, proposals were made to start a Central pharmacy with a herbarium close to the college of Indian Medicine at recurring expenditure of Rs. 1, 25,000 per annum⁷.

Founding of Government Indian Medical School:

Based on the recommendations of Usman Committee, the Government Indian Medical School was founded with Dr. G. Srinivasamurthi as its first Principal. It was formally opened by the then Governor of Madras His Excellency Lord Goschen on 24th November 1924 in a rented building 'Thambu Villa' in Pantheon Road, Egmore, Madras. But the actual classes were started on the 6th of July, 1925 for the Diploma Course *viz.* Licentiate in Indian Medicine (L.I.M). The syllabus and scheme of studies were so devised to be in consonance with the Usman Committee's objectives. The school consisted of three sections *viz.* Ayurveda, Unani and Siddha and the course durations were extended over three years. The training given in the respective Indian systems was supplemented by a course in human anatomy and physiology according to the allopathic systems⁸.

Within a year, the school was shifted to a bigger space rented for the purpose at 'Hyde Park', Poonamallee High Road in Kilpauk. The outpatient and in-patient departments were opened on 1st July 1926 and 1st September

1926 respectively and the course duration was extended from three to four years⁹.

In 1928, a committee was formed to compile standard books for Siddha medicine. Among the other significant events during this year was starting of high proficiency test in Ayurveda, Siddha and Unani to those who passed L.I.M. and had good experience to award the title H.P.I.M. as well as the opening of a herbarium for experimental and teaching purposes. In 1933, the duration of L.I.M. course was extended to five years and the final year was devoted to the special clinical training which was normally given to all apprentices attached to the various departments of the hospital¹⁰.

During 1940s, the government appointed a second committee under the Chairmanship of Sir Mohamed Usman who at that time was the Vice-Chancellor of the Madras University to report how the curriculum, methods of teaching and examination followed in the School of Indian Medicine could be improved. The report was submitted in 1941 but the Government considered only certain points and did not involve in any fundamental changes in the School¹¹.

Creation of Indian Medical Department in Madras Presidency

The Congress party took over the administration of the Madras Presidency in 1946 and there was a change in the policy of the government towards the development of Indian system of Medicine. The then Premier Hon'ble Mr. Y. Prakasa and the Public Health Minister Hon'ble Mrs. A. Rukmani Lakshmi pathi took great interest to develop the indigenous medical systems. In the All India Conference of the Health Ministers, which took place at Delhi in October 1946, as per the suggestion of A. Rukmani Lakshmi pathi the following resolutions were adopted.

- a. As per the recommendation of the National Planning Committee adequate provision should be made in the centre as well as in the states to popularize the indigenous medical systems.
- b. For research and application of scientific methods in the investigation of the Indian Systems such as Ayurveda and Unani should be with reference to maintenance

of health and prevention and cure of diseases.

- c. Colleges and Schools for training for diploma and degree courses in Indian Medicine should be started.
- d. The graduates of Western medicine courses can be admitted in the post graduate courses of Indian systems of Medicine.
- e. In the Central Council and provincial Health Boards, the practitioners of Indian Medicine should be given due representation wherever possible¹².

The Board of Studies on Indian Medicine was constituted as per the recommendations of the *ad hoc* committee and was asked by the government to consider and report on certain points regarding the teaching and curriculum to be followed in institutions of indigenous medicine¹³.

In 1947, due to the efforts of Mrs. A. Rukmani Lakshmipathi the School of Indian Medicine in Madras was upgraded to College of Indian Medicine. It was also decided to have a research department in the institution.

In the year 1948, the Government of India constituted another committee under the Chairmanship of Col. R. N. Chopra which recommended the adaptation of modern scientific methods in the development of indigenous systems of medicine. The recommendations were published in 1948 and the government of India accepted the report in board terms¹⁴.

In 1949 the post of Special Officer was abolished to create the position of Honorary Director of Indian Medicine and a modern medical person Dr. M. R. Guruswami Mudaliar, M.D. was appointed to the above post. He was also

designated as the Head of the department of the Indian Medicine¹⁵.

In the year 1955, under the instruction of the government of India, a fourth committee was appointed with Shri Dayashankar Trikamji Dave as Chairman. The committee submitted its report and recommended to introduce uniform standards of training and Post-Graduate instruction and research facilities for all the three indigenous systems of medicine¹⁶. On the national level, another committee was formed under Dr. K. N. Udupa in 1958 which recommended only the development of Ayurvedic system of medicine. Consequently on the basis of Mehta Committee's report and with the approval of the University of Madras, the College of Indian system of Medicine was started at Palayamkottai in Tirunelveli District by the then Government of Madras in 1964 to teach Siddha, Ayurveda and Unani systems of medicine¹⁷. Later this College was assigned to teach Siddha Medicine alone offering the degree B.I.M.

Conclusion

Thus Madras Mahajana Sabha not only created an awareness among the people in gaining freedom from the British but also took pride in preserving our rich cultural heritage. The initiative taken by Madras Mahajana Sabha goes long way in the history of India more so in Tamil Nadu. During the first and second Five Year Plans more attention was given to the promotion of indigenous medicines. Since 1964, in Tamil Nadu the degree courses in Siddha, Ayurveda and Unani were started by the State Government which are functioning successfully till date. In all the Government Hospitals, there is a separate wing for Indigenous medicines besides a full-fledged Indian Medicine Hospital in Chennai that cater to the health care of common people who visit them in large numbers daily.

TRIBES AS BONDED LABOURS: THE PANIYANS OF NILAMBUR VALLEY

C.A. Fukkar Ali

Introduction

Nilambur valley¹ has been the homeland of various tribal communities such as *Aranadan*, *Cholanaickan*, *Kattunaickan*, *Kuruman*, *Mala Muthan*, *Mala Panickan*, *Pathinaickan* and *Paniyan*. *Paniyans*² are the largest single Scheduled Tribe in the area. The history and cultures of *Paniyans* are entirely different from the other tribes of the region. They are the most exploited and backward tribes in the district. Ethnohistoric studies reveal that they were bonded labourers in the past and subsequent 'bonded mindedness' that made them more backward.

The early ethnographic records³ attest the recruitment of *Paniyans* and many other tribes as bonded labours in various parts of Malabar. Nilambur was one of the strongholds of bonded labour in Malabar. The nature of bond and system of works were varied according to the region. The bonded labour system prevalent among the tribes of Nilambur was, in some extent, different from that of the other parts of Kerala. To understand the true nature of the system a deep study is required. The present study is meant to analyse various aspects of the bonded labour system prevalent in Nilambur region especially among the *Paniyan* tribe.

Defining Bonded Labour

Bonded labour⁴ has been defined as "when a person provides labour of service to another for remuneration which is less than the minimum wage, the labour or service provided by him clearly falls within the scope and ambit of the words "forced labour"⁵. Another term required to

be defined here is 'bond labour'. Bond labour means bind together, uniting force, agreement, deeds etc. entered into by both the parties. PRG Mathur preferred the term bond labour instead of bonded labour. He observes that "Traditionally the Paniyans were engaged in *kundal pani* (bond labour). The bond labour still exists not only among the Paniyans, but also among the Adiyans."⁶ In the report of the Select Committee on the Bonded Labour System (Abolition Bill of 1975) defined "Bonded Labour System" consists in the Payment of cash called *Vallurkavu panam* or *nilpu panam* or by whatever name it may locally be known or the payment in kind, by one person (here after called the creditor) to a person belonging to a Scheduled Tribe (here after called the debtor), whether evidenced by writing or otherwise, on any one or both of the following terms namely:

a) " that in consideration of the payment of cash or the paymrnt in kind made by rthe creditor or the debtor, the debtor shall, by himself or through members of his family, render labour or personal service to the creditor for a specified period, either without wages or on payment of nominal wages."

b) "that on failure to render the labour or personal service referred to in clause (a), the debtor shall be bound to repay the cash or the value of the thing received by him and vacate the hut, if any, occupied by him and situated in the land belonging to the creditor."

In short, Bonded labour, is a social agreement between a debtor and a creditor under which the debtor agrees to render labour or personal services to the creditor without

remuneration in lieu of the satisfaction of the debt or part of debt or interest on principal amount for a specific period or till the debt is satisfied or repaid. It is social agreement because this has recognition of the society or social structure and not by legal one

Bonded Labour and the Tribes of Kerala

In Kerala, the system of bonded labour was in force in the districts such as Cannanore, Kozhikkode, Malappuram and Palakkad.⁷ The major centre was Waynad. Historical sources speak of the existence of bonded labour among the various tribal communities in Kerala such as *Paniyans*, *Adiyans*, *Kattunayakan*, *Pulayans* and *Kurichians*. It is reported that the system existed till recent time. It was very strong in Waynad. It is interesting to point out that there are 20 devaswoms (trusts) in Waynad and majority of them are owned by Nair and Varrier communities. However, the Gowdans are also the owners for a few devaswoms. The result is that the most important tribals of Waynad are attached to one or other land lords, particularly Nairs, Variers and Muslims. They are traditionally attached to their landlords as *Kundal panikkar* because they do not need anything more than a homestead and an assured source of food supply. The *Kattunayakans* must have adopted bond-labour for their subsistence when they gave up their food gathering and hunting, whereas the *Kurichians* become bond labour probably on account of excommunication and the resultant forfeiture of property.

In Malabar the bonded labour⁸ system was known as *kundalpani* or *Vallipani* or *aandukettipani* or *Adimapani*. It is a kind of annual contract made between the tribal labourer and the land lord with a payment of advance of cash called *Talappattam* or *Nilpu panam*, retaining fee' or *Vallurkavu panam*. The traditional manner of recruiting the tribals as bond labourer is by advancing loans at Vallurkavu festival in the last week of March. A. Ayyappan attests the recruitment of tribals like *Paniyans* and *Aiyans* as bonded labourers or *Kundal panikkar* in Malabar at the time of *Vallur Kavuvu* annual festival. "On this day, farmers and tribals of Waynad and other employers of labourers assemble there. They were found engaged in active negotiations with their prospective employers discussing the amount of advance to be paid for each group. The

employers pay the *Paniyans* or *Adiyans* the advance of Rs.30 for a family and they sign a promissory note for the advance. The validity of the contract is one year i.e., till the eve of the next Vallurkavu festival. The money advanced is not usually repayable, but is only a guarantee of the service of the labourers for the year. After the annual harvest the bonded labourers were entitled to get a kind of bonus called *kundal*. A family received 250 *seers* of paddy. During this time the advance which was given to them in the beginning accounted against the *kundal*. A family was eligible to receive full *kundal* only if they had put in during this period, a sizable number of working days, thereby clearing their dues in advance. Once the family had cleared the arrears and received the rest of the *kundal*, the family was free from the bond. Usually no family was able to pay back all advances taken and thus the whole family would remain bonded to the same master for years together. The labourers normally did not violate this tie by running away or by other means as they were afraid of the wrath of the *Vallurkavu Bhagavathy* in whose name the transactions of advance and woes were effected."⁹

The most significant feature of the system is that a tribal pledges not only himself but the members of his family as well against loan and until the debt is discharged all of them are bound to work for the creditor for which they get only daily meals and a pittance in kind. The relationship between the *Paniyan* and his patron lasts for years and sometimes for the whole life. Later the venue of recruiting the tribals was in the houses of landlords instead of the Vallurkavu precincts. Besides the Vallurkavu the tribals were also recruited as bond labourers on the Ponkuzhi temple festival day in the of month of Meenum at Munthanga village.

It is found that the tribes attached to the land lords are given daily meals (*paik*) and a pittance in kind. They are also given fringe benefits particularly on festive occasions like Onam, Vishu and Uchal. In olden times a small patch of paddy field was kept unharnessed for the apportionment of the bond labourers as *kundal*. The *kundal Panikkar* (bond labourers) get a fixed measure of paddy every year in lieu of their share. For instance, a male bond labourer gets 4 *poti* (1 *poti* = 5 Palghat paras) for paddy his female counterpart gets two *poti* as *kundal*.

Bonded Labour and the Paniyans of Nilambur

Nilambur in Malappuram district of Kerala was one of the major strongholds of bonded labour system in Kerala.¹⁰ The tribals in the region were forced to labour under the *Jenmis* of the region. It is found that the system, though different in nature, was in practice till the very recent time in the region. These bonded tribes were mainly used in the agricultural fields, in the plantations, in the river basins for mining gold, in the forest for elephant works etc. They were recruited by the Nair or Mappila landlords of the region. The study of the settlement pattern of *Paniyans* in the Nilambur region even indicates the existence of the system in its typical form. It is observed that the *Paniyans* who engaged in *kundal pani* were to settle in the drier parts of their master's estate in order to ensure their service irrespective of day and night. They had the option to leave the landlord with whom they were working and to take up work with a new master during the *Vishu* festival at that time the contract for engaging them again for another year was usually renewed. This was done not through a written document but by way of giving *Paniyans* some clothes and a meager sum of money.

The history of the tribal bondages in Nilambur can be traced back to the period of Brahman migration to the area¹¹. The Brahman settlements of Kerala are said to have originally prevailed in thirty-two villages.¹² Four of them, named, Alattur, Karantola, Chokiram and Karikkatu were situated in the present day Malappuram district.¹³ The migrant new comers of great tradition subjugated the inhabitants and "claimed superiority over them and managed to re-orient the semi-tribal, semi-nomadic society into a temple-centered, agrarian, caste society".¹⁴ The infiltration of advanced populations into tribal territory resulted in closer interaction between aboriginals and the advanced. The defence of tribal territory against a group of people of superior culture with advanced technology proved impossible for the aboriginals. Their traditional cultivating lands and hunting and gathering grounds were taken from them and the new comers automatically reduced many to serfdom. Gradually, they were amalgamated in to the lowest strata of the caste-ridden society.¹⁵ The Aryan colonization led to the downfall of primitive communist social

order and the emergence of serfdom and slavery in North India. The same had also happened in Kerala. By the beginning of the 5th century AD the Aryans began to exercise a profound and far reaching influence of society. The division of society on the basis of caste creating special interest groups based on occupation, the strict observance of sacrificial mantras and rituals and a host of other divine ordained rituals created a steel frame of society and an organization of almost incredible complexity. The all pervading influence of the new social order resulted in the birth of slavery in Kerala.¹⁶ The untouchable castes of *Cherumar*¹⁷ and *Paniyar*¹⁸ of Kerala were probably at one time independent tribes. Some of them escaped into areas comparatively free of new settlers. Those who took asylum in the remote areas stubbornly retained their nomadic and hunting habit and refused to give up their traditional way of life. The descendants of this group are today found in the hills and forests and they are described as *Adivasis* (*Adi*=early or original and *Vasi* = inhabitant). Rev. Samuel Mateer called the hill people who are scattered over the mountains as 'aborigines of the country'.¹⁹

The agrarian system subsequently evolved was feudal in character²⁰ which overwhelmed the *Cera* monarchy by the beginning of the 12th century and ultimately the *Cera* territory was fragmented into several *desoms* and *nadus* after AD 1124. A number of small principalities emerged.²¹ The network of Brahman settlement acted as one of the unifying forces in Kerala in the post *Cera* period. The settlements grew more powerful and began to amass larger extent of wealth and exert greater influence in society and polity. When the feudalistic agrarian system developed the land lord provided the tenants with capital, seeds, bulls and wages. The role of the tribals in this agrarian system was that of an insignificant subject peasantry.²² The landlord in his capacity as *Desavazhi* or local ruler received payments like *Kuthupattam*, *Ponavaram*, *Nilavaram*, and forest product of cardamom, pepper, honey and wax from the tribals.²³ Francis Buchanan also attests the prevalence of this type of *jenmi*-tribal relation in Malabar. According to him, "The forests are divided into *puddies*²⁴ in which one or more tribe lived. Each *puddy* was the property of *jenmi*. The forest produces collected by the tribes were sold

by the *jenmi* to the merchants called *Chetti* or *Mannadi*. ...If they collected more valuable items they were rewarded by their master."²⁵ It is found that the *Chettis*, who were brought by the Naduvazhis from Tamil Nadu and settled in their locality to enhance trade and business, were powerful traders in Malabar area. Now these localities are called *Chettiyarangadi*. In short, by the end of 18th century, the development of a feudalistic agrarian system based on inferior right of tenancy and superior right of land lord had been extended to tribal areas in Malabar.²⁶ In some places, the land lord provided the tenants with capital, seeds, bulls and wages as an extension of feudal mode of production.²⁷ The dependency in the feudalistic agrarian system was a kind of slavery. In Wigram's 'Malabar Law and Custom' the word *adima* is defined as "feudal dependency of a Nair up on his patron: slavery" and the terms *adima* and *kudima* are said to mean "a slave or one subject to the landlord, the grant [of land being] generally made to such persons. A nominal fee of about two *fanams* a year is payable to the landlord, to show that he still retains the proprietary title."²⁸

It is believed that Niambur *Kovilakam* was built in 13th century AD by Thachirakkavil Eradis who came from Nedyirippu in 13th century AD but up to the 18th century it was under the control of the Zamorins of Calicut.²⁹ It is said that by the early decades of 12th Century the centralized power structure of second *Cera* monarchy of Mahodayapuram collapsed and emerged a bulk of Swaroopams and Naduvazhis. Eranadu, in Malappuram district, was the more significant to the *nadu* divisions under the *Cera* kingdom, which later became Nedyirippu Swaroopam. The chief of this *nadu* had his residence at Nedyiruppu, near present day Kondotty in the district.³⁰ The Jewish Copper Plates (1000 AD) of Bhaskara Ravi mentions the Naduvazhi of Eranad 'Eranad Utayavar' who later became the ruler of Calicut as Zamorin. Nedyirippu Swaroopam comprised of two families, Samutiri *kovilakam* and Chirayil *Kutalmanna Kovilakam*. When Zamorin could expand his territory towards north the *kutalmanna* family was given charge of the area on the bank of Chaliyar river. Since this family came from *Thirichiriyal kavu* in Chirayil village, the *kovilakam* became known as *Thiruchirakavu* and *Thachirakkavu* later.

The eastward expansion of Nedyirippu *Swaroopam* and the establishment of Nilambur *kovilakam* should be analysed in the historical situation evolved after the emergence of *Nadus*. Historians argue that, "a major factor behind the whole political process in this period was the agrarian expansion."³¹ The tremendous growth of agriculture occurred after the emergence of *Nadus* induced the *Naduvazhis* to acquire more cultivable lands.³² "Unsettled land brought under the plough meant the transformation of major chunks of tribal population into peasants."³³ When the over lordship of the *Kovilakam* was established the region, the indigenous tribal people were either enslaved or compelled to vacate their traditional habitat for more interior forest.³⁴ Those who were enslaved became bonded labourers, among those the *Paniyar* are the majority. According to Thurston, "their position is said to be very little reserved from that of a slave, for every *Paniyan* is some landlor's man; and though he is, of course, free to have his master, he is at once traced, and good care is taken that he does not get employed elsewhere".³⁵

The land and forest in the area were owned by Nilambur *Kovilakom* and private parties.³⁶ The *kovilakam* lands were auctioned to these *janmis* in which the tribals especially Paniyans laboured. It is found that till recently these *janmis* were the *mestris* (supervisors) of various *kovilakams* in the area. It is evident that about 98% of the Paniyan colonies in the district are situated along the side of paddy fields owned by the successors of these *janmis*. In the midst of the paddy field there was a *Kalam*.³⁷ *Kalam* was the farm house around which the labourers lived in small huts that made them available to the *janmis* at any time required for work irrespective of day and night.

A new system of bonded labour was started by the advent of capitalism with the introduction of plantation in the area. Capitalism began to penetrate into the tribal areas of after the British occupation of Malabar 1792.³⁸ By 1820, the English East India Company introduced plantations in coffee and tea in Waynad³⁹ and by 1840s the Company expanded plantations to other parts of Malabar viz, Waynad and Munderi near Nilambur. The British also started teak plantation at Nilambur. The first teak plantation was raised in 1842 in

the forests lying to the west of Nilambur.⁴⁰ The success of the Nilambur plantation urged the British to make control over the forest area which was the traditional means of livelihood of the hill tribes. Consequently, the hill tribes were largely recruited as labourers in the plantations and thus they became bonded labourers.⁴¹ The expansion of plantation sector led to the rising of the land values which encouraged land owners to sell their land to the planters. The planters purchased the lands from the land owners along with tribals who were living on it. They were practically slaves of the land owners. In some localities where the *jenmis* had sold the bulk of land and had consequently ceased to find regular employment for them; the tribals were taken to working on coffee estates.⁴² Thus, the tribes like Adiyans, Paniyans, etc. were released from agrestic slavery from paddy fields but became bonded labourers in the plantations on low wages.⁴³ Edgar Thurston observes, "In the middle of the last Century, when planters first began to settle in Waynad, they purchased the land with the Paniyans, living on it, who were practically slaves of the land owners. In some localities, where the *jenmis* have sold the bulk of land, and have consequently ceased to find regular employment for them, the Paniyans have taken kindly to working on coffee estates under European control."⁴⁴ The system continued up to the independence.

