From the age of the *taravads* it can be seen that the oldest were *nalakam* type and *otta* type formed later. The reason for the formation of *otta* type is to accommodate more members and it requires less space while the addition of spaces. *Mamacham veedu* is the most aged *taravad* and its condition is very poor and many spaces there were not using because of its poor condition. One of the reason that it is not maintained is the formation of nuclear family and the extinction of *Marumakkathayam* system existed there. Although the traditional style of construction and construction materials are same in the case of wealthy families, The Hindu-Muslim houses in Ponnani have a different architectural structure⁴⁰. The *Masjids* and large residences of Ponnani are repositories of knowledge and information and

are unique in their form and high heritage value as they demonstrate the Arab –Hindu fusion. The unique architecture of Ponnani is a rare expression of the Islamic culture brought by the Arab trading community built by the expertise of native traditional craftsman. This is an imprint of Islamic culture which is different from that observed in other Islamic cities in india⁴¹. The new generation,who fond of modern amenities soon extirpate such traditional taravads soon.But such homes are being protected by paucity of new generation .

Conclusion

The social customs of Ponnani are a mix of both Islamic and native components.The religious customs are a mix of both and beliefs are purely Islamic. By reading Leela Dube's ,*Matriliney and Islam – Religion and Society in the Laccadives* and P.A Muhammed Koya's ,*Sulthan Veed* a novel which gives idea of matrilineal system existing in Kozhikode,we can understand that the matrilineal features of Ponnani similar with these two places. The institution of Taravad,with definite lines of authority and coordination as well as close cooperation of the matrilineal kin, has remained the distinctive feature of the social structure of the island⁴². This is exactly same in Ponnani.We can see that female members have dominance in Ponnani *taravads*.The servants were paid the salary from the *Karanavathi* and also the managers reported the accounts to *karanavathi*.

The disintegration of the system was caused by the continuous conflict among family members of the *taravad*, huge expense to maintain a *taravad*, financial liability for preparing *arav* wedding expense and dowry, partiality, dissatisfaction against muthavalli, and external factors like education, migration from village to town for job,urbanization,increasing population in *taravad* etc. ultimately caused the disintegration of this institution.L.R.S. Lakshmi states that matriliney was more strictly followed and well preserved by the Muslims of Malabar as compared to the Hindu *marumakkathayees*.This is absolutely correct because we can't find any key elements of this system among present nair families but it is still followed by some Muslim families. It is doubtful whether matriliney could be called upon this system in Ponnani.The resemblance with nair matriliney is taravad system,adoption of title through mother line and matrilocal system of grooms. It is appropriate to say that the term matriarchy is more suitable for Ponnani rather than matriliney because the women is dominant. Inheritance through mother line here,the principal feature of both matriliney and matriarchy is absent in Ponnani ,instead they follow sharia law.Therefore,it is appropriate to refer to this system of Ponnani as a cultural synthesis rather than called it as a matriliney or matriarchy.Because of the dominance of the women and inheritance based on *sharia* ,the term matriliney does not fit to Ponnani.

CRIME AGAINST DALITS : A STUDY ON MELAVALAVU MASSACRE

A. Sevugaperumal

Melavalavu Panchayat was formerly in general category in the MelurTaluk of Madurai District. In 1996 the said Panchayat was notified as reserve category exclusively for scheduled castes. This change of general category into reserve category was not liked by the people of other communities particularly Ambulacra community. During the Panchayat Board Election, at Melavalavu Village some protest was there as if the scheduled caste people should not contest, after some mediation etc. election was conducted finally on 31December 1996 in which there was contest between the deceased Murugesan and one Mayan Karuppan and however, the deceased Murugesan was elected as President of Melavalavu Panchayat Village. After such election they said Murugesan as President was not in a position to function as President freely without fear and embarrassment. This was the situation till the incident of this case on 30 June 1997.

I

The gory incident which took place had its seeds sown in 1996, when Melavalavu Village

Panchayat was declared to be reserved for the Scheduled Caste people. This was not liked by the Hindus of the Village, generally belonging to Ambulacra community and thus, an inimical feeling was being nurtured by the people of this community against the Adidravida persons. So much so that when the elections were declared in 1996, some of the houses belonging to the members of the Scheduled Caste were burnt¹. The election was conducted on 31 December 1996 and one Scheduled Caste candidate namely Murugesan was elected as President of Melavalavu Panchayat. Even before this election, twice the election had to be cancelled, as on both occasions, the whole election process was thwarted by the caste Hindus². On the fateful day, Murugesan, Mookan, Vice President Chelladurai, Sevagamoorthi and some others had gone to Collector's Office, Madurai for claiming compensation for the damage caused to the houses of three persons, which houses were burnt. They could not meet the Collector, as he was not available, therefore, one Kanchivanam was asked to wait in their office and the others boarded the bus from Madurai³.

On 30 June 1997 the Krishnan visited Madurai Collector Office for his personal works and he met there the President Murugesan, Vice President Selladurai, and also him with Sevagamoorthy, Nithianandam, Pandiammaland Mookan. He also came to know from them that they came there for Kanchivanam demanding some compensation due to the destruction of the houses of three persons by fire. Thereafter, since the Collector was not available at office, they returned from Madurai after leaving the said Kanchivanam in the Office itself to meet the Collector on his arrival⁴.

Afterwards, the as well as the above said person was travelling in KNR bus from Madurai to their Village. On arrival of the bus stand at Melur, the Kumar and Chinnaiyya also got into the bus. At the same time, first accused Alagarsamy, second accused Duraipandi, 5th accused Manikandan, 4th accused Jothi, deceased accused Jayaraman, 6th accused Manivasagam also got into the bus. When the bus arrived at Melavalavu Agraharam Kallukadi Medu at about 2.45 p.m the second accused Duraipandi shouted to stop the bus and consequently, the bus was stopped by the driver⁵. Immediately, all the accused under the president ship of 40th accused Ramar with weapons surrounded the bus. Thereafter, the first accused Alagarsamy attacked the President Murugesan by saying as if upon his right shoulder. Consequently, the passengers inside the bus ran away⁶. Further, first accused Alagarsamy severed the head of Murugesan and rushed towards west along with the severed head. At the same time, 40th accused Ramar attacked by cut Raja and 5th accused Manikandan attacked Selladurai by cut upon the left shoulder accused Manivasagam attacked Kesavamoorthy by cut upon right neck and left ear and at that time Vice President Mookan tried to run towards east and however, 4th accused Jothi attacked him by sword upon the back portion of the neck and Bhoopathy also tried to run towards west and however third accused Ponnaiyya attacked with cut upon the neck and hands⁷. Further when the Krishnan tried to run from the bus like Kumar and Chinnaiyya tried to run, 16th accused Karanthamalai attacked Chinnaiyya by cut upon right cheek and second accused Duraipandi attacked with cut upon his right shoulder and 19th accused Tamilan attacked Kumar by cut and 29th accused Asokan

attacked Kumar with cut. Due to such attacks the body of Murugesan without head was lying on the road and other persons attacked were also laying dead⁸.

Thereupon, the injured witnesses 1 to 3 with the help of three other villagers proceeded to Melur government Hospital for treatment and from there they were sent to Madurai Rajaji Government Hospital for further treatment⁹. While was in the hospital at Madurai, the Inspector of Police, Melur viz. Rajasekar came there and recorded the statement of and based upon such statement marked as registered in Melur Police Station and prepared printed first information report marked as and preceded to the incident place¹⁰. M. Subramaniam, the Deputy Superintendent of Police attached to District Crime Branch, in Madurai¹¹.

The Inspector of Police Narayanasamy and another Inspector viz. Koodendi and other Head Constables¹². Thereupon, the Subramaniya made arrangements for conducting inquest upon the dead bodies of six persons viz. Murugesan, Mookan, Selladurai, Raja, Sevagamoorthy and Bhoopathy with the help of these two Inspectors and prepared the inquest reports marked as. Thereupon, he examined the witnesses and Panchayat available in the incident place¹³. Then, he made arrangements for postmortem upon the dead bodies by sending requisitions through constables and consequently, the doctors Meyyalagan, Maharani attached to Forensic Department of the Madurai Medical College Hospital conducted postmortem upon the dead bodies and furnished postmortem reports¹⁴.

Out of the total prosecution witnesses, the Krishnan, Kumar and Chinnaiyya have been examined as injured and eye witnesses and have been treated as hostile when they were recalled on the side of the accused for cross-examination. Sathiamoorthy examined as eye witness also has been treated as hostile. Periyavar, Palani, Ganeshan, Yeghadesi, Maravarand Kalyani have been examined as eye witnesses to the incident. Karuppan, examined as eye witness also has been treated as hostile viz¹⁵. Santhanakrishnan, the K.N.R. bus conductor and viz Nagarajan the driver of the said bus also have been treated as hostile¹⁶.

As of February 1999, all the 40 arrested for the Melavalavu were out on bail and none of

them had been prosecuted. Ramar the ringleader of the Ambulacra gang was arrested only in 2001. Dalits of Melavalavu organized the handling of the murder case¹⁷. Out of 41 accused only 17 were awarded punishment. This case was first tried at the Melur Magistrate Court and subsequently transferred to the IV Additional Sessions and District Court of Madurai¹⁸. Based on an appeal filed by key witnesses who apprehended a threat to their lives if the case was conducted in Madurai, the Supreme Court permitted the transfer of the cases to the Salem Sessions Court¹⁹.

Conclusion

The Petitioner also prayed for exhuming the dead bodies buried in four different burial

grounds within Madurai district and arrange for a re-post-mortem of the same by independent doctors other than Government Hospital doctors of Tamil Nadu Government, preferably by doctors from outside the State of Tamil Nadu. On 26th July the High Court directed that the Petitioner be provided with copies of the post-mortem reports at his cost. A close scrutiny of the major conflict in the study area is expected to shed more light on the undercurrent of the caste tension. The Melavalavu conflict which provides a general background of conflict, details of Tamilnadu Parties, six dalits, and other groups involved in this conflict, trends in the course of conflicts and other related aspects.

RECOVERING DALIT HISTORICAL PAST IN KERALA: CONTRIBUTIONS OF T.H.P CHENTHARASSERY

K. Shaimam

In Kerala, history writing emerged from the anthropological studies of the colonial period. Most of the early historical studies were influenced by dominant categorization of evidence and subjectivity of the writers who engaged in them.¹ These writings neglected the position of Dalits and other marginalized sections of the society who are subjected to the

most inhuman kind oppression and exploitation. This neglect and invisibility led to the growth of Dalit intellectual engagements in Kerala as a critique of the existing dominant historiographies' deficiency in dealing with the notion of caste, movements of the marginalized and their subjectivities. The dominant discourses in Kerala, failed to recognize subjectivity and

agency of the slave castes. The historical past of Kerala and the materials by which it produced had elitist underpinnings and somehow shaped by the interest of dominating power. Dalits are not represented as speaking subjects in these writings but they emerge as objects of representation. Therefore, Dalit discourse is a political mode of enquiry and explanation generating studies on the past, present and future of Dalits in order to help them find a place in history and culture and shape their future.² In Kerala historiography, Dalit historical writings are making a strong presence which is in the process creating an alternative historical realm.

Ambedkar's thoughts and writings had been an inspiration for almost all Dalit movements and Dalit writers all over India. But in the case of Kerala, even before the strong presence of Ambedkarite thoughts Dalit historical and biographical works began to appear.³ From 1980s onwards, wide variety of Dalit historical and cultural works began to appear in Kerala historiography. The publication of T H P Chentharassery's *Ayyankali* (1979) marked the beginning of Dalit historical writings in Kerala. Through this works he laid the foundation of Dalit historical discourse in Kerala's academic realm.

He was born in 1928 at Pathanamthitta as the son of Kannan Thiruvan and Aninjan Anima. His father Thiruvan was the Area Secretary of Thiruvalla Sadhujana Paripalana Sankham. His full name was Thiruvan Heera Prasad Chentharassery. He lived in a milieu where caste discrimination and oppression were predominant, since his childhood he had experienced its brutalities firsthand.⁴ This made him think about the absence of caste and Dalit history in dominant writings and he realized the need for writing history from a Dalit perspective. He penned a number of works on ancient, medieval Kerala and wrote several biographies of Dalit leaders who were invisible in mainstream Kerala historiography. Chentharassery passed away on 27th July 2018. Though he is considered as an amateur history writer, it is an undisputed fact that, he enriched the field of historical research of Kerala with more than forty titles to his credit. His biographical and historical works critically engage with the stereotypes and hegemonic structures of

dominant historiography and reconstructs a Dalit historical past.

Biographical works

The history of religious reform movements which played an important role in the formulation of socio-religious sphere of pre-independence Kerala society is filled with narration of mainstream reform movements by upper caste reformers. The reform movements led by Dalit communities and leaders like Ayyankali, Poykayil Appachan, Pampady John Joseph got insufficient academic attention in the history of Kerala renaissance. It was in this context; T.H.P. Chentharassery came with the biographies of Ayyankali, Poykayil Appachan and Pampady John Joseph which stirred up a kind of awakening in the Dalit movements. Chentharassery's biographical works pointed out the elite character of Kerala social modernization.

The publication of T.H.P Chentharassery's *Ayyankali* in 1979 was an important milestone in the history of Dalit writings. He is considered to be the first biographer of Ayyankali and all succeeding works on Ayyankali were influenced by this work. T.H.P's work played a significant role in bringing Ayyankali back into the public sphere of Kerala who was a totally forgotten figure after his death and this renewed the debates on Kerala renaissance from a Dalit perspective.

Ayyankali (1863-1941) is considered as the first ever revolutionary social reformer from Dalit community in Kerala who worked for the advancement of lower castes communities in Travancore. T.H.P's work provides a detailed discussion about the life and struggles of Ayyankali. He begins with a discussion of the relevance of Ayyankali as an organic intellectual in the historical milieu in which he lived⁵

He gives a meticulous description of Ayyankali's rise as a revolutionary who resisted the evil practices of caste system. In the dominant historiography historical struggles lead by Ayyankali, which includes *Thonnooraamandu Lahala*, *Pullattu Lahala*⁶ are simply analysed as an agrarian protest but Chentharassery located this vibrant protests as a result of lower castes revolutionary move to access education⁷

Chentharassery in his biography on Ayyankali highlights how he made a transformation of an untouchable caste body into a martial body which thereby subverted the symbolic world of relations⁸ This can be seen in the forceful entry of Ayyankali into the public space dressed like upper caste man on a *Villuvandil*. His struggle for entering public space which was denied to lower castes by caste rules brought together people of various Dalit groups for a common cause. Chentharassery point out that the most important thing with the reforms promulgated by Ayyankali was that they were to be within the legal framework existing in the State. Even when he challenged the existing rules he did it with the final appeal of the Maharaja of Travancore. Ayyankali considered society as his own family. He always wished to have bachelors, intellectuals and higher officials from his community and they will be able to further take up the causes of Dalits. In this angle, Chentharassery could be considered as the first intellectual in Ayyankali's dream.¹⁰

Chentharassery wrote a biographical work on Pampady John Joseph (1887-1940), a Dalit reformer and founder of Cheramar Mahajan Sabha that swept Travancore during early 20th century. This work provides a vivid description of the life and activities of Pampady John Joseph. In this work Chentharassery point out John Joseph's deep sense of his story and its importance in identity formation. John Joseph articulated that lower castes such as *Cheramar*, *Pulayas*, *Parayas* and *Kurava*¹¹, all belong to the Adi Dravida race¹²

They were the rulers, landlords, agriculturalists and educated people of the land. He even traced a family called Aykara Yajmanans, then living in central Travancore, belonging to this lineage¹³. Thus, the original inhabitants of the land were the Cheramar and the foreign invaders conquered their country and made them slaves. The enslaved began to be known as *Pulayas*. This was a new endeavor in creating a separate identity and giving self-confidence to the marginalized sections. T.H.P states John Joseph tried to construct the history of the polluted castes based on their ancient legacy and glorious memories of the past and worked for the advancement of lower castes from the inhuman practices of untouchability. Under the banner of Cheramar Mahajan Sabha

(1921), he reacted against the problem of caste oppression within the Christian Churches and attitude of upper caste Hindus towards lower castes.¹⁴

John Joseph played an important role in awakening consciousness and identity of the lower castes during the first half of the 20th century. Another important biography written by Chentharassery is on Poykayil Appachan (1879-1939). He was a Dalit social reformer of Travancore in early 20th century who established Prathyaksha Raksha Daiva Sabha (PRDS) in 1910¹⁵

He tried to construct the history of his people in order to create a Dalit identity as a strategy to claim social agency by the subaltern groups. His notion of history that the slave castes were heir to a historical past which was destroyed by the conquering races had a great influence in the development of Dalit discourse of Kerala. Chentharassery shows how Poykayil Appachan strategically used the Christian theology for spreading the message of salvation and liberation among the outcaste. He established serious theological debates with the mainstream Christian churches. He identified caste as the core of evangelical discourse in Kerala and critiqued it through his dissident speeches and songs and by burning the Bible.¹⁶ But Poykayil Appachan strategically used the opportunities provided by Western missionary intervention for the liberation of the lower castes.¹⁷

According to Chentharassery, Ayyankali, Poykayil Appachan and Pampady John Joseph, the historical figures of Dalit struggles in Kerala were successful in materializing the notions of Dalit identity and public sphere for Dalits. His reading of Kerala renaissance is mainly centered on certain points like, caste, community and identity. It is under these posits he tried to re-read Dalit historical pasts. His biographical works are best example for Dalit subaltern historiography. T.H.P tries to read contemporary issues in the light of historical events. The works expose various parallel paths within reformist movements which were determined by caste hierarchies and reveal how various community enjoyed rights differently. Chentharassery critically examines how reformist movements got narrowed down to caste groups and how this

led to the emergence of Dalit agitations under the leadership of Ayyankali, Pampady John Joseph and others.

Historical works

In the dominant historiography of Kerala, the history of the slave castes has been overlooked consciously or unconsciously. The mainstream historiographies- Marxist, Liberal, Traditional etc tried to explore the notion of caste slavery but failed to provide a deeper analysis of the phenomenon. Prominent Marxist historians like K N Panikkar, K K N Kurup, Rajan Gurukkal, M R Raghava Varrier and so on studied the agrarian social structure and peasant movements but they did not address the question of caste slavery as a significant problem of the agrarian system in various periods of Kerala history thereby failed to give Dalits an agency of historical transformation.¹⁸ In the Marxist analysis, the question of caste and lower caste struggles has been subordinated to the questions of class and national unity. The traditional historians focused on the mobilization of the lower castes beginning with the breast cloth agitation which they interpreted as 'people's revolt'. The Liberal historians of various periods do not make any constructive attempt to understand Dalit historical past. The pasts of the oppressed castes do not figure in the projects of these writings. It was in this context Chentharassery's historical works gain prominence which tried to recover and reimagine the latent presence of Dalits in Kerala history.

T.H.P Chentharassery had made valuable contribution in reconstructing the history of ancient and early medieval Kerala society from a Dalit subaltern perspective. His historical works includes *Charitrathile Avaganikapetta Edukal*, *Kerala Charitrathin Oru Mugavura*, *Keralathinte Malarvadi*, *Kerala Charitradhara*, *Kerala Charithram: Sathyavum Midhyayum* etc. In his historical works he focused on the history of early inhabitants of Kerala that has been neglected by the historians as they only wrote about the elite sections of the society and their historical developments. As Chentharassery argues a country's history should start from its early inhabitants. But, the so-called historians have left them out. They consider early inhabitants as barbarous, uncivilized and untouchable people. T.H.P severely criticizes the

mainstream conventional historians of Kerala who neglected the early inhabitants and their history.¹⁹

Chentharassery points out that the 'outcaste' has a clear and glorious past. And, he further adds that the intellectuals among the outcaste should come forward in order to bring this glorious past in to light.

T.H.P's *Charitrathile Avaganikapetta Edukal* deals with ancient and medieval Kerala. In this work, the author traces various chiefs of non-Brahmin origin and tribal historical past. He tries to locate the ancient and early medieval history of Dalit community and their culture. T.H.P also analyze various aspects of caste subordination and servitude in early medieval Kerala. Through this he tried to map the history of early inhabitants of Kerala and calls them as *Adhima* Dravidians. These groups belonged to the Negrito race. Chentharassery also makes a geographical analysis of early historical Kerala landscape. In the early historic times South India was not the part of Asian continent but it was the part of Lemuria which was hidden in Indian Ocean as a result of flood²⁰. Before the flood, Lemuria was a vast continent and it shared boundaries in the south with Australia, north with Malaya and in west with Africa. In his works, he made an attack on the legendary Parasurama story, *Keralolpathi* and *Keralamahatmyam*²¹ as these accounts justify the *Namboothiri*²² social formation based on caste and property and it was these sources which were used by most of the historians to reconstruct the early history of Kerala.

Most of the socio economic and political views on ancient Kerala are contradictory and controversial. He points out that some scholars argue that during the arrival of Brahmins there were no political rule or dynasty and others states, the Brahmins with the help of rulers dominated the areas. He says that even before the coming of Brahmins plough agriculture were known to people. The idea that Adi Cheras had no knowledge of iron technology is entirely wrong which could be proven by the discovered iron articles in Megalithic remains.²³ He argues that it was not the Brahmins who taught the people about agriculture.

In his work *Kerala Charithram: Sathyavum Midhyayum*, he made an in depth analysis of the

Aryan migration, a controversial topic in history. He says that scholars like Kosambi, Romila Thapar and M.G.S Narayan etc. build up the entire Indian historical foundation on the so called Aryan theory which is an explanatory mode of analysis in the colonial administrative ideology. The Aryan migration badly affected the social relations which existed during that time. There were conflicts between the Aryans and Dravidians. The main conflict was over the matters of culture. Because of Aryan supremacy the early Dravidians were forced to leave their place and began to settle in South India. Though Aryans established their supremacy in North India they began to move towards the South in search of pastoral land and livelihood. This was a gradual process. But in several occasions they came in contact with early Dravidians like in the case of marriage. On the basis of this, T.H.P reveals that the group which moved from North to South was of mixed races²⁴

He exemplifies the Arya-Non Arya marriage in South India and through this how Aryans established their dominance. The early Dravidians were a mix of various clans. However, there were no caste or class differentiations. New sub classes began to emerge as a result of the changes in productive forces. He says that when the Aryans reached in Kerala they almost lost their distinctive cultural social aspects.²⁵ The intermixing among them led to the rise and decline of a number of sub sections. It was the control over production and distribution determined the rise of such groups. T.H.P says that some sections among Dravidians (third section) showed loyalty to Aryans. There emerged a situation in which these groups began to control the properties of temples. Gradually, the third section becomes powerful. Because of this which put an end to the marriage between Aryans and early Dravidians and they began to marry from the third group, which can be called as *sambandham*²⁶ All these led to the emergence of new Jatis and castes.

His *Kerala Charitraithin Oru Mugavura*, is a general introduction to the problems of Kerala history provides a vivid picture of the origin and proliferation of caste system in Kerala. He says that till 7th century AD there were castes based on occupation. Agriculture was considered as a dignified occupation. He says that caste system was introduced by Aryans in India. Before the

arrival of the Aryans, he writes, the caste system was unknown in Dravidian society. Aryan invasion and the subsequent process of sanskritization propagated caste system as a means to enslave the original inhabitants of the land.²⁷ He argues that the caste system emerged when the Brahmin dominance and Chaturvarnya system joined with Gotra social system. It was feudal system at that time led to rise of caste system. When Chaturvarna system led to rise of society based on the notions of dominant - subordinate and feudal system on the basis of production relation led to division of society. It was after the Sangam period such a system began to emerge²⁸. Gradually, there emerged occupational division and specialization. This led to the transformation of endogamy pattern of marriage. The emergence of *jati* in medieval Kerala transformed its agrarian setup. Tilling in the soil was regarded as a low rank affair. This conceptual change created a new social paradigm which made lazy *Namboothiri* and *Nair*²⁹ respectables in the society³⁰. The new *Namboothiri* discourse of Kerala created a wide gulf in the socio- economic scenario of the land. Here the author is tracing the shift in the social relations during and after the Sangam period.

Chentharassery's *Kerala Charitradhara* is a historiographical critique which made an attempt to recover the possibility of non Brahmin historical past of Kerala. In this he made a detailed description on the origin of slavery in Kerala. He points out that the agrestic needs and Brahminical approach to manual labour together generated a social compulsion which caused the emergence of the slave mode of production in Kerala³¹

Chentharassery notes, untouchables who were the aborigines of this land lost their footing due to historical reasons. The new social formations which emerged out of the political condition ushered in the Chera country out of the historic hundred years war, totally changed the social equations. The new social equations which emerged out of the new situations and the emergence of *Namboothiris* and Vedic Brahmanical Hindu religion were really an unequal combination in the case of the aborigines Kerala³² The refusal of the aborigines to Brahmanical designs caused social tension in the society. When their designs got impetus in

the society, they started the process of exclusion of the aborigines. The untouchable community, once the rulers of this land, lost their ground became mere slaves by virtue of the changing equations.

In the Sangam and pre-Sangam period, most of the would be *Avarna* or untouchable factions of Kerala or the Tamilakam enjoyed freedom and commanded respect³³ T.H.P brought light to the past glory of *pulaya* community which was never addressed by the conventional historians. In the post-Sangam period, the rotten Chaturvarnya system got its root in the soil of Kerala along with the Vedic Brahmanical religion. By which, the most affected section in Kerala was the untouchable/*Avarna* community. *Nairs* lost their social status and sacrificed their family setup to the *Namboothiries* through the rotten system of *Sambandam*. In the post Sangam period and the following years the looser communities were dehumanized with the upper class strategy of *Ayitham* (*Social Ostracism*). Even after this drastic fall of the untouchable community, in some parts of Kerala (in some remote pockets) they (untouchables) remained as independent community through the centuries.³⁴ But they never enjoyed any civil rights or privileges which were enjoyed by the other Savarna community. At any place, there was a probability of enslavement by all-powerful Savarna community.

T.H.P provides a detailed description about the origin of *Pulayar*. The origin of caste in Kerala speaks a different story from that of North India. The schedule castes of today claim to have had a predominant position in the early society of Kerala. Their status was as of free man in the

casteless society. They seem have had their own government and ruling dynasty. During the second Chera Empire the *Pulayas*, the largest among them was a powerful and dignified community.³⁵ But by 1800 AD all the old glory of the *Pulayar* had vanished and they were reduced to a state of slavery. He exemplifies *Trikakara* and *Parthivapuram* inscriptions to trace their origin. It was the *Pulaiyar* who engaged agriculture later came to be known as *Pulayar*. Later these groups became untouchables.

Chentharassery's works altogether represent the blend of Dalit subaltern notion and peoples' history. His Dalit subaltern history can be conceived as an alternative to all existing conventional historiographies in Kerala. Chentharassery tried to recover the voice of the marginalised by using unconventional and endangered sources materials. He successfully took up the challenge of re-defining dominant historiography in relation to the marginal people and groups. He focused on the implicit and silent forms of resistance by Dalits that have not attracted much scholarly attention. Chentharassery represents a democratic, socialist and Anti-caste position in his views. He deals with the questions of social and political democracy as well as equality and emancipation of downtrodden and oppressed. His works problematized caste and subordination, bondage, servitude, dominant- subordinated, and quest for gender equality. Chentharassery tried to provided a visibility to Dalits and other oppressed sections by remembering' them as part of Kerala history through his works.

ALCHEMY OF RELIGIOUS CONVERSION AND THE PLEA FOR INDEPENDENT COMMUNITY: RE-LOOKING THE DIALOGUES AND PROTESTS WITHIN THE SREE NARAYANA MOVEMENT FOR SOCIAL CHANGE IN MODERN KERALA

A. Shaje

Introduction

The one community in Kerala, which started and carried on it to its logical conclusion, the relentless crusade against the social evils like caste system and pollution was the Ezhava community. Ever since the emergence of S.N.D.P.Yogam that guaranteed caste solidarity to different sub-divisions of the Ezhavas, the elites of this community devised various measures and adopted various tactics for the social and political advancement of the members that the community represented. From the very beginning of their community-oriented work itself, the Ezhava leaders earnestly thought and even wrote and spoke on the easy ways available to get rid of the havoc caused by the inhuman practices to their community members as well as to other communities whose social positions were below their rank. They have

unequivocally declared that political freedom even if attained from the British rule would be meaningless unless it was backed by social and economic freedom.

Several low caste people of Travancore including Ezhavas converted themselves into other religions especially Christianity since they found it the easiest way to escape from caste tyranny.¹ In the beginning the leadership and the general masses within the community looked towards the leadership of Sree Narayana Guru for a spiritual solace. Guru was silent on the issue of conversion and at the same time started the construction of parallel temples for the Avarnas as part of sanskritisation. In fact what Guru meant was to reform Hinduism and not to abandon it, to purify Hinduism and not to annihilate it. He wanted a fair share to all the avarnas in Hinduism. For the accomplishment of these aims

he adopted such measures as simplifying Vedic texts, establishing Sanskrit schools to the low castes, changing mode of worship etc.²

Guru gifted a lot of principles of humanity, but the leaders of S.N.D.P. never tried to rely only on these principles. Instead they realised that it would be disadvantageous to them if they adopted such principles in practical politics. What they wanted was immediate and direct solutions to many vexed problems faced by their community members. On the issue of religious conversion the opinions of Ezhava leaders radically differed and these differences of opinions they expressed through their publications. From the very beginning itself the official Ezhava publications *Vivekodayam* adopted a moderate stand on many issues including conversion. On the other hand publication like *Mitavadi* of C. Krishnan, *Sahodaran* of K. Ayyappan and *Kerala Kaumudi* of C.V. Kunjuraman adopted extreme radical stands.

There were at times confusion prevailed about the stand of Kumaran Asan regarding the conversion issue. Like Mulur, a poet of the community who was also called "Sarasakavi" who translated Dharmapada into Malayalam, Kumaran Asan published a few works on Buddhist themes. His works like Chandalabhikshuki (1923), Karuna (1925) and Sri Buddha Charitam (Translation of Edwin Arnold's Light of Asia) created an impression that he was in favour of conversion to Buddhism. But his subsequent speeches and writings undermined this notion. On the question of the conversion of Ezhavas to Buddhism, Kumaran Asan and Mitavadi Krishnan expressed their difference of opinions. Though these contradictions and differences on viewpoints touched many areas of intellectual life, the discourse was purely academic and not touching the masses. C. Krishnan wrote the editorial articles both in English and Malayalam through his publication *Mitavadi* dated 28 May 1923. In this editorial he challenged the views expressed by Kumaran Asan about Buddhism while he presided over the S.N.D.P. Yogam meeting held at Kollam. C. Krishnan was of the opinion that the best way to extricate themselves from the caste tyranny was to embrace Buddhism en masse. But Asan through his rejoinder to the editor of *Mitavadi*, strongly proclaimed his stand

that Ezhavas should remain in the fold of Hinduism and work for their salvation. He entitled these rejoinders as "Alchemy of Religious Conversion" (In Malayalam it was known as Mathaparivarthana Rasa Vadam).³

Along with the conversion, move forwards rationalism also developed among the Ezhavas. From 1920 onwards Travancore witnessed the growth of rationalist movement represented mainly by the radical youths of Ezhava community. In their agenda they had given prime importance to the temple entry demand. A peculiarity of this movement was that instead of appealing for conversion, the leaders exhorted the members of Ezhava community to stand as an Independent Community (Swathantra Samudayam). Karappuram⁴ was the strong centre of this movement. An organisation known as Karappuram Seva Sangham of Ezhavas was founded in 1920, which became Karappuram Ezhava Yuvajana Sangham in 1921.⁵ The main objective was to effect political and social reforms in Hinduism. Karappuram witnessed the emergence of two other organisations namely the Karappuram Sahodara Sangham of Ezhavas founded in 1920 and Karappuram Ezhava Union in 1930. However Karappuram Ezhava Yuvajana Sangham became very popular and it was later renamed as "All Kerala Thiyya Yuvajana Sangham." When this organisation was founded the President was Chirappanchira Krishna Panicker of Muhamma and Sathyavrathan was its Secretary while Koriampallil Raman became Treasurer. The other major leaders included Kariampallil Vava Vaidyar and K.C.Kuttan. The first meeting of this organisation was held at Cherthala English School under the presidentship of Kunjikkannan Kurukkal. In this meeting Manchery Rama Ayyar and Sadhu Sivaprasad made provocative speeches. Violence broke out in the area and police arrested leaders like Krishnanayyappan.

In the third meeting of the Thiyya Yuvajana Sangham held at Pattanakkad in 1934, E. Madhavan presided.⁶ In his presidential address, he exhorted the Ezhava community members to remain as an independent community (Swathantra Samudayam). This speech was reproduced in a book form in October 1934 under the title *Swathantra Samudayam*. The book was highly critical towards all religions and immediately after its publication demands came

from several quarters for proscribing its circulation. The Dewan of Travancore asked the Chief Secretary Kunjan Pillai to look into the issue. The Government sought the advice of the Sirkar Vakil who however did not recommend for its proscription.⁷ This book was proscribed first in Travancore. Later its circulation was prohibited in Cochin, Malabar and Madras. The book attacked all religions, but the attacks on Hinduism were violent and the Travancore Government was charged with being a caste Hindu Government. E. Madhavan asserted that the Ezhavas and other avarnas received from Hinduism, nothing but harm. So they must throw that yoke and free themselves. To him religion had given to man nothing but harm. It blocked the progress of education and science, suppressed freedom of thought and caused wars. He criticised Gandhiji's anti-untouchability programme as a mere fake. He also criticised the Suddhi movement as a trick and argued that the savarna leaders must reform the savarnas first before trying to uplift the downtrodden. To him

religion was a total waste. He said, "A Christian of the lowest class can become a Kathanar. Muhammadanism does not stand in the way of any Muhammeden becoming a Maulavi. The Brahmin cook of an Ezhava can become a Priest. But the Hindu religion does not allow Holy Sri Narayana even to walk along the public path."⁸

E. Madhavan visualised Ezhava community as an independent community and suggested that without converting to any religion they should opt for atheism. He was attracted to Russian Communism and suggested the communist society as an "idealistic society." In the concluding remarks of his speech, he addressed the audience as "Comrades."⁹ The Swathantra Samudaya Vadam was an offshoot of rationalism developed among the Ezhavas. All these developments were the results of the community's ire targeted at the savarna Hindu domination which they wished to brake for the establishment of an egalitarian society.

Hardgrave Jr, The Nadars of Tamil Nadu: The Political Culture of a Community in Change, Bombay, Oxford University Press, 1969.
2. At times Guru expressed his neutral stand on religion as well. Desabhimani published the views of Guru on religion, which reads thus: "Chathurvarnya can be applied on men on the basis of their actions. But the Jati differences created by man as we see at present are meaningless. It should be done away with. Religion is something related to mind. There were different kinds of men and naturally they will follow different religions as per their wimps and fancies. It will be difficult to create a religion acceptable to all. Don't say 'my religion is right; others not right.' Element of goodness are available in all religions. I do not have connections with any of the existing religions. I also did not establish any religion. All religions are acceptable to me. I have constructed some temples due to the desire of some Hindus. I am also ready to do certain things to Christians, Muhammadans or other religious people if they so desire. I have no obligation to any caste or religion." Desabhimani, 15 July 1916.
3. The article "Matha Parivarthana Rasavadam" was published in Vivekodayam also. Later it was reproduced in the Kumaran Asan Birth centenary volume; M.Govindan (ed.) Kumaran Asan Birth Centenary Volume, Madras, Sameeksha, June 1974.

9. He said, "We did not get any reform or benefit from our connection with Hinduism. Hindu reforms were not reforms to us. We have benefited not from the Penal code of Manu, but from the British Penal code..If we abandon our religious connection, people will not only respect us but also love and care us..Don't be blind believers but be rational thinkers..Don't bother about the questions whether there is God or no God, whether religion is good or bad, think about the benefits that we will get from these things in this world. If there is another world after our death, we can think about it at that time. Now we need facilities for better life in this world..We have to awake! We have to rise! As in the case of several other reforms we accomplished, we have to take initiative for abandoning religions. In that case the future historians will record the heroism of Tiyya Youths", pp. 225-232.

URBAN GOVERNANCE IN COLONIAL MALABAR WITH SPECIAL REFERENCE TO CANANNORE MUNICIPALITY

M.C.Shalima

The British established trade relations in Malabar with the establishment of a factory at Thalassery during the last quarter of the 17th Century. However, they were able to establish political authority only during the last decade of the 18th Century. It led to dynamic changes in the society and economy of Malabar.¹ Initially, they focused on trade and economy and increasingly on political and administrative regard, which ended with the territorial appropriation of the country by the British.² Subsequently the colonial state realized the importance of political power of the region for the smooth conduct of commercial activities and this led to their interaction in native political structure. The British took control of Malabar in 1792 as part of the treaty of Srirangapattam and established an administrative institution as per the British standard. The most important reason for establishing British administration was to set up an efficient administrative system within the province since they regarded the prevailing one as anarchic.

During 1800, as part of some administrative reforms, the British divided the province into two parts under the control of two superintendents. Later, they divided the province into 10 districts, each run by a Revenue Collector. In the same year, the British government handed over the civil and military administration of Malabar from the Bombay Presidency to Madras Presidency allowing them to build up an effective administration in this province.³ All these led to the establishment of supreme power of the British in Kannur. As part of reforms introduced in the provincial administration, the British introduced the Town Improvement Act of 1865 which envisaged the introduction of municipal administration in Kannur. The main objective behind the introduction of municipal administration was to attract the interest of more efficient communities of the town in sharing the responsibilities of colonial administration. The subsequent result of this act was the constitution of Kannur municipality in 1867.

The main developmental schemes of Kannur municipality included the construction, repairing and cleaning of drains and maintenance of roads, streets. The municipal council also gave priority to lighting, water supply and prevention of fire. The Kannur municipality maintained roads annually for the easy movement of goods and people, which in turn facilitated the growth of trade.

Even before the colonial administration, Kannur has trade relations with Coorg. It is evident from that the municipality maintained a road from Kannur to Coorg to facilitate trade. During the Mysorean invasion Kakkad ferry developed as a hub of inland water transport. Some years later the municipal authority upgraded it by constructing roads to Kakkad. Kannur Municipality also maintained roads in order to develop transport facilities within the municipal limit. These roads connected different parts of the town and in turn they helped the easy movements of people and goods towards different directions. They are mainly Camp bazaar branch road, Cross road near municipal market, Anayidukku road, Jail road etc.

For the maintenance of roads around 55% of the total budget amount of the municipality was utilized during the period between 1906 and 1907. The mileage of roads increased from 23 miles in 1901 to 30 miles 1931. The difference was due to the transfer of roads to the municipal council maintained by the military department.⁴ The old wooden bridge connecting Payyambalam with the beach was replaced by a strong bridge with iron girders.⁵

The construction of beach road was undertaken in the year 1910-1911.⁶ The total cost of the work was Rs. 941/-. This road was connected with *Chalat* road.⁷ The municipal council also maintained the municipal and the jail roads. The earthenware pipe drains were substituted in three places.

The road repairs were carried on departmentally during the year 1934-35. The sub overseer was in charge of the building work

including maintenance of roads, bridges, lighting, and avenue trees. There was no trunk road during this period. 3.71 miles of military roads that were transferred to the municipality were treated as second class roads. The total length of road was 27.59 miles. Besides these, there were other roads that were maintained by the military. The Calicut- Kannur road passes through the municipality. The metal for the road was obtained from the municipal metal quarry at *Avera*. The metal was best suited for this purpose. The municipal council also tried to improve the roads in old town.⁸

The public works department Sub-overseer of Kannur reported regarding the repair of roads in Kannur Municipality in 1935. The main roads repaired by Kannur Municipality were *Camp Bazar road, Bellard road, Pattalam road, Thayatheru road, Burnachery road, and Chovva - Thayyil road* and the total cost of repair was Rs.550/-.⁹

Public health and sanitation were a great concern of the Kannur Municipality too. When Kannur was an important military station, Garrison Hospital was located in Kannur town. In 1863, this hospital was designated as a general hospital. In 1864, it was handed over to the municipality. Thus it came to be known as 'Municipal Hospital.' In the 18th century, the daily attendance was two indoor and eighteen outdoor patients. But during the 19th century the figures increased up to ten and sixty respectively. In 1900, the total number of patients who sought treatment was 419 indoor and 18887 outdoor patients. In 1910, the figure rose up to 319 and 28013 respectively. The highest figure was in 1912 when the inpatients were 894 and outpatients 31841.¹⁰

The Kannur Municipal council continued to maintain a municipal Ayurvedic dispensary at *Aanayidukku*. There were other private dispensaries in the town besides military hospitals and the railway dispensary. A medical officer was in charge of the municipal Ayurvedic dispensary. He was assisted by two peons. Most of the medicines required were prepared at the dispensary itself and some of the raw drugs were purchased locally. The dispensary functioned in a rented building. There were two sanitary inspectors in municipal service who were appointed at a cost of Rs. 1868/-. The District

Health Officer remarked in his inspection notes that the conservancy staff was sufficient.

With reference to the correspondence between the Sanitary Commissioner, Madras and the Chairman of the Municipal Council, Kannur on 27th November 1913, the former advised the latter to improve the sanitary measures in Kannur and instructed him to draw up an estimate for sanctioning fund for the implementation of proper sanitary improvements in Kannur Municipal town. The Sanitary Commissioner also recommended to conduct regular sanitary programs within Kannur Municipal town for which separate minor sanitary grant was also sanctioned.

With the sanctioning of the grant from the Sanitary Commission, Kannur Municipal Council drew up a sanitary program within the municipal limit. Following this, the Government sanctioned the grant for the scheme of town improvement in its wider sense, which mainly included acquisition of land for town expansion, widening of roads, opening parks for recreation, house sites for the poor and many other similar amenities as in other countries that take care of their urban properties.¹¹

The town was free from all epidemic diseases except for the 2 deaths from small pox during the year 1934-35. In order to prevent the epidemic of small pox a large number of revaccination was carried out especially in and around the infected localities. All other necessary preventive measures were also undertaken. A shed was built by the municipality during the year 1934-35 as well to treat small pocks. The municipal council maintained a child welfare center at *Thayyil*. The total number of children who attended this center during the year 1934-35 was 10361.¹²

Two sanitary inspectors were appointed in Kannur Town. One was for cantonment division and the other was for the old town division. The town and port of Kannur had infection-free milieu during the period of 1934-35. The town was also free from epidemics. Vaccination was carried out extensively. In order to improve the general state of public health, general drainage system was introduced. Moreover, the number of houses with latrine accommodation increased by 2%.¹³

During the period of 1934-35 there were 22 public latrines including the urinal in

Talikkavu. They were kept in proper state of repair by spending a sum of Rs. 385/-. The total number of private latrines conserved during the year was 2315. The total number of residential houses was 4822. The percentage of the number of the houses in the municipality was 48% as against 46% of the previous year. In the case of large number of houses congested areas like *Burnachery, Tekki Bazaar* and *Thayyil*, it was not quite possible to have separate latrines for want of space. Steps were taken as far as possible to extend the provision of latrines to a large number of houses. A few more scavengers were sanctioned in the 1934-35 budget. The night soil from private and public latrines were removed in lorries and trenched in municipal trenching ground which was situated at the outskirts of town and was kept in a sanitary condition. The ground was rented out yearly for growing vegetables in order to promote the properties of nitrification of the soil. The rent for year under report was Rs. 45/-.¹⁴

Thus, with the enactment of the Towns Improvement Act of 1866 Kannur became a

municipal town in 1867 and witnessed the introduction of many urban amenities like education, public health, transport and communication. These developments resulted in the growth of urban outlook among the people of Kannur. Thus the formation of Kannur municipality and its native urban governance played a crucial role in the urban process of Kannur. The administrative reforms in the field of public health and sanitation, maintenance of roads, establishment of educational institutions etc., developed the town as a center of power. These interventions resulted in the emergence of urban society, culture and urban life which is apparent in urban forms, change in attitude, change in dress, food, house, education etc. To cater to the ever increasing demand of the urban class many halls, hotels, lodges, tea shops, libraries, barber shops etc. were emerged which resulted in the emergence of a public sphere in the society. The demographic structure and the population distribution in Kannur also had a decisive role in molding the town as an urban center.

CONTEXTUALIZING THE CHANGE IN ATTIRE: A STUDY OF THE SARTORIAL PRACTICES OF THE MAPPILLA IN COLONIAL MALABAR, 1800-1921

C.H. Sharafunnissa

Malabar is an ancient name for the entire Malayalam territory stretching from the northern landmark of Mt. Deli to Cape Comorin. It was a general designation for today's Kerala and was also occasionally applied to the coasts of Tamil

Nadu and sometimes to the whole of south India. Malabar became one of the two districts of the Madras presidency on the shores of the Arabian Sea for a distance of 150 miles. From the British period the use of the term began to be restricted

to those portions of the west coast area which came under direct British rule. This area which covered the northern third of Kerala became the administrative district of Malabar.

The area known as Malabar includes 67 per cent of the Mappilla¹ population.² The tradition of the origin of the Mappillas connects with the conversion of a Perumal to Islam in the ninth century. There was considerable trade between Arabia and Malabar in the eighth and ninth centuries, and no doubt many of the traders gradually settled in the country. The result was the rise of a hybrid community composed of the offspring of mixed unions and of converts from the lower classes of the Hindus. They were spread over the whole of the district. The population is most dense along the coast and for some distance in to the interior because a large portion of the country to the Eastward being mountains and hills overran with forests.³ There are no compact villages or towns in Malabar, except along the coast, which are generally inhabited by Mappilla merchants and Mukkuvans or fishermen.⁴ This paper tries to understand the distinctive social custom of Mappilla clothing and their changes in practice of dressing during the colonial period. It also finds out the manufacture and supply of cotton goods in colonial Malabar.

Clothing is a collective term for items worn on the body. It may change depending on different ethnicity, geography, or climate. The Mappillas have absorbed many elements of Kerala culture to their way of life. In the fourteenth century Mappilla women wore a single long cloth as their dress, similar to Hindu women.⁵ Later their mode of costume is changed, and became different from the Hindu. It may have been an increasing withdrawal from social contact paralleling to the deterioration of relations between the two communities.⁶ Clothes serve many purposes like showing the identity, a sense of protection, a feeling of belongingness, a kind of status and sometimes gender also. In the royal families of Malabar clothing was a special case of body adornment, which signified their royal identity.

During the colonial period, the ordinary dress of a man was a *mundu*⁷, or cloth, generally white with a purple border, but sometimes orange or green or plain white.⁸ It is tied on the left (Hindus tie them on the right) and kept in

position by a *nul* or waist string, to which are attached one or more *elassus*⁹ of gold, silver or baser metal. These *elassus* contained texts from the Quran or magic *mantras*. A small knife is usually worn in the waist. Important persons worn a long flowing white garment of fine cotton and over this again may be worn a short waistcoat-like jacket. Though this is uncommon in South Malabar, and in the case of Tangals, etc. a cloak of some rich coloured silk.

The European shirt and short coat was also coming into fashion in the towns. A small cap of white or white and black is very commonly worn, and round this an ordinary turban or some bright colored scarf may be tied. Mappillas shave their heads clean. Beards are frequently worn especially by old people and *Tangals*¹⁰. Hajis or men who have made their pilgrimage to Mecca and other holy men often dye the beard red.¹¹

There are differences in opinion among the colonial writers about the clothing of women in public. In the words of William Logan, who had written a manual on Malabar, "the women appeared in public without veils, but among the better class it is usual to envelop the head and person but not the face in a long robe. The Mappillas are very scrupulous about the chastity of their women, who however enjoy much freedom".¹² But C. A. Innes, the settlement officer in Malabar had scribbled in the Madras District Gazetteer on Malabar that, "women wear a *mundu* of some coloured¹³ cloth, dark blue is most usual, a white lose bodice, more or less embroidered, and a veil or scarf on the head. In the case of the wealthy, the *mundu* may be silk of some light color. Women of the higher classes are kept secluded and hide their faces when they go abroad, but the lower classes are not particular in this respect".¹⁴

Men wear no jewellery except the *elassus* already mentioned and in some cases rings on the fingers, but these should not be of pure gold. Women's jewellery is of considerable variety and is sometimes very costly. It takes the form of necklaces, ear-rings, zones, bracelets and anklets. As amongst Tiyans and Mukkuvans a great number of ear-rings are worn; the rim of the ear is bored into as many as ten or a dozen holes in addition to the one in the lobe. Nose-rings were not worn.

Manufacture of Cotton Cloths

With regard to the history of manners customs and distinction of various castes in Malabar, it is necessary to refer the invaluable work of Francis Buchanan, A Journey from Madras through the Countries of Mysore, Canara and Malabar. When Malabar became under the control of the British rule, a commercial resident Mr. Torin has been endeavored to establish a manufacture of the plain cotton goods at Calicut which were called *long cloth*. It is to say the pieces are 72 cubits long, by 2 ¼ in width.¹⁵ The prices given to the weavers are 34, 32 and 30 gold *Fanams* for a piece according to its quality. The weavers have been brought from the dominions of Travancore and Cochin. Mr. Torin has established another manufactory of the same cloth at Palakkad, where the cloths are better and cheaper. In every district a few weavers make coarse cotton cloth for the use of the lower classes, and at Tellicherry a few make table-cloths, napkins, and towels for the Europeans and native Portuguese.¹⁶

Weaving was not an industry of very great importance in Malabar even though the fact that calico takes its name from Calicut. The cotton handloom weavers are chiefly Chaliyans, colonies of whom are found scattered over every taluk except Wayanad. Among Kaikolas, Tamil Devanga Chettis and a section of the Rowthens in the Palghat and Walluvanad taluks, weaving is the hereditary occupation. Each *amsam*¹⁷, however, has its group of weavers. The handloom weaver is a very conservative person and refuses to benefit by the recent improvements in handloom weaving, although by working with his wife and children long hours at his loom he is hardly able to earn more than six *annas* a day.¹⁸

Even though cloth is manufactured in this province, it is also imported through the ports of Calicut and Tellicherry. The import consists of cotton piece goods, shawls, broad cloths, nankeens etc and many other European articles

on which a duty of eight per cent is charged.¹⁹ The Mappilla imported coloured cloths for his womenkind from Madras and gets his own cloths from Tiruppur, Vaniyambadi, Salem, Kumbakonam and Kulasekharapatnam. Locally woven cloths have narrow coloured borders at their ends and the yarn is mostly Indian mill-made purchased from the Mappilla merchants. Taliparamba towels have attained some local celebrity. The Rowthens of Palghat woven the *lungis*²⁰ for Muhammadans. There is very little weaving of silk cloths in the district of Malabar.²¹

The manufacture of Mappilla skull caps was comparatively expensive when embroidered. So these articles practically dead in Malabar and has shifted to Talangeri, two miles from Kasaragod in South Canara where it flourished as a cottage industry. With the introduction of sewing machines, the caps can be made quicker and at less cost. Boys stitch the design and the women fill up the interspace with black yarn. Cannanore supplied the yarn and about 150,000 caps are made in a year and exported to Arabia, Basra, Colombo and the Straits Settlements and to Madras and Bombay.²² Each cap costs about 12 annas.

Conclusion

The Mappillas are Malayalis and Kerala is their home. They participated as citizens in the life of the state. They were a distinct community within Kerala society and their own life is qualified by its characteristics. The political, social, economic and educational pressures have brought many influences in their life. The dress of a Mappilla is extremely simple during the colonial period. Dress is significant in the very smallest detail because the language of dress in a society reveals their identity and sometimes their status. It doesn't mean the Mappillas were no longer the same. They were both receivers and givers in the process of the development of a whole people.

SOCIO-CULTURAL OBSTACLES AND THE EXPANSION OF WESTERN MEDICINE IN COLONIAL KERALA

K.A. Sheeba

The beginning of Social history of medicine as a field of historical study can be traced back to 1970 in Britain with the formation of Society for Social History of Medicine. The social history of medicine includes not only the history of diseases and its healing but also all aspects related to health including human attitude towards diseases, health policies of government, and social, political and cultural aspects of medicine. The advent of western medicine in India started with the arrival of the Portuguese. But it was the British who used western medicine as a tool for colonialism and conquest. Consolidation of British power in Travancore, Cochin and Malabar provided background to the dissemination of western medicine in Kerala. Though there were some changes in the nature of patronage to western medicine in the princely states (under indirect British rule) and Malabar (under direct British rule), the colonial imperatives behind western medicine were same in all territories whether directly or indirectly controlled by the British. When the British introduced western medicine in Kerala they faced many challenges. Did the socio-cultural features of Kerala have acted as obstacles to disseminate western medicine? If yes what were the methods and techniques adopted by the British to overcome these challenges? How did natives respond to those colonial attempts? This paper is an attempt to answer these questions. The theories and approaches of David Arnold regarding colonial medicine is adopted in

this paper. David Arnold argued that western medicine not only represented an immediate domain of health but a wider realm of cultural and political hegemony¹.

Earliest Western medical hospitals in Kerala

Though vaccination was introduced in Malabar, Cochin and Travancore as early as 1810's, Western hospitals were started in 1850's. In Cochin, State vaccination was introduced in 1802 with regular vaccinators. C. Achutha Menon remarked the first attempt to introduce European medical treatment in Cochin was made by a missionary, Rev. J. Dawson, who opened a dispensary in Mattancheri in 1818. In 1848, Diwan Sankara Variyar opened the first *sirkar* hospital; the Charity Hospital of Ernakulam². Earliest Western medical hospitals and dispensaries in Cochin were started at Thrissur (1875), Chittoor (1885), Irinjalakkuda (1888), Thrippunithura (1888), Kunnankulam (1888), Mattancherry (1890), Vadakkancherry (1891), Crangannur (1893), Nelliampathy (1898), Chalakkudy (1893), and Mattancherry (Male Dispensary, 1909).

In Travancore, Rani Gauri Lakshmi Bai (1810-1814) started a small vaccination Centre in 1813. But the public was afraid to take vaccination. Hence she instructed the members of royal family to get vaccinated firstly. In 1814, a Charity Dispensary was started in Thaikad for the prisoners. Great Maharaja Sri Swathi

Thirunal (1829-1847) upgraded the dispensary as a Charity Lying-in hospital in 1837. In 1864, Civil Hospital was started, which later developed to the present General Hospital. District Hospital Alleppey (1866), District Hospital Kottayam (1866) and Ophthalmic Hospital, Trivandrum (1905) some of the earliest western medical hospitals and dispensaries in Travancore.

Annual Report of the Civil Hospitals and Dispensaries in the Madras Presidency reported that in Malabar either Civil Hospitals or dispensaries existed at Cannore, Mananthavady, Manchery, Palghat, Pallipport, Ponnani, Tellicherry and Vaytiri in 1881³. Nilampur Hospital, Mission Hospital Calicut (1892), Leper Asylum Chevayur (1901), Mental Hospital Pudiya, Railway Dispensary Calicut, Railway Dispensary Shoranur, and Railway Dispensary Cannanore were some other earliest Western medical hospitals and dispensaries in the district⁴. In 1931, there were thirteen hospitals run by the government and thirty dispensaries were under the local boards in Malabar⁵. It was not till October 1845 that the first public hospital was opened at Calicut⁶.

Socio-cultural obstacle

Initially, the British introduced western medicine for the Europeans in India and gradually it expanded among the natives. There were two understandings in European mind when they started the western medicine. First, it was not easy to introduce an alien system of medicine among the people who were racially and culturally differed from the Europeans. Since, the methods of healing, concept on causation of diseases and the life style of natives were different from the Europeans. In colonial point of view the natives were, thus racially and culturally backward and barbarous. Second, diseases affected the Europeans and natives discriminately, which strongly asserted the assumption of the socio cultural elements in the pathogenic agents. Since the introduction of a new system of medicine was not only medical but social and cultural matter too. Some of the earliest medico-topographical reports of military departments served the purpose of knowing social, cultural, geographical and economical peculiarities of the people and the land⁷. The importance of the locality, population details and pathogenic environments were considered when the British started dispensaries and hospitals in a

place. A report from the Local Self Government and Public Health Department of 1925 regarding the opening of one rural dispensary at Meppady in Wayanad revealed that the importance of population strength as one of the criteria for opening dispensary. Wayanad *taluk*, they said, as per the Census of 1921 had an area of 821 square miles consisted of 58 villages with 84771 people⁸. So a dispensary was opened there. The same demographic criteria considered when the British opened dispensaries at Parappanangady and Kottakkal in Eranad Taluk.

Regarding Indian society and its attitude towards western medicine, David Arnold remarked that “..the dispensaries became asylums for the destitute”⁹. These were places where prostitutes or the European poor went for treatment, and created a dilemma for the colonial medical establishment¹⁰. “While the higher classes of Hindus and Muslims had strong religious and social objections to visiting European hospitals and dispensaries, the lower social strata apparently had few such objections or became patients less from choice than from desperation or because the police or their European employers sent them there.”¹¹ Similar to this view, W.H. Davids, the Assistant Surgeon of Calicut pointed on some obstruction to the spread of vaccination. “The intense caste prejudices and good caste men with sufficient intelligence necessary to grapple with the first obstruction¹². In a report on vaccination in 1853 noted that

“apathy and indifference on the part of the native community was also an obstacle to its expansion..the utmost zeal and vigilance on the part of all connected with the supervision of vaccination must be continued, not only to disarm objection and prejudice, but to make its value known amongst the people, so as that they shall be made not merely willing to receive this great protective good for themselves, but also to be interested in its wide diffusion over the entire country”¹³.

The higher caste considered hospitals as an asylum for poor people and destitutes. Since the initial period of operation the convicts, prostitutes, workers and the people belonged to lower class were the visitors of hospitals. They were forced to come under periodical medical checkup. The entry of upper caste and lower caste within the same hospital was against the

social customs and practices of that period. The use of same medical equipment for people from different castes also invited an opposition from the part of higher castes.

For the spread of western medicine the British government tried to accommodate castes and beliefs of the natives. They only selectively rejected traditions and practices of the people of the land. When upper caste patients hesitated to visit in a same room along with the lower caste for medical consultation, separate arrangement was made for the upper caste patients¹⁴. Attempts were also made to meet caste requirements with respect to "diet, accommodation and even the choice of acceptable medicines and treatments, and latterly by constructing hospitals and dispensaries..."¹⁵. E.J. Barker, Asst.Surgeon reported on the supply of different items including screens and *purdah* to Civil Dispensary at Calicut in his report in 1855¹⁶.

The social practice like untouchability prevented the upper caste people to accept western treatment from the lower caste who were trained in various subordinate medical services. When caste prejudices prevented the higher caste women to accept the medical assistance from lower caste *dais* and midwives, the government appointed women from the Nair community as midwives to visit households of the higher caste to attend delivery cases¹⁷. The same method was adopted to the promotion of vaccination programmes.

Senjee Pulney Andy, in his book *Govassoory Prayogam Allenkil Vasoory Nivaranam* opined that " the superstition of the Hindus regarding smallpox which is generally believed by them as the visitation of the Goddess *Maridha* is corrected; and to ensure confidence proved also by reference to their shastras wherein the scourage is considered as the Priest of all disorders" ¹⁸. His account continued that the natives might have showed hesitation to accept western medicine against small pox because of two reasons; first, the Europeans were foreigners and believed in another religion so that the Hindus were unable to accept all what they said. Second the natives had faith in their *shastras* which contained methods of healing¹⁹. To overcome this problem, he opined, to allow the natives to follow their *shastras* and to convince them to accept western medicine along with it.

These kinds of colonial accommodation to the cultural aspects of natives was a technique of colonialism to expand western medicine.

Women showed some hesitation to accept western medicine during the initial period. There was a belief among them that the new medicine was intended for prostitutes since those class of women came under compulsory vaccination and the medical gaze. More over the higher caste women and the *purdah* women neglected hospitals. They were also unwilling to visit or being admitted to hospital wards where male patients present. The government provide more attention to this issue because health of women and children was a matter of prestige in the colonial competitive world.

There were three methods used by the British to change the attitude of women towards western medicine. Firstly, women were appointed in medical institutions as assistants. The colonizers wanted a group of natives as medical assistants to perform minor works in dispensaries, civil hospitals and to serve in the success of their vaccination programmes. Women were trained as *dhais* and midwives. The appointment of native women increased the confidence of the female patients to visit hospitals and dispensaries.

Secondly, women were encouraged by providing incentives to their services and also were provided with scholarship and funding for their studies. The Victoria Scholarship Fund was started in 1903 to provide grant to the midwives and indigenous *dais* to get training in the western medicine²⁰. In a report of the Local self-Government Department on public health remarked that Rs 75 was paid to the midwives of Mattannur as subsidy for a quarter of year in 1931. The amount was paid for their services during epidemics, fairs and festivals²¹. Allowances were also paid to candidates when they were sent to Madras for attending examination in the midwifery²². Moreover, the cost incurred for training was met by the government. A report in 1929 said that the Taluk Boards took initiatives to provide a 6 month training to the *dais*. They were trained another 3 months more to become recognized midwives²³. Moreover when the vaccination programme was started mothers had been provided incentives to take their children for vaccination²⁴.

Thirdly, separate hospitals, clinics and dispensaries were started for fulfilling the medical needs of women. The famous hospital for women and children was started at Thaikkad in Trivandrum. In 1837, it was upgraded as Thaikkad Lying-in Hospital. Government constructed separate wards adjacent to the hospitals for women and children. In 1870 separate wards were constructed in the General Hospital Trivandrum; one for Brahmin women and the other for the Nair women.²⁵ The Victoria Hospital for women and children was opened at Kollam on 16th February 1887, in connection with the 50th anniversary of Queen Victoria's reign²⁶. This institution, also, provided training for the midwives who could use their services in different hospitals and dispensaries. In Malabar, the Women and Children's Hospital was opened at Calicut. Asst. Surgeon S.J Wyndowe M D who was in charge of the Calicut dispensary wrote that "18 cases of primary Syphilis have been treated in hospital there being a European detachment at this station. I have admitted all women who were willing to enter the hospital suffering from that disease, and have encouraged others as far as possible to attend at the dispensary for the treatment" ²⁷. In order to overcome the prejudices of the native women, the Asst. Surgeon organized classes to the midwives for instructing to them the need of accepting western treatment²⁸.

Modernization of natives was one of the ways to the promotion of western medicine in Kerala. The missionaries were the best mediators who worked for the removal of cultural barriers among natives in one sense and between natives and colonizers in other. L.M.S and C.M.S were active in Travancore and Basel Mission in the Malabar. They played a vital role to limiting the rigidities of caste and in spreading the western medicine. Missionaries realized that medicine was one of the ways to convert upper caste. This civilizational, philanthropic and humanitarian aspect of the missionary medicine, called "clinical Christianity" added to the acceptability of western medicine²⁹.

The intolerance towards the natives to their 'ignorance of knowing good effects of western medicine' is revealed from the words of Asst. Surgeon E.S Cleveland. He remarked that the "supply of rice they receive being their sole attraction" to visit hospitals³⁰. Likewise the

importance of modernizing people from medical point of view found in a report on Vaccination in 1855. People showed hesitation to accept western medicine "not only to their disagreement on vaccination(western medicine) but also against other means devised for the good of the country and which can only be expected to be overcome fully, by educating the community generally, and enlightening their minds with true knowledge"³¹. In another report colonial medical officers commented on the attitude of indigenous *dais* that they were very prejudiced and jealous of their reputation and in honesty convinced that no one could teach them anything as regards to the normal labour. They believed that doctors were required only in abnormal cases, but they themselves were the proper judges as to when a doctor should be called in³². The government wanted to remove these types of 'uncivilized' views of patients as well as traditional healers. The colonizers believed that "the intellectual development of the people would relieve them from much suffering and prepare them for increased usefulness to the state" ³³. Dissemination of western rationality through various colonial institutions like educational institutions, press, judiciary and bureaucracy had an effect upon natives to accept western medicine and to consider one as civilized.

Language was another cultural issue faced by the British when they introduced western medicine. Colonial records show that when the British introduced vaccination programmes, notification in the vernacular language was published throughout in several districts, upholding the better effects of vaccination. The Superintendent of vaccination in Malabar district knew Malayalam, which helped him to carry out the programmes easily in 1858³⁴. Apart from this, awareness programmes and celebrations were organized for the natives and it projected the 'good effects' of the western medicine. Many missionary congregations also actively participated in this attempt. A Central Propaganda Board started in Madras for giving awareness among the natives³⁵. Fifth National Health and Baby Week were organized in the Wayanad Taluk in 1927-28³⁶. Similarly the Health Week was organized in Malabar from 24/02/1930 to 02/03/1930³⁷. Separate committees formed to provide awareness among the natives on health and hygiene. They made

propagandas through songs and postures in vernacular language. These propagandas and celebrations made the native people more close to the Western method of treatment and healthcare.

Though cultural barriers prevented the upper caste people to take western medicine along with the lower caste people, the former became the ardent supporters of western medicine in later periods. They provided financial supports and some of them donated land for starting dispensaries. Government Order in 1921 revealed that when a dispensary was opened at Kannambra in Palaghat Taluk, Chachunni Valiya Nayar paid Rs 5000 towards the initial cost of opening the dispensary and also promised a site for the construction of a building free of cost. He also promised to give an annual contribution of Rs 200 towards the maintenance of the dispensary³⁸.

The socio-cultural conditions created many obstacles to the spread of successful dissemination of western medicine in Kerala. British used many strategies to overcome these obstacles. In spite of supporting modernizations the attempts were made by the British to accommodate the caste prejudices and other interests of upper caste people. That is why the upper caste later became the supporters of western medicine by providing money and material. Modernization of Kerala society provides an opportunity to the backward caste to come forward and many among them, especially people from the Ezhava community, contributed to the spread of western medicine. A selective acceptance of the cultural aspects of natives were the features of western medicine during its initial periods of expansion in Kerala.

THE ALIPURAM CAMP JAIL : THE HELL OF MADRAS PRESIDENCY

U. Shumais

Prison was an punitive mechanism was colonial innovation in Madras Presidency. Bellary now a part in Karnataka state was one of the hottest towns in the Madras Presidency. Alipuram was 3 kilometre away from Bellary railway station. It is a Bilingual Area with Telugu and Kannada speaking people. As one of the hottest town it also witnessed repeated failure of monsoon in colonial period itself. Monsoon failure resulted in scarcity of water. The Alipuram Jail at Bellary was initially a war camp or camp Jail built during First World War (hereafter FWW) for confining Turkish Prisoners of War (PoW).¹

During first World War around 217746 Ottomans were captured as Entities in which 150000 were captured by Britain. Here Britain means Britain and it colonies including India. Britain had opened Camps for Turkish Prisoners of War at Egypt, India, Burma (Myanmar), Cyprus and Mesopotamia. Hundreds of Turkish prisoners who were captured from the Suez canal war zone by the British were confined in various camps in India. The Total number of prisoners confined in India and Burmese Camps were more than 10000. The ten camps opened for the Turkish prisoners.² Thus the Turkish prisoners were confined in prisons which were more than thousand miles away from their homeland.

The proposal for opening Alipuram camp jail for Turkish PoW was submitted in 1916 itself.³ The report submitted by international red

cross committee⁴ who visited Bellary Camp jail in 12th March 1917 mentioned there were 137 Turkish PoW at that time.⁵ The prisoners were needed to work as a part of Labour. The official records shows that the government had provided a lot of facilities to the PoW at Alipuram Jail. They were also allowed to perform cultural activities and learning. In 1920 May the total number of Turkish PoW in India were about 6728. ⁶ Those confined in India, Burma and Cyprus were transferred to Egypt in during 1920-21 period. Even some were not transferred and Muhammad Abdurrahman had mentioned about that issue.⁷

There were so many graves of Muslims prisoners including Turkish prisoners at Bellary nearby Alipuram Camp Jail. Even the Turkish prince imprisoned as prisoner of war was died from Alipuram. ⁸ Their graveyards were actually located ten thousand miles away from Turkey.⁹ The graveyard was spread around two miles and there were hundreds of prisoners grave. One of the debatable question still going on is how hundreds or more than thousand prisoners at Alipuram jail died. A lot of reasons were argued for that. Some argued that it was due to official torture in 1918. While some argues that it was due to epidemics especially plague in 1918. But the historical account clearly mentions that the Plague had struck in Bellary in 1934 and not in 1918. Then there arises a question who were buried in the hundreds of grave at that spot. The answer for that mystery question is that the

majority of graves in Turkish prisoner graveyard were actually Mappila prisoners who were confined in Alipuram from 1921 to 1931. The maximum prisoners confined in there were not more than five hundred. It's mainly because as in 1922 itself as per official reports more than 400 Mappila prisoners died at Alipuram Camp Jail. The unofficial sources may much higher.

Malabar Struggle of 1921-22 was one of the major armed resistances against the Colonial State. A lot of studies have come on the Malabar Struggle. The struggle was an outcome of a lot of grievances especially agrarian and the extreme oppression of colonial state. However no works were came on the issue of 'penal crisis' and prison life of more than ten thousand prisoners. The colonial government opened various types of jails in and outside Malabar for solving the penal crisis and even Andaman Colonisation Scheme was started to deport Mappila . At the time of Malabar Struggle there were nine central jails¹⁰ and more than three hundred sub jails at Madras Presidency. In additional four sub jails were opened in Malabar, the Huzur Sub Jail at Kozhikode, The Cantonment and Fort Sub Jail at Kannur and the Malapuram Sub Jail, additional temporary accommodation at five central jails were also established.¹¹

Besides these sub jails barbed wire cages were also used in rebel zone. These cages were widely used throughout the world during First worldWar. The cages were constructed enclosed to buildings. The jail was actually constructed by using iron fencing and sheds inside were used to confine prisoners. They were located at Kozhikode, Tirur, Malapuram, Angadipuram, Manjeri, Pandikkad, Nilambur and Arikode. The prisoners in the cages were victims of heavy monsoons in day and night. Besides that they were also affected with various epidemics. R H Hitchcock the District superintendent of Malabar justified this extreme cruelty stating that it was economical in escorts and saving long journeys.¹² These cages which resulted in death of many prisoners faced much criticism and even Madras government criticised it.

The Malabar Struggle resulted in overcrowding of prisons and the government ordered the I G of prison for solving the issue. The Malabar District Collector E F Thomas in his letter to I G of prisons mentioned about the penal

crisis. The collector urged that Malabar Struggle prisoners must treat as war prisoners not as ordinary criminals.¹³ It was considering Alipuram as a camp of war prisoners the DM requested IG to check the possibility of confining Struggle prisoners at there. The I G reported the Alipuram camp jail can be used for confine Mappila prisoners.

The jail was opened on 1st October 1921 with central jail status for confining Mappila prisoners.¹⁴ The official documents state the jail had the facility for accommodating 2500 prisoners in the beginning.¹⁵ The first batch of prisoners arrived in 17th October 1921. It took three days train journey from Malabar to reach Bellary. Initially prisoners were mainly sent in closed wagons and were not even allowed to stand properly as the wagon was extremely overfilled. Gandhi compared the wagon transport as the crucifixion of prisoners.¹⁶ This cruel practice continued until the 'Wagon Tragedy'¹⁷ of November 1921. ¹⁸ The FSG mentions that three batches of prisoners were sent to Bellary in closed wagons prior to Wagon tragedy.¹⁹ Prisoners were forcibly filled and they struggled hard to get air in the closed wagons. The closed door was mainly opened only at Podanur railway station after starting from Tirur. The prisoners through the journey were in extreme hunger and thirst.

The practice of using closed wagons ended after Wagon tragedy. C Rajagopalachari had reported it to Mahatma Gandhi. Gandhi stated that after wagon incident prisoners were kept in properly ventilated carriages abandoning closed wagons and given water on the way and as a result of the sacrifice of seventy prisoners, the rest have got some relief.²⁰ As T S Tiruvenkatachami, a first grade pleader in Salem happened to travel a train carrying Malabar struggle prisoners stated that even after wagon Incident there was no feeding facility to prisoners who were in miserable condition.²¹

The Alipuram Camp Jail was soon come to know as the hell in the Madras presidency and prisoners were extremely tortured. In the beginning of December the total prisoners at Alipuram were three thousand.²² Prisoners while the Jail manual and prisoners memoirs states Alipuram jail was over crowded and more than four thousand prisoners of Malabar Struggle were confined at there in its initial years. A

Saidali stated that in 1923 there were around eight thousand prisoners at Alipuram jail.²³ In 1924 the total prisoners at Alipuram jail as per official records were 5169.²⁴ This record clearly shows the overcrowding in prison.

Architecture

The Alipuram Camp Jail was not like the other central jails in the presidency. The jail wall and buildings, cells, hospital, kitchen, workshop etc are different and in pathetic condition. Instead of stone wall they used wired fencing. Armed police was deployed as security outside the wired fencing. Initially during the martial law period military were used as guards and it was only later the jail authorities got the charge of guarding. Even in 1930s walls was not created for prison and Vishnu Baratheeyan reminds prisoners can see the persons walking outside the jail through the wired fencing.²⁵ There was no proper building nor blocks rather tarpaulin tents and thatched roofs. Both sides of sheds were covered. One block comprised by five or six sheds. Instead of confining prisoners at cells in night they were chained in open space. The workshop was not a building rather a plain ground.²⁶

The prisoners were greeted to jail by *nadayad*²⁷. Moidu Moulavi in his autobiography mentioned about *nadayadi* that in his batch around one hundred prisoners were attacked by wardens from gate to kitchen and a piece of flesh had torn apart and flew away from his thigh.²⁸ This clearly reveals the prime target in Alipuram jail was prisoner's body. The jail officials of Alipuram were mentioned as barbaric in character and treated prisoners like wild animals.²⁹ Abdurrahman in *Al Ameen* recalls his experience one hundred prisoners were beaten with batons by the wardens from jail gate to quarantine. Even the medical officer neither listened the complaints of prisoners nor examined them.³⁰ This torture remained for many years. It was counter attack from Mappila prisoners which ended the attacking behaviour of officials.³¹ Thus it's clear that prisoners in the beginning years were subjected to ill treatment from the authorities. Soon after admissions a big iron ring was put in prisoner's right leg for chaining in night. Initially prisoners were kept at Quarentine for 10 days.

EVERYDAY LIFE AND RESISTANCES.

The prisoner's first job in the early morning after removing the chains were clearing of urine pots and enquiring whether any prisoners passed away. The mappilla prisoners were forced to carry the urines for the years and even a lot of questions raised at Madras Legislative Council on that matter was ignored by officials. A long queue was there for urination. This shows there were no proper sanitary arrangements to thousands of prisoners. The queue before each toilet contains around one hundred prisoners with chains in their legs. There was no water at toilet for cleaning hence soil was used.³² The scarcity of water made daily bathing out of question in Alipuram Jail. The prisoners were permitted to bath only once in a month at open space with police presence The prisoner was allowed only three cups of water for bathing and if anything more was taken severe beating from warden would be the result.³³ Even there was no soap and enough water only three cups of water was sprayed into the body. This also resulted in spreading many skin diseases. The water scarcity also resulted in giving contaminated water for drinking and cooking.

The presence of chlorine and other chemicals in drinking water resulted in diseases and death of many prisoners. The authority was forced to supply pure water after the entire prisoners went on hunger strike.³⁴ This was temporary and soon the water scarcity and bad water supply were continued. The food at Alipuram was also worst. The prisoners got food three times in a day. Gruel in the morning, the midday meal at 11 A M and finally meals at evening.³⁵ The lack of lighting facility in prisons was the main reason for giving night food in evening itself and the prisoners were chained soon after that. Gruel was given in morning. The gruel contains stones worms, wools etc. After noon rice and curry was also miserable. The rice was cooked without cleaning and washing hence contains a lot of stones and worms³⁶

Labour

The prisoners at Alipuram Jail from the beginning were used to indoor as well as outdoor labour. Moidu Moulavi reminds the workshop was actually a plain ground were prisoners engaged in coir making in sunlight.³⁷ The main jobs include wool making, gardening

and stone breaking. The jail has also a workshop for coir making. Even though the outdoor labour was against Jail discipline the officials used prisoners for outside labour. A Saithali who was at Alipuram jail as a prisoner in 1923 mentions that two thousand prisoners were brought to outdoor work by chaining their legs to prevent escape.³⁸ In 1923 about 5935 prisoners from Alipuram jail was hired out to military department for grass farm cultivation.³⁹ The jail department got rupees 1112 from military department for hiring prisoners. This clearly shows two things the prison was highly overpopulated in 1923 as well as the prisoners were widely used for outside labour. The outside labour was against jail discipline. While this clearly shows the colonial authorities widely tortured Mappilla prisoners for extracting money. Moyarath Sankaran states Mappila prisoners were taken to Gundakal railway station for work.⁴⁰ This outdoor labour reveals the term discipline was far away in the case of treating mappilla prisoners. The Alipuram jail was used as a concentration camp by exploiting mappilla prisoners rather than treating them as per jail manual with hard labour and punishments.

Punishments

The jail officials targeted the prisoners body in the name of punishments as well as without any reasons. The Al Ameen reported that the wardens and jailors were beating Mappila prisoners like wild beasts and it was not surprising that the prisoners assaulted the officials in desperation.⁴¹ Simply the treatment given to the prisoners were similar to inhumane punishments prevailed in eighteenth century prisons in Britain. Even corporal punishment as an internal punishment was also awarded to Mappilla prisoners using stripes. In 1923 many prisoners at Alipuram jail were officially subjected to corporal punishment.⁴²

Night

The night at Alipuram was so horrible and cruel. The prisoners were chained in grounds rather than confining in cells at night. The chains in leg of the prisoner were tied with one big chain two prisoners were tied together. Prisoners were not given any sleeping materials sheets and blankets. The prisoners slept in ground and used soil for making pillow.⁴³ As the prisoners were sleeping in plain ground the changes in nature

like rain directly affected them. Mozhikunnath described that in night when lightning thunder and rain came all prisoners become afraid but nobody released them from chain.⁴⁴ The prisoners thus needed to survive the nights in that condition. In night prisoners were given pots for urination. Most of the prisoners cannot sleep in night due to the urine and vomiting of the chained co-prisoners who were affected by cholera and other diseases.⁴⁵

A lot of questions were raised by press and at Madras Legislative Council on the chaining of prisoners at night and the improper sanitary facilities mainly of night. The Quami from Madras reports even in 1925 April there were four thousand mappilla prisoners at Alipuram jail, the hottest town of presidency and requested new viceroy to release all Mappilla prisoners.⁴⁶ Newspapers severely criticised chaining of prisoners at night. Al amen criticised the cruel method of chaining prisoners like dogs in night was stated as 'Satisfactory' by A R Knapp and Sir C P Ramaswamy who visited the Alipuram camp jail in 1925.⁴⁷ Mathrubhumi by calling Alipuram jail as hell expresses its surprise that the government had money for chains to enchain several thousands of prisoners but no money for iron bars.⁴⁸ One of the non official member wrote about night chaining was 'for want of proper safeguard and in the absences of bar fencing prisoners were chained in night as 'A dire necessity, no doubt, but a barbarous relic.'⁴⁹ The inhuman treatment of prisoners and cry for solving it was not heard by government as the night chaining continued. As the law member claimed that Alipuram Jail was a clean prison just after P Keshavapillai who visited the jail and stated that night chaining as very cruel.⁵⁰ The various newspapers also requested government to sanction loans for renovating the jail by erecting new buildings for confining prisoners in night. The chained prisoners were forced to sleep on floor for years shows the uncivilised treatment by the colonial officials. The sick prisoners didn't received any medical care in night

The Alipuram Jail was famous for higher death rate in its initial years.⁵¹ The main reason for jail death in earlier period was mainly because of bad food and lack of medical attention. Most of the sick prisoners were not properly registered or treated. Even prisoners with incurable diseases are confined stating if

they were released the peace of the country would be disturbed.⁵² The high rate of mortality did not alarm the officials as the jail hospital was also in pathetic. As for name sake we can call it hospital as most of the prisoners admitted with dysentery died at their without proper treatment and caring.⁵³ It was in later period the officials decided to appoint experienced doctors to check the high mortality rate. A Saidali who was in Alipuram Jail in first half of 1923 in his autobiography mentioned about the doctor H C Berley a newly appointed doctor was a sincere person and he was succeeded in checking the spread of epidemics.⁵⁴ The total death in 1922 was 448 while in 1923 was 76 which shows the effort taken by Dr H C Berley for treating Mappila prisoners even taking his personal money. But this was temporary as the death rate and lack of medical care continued. The prisoners had to suffer this until their death or completion of their sentences. For escaping from these hardships many prisoners agreed Andaman Colonisation Scheme.

Resistances

The Mappila prisoners were not ready to give up their resistance in prison too. From 1921 onwards the jail witnessed continuous hunger strike by prisoners individually and separately for solving various grievances. In 1924 there was a continuous revolt or attacks in Alipuram Jail by Mappila prisoners against the torture and attack by Wardens. The reason was rather than following the jail rules properly there was rule by jail officials especially wardens with their own notorious rules, attacks corruption and so on. The prisoners mainly sketched the notorious wardens then attacked them the prisoners were punished severely for that but they didn't give up and continued attacking the wardens which forced so many wardens to quit the job.⁵⁵ Finally the jail officials as a result started following jail rules, treated prisoners humanely also forwarded their petitions to government. The movement was a success to an extent as the results later was mostly in favour of convicts.⁵⁶ Those who don't have voice were tortured by wardens even after that as the milk for sick prisoners were black marketed.⁵⁷ The prisoners were subjected to severe exploitation. The Al Ameen wrote an article in English as well as in Malayalam on the incident inviting attention of government and public on the ill treatment towards prisoners.⁵⁸

The resistance was also conducted against the nadayadi. It was in such counter attack Raghavan Menon the jail official was wounded on his face and hands.⁵⁹ Al Ameen stated that If the jail officials treated prisoners as mentioned in jail rules no troubles would have been created.⁶⁰

Even in 1930s there were more than one thousand Mappila prisoners were at Alipuram jail. Besides them the government also confined Satyagraha prisoners from Malabar, Tamilnadu, Andra and Karnataka at there. The prison life of Mappila prisoners at that time was mainly mentioned in autobiography of congress prisoners like Moyarath Sankaran, Vishnu Baratheeyan, K A Damodara Menon etc. Moyarath sankaran states that when they were brought to Alipuram there were 1200 mappilla prisoners and around 1500 satyagraha prisoners.⁶¹ The prison labour at Alipuram in 1930 was also coir making however Mappilla prisoners were also used to outdoor labour. The mappilla prisoners who worked in kitchen at a time sold around two hundred packets of lunch.⁶² This also raises another question to which they sold inside or outside jail. This was done illegally and the wardens claimed a portion of this money. The mappilla prisoners also run a tea club in prison and majority of Mappilla prisoners also had money to purchase tea, tobacco or beedi.⁶³ This indicates tea became a major consumption items to keralites at that time. The wardens also know it and if any warden feels dislike on a prisoner he will be charged and the prisoner need to pay four annas.⁶⁴ The prisoners were charged often however by the arrival of satyagraha prisoners it was decreased. This also shows the hell in 1920's was transformed to a moderate area or an adjustment between prisoners and officials in 1930.

The jail authorities mainly decided to crush the satyagraha prisoners as they were not a single group and the various issues created by them. The jail superintendent secretly call upon some senior Mappila prisoners and offered one hundred post of convict warden and convict supervisor to Mappila for six months. They were issued with convict warden uniform, cap and lathi or baton.⁶⁵ While Vishnu Baratheeyan also admits the secret meeting he states authorities offered 300 posts including convict warden and supervisor. Whatever is the number it was offered secretly and more than one hundred

were issued with dress and baton to take charge on Monday. The main task was to control the satyagrahi prisoners.

This secret was told to Malayali satyagraha prisoners from Kerala by Mappila prisoner. Both Mappila and satyagraha prisoners identified it as a part of divide and rule policy of colonial authorities. The Mappilas told to Moyarath the authorities strategy by offering convict warden post was a fight between Mappila prisoners and Satyagraha prisoners.⁶⁶ On the day allotted them to take charge as convict wardens they wear normal uniform and given back the convict warden uniform and lathy to authorities stating they were not willing to do this job.⁶⁷ Vishnu Baratheeyan considers both Mappilas and satyagraha prisoners as political prisoners both aiming the freedom of nation are the member of family of same blood.⁶⁸ This indicates their notion of freedom even after ten years of imprisonment.

In 1931 the total Malabar Struggle convicts at Alipuram jail was 1372. Al Ameen from Kozhikode strongly criticised the confinement and urged the government to release this Mappillas.⁶⁹ Even in 1932 there were around 1366 prisoners at Alipuram Camp jail. The government decided to close the notorious Alipuram Camp jail on 31st March 1932 and prisoners who would be left in the jail on that date were transferred to other Central jails in the Presidency.⁷⁰ This doesn't mean the hell was closed as it re opened during mass public protests.

That is it was opened during Second World War on 5th February 1941 for confining detainees and convicted prisoners belonging to Congress and Communist party.⁷¹ The Communists convicted for various offences faced extreme hardships at there. Congress volunteers in Malabar were imprisoned in connection with the *Individual Satyagraha* and the Quit India Movement and they were placed in the C class. The major change that took place was keeping these arrested in the Alipuram Jail. The main reason for shifting them to the Alipuram Jail was the hot atmosphere and cruel treatment of prison officials. V A Kesavan Nair, a C class political prisoner of the Alipuram Jail has written that the jail was used to confine political prisoners and there were around twenty five B class prisoners and five hundred C class prisoners.⁷² Rice was

given in a round shaped plate and the prisoners called it a time piece and the main curry was spinach at like that of the jail.⁷³ The C class food remained unchanged with foul smell, worm's stones and so on. Even the colour of rice was not white but it was in various colours during various days and the main colours were black, blue, red green and so on with foul smell and worst taste.⁷⁴ This food resulted dysentery to so many prisoners. At the same time the B class prisoners cooked their own food and had the provision of tea, coffee, sugar, butter, and so on.⁷⁵ While the gruel and rice given to C class prisoners was not enough to cure the hunger of them. Later when the jailor of Alipuram jail was transferred the new jailor allotted Better rice to C class political prisoners.

At that time there were around two hundred Communist political prisoners at Alipuram Jail. The jail officials were never ready to accept them as political prisoners. When the officials called them 'you are criminals' they strongly replied that we are political prisoners.⁷⁶ The political prisoners belonging to INC also faced extreme hardships at Alipuram.

The main reason for opting Alipuram was the climate, bad facilities, scarcity of water and its staff as it was known as the hell of Madras presidency among prisoners. The distance and lack of enough travel facilities to Bellary from Malabar decreased the visitors to these prisoners. K A Keraleeyan stated that the aged parents of political prisoners were notable to visit Alipuram Jail due to travelling issues.⁷⁷ Not only the travel difficulties but also the hot weather troubled the prisoners with various health issues. In 1945 the prisoners including those convicted in connection with the Morazha Chombal and Kizhariyur incidents also were at Alipuram. The Communists in 1945 decided to launch a movement against this far away confinements. K A Keraliyan urged for a peoples movement in September 1945 for the transfer of political prisoners from Alipuram Jail to various jails of Malabar or to Coimbatore Central Jail.⁷⁸ P Krishna Pilla the secretary of Communist Party of Kerala in November 1945 demanded the government to transfer K P R Gopalan and other political prisoners confined at Bellary, Alipuram and Rajamundry Jails to Kannur Central jail.⁷⁹ The government was not ready to transfer them from these jails.

The prisons in colonial India were far away from European prison of that period. These prisons were far away from Foucault's concept of panopticon and prison discipline. The Alipuram jail was an important institution which targeted the political prisoners who fought against the colonial oppression. The geographical location itself was a oppression as the prisoners faced extreme humidity, lack of water and various epidemics as a result of that. The Mappila prisoners were treated in extreme inhuman method or the jail officials followed a uncivilised approach towards them. The higher death rate in Alipuram was only due to worst food and water,

extreme torture and lack of medical care. The thousands of prisoners were even used for outside labour which shows these prisons was entirely different from ordinary prisons. The jail was closed in 1931 when the political atmosphere became quiet. The reopening of Alipuram in 1941 clearly reveals it as a political tool of oppression. This time the main victims were ordinary political prisoners belonging to Indian national congress and Communist party. The public protest for transferring these prisoners to Malabar reveals that the people were well aware that Alipuram was not a jail rather it was a hell.

17. On 19th November 1921 two hundred prisoners arrived at Tirur Sub Jail from different parts of South Malabar. Reeve and Sergeant Andrews who were in charge of the prisoners' transport decided to transport one hundred prisoners to the Jail at Bellary. Even though two wagons were available. Thus, one hundred prisoners were forcefully put into Wagon LV 1711 by 7. 15 P M. The doors were closed and locked by the police. The prisoners were escorted by Sergeant Andrews and seven policemen. The prisoners due to overcrowding and other problems fell thirsty and shouted for water. One of the survived prisoner in his statement recalls it as when they shouted for water someone said them that they would get water at Podanur station and if they continued shouting they

- would be shot. When the door was opened at Podanur, the officials were frightened by the scene. Fifty six persons were found dead and all the prisoners were dragged into railway platform. Of the remaining forty four prisoners, six died from platform itself. Thirteen were taken to hospital and twenty five people were transferred to the Coimbatore Jail in a lorry. Later eight more prisoners died and the total casualty of the event became seventy.

PULAPPEDI AND MANNAPPEDI – A SOCIAL CUSTOM OF VENAD: AN ANALYSIS

S. Simi

Introduction

In the medieval society of Kerala, particularly in Venad, there were many social segments or castes having diversities of traditions, practices, habits, food, titles, marriage laws, religious beliefs and social position. Venad was an ancient territorial principality that emerged after the decline of the Cheras of Mahodayapuram in the 12th century AD. The structure of Venad society was caste based and traditional in nature. The status of women in Venad was closely related to the social institutions. The social institutions which included social stigmas like *Pulappedi* and *Mannappedi* gives a clear picture of the sufferings of women.

Pulappedi* and *Mannappedi

Pulappedi and *Mannappedi*, were evil customs related to the system of pollution or untouchability.¹ *Pulappedi* was also called *Pulappidi*, and they respectively mean 'fear from Pulayas' and 'capture by Pulayas'.² Pulayas were low caste agricultural labourers, while Mannans were the washermen who did service for the low caste and were therefore themselves considered among the polluting classes.³ *Pulappedi* was also known by the name of *Parappedi* with reference to the Parayas who exercise it.⁴

This peculiar custom existed in Venad till the end of the 17th century. Through this custom the higher caste woman became an outcaste. According to this custom or institution if a slave like Pulaya, Paraya or Mannan happened to see a high caste woman alone after dusk in certain months she would lose her caste and would have to go with him. It was enough if the Mannan or Pulaya threw a stone or a stick at her or called out that he had seen her.⁵ Such women

were never allowed to enter their houses and their only way of living was to go with the Mannan or Pulaya however old or sick he may be. The inhumanity of this social practice lay in the fact that the woman who was not at all guilty had to undergo excommunication.⁶ Through this custom Pulayas were permitted to take away any high caste woman found outside her abode.⁷ From this it can be understand that the lower castes like Pulayas had certain rights and enjoyments in society. There is no definite information available as to how this practice originated and how the polluting classes acquired this privilege.⁸

During the months of *Kumbha* and *Meena* (February and March), if a Pulayan meets a Nayar woman alone he may seize her, unless she is accompanied by a male child. This time of the year was called *Pula pedikalam*. Gundert says that this time of terror was in the month *Karkataka* (15th July to 15th August), during which high caste women may lose caste if a slave happens to throw a stone at them after sunset.⁹

Barbosa was the first person who recorded this social practice. Barbosa, writing about AD 1516, refers to this strange custom as practiced by the *Poleas* (Pulayars). If there should be no witnesses to this incident, the Nayar woman herself, publishes it immediately, crying out, and leaves her house without choosing to enter it again to damage her lineage. If her relatives know this, they will kill her as a remedy or sell her to strangers. So what she most thinks of doing is to run to the house of some low people to hide her.¹⁰

Certain features of this time honored custom were not worthy. The Mannan and

others resorted to this practice only during a certain period in the year. They practiced only against women going out alone after night fall. Women remaining at home were never troubled. They could travel anywhere during night time accompanied by a male child at least three years old.¹¹

It is believed that, the Nayars themselves created this custom to control their own women's freedom.¹² The women of higher caste had not a proper type of marriage or marriage relations. They faced scarcity of sexuality in their life because of not getting husbands or absence of husband due to military duties. So may be the higher caste men themselves had created the customs like *Pulappedi* and *Mannappedi* to prevent their women to go out of their house after sunset and also for preventing their immoral relations with other men, and also to protect their chastity. But later, this custom became an anarchy faced by women of higher caste. And the greatest opponent of the abolition of this custom was higher caste men themselves. They needed this custom, mainly for developing caste division and untouchability among people. So the main aim behind this custom was to protect their caste rules and to prevent their women from immoral relations. Another notable fact is that the lowest ones in the caste hierarchy of that time were Pulaya and Paraya. They got the opportunity by this custom to secure women of the higher caste. This custom also highlights caste differences and lack of freedom of higher caste women in society.

If the woman subjected to *Mannappedi* was pregnant, she would not be accepted as wife by the Mannan till her delivery. She becomes his wife only if the child born is a girl. If it happened to be a boy she could go back to her house and her relatives would gladly receive her.¹³ Here reveals the discrimination based on gender is revealed. In those days higher caste women had to suffer much due to this evil practices. Women, who were afraid of losing their chastity and position in society, were ready even to sacrifice their lives.¹⁴ Those who became an outcaste as a result of the custom of *Pulappedi* and *Mannappedi* became *Avarna* castes.

This evil custom was stopped by Vira Kerala Varma or Kottayam Kerala Varma in 871 ME (1696 AD) by a royal edict known as Tiruvithangodu record.¹⁵ This order was

engraved on stone. It is a royal edict prohibiting *Pulappedi* and *Mannappedi* which appear to have been current at that time.¹⁶ King Vira Kerala Varma ordered that, any Pulaya who was caught molesting women according to this *Pulappedi* practice would be killed.¹⁷ It is said that, if *Pulappedi* or *Mannappedi* occurs, that woman needs only to take a bath in a pond and that would purify her. It also ordered that this edict to be in force till so long as grass, the earth, the stones and the Kaveri existed.¹⁸

The punishment for violation of the proclamation was extremely severe. If a Mannan practiced the above custom, all the members of his family, including the children in the wombs of women, were to be cut into pieces. It was also ordered that if a woman was polluted by *Pulappedi* the pollution should be considered as removed if the woman bathed in a tank and came out.¹⁹ Thus, the dreadful customs prevailed in Venad, due to which the women suffered a lot came to end.

Vira Kerala Varma, though not a ruler of Venad, states in his proclamation that, it was applicable to the whole of Venad.²⁰ He had no power to abolish them in the whole of Venad. But he used the power of Umayamma Rani and abolished this customs in Venad. But the Nayars, especially landlords were against this abolition and they complained about the matter to Umayamma Rani.²¹ It is said that they planned to kill Kerala Varma, and Umayamma Rani indirectly gave consent. So it can be said that Kerala Varma became martyr for abolishing *Pulappedi* and *Mannappedi*.²² It can be understood that the ruler was against this caste based anarchies while it was supported and encouraged by feudal lords.

Conclusion

The women faced more restrictions than permissions under the social institutions. The social stigmas were originated as a result of the influence of religion, caste system and social situations. During an age when caste distinctions were very powerful in society, Pulayas, Parayas and Mannans who belonged to the lower castes, had secured an opportunity to make their own the women of higher castes by practices such as *Pulappedi* and *Mannappedi*. It is not known how the lower castes especially the Pulaya, Paraya and Mannan had received these rights. The

society and social structure had allowed such practices due to superstition. Thus the lower castes have some rights, even to claim the women of the higher castes. *Pulappedi* and *Mannappedi* were an opportunity allowed by the *Naduvazhis* to the suppressed lower castes once in a year during the month of *Karkitaka* to claim the women belonging to the higher castes. Whenever this custom had occurred the higher caste women had lost their caste. Here the importance was given to caste. If she lost her caste, then she can't enter even her own house. If she enters the house, then the whole family would lose their caste. This was one of the beliefs

and the tradition based on caste existed in Venad till the end of 17th century. Through this system the women were prohibited from moving freely out of their houses at night. The practice of *Pulappedi* and *Mannappedi* also reduced the *Savarna* women to *Avarnas* or lower caste. They were tortured both physically and mentally. The society had given the lower caste the chance to secure higher caste women in the form of *Pulappedi* and *Mannappedi*. Perhaps it must have been an act of relief of their oppression. With the abolition of this practice the lower caste lost the opportunity to own higher caste women.

EVOLUTION OF ŚAIVISM IN EARLY MEDIEVAL TAMILAKAM:AN EPIGRAPHICAL STUDY

P. Sree Jyothi

The history of Śaivism has been studied and interpreted by scholars in various dimensions. Śiva is an elusive God whose history cannot be properly fitted into the Aryan-Non-Aryan divide. In Tamilnadu, Śaivism attained a popular cult status during early medieval period. The Śaivāgamas and Tirumurai are testimony of the impact this sect had on the religious history of Tamilnadu. The study of these texts can lead to a nuanced understanding of the workings of

Śaivism in the history of the Tamil country and the epigraphic sources are another major source that is a huge help in the understanding of the spread of Śaivism.

The term 'Bhakti' has been described by various scholars as an ideology, a movement etc; it was an important part in the consolidation and reformation of the Purāṇic religious sects. According to Brockington, it was characterized

by a 'personal relationship between the deity and the devotee, and worship became a fervent emotional experience in response to divine grace'.¹ Among the Nayanmars who firmly established Śaiva Bhakti, the four most prominent were Campantar, Cuntarar, Appar and Manikkavacakar.²

According to Vijaya Ramaswamy, the period from the 7th to 12th century constitutes the hard core of the 'Bhakti movement' in South India and it created a sacred space for the socially, ritually and economically underprivileged and unprivileged sections of the society. The path of knowledge precluded the lower castes and women since they were forbidden to read the sacred texts. The paths of devotion preached by the Bhakti saints required from the devotees nothing else but love and surrender and therefore provided these oppressed categories with an ideal alternative. They mostly preached in the language of the common people- Tamil.³

Romila Thapar has also looked at the flexibility of Bhakti sects in overcoming the brahmanical orthodoxy and has opined that their status was often linked with royal or political patronage and it was also out of social requirement that they emerged. She points out that non-violence often propitiated as a feature of Hinduism is not true especially as seen from the case of Tamil Śaivite hymns where there is clear mention of persecution of sramanic sects as in the case of Appar and this rivalry was mostly for economic or political hegemony. She also points out that untouchability (for example in the case of Śaivite Nandanar) is also a form of religious persecution.⁴

Champakalakshmi looks at the influence of Purāṇic religion on Śaiva Bhakti tradition, the development of temple and intensely human Bhakti as an important part of religion starting from the period of Sangam texts like Paripāṭal and Thirumurukāṛṟupatai (in Pathupattu), which was developed more in the Bhakti texts later.⁵ In Bhakti hymns apart from intense devotion, there was a protest against Brahmin orthodoxy, and denunciation against Jains and Buddhists.⁶ Direct rejection of caste can be found only in the hymns of Śaivite saint, Appar. Bhakti led to the expansion of the role of temple in restructuring society and economy; and also facilitated the advance of branches of knowledge associated

with ritual display namely architecture, sculpture, painting, fine arts like dance etc-iconography-religious and political and art were used as effective ideological apparatus.⁷ The Bhakti saints through their hymns iconize many concepts of sculptures; the hymns popularized many forms of Śiva in local myths and Puranas and they were probably introduced into the temple iconography later. The Śaiva Bhakti tradition set out to achieve reclaiming of people from the heretical sects to Hindu orthodoxy as well as assimilation of esoteric sects like Kāpālikas, Kālāmukhas and Paśūpatas into a popular Hindu orthodox mode of Śaivism.⁸ The Bhakti hymnists also introduced the idea of a 'sacred geography' coinciding with the agrarian and political geography of the Chola period, with the temple as the institutional focus in all these centers associated with the Bhakti saints.⁹ Also, the idea of pilgrimage developed with the sacred cultic geography and the 'Atta-Virattana' of Śiva is an important example which included 8 important sites of Śaivism where he performed 8 heroic deeds such as(Tiru)-Kantiyur, Kovalur, Pariyalur, Kurukkai, Atikai, Valuvur, Katavur and Virkuti' where he takes the form of 'Kankālamūrti/Bhikṣatana, Andhakavadhamūrti, Dakṣārimūrti, Kāmārimūrti, Tripurāntakamūrti, Gaṅgāsurasamhāramūrti, Kālasamhāramūrti and Jalandharasurasamhāramūrti respectively.¹⁰

The textual tradition of the Śaivas while undergoing the process of redaction was influenced by philosophy, counter traditions as well as the socio-economic and political contexts and it came through a process of syncretism and synthesis. Only after the composition of Periyapurānam by Cekkilar in 12th century that the 63 saints of Śaiva sect came to be worshipped, as earlier only the composers of Tevāram hymns who were patronized by the ruling class. It was composed in a context when there was a crisis caused by sectarian rivalry between the Vaiṣṇavite and Śaivite Bhakti sects. Through the process of a Śaiva hagiographical tradition, all forms of Śaivism including Kāpālikas, Kālāmukhas and even the wandering Siddhas were incorporated so as to create a unified tradition.¹¹

From the analysis of the inscriptions of early medieval period from the Pallava period (about 6th-8th century C.E.) onwards there is the initiation to the general consolidation of the

Purāṇic sects that started from this period that also mark the beginning of Bhakti tradition. The construction of the rock-cut cave temples that start from the Pallava period from Mahendravarman 1's period as indicated in Mandagapattu inscription and also the numerous inscriptions in the Mamallapuram indicate the proliferation of the temple worship. The starting of Brahmadeya grants can be seen in this time period. The constructions of temple for multiple deities in the earlier period indicate that there was no consolidation of monotheistic Puranic worship in the period of Pallavas. The names of temples like Rajasimheśvara, Atiranachandresvara as seen in inscriptions indicate that the equalizing of royalty with divinity started from the Pallava period onwards which continued in the Chola period as Rājarājesvaram, Gangaikondacholesvaram etc. In rare cases like the Kudimiyamalai inscriptions¹² we also get indicators of the artistic developments under the royalty during the period, in which there is the notations of vocal music and is attributed to the times of Mahendravarman 1 and it invokes Śiva.

The main inscriptions of Mahendravarman 1 indicate about the contribution he did to the development of the rock-cut architecture in Tamilakam- Mandagapattu¹³ is the first major inscription of him which says it is built by Vichitrachitta (biruda of the king) dedicated to the Trimūrtis without using brick, metal or mortar, Trichinopoly inscription indicates his building of a rock cut cave temple there called 'Lalitankura Pallavesvara griham'¹⁴, the 'Dalavanur inscription'¹⁵ mentions about a rock cut cave temple on a hill and is called 'Satrumallesvaralaya', Satrumalla identified as one of the birudas of Mahendravarman 1. In his Tirukkalukunram and Vallam inscription there is description about how his vassals also engaged or took part in the constructions of some rock-cut temples- for instance, in Vallam¹⁶, the rock cut temple is said to have been built by Skandasenan, son of Vayantappiriasar, a vassal of Mahendravarman 1. Mahendravadi inscription speaks of the grant by 'Gunabhara' identified as Mahendravarman 1 for a Vishnu temple despite him being a Śaivite supposedly converted by Appar himself. 'Siyamangalam inscription'¹⁷ is another important inscription of Mahendravarman 1 as it's a rock cut Śiva temple called 'Avanibhajana Pallavesvaram' by him, and

it was in this temple that one of the earliest depictions of Śiva-Naṭarāja is carved though without 'Muyalagan'.

Narasimhavarman 1 started the next stage of Pallava temple construction by initiating the 'Monolithic rathas and mandapas' at Mamallapuram named after his biruda 'Mamalla' or the great wrestler. The construction of 'Adi-Varaha Perumal cave temple'¹⁸ and 'Dharmaraja ratha'¹⁹, also known as 'Atyantakama Pallavesvaragriham'-probably called so as it should have been finished by Paramesvaravarman 1 at Mamallapuram (now Mahabalipuram) is attributed to have begun by him.

"Narasimhavarman 2 Rajasimha" seems to be an avid constructor as he was the one who started the next stage-'Structural temples' in Pallava architecture. In his Panamalai inscription he proclaims himself as 'Śivachudamani' and 'Āgamanusari'²⁰ indicating the staunch Śaivite influence on Pallavas. The Atiranachandesvara cave temple inscription found near Saluvanakuppam, the Vayalur and Thirupporur pillar inscriptions indicate his construction of some temples near Mamallapuram He is part of the construction of Kailasanatha and Airavatesvar temple at Kanchi, Shore temple at Mamallapuram and also Buddhist Pagoda at Nagapattinam²¹.

Nandivarman 2 (Pallavamalla) has a lot of conquests to his credit apart from some temples and it is interesting that there are some inscriptions of him that indicate the grant of Brahmadeyas in a large number like the Kasakudi plate²², Udayendiram plate²³, Tandantottam (Śiva temple) plate²⁴, Pattattalmangalam plate²⁵ etc.

The later Pallava kings have scattered evidence about the construction of the temples, but the inscriptions seem to indicate that though Śaivism was gaining supremacy it did not achieve the prominent religious sect status like the later Chola period. Another important aspect is the gift of land and gold given to the temples for offerings to God, for perpetual lamps etc. by the common people. This indicates increased participation of people in the worship and maintenance of temples and also the later period there seems to be lesser construction of temples especially after Pallavamalla and there is more

inscriptions found about the land grants and donations given to the maintenance of temples already constructed. Also the inscriptions give the geographical extent of these empires-for instance the Pallavas inscriptions' are mainly centered on the Chingelpet, South and North Arcot districts, Trichinopoly up to the Pudukkottai District. And the Cholas are having the area around the Kaveri valley as their main domain. The Kanchipuram temple also called Rajasimhesvara/ Rajasimhapallavesvara temple is a major proof of Pallava's architectural prowess and the Mahabalipuram temples constitute the change from rock-cut temple to Structural temples.

From the Chola inscriptions we can see the gradual increase in the patronage of Śaivism from Aditya-Karikala's time which gets a boost from Sembiyan Mahadevi and gains a prominent political position from Rājarāja's time in the Tanjore temple. Anbil copperplates of Sundara Chola²⁶ (Parāntaka 2) is an important inscription that throw light not just on the Chola genealogy but also mention their military and cultural achievements. In this inscription there is clear mention of the gradual growth of Śaivism under the Cholas -Kochengannan, the ancient Chola started to construct Śiva temples under areas under him and later, Rajakesari Aditya Chola is mentioned to have constructed a series of temples for Śiva and his son Parāntaka 1 gilded with gold the Tillai Chidambaram temple and the worship of Śiva later continued by their successors.²⁷ It is interesting that in this inscription's eulogy part, there is mention about the 'cosmic dance of Śiva-of the dance that causes alarm of unexpected annihilation of the world.....'²⁸, indicating that this interpretation was popular under the Cholas later leading to the large scale portrayal of 'Natarājas'. The 'Uttaramallur/ Uttamerur' inscription issued in 15th year of reign of Parāntaka 1(-922 AD)²⁹ throws light into the local self-administration of the Cholas and has been used often as a reference point by historians and is in Tamil. There is also another inscription in Uttaramallur by Rājarāja Chola in his 9th regal year. It records about the decision of the 'Mahasabha' to regulating its constitutional arrangements.³⁰ Interestingly in this inscription, there is a separation made between the 'Brahmanas' and 'Śivabrahmanas' indicating a possible separation based on sects in Hinduism during the period.

The larger Leiden plates of Rājarāja 1 in Sanskrit (composed later) and Tamil are very important as it records the grant of the village Anaimangalam to the shrine of Buddha in Chulamanivarma-vihara situated at Nagapattinam city³¹. This inscription maybe a testimony of the tolerant attitude of Rājarāja 1 towards other sects though he himself declared that he is 'Śivapādaśekhara'. Tanjore inscriptions are mostly about the grants made to the great temple from the times of Rājarāja Chola 1 and his sister Kundavai as well as his various queens which are later continued by Rājendra Chola as well. The gifts include gold ornaments and vessels, fly whisks etc. It is interesting that the Lord is mentioned as "Dakṣiṇameruviṭaṅkar/ Āṭavallār/ Taṅjaiviṭaṅkar" in these inscriptions and the gifts are weighed by a stone measure called 'Āṭavallāṅ'.³² Many of the gifts made to the lord are booty captured from the conquered kingdoms-mainly Cheras and Pandyas and some of their details are also given. The gifts are not just for the lord 'Dakṣiṇameruviṭaṅkar' but also to his consort 'Umāparameśvarī'. Tiruvār copperplates of 'Anapāya' identified as Kulottunga 2 throws light into the presence of the images of the Tevāram trio in the temple in Tiruvār to whom the king has granted gifts in his 7th regal year.

The land grants to the temple increased in this period as we see from Tanjore and Manimangalam inscriptions etc. This stands in contrast to the Brahmadeyas which gained prominence in the Pallava period. So accordingly the name of the villages change from different ruling periods: for instance 'Rajasulamanichaturvedimangalam' in ViraRājendra's period change to 'Gramasikhmanichaturvedimangalam' in Rājarāja 3's period (Manimangalam inscription).³³ So, Śiva's 'Glory and war-like' aspect actually helped the dynasties to legitimize their indulging in war and glorification. It is differentiated from Vaiṣṇavas who had more of a passionate love as the main dimension unlike the 'Veera' aspect of Śaivism.³⁴

Through the epigraphical analysis and works about Bhakti tradition, we can observe that Śaivism gained a prominent place in South India especially Tamilakam as it could incorporate elements from almost all classes and assimilate local cults and practices which made it relatable

to not just the orthodoxy but also the commoners. The Bhakti literature as well as the temples which were built and patronized by the rulers made its diffusion easy into the masses. The assimilation of esoteric elements like Kāpālikas, Kālamukhas etc also made it stronger even among those tribes and Siddhas who indulged in tantric and non-orthodox practices. The difference in socio-economic structures influenced the consolidation-Pallavas' land grants started the making of temples, but later the temple itself gained stronghold over traditional land grants like brahmadeyas in the Chola period. In Chola period it gained more prestige as the state religion with marvelous temples and

iconography that showed the political and religious symbolism of Śaivism. Thus, in early medieval Tamilakam steadily Śaivism consolidated itself with the help of Bhakti and it could be observed with the help of inscriptions how the deity Siva surpassed other deities in temple construction from Pallava to Chola period. Śaivism gained importance in political and social domain in Tamilakam being promoted by the royalty itself and played an important role in consolidating power and legitimizing it to the masses though the temples which had socio-political functions apart from the religious role.

THE ROLE OF ALMS -SEEKING -VAISHNAVA -COMMUNITIES IN MEDIEVAL SOUTH INDIA-AN OVERVIEW OF 'SATTADA SRIVAISHNAVA' AND 'DASARI' TRADITIONS

S. Srinath

The classical works on Vaishnavism beginning with R G Bhandarkar¹, C RajagopalaChari's², S Krishnaswami Aiyangar³ delve in to mainstream components of

Vaishnava doctrine and the realm of Always contribution to Tamil canonical literature. Actually, the history of Vaishnavism in South India came in for attention as a subject of study

while yet the eminent Tamil scholar and philologist, Bishop Caldwell⁴, was actively working in the field of the history of the literature of Tamil. In the course of his investigations he arrived at, to us somewhat strange, conclusion that Vaishnavism was the foundation of Ramanuja which needs to be further investigated. All these studies look at the growth of Vaishnavism in South India but do not actually look at the various lesser communities which have embraced Vaishnavism.

Thurston⁵ contributed seven volumes on **Castes and Tribes of Southern India**, printed in 1909 as a result of larger project on Ethnographic Survey of India. In fact in these works we get to know about varied phases of south Indian Castes and tribal life, their traditions, manners and customs of people.

The greatest of Vaishnava Acharyas, Ramanuja attempted to unify the sect by reform of temple and ritual wherever possible. Though he respected the rule that none but the twice born may read the Veda, he was eager, like Alvars, to spread the doctrine of Bhakti among Sudras and even among the outcastes.⁶ Among such communities are two notable communities namely 'Sattada Srivaishnava' and 'Dasri' who are ordained with alms seeking on occasions and to proselytize the countryside with tenets of Vishnavism.

Many of the Vaishnava Alvars and the Saiva Nayanars (saints) flourished during the Seventh and eighth centuries A D in Tamil nadu*. The Alvars represented the emotional side of Vaishnavism, and they were followed by a line of *acharyas* who represented the intellectual side. Interestingly Alvars came from different castes including those considered "untouchable" and women too,

The Bhakti movement in South India was spearheaded by 63 Nayanars and 12 Alvars who were indifferent to the austerities practised by both Jainism and Buddhism but whereas taught private religious worship to almighty as a tool of deliverance. The movement was totally against the brahmanical superiority and the rigid caste systems of the Hindu society at that time. So to attract mass the spiritual texts was translated into local languages. Womens were given respect and elevated to the sainthood for eg: Andal (Alvar) and karaikkal Ammaiyar

(Nayanar). So the earlier left out proportion of the population got the chance to do things which were hitherto only restricted to higher castes. This spark of Bhakti movement also gave birth to new forms of devotion and new path of salvation for the masses to attain.

Background

The rise of temples in South India from the 7th c AD was largely due to the agrarian expansion where in large lands were brought into cultivation as part of the reclamation of lands under the agents of temples which functioned as a instrument of agrarian expansion by bringing new lands allotted to Brahmanas and temples. these lands were the kadu or forest became the Nadus by three interrelated process technological- the installation of irrigation systems and irrigation facilities for wet rice cultivation social- the peasantisation of castes into tribes religious- the absorption of the diverse tribal deities into Puranic religions these new lands saw the intrusion into the peasant regions and the rise in many new peasant communities and artisans. the rise of economic status was due to the craft specialization of the artisans on account of the surplus from the river valleys. It led to a new demand for higher social status as per their economic status and their need for nearness to the temple led to the social conflicts. All these were answered in medieval period by the bhakti movement as religion was by and large only way of legitimate form of protest.

It is in this context that this paper attempts to study the changing role of *Sattada Srivaishnavas*, who were temple servants and alms seeking occasionally for ritual purpose and *Dasari* community of mendicants and alms seeking in the name of Vishnu and spreading the tenets of Vaishnavism.

Ideology

Vaishnava Philosophy and Religion had their earliest expression in the twelve Vaishnava saints of South India (Tamilnadu), popularly known as Alvārs, who flourished between the fifth and eighth centuries A. D. Their hymns laid down the foundation of the later Visistādvaita⁷. They held that Vishnu or one of his Avatars (incarnations) confers upon devotees the grace that is necessary for total surrender (*prapatti*) to him. Nathamuni was a Vaishnava saint who was an expert On philosophical aspect

of vaishnavism cosideded as first Vaishnava acharyas. From 10 hymns Nathumuni recovered all the 4000 hymns and compiled them into four collections of about one thousand each stanzas each known as *Nalayira Prabandham*. Further introduced the regular singing of the hymns in Vaishnava temples of South India.⁸ They have contributed enormously to literature.

It is the beliefs and principles embodied in the poems of the *Naalayira Divya Prabandam* that provided a basis for the Sri Vaishnava belief system. Nathamuni was the founder of the sect, but it really got into prominence when Ramanujacharya became its leader.

The Alvars are grouped under three chronological heads as follows;

Early Alvars: Poykai, Putam and Pey- 5th-6th century

Middle Alvars: Nam, Maturakavi, Kulacekarar, Tiruppan, - 7th-8th century Tontaratipoti and Tirumalicali

Later Alvars: Periya, Antal and Tirumankai 8th-9th century - Poykai to Putam 650-700, Andal 9th century, including Tontaratipoti).

They criticised the supremacy of Brahmins and refused to accept the Vedas. A notable feature of this movement was the preaching of a loving bond for the fellow human which manifested in the following ways;

They believed in an egalitarian society and believed that everyone could attain salvation through devotion. They preached their philosophies in the local languages and disseminated them in the form of stories. Opposed to caste system: They criticized the caste system and attacked institutionalized religion.

By opposing the caste system and including women into the fray the Bhakti saints went against traditional religions. Furthermore, they created their own literature challenging the dominance of Brahmins over society and religion.

Accommodated Communities

1. They believed that inequality and exploitation in society existed due to caste system and patriarchal mindset. So, they incorporated all sections of society to break the caste barriers.

2. Women like Andal (Alvar) and Karaikal Ammaiyar (Nayanar) composed many songs in praise Gods. This Vaishnava ideology has all inclusive social base.

Instead of emphasizing upon the caste identities, the Alvars emphasized upon the Vaisnava community identity with Vishnu as the supreme god head. The idea of service to a Vishnu Bhakta became equivalent to serving god. All these ideas expressed in the hymns can be related to the low caste and socially marginal background of the Alvars. For instance, Nammalvar was a Vellala, Tirumangai Alvar was a non-Brahmana kalva chief and Andal was a woman. However, the protest against astrictive hierarchy was not only emphasized by the non-Brahman Alvars, but also by the Brahmana ones like Tontartipoti.⁹ For the first time, a regional language was placed at par with Sanskrit as a language of scriptures in place of inaccessible Vedas. The presence of the above ideas in almost all the hymns indicates that the Alvars were influencing each other and creating consciousness of a community

All these hymns along with their ideas became the basis of *Srivaishnava* ideology in the twelfth century A.D. These ideas assumed practical importance around the thirteenth century A.D. when the collection of oral hymns was transformed into the scriptural text, the *Nalayira Divya Prabandham*. It is also believed that the earlier Sanskrit hymns were incorporated in to this scriptural framework. The co-existence of both the Sanskrit Vedas and Dravida Veda became the central idea in the philosophy of *ubhayavedanta* (i.e., dual Vedas)

The low caste authorship of some of the hymns incorporated in the Dravida Veda created a problem of legitimacy to the subsequent theologians of the Srivaishnava community. The question arose as to whether the composition by low caste authors could be accorded the status of a Veda. Several commentaries discussed this issue and asserted that caste was ascriptive and a person had no control over it. What made him great was his devotion to god. It was stated that the caste of the Alvars should never be discussed, since they were the all new incarnation of **Vishnu** and it was only proper that they were excluded from this social norm¹⁰. There were two sects among Srivaishnavas.

Difference between Thenkalai and Vadakalai Sect:

After the time of Ramanujacharya that Sri Vaishnavas became a sizable enough portion of the Brahmin community that they started developing a distinct identity, which is e.g. how the Iyengars emerged from the Iyers.

Ramanuja placed pretty much equal emphasis on both Sanskrit scripture, like the Vedas, Upanishads, and Puranas, and the Tamil Naalayira Divya Prabhandam, because he took the notion that it was the Dravida Veda very seriously. But after his death, his followers started having disagreements. They all agreed on the Visistadvaita philosophy that characterizes the Sri Vaishnava belief system, but they had disputes that fundamentally revolved around how much authority we should give to the Naalayira Divya Prabhandam. Manavala Mamunigal and his successors believed that words of the Alvars are of paramount importance, and that they contain all the important messages of the Vedas and more, so they started called themselves Thenkalai (the Southern group), because their supreme scripture was the Naalayira Divya Prabhandam, which is from South India.

Vedanta Desikan and his successors still believed that Alvars' words were sacred, but they also thought that we shouldn't neglect the importance of Sanskrit scripture like the Vedas. Since they placed some emphasis on scripture that had come from North India, they became known as Vadakalai (the Northern group). Thenkalai Iyengars lay more emphasis on worship of Vishnu while Vadakalais assign an equally important place to Vishnu's consort Lakshmi.

Sattada Srivaishnavas

Origin

A Telugu Chola era caste originally from the Chola-ruled North (Chittoor, Kadapa, North Arcot districts of Tamil Nadu) and South Arcot regions and Southern districts of Circars (Nellore, Prakasam, Guntur, Krishna and parts of Godavari districts) of the Madras Presidency where the Chattada schools were established from the times of Sri Ramanuja. Migration of the Chattada caste members to the Hyderabad State happened since the time when Hyderabad State

was under the supervision of British resident (of Madras Presidency) at Secunderabad. Trimulgherry and Alwal in Secunderabad have significant population of Tamil-Telugu Satanis. Andhra Pradesh's Chittoor, Kadapa, Nellore, Guntur, Krishna districts and Telangana's Hyderabad, Rangareddy, Karimnagar, Warangal, Nalgonda and Khammam have significant populations. Tamil Nadu's North and South Arcot regions have significant number of them.

The Sattada Srivaishnavas are a distinctive, though little-known, community of Thenkalai Srivaishnavas, spread, throughout Tamilnadu Karnataka and Andhra Pradesh, dedicated to temple service. The Sattadas have a long history, perhaps from the time of Ramanuja (11th c.), and guru-lineages and a literature dating from, at least, the fifteenth century. The evidence strongly suggests that they are descendents of both brahmins and non-Brahmins who followed the anti caste Alvar/Bhagavata Vaisnavism formalized by Lokacharya and Manavalamuni-they renouncing their sacred thread and top-knot and, thereby, the performance of Vedic rites, in favor of temple service and life-cycle rituals and pujas engaging songs of the Alvars in place of Vedic mantras. From the eleventh through the sixteenth centuries Sattadas enjoyed supervisory status in many of the most important Srivaishnava temples¹³

This community was prominent in Srirangam and Kanchipuram (15th and 16th centuries) under the leadership of Kanudaadi Ramanujadasar, who was a disciple of both Koil Annan at Srirangam and Azhagiyanamaavala Jeeyar at Kancheepuram Varadarajaswami temple. They were in charge of Ramanuja Kootams.

Professions

They are ascetics, purohits, medical practitioners, Sri Vaishnava preachers, Hindu dharma pracharaks, yagnakartas, temple builders, Sanskrit, Kannada, Telugu, and Tamil scholars, statue installers, musicians, flower cultivators, garland makers, and Vishnu temple priests, assistants and administrators.

They are known by a variety of names including Sanatani, Sanatana, Sanatanas, Sattina, Satani, Sattada, Sattini, Satavahana Brahmins, Dasa Nambis, Nambis, Nambi Brahmins,

Bhagavata Nambi Brahmins, Pancharatras, Vaikhanasas, Yejurvedis, Krishna Yejurvedis, Nambudiri, Namboodiri Brahmins, Chattada, Vadama Brahmins, Bhagavata Brahmins, and Tengalai Sri Vaishnavas.

They are found in large numbers in Sri Villiputtur, Sri Perambadur, Sri Rangapatna, Tirupati, Melkote, Kanchi, Srirangam, Brahmadesham, Brahmadesam, Tiruvanapuram, Guruvayur, Ayodhya, Pandarapur, Dwaraka, Varanasi, Mathura, Bengaluru, Hyderabad, Chennai, Vishakapatnam, Bhubaneswar, Kolkata, Mumbai, New Delhi, Poona, Mysore, and are largely concentrated in the states of Andhra Pradesh, Karnataka, Tamil Nadu, Odisha, Kerala, Maharashtra, Bengal, Uttar Pradesh, Madhya Pradesh, Rajasthan, and Gujarat.

Titles

Their names have the honorary last names or suffix or prefix such as Arya, Ayya, lah, Iyer, Ayyangar, Ayyavar, Ayyavarlu, acharya, chari, acharyulu, acharyam, jeeyar, jeeyangar, swamy, swami, paravastu, parakala, kandadai, sharma, goswami, Nambudari, Alvar, Bhagavat, Bhagwat, and nambi. They especially revere the Sankha, the Chakra, the Naamam, Tulasi.

Alms seeking Satani should be clean shaven. On his face and on various portions of his person he is adorned with the trident-shaped mark of Vishnu. On his shoulder he carries a guitar-shaped instrument, having four wire strings. On this he strums as he goes along and with it also he accompanies his songs. He has a pumpkin-shaped vessel to receive his doles, which he transfers to a cloth when the vessel is full. That vessel is known as Akshayapatra (Sanskrit: अक्षयपात्र) meaning inexhaustible vessel, is an object from Hindu theology. It was a wonderful vessel given to Yudishtira by the Lord Surya which held a never-failing supply of food to the Pandavas every day.

This vessel is adorned with the religious marks of Vishnu. He begs from all conditions of people and from all castes except the Panchamas. When he arrives in front of a house where he expects alms, he shouts out "adoration to the most excellent Ramanuja" (Shri mate Ramanujaya namah)¹⁴, and then begins to sing one of his song which translation of a few

specimens. In the first of these, Vishnu is called the saviour of the elephant in allusion to a story in the eighth book of the "Bhagavatam." An elephant was bathing in a tank, when it was attacked by a crocodile which would have killed it had not Vishnu or Hari come to its relief.

In Dhanurmasa Diksha some among Sattada went out to seek alms and would seek only uncooked food items or commodities from around the rural areas. The alms brought were put in front of Jeyers and later used to partake food on the occasion of *kalyanam* of Godadadevi and Ranganadha. Gradually they gave up alms seeking and few of them still working as priests in the temples of Telugu and kannada regions and some maintaining flower gardens of the temple in Tamilnadu.

Dasari

Dasari community performs all kinds of religious rites for the outcastes. They perform at their marriages and funerals and all other such ceremonies. He is also *hakim* (doctor), astrologer, and soothsayer. They get paid for these services, but they also additionally lives by begging. From the fact that he begs from all castes, and so from those who do not need his official services, he must be classed as a mendicant.

All Dasaris are Vaishnavites, and admission to the community is obtained by being branded by some Vaishnavite guru. Thence- forward the novice becomes a Dasari, and lives by begging from door to door. The profession is almost hereditary in some families. The five insignia of a Dasari are the (1) conch shell, which he blows to announce his arrival ; (2) the gong which he strikes as he goes his rounds ; (3) the tall iron lamp (with a coconut to hold the oil for replenishing it) which he keeps lighted as he begs ; (4) the brass or copper vessel (sometimes with the namam painted on it) suspended from his shoulder, in which he places the alms received ; (5) and the small metal image of Hanuman, which he hangs round his neck. Of these, the iron lamp is at once the most conspicuous and the most indispensable. It is said to represent Venkatesa, and it must be burning, as an unlighted lamp is inauspicious. A long red-coloured 'tirunamam' indicates Vaishnava mark on his forehead. He carries in his hand a pair of wooden castanets (chidathalu); the songs are usually in praise of the Vaishnava

gods of the Telugu land (Yadagiri Narasimha, Bhadradi Rama, etc.). They are especially seen during the festive occasions of Sankranti and Dasara.

He is generally a jovial, merry fellow, of goodly condition as to his body. He looks on the bright side of things and he is a very popular visitor, for people enjoy listening to the merry songs. As he comes into a village, or near a house where he expects a dole, he will break into a song. The refrain is sung at the commencement of the song, and also at the end of each verse. On receiving his dole, the Dasari will pronounce a blessing upon the giver in some such words as the following:

"Wealth, gold, and other riches in abundance; abundance of children and grandchildren; long life, health, and prosperity be to thee. My blessing is Brahma's blessing; by the mercy of the all-bountiful may you have prosperity in abundance."

This piecemeal singing of Hari's myths in the third person, to punctuated shouts of ecstasy addressed to Hari like 'Harilo ranga Hari!' and 'Srimad Rama Ramana Govindo Hari!' encouraged the audience to repeat the chant as an echo or chorus. Much later it was given concert form at individual households on invitation for a payment. Such seated concerts became known as *Katha Kalakshepam throughout south India. In Andhra Pradesh, Harikatha is closely related to the Abhang tradition of Maharashtra owing¹⁶

Hari Dasu would, from his erect standing posture, deftly switch his posture and sit on his haunches, skillfully balancing the copper vessel on his head and receive the gift .thanking God for this munificence, 'Krishnaarpanam, Srimad Ramaaramana Govindo-hari'. (Lord, treat this as something that this household has offered to you, not just me.). The Dasari, on account of their skills were advising people of good or bad times for any particular event, such as a marriage or a journey, to take place. The large number of Dasarists, in later years, are demarcated either by the caste or the instrument associated with the kirtan: Golla Dasari, Mala Dasari, Baliye Dasari, etc. are examples of the first variety and Thambura Dasari, Ganta Dasari, Jeganta Dasari, Chapa Dasari, Kommu Dasari etc. are of the latter variety.

Some practices

When proceeding on a pilgrimage to the temple of Subramanya Swami at Palni, some devotees pierce their cheeks with a long silver skewer, which traverses the mouth cavity; pierce the tongue with a silver arrow, which is protruded vertically through the protruded organ; and place a silver shield (mouth-lock) in front of the mouth. Some Dasarists have permanent holes in their cheeks, into which they insert skewers when they go about the country in pursuit of their profession.

The Dasarists in the Vizagapatam district, the members calling themselves Sankhu (or conch-blowing) Dasarists, the menari- kam custom, according to which a man should marry his maternal uncle's daughter, is followed. The remarriage of widows is permitted, but divorce is forbidden. The dead are cremated, and the Chinna (small) and Pedda Rozu (big day) death ceremonies are observed.

The Vizagapatam Dasarists are the most popular among ballad-singers, and sing songs about heroes and heroines, of which the following are the most appreciated:

1. Bobbilipata, which describes the siege and conquest of Bobbili by Bussy in 1757.
2. Ammi Nayudupata, which describes the tyrannical behaviour of one Ammi Nayudu, a village headman in the Palkonda taluk, who was eventually murdered, to the great relief of the subjects.
3. Lakshmammapata, which relates the life and death of Lakshamma, a Velama woman, who went against the menarikam custom of the caste, and was put to death by her husband.
4. Yerakammerantala-pata, which recounts the story of one Yerakamma, who committed sati. Yerakamma is the local goddess at Srungavarapukota in the Vizagapatam district. The ballads narrates her say that she was the child of Dasari parents, and that her birth was foretold by a Yerukala woman (whence her name), who prophesied that she would have the gift of second sight. She eventually married, and one day she begged her husband not to go to his field, as she was sure he would be killed by a tiger if he did. Her husband went notwithstanding, and was slain as she had

foreseen. She committed sati on the spot where her shrine still stands, and at this there is a festival at Sivaratri.

Decline-The vertical expansion of the city has made collection of alms difficult for Dasari. Their tribe is dwindling with the falling patronage, however, due rapid urbanization. However, the new generation is reluctant to practice this tradition hence this culture is gradually disappearing. "As these groups can avail reservations, the younger generation is giving preference to education and is opting for jobs.

Current status: In the past fifty years, they have formed local, regional and national associations for the education and upliftment of their community. They have the right to recite Prabandhams along with Brahmins in the "Iyal Goshti". (Hymn-singing group) This was true in Srirangam upto 1942.

Conclusion-The Sattadas are not only a sizeable, distinctive contemporary community in modern South India-a non-brahmin Srivaisnavas, but a community with a lengthy history, a guru-lineage and a substantial literature-a heritage which, though now subdued, still plays a significant part in and had a major impact on the historical development of Srivaisnavism.

BETEL CHEWING IN KERALA SOCIETY: EVIDENCES FROM LITERATURE

P. Sudheerkumar

We find people with different attitudes and aptitudes all over the world. Their mode of enjoyment and pleasure- seeking are divergent from smoking to eating opium. Cutting across geographical limits they take these vices part of their life. Betel chewing is one of such contentment people run after.

Human beings are really obsessed with some chewing habit. This can be seen from the ancient period itself. The ancient Greeks chewed mastiche, a chewing gum made from the resin of the mastic tree. The ancient Mayas chewed chicle, which is the sap from the sapodilla tree. North American Indians chewed the sap from

spruce trees and passed the habit on to the settlers. Early American settlers made a chewing gum from spruce sap and bees wax. Gum-chewing is being the most popular chewing habit. In Africa, people continue to chew khat, also known as mima, a stimulant leaf from a shrub-like tree. People chew khats imply for becoming fashionable or for seeking a way to cope with social breakdown. The Chinese used to crunch popped melon seeds, and other peoples have got their own favorites: pistachio, sunflower seeds, pumpkin seeds, etc.¹

One of the such ancient habits is betel chewing, which was a custom or habit people closely followed. They have been following this habit over 2000 years²

This habit covers a wide geographical range. Beginning with the eastern boundary of Afghanistan on the west and the Himalaya Mountains on the north, it rules all to the east and the south including the islands of the Pacific as far as Torres Straits (north of Australia) and as far east as Greenwich, including the scattered groups of the Northern Pacific. Within these limits, with but a few local exceptions, the natives of all races, colors and conditions, male and female, kings, princes, priests and paupers, daily and hourly, at work or at grave all are slaves to this habit.³

The glossy heart shaped leaf has aesthetic and ritual significance in various social and religious occasions in South and South east Asia. It is also auspicious to make offering if betel leaf and areca nut in the eve of many occasions such as pious ceremonies, festivals, worshipping, wedding ceremonies, etc.⁴

Most interestingly, the first records about betel chewing is traced from Malabar. There was a battle in 161 B.C. between the people of the Malabar region and those of another race, the Dutta-gamini, the Malabar warriors discovered on the lips of their enemies the blood red color given by betel chew-like thing and there spread the rumor that their foes were wounded. In the tenth century, Masudi, the Arabian writer, described betel chewing as a national habit in India. Later dates, numerous historians and travelers have described this habit in detail and have left us pictures which in all essentials represent the conditions now prevailing among

the masses of the inhabitants of the betel chewing world.⁵

For the preparation of the betel roll as chewed, three very different articles are necessary: the nut of the betel palm, Areca Catechu the leaf of the betel pepper, powdered lime, usually obtained from seashells. The pungent pepper leaf is daubed over with a little lime. In addition to these, most people use tobacco to add some intoxication to the chewing.

By the sixteenth and seventeenth centuries, when we have much fuller descriptions, the chewing of betel was established virtually everywhere in tropical Asia as the indispensable politeness to be offered a guest in court or village, as a central ritual symbol, as digestive, dentifrice, and mouth freshener, and as the relaxant that made life more bearable-especially when traveling, warring, or otherwise short of food. The earliest European visitors to Asia were much struck by this phenomenon. Antonio Pigafetta, whose voyage with the Magellan expedition took him to the Central Philippines, Brunei, the Moluccas, and the lesser Sundas in 1521 elaborated the experience⁶

First home of betel was difficult to determine, since it has for many centuries been cultivated in so many parts of the tropical world. It is still found growing wild in the Philippine Islands, and is probably to be regarded as a native of tropical Asia, India or eastward, or of some of the adjacent islands.

Rather being part of the chewing for pleasure, betel leaves had certain ritual presence in many parts of the world. In Far East, there are interesting events connected with betel leaves. At the marriage ceremony the betel ingredients are present as part of the bride-price. A Javanese bride and groom throw betel leaves at each other. At Malay and Sumatran weddings in the nineteenth century an ornate "betel tree" comprised of betel leaves was carried in procession. Acehnese men divorced their women, on the other hand, by giving them three pieces of areca.⁷ Also there were other uses as well. In India, on the Brahmaputra River, the natives measure distance by the number of betel rolls consumed in marching it. It is, of course, a time unit rather than one of distance. A similar custom is found among the coca chewers of Peru, in Latin America.

Betel-chewing in Kerala society

It has been proposed that betel vine entered in India during Gupta period and slowly merged to India's culture.⁸ Major betel growing areas in India are UP, Bihar, MP, Karnataka and Kerala⁹

In the Kollurmadm copper plate of Sri.Vallabhan Kotha of AD.1188, the *Karalars* were required to give the temple a lot of things during different auspicious days of the year. They include, paddy, oil, betel and areca nut. The quantity of each item has been specified for each occasion.¹⁰ Betel Chewing was wide spread in South India and South China when the first Europeans arrived in 15th century AD. In Sanskrit betel is better known as *Tambuli*, *Thambula valli*, *Thambulam*; In Hindi and Bengali, it is Pan; In Tamil, it is *vettilai*; in Telugu, it is *thamlapaka*.¹¹ Its name is *Naagbael* in Marathi, *Naagarbael* in Gujrati, *veel eyada yele* in Kannada¹²

Betel chewing became popular in the 16th century A.D. in India. Betel leaves were taken with arecanur, lime and koththa, cloves and cardamom, camphor and Kastleri.¹³ Betel chewing was once seen as part of status in society. Men enjoyed the chewing experience of betel, areca, lime and tobacco. Women also used it as a means to colour their lips red.¹⁴

While describing about the agricultural produces the Dutch traveler describes about the areca palm. He further says that that all over East India people used to chew betel leaves with areca. Betel leaves are like leaves of pepper. They also add lime with the two.¹⁵

Francis Buchanan who travelled extensively through Malabar writes about the cultivation of betel leaves thus:

At Velathur area people cultivate areca palm and jack tree in large scale. Surplus cultivation of betel is also there. In small and fragmented land they cultivate in limited numbers. They give no rent to the *janmis*.¹⁶

In Malabar, there was no large scale cultivation of betel. But, the betel vine is cultivated in small scale on the trees like mango trees and other trees. In Malabar Betel is not taxed. In the coastal lands, betel or the areca cultivation is very less.¹⁷ On the other hand, in Malabar Gazetteer C. A. Innes has aptly recorded that betel being the most important byproduct of

a Malabar garden. He also highlights the Nannambra betel the famous one in those days.¹⁸

In those days betel was an inevitable thing in marriage ceremonies. Wedding ceremonies were luxurious. All invitees are given with betel kept in a brass platter. Even the strangers were provided with this.¹⁹

Other celebrations also had the presence of betel. Women celebrated Thiruvathira festival (the festival of women in Kerala) with great enthusiasm during which they made their lips red with betel juice.²⁰ They chewed 108 betel leaves during the occasion with the god Siva in mind. This was an important part of the festival.²¹

There was a belief in Kerala that Betel Chewing was a habit that provided people with happiness one had to cultivate it²²

In the case of the elite, there were special subordinates to prepare betel. Puduval was the person who prepared betel to the king.²³ Similar to the Chozhamandala betel, there were Kozhikodan vettilla, Ambazhakadan vettilla, Kuzhinattiri vettilla, Kollam vettilla, Njali vettilla, Vella vettilla of Valluvanad, Kongini vettilla the people enjoyed all these for chewing.²⁴

The condition of the lower caste people was pathetic in Kerala even in the 19th century. For example, anybody could rear cow at home. But what is conspicuous was that there was no right to milk the cow for the *ezhavas* and others. If the cow gave birth, it had to be handed over to one of the upper caste men for the maximum cost of a good meal. If this was violated, the owner would be tied to a tree and beaten. The relatives of the culprit had to beg pardon by submitting betel and areca nut for saving the man. Even in the interpersonal relationship, there was strong presence of the betel leaves.²⁵

When the king goes out of the palace, many servants follow him. Litter carriers, jugglers fan the king, pitcher of water holders. Some carry vases into which the king spits betel juice.²⁶ when the king has ended his meal, the king returns to his dais, and is almost always chewing betel. On the other side stood another person, who held a gold cup with a wide rim, into which the king spat, and at the side of his chair was his

chief Brahmin, who gave him from time to time a green leaf closely folded with other things inside it, which the king ate and spat into the cup. That leaf is of the size of an orange leaf, and the king was always eating it, and after much mastication he spits it into the cup, and takes a fresh one, because he tastes the juice of the leaf and the mixture that goes it with of quick lime and other things, which they call areca, cut up small, it is the size of a chest nut, it makes the mouth and teeth very red because they use it all the day wherever they may be going, and it makes the breath very pleasant.²⁷

The lower caste people had particular names for the ordinary things. They were denied the names for different things used by the uppercaste people. The coconut for them was *Thenga chakiri*; *pazhuthila* for betel ; *onakkinte kola* for tobacco; *ithikkodi* for lime²⁸.

The medieval Kerala has many descriptions about the extensive use of betel in the day to day life of the people. In the *Manipravala Kavya*, Unnichiruthevi Charitam of 14th century AD, there is a wonderful narration about the hero's house Thottuvaypalli.

The betel vines grow lushly around the areca palm which stands as if to touch the high skies.²⁹

Unniachi Charitam, the *manipravala kavya* of the 14th century has ample reference about betel connected with the life of the elite. The land is laden with betel vines properly tied with the support trees and the leaves reflect light like a wonderful mirror and also they provide a great pleasure in chewing. Such is the garden around the hero's wonderful mansion³⁰

In Ananthapuravarnana, the market at the auspicious corner in front of the Sri Padmanabha Swami Temple had the following commodities for sale:

Nellintarichi thavantu

Chollichirilarazhakkayum

Thenga tha vettilakkentum

Mangathavenankayum.³¹

Here *vettila* (betel) or betel is an important thing for sale

In *Kandarmenon pattu*-the *Chaverpattu*-the hero alerts: you have to chop me to death in the straightway or else, you will not be rewarded. Thus saying, he puts in his mouth a roll of betel leaf and chewed it.³² Even when the *chaver* is all set to fight he finds the pleasure of betel.

In northern ballads better known as *vadakkan pattukal*, there are many instances of betel chewing. In the *Puthooram Kannappa chekavar pattu*, the warrior Kannappa Chekavar is greeted like this:

Where is the betel box? Give me mouth-full of betel

Hearing this, the lady nearby takes the betel box,

Prepares the *Kilivalan* betel leaf to chew

Also, she takes the milk-boiled areca nut

And adds the lime made from the finely-processed conch

-----Kannan completes his chewing

She moves the spittoon to his side

Both enjoy betel chewing.³³

In *Aromal Chekavar Pattu*, an advice is given to the daughter that an ascetic should not be given with betel, for it is used by the material people. Instead, he is treated with ganja, the powerful intoxicating agent.

One thing you remember, my dear daughter

Once the attire of *Sanyasi* is accepted

Betel shall not be chewed by him

Unniamma, hearing this, promptly prepared *ganja* to the guest.³⁴

The chieftain is made acquaintance in his bed in the morning with:

The *pooja* with ringing of bell has begun

The ruler has risen from his seat

Cleans up his face and mouth

Then chews up the betel and says good bye to all³⁵

In the song of *Attumanamel Unniarcha* betel chewing is described in another situation.

Unniarcha, the heroin, climbs up on the base of the banyan tree and sits over there

She opens her bag containing wonderful bangles,

And finishes her betel- chewing; thereafter she waits for her brother to come.³⁶

In the same song,

The trader namely Nagappan wearing the sandal with gold

Takes the precious silk and betel leaves in bundles along with tobacco leaves

He puts them in the silk cloth and then he closes his gold shop.³⁷

In another song namely *Othenanum Karimalakkanniyum*

My relative namely dear Othenan

I prepared betel for him once

I won't prepare betel for anyone else³⁸

Betel of certain places was well known. In the song, *Othenanum Mundayodan Kumbayum*

Mundayodan Kumba shall prepare betel from Tanur for me

Hence she shall sleep with me.³⁹

In the mythical story of *Parayi petta Panthirukulam*, Vararuchi, the learnt Brahmin visits the house of a Brahmin and put certain demands for him to stay there overnight. One of the demands was that he required to eat three persons after his dinner. This was actually a riddle through which he wanted to test the brilliance of the family which offered him a food and stay. The three persons he indicated were betel, areca and lime.⁴⁰

In another story *Parambathu kodan Bharaniyile Uppumanga*, Kottarathil sankunni describes the story of a trader who gives ten jars to a Brahmin to keep them until his returns. The Brahmin opened one of the jars and found gold in it. He took some of the gold pieces and becomes rich. When the trader comes back, the Brahmin tells the story to him and gives a share of his profit to the trader. The trader does not accept the offer. Finally on compulsion, the trader

gives the gold back free using a flower, water and areca as was the custom⁴¹

In the 19th century novel, Meenakshi, Kandappan, the character of the novel placed a pot on the oven for preparing tea and also kept the brass pot on the verandah for washing the feet of Kunhikrishna menon. Then he went to the upstairs of the house and prepared betel for him from the betel box.⁴²

In the celebrated novel, Indulekha by Chandu Menon belonging to the 19th century, there is a conversation between Indulekha's maid servant, Ammu with Suri Nambudirippad the proposed groom of Indulekha selected by the Karanavar, Panchumenon, which runs like this:

Suri Namabudiri: does Indulekha chew betel leaves? Ammu: Rarely⁴³

Suri Nambudiripad is a rich Zamindar belonging to an aristocratic Brahmin family. So, Panchumenon is much interested to marry Indulekha off to that family. He carries a betel box made of Silver everywhere and he shows the same to all he meets to show his richness. He is also proud of that.

When Surinambudiri was preparing for his bath, letter form Kesavan Nmbudiri arrived. Soon betel box holder Govindan was sent to call Cherusseri Nambudiri.⁴⁴

Another character of the novel, Kesavan Nambudiri has this conversation with his wife late night:

Kesavan Namudiri: Lakshmi, are you asleep? Why are you so sleepy, today?

Lakshmi Amma:Have you chewed betel? I have prepared it in a platter on the table Kesavan Namudiri: Oh, then I can have one.⁴⁵

It was a routine for the people to have a betel chewed before sleep. In *Dharmaraja*, the historical novel written by C.V.Raman Pillai, there is a description about the betel box:

When Chanthrakkaran starts from the house of Umminipillai at Thiruvananthapuram, one of the major items he carries is a betel box.⁴⁶

Conclusion

Kerala society from ancient times itself has been addicted to the habit of betel chewing. The exact date of beginning of this habit is unknown.

From cosmetic use to the ritualistic exercises people used betel either alone or with other things like areca, lime or tobacco. The medieval *kavyas* highlight the extensive use of betel by the elite class. During the auspicious ceremonies people belonging to the Hindu community provide importance to betel. The bride and groom during the wedding time give *dakshina* to the elder members of the family in betel leaf as a sign of reverence. Even today people follow this. Whenever there is an agreement reached between the families of the bride and groom, an amount of money is given to the bride's family at the time of fixing of the marriage. This is called *Murukkan Panam* or *vettilla panam* or money for betel. Until recently, in Kerala, people used to keep in their houses betel boxes to store betel and other articles for chewing safe.

The guest was entertained at home with some drink and then they were given with the betel. This was the most entertaining gesture from the host. Now it is gone.

Whenever a boy or girl liked each other, there appeared the betel to cement that

relationship. Many instances are seen in the northern ballads.

Vettilla is also used in many medicinal compositions in Ayurveda. In addition to that, many rituals must have the presence of betel.

Thamboolaprasnam or betel leaf prediction is practiced to understand the unknown, says the supporters of this as people believe that the betel leaf has the presence of many deities in it. There were many places famous for betel. Tanur is one such place described in the *Vadakkan Pattukal* and Nannambra has been mentioned by C. A. Innes for its fame. Further, there are places known for the sale of betel or pan. At Tirur in Malappuram district, there is pan bazaar indicating the brisk trade of betel. Until recently, people used to export betel in large scale to North India and other betel using neighbouring countries like Pakistan from here. But the glory of trade of betel has faded now with the strict control on it by the govt. policies and the increased awareness among the people.

ROLE OF THE MISSIONARIES IN THE EDUCATION OF SOUTH INDIA

S.S. Sundaram & S. Sheeba

As India came more in contact with European countries, her way of life including her system of education was bound to be influenced. Europeans came to settle in the country in centers (Known as factories), from which their trade was organised. The need then arose for schools, as the children of these settlers had to be educated, most of these children were owing to inter marriage, Anglo Indians. later on it was felt necessary to establish schools for the children of their Indian employees.

The real pioneers of western Education in South India were Christian missionaries. The Portuguese came to India not merely for trade but also as missionaries to spread Christianity among the people, with whom they traded. They started schools in Goa and Calicut, with the primary intention of educating their new converts. In these schools, reading and writing in Portuguese, as well as in the local language and the principles of catholic religion were taught.²

In the 16th century the Jesuits, led by St. Francis Xavier, the Superior of the Jesuit Mission in India, were very active setting up schools in the whole of India including South India, for the propagation of their faith. In vijayanagar empire certain type of Schools were set up by them, where Vernacular was taught by the Christian missionaries, and the new converts to their faith.³

In 1659 the court of Directors explicitly stated it was their earnest desire by all possible means to spread Christianity among the people of India and allowed the missionaries to embark on their ships.⁴ The first efforts of the company

to diffuse education were prompted by religious motive, viz. the evangelization of Indians, and the removal of apprehended among the inhabitants of the places where they had settled.⁵

In 1706 the protestant Danes arrived at Tranquebar on the South east coast, led by German missionaries Ziegenbalg and Plutschau.⁶ When the European landed in India, especially lay in understanding the language of the people. Since the chief aim of the missionaries was to spread the Gospel, the local tongue had to be learnt?.

The object of the missionaries being conversion the missions had to conduct schools for the Converted population. The early converts to Christianity came from the lowest rungs of Hindu Society. In order to enable them to read the Bible, they were to be first taught to read and write, So the missionaries established schools for the purpose. For the same reason they were compelled to introduce the printing press, to print, to print the Bible in Indian Languages. In short the missionaries realized that the schools were both the cause and effect of Proselytisation?

I

South India owe much of its educational progress to the effects of the missionary Societies. The honour of being the first protestant missionaries to work in the territories of the East India Company goes to the Danish Mission. Plutschau and Ziegenbalg started their activities in 1706. A Printing Press in Tamil was established in 1713. An institution for training

teachers was established in Tranquebar in 1716, and in 1717 two charity schools were opened in Madras one for the Portuguese and the other for the Tamil children.⁹ These Missionaries started 17 schools for "Heathen and Mohammedan" children, and four missionary schools for Christians. But, as in the former Schools they were unable to teach their religion due to opposition from the parents and non-christian teachers, they lost interest in those schools and concentrated on the missionary schools and on direct missionary work.¹⁰

The Printing press was another boon given by the Danish missionaries to the Tamils. The First printing press however was set up at Ambalacat near Cochin by a Jesuit missionary in 1577. Before the advent of the printing press in India all writing was done chiefly on 'Olai' – the leaves of a palm tree- with the aid of a sharp pointed iron stylus. This was a difficult and an expensive process. The missionaries began to print books. They produced a Tamil dictionary and a Tamil and Telugu Bilde. Besides these, the missionaries, indirectly effected the natives. They summoned the aid of the native teachers to teach in the schools founded by them, in which they also taught. Under their able guidance the native teachers learnt the Systematic methods of teaching, and western methods of education were slowly imbibed.¹¹

The first protestant English mission came to Madras in 1727 and soon adopted the work of the Danes Schultz and Schwartz were encouraged by the Society for the promotion of Christian knowledge to set up schools. They started schools at Madras, Tanjore, Cuddalore, Palamcottah and Trichinopoly.¹²

Schwartz is looked upon as the pioneer or Education in the province of Madras. With the assistance of John Sullivan the Resident of Tanjore he started three schools at Tanjore, Ramnad and Shivaganga in 1785 with the object of teaching English to Indian children. These were the earliest schools for teaching the English language to Indians. The Court of Directors were enthusiastic about these schools and Sanctioned a grants-in-aid of 250 pagodas per annum to each of them.¹³ The first books to have been by Jesuits in 1577 and 1598 at Ambalakata. The first protestant missionaries to print books were the Danes at Tranquebar. In 1761 a translation of the Bible and of text books

into Tamil and Telugu were made, by a second English mission at Vepery near madras.¹⁴

The good work done by the Danish missionaries was much appreciated by S.P.C.K. of London which came forward to give substantial assistance. So that the Danish missionaries could enlarge their sphere of activities by setting up more schools in other places.¹⁵ In 1790 the society for the Promotion of Christian knowledge opened a School for natives which after passing through different changes, flourished in 1882 as at peters college at Tanjore.¹⁶

II

In the beginning the East India company seems to have been sympathetic to the missionary enterprise. They were primarily a trading concern not much interested in the education of the people. As N.N Law observes, "In the 17th Century we find the Directors taking the initiative in educational work, but the arrival of missionaries in the beginning of the 18th century we find a change gradually setting in. They shifted their educational duties to the shoulders of the new comers.¹⁷ But the attitude of the company began changing as soon as they began to grow into a political power. As the company's empire began to grow, it was determined to maintain religious neutrality.¹⁸

In 1804 the London Missionary Society opened Schools in South India. The church Missionary Society and the Wesleyan mission had settlements at Tranque bar and Colombo. Charles Grant a missionary himself and Robert wilberforce had proposed to introduce a clause in the renewed charter of 1793, laying the responsibility of educating the Indian on the company but had failed. The company's Directors did not accept the educational responsibility until the charter was renewed in 1813. Then they were forced to accept the responsibility of education and to admit the missionaries to its dominions.¹⁹

The charter Act of 1813 opened India to the Missionary societies with the passage of that Act the missionaries began to land in India in large numbers and to set up schools, thereby laying the foundation of modern Educational System. Education was never the primary aim of the missionaries, they aimed at conversion and were forced to take up educational work in order

to meet the needs of the converted population, more so to train Indian assistants for their proselytizing activities. They worked among the lowest rungs of society who could not understand any other language other than their own, so they were obliged to study the native language, prepare dictionaries, translate the bible into native languages. Most of the earlier mission schools gave instruction through the native languages.²⁰

Two English schools were opened under the able superintendence of the chaplain at palam cottah, James Hough. One school at Palamcottah and other at Tirunelveli opened in the year 1818. The school was popular among the natives, but the Governor refused the pecuniary aid of 25 pagodas, requested by the chaplain at Palamcottah college Board recommended Hough's school.²¹ The Director thought Hough's school worthy of the aid" with the strong evidence before us of the utility of these schools, of their acceptability to the natives and of their able and Judicious Superintendences by the chaplain at Palamcottah, we cannot but regret that you were not induced to afford them your Countenance and support the desire to be informed of the grounds on which you came to this determination."²²

In the period prior to 1833, the missionaries mainly concentrated on establishing elementary schools, teaching through the medium of modern Indian languages. Between 1833 to 1853 the missionaries shifted emphasis to secondary schools and colleges, teaching through the medium of English.²³

The missionaries of the American Board opened, a number of primary-schools in the Madura district in 1834 and maintained for many years subsequent to 1835, a school at Madura town itself, in which English was taught.²⁴ Missionary operations were not conformed to elementary education alone. In 1837 Rev John Anderson, the earliest missionary of the church of scot-land, started in Madras what was known as the General Assembly's school. The school proud to be a great success. Encourage by its success, Anderson opened branch schools at Kanchipuram in 1839 and at Nellore and Chinglepet in 1840 at Triplicane in 1841. John

Anderson can be regarded as the pioneer of higher education.²⁵

Missionary Societies played a large role in the elementary instruction. The society for the Propagation of the Gospel in foreign parts, supported nearly 186 schools in 1854. Most of these schools were in the Districts of Tirunelvely, Madura, Trichirapoly and Tanjore. In these schools there were over 5000 scholars including 1400 girls. The society spent nearly Rs.40,000/- for its educational activities in 1852 and Rs.30,000 in 1853.²⁶ The SPG had a Vernacular girls school at Tanjore. The society also trained teachers at Sawyepuram and Vedipuram.²⁷

The activities of the church Missionary society was very extensive, especially in the Tirunelvely district. The church Missionary society had two schools at Masulipatam, one for the boys and one for the girls. They also had one boys school at Ellore, and English schools at Palamcottah and at Streevellipootoor. They maintained 317 elementary Vernacular schools in which 7802 pupils were educated. They had also a Vernacular training school at Palamcottah set up in 1856.²⁸

The London Missionary Society had set upon English School at Chicacole, another at chatterpore in the same district was supported mainly by the rent of a house given for the purpose by Mr. Onslaw, the Collector. The same mission had an English School as well, besides a girls school in Vizagapatnam. This Society was very active in the districts of Cuddaph, Kurnool and Bellary where it had established, Few elementary English schools as well as a number of Vernacular schools.²⁹ The American missionary society was at work at Guntur and at Goorzul, in the Palnad.³⁰

The Free church mission was active in Nellore district. English schools were started by the Free church Mission in the Chinglepet district. The Chinglepet and Canjeevaram schools were at work around 1854-55. In the Free church Mission schools in Black Town the number of students amounted to 627 of whom 242 were girls.³¹ The Wesleyan Mission, at work in the Tanjore District had elementary English schools at Mannargudy and Nagapatnam. The German Missionaries were at work in Malabar and at Tellicherry they had an Anglo Vernacular

School. The Roman Catholic Mission had an Elementary English School for the children of the Roman Catholic community in Canara. In Madras itself four Missions were engaged in educational work, the Wesleyan Mission, the London Mission, the Free Church and the Church of Scotland. In the Church of Scotland Mission Schools 533 pupils were under instruction of whom 358 were girls.³²

Thus by the year 1854-55 the whole province was covered by a net-work of Mission schools. By 1854 about 30,000 boys were being educated in the schools conducted by Missionary societies, and at least 3000 were obtaining the elements of liberal education in English.³³ "The educational efforts of the Christian Missionaries have been more successful among the Tamil population than in any other part of India."³⁴

III

Female Education in Madras Presidency gained momentum chiefly owing to missionary efforts. It made progress under missionary management, independent of the state before the Despatch of 1854. Boarding schools were maintained from an early period by the church of England societies in Tirunelveli but they were almost exclusively attended by daughters of converts to Christianity. The first direct effort at educating Hindu girls of higher caste was made at Madras in 1841 by the missionaries of the Scottish Church.³⁵

By the time education department started functioning, under the dispatch of 1854, the missionary societies were already at work in 16 secondary schools in the aided list and 27 schools remained unconnected with the education department. In the primary missionary schools which received no aid there were nearly 33000 children.³⁶

The woods dispatch of 1854 propose the system of grants-in-aid subject to government supervision, and the policy of entrusting gradually the management of even government institutions, especially those of higher order "may be safely closed or transferred to the management of local bodies under the control of aided by the state." The missionaries, who were the most important non-government agency of education in the country, expected that these measures would enable them to control Indian education entirely. But the government of India continued their policy of religious neutrality.³⁷

The decision of the Indian Education Commission 1882, made the missionaries, take stock of their whole position and outline a new educational policy to guide their educational enterprise in future. This was done in the next 20 years and by 1902 the missionaries adopted a policy of restricting their educational activities to the maintenance of a few educational institutions in as high a state of efficiency as possible and abandoned the dreams of commanding the whole educational field in India.

The contributions of the missionaries to education in Madras Presidency was substantial. The missionaries introduced a new system of education in this presidency. Their system was different from those in existence in the country in several respects, they imparted religious instructions according to the tenets of Christianity. They introduced a new type of organization hither to unknown in the Presidency and in this country. "It is true to say that the real foundation of Modern Indian Education were laid not by the British administrative authorities, but by the missionaries and the officials of the East India Company in their Private capacities".³⁸

COSTAL COSMOPOLITANISM ON MALABAR AND THE ROLE OF KEYIS

K. Anilkumar

The name of the town became renowned abroad due to the presence of a merchant family. The Keyi Mappila Muslim merchants of Thalassery on the Malabar coast were one of the few early modern Indian merchant groups who succeeded in carving out a powerful political and social configuration of their own on the western coast of the Indian Ocean during the British period. Today, several branches of Keyi families remain a cultural unit in the Islamic community of Kerala. This article attempts to locate the group in the larger theoretical context of Indian Ocean

cosmopolitanism and argues that the Keyis developed a distinct and significant type of coastal cosmopolitanism in an Indian Ocean setting. Chovakkaran Moosa, an influential merchant from a Keyi family during the colonial period, serves as a representative figure. Though their trade and financial relationships with British and local elites, and the characteristic architecture of their warehouses, residences and mosques, the Keyis successfully integrated the practices of global cosmopolitanism space into local vernacular secluded commercial space.

SOCIAL TRANSFORMATION OF MAPPILA WOMEN OF MALABAR

I. Arshad

Muslims are most important minority community in India. Indian Muslims are one of the most backward community and most of them are still living in a miserable condition. Socially, economically, politically and educationally they are very backward than other communities.

Indian Muslims are not a homogeneous community. Muslims of different areas have different culture and practices. The situation of Muslim women is worse. They are forced to live under the age old customs imposed by orthodox section of society. They had a much inferior

socio-economic and educational status. In Kerala the situations of Muslims are far better while comparing the other states of the country. Kerala Muslims have high literacy rate, high per capita income and a good social status than other states. Muslim women of Kerala are enjoying a good living condition. Kerala Muslims have been

a role model of Indian Muslims in social life, economic field, political field and educational field. This paper looks how Mappila women of Malabar transformed from their backwardness and acquired relatively high position.

SPREAD OF CHRISTIANITY IN SOUTH INDIA IN REFERENCE TO SYRIA CHURCH

Ashwini Barla & Dr.B. Pramila

In this study we will see about the arrival of Christianity in India to the enterprise of Merchant and missionaries of the East Syrian or Persian Church. Such a position is held by all those who deny the apostolate of St.Thomas and St.Bartholomew in any part of India and attribute absolutely no value to the Acts of Judas Thomas or to the references on other works of early centuries to India. The earliest record about the

apostolate of St.Thomas is the apocryphal: Acts of Judas Thomas, written in Syriac in the Edessan circle about the turn of the third century A.D. there are a few records, both in the West and the East, which refer to the existence of Christians in India in the ancient and medieval times, but they are few and far between and lack details.

ENVIRONMENTAL ALERTNESS IN THE ADOPTED VILLAGES OF A MEGA DEPARTMENT OF ST. JOSEPH'S COLLEGE (AUTONOMOUS), TIRUCHIRAPPLI

M. Britto Stalin

In the present higher education scenario, the involvement of students in community development programme along with their regular studies is made compulsory for all the students irrespective of courses. Though all the educational institutions including professional institutions provides Extension Programmes as Part IV, along with their curriculum viz., NSS, NCC, Nature Club, JRC and Women's Club. Whereas St Joseph's College (Autonomous), Tiruchirappalli is unique in introducing an innovative Extension Programme through SHEPHERD in the year 1985-86. SHEPHERD

is the expanded ellipsis of 'Science and Humanities for People's Development'. This paper is attempted to analyze the environmental contributions among various contributions of the college through students – Researcher applied doctrinal and analysis method for writing this paper – this paper written mostly based on the primary sources which is available in the Extension department and college library – Researcher also used SPSS package for the analysis of Questionnaires which distributed to the beneficiaries of the villages and students.

RETTAIMALAI SRINIVASAN'S CONTRIBUTIONS TO ERADICATE OF UNTOUCHABILITY

L. Elakkiya & Rajaram

During the 19th Century was the age of social reform because of the Indian society faced many more problems such as women issues, caste issues, etc., In 20th century, the Indian leaders, social reformers and political groups started their

services for the social development. This article discussed caste issues particularly dalit society or untouchables. The untouchables affected by the upper caste peoples in the Indian society from immemorial time. Their civil rights deprived

by the upper caste peoples. During the 20th century, some of the leaders started reforms, movements for the uplift of the dalits and also to

eradicate of the untouchability. This paper analyzed the role of Rettamalai Srinivasan to eradicate of the untouchability.

SOCIO-CULTURAL AND ECONOMIC HISTORY OF *KODINHI*: AN APPRAISAL

N. Farhath

Kodinhi is famous for its own peculiarities and special features in socio-cultural concerns. It is natural delightful place between Tirurangadi, (the origin place of Malabar rebellion) and Tanur, (the important place of Kunchikadar in Kilafath movement). In the cultural aspects, it is a place of different communities residing here like Muslims, Hindus and Christians and they made it is a place of religious harmony. Kodinhi is also a place of different monuments like *Sathyapalli*, *Kakuzhi*. In the historical concern, it was the main center of Malabar Rebellion and

also many people's contributions on Malabar rebellion from here. In the economical perspective, Kodinhi is an agrarian society and also major income from the agricultural fields. The British services mainly for agricultural purpose improved and developed the agrarian society. Kodinhi's agrarian economy totally changed with the beginning of gulf migration. Besides, one of the main feature of Kodinhi is its twin birth; sometimes it may lead to multiple birth, it make world attention to Kodinhi.

"IN THE ANNALS OF MEDICAL AND HEALTH SERVICES HISTORY OF HYDERABAD PERTAINING TO ASAF JAH I RULE" - A CASE STUDY OF SIR RONALD ROSS

N.R. Girdhar. & C. Chandraiah

In the Annals of Medical & Health Services History of Hyderabad pertaining to the Asaf Jahi Rule, when Allopathy Medical Science made a subtle intrusion in the year 1846 A.D', several towering personalities both British and natives, trained in it by its application and by their endeavours have handed over the benefits of that science to the public and have also drawn the attention of the Medical World to Hyderabad city. One such Indian born British personality Sir Ronald Ross, who joined I.M.S and who was posted to Secunderabad Cantonment in Hyderabad city by his endeavours discovered the Malarial Cause, and stood out as one of the greatest benefactor to humanity. His discovery of the Malarial Cause on 20th & 21st August of 1897A.D, his practical demonstrations and lectures in Hyderabad Medical School and Afzal Gunj Hospital got him worldwide recognition and put Hyderabad city on the Medical Map of the World. His findings and prescribed preventive measures about Malaria is still valued and acted upon by the Medical fraternity around the world. His connection with Hyderabad city is a memorable one. This paper is an attempt to

trace the journey of Sir Ronald Ross and his quest to discover the malarial cause, its cure and the Hyderabad connection to it. Malaria is still one of the most important and deadly of all the tropical diseases. It was estimated by WHO in 2018 that approximately 228 million malarial cases were prevalent around the world. 20th August-1897A.D was a milestone in the tropical medical history and the medical & Health Services history of the city of Hyderabad. On the 20th day 1897 A.D. Dr. Ronald Ross, succeeded in detecting the development of the malarial germ in the digestive tract of the mosquito. In 1880 A.D. Dr. Laveran, had laid the foundation stone of malarial research, when he discovered the causative germ, while Golgi, was able to prove that this microbe, was a parasite of the erythrocytes, and investigated its development in the human body. Mason had postulated his theory of the Malarial mosquito and Ross completed the Malarial Mosquito research cycle by conforming Mason's theory². And thus he became a great benefactor to the mankind whose memory is unforgettable and always afresh to the present day.

JANMI-KUDIYAN RIGHTS AND SOCIAL CONFLICT IN COLONIAL MALABAR

K. Hathika

With the formal establishment of East India Company rule over Malabar in 1792, the region witnessed fundamental changes in the forms of state power. The British introduced land settlement throughout the province along with new judicial and revenue systems that led to the process of commercialization of agriculture and the transformation of the political economy as a whole. The land relations of Malabar prior to the advent of the British is considered as a distinctive one, which was inextricably linked with age-old customs and manners. It was popularly known as *Janmi-Kudiyam Sampradayam* or *Janmi-Kudiyam Maryada*. Under British rule, the Malabar land system has been consisted of three components – the *Janmi* the *Kanakkaran* and

verumpattakaran. This new land revenue system and method of ownership of land have resulted in distrust among the people particularly the Mappilas, who were considered as the major section of society as *Kudiyans* or tenants. The present paper investigates the complex relation of Malabar land holdings and the existence of disputes between landlords and tenants, particularly the Mappilas. Many times the land dispute over the construction of mosque and burial sites for Mappilas were created violent revolts. The paper also seeks closely to identify the genesis and spread of Mappila revolts throughout the nineteenth and twentieth century Malabar.

CHALLENGES AND RESPONSES IN THE EDUCATION SYSTEM UNDER NIZAMS OF HYDERABAD: 1854- 1948

Khursheed Ahmad Bhat

The research paper is an attempt to find out the new important aspects of education system under Nizams or Asaf Jahis of Hyderabad State. The Nizams education system was very much influenced by the indigenous endeavours and foreign developments. It worked slowly in the first century of its rule, displayed the symbols of reorganisation under Nasir-ud-Daula, gradually attained pace under Salar Jung I (1853-83), started to develop under Mahbub Ali Khan and reached to its climax under the last Nizam Mir Osman Ali Khan. The political disturbances in south India and the emerging developments in British India, like, passing of Woods Dispatch (1854), establishment of three presidency

universities, introduction of English as medium of instruction in British Indian universities and the democratic concept of education for all given by Jon Dewey acted as external challenges to the education system of Hyderabad. On the other hand, the indigenous administrative needs, endeavours to develop the literacy rate of the state and to form Hyderabad a repository of knowledge of the best of the Occident and the Orient acted as the responses to the above mentioned challenges. Therefore, the research paper will try to highlight the different aspects of the challenges and the responses in the education system under Nizams of Hyderabad.

BEYOND A STORYTELLER: REFLECTIONS ON THE WORKS OF LALITHAMBIKA ANTHARJANAM IN REVEALING THE STATUS OF NAMBOOTHIRI WOMEN IN KERALA

Margaret Mary

The objective of this paper is to explore and analyse the works written by Lalithambika Antharjanam in the light of a feministic attitude and how far it paved a way for social reformation in Namboothiri community of Kerala. Her stories are full of the reformative

reminiscences related to the social renaissance. Antharjanam's voice was the first voice of a woman heard in Malayalam stories that highlighted the Reformation of Namboothiri Women in Kerala. No women Malayalam writer prior to her seems to have engaged in depicting

the miserable conditions lived on either by the writer herself or the marginalisation and issues showered on to women by the society in general. She purposefully employed her skill in storytelling to attack the false prejudices and superstitions prevalent in the Namboothiri community of which she too was a member.

Lalithambika Antharjanam, who made use of her pen as an instrument against the social inequality that the Namboothiri women of her times lived with. She was a Malayalam writer who daringly opposed social injustice in her works to see the dawn of reformation in society slowly and gradually.

CONFRONTING MODERNITY: MAKTHI THANGAL'S REFORMS AND THE MAKING OF A NEW MUSLIM IDENTITY IN KERALA

K. Muhammed Asif

This paper is an attempt to analyse the reform initiatives of Sayyid Sanauulla Makthi Thangal, one of the pioneer reformers in the Muslim community of Kerala. His attempt was to navigate the Muslim community into modernity alongside resolving their economic and social backwardness and he emphasised the need of attaining secular education for the same along with spiritual one. The paper argues that through his reform initiatives in education and strong advocacy of studying in Malayalam language he ensured a space for the native Muslim community in Kerala in the new modern

Malayali self. At the same he brought new ideas for Madrassa education and systematized it along modern lines. His strategy was to expose the community to Malayalam and English education along with religious training in an attempt to make use of the opportunities opened by colonial modernity and a making of a 'loyal' Muslim community. The paper ends by arguing that this kind of a cultivated loyalty and a space within the modern Malayali self were central in promoting political consciousness as well as 'nationalist' feelings among the Muslims of Kerala.

MEMORIES AND NATIONALISM: REMEMBRANCES FROM HYDERABAD

C.J. Niranjana

The paper is an attempt to read memories of people living in Hyderabad with regard to its integration to the Indian Union in 1948. It intends to locate the memories of people on the erstwhile rule of Nizam, national movement in the state and the role of Indian army in Hyderabad's integration, from the perspective of seven individuals from different communities in the city of Hyderabad. The attempt is to unravel how people are differently national by looking at their heterogeneous national consciousness

organised around the events of 1948 leading to the integration. The risk in creating black and white categories of being a nationalist and an anti-national is exposed, as there are possibilities of the same memory being iconic of multiple feelings which might even be contrary. The memories are collected from people who lived the period of integration and those who inherited the memories of those days from their family. This is supplemented with the available secondary works.

IMPACT OF INTERVENTION OF OUTSIDERS ON MUTHUVAN (MALAMUTHAN) COMMUNITY OF CHATHALLUR HILLS IN NILAMBUR AREA

T. Sivadasan

In this paper I have paid an attempt to study the local history of Muthuvan community in Chathallur Hills and the impact of the outsiders on this community. They are Tribals and settled

in hills and forests. They are shy to mingle with the outsiders. The local People especially higher castes Hindus, Christians and Mappilas purchased their lands with cheap rate and

exploited them. They addicted to toddy, arrack and other drinks. They spoke their traditional language called *muthanchollu* in their huts. With the impact of outsiders they started to use Malayalam and the new generation is very fluent in Malayalam. Their slang is mixing of Tamil and Malayalam language, the aged people are like to use their slang in their huts. They have primitive feature of tribes. They lived in hilly areas. They led an isolated life. So they had a separate

customs, practices and language. They believed that status of their tribe is high while comparing the other tribals. Though they had high status in society during the earlier period most of them still led a life of misery and poverty. Some of them lived in small huts, shack and hovels. They led a secluded life and still under the supervision of Mooppan. The new generation is deviated from their traditional beliefs and customs.

INDIVIDUALISTIC ETHICS OF FORAGERS OF TAMIL NADU

P. Sumabala & D. Jeyachandraleka

The social organisation of South Indian hunter-gatherers such as the Kadar, Paliyan, Malaipantaram and Jenu Kurumbaas been characterised as the lowest level of social integration, permeated by an individual autonomy culture. Among the foragers of Tamil Nadu, the Paliyans in particular express what has been described as an individualistic ethic or culture. An extreme example of individual autonomy in the tribal mode is the Paliyans, food gatherers in the hills of western Tamil Nadu. Social cooperation among them is limited to nuclear families and even the families are not very cohesive. They live in small settlements, but there is little cooperation among the families of a settlement. Marriage is an arrangement among equal families; marriages commonly flounder, because of suspected infringements of personal independence. There are very few tribal groups as starkly individualistic and atomistic as are these Paliyans. This paper attempts to comprehend the individualistic characteristics of Paliyan tribes of Tamil Nadu.

SECTIONAL PRESIDENT'S ADDRESS - ECONOMIC HISTORY SECTION
AGRARIAN ECONOMY OF SOUTHEAST INDIA (1700-1900 AD.)

Dr. R. Abbas

I am extremely obliged to thank the President, General Secretary, the office bearers and the members of the Executive Committee of South Indian History Congress for nominating me to preside over the Economic History section of the 40th Annual session of the South Indian History Congress being held at our university. I feel indebted to the organization that my services are recognized and my association with this academic body since 1999 is truly honoured. I feel privileged to present to you some of my views on the concerned topic: "Agrarian economy of Southeast India (1700-1900AD)".

The region of 'south-east' India, on which this paper concentrates, can most easily be conceived as consisting of the territories governed by the Presidency of Madras from c.1801 – with the exclusion of the two western districts of Malabar and South Kanara. It stretches down the south-eastern littoral from Vizagapatnam in the North to Kanyakumari in the South and reaches as far inland as Bellary, Coimbatore and the environs of Bangalore. In economic terms, this conception is somewhat arbitrary and has mainly been chosen because the data from the colonial era is most facilely organised in this way. In fact, there were always important flows of goods and people linking this region to economies further to the west (in the territories of the princely states of Hyderabad, Mysore and Travancore) and also to the North, especially Bengal. Nonetheless, the region also has a certain degree of historical integrity. Its local cultures escaped Mughal overlordship until very late and preserved patterns of 'little kingship' and temple based religion, which were distinctive in relation to the rest of India. The region's definition also properly highlights the significance of the sea, which provided conduits for bulk as well as luxury commerce and which, in many ways, dominated economic aspirations. Further, and over many centuries, the region saw intensive forms of interaction between its Telugu speaking North and Tamil speaking South with the former constituting source territories for the

migration of peoples, goods and ideas towards the latter. In 1957, when proposals emerged to split the Telugu country (Andhra) from the Tamil in order to form linguistically based regional states, the extent of their effective engagement became clear in the bitter struggle for possession of Madras city whose population was almost equally divided between 'native' Tamil and Telugu speakers. Tamil Nadu won the city but Andhra Pradesh maintained control of some of its most vital water resources which has been the cause of scarcely less bitter controversy ever since.

From certain angles, the story of the south-eastern agrarian economy between 1700 and 1900 might be summarized as quantitative expansion but qualitative stagnation or even decline. While it is difficult to provide meaningful aggregate statistics because of local variations, differential soil-fertility and the significance in the region of double- and triple-cropping the same land, the balance of the secondary literature is in agreement that cultivation expanded at least in line with population growth until 1900 and may even have moved ahead of it in the first half of the century.¹ However, there were few signs of farming adopting any startlingly new technologies and some indications that per acre/per crop yields might have declined.² Cultivation was expanding beyond its traditional foci of concentration in the better watered river valleys. Also, it was plainly being less supported by inputs derived from adjacent forest wastes and from animals, both of which were under pressure from the expansion of human population. While the nature of the data prevents it from being anything more than an impression, perhaps the greatest difference between farming at the turn of the 18th and of the 20th centuries may have been the relative lack of animal power by the latter date. Cattle used to abound, when not pulling ploughs then in trains carrying the bulk commodities (cotton, salt, iron) whose trade articulated the various specialist sub-zones of the region. The cotton carrying trade from the

Deccan to the central Coromandel coast alone was estimated to use 40,000 bullocks a year in the 1790s; 80,000 bullocks plied the cloth and tobacco trade across the southern Ghats to Kerala in the 1770s; 128,000 bullock loads of salt passed through the Tiruchirappalli customs as late as 1812. Equally, farming methods in the 18th and early 19th centuries anticipated the large-scale availability of animal inputs. Techniques for planting sugarcane (seen in the Baramahal in the 1790s) involved penning a thousand sheep or goats on a field for three days before beginning ploughing; and for planting turmeric in the Andhra coastal districts at about the same time, they involved doing this no fewer than seven times. But, by 1900, although the total number of animals may have increased, their ratio to the human population had fallen sharply and may have begun doing so even before 1850.³ There was barely half a sheep or goat per head of the population left in the Baramahal; and even less in the Andhra coastal districts, which had been converted to intensive paddy cropping.

But if there was very little technological change, there was much infrastructural change with positive consequences for farming and also some significant inputs derived from western science and the new global economy of the 19th century. An important feature of the pre-modern south-eastern economy, which, as Ravi Ahuja has argued, has rarely been given the attention it deserves, was the chronic instability of water supply. This derived not only (as now) from the variability of the monsoon, but also from difficulties in controlling the flows of the massive riverine systems which drained eastwards. Ahuja has shown that famine conditions hit the south-east regularly through the 18th century: in 1718-19, 1728-36, 1747, 1769, 1781-83, 1789, 1792 and 1798.⁴ Moreover, particular local economies could experience extraordinary variability in annual out-turns: a village level survey in the coastal Andhra districts for the 1790s showing differences in crop out-turn of over 70% from the same fields across a five year period. Agrarian society coped with these difficulties in various ways, most notably by remaining highly mobile.

Between 1810 and 1814, for example, when his district was beset by recurrent droughts, the Collector of Ramnad estimated that half the population (of about 600,000 people) had de-camped to the neighbouring Kaveri delta as a migrant labour force transplanting and harvesting its paddy crops. But the effect was certainly to depress overall regional levels of production. Little changed in the early part of the 19th century where, for example, the northern districts experienced bad famines in 1829 and 1833. But, gradually, more stable agricultural conditions came to be created, especially in the river valleys, and water supplies were significantly increased. From the 1840s, this reflected investments in new irrigation works whose value not even parsimonious colonial development policies could deny. The most successful such scheme was constructed on the Krishna-Godavari complex, where large tracts of land were converted from broadcast to flush-irrigated paddy production. But there were important developments, too, in the Kaveri and Tambraparni valleys. Overall, flush-irrigated acreage (with its potential for double- and even triple-cropping and much higher productivity) rose from 2.6 to 4.5 million acres between the 1850s and 1890s. But, even before this, there were significant gains made simply from the ending of the interminable warfare, which marked the region throughout the 18th century. Political instability around the headwaters of the Kaveri system, for example, had made it extremely difficult for any authority to sustain the *anicut* at the point near Tiruchirappalli where the Kaveri proper and the Coleroon bifurcate. The result was a situation on the lower Kaveri where, for decades, it was impossible for the eastern and western taluks of the delta to be cultivated simultaneously: since, if sufficient water reached the former, the latter were inundated; and, if the latter were cultivable, the former were dried out. By the 1810s, the unification of political authority under the EEIC had an immediately beneficial effect in the restoration of the *anicut* even before Victorian science attempted to come to grips with southern hydrology.

Improved conditions of political security also may have played a role in what was to become, perhaps, the most important aspect of

agrarian transformation the expansion of deep-well cultivation in the interior districts. The capital behind this was almost entirely private (and Indian) and the expansion started as early as the 1820s although only became truly significant from the 1850s when changes in the revenue system ceased to penalise returns to investment.⁵ Deep-well irrigation secured cultivation in the 'dry' upland tracts against the vagaries of the monsoon, but it also did considerably more. It opened new possibilities for the utilization of the market and of 'science'. From the 1810s, the EEIC government initiated a vigorous programme of metalled road building (where virtually none had existed before). Originally undertaken more for purposes of military security than trade, this programme nonetheless opened wider opportunities for commerce (which south-eastern society, in any event, had never been known to decline before). The roads made it possible to transport larger quantities of bulk commodities and helped to focus new sources of demand on the interior's most prized possession, raw cotton. Well-irrigation and 'science' then further intervened to transform the nature of this crop. 'Watered' cottons grow far longer staples than 'un-watered' and colonial agronomic experimentation also began to make available new varieties, such as 'Cambodias' and 'Louisianas'. Across the later 19th century, the southern interior (especially Coimbatore, Madurai and Tinnevely districts) experienced a significant cotton boom, which even survived the problems of the inter-war years to generate the bases of a modern textile industry.⁶

In addition to cotton, a second crop sustaining agricultural expansion in the interior was groundnut, which was virtually unknown before 1850 but came to be exported in huge quantities by the time of the First World War.⁷ Its particular significance was that it grew on light, sandy soils which previously had a low productivity and also that it replenished the nitrogen content of the soil. Southern agriculture had always been open to innovation rapidly taking on board the new crops brought from the Americas (potato, tobacco, chilli, tomato) as if they were its own. It absorbed the novelties of

the colonial era with scarcely less enthusiasm and, in some regards, scarcely less profit.

The issue of what happened to 'per capita income levels' in India across the colonial period is one which has detained economic historians for many decades and, given the complexities involved, seems (at least to me) as inconclusive now as at the beginning of debate. I will address it more fully later. But if the value of agricultural production is made the principal criterion and also if what may have happened in earlier decades is left out of account there is a plausibility, at least in the south-east, to Alan Heston's estimate that per capita income levels rose by about 40% between 1860 and 1914. Economically, this was certainly the best era for the 'colonial' economy in spite of the 'Great Famines' which haunted the 1870s and 1890s.⁸

Those famines have drawn a keen historical interest of late and, as both human tragedies and examples of bureaucratic insensitivity, no doubt properly so. But so far as the south-east is concerned, it would be a mistake to make them characteristic of the colonial epoch. They took place on its western edges (in the Deccan districts) and had little impact elsewhere. Those districts had experienced the 'new forces' of the colonial market place and science in peculiarly unbalanced ways: where, for example, they were drawn into displacing grain with cotton cultivation without benefit of deep-well irrigation, which increased their vulnerability to the climate. Also, they were predominantly millet eating where regional trade in the bulky commodity was poorly developed.⁹ But the appalling human consequences of the Deccan famines ought not to blind us to the fact that, elsewhere in the south-east, famine was much less of a regular threat by the end of the 19th century than it had ever been before.

Indeed, it may very well have been the long-term reduction in the regular threat, which caught out the colonial bureaucracy when the late 19th century famines did strike. The degree of its un-preparedness for, and incomprehension at, what was happening is at least as striking as any feature of racial indifference to the loss of Indian life. But the Deccan famines also draw

attention to one feature of structural change, which was more general and which, if it had not been supported by new investments and in-puts, could have had even more disastrous consequences. As noted earlier, pre-colonial southern society's standard response to impending adversity was to move. But, by the later 19th century, it was becoming increasingly difficult to find places to move to at least within the south-east itself. The Deccan famine victims died more or less where they stood in ways which it is hard to imagine would have been the case a hundred years earlier. Peripatetic mobility declined and 'sedentarisation' became the key theme of the colonial epoch: promoted at first by the administrative mechanisms of revenue 'settlement', but determined later by pressure on the land:man ratio. Sedentarisation transformed the character of southern society in ways no doubt subtle but ultimately extremely profound. Admittedly, and as Dharma Kumar has seen, up to 1900 pressure from the land:man ratio did not become critical new acreage under the plough and new population still more or less grew in tandem.¹⁰ But some problems in finding new land for flush irrigation in the river valleys were already starting to be experienced and, from the 1920s, would serve to fix a firm lid on the progress of 'colonial' development. Indeed, this lid was coming to be fixed in other areas too. As noted earlier, most of colonial development investment was directed towards large flush-irrigation projects in the river valleys, which served (and, in many ways could only serve) paddy cultivation.

The expansion of the interior via well irrigation, although it drew on resources of security, science and the market associated with colonialism, was entirely dependent on Indian entrepreneurial capital. But, even by the closing decades of the 19th century, it was starting to become clear that the colonial state's concentration on paddy production may have been a serious economic mistake. The opening up of the Irrawady delta in Burma (albeit with South Indian capital and expertise) started to produce a neighbouring source of paddy, which was cheaper and of higher quality than especially the 'old' southern deltas could provide. 'Burma rice' soon began to take over traditional

export markets in Ceylon and even to invade markets in South India itself. From the 1910s, it was joined by the vast quantities of rice emerging from the agricultural transformations of Thailand and Vietnam, which came to dominate world markets from the 1920s. Colonial development in south-east India, while helping to stabilise food supplies, ultimately went up a blind alley so far as generating new sources of capital accumulation were concerned. Rather, it was the well-irrigated interior, which ironically had benefited least from colonial investment policies, which became the principal locus of longer term prosperity and, eventually (although not until the 1920s) the site of the region's industrial re-birth.¹¹

Moreover, longer-term agricultural prosperity, even in the interior, was not a phenomenon experienced by all. There has been a lively debate in South Indian history over changes in patterns of land distribution and labour and, certainly, over pessimistic views (including some of my own) concerning tendencies towards the narrower concentration of landed assets and the increasing pauperisation of labour are difficult now to sustain. Almost all statistical tests reveal a remarkable continuity in the structure of landholding across the 19th century in spite of hugely increased acreage with a proliferation of small-holdings always buttressing the larger estates of the rich and powerful.¹² Also, there is little indication of an overall increase in the landless proportion of the population (which, it should be said, depending on district consisted of between 15 and 25% of the rural population even at the beginning of the colonial era).

Nonetheless, the ownership of land does not tell everything. There are also the questions of what can be done with it and what happens to the surplus derived from it. Here, as Christopher Baker has argued, there can be little doubt that most of the significant changes (at least from the second half of the nineteenth century) favoured producers with more substantial assets. In the interior, it took capital to finance the digging of wells and the cultivation of garden crops and long-staple cottons. In the river valleys, productivity depended heavily on proximity to water supply -- which tended to give pride of

place to the 'older' *mirasidars*. While opportunities continued to exist for small farmers to gain access to land and to produce under what Baker has termed 'minimalist' farming strategies, most of the benefits of the new markets and crops went to those with greater capital. Indeed, these agrarian capitalists also drew benefits from the fields of their smaller neighbours who looked to them for credit, for ploughs and cattle and for part-time employment. The great majority of small farmers did not have sufficient land to supply their own household subsistence but needed extra work, which could often only be found in the fields of their wealthier neighbours.¹³

Keeping a local supply of labour to hand by offering it small holdings had been a standard agronomic strategy of larger *mirasidars* in the pre-modern era when labour was scarce. It long continued into the 19th century although with a subtly different logic: whereas the conditions offered earlier to *pykari* (itinerant) cultivators had often been better than those of *mirasidars* themselves (especially with regard to revenue payment), later on they became noticeably more onerous and involved increasing features of debt-bondage. For landless labourers, too, there are few signs that economic conditions improved and some that they may have deteriorated. As for everybody in the agrarian economy, greater stability and the shrinking spectre of famine represented an inestimable

bonus. However, as Ahuja has seen, wage rates across the 18th century had tended rise. But they fell during the first half of the nineteenth century as the population began to increase more rapidly. Given that food costs also tended to fall in the later period (especially after the 1830s), the result may not have been very drastic. But, during the later nineteenth century when food prices started to rise again a noticeable feature in many parts of the agrarian economy was a shift from kind to cash wage rates, which was clearly of disadvantage to their recipients. Also, there is absolutely no evidence that the 40% rise in national per capita income level, surmised by Heston for the years 1860-1914, was passed on in real agricultural wage rates. Labour's share in the total social product was undoubtedly inclined to fall.

The agrarian society of south-eastern India, then, was highly stratified long before the coming of the colonial era and little that happened thereafter made it any less so. With the exception of the Deccan districts, the ultimate price of economic failure (death by starvation) became a less constant threat. But opportunities to make significant gains and accumulating wealth provided by the new economic order were narrowly constructed and of major benefit to only small groups. Access to capital was always the key and, with the colonial state withdrawing itself from the 'indigenous' credit system, that access became, if anything, narrower.

POLITICAL ECONOMY OF POPPY: TRAJECTORIES OF OPIUM TRADE IN MALABAR

Arun Thomas

History of Opium in India is enmeshed in the history of colonialism and vice versa. The fundamental aim of this paper is to demonstrate the transition happened in the materiality of Opium from an innocuous commercial article during Dutch time to a controlled intoxicant during the British colonialism. The concept of political economy is used here to denote the economic context out of which a change significantly brought about in the economic relations of Opium with the political and legal regimes. By problematizing the process of institutionalization of opium economy and the changes impacted on the possession, sale and consumption in Malabar spanning from the uniqueness of Dutch opium trade in Malabar to the 19th century British Malabar, this article deals with the trajectories of opium administration by the both colonial powers in establishing a state monopoly in Malabar.

The very idea of this article derives from the statement of historian Jordan Goodman who believes that "Psychoactive substances are a rich analytical category for the study of historical, cultural and economic processes of a society".¹ Having taken this idea as the premise of this study, the author attempts to seek whether British governance brought about any changes in the opium administration from that of the Dutch in Malabar. The article begins to trace the role of Dutch East India Company in the opium trade and next two sections account the British attempts to monopolize the opium economy by channelizing/ controlling the opium market in the Malabar district. It aims to conclude by postulating centrality of opium efficacy in Malabar economy by considering the profit both colonial powers extracted from trading opium into Malabar.

Tracing Opium: In Pre-British Malabar Economy

Malabar has a significant position when the history of Opium in India discussed. Barbosa in his work titled "*Description of the Coasts of East Africa and Malabar*" described extensive consumption of opium in the Malabar Coast.² He stated his surprise seeing the extent of opium

consumption though it was not produced in Malabar. Discussion on opium in Malabar would become incomplete if the Dutch intervention and participation in opium trade are forsaken. Hans Dirks and Binu John have touched upon the efficacy of opium in the pre-British Malabar economy. Dirks demonstrated how the Dutch travelers have looked at the opium consumption in Malabar primarily quoting Wouter Schouten who described opium consumption in Malabar from the context of conflict between the Dutch and Portuguese. According to him, though the Dutch became victories in the conflict between the two powers in the 1660s, the Portuguese were assisted by local *nairos* whose unflinching, fearless character was the result of the opium addiction and I quote:

"They (*Nairos*) do not surrender easily, but remain at their place strong as a post, while attacking notwithstanding fire, swords or bullets: by using opium they are fully out of their senses. And further on: 'The enemy, frantic by the opium, stands like a wall and shoots, hacks and cuts with big knives everything and everybody within its reach'³

Dirks immensely quoted Schouten to show how the Malabar and opium addiction have been imaged by Dutch travellers. Schouten claimed that kings in Malabar including Zamorin were addicted to opium. Such descriptions of opium addiction might tend to have a fallacy or fantasy of an 'ethnographer'. Whatever may be the extent of the addiction, the prime concern of this section is to figure the inseparable commercial connection between pepper and opium in the trade. I hereby quote an extract from Dirks's book to cognize the importance of opium in the political economy of Malabar prior to the British conquest.

"As elsewhere the VOC tried to pay for this Malabar export as much as possible without money; it was extremely economical with gold and silver money and species. Opium was the main import product and the main means to exchange with pepper".⁴

Since the Dutch had the priorities to amass pepper from the Malabar, the Company influenced the local rajas for the monopoly of both pepper export against opium (Amphion) import. Dirks observed that the VOC had to deal with Ali Rajas, the Muslim merchant ruler of Cannanur to stem the local traders who actively involved in the opium trade connecting Surat and Cannore.⁵ Binu John has briefly described the involvement of Ali Rajas in the opium trade. Using extensive VOC records, he alluded as to how the opium usage in the Malabar has been perceived in the Dutch Company. He picked up unique sources that testified the extent of consumption which prevailed in Malabar. The Dutch company managed to sign a treaty in 1664 with Ali Rajas through which the company asserted the monopoly over the opium trade. Binu John pointed out that despite the treaty was called, the ground reality was extremely disfavored them and the agreements remained in the official paper. They could not withstand the challenges posed by the local Muslim traders as well as Tamil Pattar Brahmins who imported a large quantity of opium from Bengal to the Southern part of India.⁶

Table 3.1. Bengal Opium Exported to the Malabar Coast, 1657-1718 (Selected years; in Dutch pounds).

1667	11560	1681	22910	1710	2610

Source: Dirks, *History of the opium problem*, p. 170.

Interestingly, the history of pepper trade is also the history of opium import as far as Malabar is concerned in the seventieth and eighteenth centuries. The above table corroborates our very

premise that opium consumption had a significant impact on the Malabar economy. Though it was a lucrative business for the VOC, as mentioned above, it had to face stiff competition from both local and foreign (English) merchants. "Although the Company tried to dislodge its market competitors by fixing a low exchange ratio against pepper (1 lb. opium for 40 khandil pepper), this did not produce any remarkable result".⁷ As a result, the VOC was not interested to hold a monopoly right over the opium import to Malabar even though they tried to have the monopoly in the second half of the 17th century.

The description of Pre-British opium trade and its efficacy in the Malabar trade connections is meant to place a background for the subsequent British approach towards opium policies and official responses to monopolize it.

Politics of British Opium Economy: An overview.

British East India Company came to the scene of opium trade only in the beginning of the eighteenth century, mainly trading with South East Asian markets. In the initial decades of eighteenth century, the British private traders who were supported by the company servants actively 'smuggled' Bengal opium which is a umbrella term that includes all the opium produced in the eastern part of India and was taken to Calcutta where the auction took place. Thus Calcutta emerged as the major 'capital' of the imperial opium trade.

The interesting turn in the nineteenth century opium policy happened when the Company knew that Malwa opium was 'smuggled' through the west coast region of India into China. Though the Calcutta authorities wanted the Bombay officials to take immediate actions to stem the trade, they were unsuccessful as the Malwa opium was produced in the areas ruled by the princely states. Amar Farooqui has investigated this 'Malwa' problem in detail, and according to him when the Company failed to extirpate the opium production in the Malwa region, they brought about a practical solution by which they attempted to gain the trade monopoly by purchasing the opium from the farmers and auctioned in Bombay subsequently exporting to China.⁸ It is interesting to know how the Company used its various technologies of

power to monopolize the western and central Indian opium production.

As far as Malabar is concerned, the political economy of opium has been drastically transformed after the British involvement in the opium trade. They painstakingly stopped all the local 'smugglers' who were trading opium in the Malabar region. It is interesting to note that the British had to undertake timely legal interventions and frame administrative mechanisms to bring about a monopoly over the Opium economy in the Malabar. Malabar was regarded as smuggling prone area and uncontrolled opium smuggling were happened to be carried out through Malabar ports. This was a serious concern for them and to control the uncontrolled contrabanding activities, they appointed a special covenanted civil servant who was designated as 'collector of sea customs in Malabar and Canara' to look after such illegal movements of Opium in the both Malabar and Canara Coastal rim. They were entrusted along with a civil servant as his deputy to collect the customs duties.⁹ Through various regulations and Acts in the first half of the nineteenth century, British managed to monopolize the opium economy in the Madras presidency and subsequently in the Malabar district too.

Opium Market in British Malabar: Auction, License, Retail, Restriction and Complexity

As Opium was not cultivated in Malabar, it was traded to Malabar from the Malwa region. As the cultivation of Poppy was strictly prohibited in Madras Presidency, the opium consumed in the presidency was imported from the Indore under the licenses provided by the board of revenue and passes from an opium officer at Indore. Retail selling of opium is monitored by the government after the strict Opium Act of 1876 which is regarded as the cornerstone of the opium administration in the 19th century British India and was an attempt to monopolize the inland production and trade of opium. The Rate of licenses, number and places of shops, were decided by the Government and strict guidelines were placed to generate maximum revenue out of opium sale. As Malwa opium was produced in the Natives states where British government had no control over the production as well as the movement of opium, the only way for the government to monitor was when the opium was traded to British territory which demanded

a pass, sanctioned by the colonial government. The pass duty on Malwa opium destined for consumption in British territory was an excise receipt which incurred Rs.10 rupees per one seer of opium, thus Rs.700 per chest.¹⁰

Malwa opium was sent in boxes containing half a chest (35 seers) and Rs.10 rupees was amounted as revenue duty.¹¹ Prior to the Opium Act 1878, Abkari and Excise administration over the opium was lenient as there was no centralized legal system to control and monopolize to do so. After the Opium Act of 1876 and the significant Madras Abkari act of 1886, the official records are so succinct in documenting the efficacy of the intoxicating drugs in the Malabar economy.

As per the guidelines, each licensed opium shops were to be owned by a single owner and collective ownership was nor encouraged by the government. But Collector had the discretion to allow joint ownership for the shops that were opened in the towns. The money to purchase a shop should be paid in one lump sum before the permission is issued except in cases in which the amount is large, in those situations reasonable instalments were permitted at the discretion of the collector.¹² The farmer who was permitted to run the shops were to pay monthly One rupee per shop for the license. He was expected to follow strict guidelines through which the monopoly over the economic activities of opium was maintained.¹³

Interestingly opium administration had a centralized nature due to its primacy in the revenue structure in the British administration. Opium vending licenses were placed in the auction and highest bidder was allowed to run the opium shop. The date and place of auction and the officials conducting the auctions were published prior. Upset prices of the exclusive privileges for selling opium and poppy heads and of manufacturing and selling of intoxicating drugs in Malabar are given below.

Table 3.2. Upset Prices of the Exclusive Privileges for Selling Opium

Taluk	Rs	Taluk	Rs
Chirakkal	3,700	Walluvand	40
Kottayam	1,610	Palghat	605

Kurumbranadu	380	Ponani	250
Wynad	200	Cochin	1,000
Eranad	505	Calicut	740

Source: The Malabar Gazette, (2nd February, 1884, Calicut), Vol.XXVI, No 11. p.372.RAC

Malabar Gazette that used to be published in the Saturdays from Calicut catalogued the location and number of opium shops opened in the district. It is interesting to know the procedure to be followed after the winning of the auction. The successful bidder was to submit security in cash and a Government promissory note endorsed to the collector along with his first deposit which is equal to one-fourth of the rent. And if he failed to pay the initial rent which is the one fourth of total sum, the deposits already made would be forfeited and privilege would be re-auctioned once more. It is interesting to observe that subjecting to all the legal provisions of the opium Act of 1878, the purchaser of the privilege to engage in opium selling had to give a surety in a stamp paper asking him to abide by the conditions. On 30th March 1884 was decided as the deadline for this stamp paper declaration, without which all deposit he has made decided to be forfeited.¹⁴ The increase in the number of licensed opium shops in Malabar indicates the motif of the government to amass maximum revenue from the drugs sale. This argument can be substantiated by the increase in licensed shops in each Taluks year by year. For example, in Ponnai taluk there was a sudden increase in the number of opium shops between 1884 and 1886.

Madras Abkari revenue reports are the best aid to know the development of the opium market in Malabar. By 1888 the opium import to non-producing areas like Malabar has been controlled by the Madras Revenue board. Number of opium shops and the quantity to be imported for retail sale needed permission granted by the Board of revenue on the recommendation of collectors. The process of opium that reached Malabar from Indore is as follows:

“A duplicate copy of the license is sent to the deputy opium agent at Indore who passes the opium on payment of the pass duty (700 per chest of 140 ¼ lb)...The deputy opium agent reports the dispatch of opium to the board, which

advises the collectors concerned; the consignments are checked by some responsible revenue officer on arrival in the district, and are then passed on for sale to farmers and licensed vendors”.¹⁵

Opium vend rentals a brought huge profit for the company. Along with the pass duty, opium vend rentals contributed significantly to the excise revenue of the Madras Presidency.

Table 3.3. Statement of Opium vend rentals from Malabar

Year	Rentals (Rupees)
1888-89	7,937
1889-90	11,416
1890-91	15,181
1891-92	17,965
1892-93	21,540
1893-94	15,340
1894-95	15,155
1895-96	13,497
1896-97	15,832
1897-98	15,930
1898-99	15,760
1899-1900	13,031

Source: Madras Abkari revenue administration Reports from 1890-1900, (Compiled by the author)

As the above-mentioned table indicates the rent from the opium shops looked fluctuating. The prime reasons for the fluctuation were related to the changing number of opium shops opened to function. One of the reasons for the decrease in the number of opium sale was attributed to natural calamities and epidemic diseases both of which reduced the purchasing power of the consumer. The increase of rentals in Malabar is ascribed to the fact that that the opium renter of Native Cochin used to accumulate the opium regardless of the cost in order to avoid the risk of smuggling from British into Native Cochin.¹⁶ In the latter case, though the sale of opium in the Malabar district statistically increased interestingly the bulk of the

consumption took place in foreign territory. Thus the quantity of opium sold in Malabar district was not necessarily consumed in Malabar. Opium bought from the official shops 'smuggled' foreign territories like Mahe and Native Cochin.

Table 3.4. Opium Statement from Malabar on the quantity consumed and pass duty derived.¹⁷

Year	Consumption (lb)	Pass duty. Rs. 5 per pound
1889-90	635	3175
1891-92	2117	10,585

Malabar had never been lagging behind in the consumption of Opium as compared to other districts of the Presidency. In terms of quantity of opium consumed Malabar used to come next to agency tracts.¹⁸ In many of the years particularly in the last decades of the 19th century, the number of opium shops are higher in Malabar comparing with other districts of the presidency except Madras town.

Table 3.5 Number of shops open for the sale of opium in Malabar.

Year	No. of shops	Year	No. of shops
1890-91	27	1895-96	22
1891-92	28	1896-97	21
1892-93	26	1897-98	20

Source: From Madras Abkari revenue administration reports from 1889-1900 (Compiled by the author)

Though opium smuggling so prevalent in Malabar, British official records seldom presented the details of smuggling cases. One would hardly see the details of smuggling groups who tried to 'subvert' the colonial drugs policies and nor did see the methods used them. The major sources on opium smuggling available in the Abkari reports and district gazetteers are of tabular representation that contained the number of cases filed under the Opium Act of 1878. It needs intricate research to problematize the nature of smuggling prevailed in Calicut region. Like Amar farrooqi analyzed the role local capitalists in the opium smuggling that enabled them to accumulate capital as well as pose a 'conscious political defiance' against British monopoly, and like Markovits who disputed Farooqui's argument by postulating the idea that opium smuggling was not a subversion but an opportunism from the part of local merchants, the author failed to integrate the problem of this 'clandestine' drug movement into the political economy of opium smuggling in the 19th century Malabar as the dearth of sources.¹⁹

Conclusion

The economic efficacy of opium in the political economy of Malabar has been an indispensable node that demands much deeper investigation. During the Dutch period opium was a major commodity that traded to Malabar in exchange of pepper. In other words it was opium that enabled Dutch company to purchase pepper in large quality without paying in cash. Though they were not successful in maintain their opium monopoly due to the indigenous

opium smuggling groups, opium trade with Malabar strengthened their large imperialist agendas. It was during the British period opium became a complete market oriented commodity that fetched good amount of revenue for the British. The British framed policies and regulations to channelize the consumption in Malabar. This highly controlled movement of opium in Malabar by the Abkari department supported the imperial agenda of extracting revenue.

TRADE AND MARITIME ACTIVITIES OF MUSLIMS IN EAST COAST FROM 17TH – 19TH CENTURIES

J. Arun

The aim of this Paper is to describe the Trade and Maritime Activities of Muslims in East Coast from 17th – 19th century. Kayalpatnam (Aka Kayalpatnam, Tamil) is a town situated 30 kilometers away from Thoothukudi on Thoothukudi, Tiruchendur Highway in the Thoothukudi district of Tamil Nadu, India. It was famous port during the times of the Pandyan kingdom, and also a chief port of Malabar. Kayal is inhabited mostly by Muslims and Nadar,

Devar, Harijian Adi Dravidian and Christian communities living in peace. It is believed that the original inhabitants were from Egypt. The first Arab Muslim settlers who were from Medina land at Kayalpattinam during period of first Caliph Abubukker when the Pandya Kingdom was ruled by Kadungon.

Kilakkarai, Devipattanam, Tondi and Nagapattanam also became busy ports, and important Muslim centres of trade. The fifteenth

century Chinese sea farers comment on the commercial link of Nagapattanam with Sumatra, Java and Burmese coasts. In the sixteenth century Adirampattanam, Kilakkarai Nagapattanam, PortoNovo and Pulicat were among the region's most active textile export centres: Muslim sea going men from Pulicat and Nagapattanam carried Coromandel piece goods to Mocha, Malacca and Burma. Even in the late nineteenth century, these Muslim ports still had links with great international exchange centres of Indonesian archipelago and Malay Peninsula.

The Sethupathis of Ramanathapuram extended their support to the Muslim traders. The Sethupathi incorporated this Muslim community leader, Periathambi - Seethakkathi, in the state policies and designated him "Vijaya Raghunatha Periathambi", Vijaya Raghunatha, being the name of Sethupathi. According to Dutch records, he is said to have controlled everything in Kilakkarai region and was the second most powerful man in the Ramnad State after the Sethupathi, Thomas Van Rhees, Governor of Ceylon (1692-7) points out in his memoir that the market price of textiles was raised or lowered according to the pleasure of Periathambi who had the entire management of the business in the Coromandel and as well as Ceylonese coasts. The Sethupathi in collaboration with Periathambi sent his ships to Persian gulf and Bengal. The trade of Seethakkathi is extolled by poets in Islamic Tamil literatures. He is called as "Vallal" (great Philonthoropist) in these literary works. He is said to be the founder builder of the great Jumma Masjid in Kilakkarai, one of the Dravidian architectural marvel. By 1698 the Dutch realised that they could not carry their trade without the help of Periathambi Marakkayar and concluded a friendship treaty with him. Then the Marakkayar became the intermediary to the Dutch. He also permitted the Dutch to build a factory at Kilakkarai.

From 1750 - the political uncertainties in Coromandel hinterland brought down the native maritime trade to decline. The Marathas of Thanjavur also encouraged to some extent the native traders. Sarabendrarajapattanam (Saluvanayakkanpattanam) was an important port in Thanjavur coast during nineteenth century.

Marakkayar, Madan Sahib Nagudha, Syed Mohamed Nagudha, Sulaiman Malim, Fakir

Mohamed Nagudha and Siddhi Mohamed, Ibrahim Nagudha of Nagore; Mohamed Sahib Marakkayar, Habib Mohamed, Abdul Gani and Syed Ahamed Marakkayar of Nagapattanam; Mohamed Ali Marakkayar, Shaik Mohamed Nagudha and Vappa Chinna vava Marakkayar of Thirumalairajanpattanam, Mohideen Kundoo and Mohamed Thambi Marakkayar of Karaikkal. All the above merchants requested the company authorises to release their merchandise and the ships which were sent to Penang and Malacca. East India Company authorities conceded their demands.