Even after independence the system bonded labour in Nilambur area continued. During the field work it was informed by some elderly *Paniyans*, Nairs and Mappilas, that in the past the *Paniyas* were either agricultural labourers or elephant workers till recent time. The *Paniyas* had the option to leave the landlord with whom they were working and to take up work with a new master during the Vishu festival at the time the contract for engaging them again for another year was usually renewed. This was done not through a written document but by way of giving Paniyans some clothes, oil and a meager sum of money. During this term the *Paniyan* has to serve his master and to do all works that his master required. There was no decent wage system but they received cooked food in the afternoon and grain for the night. The *jamni* had no obligation to look after *Paniyans* during his absence from work. If the *Paniyan* left their masters during the year before the period of traditional contract was over, they were beaten

up for not fulfilling the contract. For this reason the *Paniyans* rarely left their masters. The *jamnis* did not encourage the *Paniyan* leaving them and seeking employment with another.

The Bonded Labour System (Abolition) Act and Aftermath

The first legislative measure for the prohibition of bonded labour in Kerala was 'The Bonded Labour System (Abolition) Act, 1975'. The main aim of this act was to abolish the bonded labour system in the districts of Kozhikkode, Malappuram and Cannanore. The act abolished any payment of cash or any payment in kind under the bonded labour system.⁴⁵ The debtor or any member of his family shall not be bound or compelled to render labour or personal service after the commencement of the act.⁴⁶ Thus this act was the initial step to free the tribals from the yoke of bonded labour system. The very next year the Union Government enacted 'The Bonded Labour System (Abolition) Act, 1976'. The act says that on the commencement of this act, the bonded labour system shall stand abolished and every bonded labourer shall stand free and discharged from any obligation to render any bonded labour.⁴⁷ The net result was the tribals who have been detained in civil prison were released from detention. By implementing the provisions of the Act, 823 bonded labourers were identified and released from bondage in Kerala. Out of 823 released bonded labourers 150 numbers were in Malappuram district and they were fully Scheduled Tribes.⁴⁸ The identified bonded labourers were rehabilitated in various projects in the districts of Wynad, Kozhikkode and Malappuram.⁴⁹ Chokkad colony in Nilambur was set up for rehabilitating the freed bonded labourers of Nilambur valley of Malappuram district. The tribal families were given land and houses. A co-operative society, viz., Kalkulam Girijan Service Co-operative Society was organised with the participation of tribals.

In short, The Bonded Labour System (Abolition) Acts, of 1975 and 1976 have succeeded in liberating the tribals from the bonded labour system. But in fact the tribals of the area could not enjoy the benefits of the Acts completely because of its unscientific implementation. When they were rehabilitated they were actually transplanted from their

traditional homeland. Traditionally each tribe has its own territory but in the colonisation scheme all these rehabilitated tribes were supplied a common territory and forced to adjust in a congested area. Adequate lands for each tribe for homestead and agriculture were not supplied. Moreover, these tribals who have different customs and traditions could not accommodate with the new situation. It is evident that in the

Chokkad colony, the houses for *Aranadans* are provided in isolation far away from other tribal communities in a locality which has been called *Aranadan-cheri*. Because they are considered polluted and treated as the lowest in the tribals society.⁵⁰ Lastly, the Acts did not have any suggestion to control the private ownership over land and forest and to ensure tribals' control over forests and local resources.

Notes and References

1. Nilambur, the evergreen forest in Malappuram District of Kerala, is situated in the South East of Waynad and to the West of Nilgiri district of Tamil Nadu. The valley is one of the seven tribal belts of Kerala State.
2. Paniyan is singular and Paniyans is plural. The Paniyans is the largest single Scheduled Tribe in Kerala. According to 2011 census they number 77922 which is about 22% of the total ST population of the state. In Malappuram District also they possess first rank in terms of total Scheduled Tribe population. At present their total strength is 8701 which is the 58.6% of the total Scheduled Tribes of the district. (ITDP Census, Nilambur, 2006). They are mainly found in the Panchayaths of Chungathara, Edakkara, Amarambalam, Pothukal, Chaliyar, Nilambur, Moothedam, Kalikavu, Karulai, Vazhikadavu, Mambad, Wandoor. A group of *Paniyans* in the district are called *Kattu Paniyan* or *Kurinji Paniyan* after their area of habitation. They are found in the interior of the forest; therefore, they have primitive nature.
3. The works of Samuel Mateer, *Native Life in Travancore*(1835) and *The Land of Charity: A Descriptive Account of Travancore and Its People*; William Logan *Malabar Manual*, 2Vols.9(1887); Edgar Thurston *Ethnographic Notes on Southern India*, (1906) and *Castes and Tribes of South India*, (1909); A. 7. Government of India, *Report of the Commissioner for Scheduled Castes and Scheduled Tribes, 1960-61*, New Delhi, p.47.
8. It was in the year 1960-61 that the term 'bonded labour' appeared in the report of the Commissioner for Scheduled Castes and Scheduled Tribes. As per the report, the system of bonded labour existed in some states such as Kerala, Madras, Madhya Pradesh, Orissa and Rajasthan. In Kerala the system was in force in the districts such as Cannanore, Kozhikkode, Malappuram and Palakkad. Government of India, *Report of the Commissioner for Scheduled Castes and Scheduled Tribes, 1960-61*, New Delhi, p.47.
9. For details see A. Aiyappan, *Report on the Socio-Economic Condition of the Aboriginal Tribes of the Province of Madras*, Madras, 1948, pp.98-100.
10. In Kerala, four districts were the strongholds of bonded labour system. They are Cannanore, Kozhikkode, Malappuram and Palakkad. Government of India, *Report of the Commissioner for Scheduled Castes and Scheduled Tribes, 1960-61*, New Delhi, p.47.
11. Brahman migration began 4 to 3 century before Christ and it continued up to 8 to 12 centuries AD. They had established dominance over land and people. Perhaps these were the centuries when agrestic slavery originated. Saradamoni, "Agrestic Slavery in Kerala in the 19th Century" in T.K. Ravindran, ed., *Journal of Kerala Studies*, Vol. 1. 1974, No. 2-3, p. 455.
12. Herman Gundert, ed., *Keralolpathi*, reprint, Trivandrum, 1951, 5-7.
13. Karikkatu and Karantola fall within the Eranadu taluk. Karikkatu is a place in Trikkalangode village of Eranad. The place is predominantly of a Hindu settlement area. One of the oldest temple of Eranad namely Subramhnya temple is situated at Karikkatu. Karantola is suggested to the village of the present Trippanachi near Manjeri. Recently a ruined Vishnu temple has been renovated there. *Ibid*. Also see Kesavan Veluthat, *Brahman Settlements in Kerala*, University of Calicut, 1978, pp.21-33
14. Kesavawn Veluthat, *Ibid*, p.6.
15. Kosambi views when these food gatherers were subjugated they were reduced to the lowest *jati*, so low as to be outside the four *varnas* altogether. D.D.Kosambi, *The Culture and Civilisation of Ancient India in Historical Outline*, Calcutta, 1977, reprint, pp.170-173.
16. Adoor K.K.Ramachandran Nair, *Slavery in Kerala*, Delhi, 1986, p.7.
17. The term *Cheramakkal* or *Cherman*, means "sons of the soil'-cher-soil and *makkal*-sons." It is a caste name clearly denotes the origin of slavery in Malabar.
18. The term '*Paniyan*' is derived from *Pani* and *an* which means one who works or labourer.

32. This type of migration can be seen extensively in Medieval Kerala. For details see M.R.Raghava Varrier and Rajan Gurukkal, *Kerala Charithram*, (Mal), Vallathol Vidya Peedam, Sukapuram,1992,p-p196-272.
33. K.N.Ganesh,*op.cit*, "Agrarian Society in Kerala (1500-1800),.....p.73
34. As per the 1835 Census, the number of slaves in Malabar was 144000 which increased to 159000 in 1842. Quoted in P.K Gopalakrishnan, *Keralathinte Samskarika Charithram*,(Mal), Kerala Bhasha Institute, Thiruvananthapuram, p.422. According to William Logan, in Erand there were 40000 slaves. Quoted in K.S.Xevier, *Haviz*, Nilambur Taluk Co-operative College, Nilambur, 2004,p.20.
35. Edgar Thurston, *Castes and Tribes of Southern India*, Vol.II, reprint, Madras, 1975 p. 18.
36. In Malabar region, the proportion of possessing of private lands was as high as 74% in Malappuram district. For details see M.Kunhaman,"Tribal Economy of Kerala-The North-South Dichotomy", in T.K.Ravindran, ed., *Journal of Kerala Studies*, Vol. VII, Trivandrum,1980.
37. Cheerangan Kunji Muhammed, who had been estate supervisor of Nilambur kovilakom from 1958 onwards, said that the Paniyan of Edivanna were labourers under Govindan Nair, the then *mestri* of Manjeri *kovilakom*. Paniyan at Peruvampadam colony and Paniyans of Ettapara were working in the *kalam* of Moideenkutty Haji (Mampad) of Manjeri *kovilakom*.The Paniyans of Athikkad colony (Chaliyar) were the labourers in the Kunnathachal *kalam* under Sankunni Menon,the *mestri* of Deveswam land of Thrikkalur,Wandoor. The Paniyans of Adyanpara labored in the *kalam* of Nalakath Veerankutty. These landlords employed the Paniyans in the area for agricultural work without giving decent wages. (Personal Interview with Cheerangan Kunji Muhammed Edivanna, Nilambur.)
38. Malabar was ceded to the English East India Company from Tipu Sultan by the Treaty of Srirangapatnam in 1792.
39. The first coffee plantation was in Manantody by Captain Bavan which inspired the European capitalists largely to invest capital in the plantation sector .See for details K.K.N. Kurup, *op.cit*, *Peasantry Nationalism* p. 82.
40. The teak plantation of the Nilambur Valley should be viewed in the light of the strategic significance of teak in those days. Industrial Revolution and Napoleonic wars led them to seek more teak wood as a better raw material to the ship building industry, making of dockyard, railways etc. which played crucial role in the colonial exploitation. The Company also realised the commercial possibilities of timber that was tremendously found in the valleys of the Western Ghats. The East India Company adopted the same forest policy in Malabar that Great Britain had been followed in the mother land that was based on the requirements in oak chiefly of the Navy and mercantile marine. During that time England was passing through a very critical period of her history after the long years by Napoleonic wars. Her safety depended mainly of her naval vessels. The Malabar teak played a major role in maintaining England's naval strength in her hours of peril. Even after the Napoleonic wars the strategic importance of teak continued.

SWADESI AND PARADESI: A STUDY OF MULTICULTURAL SOCIETY IN MIEVEAL KERALA

V.V. Haridas

The early history of Kerala gives us a lesson in the interactions of multicultural and multilingual people. The people of various countries, regions, religions and languages interacted and shared their ideas with the indigenous people. Greco-Romans to Jews and Arabs left their mark in the cultural life of Kerala. Even in this coexistence the concept of *swam* and *param* was internalised by the people of medieval Kerala. The people regarded as *paradesis* in medieval Kerala represent multiculturalism. The various features of the multicultural society in medieval Kerala is analysed in this paper.

The *Manipravalam* literature refers large number of *paradesis* as traders in markets. The people regarded as *paradesis* in medieval Kerala are *Chonakar* (Muslims), *Cheenar* (Chinese traders), *Tulikkar* (Muslims from Turkey), *Konkanar* (traders from Konkan), *Malavar* (traders from Malva), *Pandis* (traders from Tamilnadu), *Chettis* (traders from Coromandel) and *Pattar* (Brahmans from Tamilnadu).¹ Duarte Barbosa, a Portuguese traveller of 16th century, called the Muslims except the Mappilas as *paradesis*. They include Arabs, Persians, Khorasans, Gujaratis and Deccanis.²

Indo-Roman Trade and Kerala

Kerala can be identified as a multicultural region from early period onwards. It was mainly which connected Kerala with other cultures. The trade relations of Kerala with Mediterranean world are well known. The accounts of Pliny, *The Periplus of the Erythrean Sea*, which is a Greek account of an anonymous traveller in the first century AD, the large number of hoards of Roman coins found from various parts of Kerala, etc. are evidence to this contact.³ It is said that the Greeks and Syrians in Alexandria came to Kerala in fact lacked a settlement similar to that of Arikamedu in Tamilnadu, which testifies the Roman contact. Though Archaeologists attempted to discover such a centre in various parts of Kerala only in the last decade we succeeded in finding such a centre.

The excavations at Pattanam in the Ernakulam district brought to light such a

settlement in Kerala.⁴ The excavations yielded a large number of indigenous potteries comparing with that of Roman and Mediterranean ware. It indicates that the settlement at Pattanam was a centre of coexistence by indigenous and foreign people.⁵ A large number of ports existed in the western coast of India, particularly in Malabar like Tyndis, Muziris, and Nelcynda.⁶

Migration from North India

Buddhist, Jain and Brahman ideologies came to Kerala resulting total transformation in the life and worshiping patterns of the indigenous people in the early period.⁷ Scholars have expressed divergent views with regard to its coexistence and conflict. In general, we can assume that it was a period of multicultural and heterogenous society. The patrons of Brahman sect itself gave grants to the Buddhist and Jain religious institutions. For instance, the Paliyam copperplates of Vikramaditya Varaguna.⁸ M.G.S. Narayanan says that the inscription dated in 898 AD shows that Buddhism continued as a prominent religion in Kerala even during the ninth century as against the prevalent view that it disappeared by that time in Kerala.⁹

Cheras and Svarupams

The multicultural aspects are evident in the inscriptions of Chera Perumals. It is explained as 'cultural symbiosis' by M.G.S. Narayanan.¹⁰ The Syrian Christian copper plate of 849 AD records the grant of lands to Mar Sapir Iso, the Syrian Christian merchant, and Tarisappalli (church of Tresia) by the governor of Venad Ayyan Atikal Tiruvatikal.¹¹ The Jewish copperplates of Bhaskara Ravi record the grant of 72 privileges to Jewish trader Joseph Rabban of *Anchuvannam*.¹² These inscriptions indicate the multiculturalism of medieval Kerala. The deeper analysis of these inscriptions indicate that these are to be viewed not merely the grants to traders and trade guilds. The Ezhavas, Vannars, Vaniyas, Taccar and Vellalar families are also transferred along with the grant of lands to the church. The legal authority over these people are also handed over to the church authorities in this grant. Similarly, the right to collect the amount received as *Talavarippanam* and *Mulappanam*, fine for the

sale of slaves who committed crime, was also handed over to the church. The church received such vast rights and authorities whereas the trading guild received the right to collect the *Patippatavaram* (the tax paid to the Utayavar, which is fixed as one-tenth share) which was paid to the Utayavar.¹³

It is in this multicultural society of Kerala after the disintegration of the reign of Chera Perumals the erstwhile Natu Utayavars became independent rulers known as *Svarupams*.¹⁴ The major *Svarupams* in medieval Kerala are Kolam *Svarupam*, Nedyirippu *Svarupam*, Perumpadappu *Svarupam*, and Trippappur *Svarupam*. Syrian Christians and other Christian sects established their settlements in the region of Cochin and Venad. The people including Muslims were actively present in the social life of Kozhikode and Kolathunadu in north Kerala. In *Mushakavamsakavya* which speaks of the Kolathunad kings narrates on the coexistence of various religions there. Though the Mushaka king Jayamani I was a devout Saivite his reign gave a feeling of secularism. Kavya narrates that Gods of different characteristics and religions flourished there in peace as do the animals of natural enmity in the hermitage of great saints.¹⁵ In Kozhikode it advanced to the establishment of power by Kunhali Marakkar at Kottakkal in Vatakara¹⁶ and in Kannur in the establishment of power by Ali Rajas and Arakkal Beevi.¹⁷ The Jews migrated from Kodungallur in 16th century found out their shelter at Cochin ruled by Perumpadappu *Svarupam*.¹⁸

Multi-culture in the kingdom of Kozhikode

Eranad Utayavars under the Chera Perumals emerged as independent rulers by the name of Nedyirippu *Svarupam*.¹⁹ The number of stone and copper plate inscriptions in Kerala generally began to be drained out. A stone inscription of Zamorin is found in the Muchunti mosque at Kuttichira in Kozhikode.²⁰ Zamorin uses the title Punturakkon in it. M.R. Raghava Varier and M.G.S. Narayanan have read the inscription which records the grant of Punturakkon to the mosque.²¹ In order to meet the daily expenses of the mosque lands are granted. The inscription in old Malayalam language is written in the Vattezhuth script. The signature of witnesses and prayers are written in Arabic script and language.

The privileges and rights of Syrian Christians and Jews at Kollam and Mahodayapuram respectively shows their trade relations. Therefore, it is no wonder when a new trading group came to Kerala was welcomed at Kozhikode. Kerala had a voluminous trade contact with China during this period is evident from the accounts of foreign travellers and the limited explorations in the coast of Kerala.²² But the Chinese trade declined by 15th century. The friendship and trade relations between Arabs and Zamorin is well known. This close rapport between Arabs and Zamorin is visible when the Portuguese reached at Calicut by the end of 15th century. This relationship gave way to the formation of a largely influential social group instead of formal relation to a trading community.

Barbosa, the Portuguese traveller, says that there are a large number of Mappilas in Malabar. He says that they are one fifth of the total population. He also says that a large number of foreign Muslims stays at Kozhikode with native wives and children.²³ Thus it is evident that the Muslim culture in Kerala naturally had the traits of multiculturalism. In Mappila culture the cultural features of Malabar are also incorporated. Thus, the term Muslims is used in this paper not in the limited sense of a homogenous sect but as a multicultural group. The active role of social groups like *Chettis*, *Pattars*, and *Chaliyas* from Coromandel, Baniyas from Gujarat, and Konkani in the city and around of Kozhikode during the period of Zamorin is evident in the accounts of foreign travellers and *Granthavaris*.²⁴

Mamankam and Muslims⁹

The *Keralotpatti* tradition says about the conversion of last Chera ruler Cheraman Perumal to Islam and his voyage to Mecca.²⁵ The Nedyirippu version of *Keralotpatti* says that the privileges and rights Zamorin got from Cheraman Perumal include the support of *Jonakar* (Muslims) and *Kathiyar* (Qazi) and the right for west Asian trade ('the right of shipping to Mecca').²⁶ The *Vamsavali* of Zamorin, which was sent to Colin Mackenzie in 1810 AD, says that the Zamorin also received the right of playing music by the Muslims from the Perumal.²⁷ Thus we can say that by these traditions Zamorin is legitimising the close relationship with Muslims in a retrospective way.

Mamankam, a festival celebrated once in twelve years on the banks of Perar river at Tirunavaya, is a ceremonial statement of Zamorin's political hegemony.²⁸ In the last day of this festival when the Zamorin is standing in state in *Nilapatu tara* (a platform) it is said that Kozhikottu Koya also stand on his left side.²⁹ We have no reference to it in the available palace records. But the *Keralotpatti* tradition endorse this fact. It says that it was Koya who instigated the Zamorin to capture Tirunavaya and become the protector of the festival *Mamankam*.³⁰ The Zamorin promised Koya a place on his right side in *Mamankam* if Koya help him in capturing Tirunavaya from the king of Valluvanadu. According to *Keralotpatti* Zamorin captured Tirunavaya with the help of Koya and became the protector of *Mamankam* and kept Koya on his right side during the *Mamankam* festival. The dominant position of Kozhikkottu Koya in the affairs of the kingdom warrants such a possibility. Why it is not mentioned in the two records available on *Mamankam* in the palace chronicle may be due to the nature of the documents which do not warrant such a reference and many such prominent persons are not mentioned in the documents on *Mamankam*. The tradition is found in the Nediyririppu version of *Keralotpatti* itself proves the fact of Koya's standing along with the Zamorin in *Mamankam* as stories in contrast to the practice will not have included in their version of *Keralotpatti*. Thus, the tradition may be taken at its face value. The charge of fireworks in the festivals like *Mamankam*, *Taippuyam*, *Purantan tira*, temple festivals and royal processions in the kingdom of Kozhikode was to the Muslims.³¹ Zamorin makes royal procession, which is a show of his pageantry in which Naykkans and Muslims were musicians.³² Zamorin visits the places in which held his sway. The newly invested Zamorin proceed to the temples and palaces and the houses of the nobles as in a royal procession based on precedent. The musicians also accompany him in all such occasions. In a palace document which records the royal procession of Zamorin from Ponnani Trikkavil Kovilakam to Kozhikode, Koya and Musali of the mosque escort him from Kallayi to Kozhikode. It shows that Muslims are incorporated as a part of court culture in a direct way.