A list of new vessels registered by the Muslims in the year 1808 in Nagore and Nagapattanam shows that it was only seven in number. All of them were engaged in overseas trade. This register contains the names of the ships (Kadar Bux, Mohideen Bux, Mohamed Bux, etc.) type of the vessel and tonnage, the names of the owners, commodities freighted name of Nagudha, country to which the vessels plied and the licence and pass particulars. The owner of the ship and the licensee for taking out voyage differ in most of the vessels. Since the pass for the voyage was in the name of the Nagudhas, the owner may or may not sail in the ship.

The Muslim merchants of Cuddalore and PortoNovo traded with Penang, Kedah and Ache. When their vessels on voyage were in trouble, they used to approach the East India Company authorities for protection. The Muslim merchants of Coromandel coast were at the favour of the East India Company authorities during this period.

Pamban Canal itself was a private property for some: time which was granted by the ruler of Ramanathapuram, to a Marakkayar family at Pamban. Retention of their hereditary rights to collect fees, a fixed salary to those who actually piloted the vessels across the Pamban Canal was ordered by the Collector. The descendants of the family of Aboobakkar Marakkayar are appointed as pilots at Pamban port-for piloting vessels across the Pamban-even to this day.

The Sethupathi exported the chank to Bengal in his own vessels and in the vessels of the Marakkayars of the region. It brought good revenue to the Sethupathi's treasury. The Sethupathi Raja sent in 1794 alone about 11,20,000 chank to Bengal from Devipattanam

port in the ship of a Marakkayar of Kilakkarai. Meera Naina Marakkayar of Ramanathapuram acted as the agent of the Sethupathi in Calcutta.

In Thanjavur coast the fishermen of Nagapattanam, Tranquebar, Thirumullaivasal and Adirampattanam collected the shells. Here the chanks were collected with net and not by diving. The chank fishery of Thanjavur coast was enjoyed by the Thanjavur Maratha rulers. The Modi records of the in the south Arcot coast the chank shells were collected by renters and also by individual fishermen. The collection of the shells was done with net as in the case of Thanjavur. Chank shells were smuggled from South Arcot coast to Pondicherry where it fetched a higher price.

The Muslims of Coromandel were the wholesale merchants in chank in Calcutta. Kilakkarai was an important centre of chank export to Bengal.

At Kilakkarai a certain contribution of the catch was also generally allowed to be set aside by the divers for the benefit of their mosque. The Sethupathi had given him the privilege to trade in his ports on payment of a reduced duty i.e., instead of the usual duty. When the concession was curtailed later by the English authorities, (the Collector of Madurai) in 1802, the Board of Revenue, intervened and afforded adequate remedy to him.

The Muslim merchants in Nagapattanam and Nagore also built ships of considerable burthen up to 500 tons, in the port itself, not only for their use but also for the merchants of western coast. The Muslims of Nagore, Nagapattanam and PortoNovo were the worst affected during this period because of the hostile operation by the Europeans.

According to a statistics in the second half of the nineteenth century, the bigger individual Muslim merchants of Nagapattanam and Nagore operated with a limited capital of Rs.35,000 to 50,000 whereas the English private merchants had liquid capital several times higher than this.

This naturally led the Muslim traders to smuggling and clandestine trade activities. The Muslim community is often found named as leading participants in smuggling activities in 17th-18th centuries. Periathambi Marakkayar was

the chief among them and he was the architect to foil the Dutch monopoly.

The Dutch monopoly in pearl and chank fisheries was also against the traders and labour class among the Muslims who were engaged in these activities. Paravas were preferred to the Muslim divers. The Muslim traders who were engaged in pearl trade had to be at the mercy of the Dutch. The Muslims in chank trade were driven to smuggling and illicit export to other regions. But the Muslims adjusted themselves to the situation and tried to cooperate with the Dutch. The Muslim traders helped the Marava forces during Dutch campaign against the Portuguese in 1657-58. During the Portuguese-Dutch war in 1652, a Muslim contingent from Thirunelveli helped the Dutch.

Though the Dutch attitude gradually became more tolerant of Islam and less rigorous although the anti Islamic laws continued to remain on the Batavia Statute Book. Learned religious preachers were allowed to migrate between Ceylon and Coromandel. The Dutch even tried to formulate a code for Muslims. The Muslim traders were treated with consideration. Muslims were employed for shipping activities in Malabar. Among the Tamilians workers in the V.O.C. there might have been Muslims also in considerable numbers.

With the disappearance of the Dutch the Muslims had to face the strong European power, the English.

The French settlements were; a heaven to the Muslim traders. Though much of export trade was done by the European trading companies and merchants, the native Muslims were also encouraged by the French. They undertook joint ventures with Muslims. During the time of wars and political confusion, the French came to the rescue of the Muslim traders by allowing them to trade under their colours. They also offered them technical expertise in navigation. The PortoNovo Marakkayars benefited much by French help. Thus the ship of a PortoNovo Marakkayar, Mohamed Shah during its voyage to Manila was manned by a French Captain. Many ships of the Marakkayars engaged in coastal trade such as that of

Mohamed Ali Beg employed French captains in their ships. The French also employed Muslim navigators in their ships for

Kedah, Tennaserim etc. Since the customs duties were half to that of Madras, the Marakayar ship owners and traders of PortoNovo, Nagore, Nagapattanam, and Tranquebar utilised the French ports for their trading activities. Thus the French settlements were favourable to the Muslim merchants and their trading activities, which was a blessing in disguise.

Bearing all the difficulties, the Muslim vessels operated from PortoNovo, Cuddalore, and Nagapattanam to Burma, Ache and Malacca. From the Madura coast trade with Ceylon was brisk. The Nawab of Arcot wanted to develop the ports at Kovalam, Santhome and Alambaram relying on the Muslim shipping. But it was not attended to.

The English thought that influential Muslim merchants created problems for the Company's relationship with the Nawab. There were occasional disputes, with the Muslims in the collection of customs. The Muslim ship owners and traders moved to the places favourable to them. The attempt of the English in the second half of the eighteenth century to attract Muslim traders to PortoNovo failed. The growth of Pondicherry port under the French was an attraction to the Muslim traders of PortoNovo. The customs duty at Pondicherry was only half to that of Cuddalore. When the native traders

represented for the reduction in the customs rate the Directors rejected it. Rice and grain trade from Coromandel to Ceylon continued to be an important activity of Coromandel Muslims. In the long run it was also affected by the rise in tariffs.

Further the English were favourable to Hindu Chettiar merchants. They were nominated as their chief agents and principal traders at Madras. It is also a fact that Chettiar merchants were in sound financial position than the Muslim traders. The English felt that the Hindus were a dosile group and very dependent on English power and hence they were in good books.

The English considered some of the Muslim merchants as their enemies due to their common religion with the Mughal rulers. Mujib opins that the British had been the cause of the economic ruin of the Indian Muslims, and the British administration had taken fierce revenge on the Muslims for their participation in the upheaval of 1857-58. The maritime trade of the Muslims of Coromandel suffered further after the mutiny. Though the religious animosity of the English towards Muslims may not be comparable to that of the Portuguese and the Dutch; but still the English discriminated, them because of their political and economic compulsions.

ECONOMIC CONDITION OF THIRUMANIKUZHI

S. Balamurugan & K.M. Subramaniam

Introduction

Thirumanikuzhi is the suburban Art of Cuddalore town. It serves as the headquarters of Cuddalore district, Tamilnadu. It lies at a distance of 22 kms south-west of Pondicherry and 205 kms south of Chennai. It is well connected by roads and railways with places like Chidambaram, Pondicherry and Chennai. This place lies exactly at the intersection of 78.15 longitudes and 11.15latitude. The river Gadilam flow 1 kms south of the town and the Bay of Bengal forms its eastern boundary. The small port of Devanampattinam is adjacent to the town. The fertile paddy fields in and around Thirumanikuzhi and Cuddalore are cultivated with perennial supply of water from the Gadilam river. Small hills are found here and there, Agriculture, Industries Trade and the Kapparmalai near Thirumanikuzhi is the highest one economic condition life of this place.

Economic Condition

In the sixth century A.D. the Bhakti movement that ushered rifled to a great religious awakening. The Saiva saints, the Nayanmars, and the Vaishnava faints, the Alvars, propagated intense religious bhakti and the temple culture Coming under their influence, thinking's of the medieval period built a number of edifices and housed their gods there¹. As a result, many temples, big or small, have sprung up in several parts of the country. When a wide spectrum of temples sprang up and their activities increased, it resulted in the steady rise in the temple establishment. For the maintenance of these temples, much finance was required. The needed income was mobilized by various ways and means.

As the temple is a common institution of both the rulers and-the-ruled, all the people, irrespective of caste, creed or colour, involved themselves in the activities of these temples. They donated either land or money or animals and supplied the required commodities according to their ability these temples were maintained by royal patronage and public benefactions. Pious people made lavish endowments both in kind and cash either to attain spiritual merit, to atone for their sins, or to

get success in a war or as a part of their fulfilment of certain vows large donations were made perhaps to popularise the fame of an individual or the power of the ruler². The sources of income of a Hindu temple included among-ether things, villages, lands, tax-exemptions and reductions by the authorities, gifts in the form of livestock, cash, old and different articles, rents, fines and other miscellaneous sources. Besides, donations to gods indicate their devotion and dedication to their gods and their loyalty to their kings³. A study of the hitherto available inscriptions of this temple reveals how the Vamanapureswarar temple mobilized resources for its maintenance.

By the ninth century the temple had ceased to be a small structure of brick and mortar attended by the villagers for worship. Instead it had become "a city of miniature in the medieval period"⁴. It was enormously wealthy and served as the source of income to the town where it was situated, for the many pilgrims who visited it spent considerable money on their boarding, lodging and purchases. In the temple employed a large number of priests, musicians, attendants, dancing girls, scribes, A accountants and many craftsmen and labourers maintained schools and ran refugee centres for sick men and animals. It dispensed charity to beggars and provided relief to the poorer citizens in times of distress and famine all this required huge resources which were provided through pious gifts made generously by generations of kings, officials, merchants, various communities and individuals. Gradually but steadily wealth flowed into the coffers of the temples, and came to possess fabulous amount of immovable and movable properties such as land, houses, gold, cash, cattle and food.

Endowments were made by every class of people. Donors can be divided into three groups: members of the royal family, officials, and private donors such as merchants, artisans, etc.

Like their predecessors, The Pallavas, the Cholas and Pandyas were great patrons of Temples⁵. Each king had his favourite tutelary deity (kulandyakam) and the temples in which these deities were housed received special benefactions. On special occasions, the kings

performed special rituals like hemagarbha and tulabhara, in which gold or precious stones weighed against the body of the king were given away to the temples for their improvement or extension.

Villages

The property of the temples can be divided into two categories:

(a) Immovable property, comprising the village land, houses and similar things, and

(b) movable property comprising the livestock, offerings of gold, silver and other precious metals, grain and offerings of various kinds of foodstuffs, services and material for the worship, etc.,

Gift Of villages formed the basis of income to a Hindu temple. We come to know from several records that in spine places whole villages were donated to the temples - a practice followed throughout in the early medieval period. From the accounts of Huien-Tsang and other sources we know that the monastery of Nalanda enjoyed the revenue of two hundred villages; probably an equal number might have been attached to the centre of education at Vallabhi⁶. The famous Somanatha temple in Gujarat had 10,000 cultivated villages to finance its activities,⁷ and these were donated by various princes of India.⁸ Likewise in Tamilnadu. too, kings, other and local bodies made grants of villages for specific and general purposes, which added to the wealth of the temple treasuries.

Gift of Villages forms an Important, source revenue to the temples. Several inscriptions refer to the donations of various villages for different purposes. These villages thus gifted were known as devadana villages. The income from the villages helped substantially in the" conduct of worship, celebrations, festivals, renovation works and other related matters

Tax-exemption was also given to some villages already endowed to the upkeep of temples. A record⁹ Rajanarayana Sambuvaraya, issued in his 19th regnal year, registers the gift of village namely Kulattur alias Solinganallur as tax-free to the temple of Sri Vamanapureswarar for conducting the service called Rajanarayanan sandhi and for offerings and worship in this temple. Maravarman Vikrama Pandya III

endowed a Urattur village as tax-free to meet the expenses of festivals, repairing work and sandhi instituted by the king himself.¹⁰ Similarly, an inscription of Konerinmeikondan records a gift of a village Kattilvendanpattu by the king for conducting sandhi puja and for festivals and repairs to the temple.¹¹

To meet the expenses of festivals, worship and offerings of curd rice, the tax-free villages Suraipattu and Sirramur were given during the period of Achyuta devaraya.

Thus, gift of villages as permanent endowments yielded much income to the temples. The various services mentioned in the endowments were thus performed from the revenue of these villages.

Cultivation of temple Lands

The temple administered the donated lands in three main ways, either it directly cultivated the lands with the help of manager and agents, or it assigned lands to its employees in return for services or it let out the lands to tenants on lease. The management of its own land by the temple was called *tiruvadaivattas*¹² or *thirunamattukani* a term, which was also used for secular landowners. The land situated within the temple premises or within a manageable; distance from it was kept under the direct control of the temple. The smaller temple, which could, not employ officials to look after the land given in lease, cultivated it directly¹³. If the tenants did not accept the terms of lease offered by the temple, it, cultivated its land directly was done by the temple authorities (*devakanmiga*).

Lease system

The lease system was adopted by those landowners who belonged to the non-agricultural classes, or by the institutions which had necessarily to depend on the tenants. Certain circumstances made it necessary for the temple to lease its lands. First, the priests, the Brahmanans.¹⁴ could not cultivate the land themselves. Secondly, the lands and villages granted to the temples were scattered over a vast stretch of land. Sometimes they donated the lands even outside the country, in

Srilanka. Naturally these lands had to be cultivated through tenants. Moreover, the practice of lease saved the temples from the

Botheration of employing a large retinue of farm laborers, from purchasing and maintaining cattle and farming equipment, and from maintaining a close supervision round the year. Therefore, the lease system adopted by the temples in modern terminology, is absentee landlordism of the temples.

Remission of taxes

Numerous examples of the exemption and remission of central and local taxes on temple lands show that it was quite a regular feature. Sometimes this was done by the king or the *sabha* suo moto¹⁵ or on the basis of representations made to the king by the authorities of the temple¹⁶. In other cases, it was done by private persons who almost bought exemption by depositing a lump sum amount of money in the treasury in lieu of the taxes on the land for all times¹⁷. This could not often secure total remission¹⁸. Often the king did it out of his own will. Some remissions but at least part remission or revisions were due to Rajaraja exigencies of circumstances.

Certain instances of remission were factious. Though the peasants were exempted from payment of taxes to the state or local bodies, these taxes had to be paid to the temple.¹⁹ Instances, also occur where the temple lands were first assessed but later made tax-free.²⁰ The temple enjoyed an extraordinary position among the land lords. It did not have to pay any taxes to the state for most of its holdings; on the other hand it collected from the people the taxes transferred to it by the state.

It would be wrong to think that all temple lands were free from taxes. Remission suggest that the temple also had to pay taxes, and to clear off the revenue dues, the temple had to occasionally sell its lands.²¹ But there is no doubt that remission was granted very liberally, and most temple lands were conveyed by it.

Tax-exemption and Reduction

Tax exemption and reduction are the two means which enabled the temple to enhance the economic resources. Certain instances of remission were fictitious. Though the peasants were exempted from payment of taxes to the state or local bodies, these taxes had to be paid to the temple. Instances also occur where the temple lands were first assessed but later made

tax-free. The temple enjoyed an extraordinary position among the landlords. It did not have to pay any taxes to the state for most of its holdings; on the other hand, it collected from the people the taxes transferred to it by the state.

It would be wrong to think that all temple lands were free from taxes. Remissions suggest that the temple also had to occasionally sell its lands. But there is no doubt that remission was granted very liberally, and most temple lands were covered by it.

In addition to the above, tax-exemption and reduction made to the temple lands added to the wealth of the temples. It appears that they were the two effective means employed by the rulers to promote the economic resources of the temples. Many of the records state the conscious attempts of the rulers and their officials either to exempt or reduce the taxes on temple lands. By this process, much of the temple lands enjoyed tax concessions. However, all *devadana* lands were not free from taxation, though tax-free gift land was a common feature.²² At times the government remitted the tax payable to the palace to help in the repair of village tank. By 1471 the village of Thirumanikuzhi had become de-populated, the local lake had become silted and; the local temple and its walls had gone to ruins. Hence, the local officer remitted taxes hitherto paid to the palace.²³ An undated inscription of Thirumanikuzhi informs the reduction of taxes on weavers of Thirumanikuzhi.²⁴

A record of vijayanagar period reveals the remission of certain taxes in return for a consolidated amount on weavers.²⁵

The inscriptions²⁶ of Thirumanikuzhi state that the temple lands and villages were made completely tax-free.

When a *devadana* land or village was made tax-free by the king, the state had to forgo or relinquish its income. If the same is done by a private individual, the donor had to pay all its taxes to the state on behalf of the temple. Therefore, the donee was freed from paying taxes.²⁷

The sellers agreed to pay all the taxes levied on those lands on behalf of the temple. Thus, the temple was freed from paying taxes.

Instead, this tax amount thus saved could be utilised for defraying the expenses of the temple.

Sale and purchase of lands by the temples

The temple was a great buyer of land. It generally purchased land when it needed them for construction or other necessary work and when it did not get them in gifts. Many a time the temple used to purchase lands from people to enable them to pay their debts or fines or rental dues.

The lands of those who could not pay the fines to the state or who died before its payment were also purchased by the temple. It seems that the temple was a ready buyer, and in emergency people always looked up to it for the purchase of their lands by the temple.²⁸ This naturally enabled the temple to dictate its own terms. At times the temple accepted lands in mortgage as a security for the loans given to the village assemblies or individuals.²⁹

The temple sold its lands. In one case it sold a portion of its land to clear off the state dues. Though the instances of sale are few, they clearly indicate that the temple lands were not held in sanctity and could be sold if necessary. As the village assemblies and state officials had a hand in the management of the temple affairs, they were generally consulted by the temple officials in effecting sale transactions.

Donations enabled the temples to secure the best possible services free of cost. Though the servants were under full operational control of the temple managements, the temples did not have to bother about their remuneration. Two categories of services were offered to the temples. They utilized the services of those who were fully attached to them. They also employed those who were exempted from central and local taxes on condition that they would render certain services to the temples.

Gift of Money

Numerous gifts of money were made by all ranks of society. Even persons of humble means made gift. Money was given to the temple for lamps³⁶ land purchase, supply of flower ghee or for feeding learned Brahmanas.³⁰ But the most common object was the maintenance of sacred and perpetual lamps in the temples. The rates for this varied from time to time, but in general at

least ten to fifteen *kalanju* in gold were required to put up a perpetual lamp. This money was invested with the village assemblies in order to secure regular flow of interest.³¹ At times money was received even for half a lamp.³² The circulation of this money ensured a constant flow of income to the temple during the time of Rajaraja I and Rajendra I made the temple function like a moneylender. Money gifts were popular especially from about A. D. 1000. We have got reasons to believe that only a fraction of these gifts could be recorded in the inscriptions. The money gifts offered by thousands of pilgrims as in the present practice do not find mention anywhere.

Temples received large sums of cash by way of donations and endowments. As it was given in the prevailing currency of the period, it augmented the flow of money into the temple treasury.¹ Inscriptions refer to the gift of cash by the rulers and the ruled for various purposes like food offerings,³³ to conduct sandhis,³⁴ festival³⁵ provide rice, ghee and curd,³⁶ to feed various people and for various other purpose. A record³⁷ Rajaraja from the Thirumanikuzhi temple, refers to the gift of 4ft *kasu* for three twilight lamps to the deity. A record of Kopperunjinga mentions a gift of 24 *kasu* by one Periyar of Karuppur for burning a perpetual lamp in the temple at Thirumanikuzhi.

The above instances reveal that most of the needs and necessities can be borne out from the cash donations. The donor is not allowed to deviate from the purpose of the gift. Therefore, gift in cash was a vital aspect of temple economy which strengthened temple activities.

Cash awards to the temples were deposited in the temple treasury or entrusted with the village assemblies³⁸ or even with certain officials of the temples like the Sivabrahmanas.³⁹ But the persons in charge of the cash awards were not allowed to spend or invest the amount as they liked. Specific instructions were given to them to invest it either in tax-free land or lend out for interest.

It is evident from a Sucindaram Inscription⁴⁰ of Virapandya which registers a grant of 30 *ilakkasu* to maintain a perpetual lamp nearby the presiding deity. Here the donor of this award was informed to invest the amount on

land. The income arising thereupon must be used to supply the necessary ghee and wick.

Gold

The devotion of the people often found expression in making gift of gold to the deities or rich ornaments and various articles necessary for the daily worship. Ornaments such as crown, bracelet, ear-ring, gold flower, garland, umbrella, and articles such as gold vessel, lamp stand, silver, fly whisk, spoon, pots of gold, silver bronze were given to the deities. Some inscriptions give minute descriptions of the ornaments donated to the temple.⁴¹

All this gold and silver were kept amassed and hoarded as a sort of reserve fund in the temple treasury known as *sri bhandaram*.⁴² They were sometimes used in helping the needy in times of scarcity.⁴³ Few inscriptions refer to the use of gold and silver vessels for the renovation or extension on the temples.⁴⁴ But such closes were rare. Generally these ornaments remained as forms of wealth. The more ornaments a temple had, the greater glory it possessed and was visited by a larger number of pilgrims, especially on the days of special worship or ceremonies when all the ornaments used to bedeck the idol put up on display. This further added to the temple income by attracting offerings.

Gift of gold was another way of enhancing temple economy. For gold, as a movable property of much value, was more reliable also. The ever-increasing price of gold and its standard value boosted the financial viability.

While the revenue from the temple land was not dependable due to flood and drought, the income from gold was dependable. Therefore, gold reserve of a temple enhanced its economy prestige and popularity. Several records furnish donation of gold for various purposes. For instance, the inscriptions⁴⁵ of Thirumanikuzhi temple record the gift of gold to burn perpetual lamps.

Thus, much of the gold that was deposited in the temple was for the purpose of lamp service. Further, gold was gifted for the conduct of various festivals and to carry out repairs of the temple.⁴⁶

Conclusion

Cholas, Pandyas, Pallavas and Vijayanagara invaded the Nadunadu for their economic motives. During their period only a section of people were civilized while the rest felt content to continue their age old social customs and practices. The numerous inscriptions and other sources of medieval period describe the way in which economic and government were organized. The entry of the new castes created a economic great stir and led to the process of stratification and to the birth of a great caste rigour. But it may be pointed out that the caste differences were purely occupational in origin. The people were steadily becoming civilizes. The women in the society were treated honorably. The Brahmins enjoyed some privileges and favors unlike the other social groups Agriculture, Industries Trade they provided information about economic people. Economic Condition in Development Thirumanikuzhi life of place.

IMPACT OF THE WORLD ECONOMIC DEPRESSION ON THE TELANGANA AGRARIAN SYSTEM IN NIZAM'S STATE OF HYDERABAD (1928-1948)

Bandi Srinivas

The world economic crisis 1929 affected the Indian agriculture classes seriously. They lost to heavily due to the catastrophic fall of prices of agricultural commodities that during period from 1929 to 1936. The total indebtedness rose to the staggering figure of about Rs.1800 crores. The main cause of this phenomenal increase has been that since 1929 the incomes of the agriculturists have been produced by more than half the burden of tenantion on the peasantry has remained the same. The declining prices of the commodities no peasant can gain anything from the agriculture except Deshmukhs and rich landlords.

The emergence of rich peasants and middle peasants in these prices and trends not possible in a nyagrarian society, quite a number of peasants resigned to their lands due to tax and indebtedness burden. The impact of the great depression on India in the 1930's since the level of agricultural prices depend ed to a large extent on the availability of credit for stock fil l in g and forward trading of the credit crisis reminded the support of the agricultural price level and the prices which had continued to the high ever since first world war come suddenly down to the pre-war level. Although India was no l on ger a

major wheat i m porter or exporter, but produced almost exclusive!) or a stable home market, which was expanding with the growth of population. The Indian wheat price immediately followed world market price.¹

The C & I dept file 169/40 report wen t on to say how the cultivators were being doubly affected by the depression. While their assets in l and depreciated as values fell, their money debts were in effect almost doubled because of the fall in the prices that they got for their crops. An additional problem was that the slump occurred just at the time that one of the land revenue payments was due. That meant that they were selling in a particularly disadvantageous situation and had to take what they co ul d get.²

Except during the famine period towards the end of the second decade of the present century the prices in the dominions did not exhibit any abnormal trend so far. The onset of the great depression in 1929 and its continuance for a six year period ending in 1 934 brought unprecedented in the economic fortunes of the cultivating masses in particular and others in general. The prices of all agricultural products went crashing down from year to year throughout the period at an amazingly faster

pace. The decline ranged from 68.47% in respect of groundnut, 50% in respect of rice to 20.48% in the case of cotton. The fall in the prices of coconut, the keen competitor of groundnut in the post war European market the imposition of controls on ground nut imports by Germany and France and strong competition from South African ground nut which had all the advantages of the better organizations, productions and marketing had cumulatively led to huge loss of overseas markets for Hyderabad ground nut or against tremendous increase in production during this period.³

The main cause of the fall in exports was the disasters slump in the prices of agricultural raw materials and the fall in the external demand for our chief export crops. The main cause of the fall in imports was the decline in the purchasing power of our consumers. It was but natural the exports should have fallen more than imports. The prices of agricultural produce and raw materials went down much more than the prices of manufacturers and finished goods. As our exports mainly consists of agricultural produce and raw materials while our imports consists of manufacturers trade was seriously affected.⁴

Food crops have a direct relation with the site of the population and figure very little in its export trade, so in this case the price factor had little to affect their cultivation. Moreover less capital and expense is required for the cultivation of food crops like jowar than for many non-food crops. That is the reason why in an era of following prices, the poor cultivators continue to grow food crops which cost them less rather than go in for costlier non-food crops.

The crisis of economic depression was serious not only from a human and economic but also from a political point of view. The position was bad enough before, but it had been accentuated by the present agricultural depression, which makes it quite impossible for any cultivator 'who is at all "dipped" ever to extricate himself.⁵

The total net area under cultivation in Telangana was 1,01,17,876 acres in 1912; 1,07,46,631 acres in 1921; 1,06,81,649 acres in 1931; 1,04,69,793 acres in 1935; 99,55,979 acres in 1939 and 91,60,383 acres in 1945. This reveals that the area sown or under

cultivation had registered a declining trend since 1931. This decline may be primarily due to the concentration of lands in a few hands.⁶ Fallow land was so high as 35.7% of occupied area in 1949-50 but it appears to have slightly decreased in 1950-51.⁷ According to government the fallow lands in Telangana were 41 one Lakh thirty seven thousand acres.⁸ Whatever changes took place in Telangana Agrarian economy confined to this net cultivation area only whether it is commercialization of agriculture or other things.

The introduction of ryotwari system in the Hyderabad state paved the way for the commercialization of segments of the agrarian economy. The growth initially of cotton in maratwada and later of oil seeds in Telangana and the social processes generated by them were primarily the results of the initiative taken by the state during this period.⁹ The first impetus towards this tendency of commercialization was noticed when money economy was introduced into the village in the shape of assessments but the effect of this could not go far until communications were improved, then slowly rents in kind went out of fashion and cash rentals were introduced. The effect of this continued with the assessments was to compel the cultivation to sell a part of this produce immediately after harvest and as generally, the interest of the money lender became due also at about the same time the part of the produce that he disposed of at this time was a large part of his total crop.¹⁰ One of the consequences of the introduction of the system of the new land relations and revenue payment in the form of fixed money payment was that the old objective of village agriculture namely production for village use was replaced by that for market. The production and produce were non-determined the new objective that of sale and hence changed their character.¹¹ The market economy penetrated into the rural India. The villagers changed to the production centers of cash crops and food grains. The striking feature of this market economy was the conversion of rural areas as the potential markets for the British industrial goods.¹² A very large portion of the total crop now came into market instead of being retained at home, nationally the movement was not marked in crops in which these was either a large internal or external trade but even when has in the case of the millet crop, the internal

trade was not important, a large proportion still come into the market as a result of certain circumstances. These circumstances were the payment of government assessments and the interest of the moneylender. To pay this two dues the cultivators had to rush to the markets just after harvest and to sell a large part of their produce at whatever price it fetched. Most of the poor cultivators had to buy back after about 6 months part of the crop they had sold away at harvest time. The price at harvest time may low but in 6 months time they had risen to height which were absolutely reunions to the cultivators.¹³

What was happening on the agrarian scene in Telangana from the last quarter of the nineteenth century till 1930 or so could be summed up thus the system of subsistence agriculture had undergone a gradual transformation giving way to the new market or cash economy without any corresponding change in the social arrangements of land. The modes of production and exchange remained as strong feudal and emerged as the major source of discontent among the poor peasant in Telangana. During the depression except landlords all other peasants were badly affected owing to the fall in the wholesale prices. Although prices recovered slightly between 1936 and 1940, they were not even half as high as the price levels of 1922. Throughout the 1930's the cash incomes of all those cultivators who produced for the market fall considerably. The price trends strengthened the position of money lenders and traders who tightened their grip on small pattadars and tenants.¹⁴ A committee appointed in 1939 for in vesting the status and conditions of tenants in the state recommended a minimum security but without any results till 1945, fearing accrual of tenant's occupancy rights on their lands, landlords had resorted to large scale evictions of tenants. A tenancy act passed in 1945 remained practically a defunct piece of legislation which only further aggravated agrarian discontent.¹⁵ The commercialization of agriculture within a feudal setup therefore reinforced the landlord moneylender's strangle hold over the rural Telangana and did not slacken in anyway intensified the feudal exploitation and oppression instead of diminishing them to any extent. It was not that commercialization did not benefit at all

certain categories of the peasantry other than the landlords.¹⁶

The development of irrigation facilities and cultivation of commercial crops had been taking place since the late nineteenth century. The main commercial crops of Telangana groundnuts, tobacco and castor seeds were grown in Nalgonda, Mahabubnagar, Karimnagar and Warangal districts. Both the total acreage and produce of commercial crops increased steadily and after 1925 commercial farming assumed an increasingly greater importance in the regional economy. The development in commercial farming was not matched by any corresponding growth of towns, of industrial enterprise and markets not even of transport and communication facilities. Consequently cultivators had to depend almost entirely on urban money lenders, towards merchants and businessmen. Money lenders, traders, merchants and businessmen who controlled the few and highly centralized markets in Telangana for the sole of their produce. Local retailers, agents and village sahkars helped urban commercial groups thus in securing to produce from the cultivators and thus managed to have a share in the profits of the marketing enterprise.¹⁷

In the recent past Telangana paid little attention to ground nut. As late as 1925-26 the total area under groundnut was not more than 3,000 acres. Subsequently it rapidly extended. Thus in 1938-39 the area in Telangana districts was 6, 27,583 acres. In each and every district of the state there is a trend towards an increase in average every year.¹⁸ The penetration of the market economy on a wider scale can be considered the most significant change in the agrarian economy during period.¹⁹

At first the commercialization of agriculture started in Marathwada region of Hyderabad Dominions which gave encouragement for the development of trade and commerce. But in telangana it started lately consequently it backward in industrialization also. Because in the early industries of the dominions 65 were established in Telangana region out of total 188 industries and factories.²⁰

Hundreds of thousands of acres of land were left fallow, or were used as pasture for cattle, until a number of new crops were introduced. Castor had already been cultivated on a limited

scale Nalgonda district and then expanded greatly. It was followed by til and most important of all groundnuts. Two things made them very important. Firstly they could thrive on the poor soil of Telangana with minimum attention. Secondly they were oil seeds not only in demand locally but even more so from the industrial metropolitan countries. In some instances these countries actively sponsored the cultivation of groundnut in their colonies, the French in Senegal later on the British in Tanzania. Responding to demand from metropolitan capital, cultivation of these crops in Hyderabad ahead. By 1940 the castor acreage of Hyderabad was 54.3% of the total Indian area. The comparable figures for groundnut and sesame were 15.8% and 13.5% respectively.²¹ There was a higher price for exported crops in 1937 for castor it was 5 rupees 6 paise amount, as against a local price of 4 rupees 10 paise. Comparative prices also partially explain the rapid adoption of groundnut in 1936. For example the average market price per unit of ground nut was approximately twice that of Jawar while castor was only about 25% greater.²² The rapid expansion of the cultivation of commercial oil seeds did more than make Telangana and the 'hole of the state that much more sensitive to shifts in the 'world economy. It also changed the balance of forces inside Telangana itself²³

The traditional commercial crop had been tobacco and chillies grown on areas of black soil. In Telangana these soils were not usually cultivated by the local people as they did not usually possess large enough drought cattle to work for the land. Peasants from the Krishna and Guntur districts of the coastal Andhra area, then part of Madras Presidency in British India were encouraged by the Hyderabad government to come and cultivate these lands. The Charminar cigarette factory in Hyderabad used local tobacco and loaned fertilizer to peasants growing tobacco on a guaranteed return.²⁴ Peasants that come from Coastal and Rayalaseema districts or Madras Presidency to populate the waste and cultivated lands in Warangal district and other border areas of the state rendered original and significant contribution to the introduction of commercial crops in the region, where as the Rayalaseema peasants introduced the cultivation of the most important cash crops of Telangana in the shape of ground nut those from Krishna and Guntur

districts were responsible for the starting of the cultivation on tobacco, chillies and the all important sugarcane. Though non-food crops had formed roughly one third the net sown area, yet they brought revolutionary transformation in the agricultural economy of the area. for the exportable surplus was yielded by them.²⁵

It was the spreading of commercial agriculture especially the cultivation of oil seeds for catering principally to the needs of the industrial west and exporting the bulk to Britain and United States. Aided by the states providing for the infrastructural facilities and supported by the export demand for the produce, the cash crops incorporated the rural economy of the Telangana into the world market. The profitable price of the oilseeds encouraged almost everybody to take to their cultivation and it brought certain uneven changes in the overall cropping pattern, acreage and output. Recent studies however have failed to establish clearly any direct relationship between movements of prices and the growth rates in acreage and output either across crops or across different periods. While in the worst days of falling prices, at the time of the great depression, the acreage and output seemed even to have increased, the price recovery in the post.²⁶ Depression period, or its sky rocketing during the inflationary war years, did not contrarily show their significant growth. The peasants tried to make good and drastic gain in their income by producing a larger quantity than before but the advantages of the price recovery had not accrued to them, mainly on account of a built in pressure to sell the produce soon after its harvesting at a low price. The pressure accentuates, ironically, with the expansion of the market economy under which the landlords, the traditional grabbers of lands on any pretext grabbed more and more lands. For agriculturists, agriculture is the only profession. Hence they have to do the agriculture irrespective of the market prices. When the rural India dragged into the national international markets in variably its impact fell on the rural agriculture. The fall in prices affected practically everyone, especially those peasants who did cultivation in own land. Even though they would be producing primarily to meet their own consumption needs because the land revenue demand was in cash they had to market a proportion of their crop.²⁷ Groundnut, the one major crop not on the table fared worst of all.

In this period its price fell by 68.5% being affected by additional measures such as import controls in Germany and heavy import duties imposed on groundnut by France for imports from anywhere except French colonies. The Hyderabad government in May 1931 removed the export duty on vegetable oils which gave such an impetus to the oil-seed crushing industry that the export of oil increased by 300%.²⁸ But this proved temporary and the re-imposition of a duty of 0.5 Re/- per palia of 120 seers from April, 1935 led to decrease in export of oil since then.²⁹ Both imports and exports fell considerably to the effect that the total trade of the state suffered a net decrease of 34% compared to the previous year.³⁰ The commencement of the First World War caused much distortion in the trade of the state.³¹

Agro climatic conditions and crop variations partly explain the unevenness. But even the same crop with similar agroclimatic conditions did not seem to have generated similar social effects. Groundnut a crop that otherwise serves as an illustration of the process of commercialization, for instance, did not generate the same effects in Raichur, Karnatic which topped in its cultivation and in Telangana districts where jagirdars, deshmukhs and other landlords were dominant. Similarly with in Telangana in the region north of river Godavari in Adilabad where there were no jagirdars, the conditions were different despite the introduction of cotton. Thus there was unevenness in the penetration of the commodity economy both in extent and quality.³² The notorious deshmukhs of Telangana belonged to the category of big landlords who exercised a good bit of red sovereignty subordinating every person and every process to the supreme purpose of his maximum net income.³³

Thus bondage, customary services, tenancy, indebtedness and land alienation were all intensified by the growth of commoditization. But the genesis lies in the commercialization itself but in the social organization where traditional landowning classes to the end were defended by the state.³⁴ Land alienation increased considerably between 1910 and 1940 particularly during the depression, when many lands previously owned by tribal peasants passed in to the hands of non cultivating urban

interests, mostly Brahmins, marwadis, komtis and Muslims. Economic surveys carried out in 1928-30 showed that in Warangal district alone 9 percent of the total land and 25 percent of the irrigated land had changed hands. Most of the land thus transferred went either to big landlords and Deshmukhs or to soucars, traders and non cultivating pattadars who dominated the economic life of the district. As a result of growing land alienation many actual occupants or cultivators were being reduced to tenants-at-will, share croppers or landless labourers. Therefore the proportion of non-cultivating occupants and cultivators of land unowned began to decline. Owner cultivators and agricultural labour person steadily increased in number in Hyderabad state as a whole.³⁵ Absentee landlords were much there through their number was declining after 1930. Nor did it signify a fundamental change in the modes and relations of production. In fact where rich pattadars held holdings too large to manage they tended to keep a certain amount of irrigated land to be cultivated with the help of hired labour and turned over most of their dry lands either to bhagela serfs or to tenant cultivators or high produce rents.³⁶

The growth of market economy was one of the factors that led to an increase in the area under cultivation but the increase led to an increase in demand for cultivators and labourers. As a consequence tenancy increased.³⁷ In the surveyed villages of 1929-30 was about 76% and by the time of second inquiry in 1949-51 it had become 78% even more the proportion of landless tenants increased sharply from about 32% to 47% during the same period. The extension of the cultivation of commercial crops made it possible for the deshmukhs and jagirdars to be more than landowners who supplemented their income through rent-receiving, revenue collection and money lending. Now participation in the world market meant that they could use the vast areas of un-irrigated land to grow groundnut which yielded them a substantial surplus. This relative productivity of groundnut also induced almost every other kind of cultivator to move into its cultivation either for increasing personal consumption, or the payment of debts or revenue.³⁸

INTERNET INITIATIVE IN RURAL TAMIL NADU: A STUDY ON SUSTAINABLE ACCESS IN RURAL INDIA (SARI)

Beulah Rachel Rajarathnamani

Introduction

Information and Communication technologies (ICTs) have become vital to the development of rural India. In India, the rural areas mostly lag behind the urban areas in education, health and infrastructure. This leads to inequality of services and opportunities for the rural population that halts them from contributing to the development of the country.

This rural isolation can negatively affect growth and sustainable development of the country. ICTs offer several strategies to achieve sustainable rural development. ICTs have been instrumental in empowering rural India with technologies, which help to reach the goals for sustainable development.

With ICTs, people in rural areas can connect easily with the local, regional and

national economies. They can access various job opportunities which would otherwise be beyond their reach. ICTs can help to create awareness among the rural public regarding new technologies in agriculture and in other sectors. The various ICTs can help to spread education among the rural masses and help them to connect easily with their urban peers¹. Thus, ICTs can help to bring the rural population to the forefront. Among the initiatives in ICTs in developing countries, telecenters occupy a prominent place. These centers provide shared public access to information and communication technologies and services through computers and internet. Such projects have been launched in rural areas with the aim of providing these services to the rural population. Telecenters or kiosks have generally been defined as places or centers that provide shared public access to information and communications technologies for meeting the educational, social, personal, economic, and entertainment needs of the community².

Sustainable Access in Rural India (SARI)

The highly acclaimed Sustainable Access in Rural India (SARI) project, emerged as a pioneering initiative in providing information and communication services to the rural communities through internet kiosks in Tamil Nadu in Nov. 2001. The project was implemented in Madurai district of Tamil Nadu. The SARI project uses the word kiosks for the places where the computers and internet facilities are available. The kiosks were located in villages of Melur Taluk in Madurai district. Melur was predominantly an agricultural *taluk* of Madurai district. The project had stated its mission as: To improve the quality of life among the rural poor by creating new opportunities in education, health, economic development and community through computers and internet³.

The SARI project is a collaborative research venture that included several organizations: the Indian Institute of Technology (I.I.T.), Madras; Berkman Center for Internet and Society, Harvard Law School; Georgia Institute of Technology; I-Gyan Foundation; and n-Logue Communications Pvt. Ltd. It used a Wireless-in-Local Loop (WLL) technology to provide internet connectivity to rural villages. Internet connectivity was offered to the local community through kiosks, which were run as self-sustained

businesses with cost recovery through service charges. A majority of the kiosks were locally owned and operated by self-employed entrepreneurs, while some were operated by self-help groups from a local non-governmental organization. Technical support for all the kiosks was provided by n-Logue Communications and Dhan was the local implementation agency⁴.

Services

SARI was started to aid the economic and social development of rural communities by fulfilling their information and communication needs. The project set up village information kiosks with computers and internet connectivity to offer various services to the local community. Collaborative efforts with agricultural colleges, enabled the provision of health services and advice on agricultural issues, while government offices in Melur helped with the provision of e-governance. E-mail, voice mail, video conferencing, booking of tickets, online education programs, job searches and placing of classified advertisements were the other services offered. While the provision of the various services at the kiosks was to overcome the limitations of distance from government offices, it was also an attempt to create a market for these services to ensure that the project was a financially sustainable, even profitable, endeavor⁵.

The kiosks or telecentres provided services that included internet content in the local language Tamil in these areas. The services were based on a self-sustaining commercial model with the charges ranging from Rs. 10 for sending an email to Rs. 100 for one hour of basic computer education everyday for one month. To deliver these services, the project had developed partnerships with several public and private agencies. These include tie-ups with the state government to provide e-government services, with the Tamil Nadu Agricultural and Veterinary University for providing agricultural and veterinary services, and with partnership with the Aravind Eye Hospital, which was a private eye hospital in Madurai, for providing eye check-ups⁶.

The services mentioned on the SARI e-governance website⁷ at the start of the project included: 1.Provision of information regarding government schemes, including: eligibility

criteria and procedures for applying to Old Age Pension (OAP) schemes, women's welfare schemes, loans from the District Industries Centre, and admission to courses in government colleges, as well as; application forms for schemes. (These could be downloaded, filled in, and printed for submission. Some applications could also be e-mailed to the appropriate officer.) 2. Facility to apply for government certificates by e-mail. This involved the following government offices and certificates: The *taluk* office for birth, death, income, community, nativity, and legal heirship certificates, as well as: the sub-registrar's office for guideline valuation of property, encumbrance certificates, and certified copies. 3. Facility to e-mail petitions and complaints to the chief minister, collector, and block development officer.

The major e-government services that the kiosks have offered include applying for birth, death, community, and income certificates, old age pensions, and sending general grievance petitions to government officials. They have specifically targeted at applications for birth and death certificates, as these were the services approved by the state government to be offered through kiosks.⁸

Kiosk Operators (KOs)

The kiosks were run by kiosk operators (KOs). The role of the KOs is to interact with the village residents. The kiosks also had "IT groups" and "kiosk advisory committees" (KACs). IT groups consisted of five young people from a village who came from low-income families, had studied up to class 10, and were looking for work. Free hardware and software training was provided to this group, teaching group members to assemble computers, and in a few cases, to take over the operations of a kiosk. The KACs comprised village *panchayat* leaders, village-level bureaucrats, and representatives from village associations. The goal of KACs was to establish the kiosk as a community asset, rather than as a solely commercial enterprise. KOs had to organize a KAC meeting every month with this objective in mind. KOs interacted with government employees mainly to obtain documents such as birth or death certificates, and ration card applications. Besides government officials, KOs also interacted with agricultural or veterinary scientists and lawyers when they organized consultations through

teleconferencing at kiosks. They interacted with doctors and nurses as they organized patient appointments using e-mail, and also later, when they followed up to ascertain whether kiosk users kept these appointments. At times, KOs would accompany a group of patients to the hospital for treatment in case the patients were unable to travel by themselves or had no one else to accompany them to the hospital⁹.

Women KOs

The SARI project provided women KOs a space to engage in activities that went beyond their traditional roles in their community. When the project started to recruit women KOs many families were not enthusiastic about this idea, because it would involve women travelling out of the villages where they lived, for a short-term KO training, to begin with, and later, every day for work. As a result, not even half the operators were women at the start of the project. However, with time, more women joined as operators. There were many reasons why more women joined as operators with time. Dhan, the local implementation agency personnel made an aggressive effort to recruit more women by talking to their families. The presence of a few women operators also convinced other women and their families that being a KO was safe. In fact, women KOs acted as role models for other women. Additionally, the long drought in the Madurai belt during the period between 2001 and 2004 meant that women did not have much work in their fields and had time on their hands. For all these reasons, by 2004, the majority of Dhan-SARI KOs were women¹⁰.

Being a KO significantly changed a woman's status in her village community. Women operators gradually began to be seen as role models in their villages. This changed the way an individual was viewed by her community, and this led to a significant shift for women KOs. There was an economic dimension to this change. Women operators had an income. Women KOs have been able to use the economic and social resources available to them in their everyday lives. They interacted with government officials for e-governance services and marketed their services to customers that in turn increased their social status. In particular, they were proud to be role models for young girls and women in their villages. Being a KO became a more acceptable option for a woman than it

was at the inception of the project. Frequent meetings also gave the KOs an opportunity to meet people and express their opinions among people outside the family, which many women found as a new and rewarding experience¹¹. Thus, being a KO brought about significant changes in the lives of women both in their families and communities.

SARI enabled the village community to receive services in their own village. The hardships of long travel due to the distance between the village and the government offices or computer-training centres was no more an issue. The provision of these services at village level not only reduced the cost for the rural people, but also made it more convenient. Kiosks provided access to these services especially to the girls and women closer to their homes. It also improved the delivery of government services. These services were provided at an affordable cost. Basic computer education, international telephone call, e-government services were available at a lesser price in the kiosks. Online information about higher educational opportunities were available to the local youth. Through the basic computer education provided by the kiosks to the local youth, there were opening up of new employment opportunities to them¹².

Conclusion

Sustainable Access to Rural India (SARI) led to meaningful social, governance, and economic changes in the rural communities. It lowered the cost of some services and facilitated easy access to online information about educational and employment opportunities to the local youth. They had also provided direct self-employment opportunity to at least one local youth (kiosk operator) who was mostly a woman. Through low cost computer education, they had led to enhancement of skills of the local youth that had opened up new educational and employment opportunities for them. The goal of access to information brought about economic prosperity for kiosk users in the village community. The experience gained from SARI helped the different stakeholders to better understand problems and find solutions in upcoming ventures of similar kinds. Therefore, SARI was one of the forerunner that provided information and communication services to the rural communities through internet centers in rural Tamil Nadu. It opened up windows for many such initiatives in the future in rural Tamil Nadu that benefited the rural community as a whole.

MAPPING THE ROOTS OF UNORGANISED SECTOR- PERSPECTIVES ON WOMEN AND WORK IN EARLY SOUTH INDIA

V. Chitra

Men and women are engaged in work. Majority of women in Every Country and in all ages have been usually been workers. The difference lays in the kinds of work they do, where, how, under what terms – all these are determined by women's position in society. Their participation as workers has always been necessary for social and economic development. In all societies, they were involved in household activities such as Child rearing, Cooking, Cleaning, fetching water and fuel, care of the elderly and sick. Women have worked outside the home as well. Women's work within the household was seen as their 'duty' rather than as work, while their work outside the house hold was sporadic, ill paid and not part of the formal sector or unorganized of 'wage-earning' labour. Enforced invisibility within the patriarchal spaces can only be contested through a study of women unrecorded presence in the household economy as well as in the broader domain of production. By 'work' we imply broadly 'Economic activity' then women have always worked.

This study is an effort to understand 'being' and 'doing' of women to map the interweaving of women and work over a historical span of time in Early south India. To gain knowledge of the present, one has to look at the past. It is broad mapping of what has been perceived as women's work from early Christian era correspondingly roughly to the period of Sangam literature in South India. By and large, the Early Sangam Literature provided a through light on the economy and participation of woman in it and description of the countryside and rural economy.

The phenomenon of various forms of unorganised sector has a long history of its existence. It is common concept which has got its origin in social structure of ancient civilization. The civilization has its birth on the banks of river valleys and there first to develop a degree of economic stratification based on land ownership. Early Tamilaham was divided on different regions on the basis of terrain and ecology. The social order of the people was based either on the region in which they lived or on the occupation which they had adopted. Sangam

society was stratified in terms of occupational difference but there were no caste hierarchies.

The primary economic domains within which this study is located constitutes the primary sectors of Economy such as Women and Farm work, Woman in dairy farming and woman in crafts especially the textile sectors. All these activities they could be seen as women's work fell under the two seminal categories as 'Domestic work' and non-domestic 'paid' work. However, with the growth of townships, women's share in the economy went down since women were peripheral in the context of both commerce and crafts.

The study will concentrate only on the core area of work and will study the role of women in production and overall economy. All these activities, while they could be seen as women's work within the household included such activities such as spinning apart from cooking, child rearing and home economics.

Women and Farm work

In Early south India, during the Sangam age, Agriculture was the main occupation of the Tamils. Agriculturists had maintained a respectable status among the people. Agriculture alone can save the mankind from the pangs of hunger and hence almost all the people have to depend both directly and indirectly on agriculturist. Generally, the agriculturists alone can be generous as they have a good stock of grains always with them. In the beginning the people cultivated some varieties of paddy and other grains such as millets. The yield of grains helped the people to be self-sufficient in food, the vital need; and the surplus grains helped them to get sufficient money for their necessary expenses and also improved their economic condition the country. Women seem to have been co-sharers with men both in domestic and public sphere. Gradually, the methods of cultivation had improved and it had become well development.

Women workers are found in agricultural sector. They are predominant in this sector because they only work that they are can find is 'informal' in nature. Women are engaged in

farming sector. More than 60 percent of the agricultural operations were in hands of women. They women played a predominate role in Hoe cultivation. Women also participated equally with men in the work of irrigation and harvesting. The sangam texts provide us with several instances of women's participation in the rural economy, like Agriculture. Weeding and Planting, Guarding of the crops, husking and winnowing and pounding were women's tasks. Women also participated equally with men in the work of irrigation and harvesting. The farmer was called as 'Uzhavan' literally means 'one who ploughs' and 'Uzhatti' feminine form of ulavan. The Natrinai poem describes the 'Uzhavan' and 'Uzhatti', the farming couple, leaving for the fields at dawn, after a simple meal of rice gruel with fish. However the term 'uzhatti' was not applied exclusively to the farming wife but also to a working woman as an agricultural labourer.¹

Women seem to have been seminal to agrarian economy as well whether the system was one of the shifting cultivation involving of hoe or one of settled plough cultivation. Weeding of plants and cleaning the fields and seed planting, guarding of crops, husking and winnowing of paddy were all economic activities done entirely by women. Besides these task performed exclusively by women, they were co-shares with men in the tasks of both irrigation and harvesting. The evidence of sangam literature regarding these specific agricultural functions of women is borne out by the game of folk songs, linked to each of these activities.

The technological transition from hoe agriculture to plough agriculture has been recorded as an important marker in changing gender balance within the agricultural domain in the context of traditional economies². The hilly and coastal regions of Tamilaham do not subscribe to the transition pattern outlined in these historical blocks. This indicate a gradual transition from a society where a women were co- shares with men in most farming activities to a patriarchal society in which women were beginning to be marginalized. The predominance of plough agriculture or settled cultivation and gradual displacement of shifting cultivation based on the hoe in which women were active participants, resulted in gradual emergence of a patriarchal caste based society. The increasingly significant concepts of purity

and pollution meant that women should not be allowed to hand the 'sacred' plough. Women therefore came to be called 'Kalam thoda magalir' literally 'Women who do not touch the plough'³ There is also no evidence in any sangam text that women handled the plough. Probably it was too heavy and not because of any ritual taboo.

Tamil folk songs of women, provide a major source of provide a major source of alternative history in reconstructing the lives of women in Economy and Tamil society. Interestingly woman's farming songs are also found in Sangam literature itself. The folk song genre in women's work situations constitutes an important sources for mapping the women's farm related work. The Malaipadukadam and kurunthogai refer to the women pounding the grain rhythmically to the accomplishment of a song. This genre is called *vallai pattu*.⁴ These folk songs specifically reflect the predicament of low caste or destitute women who had to labour for their survival. The 'Natra padal'[seed planting song] and 'Etra padal'[water lifting songs] are still to be heard in tamilnadu in reconstructing the history of women and work. These songs can become a major source of alternate history because most agricultural songs relate to women from the lower strata of society. In terms of the class structure identifiable in the majority of these work songs as clearly ' lower class' and this genre becomes crucial to the study of women's labour history. These women lacked access to the means of creating, disseminating or preserving their own history. The construction of woman as mother, wife and housewife was the trick by which 50 percent of human labour was defined as a free resources.it was female labour. In contrast, the work songs literally 'tozhil paadal' which would include voice of both lower caste and destitute upper caste women which are a part of Tamil folk tradition, provide us with a grassroots perception of women's place in historical societies and perceived by women themselves⁵

Over a period of 400 years, from the late sangam age to the beginnings of state formation under Pallava and Chola rulers, the peninsular regions witnessed major developments such as royal donations of brahmadaya lands to non-cultivating Brahmins and lands to military chief under chola dynasty. The movement of Tamil

society from a loosely stratified clan and kinship labour based production system to a much more economically stratified and socially and ritually hierarchical society, dominated by brahmanical ideology and brahmadeya land systems, resulted in a new production system. This shift had a major impact on the position of women and social perceptions of their labour. From being co-shares in farm work women came to be perceived as domestic subordinated. The new cultural marker in society celebrated the 'subordinated labour' of the woman as evidence of her virtuous commitment to her hearth, husband and children while rendering invisible her work – participation in the home. Increasingly, the upper caste women came to be confined to their domestic chores and extolled in their re-productive functions as producers of males.

The differential impact of these changes on lower caste women, the 'Kadaiyar' like 'Pallar' is striking. While undervaluing their labour, it brought them into the public domain as 'waged workers'. It seems likely that some of women's farm related activities such as irrigating the fields, harvesting crops and the pounding of grain to the rhythmic music of the vallai pattu may have changed from unwaged to waged labour in the case of lower caste women from the medieval period onwards. While pounding of grain may have constituted a part of the domestic duties of women whether upper or lower caste it is likely to become a paid profession for low caste sometime in the medieval period.

Women and Work in the Non-Farm Agricultural sector

Cattle rearing and Dairy farming

The Mullai- tinai or eco zone represented the pastoral region with deep forestation. The economy of the region was predominately based on cattle rearing and dairy farming. Women played a crucial role in the pastoral economy. Cattle are closely connected with agriculture. Bulls and buffaloes are much needed for agriculture. Cattle rearing were considered as an essential occupation. Besides this, the milk and milk-products are used as food. So cattle rearing are very essential to any country. In those days there were separate classes of people called as 'ayar', 'itaiyar'. The main occupation was dairy farming and other allied works which provided

their livelihood. The predominance of women's in the production and sale of dairy products goes back a long way in tamil culture. The shepherdess in the Tamil country is known by names such as '*Aaichchi*', '*Kovichchi*', '*Idachchi*' etc. Besides, dairy farming, various kinds of pulses and staple foods like rye were grown in the Mullai tract. In Sangam period, poetry of the Mullai[pastoral] tinai, consists of extensive imageries pertaining to women churning buttermilk, milking cows, and selling curds and butter. Starting her day at dawn, she churns the curds to take out butter. Then, she sells the buttermilk from door to door in the Kurniji and Marudam regions, and with the money she gets, she buys food grains and other necessities. Women were therefore key participants in the rural barter economy. The process of setting curds by curdling the milk is used as a simile in the Purananuru where it says like the curd being squirted into a pot of milk from the fingers of tired shepardess.⁶ In the perumpanattrupadai it is said that the 'aaichchi' is not satisfied with the gold she saves up from her dairy sales but uses the 'capital' to buy a goat, milch buffalo, a good cow, and a black buffalo in order to expand her business. The term 'mudal' which literally translates as 'capital' and it indicate that some women went beyond simple barter and actually set up business.⁷ In the religious literature of the early medieval period, the image of shepherdess figures very strongly. In the tiruppavai of the woman saint Andal 7th century the picture of the dusky shepherdess, with her heavy chains and clinking bracelets, churning the curds at dawn, occurs repeatedly. Andal's home was tirumullaivayil which was a pastoral zone specializing in dairy products. There are reference in pattinapalai mentioned lord Krishna is mentioned as Gopalan or 'Mayon'. The centrality of the 'milkmaids' who milked the cows, churned buttermilk and sold their products such as milk, curds and butter, is bound up with the medieval movements. The sale of milk and milk products helped the people improve their economic condition of life. However, the nature of pastoral women's share in the overall medieval economy is more difficult to determine. European sources for the medieval period suggest that due to Proximity of the pastoral and agricultural tracts, the women from poor peasant families often hired themselves out as servants in the dairy sector in the emerging European towns.

As the housewife became free from labour in the larger dairy farms, milking, cheese making, and butter making became the work of hired women workers.

Salt Industry

Using the available natural resources Women living in the coastal region were engaged in producing salt though it did not fetch them much profit. They traditionally played an active role in salt panning and sale of salt. Women engaged in salt production and sales were known as 'Umanapendir'. The *perumpanatruppadai* describes how the Umanar couple extracted the salt, loaded it, on carts, and sold it in the neighboring eco – regions. The *umanapendir* also hawked the head leads of salt from door to door getting in exchange paddy and other essentials. If the necessity of the commodity be considered, the salt should cost more but due to the availability in abundance and the low cost of production, it was very cheap and the producer got only a marginal income.

Fishery

Fisheries are another economic sphere in which women played a major role in traditional society. In early Tamilaham, women played a key role in fishing and in hawking the fish. Fishing was an important occupation as it yielded much profit. People who were engaged in fishing were called as 'Minavar'. They used fishing-rod with the line and net for the purpose. The fishes were sold mostly on the spot (Seashore) and then taken to the interior parts of the country. The *paradavar* women caught and sold fish. Young girls of this community kept watch over the fish drying in the sun. The Sangam text *Ahananuru* refers to these women as 'Panimagal', literally 'working women' and says that they sat in street corners selling fish. This suggested that the more affluent fisher folk may have hired women to carry out the actual task of hawking the fish. There are also references to fisherwomen exchanging fish for paddy from the *Marudam Tinai*. However, they earned much by fishing and it was also an important occupation.

Handloom sector

Weaving has been the male preserve in most traditional Indian societies. There is no doubt that a remarkable measure of skill in weaving had been achieved by the Tamils of the

Sangam age. Spinning has been exclusively women work. Women spinning thread must have been a common sight in the region. Women did the spinning within their domestic space and then either sold them directly at the local fairs or delivered them to the middlemen who collected the spun yarn from them. The sangam literature refers to spinner as 'Parutti pendugal', literally 'the spinning women'. Spinning was particularly were the occupation of widows, single women. Interestingly, those categories of women who had to sustain themselves through their own earnings. The *purananuru*, a sangam text datable between third century BCE to uses to expression; 'Parutti Pendir Paruvalenna' for the thread spun by spinsters and says that spinsters spun late into the night with the aid of the lamp⁸ spinning was by and large a part of informal sector of the economy. Another text *Nattriniai* referring to widows / spinstars as 'alil pendir' which means 'women without men' says that they spun fine yarn. Spinning continued to be the exclusive professional preserve women during the medieval period. There are miniatures depicts, while the farmers ploughed the field, their wives spun thread. There are references in sangam texts and early texts that apart from bleaching woven cloth, the washer men washed the clothes of people and presumably were paid for it. It is clear that the washing of clothes was a paid service but there is no indication of what was the nature and mode of payment. There are hardly any historical references for this. One can logically assume that like other menials and profession of village community they were being paid from the grains. Decorative motifs adorned the clothes and the dyeing also was prominent. In the handloom sector, the bleaching and washing of cloth has been predominately women's activity. The washerwomen came from the lowest caste and were called 'pulatti'. Washing of clothes was done by both men and women of pulaya caste. While the overall number of women weavers Vis-a Vis men, remains ambiguous. Spinning needed much patience and hence it was generally entrusted with womenfolk, especially widows as they could be from other domestic cares. The women continued spinning even late at night in the faint light of the oil lamps. All these things show that the women engaged in spinning and weaving of cotton and silk which were profitable.

Women in Crafts: Pottery, Basketry, Mat weaving, and Garlands

Basket making and Mat weaving have been traditionally associated with women. Both are part of cottage industries and are very poorly paid profession. In the kalittogai roughly datable to 6th century it is said that besides washing it was the work of the pulatti to make baskets out of 'korai' weeds. In the inscription there are references to 'medari' meaning female basket weaver'. In the Karnataka and Andhra region the basket weavers belonged to medara caste⁹. Basketry is the auxiliary craft of the parava[fisherwomen]. The sangam texts refers to many crafted items made out of Netti including hair decoration and garlands. The silapaddikaram refers to the Netti work done in Pumpuhar and the sale of Netti products in the markets of pumpuhar. Although the text does not specifically mention the state of women, evidence indicates that while the production was dominated by women, their labour was informal and extremely underpaid, compounded by economic and sexual exploitation. Garland making and flower selling was continues to be predominately women's occupations. The Ahananuru says that vettuva [feminine of vedar, hill tribe] girls gathered the flowers in bamboo pipes and went to the villages to sell them.

Maids and Menials

There are references to low caste women employed as domestic workers are fewer in the sangam period, because the texts mention the poorer classes and low castes as ' kadaiyar and kadaisiyar' there is no clear evidence that they worked as domestic labour. This can only be logically inferred from sangam text 'Mullaipattu' which refer to the employment of girls for lighting of huge lamps and for serving as hand maidens in war camps. Maid in the capacity of female attendants or companions do figure in a number of sangam texts. Women also worked as construction labour. One chola inscription from tiruvamattur says that at a site where there were both male and female labourers , the women were to be paid half of what the men got¹⁰ the record specifies the work as lifting water from ponds and canals and irrigating the gardens and fields and also gathering flowers and making garlands . For all such labour the male workers were to be paid only eight nazhis per day while

the woman workers were to be paid only four nazhis.

Conclusion

Woman, as a biological and social category, have been on the margins of history for centuries and correlation between women and work is its most neglected segment. Women's labour , by and large being considered informal, was neither recognized nor recorded, not just by men but perhaps also by women themselves. Working and living condition are inseparable for the women working in the unorganised sector.

These women lacked access to means of creating, disseminating or preserving their own history. There is a complete absence of woman's voice in most of the literature, within which one can locate the majority of woman working within domestic spaces and secluded from public space. All these activities, while they could be as seen as women's work fell under the two seminal categories of domestic work and non – domestic 'paid' work. The everyday life effectively robs women of any real agency of understanding and thereby transforming their world.

Panoramic survey of women and work in peninsular history should be seen as initial step towards a much more ambitious feminist enterprise. The primary endeavor has been to available data on women's work both paid and unpaid, both visible and less –visible in order to highlight south Indian women's contribution to work domain and indicate directions of movement and changes in women's work or labour history.

The sangam literature presents a panoramic view of the articles introduced or used in the trade with barter system. It portray the boats came off with paddy got in barter of salt and tied to the poles pitched in the back waters. The exchange of essential commodities such as paddy, salt, vegetables, etc on barter basis'was common in those days' especially in villages. Women sold the commodities produced by them to others in the neighbourhood and occasionally to those at the distance.

Nevertheless plating seeds, guarding crops, husking paddy and pounding grain have been exclusively women's occupations since sangam times. In the context of the representation of

women in early historic period, historians often throw light upon the economic roles of women through specific perspectives. The women workers are confined to certain categories as hired labourers, domestic servants, singers and dancers, who are identified as women earning their livelihood. On the other hand, the familial roles of women are valorized and their domestic labour is never translated into economic terms. The interplay of women, work has been studied

by historians, with the respect to engagement of women in economic processes, it has been argued that women of rural classes participate actively in economic activities along with their men, while women in urban societies are less likely seem to be involved in economic role. Till now scholars have mainly confined themselves to viewing the relation of women and work in specific paradigms.

FAMILY BANKING FIRMS IN HYDERABAD STATE – A HISTORICAL STUDY

G. Dayakar

Introduction

The bankers were closely and constantly involved with high-ranking officials, revenue – farming *talukdars* and the leaders of military troops. In the first half of the nineteenth century, Government Officials and banking firms did not keep separate, independent records of the firms' loans to the government; the banking firms kept these records, which might be copied or summarized by government clerks¹. A Government Official signed the banking firm's records and these were used by the government when necessary².

Chandu Lal, the Prime Minister of Nizam get funds from the private family firms in the first decade of the nineteenth century. He maintained good relation with family firms in Hyderabad State. The local bankers financed the government activities and personnel. Makhdum Seth, belongs to the Begum Bazar of Hyderabad headed one firm. Seth Kishen Das belongs to Karwan was opened another firm. The Marwari

firm was opened by Mahanand Ram Puran Mal. He access to the Nizam court and received as *Jagir* of Sitaram Bagh Temple. Maheshwari Marwari firm was established by Surat Ram Govind Ram. He belongs to a Gosain family of Begum Bazar. The Oswal Jain Marwari Firm was started by Umrasi Sajan Mal. All these bankers associated with the Chandu La I the *Dewan* of Hyderabad State³.

The great firms of 19th century Hyderabad belonged to three major communities such as Gujarati, Gosain and Marwari. Gujarati merchants and bankers were settled at Karwan in 17th century during Qutb Shahi rule. The Gosains came from Central India and settled in different district of Hyderabad State during first Nizam rule and resided at Begum Bazar. The Marwari, Oswals, and Maheshwaris came prior to Agarwals. Marwaris settled in Begum Bazar. Others were settled in the Residency Bazars in the Secunderabad Cantonment area, under the Jurisdiction of British. The residences of bankers

and merchants and military men intermingled throughout that suburb⁴.

Europeans, Eurasians and Persis were actively involved in the banking activities in Hyderabad State. The Palmer and Company had close relations with the Gujarati bankers. Henry Dighton, a clerk of the Palmers who was a British subject, later functioned as leading banker and revenue contractor in Hyderabad State. Kishen Das, the Gujarati banker and Dighton were partners at one time, but they split; in 1841 Kishen Das' s districts were reclaimed and turned over to Dighton, causing a bitter dispute. The Pestonji Viccajee firm, headed by Persi brothers from Bombay who were British subjects, was a major creditor of Hyderabad for a decade following Pestonji Mirji's introduction to Chandu Lal in 1835. The Palmer and Dighton lived near the Residency⁵, and Pestonji first took over the Kothi of the Muslim firm of Makhdhum Seth and then built his own and impressive Kothi in the Residency area. The important communities were involved in the banking activities in the State was:

Gajuaratis

The leading Hindu bankers in Hyderabad State were initially Gajuaratis settled in Aurangabad and in Karwan. Early members of the Gujarati banking family of Benkati Das Bhagwan Das moved from Aurangabad, settled in Karwan and maintained a garden between Begum Bazar and Karwan⁶. The Govardhan Das Bagh was an important Bagh between Golconda Fort and the city of Hyderabad. Salabat Jung an effective ruler from 1750 to 1761 left Hyderabad and stayed in the garden in 1756, he also stayed in the garden and left it for Golconda fort in 1760. Nizam Ali Khan left Hyderabad and went to the camp at Govardhan Das garden in 1764. Bokhan Das, a Gujarati name and perhaps a mistake for Govardhan Das, was appointed Khazanchi (Treasurer of the State). Nizam also Khan marched to the garden and camped there in 1776 and 1777, and the army marched and camped near the Garden of the math of Govardhan Das in 1782. Finally, when Sikandar Jah assumed the throne as Nizam III in 1803, his flag was hoisted there. The Benkati Das Bhagwan Das family also established a Gokulnathji Temple in Karwan and in the early nineteenth century and affine of this family functioned as *kotwal* or mediator for all Gujaratis

in Karwan. Karwan was dominated by Gujaratis, although other was also settled there. Benkati Das became a partner of Palmer and Company, from about 1810, and William Rumbold also became a partner of the firm, after 1816. It is Benkati Das descendants who represent this famous firm in Hyderabad during that period⁷. They preserved not only an original partnership agreement with Benkati Das signature in Hindi script but also, in their puja room, William Palmer's silver sugar bowl and creamer, which bear his name and the date 1817.

Goswamis

Goswami Rajas, Dhanraj Girji and Chandrakant Gir, were invited to the 1967 coronation of Mukarram Jah, heir of the Mir Osman Ali Khan. These two banking firms loaned money to the Nizam and other nobles in Hyderabad but helped to finance the Nizam's State Railway from the 1870s. Certainly, the wealthiest Goswami Dhahda in twentieth century Hyderabad was led by Narsing Girji and then Dhanraj Girji, the math headed by Umrao Gir in the 1840s and 1850s and linked to maths in Sholapur and Poona. The competed *dhada* was led by Raja Birbhan Gir⁸, these two *dhadas* competed with each other not only in Begum Bazar but in the wider public or civic arenas of early twentieth century in Hyderabad. Thus, in late 1926, Raja Pratap Gir built a sports pavilion near the Chaderghat Bridge in memory of Raja Narsing Gir, and it was declared open by the British Resident, with the Prime Minister Maharaja Kishen Pershad and other high officials in attendance. In early 1927, Raja Birbhan Gir donated a house of his at Residency Bazar to the Marwari Hindi *Pathshala*, and the same time, Raja Dhanraj Gir granted Rs. 8,000 for the construction of a public library at the Reddy Boarding House⁹. These Goswami Rajas played an important role in the administration of Hyderabad State.

Marwaris

The Marwari Agarwal firm of Mahanand Ram Puran Mal is an important firm in the Hyderabad State. Mahanand Ram, was the founder of the banking firm in Hyderabad State. He migrated from Ganeri and Lakshmangadh, Rajasthan in 1791, settled at Begum Bazar in Hyderabad in 1802. Begum Bazar was described in the 1830's and 1840's as a suburb

with many kinds of people living there, in contrast to Gujarati-dominated Karwan Sahu, and in the 1830s and early 1840s, just as the Gujarati banker Hari Das had mediated among factions in Karwan, the banker Puran Mal did the same among members of his community in Begum Bazar. Mahanand Ram and his son Puran Mal were close to the Nizam's court. Mahanand Sahu stopped beggars' riot near Charminar in 1811 by giving out alms, and Puran Mal Seth sent gifts in 1839 for the marriage of the daughter Jahanparwar Begum (a consort of Sikandar Jah, Asaf Jah III), in 1839. Puran Mal established Sitaram Bagh Temple in Begum Bazar¹⁰ in Hyderabad in 1825¹¹, a Temple founded by *jagirs* granted as *inam* by the government. The Nizam was attended laying of the Temple foundation. The Marwari family lived within the Temple compound and tombs of Mahanand Ram and Puran Mal were erected on the Temple ground. Nizam appointed Puran Mal as Treasurer in Berar. Puran Mal son Prem Sukh Das collected revenue there. This Marwari family played an important role both in the Nizam administration and banking activities.

Maheshwaris and Oswals

The Maheshwaris and Oswals came to Deccan. Half of the forty two Maheshwari families had come to the Nizam's State by 1850,

while half of the sixteen Oswal and thirty –two Agarwal families were there by 1860. The four Maheshwari families that arrived before 1800 settled in Hyderabad, Khandesh and Jalna¹². Two Oswal families settled in Bijapur and Aurangabad in the 1750s and 1790s respectively. More of Maheshwaris settled in Hyderabad old city, while ten families of Oswals settled in the British areas, Residency Bazar, Secunderabad and Tirmulgherry. Two Agarwal families came in the 1780s and 1790s and Agarwals seem to have settled mostly in Begum Bazar and Hyderabad old city¹³. These families occupied prominent place in the banking firm activities.

State debts

The Nizam Government had taken loan from the bankers in Hyderabad city. The Prime Ministers such as Chandu Lal, Ram Baksh and Siraj-ul-Mulk were taken loans to run the administration affectively in the State. The banking firms of Umarsi Sajan Mal, Moti Ram Surat Ram, Hari Das Lachmi Das, Lachman Gir, Shiv Lal Moti Lal and Kangir Umarao Gir were given loan to the Government of Hyderabad in different period. The debts due to the bankers detail as follows.

Table : Debts due to Hyderabad Bankers by 1847
Un-repaid Rupee loans to successive Administrations

Banking Firms	Chandu Lal 1806-43	Ram Baksh 1843-46	Siraj-ul-Mulk 1846-47	Total
Umarsi Sajan Mal	6,00,000	30,000	-	6,30,000
Moti Ram Surat Ram	3,50,000	30,000	1,00,000	4,80,000
Hari Das Lachmi Das	1,50,000	4,00,000	75,000	6,25,000
Lachman Gir	8,00,000	3,00,000	-	11,00,000
Ramaswamy	-	3,00,000	1,00,000	4,00,000
Shiv Lal Moti Lal	-	5,00,000	5,75,000	10,75,000
Kangir Umarao Gir		3,00,000	1,50,000	4,50,000
Kripa Ram	-	3,00,000	95,000	3,95,000

Ramdhun	-		50,000	50,000
Girdhari Lal Fateh Chand	--	--	1,00,000	1,00,000
Puran Mal				23,00,000
Total	19,00,000	21,60,000	12,00,000	76,05,000

Syed Mehdi Ali: **Hyderabad Affairs**, Vol-IV, Times of Indian Steam Press, Bombay, 1883, P.20.

The above table reveals that the bankers given loans to the Government during different Prime Ministers reign. In Chandu Lal period bankers had given 19, 00, 000 rupees loan to the government of Hyderabad State. During Rambaksh period government received an amount of Rs. 21,60,000 and Sirj-ul-Mulk period again the Government of Hyderabad taken loan from the bankers an amount of Rs. 12,00,000¹⁴. The total an amount of Rupees received from the bankers is 76,05,000 in the 40 years period. They were played an important role in the administration and Government.

Hundis

Banking firms furnished *hundis*, credit instruments or bills of exchange, payable elsewhere on sight or after a certain date. Most of these were destined for the British East India Company in the Presidency towns to pay Hyderabad's mounting debt for the Contingent salaries. The firms furnished cash for disbursement made locally, such as the expenses of the Nizams household or the salaries of military troops in the city. They made personal loans to high-ranking officials, some of which were guaranteed by the government. Many loans were made to *talukdars*, who used the cash as an offering to secure a contract for revenue collection. The *Nazrana* was given to the State record-keepers; it was they who awarded such contracts at this time¹⁵.

In return, the bankers received official signatures on their records, bonds or guarantees of repayment, diamonds, jewels or gold *mohurs* given in mortgage, and increasingly, land from which they could themselves collect the revenue to secure repayment of their loans. To collect the revenue, and then prevent the government from reclaiming the land assignments, the bankers employed military men, predominantly Arab and Pathan mercenaries, who acted as their agents. These military men acted as personal bodyguards for bankers too; almost all men of

any standing in the city employed Arab troops to protect their interests. The military men also received land assignments of their own from the administration when it became unable to pay their salaries in the 1840s.

Major overlapping functions were performed by the *talukdars* and the military men. Since both groups collected land revenue, often in excess of what their contract specified or their own salaries required, they became moneylenders, major creditors of the state. The military men and *talukdars* did not deal in long-distance *hundis*; only bankers were able to engage in this form of money lending to Hyderabad. The bankers had been revenue collectors when land assignments were made openly to them in return for loans under Chandu Lal, but the objection of the British Resident in the 1840s forced bankers to work their land assignments through others¹⁶, both *talukdars* and military commanders. Networking of the banking hundi transactions in the State during 1851 given in the following table.

Table: Networks of Banking Hundi Transactions, 1851

Hyderabad Firms	Number of Hundis Drawn	Rupees amount
Shivdut Ram Lachmi Ram	19	6,47,778
Shivdut Ram Jaisee Ram	22	10,10,693
Nathmal Govardhan Das	9	2,26,683
Sultan Chand Bahadur	1	17,909
Girdhari Lal Fatch Chand	3	36,721

Hanumant Ram Sri Ram	2	60,000
Moti Ram Ramdhun	5	89,107
Mahanand Ram Puran Mal	28	13,69,519
Surat Ram Govind Ram	7	1,85,715
Padamsi Nyansi	1	3,000
Gomani Ram Ram Lal	2	83,000
Anand Ram Sadasukh	2	14,000
Lachman Das Purshottam Das	7	97,000
Lachmi Das Lachman Das	7	89,143
Kishen Das Purshottam Das	2	34,483
Jamna Das Balkishen Das	9	26,893
Narayan Das Trimuk Das	3	19,579
Dighton	5	2,60,000
Mac Pherson	1	10,000

Source: Karen Leonard: *Hyderabad and Hyderabadis*, Manohar Publishers and Distributors, New Delhi, 2014, P.P 145-146

The above table reveals that the *hundi* transactions in the state in the year 1851. Shivdut Ram Lachmi Ram and Shivdut Ram Jaisee Ram were had more *hundis* and transaction with an amount of Rs. 16,58,471. Mahanand Puran Mal had 28 *hundis* and transaction Rs. 13,69,519. Mahanand Puran Mal occupied prominent place in the *hundi* transactions in Hyderabad State. Dighton also had five *hundis* and an amount transactional in the State is Rs. 2,60,000. The bankers played crucial role in the administration of the Nizam

Government¹⁷. They were also occupied prominent place in the society. They dominate their surrounding areas with their status. Government officials also supported the banking communities in Karwan, Begum Bazar and Residency areas in Hyderabad State.

Bankers were also involved in incidents of violence. In 1846, the banker Gomani Ram went with fourteen Pathans to coerce payment from a Muslim creditor, but he and six of his mercenaries were killed in the ensuing fight. In 1847, a group of bankers invaded the chief state record-keepers palace and thereby forced state repayment of Rs. 2,15,000¹⁸. Begum Bazar, where many bankers and *jamadars* resided, was often the scene of sword and gun fight. Successive *Diwans* and state officials called on the bankers again and again for loans, but these were seldom repaid. When the State was unable to give the bankers land assignments directly, many other strategies induced them to continue lending. A coalition of bankers was given an order on a *talukdar* for quarterly repayments of their loan¹⁹.

The largest banking firms of the 1840s had reached their limits. Pestonji Viccajee's land assignments were reclaimed, although Pestonji levied Rohilla troops and fought the state troops. He then requested the British East India Company's help in securing repayment; it declined, and the firm went bankrupt in 1848²⁰. Puran Mal, the Rothschild of the Deccan, whose loan had been many times those of the other bankers combined went temporarily bankrupt in 1851, as did Shivdut Ram Jaisee Ram two months later.

By 1851, the resident was scrutinizing financial records of the Noam's Government and discussing possible cession of territory. The Diwan, Siraj-ul-Mulk, responded by undertaking to repay the debt to the East India Company between July and December by 1851. He succeeded in raising loans from bankers in July, and he sent *hundis* for Rs. 40,00,000, payable in four to six months, to the Resident by mid-August. Thereafter, he found it impossible to secure a like amount by October, although more *hundis* were sent. This series of *hundis* delivered to the Resident by the *Diwan* from July to November 1851²¹.

Bankers Contribution

The oldest Kayasth Temple in Hyderabad, Ram Bagh, was built by a Bhatnagar Kayasth in 1802, at the end of Nizam Ali Khan's region. Raja Bhavani Pershad was in charge of salary distribution of palace. The Kayasth community occupied a prominent place in the Hyderabad state. The Chitragupta Temple was built in the year 1810-1811 by Duleh Rae at Uppuguda. He also received a jagir from the Nizam Sikander Jah for the maintenance of the Temple. Another Temple built by Kayasth family at Uppuguda was Kali Temple²². The special troops of the Saksena were stayed in the Temple ground. The guns and gunpowder stored in the Temple's basement. Raja Raghu Ram Bahadur served as *vakil* of several *samsthans* in the Nizam Hyderabad State. He built the Kishen Bagh Temple in the year 1822. The Nizam Sikander Jah granted a *jagir* for the Temple and later granted an additional jagir for drum expenses, a rare distinction. The Kishen Bagh Temple was dedicated to Lord Krishna and set a garden outside the old city. Sitaram Bagh Temple²³ in Begum Bazar was constructed by Puran Mal in

1825. The Temple funded by *jagirs* granted as *inam* by the government.

Conclusion

The Nizams of Hyderabad came to the power in the year 1724 and ruled Hyderabad State till 1948. They were participated many wars and public welfare activities. The Hyderabad State depended on rainfall. Most of times famine attacked the State and the ruler were taken several steps to the welfare of the State. They engaged troops in the different part of the State. Due to these reasons the State treasure empty most of the time. That is the reason why they were taken loan from the bankers and utilized for the developmental activities. The bankers also engaged troops in their areas. They were also get employment in the Government administration. They played an important role in the administration and economy of Hyderabad State. Their status is also high in the society. They were run the administration and society with the support of the Government officials. Bankers occupied an important place in the Nizam State.

SOCIO - ECONOMIC CONDITIONS OF TIRUKOIYLUR REGION WITH SPECIAL REFERENCE TO SIDDHALINGAMADAM

M. Dhanasekaran

The South Indian temples, acted in the medieval period of Tamil history as a centre of spiritual as well as secular activities of the general public living around them. The temple, it is no exaggeration to say was indeed a symbol of a rudimentary experiment in the creation of a welfare state. It touched every fact of social, economic and religious. It provided proper social environment and offered ample scope for self-improvement.

Social

In the medieval period, the society was composed of different strata of communities living in groups and doing their traditional vocations. The king, the royal household and the nobility (*udankuttam*) formed the upper clan of the society. Next came the Brahmins (the priestly class) who commended the high esteem among the people. In the middle strata of society were the bureaucrats, merchants, peasant proprietors and artisans. The farm labourers and the slaves constituted respectively the fourth and the fifth rungs of the social ladder. From the inscriptions, it can be gathered that kingship was hereditary.

He was ably assisted by a council of ministers known as *Udankuttam* the Brahmins were the most fortunate section of the society and were a privileged lot and the 'chosen people' at the land. The kings created "agraharams" (Chaturvedimangalam) for them and assigned lands made free of tax for their sole enjoyment according to their status. Even as late as the nineteenth century, they were a landed class of people, the following observation of T.Venkasamy Rao in his "A manual of the district of Tirukkilur" is worth-noting. "There is hardly a family of this colony of Tamil speaking Brahmins which does not hold land on ordinary mirasi tenure in Tirukkoilur while those who hold the 'inam' tenure likewise are comparatively very few. During the days of Hindu dynasties, the Brahmins were a favoured class. In some cases, they acquired the right of *mirasi* holding by gift of the "Vellala proprietary"¹ the bureaucrats, merchants, big landholders and the artisans formed the middle order of society and were really the backbone at the administration and

social life, the landless labourers (agrarian proletariat) and the slaves were the hardworking lot and their plight was one of misery and pity.

Women enjoyed freedom in a large measure. They were placed under no restraint in their social life and activities, the inscriptions give many examples of women of the upper classes owning property in their own right and disposing of it in the manner as they chose. Though the king and nobles indulged in a plurality of wives, the monogamous family was doubtless by the normal unit of social life.

There are a number of inscriptions in the temple of Vyaghrapadeshvarar that speak of gifts given by women of different walks of life. An inscription of the 38th regnal year of Parantaka I (907-953 C.E.) records the gift of a fly-whisk coated with gold and silver by *mutta kilanadigal*, the daughter of *Kadupattigal*, a Pallava princess,² Aditya I (871-907 C.E.) married a Pallava princess Tiribhuanamadevi.³ An inscription of the 23rd regnal year of his speaks of *Kadupattigal* as the mother of the Chola queen. Hence the *Muttakilanadiga* spoken of the inscription of the temple of Vyaghrapadeshvarar would refer to the senior queen *Muttakilanadigal* of Aditya I.

There is an inscription which speaks of a woman, a *Vellatti* by name Sathan Malli of Kilai of Alanadu, as having made a gift of ninety sheep to a Vaishnavite temple lying to the north of the shrine of Vedharanyaswamy for maintenance of a perpetual lamp. The same *Vellatti* gifted one hundred and eighty sheep for the supply of ghee for burning two perpetual lamps in the temples of Vyaghrapadeshvarar. This gesture of a woman patronizing a saivite and a Vaishnavite temple at the same time speaks volume for the religious toleration that underlined the interaction between communities.

Two inscriptions in the premises of the temple of Vyaghrapadeshvarar refer to the wives of an officer of the king's government by name Sembayan Muvendavelan, each making a gift in her own right to *Tirumaraikkattu Udaiyar*, and *Maninakka Pirattiyar*. One of the wives of Muvendavelan made a gift of ninety sheep for the maintenance of a perpetual lamp.⁴ Another wife

by name *Koyilanachipidariyar* of the same officer deposited twenty-five kalanju of gold with two persons in the locality for supply of four halis of rice as food-offering to the presiding deity on the *Uttrayana* (summer solstice) sankranti day from the interest.⁵

An inscription of the 43rd regnal year of Parantaka I has a reference to the conquest of Ceylon by that ruler.⁶ His special title includes the expression *Elamum* for the first time in the inscriptions of this temple. It speaks of the children (makal) of one *Karisatti*, a maid servant (Pendatti) of the queen in the palace establishment (Velam) of Kilanadigal (queen) and living in Vicchadara street making a gift of ninety sheep for burning a perpetual lamp. An inscription in the temple premises refers to one *Nangaiyar Nakkan Naraguni*, a queen of Solamanar as having made a gift of ninety sheep for a perpetual lamp.⁷ A damaged inscription of the 25th regnal year of Parantaka-I speaks of one Nakki of Nandipuram as having gifted ninety sheep for a perpetual lamp. The term "Nakki" would refer to a female dancer.

There are three places bearing the name Nandipuram.⁸ One devaradiyar by name *Aludainacchi Amudalvi* has been mentioned in an inscription as having made a gift of a piece of land as *Tirunandavilakkupuram*.⁹ The dancers thus transferred to Sri Rajarajesvaram from Tirumaraikkadu were Nakkan Sattan living in house number ninety-one, Nakkan Tirumalai residing in ninety-two, Nakkanmadevi living in seventythree house, Nakkan Maraikkadu living in the twelfth house and Nakkan Mari living in the forty-third house outside the temple. The expression *nakkan* stands for *Nakkinai* just as the terms *amman* and *akkan* for *ammai* and *akkai*.¹⁰

One *Santikk-kutti* by name *Peruntiruvatti Kailaikkilatti* according to an inscription had made a gift of thirty-five "veli" of land to the temple made free from certain local taxes the expression *Santikk-kutti* refers to a woman player in a drama.¹¹

A member of the body called *Virasola Anukkar* by name Ilayalvan Tiruvidaimarududaiyan left one thousand five hundred kasus with the *Muppattuvatattu Sivabrahmanas* of the temple as endowment for the maintenance of a perpetual lamp from the

interest accruing from it.¹² The expression *Muppattuvatattu Sivabrahmanas* would refer to the Sivabrahmanas who had the right to conduct service to the deity in their turn. They could transfer their rights to others on monetary considerations,¹³ if they so desired. Another member of the same body of *Virasola Anukkar* by name *Kadan Melvayil* deposited one hundred kasu with the *Tirukkoyil Udaiyar* (trustees) for the maintenance of a half lamp to be kept in the night from out of the interest on the above endowment.¹⁴ There is an instance of one Irumudi sola Anukkilli having made a gift of 90 sheep for a perpetual lamp for the god Mahadeva in Tirumaraikkadu for the merit of his sister, Ilattanangai. His mother was a pendatti (maid servant of the queen) in the *Poriyavelam* big palace establishment) at Thanjavur, the expression *Anukkar* would mean a male dancer.¹⁵ A traditional lamp mentioned as *Tiruanukkan Tiruvilakku* in an inscription might have been donated by a member of the body of *Anukkars*.

The fact that slavery was practiced in the medieval period is well-attested by two inscriptions. An inscription of the third regnal year (1219 C.E.) of Rajaraja III speaks of the sale of ten slaves with their associates (Vargattar) of *Sadaiyandikutam* for one thousand kasus by *Ariyan Picchan* alias *Edirilisola Gangainadalvan*, a kaval officer to the temple of *Tirumaraikkattu Udaiyar*.¹⁶ Another inscription of the 24th regnal year of the same ruler records the sale and dedication of two slaves by name Kalani and Kudiyal by the same. *Ariyan Picchan* alias *Gangainadalvan* to the god *Tirumaraikkadu Udaiyar*

An inscription of uncommon interest found on a pillar within the mandapa in front of the central shrine refers to a special puja known as Pidapuja.¹⁷ It records a gift of ten "veli" of land to the god *Tirumaraikkattu Udaiyar* made free of local taxes by one Viliyur. *Picchan Piramadamallan*, a merchant of *Ullalai* (inside) *Periyandigudi* (big bazaar) for the merit of *Tayan Acchan* and *Acchan Tayan*, his father and elder brother respectively. Pidapuja is a part of daily rituals done in the temple. The significance of the puja is that the donor wanted a wooden frame to be used during night service.¹⁸

A permanent arrangement for reciting Tiruppadiyam in the temple of

Vyaghrapadesvarar was made during the time of Kulottunga II (1133 - 1150 C.E.). An inscription of the king's second regnal year records the conferment of Vyaghrapader by *Padipadamulattuppattudaiya Panchacharigal* on one *Tiruchirrambalamudaiyan Nagadevan* alias *Tyagasamudrappicchan* and his group. The devakanmis of the temple were enjoined to supervise the singing of Tiruppadiyam and make sure that members partaking in the service were either related to or nominated by *Tyagasamudrapicchan*,¹⁹ the inscription refers to the king as speaking reciters of our Tiruppadiyam this signifies the ruler's personal interest in the recitation of padiyams before the deity everyday.²⁰ An inscription in the temple of Sri Rajarajesvaram at Thanjavur mentions two persons from Tirumaraikkadu by name *Maraikkadan Gnanasivan Nambi Aruran* and *Avaiyan Anukkan Dharmasivan* as having been drafted from the Tirumaraikkattu temple establishment for reciting Tiruppadiyam there along with forty-six other musicians (Pidavar).²¹

The temple of Vyaghrapadar exercised a great influence upon the people living in places beyond the Chola country also. There are references in the inscriptions to instances of gifts having been made to temple of *Vyaghrapadar Udayar* by individuals. An inscription of the time of Parakesarivarman Parantaka I speaks of two persons of as having made a gift of a piece of land made free of tax to the god Vyaghrapadar Udayar after purchase from the *urar* of Perumbulam. Kannappar is identified with Kalayarkoil in the modern Pasumpon Muthuramalinga Thevar district. It is a Sivasthala. According to an inscription of the ninth regnal year of Rajaraja I, one Narayanan alias Sembiyan Kilkarai Velan of *Mutturukurram* in Pandinadu made a gift of seven kasus to the temple for offering two palams of *Sarkkarai* (country sugar) out of the interest on the endowed amount.²² Similarly, two persons by name Kakkan Tuni of Madanam in the division of *Allarkkulakkil* and *Kavaippi* of Allur, both places in Pandinadu jointly made a gift of one hundred and eighty sheep for burning two perpetual lamps.²³

An inscription found in the temple of Vyaghrapadesvarar is about the gold and silver ornaments gifted to the temple by a merchant by name Nelveliyudaiyan,

Tiruvaram (sacred necklace), *Udharabhandanam* (wait-band), *Tiruppirai* (sacred crescent), a pair of bhaguvalai yam (sacred armlets), a pair of *tirukkaichari* (sacred bracelet), an antelope and a club (*danda*) made of gold, all for adorning the god Manavalanayanar (utsavar). For adorning the goddess Nacchiyar, ornaments such as *tirunerrimalai* (sacred forehead plate), *Tiruvaram* (sacred necklace) and *Tirumalaittam* (sacred breast plate) were gifted. The total weight of the ornaments was fifty seven kalanju and one-fourth manjadi of gold and eighty-seven kalanju, one-half manjadi and four *ma* of silver.²⁴

The fact that the place Siddhalingamadam had intimate social intercourse with the Jaffna region of the northern Sri Lanka is attested by the numerous inscriptions containing names of persons of the region of Jaffna who had helped in the renovation of certain structures in the temple premises. All these inscriptions are of recent times and on paleographical grounds can be assigned to the nineteenth century. The names of villages and towns from which the persons mentioned in the inscriptions hailed are: 1) Kodiur, 2) Marudur, 3) Anattur, 4) Siruvennainallur, 5) Iraiyankudi, 6) Kiliyur, 7) Kanakkeni, 8) Semmarrur, 9) Vikram chozha nallur, 10) Munnur, 11) Manatur, 12) Surangudi, 13) Adanur, 14) Manthuvil, 15) Vanagappadi, 16) Nirveli, 17) Palali, 18) Thalaikkurichi, 19) Thammagadam, 20) Thumbalai, 21) Polaiyur, 22) Tiruvathigai, 23) Tiraiturai, 24) Thiruvannainallur, 25) Tiruvamatur, 26) Tirumudankuram, 27) Adarpadi nallur, 28) Sivapasekharanallur and Vilvalam.

Economy

The economy of the Tamil society in the medieval period was entirely based on agriculture, the vast majority of the people lived a rustic life in the villages and agriculture was their principle occupation, the village was primarily a settlement of peasants and the village assembly on association of landlords.

The inscriptions under study give a lot of information of the existence of different types of land tenures such as *brahmadeya*, *devadana* and *salabhoga*. The Brahmins were economically affluent in the rural economy and commanded respect from every section of society. The peasant proprietors in *Vellan-Vagai* villages cultivated their lands either themselves or with

the help of term labourers or slaves. They paid taxes to both the Central Government and the local assembly called *Urar*. The farm labourers led a miserable hand-to-mouth living. In times of drought or famine, several of their families sold themselves to rich persons or temples to avoid starvation and death. Under able and efficient rulers, the lot of the general public was comfortable and satisfactory but during the rule of the weak, monarchs, their plight was pitiable.

Standard Measurements of Lands

Agricultural lands were measured in terms of *veli Ma, kani* and *kuli*. The wetlands were described as *say*, the *ma* and *kani* are usually 1/20 and 1/80 when applied to a *veli* of land. One hundred *kulis* made up a *ma* of land. The people had a wonderful commercial sense for standardization of measures to determine exact extent of lands and quantity of things they possessed or transacted. The inscriptions throw light on the standards of weights and measures employed by the people for weighing precious metals and measuring grains and extent of lands, in the days of the Cholas.

Grains and liquids were measured in terms of *kalam, tuni, padakku, kuruni, nali, uri* and

ulakku precious metals in *kalanju, ma* and *manjadi* and linear measures in *vira*²⁵ according to inscriptions in the temple of *V[∞]dharany[∞]śvar*. A weight measure *palam* has also been mentioned in an inscription.²⁶

An inscription of the 29th regnal year of Rajaraja I speaks of a measure called *Adavallan* as equivalent to *Rajakesari*. From this, it is gathered that the highest grain/liquid measure used was otherwise called as Marakkal.

There are references to the village assemblies taking upon themselves the responsibility of paying taxes to the Central Government for a particular piece of land. Some inscriptions, speak of donors or groups of people to whom lands gifted to the temple were entrusted for a purpose agreeing to pay dues (*kadamai*) and other *irais* (taxes) to both the king's Government and the village assemblies. The temple of Vyaghrapadesvarar had according to inscriptions a treasure of its own called *karuvulam* or *Sri Pandaram*. It received cash gifts and made payments towards the cost of lands or anything sold to it by village assemblies or individuals.

PANNAIYAL SYSTEM IN THANJAVUR

R. Elamaran

One of the most striking and important peculiarities of the agricultural labourers was the pannaiyal system. Thanjavur district is one of the popular agricultural districts in Tamilnadu. In the total rice yield of Tamilnadu, the district tops all the other districts and is hence known as the granary of South India.

Pannai System

The *pannai*, or home-farm, is the cultivateable land of the landlords. They cultivate their own lands by means of hired labourers or *pannaiyals*. It seems likely that this was the most general method in ancient times and that the *pannaiyals* were serfs attached to the soil and transferred from one master to another with the land.¹ They seem to have been frankly slaves when the English came into possession of the country, and many relics of the former state of things still exist. Usually, the wages of the pannaiyal is in grain and not in money. He is given presents on festival occasions and is often in debt beyond recall to his landowner.²

Pannaiyal System in Thanjavur

Agricultural slavery consisted of two types namely, pannaiyal (permanent servant) and padiyal (hired servant, receiving wages in kind). The Tamil word for slave was *adimai*. The term pannaiyal was used more frequently than *adimai*.³ The pannaiyals led a miserable life. Pannaiyals brutally punished the people who rose against them. They were meted out punishments like the horsechip beating and drinking cowdung. The pannaiyals called their landlords as "Sammy", "Egamani" and "Andai", even today.⁴ The bonded labourers could not send their children to school. Education was rejected to them. The sons and daughters of the tenant's should work with their parents in Pannais. All civic rights were designed to them.⁵ The pannaiyal and his family were tied to their landlord or peasant master by debt. They never owned any land. Labour power was their only possession to be exchanged. The landlord had the right of life and death over their own slaves.

Wages of Pannaiyals

The pannaiyals or permanent labourers in the later half of the 19th century were generally remunerated in the following manner. i) They were paid mainly in kind viz., grain and the like, ii) They were given presents on the occasions of wedding, childbirth, and festivals and also were helped when death occurred in their family, iii) They had the right to glean after harvest, iv) They received loans without interest, v) They could lease a house with a backyard, vi) They could lease lands from the mirasdars.⁶

Land owners were very interested in paying advance money to a labourer to prevent him from leaving his service and to keep him in a condition of servitude. The object of the advance money was to secure a permanent servant at a wage distinctly lower than the market rate and to make life as difficult as possible for him to change masters or atleast to go to another master in a different village.⁷ The Mirasdars asserted their rights over the pannaiyals' house plots or settlements and prevented their freedom of movement with the threat of eviction from the settlements.⁸

At times of famine, they were the first to lose employment, to feel the pinch of rising prices, and to die of starvation. Boys and girls received half of the rates. In towns, wages were paid in cash. The ordinary daily rate for an adult male being annas 4 and for children one anna. Each skilled labourer such as bricklayer, carpenter and smith were paid according to the nature of the work from 5 to 8 annas a day. The village sale of paddy on which the original commutation rate for the assessment of irrigated land was calculated, shows that the average price of the Thanjavur kalam, equal to 12 marakkal.⁹ The pannaiyals would be forced to work for fourteen to sixteen hours a day. If they failed to do so, they faced severe punishments. Even their women folk were not spared. They were not permitted to wear clean clothes. Pannaiyals and other women folk were forced to keep the upper portion of their body as naked.¹⁰

Pannaiyals and agricultural labourers awakened and got ready to struggle against economic and social exploitation. They planned these struggles in such a progressive expansion and consolidation of the *Vyavasaigal Sangam* with the help of agricultural labourers, tenants,

and sharecropper.¹¹ There were concedes that the 'Vyavasaigal Sangam' had a good grip over agricultural labourers in Mannargudi, Tiruvarur, and Thiruthuraipoondi taluks.

Since pannaiyals got a better deal in the Tanjore tenant and pannaiyals Act 1952, and the institution of agrestic serfdom was almost dead. Eviction of tenants constituted the main focus of the struggle during the subsequent years. It came to be increasingly realized that questions of tenancy and wage labour were merely part of the control over land. In a situation where the party was not fighting, an armed battle was mobilized on the issue of ceiling could greeting weaken landlord's economic and political domination.¹²

The Poonthazhankudi incident

On 6th October 1967, Valivalam Desikar, a landlord, inducted a large number of agricultural labourers from the neighbouring district of Ramnad to complete transplantation operation. It threw a large number of locals to become jobless. So they prevented the entry of the out side labourers.¹³ The land lords immediately appealed to the police to intervene in the name of law and order.

The same thing happened in seven other villages of Tiruvarur and two villages of Mayuraram (Mayladuthurai) taluk. The situation become worse and critical in a village at Poonthazhankudi, seven miles away from Tiruvarur. The landlords had their paddy harvested by out sides and caste Hindu labourers under police protection.¹⁴ The local labourers did not allow the outsiders to carry the harvested crop. They also picketed the landlord's car engaged in the same operation. Since the policemen were on the spot, they did the ugly and biased job and opened fire brutally. As a result, Pakkirisamy an agricultural labourer, was killed on the spot and several others wer arrested.¹⁵ The agricultural labourers maintained their calm and did not engage in a clash with the police. They took out a massive funeral procession condemning the landlord and the police.

As a consequence, the district administration moved into action. At a triparties meeting, the landlords agreed to raise harvest wages to 6 litres per kalam and also to induct

outside labourers only in the extreme exigency of acute labour shortage.¹⁶ The year 1968 turned out to be a replication of 1967 except that the labourers were more militant. In several villages, there was the same story of induction of outside labourers, resistance from the locals, and police intervention. In the village of Kuruppu of Nanilam taluk, the local labourers forcibly harvested paddy from a 4 acre plot belonging to a landlord. There was police intervention again, and 54 agriculture labourers were arrested.¹⁷

The frequent police interventions had an unintended effect-labourers were no longer terrostricken at the sight of rifles.

A village in Nagapattinam taluk, the same incident was repeated-induction of out side labourers, denial of job to locals and refusal to pay 6 liters of paddy per kalam as harvest wages and the presence. The local labourers could not be brow beaten. In spite of the police presence, they prevented the outside labourer from harvesting paddy.¹⁸ The local leadership was vigilant and determined to foil the land lords game. The peasant leader mobilized women in massive numbers. Support also came from neighboring villages. Through their massive mobilization they rendered the police force ineffective. Police vans were gheraoed even when women workers were threatened with arrest. Sixty of them were arrested and taken to the nearest police station.¹⁹

A vast multitude of agricultural labourers protested against the arrest by obstructing the movement of the policemen and their vehicles. The policemen could hardly scare away such a multitude of agricultural labourer by resorting to violence. They persuaded the labourers to lift the blockade and promised to leave one van at their dispense to bring back the women labourers from the police station.²⁰ Each side honored its commitment and the explosive situation was diffused. The Mirasdars could easily disease that the balance of forces was how titled against them. They conceded to the wage demand and the lifting of the economic boycott against the local workers. It was a major victory and agricultural labourers exhilarated.

The landlords, however, failed to learn the lessons from their experience with labourer militancy. They wanted to make every efforts to maintain status. They resolved to teach recalcitrant labourers a good lesson. Organized as they were.

It could be possible to mobilize immense resources and buy up police support to achieve their objectives.

In the village of Kasuveli near Nagapattinam, the landlords engaged the routine work with the help of outside labourers and the police. It was opposed by the local labourers. Over 300 local labourers marched to the threshing floor of the same landlord in the evening.²¹ The policemen liberally made use of their teargas shells and lathis (sticks). Three labourers sustained injuries. Even though the landlords in this village got little success, they were not fully satisfied. They wanted to subdue the labourers completely.

The humanitarian and social minded leaders drew the attention of the government to the inhuman activities of the land lords and the partisan attitude of the police. During this time, the Tamil Nadu Government had appointed the special police branch, that was known as Kissan Police, Kissan Inspector, and Kissan Circle, and Kissan D.S.P and some Kissan police cadres.²² The word Kissan which means (agri). The Kissan police protected the law and order in Tiruvarur taluk, but they did not protected the agricultural tenants from the atrocities of the landlords. The police attached no importance to the allegation of the agricultural tenants.²³ But the attitude of the policemen towards the agricultural labourers continued.

Target of Venmani

On 25th December, 1968 evening, there was a clash between the local and the outside labourers in which one of the outsider namely Pakkirisamy was killed.²⁴ Irinchu Gopalakrishna Naidu had mobilized a large number of hire lings. Even as they were entering the village of Venmani with guns, sticks, axes petrol etc, the agricultural labourers consisting of men, women, and children ran to their shelter. Most of the folk ran away from the village.²⁵

Women and children around forty four in number took shelter in a little hut. The little hut was owned by Ramaiyan, and this houses was 12 feet length with one gateway. A total of forty four people were hiding in the 12 x 12 feet size hut. The hirelings spinkled petrol and set fire to the hut.²⁶

Kilvenmani outrage upset the agricultural operation. Thousands of acres of paddy awaited

harvesting. The district collector exercised initiative to convince a tripartite conference to things right. It was agreed that harvest wages should be increased by half a litre. Even though the landlords representatives on the committee agreed to the agreement, the paddy producer association disowned it characterizing the agreement, as arbitrary.²⁷

Ganapathia Pillai Commission

In the meantime, the State Government appointed the Ganapathia Pillai Commission to suggest the rate at which wages could be fixed. The commission exposed its landlord bias by conceding that it did not consider in its report what might constitute the quantum of a living wage. Even then it concluded that the landlords above 5 acres should pay the wage rates as recommended below.²⁸

Plothing without own bullocks	Rs. 3.00
Ploughing with labourers own plough and bullock	Rs. 5.25
Transplantation and weeding (women)	Rs. 1.80
Bund making	Rs. 3.00
Half season repair work	Rs. 2.50
Harvest wages	

The suggestion of the commission clearly revealed that the administration never viewed the wage question as a human problem. But the landlords association refused to follow the commission's recommendation.²⁹

The Venmani massacre was an traumatic experience for agricultural labourers as well as their leaders. The scars left were too deep to heal immediately. The sarvodayees considered it an appropriate occasion to get a foothold inside the socialistic citated. The Sarvodaya workers mobilized agricultural labourers against the control of temple land by a land lord. Through a fictitious deal they were successful in getting temple lands and get it allotted to more than a hundred agricultural labourers and tenants. The sangam called upon the government to lower down the ceiling from 30 to 15 standard acres and to do away with various exemptions. In 1972, the

ceiling limit was sealed down to 15 standard acres and exempted from ceiling was brought within the purview of the law.³⁰ The impact of the land

grab movement as such led to a more radical agrarian legislation involving no actual redistribution of lands.

COMPANY'S COMMITTEE OF ASSIGNED REVENUE IN MADRAS, 1781-1786

I. Elangovan

Between the years 1765 and 1792 the English East India Company established their direct authority over Southern India. The Mysore and poligar depredations an enemy fed the country in a widespread uprising. Having no other recourse the Nawab agreed to assign his territories to the Company. This agreement between the Company and the Nawab made Assignment authorised and the Company to appoint receiver in each province of the Nawab for the collection of the revenue from the Nawab's amuldars. In this way, the decade that followed the Committee of Assignment of Revenue to the Company witnessed the

phenomenal growth of British influence in Madras.

Colonial's Beginning Acquisitions

In 1765 the English administered the Northern Circars through the deputies of the Nizam. On 12 August 1765 Mughal Emperor Shah Alam II, by a firman granted the five circars of Rajahmundry, Kondapalli, Elloru, Srikakulam and Guntur as *inam* or free gift to the English. Mohammad Ali was confirmed as the Nawab by a *firman* from the Emperor of Delhi and given the title of 'Wallajah'.¹ But virtual supremacy in the South had actually passed into the hands of the

Company and the tone in which they wanted the Madras Council to address him in regard to Tanjore was by itself a sufficient evidence of this fact.

He sought the aid of the Company to occupy Dindigul from Mysore; but for fear outbreak of war, the Madras Council did not comply with. Accordingly, the East India Company began to acquire territories, first the Jaghir in 1765 and the Northern Circars in 1765 and following this the Maravas, the Tanjore and the parts of Madurai.²

Works of the Committee of Assigned Revenue

The wars of the English with Mysore had their direct bearing upon Tamilnadu. During 1780-1781 broke out the Second Mysore War. For the effective conduct of the War, the Madras Council suggested to the Nawab to assign the revenues of his territory to the Company. Mohammad Ali opposed; but subsequently agreed to a compromise proposal by which he transferred the collection of revenue for a period of five years and retained one sixth of it for his private expenses. This was known as the assignment. During this period a Committee of Assigned Revenue collected the taxes and maintained a regular supply of money, provisions and bullocks for the conduct of the War. The interests of the people and of their ruler suffered, while the English utilised the opportunity to study the administration of the land.³

The East India Company asked the Nawab of Arcot to compensate the War expenses it had incurred in the Carnatic. As the Nawab was not able to pay the amount, he complied with the request to make over the revenues of Tiruchirappalli and Tirunelveli. By an agreement made in February 1781, the Company appointed receivers in Tirunelveli and Tiruchirappalli provinces for the collection of the net revenue from the Nawab' *amuldars*. These receivers, however, had no right to interfere in the internal administration.⁴ In effect the receivers were entitled to exercise supervision over tax collection charges; but lacked the powers essential for control. Therefore, it was natural that the system did not work.

The Board of Revenue was not then in existence and on 16 October 1781 the Government appointed the Committee of

Assigned Revenue consisting of six officers including George Proctor, the first civil officer to Madras Province, for the purpose of receiving and administering the revenues of the Nawab. The members of the Committee were first called receivers and then Superintendents of Assigned Revenue, shortly Superintendents. They were the forerunners of the future district collectors. The Madras Council pressed the Nawab for an unconditional assignment of all the provinces of the Carnatic to the Company. Mohammad Ali, on the other hand opposed the demand and invoked a treaty which he settled with the Bengal Government in 1781. This treaty exempted him from all pecuniary demands beyond the expenses of ten battalions of troops of the Company and affirmed his sovereignty over the Carnatic. In order to rectify the situation the English asked the Nawab for an unconditional surrender of the revenue of all the provinces under him. Upon his refusal a compromise settlement was effected on 2 December 1781 by which he provided the transfer of the revenue of the Carnatic to the Company for a period of five years.⁵ The English obtained the privilege of settling the rent with the renters and poligars.⁶ While the Company agreed to pay one sixth of the settled rent to the Nawab, it consented to account the rest in his credit. This agreement covered all the provinces of the Carnatic, granted much discretion to the Company for the settlement of rent and ensured for it direct control over the renters. The Nawab's powers for the period of five years were restricted to his receipt of one sixth of the revenue and the appointment of the Company's nominees as renters.⁷

The Committee for the administration of the assignment consisted of a senior member and five members.⁸ It functioned through native officers called Company's Collectors, who resided at the taluq or district offices. Despite its limited knowledge on the details of revenue and customs of the inhabitants, it made an earnest attempt to improve the administration of revenue. Besides, it appointed its own nominees in the place of corrupt renters and restricted the number of the revenue servants to the bare minimum.⁹ Anxious to conciliate the poligars, it appointed the former chiefs of Wodayarpalayam and Ariyalur as the renters of their respective districts. These chiefs, in consequence, abandoned their alliance with Tipu Sultan and joined the Company.¹⁰ In an endeavour to win

the confidence of the chieftains, the Committee relieved them from the renter's jurisdiction which occasioned oppressive exactions and placed them under its direct authority.¹¹ The poligars, thus, for the first time came under the direct administration of the Company. However, the success of the Company appeared limited. It found it essential to rent extensive districts to the highest bidders and to entrust unrestricted authority over the renters for the strict enforcement of collections.¹² The assignment gave an excellent opportunity to the English to learn the administration of the country. It established a precedent of the Company's intervention on the Nawab's Government.¹³

Acquisitions of Early Revenue Experimented Area of Jaghir

Among the Company's early possession, the *jaghir* of Chengleput district formed an important territory. In the initial stages of Company's rule, the authorities in India and England thought it highly inexpedient to interfere hastily and ignorantly with the method of collecting revenue. They felt it expedient to allow the status quo to continue i.e. the collection of revenue by the Indian officers of the Nawab on behalf of the Company under the same terms and conditions obtaining under his administration. The havoc caused by war was intensified by a pernicious system of administration. Often the rulers relieved themselves of all trouble by farming out the right of revenue collection in particular areas to the highest bidder. The Nawab of the Carnatic was in the habit of making assignments of the revenue collection in the districts of his creditors. All these renters were a set of men utterly without principles and every kind of injustice and oppression was practised on the people. In the revenue management, the Rajas, zamindars and poligars regarded themselves as petty kings and were indeed able to exercise the most arbitrary authority within their districts with the knowledge of the Government. They in turn often rented out portions of their districts or appointed subordinate officers to collect the revenue.

The first general acquisition of territory by the East India Company from a revenue point of view was of the country around Madras known as the *jaghir* as originally granted by the Nawab of the Carnatic. The revenue thus assigned was

intended as a contribution towards the expenses of the wars undertaken in aid of the Nawab.¹⁴ The Nawab of Arcot gave away as *jaghir*, the region around Madras, in return for the services rendered to him by the Company. At first administration was not assumed and revenue were collected according to local custom. In 1780-1781 the *jaghir* was divided into blocks and sold to the highest bidders.¹⁵ In 1780 the Company attempted direct management and let out the country in fourteen large farms on leases of nine years at increasing rents. The renters themselves did not know how to manage and the Company pressed them for advances demanding help in order to start cultivation.¹⁶ Hence, the renters had repeatedly failed and their estates were sequestrated.

Abolition of the Committee of Assigned Revenue

It was at first rented to the Nawab on renewed leases for year to year until 1780¹⁷ for a sum of 3,68,350 pagodas a year.¹⁸ A survey was conducted during this period. On the assumption of the *jaghir* by the Company's Government, it was placed under the charge of the Committee of Assigned Revenue, to manage the Nawab's possessions in the Carnatic. When the *jaghir* came under the Company's management, great difficulties were experienced in laying down a rule for the division of the crops, each party claiming to himself the largest shares, which he had at any time, enjoyed. The Committee of Assigned Revenue, in 1783, let out the country in fourteen large farms on leases of nine years, at increasing rents. The renters, to whom it was farmed in 1783, were men of very low origin, needy and ignorant of the business in which they had engaged. When the Committee of Assigned Revenue received proposals for renting it, they were not possessed of any lights or materials that could properly guide their judgment, in fixing the rents. In 1784 a Company's servant was appointed at the instance of the Committee of Assigned Revenue, as resident in the *jaghir*, in order to see that the several stipulations contained in the *cowls* or leases, were put into execution.¹⁹ In 1786 the Committee of Assigned Revenue was abolished; but the Resident, however, continued to discharge his duties.²⁰ On the dissolution of the Committee, the general charge and control of affairs was confided to a superintendent with a clerk, being also a Company's servant, the

resident still continuing to discharge the duty formerly allotted to him. The districts were soon afterwards placed under the sole charge of the superintendent. In 1788 the *jaghir* was formed into two divisions, and each placed under a Collector who let, to the inhabitants in smaller portions on leases for three years. By 1789 the renters, with a few exceptions, had repeatedly failed in their payments under the leases for nine years.²¹ Therefore, their estates were sequestered and several of them were put into confinement.

In short, the assignment not only established the alienable character of the Nawab's administration but made deep inroads into the prerogatives of the Wallajahs. The Committee constituted for the administration of the assignment functioned through the Indian officers called the Company's collectors. The European settler's administrative experiments in revenue matters were introduced for collecting revenue. When the Company engaged themselves in revenue collection from the conquered and acquired territories, different kinds of revenue systems prevailed in the Presidency of Madras.

FROM CLASSROOM TO STREET: STUDENTS, CONGRESS AND THE RAJ IN COLONIAL TAMIL NADU, 1930 – 1932

Dr. S. Ganeshram

The Post 1922 period witnessed swift changes in the political spectrum of India. The suspension of the Non-co-operation Movement in fact made the leaders of the Congress to think in terms of other alternatives. As a result, there was a cleavage in the Indian National Congress which ultimately led to the formation of the *Swarajya* Party. The demand for reform became more vocal and meetings were held in different

parts of the country to drive home this point. The Government appointed several commissions such as the Lee Commission, Muddiman Commission and the Simon Commission to pacify the people. However, the report of these commissions did not satisfy the requirements of the people. Hence, they became disheartened. The leaders of the Congress now began to demand complete Independence. At this time the

death of Jatin Das¹(1929) of Calcutta created resentment among the students which in turn strengthened the cause of the Youth movement. The year 1929 witnessed the formation of many youth and student organizations all over India. Conferences were held at several places in Madras and other cities of India.

The Indian National Congress which had its session at Lahore on 29th December 1929 declared the attainment of complete independence as the ultimate goal of the Congress.² In order to achieve this, Congress party launched the Civil disobedience Movement. The resolution to this effect framed by Pandit Jawaharlal Nehru charged the British Government for not only depriving the Indians of their freedom but also ruining them economically, politically, culturally and spiritually. Therefore, the Congress wanted to sever the British connection and attain *Puranaswarai* or complete Independence.³ A manifesto which highlighted the concept of *Purana Swaraj* was sent to numerous Congress organisations throughout India.⁴ The movement was marked by organization of meetings, salt Satyagrahas, demonstrations, hartals, picketing of foreign cloth shops and non-payment of taxes.

The people of Tamil Nadu extended their whole hearted support to the movement.⁵ As decided at the Lahore Session of the Congress, 26th January 1930 was celebrated throughout the country as Independence Day.⁶ The Government initiated repressive measures to crush down the movement. Undaunted by this, Gandhiji launched the Civil Disobedience Movement in March 1930.

The nationalists gave priority to the salt satyagraha programme. On 12th March 1930 Gandhiji with his seventy eight chosen disciples started their historic march to break the salt law at Dandi.⁷ In one of his speeches during the course of the Dandi march Gandhiji appealed to the students to join the struggle. He said at Anand ". . . you students must suspend your studies for as long as the struggle continues. . . come out on the battle field and become mendicants for the sake of the country".⁸ The Congress leaders of Tamil Nadu echoed the sentiments expressed by Gandhiji. Such appeals produced favourable response. A good number of students left their institutions and participated in the Civil Disobedience Movement. They

demonstrated vehemently against the arrests of important leaders. At a meeting of the working committee of the Tamil Nadu Congress Committee held on 18th August 1930 it was decided to picket schools and Colleges to catch the attention of the students who attend the class and enroll students and volunteers.⁹

Students and Salt Satyagraha:

As part of the salt Satyagraha campaign, C.Rajagopalachari organised a march from Trichinopoly to Vedaranyam on 13th April 1930 to break the salt law. Out of three hundred volunteers who expressed their desire to take part in the movement he selected hundred volunteers. Most of them were young-clerks, students and graduates.¹⁰ Students like K.Vinayaka Rao and K.Srinivasan were important volunteers of the Vedaranyam march.¹¹ O.V.Alagesan of Presidency College, Madras who wanted to but could not participate in the Dandi march was also admitted as a volunteer at Thirukattupalli.¹²

Nainappa Pillai, a Congress leader of South Arcot district started the salt satyagraha on 9th April 1930 at Kille (sea shore) near Chidambaram. He appealed to the student community to extend their mite to the cause of Satyagraha. As a mark of support the students who were present there, gave away their copying pencils, fountain pens and even shirt buttons which were promptly auctioned and the proceeds sent to the national fund.

On 21st April 1930, attempts were made in two different places on the sea shore under the leadership of Nainappa Pillai and Sudarasana Naidu to boil brine. A party of students assisted the leaders in their endeavor. At about 9.30 a.m one Venugopal, a student of Pudupalayam rushed to the leaders with the news that they had succeeded in manufacturing salt. To testify it, he brought a broken piece of pot with some salt. About thirty students took part in it. This development inspired the students to such an extent that they began to evince keen interest in the movement. The students tried to manufacture salt from brine and collected money for the salt satyagraha programme.¹³

Students and Madras Swadeshi League:

The Madras Swadeshi League organised an exhibition with the help of Madras Youth

League in July 1930. The exhibition was inaugurated by P.C.Rayon.¹⁴ Swadeshi items were sold in the exhibition. The principal members of the Swadeshi committee of Youth League visited schools and colleges to spread the message. This Youth League had much influence and support among the students of Madras Loyola, Pachaiyappa's and Christian Colleges. For the purpose of selling the Swadeshi goods outside the Madras city limits, a bus was bought. H.Sarajini Rajan, a member of the League Executive and an inmate of Queen Mary's College Hostel spared no efforts to popularise the movement among the girl students of that institution. Swadeshi notebook marketed by Swadeshi sub-committee was sold to the college and school students for four annas.¹⁵ It should be noted here that few college teachers also took part in the construction work unmindful of the Government attitude. Professor J.P.Joshua of Madras Christian College associated himself with the Swadeshi League and took part in the propaganda work in favour of Swadeshi goods.¹⁶ So also, Professor B.Ramajoga Rao¹⁷ and Professor N.G.Ranga¹⁸ took an abiding interest in the movement.

Meanwhile realizing the growing influence of Civil Disobedience Movement amidst the students, the Government held the Congress squarely responsible for dragging the students into the vortex of politics. The Government blamed the Congress for spoiling the career of students and appealed to the students to come out of the movement.¹⁹ But such appeals had no effect on students and they continued to take part in the movement.

In Madras city active student participation in the movement started with the death of Govindasamy. He was an advocate of Ambulance and Boy Scout activities. He died on 29th April 1930 because of gunshot wound in abdomen while participating in the picketing of foreign cloth shops. News of his death spread like wildfire among the city students. The enraged students who found it hard to digest the death of their beloved Boy Scout activist Govindasamy gathered near Pycrafts Road threw stones and chappals on the Police.²⁰ The Assistant Commissioner of Police had to visit the spot to bring the situation under control. Few students were taken into custody. However later they were handed over to their parents.²¹

The students of Madras decided to organise a hartal on 29th August 1930 to condemn the arrest of prominent Congress leaders at Delhi. The students of Pachaiyappa's college left their classes. A band of High School boys went round the bazaar and exhorted the students of Hindu Theological High School and Muthialpet High School to come out of their classes. They also made the Headmistress of W.F.C.M.Girls' School to close the school. Meanwhile the students of Christian College also joined the processionists. They went around the Paris Corner and requested the shop keepers of China Bazaar and Esplanade to close their shops. Anticipating clash between students and Police, all the shops in the above mentioned area were closed in the evening.²²

The students of the Hindu High School, Triplicane celebrated 'Gandhi Cap Day' on 15th September 1930. A large number of students not only attended the school wearing Gandhi caps²³ but also brought caps for distribution to other students especially to sons of government officials. After doing this they came out of the school and held a demonstration. The students of Kellet High School, Triplicane also extended their support to the students of the Hindu High School. Twenty five students were arrested and later they were released on the same day.²⁴ Because of such anti-British activities, the Director of Public Instruction warned the Headmaster of Hindu High School that the government will not release the grant if he failed to take severe action against the students for indulging in such activities. The school Headmaster Subramania Ayyar had a soft corner for the students. He blamed the police for unnecessarily beating the small boys perceptuating the issue. However the school management which viewed the matter with concern suspended three students for a fortnight and fined seven students after an enquiry.²⁵

In November 1930 alone, seventy persons, mostly students were convicted for offences connected with the Civil Disobedience Movement. In October 1930 the students of Madras city colleges organised hartal to protest against the re-arrest and conviction of Nehru.²⁶ The Congress leaders appealed to the public to take part in large number in the 'Flag Salutation' ceremony planned on 25th January 1931 and observe a hartal on 26th January in connection

with the 'Independence Day' celebration. A large number of students who responded to this appeal celebrated 'Flag Salutation' ceremony and gathered near king's statue and shouted slogans like "Gandhi-ki-Jai" and 'Close shops'.²⁷ When the Independence Day was celebrated on 26th January 1931 all the city schools and colleges declared a holiday except Pachaiyappa's College. But the students of the college did not attend their colleges. By then the crowd in front of the college swelled due to the arrival of students from other schools and colleges. Expecting violence, police tried to disperse the students. The students retaliated by pelting stones, shoes and other missiles at the police. Finding the situation getting out of control, the police made a lathi charge on the students and the public.²⁸ Enraged by this, a meeting of the college union was convened the very next day, with Professor Subramania Iyer in the chair. The meeting passed a resolution which condemned the "indiscriminate and severe lathi charge" on the students.²⁹

Thus in the city of Madras, the students extended their whole hearted support to the movement. They took active part in the picketing of shops which sold foreign cloth. This affected the revenue of the government to a great extent.³⁰ The students of Pachaiyappa's College and Loyola College played a leading role in the programme connected with the Civil Disobedience Movement.³¹ From Pachaiyappa's College alone fifteen students left the institution and joined the movement during the period from 23rd June to September 1930. Many students of Queen Mary's, Loyola and Pachaiyappa's colleges were dismissed from their colleges for taking part in the movement.³²

Trichinopoly

Among the districts of Tamil Nadu, Trichinopoly took a leading role in the movement.³³ Since the headquarters of Tamil Nadu Congress Committee was located at Trichinopoly and also due to vigorous congress propaganda, the movement began to attract the attention of the students. As a result picketing of colleges and schools was successfully organised. A few arrests were also made in this connection.³⁴ During September 1930 a large number of students of St. Joseph's College, Bishop Hebbur College and National College boycotted the classes to demonstrate their

support to the non violent struggle organised by Gandhiji.³⁵ On 5th September 1930, a public meeting was held in front of the Trichi Town Hall. The students in large numbers participated in it. Paul Ramasamy, a student of the Bishop Hebbur College and Ramachandran Nedungadi of the National College delivered 'inflammatory speeches'. Paul Ramasamy requested the students to join the movement and to hoist national flags. After the meeting, the students organised procession. On 7th September 1930 the students of Trichinopoly schools and colleges not only hoisted the National flags over their hostels but also encouraged the bazaar shop keepers to do the same.³⁶ A large number of students and sympathisers numbering about 1000 went in a procession along the main streets of Trichinopoly with national flags and singing national songs.³⁷

Realizing the strength and patriotic feelings of Trichinopoly students, the District Magistrate passed an order under Section 144 Cr.P.C., preventing demonstrations or picketing. In order to suppress the student activities, the administration forced the college and school authorities to take severe action on students who took part in the movement. A large number of students were arrested and imprisoned. A few students were dismissed from the colleges. Heavy fines were imposed on the students who absented from attending the classes. Scholarships of those students who took part in the Civil Disobedience Movement were cancelled. To stop further student activities important student leaders were expelled from the hostels.³⁸

Madurai

At Madurai most of the students of the Madura College abstained from classes as a protest against the imprisonment of Jawaharlal Nehru. An emergency meeting of the college council was held and a resolution was passed punishing the students with cancellation of three days' attendance.³⁹

Coimbatore

In Coimbatore the students of Government Arts College, London Mission High School and Municipal High School took out processions and demonstrations on 9th and 10th July 1930 in support of the Congress programme.⁴⁰ C.V. Ramakrishna, a student of the Government

Arts College who left the college to join the Civil Disobedience Movement was arrested and sentenced to two years imprisonment.⁴¹

Chidambaram

At Chidambaram in South Arcot district the students of Sri Meenakshi College⁴² celebrated the 'Independence Day' on 26th January 1930 and went round the principal streets of the town shouting slogans like 'Gandhi-ki-jai' and 'down with imperialism'.⁴³ The students of Annamalai University observed a hartal on 30th October 1930 to protest against the incarnation of Pandit Jawaharlal Nehru.⁴⁴

Suspension and renewal of the Movement:

Meanwhile, the Government was very keen to secure the cooperation of Congress to run the administration peacefully. By a settlement reached between Gandhiji and Lord Irwin on 5th March 1931, the Congress agreed to participate in the Round Table Conference to be held in London.⁴⁵ The Government then agreed to withdraw all the ordinances which tried to retard the force of the national movement and to release the political prisoners. After the First Round Table Conference Congress withdrew the Civil Disobedience Movement.⁴⁶ But the Gandhi - Irwin Pact remained only for a short time. The Round Table Conference failed to achieve

anything. Lord Willington took severe actions against the Congress workers. So the Civil Disobedience Movement was once again resumed by the Congress early in January 1932.⁴⁷ This led to the arrest of Gandhiji, Nehru and other leaders.⁴⁸ The students successfully organised hartals to protest against the arrest of Congress delegates to Calcutta.⁴⁹ On 9th November 1933 black flag procession was organised by the students of Madras city in connection with the Civil Disobedience Movement.⁵⁰ The resumption of Civil Disobedience Movement was put down by the government. Although the second Civil Disobedience Movement failed to achieve its objective, it created anti-imperialistic feelings among the people. This was evident from the fact that almost all the Congress candidates got victory at the general constituencies in 1937 election.⁵¹

The nature of the student participation in the Civil Disobedience Movement clearly showed the mental maturity of the students to decide their priorities and their appreciation of the struggle for freedom. However, this could not be attained fully due to the repressive measures of the administration. Besides Madras, the students of Trichinopoly, Chidambaram, Coimbatore and Madurai also took an active part in the movement.

LOCAL MARKET AS AN INTEGRATING CENTRE OF PRODUCTION AND COMMERCIAL ACTIVITY IN THE CASE OF VANIYAMKULAM

C. Geetha

Introduction

Kerala had been a hub of commercial activities since centuries. She has occupied an important place in the trade map of the world, which in turn influenced the socio-culture and political setting. Both indigenous and foreign trade had flourished here. Local Market or *angadis* played a major role in the internal trade of Kerala right from the ancient time. Vaniyamkulam is a village at Ottapalam taluk in Palakkad district. It was a part of Valluvanadu, one of the famous natus. The Cattle market here is the icon of the cultural heritage of this village. Vaniyamkulam *Chantha* bears a remarkable place in the history of Valluvanadu. The history of this *Chantha* dates back from the time when agricultural growth led to surplus produce as a result the exchange system started and trade practices developed. A place for the exchange of commodities developed as *chantas*. The location of the Vaniyamkulam Chanta is significant because this is a place where different trade routes are meeting. This type of *Chanthas* were existed in Kerala except Cochi and Malabar and still continues to be play an important role in the trade and commerce of agricultural products and livestock. Perumpilavu, Coyalmannam, Manjeri, Koottilangadi Kottatharaetc. are *chanthas* functioning even today. They played important

function in the evolutionary process of urbanisation of these centres. *Chanthas* had played an important role in the process of urbanization and economic development of a society, wherever they existed. The first cattle market of Kerala established by Mooppil Nair of Kavalappara in Vaniyamkulam.¹

Agricultural growth in the hinterland, the availability of surplus, the amount of importance given to the commerce and trade in the development of commodity production and exchanging the hinterland are certain necessary pre conditions to urban growth.² The rate of growth in the agricultural yields, in the surrounding areas of the Vaniyamkulam *chantha* and the availability of other commodities and consumer goods like apparels, ornaments and costumes were available here, due to the presence of major trade routes pass through this spot. *Chanthas* can be discussed as a developed system of primitive exchanges. The Growth of trade and markets are believed to provide the locus for the growth of urban centres, the distinction between urban and the rural or between the country and the town are reduced to the basic form of economic operations conducted in the respective centres, agriculture and trade.³

Trade Practices in Vaniyamkulam

The local trade system includes different types of Chantas as well as angadis. *Chanthas* can be classified according to the frequency of the conducting, location where it is established, the commodities available for trade and the time when it is operated. That is why we have weekly *chanthas*, *kadavu chanthas*, *kali chanthas* (cattle market), *anthi chantha* (functions at evening)...etc. The Chantha of Vaniyamkulam is considered as a Weekly Chantha, because it is held weekly at once at the same time it is a kali chantha too. Normally this Chanta starts functioning on Wednesday at 10 am and ends at Friday noon. However peak time of trade activities is on Thursday. Hence it is known as *Vyazhacha* (Thursday) *Chantha*. The exchange of the cattle is a very peculiar practice. When the animal or animals ready for sale it is exhibited in the market, those who wants to buy the cattle says aloud the price he is ready to pay for it. Then there will be a heated bargaining between the seller and buyer, The climax is when the third person enters into the scene. He is the middle man who interferes and finally settle the amount and if both of the buyer and seller agree with the rate finally they reached, then a handful of grass will be forcefully put into the hands of the traders, this is the sign that the sales of the cattle is settled at last. In some occasion instead of the grass, the towel (*thorth mundu*) is used. This system is known as *poruthukachavadam* and the middleman is paid a sum both by the seller and buyer for the settlement of the transaction.

The land of *chantha* divided into many parts to provide space for each traders for which he/she had to pay rent. The space provided for the traders are exclusively for the use of keeping their commodity for sale. Different portions of Chantha were allotted for the trade of different commodities and these portion is called *theruvu*. The following are the commodities kept in each *teruvu* for trade such as Cattles, rice, Vegetables, bamboo products, coir, cloths, potteries, iron implements, gold silver ornaments. Each *theruvu* named after the product that sold there. *Ariteruvu* (rice), *Panditeruvu* (grocery), *Muthantheruvu* (gold and silver), *Mattutheruvu* (cattles), *meenteruvu* (fish), *Kumbharateruvu* (pottery), *Tholpattateruvu* (leather) ...etc. were some of the important *theruvus*.⁴ *Mattutheruvu* is existing for cow and buffaloes, goats are also sold here.

The style and volume of trade and commerce has transformed in the course of time. Upto forty years before the commodities were exchanged inside the Chantha itself, but now there are grocery and vegetable markets outside, today the marketplace exclusively used for the trade of livestock. The livestock includes cow, bullocks, buffalo, goat, cock. The number of cattles were increased from hundred or so in the earlier times or before forty to fifty years increased to thousands today. It may be because the conveyance or transportation of animals has become restricted by rules by the Government now that the cattle from distant places are brought here by huge trucks protected from rain and sunlight by covering the truck. In former days cattles were brought here by walking a long distance from Tamilnadu and Anthrapradesh. Today on the day of Chantha more than fifty trucks can be seen parked along the highway, that used for the transportation of the cattle to and fro.

Trade routes and trade relations

There are different trade routes that pass by the Chantha which facilitated trade in a higher rate than it was in the chanthas of the same category. The chantha of Vaniyamkulam was and is a place, where three major trade routes met. One started from Kaverypoompattanam through Palakkad Pass headed towards Ponnani and the second one from Thirunalveli, through Chengotta crossing Western Ghats and going through Thiruvillamala, crossing river Nila coming to Vaniyamkulam and then to Panayur kotta, Koppam, Angadippuram ending in Kozhikode. The Third route passing through Vaniyamkulam was from Cholanadu through Attapadi, Mannarkkad, Sreekrishnapuram, and Anangan Hills.⁵ These trade routes enhanced the facilities of Vaniyamkulam Chantha up to an extent compared to the other trade hubs distributed along these trade routes.⁶

Commodities and goods for trade were brought to this Chantha from nearby places, Palakkad and adjacent states of Kerala that are Tamil Nadu and Andrapradesh. Vegetables are brought from different parts of the village itself. Cattles were brought mainly from Hyderabad and Tamilnadu, coir from Ponnani, grocery from Tamilnadu.⁷

The major portions of the commodities transacted here were brought by the natives. But in the case of cattles it is not so. Cattles were bought and transported to other districts in Malabar and Cochin. For further sale cattles were taken to other markets such Perumpilavu, Coyalmannam. Cattles were brought from and then taken to Cattle Chanthas Perumpilavu and Coyalmannam.

The trade and related transactions in these Chanthas were not meant to gain profit, but for fulfilling the daily needs of life.

Congregation of population takes place in different ways. The passage of a large number of population along the same path resulting in the formation of a route or channel, in which locality becomes a stopover. Several channels cross the locality, through the identification of locality assume network a clear form, a separate space or nodes within the network of channels. When the network becomes more complex connecting many nodes and the original locality or another node grown into an urban centre within the cluster of nodes⁸

Diverse trade and commercial practices in Chantha for long years give rise to a heterogeneous group of communities surrounding areas of the Chantha. Vaniyamkulam Chantha and its neighbouring Place Koonathara is noted for residing different sections of chettiya communities. These communities occupies an important role in the development of trade in this area.

Archaeology of the site

The total area of the Chanta is 6.5 acre and this land is under the ownership of Vaniyamkulam Grama Panchayath. There has been a Chanthapura attached to the market ground. This building was being used by the traders and officials who collected chungam, as a resting place. Now the authority to collect rent from the land rests with the local self-Government i.e. the Vaniyamkulam Grama Panchayath. The pond Vaniyamkulam after which the village is named as Vaniyamkulam. The pond is very near to the market. The practice of conducting trade (vanibham) near the surroundings of this pond (Kulam) combined originated the name vaniyamkulam.⁹ The land which is used as the Chantha is about 6.5 acres have banyan trees

and two small old houses. There signs of an old gate which is now seen closed because of its small size. Now the entrance is the east side of the land. The land is laying in terraced mode, the upper portion of the land was for the trade of gold and silver and lower part is exclusively for the cattles. An auditorium has been built by panchayath on one corner of the upper part of this land. Realizing the importance of Vaniyamkulam as an important trading hub, new trading groups has emerged during the last decades. Today a large dry fish market is functioning in the town near the *Chantha*.¹⁰

It is learnt from the field visit that there are many settlements of chettis can be seen in the eastern and southern parts of the market. Chettis belongs to different sections like Tamil, Vellala, Chakkans, Vaisya, Vaniya, Muthaliyars Kumbara, Pappada, Vala Chettis....etc. There are Mariyamman temples in their residing area. Among the Chettis Telungu Chettis (24 Mana) migrated from Tamilnadu and Anthrapradesh and speaking Telungu language.¹¹ The presence of these (Vaniks) groups plays an important role in the trading scenario of Vaniyamkulam.

Manufacture of goods and production for market came under merchant control through collective investments.¹² This is true in the case of Vaniyamkulam. The trade practices of the locality is attained as an important one in relation to the craft works. The traditional craft groups like Carpenter, Parayar, Blacksmith, and Panar, Kurvar...etc. These craft man played a major role in meeting the domestic needs of local people by producing home appliances, utensils and agricultural tools.¹³ Some of these groups closely related with the production and sale of the materials needed to the agricultural practices of this area. Varieties of iron implements are brought in the market for sale. These practices are rarely seen today. There were open fronted stalls ran the length of the ground. Realizing the importance of the Vaniyamkulam as an important trading hub, new trading groups emerged in due course.

Conclusion

The bio-diverse culture of the region also contributed the commercial as well as agrarian development. These features of the locality helped Vaniyamkulam to develop as an important place in trade and commercial

practices. Vaniyamkulam has great historical importance with regard to trade and commercial practices that still continue. The development

and present position of Chantha has an important role in the social economic and cultural history of Palakkad.

AGRICULTURAL ACTIVITIES IN THE MEDIEVAL PAGANUR KURRAM

R. Govindaraj

The agricultural practices of the ancient Tamils provide ample scope for the study of their agricultural heritage. The ancient Tamils raised crops, domesticated cattle for farm – use and developed suitable farming implants. They adopted tank irrigation of their lands and whenever the monsoons failed and tanks got dried up, they dug wells for tapping sub – soil water. They had also attempted to study all aspects of agriculture relating to seeds, their storage and vigor. They knew that weeds also came up along with crops, and so they followed suitable methods to destroy them. They took measures to protect the crops carefully. In this paper, an attempt has been made to classify the Sangam literature and inscriptional evidences for the agricultural activities of Paganur Kurram (present Vadipatti taluk) and understand the agricultural significance.

The agricultural practices of the ancient Tamils provide ample scope for the study of their agricultural heritage. The ancient Tamils raised crops, domesticated cattle for farm – use and developed suitable farming implants. They adopted tank irrigation of their lands and whenever the monsoons failed and tanks got dried up, they dug wells for tapping sub – soil water. They had also attempted to study all aspects of agriculture relating to seeds, their

storage and vigor. They knew that weeds also came up along with crops, and so they followed suitable methods to destroy them. They took measures to protect the crops carefully. Knowing that each crop exhausted the nutrients of the soil they applied manures to the field – before raising the next crops or adopted rotation of crops. These practices were improved and refined by successive generations of farmers and handed down to posterity as a traditional system of agriculture.¹

In this paper, an attempt has been made to classify the Sangam literature and inscriptional evidences for the agricultural activities of Paganur Kurram (present Vadipatti taluk) and understand the agricultural significance. The main occupation of the ancient Tamil people and was agriculture and cultivation and they were most respected.² Agriculture, though laborious, was the most excellent form of labour for people though they go about (in search of various employments) have at last to resort to the farmer.³ Farmers were aware of different soil types, the best crops to grow and the varieties of irrigation systems suitable for any given region. Ancient Tamil country has been classified into five geographical regions according to Sangam literature, the Marudam region was the fit for cultivation, as it had the most fertile lands. Land

was classified, according to its fertility, as Menpulam⁴ (fertile land), Pinpulam⁵ (dry land) and Vanpulam⁶ (hard land). Menpulam yielded rich produce on a variety of crops, but pinpulam was cultivated only with dry crops due to limited irrigation facilities. The yield from Vanpulam was limited. Some of the well known types of soil have alluvial soil, red soil, block soil, laterite soil and sandy soil. The Tamil country stood as an agrarian region from the 6th-7th AD., century onwards. The *Pallavas* and the *Pandyas* were the early dynasties deeply involved in the promotion of agriculture; thereby they developed number of water sources for irrigation purpose. The rivers were intercepted by constructing the dams in between and many sluices. Channels were also created. The state took responsibility of creating the water sources and also assured the supply of water according to the needs of the area and crop.⁷

Classified Lands

The agricultural activities were carried out in different kinds of lands, such as *nanjai nilam*, *neer nilam*, *vayakkal*, *vayal* (wet and fertile lands), *punjai nilam* (dry land), *karunjai* (black soil), *vilaiyum nilam* (yielding land), *kollai nilam*, *kadu*, *thottam*. Flower seems to have been and planted in *Nandavanam*, *Tirunandavanam* and *solai*. Flower was supplied to the local temple. The lands such as *thidal* (up land) *tharisu*, *palnilam* were considered not suitable for cultivation.

Nanjai Nilam

Tiruvetagam inscription says about *Nanja*⁸ lands were abundance here because of the reason that they were watered by river Vaigai. The *nanjai* land was suitable for wet crops, for paddy and sugarcane. There are many references to the cultivation of different food crops in the Sangam literature. Paddy was the main crop, with different varieties grown in wetland of the *nanjai* or Marudam land such as *channel* (red variety), *vennel*, (white variety),⁹ *pudunel* (new variety), *ivananel* (five varieties) and *torai*.¹⁰ Though there are references to the five varieties of paddy, the region under study, i.e. Paganur Kurram seems to have cultivated a general variety of paddy, is called simply *nel*¹¹ in Kuruvitturai inscriptions mentioned. Sangam classic Ingurunuru mentions that a village in Vadipatti region sugar cane was planted abundantly in Tenur.¹² The poet mentions that

the sugar cane crusher factory produced noise similar to that of a voice of elephants.

Nanjai land has been called by several names such as *vayal*,¹³ *vasakka*¹⁴ or *vayakkal*, *neer nilam*¹⁵ and *palanam*.¹⁶ These lands seem to have situated in the very fertile region only. These lands were suitable for the cultivation of paddy and sugarcane. Lines of *Ingurunuru* and epigraphically records one could understand that the Vadipatti region had different kinds of wet and fertile lands and the people there were cultivated paddy, sugar cane bamboo rice etc.

Vilainilam

An inscription of the *Alagarkovil* says *Vilainilam*¹⁷ was a land suitable. Whether *nanjai* or *punjai* for the cultivation of crops. Cultivation has depended upon the quality of land suitable for the cultivation of certain crops.

Neer nilam and Neer nilainilam

Kuruvitturai and Tiruvetagam inscriptions gave details an account about *Neer nilam*¹⁸ and *Neer nilainilam* were also called as *nanjainilam* and they were provided water from the river Vaigai.

Nilam

The word *nilam* denoted two types of lands such as *nanjai* and *punjai*. The land or *nilam* was based as a common land without mentions of their water resources. The lands were demarcated as per the four surrounding boundaries mentioned by Kuruvitturai inscription.¹⁹

Padugai

Velvikudi copper plate gave the information about *padugai*.²⁰ Flat surface type of land was called as *padugai* which was irrigated by river water. Here richest alluvial soils abundantly existed. It's also a *nanjai* land where paddy and sugar cane were cultivated.

Kollainilam

Naturally bushes grown and upland are called as *Kollainilam*,²¹ there is only one epigraphically record from temple of *Tenkarai Mulanathasamy*, which merely says as

kollainilam. Here naturally grown bushes and creepers vegetables, such as bitterguard, bottleguard, kovaikai might have been cultivated.

Thottam

Tenkarai Mulanathasamy temple inscriptions and Velvikudi copper plate gave the below details. *Thottam*,²² *thoppu*²³ means at area in which trees were grown abundantly. *Thottam* was also called *thottakuru*²⁴ and *thottakadamai*.²⁵ Here *naga*,²⁶ *mango*,²⁷ *kamugu*²⁸ (*arecanuts*) and *thengu*²⁹ (coconut tree) trees were planted.

Nandavanam

Kuruvitturai Chitraratha Vallabhaperumal and Kilmattur Manikanthesvaram, these temples inscriptions speak about *Nandavanam* and *Tirunandavanam*. The flower garden was called as *Nandavanam*,³⁰ *Tirunandavanam*.³¹ Here flower was planted and those flowers were supplied to the local temples for the performances of pujas. The flower plants cultivated in the temple gardens were *kuavalai* (*Indian water lily*), *sengaluneer* (*red kuvalai*), *malligai* (*jasmine*), *perunsenbagam*, *siru senbagam*, *iruvatchi*³² etc. In additions to the above these were also other thottams seem to have existed in this region. They included *poonthottam*, *thengu nandavanam*, *kamugu nandavanam* and *kamugu thottam*.³³

Punjainilam

Kuruvitturai and Tiruvedagam inscriptions mentions about *Punjainilam*³⁴ are a dry land.the irrigation of this land mainly depends on rain

water only. This land was suitable for the cultivation of dry bearing crops. Tiruvedagam Edaganathar temple inscription gives the details of some dry crops such as *tinai*,³⁵ *varagu*,³⁶ *gingelly*,³⁷ *pullu*³⁸ and *irungu*³⁹ cultivated here.

Karunjainilam

*Karunjai*⁴⁰ land was suitable for cotton cultivation; As the soil of this land was called as *karunjai*. An inscription from Tenkarai mentions that *panjupeel*⁴¹ cotton crop was cultivated in this land.

Seasonal crops

Seasonal crops also were cultivated in this region. Epigraphically records belongs to Tiruvedagam mentions about the cultivation of kuruva crops (short term) in the month of *adi*,⁴² *aipas*⁴³ and *masi*.⁴⁴

Summary

Paganur Kurram comprised of the present Vadipatti and a part of Nilakkottai taluk during the ancient and medieval period. This region is a very fertile and greenish wetland area because of the Vaigai River water supply. Paddy and sugarcane were cultivated abundantly here since Sangam period. Velvikudi copper plates, Sangam classic literature and epigraphically records mention about the fertile nature of this and it water sources Pandya kings constructed many Channels, canal, and sluices for promoting agriculture in this region. It's a Brahmadeya land and many efforts were taken for agricultural developments by the Brahmins.

A HISTORICAL NARRATION ON THE ECONOMY OF THE KADAR TRIBE OF VAZHACHAL SETTLEMENT

Greshma Benny

Introduction

The Imperial Gazetteer of India 1911, defines a tribe as a "collection of families bearing a common name, speaking a common dialect, occupying or professing to occupy a common territory and is not usually endogams though originally it might have been so". The tribal people are living in hills and forests for many centuries led a solitary life of their own, generally not influenced by the currents of the latest development taking place outside. Today they are at different stages of economic development. On one extreme they are primitive tribes still at food gathering stage in the remote hilly areas and on the other extreme the tribe seeking out their livelihood in the vicinity of industrial and mining complexes.¹

Among the scheduled tribes some tribes are more backward than others. They have been classified as the primitive tribes. Primitive tribal communities live more or less in isolation with a very simple lifestyle. Most of these communities are small in size and their growth rate is slow. They have been referred to as constituting the lowest layer among the scheduled tribe communities by the Dhebar Commission in 1963. They are at a pre- agricultural level of technology and at an extremely low level of

literacy. Seventy four scheduled tribe communities had been identified as primitive which spread over 17 states and Union Territories. In order to develop them Government has put forward separate micro projects and various other schemes which provides integrated development of these communities through convergence of education, health and income generating schemes.²

In Kerala five scheduled tribes are identified as particularly vulnerable tribal groups. They are the Cholanaikan, Kattunaikans, Kurumbas, Koragas and Kadar. They constitute nearly 5 per cent of the total scheduled tribe population in the state.

Kadar

Kadar's are one among the five Particularly Vulnerable Tribal Groups (PVTG) of Kerala is the original inhabitants of the state residing in the Cochin forest region. They are distributed in Palakkad and Thrissur districts and adjoining forest of Tamil Nadu. The Kadar's of the Cochin forests speak a mixture of Tamil and Malayalam, while those of Anamalai hills speak the kind of tamil called Malasir. Kadar's are light hearted and wild, but not as simple as presumed. Contact with the advanced societies has brought changes in the normal primitive life.³

The term Kadar was derived from the Malayalam word 'Kadu' meaning forest. The tribe obviously got the name because they exclusively live in forest. The "Kadar land" lays between 10 degree 20 minutes and 48 minutes north and 76 degree 30 minutes and 55 minutes east, at the tri-junction of the Coimbatore district of Tamil Nadu and the Palakkad and Thrissur districts of Kerala. They are also known as Cochin Kadar's since their territory was under the former Cochin state. The Kadars of Cochin is different from a community known by the same name living in Wayanad area. In appearance and physical characteristics both the sections have nothing in common.^{iv} Kadar's are of average height, robust, deep chested and long armed. The highest percentage of skin colour is seen in the occurrence of dark ruddy brown colour. Dark brown colour is seen among then men and light brown among the females only. Kadar has frizzy hair. A large number of Kadar of both sexes was seen with their incisors chipped. The Kadar people have the highest frequency of blood group O followed by blood group B and A.⁵

Economic activities of the Kadar

The main source of livelihood of the Kadar tribe is collection of minor forest produce. It is the most traditional occupation practised among the Kadar tribe. To trace the history of minor forest collection thirty members of the Vazhachal settlement were interviewed. The minor forest produce starts with the word "minor" but it is the major source of livelihood for the tribes. The minor forest produce has the significant economic and social value for the forest dwellers as an estimated 100 million people derive their livelihood from the collection and marketing of minor forest produce. The importance of minor forest produces for this section of the society can be gauged from the facts that around million forest dwellers depend on minor forest produces for food, shelter, medicines and cash income. Tribals derive 20-40% of their annual income from minor forest produce on which they spend major portion of their time⁶. On the basis of the information collected, the collection of the minor forest produce has undergone various changes due to many factors including the legislative measures taken by the government. From the colonial period onwards tribal people faced many

difficulties due to the enactment of certain forest laws by the British and even after independence.

During the colonial period the British established the forest department in 1864 to check the monopoly over the forest. Indian forest act of 1865 and 1878 act restricted the tribal people to collect and use the minor forest produce. After independence the Indian Government formulated a new forest policy in the year 1952 popularly known as National New Forest Policy of 1952 which has imposed more restrictions on tribal communities to access minor forest produces. The Wild life Protection Act of 1972 restricted the tribal people to enter into the protected forest areas. Only in 1988 the first opportunity to use and participate in management of forest resources and its use was permitted. The Scheduled Tribes and other Traditional Forest Dwellers (recognition of forest right) Act 2006 popularly known as the Forest Rights Act was enacted in 2007. The act recognizes and vests individuals forest in and cultivate forest land that was occupied before 13 December 2005 and granted community forest rights to manage, protect and regenerate the forest. And these rights also made provisions for the tribal people to collect and use or to market forest produce.⁷

The major resources centers of the Vazhachal colony areas are Pachilavallam, Karadipara, Athirappilly, Ittyanni, Koranganpara, Kannarkuzhi, Kundumedu, Komallapara, Charappadam, Pandimudi, Muthuvarachal, Urukombankootty, Lakshmikullam, Pachakadu, Pokalapara. These are areas where the people of the Vazhachal settlement go for the collection of the minor forest produce.⁸

The Kadar's knew everything about the forest and they were free to use all the products of the forest and to move freely in the forest areas. The Kadar men were solely engaged in the collection of forest produce and they had plenty of things to eat. They were also engaged in barter system and exchange these collected products for other things which they were in so much need and usually sold them through *pattikavaraga* (ST) cooperative societies functioning at Thekkady, Sholayar, Palapally and Nelli Yamapathi. Even after moving to settlements also they always go to the forest for the collection of minor forest as a part of that some

are mostly residing in the forest. But lot of changes has taken place after moving to these settlements in their way of engaging with the forest. Not everyone single person goes to the forest but only those who are solely engaged in this activity others used to be in the houses with other kind of jobs. Government has allotted special kind of ID cards for those tribal men who are going to the forest for the collection of the minor forest produce to cross the forest check post without any trouble. Before that it was their wish and they were free to go anything to forest without seeking any prior permission from forest office. From the colonial period onwards tribal people faced many difficulties due to the enactment of certain forest laws by the British and even after independence.⁹

Once in a month Kadar people will be going to forest for more than two or three times. When they go they will be spending nearly one week or something it can be one month. Kadar men are solely engaged in collecting forest produce. They will be going in groups to the forest whole family will be accompanying them along with their pets especially dogs. They knew every single corner of the forest more clearly than anyone else and the availability of the particular products and the best time to collect them.¹⁰

While going to forest they used to carry all the necessary things for the days of stay which includes food materials, huge ropes, cans for bringing honey and other products, and other tools they required. Earlier they had to get the necessary things to take honey from the trees. But now the tribal department is supplying them through the VSS. Kadar Women who follows her husband cooks food for them and also helps him in collecting the minor produce and in keeping the items safe. Once they reach the forest, the first thing they do is to find a place to stay most probably they will be settling near to some water bodies where they construct small shed. Next day onwards they start their work.¹¹

While going to forest there able to eat the meat of the dead animal but now they are not allowed even to touch them that actually had affected the health of the Kadar people. while going for collecting the minor forest produce they will always have encounters with the wild animals especially elephants. Most of the Kadar

people find these animals to be not dangerous at all. In the personal conversation with the people there are rare times when these animals tend to be dangerous so to manage the situations they used to carry *thotta*, it's a kind of cracker with huge sound. These wild animals are some much sacred of these heavy sounds and they also make use of some metallic tins. They use these tins to produce some kinds of sounds to ward off the animals.¹² This is the only kind of self-defence they carry while going to the forest. When the provisions that they carried with them got over they come back again collects the things and goes back to the forest. Now due to intervention of the tribal office they have much more facilities to carry more things with them. There are facilities of jeeps available as far as seven kilometers from the place they stay to the forest for bringing the produce that they collected from the forest.^{xii} Even though many changes had happened in their life the only one thing that remains same is their dependency on the collection of minor forest produce as livelihood. The only change that came is the way in which they used to extract things from the forest. The most evident factor is that whatever happens they are not ready to leave the forest that much is the connection they have with the forest and wildlife because they are even seeing in wild animals as the souls of their elders. A modern trend of taking up taking jobs other than minor collection of forest produce is becoming so common among the younger generations of the tribe.¹³

Collection of honey

Honey is the most commonly sourced minor forest produce. Honey bees build hives to bring up their young brood. Swarms of bees (*malan theam*) usually have their hives on high branches of the trees or the cliff faces. They are different type of bees and each type having their own peculiarities so while going for honey hunting he has to deal with them carefully because some bees are very dangerous to go near in that case during the day time they locate the places and eventually they collect them during the dark night. With arrival of monsoon during the mid of May after two or three rains they start to collect honey but some people used to collect honey before but Kadar's had a strong belief that when the bees collect honey from the flowers and trees they bring pollen with

them and kept it in their hives after two or three rains when everything wash off the bees will eat this pollen and began to produce high quality honey so Kadar considered this as the great time to collect honey.¹⁵

Smaller bees are not considered as dangerous as the big ones so Kadar men used to collect honey and eggs of the bees from this hives during the day time. Kadars are peculiarly expert in climbing trees. In some cases trees will be 100 feet or 150 feet but climbing for gathering honey is instinct in them. When the trees are straight with no branches then they use to make pegs out of bamboo and these bamboo pegs are driven into the trees for easy climbing. They also use bamboo hanging ladders to climb over the trees. These ladders were lowered down from the place of honey hive. Once they reach the top cliff of the tree they carve out the honey after chasing the bees from the hives sometimes they make use of fire to chase them or they also make use of torch. Mostly during the night time the bees have very poor eye sight. But at many times honey hunter will be wounded severely with the bee stings. Usually this is self-diagnosable but in rear cases this has led to serious life threatening situations among them.¹⁶

During the communication with the VSS president who was an interviewee has mentioned about the above mentioned incidents and also about the deaths among the Kadar people. He also added that apart from that there are also accident cases of people who fell down from the top of the trees. Honey hunting is not very easy it is very dangerous but Kadar people take this honey hunting as a part of their entertainment or not as serious as it is. After when the honey is carved out he comes down with the honey if there is excess amount of honey than excepted they climb to the top twice. After when they brings down the honey then it is the duty of the Kadar wife to keep it safely. They fill the honey into cans or tins which they took with them. They also collect the other items such as bee wax and royal jelly also from the hives.

After bringing back these honeys to the settlement they shift these honey into various bottles for selling them in the markets or in the Vanavibava Vipana Kendram (VVK) which was formed as a part of Vana Shabrakshana

Samiti (VSS) programme for the welfare and to promote the livelihood of the Kadar people. Now Vanavibava Vipana Kendram is not that actively working. It was a great advantage for them to sell these products through Vanavibava Vipana Kendram because they were granted incentives during the season times of Onam and Vishu etc. When they sell these products in outside markets they won't be getting anything as bonus but most of the times these Kadar people will be cheated by others without giving the proper amount since they don't know the actual value of these products but the situations has changed even though not completely. Now Kadar men make frequent visits to markets so Kadar is familiar with the market politics. There are times when they had sold 100 liters of honey in the society. An interviewee mentioned that they sold *Karithean* for 3000 rupees per liters which is considered to be the costly honey among all the varieties.¹⁷

Collection of firewoods

Forest produce most regularly used is the firewood. Apart from cooking it is used to heat the cardamom drying sheds, dormitories, and homes and bathing water during cold months of the monsoon and winter. Both men and women collect firewood from the precincts of the settlements from the dead and fallen trees and branches are also lopped on occasion. It is common for women who proceed to bathe in nearby streams at midday to bring back firewood from the fallen that are split to stock firewood for their homes.¹⁸

Hunting

The primary occupation of the Kadar and other jungle tribes is the collection of forest produce. They hunt animals with the help of dogs. Even today they have dogs in their settlements and occasionally they capture rabbits and mangoose.

Fishing

Though there are restrictions they catch fish. They use a particular kind of canoe called *Pondi*, which is made of bamboo poles. Three or four bamboo poles are tied together to form a flat structure, to make a *Pondi*. Two persons can sit on a *Pondi*. They also use fish nets. The same *Pondi* is used for crossing the reservoir to collect fuel wood from the nearby forest. The paddle of

the canoe is made of teakwood. They themselves make the canoe and the paddle.

Miscellaneous

The other thing that they used to collect apart from honey is *Marottikaya*. They collect this and get it dried for some days and later scrub it on the rocks to extract oil from these seeds. Otherwise they sell this seeds after got dried they usually get around 300 rupees for kilograms. They also collect various herbal plants and herbs from the forest which is of medical importance. The tribal people knows the all the medical plants and herbs which are used for curing various diseases and the way it should be used. They always depend on these plants for their treatments. Once Kadar goes for the collection of minor forest produce they also collect these medical plants and sells it in the

Nattumarunnu Kadai. This also forms the part of their forest collections.¹⁹

Conclusion

The above mentioned are the products they mainly collected from the forest. There is a shift in the practice of completely depending on their traditional occupation. Since this tribal people are staying in close to the tourist spot of Athirapalli Waterfalls, which has offered them other jobs of watchman, cleaners, and as forest guards etc. One thing that they benefited most is the chances to get mingle with the person from outside that has also changed their life to some extent. Increased consumption of the alcohol has adversely affected the health condition of the tribe.

THE FOREST AS A RESOURCE CENTRE IN A FEUDAL STATE : THE CASE OF NILAMBUR IN COLONIAL MALABAR

V.M. Haseena

Introduction: Forest represents a form of wealth deferring from other natural resources, hence forest were significant in the economy of a society and state. The Nilambur valley in the Malabar region in modern Kerala is rich with

varied flora and fauna. The flora of this region is characteristically tropical. The valley is well known historically for teak plantation, trees of high commercial value, like rose wood, *mahagony*, *venteak*, *maruthu*, etc., abundantly

seen in the valley. The Nilambur and Amarambalam *thirumulpad* or landlords who earn extensive forest reside in Nilambur *amsam*.¹ Nilambur *kovilakam*² was the largest owner of forest in Malabar and the Nilgiri District gets substantial income from its forest and was depended up on that income for its maintenance during the colonial period. The people and *kovilakam* took all they required for their simple want and requirements from the forest resources.

The Nilambur *kovialakm* is an old landlord family in the Ernad *taluk* of colonial Malabar. The important source of revenue of the family or the *kovilakam* was income from the forest. The Nilambur *kovilakam* held large tracts of forest and that virtually meant control over the resources of the forest including elephants. The *kovilakam* had deployed as administrative machinery to collect its forest resources. For the effective tapping of resources, the forest was divided into beats, namely Pothukallu Beat, Kallenthodu Beat, Edakkara Beat etc.³

The forests of south Malabar, owed their commercial importance and their financial success entirely on the famous Nilambur teak plantations. This place, the neighbouring territory was controlled by the raja of Nilambur. The raja's family held *janmam* rights over much of the land in Gudallur too. Because of the vast forest resources, especially teak wood, Nilambur was connected with the railway network by means of a branch line from Shornur. A large number of elephants used to be captured from the forest by the Nilambur raja. The forest department maintains elephant camps at Edakkara, Nedumkayam, in the interior of the forest.

The Nilambur *kovilakam* possessed large tracts of forest. *Kovilakam* owned 3200 acres of forest stretching from Kerala, Gudallor, Tamil Nadu and Karnadaka.⁴ The forest of owned by the *kovilakam* was divided into two *amsam* namely Muppinnad and Nilambur *amsam*. Varikkad, Vavad, Perumbathur, Ottathani, Elamudi, Chaliyar, and Nirpuzha forest, Edakkara forest, Maruthaforest, Perinkollapara forest, Kakoor forest, belonged to Nilambur *amsam* and Kunjathukkotta forest in Wynad belongs to Muppinnad *amsam*.⁵

The Nilambur *raja* tapped natural resources of the forest and drafted an administrative machinery to manage the forest. For the

convenience of administration, uniform system of management of forest was done by the *kovilakam*. For this, the *kovilakam* appointed various officers to manage vast tracts of rich forest resources. The forest department was headed by a chief forest officer.⁶ The *kovilakam* appointed forest officers to look after the forest administration. He was helped by an assistant inspector, checking inspector, forest guard, forest watcher, forest ranger. Besides these officials a head clerk, typist, accountant, assistant accountant, cashier, clerk, peon, range clerk were also appointed in the forest office.⁷ The *kovilakam* forest officers were given uniform also.⁸

The Second World War period led to an increase in the demand for teak other woods and hence land lords reaped profit from timber trade. The *kovilakam* supplied timber to contractors on a pass by paying a tax called *kuttikanam*. The timber that was normally available in Nilambur forests were *teak*, *rose wood*, *venteak*, *ironwood*, *jack wood*, *irul*, *mahagony*, *maruthu*, etc. Elephant, wild dog, deer, spotted deer mongoose, wild buffalo, bison, tiger, blue monkeys, bears, etc., were found in the forest. Forest became the main source of raw materials for a number of wood based industrial units. Besides timber, firewood, charcoal and green manure, mine forest produces like honey; medicinal herbs, spices, etc., were collected by the people of the landlord territory.

The rich forest resources attracted many including Europeans into Nilambur.⁹ The *teak* was the most important one among the valuable forest resources. The history of teak started from Nilambur.¹⁰ Teak continued to be high demand for ship building. With the introduction of railways, the demand for timber increased considerably.¹¹

The *kovilakam* had introduced a sort of permit system under which the licensees of the *kovilakam* had to apply for and obtain a permit before timber can be moved out of the forest and return such permits after checking stations at Kuzhikkayam on the Chaliyar River by the checking inspector or forest officers of the *kovilakam*. The final accounts between *kovilakam* and the licensees were settled and timber made over finally to the trader pass. The contractor could move timber with permit and *kovilakam* property mark was punched on the

timber. Timbers without property mark or pass were captured at the checking stations. The sleeper supply to railways was another source of income to the landlord. There were huge numbers of sleepers collected and supplied from the Nilambur *kovilakam* forest division to various divisions in British India.¹²

The *kovilakam* was getting large revenue for bamboos utilized by the contractors for floating the timber down the river from the place of extraction. The quantity of bamboos taken by each contractor to raft the timber was checked at a place called *kuzhikkayam*. In this way, the *kovilakam* collected the *kuttikanam* for bamboos too.

Teak was in high demand for ship building. Felling of trees was done indiscriminately and removal of valuable timber was almost whole sale. It is seen that large quantity of teak was supplied for the Bombay dockyard for ship building.¹³ Because of high demand of teak in market, the *kovilakam* started planting of teak trees on large scale for use in the future. A policy was developed for conservation of timber. The *kovilakam* promoted teak plantation at Mannathi, Nilambur and Palunda forest divisions. In 1928, new teak trees were planted at Mannathi and Palunda.¹⁴ The *kovilakam* could conserve and develop forest resources, by exercising all reasonable prudence in regulating felling, especially by contractors and timber merchant by providing necessary and proper silviculture and protection measures and by exercising vigilance over the forest. The existing teak plantations as also those to be opened hereafter, should be considered asset of the *kovilakam*, about 50 acres of teak extension were made annually. The trend of the timber market especially for teak and other valuables species, would justify large return.

The right to fell trees in the Nilambur area was auctioned by Nilambur raja by paying fixed amount of money per felled trees called *kuttikanam*.¹⁵ The transport of log was organized by the owners by using elephants. The service of the elephant was also with a charge called *pattam*¹⁶

There is an example of the sale of timber by the *kovilakam* to individuals. Imbichimammad, a timber merchant obtained 550 logs of timber from the forest of Nilambur *kovilakam*, on a

stump fee of at the rate of rupees 20 per each *venteak* and *maruth*, rupees 15 for each *irul* log, rupees 11 per each *maruth* log, rupees 18 per each *pali* and *payan* log, rupees 25 per each *punna* logs, rupees 30 per each *ayani* logs and *irumbakam*, rupees 40 per each *vellakil* logs, rupees 10 per each mango and *thani* logs. Accordingly, all 550 logs cost of 7945 rupees. Again bamboo required for removing the logs from the forest, 100 bamboos permitted to cut for this purpose on a stump fee of rupees 2.5.¹⁷

The people living in or near the forest tracts were allowed to require fuel, bamboos and less valuable timber trees with less charge.¹⁸ The people were given the right to cut trees without *kuttikanam* in the early period. In some cases, the *kovilakam* permitted people to cut timber as per their necessities. The *kovilakam* permitted people cut trees for construction of houses without stump fee.¹⁹ Through the tenancy system, householders were give land for cultivation. The tenant could cut trees, only if there were genuine need for building or demand of firewood. This was done under the supervision of the *kovilakam* staff. The right to fell trees in Nilambur forest was auctioned by the palace administration.

The *kovilakam* collected revenue by licensing shooting of wild animals in the forest. The landlord issued shooting license to shoot wild animals on a license fee. The *kovilakam* issued license to hunters in the forest areas belonging to the Malabar and Nilgiri districts. The license fee was Rs. 50/- for one year. Rs 10/- must be for occasional license for period not exceeding three days on each occasion.

According to a document, the landlord gave shooting license to ES Conner, Caroline Estate on 4th May 1932 for one year.²⁰ There were conditions under which the shooting license was granted. This license was not transferable and was to be shown on demand to any forest officer or forest guard of the *kovilakam*. The license did not authorize shooting or destruction of wild elephants. The licensee could not hunt or shoot in the areas where elephant capturing pits existed or operations were going on. Every applicant had to deposit a fifty rupees as security for due observance of the conditions mentioned in the license. E.S. Conner's license had mentioned permission to shoot two bisons, three sambars,

two cheetahs or tigers, two jungle sheep, one any other beast (except an elephant).²¹ The managing agent was powerful to close any part of the forest to shooting for special reasons. Violations of any conditions of the license entail cancellation of license and capture of security deposits.

The *kovilakam* sometimes issued free license too. The Railway District Engineer, Kannur also permitted hunting expedition in the Nilambur forest. The *kovilakam* gave them license for a period of three days. He was permitted to shoot one bison, one tiger, and two wild boars with this free license.²² The landlord had given free license to shoot in the forest of Nilambur to Captain H.C. Cunningham, Second Battalion, the Staffol, Regiment, Hyderabad; for hunting tiger in the forest.²³

The hunting of elephant was prohibited as it was the chief revenue of the landlord. There was a separate department for the maintenance of elephants with elephant *jamedar* as its head. The *jamedar* looked after these elephants at various elephant camps. The revenue, income and expenditure, maintenance of elephant, training of elephant were managed by this elephant *jamedar*. The *Jamedar* was in charge of elephant camps. The chief elephant camps in the territorial jurisdiction were at Nilambur, Edakkara, Neerpuzhamukkam and Eyyamkuzhi.²⁴

Elephants were captured by digging pits in the forest. The elephant *jamedar* was assisted by a forest inspector who inspected the site for elephant pits. The assistant inspector helped him in finding place for new elephant pits. The pit watcher inspected various elephant pits and reported to the *jamedar* of the elephant camps. When there was the presence of elephant in pits, the *jamedar* with mahouts went to the pit site to capture the elephant. This captured elephant were carried to the elephant camps.²⁵ These elephants were kept in camps for sale in future. In addition to the sale of elephants and hiring to them to temples and individuals also was practiced.

Elephants were hired out by various groups for various purposes. The *kovilakam* elephants were hired out to timber merchants and the charge for hiring an elephant was called *pattam*. These elephants were mainly hired out by timber merchants to drag out timber from the forest.

Elephants like *vettekkan, paru, neelandan, padmanabhan, sundari, malathi* were sent to the forest to drag out logs to the river and a cost of 43-3 *anna* was sent to the *jamedar* as rent.²⁶

Besides, the *kovilakam* elephants were also given for processions in the temples. In one case the *kovilakam* elephants were sent to the Tripuranthaka temple of Pookottur *cherikkal* for temple procession in 1930.²⁷ The *kovilakam* also supplied elephants to other landlords for dragging out elephants from the pits. They were paid *pattam* for the use of elephants.

The *kovilakam* also earned income from Grazing License of animals like elephants, and cattle. A small fee was charged for grazing of animals in the forest.²⁸ Nicholas, a retired forest ranger had requested the permission to keep two elephants at Pookottumanna during rest season. The *kovilakam* permitted him to keep his elephant at Pookottumanna, near Chungathara for about two months and they allowed to be grazed in *kovilakam* forest on a charge of five rupees for each elephant for one month. He paid the grazing fee on 4th June 1928.²⁹ Likewise, the elephant of Unnikkammu, a timber merchant grazed in *kovilakam* forest without grazing license. The *kovilakam* forester reported this matter to the *kovilakam* office that he did not pay Grazing fee. The *Diwan* ordered him to pay three rupees as grazing fee immediately after getting the order.³⁰

The *kovilakam* also sold their elephants by auction and in 1922, they conducted auction of 24 elephants. Twenty four well trained elephants of Nilambur Palace were sold in auction on 27th April 1922 at Trissur.³¹ In 1949, six elephants were sold in an auction held at Edakkara.³²

The *kovilakam* earned income from renting out forest land for plantations like tea, coffee, rubber etc. The British planters were given acres of land on lease. These planters took land on lease to plant the area with teak and other useful trees. The Gwalior Rayons Company also had leased out twenty five thousand acres of land. The land lord was collecting *pattam* for leasing out his land.

The notices issued by the *kovilakam* management shows that trespassers in the forest were also prosecuted.³³ This shows that illegal shooting and hunting in the forest of Nilambur *kovilakam* was prohibited. Likewise *kovilakam*

prohibited illegal cultivation of modan, sesame, chama etc. These were prohibited in the forest area owned by the *kovilakam*. The cultivation was permitted only after paying the *pattam* to the *kovilakam*. Clearing of forest without the permission of *kovilakam*, setting fire to the forest, cattle trespassers, illicit collection, possession and removal of forest produces were reported to the *kovilakam* and were prosecuted.³⁴

Another income of the *kovilakam* was from minor forest produces like cardamom, turmeric, honey, medicinal plants. The Nilambur *kovilakam* permitted to collect forest produces on a certain amount fixed by auction. Besides this, the *kovilakam* earned income from collection of metals from forest land. The *kovilakam* had permitted mining of 500 red sand stone for the construction of a school at Chungathara by charging five rupees as *kuttikanam*.³⁵

Conclusion

The *kovilakam* was the owner of large extent of forest land in the Nilambur valley. The *kovilakam* maintained an independent forest policy due to the fact that the important source of revenue was the forest. The *kovilakam* was a

prime landlord in Malabar to think about the need to protect the forest. Timber, charcoal, firewood, bamboo, balsa, cashew, eucalyptus, honey, wax, tusk, horn and bides of wild animals, black and white dammar, fibers, flosses, oil seed, cardamom, various roots, stems, leaves fruits and flowers of medicinal plants were the important forest produces extracted from the Nilambur *kovilakam* forest .

The forest remained as a chief source of income to the feudal state. The transformation taking place in colonial India was transforming the forest policy of the landlord. When the railway was coming, the chief attraction became teak tree. When investment colonialism turned its attention to plantations, the feudatory began to lease out land to the investors. The elephant remained as a chief source of revenue of the feudatory till the modern period. Though the *kovilakam* was not an independent state, the landlord was enjoying certain rights in colonial India due to his authority over the forest resources.

ORIGIN AND DEVELOPMENT OF EDUCATIONAL SYSTEM IN RAMNAD DISTRICT 1950-55

K. Karuppiah

Introduction

Before the independence of India, Ramnad district was socially, economically and politically backward region of Tamilnadu. Because, the British government had not took sincere efforts for improvement of education in same district¹. Most of people were illiterate and ignorant of the region. Moreover, they did not get sufficient basic facilities from the British government. After the independence of India, the democratic government took sincere efforts to eradicate illiteracy and ignorance among Indian people². It encouraged each and every state to open elementary schools in all villages. Following the interest shown by the central government, the madras government paid special attention to open the elementary institutions in each districts. Besides, it encouraged compulsory education to school age children and introduced attractive schemes for the development of elementary education. Subsequently the madras government opened large number of primary schools in Ramnad district³.

Elementary Education In Ramnad District 1950-1955

In Ramnad district, the state government followed the principles of central government and it took necessary steps for the improvement of primary education⁴. Following it the state government sanctioned the grant of RS.3,50,000 to Ramnad district board during 1951-1952. The subsidy amount of RS.1,00,000 was also sanctioned by the government to construct school buildings and playgrounds⁵. After 1951, the state government increased education grants to each taluks of Ramnad region, and as a result

of it number of elementary institutions were sprang up in Ramnad⁶. All these developments created awareness among the general public for compulsory education for school age children. In view of these governmental steps primary education in Ramnad district improved quite a lot⁷. Kamaraj came to power in Tamilnadu in the year 1954 and aimed at introducing efficient and liberal administration in all fields⁸. He felt that promotion of education was essential for the economic welfare of the people. With this end in view, he opened schools even in remote villages, strengthened the existing institutions and implemented a scheme of compulsory education for the children upto the age of eleven⁹. For that he introduced fee concessions, free uniforms and mid-day meals on a large scale to draw poor children to schools. During his period, quite a large number of primary schools were opened in rural and remote villages.

Secondary Education

Based upon the census of 1951, the total population of Ramnad district was 20,35,600 in number. Following statement shows the total number of educational institutional of the Ramnad district and average population served by one institution¹¹.

State natural divisions and district (1)	Total number of educational institutions (2)	Average population served by one institution (3)	Percentage of literacy population (4)
Ramnad	1504	1383	21.4

It is very difficult to trace out uniform correspondence between the percentage of literacy in a district and the average population served by one institution in Ramnad district that the figures disclose a number of disparities. This is because the percentage of literacy depends not only upon the number of schools provided proportionately to the population, but also on the extent to which the schools have been actually availed by the population in each area¹³. Some private management and private agencies ran the high schools in same district. Moreover two private training schools opened in Ramnad district were namely, Balagurukulam training school at Virudhunagar and Alagappa training Montessori school at Karaikudi where quite a number of boys and girls were interested to join¹⁴. Hence the separate schools are also run by Harijan welfare department for the concerned community students. Besides, the state and central governments sanctioned considerable grant for the development of secondary education¹⁵.

Missionary Management Of Secondary Education

The Christian missionaries contributed much for the spread of education in Ramnad district. Under them several secondary schools were opened. The German missionaries took the lead of this process and they are under Fredrick Schwartz visited Thanjavur, Sivaganga and Ramnad areas. They opened number of educational institutions in Ramnad and sivaganga taluks¹⁶. Consequently, Schwartz high school was opened by common Christian missionaries in Ramnad during eighteenth century. The school was first opened as high school in Ramnad region. The Raja of Ramnad also gave absolute support to German Christian missionaries to run the institution. Moreover, he contributed liberal donations to this institution for the construction of buildings and playground¹⁷.

Following Fredrick Schwartz, missionaries under St. Andrew's took sincere efforts to develop the female education. He had taken practical steps towards the establishment of high school for the girl students and a high school was opened by the missionary in Ramnad during the academic year 1937-38. Subsequently, for the development of the women education, Shanmuga Rajeswara sethupathy Raja of Ramnad donated free lands and liberal grants to

the institution¹⁸. Hence, missionaries sincerely ran the secondary education and also, they provided positive help to poor students¹⁹.

Higher Education

Though Ramnad region was backward in all respects no organization or political leaders came forward to launch any higher academic institutions to improve its general standard for a long time. Specifically between 1910 and 1946, there were no higher institutions opened by the government to its credit. Due to the lack of higher institutions, the poor students unable to continue higher studies in Ramnad and had to travel for off places to get their education²⁰. There were so many factors attributed for this lacuna and the major cause was that the common man did not understand the importance of higher education and lacked knowledge about governmental services, self-employment services and private employment opportunities. They only depended upon agriculture and fishing works²¹.

Under this situation a few private managements came forward to open higher educational institutions in their respective areas with the major intention of upholding their own communities. In this venture few significant personalities emerged were the Raja of Sivaganga, Dr. Alagappa Chettiyar of Karaikudi and Senthikumara Nadar of Virudhunagar who came forward to open new arts colleges in their respective areas²². Accordingly, three arts and science colleges were opened on August 11, 1947 in Ramnad district which were the first higher institutions of the district. The three higher academic institutions were named as the Raja Douraisingam memorial arts college, Sivaganga, Dr Alagappa Chettiyar arts college, Karaikudi and Virudhunagar Hindu Nadars' Senthikumar Nadar college, Virudhunagar²³. Though these colleges were aimed at the upliftment of their own communities as well as other communities and they became service minded institutions in the later days. Number of students joined the institutions and they got undergraduate degrees in concerned faculties. Moreover, the qualified candidates received employment opportunities in central and state government services²⁴.

Professional Education

Ramnad was a technically backward district in Tamilnadu. Though its literacy rate was improved due to the introduction of so many

educational institutions. Therefore, under the hue and cry of the general public, several technical institutions and provisional colleges were earmarked one after another. To begin with, the venture started with the inauguration of Dr. Alagappa college of engineering and technology²⁵. On the basis of government order, Alagappa Chettiyar's college of engineering was inaugurated by Dr. Alagappa Chettiyar in Karaikudi during the academic year 1952 – 1953. Dr. Alagappa Chettiyar education trust immediately sponsored the grant of four lakhs of rupees towards the opening of new engineering college. The college was affiliated under Madras University and it offered the following courses namely, free – engineering B.E.Civil, B.E. mechanical and B.E. electrical engineering. For the engineering courses only 180 students were admitted in the beginning. Right from the first page of students sent for the B.E.degree examination, the college had secured first rank in the university successfully for five years²⁷.

Subsequently, Dr. Alagappa Chettiyar training college was the second educational institution founded by Dr. Alagappa Chettiyar in 1950-1951 in the Alagappa campus of Karaikudi under a scheme of special aid. Moreover, Dr. Alagappa Chettiyar polytechnic is one of the cluster of educational institutions founded by the Late Dr. Alagappa Chettiyar on

the 4th July 1955²⁸. The institution provided technical training at diploma level and offered training in three basic courses of civil, mechanical and electrical engineering, leading to the diploma examination conducted by the state board of technical education²⁹.

Conclusion

After independence of India, the democratic government took sincere measures to remove illiteracy and ignorance of the people. During the Congress administration, particularly, the congress ministry under Kamaraj witnessed the social revolution of establishing schools and colleges in Tamilnadu, especially in the regions of Ramnad. Under his shrude and sharp administration, a number of schools were established in several backward and remote villages of Ramnad³⁰. He had encouraged education by implementing free mid-day meals scheme, free school education and serving scholarship to suppressed and backward classes. Even though, higher education as well as professional education had not sufficiently developed in Ramnad region. During the period, if the central and state governments provided sufficient higher education to people, the Ramnad district was socially, economically and politically was highly developed³¹.

COMPANY AND TIMBER 'MONOPOLY': LOCATING TRADE WITH PRIVATE AND 'NATIVE' MERCHANTS IN COLONIAL MALABAR

M. Lijin

Introduction

India for centuries has attracted foreigners because of its wealth and natural resources. Since the seventeenth century, there occurred a keen competition among European maritime powers to trade with India. The first among the Europeans to reach the shores of Kerala were the Portuguese. They were followed by the Dutch, the French and then the British. The English East India Company began its trade with India 1600. Within a period of one hundred and fifty years, it attained territorial control in different parts of India. The proposed paper trying to understand the East India Company's timber trade and tracing the reasons behind the establishment of government 'monopoly' on timber resources in Malabar. During the early decades of the 19th century, Malabar volume of timber trade comparatively high and East India Company establish political control on Malabar forests.¹ Due to various reasons, East India Company's immediate problem was to procure timber for naval stores and other purposes. Preservation of forests and forest wealth of India in general and the Malabar, in particular, gained importance by the 18th century. Political control alone would enable the East India Company to establish a government monopoly of the forests in Malabar. For generating maximum profit company grant permission to free trade, especially with 'native' merchants and private individuals and agencies.

These private agencies belong to English private companies, Parsee merchant groups etc.

Timber 'Monopoly'

'Monopoly' may be accustomed to mean the entity that has total or near-total control of a market. By formulating various rules and regulations for the steady supply of timber for shipbuilding and other public works British authorities controlled the natural; world of Malabar. Interestingly enough, this was strongly emphasized by the British officials surveying the forests of the Western Ghats in Malabar and Canara. In any event, this procedure made it quite easy for the British to announce their teak monopoly on the Malabar Coast in 1807. Joseph Watson, lately appointed to the new office of the 'Conservator of Forests', unified the provinces of Canara and Malabar in the Forest Department newly created to facilitate the thus centralized timber trade and announced a monopoly of teak.²

Since the East India Company had established timber monopoly in Malabar, it could exercise complete control over the forests of the Malabar. Information based on surveys of various officers was assembled and analyzed at frequent intervals.³ This helped the East India Company to develop its timber trade throughout Malabar presidency. The surveys conducted by various officers including Engineers, Botanists, Surgeons etc. during period from 1804 to 1812

submitted the different reports on the natural world of Malabar and details about the tree species particularly teak and other valuable timbers.

The Correspondence files between Public Department Bombay Presidency and President and Governor in Council of Malabar dated on 05/01/1807 mentions about the Royalty of Teak trees in Malabar province,

*"We do ourselves the honor to lay for your Hon'ble Board's information, copies of letter and of its accompaniments from the Conservator of Forests, Malabar dated 15th and to express our satisfaction at their conveying important information about the trees of Malabar forests and make control over teak trees and announced Royalty on Teak and Malabar forests."*⁴

The Conservators report on Forest Surveys on Malabar forests seriously reported that the necessity of the conservation and control of forest resources. During the subsequent years of the early Nineteenth century, the various correspondence took place between the Malabar and Bombay Presidency, about the measures taken for sustaining the continuous supply of timber for shipbuilding industries. The Madras correspondence files during this age throw light on the necessities and significance of timber supply. As a sum result of these developments, finally under the basis of various reports includes forest surveys, land surveys, and other methods Hon'ble Government proclaimed control on teak trees in Malabar forests, naturally through this significant administrative legislation colonial state established timber monopoly.⁵ Accordingly, they had to secure the supply of timber for their naval stores, a crude kind of forest management was set up on the Malabar Coast in 1802, and in 1807 they proclaimed a timber monopoly over teak and specified trees.⁶

Trade with 'native' merchants

The forests of Malabar originally belongs to various possessors like local *rajas*, *nayars*, *janmamkars* etc. According to Mr. Farmer, member of the Bombay Bengal Joint Commission and supervisor of Malabar, most of the forests were privately owned. The timber trade along the Malabar Coast was organized by two distinct groups, whom the British identified as 'jungle merchants' and 'coast merchants'. The 'jungle merchants' mostly Mappilas, employed

several contractors to conduct the different phases of timber procurement.⁷ The 'native' merchants procured timber from the forests and these timber logs were stored at *koop* (local timber yard). The 'jungle merchants' employed woodcutters from the surrounding areas on daily wages. Local chieftains or *rajas* controlled the trade in the Western Ghats determined the amount of timber to be transported and ultimately the price per log.

In Malabar province Mussa gained a monopoly in timber trade also the connection with the prominent trade centers in Alappuzha, Travancore, and Bombay etc. and seriously engaged trading activities in Beypore, Kallai, regions. Zamorin of Calicut failed to break the monopoly of Mussa in Calicut.⁸ To reduce the number of mediator merchants, the British invested with the well-known and firmly established wholesale merchant Covakkaran Mussa with one thing just like a monopoly for felling trees in specific space inside the Malabar province around twelve years.⁹ British aim was to that maximize the timber output. All felled and stored timber had to be transported to the Ponnani, Beypore Calicut or Ellatoor.¹⁰ Mr. Watson, Conservator of Forests, published a proclamation,

*"All trees which people now have ready to cut and lying in the jungles, must be brought on or before 31st of January 1807 to Ponnany, Bbepore, Calicut or Elattoor, after which period on person if he has Timber in the jungles must bring it down, the period being elapsed, the Kuttikanm and the charges of felling and barking will be paid him, accordingly to the old custom"*¹¹

To meet the demand for the steady supply timber for shipbuilding in the Bombay dockyards, the British were enforced to sign further contracts with individual native timber merchants. These bonds were more or less of the same time. A stable amount of timber had to be provided on a certain date to a specific place. Timber merchants employed as carpenters, the wood reapers and workers, the draught animals, and he commenced the transport of logs. In North Malabar British make a contract with Covakkaran Mussa and Calicut, agreed with the indigenous timber merchant Paiangalat Chanja Pakki for furnishing 600 teak *Candies* per year each at least 40 to 45 feet long.¹² The official

records gave the details of contracts with local merchants and native traders.¹³ Through the continuous and rigid timber and spice trade between native or indigenous merchants and British or East India Company trying to develop an Anglo-Islam culture in Malabar. It helps to culminate in some elements between both sides.¹⁴ The trade with 'native' merchants paved the way for the deep contact with Malabar and naturally company utilizes this opportunity as a safety valve for establishing political supremacy in Malabar.

Commercial Link with the Neighboring States and Private Trade

In the adjoining states, the Company influenced the timber trade via its residents at the court of *rajas*. Travancore is one of the princely states involved in continuous timber contracts with the company. East India Company formulating a trading contract with *Maharaja* through its residents. Francis Buchanan says about the peculiarity of timber trade as follows,

*"The forest in every part of Malabar would appear to be a private property- person who wants to cut timber must first apply to the land lord (Jenmakar) for permission; which is granted in a writing called Kuttikanam, in which is specified the price that is to be distance of trees from water carriage".*¹⁵

The other significant category of timber trade framed by the colonial state through contact and contract with neighboring states like Travancore and other regions. Native merchants like Mussa engaged close contact with Raja of Travancore, because the famous *Odathil palli* in Thalasseri is constructed by teak got from the Raja of Travancore as a gift to Mussa. Although British authorities make trade contact with the Rajas through the residents at the Court of Rajas. In the early 1800s, East India Company signed a treaty with Raja of Travancore supplying of teak timbers. Avittam Tirunal Rama Varma, Raja of Travancore offered to supply the British with the yearly teak produce of his country, for a particular amount of money. Besides the native merchants, the contracts with local Rajas create a more continuous supply of timber to the Company. As a result of this, the Resident, Mr. Handley, informed the Bombay Government that this form of trading association was the only viable course because no single or native

merchant could guarantee the huge quantity and the great quality of the timbers. Besides all forests were in the custody of Raja, so it was with him that East India Company had to convert their contracts.¹⁷

Moreover, the East India Company involved private trade, particularly the British officials rather than organized or public trading activities. The significant private traders in Malabar were the Mardok Brown in Anjarakkandy in Canannore and Alexander Mackonochoy in Beypore. Company officials, legal advisors indiscriminately supported any private British enterprises. The private trade flourished a few years after the annexation of Malabar, the British private individual set up a saw mill at Beypore to supply the Bombay dockyards with planks, beams, and masts. The Commissioners of South Malabar were asked to organize further timber supplies from local merchants to keep the samill functioning efficiently.¹⁸ Sawmill project had tried to check a state monopoly for pepper and had been relatively successful in instituting a prominent position in the pepper trade in Malabar province.¹⁹ Mardok Brown established a plantation at Anjarakandy and through this investment, he concentrated in trade and trading activities in Malabar. Through the double profit of timber trade rather than spices especially pepper, naturally Brown turned much importance in the timber trade. Mussa and Brown were the prominent natives and British private traders in Malabar province. Mardok Brown is a prominent and significant foreign timber merchant in Malabar province. Due to the profit earned through the timber trade was high and this realized by the colonial merchants suddenly, moved on this type of trade. Their various conflicts have emerged among the Mussa and Brown in the case of timber monopoly in Malabar, particularly North Malabar. Mussa and the company were closely and maintained cordial relations with Company, but Brown sometimes failed to make friendly contact with Company.²⁰

Besides, Alexander Mackonochoy other private traders other than different parts of British India, especially Parsis. Particularly the individual merchants, who mainly settled in Bombay because of Malabar and Bombay experienced a high volume of timber trade relations. The

majority of these individual merchants were prominent contractors, they engaged in construction works. The merchants and contractors create timber contacts with Malabar province.²¹ It also helped the increase in the growth and development of timber trade with the Bombay Government. Some of the significant contractors and merchants during this period includes, Cursetjee Nowrojee, Jugannath Wittonjee, Meya Huson, Sunkarjee Pillaijee, Embramjee Mahimkar, Bayan Chacootty, Adasheer Dady, Hurmusjee Bomanjee, Oram Jatta, and Mohammed Waddagata Chartow. The Madras Correspondence Files gave details about the contract and contact between these private contractors and merchants. Everyone who framed or formulated timber transport agreement with Conservator of Forest, Malabar.²²

Not only have the private individuals some of the agency firms also associated with the timber traded with Malabar. Sometimes, these private and private agency houses become a threat to the East India Company. Some of the private agencies that closely associated with the timber trade in Malabar were, Alexander Adamson; Bruce, Fawcett and Company, Forbs and Company, Harding Rivett and Wilkinson, Souza (Miguel de Lewis), James Tate, Taylor and Agnew.²³ These private enterprises closely adjoined with the Malabar region and actively participated in the timber trade.

End of Timber 'Monopoly'

In 1818 the government of Madras appointed H.S.Greame to enquire and submit proposals for improving the revenue administration of the province. He observed,

*'It seems not to be disputed that the timber monopoly has curtailed the profits of coast merchants that a number of the lower orders of the people employed in the construction of vessels have been deprived by it of a comfortable livelihood and that their occupation has been chiefly transferred to the port of Bombay.'*²⁴

In 1822, a minute recorded by Thomas Munro, the Governor of Madras stated, *'The people however now submit reluctantly to the monopoly, but we should recollect that no partly profit in timber trade can compensate for the loss of their goodwill.'*²⁵ On the recommendation of Munro, the Governor of Madras, the Bombay government abolished the appointment of Conservator of Forest. It thereby ended the Government Timber 'Monopoly' in the year 1823 after seventeen years of its introduction in Malabar.

The Company's rule in Malabar meticulously involved in the trading activities for a long period. Timber trade and forest conservation would become the aim of the colonial regime. Although, East India Company encouraged private trade in Malabar and authority maintained deep contact with native merchants, especially mappilas. On the eve of British colonialism in the province mappila merchants were the occupied monopoly on trading activities. They paid *Kuttikanam* (Stump Fee) to the local *Rajas* and felled trees from the forests. During the early decades of 19th century, company promoted 'native' merchants and private individuals and also registered private agencies in the timber trade. Through these various waves of trade, Company ensures a steady supply of timber planks and other commodities required by the needs of the state.

TRADING COMMUNITY IN THE MEDIEVAL PERIOD AS PORTRAYED BY THE INSCRIPTIONS OF VIRUDHUNAGAR DISTRICT

L. Maheswari

Trade and commerce was the traditional profession of the Tamils. It played an essential role in the daily activities of human life. The economic condition of the Tamil country was greatly shaped by its trading fervour. The prevalent of peaceful political scenario coupled with a stable socio-economic order favoured the emergence of several trading communities in the Tamil country. The regular customary practices favored the profession of trade and commerce. Mostly all castes and communities participated in trading activities in one form or the other. Epigraphical sources throw light on trade both internal and external, centers of exchange, items of trade and trading castes. As a profession, trade had secured a social status in the society from time immemorial. The merchant class were undoubtedly the most powerful and influential section in ancient Tamil country on account of their number and wealth¹ These traders created an atmosphere of goodwill among the local population by constructing water tanks and places of worship – a corporate social responsibility initiative of those days.²

Virudhunagar District is situated in the foothill of the Western Ghats, the commodities arrived from the Western Ghats were taken towards the Eastern Ghats. Hence many merchant settlements one can find through the inscriptions of Virudhunagar District.

Trading Community:

According to the inscriptional sources the trading community mainly belonged to Chettis and Nagarattar. According to Edgar Thurston Nagarattar is a sub-caste of Chettis. Their main occupation was trade and commerce. They

accumulated wealth from exports, imports, and sales within the town.

Settlements:

The merchant settlements were administered by the assemblies called Nagaram. These mercantile settlements were well protected by the armed guards called Virporivirar, and Asiriyam provided by the Nattars. In other villages the merchants resided in separate streets in the towns and villages. For instance, Aruppukottai inscription³ (13th C A.D) [refers to the three great streets of the merchants]. Cholakuram Inscription⁴ Mudivallangu Pandya Nallur inscription⁵ give details about their settlements.

The merchants lived in well protective areas. They had good relations with the Nattars and got asiriyam or protection from them. Managaseri inscription of Sundara Pandya mentions Mallinattu⁶ Kulasekarapuram Nagarattar got protection from Venbu Nattar and Karunilakudi Nattar, because they were in need of getting protection for their goods and wealth. This reflected their cordial attitude towards other communities.

Trade Centers

In Virudhunagar District merchant settlements were existed in Sattur⁷, Kulasekarapuram⁸, Seithur⁹, Sengundrapuram¹⁰, Chettikurichi¹¹, Edirkottai¹², Aruppukottai¹³, Kambikudi¹⁴, Tiruchuli¹⁵, and Tiruttangal.¹⁶

Domestic Trade

In the domestic trade the merchants had the marketing place called sandai.

'Vikramapandian Sandai'¹⁷ is mentioned in the Maravarman Sundara Pandya I's Aruppukottai inscription. Taxes were collected by the government. The Aviyur Inscription¹⁸ mentions that for the domestic goods puravayam, and Urayam as taxes were collected from the merchants.

Highways

For internal trade for the markets and also for external trade three ancient highways criss-crossed this region.

- a. Madurai to Western Coast
- b. Madurai to Kanyakumari
- c. Madurai to Tuticorin on the Eastern Coast.¹⁹

The trading communities used these routes to transport goods across Pandya nadu and the traders often settled in villages along the trade routes.

Weights and Measurements

The inscriptions throw light about the different units of weights and measurements. The standard measures in these days were often called by the names of the reigning kings. The standard weights used for gold, silver, copper and other metals were kalanju, kunri and Manjadi. Traditionally in all the periods standard cubic measurements were used. They were alakku, ulakku, uri, nali, kuruni, padakku, thuni and kalani.²⁰

Coins

Coins is a piece of hard material traditionally metal, which was used as a form of money. They are standardized in weight and produced in large quantities at a mint in-order to facilitate trade, issued by a government. Materials used for coins exhibit their economic prosperity. Through the symbols in the coins one can know of their religion, kingdom and their love of art. The Pandya rulers issued gold coins in the name of kasu and palankasu from the 9th century onwards²¹. At the same time, they struck silver as well as copper coins, with the symbols of bow and arrow, conch, chakra, fish, elephant and sea tortoise.²²

Panam

Varahan (or) panam also were in usage. Achchukasu also in circulation. Both types were

mentioned in the Aruppukottai²³ and Suranur²⁴ inscriptions. The Cholapuram inscription provides information that one achchu was given as wage to a stone mason for payment done with stones during the period of Virapandya.²⁵

Armed Guards

To protect their wealth and their safety they had the armed guards known as Virporivirar associated with trading groups.²⁶ At the same time they got protection from the Nattars in the name of *asiriyum* (protection). For instance, Sengudi Nattu Abimanamerupuram, a traders settlement was in the protection of Nayanar Manithanthaperumal.²⁷

Foreign trade

The Pandyas had trade relation with other countries. The inscriptions also refer to the presence of Tennilangai Valanchiyar, a trade guild settlements in many villages. Nanadesi Thisaiyayirattu Ainnurruvar, and TennilangaiValanchiyar are the trade guilds mention in the inscriptions of Aruppukottai and Cholapuram. Inscriptional evidence is corroborated by the discovery of 12th C A.D. Srilankan gold coins found at Sengundrapuram and the Chinese coins found out from Cholapuram. They point out the fact that the Pandyas had trade relationship with China in the 12th and 13th centuries.

Role of Traders to the Society:

Through their wealth, the merchants did a lot for the society and for the temple activities. The Traders donated much to the temples. Edirakottai inscription²⁸, Kundalakuttur inscription²⁹, Sengundrapuram inscription³⁰, Aruppukottai inscription,³¹ and Cholapuram inscription³² give details about their donation in the form of land and institution of services to the temples. The armed guards of the trading community donated land to the Jain monastery (Samana Palli) at Pallavakulanthagallur.³³

In short, Traders and their trading activities led to the thriving-economy of this drought-prove district. Hence they were highly respected in the society. The Mannarkottai inscription (10th C A.D) mentions the offering of one's own life for Kaliyuga Kandadi-Dharma Chetti by performing Navakanda sacrifice. The man who did was none other than the village headman.³⁴ A village headman offering Navakanda denotes that the

Chetti might have done many welfare measures for the village. Hence for his well-being the exceptional sacrifice might have been taken by the village headman.

The merchants of the medieval period engaged in internal and external trade activities and thereby uplift the economy of their kingdom.

As they were wealthy, they had their own settlements and assemblies. As wealthy people they spent their money in donation the temple in their locality which was the centre of the village activities in the medieval period. Thereby they played a significant role in the economy and social wellbeing of their country.

AGRICULTURAL DEVELOPMENT IN THE VADPARISARA NADU IN THE NORTH KONGU REGION IN THE MEDIEVAL PERIOD- A STUDY

M. Mathialagan

The study of the Hindu temple as economic entities assumed great prominence in their economic historiography of Medieval South India. The work of Burton Stein marks the important step towards a new methodology in the analysis of the temple inscription and their socio economic import. The monetary endowment of the temple generated a stream of income which was used to finance of the temple and development of agriculture feeding Brahmans, temple construction and repair, rituals, lighting the lamp and so on.

Here an effort is made towards elucidating the questions dealings with the role of the temples for the development of agriculture and its impact in *vadaparisara nadu* in the North kongu region from the Kongu chola (*konattar*) period to the Vijayanagar period.

Vadaparisara nadu was one of the nadu division in the North kongu region which lying in the northern side of the Kongu region.¹ The region covered in the *vadaparisara nadu* inhabited by the primitive people who belonged to the Mesolithic age.² In the pre historic period

the ancient pastoral and hunting tribes lived in the Noyyal river basin and in the Sangam period the whole kongu region was occupied by the pastoral people who were called as *kongar*. The *kongar* were a great pastoral people fond of cattle breeding and agriculture.⁴

Aditya I invaded the kongu region in 870 A.D and 894 A.D and assumed the title of *kolliyurko* and *kokandan*.⁵ The origin of the chola viceroyalty of konattar chiefs of kongu can be traced from parantakal after the battle of Takkolam. The cholas bifurcated the nadu division and appointed the konattaras their viceroys. Virachola perumandikal (942-989A.D) was the first ruler of the kongu chola dynasty. Virachola kalimurkha (980-1004 A.D) and kalimurkhavikiramachol (1004-1047.A.D) were controlled the *vadaparisaranadu*.⁶ The nadu comprised of / *vadakarainadu*/ *va/a/ayurnadu* *Nirararparrunadu*/ *Chevurnadu* and *Nalarparrunadu*. The other two nadu division found under the *vadaparisaranadu* were *puluvanadu* and *vellalanadu*. The core region of the vadaparisara nadu was present Avinashi and Thirupurtaluk of the present position.

When Cholas occupied the kongu region they initiated the agricultural development in the North kongu region. In *vadaparisara nadu* the konattar (Kongucholas) linked the shepherd villages with the local temples. The *samantas* (*king's* officials controlled the north kongu region. The inscriptions⁷ of the Kuluthunka I of the *vadaparisara nadu* reveals various names of the *samanthas* in the north kongu region.

The epigraphical evidences⁸ reveals that the tax was collected from the *Puluva nadu* and *vella/a nadu* by the temple authorities. The sabha of the shepherd villages remitted taxes in the temple treasury. An inscription⁹ of kokalimurkan and Kokkali murka vikirama cholan reveals the name of the cattle settlement villages (shepherd village) (Pa//ika/). During the period of Kulothunga Annur inscriptions¹⁰ mentions the name of the king officials (*nattusamandan*). The sabha collected taxes from the each house hold (*kudikanam*)¹¹ and it was remitted in the temple treasury

The inscriptions¹² of Koluthungal (1149-1168A.D) in reveals that the Brahmans were the members of *chitrameliperiya nadu* assembly and called as a *kaniyudiya siva brahmanas*.

Another inscriptions¹³ of the kulothunga I in Naduvacheri mentions the eight kind of social group among the shepherd community and they remitted their taxes in the temple treasury for lighting lamp in the temples. The sabha collected taxes from the each house hold (*Manrattu*). An inscription¹⁴ of the kulothunga II in 1203 from Annur mentions that the *kaniyudia siva Brahmans* received the gifts from each kani holders (*manradi*) for light the lamp in the temple.

An another inscription¹⁵ of kulothunga II (1196-1210 A.D) in 1200 A.D reveals that members of the temple treasury encouraged the entrepreneurs in the *devadanam* villages. Alathur was devadanam (lands donated to the siva temples) during the period of kulothunga I itself and it was encircled by number of small villages with *nanchai* (wet land) and *punchai* lands (drylands).¹⁶ Avinashi was a temple town called as a *adikil thalam*.¹⁷ many merchants (*valanjijyar*, guild) settled in and around of this temple villages.

Virarajendra (106-1256.A.D) was an important ruler in the among the konattar, Konguchola rulers. During his period the Hoysalas occupied the north kongu region and the kaikolas settled in large number the north kongregion. The epigraphical evidence¹⁸ of Virarajendra (1206-56) reveals that Palankarai become a weaving centre and Naduvacheri was a *brahmadeya* (grant of land to the brahmans) village in Vadaparisara nadu¹⁹. Many villages were developed around this town. ViraRajendra promoted the agriculture in the *vadaparisaranadu*. The king, merchants and individuals donated lands to the temples. The temple lands were converted into fertile lands with human efforts in the form of irrigation techniques. The dry lands were converted into wetlands. An inscription²⁰ virarajendra from Annur refers that the Kulothunga choladevan kuravan, a king official, deposited 95 *achu* with devakanmis of the temple at manniyur for bringing certain lands under cultivation. During the period of Pandyas various kings and his officials, the local bodies (*sabha andur*) and individuals figure as the promoters of reclamation. One undated inscription²¹ from Karuvalur denotes that the kings ordered to the temple authorities to donate the tank namely *pursakulam* in Karuvalur village along with the

lands irrigated by the tank to the temple as a *thiruidaiyatta iraiyili* in Palankaruvalur.

An inscription²² of virarajendra from Avinashi denotes that the gift of land by the king's officer and his wife to the Avinashi temple. The land was situated in the Kolinjipadi alias *udiyapiratti chathurvedimangalam*. The land was very fertile and called as *ku/othunga chola mannarai*. An inscription²³ of Konerimaikondan in 13th century from Sevur records that a gift of a village namely Arasur alias kuladeepanallur as *devadana* to the kaapolisvara temple by the king.

Apart from the kings, the king's officials also donated land and villages to the temple. An inscription²⁴ from Avinashi records that one Rakutharaya singaya dandanayaka army general of Viraballala III donated villages from *Karaivalinadu* to the Avinashi temple. The inscriptional evidences from the Pandiayas of kongu region reveals the social group of *vellanadu and puluvanadu*. They were cattle keepers and have formed a new group in the micro region of *vadaparisara nadu*. They donated lands to the temples and promoted agriculture after donating the lands to the temple. The sabha of the *vellanadu and puluvanadu* received the loan from the temple treasury for the development of agriculture. One inscription²⁵ of sundarapandyan from Annur in 14th century reveals that the merchants purchased lands near sevur tank from vellalas and donated the land to the temple. The inscription further reveals that the sevurmanram (Ur sabha) become the defaulters of the temple treasury and the members of the *manram (Ur sabha)* sold the lands to the merchants as *Thiruidaiyattairaiyili* to the sevur temple.

An another inscription²⁶ of the same ruler from sevur denotes that one vellala from sevur namely vellalan kommaiya siruvanandan sold the land near tanks area (*sangalvan kulam*) to perumal temple at Sevur for *anradu varagan* 300 *pullikuligai* panam. During the period of Viravallala in 1322 A.D the above temple land became waste land {fallow land} of the temple consequently one madappa dandanayak, an army general of viravallala III undertook the reclamation work and redonated to the temple.²⁷ An Inscription²⁸ of Virapandya from Sevur denotes that the *vellanattar and puluvanattar* donated *thiruidaiyatta iraiyili* land

in Karaipadi village. The land included *nanchai* (wet land) and *punjai* land {dry land} well and garden.