The struggle of Kozhikode against Portuguese was led by the Muslim sailors. It is in this context the valiant struggle of Kunhalis are understood. Kunhalis mainly appears in the accounts of the Portuguese, who are their staunch enemies. Except the Portuguese descriptions only in a few songs the memory of Kunhalis are represented. In the palace records of the Zamorin reference of Kunhalis are not found. The available palace records called *Kozhikkodan Granthavari* consist only very few records before 1600 AD, the year in which the last Kunhali Marakkar was killed, may be the reason for this. However, in a later document, exactly in the record of 1667 AD the Zamorin granted the title Kunhali Marakkayar to Kunhikkalanthar the son of Kuzhiyodi Kottakkal Marakkayar.³³

There are various arguments for the reason of Kerala being the land of multi-cultures. It is clear that it was not due to the efforts of organised religions until the colonial period. According to M.R. Raghava Varier the peoples of different faiths from various western and eastern countries were attracted to Kerala for the popularity of pepper, clove, cardamom and other spices in the world markets.³⁴ He says that the reason for the patronage of different trade communities and religions by the local rulers in Kerala in the pre-modern period is the revenue from trade.³⁵

The multiculturalism mixed in the worshiping culture of Kerala has to be added along with the above stated physical reasons. The best example is the rights and privileges granted to the people outside the religions in different religious shrines. There are a lot of examples for such interrelated and cooperative worshiping culture in Kerala. The folk culture of Kolathunad particularly the traditional artform *Teyyam* incorporates multi-cultures. The deceased ancestors, heroes, spirits, demons, Gandharvas, Brahmanic gods and Dalits are worshipped as *Teyyam*. Not only in the folk culture and tribal arts we can find out various traces of multi-culture in many other aspects. Struggles and conflicts between these sects occasionally occurred. But these incidents are negligible in the history of multicultural society of pre-modern Kerala.

HISTORICAL STUDIES OF DALITS RIGHTS VIOLATION IN INDIA WITH SPECIAL REFERENCE TO TAMIL NADU

S. Kuppusamy

Introduction:

Economic development and social oppression cannot go together as development is a process of expanding real freedoms of the people of any country and social oppression is the process of restricting the freedoms. Individual human security, individual freedom and the achievement in development are interconnected. It is proved that development of a country

depends 20 percent on national resources, 10 percent on infrastructural, and 60 percent on human resources and social factors. In which, human resources and social factors are highly affected by violence against dalits, women, minorities, Children and other vulnerable groups and these violations very much affect economic development of a nation indirectly. Among all types of violence the most damaging is the caste

violence. Due to atrocities committed on Dalits, physical strength of the victims deteriorate making them unfit or less fit for their occupation. Thereby, violation reduce the productivity of the victims and total gross national product. For instance, the economic condition of victims sometime changes from richness to penury within a few minutes if atrocities such as destruction and damage of properties etc are committed. Besides, if there are bodily injuries, they have to spend a lot of money on treatment, and they lost their earnings during the period of their illness. The wealth of victims may be wasted in litigation. And furthermore, the educational progress of victims and their family members as affected. In consequence, the society is disintegrated and divided into different groups on caste line.

Hence, this paper to focus on the Dalits rights violation with special reference to Tamil Nadu by referring and make use of books, Journals, and records available in libraries and offices of NGO.

Historical background of violation on Dalits:

According to the Rig Veda, classifies of human beings in four varnas. Viz; Brahmana, kshatraya, Vaisya, and sutra and points out that all human beings are equal and they are all brothers. Brahmanas were considered as teachers or instructors as they came from the mouth of the God, and kshatrayas came from the arms of God and so they were given the job of governance. The people who took care of agriculture, cattle forming etc were considered as the sustainer of the world materially, as they came from the thigh of the God, sutras were considered as the toiling sections of the society as they came from the feet². However, in due course this varna started and degenerated into Jathi (caste) and it began to determine the career of an individual and the division of the society into four varna became rigid. Whereas, shudras were considered as sub-human beings and inferior to all, while Brahmana were considered as semi-god. As formal education was confined only to the study of Vedas, But shudra were not allowed to acquire knowledge. Because it was considered a sin and crime to give them education³. Gautam pointed out that; it was the custom that of any shudra bore any veda mantra. The molten glass or lead was poured in his ears, and if he recited any verse or words of the veda,

his tongue was cut down and if he remembered veda mantra his body was cut into pieces by an axe. Even they were not allowed to acquire property. But a Brahmin was permitted to take their property at his pleasure. It was considered that as shudras born in servility, they must be kept in servility forever and their salvation must be alone only through serving the higher classes. Even they were killed by the higher castes without paying any compensation or only paying a small value⁴.

In the modern period:

Shudras were not allowed to come near Brahmana. For instance an kanyakumari district, Nadar (backward) had kept a distance of 36 feet from Brahmana and 12 feet from Nairs. But, shudras had kept a distance of 96 feet from Brahmanas, and 60 feet from Nairs. Even Dalits were not allowed to draw water from the well which was used by high caste people. Shudras were not allowed to walk along to streets, where higher caste people lived. They were paid low wage or they worked for some food without any wage in money. Thus, the caste system was very rigid and every factors contributed the existence of caste system in India⁵.

From above it is clear that from to thousand and thousand years ago, division of people into castes later developed into caste system, endogamy and caste hatred. Caste is not merely a political form nor is it a religious phenomenon only. But caste is basically an economic structure. So dalits were backward religious, educationally, socially, culturally, and economically and all these led to uncontrollable atrocities on there. Sudras were treated like slaves, sub-human beings and even more cruel than animals. This pathetic condition remained unchanged in the ages Jainism and Buddhism though they were allowed to embrace the new religious order. But during the Gupta age their position slightly changed and they were allowed to listen to the epics and purana and were permitted to worship the new God Krishna. This continued up to the period rid the British established their rule in India. They introduced modern concept of laws that says all are equal before law⁶. This is the reason for the limited success of the temple entry struggles and struggle for wearing upper garments by low caste people in some parts of India. Between 1932 and 1936, a number of temple entry and

anti-disabilities bills were introduced in the central legislative Assembly and in the Madras and Bombay Legislatures due to the demands made by various social reformation organizations like the Brahma samaj the Arya samaj and the Theosophist. In 1938 the Madras legislature passed to first comprehensive and penal Act to remove social disabilities and violation of these rights was made cognizable offence. It was followed by some other larger princely states. Madras again took the lead in enacting a comprehensive temple entry act⁷.

Even though, a number of acts against social disabilities were passed, no constructive and concrete measure for the socio-economic and educational development was taken even in the British period. At the time of independence, social disabilities were at their peak and dalits were suffering from all kinds of discrimination. The Commission and continuation of caste disabilities. Since the period of later vedic age had created inequalities in all spheres of life. Hence, the Indian constitution was established with enough provisions to safeguard interest on the Dalits and all vulnerable groups⁸.

The preamble of our constitution promise of equality of status and of opportunity has been concretized by the provision of Articles 14, 15, 16, 17, 19, 21, 23, 25, 29, 37, 38, 39, 39A, 42, 43, 44, 45 and 46. Even then, the dalits suffered from various discriminations and violence because of lack of suitable law and support from the community where they lived. Hence, the untouchability Act was passed in 1955 and it was amended in 1976 and passed as protection of civil Rights Act. Then, the scheduled caste and the scheduled tribes Act was passed in 1989 and came into force on 30, January 1990⁹.

But even now, a portion of our population has been deprived of their rights, requirements and opportunities due to the caste based prejudices. All forms of deprivations are prevalent in nearly all parts of the country in their overt or covert form. Untouchability is not completely removed though reduced to some extent. However, still public utilities are not permitted to be used by them freely, dalit women are raped, dalit minor daughters are abused, their marriage processions are attacked and bridegrooms and members of marriage processions are attacked. Even their social, cultural, and religious procession are also not

allowed. Homes of dalits are burnt down and their meager source of livelihood destroyed. They are not allowed to enter the houses of higher caste. They are served in separate cups even in tea stalls etc¹⁰.

During to modern period Dalits Rights violation:

Not only the past but also present has been full of innumerable instances of violence against dalits. In spite of passing and commime in to force of the various Acts and Rules the atrocities are still being committed on Dalits though there is some improvement in educational level and enjoyment of some civil rights during the post independence period. Various serious crimes are committed against Dalits by dominant castes for various historical, social and economic reasons. High caste people try to dilute and weaken the force of compensatory measures by talking retaliatory pressures or involving in atrocities. Besides, dalits demand statutory minimum wage, refuse to do bonded labour and dirty works of scavengers and sweepers and claim other personal, social, civil, and political rights. All these antagonise the higher caste people and result in atrocities on dalits. Though there are provisions in laws to stop every disability such as, economical disability, social disability, political disability including untouchability denial of access to public places, use of customary passage, and fouling of water etc continued¹¹.

So far as in personal atrocities were concered, which affect both body and reputation. The atrocities include causing humiliation insult forceful drinking and eating of uncredible or obnoxious substance, stripping, outraging molest sexual exploitation injury or annoyances. Besides, to atrocities affecting properties are also not stopped. For instance, the land belonging to dalits is occupied by higher caste, residential premises and properties are damaged and their owners are killed or driven out. Dalits are maliciously prosecuted by public servants on false information, false evidence are created and even evidence of atrocities is destroyed. Dalits are not allowed to caste their votes in election or forced to vote to a particular candidate and even elected representatives from Dalit community are not allowed to assume office¹².

And another importance instance, are, a police officer, the protector of weaker sections

raped the daughter of a dalit in his presence in to police station and so the dalit committed suicide as he could not bear this inhuman Act.(The Hindustan Times, 20-12-1994 in TR Naval,

2001). In Bihar, between 1997 and 1998, 28 massacres were committed by Ranvir Sena, in which as many as 487 Dalits were killed. (The Hindustan Times, 12-2-1999 in TR. Naval), 2001). The Dalit student were not allowed is take their meals on the table which was used by upper caste students in the Mets of a hostel in the capital of our country (Indian Express, 24-02-1999). A Dalits youth was thrashed as he dared

to chew betel in the presence of upper caste men (The Hindustan Times, 24-12-1998) etc. in the same violence committed in Gujarat, Rajestan Punjab, Kerala, Tamil Nadu, Andra, Madhya Peadeesh, U.P, etc.,¹³.

In Tamil Nadu:

In Tamil Nadu between 1992 and March 1999, 80 dalit families were attacked by the dominant caste people on 23-7-1999, 11 dalits were killed and 426 were injured in Tirunelveli district alone. Besides, on 26-04-2005 that in keeripatti, Madurai, caste Hindus have instructed local shopkeepers not to sell vegetables and milk to a lady who unsuccessfully contested in the recent by election to the reserved panchayat (The Hindu, 26-04-2005). In another incident, nine persons ransacked 15 houses and hay stack yards of dalits in karsoozhthangalom, Naduvor in Tirunelveli, (The Hindu 07-06-2005). A dalit lady was murdered in Moolakkarai, Kanyakumari dismiss (Daily Thanthi 04-06-2005). The dected Dalits were not allowed to function in four resourced panchayals like, Pappapatti, Keeripatti, and Natermangalam in Madurai district and Kottaka chuiyendal in Virudhunagar, (Dr. Raja 2005 of The Hindu, 16-06-2005).¹⁴.

Further, it was complained that separate tea cups were used for serving dailts in a tea stall in Salem, (The Hindu 17-06-2005). Even in Tsunami Relief works, dalits were discriminated and not given proper relief (The Hindu, 31—08-

Year	Unite Cases Register	Murder	Grievous Hurt	Rape	Arson	Others	Crime Under PDA	Total

2009	-	-	-	-	-	-	-	-

2005, 27-08-2005 and 12-08-2005). Above all, dalits were not allowed to enter kanda devi temple in devaksai even after High court's direction (The Hindu, 18-06-2005, 21-06-2005 and 26-06-2005). A few servants conducted in this respect also provide enough information on Dalit rights violation ¹⁵.

Table: Untouchability cases and Crimes Atrocities Against Sc During 1981-2002¹⁶

Annual Report of commission forth SC& ST in Sukhado Thorat, 2002 & The Hindu 20.07.2007.

According to state wise Analyse of cases of rape of SC women during 1981, 1994 and 2002 in Tamil is one of the states that has recorded high incidence of atrocities against dalits. Caste clashes continue plague the southern store of Tamil Nadu (Nayyar Shams, 2004). Individual clashes deed to group clashes and they finally lead murder, property damage and other forms of violence. Dalits are socially backward as well as weak in number. According to 1991 census, the SC population comes to 13.82 cores and the Scheduled Tribes population to 6.77 crores representing 16.33 and 8.08 percent of the total population respectively¹⁷.

In Tamil Nadu the percentage Scheduled Caste population was 19.18 percent in 1991 and 19 percent in 1998. On the all India map, Tamil Nadu has the sixth biggest concentration of details compared to the state average of 19.18 percent the districts which have greater than the state average are Nilgiris (30.22%), South Arcot (inclusive of Trillipuram and Cuddalore districts)(27.11%) Chengalpattu (inclusive, Thiruvallur and kanchipuram district 25.92%) Thanjavur inclusive Tiruvannamalai (21.46%), North Arcot (20.70) and Dindugul (19.41)¹⁸.

Source commission for sc/st in vimal thorat, 2002 and The Hindu, 20-07-2004. Where as estimated number of caste in India is 16,000. In Tamil Nadu, these are 174 castes and sub-castes categories as scanned 34 tribes listed as ST. these people, who were discriminated down the ages, get education and then they claim their rights, demand minimum wages, refuge upper caste to do bonded labour and inhuman atrocities. When the Dalits get enlightenment, which is not tolerated by them eventually leads to clashes and destruction of Dalit properties by dominant caste people.

The first and major atrocity, leaving a lasting impression on the psyche of dalits all over Tamil Nadu was the killing of Immanuel (one of the dedicated fighters for dalits rights) at Mudukulathur village in 1959. From then onwards, a number of atrocities have been happening every year. In 1968, 48 dalits workers were killed in cold blood in kelvenmani massacre. It led to atrocities on dalits in more than 20 different parts of the state. During the late 1980's caste clashes escalated in the southern districts. For instances which faced a civil war type of situation due to devar –dalit clashes except kanyakumari witnessed frequent clashes during 1995-1997 and 1998. During those period. The estimates of economic damages are not actually shown. But as many as 130 people

were died in the district of Tirunelveli, Madurai, Tuticorini, Ramanatha puram and Virudhuragar. The damage caused by this clashes was estimated by people watch, Madurai at Rs. 42 lakhs etc. If every clash is taken for estimated, then the total damage may run to crores of rupees. Even it is not easy to estimate the loss by assessing the damage caused to property. Loss is caused by injuries, cost of treatment loss of productivity, etc., and if we take all these into account its total loss will be much more than if appears to be. All these loss can be avoided, if there is a political will be stopped it and people are made aware of the fact that all are equal before law and every citizen has to fight to lead a life with dignity¹⁹.

Conclusion:

As analyzed above, we can see that scheduled caste are even now like apartheid in compassion to forward castes, only giving reservation, in jobs on papers has not been effective, because the implementation atrocities are coming from for land caste. Unless the scheduled castes have not been fully empowered in decision making, implementation and to share the equal opportunities, the situation would not change. In other words education is one of the important factors which can make significant contribution towards improving the social status of sc's has been viewed as to crucial mechanism through which members of Sc are to be equipped to obtain secular occupation. So that they can improve their status. The advent of political order recognized the principle of "Human Rights" and equality. The new political system aimed at transforming the social system from restrictive status to that of achieved one. However, education has provided only marginal relief to untouchables even elite education and secular professions could not offset to evils of caste system and practice of untouchability in the present day in Indian society.

TEMPLE AND ARTISAN COMMUNITIES IN MEDIEVAL TAMIL COUNTRY

K. Mavali Rajan

The present paper is an earnest attempt to focus on the artisan community and their craft activities in medieval Tamil country. Among the different social group of Tamil society the artisan communities are prominent, who involved in skilled labour, occupied important position in the social life of the entire society. There were different categories of artisan community in early India like painters, sculptors, carpenters, iron-smiths, who were mostly considered as class of master-craftsmen or skilled artisans belongs to the lower caste groups in the Brahmanical social hierarchy. The term 'artisan' is generally used in the sense of one who is possessed of practical skill in a particular trade or profession such as a handicraftsman, a mechanic, etc. The *Manu*, considered as a law book of Varna-Hindus gives some references to artisans, craftsman, practical arts, handicrafts, mechanical works, etc. These artisans can be placed in two broad divisions, namely general artisans and metal workers. Those who made a large number of daily uses wood work such as plough, sward, cart, chariot, utensils, pestle, bed, seat, etc. were considered as general artisans and those who associated with the working of metals such as gold, silver, iron, brass, copper, tin, lead and precious stones were known as metal workers.¹

Artisans in Early Indian History

Art activity in ancient India involved by different sections of the society: artisans for

raising monuments, temples, patrons for financing the projects, priests for consecrating the monuments and so on. The artisan community in ancient India was not an isolated social group, belonged to the general section of the society engaged in various craft production. In ancient India different categories of artisans are found clubbed together in one general group called *silpin*. Likewise, the term '*shilpa*' is of a wide connotation and it includes within its ambit various crafts, skills and occupations.² Similarly the word '*rupakara*' was frequently used in ancient literature for sculptor as well as the term '*silpi*' for painter, '*vaddhakis*' for carpenters. The *Arthasastra* also mention a term '*karu*', which generally designates artisans, specifically connected with architecture and sculptural art. The stone workers were referred in inscriptions as '*silākarmanta*' or '*sailakarma*'. The sculptors are mentioned as *rūpakāra*, *aveśani rūpadaksha*. In *Rig-Veda*, the god Vishwakarma is mentioned as *dhatu-karmara*, here *karmara* is refer to artisans and artificers (black-smith) ³ and *dhatu* refer to raw-material. The *Vajasneyi Samhita* categories the artisans: chariot-makers, carpenters, potters, smiths, jewelers, herdsmen, etc.⁴ The ancient text *Mahavastu* refers to various classes of artists and their field of specialization. They are painters (*chitrakāraka*), carpenters (*vardhaki-rupakāra*), carvers (*kārupatrika*), modelers of clay (*pustakāraka*), plasters (*pustakarmakāraka*), decorators (*lepaka*), and

architects (*sthapati-sūtrakkāra*). The *Sutradhara/Sutradhara* were became master-iconologists and iconographer in later Indian art history, in sometimes they were given place next to the *Sthapati*. These different categories of the craftsmen mostly involved in temple building, stone-caving and architecture works.⁵

Renowned historian S.Settar in his general presidential address delivered at the Indian History Congress views that "the first artisan in the history of Southeast Asia -----is found in Karnataka. It is with the artisan named Champada, who carved three edicts at Brahmagiri that the documented history of the Indian artisans begins". Further he says that the monumental scale of communication both visual and verbal developed by Asoka (273-232 BCE), should have made him depend heavily on a corps of composers, scribes, engravers, sculptors and architects. They were the early artisan community mostly involved in erection of edicts, *stupas*, *viharas*, *chaityas*, etc.⁶ Settar categorizes the artisan community of Asoka time into five categories such as indigenous or local artisans, folk or rural artisans, descendents of West Asian artisans, traditionalists or purists and skilled artisans.⁷

According to inscriptional evidences the king Asoka employed a large number of artisans to engrave the *Prakrit-Brahmi* (*Prakrit* language and *Brahmi* script were first used by Asoka for transacting official communication) edicts. One of his edict mention about an engraver (*dpr=dipiri*). A.H.Dani has made some interesting observations on the writers and engravers of Asoka's time. He says that (a) it was the writer who dedicated the style of writing not the engraver, because the letter's role was only secondary and (b) that writing of the inscription on the stone by the '*lipikara*' preceded 'cutting the letters on the stone'.⁸ From the statement it is clear that Asoka used a separate artisan community to write and engrave his edicts and other official proclamation. Asoka engaged several *Kharosthi* artisans to engrave edicts at Takshashilla, Chunnar, Pataliputra, Girnar, etc. Not only the scribes and engravers the sculptors and architects were also engaged in the making sculpture and architecture in different regions of Asoka time.

We find references to in Buddhist *Jataka* stories about the artisan guilds, which include

those of wood workers, smiths, painters, ivory carvers, site-explorers and image makers. In Tamil *Sangam* texts there are instances to the Yavana artisans, who were experts in making images, seems to have spread to the farthest corners of the country. In the *Pattupattu* (Ten Idylls) poet Nakkirar refers to a beautiful doll made by a Yavana. In *Manimekalai* we get references to the Yavana carpenters and their skilled works along with the mention of Magadhan craftsmen, Avanti blacksmiths, Maharatta Smiths and the Tamil skilled labour. From the descriptions we can understand that the early Tamils of the 2nd to 5th century CE invited many skilled artisan communities from the different regions of both inland and foreign for the purpose of makings images and other artistic works.⁹

Vishwakarma

In modern days the artisan communities are known by the name *Vishwakarma*. Even the community prefers the new name, which has evidential support in 12th century inscriptions that refer to smiths and sculptors belonging to the *Vishwakarma kula*. Although Vijaya Ramaswamy notes that "-----the Vishwakarma community is obviously cutting across caste lines and----- comprises five socially and economically differentiated castes".¹⁰ The community claims descent from the god Vishwakarma, who is considered by Hindus to be the divine architect or engineer of the universe. According to *Vishwakarma Purana* it is believed that god Vishwakarma had five children namely Manu, Maya, Tvastar, Shilpi and Vishvajna, being respectively the clans of blacksmiths, carpenters, bell metalworkers (metal casters), stonemasons and goldsmiths. The five children served the gods as artisans, and possessed the ability to create things by simply imagining them.

The Vishwakarma have held a higher social status for many years, and believe that the trades which they traditionally follow are superior to the work of a manual labourer because they require artistic and scientific skills as well as those of the hand. According to George Varghese, their claim to high status is 'one of the mainstays of Vishwakarma identity' in what is otherwise a fragmented, incoherent community that has often suffered from internal differences of opinion. Vijay Ramaswamy in her

key note address delivered at the 38th session of the South Indian History Congress states that “the craft persons collectively referred to as Vishwakarma today constituted a unique craft/artisanal collective that cut through caste and class lines having as its constituents the humble blacksmith and carpenter as well as the affluent *Sthapati* who was the mason-cum-architect and the *Pon-Kollar* or goldsmith. The primary identity of the craft persons stemmed from their community rather than their caste identity. The majority of medieval inscriptions emphasize that the artisan belonged to the *Vishwakarma kula*, rather than detailing his caste affiliation. Inscriptional evidence makes it amply clear that despite belonging to different professions and different *jatis*, these craftsmen claimed a collective entity that transcended caste and class to form the larger community of craft-persons”.¹¹

Social Status of the Artisans

The artisan community is spread widely throughout India and played a vital role in the village economy. They occupied an important place among the village community and as skilled labour in craft activities, produced the agricultural implements, which led to the agrarian and industrial development in early human society. Their socio economic status varied from a very high level to the low level in different parts of India, as they earned high wages in urban centres and low wages in villages. Ananda K. Coomaraswamy says that “the Kammalar (i.e. *Panchalar*) were known as Vishwa or Dev Brahmin. They spread gradually towards the south and then reached Ceylon, Burma & Java. The Vishwa-Brahmins claim to have been the spiritual guides and priests and their position in the society survives in the saying the ‘Vishwa-brahmin, is guru to the world’.¹²

They also performed priestly rites in connection with consecration of images. They both claim and possess various special privileges, which they always upheld with much vigour. Coomaraswamy also mentions “throughout the rest of ceremony all priest officers had been performed by the craftsman themselves acting as Brahman priest”. Krishna Rao says, that “The most highly organized and efficient of the industrial classes was Virpanchal comprising Goldsmiths, coiners, blacksmiths, carpenters and masons. In the finest period of

Indian art, particularly between 8th and 9th century CE, they claimed and enjoyed a high social status in the community, equal to Brahmins. The art of engraving and sculpture had attained a high stage of development. It was exclusively cultivated by *Panchalas* who wore sacred thread and considered themselves as Vishwakarma Brahmins. The craftsman being deeply versed in national epic literature always figured in the history of India as missionaries of civilization, culture and religion. The intellectual influence being creative and not merely assimilative was at least as great as that of the priest and the author”.

In a Brahmanical scheme of society as outlined in *Manu*, artisans belong to the lower orders had a far more degraded social status. The lower of Varna occupied by the Vaishyas and Sudras, who possessed the requisite technical knowledge and experience of production and distribution, which the members of the higher orders lacked. R.S.Sharma in his work *Economic History of Early India* critically analyzed the functions of the different *Varnas*. He says that the upper two *Varnas* were non-producing social sections mostly involved in activities like praying and conquering and other two castes were engaged in primary task of production. Accordingly those who considered as upper *Varnas* were mostly non-producing social groups, enjoyed enormous social rights. The next two social groups were the producer community, produced for the whole society. It has been rightly pointed out by P.V. Kane that the principal tax payers were agriculturists, traders, manual workers and artisan communities.¹³ Though historical sources strictly stress that the artisan community enjoyed a respectable position in the social system during the early period. Many literary texts cite that some of the artisans groups engaged in various crafts belonged to the vis, ‘the Aryan community’. The special place of *Rathakaras* and *Karmaras* and their responsibilities have been indicated in literary texts. Sometimes they were designated as *ratnins* and assigned important roles in the coronation ceremonies of the kings.¹⁴

Temple and Artisan Community

The temple and its ritual and non-ritual activities including the management were engaged by the different communities of the village. Among them the Brahmin functionaries

played vital role as priests, officials, land owners of the temple lands, etc. They performed all the ritual services like rites and sacrifices and received grants from the king and royal family in return for their ritual service. The Brahmins controlled the administration of the Hindu temples as well as the management of the *Brahmadeya* and *Devadana* villages. The landed community, merchant community and other privileged section of the society who also had lively interest of the temple. From the South Indian Inscriptions of the medieval period we find references to non-Brahmin residents, who rendered numerous services in the temple. They often had made number of endowments to the temple for the religious offerings. Due to close association with the temple activities many of them both Brahmin and non-Brahmin functionaries were contributing their services to the local Siva and Vishnu temples, which are recorded in temple inscriptions of the medieval Tamil country.¹⁵

In addition to the Brahmin, land owning community and merchant class, there were a few artisans and craftsmen, who settled within the limits of the temple-centered village and indebted to render their service to the temple as well as village. Five of the leading artisan community in south India came together in a unique association and were hence collectively identified as the *Kammalar* in the medieval Tamil country, as the *panchalar* in Karnataka; as *ainkudi kammalas* in Kerala; some inscriptional evidences referred them as *pancha kammalar* and *anjuvannam* (five classes of artisans).¹⁶ However, in many of the medieval inscriptions they are also collectively referred to as the Rathakaras, literally, the chariot makers. In modern days they are referred to as Visvakarma, divine architect they claim as decent. The Visvakarmas were made up of five occupational groups (*panchalar*); goldsmith (*tattan*), brass smith (*kanna*), black smith (*karuman* or *kollan*), carpenter (*tach-chan*), and mason (*silpi* or *kal-tachchan*). These five Visvakarma group were also referred to as *kammala rathakarar*, *pancha kammalar* in medieval inscriptions, who were primarily engaged in the temple construction activities and engraving temple inscriptions that revived in the 11th-13th century CE. The construction did not involve the mere erection of shrines but the building up of an entire temple complex spread over a vast area.¹⁷

Among the five artisan community the black smith or *kollan* who were very active member of village community did craft work that was substantially different in nature from the work of a *perum kollan* or master black smith who was an integrated part of the temple building process.¹⁸ There were some group of people involved in the engraving inscriptions and the images of gods in the temple building. These engravers seem to have been smith attached to that particular temple. Information on engravers (*porkoyil achari*) is available in the Pandya inscriptions. The inscriptions also list the various craft functions involved in the sculpting of images and in temple building. Many of the inscriptions speak of sculptor called *shilpi* or *kal-tachchan* and *tirumeni cheyvar*. The architect of the temple also referred to as *sthapathi*, who has knowledge of the science of architecture of the temple.¹⁹ The Tiruvarur inscriptions describes the *sthapathi* as *vastu tatvajna*, which means that a person who well versed in the science of architect.²⁰ Besides the crafts production they directly concerned with the temple building, the Kammalar also engaged in the construction of wells, tanks, and sluices.²¹

The Rathakaras, chariot maker, one of the well known leading artisan community and was the privileged group in the village communities who involved in the chariot-making, the erection of *gopurams* of the temple. The chariot-makers were also used as a means of domestic transport along with the common carts and employed in the temple to draw the images of the gods during the festivals. Inscriptions make it clear that the craftsmen residing in the *tirumadaivilagam* of the temple, served to the temple. Another inscription describes the residential quarter of the Rathakaras, like the blacksmith, and the village carpenter as *kammanacheri* which located near the potter and other functionaries' residence.²² The medieval Tamil epigraphs were recording the names of craftsmen refer to them as 'our temple goldsmith' or 'the temple mason (*porkoyil*)', etc. The temple also employed various smiths and had carpenters and even repairer attached to the temples. An inscription of Vira Pandya dated 951 A.D. from Ambasamudram in Tirunelveli district mentions the apportioning of land to the smith, potter, drummer, barber, and others.²³

On the other hand the inscriptions of medieval Tamil country refer to artisan classes like *taccar* (carpenters), *kalavaniyar* (potters), *vaniyar* (oil-mongers) and *vannar* (washer men), brought to settle in the temple-centered society. These skilled workers appointed to the temple to perform various services. The potters were appointed to supply new pots to bring water to perform *pujas*. The washer man, barbers, tailors, jewel-makers were also appointed in temples to perform various temple services. The jewel-makers had to make various ornaments of the deities, braziers for making vessels, carpenters for making wood work in the temple and goldsmith for making gold ornaments.²⁴ Teachers and scholars were also in the employ of the temple, who involved in intellectual debates in the temple.

The stone mason of the villages of medieval Tamil country were enjoyed some privileges such as the belonging of two conches, the beating of drums and so on at domestic occurrences; good and bad, the use of sandals when they went out of their homes, and the plastering of the walls of their residences with

lime plaster. Sections of land were given to temple security personnel Kaikkolas, who were as warriors and policemen during the medieval period, but later they were the members of weaving community.²⁵

In concluding part it is important to note that the number of artisans and craftsmen settled in temple land to ensure their services to the temple as well as its settlement. These people were granted the right to settle down in the temple's landed property, which they were bound to respond through their arts and crafts service.²⁶ Thus they also became groups of hereditary occupations under the encouragement of land rights. As usual they were also graded according to their birth and occupation and were accommodated in to the *Varan-jati* complex. Just as any of the major caste, the caste of artisans or craftsmen evolved its own sub-caste and separate hierarchy. The actual tillers of the soil, who were purely landless, constituted the lowest layer. In short, the temple working as an institutional force had accelerated the crystallization of the caste-based stratification.

CULTURE AS RESISTANCE – IDEOLOGY AS 'SELF' ORGANIC
INTELLECTUALISM OF E. V. RAMASWAMI NAICKER, IN RETRIEVING
DRAVIDIAN IDENTITY: A RE-READING

A. Muhammed Maheen

Marginality is a source of both powerlessness and power and results in subordination and resistance. Marginality arises from a comprehensive association between writing state, history and religion. Marginality has to do with distinctive and unequal subject positions within the fields of power and knowledge. The combination of state, power, history and ethnography constructs the other as a ferocious and backward people far removed from religion and civilization.¹

In any society dominant and subordinated classes, as well as their ideologies and narratives of the past and present are always in conflict. The ideology that serves the interest of one group subverts the interest of others.² However, ideology conceptualise in a society where the dominant class gain an upper hand. As the knowledge system and socio-religious world view developed by the caste elites were intended to exploit and enslave the majority low castes. Infact the history of Indian society from the Aryan immigration³ to the present era has been a history of conflict and contestation over land resources and cultural practices.⁴ The intruders, who later glorified themselves as Brahmanas and the indigenous people were denigrated and de-humanised as rakshasas, dasas, Shudras, Chandalas, Panchamas in modern sense as dalits, adivasis or marginalised etc.⁵ Ideology, often, transforms into hegemony.⁶ It is seminally expounded by Antonio Gramsci and according to him it is not just a system of domination (whether of ideas or political power) but a process whereby the dominant class indoctrinates the masses and manufactures a consensus in civil society through largely peaceful means.⁷ Ideology is thus an instrument of domination finds an archetypical expression in Brahmanism and that Brahmanism is the main exploiting system of traditional Indian Society. Brahmanism uses the ideology of caste as a crucial instrument

to dehumanize divide and dominate the productive majority.⁸ This hegemonic ideology which acts as a 'permanently organized force',⁹ a phrase used by Gramsci, which never stood for any consistent philosophy, doctrine or ethics, but has adjusted its hegemonic methods and principles to changing situations. Power, thus, is the core of Brahmanism. The exercise of power necessarily involves conflict and resistance. The contestation for economic, cultural and intellectual resources between the powerful and the powerless involves both dominance and resistance. This conflict, obviously multifaceted, takes place at different levels. There are many forms and faces of domination, which is equally true of resistance. A new humanitarianism or western rationalism introduced by the colonial administration provided new opportunities for the casteless people in the sub continent.¹⁰ In other words, the colonial modernity contributed the genesis for many social movements that helped to reconstitute the identities of the communities or other social groups.¹¹ In short, clubbed with the process of Colonial modernity, a transforming political economy and corresponding structural changes brought about new initiatives to establish a 'new self' among the Dalit groups.¹²

To retrieve historical subjectivity (agency) and to write inclusive histories, one cannot ignore the pre-colonial anti-caste epistemic lineage of Dalits. Running counter to the dominant social and historical representation of Dalits as acquiescent subjects is a narrative of sustained resistance in the form of social memory, folk traditions, songs, folk tales and subversive ritual performances that was created not just as tactic of survival but also an entire alternative worldview set against the unequal and oppressive Brahmanical Hinduism.¹³ The Brahmanical epistemology inflicts epistemic violence while enforcing material and social deprivation in order to crush Dalits' sense of self

and to dehumanise their existence. In this way, anti-caste epistemology acts as a counter culture to preserve individual and community identity by weaving soothing alternative narratives about caste and inverting the Brahmanical interpretations. For centuries, as individuals and communities, they have actively questioned their stigmatized existence and contested dominant caste Hindu Brahmanical ideologies, which excluded them from material wealth and denied them a dignified social existence.¹⁴ From ancient times to the post colonial present, Dalits have been articulating anti-caste ideologies and aspiring to an egalitarian, ethical society based on principles of social equality and human dignity. Even though the forms of expression and modes of protest changed continuously over time in order to adopt to altered historical circumstances, the broader anti-caste narrative survived as a motif.

It is in this contest, it is necessary know the history of caste from one's own experience. Breaking the 'culture of silence' imposed on them, they have started telling their stories in their own language and idiom, and refute the conventional representation of themselves in history and culture and thereby deconstructing the history of Brahmanised hegemony and endeavoured to search a history of their own. Now it is clear that they were do not share history. Not only share not even a history of their own.¹⁵

However, the irony is that the Western principles of democracy, equality, human rights etc found favour only with the elite class. They further endeavoured to strengthen caste solidarity between members of the same caste. Gopal Guru suggests that though the normative grounds are created by the politics of recognition, emancipation and education of the subject, as an offshoot of modernity, at the same time we must recognise that these modern principles, along with modern institutions, bureaucracy, industrialization and the public sphere, have also created new conditions for the perpetuation of humiliation.¹⁶ Modernity, argues Guru, creates new shared moral and ethical commitments to egalitarian values among dominant and subordinate groups, yet it also creates new practices that contribute to the latter's exclusion.¹⁷

Thus it is evident that, the counter movements spearheaded by the Dalits were sought to be contained, controlled and

demobilised by the hegemonic structures of power in political and social sphere.

It was in this atmosphere of coercive suffocation that radical Dalit sensibilities sought to give vent to their frustration and outrage, thus aligning themselves with other revolutionary and radical movements at least for retrieving identity.

In the Tamizhakam, the second half of the 19th century witnessed sporadic yet determined attempts by lowered castes to articulate their deprivation and humiliation, and also a sense of longing to belong to their original Dravidian culture. Here it was easy to give linguistic, ethnic and indigenous identity to the non-Brahman as who had a language with non-sanskrit origin, recognised as Dravidian or Tamil. Here, the non-Brahmanas adopted their indigenous and autonomous Tamil literary traditions in a battle for social and political equality emphasising the pre-sanskrit and non-Aryan Dravidian heritage of the south.¹⁸

Several Tamil Sanghams were formed in cities like Madurai and Madras. The revival of interest in ancient Tamil classics spurred the publication of many journals which attacked the alien of oppressive Brahminic culture. The Ramayana was turned on its head by glorifying Ravana and depicting Rama as the Villain; the murder of Shambuk, the untouchable boy by Rama was mourned and roundly condemned. The Dravida Kazhagam of 1882 raised and debated the ideological matrix of Dravidianism. At the turn of the new century, the stage was set for emergence of a powerful non-Brahman movement in the region.¹⁹

It is in this back drop let me examine the emerging non Aryan consciousness in the 19th and beginning of the 20th century South India by, Erode Venkatappa Rama Swamy Naicker and others.²⁰

The origin of Non-Brahmin Movement otherwise called anti-caste movement started with Jyothi Rao Phule (1827-1890) in Maharashtra.²¹

The non-brahmin movement in Tamil Nadu came vigorously with the aggressive leadership of E.V.R who is popularly known as Periyar. He began his Self-Respect movement in 1925 and the primary objective of this movement was to discard the priestly service of the Brahmins and

their value system by resisting the tenets of Hinduism. Seeking a basic change in the traditional social system, Periyar wanted to establish an entirely new pattern of values in which all people irrespective of their caste creed or set could enjoy equal self-respect.²²

E.V.R, a religious mendicant who had been completely disillusioned by the Congress and Gandhi while taking part in the Vaikom Satyagraha. He stopped calling Gandhi 'Mahatma' in 1928 in protest against Gandhi's interpretation of Hinduism, which, he said, only perpetuated untouchability. He rejected Gandhi's idea of separate temples for Adi Dravidas and rejected the notion that intermarriage and dining were personal and not part of social reform.²³ Despite his opposition to religion, however, he led the campaign for temple entry for untouchables, while insisting this was only to assert their rights of access not to promote the worship of stones or for them to spend money like other fools. Equally EVR advocated access for all to the inner sanctum of temples and the right of every community to take up priestly duties.²⁴ This was really a virtual crusade to liberate the non-caste Hindus from the caste evils including idol and devil worship and other forms of superstitions and caste oppression. Indeed, it was an attempt to develop 'self' among the avarnas. If Phule drew some of his egalitarian inspiration from Thomas Paine, Periyar was more impressed by Robert Ingersoll.²⁵

Like Phule and Ambedkar he was an egalitarian in a Western, individualist vein. The notion of human dignity was so central to his thinking that after quitting congress in the mid 1920s he launched the Self Respect Movement, whose key word was 'Samadharm, ie, equality.²⁶ He also emphasised the social purity of the Dravidians.²⁷

Naicker established an equation between the Brahmins and the Aryan invaders. Himself the son of an affluent merchant from the Balija Naidu Caste(trade), he presented the lower castes as the Dravidians and used Dravidianism against the Brahmanical elite. Boycotting Brahmin priests- especially for weddings, Naicker initiated self respect weddings celebrated without such priests. Through resolution he condemned the Varnasharma dharma.²⁸ Manusmriti was burnt on several occasions. Caste system was spelled out in terms of a return to the sources of the

Dravidian culture. His Samadharm came to stand in for a cultural and civilizational alternative: a social order based on radically different principles from the present, which needed to rest on premises derived from a non-aryan, non-sanskrit ethos.²⁹ The activism of Naicker are the symbol of a negation of existing morals and ethics. 'Negation' a Gramscian tool is applicable here. Negation is a system of denial. This is an act of dismantling or upsetting something existed in the society. It aims a destruction of hegemonic society in toto. This theory says, the Subalterns historically on the defensive can achieve self awareness through a series of negations.³⁰

Periyar had an explicit ethnic conception of the low caste identity, which he compared to the situation to the blacks in South Africa.³¹

Periyar's radical ideas about gender and sexual equality were revolutionary in the Indian context. For eg: Periyar takes a radical stance against the devadasi system as he believes it is a concrete sign of the subordination of lower caste woman to the fulfillment of the needs of upper caste men.³² Moreover EVR who radically transformed the political commonsense of Tamil Speaking South India during the 20th century. His critique of the nation form became available only within the ethical horizon of the de-territorialised post national imagination.³³

As I said earlier, As a visionary, Naicker stood for the education of the down trodden. Education has helped to empower countless impoverished and illiterate people throughout the world. It is a vision of looking education as a process of liberation and as an authentic tool for the emancipation of human being.³⁴

Apart from education, the leaders of non-brahmanic movement including Naicker introduced various new social practices which challenged the hegemony (Counter hegemony) of the upper caste and brought revolutionary changes in their day to day lives. His advocacy of self respect, marriages and emphasis on birth control method constituted an important critique of Brahmanical patriarchy.³⁵ His attack on the caste system had a positive impact as some of the upper caste men, who defying the Brahmanical orthodox practices, chose women from the lower caste for inter-caste marriages. As a true moralist, he applied, the concept of chastity to both sexes.

Women needed to be independent and not to bear children. They should hold 50% of the jobs. His movement sanctioned divorce and pleaded for the property rights for women and thereby he prepared a platform to address women's issues and uphold their dignity and even identity.³⁶

To propagate his ideas Naicker founded the Tamil Journal *Kudiyarasu* (Republic),³⁷ *Paguttarivu*³⁸ (Common Sense) and *Viduthalai*(liberation)³⁹. It continues to this day as a daily. How does a print culture influence a period and society see the works of Benedict Anderson, 'Imagined communities', Partha Chatterjee 'Empire and Nation' Robin Jeffrey 'Media and Modernity'.