An another inscription²⁹ of virapandya from Sevur in 11th century reveals that *vellanattar and puluvanattar* of the *vadaparisara nadu* donated marudur village to the sevur temple as tax free *iraiyili* for conducting the *periyannattar* festival in the temple.

Agriculture was the basic industry on which vast majority of the population depended for livelihood. Temples as a biggest land owner filled a large place in the agricultural economy of locality. Right from the kongu chola times the villages donated to the temple called as *brahmadeyas, Devadanas and thiruidaiyattam*. The brahmanas occupied in the temple villages called as *kovil kaniyudiy Brahmanas*

They were the members of the temple treasury. According to the inscriptional evidence they collected taxes on behalf of the temple from tillers. Subsequently, the temple property was increased in due course the temple become big land owner. An inscription³⁰ from Avinashi temple in 1350 A.D. reveals that one srirangabhattan from *viranarayana chathurvedimangalam* in the chola country donated lands from *karaivalinadu and perurnadu* to the Avinashi temple. It is assumed that the brahmanas land lords (*Kaniyudiy Brahmanas*) donated lands to the temple general welfare.

The wet cultivation and dry cultivation was widely prevalent in *vadaparisara nadu* in association with well irrigation. The paddy was cultivated in the river beds such type of lands were called *mannarai*. The inscription from *vadaparisara nadu* refers the prevalence of canal and tank irrigation. The major tanks are mentioned in the inscriptions of the temples³¹. The kings and officials also promoters of irrigation system. The irrigation works in the dams and canals was maintained properly by various agencies, assemblies and individuals. The Vijayanagar ruler Achutaraya in 1538 A.D constructed one tank namely *saliya samudram* and he donated half of the revenue from the lands irrigated by the tank to the Avinashilingeswarar temple at Avinshi.³²

The *brahmadeya* settlement in the *Vadaparisara* nadu reduced the mechanism of violence in the north kongu region. It served as the agents of detribalization by reducing the tribes into caste. The *brahmadeya*, *devadana* and *chaturvedimangalam* settlements spread out the brahmanical culture. The Brahmans organised *chitrameli periyana* assembly and united the shepherd community on the festival occasion. The brahmans occupied the fertile lands and holding the *manrattu* rights. They collected the taxes from the tillers from the temple villages. The new *gothras* among the brahmans appeared in the inscriptions denotes that the brahmans inroads in *vadaparisara* nadu developed a new culture in the north kongu region. They employed various position in the temple complex and developed the temple treasury and attained a superior position in the temple and society. The pastoral people of the kongu region in the early period were leading a tribal life with clan division mingled with

immigrants and emerged as vellalar on the north kongu region and adopted the valley culture. The mercantile guilds indulged in trading activities in the *vadaparisaranadu*. Subsequently many mercantile settlements emerged in the north kongu region. The *kaikolas* settled in *vadaparisara nadu*. They developed in spinning and weaving and dying in the north kongu region which paved the way for the inroads of weavers from the north kongu region during the vijayanagar period. The entrepreneurs like potters, artisans and *devaradiyar* were settled in the villages in *vadaparisaranadu*. The temple become the landowner and temple property was increased due course and become big land owner. Temple garden was developed in every temples. The agricultural development in the *vadaparisara nadu* paved the way for emergence of many mercantile centres in the Noyyal river basin.

REVENUE SYSTEM DURING THE PERIOD OF QUTB SHAHIS OF GOLCONDA

Mohammad Osman Pasha

Agriculture is the most important and the oldest occupation of this country. It provided basic needs like food, clothing and shelter, and

employment to the people. Through the ages land revenue formed one of the basic sources of income to the government. Land revenue was

collected from all kinds of land owned by the individuals and institutions. Like other contemporary decentralized feudalistic states of Indian sub – continent, the QutbShahi government also collected its revenue by farming particular methods. The greatest source of revenue for Central Government was derived from the king's claim as a share from all agricultural production. Through the mechanism of the land tax, the Qutb Shahs appropriated a large share of every harvest.

From the earliest years of Muslim rule in Golconda, there existed a perfect assessment of Jam – e – Kamil which specified a normative land tax, figured for village, taluq and district – wise in the kingdom. By the latter part of the 17th century, with the annexation of Carnatic territories, the Jam – e – Kamilwa improved. As far as land tax is concerned, the State demanded at the time of the formulation of the perfect assessment seems to have been computed on the equivalent of the one half share of the produce of every harvest as land tax since in theory of the rule of the battai or equal division of crops between the government and cultivators. The State officials gathered the land revenue which starts from the level of the village, Karanam who was the official and collected the revenue from each talent.

In the exploitative land structure that prevailed, during that time, land revenue was shared by three classes of elites at the topmost layer, viz. the Sultan, the muqasadars (the great nobles), the sarsamatus (district governors) and hawaldars. In some parts of Golconda the central revenue ministry could directly collect land tax, while in other parts the muqasadars were given specified lands or muqasas as revenue assignments. In still other parts such as in the coastal Andhra region, the sarsamatus had the power to collect taxes from large territorial expanses and the hawaldars from smaller areas. A chosen few of the Persian Sayyids and sometimes person of Habashi origin were given the posts of the sarsamatus, whereas the lower level of posts of hawaldars was given generally to Niyogi Brahmins¹.

The agrarian system was a matter of duties rather than rights. At its root lay the conception that it was the duty of peasants to till the soil and pay a share of their produce to the State. So far as private rights claims were recognized, they

were subordinate to this fundamental obligation. Golconda rulers did not impose an entirely foreign system on their subjects in their kingdom. They accepted the established customs (barbast) in the land tenure system, as the revenue was a prominent feature of the agrarian system. The kingdom was divided into Subhas, which were under the control of a Subedar.

The Subhas were further divided into Sarkars or mahals or Tarafs, which were under the control of Tarafdars. Tarfs were divided into Taluqas or Simthu or Paraganas, which were under the control of Amils and Majumdars. And the village was a primary Revenue Unit. In these administrative divisions the Simthu or pargana was considered to be a center for revenue collection. These parganas were auctioned every year and given to the highest bidders called Ijaradars, or Jagirdars or Zamindars, on contract basis.

“The Zamindars used to go for higher biddings and they used to collect the revenue through their own appointed subordinate officers who in turn collected revenue from the assigned tenants in the villages”. If number of villages were more in a paragon, then it was divided into two or three divisions (vonttu)² and given to Zamindars, who were to be under the control of Amils in the concerned pargana. This Ijara (contract) system was quite prevalent even after Qutb Shahi rule.

Moreland also gives the similar information and it is on the basis of description from a travelogue of “Pieter Van den Broeck's Voyages”. Which states that “ the kingdom was divided into districts under Governors, and the posts were formed by every year to the highest bidders. Here the Governor was not a provincial Amil but a Zamindar or jagirdar who was a contractor of tax collection. “Most of the local Governors were Brahmins or Baniyas. “The craftiest and most knavish people in all India”, we gave lavish presents to their superiors at court, so that the complaints of the poor could never reach the king”.

The auction (Ijara) method was not only for collecting land revenue but also for collection of other taxes in the State at seacoasts, on export, import duties, salt, markets and mines. Through auction, the allotment would be given to Ijaradars or zamindars. The rights over the region were not

only for collecting the land revenue but also for looking after the village and Paragana administration. The land revenue was collected two or three times in a year and it was collected in cash (varahalukattadi) or kind (kolichetattu).

The Zamindars usually used to pay in cash to the treasury. The stipulated annual sum had to be paid to the royal treasury in three installments in a year. These Zamindars used to collect more revenues and they were paying little amounts to the treasury in three installments in a year. Because of this type of practice the mediators and contractors became very rich and enjoyed the regular rights over Zamindari by offering highest biddings. Zamindars were continued in their Jagirs by political influence like the recommendation of Qiladars or other nobles of the kingdom.

Revenue minister Mir Jumla was responsible for revenue collection from the provinces in regular intervals every four or six months. Subhas were under control of subedar or sarkhel. His office comprised the Diwan, in-charge of revenue and assisted by the sherishtadar, a head accountant. Tatafwas under the control of tarafdar or mahaldar or maniavar, held responsible for law and order as well as revenue supervision. He was assisted in revenue collection by Sardes – e – Mukhis or Deshkulkarnis³, who were in charge of revenue accounts.

Parganas were under the control of Amil who were assisted by majumdar, who used to collect the revenue from the Ijaradars and also maintained the records and accounts which were subjected to audit. He was also empowered to audit the zamindars accounts and records. There are instances found in QutbShahi records wherein Amils and majumdars dominated over Zamindars in the matters of inspection and audit of accounts of Patwaris who were appointed by Zamindars.

Majumdars were assisted by Desha Mukh or Desha Pandya even sometimes known as Desaiyans. Their primary job was to maintain the records and accounts and they were also in-charge of collecting the taxes from the Zamindars. Sometimes, they were appointed directly through the Sultan's farman. In lieu of their services they were paid some percentage of their collections, ranging from 5% to 10%⁴.

The zamindars used to collect the revenue through their own patwaris or kulkarnis who maintained triennial accounts and village land records. They were asked to submit the accounts to majumdars. There are instances that these Desha – Mukh and other revenue officials often misused their powers in revenue collection and embezzled government. "Zamindars and Amils joined hands in the misappropriation of government revenues which were detected and proved zamindars and DeshMukhs were asked to submit their records regularly. Account books, revenue register (Awarja – Taqaqi). Records (Pahanis) were inspected and audited.

Delay in remittance of revenue by zamindars was punishable crime. If they failed to pay the revenue in time, due to negligence or failure in collection they were required to produce the security bonds. After executing security they have to pay their regular installments along with due money in time. Otherwise, the zamindar and his guarantor were arrested and kept in custody. Their release was only after executing a new bond for the due amount (taujih) as determined. In some instances they borrowed money from money lenders and noblemen of the kingdom on interest at the rate of 4% or 5% per month.

Under any circumstances, if the employees embezzled the government money, they were punished severely. Misappropriation or misuse of government revenue by the Amils or tarafdars was treated as a serious crime. "...defaulting Governors were permanently injured by the punishment inflicted on them". It is clearly understood that the QutbShahi officials were not responsible for revenue collection⁵.

They looked after the revenue remittance, accounts, maintenance of accounts and auditing the Zamindar's account books. They audited the revenue remittance accounts. They were not having direct contact with the cultivators of the land, who were exploited by the Zamindars. There was no one to hear their woes. There are no clear evidences to show that correct uniform land tax was levied on the peasants.

That QutbShahi government used to settle the land disputes and land tax by appointing revenue officials of the state. A number of inscriptions of the period attested the cases. For example, the Dharjavaram inscription (Prakasam

district) describes at length details regarding land and other taxes, Mohammed QuliQutb Shah's period, the army chief Ekhlash Khan gave the inscription in A.D. 1592 regarding the land tax determined by the government after the settlement of cowl, at a newly established town Ekhlashapuram. He was a Tarafdard of Addanki and Kondavidu region. Details of taxes on land are as follows⁶:

1. Newly cultivated land for the first two years as per the Kowl agreement (as per the prevailing system tax would be exempted for 5 years. Here Ekhlash Khan granted exemption for initial period of two years only.
2. From the 3rd year onwards tax should be paid $\frac{1}{4}$ of the produce permanently.
3. Different crops sown in wetlands would be taxed $\frac{1}{3}$ of the produce. (Rajuku Palu Okati, Kulapallu Rendu).
4. Uncultivated land if cultivated, then the king was entitled to claim $\frac{1}{4}$ of the produce (Rajuku Palu Okati, Kulapallu Mudu).
5. Out of grain produced from Chalaka land in case of Thurakalu, Doralu, Brahmalu and Karanalu (they are all called Sukhavasulu (people leading a life of comfort) king was entitled to $\frac{1}{2}$ of share of produce. (Sagamu Rajuku Migatadi Kulapolluku).
6. In case of barren land, $\frac{1}{5}$ th share of the total produce was collected by the king. (Rajukupalu Okati – Kulapallu Nalugu).

The Malkapuram inscription contains details of the agreement made by the people of

24 villages in Ravimpadusthala. It was collectively agreed by them to pay tax. The inscription also describes the details of wet land existed in each village totaling around 2,657 kuchalas (one Kuchala is equal to 29 acres, this means that the total wet land in 24 villages accounted to about 77,053 acres). The land tax was fixed as $\frac{1}{3}$ rd of the produce to all communities. Brahmans were exempted from tax payment and Mulims had to pay on $\frac{1}{6}$ th produce as tax.

Basing on the inscriptions and Kaifiats it can be concluded that during the QutbShahi period, the land tax was more or less $\frac{1}{3}$ rd of produce of every crop. The revenue statement relating to the reign of Abdul Hasan Tanashah (A.D. 1686) shows the annual revenue from the kingdom to be 2, 47, 50, 530 huns realized from the land taxes.

K.V. Bhoopal Rao gives diverse amount that in the year A.D. 1686 that the State yielded Rs. 33741840-00 per annum as land tax. However the QutbShahi government used to get immense wealth from the land revenue which varied from place to place.

The above study now draws focus on the nature of State's land revenue collection. J.D Thevenot has observed of the Deccan on one journey of the insolence of tax collectors acting in the name of their lords whom villages had been granted⁷. Later he noted that the nobles appropriated maximum amounts of revenue from their land grants mainly because of the weakness of the central authority. Finally we can say that Qutb shahi rulers maintained a systematic revenue system in entire kingdom.

TANK IRRIGATION AND GRANTS AS REFLECTED IN THE INSCRIPTIONS OF KOLAR DISTRICT

Munireddy & N. Shaik Masthan

Introduction

Kolar district is a district in the south eastern tip of the state of Karnataka which is traditionally regarded as the drought hit district with only an Annually Average 744 MM of rainfall. But this district has a rich and vibrant history and culture. The people of the district are known for their hard work who toil day in and day out to meet the demands of the life and in fact they have carved out a life style of dignity due to their persistent and sustainable way of development. It is a rain fed district and majority of the people are agricultural based in their profession. Hence, artificial way of collection of rain water has been a means and method of development of agriculture and through irrigation. Therefore, development of tanks has become an important aspect of the way of economic life of the people where tank irrigation plays a very major role and importance, a little bit of rain which falls annually has to be carefully store effectively. Even the great dynasties which ruled the district starting from the Chalukyan period to Hoysalas and the Vijayanagara dynasties constructed and maintained many tanks along with the development of the tanks by the queens, Ganikas, temples and the philanthropic people. Constructing a tank was called as a 'punya' water or a merit which bring credit in the other world. A tank which is filled with Rain water leads to fulfilment of so many other tanks in the stream as there was a chain of tank system that was developed in the entire area. But today due to various human activities number of tanks in district have disappeared¹.

A Gazetteer Edited by B.L.Rice explained that 85% of water which is available from Palar and north Pinakini (Uttara Pinakini) rivers are used in Kolar district. Further it is said that in ancient period, there were a total 5,497 tanks, which served/watered 48,600 hectares of lands of Kolar region. Palar River which originates from Gotham Gudda near Kaivara flows through Kolar, Bethamangala, Ramasagara all the Rivers of Kolar, Nangili, Kurubur Comes to these streams only. Ramasagara tank is the biggest tank in the District, The tanks situated in Bangavathi, Ronour, Kolathur and Lakshmi

sagar of Srinivasapur taluk has a very good catchment area.

The northern Pinakini, also called the north Pennar River, rises on the Chennakesava hills to the northwest of Nandi hills, in Chikkaballapur taluk and the Subsidiary Rivers of northern pinakini called as Chitravathi and Papagni River fills water to many tanks in the flow stream. Byarasagar tank of Gudibande is the biggest tank in the district. As well in the same district there are tanks like watada Hosahalli, Huddugoor, Nagaragere, and Namagondlu are very important.

The south Pinakini River (Dakshina Pinakini), which also originates in Nandi hills in Chikkaballapur taluk, flow in the easterly direction upto Shiddlaghatta, and to this river there are attached tanks like Kandavara and Gopal Krishna are constructed².

In Southern India irrigation system developed and adopted since ages. The Human in the beings developed agriculture as their primary activity and entirely depended on rainfall for cultivation. But with the increase of population, people shifted to less density areas and started the technique of storing the rain water for cultivation and household activities. Tanks were constructed with the help of dried and wet leaves, sticks, creeper and soil to pile up the bunds. And then the rain water is stored in such tanks and water was supplied to catchment area for cultivation through small canals. History explains the how megalithic cultures stored water from the mountain regions were used for cultivation activities throughout³.

The development of tanks and tank irrigation In Kolar district are referred in the inscriptions starting from 5th century to 18th century. The first inscription in this regard belongs to Gangs period which is known as Malur taluk's Nonnamangala copper plates, According to these inscriptions two tanks were constructed for irrigation purpose and the area below it nearly of 6 zone of land were given as land grant⁴.

The study of the District tank irrigation is divided and studied as

1. Tank construction and Grants.
2. Repairs and management.
3. Water management.
4. Technical Skill etc.

Tank construction and grants

There are many numbers of inscriptions that are available in the district of Kolar, which explain that many or every dynasty that ruled the district like the Gangas, the Chalukyas, the Pallavas, the Cholas, the Hoysalas, the Vijayanagara, the Wodayers and the Sultans of Mysore have taken proactive role in the construction of the tanks particularly their kings, Queens, Palegars, officials, women, Prostitutes, Businessmen, priests, private people and organisations who not only built the tanks but also managed tanks.

The first record of tank construction in the district was found in 931 C.E at a place called as Avani which is popularly called as Avani inscription. As per this record in the 40 years history of Avani there were built 50 temples and 2 tanks⁵.

In Bangarpet taluk, there is Ramasagara inscription. Ramasagara was famously known as 'Bukkasagara' as it was constructed by Bukkaraya the governor of the region during the Hoysala rule. As per the inscription of kalludi in Gauribidanuru taluk, Pratapa Bukkaraya ordered to Singhia Batta [who was a water Resources Expert] and make the flow of water from Pennar Rivers to Penugonda for the betterments of people.

The kings in those days implemented various programmes for the construction of tanks which helps in Irrigating purpose like 'Bittuvatta,' 'Dasavanda,' and kattu-vadugai etc., Words are seen in inscription which suggest the collection of special taxes for the construction of tanks for irrigation as well as for consumption purposes. They also suggest the encouragement provided to tanks irrigation. For construction and repairs of tanks the land below catchment area of tanks were given as Grants of land to people. 1/10th portion of tax amount collected was spent

on tank construction and repairs ['Kodugai' or 'kattu-kodige'].

In 1033 C.E a place called as Iramudi Nadu was given as a Grant by king Iramudi Chola, who said to have constructed 300 tanks and sluices are recorded in the Nancharlu inscription. In 1330 C.E Arabikothnoor inscription mentions that one of his subordinate ruler on behalf his brother constructed shivalinga temple and a tank.

Vaniganahalli inscription in Mulbagal taluk mentions that the citizens and priests requested their king Mangarasa to distribute 2/10 of tank catchment area and 2/10th of his tax amount to spend on tank irrigation project of the region.

In the olden times it was believed by some people that construction of tanks, wells, temples etc., was a religions merit which was believed to be a punya that would yield foots in the other world. In this regard an inscription dated 1100 C.E, at a place called Bovigondanahalli in Chintamani taluk has references to the construction of a tank in its pure philanthropic pursuit. In this inscription the son and grandson of king Verupakaran constructed tanks in Madamangla region with king's trade mark and seal exhibited on the inscription⁶.

Private people were also interested in the construction of some tanks. In an inscription found in Chikkaballapur tells that kuduvathi tank was constructed by a family from its own cost so the tank was given to the use of the village along with the family⁷.

There were references that woman also showed much interest in construction of tanks and wells for water purpose. The granddaughter of Bukkaraya, Jammadevi constructed canals in the village of Tiruvani. The names of the contractors were also given in the inscription, like Peddabaluvooja and Chinnabovivooja who agreed to construct the tank and after completing the construction they said to have received 130 honnnu coins, land, and horse from king⁸.

There are references that, Even Businessmen were also interested in the construction of tanks in those days. As per an inscription of Arlukunte in Srinivasapur taluk, a businessmen (Shetty) from Kanchi constructed a tank and was given as a gift to the people of the village has been documented⁹.

Repair and management

Tanks were constructed in the river flow catchment areas not only for storage of water but also to guard from the disasters and damages to be caused due to heavy rain fall at times. There were occasions also that even tanks were also to be damaged by bunds being cracked and the crops were destroyed. Hence they were required to be constantly observed, repaired and maintained. In 950 C.E an inscription of Bethamangala records the maintenance work of the tank of Vijayaditya Mangala which was repaired by the administration. In 1155 C.E the official Sokkeimaiya, a subordinate of king Vishnuvardhana of Hoysala kingdom repaired this tank once again. In 1903 C.E when the tank collapsed due to floods once again, the Mysore kings reconstructed this tank. At present this tank supplies water to K.G.F city, and it is the main source of drinking of water to the people of the city.

An inscription in Kolar district dated 1000 C.E called as Hebbani inscription depict that the head of the village had reconstructed a collapsed tank so he received "kottu kodige" inam, (land grant) from Nolamba rulers¹⁰. Another Inscription in Malur Taluk says that some People called, one Kadripathi and Dasegowda have repaired half of the collapsed tank and rest of the construction and repair was done by a person called Agasa Chinna¹¹. In another inscription called, Dalsanur Inscription there is a mentioned that in 1128 C.E a Person called, Pudunadu Gowda converted around 300 hectares of barren land into cultivable land by suppling water to this.

Tank water management

In every Village in ancient and medieval ages, a person was appointed especially to look after tank water management, and that was the practice in n Kolar region. The government used nominate that person on the recommendations of the village panchayat and he was to be given a plot of land for his livelihood, and it was rotation among the same community people of the village. He was called as Neeraghatti or Neeraganthi. That apart this person also used to get annual subsistence from the farmers, who grow the crops in the catchment area of tank in the form of grains and grass as remuneration to the person who worked as water manager or the

Called Neeraganthi. It was the practice that on Sunday's and Monday's in every summer session, all the people of the concerned villages together used to repair, maintains, managed and reconstructs the tanks where ever necessary.

The village administrators called as Shanubhoga, Patel, and Neeraganthi, Tohti, Talwar, Poojari and others were all the service providers who played a pivotal role in the service of the total welfare of the village and the up keep of the tanks as per the Village rules, regulations and traditions. The Catchment area of tank is extended for cultivation as well as for the purpose of drinking water available in tank. Safe guarding the entire area was the most responsibility of the village community and the administration.

An undated inscription found on the tank-bund of the village called kurabarahalli in Kolar District, Claims after the gifting of the land (Bittu vatta) for the maintenance of the tank, that whoever adhered and acted according to the principles of dharma, would earn the merit that would accrue for having performed the traditional horse sacrifice (Aswamedha – phalam) benefits.

In Chintamani taluk there were villages called as Munuganakunte and Doddakere where the village's tanks had catchment areas of $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$ parts but was facing an acute shortage of water problem including drinking water. To solve this problem and to bring balance to the catchment and water availability a system called "DAMOSI" was adopted, which can be seen even today¹².

The Vijayanagara kingdom which was established in 1336, ruled all most all parts of south India. It developed a unique system of administration and the basic feature of Vijayanagar kingdom was the system of 'Aayagar'. In this system among all the officers of the village, an officer called Neeraganthi, was in charge of the village tank and looked after the water management and distribution of water efficiently and equally to all the land holders for their crop pattern. He was in charge of any water dispute of the village and was a highly responsible person held responsible by the panchayat. Of course he was suitable remunerated for all his duties.

A Kannada Inscription of the year 1517 C.E. of the village called Bana Samudra, in Kolar district records that one Chabayanayaka made arrangements for the removal of silt from the spot of the sluice, year after year regularly. Further the pit (channel) so formed had to be strengthened with stone walls to prolong its utility, year after year. One, Mekalabomma, in the year 1636 C.E. repaired the breaches in the tank of his village, in Kolar district, in return for which he received some wet-land below that as 'Dasavanda' arrangement¹³.

Technical skill

The tanks which we are seeing today throughout the district are only the legacy and the reminiscences of the technical expertise that our forefathers displayed in the technique and the skills of construction, repair, and Maintenance of small as well as big tanks. An inscription found at a place called Porumamilla in Kadapa district, there is a description of the water lifting system through a sluice or culvert, which is still functioning, is one of the magnificent and a typical example of the hydraulic method of water lifting adopted in the Vijayanagara period. It is an unusual display of engineering skill. But this inscription points 12 requirements and 6 disadvantages as the prerequisites in the construction of tanks¹⁴.

The Rajagundlahalli inscription (1497 C.E) in Kolar district, has explained the details of the construction of new tanks. Thereafter, the embankment or the bund was constructed with stones. Its rear was packed with loads of earth and the tank was farmed. It was also provided with a sluice, built of stone –slabs which were fixed firmly by using bricks and lime-mortar and it was complete in all respects¹⁵.

In a Vokkaleri copper plate inscription Shivaji's subordinate Subedhar Ananthaji Bose said to bestowed showers of praise to one Mari Gowda for one of the best construction of tank he had given to work with. Though there is no mention of any material benefit awarded to him, it was a matter of pride and honour to have been received such laurels. Though there are minute details about the construction of tanks, their maintenance and policies and programmes relating to them, There are hardly any inscripational details regarding tank's capacity and quantity of water storage etc., For example,

in 1408 C.E Agara inscription tells about tank construction while the Avani inscription tell about the appointment of a priest of a temple for the purpose of construction of religious hall (Dharmachatra), he said sold the tank catchment area to Ankappa and so on., but the capacity of the tanks, the measurement of water and such details are in wanting.

Conclusion

Though inscriptions as such are available in Kolar district since 4th century CE, inscriptions relating to tank irrigation are available only since 5th to 18th century. While, some 90-95 inscriptions tells about new tanks that were constructed and the development of the irrigation works in the region at the times of Gangas, cholas, Hoysala and Vijanagara period rest of the inscriptions are ment for donor records, grants, sacrificial stones and so on.

To sum up it can be said that system of water management and distribution of the water was a main concern of every civilization at every given point of time. It totally dependent on the availability of water as a resource. While, where ever rain water and river system was not adequately available, people strived to develop the technique of storage of water in an artificial way i.e. by tank system. The natural instinct for the betterment of life by all the creatures was also a motivating factor for the thought process of storage of water. So there is a great concern for all the Researches, Experts, Officials and politicians as well as government to focus, on these issues for the betterment of the living human society.

It is our earnest to give the message to the society, that instead of constructing houses and various Buildings both for domestic and industrial purpose in the tank catchment areas. It's better to repair and reconstruct the damage tanks and maintain the existing tanks and its catchment areas for the purpose of future irrigation and agriculture activities. It not only helps the conservation of environment but also provide better life to the generations to succeed. This paper in time and space is only a tribute to those great people and the times who have contributed their might to the cause of building culture and civilization. It is for the betterment and welfare of people in Kolar and Chikkaballapur districts in particular, As well as entire human folk of the society in general.

THE DEVELOPMENT OF IRRIGATION IN CHINGLEPUT DISTRICT UNDER THE BRITISH RULE

V. Palanichamy

Introduction

Irrigation holds the key to agriculture development. It is one of the most important factors for assured more crop production in wet and dry lands. Adequate and timely supply of irrigation water to crops is a pre-requisite in the agricultural production process, particularly in areas where the rainfall is scanty and irregular. Irrigation in colonial India has been subject to many studies and debates. Scholars such as Elizabeth Whitecombe and Ian Stone debated whether colonial policies on irrigation had been beneficial or detrimental to society.¹ In South India, different regions, such as Tirunelveli and Nanchilnadu, have been examined in detail to understand the impacts of colonialism on agricultural life, including irrigation setups.² But by the end of the 18th century the irrigation system was in a miserable state and the area was largely depopulated.³ The agricultural crops were affected by famine; therefore land revenue was decreased. During colonial rule in the indigenous irrigation works were mostly neglected. The irrigation development through treated as commercial in early days was primarily undertaken as a famine relief measure.

After the British conquest of the Tamil country in 1800, the continued importance of eminent native personalities in financing irrigation was over shadowed by the growth of Government as a centralized planner.⁴ Sir Arthur

Cotton was analyzed that irrigation only as a means for obtaining land revenue, and in general, the state sponsored projects had to run a profit.⁵ The financial feasibility of irrigation schemes was used as the test of utility.⁶ Because of (British officials) negligence, throughout the 18th and early 19th centuries the irrigation works sometimes survived by local efforts and sometimes deteriorated.

There is no Public Works Department prior to the late 1840s but the whole problem of irrigation was looked after by Civil Engineering Department under the Board of Revenue. "The various Collectors had annually to report to the Board of Revenue as to what works required repair, with an estimate of the charges. Small undertakings were looked after by the local authorities, while the more important ones were assigned to the Superintendent of Tank Repairs and Watercourses". In India particularly in Madras Presidency, a Civil Department of Public Works was established in 1852 by the colonial government with irrigation and chief concern⁷ because, it was so in most of the irrigation tracts of the country, through they took interest in some large scale irrigation works. By around 1875 it was observed that a few works 'of native origin' were the only ones which registered commendable success and helped to show a positive balance in the government's irrigation account.⁸

The Famine Commission in 1879 had indicated that no irrigation works had yet paid their way in all provinces (upper part of Madras) of colonial India. The Commission had also indicated that the localities in which large scale irrigation could be undertaken with significant advantage were becoming exhausted. This Commission realized that the great famines during the year 1877-1878 had hit the neglected areas which were not suitable for large scale irrigation and pressed the need for development of minor irrigation.⁹ On the basis of the recommendations of the Famine Commissions, the First Irrigation Commission was set up in 1901. The Commission also brought into focus the management problems of the minor irrigation works like the tanks. This paper is made an earnest attempt to bring out light about the social and economic changes in Chingleput district through the development of irrigation. It also deals with the various irrigational systems and maintenance of, channels, canals, tanks etc., these were controlled by government officials and private landowners over the period. Some scholars Prasannan Parthasarathi¹⁰, Arun Bandopadhyay,¹¹ David Mosse¹² have been studied related on the development of irrigation, methods and its practice, maintenance of tank, Channels, canals of South India. Therefore the author has focus on micro level study on the development of irrigation in Chingleput district; it is brought to light about social and economic changes under the British rule through the development of irrigation. The establishment of a stable revenue regime also required comprehensive power over water resources in order to maximize revenue potential for Colonial India. Water was controlled and distributed to the pasture land for commercialization of agriculture and for collecting more revenue to the government during the periods of drought, so that necessary moisture may be always available for the growing various crops in this region.

Development of Irrigation Works in Chingleput District

Types of Irrigation works

The irrigation works of Chingleput district may be divided into four main categories i.e., rivers, canals, tanks ('eries' in Tamil) and wells. The Madras Government devoted particular attention to the improvement of this class of irrigation. In the beginning 19th century, canal

irrigation was spurred on by search for revenue. The early British officials were taken effort on the redevelopment of old system of previous rulers of this region. In addition to the repair and renovation of existing tanks a number of new works were inaugurated, including weirs across many of the smaller rivers of the district designed both to give direct and irrigation by means of canals taking off above them and to replenish the supplies of the small storage works in the commanded area. Collectively these small works were considered importance and contribute largely to the irrigated area of this region.¹³ Under 'canals' are classed all works of any considerable size for diverting the waters of streams or rivers, and carrying them on to the land.

All works for the storage of water, and all natural depressions of which the water is used for irrigation are called under the caption of tanks, and under 'wells' works for giving access to the subterranean supply or to the waters of rivers which running deep below the general level of the ground; it lifted vertically before they can be made to flow on to the fields.¹⁴ 'Canals' are of the perennial' or inundation type according as they are designed to draw their supplies from the river at all seasons of the year or only when it is in flood. In the former case it is almost always necessary to make a weir, temporary or permanent, across the river so as to divert the water in to the canal, and this is often one of the most expensive parts of the canal works. Inundation canals had no such weirs ones cleared of silt they go on taking in water from the river until, at the close of the flood season its surface falls below a certain level, and the canals then remain dry until the next flood season.¹⁵ Parthasarathi has rightly pointed out that the development of agriculture in 19th century Tamilnadu including Chingleput district was very complex and varied environment of the region. It contained extensive tracts of forests, widespread wastelands, and abundant surface water. This diverse environment made it possible to maintain high levels of agricultural productivity as it provided the resources to maintain the fertility of the soil and the supplies of water that were critical for agricultural enterprise.¹⁶

The changes in the pattern of irrigation resources in colonial Tamil Nadu need some

explanation. The number of rivers, channels, tanks and wells in Chingleput either remained unchanged or increased negligibly during the 18th and 19th centuries under discussion. Chingleput was predominantly a wet district, extensively irrigated by river-channels and tanks. The two major rivers Palar and Cheyyar are flow through the southern part of the district irrigating mainly Uttiramerur, Kanchipuram and parts of Chingleput taluk, while the other two rivers i.e. the Korattalaiyar and the Arani are pass through the northern taluks. None of these rivers was a very secure source of supply, and irrigation in the early season was often hampered by the low level of breaches in them.¹⁷ This district had an elaborate tank system, and the larger tanks of Uttiramerur, Ponneri, Chembarambakkam, Red Hill, Chingleput and Madurantakam were all located in central and southern parts of the district is discussing below.

Tank Irrigation and development of Agriculture

There are two largest tanks i.e. Chembarambakkam and Mathurandagam have been irrigating in Chingleput district. Other tanks are smaller and rain-fed ponds irrigation small areas of within the circle. The Chembarambakkam tank was the biggest one embanked by old native ruler of Tamil country, irrigating usually as many as 52 villages.¹⁸ Before its enlargement it held from 55.61 millions of cubic yards, and had an area of 4,648 acres or 7.26 sq miles. After enlarging the tank capacity was 102.91 million cubic yards and the waterspread was 5,729 acres or 8.95 sq miles.¹⁹ However, these tanks were not always in full supply; and we often hear of any of them with six, four or even one months' supply.²⁰ The tanks of the northern taluks were mostly shallow and insecure.²¹ The result was that the wet land in Chingleput could not be continuously cultivated because of the limitation of the irrigation system, at least with considerable degree of intensity. The river system could not be always depended upon, while the tank system was subject to failure. The latter was not only due to seasonal scarcities, but also to certain defects in the construction of the tanks concerned. The tanks were often breached or inundated in the middle of a season, causing subsequent loss of water; and sometimes water was let off through sluices in anticipation of inundation and then there was no water.²² Consequently, even some cultivable,

good wet land could become waste for the time being in this region.²³ It is important to note that complete check in the growth of tanks in a great tanks district like Chingleput constituted a serious hindrance to the increase of cultivation.

The creation of channels and any major repairs of both channels and tanks were always regarded as part of government responsibility. The Madras Public Works Commission of 1869-70, and successive commissions of enquiry during the remainder of the 19th century amassed a vast body of evidence to demonstrate the existence of autonomous village institutions of tank maintenance and communal labour, generally referred to as *Kudimaramat*, 'villager repair or maintenance works'. The total agricultural production of both wet and dry crops yield below the average under the large tanks was extremely good in this district.²⁴ The Government had estimated amount for the development of Chembrabakkam Tank Project was Rs.6,43,000 and the granted for the year 1877-78 was Rs.41,550. The Uttiramerur tank supply channel in Chingleput district was widened and deepened by famine labour in 1878.²⁵ There was 14,371 acres irrigated from Chemberambakkam Tank and collected revenue sum of Rs.62,073 in 1878.²⁶ The colonial government also admitted for the first time its moral obligation to maintain minor irrigation. Government not only increased its sponsorship of tank repair, but also insisted on its overriding right to own and control local water resources in the public interest. By this time also, the ryotwari revenue settlement had turned irrigation commons into state property.

Irrigation under Wells

Irrigation through wells was practiced mainly for garden cultivation in Tamilnadu, However, for wet cultivation in the insufficiently irrigated areas, and for better dry cultivation, wells were often used. In Chingleput district there were repaired 4629 wells in 1826 to 1827 and it was increased to 4827 wells in 1837-38.²⁷ D. Brandis had travelled through out the districts Tamilnadu in 1880 and mention in his report on Forest Management, he noted that Salem and other districts of Tamil Nadu the large number of new wells were deepened in the inland districts, and it seemed to that the people fully recognized the value of wells for irrigation. Such wells cost from Rs500 to Rs.1000.²⁸ The Board's report on

the Revenue Settlement of the Madras Presidency gives the details of well irrigation in 1890 shows that 3,176 wells were excavated in that year by Government ryots at a cost of Rs.2,63,677, it was increased three-fourth in Salem, Coimbatore and Chingleput districts. The large number of wells had been excavated in the Chingleput, North Arcot, Coimbatore, Madurai and Tirunelveli district of Tamilnadu during the year 1877-78 with the aid of government loans. In the single taluk of Ponneri, which was more or less to drought, it appeared that no less than 900 wells was constructed in hard soils end of the year 1880.²⁹ This was a great advantage to that taluk which was protected peasants from droughts. Generally, large number of wells was dug for irrigation purpose with advances granted by Government under the Land Improvement Loans Acts on very favourable terms for protecting cultivators from droughts.³⁰

Practice of Irrigational Methods

On garden lands, irrigation is practiced on an elaborate scale. Three methods of raising the water are adopted, according to the height of the field above the source of supply. For low lifts a bucket was used, swung on a rope' this was raised and lowered by two men,, while a third upsets it over the field. For higher lifts, up to 12 feet, the *picottah* was used. This ingenious but simple machine was identical with the level of Egypt. The third form of lift, the *kavalay*, was used lifting water from deep wells. This consists of a leathern bucket, attached to a rope, which runs over a roller, and is worked by a pair of oxen moving up an down an inclined plane.³¹

Cropping Patterns

To take the case of wet land in Chingleput at first, the main crop was no doubt the much-talked about *samba*, amounting to 62 per cent of the whole produce.³² The *kar* was a limited first crop, cultivated in areas where the facilities of early irrigation through river-channels were available, as in Kanchipuram and Uttiramerur, but it was generally insecure.³³ Of the two-cropped wet land, the cropping schedule was either *kar* (reaping time October-November) and *navari* (reaping time May-June), or *samba*

(reaping time January-February) and *madungal* (reaping time June-July) on the same land. Sometimes there was a third produce, a kind of pulse called *poovasi* which was reaped before August-September.³⁴ In the second half of the 19th century and early half of the 20th centuries the British government forced formers to cultivate commercial crops viz., cotton, sugarcane, groundnut, and indigo etc., for exportation of foreign countries. Cotton was more demands in the manufacturing factories during the time of First World War. The mirasidars (land owners) and the small peasants were cultivated cash crops for market values. The farmers were easily cultivated groundnut because of it needs less amount of water to irrigate and the laboring charge was very low. Therefore commercialization of agriculture reached its zenith during the early 20th century. The money lenders and the *mirasidars* thus enjoyed enormous profits through collecting money from the landholders during the harvesting times. Hence the small landholding community's social and economic life style was slowly changed over the period. The expansion of trading activities in India as well as the whole world were enriched the growth of manufacturing factories. The manufacturing goods were sold outside of the countries and gained profit, this profit was transferred in to the world market economy.

Conclusion

The development of irrigational system in Chingleput district is to understand that most of the waste lands had been brought for cultivation due to availability of water in the catchment areas. Therefore land value was increased during 1860s and 1870s. Besides the land revenue was levied by Revenue Department in different from tank to tank and utilizing canals and river waters. During the colonial rule water was commercialized by the government officials and the elite group of people. This was made conflict between the big landholding and small peasant communities for utilizing water. Hence the small farming communities were sold their land and moved to urban centres for searching new kind of job opportunities for their livelihood.

WEAVERS' COOPERATIVE MOVEMENT IN INDIA - GENESIS AND CHALLENGES

P. Prasanna

Handloom Industry in India constitutes one of the major sectors employing the largest number of persons next to agriculture. According to the *Handloom Reservation Act of 1985*, "A Handloom is defined as any loom other than a power loom".¹ Loom was one of the Gandhi's

Catalyst for the freedom movement.² Handloom uses the services of other professions like carpenters, loom makers, dyers, transporters and makers of reeds, etc. Hence, it is a complete ecosystem of skilled workers.³ Nehru considered co-operation in its wider aspect as relating to human

relations in general and not as a particular form of economic organization.⁴

Emergence of the Cooperative Movement

In Capitalism, the private ownership of capital and resources provide incentives to agents to utilize resources efficiently and avoid the tragedy of commons. The inability of the poor to access finance and sell output at the right price traps them into a poverty cycle. In the capitalist system, labour and the capital markets were interlocked. In 1844, a group of 28 workers of Rochdale organized a society called "The Rochdale Society of Equitable Pioneers" in Rochdale, England.⁵ It was considered as the true beginning of the modern cooperative movement. They showed the way of retail trade and developed the methods of modern large scale distribution and co-operative stores to offer standard good at standard prices.⁶ Cooperatives as an organizational arrangements of collective economic activity can break the interlocked capital, labour and the output markets.⁷ It is an essential association of human beings and the power of capital can be eliminated by limiting the return on capital to the minimum. It gives the direction and the sense of reality to the social structure and the national economy.⁸ Through cooperation, it is possible to generate higher surplus than the individuals acting as autonomous agents.⁹

The Cooperative Movement in India was formally introduced in the year 1904.¹⁰ There are two kinds of Cooperative institutional arrangements. First kind deals with the ownership of resources and the common capital, and the second deals with the members own their physical and human capital, but the cooperative institution deals with input and output markets to realize high surplus through collective action.¹¹ It was initiated not only to aid in economic development, but to bring about social change as well. In 1935, the Tamil Nadu Handloom Weavers' Cooperative Society, popularly known as 'Co-optex' was started. After independence, the state started to provide massive assistance under various development plans to build a strong cooperative sector especially in the rural areas.¹²

In India, more than 4 million jobs are provided by the Handloom, Power loom and the Mill sector. Out of the 38.47 lakh adult weavers and allied workers in the country, 77% are

female weavers and 23% are male weavers.¹³ More than 50% of the weavers belonged to the North Eastern region.¹⁴ In the 1960s, the international and national forces contributed favourably to the development of multilateral cooperative societies.¹⁵ Amalgamation of primary cooperatives into large cooperatives was the most significant development that occurred in the producers' cooperatives. In 1963, National Cooperative Development Corporation was set up with a view to promote the cooperatives.¹⁶ Twelfth Five Year Plan (2012-17) suggested to reflect the infinite variety between Indian textiles and world products and "India Handloom" brand was launched in the year 2015 with its own logo to endorse high quality products as per need of the niche market.¹⁷ Between 2010-11 and 2014-15, total grants and subsidies allocated to the textile sector was Rs. 11,232 crore. From this quantity, the allocated amount for the Handloom sector was Rs. 2176 crore.¹⁸ After 'Make in India', the demands for the handloom products increased.

Problems faced by the Cooperative Movement

Trade union movement and the cooperative movement began as the movements of dissent and protest against the exploitation of labour in the capital system. Trade union movement over the years consolidated its position in protecting and promoting the interests of the workers. But the cooperative movement did not achieve it. Even though, many successful cooperative organizations emerged, they were under a particular leadership which acted as an instrument for strengthening their community and as vote banks. It caused an unequal balance between the cooperative leadership and the workers. K K Taimni in his article 'Co-operatives as Employers' affirmed that the cooperative idea was formulated with a view to break the hold of capital over industry and labour, but it has never worked that way.¹⁹ Workers were weak in terms of resources²⁰ and organizational strength and the local financial markets made the people dependent on middlemen for short term finance.²¹ Primary cooperatives without structural support are relatively weak. Government initiatives to reduce the public sector through privatisation and contracting out of public services opened new opportunities and challenges.²² Cooperatives are placed at a disadvantage while competing with larger firms and integrated corporations.²³

In India, Powerloom contributes 60% of the total cloth production and the handloom contributes nearly 15% of the production.²⁴ More than 80% of handlooms are in rural India.²⁵ In 1985, 22 items were reserved for Handloom, but within a decade it reduced to eleven. Powerloom encroached the handloom designs which created an unequal battle that paved the way for the loss of opportunity among the handloom weavers. Modernization and mechanism threatened the traditions of the weavers.²⁶ As per the Third Handloom Census of India carried out in 2009-10, more than 43 lakh people are engaged in weaving and allied activities related to the handloom industry in India, which was 65.5 lakh as per the Second Handloom Census conducted in 1995-96.²⁷ From 2002-2012, suicide of thousand weavers were reported, especially in the state of Andhra Pradesh.²⁸ Exploitative wages, the appalling conditions of work, inadequate supplies of yarn and their inability to attract and retain young talent weakened the sector.²⁹

Conclusion

Oliver E. Williamson who won the Nobel Prize for economics in 2009 found that common ownership in the form of firms, helps to solve some market failures by mitigating transaction costs and uncertainty.³⁰ International Cooperative Alliance principles recommended the cooperatives to function as independent,

democratic and member-led cooperative business organizations. To develop self-reliance, the cooperatives have to generate the required capital internally and not depend on the state. For mobilisation of resources, Cooperatives can approach the open money market through the raising of share capital. Comparative analysis of cooperatives and capitalist firms would help us to find to what extent cooperatives could perform well in comparison with capitalist firms. If the cooperative action is successful, it could develop output markets by reinvesting a part of the surplus. The survival of cooperatives depends on its ability to adapt to the changing market economy so as to gain the confidence of producers and consumers in relation to price and the quality of products. Gandhiji propounded that the cooperation or local government where wider participation by the public is the essential condition for the success. Workers should be participated in the decision-making process and the relationship between the elected cooperative leaders and the workers need to be healthy to maintain a good industrial relation. In order to attain optimum utilization, all the members of small and large of an integrated cooperative must form an alliance. Cooperatives should pay attention to their internal management to improve their operational efficiency and the success depended not only on economic benefits from the cooperatives to members, but also based on fulfilling the needs of the members.

IMPACT OF INDUSTRIAL POLICY ON NATIVE STATES: A CASE STUDY OF COCHIN STATE

P.S. Pratheep

Introduction

The Princely State of Cochin made its debut in the political history of Kerala with the dismemberment of the Kulasekhara power in the twelfth century A.D. The ruling family of the State was known as Perumpadappu Swarupam. Till the end of the thirteenth century, the headquarters of the Perumpadappu family was at Chitrakoodam then to Mahodayapuram then to Cochin by 1405 A.D. Colonial penetration into Cochin commenced with the advent of the Portuguese. Cochin changed hands from the Portuguese to the Dutch, and by the end of the eighteenth century, Cochin became a vassal of the English East India Company. This was accompanied by the signing of a series of unequal treaties with the colonial power, which cemented England's control over Cochin.

After the conquest of the sub-continent by the British, India found herself ruled by two agencies, the direct rule by the British, and the indirect rule through the princes. Although the Government of India was ultimately responsible for what was happening in the Princely States, Indian princes, who had only *de jure* authority, internally ruled these States. The guidelines of the official British policy concerning the Princely States' transaction with capitalists and financial agents were formulated as early as 1797, when the Government of India initiated certain measures which made it obligatory on the part of British subjects.¹

Background for Industrial Growth

Though there were no consistent official guidelines for the industrial policy of the Government of India till 1914, it can be seen that a few individual administrators did some pioneering work in the field of industrialization.² For example, Lord Curzon, interested in the economic development of India, encouraged provincial governments to establish additional facilities for technical and industrial education, and in the subsequent years some provinces initiated modest schemes in this direction. Convinced of the feasibility of the suggestions made by Alfred Chatterton, a Professor-turned industrialist, the Madras Government made some pioneering efforts in the aluminium hollowware industry between 1898 and 1903. This was a remarkable success and later more and more enterprises were started culminating in the creation of the first provincial Department of Industries in 1906, and in the next year the Government of India created a State Department of Commerce and Industry. More important was the 1907 Nain Tal Conference convened by John Hewett, the then Lieutenant Governor of the United Provinces, to chalk out future plans for industrialization. This Conference also stressed the need for close relations between the technical education and other State efforts to encourage industry. The annual meetings of the Industrial Congress also made some valuable suggestions for boosting the industries.³

In response to those demands for industrialization, the Madras Government

appointed a Director of Industries in 1908. All pioneering enterprises and industrial education were brought under his direct supervision. The Government of India also came forward to finance individual entrepreneurs by way of loans. Thus, between 1898 and 1910, modest beginnings were made in the direction of Indian Industrialization with the support of the Government of India.⁴

By the late nineteenth century, the Cochin administration was fully oriented towards the industrialization of the State. But the lack of sufficient capital as well as the imperial restriction and insufficient technological know-how hindered the State from making any venture in this direction. Yet, the State successfully entered the rail map of the country in 1902.⁵

It may be noted that the Shornur-Cochin railway line became a reality exclusively due to the financial support of the State⁶. Reports indicate that the State had even to dispose of a small part of jewellery for the fulfilment of the project⁷. The introduction of the railways facilitated easy transport not only of the humans but also of the goods. The railways boosted the commercial activities of the State.

In tune with the policies of the Madras Presidency, the Government of Cochin also decided to conduct an Industrial Survey of the State. The survey was entrusted to C. Achyutha Menon⁸ who was asked to suggest ways and means of improving the industrial plight of the State.⁹ The terms and references of the survey included the extent to which the interference of the State could be made in industrial pursuits, the prospects of expanding the technical education in the State, and also the scope for further expansion of the industries of the State.

The Report of the Industrial and Economic Survey was submitted in December 1910, which highlighted the following suggestions:-

- (i) Institution of a technical scholarship tenable in Europe for training in leather industry.
- (ii) Institution of an annual Industrial Exhibition.
- (iii) Granting of advances to artisans to produce articles of fine

workmanship at these exhibitions.

- (iv) Granting of loan to the Sitaram Spinning and Weaving Company.

The recommendations in the above Report were gradually implemented in the State. Priority was given to technical education, and a technical school was started in Trichur, which imparted training both to girls and boys in several trades and crafts. Meanwhile, the reigning Raja Rama Varma had to abdicate the throne in 1914, following serious differences of opinion with the Imperial Government. The outbreak of the World War I in 1914 forced the Cochin Durbar to keep the Report in cold storage. In other words, the Report of the Economic and Industrial Survey had a premature death due to colonial interference as well as the outbreak of the global war. World War I helped to surface many problems latent during the nineteenth century British imperialism. The war also dislocated India's markets and the first year of the war saw the considerable fall in both Indian exports and imports.¹⁰

The Government of India, as announced by Sir William Clark, when speaking on Sir Ibrahim Rahimtoola's Resolution in the Legislative Council on 21 March 1916, decided that the time had come when the question of the expansion and development of Indian manufactures and industries should be taken up in a more comprehensive manner than had hitherto been attempted.¹¹ India possessed two notably successful manufacturing industries in the two great textile industries of cotton and jute, and there were others which had also reached some degree of importance; but it remained none the less true that she was still in the main a producer of raw materials. The Government of India had strong hopes, however, that it might prove possible to place the industries of this country on a much firmer and more extended basis than at present, and they considered that no means should be left untried which held out a reasonable hope of effecting this end. They were aware of the eager desire of a large number of the people of India for the industrial development of their country, and with this desire the Government of India fully associated them.¹²

The efforts of the Government in the past towards this end had disclosed the timid and unenterprising; skilled labour was lacking; and there was a want of practical information regarding the commercial potentialities of India's raw products. All these difficulties required full examination by men of technical experience and high business standing. After much deliberation, the Government of India, with the approval of the Secretary of the State, appointed the Indian Industrial Commission in 1916 with T.H. Holland as the President. Other members of the Commission were Alfred Chatterton, Fazulbhoy Currimbhoy Ebrahim, Edward Hopkinson, C.E. Low, Pandit Madan Mohan Malaviya, Rajendra Nath Mukherji, Horace Curzon Plunkett, F.H. Stewart, and Dorabji Jamsetji Tata¹³. Some of these members were acquainted with Indian conditions, some with industrial progress in other countries where similar objects had been pursued, and others with industrial problems generally and their business side in particular.

The Commission was instructed to "examine and report upon the possibilities of further industrial development in India and to submit its recommendations with special reference to the following questions:

- (a) whether new openings for the profitable employment of Indian capital in commerce and industry could be indicated:
- (b) whether and, if so, in what manner, the Government could usefully give direct encouragement to industrial development –
 - (i) by rendering technical advice more freely available;
 - (ii) by the demonstration of the practical possibility on the commercial scale of particular industries;
 - (iii) by affording directly or indirectly financial assistance to industrial enterprises; or
 - (iv) by any other means which were not incompatible with the existing fiscal policy of the Government of India¹⁴.

The Indian Industrial Commission

The Industrial Commission was appointed at an appropriate time as the new Secretary of State for India, Chamberlain, was more inclined

to encourage State industries than had been his two predecessors, Lord Crewe and Lord Morley. Chamberlain agreed to abandon Lord Morley's prohibition of pioneering activities and gave permission to local governments to initiate and assist promising industries. Yet, no headway was made until the appointment of the Indian Munitions Board in 1917 which was supposed "to control and develop Indian resources with special reference to the needs created by the War"¹⁵ and to apply the manufacturing resources of India to war purposes with the special object of reducing demands on shipping.

The Board definitely gave considerable stimulus to certain established industries like cotton, jute, iron, steel, etc., and their successful working revealed how the new departure of the Government of India from the traditional *laissez-faire* policy to State encouragement could boost local industries.¹⁶

The Government of India received the Report of the Indian Industrial Commission on 29 October 1918.¹⁷ The said Report, published in 1918, was based on two fundamental principles. The former was that in future the government should earnestly address itself to industrial development in the country and the latter was that the government should undertake such work only with adequate administrative equipment and sufficient scientific know-how.¹⁸

The Report also urged the government to set up Provincial Boards of Industries. The Commission also envisaged a scheme of creating Provincial Departments of Industries endowed with vast powers.¹⁹ The provincial departments would thus be the mechanism through which the motive force contained in the technical, scientific, educational and financial proposals of the Commission would be applied in the way in which they could be most effective; viz, through an agency under the complete control of Local Governments.²⁰

Each Provincial Department as envisioned by the Report was to be placed under a Director of Industries, who would also act as the Secretary to Government in matters of trade and commerce. To assist the Director, a Board consisting mainly of non-officials was to be constituted which would comprise professional experts and teachers. This

Provincial Department was to function as a link between entrepreneurs and the Government. The Board was to help the new industrialists in assessing the feasibility of fresh projects. There was even suggestion for setting up Industrial Banks for speedy financial assistance to the needy industrialists. The Board was charged with the responsibility of reviving the sick units in all technical aspects connected with production and marketing. Thus, the Provincial Departments were to become the nerve-centres of industrial expansion in the country.²¹ The other recommendations of the Indian Industrial Commission were:-

- (a) to constitute a central department of industries;
- (b) to create All-India scientific and technical services;
- (c) to create an agency for the purchase and inspection of stores in India.²²

Accepting the fundamental principle underlying the Commission's recommendations, the Secretary of State agreed to a policy of active participation by the government in the industrial development, as one of the legitimate functions of the State.²³ Abandoning the traditional policy, the State now decided to be an active participant in the process of industrialization of the country. In short, the new industrial policy of the Government aimed to step up the industrial growth of the country. The World War I also sounded the death-knell of 'free-trade'. Indian tariffs, till 1917, were dictated by the Lancashire Cotton industry.

Industrial Growth: Government's Initiatives

On 9 April 1918, the Government of constituted a Department of Industries, with a view to the improvement of the minor industries of the State.²⁴ Unable to realize the advantages of having an independent Superintendent of the new Department, the Cochin Durbar gave the Headmaster of Government Technical, Commercial and Industrial School at Trichur, additional charge of the Superintendent of Industries. Two years later, the Department was delinked from the Department of Education under a full-time Superintendent with effect from 1 May 1920.²⁵ In 1922, the post of Superintendent of Industries was abolished and

again the charge was handed over to the Headmaster, Government Trades School, Trichur. For the convenience, the Office of the Director of Industries was shifted from Ernakulam to Trichur.²⁶ Later, the post of Superintendent of the Government Trades School, Trichur, was abolished. In 1925, the Department of Industries was amalgamated with the Department of Education and the Director of Public Industries began to function the duties of the Superintendent of Industries also.

The Advisory Committee attached to the Industries and Commerce Departments recommended that a separate Department for Commerce and Industries should be constituted. The Government of Cochin, after careful consideration, was convinced of the necessity of laying down a sound policy of industrial development, through a strong base of industrial education. The Government decided to impart technical and industrial education to the people. Industrial education received further impetus after 1925. The Government Industrial School at Trichur was the most important and earliest of all the institutions imparting industrial education in the State.

Government interest was not confined to the development of industries alone. They were anxious to improve the conditions of the workers also and Cochin possessed a labour code. All the important decisions of the International Labour Organisation ratified by the Government of India had been brought into effect in Cochin also. The Workmen's Compensation Act of 1111 M.E (1945-46), the Trade Union, Trade Disputes and Dock Labourer's Act of 1112 M.E (1946-47), the Factories and payment of wages Act of 1113 (1947-48) had all been enacted on the model of the Acts in British India. An important feature of the Post-war period in the State was the tendency on the part of the working class population to organise themselves into trade unions and fight for the betterment of their conditions.

Conclusion

To conclude, the above analysis reveals the fact that, despite the obvious technological and financial constraints, the performance of the industrial sector in Cochin was quite

encouraging. At the same time, the inability of the State in moulding a proper vision regarding the industrial growth frequently obstructed the industrial achievements of the State. Even though the State faced very serious financial constraints, the State ventured into industrial concerns even by disposing of its precious jewellery, as could be gleaned from the building

of railways in Cochin. On the other hand, most of the State ventures ended in a fiasco, and the initiatives of the private sector did yield tangible results. Though the Government of Cochin had ambitious plans they all failed due to a lack of proper technological advice and partly due to bureaucratic lapses.

WOMEN IN AND AROUND THE CANTONMENTS DURING THE COLONIAL PERIOD: AN ECONOMIC AND MEDICAL PERSPECTIVE

Preeti Das

This paper discusses the fate of the European women associated with the military men in the British army as well as looks into the perceptions that existed about the Indian

women around the cantonments. Therefore, I have tried to put forth the wider social conjuncture through the lenses of medical and economics factors that somehow determined

the position of the women. Women, though undoubtedly an intrinsic part of the society has been mostly left unnoticed in the larger aspects of the social, political and economic dimensions. However, with the popularity of the Gender and Feminist discourses, the existing question of women, have become a new fascinating subject. Military has been one of the major divisions where the absence of women has been highly conspicuous. During the colonial period, Indian women were considered a disease spreading agent among the European soldiers, who were considered by the British authority, as Erica Wald says, as 'an asset to be protected'.

Women, majorly and in the context of Indian women in the British military regiments were viewed as nothing more than a pathogen spreading venereal diseases. Erica Wald mentions that, military costs consumed the larger share of the company budget within which, most of the expenses was towards the maintenance and payment of officers and soldiers, both European and Indian. However, statistics reflects that the Troops of the European regiment were most expensive to maintain and as their numbers in India grew, so did the expenses. Also, it was higher because they had to be maintained in a land away from their home and clothing and other incentives had to be included. Hence, 'avoidable' losses like the ones caused by venereal disease or liquor were highly resented. According to her, Syphilis and gonorrhoea continued to disturb all army attempts to control the diseases; even though a cure was discovered in the early twentieth century. The way in which The Military and the Medical responded to the venereal disease and drink points to the obstreperous nature of the Company's ruleⁱ. One can easily figure out the differences of notion regarding men and women as regulation policies acted as tender balancing acts, arguing that men had to be handled and pacified for the fear that, if their needs are not fulfilled they might refuse the obligations to their masters and turn against them. Hence, to provide the men's perceived needs, 'healthy' controlled outlets were needed. This concern is evident in both the lock hospital system as well as the cantonment regulations which are devised to control the Indians who surrounded the Europeans, rather than to

regulate the soldiers. The extreme surveillance and treatment systems, known as the *lal bazaar* and lock hospital systems emerged as the answer to the sexual and social 'threats' chasing the menⁱⁱ.

By 1822, lock hospitals operated in almost all the major stations where European troops were based. The count of the women treated annually in Bengal alone has been estimated as 4,000. The operation of this system officially existed till 1831, as the government general Lord Bentinck ordered its abolition, due to the expenses and lack of considerable results. It was first abolished in Bengal and four years later in Madras and Bombay. In Calcutta, however, the system was favoured by most military surgeons that left the officers with a plenty of loopholes which allowed them to continue it, though unofficially but with similar measuresⁱⁱⁱ.

Until the mid-nineteenth century, fearing a threat to the stability of its relationships with the Indian rulers, the East India company was doubtful regarding the allowance of any increase in the number of European women in India. This might be one of the reasons, but definitely not the sole reason that, in the eighteenth and nineteenth century, relationships between European men and Indian women continued to be fairly common, even if there was a lack of material support from the Company. Also the relationships of the concubinage with Indian women highly prevailed. In fact, a proposal to the Governor in 1810, noted that, men who had relations with native women were less likely to have venereal diseases and unlike the men with European wives paid more attention to comforts related to health. There existed contradictions between the Indian Army and the civil government, wherein the former fostered facilities for sexual relations between British soldiers and Indian women and the latter attempted to prohibit any such relationship among the British officials. However, both aimed at preserving the imperial construct of power by maintaining the soldiers' 'masculinity' and interspace between social elite and the people^{iv}. Erica Wald notes the proposal of a surgeon who suggests the officers to encourage their soldiers to nurture relationships with native women, who according to him had

sobering influence and would reduce disease and promote efficiency. These medical men regarded the European women as a burden rather than offering any help, as they were not 'strong' enough to endure India, and hence lost themselves to the country. Samuel Hickinson, who was an officer in the Company's army in Madras, provided an insight into the existence of relationships of these kinds. He disclosed that most of his compatriots, who initially intended to return to England, after arriving in India, went into relationships with Indian women and chose to settle in India with their wives or mistresses and children.

The relationships that grew among the European man and Indian women and how the category of 'prostitute' was transformed by pressure from the colonial state as also did the longer-term relationship between Indian women and European men^v. An evident cultural gap existed between India and Europe in the understandings of 'prostitution' as can be traced in the fact that there existed no equivalent of temple dancing girls in Europe, and thus no observer could have a comparative understanding. Due to the discrepancies in the notions, the medical and the commanding officers who translated these sundry practices, could manipulate the definition of the category according to their suitability^{vi}.

Erica Wald also provides the monetary accounts of the soldiers, where each European soldier represented incurred considerable expense on the Company, which puts the average cost of maintaining a soldier in India at £100 inclusive of recruitment, equipment and pension. Considering the distressed condition of the company's finances in the early nineteenth century, the cost of maintaining a soldier was a sizeable one and thus, something the Company wanted to safeguard. Thus, the time spent outside the active duty of service was a loss to the Company which included the time spent as patient in the hospital suffering from fever, dysentery and venereal diseases. Among these, venereal diseases was the most resented, since it was viewed as something occurring due to carelessness of the men regarding their physical needs. Additionally, the treatment of venereal diseases was time consuming and the diseases like syphilis were believed to make the one affected more vulnerable to the other

diseases. Costly wars of expansion and pacification along with expensive administrative functioning, resulted in massive deficits and thus, the cost of an army which was stricken by venereal diseases could be the last one for the company would intend to afford^{vii}.

Surgeons and commanding officers gradually they adjusted the system to suit their needs, these officers were desperate for a solution but perceived many of the rules as constraints, re- fashioned the lock- hospital system. The outcome was therefore not a system that grew out of an unified discourse that would result a best means to tackle venereal diseases, but from unstable and discerning dialogues among the surgeons and commanding officers who were fearful of instigating discord amongst men through examinations and treatments as well as of an army weakened by venereal diseases^{viii}.

She also suggests that, they were keenly aware of the potential fiscal and political costs and hence suggestion was made on the most feasible and perhaps the 'only' feasible politic option, i.e. enforced monitoring and treatment of women deemed to 'prostitutes', who would 'safely' ensure the sexual needs of the men. The idea behind this was that, the prolonged and often dangerous treatment required for venereal diseases would be borne by the women and not by the men on the military which meant that fewer days will be lost for the Company in the name of treatment.

Wald states that, women were defined by the surgeons as the main weakness to justify a potentially overpriced system. The blames for venereal infections were largely framed in gendered terms, whereas there were other 'moral' ailments stalking the cantonments and the so called dangerous women were not be solely made responsible. Among the most malignant was the high level of drunkenness among the European soldiers. In such instances, 'low- class' European women was seen to be 'naturally' inclined to 'immoral' activities but unlike their husbands, these wives were 'eligible' for punishment. Irrespective of the sympathies, European women who were repeatedly caught selling liquor or engaging in illicit prostitution was perceived as disruptions to the moral order of the cantonment and to

solve these issues, permissions were often sought to expel these women from the cantonment areas.

She also says that, widows of soldiers and women who left their husbands were seen as the disturbing agent, the tag which was already reserved for the single daughters of the soldiers, who according to the higher officials, could easily temper the composer of the cantonment. Noting one of the Lieutenant Colonel by the name, Henry Havelock, who in 1848 was serving as Deputy Adjutant General of Bombay, viewed the presence of a woman whose husband was serving in Karachi, as problematic to the camp and argued that it was within the rights of the Adjutant General to forcibly expel her from the cantonment premises but was wary of the fact that would be projected in front of the natives if she loitered around the surrounding areas. Her dissolute behaviour would do nothing but only cater 'disgrace' to the European character.

Philippa Levine notes that, women who worked as prostitutes, especially the ones who serve the British army and sailors had to register officially as prostitutes and engage in regular examinations designed to detect venereal diseases. The Contagion Disease laws and the other measures to tackle health related issues have been noticed to be primarily protecting the health of the soldiers. Levine not only talks about the laws but also the counter attacks, hence, she tells that the Contagion Diseases Act attracted dissent and resentment from the women campaigners who felt offended by a law that was gender as well as class prejudiced. They viewed only women as the ones responsible for the transmission of diseases and subject to legal and medical surveillance. Even among the women, only the working class women were punished, veiling the unobtrusive forms of sexual assistances which were exclusive to the wealthy.

The Cantonment Act of 1864, brought regulation to military and the Indian Contagious disease Act of 1868, extended it to the cities and that the cantonments were surrounded by bazaars, markets from which supplies and labour were drawn^x. Registered prostitutes were predominantly confined to the 'lal bazaars' which she says were also known as also known as chaklas^x. She quotes Jay Cassel

in saying that, nineteenth century Venereal disease laws always perceived as a subsidiary product of prostitution also saying that the primary concern of the Contagious Disease was governing the sexuality, especially of the women and the colonial people. She also opines that these hospitals must have been very expensive ventures as the wards were segregated for women of different religions. However hospitalising women was not the wider choice of control, She mentions that in Madras presidency, expulsion was the tactic that was favoured. Cantonments at Bangalore, in the early nineteenth century made the infected women cut of their hair and then they were publicly expelled.

The regiments were often accompanied by women who had sense of attachment towards it. It was usually on the line of march, campaign close by the barracks and experiencing the degree of protection and at times, subvention from the regimental funds^x. The Contagious diseases policies of the colony were however never exclusively military but the discussions focused frequently on soldiers health. Women whose clients were soldiers and sailors had a mandatory allegiance to surveillance and detention. Levine refers to them as merely a pawn in the larger game of imperial defence. The discussions on venereal diseases without referring to prostitution was either absent or rare. Therefore, one can have a brief idea of the larger picture in the way women have been looked at. Also the fact that they were the ones to be solely blamed for the spread of diseases gives the impression of the prejudiced version of supremacy of the opposite gender.

The dynamics of how women were perceived in relation to the military is multi-faceted and at times ironical. European women were viewed as to be of superior racial origin but also were seen as weak in terms of their durability in India, whereas Indian women though regarded as the major source of venereal diseases which the soldiers suffered, were thought as better off than their European counterparts as they had better immunity. On one hand, European women were not allowed to stay in Indian without the required permission as it will only add to the extra burden on the expenses meant for the soldiers; on the other

hand, permanent relationship with the Indian women were also not something that was appreciated. Within this existed layers where 'upper-class' women were seen as different from

the 'lower-class' women. Hence, women had to face challenges not only horizontally like say belonging to different regions but also vertically on the basis of class.

THE CONSEQUENTIAL CHANGES IN THE LAND SYSTEM OF MALABAR UNDER THE BRITISH RULE

C.P. Radhamani

The British administrators had an ideological affinity towards the seventeenth century English concept of private property, derived from John Locke and others, and it was transmitted to them through the school of Philosophical Radicalism or Utilitarianism. These ideas and *laissez faire* principles were decisive forces in controlling the Indian political economy in the nineteenth century. The British land policy under the utilitarian principles mainly stood for defining and recording the rights of the landowners and guaranteeing their rights through law courts¹. The Whig concept of a political society was more concerned on landed property and protection of the rights in the land. Joint control and communal ownership over land were considered as characteristics of a primitive society. As such the existing pattern of agrarian relation among the numerous groups in the rural India were disturbed and disrupted by the English administrators in the early stages of colonialism. But the growth of rural population, the integration of the economy and agriculture with the world capitalist system, periodical revision of land tax, absence of scientific cultivation, etc created an explosive situation in the villages of Malabar especially in grain producing southern Taluks. The social evils arising from the growing dominance of landowners and intermediaries were not so far

controlled by the Government. It could not further create conditions favourable for a prosperous agriculture in Malabar owing to defects in the tenurial system, land control and other factors under the colonial government².

By the treaty of Seringapatam in 1792 Tipu Sultan ceded Malabar to the English East India Company and made a part of Bombay Presidency³. The Mysorean rulers made the settlement with the *Kanakkars* who were then in possession of land. Taking advantage of this situation the Muslims purchased land at low costs or to seize land withheld by fleeing landlords⁴. But the Kanakkars who became a party to the revenue settlement of Mysorean only tried to preserve their *Kanam* rights and did not try to seize the *Janmam* rights. If the *Kanakkars* regarded the *Janmam* to be really important right in the soil, they would have definitely claimed this rights⁵. As soon as the British annexed Malabar, they started leasing lands to the Rajas of numerous principalities, whom they had encouraged against the Mysore sultans for lump sums equal to the Mysorean assessment⁶. Naturally the collection of land revenue was done by the deputies of the Rajas. This policy left the country at the mercy of the Rajas who in turn were supported by the might of the British, had pernicious effects. Under this conditions agriculture did not flourish, and that the fields

now cultivated (which in some districts bear but a small proportion to those that are waste) should yield but very indifferent crops⁷.

The company's assessment of the tenorial position in the Mysorean period was stated as follows. In the year 1766 Hydar Ali first invaded Malabar the country was divided among a number of petty *Rajahs* of whom the Zamorin was by far the most powerful. The Village headman were called Desway Jelmway He enjoyed the whole or only a part of the rights which were supposed necessary to the constituting of complete chief of the *Desam*. These rights together with the landed property of the village were originally obtained from the Nambudiri Brahmins who were the ancient proprietors of the whole country⁸. Another British official wrote in the province of Malabar there was a class of people called *Jenmkar* or possessors of free hold, for there is not a spot of ground that had not been for one of those claimants, so difference in this from all other countries of India and this is owing to the impossibility of renting⁹.

It could also be seen that the Company's officials of the earlier period were very much anxious to keep the Brahmins satisfied¹⁰. They were equally anxious to hold to the fled Rajas and Hindus (the lower orders exempted) the prospect of restoring them to the situation they held prior to the Mysorean invasion. One of the officials of the Company stated: "they were then called on to join our standard, as people who in avenging their own injuries might prove useful allies to us¹¹. Further proof to the conciliatory attitude towards *Janmis* could be seen in Governor –General in council in his reply to the Malabar Joint Commissioner's report. He wrote "whatever importance our possessions on this Malabar coast may in future attain, either in a financial or commercial view, at present their political consequence is most worthy of attention"¹². On account of such factors to the early British administrators accepted the Brahmin tradition that they alone enjoyed the proprietary right in the land¹³.

In 1793 a group of Joint Commissioners¹⁴ were appointed to supervise collection by the *Rajas* as well as to study the region in order to make more convenient arrangements for revenue collection and general administration. When the Joint Commissioners started their

work of enquiring into the land tenures of Malabar the Brahmins and Nairs who had left the region following Mysorean invasion were returning. Farmer, one of the Joint Commissioners to restore them to their estates. They were reinstated with full ownership rights and as per the rule laid down for the restoration they were given the authority to prosecute in law courts for regaining possession which they lost before September 1787¹⁵. This was done in view of the older usurpation of their rights by the Moplah of Ernad Taluk. By 1789 the major part of such possession were reclaimed by landlords except in the Moplah districts. Farmer reported in 1793 that two types of right-holders in land were found in the region. First *Jelm-Kars (Janmis)* or free holders who hold their lands either by purchase or by hereditary descent. Second *Kanam-the Kaars (Kanakkars)* or mortgagers, to whom an actual delivery of the land appeared to be made, although the money taken up on it was not at all proportioned to the value of the land¹⁶. Thakery and Warden who was Collector of Malabar for twelve years from 1804 to 1816, also subscribed to the above idea, that the *Janmis* possessed entire rights on the soil¹⁷.

One of the far reaching consequences of the tenancy reforms during British period was that they did not draw a bold line between different interests but singled out the substantial tenants for special protection and devoted less attention to other tenants. The twin rights of fixity of tenure and fair rent were granted to tenants who held lands directly from the landlords i.e., the *Kanam* tenants and every settled cultivators. These reforms raised the *Kanam* tenants into a new class of landlords who had no interest in agriculture. The interference of the Government helped them enjoying protection from competition. The most important effect of this change was on their tenants, they were exposed to competition and had to become tenants not only of the traditional landlords but also of protected tenants. Their position became worse in the agrarian hierarchy since the migration from other sectors increased the number of people who sought their livelihood in agriculture. On the whole, therefore it must be stated that tenancy reform did not constitute a change in basic economic relationships. This only reshuffled the upper levels of the tenorial

hierarchy and exposed the tenants at the bottom, to competition.

The cultivating tenants had no protection of law in regard to fixity of tenure and fair rent. As more people had to be accommodated in the narrow confines of agrarian structure, these unprotected tenants had to pay more rent to retain their holdings. The tenancy legislations afforded little relief to agricultural labourers, the actual tillers of the soil. They were tied to agriculture and it was their main source of livelihood. Their wages depended on the demand of labour and they often received only low wages. They were subjected to both 'old' and 'new' kinds of exploitation. The result of the reform was the multiplication of interest groups in land, which had no inclination whatever to invest directly in agricultural development. The actual cultivators, the last right holder was left high and dry. In consequence, agricultural produce suffered a set-back.

The colonial economy gradually lifted a new stratum to wealth and power, and brought the most ancient and power, and brought the most ancient living aristocracies to an end. The Syrian Christians, Moplahs and Ezhavas as traders and merchants benefited more from cash crop cultivation, commercialization of agriculture, and from the expansion of trade and commerce. They were the people who purchased land from the traditional land owing communities. The mobility of the middle class strengthened the National Congress. The marginal farmers and agricultural labourers under the leadership of the Communist party fought against the evils of landlordism and colonialism. The Party's perpetual struggle helped them to broaden their base in the state, especially in British Malabar.

The land policy of the British in Malabar aimed to achieve two objectives. Firstly, they wanted to extract large share of the agricultural produce as land revenue. Secondly, while achieving this end they were also interested in creating and recognizing a few superior right holders in land who would act as the agents of the British. Thus the application of the British jural norms led to categorization of the agrarian population into *Janmis*, *Kanakkars*, *Verumpattakkars* and agricultural labourers. Thus the erstwhile joint proprietorship or corporate ownership was transformed into individual ownership and the growth of middle

peasantry. The restoration of feudal and semi-feudal structures of the through gifts and donations on festive occasions. This practice continued well into the twentieth century on account of the vesting of complete rights over forests and waste lands in the landlord, and the refusal of the government to consider the afflicted question of the rights of tribals over the land they cultivated.

With the expansion of cultivation of cash crops and the development of industries based on agricultural products had accelerated the monetization of economy and wages were paid in cash. Agriculture especially the cultivation of paddy became more extensive in the interior. There was also an increase in the area under paddy cultivation in large extent. Since all waste lands and forests belonged to the *Janmis*, the peasants had to get permission from the *Janmis* for cultivation. They had to bear all the responsibility of cultivation and half of the produce was given as rent to the *Janmis*. The increase in the agricultural population and vast expansion of cash crops created many problems to the tenants.

The fall in the per capita production of paddy and other food crops was one of the striking features of the development of agriculture during this period. At the same time, production of cash crops increased and the growing demand for cash crops in world market deflected paddy cultivators, which provided only a small margin of profit.

The development of commercial agriculture involves replacement of subsistence farming by producing crops for trade. While modernization of agriculture implies transformation in the modes and therefore in the relations of production. The shifts in the cropping pattern was chiefly determined by the demand and supply situation, particularly of raw materials. When cultivation became expensive, cultivators took to the practice of borrowing money from local money lenders and landlords. The money lenders and landlords extracted high interest rates from the farmers and absorbed large scale transfer of land from cultivators to non-cultivating, money lending households. Gentleman farmers attracted by the profit and social status resulting from land ownership began to possess land. Their aim was to make more profit not from direct participation in

agricultural production but from rack-renting and land speculation.

During this period customary rights disappeared and the labourers became free to sell their labour at prices fixed by the market forces or to remain unemployed, if no work opportunity was available. The new cropping pattern was comparatively less labour absorbing because the perennial cash crop cultivation needed labour only for maintenance and harvesting. That was especially true of women agricultural labourers. The ruin of local manufacturing industries in the colonial period swelled the mass of agricultural labourers and increased the number of people forced to live on land. The agrarian sector could no longer absorb the underutilized and unutilized labour force in the district. The European planters depended mainly on cheap labour available from neighbouring regions outside the district.

The tremendous increase in the population and the decline of traditional manufacturing industries had increased the demand of land for cultivation. During the late 1920s Malabar witnessed the migration of peasants from Travancore because of the high pressure of population on cultivable land in Travancore. The small peasants purchase the lands in Malabar and brought up waste land converted them into paddy fields or orchards and plantation. Increasing capital investment in agricultural

sector in highlands of Malabar was the main impact of migration. The migrants introduced crops like tapioca, ginger and lemon grass. As a result of migration rapid changes took place in agriculture and cropping pattern. Cultivation of coffee, rubber, cashew etc had been rising and the area under food crops fell considerably. The growth of plantations and the expansion of agriculture which was accelerated by the process of migration reduced the area of forests in Malabar. Moreover the migration was also responsible for the fragmentation of agricultural holding in Malabar.

Under the impact of increasing monetization and the advent of capitalism the traditional agricultural system was under strain and stress. Subsistence agriculture was undermined by the introduction of commodity agriculture. The increasing regional specialization and the shift of emphasis from lower to higher value crops diminished not only the income but also changed the attitude of the agriculturists. Food production for local consumption was neglected in favour of articles of food and raw materials for export. Commodity exchanges began to play an important part in the newly evolving economy. Under the new conditions, land was exploited instead of being used for subsistence and crops were produced not for consumption but for sale.

AGRARIAN TENSION IN MADURAI - THE ISSUE FOR DEBT RELIEF AND LAND REVENUE REMISSION, 1954

K. Ramesh Kumar

Introduction

Agrarians witnessed a sharp increase all over the county since independence. About 200 tenants were barely treated by Ultrathathy Mutt in Thenparai village. They formed *Kuthagai Vivasayigal Sangham (Share Croppers Association)* in January, 1943.¹

The name of Share Croppers Association was changed into *Tamilnadu Vivasayigal Sangham (Tamilnadu Agricultural Labourers Organisation)* on 14 June, 1943.² In 1954, the peasants of Tamilnadu in general and Madmai in particular demanded ceiling on land holding, higher waram, debt relief and protection of tenants from eviction which were categorically rejected by landlords.

Confiscation of Peasants Property in Dindigul Taluk:

In Nagayakottai in Dindigul taluk, the land revenue remission was sanctioned where the outturn was 8 a1mas and less. Owing to drought, the land revenue was not collected in the previous year. In spite of remission, peasant's property such as utensils and cattle taken away by the tax collectors. The peasants who paid tax without pocket money were not given receipts by Tax Collectors. After paying tax with pocket money a receipt was given to Ramasami Gounder of Senduvali. In Kalkottai, Muthusami Konar's cattle, Andiappa Konar's utensils, Mariithai Konar's utensils were forcibly taken away by the village munsif.³ About 743 peasants of Nagayakottai, 1015 peasants of Vedansanthur and 110 peasants of Puthutamaraipatti sent a petition to the government to extend Debt relief for 3 years.⁴

The 6th conference of Tamil Nadu Kisan Sabha:

The 6th conference of Tamil Nadu Kisan Sabha was held at Dindigul between 30 July and 1 August, 1954⁵. About 50,000 peasants gathered at the conference. A procession comprised of 10,000 was held. It passed the following resolutions:

- i) long live peasants struggle.
- ii) ceiling on land holding.

- iii) distribute surplus lands to peasants.
- iv) 75% waram to cultivators.
- v) stop evicting the tenants.
- vi) distribute barren lands to peasants.
- vii) extend debt relief for two years.
- viii) down with Police repression and ix) release the political prisoners.

Forcible Collection of Kist in Tirumangalam Taluk

In Tirumangalam taluk there was no proper yield for the previous four years. The peasants by and large revolted against the government fought for the remission of land revenue. Subsequently, the government sanctioned land revenue remission for the fasli 1362 (1952-53) to 74 villages of the district. Prior to land remission, the tax collectors forcibly recovered kist from the ailing peasants⁶. In Sathankudi, Pusalapuram, Puliyanikulam, Kannakulam and Villur, the village officers took harsh measures to collect tax with interest from the peasants. However, the peasants raised the question of tax collection in the course of remission. In response to this, the village officials were collecting tax where the out-turn was 4 annas and above. The village officers statement in fact, was false and baseless. Owing to drought, there was no cultivation operation in the region. The government as such sanctioned the remission of land revenue. The peasant organisation flared up against the activities of tax collectors.⁷ On the other hand, the tax collectors contended that they credited the tax amount for the forthcoming fasli 1363 (1953-54). In other words, on March 7, 1954⁸ the peasants reacted against the village officers to get their money back and to end tax collection.

Landlords Action Against Peasant in Allinagar in Periyakulam Taluk

When the peasant organisation of Allinagar in Periyakulam taluk was growing in momentum, the landlords on the other took deliberate attempt to nick it in the bud. However, with the instigation of landlords, the police were searching for arresting the leaders and members of Kisan

Sabha. Similarly, the peasants of Uttamapalayam were terrified by the police who threatened to close the organisation.⁹

The Peasants Demand for Equal Wages women

Women peasants of Chithaian Kottai and Athur in Madurai district revolted against land lords to get equal wage with that of men labourers. The women peasants with babies and pregnant women usually engaged in work from 6'o clock in the morning to late evening. The daily wages paid to women agricultural labour of the district in fact, was 9 annas 2 paise¹⁰ However, the women labourers who worked for more than 12 hours were hardly paid 6 Annas a day. As a result of this, the women peasants revolted against the landlords for minimum work hours and higher wages.¹¹

The Demand for Barren Lands for Cultivation Kombai, Uttamapalayam, Anumanthanpatti and Pudupatti

The Praja Socialist Party convened a meeting at Madurai to redress the grievances of peasants. It passed a resolution urging the government to distribute poramboke lands to landless peasants within 23rd May, 1954 ¹² The party reiterated that if the government failed to assign within the due date then the party in association with peasants would trespass and take possession of poramboke lands for cultivation.

The peasants of Kombai, Uttamapalayam, Anumanthanpatti and Pudupatti villages sent a petition to the District Collector of Madurai to distribute barren lands for cultivation.

Cultivation Works in Barren Lands of Pottipuram

As a matter of fact, the government owning about 10,000 acres of barren lands in Pottipuram in the west of Kombai failed to assign land for landless peasants. In other words, the peasants had been demanding these lands from the government for years. In the meantime, without getting any positive response from the government, the peasants started to initiate the cultivation works.

In his visit to Madurai, M.Bhaktavatsalan¹, the Minister for Agriculture assured that the government's willingness to distribute the barren lands to landless peasants within a short period of time¹⁴ On the other hand, D.G.Krishnamoorthy, the local Congress leader objected to the government's move to hand over barren lands to the peasants particularly the Kisan Sabha members. Subsequently, the leaders of the Congress Party threatened the peasants that if the forest lands were taken for cultivation then there would not be rainfall in the near future. Meanwhile, the police force was installed to prevent the use of land for cultivation.

Conclusion

B.Srinivasa Rao, the Secretary of Tamil Nadu Kisan Sabha and P.Ramamoorthy, the leader of opposition party gathered with 50,000 peasants to protest against the charges upon the peasant community. On seeing the nature of barren lands on the one hand and the condition of peasants at the other, M.Bhaktavatsalam, the Minister for Agriculture assured to issue lands to the needful. The issues of debt relief, barren lands for cultivation and land revenue remission was temporarily resolved under able leadership of the Communist.

COLONIAL INITIATIVES AND THE INDIGENOUS RESPONSES: A STUDY OF TRANSFORMED DYNAMICS OF TEXTILE TRADE IN EIGHTEENTH CENTURY EASTERN INDIA

Santosh Kumar Malua

On the 19th Jamadee-ul-awal 1170 (9th February 1757), the English East India Company made a formal commitment, through an official agreement, with the eastern region of the Mughal Empire. It volunteered to abide by the trading regulations established by the law of the land while conducting trade in the province,

We, the East India Company, in the presence of His Excellency the Nobob Monsoor-ul-Mulek Serajah Dowlah Shah Kuly Khan Behauder, Hybut Jung, Nazim of Bengal, Behar and Orissa, by the hands of seal of the Council, and by firm agreement and solemn attestation, do declare, that the business of the Company's factory, within the jurisdiction of the Nabob, shall go in its former course... that we will carry on our business as formerly, and will never, in any respect, deviate from this Agreement.¹

In response to the above, Nawab Siraj-ud-Daula of Bengal, issued a decree on 9th Rajeb Moon (31st March 1757):

The English Company's goods have been carried backward and forward by land and water, always through the Provinces of Bengal, Behar and Orissa, by the *dustuck* and seal of the said Company, by virtue of the King's Firmaund, which is also now confirmed by me. Take care, on no pretence to interrupt their carrying their goods backwards and forwards through all the chokeys whatsoever, and not to demand any katbarra, manjor, etc., according to the King's Firmaund. Let them pass and repass without receiving a single cowrie from any of their people; and interfere not with the English Company's Gomastahs on any account, but rather take care that through all your districts their business be not obstructed in any way.²

These treaties, however, were the expression of acceptance and recognition of the

Nawab's authority and the Company's trading behaviour in the region. Ironically, after three months these agreements on paper proved false and the victory of the East India Company at Plassey on 23rd June 1757 changed the whole future course of commerce and conquest. The setting of the political stage in the year 1757 at the battle-field of Plassey was not an isolated eighteenth century event. It was the logical culmination of some deep seated aspirations of the British Empire manifesting itself through its long distance trade and commerce in the region spread over centuries, to take the shape of an empire in the eastern seas.³

Though, the process of political decline had already set in during the last days of Aurangzeb, there was 'little decline in material production and affluence'. The commercial activities initiated by the Europeans in the seventeenth century had provided the impetus to intense economic activities in eighteenth century Bihar.⁴ These activities encouraged urban growth in this province on a scale which is said to have surpassed Bengal.⁵ Notably, decline of the Mughal Empire in the eighteenth century could not cause any disruption in the network of trade and commerce which had already developed through the seventeenth and eighteenth centuries.⁶

These changes did not occur exclusively in the later part of the century, contrary to what many think. Rather, one can trace the strings of transition from the early decades of the eighteenth century when in the sphere of the export market Europeans outclassed the Iranian and central Asian merchants and reached the helm of all affairs in course of time.⁷

The dynamism of eighteenth century has been mapped through various parameters of political, economic and social aspects of European trade and commerce. It has been interpreted and reinterpreted in a variety of ways but scholars seem to agree on the point that it was an era of optimization in political, economic and social transaction. The core of these developments was basically the growth and

autonomy of distinct economic and political formation at the regional level.⁸ This feature induced a tangible connection between commerce and conquest in the Indian sub-continent, largely characterised by 'adaptation and resilience' against the numbers of inroads into its economic as well as social life.⁹ India, too, experienced a 'multitude of changes in quick succession' with other Asian countries during the eighteenth century. Traditional centres of trade like Surat, Calicut, Hugli and Masulipatam which had been in existence for a long time, gradually declined and gave way to new towns like Bombay, Madras, and Calcutta.¹⁰ Eventually, it culminated in bringing changes in production, distribution and in the volume of trade besides, the relationship between overseas and local markets, and in the 'mechanics of supply within India'.¹¹ Easy access to money and credit facilitated their further growth.¹²

To unravel the economic transition in eighteenth century Bihar this paper investigates the commercial behaviour of eighteenth century Bihar with specific study on the textile trade. Textile was one among the principal items of trade from Bihar in the eighteenth century, other articles were saltpetre and opium. It proposes to enquire into how colonial intervention transformed the regional dynamics of trade through its policy and prerogatives. What were the colonial initiatives and the indigenous responses to this development?

Textile Trade

Since the very beginning of English trade in Bihar, Patna was one of the renowned centres of textiles. Hugh and Parker had arrived there to purchase calicoes in 1621.¹³ There were many varieties of textiles produced in Bihar, the main types being baftas, chintz, cowtars, elatches, calicoes, emerty, khasas, lakhwary and mahmoody. The main centres of production were Patna, Arwal, Jehanabad, Saidabad, Ekanagar, Magrah and Lakhwar etc. There were different families who supplied cotton piece-goods to the Company and prominent among them were Radhakissen, Meer Ashroff, Mohanlal, Bhagwandas, Bhagwant Rai and Santoke Mal. Unlike other items of trade, textile trade was free from any monopolistic control; the English company had to rely on Indian agents for purchasing cotton textiles. One of the most distinctive features of this trade was the hold of

certain families in the business as native agents.¹⁴ The English East India Company generally got its supply from the house of Meer Ashroff.¹⁵

Unlike saltpetre and opium, trade in textiles was different in its form and consequences. Despite the high demand for cotton textiles the European companies could not impose any direct control on either the textile market or on the artisans who manufactured these commodities. The Company had to get its supplies from native agents.

Quantity and Price

The English cloth investment at Patna in early 1744 included 18,000 pieces of coarse Baftas and 15,000 pieces of Lakhwaris.¹⁶ From 1774 onwards the Company's annual purchase averaged around 64,000 pieces. There was frequent fluctuation in the price range but it varied from variety to variety. For example, price of Baftas between 1774 and 1780 increased from Rs. 77.08–88.08 to Rs. 82.08–117 per piece, likewise the price of Emerty too saw an increase during 1774 to 1776 from Rs. 68–98 to Rs.84–98 but it could not hold that for long and decreased from Rs. 68–71 to 68–92 in 1777. Similarly, Calicoes too experienced decrease in 1777 from Rs. 85 to Rs. 79, and prices of Khasas also declined in 1776 from a price band of Rs. 107–120 to Rs. 101–120 and Rs. 101–117. Mahmoody, between 1774 and 1780, decreased from Rs. 75–106 to Rs. 60–100, but the price of Lakhwary remained constant between 1774 and 1780 at the range of Rs. 53–57.¹⁷

Table: 1 - Procurement of Cotton Piece-goods from Bihar 1774–1790

YEAR	QUANTITY (in bales: 1 bale = 100 pieces of cloth)
1774	545
1775	832
1776	787.3
1777	545.7
1778	1135
1779	920
1780	1825

1781	810
1782	457
1783	240
1784	70
1785	250
1786	131
1787	67
1790	103

Organisation of the Trade

In the trade of textile similar to saltpetre and opium the provision of advance payment for the supply of a stipulated quantity of piece-goods was the standard practice. Earlier weavers accepted any order and delivered the manufactured cloths to clients at their convenience but in the eighteenth century things did not remain the same and the system of advance virtually bound them to the client. In the mid 1770s the *Kistbundee* advance was introduced in this sector to procure goods in installments. But these advances were, in fact, used as a deliberate tool to bind weavers to the East India Company and to force them to manufacture larger quantities of cloths than they were capable of, or willing to manufacture. These changes affected the nature of the system which in turn brought about important changes in the whole nature of the textiles business.

The most important change in this business was the fact that European companies replaced merchants from Central Asia, Iran and other places as the chief buyers of Patna's cotton textiles. By the 1770s, the English East India Company had complete control over the market as well as the manufacturers. Besides being the main buyers of cloth from Patna, after acquiring Diwani, they were also the ruling power of the land which created an advantageous position in favour of the Company against other European companies trading in the region. On the other hand Indian merchants also became easily dedicated suppliers in the cotton textiles market by serving the enormous English demand. Unlike the monopolisation of opium and

saltpetre trades, the textiles business became the only branch of the region's traditional export trade that remained open to the Patna merchants. By the mid-eighteenth century not only did Patna textiles constitute an important item in the trade, they were also in great demand by European private traders, many of whom were officials of these companies. By 1780 Bihar piece-goods had become so important for British investment that a failure to procure the right amount of these textiles produced serious problems for the Board of trade in Calcutta.¹⁸ The Dutch and the French were equally anxious to purchase cotton textiles from Patna, but after 1757 they were in no position to offer serious competition to the English. Thus, by the late eighteenth century the Patna piece-goods became a major investment item for the English Company. Although, Patna was one of the major centres of its textiles investment, Bengal remained the main centre for cotton textiles. The other centres for this item were Dacca, Lakhipur and Shantipur, to mention only a few from where the company bought equally large quantities of cotton piece-goods for export.¹⁹

'Backward' State of Textile Trade

The textile trade in Bihar had, however, not proved to be that successful as the trade in saltpetre and opium did. There were continuous failures faced by the Company agents in getting proper consignments ready in time; they in fact remained silent spectators due to their helplessness. The Chief of Patna in one of his communications to the Board of Trade reported that there was regular 'Flight of the Contractors' and 'the advantage taken in consequence by the weavers of debasing the fabrics'. Besides, there was opposition by the manufacturers to make Mahmoodies.²⁰ He further disclosed his inability to repair the loss and revealed that he had tried 'to fulfil [the Board's] commands respecting...provision of ... Cloth Investment but in vain'.²¹

The cloth business of the Company was beset with problems; the Chief of Patna expressed his helplessness due to the prevailing bad condition. He reported to the Board about it that he did everything he could '...except that of going [to] the circuit of the *aurungs* where cloths are [were] made, to superintended every minute part of the business'.²² There was large balance amounting to Rs. 190,000, to be recovered from

weavers as well as contractors. He clarified that this balance was due to the change of nature of trade particularly in Gaya and Jahanabad. Weavers from this area preferred to 'sell to the public or private purchaser' who paid higher prices than the Company. Hence, private purchasers received the best product and the Company had to lose.²³ Besides, the Chief also reasoned that agents of Meer Ashroff's house were 'possibly discontented with the loss of great part of the right' and were no more loyal to the Company. But, he refrained from making any negative comment of the business house in view of its being the oldest and most credible with which the Company had been doing business since long.²⁴

Quality of Cloths

The Company was worried about the falling standard of few varieties of cloth which had led to considerable loss to returns as well as the Company's reputation. The Chief of Patna while reporting this deficiency to the Board explained that the silk of France was very popular in Europe and maintained its reputation of being best in the market, and this was because it always retained its quality. The Company, however, failed due to the fall of standard in maintaining its quality. For instance, the Baftas were found 'deficient in breadth and quality and many in length'. It was generally used for printing and making gowns in Europe. One piece of Bafta measuring 12 to 12 ½ yards was sufficient to

make two gowns, each gown being six yards in length. It became difficult when the length of the Bafta was less than 12 yards. Consequently, 'the price of sale is not only lowered but when either breadth or length [of] the original quantity of cloth is diminished, the price is not in proportion to the quantity wanting'.²⁵ Hence, the Chief suggested that 'all goods should be scrupulously kept up to their standard of breadth, length and quality [and] it [should] avoid heavy unnecessary expences to the Company[.]'²⁶

Conclusion

The Company reasoned that due to apathy of native agents weavers of Bihar lost faith in the Company and it incurred heavy loss.²⁷ The temporary characteristic of the Company's employment was thought to be the main reason by authorities and they tried to convince *aurungs* about the permanency of requirement by the Company but it could not brought any relief to the already torn out fabric of the textile trade in the region.²⁸ In fact weavers knew that Company was paying less than the other private players in the trade and the Company too was convinced of the crunch of the situation but it was not ready to compromised much on the front of the cost and it too had serious apprehension on the loyalty of the weaver for being the Company's client supplier. Hence, the Company suggested there should be contract with the weaver or the agent on fixed salary.²⁹ But again it couldn't bring any good to the Company reputation in the textile trade in Bihar.³⁰

COLONIALISM; EXPLORING REALITIES AND REASONS FOR THE INTRODUCTION OF RAILWAYS IN INDIA

S.R. Saritha

Introduction

The progress of a country depends upon the availability of a viable system of transport facilities. Without proper means of transport and communications it may not be possible for any government to administer a vast country like India. Indian Railways played a vital role in the economic development and national integration of our country. It has brought about remarkable changes in the economic, political, social and cultural life of the country. The Indian Railway system today is the largest state owned enterprise in Asia and the second largest state owned Railway system in the world. The introduction of Railways, which is one of the legacies of the British rule in India, has not only caused remarkable increase in the quick communication between different parts of India but also brought about profound changes in the habits and outlook of the people.

The political condition and the economic trend of the 19th century India induced the British to construct railways all over India. Railways, it was believed, would assist the economic development of India and provide both a market for British goods and a source of raw materials. It would also be helpful in the administration and protection of India by facilitating the movement of troops within the subcontinent.

I. The British Commercial Interest

Till the last decade of the 18th Century India had been a source of luxury trade goods for Britain. But by the 19th Century the situation was completely reversed. The rapid industrialization and the introduction of factory system in Europe compelled the British to find market for their finished products. They also wanted to get an uninterrupted supply of raw materials for their factories. So they penetrated to the Indian life through infrastructural developments, which

were meant only to sub serve their interest. India became a source of raw materials for the British textile industries and a profitable market for their factory goods. British took interest to develop the hinter lands as raw material producing areas for British industries, mainly due to the pressure created by the Manchester and Lancashire textile mills. It became important to link these hinter lands with the ports – Madras, Beypore, Cochin, Quilon and Mangalore.

The importance of Railways over other means of transport from the economic point of view came to be realised during the middle of the 19th century. Their main objectives were exploitation of the natural resources in India and the consolidation of the British empire. Certain kinds of goods like salt and sugar could not be carried in wet seasons because of the inconvenience of transport. Considering the greatest extent of India's vast plains, the low value of land, cheapness of labour and general facilities for producing buildings, the Railway promoters in England brought political and economic pressures on The East India Company to introduce railways in India.

The British decided to construct the light railways of tramways just to carry the forest wealth to the nearly main lines. These were introduced as a temporary means of transport which would be given up after their purpose was served. However the condition prevalent in India and the adaptability of the people to the tramways with its slow speed paved the ways for the British companies to convert those temporary narrow gauge links into permanent ways.

To establish the Railways, the British Residents tactfully projected the importance of railway in the princely states of Cochin and Travancore. They said that these states did not raise enough food for their population, which largely depended on the grain imported by sea at Cochin. If the Railway was constructed, these places could be in direct connection with the large grain producing districts of Tanjore and Trichinappalli and be able to meet their demands at greater advantage than from distant ports.

II. Military Motives

The early rail road policy of the British seems to have been largely dictated by military needs. The need for a railway system was felt

because of the need for the improvement in commerce and troop movements, which was of primary concern to the British government in India. Lord Dalhousie pointed out the importance of railways both for maintaining internal order and for defense against external aggression. Being an imperialist he rightly wanted to perpetuate the British domination over India.

Before the construction of any railway bridge, whether a new one or the replacement of an existing one, the wishes of local governments and the military department were considered. It was the army of Madras Presidency that the British had chiefly looked for services beyond sea. By railway investment in India, the government had to reduce military expenditure, through quicker military transport and better internal administration.

III. Capital investment interest

The railway was one of the protected monopolies sponsored by the British mostly to provide scope for the fruitful investment of their capital in India. The successful running of the first train in England and the opportunities and profits which accompanied it attracted the attention of the capitalists and moneyed men who were searching for new areas for investments.

IV. Political Interest

The British realised the importance of cheap means of transport for the progress of the country materially and for the efficiency of the administration. The administration both of the East India Company and of the Crown was subjected to a continuous pressure to extend and multiply railway lines in India. The central elements of Dalhousie's planned Railway lines in India were the Trunk lines connecting the major administrative centres of the presidencies and provinces. At a later stage the government was compelled to seek financial assistance of the Indian princes in the construction of railways within their territories.

The moving cause in the development of Indian Railways was the restless activities of the railway agents and managers. The railway promoters in India wanted rapid expansion of railways because it would provide political stability to India.

V. Other Reasons

The Press repeatedly advocated the desirability of rail roads in India emphasizing their superiority over other means of transport. The British were however lukewarm in their response to all the proposals as they anticipated the failure of railway projects in India. Merchants of different places in South India submitted several petitions to their authorities for the extension of railway lines. They said that the transmission of goods through canal was not safe. Therefore they continuously submitted petitions to open new railway lines. There was a strong felt need for the establishment of railways by the second half of the 19th century.

The security concerns in the post mutiny years was so high that the construction of railways became a top most priority for political consolidation and economic exploitation of the British in India. That is why they constructed

national railway network connecting the major centres of the country. The need for a series of in-lets and out-lets for exporting raw materials and importing manufactured goods was another compelling factor to construct the railways. Similarly, the public demand also played an important role in the extension and expansion of railways in India.

Conclusion

Inshort, the constuction of railways in India was undertaken by the Britihers to achieve a number of objectives both commercial and political. The basic purpose was to collect raw materials from different parts to export to Britian. It was also used to sell British manufactures in every part of the country. Though the British constructed railways for their own benefit later it became a boon to our country.

LAND REVENUE ADMINISTRATION UNDER THE BRITISH IN MADRAS PRESIDENCY

M. Senthilkumar

Introduction

The British rule, in India, witnessed radical changes in political, social and economic life of the people. Madras, the birth place of British Rule in India, became one of the centers for their economic experimentation. Their administration led to the emergence of new institutions and agencies for revenue administration. Since the rulers of India were foreigners, they did not take any step for the upliftment of the native people. At the same time, they concentrated on increasing the revenue in all possible measures and collect maximum revenue from India with minimum expenditure. In order to achieve a maximum revenue collection from India, the Britishers introduced new techniques in revenue administration. Hence, a new mode of revenue system, popularly known as the Permanent Revenue Settlement which was introduced by the Governor General Lord Cornwallis, and it was implemented in the Madras Presidency in 1802.¹

Permanent Settlement in the Madras Presidency

The first quarter of the 19th century was the formative period in the history of the revenue administration in Madras Presidency. During this period, three types of land settlement were experimented by the British government; they were the Village Settlement; the Permanent Settlement; and the ryotwari settlement. Among these, the Village System was replaced by the ryotwari settlement.²

In Madras Presidency the land revenue reforms were introduced by Cornwallis in 1793. During that time, the company's officials were more interested in trade and commerce than in revenue administration.³ The Governor and his council were not equipped to administer the land revenue in the Presidency of Madras. The Board of Revenue, the Provincial Council and the Collector were appointed to draft a Permanent Settlement with the Zamindars as in Bengal.⁴ After a few years of trial, the experience had showed that Madras and Bengal were different attitude in revenue administration. The method which was successful in Bengal was unfortunately a failure in Madras. The zamindari

lands held by certain chiefs as their hereditary estates paying tribute to the government and collecting the land revenue from the ryots. As in the case of Bengal, the land tenures and revenue settlements made them leave the collection of land revenue to the Indian administrators.⁵

They were allowed to collect it from the farmers and the renters, who were the successful bidders, usually strangers to the country, but not interested in the welfare of the people and cultivation. To ensure better control over the zamindars, "Provincial Councils" were formed in 1769, like the Bengal model to supervise the revenue settlement. These councils were set up in Ganjam, Vizakhapatnam and Masulipatam.⁶

In 1775, the court of Directors formed a special commission, with the Committee of Circuit, including certain members from the Madras Council, to ascertain the population, the produce, as well as the gross revenues and the customary rights of the zamindars and cultivators. In 1794, the East India Company decided to introduce the permanent settlement in the region.⁷

This system was adopted to ensure the happiness of the cultivators of the soil who had received any encouragement from their land owners. It was noted that the landholders themselves to make indefinite demands due to arbitrary assessment. In order to regulate the demands of the land-holders over their tenants, the first step was taken solve the demands of Government. There is a need to outline the principles for the assessment of the zamindari lands. In this scheme, all the expenses of Government Revenue officers, except Karnams, were to be paid by the land holders. The extensive tracts of uncultivated drain and waste lands forming part of a zamindari were "to be given up in perpetuity to the zamindar free from additional assessment."⁸ When the zamindar faced the effects of famine or mismanagement, he was unable to bear the full amount of the assessment then a gradual rise of assessment was to be adopted. Several progressive demands which were specified in the proposal related to zamindars proprietary right in the soil.

The special commission

In 1802, the company government appointed a special commission consisting of William Petrie, a member of the council, Cockburn, a member of the Board of Revenue, and Hodgson, the secretary of Revenue Department. This commission made a thorough study about the settlement measures implemented in the Districts.⁹

When the Settlement was introduced in the districts, the Court of Directors had the view that the districts which faced the war and internal problems were not fit for the experimentation of permanency. They stated that the land tax being the primary source of public revenue, the restriction was not necessary. They were afraid of the fixed money rents would be affected by the depreciation of currency.

The Settlement ensured permanency of tenure to the zamindars and other land holders. It provided the right to hold their lands forever with fixed revenue, including the right of inheritance and transfer. To secure the rights of the ryots, during the time of Sir Thomas Munroe, the Regulation IV was passed in the year 1820.¹⁰ These regulations were added to the part of the documents in the history of the zamindari system in Tamilnadu.

Lord William Bentinck (1803-1807) believed that the zamindari tenure was not suitable to the major portion of territories on the East Coast.¹¹ The creation of zamindars, in new areas, was neither economically suited to improve the conditions of people nor gained any future security of the government.

William Bentack favoured the ryotwari settlement and as he believed it alone could form the basis of any arrangement for setting them in perpetuity. The permanent settlement led to the creation of middle-men viz. zamindars. They were not paid rent for their estates, but enjoyed the responsibility of collecting the tax from the ryots.¹²

The public opinion, in India, was also in favour of the abolition of the Permanent Settlement. Socialists condemned the Zamindars under the permanent settlement and the ryot were considered as the keystone of its permanency. On the failure of the Zamindari System (1801-1808), the proposed "Village

settlement" survived for a few years and finally the Ryotwari assessment was introduced.¹³

The Village Settlement or Village Lease System

The British administration attained an agreement with the mirasidars, in each village, for the collection of taxes, from the ryots which was fixed on the basis of the price of the produce, from the cultivation of lands.

The village was leased to the mirasidars for a period of three to five years. In his report, Hodgson, a member of the Board of Revenue urged the necessity of adopting the Village Settlement. The Board was strongly in favour of the village system. Accordingly, the circar and the ryots were the joint proprietors of the land. The share of the circar from the nanjai lands, paddy lands, was to be collected in kind.¹⁴

The village system was familiar to the people which were known from ancient times. The Government felt that this system may reduce the charges of revenue collection and the burden of the collector. Moreover, it avoided the dispute between the ryots and mirasidars.¹⁵ Further, the ryots would be protected by the courts against the exactions of the mirasidars of the village.

According to this system, the assessment was fixed for three years on the basis of the cultivation of the actual lands as well as the collections of the rent for the previous years, which was fixed, to be paid in all circumstances except some extraordinary situations such as cyclones, drought, etc. In such a situation, where the government allowed a remission.¹⁶ Also, the renters were expected to issue pattas to the cultivating ryots.

All these efforts have paved the way for the formulation of new regulations and the restoration of ryotwari system. The despatch of the 16th December 1812 insisted the Madras Government to reintroduce the ryotwari settlement. To execute these orders, Munro was sent to India as the chief of a special commission.¹⁷

The ryotwari system of revenue administration consisted of five stages, such as demarcation of boundaries, survey, inspection and classification of soil, assessment and record of rights. Sir Thomas Munroe, the architect of the ryotwari system of the company in Madras,

assumed the Governorship of Madras in 1819. The credit goes to him to the implementation of the ryotwari system throughout the Madras Presidency.¹⁸

Revenues

Government revenues are broadly divided into tax and non-revenue. Even at the turn of the present century, taxation was viewed with suspicion, which was a hangover of the gospel of *laissez-faire*, preached in Smith's *Wealth of Nations*. "Taxation for revenue only" and "Revenue for defence and justice only" formed the twin mottos that guided and governed fiscal policy. But, today, after the two World Wars and the Great Depression, except for the lone voice of Abba Lerner in his doctrine of Functional Finance, taxation, viewed as a multi-purpose instrument, is resorted to on an ever increasing scale, by Governments to discharge the duties enjoined on a Welfare State. To quote a former British Chancellor of Exchequer, "the job of taxation is not merely to balance government's expenditure. Taxation is, nowadays, devised to reduce consumption, increase savings and investment, to mop up surplus money and curb inflationary pressure, to reallocate and deploy factors and inputs, to recast the productive pattern and refashion the consumption path."¹⁹ If most of these functions are more applicable to the federal than to the State governments, with the expansion of social services and welfare activities, States will be constrained to devise new taxes in addition to enhancing the rates and broadening the bases of existing old taxes.

Land Revenue

Land revenue, the main stay of the Indian revenue system till the World War II, accounted for 43.75% of the total revenue of Rs. 16 crores in the undivided State of Madras in 1938-1939. Falling to 11% in 1957-1958, it has reached a low of 1.8% in the current year. The Taxation Enquiry Commission observed that the incidence of land revenue, considered by and large, has ceased to be appreciable. The actual burden at present on agriculture is light mainly because of the large increases in the price of agricultural produce that have taken place since the settlements were made and the basis of settlement was fixed. Since this observation, made nearly 20 years ago, the prices of

agricultural produce have scaled to unprecedented peaks. The case for raising the rates is strong. During the Second and Third plan periods, although the State Governments fought shy of a straight forward increase, levy of surcharges, cess for local bodies, taxes on Commercial crops, enhancement of irrigation rates were resorted to indirectly enhance the tax on land. But of late, the policy has veered towards its ultimate extinction.²⁰ In 1970-1971, Tamilnadu Government abolished the basic assessment on dry lands costing an estimated loss of Rs. 1.6 crores in 1969-1970 and Rs. 8.30 crores in IV Plan period."²¹ Remission of land revenue, for holdings below 2 acres in Kerala, below 5 acres in Punjab and Haryana and upto 7.5 acres in Madhya Pradesh, have been granted.

Again, compared with Rs. 1084 crores being the value of agricultural produce in the Net State Domestic Product, land revenue has declined to 0.5% in 1970-71 and, in the current year it must have gone down still lower. Even this light impost was paid by about five million farmers as most of them paying less than Rs. 10 each. It is an old saying in public finance that an old tax is no tax. In this milieu, the abolition of land revenue would never be hailed as the emancipation of an oppressive yoke. None of the economic criteria would warrant its abolition. A sound fiscal policy would be to retain it and distribute its proceeds to panchayats, sorely in need- of funds for development or earmark it for rural development.²²

Agricultural Income Tax

Agricultural income tax, first levied in 1955-56 in Tamilnadu, yielded Rs. 142 lakhs, the plantations accounting for the bulk of it. Its yield has crawled at snail's pace from Rs. 1.3 crores to Rs. 3.2 crores in the past 16 years. It forms a negligible fraction of 1.5% of the total-tax revenue in the current year. It is argued that, due to the lowering of ceilings on land, it would be futile to expect any sizeable increase in its yield in the future, particularly in the long run after the present day larger holdings get divided and subdivided through inheritance. This is too gloomy a foreboding.²³ With the onset and rising tempo of the Green Revolution, even the holdings of 5 to 7½ acres wet or garden land, atleast in the favourably situated regions, were bound to yield incomes above an exemption limit of Rs. 4,000. As the number of tax payers will increase, the tax

revenue is likely to increase, albeit mildly. Administrative difficulties will not be too stiff to be overcome. Alternatively if the gloomy prognostication of its steady and eventual shrinkages materialized, the promised abolition of land revenue would prove to be a step in the wrong direction. Since it would accentuate still further the already existing urban-rural disparity in the incidence of taxation.²⁴

Land Revenue administration

The Department of Revenue was the third in the order to be organised in 1774, with a Board of Revenue at Madras. The Commissioner in-charge of Revenue Administration Department dealt with some 49 subjects policy matters, bifurcation of districts, creation and administration of revenue divisions and taluks, Jamabandi Administration Report, grant of dry

remissions, Revenue Establishment matters, drought relief, floods, cyclone relief, etc.²⁵

The functions of the Commissioner of Land Administration were 46 in number - Irrigation, *Kudi-maramath*, evaluation of irrigation schemes, surveys, food production, registry of lands, land acquisition, etc.

In the beginning, the Tamil kings collected taxes from the land on the basis of its fertility and income. When the British established their administration in Tamilnadu, they collected taxes and the enhancement of revenue was their main objective; they introduced different types of tenure systems in land revenue administration. Later, the independent governments changed the tenure systems and introduced the reform method of revenue administration.

THE EFFECTS OF COLONIAL RULE ON FOREST LIFE INSOUTH INDIA

G. Somasekhara & Chanamala Narendra

Introduction

The natural vegetation is rich in earlier years in India, over the time they have been declining. Until the British Colonial period in

India, a large number of people (mostly indigenous tribal communities used to live in or around forest areas depending entirely on forest products.¹ Ritual, cultural as well as social

celebrations were strongly interrelated with the forest environment. For those people, the entire forest area was their home. They used to move from one area to another to collect food, fodder, firewood, wild game and many other products for their subsistence purposes. They used to sell or barter very little to outsiders to get non-forest products. Before the East India Company's rule (1757-1857), there was no restriction on forest and forest products collection for forest people in India apart from forest reserved for hunting for rulers.²

The British administration main target is to strengthen their rule over India and to increase their revenue from forest products. Earlier administrators of English had no proper policy on conservation of forests.³ The British colonial government was leading the large-scale deforestation of forests for commercial and strategic purposes necessary for the expansion of their empire.⁴ In other words, exploiting the forest wealth while denying the natural rights of the tribal without any purpose.⁵

According to the study of the hilly areas of the Madras Presidency, colonial rulers did not give importance to the environment, and their main purpose was to generate income from the forests in the eighteenth and early nineteenth centuries.⁶ In fact, colonial forestry has destroyed not only subsistence farming but also the traditional methods of forest management.⁷ It should be noted that income requirements, the expansion of commercial crops, the development of the mining industry and the construction of railways contributed to the deforestation in the nineteenth century.⁸ Any earlier attempt towards conservation was intended to meet the future requirements of the imperial power.⁹

Forest became an important resource

Earlier forests were treated unimportant to the mankind. As long as man's desires are limited and nature is rich in forest resources, it is not important to consider how to treat forests. Even at the time of Dravidian Civilization the people were not destroyed forests at any more. But the Aryans who were migrated to India have been destroyed forests for agriculture purpose. The ancient culture of Hindus had its origin in the Aranyas and Ashrams. There is great respect for the vans (forests) and

plantations near the temples, even if no effort is made on the part of the rulers or the people of the land for any permanent maintenance of the forest.¹⁰

When kingdoms became strong enough, the rulers began using forests to manage them. The rulers of the Magadha Empire set up a separate department to manage the forests. At the time of Chandragupta, the royal buildings were probably constructed to a large extent of wood, like the Burmese palace at Mandalay; but from the reign of his grandson, Asoka, brick and stone were generally substituted for timber.¹¹

At the time of the Muslim invasion started, they were cut down the forests for conquering other places in India. The invaders did not have any special interest in the conservation of forests either, they cleared them either for strategic reasons or even for other purposes. With the fall of Moghul Empire, the country was divided into a number of small kingdoms that were frequently fighting among themselves, as a result of which many people abandoned cultivation in disturbed areas and resorted to remote forest areas. That was continued to the British period.¹²

The British themselves were new to ideas of systematic forestry, as they had no developed forest organization then in Britain. So government used forests for governmental purposes and people used according to their requirements. As supplies of first class oak timber became short in England, they started to get the information of Indian Forests. It is observed that Teak is the substitute for oak timber. So Britishers started to find out the teak forests in India. It has been said that the most immediate object of the Forest Department is to meet the present demand for timber and fuel. But this demand is always increasing. The population itself increases, requiring more fuel. There is already a large demand for railway sleepers, and for railway and steam ship fuel. Internal trade also takes a greater quantity of teak, sandal wood, jungle wood and other forest produce.¹³

A Strategic Increase of Forest Cover and Systematic Reduce of the Forests

According to the Siva Ramakrishnan in his book, "Colonialism and Forestry in India," the British administration main target was to get income from the forests and utilized them for the Colonial State development. The Britishers were

forced to find timber resources from India, since scarcity cropped up for timber from the construction of the fleet in England, during the latter part of the eighteenth century.¹⁴ So colonial rule mainly focused on extracting teak timber to meet the demand of King's Navy in England in the early nineteenth century.¹⁵ That's why they wanted to increase the forest area under their jurisdiction.

For that purpose, in 1806 the post of 'Conservator of Forests' was created and Captain Watson from the East India Company Police Service was appointed as first holder of this position, vested with wide-ranging powers.¹⁶ Within two years he controlled over the jungles in Malabar coast, people not to enter into them for cutting trees. His main purpose was to preserve the forest for the commercial benefit of the state.¹⁷ In 1855 Lord Dalhousie, the Governor General, outlined a permanent policy for forest conservation. It laid down that all teak timber was State property, all benefit from it accruing to the government.¹⁸ His memorandum, known as The Charter of Indian Forest, has upheld the rights of natives and tribes over forests.¹⁹

Dietrich Brandis, a German Forester, the then Inspector General of Forests to the Government of India, introduced for the first time the method of what he called 'linear valuation survey's' and framed on the data obtained what was virtually the first working plan, with an estimate of the growing stock and a calculation of the annual sustained yield.²⁰ That means the number of trees to be felled should never exceed their annual production by natural or artificial means. Subsequently, the British administration proclaimed that the royalty right of the teak trees belonged to the Company, and also prohibited unauthorized felling of these trees.²¹

In 1863, the necessity for early demarcation of the government and village forests in Madras was pointed out by Brandis and Cleghorne. And also in September 1869, the government of India, urged upon the Government of Madras the necessity of early demarcation and efficient protection of extensive forest reserves.²² Mr. Beddome then conservator of forests in the Cuddapah District, collected systematically all information relating to the working of the forests at that time and produced

the first 'Manual of Forest operations' in Madras.²³

The Indian Forest Act 1865, was enacted by the British to create a state monopoly in the forests and to ensure proper forest management. The revised Indian Forest Act, 1878, which classified forests into Reserved, Protected and Village forests. The Madras Forests Act, 1882, was enacted by the Madras Government as the Indian Forest Act 1865 prohibits the establishment of the rights of the villagers, over forests and the entire state forest property. During the last two decades of the nineteenth century, most of the forest areas of the country were constituted either into reserved forests or protected forests.²⁴ The attention of the local governments was invited to the need of constituting more areas into reserved forests and for speeding up settlements and demarcation work.²⁵

Any attempt to protect the forest was not really to conserve it but to ensure the future supply, particularly to meet the demand in England.²⁶ By the end of 1881-82 there were 46,213 square miles of Reserved and 8,612 square miles of Protected forests. At the end of 1897-98 the area had increased to 81,414 square miles of Reserves and had decreased to 8,845 square miles of protected forests. Reserved and protected forests constitute permanent forest estates, maintained for the purpose of producing timber and other produce and for protective reasons as such, they fall within the Category of "permanent forests".

The extent of protected forests is constantly changing, as new areas are identified and incorporated into the reserve's classroom, after final settlement.²⁷ The total extent of permanent forests in India as per present available data, is 607,340 sq km (231,493 sq miles), forming 77.4 per cent of the total forest area.²⁸ At the end of the year 1874, the Madras Presidency contained 1,01,202 acres of firewood reserves.²⁹ Within the duration of 6 1/2 years only from Cuddapah District, 86,662 tons of fuel was cut for the Railways.³⁰ In 1888, fuel and Timber was collected from Cuddapah District forests more than they required.³¹

The table below shows how the forests were cut down for British commercial benefit.

Value of Timber and Wood Exports from Madras Presidency: 1855/56 – 1875/76

S.No	Year	Value (in Rupees)
1	1855-56	736117
2	1860-61	931317
3	1865-66	1654166
4	1870-71	1013878
5	1875-76	1045109

Source: Maclean, C.D (1885), Manual of the Administration of the Madras Presidency, p.344.

Earlier forest is a natural resource and supported to the people in different ways directly or indirectly. But at the time of British rule it is converted onto commercial enterprise. They treated forests as their one of the best revenue source in India.

Effects on Traditional Methods of Forest Management

Shifting cultivation

There is a traditional belief that forests are reserves of land for the extension of cultivation and that conversion of 'jungle' lands into crop lands. Shifting cultivation is one of the most ancient system of farming. It is practiced in different parts of the world. It is primarily practiced in all the North Eastern States and practiced partially in North India and Andhra Pradesh, Kerala and Karnataka. Shifting cultivation basically consists of clearing of plot of forest land by burning the vegetation and cultivating the plot of land for one or two years. After this, the old cultivated land is then left fallow so that to regain the vegetation cover.³²

Due to population growth, those who adopt ancient farming practices rely heavily on forests. The tribes have been burning the forest for livestock welfare, clearing it for temporary cultivation, and destroying it to create lasting cultivation. And wherever the government has the good, it has not intervened to ban such practices.³³ But the British government has decided to ban certain activities, that are harmful to the forest in these areas. Carefully consider whether to enforce more stringent rules; In later times, the rights of local communities were completely suppressed.³⁴

The Indian Forest Act, The Madras Forest Act and other forest conservative methods enacted by the British government, prohibited on certain lands the breaking up for clearing for cultivation. So that villages those were depend on shifting cultivation have faced shortage of food grains. But the important thing is that once upon a time the land used for agriculture could be seen growing in forests without the involvement of human beings.³⁵ However, the tribal way of life was disrupted by the British declaring this ancient tribal farming system a threat to the forests.

Effects on collection of Minor Forest Produce, Grazing, Firewood

British forest policy mainly emphasized the conservation and procurement of timber products. Minor forest products are less important than most other forest products. But, Forests in India have therefore a value to the state far value of in excess of their mere financial profits. Forests provide the forage needed to protect the country's agricultural livestock and starvation. Forests supply ready-made materials for housing and roofing, fuel and small forest products to villagers to their enjoyment of life. The use of forest manure for farmer farms was already in use.

In 1886-87 the collection of minor forest produce was 6,705 Mds, in 1887-88, MFP was 2,992 Mds, and in 1888-89, MFP was 9,978 Mds.³⁶ Once the British start their forest conservation efforts, the restrictions brought forward on the villagers to enter into forests. Only the villagers authorized by the forest department can collect minor forest products from the reserved forests. Other local people used to collect forest products for their subsistence or commercial purposes from protected or unclassed state forests.³⁷

Tribal Revolts

The tribals are living in the forests away from civilized society and they were concentrated near the hills and peaks in the forests. This is because their social and economic life is intertwined with seasonal forest products. The tribes who, like the Khonds and Sauras in Ganjam and Vizagapatam, the Koyas and Reddis in the Godavari, the Chentzus in Kurnool and Kistna, the Yanadis in Nellore were lived in the Forest of Andhra Region.³⁸ The villages are

regularly identified as though they were forested. The British, however, for their selfish interests, made the lives of the tribals dependent on the forests worse. The forest laws were enacted to prevent tribals from freely entering the forests. In the name of forest protection, the forests were divided and those living in them were shifted to other place. Britishers were not recognized the natural birth right of the tribals over the jungles. Because of the above actions, for the freedom from British administration, the tribes fought against the British.

In 1786-87, a tribal zamindar namely Guragaballi Desureddy, a Konda Dora revolted against East India Company. In 1800, a tribal army led by Pandu Dora attacked the platoons of East India Company. In 1802, Koyas of Chodavaram rose against the British under the leadership of Rama Bhupathi. Rampa Pituri led by Dwarabandham Chandraiah in 1879. The

Lagaray Pituri against British led by Garagonda Manga Rajuin 1916-1918. In 1922 a Koya revolt started under the leadership of Alluri Sita Ramaraju.³⁹

Conclusion

Forests are abundant in the Madras Presidency, especially in the Andhra region. Before the arrival of the British, those who lived in these forests and depended on the forests were living with the help of forest products without any trouble. The British created forest laws and policies for the conservation of forests, but these were created problems to the tribals. The tribals have been deprived of all the common rights on the forests. The tribes revolted against the British because of interrupting their natural affiliation with the forests, in the way of life of the tribes.

THE MODERNIZATION OF COMMUNICATIONS IN HYDERABAD STATE- POSTS, TELEGRAPHS AND TELEPHONES

Srinivas Rao Vaddanam

Introduction

The erstwhile Hyderabad State owned his postal system which symbolizes the insignia of sovereignty. Till mid nineteenth century, different modes of postal communication were prevalent. The Mughal postal system which was in vogue in the Deccan during the times of Nizam-u i-Mulk was continued by his successors. But, as time passed, an improvement was introduced in the system and modifications were made from time to time. Both official and private posts of the public were conveyed during the early period by licensed carriers or postal contractors. A foreign mail service also existed. Further the Nizam co-operated with the Europeans the Deccan postal communication. The present paper intends to explore the modernization of Posts, Telegraphs and Telephones in Hyderabad State.

Posts

A new era in the history of Hyderabad State's postal system dawned in the eventful year 1857, with the bill of Hyderabad State's Postal Department on a regular footing. Salar Jung, the first Diwan created a new postal organization under the direct control of Government and abolished the postal contract system. At this time, ordinary and express letter (Ghungru or Bell post) and parcels of both the Government and public were conveyed by collecting a nominal fee¹

Under reformation scheme of Salar Jung, the postal department received significant attention. Post offices were opened in important towns and cities of the State. Ghongro or express post service was abolished in 1802² Since 1869 onwards different types of stamps of different denominations were introduced which were continued till 1909. Book post, parcel and money order system in 1873, half Anna envelope in 1877, and signing of an agreement for mutual exchange of correspondence between the British and the Nizam's Government in 1882 were the main features during Salar Jung's Premiership.

In A.D. 1869, the State Government took over the control of the postal department and reorganized it on proper lines by establishing post-offices at the district and taluk headquarters as well as at some other important centers. With a view to affording the utmost convenience to the public and also to facilitate the smooth flow of trade and commerce, the Nizam's Postal Department not only carried but also transferred to the nearest British Indian post-office or railway mail service station all articles emanating from the State intended for delivery in British India. Similarly, it also delivered within the State postal or any other extra charges.

A postal Agreement was entered between the Government of India and Nizam Government in the year 1882. As per this agreement both Governments were given equal rights. In the year 1903, Director General of Postal India proposed to a malgamate with Imperial Postal Departments in the pretext of deficit in postal revenue. To consider this, a committee was appointed and submitted its report. However, indicating a malgamation, the Prime Minister of Hyderabad state gave a reply to Resident that the A malgamation proposal of Government of India would not only mean a loss to the state financially and politically but it would also effect the prestige, sovereign rights and cause public discontent and hence not agreeable. Later British Indian Government dropped this idea of united postal services. In order to popularize the postal services in the State, the Nizam's Postal Department introduced many improvements. Money Orders were introduced in 1910, the Value Payable Post (V.P.P) in 1914, unregistered parcels in 1921, savings bank facilities in 1923 and the system of express delivery of letters in 1943⁴

During second half of 19th century, the Postal system extended to every nook and corner of the State with Head Post Office in districts and Sub Post Offices in Taluq headquarters besides all the important towns and business centers. The office of Railway Mail was established and the Inspector Railway Mail was appointed. In 1888, the proposal by the Nizam's Government for the closure of certain

Imperial Post Offices was rejected by the British who asserted it as their Paramount right. Nizam to uphold his dignity and sovereignty by having an independent postal system refused to accede to the proposal of accepting British currency from the public at the Imperial Post Offices and the amalgamation of Postal System⁶.

However, Hyderabad state strongly pleaded for retaining the Native postal services, Akbar Hydari, the then Prime Minister in the memorandum submitted to Round Table Conferences made it quite clear that in no circumstances would Hyderabad ever agree to give up its separate Postal Department or its Currency. This was a matter of sentiment rather than of finance. In the matter of Post-offices, Hyderabad wanted a fuller measure of reciprocity with regard to further exchange of facilities between the British and Hyderabad postal services. In his opinion, letters bearing Hyderabad stamps should circulate and be delivered free of charge in British India by the British Postal Department.

Akbar Hydari said it was probable that Hyderabad would agree to an arrangement under which its Postal Department would act as sole agents for the carrying of letters in the state and under which letters bearing Hyderabad stamps would be delivered in other parts of India by British Post-offices without extra charge, the resulting postal revenue from the purchase of Hyderabad stamps being divided on some equitable basis between the British and Hyderabad Governments.

During 1911, summary of discussions between the Sub-Committee on "Privileges and Immunities" and the representatives of the Nizam's Government held at 11-30 a.m. on Monday, 15th February, 1932⁸

Important improvement and changes were brought in the then existing postal system when Mir Osman Ali Khan, Nizam VII assumed the reign of the Asafia Dynasty. Experienced officers from British India were appointed on deputation for fixed tenure in the past. Following the practice of his predecessors' Osman Ali Khan, availed the services of three British Post Master Generals on deputation during 1896-1921. Official registered articles and parcels bearing the service stamps of the British Government when made over to the State Post Office for delivery, parcel post,

registration, postal order, post cards and reply post card, money order, value payable, post office saving and cash certificates were introduced. The practice of obtaining the services of the British India Postal Officers on deputation was discontinued in 1921. Hence, under their supervision, the Postal Department progressed well.

There were 417 post offices and the number of letter boxes were 396 with an annual postal revenue of Rs.3,78,777. During 1911-1912, the number of postal articles carried totalled 13,333,618, the mileage over which mails were carried by rail was during that time 1,195 and the mileage by road was 4,976. The number of post offices in the State during 1921 was 667 which rose to 711 during the closing decade 1929-30. The number of letter boxes increased from 564 to 721 which worked out one post office for every 108 square mile or 16,345 persons in the State. The State authorized all the post offices to transact money order work. During the same period, 4,000 money orders worth Rs. 86,64,662 were issued⁹. The Saving Bank balance during 1931-1932 was Rs.1,05,85,903. But the rate of interest payable on such accounts was reduced from 3 to 2 percent per annum¹⁰. The number of saving banks was 83,000 during 1940's. The year 1939-1940, the number of insured letters and parcels issued rose to 14,452. The insurance fees increased to Rs. 6,57,812/-. Similarly, the number of money orders increased and the value amounted to Rs. 1,18,34,179 in 1939-1940.¹¹

The period of expansion also witnessed the compilation and enforcement of the post office manual. Mail motors were arranged to expedite the conveyance of mails. The system of express delivery and window delivery was introduced. The postal charges were raised in 1930. The Post Office Guaranteed Fund was created for the welfare of the postal staff. The city Head Post Office at Hyderabad was the only first class head post office in the Nizam's Dominions which was placed under the control and supervision of the Post Master General who enjoyed Superintendents Powers over the staff and offices under his jurisdiction. Under him there were Deputy Post Master. There were Inspectors of city postmen because the city peons and packers. Similarly, there were sub-post masters in town and their number was 31 throughout the

city. Postman was provided with an umbrella and yellow cloth bag for carrying Letters, Parcels and Registered letters etc. The Nizam's Government had great impact of British India. The Nizam's Government adopted some of their postal system but the services offered and the systems introduced in the Nizam's dominions were on par and were much better than those of the British India since they were all received by the people. The State adopted local languages like Urdu, Marathi and Telugu besides English on all the stamps and postal stationery.

The postal services of the Nizam's Dominions continued even after independence and the takeover of the State in 1948 by the Indian Union. The Hyderabad State stamps and postal stationery became invalid when the state was merged with Indian Union in 1950. However, the stamps and stationery were allowed to be exchanged for Indian items till July 31, 1950.

Telegraphs

The installation of electric Telegraph system in Indian dates back to the time of Lord Dalhousie. It was in 1857 when Hyderabad was connected with Bombay and later with Kurnool. Salar-Jung I took the initiative for availing the services of the Telegraphs for official purposes. Expansion of Telegraph lines in Hyderabad was made under the Act XIII of 1885, and thereafter all the Telegraph lines were opened by the Government of India were according to an Agreement in 1870.

In 1900, a line was established at Imperial Post Office, Chaderghat for the business facilities. Beside Railway stations the Telegraph lines were established in Residency, Secunderabad, Bolaram, Aurangabad, Aurangabad cantonment and Hingli. Beside these, telegraphs lines were installed in other places to facilitate trade and military needs. A petition was made for the opening of a Telegraph office at Yadagiri. On the request of the Resident permission was granted by the Nizam.¹² Similarly, a Farman was issued by the Nizam in 1932 for the establishment of British post office and a Telegraph office at Warangal on the move of the Resident.¹³

During 1939-1940 the Indian Post and Telegraph Department finally agreed with Nizam's Government for the linking up of the

Local Central Exchange with that of the Imperial Trimulgherry Exchange for access to the All India Trunk Line¹⁴. On February 20, 1944 the Trade Association of Hyderabad passed a resolution in their Fifth annual General Meeting for the introduction of phonogram facility to the merchants and trades to conduct business without side Hyderabad without loss of time and efforts¹⁵. Thereafter, the Telegraph lines were extended in many places throughout the Dominions.

A British Post Office in Hyderabad city (Chadarghat), and small British Government Post Offices are scattered throughout the State, and letters bearing English postage stamps are conveyed free from the State Post Offices to the nearest British Post Office or railway mail service section.

Postal Stamps

State Postage Stamps of different denominations are at present in circulation and can stand comparison with those of their kind in any other country both in excellence and artistic design. The post adhesive postal stamp of Hyderabad was issued on September 8, 1869 during the reign of Mir Mahboob Ali Khan Asaf Jah VI. It had the inscription in Persian Sarkar-i-Asafia (Government of Asaf Jah) and the year 1866, and denomination one Anna. In the year 1866 the stamp was first designed during the reign of Afzaluddaula, Asaf Jah V. But due to delay in getting the die and plates manufactured in London and subsequently printing. It could not be issued in that year.

The design of the inscription is a masterpiece of calligraphy in architectural pattern and is unique in story. Several types of postal stamps, postal stationery, cards, covers etc., in various denominations were issued in numerous designs and values. The central theme of all the stamps and covers was Sarkar-i-Asafia either in the form of a monogram or inscription. The state's name Hyderabad was not incorporated in the stamps, except in one case. The first stamp to have 'Hyderabad' inscribed was Second World War victory communication stamp, Hyderabad was the first in the world to issue a victory stamp, while the inscription 'H.E.H. the Nizam's Government', appeared twice, first on the one rupee stamp of 1927 and on the set of three pictorial stamps of 1947. The unissued

stamps of self independence Hyderabad of 1947 had 'Hyderabad'¹⁷

On the occasion of the 47th birthday of Mir Osman Ali Khan, Asaf Jah VII, a set of eight pictorial stamps were issued on 12th November 1931 through the designing was actually initiated much earlier during 1929-30. Subsequently they were modified and issued six of the set carry historical monuments of Hyderabad State. The lower values of four and eight pies has Tughra (Monogram) of Sarkar-i-Asafia. The one Anna value has Charminar, two Annas has High cowt, four Annas has Osman Sagar dam, the eight Annas has the ancient pre-Islamic period facade of the Chaitya Cave (No.XIX) of Ellora at Aurangabad, which is dated to 200 B.C. - 650 A.D. The twelve Anna value has the Madrassa of Mahmud Gawan at Bidar, dated to the fifteenth century, and the rupee one has Chand Minar of Daulatabad in Aurangabad. The colour scheme of these stamps was adopted from the stamps of Morocco which were pasted against each artist drawing for colour matching¹⁸

Postal history was created on 13th February 1937, when Hyderabad for the first time issued commemorative as well as bi-colour stamps. The occasion was to celebrate the Silver Jubilee of the Nizam VII, who ascended the throne on 1st September 1911. But due to Ramazan the later King George V's death it was postponed twice. It was celebrated during 13 to 26 February 1937 and stamps were issued¹⁹ When the British rule was withdrawn from India in 1947, British unilaterally denounced their treaties with Hyderabad and her obligation under them. Thus, Nizam chose independence of Hyderabad state. However, due to critical political conditions, the commemorative issues were not issued²⁰.

For public convenience Hyderabad issued postal covers, postcards, regulation covers from 1878 onwards in various sizes bearing variety of embossed or printed stamps in monogram or in one case Charminar monument, special money order forms too were issued. For official use the ordinary postal stamps were over printed 'Sarkari' (Official). For use of the Nizam's private estate Sarf-i-Khas, the stamps were also over printed 'Sarf-i-Khas' Sir Sa'ad Jung I, Prime Minister of Hyderabad had stamps punctured 'S.J.E' for his estate' use²¹.

The Telephone Communications

The Telephone system was first introduced into Hyderabad in 1885 AD with a view to facilitate communication between the Officials of the various important departments and the staff of the Nizam's personal Secretariat²².

The Department was first worked for seven months by the Bombay Telephone Company and was then taken over by the Military Secretary then the late Major Percy Cough to the Nizam's Government. Subsequently it came under the control of the Public Works Department, when it was worked by Messrs. the Callender Cable Company, Limited. Mr. BalaPershad, Ph.B., M.A.I.E.E. has been the Superintendent of the Telephone Department²³.

In 1938, that is the year of the introduction of the Magnets single line earth return Telephone system, only one telephone exchange was there at the Baradari, with sixteen subscribers but in order to connect up all the important offices, another exchange at Narayanguda was opened and later, in order to cope with the public demand, a third exchange was opened at Secunderabad²⁴

As the magnet system was not satisfactorily owing to the increased number of subscribers, it was decided by the Government in that the existing system and most of the overhead lines be replaced by means of a Central Battery system and underground cables. The change in the system resulted in the removal of about 650 magneto telephone instruments, magneto switch boards and other apparatus. In order to make use of these discarded apparatus, the Nizam issued orders in that Telephones should be installed in Aurangabad, Jalna, Nanded, Gulburga, Raichur, Warangal, Latur, Parbhani and Nizamabad²⁵.

Accordingly, Telephones were installed in Raichur and Aurangabad, Jalna and Warangal; and trunk lines were installed connecting Aurangabad with Jalna and Hyderabad with Warangal. Proposals to connect up Bidar with Hyderabad by trunk lines and for the installation of Telephones at Nanded and Umri with trunk lines between them were submitted to Government. Connection of Raichur with Narayanpett via Saidapur is also made.

The Telephone Department made effort to popularize the system which met with increasing success and not only added to the income but also tend to lessen the rate of

subscription is prohibitive to persons of moderate means²⁷.

In the beginning, the Bombay Telephones managed the system which later came under public works department of Nizam's household. The subscribers were mainly the nobles, wealthy private individuals and important officials who paid Rs.15,000 towards annual maintenance. The cost for non-officials Rs.10,000. With the increasing demand a second exchange was opened at Narayanaguda. There were 202 lines in 1911²⁸.

A letter from the Secretary to Government Public Works Department in connection with providing a Telephone facility to the outlying police Secunderabad highlights that the charges of the Hyderabad Telephones were less compared to those of Imperial Telegraph Department. The total rental charges in Osmania Sicca were Rs.1 270 in 1913²⁹. In 1917, the Calendar Cable Company strongly recommended the Nizam's Government for automatic system instead of magnet system. Therefore, officials were deputed to Simla to study the advantages of the automatic system before the installation of these lines in the city and suburbs.³⁰

The Department was first worked for seven months by the Bombay Telephone Company. Later, Calendar Cable Company was granted permission for the installation of automatic system and its maintenance and supervision till 1918. In 1919, the Department of telephones came under the supervision of a Superintendent. In 1924, the Department set up a central exchange of 1200 lines which had the capacity of an additional 2000 lines.

The reign of Nazim VII witnessed the extension and expansion of Telephone facilities. The total number of exchange and extension at the end of 1928 was 651 and 173 respectively. Certain offices like Finance had the facility of Automatic telephones and special arrangements were also made in the Automatic Switch Board which facilitated conferences among the officers³¹. In 1929, the Central Battery System was established. Later, Trunk lines connected Warangal to Hyderabad and Jalna to Aurangabad. In 1931-32, the damaged underground cables were replaced with new cables which improved the services and there

was general satisfaction among the subscribers whose instruments were looked after with great care and rigid watch³². These improved services resulted in an increase in the number of subscribers from 848 in 1935 to 964 in 1937³³. In 1935, the Hyderabad City Telephones completely shifted over to Automatic System at a cost of about five lakhs of rupees³⁴.

Telephones exchanges were also established at Bhongir and Jangaon. Later, Aurangabad was connected with the all India Trunk System. With this the important commercial centers of the Nizam's Government were brought together Telephone connections. The year 1941-42 marked the connection of All the Trunk Line with Hyderabad State. Telephone which provided easy access to the subscribers to have contacts over Telephone with any part of India³⁵.

In order to extend the telephone facility to other Government offices in Hyderabad, exchange at Naryanaguda was started in A.D. 1899. Three years later in 1902-03 the Telephones were extended to the general public. Another exchange at Secunderabad started functioning from 1912. However, in 1923-24, when the central battery switchboard system was introduced all the public subscribers lines were connected to the central exchange at Gowliguda. Consequently, the exchanges located at Baradari and Secunderabad were closed. In 1927 Hyderabad city was connected with Warangal by trunk-lines. During the year 1934-35, the exchange at Narayanaguda was discontinued. The next important stage in the development of telephone system in the city was in 1938 when the automatic switchboard system with a capacity of about 2,5000 lines was introduced. Under this system three sub-exchanges, one at Secunderabad, another at Golconda and the third at the Osmania University were started. The State telephone system was connected to the all India trunk-lines in 1941. Since then, the progress made in this direction is impressive as it can be seen from the fact that the number of telephone connections in the city rose from 1,680 in 1940-41 to 1,908 in 1950-51.

Conclusions

The Hyderabad postal Division was one of the oldest divisions in the State with jurisdiction

over the twin cities of Hyderabad and Secunderabad and the rural parts of the district. Several types of postal stamps, postal stationary, cards, covers etc., in various denominations were issued in numerous designs and values during the entire period of its history. The central theme of all the stamps and covers was Sarkar-i -Asafia either in the form of a monogram or inscription. And Salar-Jung I took the initiative for avai ling the services of the Telegraphs for official purposes. Telephones were first introduced in

Hyderabad city in A.D. 1884-85 when the Bombay Telephone Company started an exchange at Baradari with 16 connections intended only for the ruling family and high officials of the State. With effect from the 15th of April 1950, the administration of posts and telephones in the erstwhile Hyderabad State was taken over by the Government of India as a sequel to the integration of Hyderabad State with the Indian Union.

AN OUTLINE OF TRIBAL CULTURE AND ECOLOGY IN DECCAN REGION - A HISTORICAL PERSPECTIVE

T. Srinivas

The present paper is an attempt to locate material and non-material culture of tribes from ecological perception. The general perception

regarding study of ecology means dealing something related to nature and human world has nothing to do with nature but this is a narrow

concept. It has also something to do with those factors in natural environment that constantly work in shaping man and his culture.

It is difficult for one to give a satiable definition to culture. It is knowledge related to humanity, which is learned or acquired but not naturally gained. Here my point is not to argue whether man acquired knowledge naturally or not but how far it is correlated with nature or ecology. Culture is all that man learns and acquires by virtue of being a member of society that is conditioned by its surroundings. Here my area of observation lies i.e. how man responds to the conditioned circumstances of nature or ecology. It differs from society and each has its own hallmark of Uniqueness. It is acquired through struggles and sheer efforts of concerned society or tribe.

However, in human beings culture helps in adaptations to the environment more efficiently. Every community has its own cultural identity, one can identify them through their practices, tradition, customs and spiritual applications. Similarly, tribes too have their own culture, which stands out from the rest, mostly shaped by their surroundings (ecology in present context). Every tribe developed their own culture in correlation with their environment and it has brought them an identity. This cultural diversity is a kind of natural heritage given to man by nature in this district.

Economy in correlation with ecology:

General aim of this paper is to stress on cultural pluralism and egalitarianism that enables us to have broad outlook of multicultural societies. In the present age of globalization, cultural diversity is loosing ground which is the real nature or character of cosmopolitan world. Economic developments like domestication and cultivation of food crops occurred only some ten thousand years ago, and there can be little doubt that it was brought about by the invention of a type of agriculture still common in large parts of the less developed world, known as slash and burn or alternatively as 'shifting cultivation'. Even today shifting cultivation is practiced by very scanty number of tribal population in India. Agriculture, hunting and cattle rearing have always been basic to tribal economy since times immemorial. The wooded hills and range of this district are not only the home to many tribal

communities but also provided a suitable habitat for undertaking occupations like shifting cultivation, hunting and food gathering though most of the traditional occupations have been abandoned today. Relative isolation for many years gave them free hand to lead their own way of life without any disturbance. Rugged terrains of India helped tribes to retain many features of their archaic way of living till the interference of state and its agencies has happened. The foreign interference brought change in tribal economy and social life.

Today in India's mainland, nowhere we can find tribes completely depended on hunting and gathering for sustenance. That means they got extinct, if not to say their culture got extinct. No tribe in India today are an exemption to such transitions. It is said that by 19th century there were more than ten lakhs of people who depended on shifting cultivation and this dependency has dwindled to about few thousands today. The tribes who depended on shifting cultivation to some extent defended themselves and resisted against economic and cultural invaders by responding in form of revolts. But those tribes who depended completely on hunting and gathering failed to defend themselves. People who are naive regarding shifting cultivation defend their notion of anti shifting cultivation. According to this notion shifting cultivation will not only clear green cover but also leads to erosion of fertile soil and this eroded soil will collect in rivers as silt and result in manifold increase of floods during rainy days. The above notion was developed during colonial period. Why this entire problems not to be seen prior to the arrival of outside elements into forestlands is the argument made by present environmentalists. In contrast to the above said notion, some anthropologists argue that for effective and successful utilization of resources under shifting cultivation the growth rate of population should be either low or stable in growth. Haimendorf, a London based Anthropologist made extensive research on tribes of central and peninsular India. (See Haimendorf's "Tribal Hyderabad" 4 volumes) In his study on Hill Maria of central India he came to amazing conclusion that the thick forest today can be seen in the areas where shifting cultivation is practiced and in areas where plough/permanent cultivation is present there we find no forest. That is vigorous depletion of

forest cover or deforestation was recorded in the areas where shifting cultivation is absent. To Varier Elvin, an anthropologist on scientificity of shifting cultivation opined that it is not only an economic method with few environmental effects but it is also a way of life.

People who criticize shifting cultivation forget that it is the state after bringing most of the forest areas under their administration has immediately asked tribes to stop this method of cultivation by stating that it is not environmentally viable. On the other side, fast depletion of forests has been recorded in the state administered areas only that too purely for commercial/market purpose. Growth of population is shown as other important cause for not supporting of slash and burn method of cultivation. The question is why there were no problems before the intervention of forest department in the tribal way of life. Therefore, looking shifting cultivation from environmental and cultural point of view is necessary rather purely from economical angle. There was no recorded environmental problem created by tribes prior to the penetration of outsiders (state/forest department/contractors) into deep forest areas.

In the absence of scientific mode of cultivation, animal husbandry and organic manures, shifting cultivation proved good and sustainable with low inputs for cultivation on the infertile soils. This method of cultivation involves the rotation of fields rather than crops. This type of cultivation is good for rain fed and millet cultivation. In this method of agriculture the period of cultivation is not more than two years, since the production of crops falls drastically up to 50% in the second year. There are two main reasons for diminishing yields and hence abandoning the plot to a specific fallow period. Firstly, the fertility of soil reduced because the nutrients from the ashes are utilized by crops, and secondly there is a revival of weeds which have been partially killed by the initial firing. One can reuse the same field when its fertility is regained but for this it takes some time for nature to restore. Therefore as long as adequate fallow periods are maintained in this type of cultivation and it remained the most efficient and proven method of agriculture in many parts of the tropical world.

This slash and burn cultivation did not continued for long in modern days and situation underwent change from the beginning of 20th century as the state embarked upon the policy of forest reservation and allowed land hungry non tribal peasants and entrepreneurs to infiltrate into the tribal areas. Thus growing of population and commercialization of forest by state has not only created pressure on land but adversely affected fertility of soil. Under coppice, selected species of trees will be eliminated resulting in many social and ecological problems like decline in availability of humidity, reduction of rejuvenation of soils because of decrease in leaf fall, decrease in time for re-growth of forest after abandoning by tribes, bringing other type of imbalance in ecology.

Tribes like Gonds, Kolams and Naikpods of Godavari valley in Deccan region has practiced plough or shifting cultivation in more eco-friendly mode. They after clearing forest cover ploughed on hill slopes leaving tree stumps undisturbed and did their best to avoid tree stumps while cultivating. In this type of cultivation stumps that are left standing help against soil erosion and allow the sprouting of stumps leading to the re-growth of forest cover again with in short time. Such cultivation practices have been well adapted to suit the physical characteristics of the soils present in this region. It is well established known fact that broad leaf tropical forests help to store rain water, nutrients and regulate rainfall. But the grass varieties grown by tribes have multiple roots and keep upper soil intact and there is no need to have deep ploughing. Burning of fields after clearing forest too is an eco friendly act. The dried branches and leaves that are cut and stripped off are burnt to yield fertilizing ash which provides fertilizer for the crops. 'Konyak' tribes of northeastern India practiced traditional way of shifting cultivation and that was never of communal ownership. Unlike the above tribe shifting cultivation among other tribes of deccan was of both individual and communal ownership.

Shifting cultivation can be successful support in case of less population. Because of shortening or reducing of cycle of shifting cultivations time period, revival of lost forest cover is not taking place. For this there are two causes, one is increasing pressure on land

because of percolation of non-tribals with title deeds (*patta*) or ownership rights in their hands and occupying the land abandoned by tribes and doing intensive cultivation that gave no time for revival of forest cover. The other is because of the above percolation into tribal or forest areas making it difficult for tribes from moving around in large forest tracts that were at their disposal and now they are confined to limited area. The new arrivals led to increase in demand of wood. As a result of this new pressure the traditional values developed by man (tribes in particular) to preserve his natural environment began to lose ground. The general cause is arrival of new and powerful owner of forest i.e., state and its agencies.

Socio-religious aspects of tribes in correlation with ecology:

Here, the intention of presenting tribal socio-religious aspects from ecological point of view is to situate culture with in a concept of social production and specify the ways that cultural forms serve the concerned society in eco-friendly manner. As part of tribal cultural studies we have to assert value of popular culture even though they form minority group population wise. After all Culture is all that man learns and acquires as a member of society. In case of animals, their genes play important role and culture in the case of man. Man can transcend his biological needs to a certain extent for spiritual and religious reasons but animals can't as they are rooted in their organism needs. Thus, culture intervenes in the satisfaction of biological needs of every society that in turn guided by its surrounding. However, Culture helps in adaptation to the environment. As said in the beginning that there is much more to the relationship between man and environment, other than adaptation. There are certain element of non-material culture like knowledge, beliefs and values.

Ecology and ethno-medical issues:

Leading a simple life is different from leading a meaningful life because the latter one is an art. It refers to those forms of creative expression which are guided by principle of necessities and which involve imagination, skill and style in executing things. Tribes achieved this art of living every tribe in India has their own characteristic forms of creativity. Tribes through

their acquired experience, consciousness, knowledge, perceptions of reality express their values. These expressed values speak about their identity and their culture. Collection of a wide variety of items used by the community like food, fodder and medicine is one of the most important activities in the life of a tribe. As a larger part of it, tribes have developed their own ethnic medicine and learned to survive by using the nature in which they live. They gained knowledge of plants that exist in their surrounding for curing different ailments.

The history of ethno-medicine on which traditionally the human beings have depended dates back perhaps to the origin of the human race. As there is absence of any mode of recording events in tribal societies, studying their medicine is like visiting pre-historic days. As a part of ecological history, the history of the plant lore of the India was certainly well abreast of the times and gave much that the west has assimilated though not always gracefully acknowledged. Studies in the history of Indian plants on the strength of Indian source that influenced the life of people have convinced that so far this branch of ecology has been almost neglected by historians and consequently our indigenously acquired knowledge of nature is becoming extinct with vanishing cultures.

The knowledge about use of different parts of plants, their medicinal values, how and where to collect and store, the proportion of medicinal values and the processes of manufacturing medicines from the plant, the general therapeutic value of the different parts and the effects of medicine on different part of the human body can only be acquired through sheer experience, consciousness and awareness. Knowledge regarding ecology and ethno-medicine deserves for wider circulation, as medicine is not the preserve of one nation or one community but is for mankind as a whole. Tribes have this wealth to give for welfare of world. If the disease is concomitant with life, then science/knowledge to cure such diseases to preserve life provides remedies for disease. Wherever it may be the growth of knowledge, it is concern of the entire humanity and there is need to know about it. It is nothing but an effort to keep mankind moving forward in the path of civilization. Today dissemination of useful knowledge is a sacred obligation to be discharged by the scholars of the

whole world and any medium which effects the widest possible dissemination of this knowledge deserves to be used for this purpose without any pride or prejudice.

The purpose of the present paper is neither to prepare list of prescriptions for different diseases nor to investigate the exact medicinal values but it is an attempt to appreciate the knowledge of medicinal plants of remotely living tribes for treatment of ailments that they had inherited as hereditary knowledge from their ancestors.

Thus ecology became an integral part of tribal culture rather than an impersonal habitat of plants and animals. It is that harmony in man, plant and animal interaction that is universal phenomenon and the relationship is largely symbiotic. This can be clearly found among tribes in India. Each community of tribe inhabiting in a particular geographical area seem to have consciously applied this universal principle to construct a cultural device to ensure reasonable safety not only to their life but also to ecology (flora and fauna) in which they live. This significant element of bond between man and nature should be adhered.

ECONOMICS OF DISSSENT: DR.P.PALPU AND THE ORIGIN OF SWADESI MOVEMENT IN KERALA

R. Sunilkumar

Dr.P.Palpu, a pioneer social reformer of Kerala and the founder of the SNDP Yogam strongly believed that the dissent/reform movement in Kerala would become a meaningless exercise if the socially backward classes were not economically empowered. He wanted to provide an economic solution to the social needs of socially backward communities who were suffering from want of labour and food. He supplemented the work of Sree Narayana

Guru and acted in accordance with Guru's advice: "educationalise and industrialize the masses"¹ as the panacea for all ills of the society. He was motivated by a strong *swadesi* sentiment: instead of exporting the raw materials, he wanted to collect and convert them in to finished products and sell them in foreign markets; revived the traditional industries and developed several new industries useful to the people; founded the Malabar Economic Union

for carrying internal and external trade; and held exhibitions to boost the economic activities of the people. This paper focuses on these aspects and enquires in to how Dr. Palpu emphasized on the economic aspect of social reform to make it more meaningful and sustainable.

The Ezhavas were the largest Hindu community in Kerala. They were a hardworking community and were engaged in most of the industries on the Coast. In the Census of 1901, 50% of their total population was returned as actual workers. There were great agriculturists and about one fifth of the entire cultivated area in Kerala were either owned or cultivated by members of this community. They were thus responsible for some of the main products of the country, e.g., coconuts, arecanuts, jackfruits, plantains, paddy, pepper, tapioca, pulses, yams, etc. In regard to manufactures, coir-making, weaving, toddy-drawing and distillation of liquor were among their traditional occupations.² They produced several kinds of cloth; made mats, tiles and ropes with remarkable skill. They were also the chief lemongrass and oil-distillers of Travancore. They were thus one the most industrious and prosperous communities on the West Coast.³

Dr.Palpu realised that for the social progress of the Ezhavas, economic regeneration was inevitable. One of the important aims by which he founded the SNDP Yogam was the industrial advancement of the community. Sree Narayana Guru also emphasized on this point, but it was Dr.Palpu who gave practical expression to this idea. He organized an Industrial Exhibition at Quilon in 1905 and another at Cannanore in 1907 for encouraging the industrial habits of the people.

Industrial Exhibition at Quilon, 1905

In Nov. 1904 the decision to hold an 'Industrial Exhibition and Literary competition' was publicized through the *Vivekodayam*. It was to coincide with the second annual meeting of the S.N.D.P Yogam to be held at Quilon in Jan.1905. Only those items made by the Ezhavas or Tiyas belonging to Travancore, Cochin and British Malabar were permitted for exhibition.⁴ Coconut and other agricultural products, items of weaving, carving, handicrafts, varieties of mats, coir, pottery and machines, book-binding, various food items such as coconut jaggery,

biscuit Jan Jelly, *Chatni*, butter, curd, cheese, etc., were the items invited for exhibition. They were to be sent to the exhibition committee office at Tamarakkulam in Kollam.⁵

The exhibition was a very great success. Dr. Palpu as president of the exhibition committee related the purpose of the exhibition. It was organized for the purpose of exhibiting the industrial talents of the Ezhavas or Tiyas of Travancore, Cochin and British Malabar. He claimed that it was the first of its kind not only in Kerala but in the whole of India. It was attended by Europeans, Christians, Nairs, Brahmin officers and ordinary people. Three thousand men, mostly Ezhavas from different parts of Travancore, Cochin and Malabar participated in the exhibition.⁶ Inaugurating the exhibition T.F.Bourdillon, Travancore's Conservator of Forests said: "You, Ezhavas had a great advantage in being accustomed to manual labour and trained in special Industries... You have the entire control of the coconut fibre industry in your hands, at all events in its early preparation".⁷

Cannanore Exhibition, 1907

The Industrial Exhibition held at Quilon in 1905 was an exhibition of those items made by the Tiyas of Travancore, Cochin and Malabar. Dr.Palpu was aware of the limitations of such a 'caste exhibition'. His next move was to organize an exhibition entirely different from the one in 1905. He thought of an All India Exhibition embracing the different castes and communities. It was decided to be held at the fourth annual meeting of the SNDPYogam to be convened at Cannanore in 1907.⁸

The exhibition was held near the municipal school, east of Cannanore Railway Station. An old military barrack was used as the main stall. Four thousand items sent by 600 exhibitors from different parts of India, were neatly arranged in the rooms of the barracks. There were also several make-shifts used as stalls, tea shops, hotels, and as stages for performing arts, speeches and hall for audience.⁹ The items included agricultural tools (Peers Lesly Company) pottery (Fen Company) water pipes (Parry Company) sewing machines (Singer Company), copper utensils made in Tibet, cotton fabrics (Malabar Weaving Company), Indian Aluminum Company products, leather works

(Thrissavaperur Leather Company) Handicrafts (Basel Mission, Mangalore) Mats (Thiruvananthapuram) tea, coffee, rubber, cardamom, cinchona and pepper (Forest Department), items made by the prisoners of Central Jail, Cannanore etc.¹⁰ The organisers also did much to encourage the industrial skill and artistic taste of women by arranging a Ladies Section. The items in this Section were beautifully arranged and they included exhibits of weaving, embroidery, paintings, etc.¹¹

Castle Stuart, I.C.S inaugurated the exhibition. He remarked that the exhibition is illustrative of the progressive spirit of the Tiyas of Travancore, Cochin and Malabar. He said of the industrial and agricultural aptitudes of the community who own or cultivate one fifth of the entire cultivated area in Travancore.¹² Castle Stuart was greatly impressed by the endeavours made by the SNDP Yogam for the economic and spiritual advancement of a large community as the Tiyas and requested all people to be sympathetic and cooperative to the movement. He appreciated Dr.Palpu and other organizers of the exhibition for making it a great success.¹³ All classes, official and non-official, European and Indian cheerfully co-operated with the exhibition committee.¹⁴

Development of Industries

Dr.Palpu made extensive experiments in connection with the existing industries in the South. He was successful in finding out cheap and satisfactory methods of improving these industries and making them profitable. ¹⁵ After years of painful investigations, at his own cost, he was able to find out large number of paying and useful industries such as the fibre industry, hat manufacture, manufacture of perfumes, dye stuff industry, leather buttons manufacture, making of paint and varnishes, weaving and calico printing, manufacture of gold and silver thread for weaving, and manufacture of coconut butter and cocotine. ¹⁶

Development of fibre industry

An unlimited supply of fibre, coconut, palmyra, bow string, Deccan-hemp, plantain, madder, fence-cotton, pineapple, aloe and a host of other varieties were available on the west coast from one end to the other. All of these, with the exception of coconut and palmyra fibres were then practically going to waste. After years of

patient research, Dr.Palpu investigated methods to exploit the potentialities of fibre industry.¹⁷ He had succeeded in making several useful articles out of coconut fibre and the canvas he had woven out of that, had, for excellence of texture and durability, stood comparison with the best imported variety. These samples had been very much appreciated by the agent to the Governor-General. He had also succeeded in making articles like canvas, belts etc. out of the ordinary plantain fibre which was so largely available everywhere. The inner stem which is left out in the process of extraction of fibre could also, after being dried, be used as packing material.¹⁸ The most signal achievement of Dr.Palpu in the direction of fibre industry was the production of a kind of cloth as good as Tussore, out of bow-string hemp which grows wild in very great abundance both in Travancore and Cochin.¹⁹

According to Dr.Palpu, the scope for utilizing these and several other varieties of fibre available on the west coast was unlimited. This potential wealth of the country which, if properly exploited, would add materially to the well being and prosperity of its inhabitants who lived in want and misery.²⁰ He presented a plan to the Cochin Govt. for the development of fibre industry in the State which was unfortunately turned down. ²¹

The Travancore Government was then following a trade policy which was harmful to the development of cottage industries in the State. The white coconut jaggery that was being manufactured by the Ezhavas throughout the country had been killed by the Government by misusing or abusing the excise rules. Instead, enormous quantities of foreign sugar were imported into the country at higher prices. Besides, the weaving industry practised by the Ezhavas had been destroyed due to lack of encouragement from the Government. The Ezhavas were ostracized and were not entitled to basic human rights with the result that the once prosperous and world-famous industry became practically died out.²²

Dr.Palpu developed a process by which the toddy could be used as a very nutritious drink. He called it non-alcoholic *madhu* champagne. The *nira* is collected fresh and is prevented from fermenting by means of an edible vegetable material instead of the usual lime which, being a strong alkali, deprives the juice of much of its

nutritive value, in addition to spoiling the valuable sugars therein. Coloured and flavoured suitably from beneficial vegetable sources, and pasteurized carefully, aerated and sealed in the usual way under aseptic conditions, Dr.Palpu says, the special champagne would keep for months and years. He sent samples of the champagne to Gandhiji who tasted it and appreciated it highly. The Congress Ministry in Bombay had got the three bottles he had sent them duly analysed by the Government chemical examiner and found them satisfactory.²³

Formation of the Malabar Economic Union

Malabar Economic Union was a commercial organization founded by Dr.Palpu in Cochin during the First World War for the development of trade and industry in Malabar, Cochin and Travancore. Its purpose was to liberate the Malabar Coast from foreign exploitation, to revive the traditional handicraft industries and to provide a strong economic basis to the socio- religious reform movement organized under the auspices of the Sree Narayana Dharma Paripalana Yogam. As there was no indigenous competition, the foreign firms established on the coast exploited the peasants who were paid a low price for their commodities. The peasants were also subjected to the exploitation of middlemen and money-lenders. The need for an indigenous agency which would do away with middleman and look after the interests of the peasants was highly felt. Such an agency would be able to undertake collection of goods at reasonable prices, transportation, export and supply of goods to foreign firms. It would give labour for the jobless, just wages for their labour and help improving the living conditions of the peasants and workers. It wanted to place the control of foreign trade in Indian hands and make it favourable to India. It also wanted to encourage the development of Indian handicraft industries and thus support the concept of Swadesi. Unlike many business organizations, it was not characterized by a profit motive to amass wealth by any unfair means but by a philanthropic attitude – to help the poor working and depressed classes and assist financially their social and educational uplift out of a share of its profits.²⁴

With the outbreak of the First World War, Malabar Coast was relieved from acute competition. The foreign firms on the Coast had

all closed down for want of shipping facilities. Thus coir, copra and other export goods became locked up in the country. It created considerable hardships to the people. They suffered from poverty and want of labour. The immediate conservation and control of these goods by an indigenous agency and their conversion into finished products in the country were matters very essential to the interests of the country and to the material benefits of the people.²⁵ In a scheme for conserving and developing trade and industries in Travancore, Cochin and Malabar presented to the Travancore Government, Palpu wrote: "When the war broke out, special endeavours were felt necessary by the promoters of the Yogam to conserve and develop trade and industries on the coast for the benefit of the people. A company was accordingly formed by them at the time, under the name of the Malabar Economic Union, and registered as a public limited liability company, with head office in Cochin with an initial capital of Rs.1,00,000".²⁶ Sree Narayana Guru was made one of the Directors of the Company. Tanu, Palpu's brother was the Managing Director. It was agreed that 25% of the net profits of the Company was to be set apart as an endowment in the name of the Swami (Sri Narayana Guru) for educational and charitable purpose and that 50% for financing the Union's branches and in developing trade and industries. Only the rest of the profits was available for distribution as bonus to workers and as dividend to share holders.²⁷ Thus it is clear that the main motive behind the formation of the Malabar Economic Union was not born out of any selfish economic interests but of a broader outlook, a feeling of self-help and philanthropy – the desire to help the people suffering from want of labour and food, and the economic, social and educational uplift of the poorer sections.

The foreign firms established on the Coast stood for safeguarding the interests of the European exporters, while the Indian farmers got meagre wages for their daily toil because the prices of their goods were cut down "beyond all bounds of equity and fairness". Dr. Palpu said that a congenial atmosphere prevailed for an indigenous initiative in trade. "India is now aspiring for Home Rule and speedy revival of its indigenous industries and trade. Any venture which has for its object the building up of an industry or business by the people and the profits

of which were meant for distribution among the people in India itself, will at this time appeal to all patriotic Indians including the captains of large industries and the enlightened ruling princes of feudatory states".²⁸

Palpu hoped of getting encouragement, concessions and privileges from the Travancore, Cochin, British and French Governments. "These concessions are of such great value for the success of enterprise and are calculated to give advantages which the investment of even several crores of rupees by foreign firms may fail to secure".²⁹

The Constitution of the Union provided for the formation of branches which would enter into partnership with the interior garden owners for the purchase and sale of goods. They would replace a series of money lenders and intermediaries who exploited the actual producers and assure the latter a much better price than they were hitherto getting.³⁰ The great advantage of the union was that it could collect large quantities of goods through its various branches. None of the foreign firms had such an advantage. The union would be able to provide qualitative goods and undertake large orders.³¹ Palpu claimed that with a complete network of branches all over the coast, adequate shipping and banking facilities and necessary foreign connections, the Union shall be able to control from the very outset at least goods worth Rs.2 crores per year.³²

The Malabar Economic Union started work in Cochin and Alleppey and had done some work in Calicut as well. It did export trade for some months in partnership with an English firm in Madras which was financing it then.³³ Neave, a friend of Dr. Palpu in London was authorized to make arrangements for export trade in Malabar.³⁴ The Union entered into trade with a foreign firm viz., Messers. Gordon Woodroffe and Co., and agreed to send a supply of goods to the value of £ 100,000/-.³⁵ The Company's London Office accepted the business proposition put forward by the Union and referred the matter to Sir Hugh Fraser, its representative in Madras. He called for the opinion of the existing firms on the coast who, in one voice, at once resolved to veto the combination. Sir Hugh Fraser therefore wrote strongly against the proposal from London.³⁶ All

the senior partners of the Company agreed to drop the idea and the Cochin Chamber of Commerce which included all the foreign firms on the coast including the banks and shipping agents, passed resolution unanimously to the effect that the M.E.U should receive no encouragement of any kind in its attempt to make direct export trade with foreign countries. The Union could not therefore get any loans from banks and could not send by steamer even samples of their goods to their agents in London.³⁷

The Union asked for a loan of Rs.10 lakhs from the Cochin Government and provided necessary safeguards and guarantees.³⁸ He also wrote to the Travancore Government requesting their financial assistance for implementing a scheme for the development of trade and commerce in the State.³⁹ But the Governments of Travancore and Cochin paid little heed to Palpu's genuine requests. He wrote to C. Krishnan, "...owing to the unsympathetic and perverse attitude still maintained by the Governments of Travancore and Cochin, I have been prevented from starting anything here".⁴⁰

The attempt of Dr. Palpu to develop trade and industry was met with opposition from different circles. The European firms existing on the coast whose main idea was to make maximum profits through all unfair methods were opposed to the rise and growth of the Malabar Economic Union which had a national and philanthropic character. They could easily influence the native Governments, banks and other agencies and dissuade them from encouraging the successful expansion of the Union. The savarna officials, out of resentment to the growth of the Ezhava movement, and the foreign traders, out of selfish economic interests, torpedoed the grand scheme put forward by Palpu for the industrial development of the country. ⁴¹ His request for money grants and loans were not considered by the Dewan of Travancore.⁴² Thus the selfish motives of the foreign firms on the coast and the narrow and short-sighted policies of the caste Hindu officials stood in the way of implementing a carefully thought-out plan for the economic development of Kerala.

COLONIAL FOREST ACTS AND THE TRANSFORMATION OF MALABAR FORESTS

P. Udayakumar

Introduction

The forest department, a brainchild of the imperial ambitions, functioned like an agent of the British and served the imperial purposes at different stages. Control over forest and its resource utilization was viewed by the British as a crucial factor maintaining their hold over India, for economic, political and military reasons. Forest resources of India were exploited at different stages and it had a crucial phase, an ecological watershed during the colonial period. The British in the course of dominating India, intensively felt the need for monopolising the

forest wealth as an exigency of the colonial government. Steps were taken by them to achieve this ambitious imperial need. Clear cut forest laws were made after invoking precedential legitimacy which the colonial government had drawn from the past history of the nation. Law was a coercive factor and the British government in India saw it as a strategy. Every region in India felt the impact of this colonial forest policy. This paper is an attempt to analyse the socio-ecological impact of the forest acts and the management of the colonial Malabar.

Forest Acts and Forest Policy

Forest policy was designed to cater to the needs of the army, navy and the railways. The introduction of colonial administrative structures, the destruction of forests continued in the form of contract system, smuggling of timber, and opening of the plantations, and the use of commercial interest of the forests. The forests of Malabar were divided into those of north and south Malabar. The forests of south Malabar were of greater commercial interests than the forests of north Malabar. The forests of north Malabar were divided into the Begur, Chedleth and Kanoth ranges. These forests comprised in an area of 164,928 acres or nearly, 259 square miles. The forests of south Malabar were divided into three ranges of Nilambur, Amarambalam and Mannarghat, These comprised in all an area of 170,351 acres or 266 square miles¹

The forest department is one of the branches of business made over to the Home Secretary and is in charge of the member council who holds the portfolio of the home and the revenue and agricultural departments. The inspector general of forests, besides acting as professional advisor of the government in all forests matters, fulfils the functions of undersecretary in the home department, submitting cases direct to the secretary.

Some progress has been made in the preparation of working plans and collection of statistics for future plans. The northern circle and southern circle. In north Malabar a rough working plan was prepared for the kurichiyath reserved forest on the basis of the measurements made line 5 1/2 miles long and 50 yards wide, 100 acres taken right through the forest. The sample plots have not been under observation long enough to arrive at any data of importance. In south Malabar the provisions of the working plan for the teak plantations and that for the natural forests of Nilambur valley were adhered to. The work done in the natural forests was successful financially. In the area of 80 acres planted up the planting after deducting the amount realised by the sale of the timber standing on the ground came to Rs 155 only. In the same tract 80 acres was cleared and prepared for at a cost of Rs 2388 and the produce removed realized Rs 5000 and odd. The Waalayar working scheme was again held in abeyance as the reserve required rest. In

southern circle the expenditure on roads amounted to Rs 18164. The principal works of repair in the north Malabar and the Niligiri were confined to the Chedleth –Sulthans battery road in former district. Departmental surveys was started in all districts for the forest department purposes. In south Malabar the work consisted of the swamps and portions unsuitable for planting in coupe 1 in the Karimpoya reserve. The area of reserved forests for which final maps were prepared up to 30th June 1899 amounts to 8518 square miles.²

The area of reserves in the madras Presidency is reported as 2870 square miles, but these figures represent the areas locally classed as reserves and not only those constituted reserves under Madras Forest Act No.V of 1882. Of these latter class, 683 square miles have been formed in the southern circle and proposals have been made for further extensions during the present year.³

The govt. of India has of late years taken an exceptionally large share in advancing forest conservancy in Madras. That presidency was among the first of the Indian provinces in which forest conservancy received attention indeed the well-known Nilambur Teak Plantations were commenced as early as 1844, though a regularly constituted forest department was apparently not organized until 1856. The development of the department was peculiar and towards the 1875 it had become apparent that its principal efforts were directed towards the establishment of plantations and groves scattered over the country, while the natural forests of the presidency were not under sufficient control. Then came the Famine Commission in 1877 who pointed out the necessity for more vigorous action in the protection and re stocking of the natural forests, more especially those situated within the catchment areas of the principal rivers used or diverted for irrigation of the low lying country.

A general Indian Forest Act was passed in 1878, which provides for the preservation and management of the forests, the control forest produce in transit, and the duty leviable on timber.⁴ The Burma and madras forest acts proceed on the same general lines as the Indian act, but besides certain minor improvements they differ on some important points, that the general Indian acts recognises two different

classes of state forests –reserved and protected forests-while the later enactments recognise only one class⁵.

The more immediate cause for the direct interference arose out of the introduction of the Indian Forest Act of the 1878. When the act was under consideration, the madras government declared it unsuitable for extension to madras because it was held by that government that the rights of the villages over the waste lands and jungles were of such a nature as to make it impossible to constitute forest estates under the provisions of Indian Forest Act, and after some discussion it was decided to pass a special act for the southern presidency. The first draft of a madras forest bill which was submitted to the government of India and found to be defective as regards both substance and form and was therefore not approved. After further correspondence a new Act was submitted to the assent of His Excellency of the Governor General in council, but it was found that both from a forest and legal point view the Act was unsuitable. Accordingly His Excellency of the Governor General in council vetoed the Act in September 1881 and deputed Mr.Brandis late inspector general of Forests to the govt of india to visit madras, with the view of his conferring with the Madras govt on the whole subject of the forest conservancy in the presidency. Mr .Brandis left for madras in October 1881 and remained there until January 1883. During that he visited nearly all important forest districts and submitted proposals to the madras govt. which now form of active forest conservancy in presidency.

The first step of importance was amalgamation of jungle conservancy fund with the provincial Forest Department and in connection therewith the localization of the Receipts and Charges of the department. Next the collector was appointed chief of the Forest department in each districts with a district forest officer as assistant, while the districts were arranged in two circles, the northern and southern, each presided over by a conservator of forests who is the consulting and inspecting officer, with authority in matters of finance and establishments. In order to provide the necessary staff a comprehensive reorganization of the superior and subordinate establishments worked out and received the sanction of the government of India and of her majesty's secretary of state for

India. Three experienced officers belonging to staffs under the govt. of India were at the request of the madras govt. transferred to the southern presidency. The long pending question of a Forest Law for the madras presidency was brought to a satisfactory conclusion by the passing with effect from first January 1883, of the Madras Forest Act No. V of 1882.

Having thus been provided with the necessary and appropriate means of action, the department may be said to have started forest work on new lines towards the close of the year 1882. The subject which claims foremost attention is the demarcation and settlement of permanent forest estates, constituted under chapter II of the Act. The areas which have hitherto been considered as under the more special management of the department amount to 824 square miles to the northern circle and to 2046 square miles to the southern circle or a total area of 2870 square miles.⁶

Mr .Ross,Resident Engineer at Palakkad is working the 'chennat Nair " forest on contract ,where there is a large supply of well grown Errool,Venge,Karra-marda, he conducts the operations with energy and judgement. The work is occasionally inspected by cleghorn. Pyngda of Burma which Lt.Williamson recommended in his letter to the chief secretary as a superior wood and suitable for railway purposes is identical with errool of Malabar.

Teak plantations: the increasing demand for woods, available for government purposes renders it of the utmost that the various plantations should be carefully watched and conserved especially now that the Home Government is looking in this direction to supply her dockyards. The largest and most valuable forests are reserved for the purpose of govt.andmeasures have been adopted not only to prevent inroads upon with the axe and configuration, but to watch the growth of the plants and provide against being they choked by the undergrowth which springs up around them. The most important of these plantations are the 'connolly plantations'. These young forest have been specially referred and their value to the state will every year become more perceptible. The forest is of such importance and at such a critical period in its history –recommended for the conservator and the periodical visit of the collector.⁷

The constitution of forest reserves is as yet in a very backward state only 1628 square miles having been declared under the forest act at the end of the year under report, which amounts to only 1.15 percent of the whole area of the presidency. Later it enhanced area to 9500 square miles. In madras climatic conditions would appear to demand more liberal provision of wood land than is necessary in other parts of the empire. The area extended to 50000 square miles –place all extensive tracts of waste lands and forests. Which are not required cultivation or which in view of the insufficient area of pasture land available outside the forests that have been set aside for the special purpose of supplying timber and fuel, it will be better policy to preserve for the grazing requirements of the people- under chapter II of the forest Act, so that they can be permanently managed in a systematic and therefore the most profitable manner for the state, whether for the supply of the timber, fuel or fodder.⁸ In the southern circle work was confined to operations of minor importance. A detailed forecast of forest survey work was supplied to the government, and a scheme was drawn up in accordance with it by the madras survey department, for better supply of forest maps, the reserved and the village forests. And the village maps were also available.⁹

In madras area of the forest has been increased. The total area of forest under the control of the forest department has increased. In madras by 1903 square miles. The changes in the areas of reserved and protected forests shows the results of forest settlements, and the consequent transfer of one class to another. The respective rights of the government and private persons in and over any forests are finally settled only by the constitution of such property as reserve under the forest law in force.¹⁰ The opening up of the forests by means of new roads has met with considerable attention as may be seen by a reference to the extracts. The expenditure on roads, buildings, and other works was done R 59841 which is an increase on the average. Much to be done in the way of making of roads and building rest houses.¹¹ The remarks already made with regard to demarcation work and to forest settlements also apply to surveys.¹¹

The British occupation of Malabar and their control over forest affected the life and culture of the people, especially the tribes. By a

proclamation dated on 3rd July 1805, the administration of Malabar, forest was taken away from Madras Government to Bombay Government. Later, it given back to Madras Government in 1822¹² The Malabar forests were divided into two categories, viz. private and government forests. The government intervention on forest was with the introduction of state royalty in teak and other valuable trees in 1807¹³. The Forests Department and the Jungle Conservancy Department was formed in 1860. In 1882, these two departments were merged into one and it became new branch of the Revenue Department.

The forests policies and acts of British in Malabar were for the attainment of colonial purposes. The British colonial forest policies highlighted their commercial, military, economic and industrial imperatives. The British ascertained that, the forests of Malabar were the best source of raw materials for British industries and technological advancement. The industrial needs of Britain were the first requirements for colonial forest intervention in Malabar¹⁴. The British unscrupulously exploited the Indian subcontinent for the timber requirements of their industries. The Malabar Teak was very notable for its quality and thus it widely used for the ship building industry. In 1796, William Maconochie established a timber syndicate in Malabar¹⁵. For the Bombay dockyard, large quantity of teak was cut from Malabar forests. So it is explicit that, 10,000 teak trees were brought from the Baypore River in the year 1799 itself. ¹⁶. The timber export doubled in the coming years. 33,000 teak logs were exported from Malabar in 1837. Apart from the shipping industry, the timber of Malabar was widely used for other purposes also, notably in the Public Work Department for construction works. Company ascended the monopoly of felling of trees of Malabar in 1803. By appointing Colonel Watson, a police officer as the Conservator of Forest, the company fixed their sway over the resources. This was the beginning of the conservancy of the resources and the restriction and authoritarianism. Appointment of the police officer as the conservator of the forest shows the British imposition of power in the forest wealth as well as the enforcement of the law. This was a clear message, that the accumulation of power and wealth in every aspects of colonial rule.

The British were well planned and aware of the significance of the forest resources for strengthen the colonial empire. Thus they had well study on forests and brought many reports for the management of forests. Of such reports emphasise the forest conservancy and its importance. One such report highlights that; as regards the direct advantages of forest conservancy, it is of the greater importance to produce on the smallest area the largest quantity possible of useful timber, wood and other forest produce¹⁷. In a report regarding the Nilambur plantation S. Eardley, the Inspector general of Forest during his Inspection reported that: these are commercial success and are likely to pay such good returns on the capital expenditure. They had secured a gross revenue of about 60,000 in the last year in this way by introducing some new methods.¹⁸ These reports reveals that the colonial argument of forest conservancy was aimed to the availability of more products for commercial purpose and to make maximum revenue. The passing of Forest Acts in 1865, 1878 and the amendment of subsequent years once again concreted the colonial interest on forest. And it was very evident that, the colonial interests on forests didn't mean the protection of forest in its true sense. Really it was their plan of a systematic exploitation of the forest¹⁹. Under Section 35 and 36 of the Act of 1882, Under Section 35 and 36 of the Act of 1882, the government made rules to carry out the provisions of the act by restricting the natives to cut timber from the forest²⁰. So the tribes were not allowed to bring a felled timber from forest even for making hut or as firewood. Only a person who possess certificate of registration had the right to take timber from the forest. The tribal people were not aware of these legal formalities and therefore excluded from the forest.

The Act of 1865 guaranteed the government to declare any forest as government property. One of the provisions of the Act ensured the government to protect the existing rights and privileges of the natives in the forests. The argument over the provision of the Act prevented the passing of the Act in Madras Presidency. The Madras Forest Act (MFA) defined the rights of government over forest in 1882²¹. These arguments showed the colonial interests on forest. The forests were classified as reserved and protected. The British wanted a

clear cut control over the forests of Malabar for exploiting its resources by taking away of the natives from forests. The masters brought many interventions in the form of litigations in which they were tightens the hold over the resource. They kept the natives away from forests by asking the misuse of forest by the natives. But, in fact the Malabar forest was largely 'transformed' by the masters for making a colonial capitalist world.

The introduction of colonial forest policies altered the life world and the human ecology of Malabar in general and tribal community in particularly. For the better and effective working in forest, the Act of 1882 declared that the forest as reserved and state forest²². There were 13,428 acres of forest transformed as reserved forest in Palghat division and 15,558 acres of forest transformed as reserved forest in Nilambur division in respectively²³. State forest and Reserves under Forest Officers in Malabar includes 46,720 Acre in 1883²⁴. The Section 25 of the Forest Act (1882) declared that; if the rights of government and private persons in such lands have not been inquired into, settled and recorded, in a manner which the government thinks sufficient, the procedure prescribed by the act must be applied²⁵. The Act therefore ensured the settlement with the government over the claim of the forest land and its dependence.

Conclusion

The tribal people had only customary rights in forest and haven't any official or legal claim in forest. Their right over their land was completely taken away from their hand and they were unknown about to retain their right to engage in forest by the legal procedure provisioned by the government. The Rules under Section 21(h) of the Madras Forest Act (The Act V of 1882) empowered the Governor in Council to "make rules for the regulation of hunting, shooting and fishing and to prohibit the poisoning of water and the setting of traps or snares within the limits of all reserved forests situated in the Presidency Madras". The Act prohibited the entry of tribes in forest for hunting and fishing. In any case in which a person or persons had been violated of an offence against the forest laws, were convicted. As a first step the government strictly prohibited the collection of forest products. The 'forest products' were listed such as minerals, surface soil, trees, timber, plants, grass, canes,

peat, creepers, reeds, fibers, leaves, moss, flowers, fruits, seeds, roots, galls, spice, juices, catechu, bark, gum, wood oil, resin, varnish, lace, charcoal, honey and wax, skins, tusks, bones and horns. The government also prohibited trespasses or pasture cattle, or permit cattle to trespasses; fells,

girdles, marks, lops, taps, uproots or burns by any tree, or the strip off the bark or leaves from, or otherwise damage Fines were collected for the violation of these rules. Thus it changed the entire life and structure of the Malabar in all the way.

ECONOMIC CONDITION AS REVEALED FROM THE INSCRIPTIONS OF ERUMBESWARA TEMPLE AT THIRUVERUMBUR - A STUDY

S. Vanitha & B. Perundevi

Temples in all countries and at all times have exercised great influence upon the minds of the people. In India it has helped in the preservation of the best of Hindu traditions, in moulding the lives of the people, and in keeping the bond of unity in a country where there is a wide variation of climatic conditions and where there is a bewildering diversities of customs, dress, and languages.¹ Temples in India originated as places of worship or cult centre, in the centuries immediately before and after the beginning of the Christian era. They were systematically built up as institutions with a focus for all human activities² - social, economic and cultural.

The temple occupied a place of vital importance in the history of medieval South India. It constituted a powerful social and economic entity. There is no doubt that the temple served not only as a place of worship but also as the focus of the material life of the people. The temple became the center of social life. From the early hours of the morning to late hours of the night, *pujas*, festivals and special gatherings attracted the people. It held them in its fold heightened their sensory appreciation by the rendering of *Thiruppadiyam* by *Othuvans*, and music by the temple musicians, by the exotic colour of the paintings, by the scented perfumes around the place of worship, by the tasty

offerings (*Prasadams*) distributed. Verily all the five senses became cultivated in their fullness in a temple. In the development of temple many elements and their aspects have made the temple a vibrant living force even today. Above all, the temple became a cultural institution of a great eminence, namely, development of man and his environs through good education, assured health, and freedom from penury.³

The *Erumbeeswara* temple at Thiruverumbur has played an important role as a land holder, consumer of goods and services, employer, banker and the like. The inscriptions which are engraved on the walls of this temple and other temples found in and around Thiruverumbur provide a mine of information with regard to the socio-economic conditions of the locality.

History of Erumbeeswarar temple

Erumbeeswara temple is located in the distance about 2km from Thiruverumber and about 12kms from Trichy. It is one of the revenue villages in Thiruchirapalli district of India state, Tamil Nadu. Erumbeeswarar Temple is a Hindu temple dedicated to Lord Shiva. Hoisted on a 60-foot tall hill, the temple can be reached via a flight of granite steps. Since the temple is on a hill, it is colloquially called "Malai Kovil" or "hill temple". The temple is famous not only for its Dravidian architecture style but also its legend - Lord Shiva is believed to have morphed himself into an anthill and tilted his head at this place to allow other Gods who took the form of ants, to climb up and worship him.⁴ Erumbu means ant and Eswaran refers to Shiva.

One can see that that Shiva lingam is a slanting one along with the marks of ants creeping on the lingam. The temple is one in a long line of temples built by Aditya Chola, of the Chola dynasty, along the banks of the river Kaveri, to memorialize his victory in the Thirupurambiyam battle, over the Pandyas. Because of King Aditya and his Chola ancestry, we see that the temple has a number of inscriptions from the Chola Empire dating back to the 10th century. Because of its historical and religious importance, the temple has been declared a protected monument by the Archaeological Survey of India and is locally commemorated as the "Kailash of South India".⁵ While many festivals are celebrated with

full gusto at the temple, the annual festival of Brahmotsavam (May/June) is one of the grandest festivals that is celebrated by the temple and is attended by thousands of devotees from far and near. Along with the images and idols of Shiva and his consort Saurabhya Kudalaambal., one can find granite images of other Gods also, like Lord Ganesh, Lord Murugan, nandi and Navagraha, in the hall that leads to the sanctum.

Inscriptions of the temple

Erumbeeswara temple in its current form was built by the Cholas king Aditya I (871-907 CE). The temple has 49 inscriptions from the Cholas period (850-1280 CE). The inscriptions numbered 101, 104, 105, 127, 130 and 133 of 1914 are believed to be inscribed during the 5th to 7th year of the reign of Aditya and hence believed to be between 882 and 885 CE. Another set of inscriptions from the Sundara Chola (957-970 CE) period indicate gift of land to maintain four signs of *Tirupadigam*. One another inscription indicates the donation of ten *kalanchu* (a measure) of gold to the deity by a temple woman in the year 875 CE. A king by name Siruthavur Sembian Veithi Velan from iliyurnadu is believed to have constructed the vimana⁶ (structure over the sanctum); the temple was the only temple that Malik Kafur (1296-1316 CE) could not conquer in 1311 CE, during his South Indian expedition. The temple is a declared monument of the Archaeological Survey of India on account of the inscriptions in the temple.

Social life

A detailed and analytical study of the inscriptions from the temple throw light on the composition of various communities of the Thiruverumbur and reveal the nature of interaction that the temple had with the people of the town like Brahmins, Vellalars, Merchants, Potters, Goldsmiths, Carpenters and Mandradis. The caste was the basis of the social organization under the Cholas society was divided into number of social groups or castes. Each caste was hereditary and constituted an occupational group. Brahmanas occupied a privilege position in the society.⁷ They were exempted from taxes, owned and enjoyed land with full royal support. Their main duties included learning and teaching of the Vedas and performing rituals and ceremonies. Some of

them served as chief priests of the temple. The *vellalars* mentioned in an epigraph of this temple proves that they will be the backbone of the society. Their professions were not only cultivation but also cattle breeding, business, weaving and service to the twice born. They acted as high officials in the Chola administration, particularly, in revenue field. Next to the *vellalars*, the merchant class formed a vital link in the economic fabric of this place.⁸ There are inscriptions conveying news of endowments to the temples by the trading community. The position of women in the Chola society was of a special significance. They were experts in religious literature and *puranas*. Property right had been conferred on them. They liberally made endowments to the temple. The temple epigraphs show in detail the social condition of Tamilnadu during the time of Aditya I, the author of the Erumbeeswara temple at Thiruverumbur.

Economic Condition

The temple occupied the place of importance in the history of medieval South India. It constituted a powerful economic entity. The temples were not only the place of worship but also the focus of the material life of the people. The Erumbeeswara temple at Thiruverumbur has played an important role as landholder, consumer of goods, employer, banker and the like. The inscriptions which are engraved on the walls of this temple provide a lot of information with regard to the economic condition of the locality.

The temples were maintained with royal benefaction and public patronage. One can understand the economy of the place from the inscriptions relating to the sale and purchase of lands, provision of the irrigation facilities, conduct of *pujas* and festivals, protection of the property of the temples, the upkeep of the temple premises, the construction of the building and several other works. In short, the Erumbeeswara temple was the centre of economy of Thiruverumbur. The inscriptions in this temple reflects the economy of the town.⁹

More than 49 inscriptions from the temple refer to the land transactions such as purchase, sale, donation of land and laying new streets, designs, remission of taxes to the land attached to the temple, etc. From these one can

understand the main aspects of the economy of Thiruverumbur area.

Temple as Bank

Temple treasuries served as local banks. The temples lend money to private bodies and village assemblies for cultivation, with or without security. Parents in order to perform the marriage of their daughters drew as loan money from the temple treasury. In times of distress temples helped the people and the unrealisable debts were rounded up by the purchase of the debtor's land.¹⁰

Temple as a big consumer

The temples are big consumers of milk and milk products, flowers, rice and other consumer items for various services connected with worship. Since *pujas* and festivals in the temples have prospered in recent times, there is an ever increasing demand for coconuts, sandal wood, rice, turmeric, incense, leaves, flowers, lights, ghee, salt, pepper, *areca nut*, betel leaves, oil, mustard, pulses, sugar, plantain, curd, camphor etc., There have been donations for these articles to the temples by many philanthropists. The inscriptions of Erumbeeswara temple at Thiruverumbur mention that there have been generous endowments of paddy, rice, vegetables, edible oil and other articles for *nivethanam*, *Tirupallitamam*, *tirumanjanam*, and burning of lamps.¹¹

Taxation

Every Government has its revenue as its life line. The Government gets its revenue through several ways and sources. One of them is the various taxes collected from the people. There are sufficient evidences to show that the tax was collected in the Sangam Age.¹² Though the word tax is not directly mentioned the word, *Irai* denoted tax. In those times land tax was fixed on the basis of fertility of the land, irrigational facilities and the relationship of the tiller of the soil and the land owner. From an inscription of Erumbeeswara temple the various taxes prevalent during the Cholas period are learned. They were called *Nilavari*, *Piravari*, *minpattam*, *tari-irai*, *tattar pattam*, *kadi-ayam*, and *Arasuperu*.¹³

Units of Land Measurement

In order to collect the above mentioned taxes, the land, particularly, tax land was measured by different units called *vatika* or *veli*, *kani*, *kuli*, and *kol*. A basic measurement for measuring land was through *Adikol* which means rod of Adi (equal to the present day one foot) Inscription mentions the name *panniradikol* the rod of 12 feet length. One square of *panniradikol* form 1 *kuli* and hundred *kuli* formed one *ma*. Based on the one foot measurement, measurements of lands were made and different units were formed with a specific name for each unit. They are discussed one by one here under.

Vatika or Veli: *Vatika* is a Sanskrit term representing a unit measure of land. It corresponds to *veli*, a unit measure of length. *Veli* was divided into 1/2, 1/4, 1/8, 1/20, 1/80 and 1/320.

Kani: *Kani* is a unit. It is 1/80th of a *veli*. One *veli* is equal to 20 *ma* and one *ma* is equal to four *kani*. One hundred *kuli* also formed one *kani*.

Kuli: *Kuli* a popular term used even now in Tamilnadu, is a unit of measurement for measuring land. *Kuli* also means a pit but in this context it is to be taken only as a unit of measurement. It is generally considered that it is an area spreading over 10 feet by 2 ½ feet square or 10 feet by 2 feet.

In their period there were several units of measurement. They were,

16 <i>chan</i>	-	1 <i>kol</i>
18 <i>kol</i>	-	1 <i>kuli</i>
100 <i>kuli</i>	-	1 <i>ma</i>
1 <i>ma</i>	-	4 <i>kani</i>
1 <i>kani</i>	-	4 <i>mundrikai</i>
1 <i>mundrikai</i>	-	1/320 <i>veli</i>
240 <i>kuli</i>	-	1 <i>pataka</i>
20 <i>ma</i>	-	1 <i>veli</i>

The inscriptions of Erumbeeswara temple belonging to the Chola period describe land measurement as *Mukkal*, *Kani*, *Ma*, *Mundrikai*, *Kuli*, and *Veli*.¹⁴

Coins

The general terms to denote coins were *kasu*, *panam*, *achchu*, *tiraman*, *pon varadham*, *madai*, *kalanju*, *akkam* etc. They meant different denominations were also there in the above said designations. No specific difference has been noticed in respect of the metal of the coins in inscriptions. Some inscriptions specifically mention the denomination of the coins along with the metal which is invariably gold. However, copper coins were in circulation in large numbers during the Chola period. It appears that the general name for the copper coin was *Kasu*.¹⁵

It is not at all possible to know the correct weight of these coins with respect to their denominations. It is also not possible to identify and associate at present the available coins with their respective names and denominations. More important among the coins were their denominations which had a uniform system of weight and purity of metal. The main denomination was the *kalanju*. *Kalanju* was equal to twenty *manjadi* and one *manjadi* was equal to two *kurunis* and one *kuruni* was equal to two grains. Thus, a *Kalanju* consisted of eighty grains.

Weights and Measures

The standard weight systems seem to be the *manjadi*, *kalanju* and *palam* during the Chola period. The grain measures that were in vogue in the temple in various times were the *kalam*, *tuni*, *paddakku*, *kuruni* and *nali*. The Erumbeeswara temple enjoyed the privilege of receiving the regular supply of different things like milk, butter, ghee, oils, etc for daily use. The liquid measures that were in usage in the temple were *nali*, *uri*, *ullakku*, *allakku*, and *sevedu*.¹⁶ The *ullakku* was a vessel for measuring the oil.

Liquid and grain measures

2 <i>Sevidu</i>	=	1 <i>Pidi</i>
5 <i>Sevidu</i>	=	1 <i>Alakku</i>
2 <i>Alakku</i>	=	1 <i>Uri</i>
2 <i>Uri</i>	=	1 <i>Nali</i>
8 <i>Nali</i>	=	1 <i>Kuruni</i>
2 <i>Kuruni</i>	=	1 <i>Padakku</i>
2 <i>Padaku</i>	=	1 <i>Tuni</i> or <i>Kadi</i>
3 <i>Tuni</i>	=	1 <i>Kalam</i>

Thus, Erumbeeswara temple at Thiruverumbur has become an integral part of social and economic lives of the people. On account of the temple having economic production and irrigational rights, it was in a

position to dominate the life of the village. From the discussion, it can be seen that this temple became the centre of people's activities and the temple played a vital role in the growth of socio-economic aspects of their life.

THE REVENUE SYSTEM IN DHARMAPURI DISTRICT: FROM 10TH CENTURY TO 16TH CENTURY CE

S. Vishvabharathi & K. Karuppasamy Pandian

Introduction

The revenue system of Dharmapuri district is better understood now with the help of inscriptions found in the district. They offer a major breakthrough in this subject. This paper focuses its attention on the nature of different aspects of revenue system in Dharmapuri district from 10th Century CE to 16th Century Current CE; the period represent the reign of Imperial Cholas to Vijayanagara. For want of the basic classification and forming a concordance of the names of the taxes inscriptions of former composite Dharmapuri district i.e., which includes present day Krishnagiri district are also considered into the study account.

Taxation

Inscriptions and literature show the taxes were called 'Kara' or 'Irai'; whereas the tributes were called 'Tirai' and the custom duties and tolls were 'Sungam'. All these were generally by the name 'Vari', and in later Tamil polity a department in charge of levying any variety of taxes were called 'Variam'.

State income was collected from various sources. Land revenue was prominent amongst all taxes. Agricultural products and trade goods were also taxed. Likewise professional tax and business taxes were also imposed. Copper plates reveal that, tax lands were donated in the name 'Iraieli lands'.

Reigns in Dharmapuri

After Sangam Era and Kalapirar reign; Kanchi Palavas established their supremacy in composite Dharmapuri district. Composite Dharmapuri district possessed inscriptions from 5th cen. CE to 19th cen. CE. Leaving the 17th and 19th cen. inscriptions they may be grouped in to:

- 1) 5th to 9th cen. CE- Period of Feudatory rule.
- 2) 10th to 12th cen. CE- Rule of Cholas,
- 3) 13th cen. CE- Rule of Hysolas
- 4) 14th to 16th cen. CE – Rule of Vijayanagara.

Levies in 10th to 12th Century CE

Cholas were the first direct rulers of this province in the medieval period. However, the inscriptions of either the Ganga, Bana, Nulamba

feudatories or Cholas did not reveal any revenue or levy names. The inscriptions inscribed in the reign of Hoysola and Vijayanagara show numerous kinds of taxes levied on various sectors. Some of them were never been understood and what for it was levied.

After Cholas the scenario of composite Dharmapuri district was no different with that of rest of Tamil Nadu. The taxes imposed at time and spaces were just comparable with that of Chola and Pandya country. However, only from 12th Cen CE onwards particularly from the reign of Hysola the detail and names of levies were obtainable from inscriptions.

Levies in 12th Cen. CE

From the earliest time trading activities were subjected to tax. They were in different names. The 12th Cen. CE inscriptions of Composite Dharmapuri district records two different kinds of taxes namely 'Sariyai' and 'Sungam'. 'Sungam' may be considered as the tax on goods handled by the business communities both imported from faraway countries and indigenous goods moved from one place to another place through a trade route.

Levies in 13th century CE - Reign of Hysola

However from 13th Cen. CE onwards we could see clear information of taxes from inscription. Primarily two different kinds of taxes namely the 'Kadamai' and 'Kudimai' were mentioned in this specified period inscription. It was understood that 'Kadamai' was a common name for tax. 'Kudimai' was a tax imposed particularly on 'agrarian' society.¹

The 13th cen. inscriptions further records 'Sithayam'², 'Payarugamam', 'Vichuppattam', 'Asuvamvetti', 'Amsaisarigai',³ 'Kuthirai Sarigai'⁴, 'Kalyanatham'⁵, 'Thattarpattam'⁶, 'Kadamai'⁷, 'Kelvi nivantham', 'Irasaya nivantham', 'Siththayap pon'⁸ 'Adimai Sarigai'⁹ 'Puraththaragu' and 'Kaiyadith tharagu'¹⁰, 'Manai thirai'¹¹, 'Thari irai'¹²

Besides above taxes, we came over the names of numerous in kinds of tax names imposed during the reign of Hysola's. About nineteen of them were noticed from the inscriptions. They are: 'Athigari jevetham'¹³, 'Alumaalum jevetham'¹⁴, 'Kanikkai'¹⁵,

'Kaniyayan', 'Kattukkuththagai', 'Karpura kanikkai', 'Keelthandu', 'Kuthirai usagai', 'Siththayam', 'Sillantharayankal', 'Mallu thinam', 'Puththirai', 'Pudukkanikkai', 'Thariyerai', 'Thigai ponvazhi', 'Melthandu', 'Adaimaniyam', 'Kutangai Maniyam'¹⁶, 'Kalyanathayam'.¹⁷ Some of above taxes the nature and basis of taxation were unclear.

Levies in 14th CE- Reign of Vijayanagara

The scenario in 14th century inscriptions are little different from that of earlier period. 'Kadamai', 'Kudimai'¹⁸, 'Sarigai', 'Sugam'¹⁹, 'Pattadai', 'Eruthu kolmaru' 'Vellayam',²⁰ 'Kanikkai'²¹, 'Thari yerai' 'Thattar pattam', 'Kuthirai Sarigai', 'Kuthirai sungam', 'Vandich sungam'²², 'Ina vari'²³ were recorded in this period.

Scenario in 15th century

'Magilmai' was mentioned as a tax in the 15th cen. CE inscriptions. as described earlier was a tax on trade. 'Magamai', 'Magammai' and 'Magazhalmal' were may be considered as same kind as Magilmai, however, there was a difference in opinion on its nature. S.Krshnamurthi & S.Selvaraj had noted that, the word 'Magamai' maybe derived from the word 'Maganmai'. Maganmai was considered to a levy for the sake of Temples and Catiram i.e., travellers inn.²⁴

The sandy shops were taxed in the name of 'Adikasu'. It first occurred in 15th cen. inscription. 'Allayam' was another kind of tax related with sandy. At the same time 'Vellayam' a kind of tax was also came in to the tax scene. It may a kind of tax imposed on agrarian society.

The existence of 'Pattadai' tax was exposed from 14th and 15th cen. CE inscriptions. Pattadai usually denotes the artisan group. Thus it may assume to be as imposed upon the artisan group named after them.

Besides all above said, the levies during the reign of Vijayanagara rule were also numerous in kinds, more than that of Hysolas. About thirty six of them were found in the inscriptions. They are: 'Anaithayangan'²⁵, 'Adimai Sarigai'²⁶, 'Amsai Sarigai'²⁷, 'Adikasu and Alukkasu'²⁸, 'Asuvam', 'Ayam' and 'Ulayam'²⁹ 'Kanam'³⁰, 'Kalyanathayam' and 'Kaliyanathayam'³¹, 'Kadamai', 'Kudimai'³², 'Kuthirai Sarigai'³³,

'Kuthirai Pathagam and Kuthirai kuzhi sungam'³⁴, 'Kuttuvadagai'³⁵, 'Sarigai', 'Sungam' and 'Magazhmai'³⁶, 'Pattadai'³⁷, 'Vellayam'³⁸, 'Vellaya Sungam'³⁹, 'Thattar pattam'⁴⁰, 'Payaruganam and Vichuppattam'⁴¹, 'Siththayam'⁴², 'Sarivaram'⁴³, 'Chettiyar magamai' and 'Allaya manyam'⁴⁴, 'Kudangai maniam'⁴⁵, 'Kavundu maniyam' and 'Peru sungam'⁴⁶, 'Vetti' and 'Vellappadi'⁴⁷, 'Naduthalavarikkai.'⁴⁸

The levy on Kudirai i.e., horse was mentioned as 'Kuthirai Sungam' in the 15th century; the same was called as 'Kuthirai usagai' in 16th Cen. CE inscriptions.

Scenario in 16th century-

Scenario from 16th CE onwards shows some unclear picture of taxation in this region. One important notice was the levy on Kudirai i.e., horse was mentioned as 'Kuthirai usagai' in the 16th cen. CE inscriptions. As said earlier the same was called as 'Kuthirai Sungam' in the 15th century. 'Karpura Kanikkai' a kind of tax was also existed in 16th CE too. Kanikkai in Tamil means to a 'donation'. Inscriptions from Chola-Pandiya countries show a tax in the name of 'Karpura vilai'; it was identified as "sale price paid for temple land; price paid for cultivation rights to temple lands and commutation of the taxes thereon."⁴⁹ Therefore the Karpura Kanikkai may be considered as the tax on the land or the crop donated to the temple. 'Kuthirai Sarigai' was another name to tax imposed on horses. were imposed by a tax called 'Kannalathayam', later inscriptions claims it as 'Kannalam' and 'Maduvai'. Maduvai is a Kannada word means to marriage.

General category

In general category, 'Ullayam', 'Naleruthu', 'Narpasu', 'Kolmaru', 'Sungam', 'Thalvarigai' were heard upon. 'Naleruthu', 'Narpasu', maybe taxes forced on the cattle growers such as Idaiyar, Kovers and Mandadiyars. The 16th cen. inscriptions mention the name of the taxes 'Keel Thandu', 'Mel Thandu'. Both theses may be compared with Pandya country's 'Keel Irai' and 'Mel Irai' taxes. The word 'Thandu' means to tax thus derived the word 'Thandam'. Besides theses 'Malluthanam', 'Thikkai', 'Alumaalu Jevitham', 'Athigari Jevitham', 'Pudukanikkai', 'Puththirai', 'Vadagai ayam', 'Rayasa nivantham', 'Kelvi nivantham' were also mentioned in the inscriptions. Amongst these 'Rayasa nivantham' was considered as registration fee.

Tax on Thevathana villages

'Siththayap pon', 'Rasaya nivantham', 'Kelvi nivantham' were kinds of taxes levied on Thevathana villages.⁵⁰ However it was not clear how they were imposed, they may be levied on artisan group working in these villages.