Naicker sensed that caste had come to play an important role in economic life and it developed strong roots in occupations in the birth based hierarchial class society of early India and few movements of protest against injustice involved in its intrinsic inequality had power to change this ground reality or to offer any viable and enduring alternative. Therefore with the help of some of his colleagues, Naicker drew up a 14 point socio-economic programme known as the 'Erode Path'.⁴⁰ The social reformer and anti imperialist in him was greatly influenced by what he had seen of Bolshevic power in the Soviet Union which made him to visit Soviet Union.⁴¹ Naicker returned from the Soviet Union in 1931 a fiery revolutionary advocating the overthrow of the govt. by violent means. He translated the Communist Manifesto into Tamil. His extremist politics landed him in a prison for sedition. Freed in 1934 he called upon his followers to renounce all British conferred titles and honours.⁴²

In response to Raja Gopalachari's, the then the Chief Minister of Tamil Nadu, imposition of Hindi on School children (official language after freedom), Naicker uphold a Dravidian State, a search for Tamil identity separate from the rest of India. Often a first demand for secession in Modern India. As the freedom struggle entered its final phase, Naicker realised that the British were in no mood to concede the Dravida Nadu demand even when they were about to leave India. So his campaign was, Swaraj had no meaning to the Dravidians, Muslims and the Harijans. This was part of Naickers' attempt to find an identity together with Jinnah and Ambedkar⁴³ but proved futile. In 1944, the

Dravida Kazhakom came into being, demanding a separate non Brahmin Dravidian Nation, as stated earlier, later to become a political Party. ⁴⁴

Tamil nationalism linked with the anti-caste movement, thus became a powerful force in the South. Dravida Kazhakam with Regional Nationalism and sub national identities ⁴⁵ was a major political movement and at one stage even threatened to divide the country on racial lines. Thus the Dravidian Movement of Tamil Nadu was in a sense the Black Movement of India, which asserted Dravidian self-respect. ⁴⁶

After breaking ties with Congress, his political career then onwards was more or less an unwavering journey through the Self Respect Movement (1926) and the Dravidar Kazhagam (1944) in search of substantive, as opposed to formal, citizenship for the subordinate groups. The centrality that he assigned to citizenship as constitutive of the nation is more than evident from the way he assessed and combated the nationalist concept of 'swaraj' and the manner in which he responded to the British Raj.⁴⁷

For the self-respecters, the notion of citizenship was not merely for a legal identity, but, to them 'as the founding ideal of a new Republic'. It was to animate not merely claims made on the state but on society as well; it implied and called forth a social commitment to the destruction of caste, wily faith and gender differences. Citizenship in this sense was to define new modalities of personal and social interaction, where self respect and mutuality governed human relationships⁴⁸

To conclude, as else where in the world, India too experienced the violation of basic rights of Dalits, Adivasis, Minorities and other Marginalized sects in Indian Society. There are so many movements sprang up in different parts of the world. In India and its Southern parts too we can heard the echos of cry in the wilderness. Many stalwarts like Vaikunda, Sree Narayana Guru, Ayyankali, E.V. R and others who took the lead in addressing the grievances of the downtrodden. E.V.R pointed out the clever devices of exploitation followed by the Brahmins under the mask of divinity on the pretext that they are solely the incarnation of God on earth. Therefore, naturally E.V.R rejected the abode of God. According to him injustice was purely man made not a divine ordaine. Hence it should be

deleted by man himself. History was one of cultural struggle, a term widely used by prominent-historian like K. N. Panikkar (Culture As A Site of Struggle). Though his immediate mission of creating a Dravidian State ended in failure⁴⁹ he could succeed in creating a public sphere,(Jurgen Hebermas) or Subaltern counter public, where the marginalised could share a sense of oneness and a spirit of Nationalism

whether it is radical, regional, separatist or any other sub national identities.

We may justify, as it is said subnationalism is not a threat as long as it is not, secessionist, or aimed at othering sections. Therefore it can be seen as a constitutive element of India's Plural democracy.⁵⁰

 34. For details see, Paulo Freire's, Pedagogy of the Oppressed. It is a study of education in the illrd world, particularly Latin-America. His experience of teaching illiterate and oppressed people in Latin America has made him particularly sensitive to the specific psychology of the oppressed, the multiform forces of oppression, and the methods necessary to release the one from the other. He proceeds to analyse the socio-political and economic forces which have constituted the psychology of the oppressed and he shows that these forces of oppression have become a whole culture in the Third World. This culture prevents the people of the third world from ever releasing themselves from oppression: in their psychology those force have been interiorized, they are part of the atmosphere in which these people live. He tells us that to release the oppressed from their way of being is not a easy as removing the forces of oppression.
- The socio-political situation in the Third World has created a psychology and an atmosphere which combine to form the culture of the oppressed. He has helped to empower countless impoverished and illiterate people throughout the world. It is a vision of looking education as a process of liberation: as education as an authentic tool for the emancipation of human being. See, Paulo Freire, Pedagogy of the Oppressed, U.S.A 1968 (2014)

HERCULEAN EFFORTS OF BUDDHIST BHIKKUNIS - A STUDY

Dr. S. Nagaraj & Dr. R. Revathi

Introduction

Buddhism is widely known throughout the world as a religion of peace and kindness. It is less known as a religion of gender-equality. And, in fact, many Buddhists throughout the world are taught that women, because of their characteristic karmic dispositions, are incapable of awakening or of becoming a Buddha, at least without first being reborn as men. Furthermore, relatively few women have gone down in Asian history as teachers, yogis and thinkers; the great Indian scholar-monks were all exactly that,

monks, and the ordination and transmission lineages tracked in East Asia list one man after another. The Theravada tradition managed completely to have misplaced its order of fully ordained nuns, and the Tibetan never had one, leaving a decidedly lopsided Sangha throughout much of Asia, and very limited opportunities for women to receive the support and respect that nourishes the highest aspirations of the Buddhist Sangha. Moreover the Buddha himself has been commonly implicated in this bias. For instance, although he created a twofold Sangha of monks

and nuns, he is said to have done so reluctantly, and he seems to have created a degree of dependency of the latter order on the former. An image that shines through in the discourses repeatedly is, in fact, that of a Buddha who had nothing but the deepest kindness and respect for women, in stark contrast to the standards of the society in which he lived.

In ancient India the position of women does not appear to have been a very happy one. Generally, women seem to have been looked upon as being inferior to men. Their freedom was extremely limited. The general view appears to be that they had to be under the care of parents in their childhood, under the protection of husbands in their youth; and in their old age they had to be under the control of their sons. Therefore, it was thought that they do not deserve any freedom. Their main role was considered to be that of housewives, managing the affairs in the house according to the wishes of their husbands. Even as a wife the life of a woman was often miserable. This was especially so when she had the misfortune of being a co-wife. Jealousies and conflicts between co-wives were a common feature in ancient Indian society. The widow's plight was still worse. Normally, a widow was not allowed to remarry. It is said that a widow had to kill herself by jumping into the funeral pyre of her husband.

Women did not have educational freedom. Education was not considered as being of any importance to women. Their religious freedom, too, was restricted. As they had only little freedom, their chances of performing meritorious religious rites, too, were very limited. Women seldom were allowed to make their own decisions. They did what men do and spent their lives in service to others. This is the society where Buddha grew up and taught, Buddha said that women are capable of becoming arhats. If they follow the path of renunciation they can become completely enlightened just as men can.

During the Sixth century B.C. Buddhism texts reflect women were stereotyped, ideals of the submissive and were supposed to revolve around her husband and sons. They also contain many negative images of women as temptresses and creatures of passion. Buddhism does not consider women as being inferior to men. Buddhism, while accepting the biological and physical differences between the two sexes.

Buddhist texts repeatedly describe celibate monks as embodiments of Dhamma (the path of enlightenment) while the lustful insatiable women are described as embodiments of Samsara (the cycle of death and rebirths).

Women in Buddhist Sangha

Many years ago, Buddhism created a revolution in India that is recognised in religion's history as one of humankind's greatest revolutions. When Buddha started Sangha, the Buddhist predominantly consisted of men. Women did not participate in the early beginning of Sangha, therefore, there was also some yearning among women for equality and some for interested in joining Sangha. However, they could not get easy entry as there was no tradition of assimilation. The Buddhist community comprised monks and nuns known as the Bhikkus and the Bhikkunnis, respectively and the Upasakas and the Upasikas known as the laymen and laywomen, respectively.

Buddhist tradition suggests that the Buddha was not initially keen to establish a Bhikkhuni Sangha but ultimately gave into the persistent pressure of his disciple. Buddha persuaded to permit the ordaining of women as nuns. The general hesitation in admitting women as nuns came from the notion that this would weaken marriage and family.

The religion was congregational for most but did not preclude those who wished to meditate in isolation, monastic orders were introduced. The assembly of monks constituting the authoritative body, the Buddhist sangha. Monks wandered from place to place, preaching and seeking alms and this gave the religion a missionary flavour.

Buddhist Nuns

Tripitaka consists of three books, the Sutta, Vinaya and Abidhamma. The Vinaya Pitaka has rules for monks and nuns of the sangha (monastic order). Therigatha describes women's experience of renunciation and it is especially important because it is one of the very few surviving ancient Indian texts composed by or attributed to women.

Admission regulation for Nuns.

The sangha was not open to pregnant women, mothers of unweaned Children,

rebellious women who associated with young men and those who did not have their parents or husbands permission to join. The Buddhist orders of male and female ascetics were among the first to be established in the world some became Bhikkhunis because their husbands or relatives were becoming Bhikkhus, others became Bhikkhunis. When they were widowed or their relatives died some very poor women joined due to protection. Even some young women choose renunciation life as preferable to marriage. The rules for nuns were basically the same as those for monks, but there were more rules. Buddha is also described as having laid down eight special rules subordinating the order of nuns to that of monks. However, it has been suggested that this was a later interpolation. While women could attain salvation their capability for attaining Buddhahood directly. Monks and Nuns were bound to have had some amount of interaction. In fact, nuns were not supposed to live too far away from monks during regular times as well as during the monsoon retreat. They had to consult the latter for the date of the Uposatha Ceremony. If a nun broke certain rules, she had to answer to a mixed gathering of monks and nuns. However, contact and interaction were carefully regulated and restricted. For instance, a monk was not supposed to be alone with a nun in a closed room and was not allowed to preach to a woman in private without the presence of a third person who could understand what was being said. However, a monk could accompany a nun on a road that was considered dangerous. Buddha opened up a significant space for women's spiritual aspirations. When monks and nuns acquired residencies their monasteries and nunneries were built near towns, thereby facilitating the support expected from the lay community. The establishment of Buddhist monasteries accelerated education.

The most evident signs of a Buddhist nuns' lifestyle - shaved head of monastic robes are explicit symbols of our spiritual values. Buddhist monastics cultivate inner beauty and drop fixation with making ourselves physically attractive nuns shave their heads to symbolize letting go of worldly concerns, specifically to "shave off" the poisoned minds of ignorance, anger and clinging attachment also wear the robes of a Buddhist monastic and forego

jewellery and makeup donning the robes each morning reminds us of Buddha's teachings nuns also refrain from listening to or playing music, dancing, watching entertainment.

Therigatha

The Therigatha is an anthology of poems by and about the first Buddhist women. These women were theris, "senior ones," among ordained Buddhist women and they bore that epithet because of their religious achievements. The theris in the Therigatha are enlightened women and most of the poems (gatha) in the anthology are the songs of their experiences. This Buddhist texts contain several references to learned nuns. The *Therigatha* is a collection of 73 poems consisting of 522 versus, supposed to have been composed by 72 nuns over a period of 300 years who had reached a high level of spiritual attainment. Many of these nuns are described as possessing *tevijja* (the three kinds of knowledge), an attribute of arhats. The Therigatha contains numerous stanzas that clearly express the feelings of joy experienced by saintly bhikkhunis at their ability to enter the Order and realize the Truth. Some of the poems express the nuns experience of nibbana. They also feel of the experiences which preceded their joining the Sangha. The poems are renditions of stories, situations and emotions that seem remarkably extent, depression, loss, marriage, motherhood, betrayal, menopause and death, all features are causes of suffering which were then overcome through Buddhist teaching.

Conclusion

Buddhism originally offered no doctrinal resistance to the acceptance of women and men as equally capable of spiritual attainment and this continued to be the position of mainstream Buddhism through the centuries. Most of the main schools of Buddhism which are thriving today are fully egalitarian in doctrine. Many of the problems which women in Buddhists countries faced day to day have more to do deeply rooted social values which were not originated by Buddhist theorists but with which Buddhist have casually compiled by the efforts of Buddha's view on women's right greatly helped all the sections of women to fulfill their role as daughter, mother, Wife, sister and nun (Bhikkhuni).

PROTESTANT MISSIONS IN COLONIAL ANDHRA: A COMPARATIVE STUDY OF THE GODAVARI DELTA MISSION AND THE AMERICAN LUTHERAN MISSION

B. Prakasam

Introduction:

As per the tradition, St. Thomas, one of the twelve disciples of Jesus Christ introduced Christianity in India in A.D. 52.¹

Yet, it was mainly confined to the Malabar Coast of Kerala till the advent of the Portuguese rule in India in the first decade of the 15th century during which period a new dynamic spirit of Roman Catholic missionary activity began in India.² Christianity followed the Portuguese flag and every Portuguese vessel brought a number of Missionaries to India to look after the spiritual needs of European Christians and every Portuguese Trading Centre thus becoming the nursery of Christianity. Soon Roman Catholic centres began to appear in the coastal areas and southern Madras.

As the tradition goes, an important event which could testify to the presence of Christians in Andhra Pradesh from the early centuries is the Council of Nicea held in 325 C.E. It is recorded that a delegation from "Divos" represented the Church in India in the Council. Some historians identify "Divos" as Diviseema. It is also recorded that Arian emperor Constantius sent Theophilus

who was originally an Indian to the island called "Divus" which was inhabited by Indian Christians in the 4th century. This island is identified differently by various historians³ while some feel that it could be Diveeseema.⁴

Among the letters given by Pope XXII around 1330 to Bishop Jordan Catalani addressed to the Kings and the Christians in India, the historians report that there was one to be conveyed to the faithful at "Mausolipatinam" (Machilipatnam) along with the one for the Mylapore Christians. A Christian king named Solomon, ruled parts of Orissa and Andhra according to the Catalan Map dated 1375. Fr. H. Colli (+1962), an Indologist and Sanskrit scholar of renown, affirms that Christians (Nestorians or Catholics) were already present at Vijayanagar in 1442. He bases his conjecture on some report of Abdur Razzak, Persian ambassador at the Vijayanagar Court, who mentions that the Prime Minister (*wazir*) of Vijayanagar was a Christian.⁵

Christian presence in Andhra Pradesh seemed to have continually existed almost from the beginning of Christianity in one form or another. In the first century, some Greek

Christians from Alexandria settled in Masula presently known as Machilipatnam, a coastal port town. It was for long a trading post of Roman merchants. Even some Jews passed through it and made their settlement in the nearby trading towns like Guntur where a Synagogue was built. Armenian Christian merchants and migrants had their settlements in Macilipatnam and nearby locations.⁶

Christianity upon its arrival in India during the 1st century did not make any progression within the Indian subcontinent and was limited within the Southern coast until the 15th century when the Portuguese arrived in India in 1548, followed by the German Lutheran Protestant missionaries Ziegenbalg and Pleutschau in 1706, Moravians in 1760 and William Carrey in 1793.

The Protestant Missions in Andhra Pradesh

Bartholomeus Ziegenbalg was the first Protestant Lutheran Missionary to visit the Andhra Pradesh. He was sent by King Frederick IV of Denmark in 1706 on behalf of the Royal Danish Mission to work among the Tamils. During his course of work at Tranquebar, he made a short visit to Tirupati in 1716.

However, it was his successor, Benjamin Schultz, who started work among the Telugu people shortly after his coming to Madras in 1726. He learnt Telugu and translated the Catechism and New Testament into Telugu language. As to point of conversion and the early reports of Schultz do not distinguish between Tamil and Telugu converts. Shultz's successor John Philip Fabricius continued to work among the Telugu people in Madras.

He founded Boarding Homes for the schoolchildren and had moved to Dutch settlement in Pulicat because the mission buildings were destroyed by French in 1746.⁷ This paper will briefly analyze two of the most important missionary agencies who shared the gospel within the state of Andhra Pradesh - the Godavari Delta Mission and the American Lutheran Mission.

The Godavari Delta Mission (GDM)

The origins of the Godavari Delta Mission (GDM) are traceable to the Open Brethren Movement of England⁸ under the leadership of

men like George Muller, Robert Chapman and A. N. Groves⁹. Two young men, William Bowden and George Beer, the pioneers of the GDM, were members of the Ebenezer Chapel in Barnstaple, who had Mr. Robert Champan as their preacher/pastor.¹⁰

A. N. Groves, the architect of the GDM, visited this chapel in 1835 in search of missionaries for India. Groves himself was a missionary to Baghdad, but through the instrumentality of Sir Arthur Cotton who was a British Missionary Engineer in India, he was persuaded to turn his missionary gaze upon the ripened fields of India. Arriving in Bombay in July 1833⁸⁵ Groves then surveyed the need in the country, returned to Europe and UK looking for missionaries, went to Barnstaple and found Bowden and Beer willing, and prepared for the task. William Bowden and George Beer, together with their families arrived in Madras on July 8, 1836 and then moved to Narasapur in April of 1837.¹¹

Bowden and Beer families represented the first ever Brethren overseas missionaries anywhere in the world. The primary mission of the GDM was unquestionably evangelistic. Every GDM missionary carried out evangelization. Until a few years ago no foreign Missionary left India withdrawing themselves from the missionary work. Consequently today there are more than 300 GDM churches with a membership of anywhere in between 40 to 50 thousand.¹²

Among the accomplishments of the GDM, the Mission High School at Narsapur was an outstanding example. Hardly three years after the arrival of the GDM pioneers, George Beer established the Narsapur School in 1839. The motto of the school was "Bear the Cross – Wear the Crown". Beer himself managed the affairs of the School until his sudden death in 1853. Mrs. Beer took over charge, ran the school until 1861, and handed it to her son John William Beer who was barely 18 years old at that time.

John Beer developed the School into an Anglo-vernacular school with an enrollment of 200 pupils. He mastered Telugu language and managed the school until 1894. Then his brother Charles Beer held the reigns until 1903 and passed on the management to E. B. Bromley who developed it to the level of a middle school by

1921. Bromley, besides administrating the Narsapur School, was also taking care of 60 smaller schools in the villages.¹³

Jeevan Jyothi Press was started in Chagallu in 1928 by Charles Adams and functioned there for 40 years before it was moved to Narsapur in 1969. After Adams death in 1949 it was managed successively by Kevin Osborne, Miss. G. Rogers, Miss Wright and then David Dren. In 1969 the Press was handed over to a native Indian, K. Wilson and at his instance, moved to Narsapur. A great deal of Telugu Christian literature has been produced in this Press besides publication of Telugu Christian Magazine, Rayabari, of which Wilson is the Editor.¹⁴

The American Lutheran Mission (ALM)

The beginnings of the Andhra Evangelical Lutheran Church (AELC) can be traced to the evangelistic zeal of the European Lutherans who migrated from Germany to the United States of America. Several factors such as war and the resultant frustrating economic conditions, the desire from escaping religious persecution and the news of a land flowing with milk and honey where one can live in freedom, peace and worship God in all the grandeur encouraged Germans to migrate to New York, Pennsylvania and New Jersey areas of the United States in thousands.¹⁵ Since the Pastors who migrated were too insignificant to meet the religious and spiritual demands of thousands of migrated Germans and other Europeans, requests for pastoral help in churches as well as schools poured into England and Germany. As years passed by, the Lutheran Churches in America also realized that they could not solely depend on Europe for Pastors and therefore, started their efforts toward the establishment of Seminaries at Gettysburg and Pennsylvania in 1826 to train Pastors and also in order to preserve and protect the identity, spent their resources in organizing a General Synod. The first Convention of the General Synod which met on October 22, 1820 was given the mandate to impart theological education and training to the Seminaries and Missionary institutions.¹⁶ The news of the activities of the Mission in foreign lands ignited so much interest and enthusiasm on Mission Enterprise that in the 1833 Convention of the General Synod, a Committee was appointed to prepare a report the Mission to present at the

next Convention that was scheduled to meet in 1835. Fascinated by the Report, the Convention that met in October of 1835, organized the 'Central Missionary Society' and one of its emphases was to send Missionaries as soon as possible to the 'heathen' lands.¹⁷ Sometime in 1836, the appeals from C. L. E. Rhenius of Tinnalvely in India and Frederick Gitzlaff of Chnas for volunteers to start Lutheran Missions evoked positive response from America and a Convention of Ministerium of the Pennsylvania General Synod was convened on June 9, 1941 and decided to establish its own Mission and asked John Christian Friederick Heyer as the first Missionary to proceed to India and start a Lutheran Mission in that country. Heyer's wife died on January 13, 1839 and the grown-up children of Heyer who were capable of looking after themselves were positive signals for Heyer to accept the offer.¹⁸

Father Heyer, as John Christian Friederick Heyer is affectionately called in India and in America, sailed from Boston on October 15, 1941 at the age of 48 and arrived in Madras on April 16, 1842. He arrived at Nellore on May 23rd. From Nellore, Stephen van Husen of the American Baptist Mission accompanied him in seeking for a suitable location to carry on his work. They travelled to Ongole, and later to Guntur, arriving there on July 31, 1842.¹⁹ At Guntur, they were given a very warm welcome by Henry Stokes, the then Collector for the British Government in Guntur District.