Collection of taxes

There was no clear reference is available on how the taxes were collected, and by home and how it was directed to the government treasury. However Ko.Ma. Ramachandran had described with the help of inscriptions from Kongu province that 'during the Ganga reign, each village had a village head and an accountant. They administered the village and were responsible for tax collection in the village. They collect taxes from the public and pay the king their rightful portion of tax.'⁵¹ The same may be considered for the composite Dharmapuri district too,

Harassment free collection of taxes might be used by the officiating persons. During the Viraramanathan reign, a royal order was issued for beheading as punishment for those officials and accountants misbehave public and demand food from the public while they were on their duty of collection of tax or on village duty.⁵² This may reveal the fact those who collect tax by torturing public were subjected to stringent punishment. One copper plate records, during the Nayaks rule, the Viramuttigals, tax collectors when officiate to collect tax from Vetkovers used violence on them, but, when they came to know about the exception of tax for the Vetkovers they, they turned back, devoid from tax collection from them.⁵³ This reveals the fact that some times the officials used violence in collection of tax.⁵⁴

Conclusion

The revenue system of Dharmapuri (Composite Dharmapuri district) district during the reign of Imperial Cholas, considering properly with inscription shows less names of levies; though it this region was in direct control of the Cholas. This scenario is quite contrast to the rest of Tamil Nadu. Thus we may conclude that the progress of economy of the district was very slow, and transformation into agrarian society from pastoral and Agro pastoral was that quickly happened. Dr.Y. Subrayalu's assessment⁵⁵ may be kindly noted and compared here, according to him "Though

nearly four hundred and twenty taxes are named during the four centuries of Chola state, only about five percent of them was significant, if we considered the frequency of their occurrence area-wise and time wise." The real economic development plans involving the common man was implemented in the reigns of from later Chola's and Hysolas; the development was set forth with agricultural development by means of

developing irrigation facilities and establishing lakes and ponds. There after the economy of Thagadoor province transformed in to an agro-pastoral economy. However it ever became a pure agro based; irrespective of hectic activity of Vijayanagara and Nayak rulers. However the business, professional class and trade activity was never witnessed a fall.

FORT ST.GEORGE : A TRADING HUB OF COROMANDEL COAST IN BRITISH ERA

P. Arumugasamy & B. Hameed Basha

The purpose of the article is evaluating the potential of Fort St.Geroge as a trading hub of Coromandel Coast in British Era. The key question is whether the Coromandel was a great platform to the trade and commerce to the

Europeans. Fort St. Gorge was a vital and thriving trade center in colonial period in the Eastern coast of India, especially Coromandel Coast. Europeans were arrived India after the discovery of sea-route from Europe to India. They

came to India for main purpose to establish their trade activities. On the consequences, the British East India Company was informed in Britain for the specific purpose of pursuing trade with India and China. Fort St. Gorge was a vital and thriving trade centre in colonial period in the Eastern coast of India, especially Coromandel Coast. Europeans were arrived India after the discovery

of sea-route from Europe to India. They came to India for main purpose to establish their trade activities. On the consequences, the British East India Company was informed in Britain for the specific purpose of pursuing trade with India and China. This study mainly focused on the significance of Coromandel coast and how Fort St.Geroge acted as trading hub in colonial era.

FOREST MANAGEMENT IN KANYAKUMARI DISTRICT - A STUDY

P. Jeyabalakrishnan

Kanyakumari District is located at southern tip of Peninsular India and bordered by Thiruvananthapuram district of Kerala state to the west and Tirunelveli District of Tamilnadu to the north and east. The forest in Kanyakumari District is verdant and virgin Forests and said to be of 75 million years old of the total district area 167130 ha. Government Forests occupy an area of 50486 Hectares which comes to about 30.2% the total District geographical area. The forest of Kanyakumari District was transferred from Kerala to Tamilnadu on 1st November 1956 as a result of the State reorganization. The forests of this Divisions (Part) i.e.: Boothapandy and

Mahendragiri R.F were previously managed by the District Forest Officer, Tirunelveli south Division with Head Quarters at Tirunelveli consequent on the formation of Kalakadu and Mundanthurai sanctuary, Kanyakumari Division was formed exclusively to manage the forests of Kanyakumari District with Head quarters at Nagercoil from 1.4.1977. There are fourteen types of forest from luxuriant tropical wet evergreen to tropical thorn forests. In this paper an attempt has been made to reveal how the forests in Kanyakumari District had been administered and its intricacies sorted out systematically were analyzed.

ECONOMIC EMPOWERMENT OF WOMEN IN TAMIL NADU

A. Naresh Kumar & R. Sthanislas

The empowerment of women is very essential for a nation. The freedom of life of a women brings enlightening not only the family but also the entire nation. In the modern era, the women are achieving great level in all the fields. They do business, caring family, business, science and technology and what not? Though they earn money, most of them are not empowered economically yet. Earnings of a married women help to lead a family. Mostly middle class women earnings are contribution more in the family development. But in many occasions, they

are not able to take financial decision in their life. Hence, this article is an attempt to study the economic empowerment, economic empowerment in India, women empowerment, economic in Tamil Nadu. Vellore region is the top exporter of finished Leather goods in the county. Vellore leather accounts for more than 37% of the country's export of leather and leather related products. The Government of India has released the next round of smart cities project list. The Tamil Nadu state district Vellore also got a place of the list of 27 cities in the project.

SREE NARAYANA GURU'S IDEAS AND PRACTICE OF TECHNOLOGY, CRAFT AND EMPLOYMENT ORIENTED EDUCATION

S.K. Remya

Human life is the most sacred of all creations of God and it is significant to point out that humans misuse the gifted blessing of God through their

activities. Education has played an important role in moulding human life. In pre- modern society of Kerala, the backward sections of society were

deprived of the enlightenment of education. The right to get education was the privilege of high caste people. In this regard Sree Narayana Guru of Kerala protested against social evils which prevailed in society. Liberation of any society is incomplete without educating the lowest and the

submerged sections of society. Education is the only solution to solve these ills in society. This ideology of educating the illiterate and relegated sections of society formed the basis of Sree Narayana Guru's ideology of education.

SITUATING WOMEN LABOURERS IN THE INDUSTRIES IN COLONIAL MALABAR

K.P. Shapna

The dawn of the twentieth century witnessed the establishment of large-scale industries in major cities of India. Simultaneously, small-scale industry also developed in the peripheral regions such as Malabar in Madras presidency. Malabar already had few cottage industries and both kinds of industries were operational and employed substantially with men and women. Research in India on workers has mostly been a male-centric exercise. In the late Nineties with the processual approach to the writings of history a few works had come up with the gender

perspective; but very few for the Malabar region. Extensive Studies were done regarding women in agrarian work by scholars but very limited studies were reported in industrial sector. The present study seeks to fill this vacuum by situating women workers in the small scale industries of Malabar. It also focuses on the socio-economic condition of women in the existing cottage industries and the society of Malabar. An Attempt is also made to fix up the women workers under the missionaries and capitalist owned industries of Malabar.

RYOTWARI SYSTEM'S CONSEQUENCES ON NIZAM POWER AND ECONOMY IN THE HYDERABAD STATE

Thunga Rampandu

One of the major Reasons for the Colonial intervention into Hyderabad State was the Maratha–Nizam wars, these wars led Nizam to sign into the Subsidiary Alliance, because, at that time Nizam didn't have that much of army power to bear the attacks of the Maratha troops. After the intervention of Britishers many changes occurred in the Hyderabad State. The strike is Ryotwari system which Economically weakened the Nizam's State along with the Local Landlords,

Deshmukhs and Deshpandeys, As of we all knew this Ryotwari system created huge demand to the land, as a result, this encouraged non-cultivating dominant communities to grab vast land through money lending, then much of the state land was gone into the hands of money lenders, landlords and rich peasants these all have created the new waves towards Semi-feudal society and weakened Nizam power.

SOURCES OF LAND REVENUE, LAND TAXES IN EARLY MEDIEVAL KARNATAKA: A CRITICAL REVIEW

L.C. Venkatachalapathi & N. Shaik Masthan

Land was the main source of revenue in medieval India as well as Karnataka and Agriculture was the source of wealth for State's and individuals. The early Indian works like Darmasatras, the Smritis, Abhilasitha-cintamani of Somesvara and Arthasasra of Kautilya give us

a complete picture of the land revenue and associated subjects. Inscriptions, being contemporary records, which constitute the most reliable source of information to write about the land revenue, differed with different dynasties at different times. Taxes which were existing in

medieval Karnataka were Land Taxes, Property Taxes, Profession Taxes, Commercial Taxes, Taxes on Industries, Social and Communal Taxes, Miscellaneous Taxes, Judicial Fines etc. Agriculture as a main occupation, prospered in the medieval life. In medieval Karnataka, it was as much a land of innumerable popular villages. They were more especially the Agraharas which were centres of economic activities, were richly endowed with natural vegetation, perennial water resources and fertile soil, and largely

utilized by the residents of the villages to ensure their economic prosperity. The revenue administration of the times still continues to be a fertile and virgin field of study for the scholars to explore the means and methods of the sources of revenue system, their collection, typology and its relation the state and the society. Hence, this paper is an attempt to make and analyze the land taxes in medieval Karnataka in its socio – economic and political way of life.

FISHERS SECTOR: PROBLEMS AND PROSPECTS IN THE GLOBALIZED SCENARIO

T. Vinayan

Fisheries sector one of the very important field of our economy faces many challenges in the present globalized world order. A very profound transformation took place in the field due to the ever excess capital investment. The Economic Life of Marine Fishers in Kerala presented a picture of great transformation due to several factors. In the early years of independence the condition of fisherfolk in the region is very pathetic. They lived in poor surroundings and they struggled to meet daily needs. The low earnings, absence of alternate jobs and exploitation of middle men brought their life deplorable. The faster involvement of both government and non-government agencies

helped a lot to improve the condition of fishers in the state. The various techniques adopted in the field of fishing side by side with the better price to the product helped them to stick on the field. The different schemes introduced for the fishermen also supported for their sustainable growth. The decreasing catch, climate change, increasing operating cost, etc. are the new challenges. At the same time attractive price for fish, excessive demand for marine products both in internal markets and abroad, new and advanced preservation techniques, product diversification, etc. gives new prospects to this sector.

SIGNIFICANCE OF ICTS AND ECONOMIC EMANCIPATION OF MANIPUR WOMEN FARMERS THROUGH EMA KEITHEL (MOTHERS' MARKET)

A.S. Worchipam

The paper analyses a distinctive market which is run only by the women named 'Ema Keithel' (Womens' Market) located at the heart of Imphal town, Manipur. Despite being a patriarchal society, the Ema Keithel has a unique position because of its function as controlling institution of women that affects and subsidises to the whole economy of the state. The market has been providing livelihood for the entire state from generation to generation. Being run only by

the women, this market play immeasurable role in empowering the women economically, politically and culturally. Although motivation for participating in agriculture and marketing is first to contribute to household food security and income, to withstand this productivity, it is necessary to understand women information need and importance of Information and communication Technologies (ICTs) as this will help close the resource access gap

SECTIONAL PRESIDENT'S ADDRESS - CULTURAL HISTORY SECTION
TERRACOTTA TRADITION IN EARLY CULTURES OF ANDHRADESA

Prof. P. Bhaskar Reddy

Mr. President and Fellow Delegates, I am grateful to the members of the executive committee of the South Indian History Congress for selecting me President of the Cultural History Section of its 40th annual session. Of all the academic honours that one could aspire for, nothing can be compared to the recognition of this kind coming from one's own co-workers. I would like to take this opportunity given to me to present before you my views and understanding of Terracotta Tradition in Early Cultures of Andhradesa.

Clay is the most easily pliable and versatile medium for preparing utilitarian objects such as pots and pans, as well as religious and aesthetic art objects. Man has experimented with the soft, plastic earthly material as medium of decoration or expression since hundreds of thousands years ago. However, the recorded usage of clay in potting varies between eight to ten thousand years in different parts of the world. Their utility and beauty of shapes go hand in hand and occupies a unique position by its distribution and characteristic features in different areas and periods. Thus pottery provides a rich data for understanding the past Cultures and studies on it attracted the attention of the Archaeologists.

In fine art, the word Terracotta (baked earth) is most commonly used to describe a type of sculpture, unglazed ceramic art, or decorative architecture, made from coarse, porous clay, which is noted for its versatility, cheapness and durability¹. Terracotta objects have been prepared and used by human beings from ancient time of human history in the form of household objects, ritual objects, aesthetic objects and sculptures along with pottery. The pottery and votive figurines found from Egypt and Mesopotamia are claimed to be among the earliest findings of terracotta. Terracotta art was prevalent in ancient Greece as early as 7th century BCE and throughout the Roman Empire². Terracotta antiquities represent unique repositories of information for archaeologists and art historians; they are excellent indicators of

cross-cultural exchange because they reflect the technical proficiency of artisans and the taste, trends, and orientations.

India too has a long antiquity of terracotta assemblages, reported from a large number of Pre-historic and Early Historic sites. The earliest evidence of clay modeling tradition of Indian sub-continent dates back to the ceramic Neolithic period of Mehrgarh in Baluchistan. Five unbaked clay figurines representing human and animal forms have been recovered from period I of Mehrgarh dated to end of 7th Millennium BCE³. The evidence of baked clay animal figurines occurs for the first time in the Indian subcontinent from Period III of Mehrgarh dated to c.4000 BCE. Terracotta or baked clay human figurines occur from Period IV onwards⁴. The stylistic evolution of these terracotta figurines has been noticed between Period IV and VII. The terracotta tradition was continued in good measures during the urban phase of Harappan civilization which flourished between 2700 BCE to 1750 BCE. The Indus valley sites at Harappa, Mohenjo-Daro, Chanhudaro, Lothal, Kalibangan, Banawali and others have yielded a vast range of terracotta objects-toys of birds, animals, wheeled carts, men and women, cult figures, especially mother goddess, beside other utilitarian potteries in great abundance. After the Harappan Civilization several regional copper using agrarian cultures emerged in the Indian sub-continent. During the early historic period various forms of terracotta figurines were found in different parts of India. The tradition of making terracotta figures came to south India almost at the same time as it did in north India. The clay figurines of each period of India's long history share the characteristic feature of the art style prevailing in a particular period, but at the same time they are marked by regional distinctions both in style and type. Andhradesa is one of such states where rich terracotta tradition was found. A Systematic study of the clay figurines made on regional basis is likely to prove a fruitful source of crafts, Art tradition and Cultural History.

Terracotta in Andhra

Andhra region (present states of Andhra Pradesh and Telangana) form a distinct territorial and Cultural unit on the southern side of the Vindhyan range in the Indian sub- continent. It has a rich fascinating range of art forms which are unique in style, theme concept form and expression. Terracotta tradition was one among them. The early agricultural and pastoral communities of the region had initiated the production of clay figurines for the ritualistic purposes from the Neolithic times. Archaeological excavations conducted by various organizations all over the Andhra region brought to light a variety of terracotta figurines in abundance in different forms and techniques belonged to different phases.

Terracotta in pre historic culture

The earliest datable terracotta specimens in Andhra region are reported from Veerapuram belonged to Neolithic period. Few fragments of terracotta bulls were recovered in the excavations conducted by Birla Archaeological and Cultural Research Institute, Hyderabad⁵. Variety of bull figures with projected horns without hump resembling the terracotta bull seal of Mohanjadaro and Harappa were noticed from Chinnamaruru⁶. The Neolithic habitation site at Palavoy has yielded 127 unbaked clay objects. All the specimens were found in the Neolithic levels of Palavoy excavations. They are irregular in shape. Several of them are elongated flattish; sometimes round with knob like projections. Some are even spherical but very small in size varying from 1.5 to 3.2 cm. in diameter. From the large number and amorphous nature of these objects they appear to be primitive play things for children. Besides a terracotta bull also recovered from the surface level of the site⁷. The terracotta bull bears red bands painted on the body and stylized animal heads probably attached to pots were noticed from Ramapuram⁸. It is interesting note here that Ramapuram is a vast prehistoric site and variety terracotta figurines consisted of Human figurines, animal figurines like dog, bull heads, humped bull were also noticed in 1981-82 excavations at Ramapuram. Crude and archaic forms of bulls were the earliest terracotta figurines recovered from the sites at Veerapuram, Ramapuram, Chinnamaruru and Palavoy etc. These clay forms were hand- modeled and undecorated.

Terracotta in early historic Culture

The early historic culture of Andhradesa can be divided into two phases. The first phase is marked by megalithic burials and iron usage and the second phase beginning from 300 BCE coincides with the presence of script, coinage, baked brick structures, maritime trade and phenomenal increase in trade activity and institutions.

Terracotta in Megalithic Culture

The utility of terracotta art objects appear to have been increased considerably in Andhra during the early Iron Age. The early Iron Age settlements in Andhra are characterized by the megalithic burials and distributed in wider region. Variety of terracotta figurines in large numbers were found in the Megalithic sites. It is evident that the megalithic builders of this region were producing and utilizing the terracotta objects of daily use. Lagged Sarcophagus in different forms and sizes were in use for disposal of the dead body. Terracotta sarcophagus with six legs in two rows and decorated with an appliqué band of finger impressions below the rim was noticed from the Megalithic burial at Peddamaruru. The practice of depositing or offering terracotta figurines of animals was also in vogue. The figurine of a buffalo, intended to be luted to one end of the Sarcophagus was recovered from Peddamaruru⁹. This is a unique example of artistic amplitude of clay modeling found in the Megalithic sites. The terracotta beads, pottery, shell, etched carnelian, animal bones and horns etc., were the other antiquities recovered from various levels. Long horned terracotta buffalo figure was reported from a Cist burial at Serupalli¹⁰. The figure of deer was obtained in the megalithic burial at Pochampadu along with several terracotta figurines of diminutive size and archaic features¹¹. Thus, the occurrence of terracotta bull in Neolithic-Chalcolithic sites, animal figurines in the megalithic burials and preparing the sarcophagi in animal form suggest the prevalence of some sort of cult worship/ belief among the Megalithic communities of the region. By about the 3rd century BCE, the megalithic settlements in the region had shown inter regional exchange and the impact of trade led to the greater extraction of 'surplus' of craft products in the localities for the purpose of trade.

Terracotta in pre- Satavahana age

The extension of Mauryan authority, introduction of Buddhism and opening up of the area for long distance trade, growth of agrarian settlements brought vital changes in Andhra region. The emergence of urban centers at Dhulikatta, Peddabankur, Kotilingala from pre – Satavahana times and their location on trade route connecting Vidarbha with the east coast were the main factors for commercial and artistic development and its exchanges. Terracotta craft became more popular in Andhra from 300 BCE in accordance with the aesthetic value of the society. A large number of terracotta figurines of human and animal forms belonged to pre-Satavahana age have been found from various excavations.

Terracotta in Satavahana age

The Satavahana period contributed immensely to the development of many artistic traditions culminating in adoption of new techniques and styles in various fields of art, architecture, sculpture and crafts. The new innovations in art forms were continued uninterrupted for the subsequent centuries. The terracottas of the Satavahana form a class of their own on account of their stylistic peculiarities and technique. Kondapur, Nagarjunakonda, Yeleswaram, Salihundam, Kotilingala, Peddabankur, Dhulikatta etc., were the important centers of terracotta craft during this period. The terracottas discovered in the above places were characterized by bold physiognomy and extremely sensitive modeling. Some of them are handmade and some are cast from single or double moulds. The terracotta making technique of Satavahana period was totally different from the earlier ones as it produced figurines in a free standing condition which were hollow inside. They mark a distinct technological advance when compared to the earlier ones¹². The technique of terracotta art of Andhradesa has followed a progressive course in different periods of history.

Archaic Terracotta

The hand-made figures modeling the clay to the desired shape found in various places of Andhra. These hand-made figures were made out of a single lump of clay pressed by hand into three parts. The top portion making the head is made into round mass without retouching.

Sometimes the nose was pinched and eyes executed in appliqué. The hands, legs, and breast were drawn out like pointed spikes¹³. They appear crude and show rough workmanship and look like totem symbols. These are generally designated by the archaeologists as “archaic” or “ageless” due to the fact that they cannot be ascribed to any particular period or style. This archaic terracotta category covers both human and animal forms found in the region from Megalithic to Satavahana periods.

It is interesting to mention here that female figurines were found more in the category of archaic human forms. These figures are characterized by featureless face and halo like dressing of hair locks. However, in some figures the hair is shown with incised lines. The hands are pinched and are in the form of pointed masses or horizontal tapering production without details. The breasts are protruding and pointed. The attenuated waist line with or without a navel has been broadened towards the hip. The back is flat. The similarity of the shape and sex (female) of many figures may indicate the fertility cult¹⁴. The archaic female figures which represent fertility cult recovered might be precursors of the later images of nude goddess popularly known as Lajjagauri¹⁵. These kinds of figures have a wide distribution in Andhra region found in many sites. The figures from Dhulikatta, Peddabankur and Nelakondapalli appear to have been cast out of the same mould. Apparently these figures were manufactured at one place and exported to other places¹⁶. There is one interesting hand-made terracotta figure of probably male wearing a head-gear recovered from Dhulikatta. The head-gear has a prominent brim with a jewel (rossete) attached to its right. The eyes and ears are made in appliqué. The mouth is open to simulate a laugh. The figure appears to be the mouth of a water jar. This may be a unique figure and without any parallel so far found in India¹⁷. Among the animal figures bulls occupy a prominent place which occur right from Neo-chalcolithic to early historic times, where as the figurines of buffalo, elephant, boar, ram, dog, deer, birds and others occur from the Megalithic period onwards. The crude figurines of bovine animals, such as bull, etc., are characteristic of the proto-historic period, but stylistically they cannot be attributed to any particular phase. Some of the archaic terracottas may be compared with those

found at Bhita, Kausambi, Pataliputra, Ahichatra, Mathura, Yeleswaram, Nagarjunakonda etc¹⁸.

Molded Terracotta in Andhra

The Satavahana terracottas mark a distinct technological advancement, for the technique employed in the fashioning the terracotta figurines is a highly specialized one, and marks a departure from that followed earlier in the north, especially in the Gangetic valley¹⁹. In the progress of terracotta manufacturing technology mould was initiated and used extensively in the region from around 2nd BCE. The earlier technique of hand-modeling and production of archaic forms were modified by the use of moulds. Single molded form of terracotta was the intermediate stage between the archaic form and double molded sumptuous figures. In the Mauryan terracottas, one notices that the head was produced from a mould and was attached to the body which was modeled by hand. Further development takes place in the Sunga period when the entire figurines was produced from a single mould, and hence had a flat back like a plaque²⁰. Such single molded human and animal figures were found in Andhra at Kondapur, Nagarjunakonda, Yeleswaram and Salihundam. It is evident that the production of terracotta in Andhra region was marked by distinct chronological periods with an emphasis on technical and stylistically peculiarities. However, regional variations are found in the proportions of the modeled forms and objects²¹.

The next stage of terracotta art of Andhra is marked by the use of double moulds. The Satavahana period is significant for the imitation and mastery of the double mould technique. It is the fact that the technique of double mould almost changed the concept of terracotta art and made easy for production in large scale.

A noteworthy advance was made in the Satavahana era when figurines in the round were produced by employing a novel technique. It was a specialized technique which produced terracotta figurines like free standing sculpture. For this, two different moulds, one for the front and the other for the back, were made. A thin layer of clay was pressed in each mould which resulted in producing two halves of a figure. They were then joined together by a thin ribbon of clay. The figure thus produced was hollow from inside. Some of the Satavahana terracotta has

holes in places which were apparently intended for letting out the hot expanded air resulting from firing. From a close examination of some specimens it appears that the two different moulds were placed in a master cover. This is evident from a thin line at the joint²². Regarding this technological advancement Deshpande M N observes "Technique employed in the making of double molded figurines is very interesting and highly specialized craft, which probably inspired by the western Artisans". He also stated that this technique was fully developed in about the 1st century BCE when the enterprising traders from the west were busy in exchanging their products with those from Deccan²³.

II

The other characteristic feature distinguishing from others is the material which they were made. The black cotton soil of the Deccan is not suitable for making terracottas, and Satavahana potters therefore used different but far superior clay- kaolin. It is creamish in colour and is of extremely fine quality and hence the smoothness and the luminosity that characterizes the Satavahana terracottas²⁴. Apart from kaolin, clay was also used for modeling other objects of daily use, including those with utilitarian value.

III

Double molded figurines made of both levigated clay as well as kaolin have been noticed in the entire Andhra region. The terracottas produced by this technique are diverse and specific. These figurines include male and figurines with elaborate head dress, amorous couples, females in alluring posture, female with a child (ankadhatri), yakshas and yakshinis in various standing postures, mother Goddess, figures seated on animals, bulls, horses, elephants, rams and birds like cocks, sparrows, parrots etc,. Finest specimens of human and animal forms cast out of double moulds of the Satavahana period are recorded from Peddabankur, Dhulikatta, Kotilingala, Kondapur, Nagarjunakonda, Yeleswaram etc,.

Yeleswaram was one of the important centers for this craft and hundreds of terracotta objects were recovered. Most of the figurines belonged to the cult images such as nude Goddess, Mithunas or Dampati, Yaksha-Yakshini group. The secular figures include male or female

figurines, animals, birds, ornaments, lamps, toy-carts, seals and sealing etc²⁵. It is very important to note here that at Yeleswaram the entire technique of manufacturing terracotta figurines was revealed by the presence of hand modeled figurines and moulds used for taking casts. Fine terracotta double moulds of mother Goddess, a Scythian soldier, ram, and mould for making designed miniature pots, mould for stamping on bigger pots were recovered from Yeleswaram. The double mould of ram at Yeleswaram is hollow at the base. The two moulds of the rear and front portions must have been tied with a thread outside and wet clay was pressed in through the hollow which is wide enough to allow the thumb inside to press the clay over the negative. The moulds of human figure also have holes at the base but are narrow for the insertion of clay with fingers²⁶.

The terracotta figurines recovered from Kondapur show highly developed skill in modeling, a keen sense for realistic effect and lively imagination for inner expression and artistic detail. Female figurines in different forms and style, Yaksha and yakshini, mother goddess, animal and birds were found plenty²⁷. The terracotta specimens noticed from Kotilingala includes, human figurines such as heads of male (one figure with head gear comprises of turban, and other represented by low, wide open eyes, blunt nose and thick lips, bald head without hair), and animal figurines of pig, elephant, doll, bull, horse, and other objects include circular cart wheel with spokes, rim, hub and a hole, dabbers etc²⁸.

Thousands of terracotta objects consisted of human, cult figurines, yaksha and yakshi, animal, bird, decorative and utilitarian in different forms and technique, besides moulds, belonged to Satavahana and Ikshvaku periods were noticed from Nagarjunakonda. The terracotta figurines of Nagarjunakonda have a distinctive place in its technological and artistic features²⁹. The *yakshis* belonged to Ikshvaku period were even more dexterously molded with interesting head-gear, hair style etc., which are also paralleled in stone sculpture with similar facial features. It is very important to note here that thousands of figurines were discovered from Yeleswaram and Nagarjunakonda excavations, which now submerged under the waters of the Nagarjunasagar dam.

IV

It is evident from above that there was a spectacular growth of terracotta art in Andhra during the first three centuries of Christian era. One notable development is the art features of human and animal figures. They are robust with prominent features and the modeling is quite realistic. Some characteristics are distinguishing them from others. Foremost among them are the figurines of the mother goddess. There are three types of mother goddesses cast-out of double moulds. The first one is modeled with outstretched hands and arms lifted. She wears a *makara* type of head-dress and ornamented with a necklace, waist-band, *kankanas*, etc. The face and hair style are quite typical of local style. The flowing hair is beautifully made into a black-knot at the end.

The second type is made of kaolin which appears to have universal distribution found among the early historical sites of South India. The left hand of the goddess simply rests on her thigh, while her right hand holds on a fruit bunch. A parrot perching on her right arm is nudging her breast with its bill. She is profusely decorated with a broad necklace ending in a locket above the prominent navel, the bangles, a beaded waist-band of double rows and Keyura above the feet. In some figures she wears *yajnopavita* and a beaded necklace with a leaf pendant.

The third type of Mother Goddess is made of finely levigated clay found at Dhulikatta. The goddess holds her breasts with her hands below. She wears a beaded *yajnopavita*, ornaments and beautifully combed hairs towards right. The ornaments such as the *kankanas*, *keyuras*, and the *lalatika* (crest jewel) are in a pleasing harmony with the smiling expression of a benign Goddess, depicted with parted lips, narrow eyes and bulbous cheeks³⁰.

Another noteworthy class of female figure is mother and child found at Nagarjunakonda and Yeleswaram. The lady is shown standing with right arm at rest and left supporting the child (*Ankadhatri*). Some male and female figurines have elaborated coiffure, costumes, head dresses and exquisite jewellery³¹.

Animal and bird forms in double molded terracotta appeared in a considerable number in various places. Satavahana artists also specialized in modeling the animal figures which

are realistically and sensitively portrayed³². Some of them are considered classic and superior to any of those produced later. Extreme care was taken to model the features and special types were introduced, such as sculptural group compositions, which have parallels in the contemporary art that was popular in western Deccan rock-cut architecture³³. Among the animals Horses were noticed in large numbers and bulls occupy the next place. The Elephants, rams, boars, monkeys, certain hybrid types with bodies of animals and birds such as cocks, sparrows etc., were also found. Apart from above, terracotta ornaments like ear-rings, bangles, pendants and armlets and others in various designs were recovered. The most interesting example is a beautiful modeled Chaitya window motif in terracotta recovered from Nagarjunakonda excavations³⁴. It is important note here that along with terracotta during the Vishnukundin period stucco objects of human, animal, and decorative objects were noticed from Kesaragutta and the figure of life size Buddha recovered from Phanigiri.

SUMMARY AND REMARKS

Thus Andhradesa is a lucrative region for studying terracottas as it has a long, rich and continuous presence of terracotta art from Neolithic time upto Vishnukundin period with so many forms, style and technique. Nearly 54 find spots distributed all over the Andhra and Telangana regions in the domain of Satavahanas, Ikshvakus and Vishnukundins have yielded terracottas in profusion. The artisans of Andhra were successful in the terracotta craft to produce highly skilled and sumptuous figurines with elaborate typology and advanced technology. This tradition even flourished in contemporary society in several forms and design.

Despite the profuse occurrence of terracotta objects from various archeological sites of Andhra, systematic attempts to catalogue and classify the findings have been very limited. The excavation reports mostly contain the description of the findings with short analysis with respect to a particular issue. Further reports were not published regularly to incorporate the new findings. Moreover, several finds collected both from surface as well as excavations do not contain full details of the locations at which they were found or any information about the cultural

context. In the museums of Andhra and Telangana only selected terracotta figurines are in display and some figurines are in their possession of reserve collection. Thus, the terracotta are either not put into proper documenting or classification method or the data is not synthesized meaningfully in order to understand the life style of the people, socio-economic condition, traditions, technology, production, marketing and exchange etc.. Thus in this presentation I have taken the face value of the excavator's interpretations and reluctant to question the inferences of the excavator assuming the fact that the excavator's observance should not be questioned much.

Due to inadequate recorded information the researchers mostly concentrated on terracotta production technology and the art features of some selected objects by using the different ways of clubbing the available information. The most concentrated areas of descriptive studies are that of concept fertility, mother goddess, stylistic analysis, classification, and technological aspects of terracotta art. Art historians depended primarily on stylistic analogy "a method where an object's temporal position is determined by comparing it with stylistically similar objects recovered from excavated sites of North India". The terracotta tradition in Andhra has not yet been studied scientifically the background of the cultural sequences. Explorations and Excavations at the sites mentioned above seem to indicate that terracotta as a form of social, religious and aesthetic articulation in the regions south of the Vindhya was associated with the growth of urban culture in the region of Satavahana and Ikshvaku domain. The studies so far are very limited in Andhra and required to see the comprehensive account and also the presence of non-material aspects of society and culture linked to the apparent material presence of terracotta. More research on multidimensional aspects of terracotta is needed for deeper understanding of the rich terracotta traditions and its interrelated facets of culture and institutions.

The terracotta materials recorded so far from various excavated sites of Andhradesa are given in Appendix which may serve as consolidated base for further research in the said field.

ARABI-MALAYALAM POETRY AND FOLKLORE LITERATURE

P.A. Ajmal

INTRODUCTION

Origin and development of Arabi-Malayalam

Arabi-Malayalam is a system of writing Malayalam language in a variant form of Arabic script. It is a blend of Malayalam grammatical base, Arabic script with special orthographic features, and vocabulary from Malayalam, Arabic, Tamil, Urdu and Persian (Ali, 1995). This language was originated in the South Indian region of the Malabar; today the script is mainly

used in Malasiya and Singapore by the migrant Muslim community. It is also used to teach Malayalam in Madrassas of Kerala and Lakshadweep. Until the twentieth century, the script was widely taught to all Muslims in Kerala, including the women. Most of the Mappila songs were written in Arabi-Malayalam script. The earliest known such work is the '*Muhyadheen Mala*'; written in 1607. Over the centuries, almost 3000 Arabic words used in Arabi-Malayalam came to be assimilated to the Malayalam

language. Many of them relate to law, administration, and commerce, indicating the areas where the Muslim influenced, especially in the lands under Zamorin (Rolland E. Miller, 1992).

Arabi-Malayalam becomes relevant because of the cultural originality in their tunes which came from generations to generations. The creativity in the tunes is of importance because it is known to even the illiterate. Folk songs reflect life in them unlike the short-lived instrumental music in films. A scientific research is necessary in the field of Mappila songs in which magical realism flows through the veins. To the Muslim women to whom education was prohibited, Mappila songs, especially Mappila songs in Arabi-Malayalam were a rising song given by the invasive Muslim civilization. It is not different in other societies also (Ali, 1995).

Significance of the language

It was the presence of a Semitic society which came to Kasargode along with the ship of Malik-ibn-Dinar. Sermons did not establish the presence of that society and stand the test of time. They successfully got mixed with the native culture of Kerala. It is a result of that kind of unification that a Mappila song culture is prevalent for generations in the Mogral village in Kasargode district of Kerala (Ibrahim Kuju A.P, 1998).

Mappila songs were raising songs and declaration of freedom for Muslim women who were denied education by the vested interests of priesthood and the male domination. The acceptance to Mappila songs in which Allah (God), Prophet, and Caliphates were the characters were beyond what their authors had thought. The '*malas*' (songs) are rich with hero worship and there are heroines also like '*Mohiyatheen Mala*' and '*Nafeesth Mala*'. Music is used medical treatments now. It is not so long before that to console a woman giving pregnancy women sat around sang Nafeesath Mala. There were songs to give spirit to the warrior going for battle also. There are lullabies and funny songs in Arabi-Malayalam which still people sing.

Arabi-Malayalam songs are influenced by magical realism a lot. The message from the immortal art forms, and even the doubts which they arise influence people's minds. Theatre and

music have an integral part of the social changes in Kerala. Literacy was the guiding light for renaissance. Art can shed light in people's mind and trigger revolution. Even though there are Mappila songs in Arabi-Malayalam and pure Malayalam which influence people irrespective of their age, beyond entertainment its influence spreads on the background of God worship and hero worship. Therefore Mappila songs in Arabi-Malayalam are treasures in language and culture. Art and music forms are symbols of a live society. Arabi-Malayalam songs could be seen as agents of indirect woman empowerment (Balakrishnan V, 2006).

There are songs for every occasion like birth, death, marriage, and feast, offerings to God, football, agriculture, battles and love not only in Malayalam but also in Kannada. There are set rules and grammar for this range of music also. The works of T. Ubaid and Moyinkutty Vaidyar, a new generation of Mappila song writers and instant poets are a unique experience in the village of Morgal in Kasargode. A generation in whose veins the sweet tunes of Mappila songs dissolve will make anyone wonder. The style of their singing underlines the humanitarian face of music. It is not only language but also the culture which is being transferred with the songs. Arabi-Malayalam which shed the light of informal education for the Muslim woman who was denied literacy and education could only be seen as a streak of light in the dark cloudy sky when viewed through the rear view mirror of time. Mappila songs written on the fourth Khalifa Ali radiating hero worship could be read on the grounds of Shiaism (Ibid, p.28).

Mappila songs shouldn't be rated on the basis of new trends and popularity. This poetic stream of self-expression should be read on the basis of literary values as well as its influence on social and cultural space. For the people of '*Holy Book*' which called its people to read, Mappila songs are iron swords. Like the '*ishlas*' which doesn't stop raining and changes night to day, centuries ago it was the Islamic invasion that gave magical realism. The mala genre of Mappila songs, generally written in Arabi-Malayalam script are praises of pious personalities of Islam who were supposed to have gained high spiritual status. Generally, though most such works were themed on the lives of Sufi Saints (Auliya). Most of these songs narrate, "*Superhuman*" deeds of

these saints. Popular among these are the '*Muhyidheen Mala*', '*Rifai Mala*', '*Shaduli Mala*', '*Ajmeer Mala*', and the '*Nafeesath Mala*'.

Arabi-Malayalam became the language of choice for Mappilas. It wasn't until recently that they began to learn Malayalam in its original script. Mappila literature was written in this new language, and was taken to new heights in both poetry and prose. Mappila Pattu is the folklore songs in Arabi-Malayalam language and is generally devotional in nature. This continues to be a popular art form in Malabar. The oldest poetry in Arabi-Malayalam is probably 'Muhiyaddin Mala' that tells the miraculous tales of Muhiyaddin Shaikh of Jilan. The long struggle that Mappilas led against the invading Portuguese explains why a number of their poetry is actually marital songs. In style, Mappila songs start with a slow beat then picks up pace gradually and ends in a climax (The Hindu, 2007).

In prose, Arabi-Malayalam is mostly translation of the original books. Even though Mappilas have now started learning the language in Malayalam script, Arabi-Malayalam survives. Mappilas dances are group dances that involve complex movements and coordination. Kolkali is performed by men with sticks. Aravanamuttu involves a Duff like instrument which is performed by a group of men. It is as much a feast for the eyes as for the ears (Mohammad Koya, S.M, 1983).

A huge volume of literary works written in Arabi-Malayalam have not been translated to Malayalam, and some estimates put the number at almost 90 percent. These works contain the greatest literary achievements by Mappilas over the centuries. Romantic ballads, folk tales and battle songs have found a place in Arabi-Malayalam literature. While Arabi-Malayalam literally denotes Arabic influence in Malayalam, the vocabulary used in Arabi-Malayalam works often included Sanskrit, Persian and Tamil.

The first Arabi-Malayalam novel, '*Chahar Dervesh*', a translation of a Persian work, was published in 1883, six years before O. Chandu Menon's '*Indulekha*' (Ibid, p.29). Moyinkutty Vaidyar and others translated important works of Sanskrit into Arabi-Malayalam. Major works translated thus were '*Astangahridaya*', '*Amarakosha*', '*Panchathanta*' and even stories

about King Vikramadithya. Sanskrit medical texts were also translated into Arabi-Malayalam by authors like Abdu Rahman Musaliyar of Ponnani Puthiyakath. These included the '*Upakarasara*', '*Yogarambha*' and '*Mahasara*'. Arabi-Malayalam periodicals played an important role in the social reform movements of the Mappilas in the early 20th century. '*Al-Irshad*', published in 1923 by the Muslim Aikya Sanghom played an important role in explaining the tents of Islam to the common man and distinguishing between religious practices and superstitions (Menon, Gangadhara. M, 1989).

Different types of Arabi-Malayalam poetry and folklore literature

Malappattu

The '*Mala*' genre of Mappila song, generally written in Arabi-Malayalam script are praises of pious personalities of Islam who were supposed to have gained high spiritual status. Generally, through most such works were themed on the lives of Sufi Saints (Auliya). Each mala often corresponded to the leader of a Sufi order called '*Thareeqath*', who was abundantly showered praises in the poetry, often well-exceeding the limits of human capabilities. The 17th century also witnessed the composition of other popular works in the Malappattu genre, namely the '*Rifai Mala*' (1623) by Ahammadul Kabeer, '*Uswath Mala*' (1628) and '*Valiya Naseehath Mala*' (1674) by Manantakath Kunhi Koya Thangal.

Songs of the 18th century were primarily of the '*Qissa*' genre, narrating stories of the Prophets of Islam or Sufi Saints. An example of such songs includes the Ibrahim Nabi Qissa and the Ibrahim ibn Adham Qissa. Songs like Kappapattu and Safala Mala by Shujayi Moidu Musliyar conveyed ideological message to the community in the era of post-Portuguese years when the identity and existence of the Mappilas were in a shattered state (Rolland E. Miller, 1992).

Padappattu

The first dated work in this genre was the '*Zaqqoom Padappattu*' dated 1836. This song was actually an Arabi-Malayalam translation of the Tamil work '*Zakkoon Padayappor*' composed by Varishay Muhiyadheen Poolavar of Madurai in 1686. Alim Umar Labba, a Mappila religious scholar from Kayalpattanam translated it into Arabi-Malayalam. Many of the tunes

(Ishals) of Zakkoon Padayappor have been largely utilized by famous Arabi-Malayalam poet, Moinkutty Vaidhyar, especially in his master pieces work, '*Badar Padappattu*' (Ibid, p.201).

The songs of the Padappattu genre can be classified into four different types:

1. Islamic folk tales

These songs have no relation to actual historic events but either from a folk tale, a legend or simply an imaginary story related to Islamic traditions. Songs of this category includes the Zaqqoom Padappattu and the Jinn Padappattu. The former is a story about an imaginary confrontation of King Zaqqoom of Iraq and Prophet Muhammad of Arabia while the latter is the story about the Jinns, the other creation parallel to human beings as taught by the holy Quran.

2. Islamic History

These songs narrated events from the early years of Islam, and in particular the early battles of Islam. The '*Badar Padappatu*', the '*Hunayn Padappattu*' and the '*Karbala Padappattu*' are characteristics of this category.

3. Mappila History

Songs of this type typically narrated the heroic deeds of the Muslims of Kerala and eulogize the martyrs among them, especially in their battles against Portuguese and the British colonial powers and the local Jenmi landlords. Typical among these are the '*Kotturpalli Mala*', Moyinkutty Vaidyar's '*Malappuram Padappattu*' (1883), '*Cherur Padappattu*', etc.

The first depicts the heroism of Veliyankode Marakkar, a warrior who saves a seventeen year old Mappila girl from the hands of Portuguese kidnapers but is martyred at the end of the battle. The other two narrate stories of Mappila attacks on the British and the Jenmi landlords during the 19th century. The Cherur Padappattu, composed by two poets named Mammad Kutty and Muhiyadheen in 1841, refers to a battle between Mappila rebels and the army of the East India Company. The rebels had assassinated Kaprat Krishna Panikkar, the Adhikari of Tirurangadi and sought refuge in a deserted house. The soldier's later surrounded them and in the ensuing battle, seven Mappilas and 20 of the Company army lost their lives. The

Cherur Padappattu narrates this story praising the 'martyrs' among the Mappilas in this battle.

4. Fictional Song

These songs were about purely imaginary subjects. The '*elippada*' which narrates a three-day imaginary battle between rats and cats based on a Panchatantra story falls under this category (Ibrahim Kunju A.P. 1992).

The common features of all these songs were their pattern of narration of the bravery of the heroes depicted. While the battle songs roused the feelings of the community against the authorities, this era also witnessed the popularization of romantic ballads like Moyinkutty Vaidhyar's '*Badarul Muneer*' '*Husanul Jamal*' and Chettuvayi Pareekutty's '*Soubhagya Sundari*'. One of the notable aspects of both these works was the age of the authors at the time of the composition; Vaidyar was said to have been 17 or (by some reports) 20 at the time and so was Pareekutty (Malayalam Literary Survey, 1994).

Malappuram Padappattu

The Malappuram Padappattu (1883), also known as the '*Madhinidhi Mala*' describes the undercurrents of peasants' life and struggles in Malappuram in the 18th and 19th centuries. In 1763 a local landlord named Para Nambi had a dispute with one of his officers named Ali Marakkar. The dispute escalated to a major battle between the landlord's men and the Mappila and the lower caste Hindus amongst the tenants. 44 Mappilas and a lower caste Hindu of the Thattan (goldsmith) caste lost their lives in the battle. They were eulogized later by the Mappilas. Sometimes later, the Nambi felt remorse at his deed and decided to make up with the Mappilas. This was the theme of the Malappuram Padappattu. The work was composed with 68 Ishals, four Vambus and a Kuthirachaattam. It also makes references to the story of the King Cheraman Perumal who is said to have journeyed to Makkah and converted to Islam (Miller E. Roland, 1992).

Conclusion

Arabi-Malayalam was one of the most important medium of teaching process across the Muslims of Kerala especially in Malabar region. Once it was a medium for Kerala Muslims

from their illiterate ignorant as well as backward of their daily retain. Its contribution in the field of women education was scarcely mentioned. The special Mappila literary achievement was Arabi-Malayalam, which was the vehicle of religious materials and Mappila songs. Ulama played prominent role in keeping away from modern education because these Ulama were the part of their daily life. They were also contributes associate with the clutches of that learning programme, because their livelihood had depended on their activities and performance. In short, once Arabi-Malayalam played a significant role in the everyday life of the Muslim in Kerala.

The literature of Mappila songs represents the aspirations of the Mappila community, its frustrations, struggles, love and affection over the ages and these Mappila songs are known as the "cultural fountains of a bygone age". Today, increasing "cacophony" trends in newer Mappila songs and the lack of poets with a sense of imagination have attracted criticism from many concerns. A large number of songs released in the last decades under the label of Mappila songs, have been criticized for deviating from the original nature of the folk idiom and tunes, provoking a call for a preservation of the original identity of Mappila songs.

DEVELOPMENT OF TRADE IN MEDIEVAL KERALA: A STUDY OF THEKKUMKOOR KINGDOM

Albin Jose

Introduction

There are a number of studies on the history of trade in medieval Kerala. In such studies minute details are ignored and major questions and problems not adequately attended. Therefore, even attempts to conceptualize the whole problem of medieval trade and formations of wider networks fail to understand the specific regional features. From the ancient time onwards Kerala was known to other part of the world.¹ Trade is believed to have taken place throughout much of the recorded human history. The foreign traders came to Kerala from different countries and make trade contact with the native kingdoms.² The studies on trade in medieval Kerala

generally follow a trend of atomistic and compartmental perspectives. The growth and development of trade in medieval Kerala was a long process.³ The paper focuses on the development of trade in native kingdoms and the development of regional market centres.

DEVELOPMENT OF TRADE IN THEKKUMKOOR KINGDOM

The Dutch priest Canter wisher in 1723 declaimed that Thekkumkooor was the more beautiful province in Malabar region.⁴ Thekkumkooor was a local kingdom which spans across the present Kottayam, Pathanamthitta and some regions of Alappuzha, and Idukki districts of Kerala⁵ Thekkumkooor emerged as the result of administrative changes

in the princely states at the end of the 12th century.⁶ The northern part of the Venpolinad was transformed into Vadakkumkooor, and southern parts as Thekkumkooor.⁷ The royal house hold of Thekkumkooor Kovilakam were at Vennimala and Manikandapuram later it shifted to Changanassery and Thazhathangadi in Kottayam. Thekkumkooor lies between the Meenachil and Pamba river which flows to Vembanad lake.⁸

Even though there is little evidence of local documented history, it is believed that this region was a major trade centre in the early centuries after Christ. During the Chera reign, this region used to be the trade zone for Eastern spices. This region also used to be the braking house for overseas spice trade from other Kerala towns like Bakkare (Purakkad), Semna, Koraiyoor (Kodiyoor), Nelkinda (Niranam).⁹ It is well known that the best quality pepper, ginger and other scented spices were grown in Vemboolinad and nearby kingdoms.¹⁰

Spices from Kanjirapally and Kothamangalam were transported through Meenachil and Muvattupuzha rivers respectively before being traded in Chemmanakari and Thazhathangadi later capital of Thekkumkooor royal family.¹¹ Geographical peculiarities and climatic conditions of Thekkumkooor is very helpful in the development of trade.¹² The natural products of the region are as varied as its climates and landscapes. Availability of spices is the crucial factor contributed to the trade development in Kekkumkooor.¹³ The markets of Thekkumkooor were once bustling with the export and import of goods from places in Dutch, Portuguese, Central Asia and China.

Lieutenants Ward and Connor of the British anny refer about this trade centre having contact with busy ports and ships setting sail to various Asian countries.¹⁴ Dutch records also show the evidence of 10 lakh ton of pepper exported from Thekkumkooor in a year.¹⁵

Early trade relations which centred with Egypt and Rome later shifted to traders from Syria, Persia and the Arab lands. History recalls that in the fifteenth century when Portuguese became the superpower, the trade domination of other countries ended. This change became evidently visible in the trade in Thazhathangadi also.¹⁶ The Thekkumkooor and the

Vadakkumkooor royal families were against the Portuguese and did not allow the European dominance of Thazhathangadi.¹⁷ A system of trading through brokers commenced with transporting goods by local vessels to areas like Purakkad, Kudavechoor, and Cherthala. This system not only helped to solve the crisis here, but also enabled financial growth as well. Heavy exports from Thazhathangadi reduced and Purakkad developed as an excellent port¹⁸ Portuguese had their dominance in Purakkad and later when the Dutch influence grew, there were trade contracts established between Thekkunkooor and the Dutch East India Company. Thazhathangadi experienced a long tenn presence by the Dutch. It was during this time that various communities who excelled in trade were brought to live here.¹⁹

Members of Knanaya community who resided in Kaduthuruthy (from Kodungalloor) were invited to stay here and were given residential places in Valiyangadi. Land was given for establishment of the Valiya Palli. It was in 1550 that the ruling king, Adithya Varma paved the way for this Christian immigration. This community was the main traders of spices like pepper, ginger, jaggery and cooking oil.²⁰ The Gowda Saraswat Brahmins who excelled in trade in Purakkad and Cochin were brought in and offered place to live and also place to construct a temple for worship. They were mainly traders in scented spices and medicines. Even today this community has not forgotten their family profession. Many shops in Kottayam town belong to this community.²¹

IMPACT OF TRADE

Trade played a vital role in the history of medieval Kerala. It was a centre of various kinds of activities, large scale cultural exchanges, diffusion of different religious ideas, spread of technologies, rise of market centers etc.²² It had from early time onwards scene of intense commercial trade. It provides highway linking to a great variety of people, culture and economics.

Demand of the spices and other products help Kerala to achieve high position in local and foreign trade. Agricultural growth in the hinterland, the availability of surplus, the amount of importance given to commerce and overseas trade in the development of commodity production and exchange in the hinterland are

certain necessary pre-conditions to urban growth.²³ Due to the availability of ample surplus in agricultural production active rural markets and trade centres developed in medieval Kerala. The process of urbanization was gradually taking place in major trade centres and market places.²⁴

In medieval times trade was the major source of income in Thekkumkooor kingdom. We can understand that the details of trade in medieval period from the local records and foreign accounts. During that period Thekkumkooor rulers developed a trade contract with Dutch because of the antagonist approach of Portuguese.²⁵ We got inevitable evidence from the Dutch accounts for the trade relationships.

Thekkumkooor region at present includes Kottayam. The economic and social status highly developed in Thekkumkooor from the trade relationship with foreigners. A number of trade markets, school and other education institutions developed in this region due to foreign contact. The main trade centre is known as Thazhathangadi, the later capital of Thekkumkooor.²⁶

A number of people came to Thekkumkooor from different religious communities and administer the trade with the support of administration of the Thekkumkooor kingdom. The traders lived in Thekkumkooor kingdom with their own religious beliefs. The social, political, economic, and cultural status of the present Kottayam district developed from the local and foreign trade relationships with the Thekkumkooor kingdom.

CONCLUSION

The foregoing analysis is aimed at bringing to light certain important aspects of trade and commerce in medieval Kerala. The available data and information show that the climatic and geophysical features of the region played a decisive role in shaping the contours of the economic life and activities of the people. It can be concluded that with the available evidence it can be clearly shown that several far-reaching changes were occurring in almost all walks of life including trade and trading centers of Thekkumkooor kingdom.

MEMORY AND HISTORY: A STUDY OF DALAVAKULAM MASSACRE IN THE NINETEENTH CENTURY

Anjana Menon

*Societies relate to their own pasts through the mechanisms of memory.*¹ Collective memory, as a source of social and personal identity, may be considered as a kind of history (amateur) appropriated by the different groups of contemporary society.² Thus, over the years, people have woven an incredibly complex network of stories.³ Within this network, fictions not only exist, but also accumulate immense power.⁴ Therefore, interpreting a memory can be most treacherous for an historian, as they can be the most puzzling source of information.

In the recent centuries, 'the past' too has become a commodity, and it has acquired a new valence as a source of collective and personal identity.⁵ Modern business magnets, political groups or social groups have all weaved complex stories which may also be called as 'imagined realities'.⁶ An imagined reality is something that everyone believes in, and as long as this communal belief persists, it exerts force in the world.⁷ At this juncture, the potential role of academic history as a critical receives emphasis. The lores and controversies enmeshing the putative massacre of Ezhavas at Dalavakulam in the opening decade of nineteenth century, which is now much a part of the cultural memory is the point under consideration in this paper. The story is elusive and plastic: no two narratives fully agree on its time, space, intention or structure. All writings, which are mainly produced by subaltern writers, are based on hearsay, speculations and tangential evidence, never on conclusive resources or contemporary documents. This paper is an attempt to analyse how '*Dalavakulam massacre of the nineteenth century*' - a popular memory is used in articulating the connections between the cultural, the social, and the political, between representation and social experience.

The story revolves around Vaikom Siva temple, which received national attention during the Vaikom Satyagraha. Though every version of the story is different from each other generally. *Dalavakkulam* massacre which is said to have happened in the first decade of the nineteenth

century is believed to be an organised movement to enter the Vaikom Siva temple by the Ezhava youth during the reign of Velu Thampi Dhalava in Travancore. The story retorts at the state led army for having mercilessly butchered the unarmed youth who tried to enter the temple. Dhalava himself along with Kutirapakky, Kunjukutti Pilla and Vaikom Pappanava Pilla, leaders of the royal army are held culprit by the story tellers. The bodies of these young men are said to have been thrown in to pond in the eastern gateway of the temple. This pond called the Dalavakulam, which is now the bus stand of the municipality, which can be recognised as the rich site of the memory.

Memories and histories, far from being synonymous, appear now to be in fundamental opposition⁸, as memories remains in permanent evolution, open to the dialectic of remembering and forgetting, unconscious of its successive deformations, vulnerable to manipulation and appropriation, susceptible to being long dormant and periodically revived.⁹ The memory of human actions and history is said to presuppose a temporal gap or distance between the time of occurrence of an event or action and the time of its recollection.¹⁰ Just as the case, the said massacre was brought to wider attention through a short write up by K. R. Narayanan (former secretary of the SNDP Yogam) in the Vaikom Satyagraha Special edition of *Vivekodayam* in 1975. He describes the *dalavakulam* incident as an attempt by about hundred Ezhavas to enter the Vaikom Siva temple and conduct worship, during the reign of Balarama Varma (1798-1810).¹¹ He marks the encounter on a *pradosham*¹² day and also points out that these efforts were efficiently prevented by the caste Hindus using an iron hand. In his version, Kujikutti and Kuthirapakki mercilessly massacred the youths who wanted to enter the shrine and had reached the northern entrance of the temple.¹³ He adds that, after the incident, the soldiers of Kunjukutti and Kuthirapakki went from door to door slaughtering and harassing Ezhavas, even chopping of ears of some¹⁴. Narayanan mentions two write ups that

appeared in *desabhimani* of 1099 (1924) and a folksong that was popular in Vaikom that described the incidents. However, he admits not being able to recover any of them.

There are two points that demands further elaboration here. Primarily, *Vivekodayam* is a literary journal that was established to serve as the voice of underprivileged communities especially the Ezhavas. It is opined that *Memory is blind to all but the group it binds*¹⁵ hence we the views presented in this work can be only critically analysed. Maurice Halbwachs has pointed out that, there are as many memories as there are groups, that memory is by nature multiple and yet specific; collective, plural, and yet individual.¹⁶ In this case, the inability to identify a memory with a counter narrative questions the originality of the memory.

Secondly, though the original text is yet to be discovered, the premise on which *desabhimani* was grounded also needed discussion. Most noteworthy factor is the period of the first publication of the article in *desabhimani*. 1924 was the time when the nation struggles against untouchability was in its full swing. In a newspaper with rich nationalist tradition the publication may have been intended to ideologically enrich the Vaikom Satyagraha. It was founded by T K Madhavan, who was a good example of the Ezhava educated elite¹⁷. He was influenced by Narayana Guru and the SNDP Yogam, and worked for the same from 1914.¹⁸ *Deshabhimani* was founded in 1915, with the aim of publicising Ezhava grievances and achievements¹⁹. When a story succeeds in entering the consciousness of a society, it is said to give Sapiens immense power that enables millions of strangers to cooperate and work towards common goals²⁰. Madhavan had raised the question of temple entry in an editorial in *Deshabhimani* in December 1917.²¹ The issue was discussed at meetings of the SNDP Yogam and the Travancore assembly over the next three years, and Madhavan himself had introduced resolutions calling for temple entry and recognition of Ezhavas' status as respectable caste-Hindus.²² It is noted that in November 1920, that he himself went beyond the restrictive notice boards and later announced this to the district magistrate²³. The publication of such a story, an emotionally charged memory, may be seen as an attempt to steer emotions, to motivate

people to act, and prepare the people to receive the new ideas. The revival and portrayal of this 'collective memory' in the *desabhimani* when the *Vaikom satyagraha* was brewing in the background may be viewed an exploration of a shared identity to unite the Ezhava community towards a common goal. It may also be identified as part of larger agenda of identity formation among the Ezhavas. Such an identity formation means utilisation and intensification of every cleavage between communities. Thus, through the intensification and propagation of the 'story' of Dalavakulam incident the purpose placing of other communities at binaries was also satisfied.

K R Narayanan has also noted that a grand meeting was organised under the presidency of Kumaranasan in 1098 (1922) at Vadayattu in which Adv. Tharayil Krishna Pillai recounted this particular incident. In his concluding note to the meeting, Kumaranasan is said to have referred to the incident as "a horripilating heroic episode"²⁴. In Narayanan's views, Asan seems to be of the opinion that those martyrs were meritorious enough for their mortal remains be unearthed and worshipped.²⁵ But it is questionable why Kumaranasan who was a strong critic of caste, himself did not mention anything in any text he produced.

The task of remembering has made everyone their own historian.²⁶ The demand for history has thus largely overflowed the circle of professional historians.²⁷ 'The past' is being used to affirm identities, to claim legacies, to celebrate collective bonds, and to traduce rivals and 'the past' so used or misused, is clearly dictated by the present²⁸.

Later, it was N K Jose who popularised the event through his aggressive polemic writing. He calls the *Dalavakulam*, the memorial of the incident which according to him marked the struggle against untouchability.²⁹ According to him,

"...a few Ezhavas from Kulasekharangalam, Vadakkemuri, Maravanthuruth and Vadayar regions belonging to the taluk of Vaikam attempted to enter Sivakshetram and conduct worship. The upper caste men under the leadership of Kunjikuttipillai and Kuthirapakki slaughtered these Ezhavas who had reached the northern entrance of the temple. He too identifies Dalavakulam as the burial site of the victims.

Jose notes that, not satisfied with this, the revengeful caste men entered houses of even the innocent Ezhavas and attacked them. The carnage boisterous dance that was performed in Vaikom that day shocked the warriors and many ran in fear to regions like Kozha, Kurivilangad, Neendur. It is believed that those people known as Kurachekonmar in these regions is perhaps the next generation of those who fled from Vaikom during the incident.³⁰

Jose who later took up the pen name *Dalit bandhu*³¹ in his work, *Vaikom Sathyagraham oru prahelika* concludes his observations criticising that the followers of M K Gandhi with the ng the tool of ahimsa cheated the people and succeeded in supressing the Vaikom Satyagraha a century back.³² This book does not provide any new interpretations but the language is highly charged. Jose's another *Dalavakulam Vaikothe Krishthavarum* (Dalavakulam and the Christains of Vaikom) contains an essay with primary focus on the delavakulam massacre. It is the longest analysis of the matter so far. In this essay, the author tries to view the event in the mirror of continuing suppression of the Ezhavas was by the upper-caste Hindus. Strongly putting Veluthampi Dhalava at the position of the accused and draws a picture of bloody caste rivalry. He even puts the intentions Vaikom Muncipilaty at question and believes that they promote the perspectives of high caste Hindus.³³ However, he neither succeeded in recovering the original article of 1924 nor was he able to ascertain the historicity of the events by the means of other contemporary sources. Mary E King mentions this historiographic slip.

Mary Elizabeth King, is the most recent academician to speak about the incident .She mentions the *dalavakulam* massacre in her work *Gandhian Nonviolent Struggle And Untouchability In South India : The 1924-25 Vaikom Satyagraha And The Mechanisms Of Change* .She views this attempted entry as the first assertion of the rights of the untouchables and thus considers it an antecedent to the Vaikom Satyagraha³⁴. She nullifies the views of N K Jose, by calling him a 'local folk historian' and alternately presenting the views of historian Vasu Thillari which provides altogether a different perspective. In the version of Thillari, just four or five members of the backward caste tried to enter the temple whereupon, upper caste

men killed them and threw their corpses in the pond adjacent to the temple.³⁵

Very recently the above said massacre has been subjected to much thought and the nescient article work as an intellectual/ideological adhesive for subaltern caste groups. Recent observations note that new technologies and changes in the politics of representation have encouraged individuals and groups to see themselves as the most legitimate curators of their own memory³⁶. In the case under consideration, apart from blogs, websites of caste groups and YouTube videos, Wikipedia also discusses this incident. Though academic historians do not consider Wikipedia as a trustworthy source, as Pierre Nora points out, its historical entries serve as virtual "sites of memory" and play a great influence in codifying the meaning of past events for the people.³⁷ Apart from a page that describes Dalavakulam massacre³⁸ Wikipedia page on Vaikom satyagraha³⁹ credits this incident for paving the intellectual ground for the Satyagraha that happened in the twentieth century. At this point, deconstructing this memory becomes important.

Collective memory often has physical sites associated with it.⁴⁰ In the developed world, ownership of these sites is occasionally contested, although more often contestation concerns how they are used to represent the past and the cultures to which they refer. ⁴¹ The memories of the pond exist as a rich site not only to enrich the dalit arguments about their subversion and the role of the state, but also helps in sustaining caste rivalries. The ability to influence memories, their putative behavioural and policy implications, is one means of achieving influence in the present over the future⁴². This contestation is fought and sustained to definitely in this regard. future.

Another point that needs to be critiqued is the claim that Hindu elitism removed remnants of this incident. The lack of evidence cannot be discarded that easily. Travancore state is found to have had relatively better spread of literacy in the nineteenth century owing to the enlightened policies of the monarchical regime and the activities of the Christian missionaries.⁴³ Vaikom has a rich non-elite literacy tradition and social reforms in Kerala have represented the plights of the downtrodden through literature. In such a background, massive violence and the 'fear' it

could have produced, must have been a subject upon which such reforms and their literature must have definitely pondered upon. During the first quarter of the 19th century, Chattambi Swamikal and Narayana Guru, actively engages in intellectual discourses towards initiating reforms in the existing society in Travancore.⁴⁴ If the haunting memories of the massacre at the *dalavakulam* was alive during their period, it why it did not find a space in their discourses.

Just a decade after the said incident is memorised to occur, Channar revolt took place in Travancore which received missionary support and was much discussed. However, the faithful writers of this memory are unable to cite neither any records of the British records or communications nor any comments made by the missionaries present here at the time in the state. By the very beginning of the 19th century Christian missionaries such as C. M.S., L.M.S. and Salvation Army began their activities in Travancore. Chances are high that if such a massive killing had actually taken place, missionaries might have used it as an opportunity for conversion. Nor does it find a place the records of the British resident.

It is argued that though attempts were begun by the dalit castes from the late 19th century to organise themselves, the various sections of the dalit liberation movement really began to take off from the 1920s, in the context of the strong social reform and anti-caste movements which were penetrating the middle-

caste peasantry and the national movement which was beginning to develop a genuine mass base.⁴⁵ Much before the first census taking place it is questionable how as claimed two hundred young men became conscious of their identity as Ezhavas must be questioned too.

Rabindranath Tagore who became disillusioned with European claims to civilization after the massacre of Jallianwala Bagh in 1919, had renounced his knighthood.⁴⁶ No mention of any reaction of public figures, which is inevitable if such a massacre, is provided even by any popular narratives. Many states have shown no hesitation to employ the 'politics of fear' through bloodshed towards attaining their goals, while the Travancore has no such tradition. The fear of mass killing is haunting and can last for centuries. If we observe deeply, we can notice that such sites have never again been the epicentre of another mass struggle or social movement. Wagon tragedy silenced the people, on the contrary, Vaikom became the centre stage for a social reform movement whose vibration was felt across the nation

The much alive and discussed memory of the Dalavakulam massacre in the nineteenth century thus may be considered as a cultural production and consumption which underlines the persistence of vested interests of the memory makers and acknowledges the tastes and preferences of the memory consumers

ROLE OF PORTS IN MALABAR: DEVELOPMENT OF TRADE AND RELIGION

P. Anjumon

The south western coast of India was known as 'Malabar' to the foreigners from early times. A number of ports flourished in the Malabar Coast from very beginning. Important among these ports were Muziris, Tyndis, Barace, Nelcynda, Naura, Ezhimala, etc. The Phoenicians, the Babylonians, the Assyrians, the Sumerians, the Egyptians, the Romans and the Greeks were the foreigners who established contacts with Malabar from ancient time onwards. In the medieval period Malabar trade came into the hands of Chinese and Arabians. With the landing of Vasco da Gama at Calicut in 1498, the region became the site for the colonial rivalry involving major European powers. As a result, the region

was frequented by foreign vessels helping to emerge it as major trading centre of the world.

The ancient Egyptians also used spices from Malabar to make perfumes and holy oils and to preserve the dead bodies of their kings and other highly placed persons by a system of Mummification. Alexandria in Egypt became very prosperous due to profitable trade with Malabar during the reign of Ptolemy. It was centre of the East and West trade. In the palace of Nebuchadnezzar, teak of Malabar was used. All these references from various sources justify the existence of our maritime relations with Sumerians and Babylonians in the last millennium before Christ. Herodotus, who lived

about 500 years before Christ, states that goods were carried by the Arabs, in small ships from the Malabar coasts up to Aden, and from there, the Phoenicians and the Egyptians carried them to the coasts of the Red Sea and the Mediterranean Sea. With the conquest of Egypt by Rome the contact between South India and Rome became direct and the trade between Rome and Malabar ports became strong.

There was great increase in the volume of trade with Rome after 45 A.D. The Greek navigator Hippalus found that ships could travel from Ocelis near the mouth of the Red Sea and reach Malabar Coast in 40 days with the help of the monsoon.

There are some significant historical works that deals with Greco-Roman trade in Malabar. The earliest accounts are those of Greek and Roman writers. *The Periplus of the Erythraean Sea* of anonymous author, *Natural History* of Pliny, and *Geography* written by Ptolemy are the most important sources of Greco-Roman trade on the Malabar Coast. The Sangam works are the earliest indigenous accounts that provide information required for the reconstruction of trade relations of Malabar Coast with the Greco-Roman world. The Sangam works like *Akananooru*, *Purananooru*, *Pattitpathu*, etc. give details of these trade relations. The Romans listed pepper among the most precious things along with metals. Several hoards of Roman coins have been discovered from India including South India. Most of them belong to reigns of Augustus, Tiberius, Nero and Claudius. According to Pliny, pepper was sold at as high a price as 15 Denari a pound. Pliny bitterly reproaches Romans for their extravagance, which caused a great drain on Roman finance. The decline of the Roman Empire in the third century adversely affected the trade between Rome and Malabar.

Malabar had trade relations with Chinese from early times. It grew through the fifth to fifteenth centuries. Some scholars have suggested that Chinese trade relations with Malabar began long before Greek and Roman ships were called at Chera ports and a Chinese colony had been established here. But trade between China and Malabar Coast was flourished during the medieval period. The Kollam, Kozhikode and the Pathalayani Kollam are important Chinese trading centre on the Malabar Coast. Medieval Arab traveller

Sulayman says that "Chinese ships came to Kollam and that one thousand Dirhams were collected from each of them." Besides this, many Chinese travellers came to Malabar Coast and left behind travelogues of their journeys. The most important among them were Pancou, Fahian, Chau-Ju-Kuwa, Wang Ta Yuan, Ma-Huan. Chau Ju Kua mentioned the trade in the Quilon and its trade link with Indonesian ports.

Marco Polo, the celebrated Venetian traveller of 13th century, mentioned ports of Cape Comorin, Quilon, Kozhikode and Ezhimala. These are important commercial centres at that time. The spices of the Malabar Coast noted by him during his voyage were pepper, ginger and cinnamon. He also gives an interesting account of pepper trade with China. Wang-Ta-Yuan visited Malabar in the 14th century AD. His book *Tao-i-chi-liao* contains the description of the important ports and markets of Malabar. He mentioned Kayamkulam, Elimala, Cochin and Kozhikode. He noted that "Many things exported from China through Kozhikode." Ma Huan's account *Ying-Yai Sheng-Lan* (1433) mentioned "the country of the Kollam, Kochi, Kozhikode, etc. and presents a lot of interesting information which includes several ethnographic details. The indigenous sources also refer to the Chinese contacts of Malabar Coast. *Unnunilandesam* mentions the Chinese junks which came to the Kollam port. *Unniyaticharitam* is another account that mentioned Chinese contact with Malabar.

In addition to the western countries, the Chinese and the Arabs also entered into trade relations with Malabar from the very beginning. During the early period, the Arabs played the role of middlemen and raised considerable profit out of the trade between the western world and the South India. But the period between 9th century A.D. to 15th century A.D., is considered as an era of Arabian trade in Malabar Coast. The word 'Malabar' is first used by medieval Arab travellers. They referred to this land as 'Biladun Ful Ful', which means the land of pepper. Arabian travellers like Sulaiman, Al-Idrisi, Al-Qazwini, Abdul Razak, etc. refer to the trade and ports of Malabar.

The important Malabar ports mentioned in these travel accounts are Ezhimala, Valapattanam, Pantalayani Kollam, Kozhikode, Kodungallur, Kochi and Kollam. The Arab traders arrived at Malabar ports from Zanzibar,

Ethiopia, Morocco, Tunis and Trippoli brought the goods from Malabar and sold them in western countries. The important goods exported from Malabar Coast were pepper, ginger, cardamom, sandalwood, etc. Marco Polo and Ibn Batutha, two eminent medieval travellers also refer to the brisk trade between Malabar and the Arabs. When Ibn Batutha reached Malabar in the 14th century, the Arab community was well established and prosperous. He mentioned that "The greater part of Muslim merchants of this place are so wealthy that anyone of them can buy the whole cargo of such vessels as put in here and fit up others like them." During the time of the establishment of European power in Malabar coast, the Arab trade declined.

Ports of Malabar had contact with the countries of the outside world from time immemorial; but we have no recorded evidence related with Malabar ports. The earliest recorded evidence on Malabar port comes from the Books of Kings in Old Testament. According to it, "And King Solomon made a navy of ship in Ezion-geber, which is beside Elath on the shore of the Red Sea in the land of Edom; and Hiram sent in the navy his servants, shipmen that had knowledge of the sea, with the servants of Solomon. And they came to Ophir and fetched from thence gold, four hundred and twenty talents, and brought it to King Solomon." Among the items taken by the fleet of Solomon all except silver are native to Malabar, they brought ivory, apes, peacocks and timber for the famous temple of King Solomon about 1000 B.C. Most of the scholars, identified Ophir as Beppur, situated on the mouth of the river of the same name. The Beppur River was reputed in ancient times to have brought down auriferous sands from the Wayanad Hills. It has been identified by some other scholars with Puvar in Trivandrum district.

The classical writers give details of ancient ports of Malabar Coast, which were the commercial centres that developed contact between Malabar and foreign countries. The forest resources of Malabar were brought to these ports and exported to the countries abroad. During the time of Romans, pepper was an important item of export from ports of Malabar.

Among the ports of ancient Malabar Coast mentioned by the classical writers, Muziris was considered as the most important seaport. Pliny in his *Natural History* had mentioned Muziris as

the capital of the Cheras. After stating that Muziris was "the first emporium of India", he said: "the station for ships is at a distance from the shore, and cargoes have to be landed and shipped by means of little boats." Periplus considered "Muziris as a city at the height of prosperity". A verse in the *Akananooru* refers to "the beautiful large ships of 'Yavanas' laying at Muziris to receive the cargoes of pepper paid for Roman Gold." Parinar recorded the brisk trade in pepper carried out at the port of Muziris. He refers to the "sacks of pepper that are brought from the houses to the market; the gold, received from ships in exchange for articles sold is brought on shore in barges at Muziris, where the music of the surging sea never ceases and where Kottuvan (the Chera King) presents to visitors the rare products of the seas and mountains."

Another important ancient port of Malabar was Tyndis. The Periplus refers to it as "a large village close to the shore, situated 500 stadia north of Muziris." It lay on the navigable river Ponnani which would bring down the pepper of the Anamalai hills. The *Purananooru*, referred as "It was bounded by groves of coconut trees bearing heavy bunches of fruits, a wide expanse of rice fields, verdant hills, bright sandy tracts and a salt river whose glassy waters are covered with flowers of brilliant colours. It has been identified by scholars alternatively with Kadalundi, Ponnani and Panthalayani Kollam. Barace (Bacare) was next important trade centre situated in the mouth of river 'Baris' to the south of Muziris. Barace has been identified by scholars as Purakkad, and the river 'Baris' has been identified as 'Pamba'. Pliny mentioned Barace, it was a more convenient port for foreign ships to call as, unlike Muziris, it was free from Pirates. The author of Periplus refers that "large quantities of pepper were brought down to Barace from interior which is called Kottanara."

Nelcynda was another important port mentioned in the early accounts; it was situated 500 stadia south of Muziris. Pliny recorded that Nelcynda at that time belonged to the Pandyan Kingdom and the Greeks regularly visited here for pepper. It has been argued by some scholars as Niranam and some others believed it was Neendakara. Another port referred by classical accounts was 'Naura', which was identified as Kannur. Balita, mentioned by the Periplus as the harbour and village on the shore, situated

between Barace and Cape Comerin. Some scholars identified it was Varkala.

Eli port, the port of Eli Kingdom (Ezhimala) was the ancient port of international trade. The territory of Ezhimala was located to the northern part of the Chera territory. It was mentioned by Tamil songs as land of high mountains. The geographical condition of Ezhimala influenced to the growing of its condition of trading activities. This region was blessed with a very resourceful hinterland supplying hill products like ginger, wild cinnamon and pepper, and these goods were flowed to the ports of Eli, Matayi and Valapattanam.

Eli was an important medieval commercial centre of Malabar, mentioned by medieval travellers. Both Dimishqi and Abdul Fida mentioned Ezhimala. Abdul Fida recorded that Ezhimala is "a big mountain projecting into the sea and is visible to the navigators from a distance. It is called Ra's Hayli." Marco Polo emphasised that "the Eli Kingdom had no port, only river mouths and fairly unsafe beaches." Fifty years later Ibn Batutha noted the existence of Eli port. According to him, "Hili is large and well built, situated on big inlet which is navigable for large vessels. This is the farthest town reached by ships from China." Like Calicut and Kollam, the port received customers from China. Wang-Ta-Yuan, a contemporary of Ibn Batutha, provides further details about the area; "the ground was poor but provided the best pepper in Malabar; the houses were separated by small gardens; the inhabitants, who were aggressive people, carried arms." In the beginning of Portuguese period, vessels from the Persian Gulf used the Eli waters as a port of call and ships from Kollam and Calicut gathered there to collect fresh water and wood before setting sail for the west. Four rivers start from the Eli mountains, which helped it to develop as a busy port. In the north, there were the Kavaï and the Elimala, and to the south the Taliparamba and the Valapattanam. The hill resources of Elimala flowed through these rivers to the port and it was exported to the foreign countries.

Matayi was the early trading centre of north Malabar, which was mentioned by the author of *Periplus* as Mandagara. It was one of the important trading centres of Eli Kingdom. The major medieval port town known as 'Marahipatanam' in the *Mushikavamsa* was

identified as Matayi. It was a royal city of Ezhimala. The foreign travellers have pointed out that the region was infested with pirates and it shows the prosperity and the frequent visits of mercantile ships. Ibn Batutha recorded this region as a "large and well built town situated on a bay navigable for large ships."

Matayi is described by Duarte Barbosa as a Mappila centre and there were, however, Jewish and Hindu merchants engaged in various business. Matayi is situated on the bank of a large river, the Taliparamba (Killa), whose direct access to the sea is blocked by a strip of sand which diverts the flow of the river into the Valapattanam estuary in the south and to the north links up with the swamps of the Elimala, blocking the whole of the harbour area. There is nothing to be gained by listing the countries references made by the Portuguese to the maritime activity of Matayi since they do not describing the harbour site. Matayi was a busy trading centre in the medieval period, but since the coming of Portuguese they had neglected Matayi and selected Cannanore as the main commercial centre.

Valapattanam or Balipattanam was the royal city and was also one of the early port of Ezhimala dynasty, situated on the south bank of Valapattanam River. The formation of Valapattanam port was related with tradition of Ezhimala dynasty. According to tradition, "Vallabha Perumal, the eleventh of the Perumal built a shrine and a fort to protect it on the banks of the 'Neytara', as river was then called River Valapattanam. The Valapattanam, navigable in all seasons, gave access to the hinterland as far as the foothills of the Ghats and was connected with the Coorg road. This network of communications had stimulated the growth of the towns and found favour with the sovereigns.

During the medieval period it became a major trading centre of North Malabar. It was a thriving Mappila town, frequented by Arabs and Chinese. It was mentioned by a number of medieval travellers. Dimishqi and Ibn Batutha mentioned it as Buddfattan. Ibn Batutha noted that it was under Raja Kawayl (Kolathiri). Ibn Khurdadheen mentioned it as 'Babattan' and he says that "Rice is produced here and exported to Sarandib" (Ceylon). Ibn-Hawqal mentioned it as 'Bani-batan', perhaps it was Valapattanam. During the time of Portuguese, the importance of twin port, Matayi lost and it for Valapattanam.

William Logan noted it as "this port has a fair amount of coastal trade."

Kannur or Cannanore was an important port of North Malabar which attracted the attention of the European traders on various accounts. Some scholars argued that it was an ancient port. Wilfred H. Scoff says that it was 'Naura', mentioned by the Anonymous author of Periplus. It was an active port during the time of Roman trade. The most important evidence is explored through Roman coins of the time of Tiberius, Claudius, and Nero from Kottayam near Cannanore. During the medieval period it had no importance because the presence of Valapattanam and Matayi. During the time of Portuguese it became a major trading centre of Malabar. In 1663, it came into the hands of Dutch and later under English. Due to the formation of English port at Tellicherry, its importance again decreased.

In 1505, the Portuguese built a fort called St. Angelo at Cannanore. The Cannanore warehouses could provide up to six thousand candies of ordinary ginger each year, whereas the pepper, formerly so highly valued by the Chinese customers. During this period, it became a busy port, which imported the horses which were exported from Ormuz and Arabia. They were then taken by road to the Ghats and up to the Kottayam market where the Vijayanagar merchants paid gold pardaos for them. It was estimated that approximately two hundred foreign vessels visited the port of Kannur every year. This port was linked by road to the hinterlands of Kolathunadu. According to Tome Pires' "the Kingdom of Cannanore is large and has a large city and much trade and many people. The port of Cannanore is important but other ports under Kingdom of Cannanore is unimportant, they are Kumbala, Kottakulam, Nileswaram, Hyeri, Balipattanam, Madayi and Dharmapattanam. William Logan report that the average tonnage was Rupees 459253 per annum. The imports average was of Rupees 2144726 and export was of Rupees 1387749. He also noted that Cannanore was the principal port of the group composed of Kavvyi, Ettikkulam, Putiyangadi, Valapattanam.

Dharmapattanam was an island formed by the junction of Tellicherry and Anjarakkandy rivers just north of Tellicherry town. It was port city of Kottayam. The word 'Dharmapattanam'

had been used as a synonym of 'pepper' in the 5th century *Amarakosam* because it was a land of pepper. Another opinion is that, the word 'Dharmapattanam' means "the place of charity". It was also related to the legend of Cheraman Perumal. It was a place where Cheraman Perumal took his last farewell of Malabar and sailed for Mecca. Here according to *Tuhfat-al-Mujahidin*, Malik Ibn Dinar founded one of his nine mosques, but not a trace of building remains. Ibn Batutha gives a different account. At Dahfattan, he says "there is a great well and a cathedral mosque, which were built by Kuwaly's (Kolathiri) grandfather, who converted to Islam."

During the medieval time it was a busy port, it was mentioned as 'Dahfattan' by Dimishqi and Ibn Batutha. The pepper of Dharmapattanam has been highly valued by the Chinese customers and was exported from Dharmapattanam to Calicut. Barbosa noted a rich and powerful Moorish town 'Tremopatam' as the last places which the king of Cannanore held against Calicut. The Moorish town 'Tremopatam' has been identified as Dharmapattanam. Tome Pires mentioned that "Inland and upriver from this Moorish strongholds is the landlocked trading centre called Kottayam." It was a well known pepper cultivated area.

There had been no significance for Tellicherry during the 16th century. The Portuguese destroyed Dharmapattanam due to the command of Kolathiri on 26th January 1525. After this incident, Tellicherry grew as a business centre. The Dharmadam Island was ceded to the English East India Company in 1734. The English factory at Tellicherry, with its outworks on Dharmadam Island, secured to company the largest share of the trade through the excellent pepper produced in the Randattara Achanmars territory, in the Kottayam Rajas domain, and in that of the Iruvazhinadu Nambiars, tapped by the river converging at Dharmapattanam.

Pantalayani Kollam was another important medieval port of Malabar. It was a busy trading port, which was visited by Chinese and Arabs. It was referred by all the geographers, Arab as well as non-Arab. According to Ibn Batutha, "Fandaryana, a large and a fine town with orchards and bazaars. The Muslims occupy three quarters in it, each of which has a mosque. It is at this town that the Chinese vessels pass the

winter." Fandaryana or Fandarina has been identified as Pantalayani Kollam.

According to *Tuhfat-al-Mujabidin*, Malik Ibn Dinar founded one of the mosques at Fandarina. Odoric of Pordenon (1318-22) reported that "in the city of Fandrina, some of the inhabitants are Jews and some are Christians." It was a centre of spice trade and also as an entreport on the Malabar coast Jews visited this port. Idrisi mentioned that "Fandarina is a town built at the mouth of a river that comes from Malabar where vessels from India and Sind cast anchor. He also recorded that "pepper grows in Fandarina". Dimishqi says that "most of the inhabitants of Fandarina are Jews and Hindus. Muslims and Christians are few in number.

Calicut was famous for medieval Chinese-Arabian trade and arrival of Vasco-da-Gama on 1498. Uddanda, the Tamilian court poet of Zamorin in the 15th century, very poetically speaks of Kozhikode as the abode of the Goddess of prosperity whom her mother, the sea, was pampering by gifting shiploads of riches brought from different ports of the world. It became an important centre of world since 13th century, it was related to the decline of Cranganore following the floods in the Periyar River in 1341. Marco Polo, who visited the coast towards the end of the 13th century did not mention Calicut. Later, travellers accounts of Chinese and Arabians mentioned Calicut. Ibn Batutha recorded that he found thirteen ships of the port of Kozhikode. The tolerant policy of the Zamorins and the concessions granted by them to foreign traders made the Chinese and the Arabs gradually prefer Calicut to all other ports on the west coast. In this way the nations of the west came here for spices, pepper and cloth. The Chinese even came from the far East in their gigantic floating bulks. That time it was certainly a place of great trade. The Zamorin appointed a Muslim officer known as the Sha Bandar to regulate the affairs of the port of Kozhikode. This office gradually became hereditary and became

to be called the Shah Bandar Koya, Shabandra Koya or simply Kozhikottu Koya.

Conclusion

Ports are considered as an integral part when we analyzing the history of coastal regions. Malabar Ports are mainly classified in to three. They are Ancient ports, medieval ports and Modern ports. From Ancient time onwards Malabar made trade relations with foreign countries through ports. This made change in both cultural and trade matters. Different religious groups entered in to Kerala through foreign trade relations and this made cultural exchanges between Christians, Hindus, Islam and Jews groups. Islam spread in Kerala by the growth of Muziris as an important port. The adjacent areas of Cochin mainly Kodungalloor played an important role in the spread of Jews and Christian religion. Islam religion spread in the Northern part of Calicut because of the foreign trade relations with Arabs and the close interaction with Zamorins. Most of the mosques are made in the banks of Calicut ports Like Muchunthi mosque, Chaliyam puzhakkara mosque, Koyilandi cheriya palli. The traits of internal migration from North India can be traced from these ports. Most of them were before the arrival of Portugese. The Sindhs, Marvadis, Parsis and Baniya can be seen in parts of Calicut. The Gujarathi Setts, Bohras and Badkal Muslims were concentrated in Ponnani port and Panthalayani kollam. These Migratiois led to the emergence of Pandikasalas and Trade centers. Now the ancient ports are replaced by

Markets. Calicut is considered as a greatest example for that. The Gujarathi street of Cutch peoples, Silk street of Chettis, Valiyangadis were the major contributions of Calicut port. Thalassery in Kannur, Ponnani in Malappuram and Kodungalloor in Trissur were the Pattanams and Angadis grew along with the ports.

REV. HENRY MARTYN AND HIS ENCOUNTER WITH SOCIETY AND LANGUAGES IN COLONIAL INDIA

N.V. Baby Rizwana

Introduction

Henry Martyn was born in Truro (Cornwall), United Kingdom. He was educated at Cambridge and later decided to become a priest. He became well known for his missionary activities in India and Persia. After hearing about the success of William Carey's mission¹ at Serampore in Bengal, he abandoned his career of a barrister to preach Christianity. He then became the chaplain of the East India Company. He produced Hindi, Urdu and Persian translations of the New Testament. Later he retired from his work in India and went and lived in Persia. He is best remembered for his scriptural translations which remained prominent until the end of nineteenth century. This paper tries to trace his idea of Indian society and his contribution to the missionary literature translations in colonial India.

1. Martyn's Perspectives about Indian Culture and Society

The missionary view of India came into circulation when Charles Grant published his celebrated observations on the state of society among the Asiatic subjects of Great Britain, particularly with respect to morals and on the means of improving them. Grant wrote, "upon the whole, then we cannot avoid recognizing in the people of Hindustan a race of men lamentably degenerate and base, retaining but a feeble sense of moral obligation yet obstinate in their disregard of what they know to be right, governed by malevolent and licentious passion, strongly exemplifying the effects produced on society by great corruption of manners and sunk in misery by their vices."² He believed that caste, Brahmanical legal system and rule were the reason for Indians' doom. He hoped for an

elimination of Hinduism and that it could only be attained through conversion to Christianity. Claudius Buchanan, John Shore, William Carey and William Ward all shared the same attitude. William Ward in his book about Hindu religion and society gave importance to empirically gathered information than to the Sanskrit texts which were the chief source for the Orientalists. Ward wrote that caste system "has rendered the whole nation cripples. Under the fatal influence of this abominable system, the Brahmans have sunk into ignorance."³ They collectively believed that it was important to destroy caste if they wanted to set the Indian society on a path of progress. It was however a difficult task. Even if the converted people remained as a different group and were cut off from the rest of the society, the diffusion of Christianity was still possible if there were proper communications. In order to spread the gospel, missionaries started to produce and disseminate the Bible to the people in the vernacular languages.

Even though they were the complete opposites of each on some issues, the orientalist and the missionaries agreed on other points. They agreed that Brahmans were at the apex of the social structure and the sole handlers of knowledge. They also agreed with the theory of the *varna*. They left out the study of political organization, land and the legal system. They all agreed that the nineteenth century version of Hinduism was full of superstitions. The main difference was that the Orientalists believed in a past golden age of civilization, whereas the missionaries asserted that society and culture had always been decadent. Martyn was no exception. Henry Martyn reached India in April 1806, and the first thing he did was meeting Mr. Buchanan in Hooghly. After a brief discussion,

he met with the Mr. Brown in Aldeen. The scenes near Aldeen were described by him as most heartbreaking. He gives a detailed picture of the evil practices of Hinduism and called Hindus devil worshippers. He started preaching in Calcutta and kept a detailed account of the local picture in his diary. He says he slowly began to understand Indian culture. When he reached India he saw Indian society as hopeless, and was doubtful whether his decision to come to India was the right one. He was not confident of being able to bring about a change for the better in India. He says, "Looking forward to an idle, worthless life spent in India to no purpose."⁴

He looked at India as a wretched place and his biggest challenge was to take on those "who had erected such a monument of her shame on the coast and whose heathenism stared stranger in face."⁵ He was utterly in confusion regarding whether Indian conditions would suit him. His early phase in India was chaotic as he tried to adjust himself to the environment and the people. It is clear that he was not happy after reaching India, but told himself that God might have a purpose in his being sent there. He says, "Scarcely can I believe myself to be so happy as to be actually in India". His first description of natives goes like this. "In general, one thought naturally occurred: the conversion of their poor souls. I am willing, I trust, through grace, to pass my life among them if by any means these poor people may be brought to God. The sight of men, women and children, all idolaters, makes me shudder as if in the dominions of the prince of darkness. Hearing the hymn, 'Before Jehovah's awful throne,' it excited a train of affecting thoughts in my mind."⁶ He further writes, "Wide as the world is thy command. Therefore it is easy for Thee to spread abroad Thy holy name. But oh, how gross the darkness here! The veil of the covering cast over all nations seems thicker here; the friends of darkness seem to sit in sullen repose in this land. What surprises me is the change of views I have here from what I had in England. There my heart expanded with hope and joy at the prospect of the speedy conversion of the heathen, but here the sight of the apparent impossibility requires a strong faith to support the spirits."⁷

When he got his resident pagoda on the side of the river near a temple, Martyn was not happy. He says in his journals that the sound and

noise produced by the devil worshippers left him with no sleep. So he decided to bring out the church bells into the vaulted halls of the pagoda. He states, " It is heavenly the sound of bells, where once devils were worshiped."⁸ He looked at Indian subjects with kindness and pity. He says "I lay in tears interceding for the unfortunate natives of this country, thinking with myself that the most despicable sooner of India was of as much value in the sight of god as the king of great Britain."⁹ He many times called Indian as servants; he addressed the low caste coolies in the name of servants. It is evident that Martyn exhibited an attitude of intolerance to Hinduism, called Hindu rituals as cruel and expressed contempt for the idolatries of heathenism. He hated the symbols of red *tilak*, the sounds of drums and cymbals. He called Indians poor devil-worshipping natives and described his stay in India as "standing as it were in the neighborhood of hell."¹⁰

India was a new experience to Martyn. It was more horrifying rather than simply different. The Hindu rites, superstitions, and the changing nature of caste by the mile confused him. John Sargeant gives a description of what Martyn felt about witnessing the Hindu rites in India. He writes, "In the vicinity of Aldeen, indeed he witnessed with horror the cruel rites and debasing idolatries of heathenism. The blaze of a funeral pile caused him one day to hasten and den devour if possible, to rescue an unfortunate female, who was consumed before he could reach the spot. In a dark wood at no great distance from Serampore he heard the sounds of cymbals and drums, summoning the poor natives to the worship of devils- sounds which pierced his heart; and before a black image, placed in a pagoda with lights burning around it, he beheld his fellow creatures prostrating themselves with their foreheads to the earth."¹¹ When he was traveling through the Ganges at night, he saw Kali worshippers. He says the very sight of it made him sick and he turned his face so that his Lord would not punish him for seeing such kind of sins. Like many of his contemporaries and other missionaries, Martyn kept a hostile attitude towards Indians in general and Hinduism in particular.

The continuous contact with the locals made Martyn feel like he should be patient with them because they had not been exposed to the

true religion. At this stage compassion more than hatred grew in his feelings towards Indians. He says that he felt love for the Indian souls and longed for transferring these poor simple people to the Holy Gospel. He vowed to preach to them day and night. When he was traveling from Hooghly to Dinapore, Martyn narrates an interesting story that happened. During his free time on the deck, he used to capture birds and one day he shot a bird worth eating. After a while, a man approached him and asked him that one *musalchee* liked the bird and he could offer a fish in return. He then writes, "I then recollected what Brown told me of the custom the servants have of making requisitions from the natives in the name of English masters. Alas, poor natives, how accustomed are they to injustice. They cannot believe their English masters to be better than their Mohammedans."¹² It shows that he believed like others that Indians faced the doom from the coming of sultanate rule in India. He was no exception in believing that Muslim rule ruined Indian wealth and exploited Indian heritage.

While traveling through the villages Martyn found women to be timid and shy. They did not see him in the eye. The dressing habits of women and their behavior were strangest for him. He said whenever he spotted a girl or a woman, they fled at his sight. When he managed to strike conversation with some women, their husbands became suspicious, and in any case language barrier did not allow much exchange. During his Hindustani studies, he tried to read the Ramayana after hearing much about Lord Ram from the natives. But after reading, he says he was left heartbroken, and called it a work of Satan. He found nothing good about the epic, and said the text was against the spirit of God. He was never impressed with Indian literature. He learned to read every script in Sanskrit but only for the purpose of learning the language. He was completely in confusion with Indian culture and religions. He called many *munshis* and pundits as ignorant who behaved like they knew everything but in reality did not know a thing. As one man greeted him, he writes, "As he prostrated himself to the earth, and placed his forehead in the dust, at which I felt an indiscernible horror."¹³

Martyn's exchanges with pundits and *munshis* were mainly on the subject of religion.

Once when he asked a pundit about his superstitions and the pundit got angry. So did a *munshi* when asked about the veracity of the Koran. Martyn called them fools and pitied them saying their false religion made them arrogant and ignorant of true reality. The only time when he mentioned the past heritage of India was when he saw a Brahman sitting under a tree and praying along with his pupils. He says even though India invited the wrath of God for protecting Jews, it still managed to protect its own heritage.

His discussions with the Indian *munshis* and pundits were always left incomplete. Once when a pundit asked him about the idea of the Holy Trinity, Martyn explained it. But the pundit mocked him by saying Christ was so low as to take birth from a woman. Martyn says Indians did not hold any respect for women. When pundits argued that there were many ways to reach God, Martyn replied that the only savior was Christ and He pardoned only those who repented. When compared to the other missionaries, what made Martyn different was that instead of discussing only with the Brahmans he contacted other local groups as well. He used to travel to the deepest part of the village and meet different people from different castes. While it is true that his dialogues were mainly with the learned men of upper castes, he also engaged with rural low-caste groups.

2.Martyn's Linguistic and Translational Efforts in India

During the nineteenth century, along with other modes of preaching, language studies, translation of Holy Scriptures and their distribution among the desired communities became a new trend among the protestant missionaries. Stephen Neill commented that "the first principle of Protestant missions has been that Christians should have the Bible in their hands in their own language at the earliest possible date,"¹⁴ whereas Catholic missionaries were engaged in translating mostly books of devotion. When the mission became a serious affair the translation of the holy books and their distribution also became an important matter. During the initial stages, British and Foreign Bible Society and Wycliffe Bible translators took the work in their hands. Thus, the gospel-centered missionary activities began to grow

with a new trend of translation and language studies.

Missionaries were normally interested in Indian languages and culture of nineteenth century India. But it became more fascinating when Martyn joined the scenario. The pioneer missionary who started the study of Indian languages for the sake of the mission was William Carey. It was not the translations but the language study that first started as missionaries got involved with the natives for a better understanding of their culture. Communication and language barrier were the major problems faced by the missionaries of the nineteenth century. Carey's celebrated work 'Dialogue' intended to facilitate the learning of the Bengali language was published in 1801 through the Serampore Press which became the centre for the publication of translation works. "This work reads like a forerunner of modern language teaching materials for learning a language including through the oral method. It contains a series of dialogues between various types of Indians, zamindars and their tenants, zamindars and their officers, washermen, fishermen, cultivators, and various types of women."¹⁵ This method of learning the Indian tongues and translations was later taken up by William Adams, who proved to be a champion of indigenous education. Bishop Robert Cardwell who composed works such as the 'Comparative Grammar of the Dravidian Family of Languages' was also a follower of this method.

Martyn was not merely a pious, young, and a dedicated missionary, but a capable translator who began to learn Indian languages even before he arrived in India. He had a natural flair for learning languages, and wrote a regular journal from the days of his Cambridge studentship about learning a variety of languages. During his time as an ordained priest, there is a detailed description in his journal wherein he says that it was a difficult task to learn Indian languages. John Sargent writes, "During the two months Martyn was resident in London, he considered that he could not better employ his time, than by devoting it to the attainment of the Hindustani language, and having the advantage of being assisted by a gentleman eminently competent to direct him, he was incessant in his endeavors to obtain that

necessary qualification for an Indian missionary."¹⁶

Upon his arrival in India, he was disappointed to hear from his Brahman friend that every song here changes within miles. In 1806 he was asked to make translation of the New Testament into Urdu. He was also in charge of making Persian and Arabic translations. He translated a number of the psalms into Hindi, Nagri and Urdu. He completed the Hindustani Gospel in 1810 and sailed to Persia with a copy of the Persian tracts of the gospel to present it to the Shah. The evangelical concept of centrality of scripts is definitely one reason that motivated him to do translations. He believed that these scriptures could change the lives of people. As Padwick states, "In his writings [there are] increasing and deepening longings after God, numerous instances of delight and satisfaction in prayer, and many indications of his intense love of the word of God."¹⁷ Sebastian Kim wrote the following about Martyn. 'His [Martyn's] devotion to translation was greater even than his commitment to the Bible, his interest in logic and desire for an excellence in translation was equally, if not more important in assessing his motives. His interest in language is evident when we read about his preoccupation with studying Bengali and Arabic grammar while he was ministering at Lolworth and thinking of going to India, perhaps anticipating his later involvement in translation work.'¹⁸

Throughout his journey from England to Calcutta, Martyn learned Bengali, Urdu, Persian and Arabic grammars. He learned a lot from Carey's translation works. During his stay in India, he learned Sanskrit grammar with the help of pundits, and Nagri with the help of *munshis*. He translated acts and commands into Indian languages. Whenever he translated he corrected it with the help of his friends who were better in the matter of language. He also learned the rules of Sindhi. Every time he visited villages he gave out translated tracts to the people. Mirza of Benares, well-known in India as an eminent Hindustani scholar, and Sabat, an Arabic scholar helped Martyn during his stay in India with the translations and helped him to achieve a standard of professionalism in his translations. Martyn left for Persia "determined not to come forth again till he brought with him such a

version as in all its niceties could satisfy the sensitive Persian ear."¹⁹

The question whether Christianity was used as a tool to secure power by the Company caused a prolonged debate in the academic discourse about Indian history. Since the process of imperialism and missionary activity coincided, the possibility of collaboration between them becomes a question to consider. Evangelicals considered the mission as their bounden duty to help the heathens through redemption, Babington nevertheless writes that "not all Evangelicals were eager to help heathens, but the more urgent challenge was to help the godless poor at home."²⁰ It is difficult to believe the assumption that there is no connection between Protestant expansion and colonial consolidation. When we evaluate the expansionist policy of imperialism and the missions, it is evident that missions expanded in the colonies rather than any other part of the world. K M Panikkar writes, "Christian evangelicalism represented an attempt by the Europeans to impose a mental and spiritual conquest as a way of buttressing their political authority."²¹

So we can tentatively work with the assumption that colonialism and mission were the two sides of the same coin. India was always a temptation for the missionaries. In the early eighteenth century when the Company was merely a trading organization, they strictly avoided any contact with the missionaries for the fear of opposition from the natives. In 1793 when a petition was sent out to the British Parliament to allow missions to do work in India, it was rejected on the ground that missionaries could hurt the religious sentiments of the natives, and eventually bring a critical situation to the stability of rule by the Company. But in 1813 with the help of Wilberforce, the 'pious' clauses were added to the Charter which allowed the missionaries to enter India. Even after this, the Company used its power to eliminate or remove any foreign person from India as it deemed fit.

Many of the translators including Martyn worked in a colonial context and it is right to say that they benefited from the colonial establishments. However they did not see missionary work as entirely part of a colonial agenda. In Martyn's case, he was genuinely interested in the scriptures, even though he did

not give much attention to the classical works of India. Even though Martyn's agenda was mainly the spreading of the word of God, it is right to say that even though he was proud of the colonial government he did not openly ask for the continuation of it. His agenda was of a religious nature. Eric Fenn convincingly argues that it was the evangelical revival, more than anything else, which was the driving force behind this missionary work. It was out of that movement, a movement of the Spirit, that there came a fresh conviction of the universality of the Gospel which went onto make the nineteenth century a notable landmark in the expansion of Christianity. The fact that the new spirituality had been so closely connected with the recovery of biblical truth meant that the Bible moved into the centre of faith and practice again in a way which ensured that it would be at the very heart of the new movement when it came.²²

Many writers were in doubt about the real agenda of the translations and language studies. The visible goal might be making the gospel available in the languages of those who needed the material. But many historians speculated that whether there was any hidden agenda behind the translations. R.S. Sugirtharajah, in a recent publication, calls it as scriptural imperialism and argues that during this time the scriptures did not play an important role for the believers.²³ Sermon and oral discourse and transmission played a more important part. In Martyn's career there were instances when people from his own ministry took offence when he used written sermons.

Sugirtharajah accuses Protestants of a dogmatic attitude of "acknowledgement of the sufficiency of scripture, assertion of its authority over tradition, [and] treating it as the incorruptible Word against human error and it created trend of the denunciation of the natives' idolatrous practices" and "preaching accompanied by the presentation and dissemination of the Bible as the answer to their miserable state."²⁴ He says scriptural imperialism was invented by the missionaries themselves. They saw and projected themselves as agents of God who needed to pass the scriptures down to the lesser fortunate societies. "The oracles of God, which were first given into the custody of God's chosen, the Jews, had now been passed on to the Christians, especially the British ... The Society's intention

of providing the Bible in the vernacular was another mark of scriptural imperialism. In colonialism's cultural conquest, vernacular Bibles, enabling the natives to read the Word of God in their own languages, could be seen as the sympathetic and acceptable face of its civilizing mission: it appeared to be a noble cause. But behind this noble claim, one came across constant complaints by the Society's translators who found that the indigenous languages not only had no suitable vocabulary but also lacked concepts to convey the ideas of the gospel²⁵. Furthermore, scriptural imperialism was furthered by the ambition to print the Bible at affordable prices and place it within the reach of all people. The publication of the Bible in various vernacular languages was not meant to be a profitable enterprise. However we also observe that the local people gave their seal of acceptance to the Bible and sometimes the locals also participated in the endeavor of translation.

Conclusion

Martyn first landed in Madras first but after few days he moved to Calcutta, the main centre of missionary activity during that period. After

reaching in Calcutta he started working at Serampore Baptist Mission as an assistant in the work of Bible translation. Martyn was largely inspired by William Carey's translation work. It provoked him to learn the different languages in India and Persia that motivated him to learn Bengali, Sanskrit, Urdu, Persian and Arabic along with other local languages which helped him to translate Christian scriptures in future. He translated *The New Testament* into Hindi and Persian, *The Psalter into Persian* and *the Prayer Book* into Hindi, *The Anglican Book of Common Prayer* into Hindustani. He had also revised and Arabic translation of *the New Testament*. He was never interested to translate any Indian classics or other texts into English or in any other European languages. From his translations, journals and biographies, it could be argued that his scholastic knowledge about Indian and Persia was limited, even though he was shined in the area of translation, language studies and interfaith studies where as he completely ignored the possibility of a rich literature in ancient and medieval India and Persia.

End Notes

1. William Carey (1761 – 1834) was a British Christian missionary. Carey is known as the Father of Modern Missions. He reached Calcutta (India) in 1793. He joined the Baptist missionaries in the Danish colony of Serampore (India). He started schools for poor children and opened the first theological University in Serampore. He was the first missionary who realized the scope of print mission in India.

STYLE OF RAJENDRA CHOLA I SCULPTURAL CONTRIBUTION – ESALAM TEMPLE

M. Chandramoorthy & Dr. K. A. Kavitha

Sculpture in South Indian temple occupies an important place. They were sometimes used to decorate the different architectural members like pillars, plinth and superstructure in a temple. Both sculpture in the round has bas-relief were carved. Esalam, being a remote area in the Villupuram Taluk and Villupuram District, is less known to the general public.