Guntur is the Headquarters of AELC and from there Heyer reached out to Prathipadu, Nallapadu and Kothapeta and disciple and baptizing a few people. Rev. Heyer coupled his evangelistic activities with educational efforts and started his first school in 1844 AT Guntur and later at Prathipadu, Nallapadu and Kothapeta. In 1855 Robert J. Wolf started a College and provided higher education facilities in the Guntur area.

In 1881 Miss Kate Boggs came to Guntur and did much towards the welfare of women. Then in 1883 Dr. Aannah Sarah Kugler came and started her medical work and laid the foundation for the now famous Kugler Hospital.²⁰ She died in 1930 in Guntur after 47 years of medical service to the people of Guntur. Anna Kugler received from the Viceroy of India the Silver *Kaiser-i-Hind* medal in recognition of

her services.²¹ John Aberley started a Bible Training School in Guntur for the training of pastors for the Lutheran Churches.

In 1920, the Andhra Christian College was founded. J. Roy Strock²² was the first Principal. In 1950 the first Indian Christian disciple, T. S. Paulus was appointed as the Principal and he distinguished himself as an outstanding educationalist and disciplinarian shaping the College to prominence, that it became the alma mater for many of the outstanding leaders in Andhra Pradesh today.²³

The AELC opened centres at Chirala, Sathenapalli, Bapatla, Bhimavaram, Dhawaleswaram, Rajole, Tarlupadu, Korukonda, Kovvuru, Polavaram, Markapuram, Cumbum, Narasaraopet, Vinukonda, Palnadu, Rentachintala, Repalli, Tenali, Tanuku, Parvathipuram and Rajahmundry. In all these places, the missionaries built schools as well as churches. Besides the well known Kugler Hospital in Guntur AELC opened similar hospitals at Rajahmundry, Chirala, Tarlupadu, Bhimavaram, and Rentachintala and Ankalaandem.²⁴ They also built hostels in Kovvuru, Narasaraopet, Tenali and Rajahmundry and a Higher Grade Training School at Narasaraopet, which was opened in 1946.²⁵ In Rentachintala the Missionaries started a Special School for the Blind in 1911 and taught Braille to many Christian as well as non-Christian youth, both boys and girls.²⁶

The North German Missionary Society has established a mission at Rajahmundry in 1845 under missionary valet. It transferred its properties to American Lutheran Church in 1851 because of the financial problems it faced. A Teacher Training School was opened. Rajahmundry also was the home of Luthergiri a Theological Training School for men – from 1850 to 1971, which in 1972 merged with the B.D. section of the Ramapatnam Baptist Theological Seminary to form the Andhra Christian Theological Seminary and then relocated to Secunderabad as the Andhra Christian theological College.²⁷

Thus, the missionaries who came to Andhra Pradesh exhibited an exemplary life of godly living among the local people. They braved hardships for the gospel and toiled to bring the betterment of the lives of the people. They brought reforms through their education and teachings. Through their lives and mission works, many men and women from Andhra Pradesh became Christians who brought many souls to Christ. They forsook their own and faced difficulties in witnessing for Christ. Their faiths laid the foundations of Christianity in Andhra Pradesh. Through the efforts of local Christians, many schools and colleges came into existence, which brought new stimulus of thinking into the lives of Telugu people.

References

1. St. Thomas landed at Cranganore (Kodungallor) on the Periyar Bay (on the Malabar Coast in Kerala). He preached Christianity to the Jews who had settled there and to others and travelled towards the South, establishing Christian communities at seven places (Malankara, Palayur, Parur, Gokamangalam, Niranam, Chayal and Kollam). He ordained priests from four Brahmin families called Sanakarpuri, Pakalomattam, Kalli and Kalliankal. Then he crossed over to the east coast and canonized further to Malacca and China. He returned to Mylapore, which is in present Chennai and preached the new religion to the Brahmins. There some Brahmins rose against him and speared him to death about 72 A.D. MOBILISATION AGAINST TEMPLE ENTRY LEGISLATIONS: MALABAR EXPERIENCE (1938-1947)

P. Priya

Traditional Kerala Society was a hierarchical caste ridden one. Efforts against caste disabilities began as part of social reform movement and the national movement. Gandhian nationalist agenda concentrated on granting temple entry to all castes. The Guruvayur satyagraha (1931)¹ organised by the Kerala Pradesh Congress Committee (KPCC) in 1931 however did not lead to the temple being open to all castes. After the assumption of power by Congress Ministry in Madras (1937), legislative attempts to ensure temple entry were begun. This was not a smooth affair, as there were opposition to such efforts. In historiography, such counter mobilisations are seldom considered. This paper attempts to such efforts.

The caste system is an in egalitarian and deeply oppressive system. It is a segmentary system in which people view themselves as belonging to units of different orders.² Hierarchic gradation, social and other inequalities, endogamy, restrictions on dining, and the lack of freedom regarding the choice of vocation were the principal features of the caste system.³ Caste was propelled by the ideology of hierarchy which in turn, was based on the religious principle of purity and pollution.⁴ Caste, in as much as it is manifested in prohibitions on

intermarriage, eating together and other forms of bodily communication, can be regarded as a specific instance of broader cultural notions about ritual purity and pollution.⁵ Caste system is a prime example of a closed form of an ascription- based system of stratification; it is not as if mobility did not even occur in Indian History.⁶ As Ambedkar observes, important feature of caste is graded inequality. Caste being a hierarchical system he used the simile of a pyramid to describe it. That pyramid attributes reverence for those who are going higher to the top and imposes contempt for those going down to the bottom.⁷

The social system of Malabar in the 19th century was well-entrenched in the principle of caste and kinship. In the lower strata of the caste-based society were the depressed castes like *Pulayas* or *Cherumars*, *Parayas*, *Nayadis* etc.⁸ They were subjected to exploitation and humiliation by the upper classes. Sanal Mohan observes, 'In Kerala Society, untouchable communities such as *Pulayas* and *Parayas* were spaced within the structure of power and dominance that was determined by the peculiar caste formation. They occupied the lowest stratum of society, performing socially necessary labour, outside the realm of ritual purity and significance.'⁹ In the colonial accounts, they were

referred to as slave castes and they were bought and sold along with land. They were referred to as agrestic or chattel slaves and their social mobility and life were determined by their status as slaves.¹⁰

The members of polluting castes had to keep themselves at the prescribed distances from those of upper castes.¹¹ They were denied admission to the roads in proximity to the temples and the houses of Caste Hindus. William Logan observes, 'Both men and women are still afraid to avail themselves of the privilege of using the public roads, in passing from one part of the country to another they tramp along through the marshes in mud, and wet often up to their waists, rather than risk the displeasure of their lords and masters by accidentally polluting them while using the public roads.'¹²

The Depressed classes did not have right of temple entry. The system of praying in temple was also fixed according to the caste-hierarchy. Most of the roads near the temples were exclusively for the upper castes.

II

Malabar was the nerve centre of national movement in Kerala. People in Malabar were very much watchful of and influenced by the political developments outside the province. The growth of Indian National Congress and its political activities were represented in Malabar by the educated middle classes.¹³

The year 1919 witnessed the emergence of Mahatma Gandhi as the leader of the Indian National movement. Gandhian constructive works were the promotion of khadi and spinning, national education and Hindu-Muslim unity, the struggle against untouchability and the boycott of foreign cloth.¹⁴ It brought much needed relief to the poor; it promoted the process of nation-in the making; and it made the urban based upper caste cadres familiar with the conditions of villages and lower castes.¹⁵

The nationalist agitation against untouchability and other social evils acquired a sense of direction during the Gandhian era.¹⁶ Gandhi correctly perceived the political importance of the struggle against untouchability. According to him, 'Swaraj was not attainable without the removal of untouchability'.¹⁷ Gandhi believed that

untouchability was essentially and exclusively a problem of caste Hindus and the untouchables were merely their helpless victims. Untouchability was a 'sin' against God and man and a poison slowly eating into the very vitals of Hinduism and was violative of human spirit.¹⁸ Gandhi remarked, 'Temple entry is a spiritual act, transforming the whole society by single act of admission.'¹⁹ Gandhi made it clear in 1933 that untouchables' access to temples was the key for the removal of untouchability in India.

Soon Malabar also plunged in to the vortex of an active movement inspired and led by Mahatma Gandhi. Congress now began to involve more and more into social constructive activities. The Congress workers now turned towards the propagation of Khadi and anti-untouchability campaigns.

Such campaigns generated notions of 'public' and under privileged sections, to gain greater social mobility, began to see tanks and ponds associated with temples as 'public' ones. They claimed that as citizens, they had a right to 'use' these tanks and ponds. Such claims were however contested.²⁰ Many temple entry movements and campaigns were started. Vaikom satyagraha and Guruvayur satyagraha was looked upon in this perspective.²¹ Guruvayur Satyagraha began on 1 November 1931 and it demanded entry for untouchables into the Guruvayur temple and also called for the abolition of untouchability.

III

When the Congress Ministry came to power in 1937 under the premiership of C. Rajagopalachari, attempts to legislate on temple entry were made. Rajagopalachari initially supported the idea of a Temple Entry Bill proposed by M.C. Raja in January 1938. The Act paved the way for entry of Harijans in temples in the Malabar regions if the caste Hindus in the particular area did not object to it. On 1 December 1938, C. Rajagopalachari introduced the 'Malabar Temple Entry Bill' in the Assembly.²² It was passed in the Assembly on 13 December 1938. It received the consent of the Governor on 18 January 1939. Its aim was to remove the disabilities imposed by custom and usage on certain classes of Hindus in respect of their entry into and offering worship in the Hindu temples.²³

The Bill states that there has been a growing volume of opinion demanding the removal of disabilities imposed by custom and usage on certain classes of Hindus in respect of their entry into and offering worship in the temples. There is no jurisdiction for resisting this demand after the recent extension in the Travancore state of the rights and privileges of entry and worship in all the important Hindu temples to classes which had hitherto been excluded.²⁴

On hearing the news of the introduction of the Malabar Temple Entry Bill in the Assembly, the Zamorin of Calicut sent a Memorandum on the Bill to the authorities. Zamorin in the memorandum argued that no one should have authority to claim entry into the temples which were being private property.²⁵ This argument of the Zamorin reveals that his desire was to preserve the temples as private property under his supreme power. The caste Hindus formed an organisation known as the 'Malabar Temple Security Committee' for opposing the Malabar Temple Entry Bill. On 28 November 1938, a deputation of the Malabar Temple security committee consulted prime Minister C. Rajagopalachari and submitted a memorandum to him for preventing the Bill.²⁶ The Prime Minister's reply did not find favour with them.

The conservatives also held a conference at Palghat on 24-26 February 1939 under the presidentship of the then Zamorin.²⁷ The Zamorin made a speech condemning the granting of temple entry in Travancore through a Proclamation, and praised the Maharaja of Cochin as the defender of Dharma. K. Kelappan got an invitation to this conference but he did not participate as he thought that it was a sin to attend such a conference.²⁸

The Madras Temple Entry Authorisation And Indemnity Act of 1939

On 17 July 1939, the Governor of Madras issued an ordinance known as the Madras Temple Entry Indemnity Ordinance of 1939.²⁹ In the wake of referendum in regard to Temple Entry Bill, the Harijans entered the Sri Meenakshi temple at Madura in Madras on July 1939.³⁰ This act from the side of the trustees of Madura Meenakshi temple, created some resistance from a section among the public people in Madras and there was possibility of legal action, against the

trustees. So the Madras Government prepared a bill to preserve such kind of trustees, known as the Temple Entry indemnity Act of 1939 immediately after the Harijan temple entry at Madura.³¹ The Madras legislature was not in session at this time. So the Governor of Madras issued an ordinance on 17 July 1939 known as the Madras Temple Entry Indemnity Ordinance, 1939 when the matter was presented before him.³² In his speech on 21 July at the meeting held at Congress House in Madras, C.Rajagopalachari stated that it was the strength of Congress Ministry which was revealed through the ordinance.³³

On 31 August the Prime Minister presented the Bill in the Madras Legislative Assembly and told that this bill was brought to the assembly for performing the promise of Hindus, who have taken it through signing the Poona Pact (for socio-religious reform of Hindus) on 24 September 1932.³⁴ The Temple Entry Indemnity bill was passed by the Assembly on 4 August.³⁵ The Madras Temple Entry Authorisation and Indemnity Act, 1939 (Madras Act XXII of 1939, contains a provisions which enables trustees or other authorities in charge of temples, with the approval of Government, to throw them open to the excluded classes of the Hindu Community; whenever they are satisfied that the general Hindu Public is not opposed to that step.

This act resulted in the opening of only a few temples in Madras and a few in Malabar. The following reference cited from the Fort St. George Gazette states that 'the trustees of the Sri. Krishna Swami and Sri Kadakkavu temples at Kothakurusi in the Malabar District, the worshippers of the temples were generally not opposed to the removal of the disability imposed by custom or usage on certain classes of Hindus in regard to entry and offer worship in the temples and so they were opened for all.³⁶

Both Acts, the Temple Entry Authorisation and Indemnity Act and Religious Disabilities Removal Act would be helpful to remove the disabilities of untouchables in Malabar to some extent, but these two acts could not have resolved the temple entry problem with all its aspects. Some instances like the prohibition of Harijan procession on the Kizhoor Road near Kizhoor Siva temple in Payyoli shows that the

Temple Entry Disabilities Removal Act was not successful in the removal of disabilities.³⁷

The Madras Temple Entry Authorisation Act, 1947

The Malabar Temple Entry became a truth on 2 June 1947. It was through the Madras Temple Entry Authorisation Act, 1947 that British Malabar got temple entry to the lower castes. The Madras Temple Entry Authorisation Bill got the consent of the Governor General on 11 May 1947. It was passed on 13 May 1947.³⁸ But the Bill became an Act on 2 June 1947. The purpose of the temple entry Bill was to authorise entry into Hindu temples in the province of Madras and the offer of worship therein by certain classes of Hindus who by custom or usage are excluded from such entry and worship. The provincial government aimed to remove the disabilities imposed by custom or usage on certain classes of Hindus against entry into temples in the Province which are open to the general Hindu public. It extended to the whole of Madras.³⁹

The existing provision Malabar Temple Entry Act of 1938 is however inadequate, as the Government can not take the initiative but have to wait until the trustees of other authorities in charge of a temple take the first step and apply to Government for approval. Government became helpless wherever a trustee takes up a negative attitude and refuses to obey the people's will.⁴⁰ The Bill makes it clear that the depressed classes will hereafter have a right to enter any temple which is open to the Hindu public generally and offer worship therein in the same manner and to the same extent as other classes of Hindus. In particular, the excluded classes will have the same right to bathe in sacred tanks and wells adjacent to temples and the same right of passage over any sacred place (including hills or hillocks and roads, streets and path ways) as other classes of Hindus.

The trustees or other authorities in charge of a temple will however have power to make regulations for the maintenance of order and decorum and the due observance of rites and ceremonies in the temples, provided only that such regulations do not discriminate against the excluded classes in any way; and to ensure this result, the power to make regulations have been made subject to the control of Government and

to any rules made by them. Provision has also been made for the punishment of any one who prevents a member of the excluded classes from exercising the right conferred by the Bill or who molests or obstructs such a member in the exercise of such right. Both the Malabar Temple Entry Act, 1938 (Madras Act XX of 1938) and Madras Temple Entry Authorisation and Indemnity Act, 1939 (Madras Act XXII of 1939) were repealed.

The Malabar Temple Entry Welcome Committee which was formed on 31 May 1947 at Guruvayoor under the presidentship of Kiduvath Krishnan Nair made arrangements for celebrating the temple entry on 2 June 1947. On the morning of that day, a public meeting was held at Guruvayoor and Kelappan, U.Gopalamenon and V.J. Raman led the devotees to the temple.⁴¹ On 2 June 1947, all the temples in Malabar were thrown open to all castes. The Mathrubhumi wrote in its editorial on 1 June 1947 (Titled Temple Entry) that, it had played an important part for the removal of untouchability and temple entry agitation; and had given leadership to the whole India in this matter which is prestigious for the Malayalies.⁴² Thus, finally after taking a long time, the temple entry struggle became a reality. One of the main leaders, K. Kelappan made an aphorism regarding the temple entry Act; the social evil which crusified lakhs and lakhs of Hindus for centuries has now finally rebuked. He emotionally hoped after the vindication that a myriad of ostracised communities in Malabar will now be permitted to enter inside the temple.⁴³ It would seem that the passage was a smooth one. But it was not so. There were counter mobilisations which sought to prevent the passage of such legislations.

IV

The Travancore Temple Entry Proclamation did not make the Zamorin favourable to temple entry in Malabar. The Zamorin had no wishes to change the existing customs and usages in temples. On hearing the news of the Travancore Temple Entry proclamation, the Zamorin said that the Travancore Maharaja had freedom to give temple entry right to his subjects; but he was only a trustee of the temples which were under the supervision of Hindu Religious Endowment Board.⁴⁴

When the Malabar temple entry act was passed, the caste Hindus raised banner against it. They filed exemption suits to nullify the effect of the Temple entry act. A number of suits filed in the civil courts attempting to nullify the effect of the Temple Entry Act.⁴⁵ Majority of the temples submitted petitions for exemption from the operation of the act. These petitions were submitted by *Uralars* (temple proprietors) of the temples. Most of them were Brahmins. They filed petitions in the district courts also. Govt. of Madras made an enquiry and rejected most of the petitions as most of the temples came under the purview of the Madras Hindu Religious Endowment Act II of 1927 which were included in the Madras temple Entry Act of 1947.

When the act was passed, there were attempts from Congress workers, Communists and Harijan Sewak Sangh to enter the temples. Taluk Harijan Samaj of Kurumbranad *amsom* sent a circular to the trustees of Sri Panthalayini temple that the Harijans proposed to enter the temple on 12 December 1947. On that day around 100 Harijans came to enter the temple. But the temple authorities opposed them with the help of the police. Then they held a protest meeting.⁴⁶

After the Madras Temple Entry Act came into force, under the auspices of the Village Congress Committee, many youngsters entered the Parappurath Sri Krishna temple in exercise of the privilege granted under the said legislation. The *Uralan* thereupon filed a criminal case against 16 persons. After this he closed the temple. Then the general public sent a petition to the Government.⁴⁷ The *Uralars* of Sri Janardhana temple at Amaravathy, Cochin filed an exemption suit claimed that the Devaswam under which the temple comes is private, belonging to the Shetty community.⁴⁸

Most of the temple *Uralars* claimed that concerned temples were private temples were founded by their ancestors, they were sole *Uralan* of the temple, temples do not get any income from offerings made by the general Hindu public. The temple had no income by way of offerings by the Hindu public. There were also no properties endowed by the Hindu public.

The *Uralars* of Sri Moonnumurti Temple, Trikkatteri *amsom*, Walluvanad Taluk submitted a petition against the temple entry. They

complained that by reason of Act V of 1947, members of Hindu public who were not entitled to enter and worship had entered and worshipped without any reference to cleanliness, decorum or propriety. Daily poojas were interrupted and the people who come were mostly mischief makers carrying flags and shouting slogans.⁴⁹

Panniyur temple in Koodallur *amsom*, Ponnani taluk submitted an exemption petition from the operation of the act.⁵⁰ The *Uralars* of Kandamanasala Madam, Meppayur, Kurumbranad taluk submitted a petition for the exemption of Temple and tank. In the petition, the petitioner argues that the tank and temple are purely family property. The public has no right of worship or any other right over it.⁵¹ Many criminal cases also filed in this time. When temple entry act was passed, many youngsters entered the temples and took bath in tanks irrespective of caste barriers. But many caste Hindus filed cases against them. *Jenmi* of Kandamanasala Madam sent a petition. He filed a criminal case against a group of local young men who entered the temple as per the Act.⁵² Rama Varma Valiya Raja claimed that Parappurath Sri Krishna temple, Naduvattam *amsom* was his private property, and so the general public had no right to enter and worship in the temple.⁵³

Kalluvazhi temple at Moothedath Matamba *amsom*, Valluvanad taluk, sent a petition and filed suit against the Act. *Uralan* of the temple, Vallur Manakkal Akkiran Nambudiri, sent a petition.⁵⁴ The Trustee of Sri Krishnamurthi and Ayyappan temples at Karumanasseri village in Palghat Taluk filed petition for exemption on the ground that these temples were private temples belonging to Brahmin householders of the village. This claim was granted.⁵⁵ The *Uralars* of Sri Ongallur Taliyil Ganapathi Temple, Kalladipetta, Walluvanad taluk submitted petition for exemption. They were *Nambudiris* and *Karavans* of respective *illams*. They claimed that it was founded by their ancestors for their private worship.⁵⁶ The *Uralars* of Sri Kodivalliyotte temple, Mullakurissi *amsom* at Pattikkad in Walluvanad taluk⁵⁷ and *Uralars* of Sri Perumangod temple, Sri Krishnapuram *amsom*, Walluvanad taluk submitted petitions.⁵⁸

Kalliyambath Kunhiraman Nair submitted a petition for the exemption of Sri Panthalayini

temple, Panthalayini amsom, Kurumbranad taluk, from the operation of the act. It was granted on the ground of family temple.⁵⁹ Sri Chethallur Temple, Chethallur *amsom* of Walluvanad taluk,⁶⁰ Trustees of Tripatta Siva Temple of Katikad Amsom in Ponnani taluk argued that this temple was their ancestral property for the exclusive use of their family. Even members of caste Hindu public can not enter without permission.⁶¹ The *Uralars* of Sri Moonnumrthy Temple, Trikkatteri *amsom*, Walluvanad Taluk also submitted petition. They also claimed that the properties of the temple were gifted by their families.⁶²

Urala Nambudiris of Sri Pachayil and Ayyampilli temples, Mannampatta amsom, Walluvanad taluk,⁶³ Nambudiri Chemmankuzhi temple, Ezhuvanthalala amsom, Walluvanad taluk,⁶⁴ Sri Dakshinamurthi temple, Sukapuram Ponnani taluk,⁶⁵ Chethallore temple in Walluvanad taluk and Koozhakode temple, Chooloor amsom, Calicut taluk, Sri Venkita Thevar Temple situated in Kottakkal *amsom*, Ernad taluk -filed cases for the exemption from the operation of the Act and also submitted petitions.⁶⁶ They claimed that there was no *inam* in the temple and there were no properties endowed to the Hindu public. There was no *bhandararam* (treasury) and flag staff.⁶⁷

There was a dispute regard to the use of temple and tank within the compound of the palace of the Zamorin of Calicut. The palace is in a compound of about 90 acres enclosed by wall and fence. There were two temples within the compound. A Bhagavathi temple near the palace building. This is private and there was no dispute. A Vishnu temple and tank outside the palace building but within the compound. The present compound was enclosed and the palace and other buildings were constructed about 1920. Prior to that there was no special headquarters for the Zamorin. At that time the Vishnu temple was in ruins. It was rebuilt by the Zamorin in 1928. The Zamorin now claimed that it was reconstructed exclusively for worship by the Zamorin and his family. There can be no doubt that before the present compound was occupied by the Zamorin, the temple and tank were used by the public.

Leaders of Malabar Temple Entry Council of Action like K. Kelappan, V. I. Raman, Chandu and V.N.Raman intervened in this issue and

demanded to open the tank and temple to the public. But Zamorin claimed it as his own property.⁶⁸

Kizhakke Kovilakath Viyathan Sreedevi alias Valiya Thampuratti sent a petition to the Provincial government of Madras requested to exempt from this act on the argument that temple is a private one.⁶⁹ The Kovilakam then obtained an order from the Govt. (G.O. No. 77 dated 13 December 1947) prohibiting non-caste Hindus from entering the temple till the suit was decided. The Kovilakam took advantage of this order not only to prohibit non-caste Hindus from entering the temple but also to prevent them from using the road in front of the temple. At that time Kottakkal Pothu Jana Temple Entry Committee sent a petition to the Govt. demanding to open the temple to the public.⁷⁰

However there were 'reformed' trustees of temples who own their own opened temples under their control for all. For example Kadathanad Valiya Raja opened the historic Lokanaravu (Vatakara) to all on the 16 October 1946. Nationalists like K. Kelappan and K. A.D amodara Menon were present on the occasion.⁷¹

Conclusion

In conclusion, it can be seen that caste consciousness is deeply entrenched in the society. It cannot be eradicated by a single temple entry campaign, an administrative act or legislation. It requires 'daily struggles' leading to a 'cultural revolution.' However prohibition of temple entry is a 'visible' oppressive practice which could be removed through an agitation or legislation went a long way of eradiating traditional practices. It undoubtedly had a deep ideological impact. But it would be erroneous to conclude that such actions would lead to a 'change of heart'.

In contrast to the counter mobilisations made earlier during the Guruvayur satyagraha which quoted 'smriti', 'sruthi' and such religious texts in the later period, the opposition was made on the basis of 'ancient practice', traditions and social customs. Claims of temples being private properties were also made to get exemption from the Act. This 'gain' could definitely can attribute to mobilisations against caste disabilities. The oppositions to temple entry by the time of India's independence had become weak as the opponents relied on administrative

and judicial machinery to prevent the working of the Act. This was a far cry from 1931.

When there were daily public meetings against temple entry, demonstrations and

sloganeering. But 'complete social justice' remained a distant dream. The application of notions of 'power' as propounded by Michel Foucault is relevant in this context.

METHAN: UNRAVELLING THE IDENTITY FORMATION AND STRATIFICATION OF THE MUSLIMS IN COLONIAL TRAVANCORE

T. Sakhariya

Introduction

In colonial Travancore, the term *Methan* / *Methar* was widely used by the people, especially upper class, knowingly or unknowingly in their day to day life, to denote the Muslim community, especially the native Muslims other than foreign origin Muslims like the Ravuthars¹ or Pattanis². Some of the official records, literature and popular art forms of the erstwhile Travancore - some record it as a suffix to individuals - represent the Muslims as *Methan*. This term referring to a religious sect or sub castes among the Muslims, appeared in the official records of Travancore quite early but gradually disappeared from the records but it continues to remain the minds of the people. The origin of the term is shrouded in obscurity. The available records say that, they were the native Muslims, who were either the descendants of the Arab traders or got converted under their influence. Nonetheless, the term *Methan* became a stigmatized identity for the Muslims of Colonial Travancore. This research paper is a genuine venture to explore the origin of the Muslim sub group / sub caste of the colonial period - whether they had a stigmatized identity, how it assumed popularity and why it disappeared or got assimilated with the mainstream.

The understanding of identity as a topic of cultural studies, to a great extent, derived from the studies of Stuart Hall. According to Hall, "Identity is a structural representation which only achieves its positive through the narrow eyes of

the negative".³ However, the identities can be divided into categories, and categorization, being an integral part of human behaviour, only helps to understand one another and to maintain social and moral order.⁴ The colonial intruders, especially the British and their native associates created, used and popularized the term *Methan*⁵ / *Meitars*⁶ / *Methar*⁷ like a caste / sub caste among the Muslims of the erstwhile Travancore⁸ and Cochin.⁹ The *Methan*, a stigmatized identity in many respects, has its roots shrouded in mystery. As Dr. Imtiaz Ahmad asserts, "Islamic societies throughout the world, despite the unity imposed upon them by a common adherence to a universal religion, have both the potential and the possibility of creating a distinctive pattern of belief shaped and ordered by their temporal and environmental conditions".¹⁰ The academicians use different names / terms to denote the pre-reformed phase of the Muslims in different regions of the world such as the *Census Muslims*, *Folk Islam*, *Popular Islam*, *Lived Islam*, *Nominal Islam*, etc. However, these categories were sons of the soil and etched their own social identities in various regions during their lifetime and these categories, in the course of time got purified by Islamization. Yet, some of their indigenous features remained long after they got assimilated into Islam. These imagined communities borrowed the local rituals and beliefs of the land. Benedict Anderson remarks, in these Islamic Ummah, as such an imagined community, stratification can be seen only in the holy language and scripts.¹¹

Who were the Methans¹² ?

A group of the Muslims like the *Mappilas* / *Moplahs* of Malabar lived in the Travancore - Cochin regions with Shafi School of Islamic jurisprudence¹³. This group of Muslims, during the colonial period, borrowed the identity of *Methan*, a stigmatized one.¹⁴ Rev. Samuel Mateer, a missionary of the London Mission Society, published a book in London, titled *the Land of Charity* (1871). In this book, he narrated the life of the native people of Travancore, and stated that, among the Muslim Community, there were sub divisions like Tulukkan¹⁵, *Mappilas* (Moplahs) and *Methan*. He admitted regarding the meaning of the word *Methan*, 'of which I have never been able to ascertain'.¹⁶ However, after a few years, Rev. Mateer wrote another book titled *Native life in Travancore* (1883) in which he stated that, "just like the hereditary village headman of the Maratha region- *Mehtar*¹⁷, the term was used to denote the influential Muslims in the land of Travancore. The title *Methan* was given to a Mohammedan merchant of Povar¹⁸ and later the term was used by the group as politely called".¹⁹ The Mohammedan of Povar, Pokmoosa Marakkar might be the merchant, had been given the title '*Mether*'. He was also the patron of the first Dewan of Travancore, Raja Kesavadas and was an intimate friend of Marthanda Varma, the maker of modern Travancore. But, there is no historical evidence regarding the award of the title. The Malayalam Lexicon - *Sabdatharavali* of Sreekanteswaram Padmanabhan also stated that, the name *Methan* was used to denote the Tulukkans²⁰ and it derived from the Persian word 'Mehtar'. (However, Tulukkans, a group that followed the Hanafi School of jurisprudence²¹ and had Tamil as their mother tongue, is not mentioned as *Methan* in any of the historical documents). In 1841, Rev. Joseph Peet, the CMS missionary of Kottayam compiled a grammar text for Malayalam which depicted *Methan* as a caste sub division among the Muslims of the land.²² The Census Commissioner of Travancore (1931), Dr. N Kunjan Pillai stated in his report that, "the Arab and the Egyptian merchants who came to Kerala after the 7th century AD settled in the coastal areas of Travancore. The descendants of these merchants and the Muslim converts are also known in the name of *Methan*. They use Malayalam as their mother tongue and

follow local customs like matrilineal system of inheritance (*Marumakkathayam*), etc".²³

The early surveys conducted by the British in the state of Travancore and Cochin mentioned the term *Methan* frequently. Nonetheless, the early survey of Cochin from 1810 to 1821 by Lt. Ward and Conner described the Muslims of Cochin as *Jonaghur*²⁴ or *Jonaka Mappila*.²⁵ However, Lt. Ward and Conner had conducted a socio- economic and geographical survey for the state of Travancore (1818 - 1820) in which they depicted the Muslims of the state using various terms such as *Meitars*, *Moors*, *Labbai*, etc. According to Ward and Conner, 'The *Jonakas* are the descendants of the early settlers of the Arabs in the coastal regions of the state of Travancore. They were known as *Meitars* in Travancore'.²⁶ In 1839, an English Geographer, W H Horsley conducted a survey on Travancore titled *Memoir of Travancore*, which mentioned the native Muslims such as *Meithar*. He mentioned that, 'Karunagappalli, a tehsil (Sub District), 13 miles away from Quilon Residency was mainly inhabited by the *Meithars* and have a mosque for them'.²⁷

The rulers of Travancore also had given the title '*Methar*' to the Mohammedans / Muslims of the state. However, they were not influential or elite genre of the society alone, but artisans or skilled performers, so on and so forth. A re-script (*Nettu*²⁸) of the Maharaja of Travancore dated 9th of *Kumbham* 995 M E (1820 C E) stated that, a group of fire workers who enchanted the royal family members, while residing at Quilon (Kollam), were to be given titles and royal offerings by the Diwan Janardhana Rao Venkitta Rao. Some of them were Mohammedans: "...fire workers like *Kunjan Marakkan Kochu Methar* of Kakkazhathu, *Pappu Kunju Kochu Methar* of Purakkad and *Karuppu Kunju*, another *Methan* will be given the umbrella, chain lamp, valour chain and the titles such as *Valiamethar* (Greater *Methan*) and *Kochumethar* (Lesser *Methan*) respectively".²⁹

Etymology of the term *Methan*

An enquiry has been made into the etymology of the Malayalam term '*Methan*', as a separate entity among the Muslims in colonial Travancore. There were a large number of studies regarding the *Mappilas* of Malabar, yet there has been no study on *Methans* as such,

their counterparts in Travancore. As William Logan asserts, the origin of the word *Mappila* is from the Malayalam term, *Maha Pillai* (Great Child).³⁰ Likewise, according to some scholars, the term *Methan* has been derived from '*Meltharam Alkkar*' (great souls) as attributed to the Muslims by the native rulers. However, a doubt naturally arises as to how can a group of lower origin, petty traders, and daily workers like the native Muslims achieve the name that signifies greatness. The reason might be attributed to the transformation that the 'Avarnas' or the lower classes of the society underwent as they got converted to Islam. Since they attained a higher social status due to their conversion to Islam, they came to be called '*Meltharam Alkar*'.

The Savarnas (upper strata of the Hindus), called the Muslims and Christians as *Mlechans* (Impure).³¹ The term *Methan*, according to some scholars, 'is a palatalized version of the *Mlechans* (*impure*)'. Nonetheless, there is very little possibility that a negative term has become the name of a sub caste of a religious community. The term, however, has been in use for quite a while and there are any number of examples to prove its currency among the general public. Thus *Mecher*, a Muslim / Mohammedan deity worshipped in a temple at Kuttanad in Central Travancore, might have earned its name from *Methan*.³² Yet another argument is that the term originated from the Malayalam word *Mel Sthaniyar/ Melthaniyar* (high title holders). However, the *Methans*, Arab descendants and also converted Muslims, were very poor in language and culture and not in a position to be held equal with the upper strata of the community like the Sheik, Sayed, Meman, Pattanis, etc.

The term '*Mohammedan*' was used synonymous to Muslims in the early colonial records. It was during the 18th - 20th centuries, that the European ecclesiastical officials and Christian scholars described Islam as Mahometism, Mahomedanism and Mahometry.³³ The high officials of the state of Travancore were the English educated Brahmins from the Madras and Bombay presidencies. These officials have recorded the name of Muslims as Mahomedans (Mohammedans). From the frequent use of the term Mahomedans, the 'Maho' might have been clipped or lost, making the term *Metans / Medans*. This term

gradually attained currency through literary and other art forms of the land. The term Mahomedans was used to denote the Muslims in English and *Methan* in the Malayalam records of the state of Travancore.³⁴ The feminine *Methachi* (*Methan* womanhood) was also popular.³⁵

Stigmatized Identity of the *Methan* in Malayalam Literature

In Malayalam literature, especially in novels, short stories and plays, the Muslim community in Travancore and Cochin were depicted as *Methans* - a stigmatized identity - especially by the writers who belonged to the upper strata of the society. As the literary works of Malayalam was largely written by high-born writers, their attitude to and treatment of the Muslims was more or less a reflection of their surroundings. For example, the Malayalam novel *Bhranthalayam* (Lunatic Asylum) of P. Kesava Dev published in 1949 depicted the story of partition of India and its incursions in the native states of Travancore and Cochin. His characters sarcastically use the word *Methan / Methachi* (womenfolk of the Muslims) to depict the Muslim characters.³⁶

The *Aithiyamala* (1909) of Kottarathil Sankunni alias Vasudevan depicted the early life and activities of Kayamkulam Kochunni, the Robinhood of Kerala. In his story of Kochunni, it is said that he left his home at an early age and met a Brahmin at Avoor near Kayamkulam and introduced himself as a destitute Mohammedan boy. The Brahmin brings him into a nearby shop – *Valiaveetil peedika* and introduces him as a *Methan* child (*Methachekkan*).³⁷ Nonetheless, the narrative comments of the author as well as the remarks by the characters in the novel are to a very large extent, the result of the socio – political atmosphere prevalent at that time. Like P. Kesava Dev and Kottarathil Sankunni, famous writers such as Thakazhi Sivasankara Pillai, M. P. Narayana Pillai, etc. have used the term *Methan* to denote the Muslim characters in their stories.

However, the Hindustani Muslim groups such Pattanis / Dakhnis were the main Muslim characters in the novels of 'Marthanda Varma' and 'Dharma Raja' of C.V. Raman Pillai, because these two historical novels discussed two big shots in the Travancore royal family – Anizham Thirunal Marthanda Varma and Karthika Thirunal Rama Varma. Moreover, the Pattanis

were military officials and medical practitioners, especially of Unani medicine with Hindustani as their mother tongue and they never mingled with the ordinary native Muslims of the region.³⁸

***Methan Mani* (Methan Clock): A Symbol of the Stigmatized Identity**

The identity of the Muslim was stigmatized by using the term *Methan* and this is evident even from the structures built during the colonial as well as monarchical age. *Methan Mani* (a clock tower) near Sri Padmanabhaswamy temple was one of the stigmatized symbols of the condescending attitude. It was during the attack of Mysore on Malabar that a large number of Brahmins fled to the Land of Charity-Travancore. The ruler of Travancore, Karthika Thirunal (Dharma Raja) wholeheartedly welcomed them. It was during that period that Dharma Raja decided to construct a clock tower at the centre of the Sree Padmanabhaswamy Temple.³⁹ In the clock's dial, a bearded man's head was erected in between two angry goats and at every stroke of twelve in the noon and at midnight; the two goats came together to hit the bearded man. The moaning of the bearded person was a thing to laugh. The Brahmins and the locals called it as *Methan Mani* due to the presence of the bearded man who represented the Mysore intruder Hyder Ali.

As part of the construction of the clock tower, the official records of Travancore (Mathilakam Records, Churuna (Scroll) 1271.2, Leaf 85, M E⁴⁰ 946 Chithira 8) state that, 'On 30th Thai of 945 M E, Muthunayakam of Puthapandi was given a sum of Rupees 400 as remuneration for making two needle, the head of a Methan (bearded man) and the copper dial to the clock'.⁴¹ The head of the bearded man was called Methan by the colonial mind and the local Savaranas (upper caste). Nonetheless, the Maharaja of Travancore had a maternal relation with the Kolathunadu (North of Malabar), an affected princely state of Mysore interlude. According to M.G. Sasibhushan, as revenge to the Mysore ruler Hyder Ali, the Travancore Raja deliberately included the bearded man to insult the Mysore as well the Mohammedans.⁴²

Mohammedan Groups: Unravelling the Identity Formation - Census Speaks

In 1872, the British started Census in India. However, in Travancore, the first census was

held during the reign of Swathi Thirunal. From 1881 onwards, the British started regular census with religion, caste, sub caste, education, literacy, language, health, etc. as their subjects. It was during the period of the British rule that the land was divided into three principalities such as Travancore, Cochin and Malabar and the British conducted the census activities in these native states. In the early Censuses of Travancore (1836 and 1854), the so called Muslims were recorded as Mussalman; but in 1875, they were recorded as Mohammedans.⁴³ The Cochin Census report of 1875 stated that, 'the Jonaka Mappila and Ravuthans were the two groups among the Muslims'. There were also a number of sub groups like Dakhini, Cutchi Memons, Sait, Naina, etc. "Pathans or Pattanis, the descendants of the Afghan Soldiers of the Raja of Travancore residing in the southern part of Cochin" states Mr. Sankaraih, the Census Commissioner of Cochin.⁴⁴

However, the Travancore Census of 1881 reported that, "there were Sunnis, Shias, Wahabi and Faraisi among the Muslims in Travancore. Among the total Muslims (6% of the total population were Muslims) the Sunnies occupied the prominent position".⁴⁵ The commissioner also stated that, there could be a division such as Sheik, Syed, Mughal, Patan, Labbai, Methan, Tulukkan among the Muslims, but no such efforts came from the side of the officials.⁴⁶ However, the Census of 1891 traced 28 sub-groups among the Muslims.⁴⁷ Among them, the Methans occupied the first position by numerical strength with 54086.⁴⁸ The main centres of the group were Karunagappaly (14244), Quilon (11741), Karthikappally (6851) and Chirayinkil (5597). These tehsils (sub districts) were the centres of medieval maritime trade with the Arabs/ Muslims.

By 1901, the Muslim groups of Travancore rose to 47 sub-groups.⁴⁹ They were Afghan, Alima, Ambi, Arab, Ashabi, Bora, Chinese, Fakhir, Faroshi, Hamdeyi, Hindi, Islam, Ismail, Jamat, Jonakan, Cutch, Khan, Labbai, Malabari, Mappila, Mali, Moula, Memman, Methan, Mughal, Muthali, Ostha, Pailman, Pathan, Panyar, Pilathi, Rajasbaniya, Ravuthan, Salyya, Sakhi, Sharibha, Sayed, Sheikh, Shngsha, Sikh, Sindh, Singhali, Thangal, Tharakan, Thulukkan, Weiz.⁵⁰ Of these sub castes, *Methan* occupied the largest number (55214). The other sub castes, however, came

from North - West India were mainly occupational groups too. The upper caste like the Nairs, as per the Census of Report (1901) had as much as 116 sub-groups; the Elavas (Ezhava) also held 33 sub castes excluding 13 sub divisions of the sub castes; the Pulayas and the Parayas held 80 and 64 sub castes respectively.⁵¹ In 1911, the population of the Muslims comes to 2, 26,617; the Jonakan, Mappila, Labbai, Methan, Pathan, Ravuthan, Sayed, Sheik and Tulukkan held the sub castes of the total population of the Muslims. The majority of them were the *Methan* (66864 souls) mainly concentrated in the seven Taluks of the State of Travancore: Vilavankode, Trivandrum, Chirayinkil, Kollam, Karunagappally, Kottarakkara, Karthikappally.⁵² In the census of 1921, the Muslims were categorized as seven major groups and 30 minor groups. These seven groups were the Jonakas, Labbai, Mughal, Pathan, Ravuthan, Thulukkan, Methan and the minor groups comprised only below ten thousand of the total Muslim population. The numerical strength of the Methan (89209) was high and they lived in the Central division of Travancore with Quilon, Chirayinkil, Karunagappay taluks. The Census of Cochin (1921) stated that the Muslims of the state comprised of the Bohra, Hanabhi, Jonakan, Cutchi, Pattan, Sheik, Syed and Shafi groups. Among them, Shafi group (1140) represented the Methans of Travancore.

In 1931, the population of the Muslims came up to 3, 53,274 and majority of them were the Sunnies. Among the Sunnies, twelve castes have been categorized into four groups. They were the Cutchi Memons, the Malabar Muslims (the Jonaka Mappila, the Methan and the Thangal); the Tamil Muslims (the Tulukkans, the Ravuthans and the Labbais) and the Northern Indian Muslims (the Dakhinis, the Sheik, the Mughals and the Sayeds).⁵³ In this category the Methans were included in the native groups of the Malabar Muslims. However, the Muslims of Cochin decided to represent them as a single category as Muslims of the state.⁵⁴ So they were reluctant to be represented using different names and obliging their request, the government accepted it in the Census Report of 1931. This was followed in the next Census in Travancore (1941) and the caste notation was avoided in the followed Census Reports.

Where Have the Methans Gone?

The petty traders of coastal regions, the *Methans*, later migrated to the inland also. The trade of spices flourished from coastal to hilly tracts of the state of Travancore and naturally they prospered owing to the trade. The European interventions had also curtailed the trade activities of the Arabs and the native Mappilas and Methans. The formation of the ports like Alappuzha and Poonthura promoted their trade and they became financially sound. Their life became steady after their migration to Straits Settlements (Malaya and Singapore) and Gulf countries. In later days after the integration of princely states and thereby the formation of modern Kerala, the Methan sub caste vanished from the records and existed only in the literary forms and arts forms especially dramas and cinemas. It however remained in the popular mind. In 1927, the Cochin government due to representations from the Muslims enacted laws to eliminate the term Mohammedan and instead, began to use the term Muslim. In 1943, the Travancore Government also recommended to change the designation of the Mohammedan Inspector of Schools as the Muslim Educational Officer.⁵⁵

Nonetheless, the Anthropological Survey of India (ASI) had designated the Methans in their publication as the Shafi Muslims. In 1998, they published three volumes 'People of India, National Series – India's Communities' under the editorship of K S Singh, which depicted around 280 Muslim communities in India. Among them, they mentioned a group of Sunni Muslims in Kerala with the title 'Muslim Shafi' as: 'a group of people who lived in the districts of former Travancore and Cochin states, with Malayalam as their mother tongue and worked as coolies, agricultural labourers, petty traders, etc. and they followed the Shafi school of jurisprudence.⁵⁶ It was also mentioned by another book of ASI published in 2004, that the life and culture of the *Methans* in the colonial Travancore such as Muslim Shafis were different from those of the Mappilas of Malabar⁵⁷, and they had the traditional prefixes like *Kunju, Kannu, Kutty*, etc.⁵⁸ Their marriage rites and attire especially their dressing style, etc. were different from those of the *Methans*.

The Muslims of the native origin rapidly changed in the course of time by migration to

other countries especially Malaya peninsula (The Straight Settlement) and the Gulf countries. There was also a social mobility among the native Muslims to improve their social status. They tried to mingle with other Muslim communities and assimilate the rites and rituals

including their ardent religious beliefs. This rapid change among the native Muslims brought about radical changes in the community, described by Imtiaz Ahmed as 'Ashrafisation'⁵⁹, which cleaned up the native identity notations, but retained enough of the contemporary society.

Notes and References

1. The Ravuthers (Rawthers) were the Muslims who lived in the Tamil countries, especially in the modern South India. The word Rawther is derived from the Arabic word Rabithu which means 'horse'. Dr U V S Swaminatha Iyer in his Nallurakovai pointed out that the Ravuthars had been given the name from their profession of riding and rearing horses. See, R Abbas, *Major Divisions of Muslims in Madurai*, The Proceedings of South Indian History Congress, Vol. XXIV, Ed., Dr B S Chandrababu, Madurai, 2004, p 190
2. Pattanis / Pathanis are a derivative term of the Pashtuns, a warrior group in Baluchistan who migrated to different regions as military officials and soldiers. They also served the Deccan Sultanates; from there they migrated to Travancore. They were also known as Dakhinis, a name given to the Urdu speaking people who came from Deccan and they used the Hindustani dialect known as Dakhini / Hindustani or Dakkini Urdu which had a slight change from the original Urdu. 5. In Travancore and Cochin, the Muslims were known in different categorical names on the basis of occupation, place of origin and so on such as the *Mahommedans / Mohammedans, Jonakans, Tulukkans, Ravuthars, Labbais, Methan, Meman / Cutchi Meman or Sait*, etc. The term 'Mohammedan' was used to denote as the followers of Prophet Mohammed. The *Jonaka* is the corrupted form of the Yavanas in Sanskrit which means foreigners. Tulukkan is also a term coming from the word Turks (Turushka in Sanskrit) which means the Muslims from North India with Turkish lineage. The Ravuthars and Labbais are Tamil Muslims; the Cutchi Meman or Sait was the Muslim group coming from Western India especially Gujarat. However, *Methan*, the origin of the term denoting to the native Muslims was in obscurity.
6. An Anglicized term for the *Methan*, have been used by the British officials in their records. Vide., Lt. Ward and Conner, *Memoir of the Survey of Travancore and Cochin States*, Vol. II, the Government of Kerala, Cultural Department, 1994(r. p.), pp 53, 54

57. In Travancore, the Christians were named as Mappilas, especially higher castes. In Malabar, the Muslims were called Mappilas (Moplahs in foreign records). Lowis Moore stated that, the meaning of Mappila is bride groom or Son- in- Law of the country because Arabs made matrimonial alliance with the land. According to Francis Day, Mappila, a compilation of two words Ma means mother and Pilla means child, because the children of the Arabs had no right over their fathers. Percy Badger was of the opinion that Mappila, a corrupted word of Muflih (from the root falah) which means prosperous or victorious; Buchanan used the word Maflih for the same. William Logan is of the opinion that, the word maha (great) and pilla (child), an honorary title given to the Rajas to the early settlers of the Mohammedan

59. This rapid change among the Muslims, as a matter of fact, have considered by Imtiaz Ahmed as 'Ashrafisation', which might be compared to M N Srinivas's understanding of Sanskritization. The procedure of Ashrafisation essentially means a social mobility among the Muslims, a concern to improve their social status in periods of rapid change. It involved the adoption not only of modes of social behaviour such as Purdha, but also an adherence to what was believed to be 'high' Islam (High Islam, a term used by Brabara D Metcalf for Ashrafisation in Bengal) and the social and political values that derived from its prescription. ISLAM, MATRILINY AND ARCHITECTURE: THE CASE OF PONNANI

P. Sameena Nasrin

Introduction

Matrilineality is the tracing of kinship through the female line. It may also correlate with a system in which each person is identified with their matriline –their mother's lineage-and which can involve the inheritance of property and or titles. In a matrilineal descent system, an individual is considered to belong to the same descent group as their mother. The co-existence of matriliney and Islam was often viewed as paradox, as Islam prescribes patriliney and patriarchal relations. In some parts of the world, Muslims follow matriliney. The matrilineal system of inheritance or *Marumakkattayam* is a peculiar feature of Malabar society and it occurs among a section of the Muslims of Malabar, the Mappilas also. The most common among the translations of the Malayalam term *marumakkathayam* are "female line", "mother right", or simply "matrilineal inheritance"¹. William Logan states in his *Malabar Manual* that "the most important of the customs in which the people of Malabar differ from people elsewhere is that connected with the inheritance of property"². C.A Innes and F.B Evans mentioned about *marumakkathayam* as a remarkable peculiarity of Malabar society³. Among the Mappila population, it mostly occurs in the coastal towns of Malabar and in the Laccadive, Minicoy and Amindivi islands⁴. It seems reasonable to assume that centuries ago a matrilineal system, with the duolocal residence pattern, was brought to the Laccadives by the migrants from the coastal region of Kerala⁵. Ponnani was one of the active seaport in Malabar, which located on the confluence of Kerala's second largest river, Bharathapuzha and Arabian sea. Ponnani is the southernmost

Taluk of Malabar proper, and though separated from Palaghat by Cochin state and Nelliampati hills, forms with that taluk one of the three main divisions of the district. The shape of the taluk is most extraordinary.⁶ *Malabar Gazetteer* states that more than 95 percent of the inhabitants are Mappilas⁷. Ponnani, is often referred to as the cultural capital of Kerala Muslims. Ponnani was not known as a Muslim center before 15th century. The famous African traveler and historian of the 14th century Ibn Batuta, who had visited Kerala has not mentioned Ponnani in his travel description. It was the Maqdoom family that settled in the late 15th century in Ponnani who brought up this place as an Islamic learning centre, Subsequently Ponnani came to be famous as in the name of "small Mecca". Matrilineal Mappila *taravads* are very powerful in Ponnani region. The Maqdoom family of Ponnani was very famous matrilineal family which followed the *taravad* type of joint family system. The present paper attempts to assess the nature and peculiarities of matrilineal Muslim society in Ponnani, whether we can call this as matriliney or not and the Mappila *taravads* and its architectural peculiarities relating with this system of Ponnani.

Content

The origin of the *marumakkathayam* is a matter of debate as no authentic record is available. The European travelers who visited the Malabar coast since the 15th century A.D had left valuable accounts. It is generally believed that *marumakkathayam* was the direct result of the polyandry⁸. In such a system paternity was uncertain and a woman's children belonged to the father's side to a

number of men together, while on the mother's side they belonged to one individual. When paternity was uncertain a person found it safer to consider his sister's children as his heirs than his own children. Among the Muslims, matriliney was adopted as a matter of convenience. The initial phase of intermarriage between the Arabs and the local women was of a temporary nature and hence the father did not play a significant role. The children were brought up in the mother's house and this therefore planted the roots of matriliney among the Malayali Muslims⁹.

Sheikh Zainudeen Maqdoom 2nd mentions about *Marumakkathayam* in his work titled "*Tuhfathul Mujahideen*", who considered it as a strange habit of infidels of Malabar. "The inheritance of wealth and possessions in Nair community and the like went to maternal brothers, their children of sisters or maternal aunts or maternal relatives, not to the children. This non- inheritance of the children crept to the majority of Kannur Muslims though they recited the Holy Qurhan, memorized it, educated and performed prayers" ¹⁰. He states that Muslims practice *marumakkathayam* in Kannur and surrounding areas¹¹. Since he did not refer to Ponnani, so it is clear that the system did not exist in Ponnani at that time. Because he was a teacher spent a good part of his life in Ponnani and had contacted to children from different places, as a religious scholar, he was in constant contact with all kinds of people in the society. So if there was such a system out there, he would definitely record it. So it is reasonable to assume that there was no matriliney in Ponnani in the 15th or 16th century. In Ponnani, a great bulk of people follow the patrilineal system common to both Islamic tradition and practice of the other Hindu groups in Kerala. Majority of Ponnani Muslims follow *Makkathayam* system. Those who follow matrilineal system are concentrated in the old Jumuhath Palli ward and Angadi ward¹². Ponnani became a municipality in 1978 but the place still known as jumuhath palli ward and angadi ward among old generations. How did the matrilineal features come to be among the few muslims of Ponnani?. Similarity in customs and architectural styles buttress the conversion theory. A.P Ibrahim kunju, a scholar who studied in this area states that the most significant adaptation of hindu social custom by

Mappila Muslims of Kerala was *Marumakkathayam* system¹³. "The matrilineal kinship system was adopted by north Malabar Mappilas from the Nair community, probably as a result of intermarriage and conversion" ¹⁴. Ponnani, is a place where many Namboothiris and Nairs lived and as a port city, trade with Arab Muslim merchants may lead them to conversion. With the adoption of the new religious laws, they have retained many of the old laws. During 16th century Muslims and Nair army started war against Portuguese under the Samoothiri reign. To a certain extent this led to the formation of new customs and traditions which was the hybrid of the two.

For a system to be called by its name, it must include all its elements or at least include its important features. If so can this system that exist here be called as matriliney or matriarchy?. It has to understand that whether it is matriliney or matriarchy or a mixture of both systems existing there. Before we get into that, we need to know what the two are. The terms „Matriarchy“ and „Matriliney“ are often linked, which should be distinguished. The matriarchal society is the one in which the women are the leaders and rulers. A combination of female dominance, female kinship and female inheritance are found in matriarchal society¹⁵. But in the case of matrilineal society, there is no question of female dominance, only the kinship, descent and inheritance are traced in the female line. In the case of Malabar the matrilineal society existed as there was no female dominance, and the family system was patriarchal influenced¹⁶.

In Malabar, matriliney system was practised mainly by the Nair community. It would then take a comparative study with Nair matriliney to ascertain the extent of this condition among the Muslims of area under study. The most significant feature of *taravadu* formation was that women were central to the creation of many of them¹⁷. In case of Ponnani, we can see female dominance. The *karanavan* had a respectable position and the junior members obeyed him in Nair *taravads*, like that of the female head or *karanvatthi* commonly known as *Muthavalli* who holds a high position in family. If there is female dominance it must be matriarchy and if there is male dominance it must be matriliney. As far as these features concerned, it must be said

that there was matriarchy. Then, what about the inheritance? Inheritance from motherline is a common feature that exists both in matriarchy and matriline, but in Ponnani they had adopted certain aspects of the matrilineal system like adoption of title from motherline, the taravad system, matrilocal and dowry system, but in matters of inheritance, they adhered to the Islamic law means the *sharia* law. L.R.S Lakshmi in her work, "The Malabar Muslims" argues that this was exactly the same that existed in Kozhikode. She states that unlike the Muslims of North Malabar who follows matriline, the Kozhikodan Muslims were *Marumakkathayees* as far as descent and kinship was concerned but *Makkathayees* in their mode of inheritance¹⁸.

Ponnani is famous for Maqdoom family. The first thing to be said about the matrilineal system of Ponnani is that of the Maqdoom family. The Maqdoom family of Ponnani did not initially follow this rule. They have been observing it since the third generation. Sheikh Zainudheen Maqdoom II, a third generation of Maqdoom family spent much of his time working on knowledge, teaching and Islamic preaching, he couldn't do justice to "Maqdoom" title. So he nominated his sister's son and later everyone accepted this system. From this it can be seen that the family did not follow this matrilineal system initially¹⁹. There are three types of Maqdoom families - Maqdoom Tangals, Maqdoom Malabaris and common Maqdooms. Only those from the Maqdoom Tangals are considered for this position²⁰.

The *Marumakkathayam* joint family or *taravad*, as it is called, consists of all the descendants of a common ancestress, in the female line only²¹. All *taravads* of influence set apart property for the common use, and indeed it seems to have been for purposes of thrift that this system of inheritance was at first devised. So long as that common property exists any number of families may hang together and form one *taravad*²². The *taravad* property was vested in the hands of the *karanavan* in Nair families. The *karanavan* was not an absolute owner, but an agent or representative of the *taravad*. The *karanavan* conducted all the ceremonies and managed the *taravad* properties but in Muslim matrilineal family the

father conducts the marriage of son and daughters and gives part of their property as dowry. In Nair matriline, not all members of the *taravad* have the property rights, but among Muslims each member will be heir of their parents property while all have connected with the common *taravad* properties. Each *taravad* held huge tracts of land. Large areas of northern and coastal Malabar, especially regions around Ponnani and Kozhikode, were integrated into a highly commercial economy centred on pepper and coconuts. Pepper production proliferated well into the mid-nineteenth century in north Malabar, and it formed an extremely important source of wealth for the bigger taravads²³. The system prevented the partition of property as the women in whose name the descent took place, continued to live in the *taravad* even after their marriage.

In addition to the dowry the girls receive at the time of marriage, they will also inherit the property after the death of their parents. During marriage, the girl gets a lot of wealth as a dowry. The elder daughter gets more dowry²⁴. In most families there were at least 5 or 6 girls and when the last girl gets married, the family's finance will be low. After the death of parents, there is nothing much assets to share for sons²⁵. Women stay in their own homes after the marriage. The husband's house is often visited years later and staying at the husband's house is rare. This is known as *Kayari iranguka*²⁶. Husbands settled in wife house after marriage is called as *Kayarikooduka*²⁷. Dr. K.K.N Kurup and Prof: E Ismail argues that women is a permanent member of the house with all occupational and legal rights, though she makes occasional visits to her husband's house. Since they follow the matrilocal residence system even the freedom of movement is restricted to a great extent²⁸. Marriages at that time were celebrated in night and women went together and during the day time, women were not allowed to leave home²⁹.

The Mappila house was called a *taravad* or joint family house, a terminology adopted from *Nairs*. The word '*Akam*' appears in the name of the majority of households that follow this system. For example Kawdiyamakkanakam, Vettam Pokkiriakam, Noorudiyanakam, Thareekanakam, Maqhoom Puthiyakam,

Kodambiyakam, Mayanthiriyakam etc. As understood from the field study, there are two types of *taravads* existing in Ponnani, the *Nalakam* type and *Otta* type. *Taravads* having *nadumuttam*³⁰ which connects the rooms through *Kottil*³¹ is *Nalakam* type. This type have a resemblance with Nalukettu houses. From padappuram enters into *nadumuttam* and other three sides have *kottil* which connects the rooms. The *kottil* in *nalakam* type is a raised platform from *nadumuttam*. Each *kottili* have two or three rooms or *Aras*. Each *kottili* have different functions such as for dining, gathering space, space for common activities. Addition of spaces is done adding one *nadumuttam* and adjacent *kottili* and rooms. This type of growth needs more space. *Taravads* which have one *kottili* that connects four adjacent room is *otta* type. *Nadumuttam* is not seen in this type. Four rooms have a single hall and this hall act as multifunctional hall. Addition of spaces is done by adding one *kottili* and four *aras*. This type of growth needs less space than *nalakam* type.

For every marriage, each room called *Ara* is added to the house. Each *Ara* has an entrance called *Mathok*³² or groin door. It is believed that the *Mathok* can extinguish fire. The *Aras* are set up as small houses or apartments in a big house. An *Ara* or *Mandokam* comprises of three rooms each has separate character. The three rooms are *Kadakkunna Mandokom*,³³ *Nadukkale Charu*³⁴ and *Thalakkale Mandokam*. *Thalakkale Mandokom* includes Kolai, bathroom and courtyard. In wealthy families *Thalakkale Mandokom* comprises well or shared well and *hau*³⁵ as per grooms demand. *Kadakkuna Mandokom* is more like a foyer where the door to the *Nadukkale Charu*. This room is used for seating and reading. *Nadukkale charu* simply means the bed room. These *taravads* follow simple plans and space organization in such a way that spaces are multifunctional, designed to accommodate big group of people. Subaida, a member of Chozhimadam *taravad* says that this system will ensure the safety of women as well as ensure that there will always be women in the family, and if daughters or daughter in laws (now many *taravads* including this in Ponnani began to follow *makkathayam* system) no longer have to take this house, then this house will go to Maenathul islam sabha of Ponnani

as per the *wakf* accord done by her grand father³⁶. According to L.R.S. Lakshmi two kinds of *wakfs* were made-one for the religious or charitable purpose of the public called the public *wakf* and the other for the benefit of the *wakif*'s family and his descendants called the private *wakf*. The private *wakfs* were also known as family *wakfs*³⁷. In case of any damage occurs to house, *wakaf* organization is responsible to grant financial assistance³⁸. When fire broke out years back, they allotted four lakhs rupees for repair. The *taravad* property will be equal to every one. When the *taravad* house could no longer accommodate any more members, smaller branches of the joint family were created. They were known as *Thaavazhis*. A *thaavazhi* is a group of persons consisting of a female ancestress, her children and all the descendants in the female line³⁹. In Ponnani, there are lot such *thaavazhi* families, because many wealthy *taravads* bear the same *Taravattuperu*. Those who can afford to build their own homes will later move out of the *taravad*. Then they can lock their *Ara* or leave it to others. In many *taravads* such locked room can be seen. They can come back at any time, because the property of *taravad* never be partitioned. But now things have changed completely. Today these houses are on the verge of collapse due to various reasons and most of the families began to follow *Makkathayam* system. Those who are financially prominent today use to buy the *taravads* and giving others their share.