The sculptural representation in Tamil country began during the Sangam period. Sangam works have mentioned about *Kollipavai* and *Sathukkabootham*. But we have no archaeological evidence for this. Goddess sculpture was located at *Ulagur* near *Dindivanam* which belongs to fifth Century A.D. It is the earliest sculptural representation. During 6th to 8th century's number of sculpture were created in the Rockcut temples in monolithic rathas and in structural temples by the Pallava rulers. Nearby Esalam, *Lingathadimedu* has Pallava type of Linga. This Linga is best example for Pallava sculptures. Inside the temple of *Ramanatheeswarar* Prakara has broken *Aavudaiyar* without pooja. It is also the best example of Chola sculptures. The Aavudaiyar period was early 11th century A.D. The sculptures are divided into three types. They are

1. Stone Sculptures
2. Bronzes
3. Wooden Sculptures

Stone Sculpture is found in Ramanatheeswarar temple of Esalam village. The pillars have shallow bas-relief. However, they are in fairly good state of preservation. Some ornamental details may be noticed on the temple walls. The Vimanas have also few sculptures of brick and mortar. Now we discuss about the stone sculptures at Esalam in this article.

Ramanatheeswarar (Linga)

The main deity of this temple is in form Linga called Ramanatheeswarar. The Linga is made up of three parts namely *Brahmabhaga*, *Vishnubhaga* and *Rudrabhaga*. The *Brahmabhaga* which is the bottom portion is square in shape, and is planted in the centre of

garbhagraha. The *Vishnubhaga* is the middle portion octagonal section and the cylindrical shaft visible to the devotee is the top part, circular known as *Rudrabhaga*. The *Pranala* of the Linga (water chute) is facing left. The Linga is achala Linga (immovable) type. Recently it was prathishta. It was dated by **Mr.M. Chandramoorthy, Deputy Director, Tamil Nadu State Department of Archaeology on 12th may 2014**. The old Linga was misplaced.

Sculptures in the Niches around the Sanctum

Vinayagar

The southern niche of the *arthamandapa* has the image of Vinayagar. He is seated on the pitha with four hands. The upper two hands have the *ankusa* and the *pasa* and one of the lower hands have the *tanda* and the other holds a *modaga*. His trunk is turned on his left and it has one modaga. He adorned with *kritamakuta* and wears a number of haras around the neck. He wear *pathasaram*, *lower garment*, *udharabandham*, *yajnopavita*, *vaghu valaiyam*, *tholmalai*, *keyuram* and *bangles*. The sculpture assigned to the 11th Century A.D. on stylistic grounds of Rajendra I.

Dakshinamurthy

The southern niche of the *garbhagraha* has the image of Dakshinamurthy. The agamas mention twenty five sportive forms of Siva, most of which are usually met with in South Indian Temples. One of the most important of these is *Dakshinamurthy*, also called *Alamarselvan* in Tamil. He is seated on the *mount meru* where the rishis dwell. The image represents Siva as a teacher of gnana, is seated under a banyan tree in the *Veerasana posture*, his right leg rest on *muyalaka*. he has a *tajamakuta*. He is with four arms, the upper right and left arms are *kadaga hasta pose* having *naga and jwala*, whereas the lower right and left hands were broken. His left and right ear has no kundalas. He has his *yajnopavita*.

Banyan trees has *snake, owl, monkey, handbag, bird* are all lived in the tree. His left leg from knees were broken. And front right and left hand from knees also broken. So new

Dakshinamurthy is put in front of old dakshinamurthy. His eyes little bit open. Ornaments, yajnopavita, brahma mudichi, naga bhajibanda are all in the sculpture. So the sculpture is early 11th century A.D. the period of Rajendra Chola I.

Vishnu

The image of Vishnu is seen in the western niche of the garbhagraha. It is in the form of polished stone. He is standing on Padma pitha in *samabhanga hasana*, wear full lower garments, *udharabandha*, *yajnopavita*, *brahmamudichi*, *kanda saram*, *sarappali*, *makarakundala*, *tholmalai*, *keyuram*, *bangals*, *rings*, *keerthi mugha lower garment*, *padhasaram* etc. are all he wear. He is stading in the *samabhanga postue* wearing *kiritmakuda*. *Sangu* and *Chakra* in his upper right and left hands with the postur of Kathiri. While his lower right are in *abhayamudra* and left is resting on his hip i.e., *katiya valambalabita pose*. This is one of the earliest sculptures of the temple in the period of Rajendra Chola I.

Brahma

The standing figure of Brahma is found on the northern niche of the garbhagraha. He has four faces, of which the one at the back is not visible. He wears *kiritamakuta*, *yajnopavita* and *kundalas*. He is with four arms. The upper right and left wear *akshamala* and *kendi* respectively while the lower right is an *abhayahasta* (broken original, and fit duplicate) and the left is resting on his hip i.e., *katyavalambita pose*. He wears a number of haras around the neck. He ear wear *rudraksha kundala*. The anklets are also found in

his legs. The image was workmanship of the *Rajendra Chola I* period.

Durga

This deity is found standing on the northern niches of the ardhmandapa. She is standing on the *buffalo head in tribanga pose* and wears a *kiritamakuda* and decorated with *makarakundala*. She is with four arms. The upper right and left arms hold *prayoga chakra* and *sankhu* in kathiri hasta respectively. The lower right arm is in *abhayahasta* (broken original, and fit duplicate) while the lower left arm is resting on her left thigh. One *parrot* is seated in her hand. She wears anklets, a number of haras around the neck. She wears *"marbu kachu" pathasaram*, *vaghu valaiyam*, *tholmalai* and *bangles*

Dyana eyes, sharp nose, smiling lips, broad sholder, perfect body, standing pose are all easily attracted by the people. The buffalo eyes are very sharp and angry. This sculpture on stylistic grounds to the period of *Rajendra Chola I in the early of 11th Century A.D.*

Epilogue

These sculptures are all very attractive. This temple was built by *Rajaguru Sarva Siva Pandit*. He was a *Rajaguru of Rajendra Chola I* in 11th century A.D. So these sculptures are equal to *Gangai konda Choleeswaram temple* sculpture. But the esalam sculpture is small; Gangaikonda Choleeswaram temple sculpture is big. Both are very marvelous. The temple was built in early 11th Century A.D. It is the best example of Rajendra Chola I sculpture.

SWAMI VIVEKANANDA'S THOUGHTS ON PROGRESSIVISM - A PURVIEW

Dr. P. Charles Christopher Raj

Introduction

Swami Vivekananda or Narendranath Datta, or simply Narendra or Naren as he was known during his premonastic days, was born to Vishwanath Datta and Bhuvaneshwari Devi on

Monday, 12th Jan 1863 at Calcutta. He belonged to high-caste, relatively affluent family of lawyers, and received a solid Western-style education. From the influence of his father, he seemed certain to enter into the profession of

law. But, at the age of 18, he met Sri Ramakrishna, a revered Hindu ascetic, who placed his hand on the young Anglophile and instantly tapped within him an undiscovered spring of traditional Hindu thought¹.

Vivekananda strove to rid Hindu society of the many ills that contaminated its pristine purity. His crusade against untouchability, his desire to uplift Indian women to the level of equality among men, the new yet old orientation that he gave to education as 'the drawing yardstick of the perfection already in man', were part and parcel of his well-defined mission in life.

His extraordinary gift of oratory struck his audiences like a lightning bolt and immediately propelled him into an unprecedented speaking tour throughout America and Europe.

His thoughts dedicated to social service and religious education with centres around the globe, served the poor with great zeal, proved contagious to the Indian Nationalist Movement, especially to Gandhiji's programme of social reform. His messages remains still clear and emphatic for the development of Indian women. Though he lived a life of celibacy, he talks in overwhelming terms about the greatness of love and marriage as well as the duties that are to be fulfilled by the householder².

His ideas borne the paradigm shift, and expected India to become a great power in 2020, a dream already visualized by Swamiji in the 19th century. In fact, he was the first entrepreneur behind the concept of globalization who took Hindu religion to all over the world. He made aware that there is a religion which deals with progress in life that can be achieved with the help of a special instrument called 'Truth'.

Swamiji's progressive thoughts were supererogation, highly prominent and visible even in the present century.

Swamiji's views on Social evils and Remedies

On looking at the social evils of our country, he advocates the remedies through his teachings, that each soul is potentially Divine, the goal of human birth is to realize this Divinity within and manifest it for the welfare of the humanity, and essentially all religions lead to the same realization.

The important point to note is insistence on individual liberation as a priority over the efforts to 'do good to the world'. The idea is to strive for special state or plane of consciousness that would lead a person to realize his or her true nature. Achieving such exalted state of altered consciousness forms the basis for human actions. Every human act should have this aim in sight, and even in 'service to humanity and renunciation of sense pleasures'. Religion or spirituality was an act of inching higher and higher on the steps of consciousness, from animal consciousness to human consciousness, and from human consciousness to Divine Consciousness³. Remedies to the prevailing evil in the society is his summation through upward motion of faith in oneself, strength of the individual to face the society, fearlessness of any evil that engulfs the individual, truthfulness at all time of life and lastly service to humanity that alone can bring the ointment for the wound caused by the social evils of our country.

Swamiji and the Significance of Education

Swami Vivekananda, a great thinker embraces education and signifies it as a tool for 'man-making'. Realizing that mankind is passing through a crisis, he cautioned that our materialistic and mechanical way of life is fast reducing man to the status of a machine. He feels the dire need of awakening man to his spiritual self wherein lies the very purpose of education.

Education is not mere literacy as he observes but it should abound in information that can be disseminated, and should embody a culture. In his scheme of education, he lays great stress on physical health because a sound mind resides in a sound body and he quotes as 'nayamatma balahinema labhyah'; i.e. the self cannot be realized by the philosophy weak⁴.

The exposition and analysis of Vivekananda's scheme of education brings to light its constructive, practical and comprehensive character. He realizes that is only through education that the uplift of masses is possible.

A few of Swamiji's personal observations, epitomize the concept of education that it acts as a manifest tool perfection found already in man. Like flintlocks, knowledge is well present in one's mind, suggestive ideas are the friction which brings it out. Education doesn't mean obeying

Guru who taught you or blindly worshipping your Guru as God, love him as you will, but think for yourself⁵.

He states it emphatically that if society is to be reformed, education has to reach everyone-high and low, because individuals are the very constituents of society. The sense of dignity rises in man when he becomes conscious of his inner spirit and that is the very purpose of education. He strives to harmonize the traditional values of India with the new values brought through the progress of science and technology.

It is in the transformation of man through moral and spiritual education that he finds the solution for all social evils. Founding education on the firm ground of our own philosophy and culture, he shows the best of remedies for today's social and global illness. Through his scheme of education, he tries to materialize the moral and spiritual welfare and upliftment of humanity, irrespective of caste, creed, nationality or time. However, Swami Vivekananda's scheme of education, through which he wanted to build up a strong nation that will lead the world towards peace and harmony, is still a far cry. It is high time that we give serious thought to his philosophy of education and remembers his call to every-body-'Arise, awake, and stop not till the goal is reached.'

Swamiji on 'Women' – their problems and solutions

According to Swamiji the **Status of Women** – Women are bondage and a snare to men. It is for this purpose, I suppose, that scriptural writers hint that knowledge and devotion are difficult of attainment to them? Swamiji replies – **In what scriptures do you find statements that women are not competent for knowledge and devotion?** In the period of degradation, when the priests made the other castes incompetent for the study of the Vedas, they deprived the women also of their rights. Otherwise you will find in the Vedic or Upanishad age Maitreyi, Gargi and other women of revered memory have taken the places of the Rishis through their skills in discussing the Brahman. All nations have achieved greatness by paying proper respect to women. **Manu says "Where women are respected, they are Gods delight, and where they are not all works and efforts come to naught."** In India **Women are revered as Mother** – The

mother is the ideal of Indian womanhood. And even God is conceived as mother. In the West, a woman is essentially a wife. In a western home it is the wife who rules but in an Indian home it is the mother who rules. Woman as mother is marvellous, unselfish and ever forgiving. In India it is the father who punishes the child, not the mother as in the West⁶.

The most significant and profounding solution to the existing problem that all hearts should throng and start a movement for emancipation of women. Though the primary goal for women empowerment is to improve the quality of life of women but it has also deep ramifications in social, economic and political scenario of body polity. The media through its reach to people at large has been instrumental though not to the extent desired in supporting the movement for women emancipation by focusing neglect and marginalization of the position of the women in society. It sounds intriguing how from a highly dignified position in India's mythic history, the woman in India has been relegated to a secondary position. The vested interests of the ruling elite and the male lobby influenced by alien cultures legitimised woman as an individual of little consequence. It would be a sad commentary on the subordinate role of women in India when woman is ideally viewed as Shakti (Power), the origin of power itself but in reality found as helpless, hapless woman without any identity except that of a wife, or the mother who has very little voice in decision making and has very little by way of her own basic choice. Although discrimination against and exploitation of women are global phenomena, their consequences are more tragic in the some parts of the globe particularly in under developed countries where, ignorance, deprivation of the basic necessities of life, and the ever-growing pressure of transition from tradition to modernity-all combine to aggravate the inequalities that women suffer to a point at which their existence is reduced to a continuous battle for survival. Improving the status of women is regarded as the key to narrowing the gender gap and achieving a better quality of life. Women are under great social control and scrutiny which has restricted what they can say and where and to whom. Cultural moves in almost every social set-up determine women's socialization in no uncertain terms. This has an important bearing on their ability to communicate and express their

thoughts. Swamiji compared Foreign women to Indian women, that they should have the liberty, liberty as the first condition of growth, will help women in leading their own life independently not depending on their husbands, sons at various stages of their life span⁷.

He utters in his own lecture that 'Men and women in every country, have different ways of understanding and judging things. Men have one angle of vision, women another; men argue from one standpoint, women from another. Men extenuate women and lay the blame on men; while women exonerate men and heap all the heap on women'⁸. He entrusted the duty to on coming generation thinkers to uplift womanhood as scholars like Maitreyi and Gargi, heroines like the Queen of Jhansi; wives like Sita and mothers of heroes like Jeeja Bai⁹.

Swamiji reminds us how in our old forest universities there was equality between boys and girls so that in this nation we may not have to learn from Tennyson's long poem *Princess* about educating a woman. Thus equality of sexes and freedom is the burden of Vivekananda's speeches and writings concerning women. But as Sister Nivedita points out, "The growth of freedom of which he dreamt, would be no fruit of agitation, clamorous and iconoclastic. It would be indirect, silent and organic"¹⁰.

Swamiji on the "Institution of Marriage"

Swamiji utters that most desirable life of a citizen in a society is the life of a family man with all the happiness that the company of a loving wife and loved children can offer. The life of the married man is quite as great as that of the celibate. It is useless to say that the man who lives out of the world is a greater man than he who lives in the world; it is much more difficult to live in the world and worship God than to give it up and live a free and easy life¹¹.

Marriage is the type of institution of one's soul relation to God. He justified Hindu marriage-customs, as springing from the pursuit of this ideal, and from the woman's need of protection, in combination. And he traced out the relation of the whole subject to the Philosophy of the Absolute. When Swamiji was with Sister Nivedita at Jhelum he discussed about the depth of marriage and said in his own words. "This is why"; he exclaimed, "though the love of a mother is in some ways greater, yet the whole world

takes the love of man and woman as the type. No other has such tremendous idealizing power. The beloved actually becomes what he is imagined to be. This love transforms its object. Marriage is not for individual happiness, but for the welfare of the nation and the caste. Certain individuals of the modern reform, having embarked on an experiment which could not solve the problem, "are the sacrifices, over which the race has to walk"¹².

Swamiji's idea on Religion as the Healer of Humanity

Religion plays a vital role in the growth of a country. The world of religion has many prescriptions and many practices. The priestly order in every religion has its own dress and its own discipline. There are many rituals and many taboos, Individuals are expected to suffer penances, offer prayers, a greater rigour and a life of asceticism all stipulated. Celibacy, renunciation and other practices are prescribed as paths to the heaven. Much has been said about the common ground of religious unity. This unity cannot come by the triumph of any one of the religions and by the destruction of others. It can come only by every religion assimilating the good points of other religions. To other nations, religion is one of the occupations of life but here in India religion is the one and only occupation in life. As a consequence, our culture and national genius have derived a special bent or direction. Referring to the flooding of the world with Indian spiritual ideas that is silently taking place, German philosopher Schopenhauer said " The world is about to see a revolution in thought that is more extensive and more powerful than that was witnessed by the Renaissance of Greek literature."¹³The Ideal of Universal Acceptance - What the world needs from India is the idea of harmony and acceptance of all religions. In the ancient world outside India among the Babylonians and the Jews, each tribe had a god known as Baal and Moloch. When the tribes fought among themselves the victor displaced the Baal or Moloch in the temple of the vanquished with its own God. Thus the supremacy of Gods was settled in battle. In India, religious evolution took a different turn. Here also there were several Gods, but it was realized in the Vedic times that Truth or God is one but the sages call him differently. Differentiation is the

law of life and religious differences are bound to persist, but it does not mean that we should hate each other. This can be achieved only if the Truth of universal acceptance preached in India is spread the world over.

As Swami Vivekananda says in 'Is Vedanta The Future Religion?' "...Gradual or not gradual, easy or not easy for the weak, is not the dualistic method based on falsehood? Are not all the prevalent religious practices often weakening and therefore wrong? They are based on a wrong idea, a wrong view of man. Would two wrongs make one right? Would the lie become truth? Would darkness become light?".....Vedanta is everywhere; only you must become conscious of it. These masses of foolish beliefs and superstitions hinder us in our progress. If we can, let us throw them off and understand that God is spirit to be worshipped in Spirit and in Truth. ...All the different ideas of God, which are more or less materialistic, must go. As man becomes more and more spiritual, he has to throw off all these ideas and leave them behind. If Vedanta - this conscious knowledge that all is one Spirit - spreads, the whole humanity will become spiritual. But is it possible? I do not know...¹⁴"

Conclusion

It is well known that Swami Vivekananda was associated with the Renaissance in India, that he was one of the leading thinkers of the emerging new India at the turn of the 19th century. He was regarded as a prophet who gave a clarion call to a tired nation with a hoary culture to awake and arise. A whole culture was to be reborn from servitude, lassitude and fickleness. He could rejuvenate that culture, and act as its spiritual ambassador to the West. But it is perhaps not so well known that Swami Vivekananda was deeply committed to the welfare of women. One of the overriding issues of the Indian Renaissance was the position of women in our society and the oppression women faced both at the institutional and individual levels. It is interesting to examine Swami Vivekananda's stand on the issue of women's rights. It reveals his deep insight into Indian culture and spiritual history, for it is they which have shaped our tradition and traditional institutions. Vivekananda's call for liberating India from its evils are very different from the shrill cry of the Western suffragette for franchise or "liberation". It is the result of an inclusive understanding of a whole way of life.

SRI KRISHNADEVARAYA AND HIS CONTRIBUTION TO TIRUMALA TEMPLE, SOUTH INDIA

Prof. P. Chenna Reddy

Krishnadevaraya's reign (1509-1529 A.D.) witnessed a tremendous spurt in trade and commerce both inland and foreign countries like Persia, China, Portuguese and other European countries. He established number of mints at Penukonda, Gooty, Gandikota, Tadipatri and Chandragiri besides, Hampi and issued coins in gold, silver and copper. He also constructed number of tanks and dug wells and canals for irrigation¹.

Krishnadevaraya himself was a great poet and wrote books in Sanskrit and Telugu. His Telugu work *Amuktamalyada* is considered as a master piece in Sanskrit. He was great patron of Tamil and Kannada literature. He encouraged many poets and his court was adorned with *Ashadiggajas*. He conducted literary debates, popularly known as *Bhuvana Vijayam*. Krishnadevaraya was a great patron of arts and crafts including sculpture, architecture and painting. His period was remarkable with all round development in all walks of life and considered as the 'Golden Age' in the history of south India. The list of articles in gold, silver and copper which include ornaments, Jewellery and ritual items donated by Sri Krishnadevaraya and his queens to Tirumala temple is astonishing to note.

His gifts and grants to Tirumala during his first visit on 10.2.1513 A.D.² included a *Kiritam* (crown made of gold) set with nine kinds of precious stones to God Tiruvengalanath (Sri Venkatesa). The details are 1,555-weight of gold for the *vommechchu* work (basement work for setting the stones); 1,076-weight of solid gold selected for *kundanam* work; 2,822-rubies refined; 160-emeralds weighing 108 *ratulu* or carats; 423-old diamonds weighing 65 *manjalu* weight; 3-big rubies including the central ruby, 10-sapphires, 17-cat eyes, 1-topaz, altogether weighing 3,130 units; 1,339-pearls weighing 163 *ratulu* or carats, 1-string of pearls, gold wire into which the pearls are inserted, weight 15 (units), the total weight of the above said crown is 3,308; also three stringed necklace containing 1,370 *jari-muttelu* or blue coloured pearls, 1-*manikyam* (gem), 2-sapphires, 2-kusulus, 15-*addigas* (neck ornaments), weighing 225 *ratulu*,

1-*padakam* containing 6 big pearls, 60-diamonds, 11-emeralds, 3-*manikyams*, 5-rubies, all weighing 61 units of largest weight and 25 silver plates for the purpose of *karpura harati*.

On the same day the queen Chinnadevi, also presented a gold cup, weighing 374 (units) to Tiruvengalanathadeva, for offering milk after night worship. The queen Tirumaladevi, also presented a gold cup for offering milk, weighing 374 (units) and a gold plate for keeping perfumes weighing 10 (units).

During his second visit on 2-5-1513 A.D.³, without his consorts visited the temple in Saka 1435 (2-5-1513 A.D.), and offered ornaments to God Tiruvengalanatha and *Utsavamurtis*, (processional images) of Sri Venkatesa. They are, 1-Big *Vududhara* ornament consisting of 5 diamonds..... 4-*addikas* (chains), 6-border *addikas*, 6-middle *addikas*, all these 17 items are set with 139 emeralds, 5 gems, 508 old diamonds, 186-rubies, including the gold string, altogether weighing 662 units.

Besides, they are 1-*Kathari* (sword) with its sheath containing 131-old diamonds, 431 rubies, and 2 sapphires, all weighing 198 (units). The tassel of the sheath composed of 3500 small pearls and 19 big pearls, 28 rubies fitted at the top of the tassel weighing 128 (units), total weight of the sword and tassel being 326; in this 43 rubies, 15 emeralds, 20 diamonds, all weighing 165 (units).

Other items are 1-*Nichchala-kathari sheath* studded with 24 rubies on the top of this sheath for the daily use weighing 132 (units), 1-small sword for the daily use with a small tassel made of pearls, 1-Sheath consisting of 55 rubies, 1 emerald, and 36 diamonds weighing 89 (units), 1-*Padakam* (pendant) made of 4 big pearls, 7 rubies, 10 emerald, and 117 diamonds, altogether weighing 87 (units), 1-Pair of *Bhujakirti* or *Vanki* with 322 pearls, 360 rubies, 4 sapphires and 247 old diamonds, altogether weighing 573 (units), 1-*Bhujakirti (vanki)* for daily use weighing 198 (units), 2-Pairs of *Bhujakirti* for the daily use. 1-String with 17 *addigas*, 30 *addigas* in the shape of leaves of peepul tree, 30 pearls, 210 rubies, 58 diamonds

and 5 emeralds altogether weighing 205 (units), 1-Similar string with 122 pearls, 193-rubies, 104 diamonds, and 33 pearls, hanging at the end of the *addiga*, weighing 4 (equal to 8 *pana* weight) altogether weighing 276 (Units).

For the processional images of Sri Venkatesa for the daily decoration, he offered 3 crowns consisting of 405 pearls, 284 old diamonds, 822 rubies, 91 cats eyes, and 6 sapphires, weighing 380 (units) in total.

In his third visit on 13-6-1513 A.D.⁴, for the merit of his (Krishnaraya's) father, Narasa-Nayaka Udayaru and his mother Nagajammamgaru, he made a gift of.....set with nine kinds of precious stones to Triuvengalanadhadeva (Sri Venkatesa) 3 - Tuka (weight) of kukumpuvu (*Arisala*), 300 areca nuts, 600 betel leaves..... He also granted the villages such as Chatravadi village, Tururu village, Karikambudu villages situated in the sub district of Godagaranad. With the income of the above said villages, a festival has to be conducted to Triuvengalanadhadeva.

During his fourth visit to the temple (6-7-1514 A.D.)⁵, On his return journey to his capital after capturing Udayagiri Fort and after defeating Prataparudra Gajapati of Orissa, he paid a visit to Tirumala in Saka 1436 and worshipped Sri Venkatesa and performed *Kanakabhishekam* for God Sri Venkatesa with 30,000 *chakram pon* (gold *varahas* or sovereigns) and presented three strings of ornaments containing pearls 483, rubies 119, sapphires 121, thin gold wire 480, gold chips 160, altogether weighing 250 (units), one pair of *Kadayam* (*Bahujavalayam* or *Vanki*) made of diamonds 322 and rubies 100, all weighing 275 (units). He also granted one village, Talal pakkam (Talapaka) situated in *Pottapisima* with libations of water in an auspicious hour called *manvadipunyakalam*, for the preparation of 10 *tirupponakam taligai*, 2 *Tirukkanamadai* and 2 *appa padi* to be offered to the God daily, as long as the sun and the moon shine, out of the cash and grain income derived from the said village.

Out of the preparations, offered 2 ½ *prasadam*, 1 *akkali-manlai* and 26 *appam* are due to the donor as his share, from which 1 *prasadam* shall be delivered to Rangadikshitar (Royal Purohit), 1 *prasadam* to Sivadikshitar and ½ *prasadam* to Tiruppanipillai (officer in charge

of the public works department of the temples); deducting this 2½ *prasadam*, 1 *akkali-manda* and 26 *appam* shall be carried on to your (Krishnaraya's) choultry at Tirumala for the feeding of Brahmanas.

On the same day Chinnadevi the queen presented the ornaments and granted a village Gudiur (Mudiyur in Tondaimandalam) with libation of water in an auspicious hour called *manvadi-punyakala*. The ornaments are 1- *Kanthamala* (necklace) with a *padakam* (pendant) set with 111 pearls, 1-central ruby, 2-emeralds and 4 diamonds, altogether 200 (units). One village by name Mudiyur, situated in Tondaimandalam for the preparation of 5 *tirupponaka taligai*, 1-*tirukkanamadai* and 1-*appa-padi* to be offered to the god. The above said offerings shall be prepared and offered out of the income of the village, received in cash and kind into the temple – treasury as long as the moon and the sun shine.

Out of the preparations offered 1 ¼ of the *prasadam*, ½ *akkali-manda* and 13 *appam* are due to the donor as her share from which, 1 *nali* of *prasadam* shall be delivered to Tiruppanipillai (officer in charge of the Public works department of the temple) and 1 *prasadam*, ½ *akkali-manda* and 13 *appam* shall be handed over to her (Chinnadevi) and also for choultry supervises. Tiruppanipillai, also for the Brahmanas.

Tirumaladevi, on the same day, presented a *Chakra – Padakam* (round pendent) containing 132-diamonds, 85-rubies, 83-emeralds and 66 pearls, altogether weighing 225 ½ (units). She also granted with libations of water in an auspicious hour called *manvadipunyakalam*, a village by name Piratti-kulattur situated in Cholingavarapattu (Sholinghur) for the preparation of 5 *tirupponakam-taligai*, 1 *tirukkanamadai* and 1 *appapadi* to be offered daily to God, out of the income of the said village received in cash and kind into the Temple treasury as long as the moon and the sun shine.

While returning from the Victorious eastern campaign, he visited the temple at Dharanikota on right bank of the river Krishna along with his queens and performed ceremonies and returned to Vijayanagara. On the third day of the dark fortnight of the *Kartika* month in the cyclic year *Yuva*, current with the

Saka era 1437, 25-10-1515 A.D. Krishnadevaraya presented to God Tiruvengalanatha (Sri Venkatesa) a *nava-ratna Prabhavali* or *Makara-torana* set with nine kinds of precious stones consisting of 25-*Kirtimukha* leaves, 13,835-*vommenchchu* beads, 16 -weight of the gold wire, 7,978 weight of the solid gold, 20-silk fringes hanging on the head of the *Makara-torana*, and 5,474 weight of the above said gold fringes, thus making up a grand total of 27,287. The following nine kinds of gems are fixed in different parts of the (above said) *Makara-torana*, they are 81-rubies, 10,994-red stones, 730-emeralds, 40-cat eyes, 45-agates, 74-topazes, 920-old diamonds, 3,933-pearls, 4-prominent sapphires fixed in the place of the eyes, 6-corals and 30-conch shells, thus the total weight of the arch of the *Makara-torana* (described above) is 14,711, and the grand total of the whole *Prabhavali* (including the lower and the upper portions) weighs 31,124 (units).

Krishnadevaraya in his fifth visit i.e. on **January 2, 1517⁶**, after planting a triumphal pillar at Simhadri-potnuru, returned to Rajamahendravaram and performed *Mahadanas*, by his queens Chinnadevi and Tirumaladevi and returned to Vijayanagara. On Friday the 10th lunar day of the bright fortnight of the *Pushya* month, in the cyclic year *Dhata*, in Saka 1438, paid a visit to Tirumala, presented to God Tiruvengalanatha (Sri Venkatesa) one *Kanthamalai* (necklace) one *padakam* (pendant) 30,000 *varahas* for gilding the *Vimanam* over the Sanctuary, ordered 1000 *varahas* of pure gold to be collected (into the Temple treasury) by the *Sthanattar* (Trustees) of Tirumala from the Godaganadu (surrounding villages of Tirupati) for the expenses of *Pulikapu* (ablutions) on every Thursday to be performed to God. Further, he granted the taxes called *Nityamulavisannadu*, *Talarikkam* and *Madarikkam* from Tirupati relating to Godaganadu amounting to 500 *varahas* to serve the expenses of conducting morning offerings for God Tiruvengalanatha.

During his Sixth visit on 9.9.1518 A.D.⁷, Krishnadevaraya after the victory over the east-coast and returned to Vijayanagara. On Thursday, combined with the star *Svati*, being the 5th lunar day of the bright fortnight of the *Kanya* month in the cyclic year *Bahudhanya* current with the Saka year 1440, completed the

gilding work of the *Divya-Vimanam* of Sri Venkatesa.

During his seventh visit i.e. on 1520 A.D.⁸, he presented a *Pitambaram* (laced silk cloth) set with nine kinds of precious stones, a *Kullavu* (cap) fixed into it pearls, rubies, emeralds and sapphires, and two *chamaras* (fly-whisks) set with nine kinds of gems had his queen Tirumaladevi presented a *padakam* made of nine kinds of stones, and arranged that this gift shall be conducted as long as the moon and the sun shine. Further more, he directly presented 10,000 *varahas* as a tribute (*kanuka*) and a valuable *padakam* (pendent) that time Baguri Mallarasa, the body guard of Krishnaraya Maharaya executed this *Dharma sasanam* (deed of charity), Sripati, son of Peddayasari, the state engraver and rayasam officer (secretary) of Krishnaraya Maharaya were also present.

As an ardent devotee of Lord Venkatesvara of Tirumala, he dedicated his work called *Amuktamalyada*, which he wrote at the instance of Andhra Mahavishnu of **Srikakulam** and dedicated it to the Lord of Seven hills. In spite of his affiliation to Vaishnavism, he supported Saivite temples also. He was equally generous towards the Jaina religion. He restored a grant made earlier by the king Devaraya – II to a Jain temple. He donated enormous gifts to the temples that he visited and encouraged to do so by his queens Chinnadevi and Tirumaladevi. He has also donated villages for conducting various rituals in the temple like *abhisheka*, *amritapadi* etc.. The festivals included *Rathotsavam*, *Vasantotsavam*, *Kalyanotsavam* and *Tirunallu*. He also made gifts for the merit of his parents. Besides Krishnadevaraya and his queens, a large number of his ministers and officers, *jiyars*, *Acharya purushas*, temple servants, merchants, and citizens also made gifts and grants to the temple.

TTD's Contribution to Arts and Letters:

It is a fact that God Venkateswara is a very popular God right from the 10th century A.D. onwards and almost all the kings of South Indian dynasties and it is not out of place mention that Sri Krishnadevaraya, the mighty Vijayanagara emperor visited Tirumala Temple seven times and donated cash, kind and Jewellery, a tradition still continued as almost all the Presidents and Prime Ministers of India, Chief Ministers and

other dignitaries visit the God. Lord Venkateswara thus became a tutelary God for each and every family of entire South India. All the Telugu speaking people whether native or settled elsewhere abroad feel proud to have such a great temple in Andhra Pradesh which is considered next to Vatican City in attracting visitors and generations revenue and employment are concerned. Gifts and grants from various sources i.e. Kings, Queens, Traders, Merchants, faithful followers of Vaishnavism made the Tirumala temple, one of the richest holy Vaishnavite Kshetras of India.

TTD's in turn provided facilities to the devoted pilgrims, the Tirumala Tirupati Devasthanams have established many educational and local institutions for the benefit of the many.

In the first instance, the *Vedapathasala*, which was established 150 years ago has been upgraded into an oriental college offering several academic programmes in Sanskrit and Telugu media. TTD established schools at Vellore and Tirupati to promote education for children. An exclusive school for *Vedas* and *Agamas* was established in which the traditional knowledge such as *Vedas*, grammar, logic *Mimamsa* and other disciplines are taught.

On par with the Archaeological Survey of India, the TTD have initiated a project under the guidance of Sri Sadhu Subrahmanyam Sastry to deciphered and edit the inscriptions engraved on the walls of TTD temples. As a result, a report on TTD inscriptions, dynastic wise was published. These publications revealed the unknown facets of not only the history of the temples and the donors but also the history of South India.

Another important project launched by the TTD's is called Annamacharya project committed for decipherment cataloguing, editing and publishing of Annamacharya Keertanas. TTD have established S.V.Oriental Institute for the purpose and inducted great scholars like Manavalli Ramakrishna Kavi, Veturi Prabhakara Sastri, Rallapalli Ananta Krishna Sarma, Panganamala Balakrishna Murthy. Thus as many as 29 volumes were brought out on the spiritual and *Sringara Keerthanans* of the Tallapakkam poets. Efforts were also made to bring out CDs on the above rendered by Smt. M.S. Subbulaxmi and Dr. Mangalampalli

Balamurali Krishna. Similarly TTD have also launched 'Tarigonda Vengamamba Project' to publish her writing and renderings in print and digital media.

TTD have also established another important chair called 'Veturi Prabhakara Sastri Vanjmaya peetham' and has been publishing his works. Another prestigious project established by TTD is the 'Hindu Dharma Prachara Trust' to preserve the folk arts and crafts for posterity, thus giving a new lease of life for *Harikatha*, *Burrakatha*, *Chakkabhajana*, *Kolattam*, *Bhajana* etc.,

Equally important project established was the 'Alwar Divya Prabandha project' in order to propagate and promote pasuras of Always including the Nalayiradivya Prabandham. The TTD have launched another innovative project called the 'Dasasahitya project' to publish the keertanas rendered by Kannada Dasa poets.

An exclusive college for music and dance was established to import training to the young on the traditional music and dance forms of south India. Similarly an exclusive school called 'S.V. Nadaswaram' School was established to encourage students in the fields of *Dolu* and *Nadaswaram*.

S.V. Vedapathasala has been upgraded to S.V. Institute for Higher Vedic Studies, which later became S.V. Veda Viswavidyalayam, a deemed to be university, to promote Vedic education special incentives are given to the students who are prosecuting high vedic studies. Apart from this financial assistance is given to other similar institutes in the country and abroad.

TTD's have established an institute called S.V. Institute of Traditional Sculpture and Architecture to import training in stone sculpture, bronze casting, wood sculpture, stucco, painting and temple architecture. Hundreds of passed art students are working in Endowments and Archaeology Departments and also in TTD. TTD's have also been undertaking renovation of temples under its control.

The *Itihasa* project of TTD is publishing and propagating the epics of India to preserve them for posterity. To promote education among the women, the TTD have established Sri Padmavati Womens' College now Padmavati Womens' University a deemed to be university,

which is offering hundreds of Degree, Diploma and Post Graduate programmes for women. To promote arts and letters a beautiful auditorium called **Mahati** was built and offering cultural programmes and academic debates almost on all the days at Tirupati. The TTD have also commissioned a TV channel called SV Bhakti Channel to promote the decaying traditional arts. Thus the TTD's have identified the corporate social responsibility and rendering yeomen service to the society besides preserving culture and heritage of the people. The TTD have also been into rendering to the Social causes and Charity Services among which medical facilities and fee feeding of poor people.

Established S.V. Medical College for imparting medical education and established highly specialized hospital called svims for the benefits of the Pilgrims and residents of Rayalasila. A good number of free dispensaries are also in operation. Free medical checkups and eye camps are conducted very frequently.

At the same time special schools for physically challenged impaired, blind, deaf and dumb to provide an opportunity for education and employment. Also seen a poor home for children.

Under the Chanty Programmes, free Annadana Scheme, mass marriages and

financial and material assistance including supply of Srivani Idols to the new temples and temples under renovation throughout the state under Jeernodharana scheme. For spiritual upliftment, various schemes like Dalitha Govindam etc are launched to involve many people in devotional activities. Mangla sutras are also distributed among the poor people.

A very big gosala is also maintained by the Tirumala Tirupati Devasthanam in addition to Sri Venkateswara Zoo to render service to the holy cows and protect bird and wild life.

The TTD with its establishments at various places connected with the mythological accounts of the God and his consort was responsible for growth of religious architecture like the Temples, Mandapas, Gopuras, Pushkarinis and Flower Gardens over a period of time. It also encouraged Agamic literature to grow called the Vaikhanasa Agamas which cater to the needs of the daily rituals in the temple.

The TTD since the early 15th centuries encouraged composers, poets and Musicians. The Tallapakan poets including Annamacharya, Timmakka, Peda Tirumalacharya and Tiruvengalanatha and Tarigonda Vengamamba, who compose Kirthanas and wrote many works like Paramayogi Vilasam and Subhadra Parinayam etc.

FRENCH IMPACT ON CULTURAL LIFE OF PONDICHERRY

Dr. S. Chinnappan & V. Balachandar

The French colonists, who came to India precisely with a purpose for making commercial gain at the earliest in 1664. They did not enter into political contest with the British neighbours until the time of Dupleix in 1742.¹ Therefore, the commercial operation dated back to 1664 A.D went off peacefully without any social implications until the reign of Dumas. The creative period of Pondicherry under Franchoise Martin sowed the seeds of French mercantilism

and in fact, the simple hamlet of Pondicherry was virtually shaped into a French model town by his efforts. The political and commercial consolidation were strengthened by the relentless contributions of Martin as a builder of Pondicherry.² Martin's perseverance, gentleness with the native, his fair – dealing all contributed to the real foundation of the fulfillment in Pondicherry.

In the words of F. Laurent Angoulame as referred to in the death certificate of Françoise Martin that 'Pondicherry is indebted to him for what it is today'.³ After Martin, Lenoir who was the real architect of Pondicherry, contributed to both the economic and political prospects of the French in Pondicherry. Dumas consolidated and integrated the architectural edifices into the fabric or French model in Pondicherry. Thus, a total transformation of Pondicherry from its slumhood to an established township implanted the marks of urban culture. This was due to the result of French arrival in this land. Therefore, the first major impact was the development of the neglected coastal hamlet into one of the international maritime centres. The French arrival was the blessing in disguise for the growth of urbanization in Pondicherry. There is influence of French culture at political, social, religious and administrative levels. To understand the French cultural influences in this part of land alone has to look from the culturalization point of view.

The French impact on the religious structure

The first stage of proselytisation was initiated by the early settlers namely the Capuchins. The missionary activities were actively carried on a large scale with the arrival of the Jesuits, who were virtually finding an alternative place, when they turned out from Siam. There were differences of opinion between these two orders on certain issues centering on the religious policies. While the Capuchins propagated to the natives to follow the western pattern, whereas the Jesuits allowed the natives to follow their own traditional customs and convictions. Naturally, the Jesuits order spread predominantly amongst the people of Pondicherry.⁴ As a result of this, even a good number of Catholics retained their religion and traditional beliefs of Hinduism, though they were Christians. In due course of time, Christianity became an answer to the lower castes and which could help them to acquire equality and social prestige. The process of conversion to Christianity gained momentum, when this kind of orders dedicated their lives for the educational and social services.

The religious converts and inter-caste marriage

In Pondicherry a large number of families left the Catholic Church and joined the

congregation of Seventh Day Adventists. Ananda Ranga Pillai confirms in his diary that one sixth of the total population in Pondicherry was converted to Christianity. It is true that the French administrators preferred a Christian to act as 'Dubash' in place of a native Tamilian.⁵ It is said that the courtier ship was not conferred to Ananda Ranga Pillai, since his choice was disputed over the question of religion.

The title of mixed castes are available, for example, mixed titles such as Mudaliar – Harijan, Udayar-Harijan, Vellala –Harijan and even Brahmin-Harijan are available in the society even today. This was actually happened due to the rich position of the Harijans, who could attain it due to their war services during the II world war (1939-45). When the low caste people had returned from the war service with the huge wealth, the upper caste people who used to marry in inter-caste or mixed marriages, without any caste barriers.⁶

Caste Structure under the French administration

The French mercantilist policies in India were definitely responsible for the social mobility between different caste groups. The caste rigidities were definitely mellowed when different social groups were fused together under the demands of commercial enterprise. The fusion of different caste people were mainly due to the constant flow of outside population into Pondicherry. In the later years, the European mixed communities had their own settlements. The number of Topaz and Metsis⁷ (Indo-European) were comparatively less even today. These groups exist in Pondicherry as separate entities in the name of different streets, in no other part of India. We see this kind of intermixture of different castes and communities as it occurred in Pondicherry, whereas in the later part of the 20th century the influx of Bengali population increased after Sri Aurobindo's foundation of the Ashram here. Moreover, the French Indian Government passed an enactment not to use the name of the streets with any caste titles thereby the rigid caste system was partly broken by the French Government.

French impact on festivals

The French Governors had encouraged the practice of Indian festivals and fairs and they never came on the way. Instead, Lenoir, Dumas and Dupleix participated in the Hindu festivals.

There are examples that the late night entertainments were arranged by the Diarist Ananda Ranga Pillai on festive occasions and even Dupleix, participated on such occasions. The elite group of Pondicherry, who got used to witness French festivals like King's day, Victory Day, Feast of Nativity, Governor's Feast, New Year Day etc., The curious feature is that the Indian practice of conducting a musical procession called Naourz was followed by them.⁸ the Governor's and the other dignitaries were adopted the Indian custom of giving betel and lemons from the Pondicherry society. On important festival occasions or social functions, French dramas were staged Oberra calling girls were entertained the European audience in those days. Though, there are lot of French cultural traits available in Pondicherry society. The various festivals of different communities like Pongal, Vaishnava festivals, Chithra pourami. All souls day, Kandhuri festivals etc., were celebrated with great pomp and ceremony during the French times.

Customs and Practices

Organised holidays for festival occasions was made official by the French Government. There were certain manners, beliefs and customs adopted from the French way of life. The custom of giving presents the gun salute to the important dignitary, the grand celebrity on important festival occasion with drum-beats etc., became the part and the parcel of the society. The culture of giving presents on occasions like marriage was followed by the French.⁹ The article of presentation evoke curiosity. Dupleix presented double barrel crystal, scissors, six small boxes and badam nuts to the daughter of Chanda Sahib. On the occasion of the victory of the French over the British in 1747, the French took arrack and juice.¹⁰ This practice was imitated by the Indians also. Common diners were arranged to mark important occasions. Processions were led along the streets with plantain leaves, coconut leaves etc.¹¹ The invitees were businessmen, company merchants and other dignitaries. Such a grand function was arranged in honour of Dupleix, when he established his suzerainty (overlordship) in Deccan. Thus, procession is still extended to other important occasions like New Year Day, Victory Day etc.

Belief System

The belief system was unusual in character and personal in practice. This does not have any scientific inertia but its preponderance on human psychology is phenomenal. Falling down of the car,¹² burning of the meteor, crossing of cats, hearing of bad news, breaking of the flag robe and falling of the church bell were taken as bad omens¹³. The appearance of Comet was also taken as a bad omen by the natives and the Europeans.

Dress and Diet

The European dress materials were freely imitated by the natives. Even today, the French speaking community and students studying in French institutions adopt the French style of dressing. Among the natives of Pondicherry, the table manners and the French etiquette in diet are also followed still.¹⁴

Art and Architecture

The existing models of buildings, monuments, war articles, coins, dress materials and the alignment of streets stand as an evidence even today to highlight the French impact. The patternisation of the streets, open drainage system, the frontal facades, long windows, high ceiling, gothic designs, wall decorations, broad corridors outside the house are distinct marks of the French architecture. The residential houses of the Governors and the Europeans were symmetrically arranged and thus the streets hit each other at right angles. The overall planning of the townships was hemispherical and having an open end facing the sea.¹⁵ All the rues in Pondicherry leads to the sea as modeled by the French. The town was distinctly divided into white Town and Black Town. The Europeans inherited the white Town and the Black Town was occupied by the natives. Even today the town structure is segmented into several enclaves of social groups.

The church structures of the Catholics and the Capuchin are the historical remains of the French architecture. The entire scheme of town planning was probably oriented to have natural drainage system. The most important aspect of the town planning was water supply system. The French administration devised an organized water supply system from a distant place called Ousterri and it functions well even today. The

painting and the murals reflect the French aesthetics in palatial building even today. Municipal building was Pondicherry stand as a living monument to prove the excellence and sturdily of French structure.

In the present relationship both social and economical, the French did not alter the basic fabric of native tradition. For example, the process of billing and leasing out land on Varam basis was followed by the French.¹⁶ Production of betel leaves areca nuts was completely under the government control. Exist and Entry of the cart loads of commercial goods was monitored by the government agencies. Trade regulation was strictly followed. The commercial culture and the economic system of Pondicherry were thoroughly revolutionized by the French administration. The greater contribution was the introduction of money economy, banking system and currency experiment. The standard weight and the count of gold were maintained against the rupee value. The barter system of the rural commercial operation was then replaced by European model of money currency.

The registration of birth, death and marriage opened the concept of census among the natives. The property rights were well defined in the French administration. Civic discipline was maintained. The judicial regulation were simple comprehensive and the proceeding were closed

with immediate results. The Chaultry Courts with the help of the natives decided case according to the traditional law.¹⁷ However, evil and criminal acts of the later period show perfect evolution of judicial structure. In contrast to the European model. The French introduced the simple comprehensive legal system also and favored quick judgements.

The above pages reveals the result of my investigations, which try to trace the French impact on the cultural life of Pondicherry. The work surveyed in detail about the French beginning and settlement in Pondicherry. A review was made on the role of French in India specially in the case in Pondicherry, purely looking from the cultural point et view, Any one will casually remark that the French cultural influence in Pondicherry is superficial and outwardly. Though it looks peripheral, an analysis on the introduction of French cultural elements there will make it clear that the French cultural impact is internal deep and visible in every aspect of the Pondicherry life and society. The French impact on every branch like political administration, judicial affairs, educational system, municipal affairs, religious field and town planning available French words in everyday life are all deep and these are all studied in detail in the paper.

MERGER OF SOUTH TRAVANCORE WITH TAMIL NADU DURING KAMARAJ REGIME

Dr. R. Christal Jeeva

The Present-day Kanyakumari district of Tamil Nadu State in India was originally a part of the Travancore-Cochin State. The Government of India announced plans to re-organize States along linguistic lines, the people of Tamil-majority of South Travancore. At that time K.Kamaraj was the Chief Minister of Tamil Nadu. During his regime, the Government of India formed the committees for the linguistic reorganization of States. K. Kamaraj suggested a part of South Travancore should be merged with Tamil Nadu. This article focuses on the Merger of South Travancore with Tamil Nadu during Kamaraj Regime.

The Indian National Congress promoted the demand for the reorganization of states. Thereafter, the Government formed provincial committees separately for the Tamils, Telugus, Kannadians and Malayalees. However, due to inordinate delay, over the enforcements, its leaders developed doubts in the wisdom of their move. Confronted with the situation, the Telugus of Madras Presidency and the Tamils of Travancore State embarked upon a struggle for the realisation of their cherished goals¹.

The demand for a separate Tamil Province was voiced for the first time by the Tamil Nadu Congress Committee in July 1938 at its meeting at Tirunelveli and reiterated it Madras in October 1938. In this demand for a separate Tamil State, the Tamil State, the Tamil leaders like S.P. Aditanar envisaged the formation of an independent state of the Tamils, comprising Tamil-speaking areas in South India, North Ceylon and South Travancore. Among them, a major agitation in South Travancore marked the significant trends in the Tamil Integration movement².

The Princely State of Travancore that formed the southern part of the homeland of the Tamils, mostly concentrated in South Travancore, Devikulam, Peermedu and Chittur, constituted a linguistic minority groups in a Malayalee dominated area. Their ordeals defied description, for the Nairs who controlled the administration, denied to the Tamils any place in the establishments of the State³. As most of the lands belonged to the Nair land lords, the Tamils

lived at their mercy as tenants and labourers. They had no right either to enter the temples or learn their language in the schools or to serve on the administration. Added to these, the princely administration promoted Malayalee migration to the Tamil areas, particularly Devikulam and Peermedu. Threatened with extinction, the Tamils clamoured for the integration of their territory with Tamil Nadu. At a conference at Trivandrum in May 1938 the leaders discussed the issues. In October 1938 a meeting held at Rajakkamangalam, they adopted a resolution demanding the formation of a separate district for their areas⁴. This was followed by the organization of Tamil Sangam.

In December 1945 at a meeting at Nagarcoil the leaders formed the all Travancore Tamilian Congress, subsequently called Travancore Tamil Nadu Congress (T.T.N.C). S. Nathaniel was elected as a President, but A. Nesamony wielded the real influence⁵. The party decided to work for the merger of Tamil speaking areas of the princely states with Tamil Nadu⁶. On 13 July 1949 a new situation developed as the other Malayalam speaking state of Kochi was united with Travancore. This reduced the Tamils to a smaller minority. In protest against this development, demonstrations were held out and the leaders were arrested.

After the arrest of its leader S. Nathaniel, R.K. Ram, A. Gandhiraman and P.S. Mani, A. Nesamoney led the agitation programme. In the meantime, individual Satyagraha was conducted by T.T. Daniel of Nagarcoil, M. Subramaniam of Eraniel and Ponnappa Nadar of Marthandam at various places in Travancore. Many Tamil leaders were jailed⁷. On the promise of Sardar Vallabhai Patel, the Home Minister of India that the demands of the Travancore Tamils would be considered when linguistic states were formed, and due to the compromise efforts of K.Kamaraj the agitation was called off and the arrested leaders were released⁸.

As the oppression continued, T.T.N.C. decided to launch an agitation. It demanded the introduction of Tamil as official language in Tamil areas and their integration with Tamil

Nadu. P.S. Ramaswamy Pillai and A. Kunjan Nadar, one after the other led the movement. Volunteers defied the ban orders in Devikulam, held demonstrations, burned stamped papers and picketed the public offices. On 6 August 1954 Gandhi Raman started a fast to form a United Tamil Nadu⁹. Political parties and organizations of Tamil Nadu such as Tamil Arasu Kazhagam, Dravida Kazhagam, Dravida Munnetra Kazhagam and the Communist party supported the agitation. The T.T.N.C. observed as liberation day and a complete hartal on 11 August 1954¹⁰. Leaders were barbarously beaten and many of them were crippled¹¹.

In Devikulam Taluk alone security proceedings were initiated against 464 persons including twenty women. Nearly fifty cases were put up against the Tamils on various charges, even though the integration agitation was continued. Following the piquant situation, in 1954 the Government of India appointed the States Re-organisation Commission with Fazl Ali as Chairman and H.N. Kunzru and K.M. Pannikar as members¹². The T.T.N.C. Committee submitted a petition to the State Re-organisation Commission and requested that the Travancore Tamil areas should be merged with Tamil Nadu. K. Kamaraj, the Chief Minister of Madras made a statement to the commission when it visited Trivandrum on 25 May 1954, insisting that the nine taluks in Travancore – Cochin viz. Thovalai, Agasteeswaram, Kalkulam, Vilavancode, Neyyatinkara, Shencottah, Peermedu, Devikulam and Chittoor should be merged with Tamil Nadu¹³. Shencottah respectively too submitted petitions to the State Reorganisation Committee insisting on the inclusion of these nine taluks with Tamil Nadu.

The presence of K.M. Panikkar, a Nair with strong Malayalee bias, on the Commission pretended evil for the interests of Tamil Nadu but no notice was taken. The Commission recommended the transfer of the entire Malayalam speaking areas from Madras State but only a part of the Tamil speaking areas from Travancore – Cochin¹⁴. It allotted the entire Malabar area consisting of the present day districts of Cannanore, Calicut, Malappuram and Palghat from Madras to Kerala. At the same time it gave from Kerala to Tamil Nadu only the southern half of Trivandrum district. Neyyattinkarai, Devikulam and Peermedu, the

predominantly Tamil Taluks were to remain with Kerala.

The Dar Commission adopted to formulate that an area was unilingual, when at least seventy per cent of its people spoke a language. In the above mentioned Taluk, seventy eight percent of population spoke Tamil language¹⁵. The Shencottah Taluk is partly an enclave in Tirunelveli district of Madras State and the percentage of Tamil – speaking people in this taluk was Ninety three. Physically and geographically it belonged to Tirunelveli district in which it should be merged. The Devikulam and Peermedu taluks stood on a some what different footing, These hill areas, for various economic and other reasons were of great important to the State of Travancore – Cochin State. Devikulam and Peermedu with their rolling hills, heavy rainfall, green forests and numerous rivers were of vital necessity for Tamil Nadu. For the two major river system Periyar and Pampa which flowed from the high ranges, offered the only source of irrigation to the parched districts of Tamil Nadu.

On 21 December 1955 Panampalli Govinda Menon and K.Kamaraj held a joint discussion along with the Congress Four-Man Commission regarding the problem of Tamil Nadu and Kerala¹⁶. Opposing the verdict of the Commission hartals and meetings were conducted on 7 February 1956 all over the Tamil areas. It should be noted that the T.T.N.C. submitted a memorandum to Prime Minister Nehru. They disagreed with the statement in the memorandum and supported the stand of the Government¹⁷. K. Kamaraj met the Prime Minister Nehru and the congress President and represented the views of the T.T.N.C. in relation to the future of the Tamil taluks of the Travancore – Cochin State.

The decision of the Central Government to retain Peermedu and Devikulam and the Western portion of Shencottah taluk in the proposed Kerala State created unrest in Madras State leading to agitation which was called off subsequently¹⁸. On 28 January 1956 and All Parties Conference consisting of the members of the D.M.K. the Dravidar Kazhagam, the Tamilarasu Kazhagam, the Communists and the Socialists was convened at Madras. This conference decided to observe state-wide hartals, processions and meetings on 20 February 1956

throughout Tamil Nadu in order to record its protest against the Central Government decision¹⁹.

On 16 March 1956 the States Reorganisation Bill was presented in Parliament. The opposition party leaders of the Assembly P. Jeevanandam, K. Vinayagam, A. Retnam, Swaryam Prakasam and N. Rathina Gounder discussed and criticized the bill and vigorously opposed the government's proposal²⁰. This discussion was conducted on 28 and 29 March and 22 to 26 April 1956. C. Subramaniam supported the proposal of the government and carried it in the Assembly²¹. The government motion on the States Re-organization Bill of 1956 was introduced in the Madras Legislature Council on 26 September 1956 by its leader who supported it. The House discussed it and finally the Bill was passed in favour of the government proposal²².

On 31 October 1956 K. Kamaraj, the Chief Minister of Tamilnadu gave his consent to the Re-organisation of the states. The States Reorganisation Bill and amendment of the law were approved by both the houses of Parliament and were declared by the president as law. As per the States Re-organization Bill, Thovalai, Agasteeswaram, Kalkulam, Vilavancode and part of Shencottah taluk were transferred from Travancore State to Tamilnadu on 1 November

1956. These four taluks formed the present Kanyakumari district and Shengottai taluk was merged with Tirunelveli district. These were annexed with Tamil Nadu State²³.

During that period the Travancore State Congress favoured the idea of uniting all the Malayalam speaking regions and the formation of a unified Kerala. That party was continuously compelling for the merger of Tamil regions in Travancore with Tamil Nadu. Travancore Tamil Nadu Congress President Nathaniel met Kamaraj in connection with the merger of South Travancore with Madras State. Kamaraj promised to solve the problem legally. But the government of Travancore stood against this. He wanted to make negotiation talk but no decision was reached. The states were proposed to be reorganized on linguistic basis and solution to this problem was anticipated. But K.M. Panicker, a member of the commission appointed for this purpose considered only the proposals of Pattam Thanupillai, but not the interests of the people in Kanyakumari District. It was the general feeling among the leaders and the people of Kanyakumari district that Kamaraj has not shown much interest in solving this problem. The main demand of T.T.N.C. was to merge the Tamil regions with Tamil Nadu and major parts of it was realised.

TEMPLES OF THE MADURAI PHASE DURING THE PERIOD OF NAYAKAS (1600 - 1700 CE)

C. Deepa

The artistic traditions of the Hindus which so far flourished in the warmth of royal patronage now depended for encouragement of the rulers of new principalities which had been originally united under Vijayanagar. Of the several states into which the empire splintered, the contribution of Madurai was by far the most significant for the further advancement of the Dravidian style. The Tamil country with Madurai as capital and extending as far south as Cape Comorin was ruled by the Nayaka dynasty. The final form which the Dravidian style assumed under these rulers and flourished to this day is, in principle, a continuation of the building methods of the Pandyas who lavished most of their skill and resources on the architecture of the gopura and on extending and improving the shrines already in existence. Under the Nayakas of Madurai the temple came to be developed into a vast network of structures having imposing gateways and towers. The Vijayanagar period had witnessed great elaboration in the temple festivals and ceremonies which involved the temple deity or deities being taken out in procession quite often. This had in turn necessitated considerable amplification in the building scheme of the temple.¹

The temples belonging to the Madurai group built either wholly or in part during the period are considerable in number. The Minakshi temple of Madurai can be taken as typical of the group. The present study seeks to trace out Tanks, Pillared pavilions, towering gopuras and concentric compound walls are main characteristics features during this period and purpose of the architectural edifice through the ample sources like inscriptions, literature and field survey.

Madurai temple conceived and built all at one time it is actually a double temple. The twin shrines dedicated to Minakshi, tutelary goddess of Madurai, and her consort Sundaeswara, were substantially rebuilt. Renovation of the monument continued throughout the fourteenth and fifteenth centuries, but by far the greatest efforts were made from the middle of the sixteenth century onwards under the direction of the Nayakas.²

The Madurai complex is contained within high enclosure walls that create a vast rectangle of 254 by 238 metres. lofty gopuras are positioned in the middle of each side. The towers of these gateways have elongated proportions and curved profiles that achieve a dramatic sweep upwards, that on the south is almost 50 metres high. The lower granite portions have pilasters with slender, part-circular and fluted shafts many of these define projections without niches headed by *shala* and kuta pediments. The carvings here are confined to miniature animals and figures at the bases of pilasters and on wall surfaces in between. The brick superstructures have pronounced central projections with openings at each of the nine ascending storeys. The lowest of these openings, immediately above the caves sheltering the entrance passageways, are distinguished by free standing colonettes. Plaster sculptures, reworked and brightly painted in recent years, are applied to almost all of the architectural elements to create vivid polychrome effects. Enlarged yali heads with protruding eyes and horns mark the arched ends of the capping shala roofs the ridges have rows of pot like finials in brass.

The Minakshi temple is usually entered from the east through a porch projecting outwards beyond the enclosure wall. This porch was erected by Rudrapati and Toli Ammai, consorts of Tirumala Nayaka.³ Four columns on either side have carvings of different goddesses the curved vault above is covered with paintings of recent workmanship. A doorway flanked by images of Ganesha and Subrahmanya leads into a vast columned hall used for shops and stores. This structure was added in 1707 by Sanmugam Minakshi, minister of Vijayaranga Chokkanatha.⁴ Its piers have lion-like brackets carrying suspended beams. At the far end of this mandapa is a doorway contained within a towered gateway (Chitra Gopuram) that was erected in 1569 by Kalathiappa Mudaliar, a son of Ariyanatha Mudaliyar⁵ minister of Kumara Krishnappa. Beyond is a small corridor flanked by columns with sculptured figures. This gives on to the golden Lotus Tank (165x120 ft) is one of the earliest structures of the temple complex. However, it was, also with its surrounding

structures, renovated and rebuilt in 16th -17th centuries. The pillars of the northern side of the tank carry the statues of the king and his officers who supposed to have constructed this. Some of the pillars of this side also show the statues of the poets of the Sangam fame. There is an entrance at the western corner of the tank which leads to the southern gopura of the temple. In the western corridor of the tank there are small mandapa and kilikkuttu mandapa. The roof of the Rani Mangammal mandapa carries the contemporary paintings. They portray scenes of goddess Minakshi and Siva's celestial marriage, receiving of scepter from the goddess and Minakshi's encounter with dikpalakas.⁶

A long corridor defines the transverse north-south axis of the Minaksi Sundaresvara complex. The columns lining its central aisle have three dimensional sculptures of deities, heroes and rearing yalis. The Minakshi shrine, together with several subshrines, stands inside a rectangular compound to the west. A gopura built by Siramalai Sevvandhimoorthy Chittiyar in 1559 which is situated at the northern end of the corridor provides access to the Sundaresvara shrine.⁷ This too is contained within a rectangular enclosure, marked by towered gopuras in the middle of each side. The granite basements, pilastered niches and brick superstructures of these gateways resemble those on the periphery of the complex, except that they are not as high. A colonnaded corridor entirely surrounds the Sundareshvara compound. On the east it meets the Kambattadi Mandapa, an addition of the early eighteenth century. Beyond the Kambattadi mandapa, in the outermost enclosure of the Madurai complex, is the Viravasantaraya Mandapa, built by Muthuvirappa Nayaka elder brother of Tirumalai Nayaka in 1611.⁸ Its central corridor, which is no less than 75 meter long, is lined with piers displaying yalis alternating with quarters of part square colonettes in shallow relief leaf like motifs and crouching animals adorn the brackets. To the north is the thousand pillared hall, a treasure house of art. This was built in 1570 by famous Dalavai Ariyanatha Mudaliar who was minister to four successive Nayakka rules. Of the exactly 985 elaborately decorated columns incorporated into this mandapa, some have fully modeled figures, both divine and royal.⁹ Yalis line the central aisle that leads to the raised dais at the northern end of the mandapa. At the southern

end is a porch with finely carved columns, those at the corners being surrounded by dense clusters of slender colonettes.

Outside the complex, directly on axis with the east gopura or Sundara Pandyan gopura¹⁰ or Avani Venda Raman Gopura¹¹ leading to the Sundareswara shrine stands the Pudu mandapa. This major construction is the work of Tirumala and was completed between 1626 and 1633.¹² It is now a market for textiles and household goods. The hall, which is almost 100 metres long, is reached by steps flanked by balustrades with vigorously posed yalis. Its broad central aisle is flanked by piers carved with portraits of the Nayakas and their queens. Carvings at the eastern and western extremities of the hall represent horses and yalis with riders on the outside faces of the piers, with major deities on the inside.¹³ Further east, beyond the Pudu mandapa, Tirumala's an unfinished Raya gopura is more than twice the dimensions of any other gateway at Madurai, measuring 174 ft by 117 ft. The base itself is 54 ft in height and had it been completed it would have been one of the tallest in the country. It was begun in 1654 but was not destined to be completed.¹⁴

Two and a half miles north of Tiruchirapalli is Srirangam, an island formed by the two branches of the river Cauvery. It is famous for its Ranganatha temple, the largest of the Dravidian temples, and is dedicated to Vishnu in his recumbent form. Unlike the Madurai temple, this has only one sanctuary, an ancient structure small in size and architecturally insignificant. As we see it today with its seven concentric enclosures, twenty-one gopurams, bazaars and residential colonies laid out within its walls, it looks more like a township than a temple. While the sanctuary dates back to about the 11th century, the surrounding enclosures and the pavilions inside were put up in the seventeenth and eighteenth centuries. The sanctuary is a square apartment of no great architectural merit and the cella within has the unusual quality of being circular, resembling a Chaitya hall. Of the thirteen gateways which lie axially to the main shrine at least six are notable for their size and workmanship.

Architecturally, the finest part of the temple is the "hall of thousand pillars" situated within the fourth enclosure. Its pillars are carved of granite monoliths, a stupendous undertaking which

impresses one not only by its size but the quality of craftsmanship. The horse court is the best part of this pillared hall. Within the third enclosure are to be found the Garuda mandapa which is another beautiful pillared hall, and adjacent to it is the Surya Pushkarani, a covered pond named after the sun. At the northern end of this enclosure is the Chandra Pushkarani, the moon pond. The second enclosure has a covered court with pillared pavilions.¹⁵

Belonging to the same period and style, but much smaller in size is the Jambukesvara temple at Srirangam situated about a mile away from the great temple. It has four concentric enclosures of which the two inner ones have covered courts. Although not comparable in size to the Ranganatha temple it far surpasses it in the beauty of its architecture.¹⁶

Another well known example of this style and of the same period is the Ramesvaram temple. This multi shrined temple complex consists of two main sanctums like Madurai Minakshi temple, one for Lord Ramanatha and the other for his consort Parvathavardini. It has three enclosures. At present it stands out as a vast complex with massive structures, enclosed by a 6 metre high compound wall, which surrounds an area of 13.6 acres of land. The compound wall measures about 259.150 metres from east to west and 197.10 metres from north to south.¹⁷ By far the grandest part of the Ramesvaram temple is the pillared corridors which surround it. They extend to nearly 4000 feet in length, the breadth varying from 17 to 21 feet. Their height from floor to roof is about 30 feet. The pillars, about 12 feet high each, are enormous blocks of granite, richly decorated and well proportioned. Set close to one another, they run along the entire corridor. The perspective presented by these richly carved pillars running uninterruptedly to a length of nearly 700 feet is a breath taking sight. The devoted patience of thousands of skilled craftsmen and the labours of many more apprentices which have gone into this stupendous structure is a testimony to the religious fervor which characterized the builders of the sixteenth century.¹⁸

Equally venerated and no less remarkable for its architectural merit is the Nataraja temple at Chidambaram. This temple consists of a number of structures apart from the main shrine.

Although these were put up at various times as structural accretions to the main temple, they retain a surprising element of symmetry in plan, and functional unity in their disposition. The centre of the large enclosure is occupied by the sacred tank around which other structures are grouped in an orderly manner. The 'hall of the thousand pillars' which the temple is famous was built in the 17th century. It consists, as elsewhere, of pillars carved out of granite monoliths. The finest part of this temple, however, is its porch which consists of fifty six pillars, each eight feet high. They are all delicately carved. The stylobate on which they rest is ornamented with gracefully carved female figures in various dance poses.

A few more comprehensive examples of the later Dravidian style are to be found, among other places, at Tiruvarur, Tiruvannamalai and Srivilliputtur. The original shrine at Tiruvarur dates back to the ninth century and its deity has been the subject of praise in innumerable compositions of great poetic excellence produced by the saints of Tamilnad. The temple consists of twin shrines dedicated to Siva and his consort parvati. They are placed side by side in a cloistered court and three concentric walls enclose the entire complex of structures. The three storeyed eastern gateway, built in the 18th century, is the finest part of this temple. Here we see the pilasters, the sunk recesses, the rearing hippogryphs and the pillared niches enshrining sculptured images employed to maximum aesthetic effect.¹⁹

Thus, tanks, pillared pavilions, towering gopuras, and concentric compound walls are found in larger temples which have religious significance in Tamil Nadu. They are included in the temples of Madurai, Srirangam, Chidambaram, Tiruvannamalai and Srivilliputtur. The other temples are more or less repetitions of the same style with minor variations. Tanks, pillared pavilions, towering gopuras, and concentric compound walls are the main characters of this period. The temple at Srivilliputtur is famous for its massive gopura which is nearly 200 ft. high. It is built in thirteen storeys exclusive of its barrel shaped roof. The style of Nayaka features emerged to indicate that the architectural excellence reached its zenith during the 16th to 17th centuries.

THE HEROIC TRADITION OF MALABAR; A STUDY BASED ON VADAKKAN PATTUKAL.

K. Dhanya

Introduction

Heroism is courageous and valorous activities of heroes and heroines. An action is said as heroic when there is something of challenging, dangerous and more over a common man or a woman does not dare to do. Mostly such actions are not done for their wellbeing instead for the benefit of the poor and ordinary people. Egotism, modesty, courage, patience are some of the qualities of the heroes and heroines. In the book 'The cult of Theyyam and hero worship in Kerala' 'hero' is described as "who either dedicated their lives for a noble cause or who happened to be martyrs"(Kurup, KKN,(1973)2000:) We, Keralites have a great tradition of heroism especially, northern Keralites. And tradition can be said as "cultural continuity in social attitudes, customs, and institutions". Present paper is an attempt to study heroic tradition of Malabar through one of the important and famous folklore genres, folk ballads, especially, 'Vadakkan Pattukal'. And it is also examined the present society's concept of heroism. The word 'vadakkan pattukal' is a composite of two Malayalam words 'Vadakkan' and 'pattukal' which means 'northern' and 'songs' respectively. Vadakkan pattukal are songs which are rendered in the northern part of Kerala, popularly known as 'Malabar' which includes

Malappuram, Kozhikode, Wayanadu, Kannur and Kasarkode districts which are lying in between western Ghats and Arabian sea. It mainly includes Puthooram pattukal, Thacholipattukal, and Ottapattukal. And 'Vadakkan pattukal' is believed to have been formed after the reign of 'Perumals' and before the arrival of 'Portugese'. There are so many studies which have been conducted on 'vadakkan pattukal' theme, but on this particular subject so far no studies have been conducted. And hero/ heroine admiration goes on now itself as like before or something more than that of yesterdays, so that the study is relevant even in the present scenario.

Methodology

Most part of the paper is prepared by using secondary data, folk ballads especially Vadakkan pattukal. And primary data have been used for conducting a comparative study on heroism with present society.

Results And Discussion

The heroic tradition of Malabar has been examined through the folk ballads of the heroes like *Aromal Chekavar and* Thacholi Othenan, and heroines *Unniyarcha and *Poomathai Ponnamma. As folklore is a mirror of the existing condition of the society, every social aspects of

the society is reflected in the varied folk genres, like folksongs, folktales, folk ballads, folk paintings etc. Here, some of the characters of Vadakkanpattukal have been taken to analyze the social values which were versed in that time. So through the ballads of the above mentioned characters it can be understood the reason for the people's admiration of them. The following are some of the important characteristics of people's worship of the certain people.

1. PHYSICAL APPEARANCE

Physical appearances of the particular people make them admired by all. There are so many references in Vadakkan Pattukal about the physical qualities of heroes and heroines which is one of the attractions towards them. The following are the important features of physical appearance by which many are attracted to it.

1.1. Beauty

Beauty is one of the factors of attraction to any person. As far as 'Vadakkan pattukal' is concerned there are so many delineations of the male and female protagonists. But the yard sticks of the beauty are very different from that of today's. The complexion of heroes as well as heroines is said like 'vayanadan manjal muricha pole' by which it is meant the color of turmeric we get when it is cut. This is the symbol used in almost all characters to portray the sense of complexion. Unniyarcha, Aromal chekavar, Thacholi Othenan had been said to have these attribute of beauty. The scurfy chest men is another element of handsomeness, which is explained whenever the elegance of heroes are described. Toe to head of the heroines are well portrayed in these ballads. Aromal Chekavar and Thacholi Othenan have been described to be very handsome because of having a great scurfy chest. The following lines describe that fact (Achyutha Menon, Chelanattu, 1935:155-156)

"Karirulkotha mudiyazhaku
panchami chandranodocha netti
kunjimukhavum cheriya kannum
thaththamma chundum pavizhapallum
kannadikotha kavilu random
shanku kadanja kazhuthazhaku
cheppukadanjoru thoomughavum

marathu mampulli poonchunangum
alila kothoranivayarum"

And heroes' preparation before going to fight is also described (Achyutha Menon, Chelanattu 1935: 156-157) and it went like

"Veeralipetti thurannu vachu
noottonnumulamulla kacheduthu
thengodu chutti pidichondeettu
kacha varinjangu kettunnallo
veerali pattu eduthuduthu
sindoorapottume thottu vegam
valum palisayum kayyilayi"

Almost every part of body which are included in the list of the features which affect the elegance of a hero/ heroine. Even the heroes' hair, forehead, face, neck etc. have been shown similitude to dark light, moon, mirror, and conch respectively. And of the heroines, every parts of the body have been explained and compared to certain objects like silk, sun rays, pillars etc. And the makeup scenes of heroines also have been sketched in vadakkan pattukal. For example the ballad 'Unniyarcha koothu kanan poya katha' (Achyuth Menon, Chelanattu,) explained the way a female protagonist making her look better.

"Chandanam urasi kuri varachu
kannadi nokki thilakam thottu
peelithirumudi kettivachu
anjanam kondaval kannezhuthi
kunkumam kondaval pottukuthi
kasthoori kalabhangal poosunnundu
meyyadapetti thurannu vachu
ezhukadalodi vanna pattu
pachola pattu chuliyum theerthu
pookkula njari vachudukkunundu
kottappadi vacha ponnaranjan
meetheyazhakinnu poottunnunde
ezhuchuttulloru ponmalayum" (Vadakkan
pattukal, Page no: 28-29)

All female characters in the ballads have been portrayed with a sense of sexuality. Poomathai Ponnamma has been obviously shown with a tinge of sexuality in the explanation of her beauty in the famous ballad titled 'Poomathai Ponnamma' (Panikkotty, MK, 1999:84) and the lines go like this

"Valanjum koyi kettiya poomudeente
churanjulloru chelu karukaruppu
pottillanetti puthumanetti
pattola pattilhelinja netti
kannorilam painga cheenthu pole
kavilu karinchola pattu pole
karikooty thechellarayi vacha
kathiron kanikanum kunjipallu
kili kothichundintadivarathe
kali kandal thambayi thenolikkum
mula vannu munnaram kavalayi
adivaram ponthayyachodupole
varayum varakkettum vallikkettum
arayum arakkettillakkikkettum"

The present society also consider 'beauty' as a factor of attraction, and it is found that 80% people give importance to the 'beauty concept' but the rest give importance to confidence, problem solving capacity.

1.2. PHYSIQUE

Physique is another factor of physical appearance, a person who had great physique was admired even got attention on those periods also. It also became a matter of attraction and worship which they had attained or had got genetically. By the physique it could be judged how powerful they were looked like. In order to show the strength of the heroes it is often described about the physique of the heroes. For example the fight between Thacholi Othenan, the hero of 'Thacholi pattukal' and Payyanadan Chindan Nambiar, a famous Kalari teacher in Thacholi Pattukal, said to be the master of 18 *Kalari is portrayed in the same. It is said about the duel between these two people, a duel is a fight between two persons, and one has to win here even by finishing the other. And 'duel' was used for making decision on any debated issues or for solving any kind of problems between two groups or two persons. 'Duel' is fixed between those both parties and the winning team could

execute their decision. It is said that the Malayalam proverb 'Kayyookkullavan karyakkaran' (Survival of the fittest) is emerged from this tradition. Here, in the fight between these two great powerful persons went long hours without seeing any of the two's victory. At last Thacholi Othenan won the duel by applying the last and the very important technique of the martial art, Kalaripayattu, 'Poozhikadakan', a trick in Kalaripayattu, martial art which is not taught normally to the disciples, was taught to Othenan Kurup by his teacher Payyampilly Chanthu. This says about the strength by which the person sustained his heroism. Besides this, Aromal Chekavar of Puthooram pattukal' is also said to have such a physique by which the strength of that person could be calculated. To some extent present society consider the physique of the heroes.

1.2.1. MASCULINITY

Masculinity is always referred when it is discussed about heroes. The word masculinity can be described as "the quality of being masculine" and 'masculine' means "having the qualities or appearances considered to be of typical of men; connected with or like men". And whenever heroes are considered the 'masculinity' can be said as hegemonic masculinity, which can be defined as "having such characteristics as dominance, chauvinism, violence, aggression, virility, mental toughness and strength" (Yaghoubi, Roya, 4) When it is described about Aromal Chekavar, Thacholi Othenan and most of the heroes it is seen that the facial expressions of these personalities have been depicted like furious. And their style of walking and sitting has been metaphorically expressed as thunder, lightning etc. (Panikkotty, MK, 1999). As it is stated above there are so many situations which show the above said attitude of man in Vadakkan Pattukal, for example in the ballad 'Kudakumala Kunjikannanumayulla Othenante Porattam' the lines like "ente thadiyenikkormmayilla, Uyirinum pedi enikillallo" (Achyutha Menon, Chelanattu, 1935:152), which describe the fearlessness, vigor etc of the male protagonist of this ballad. The aggressive and violent attitudes of the heroes are justified like saying "vigorous" or "masculine".

2. MENTAL STRENGTH

It is another important quality which a hero or heroine is required to have. Though a person is powerful and who is not very brave is of no use with his strength. Mental strength can also be said as decisiveness, valor, bravery, capacity to take decisions at the right time etc. The following are the important features by which the mental capacity of a hero can be understood, and those which are seen in the heroes and heroines of Vadakkan Pattukal.

2.1. BRAVERY

Daring personality is another quality of heroes and heroines, which can be seen in the hero and heroine characters of Vadakkan Pattukal. For example Thacholi Othenan at his age of sixteen challenged the great Kalari teacher, Payyandan Chindan Nambiar for a *Poythu. And there are so many situations where Othenan is advised like he had been just sixteen and Chindan Nambiar was 42 and challenged such an experienced and dangerous personality, who had won many fights in his entire life. But without bothering such pressures he moved on and fought and won against that great man. Aromal Chekavar also did such great daring jobs like accepting the *Ankam challenge for settling a dispute between two chieftains, in which the one would surely lose life, it is meant that one had to win over another by finishing the other. And the winner team's idea would be permitted to execute. Another feature which is accompanied with bravery is leadership quality.

1.2.1. Leadership

It is a peculiar strength of the hero characters, the willingness to take up any of the challenging and dangerous activity. Even for informing the objection on any ideas or going on with the risky factors in their life. In Puthooram pattukal Unniyarcha, though a woman of that particular period fought against the scoundrels on the Nadapuram town who always did many problems to the women passengers who walked past through the same. It is obviously because of the courage she had and her readiness to fight against the ills in the society. And it is described as when she was stopped and insulted by those people she answered them with her *Urumi (Damascene blade).

2.2. Decisiveness

It is a quality which the heroes and heroines must have in their life. There are number of situations in Vadakkan Pattukal, in which these hero characters' determination can be understood. Poomathai Ponnamma was assured to give many gifts like jewelry, food, land for her submerge to the fleshly wish of the landlord, but she refused in all the way she could and that resistance made her life very troublesome. She withstood even when she was charged of defloration.

3. Moral Values

Moral values are part and parcel of one's character. The moral value of a person can be judged by his/ her actions, words etc. The heroes would not fight with an armless man, and those who fell down in the midst of fight, the opponent were not used, applied any physical force towards the enemy.

3.1. Truthfulness

It is one of the great moral values. There are so many contexts in Vadakkanpattukal which discourage the habit of dishonesty. The characters which are mentioned here are part of honesty and who fought against dishonesty through their life. For example Poomathai Ponnamma of 'Poomathai Ponnamma' titled ballad fought against the frame-up, which was prevailed against her, though she had to give her life for that allegation, it could be understood to everyone that who had been the corresponding false coin. And Puthooram Pattukal, also always stand up with honesty, one of the character of the same is said to have been called as 'treacherous Chanthu' (Chathiyam Chantu). The deeds of his made the others address him so. From this it can be understood the importance given to this idealism.

3.1.1 Keeping Promises

Being a man or woman of words was a very important aspect as far as a hero or heroine was concerned in those periods. Words were considered as valuable as their life, and there had been no need for agreement with signature from the person who once informed their willingness to do something. Promises had been kept even at the risk of their life. For example Aromal Chekavar of Puthooram Pattukal was asked whether he could fight an Ankam in which the problems between two chieftains had to be

solved, many people who were associated with the ruler assembled at his house for his acceptance of the duel, means his word. This decision of Aromal Chekavar terrified many of his close relations like his wife, Kunchunnooli, Sister Unniyarcha etc. and tried to dissuade him from the duel, but he moved on with his assertion.

4. Stands for social equality and justice

Those who fought against inequality and injustice in the society were admired. They always stood against establishments, and stood for social change. Questioning against the social injustice is referred in the Vadakkan paattukal, such as caste system. Present society also gives much importance and respect to those heroes or leaders who always work for social justice and equality.

5. Potentiality

It is a remarkable attribute of heroic personalities. Unniyarcha's ability in Kalaripayattu is explained in the ballad 'Puthooram pattukal'. And some of the fighting scenes of the heroes like Thacholi Othenan, Aromal Chekavar have been sketched, it is said like, a person who fight with number of people is reported like heroic, and a person who can fight with the most dangerous animals like elephant also can be seen in Vadakkan Pattukal. A hero who fights and defeat 310 people at a time, and one who fought against 42 people have been mentioned here. Now a days the heroes of film are worshipped because of this factor, 99% of heroes are supermen who fight against number of people and can do magic which is in favor of the ordinary people and against the wrong and guilty people and things.

6. Martyrization and deification

There are some hero/heroine characters that had to give their life for any particular causes, and in most of the cases these happened through traps or through wrong ways. For example it is believed that Aromal Chekavar of Puthooram Pattukal was trapped to death by Chanthu, he was not defeated in the right way. And Poomathai Ponnamma, a heroine in the Vadakkan pattukal was punished for a false allegation against her, which caused her death led the people of her corresponding community worship her as a deity of their clan. In the ballad

itself it is treated her as a goddess, for example (Panikkotty, MK,1999:)

"Poomathai ponnamme ente daive

thelinju vilayadoo daivaththale"

The above said lines clarify that the corresponding clan of 'Poomathai Ponnamma' worshipped her, and the lines say that 'oh, the almighty, Goddess Poomathai Ponnamma, Kindly be with us in all our ventures'. Deification of the heroes/ heroines is the extreme level of hero worship. Thacholi Othenan is also deified by the people, and there is a shrine at Thacholi Manikoth, Vadakara, where Othenan was believed to have been lived and 'Thira', a ritual performance, is conducted every year on Malayalam month, Kumbham 10.

Martyrization plays an important role even in the heroic worship of the present society, for example the the 'Onchiyam martyrs' of Vadakara, Kozhikode still live in the hearts of the locale people as heroes. Because they were shot dead on 30 April 1947, for standing with the ordinary people, more clearly for having an accurate standpoint against feudal system prevailed in the society in those periods, which was considered to be a social sin. Another personality who found to be as heroic is, TP Chandrasekharan, after his death even a party has been evolved as a honour to him, though he is not widely accepted. Even the great strength of our nation, Indian Army has given us such heroes a lot. They lost their life because of protecting the whole nation from the enemies not for personal benefits, so their sacrifice made them adorable and heroic.

Discussion

Though these facts about heroes have been depicted in the ballads, most of the heroes had extra marital affairs in those periods. But mostly it was considered as an attribute for both the hero and to those whom he had affair with. It could be found that there are some attributes of the heroes/ heroines which are not considered as with the same spirit as before, for example, the role of women in the present society, the characters like Unniyarcha are not well accepted as before. Because the 60% men and women community do not accept such a character like Unniyarcha, alleging not having 'womanhood', 'unruliness'

Conclusion

As far as a hero or heroine is concerned the characteristics above mentioned like Physical appearance, mental strength, moral values etc. have been considered now itself. Hero worship has its root in the Sangham ages itself, the 'hero-stones'(Virakkallu) which had been the honors for the soldiers' who lost their lives in the battle field, in those ages, and which are said to have had a detailed description including the achievements theirs (Kurup, KKN,(1973)2000: 37). And Vadakkan Pattukal is obviously has a number of heroes who are very famous in the

entire Kerala itself, and the certain part of life of some of the heroic characters have been filmed like Unniyarcha (1961), Palattu Koman (1962), Thacholi Othenan (1964), Othenante makan (1970), Aromalunni (1972), Ponnapuram kotta (1973), Thacholi Marumakan Chandu (1974), Thumbolarcha (1974), Kannappanunni (1977), Thacholi Ambu (1978), Kadathanattu Makkam (1978), Palattu Kunjikannan (1980), Kannappa Chekavar, Oru Vdakkan Veeragatha (1988), Puthooram putri Unniyarcha (2002) etc. These all justify the capabilities of the heroes/ heroines of 'Vadakkan Pattukal'

End Notes

1. "Cheeru kulichu chamayunnallo kannilu randilu mayyum thottu mudiyum minukki ketti olu abharana petti thurannu vachu kunkuma pottu thottondittu veeralipattumeduthuduthu nagapadam pinne pulinakhavum cheeru eduthu kazhuthil ketti mothirameduthu viralilittu hastha kadakan kaikkumittu ella chamayavum chamanju Cheeru Pokunnundomana KunjiCheeru" These are the lines which are taken from the 'Vadakkan pattukal Vol 1', subtitled 'Othenanum Chathoth Cheeruvum'(Page No:27) describes about the ornaments the heroine above mentioned had been wearing and the cosmetics used for having a beautiful outlook.

CULTURAL TOURISM IN KERALA: AN OVERVIEW

Divya Dhanan

Introduction

The cultural tourism is an essential part of tourism industry in general, since it depends on the cultural legacy of the Kerala society. It includes visiting cultural heritage sites that involve archeological, heritage; urban and rural places, historical cities, village and land marks; cultural facilities like museums, monuments, exhibitions and geographical areas, natural features with recognizing their components and potentials and resulting cultural impacts. The cultural tourism in Kerala focuses on people stories and places through interpreting the cultural scenes and shows, restoring historical structure, and recognizing the past in an interesting way. The Kerala Tourism

Development Corporation (KTDC) has focused its attention on the cultural tourism.

The cultural tourism focuses on developing cultural tourism at Kerala and developing the cultural tourism events at the archeological, heritage and natural sites with highlighting them within the KTDC frame work via the cultural tourism development program in cooperation with the concerned public and private authorities. Also, it concentrates an opportunity to recognize Kerala's cultural depth, heritage and environmental diversity.

The vision of cultural tourism is based on investment of the Kerala culture by transforming its elements, resources and potentials into vital, valuable, developmental and sustainable tourism

projects that achieve economic, social and cultural benefits.

It aims to preserve and invest cultural legacy of the Kerala with its heritage and natural components, develop the related cultural tourism and support the efforts exerted by the concerned authorities to achieve the desired objectives. Some other aims such as

- Developing the cultural and natural sites with employing them in best ways and finding attractive tourism routes among them that develop the cultural tourism and highlight the national heritage importance.
- Enhancing the cultural heritage with all possible means and raising awareness of its social, economic, cultural and tourism significance at the local and national level.
- Documenting the intangible and oral heritage at the cultural sites with demonstrating it in an appropriate artistic and creative manner that gives life these sites and make them attractive at the tourism level.
- Creating attractive tourism programme, activities and products at the cultural and natural sites that can fulfill economic, social and cultural benefits.
- Providing expertise in the field of managing and investing cultural heritage sites and opening the way for the individuals to implement development economic projects in cultural tourism fields, leading to create appropriate job opportunities, raise the individual income and support the state economy.

The most important types of cultural tourism as heritage tourism, cultural city tourism, traditions and ethnic tourism, event and festival tourism, religious tourism and creative tourism.

Heritage tourism is quite a new phenomenon on the one hand concerning cultural tourism but on the other hand its routes can be traced back to the ancient times of human history. Due to the modern trends of tourism its demand has been rapidly growing from the 1990s but especially in the 21st century. It includes material, non-material and cultural heritage sites. Material factors such as built heritage, historic memorials, architectural and heritage sites. Non-materials include literature,

arts and folk lore. Cultural heritage sites comprise museums, collections, libraries, theaters, event locations and memories connected with historical persons.

Another segment of cultural tourism is city tourism. The city tourism activity which takes place in an urban space with its natural features characterized by non-agricultural based economy such as administration, manufacturing, trade and services and by being nodal point of transport.

Ethnic tourism is another important type of cultural tourism. It is when traveller chose to experience firsthand the practices of another culture, and may involve performance, presentations and attractions portraying or presented by small, often isolated indigenous communities.

Cultural events and festivals play an important role in the formation and strengthening of cultural tourism. Event and festival tourism covers attendance of traditional or contemporary celebrations of culture, which can include music, dance, cookery, arts and sports. Such events can be may take place at the same time every year and can last from one day to several days.

Religious and pilgrimage tourism is a type of cultural tourism exclusively or strongly motivated by religious reasons. This is one of the oldest forms of tourism. It can also be referred to as faith tourism or spiritual tourism. It focuses on the viewing of religious monuments and artifacts.

Creative tourism is also a branch of cultural tourism, which offers visitors the opportunity to develop their creative potential through active participation in courses and learning experiences.

The cultural tourists also divided into five categories such as the purposeful cultural tourist, the sightseeing cultural tourist, the serendipitous cultural tourist, the casual cultural tourist and the incidental cultural tourists. Cultural tourism is the primary motivation for visiting a destination and the tourist has a very deep and elaborate cultural experience. They were known as purposeful cultural tourists. The second category sightseeing cultural tourist considering cultural tourism is a primary reason for visiting destination, but the experience is less deep and

elaborated. A tourist who does not travel for cultural reason, but who after participating ends up having a deep cultural tourism experience they were called as serendipitous cultural tourist. The casual cultural tourist considering cultural tourism is a weak motive for travel and the resulting experience is shallow. The incidental cultural tourist does not travel for cultural reason, but nonetheless participates in some activities and has shallow experience.

The cultural tourism in Kerala has some positive and negative effects. The positive effects such as the development of regional culture, protection of natural habit, the highlighting of tourism region, strengthening of the local traditions and culture, less seasonal, can extend the tourism season and finally it can be an important form of sustainable tourism. The negative effects comprises culture become commercializes, destruction of environment,

investment of tourism that act against the state environment, carrying capacity problem and conflict sources.

Conclusion

Cultural tourism itself is a very complex segment of the tourism industry, both its demand and supply is diverse and versatile. It has a great significance in Kerala Tourism sector. It is based on cultural and historical resources. These resources should become attraction of existing, potential and create new tourism demand, taking into account the profile of the tourist. The government and private bodies have to focus on enhancing the cultural and heritage sources as they among the primary sources of income for the state. On the other hand we also have to collect information and identify the cultural assets and resources around the state that can be implement the tourism level of Kerala.

VIJAYANAGARA ARCHITECTURE AND THE VISUAL REPRESENTATION OF HISTORY

Dr. T. Divya

The American historian and literary critic Hayden White in 1988 coined the term 'historiophoty' to describe the representation of history through visual images and filmic discourse. White says that historiophoty is in contrast to historiography which is the representation of history through verbal images and written discourse.¹ This shift in historical thought has received great attention at the hands of historians recently and is very much associated with the studies in visual culture. History and visual culture are perpetually linked to each other and are interdisciplinary initiatives focusing on the importance of images and

artifacts in our life. This paper is an attempt to look at how architecture serves as a means of visual representation of history.

Architecture and visual culture are inextricably related to each other. History has recorded that the relationships among individuals, interest groups, cities and nations have been defined through the architecture of the times viewed as symbols of power. Monumental structures like forts, palaces, temples, mosques and churches are visual representations of history- the history of power, authority and subjugation as Wagoner and Eaton have rightly

pointed out in their work *Power, Memory, Architecture*.² Indian architecture has evolved through ages in different regions and was generally affected by the emergence and decay of great empires and dynasties in the sub continent. This paper will discuss on the imperial ideology of a medieval South Indian dynasty – the Vijayanagara- as reflected in its architecture.

History of Vijayanagara has been a fascinating subject to the historians since 1900.³ The formation of the Vijayanagara Empire took place in the mid fourteenth century at a time when there was no single pre-dominant power or states to lay claim to the territorial or imperial power in South India. From the fourteenth through the seventeenth centuries the Vijayanagara Empire spanned a vast area and incorporated diverse ethnic, linguistic, socio-economic and political groups. The recent approach towards the study of Vijayanagara is the one using an interdisciplinary method of correlating the archaeological remains or data with the reconstruction of the material culture of the period. The ruins of the city of Hampi afford a wealth of data to the historians who look at Vijayanagara from an interdisciplinary perspective comprising of the multifaceted aspects of the empire such as art, history, religion, society, economy, archaeology, anthropology and so on in understanding the questions concerning the empire. Scholars like George Mitchell, John Fritz, Vasundhara Filliozat, Carla Sinopoli, Kathleen Morrison and Anila Verghese have raised questions which are not discussed in the written sources such as the construction of ritual and cultural space and the kinds of activities that took place in these spatial zones such as the legitimization of power, the elaboration of an imperial ideology, the articulation of belief practices, rituals and expression of art, architecture, craft production and courtly styles.

Hampi, the regal capital of the Vijayanagara Empire is known for its architectural pomp and splendor. Michael Minkenberg opines that 'when it comes to the confluence of architecture and power, capital cities occupy a place of special significance. In these cities, especially in cases where they have been explicitly designed to be capitals, the architecture and urban design sponsored by the state carries an undeniable political agenda, albeit one's subjected

interpretations'.⁴ The material culture of Vijayanagara may have been largely produced by activities in which kings, members of the royal household and court and governors from elsewhere in the empire displayed symbols of authority in fact if the segmentary nature of Vijayanagara is accepted, it was only within the capital and its surroundings that the king held sufficient authority to display his power on a grand scale. Nowhere is the record of royal display more evident than in the remains of the urban core of the city, particularly in the royal centre. Here sacred and secular buildings take on a monumental expression in stone, accompanied by a richly carved iconography, architecture and sculpture seem to have no purpose other than the display of the royal power. In Vijayanagara, power and faith meet to create an architecture of power in which religion found expression in a royal architectural style represented in the royal centre. The material culture of the royal centre was created largely by the activities of kings, their nobles and the court. The presence of Chinese porcelain in the royal centre which was revealed in excavations suggests that the material culture of the royal enclosure was marked by a different ceramic culture than the surrounding hinterland. The architectural elements such as palaces, royal residences, large ceremonial platforms, ornate tanks all bespeak of a culture of royal display of wealth and magnificence. This was also the site of the spectacular festivities associated with the Mahanavami festival and hence we may say that royal power, kingly ideology and architecture blended in Vijayanagara to create the spectacle of power, with the city as the stage. The overall architecture of the royal centre at Hampi may be broadly classified as religious, military and civil.

Religious Architecture

The construction and renovation of temples marked the symbol of imperial power of the Vijayanagara. The temple architecture at Hampi especially the royal shrines constructed under the patronage of the *rayas* (rulers) reflected the imperial vision and élan of the empire. The title adopted by the rulers i.e. *Chera Chola Pandya Sthapanacharya* itself suggests that Vijayanagara imperial self image was predicated upon the implied continuity with the earlier historical dynasties of the region. Secondly at the level of monumental architecture, the *rayas*

deliberately adopted the Chola and Pandyan paradigm of architecture. Anila Verghese puts it "The Vijayanagara polity, by adopting the Chola Pandya paradigm as the imperial idiom of temple architecture, revived the *gopura* structure after a hundred year gap in its construction and made it a pan South Indian feature of temple architecture, spreading across the whole of Tamilnadu and much of Andhra Pradesh and Karnataka".⁵

The construction of the *gopura* in major temple cities replicating the pattern inherited from the Chola tradition became an aspect of the imperial ideology of Vijayanagara particularly during the early Tuluva period. Three storeyed *gopuras* were frequently experimented with at Hampi (see illustrations Fig. 1). These structures include the Ramachandra temple, Virupaksha temple and the celebrated Vithala Temple. Further multi storeyed *gopura* structures were constructed at Srirangam, Kalahasti, Chidambaram, Ahobilam, Kanchipuram, Melukote and Tirupati. The construction of *gopuras* along with the elaborate hundred and thousand pillared *mantapas* were architectural expression of royal power. The Hazara Rama temple at Hampi is an important monumental representation of the imperial ideology of Vijayanagara. "This temple was a forum for encompassing the ordering ways of worshipping Rama in the interest not only of worship but also of constituting the king's material and symbolic claim to rulership."⁶

Making donations to the temple deities was another way in which regal wealth was displayed. Alexandra Mack has argued that during the Tuluva period there was a substantial increase in the flow of endowments to important shrines such as Tirupati temple.⁷ Gifts of money, land or income from land were invested by the temple to provide a continuous source of income. Probably the most enduring evidence of such gift giving is seen in the construction of temples throughout the empire, these monuments often recorded their donors in stone inscriptions. Particularly impressive were the towered gateways and associated high enclosure walls erected by the Vijayanagara kings throughout the empire. The temples at Kanchipuram, Kalahasthi, Tirupati and Srirangam are examples.

Military Architecture

During the Vijayanagara period the display of military strength was an obvious expression of

royal force and might. At the capital there were usurpations, invasions and the rulers kept a formidable centre of infantry, cavalry, elephants, artillery and a palace guard. The structures related to this military force, fortifications, defensive gateways, stores, treasuries were also indicators of royal might. While the Vijayanagara was always continuously at war with the Bahmani Sultans to the North, war was not entirely sectarian. The expansion and maintenance of the empire required military expeditions against lesser Hindu rulers to effect their subordinations. According to Portuguese observers, the king maintained an army in the city that partly consisted of Muslim mercenaries. These mercenaries were probably housed in separate quarters of the city. As well as, horses and animals used in war and barracks for troops, there were stores for weapons, food and loot. Particularly imposing is a monumental elephant stable consisting of ten domed chambers symmetrically arranged in a row with a central tower (Fig.2) . The architecture of the stables has combined Islamic and Hindu forms to create a unique Vijayanagara courtly style. Several carved panels in the royal centre depict foreign supplicants in front of seated royal figures, troops bearing arms sometimes parade behind. Particularly informative are the panels carved on the outer walls of Ramachandra temple compound in the middle of the royal centre. Here elephants, cavalry, foot soldiers, dancing women and musicians process towards royal figures seated in temple like pavilions. On the basement of other civic and religious monuments, panels of elephants and horses – both symbols of royal power are carved (Fig.3)

The king's capacities as a warrior is also through his hunting expeditions displayed on the sides of a platform associated with the Mahanavami festival (Fig.4). It often involved martial elements. These expeditions displayed the organizational capabilities of royal leadership. Panels showing military and hunting episodes occur in successive registers. Figures of wrestlers are carved on the most important gates of the city, Mahanavami platform (Fig.5) and the compound walls of the Ramachandra temple. One large building near the elephant stables may have served as an arena for athletic contests. Such contests communicated the strength, skill and combativeness of those who served the king.⁸

Vijayanagara was frequently attacked by the armies of the Deccan Sultanate and was besieged several times, although never successfully. Vast fortification protecting the city particularly its urban core convey the military strength of the ruler. Here is found an extensive series of defensive features – bastions, elaborate gateways and look outs. Hampi is mentioned as Purapampa in a song by Purandaradasa – a Kannada poet of the 16th century – who was aware of this urban nature of the city.⁹ Hampi had defensive fortifications which displayed the military strength of the kingdom. Adam Smith observes “Fortifications not only reflect the power of authorities of a community but are themselves fundamental to that power. It would not only have demonstrated power but would have been a source of power itself that local elites responsible for such structures could draw upon to legitimate themselves”.¹⁰

Civil Architecture

The civil architecture of Hampi known for its buildings of public utility include structures like pavilions for public ceremonies, water management through aqueducts, tanks, water ponds and wells. An inscription of 1521 A.D mentions the gift of a reservoir to Ramachandra Temple by Krishnadevaraya which served as a building of public utility. The Bazaar in front of Virupaksha temple used to be a centre of thriving commercial activities and bustled with local and imported goods and produce. Foreign travelers like Varthema and Abdur Razak have described the king of Narsinga (Vijayanagara) as the richest of all they have ever heard spoken of and compared the realm of Vijayanagara ruler to that of Rome.¹¹ Agriculture flourished and bazaars bustled with fresh produce. It is known that the word market itself is originated from the Kannada word ‘Marukkatte’ a platform for selling commodities – which later on evolved as market in English language. The Kannada word Marukkatte itself originated at the Bazaars of Hampi, six centuries ago. Hampi bazaar streets can be considered as one of the first attempts seen in Indian building history to provide organized retail space at a city level. The Hampi Bazaar in front of Virupaksha temple is 717 metres long with each stone mantapa having two or more halls. Some even are multi storeyed with staircases.¹² These bazaars also supported cultural activities like fairs, festivals, music and arts. The work of George Mitchell and John Fritz

and their team has led to the detailed investigation of the royal city of Vijayanagara in which imperial ideology was wedded to architectural exuberance. They divided the city into two parts a) Royal Centre b) Sacred Centre with a wall running on a North South axis including the two spaces. George Mitchell writes “courtly architecture in the Vijayanagara period is also a statement of imperial ambition”. Large palaces whose ruins have been excavated embellished with ornate tanks fed with water from an elaborate water distributive system from the river Tungabhadra, spectacular platform where the king sat in royal display to his *praja*, all bespeak of an imperial architecture.¹³

The Vijayanagara rulers were also adjudicators of disputes and upholders of Dharma. The king and his officials conciliated disputes in one of the columned halls in the palace. Within the royal centre the remains of a large structure with hundred columns known as king's audience hall was the centre of this royal activity. Significantly this monument faces on to a large public entry court: behind are platforms and courts associated with more guarded courtly activities.¹⁴ The buildings of public utility such as pavilions, markets, ponds, tanks, wells became an integral part of the life of the residents providing them a platform to interact, relate and congregate. The architecture at Hampi has played a vital role in integrating the public and private activities of the society and has been one among the many languages which expressed the élan of a regime. Imperial cities everywhere pride themselves as the centers of the universe. *Roma Eterna* or Eternal Rome was the myth on which the imperial history of the Roman empire was founded. In the case of Vijayanagara, the American anthropologist John Fritz has advanced the claim that the city was a ‘cosmic city’ in that it was aligned with the cosmos with the city itself as the axis mundi with a sacredness that inhered on to the king himself. In the case of Vijayanagara with its clear delineation of space which divided into a royal centre and a sacred centre Fritz states that “capital was not merely a setting for ritual or a precipitate of social action; rather urban form at Vijayanagara embodied the principles and relationships that constituted the authority of the king”.¹⁵ Architecture has thus played a vital role in the visual representation of imperial ideology and Vijayanagara architectural splendour at Hampi is a striking example.

FOLK DANCES: IMPACT ON CULTURE IN TAMIL NADU

R. Durga & Dr. K. Vijaya

Introduction

Dances in India comprise of varied styles in the country. Different forms of dances have originated in various parts of India based on local tradition.¹ Dancing has been an expression to symbolize the inner feeling of joy, sorrow, anger, elation and esthetic emotions adding to its richness of Indian culture.² Indian dances are broadly divided into classical and folk dances. The classical dances of India are spiritual in content, but the folk dances of India, which are not only spiritual as well as religious in content but the main force behind these dances are the celebratory mood.³ Indian folk and tribal dances are products of different socio-economic set ups and traditions evolving over the ages.⁴ The village folk dances are performed for passing time and to create the power of concentration. The group dances build up unity and goodwill, which develop social harmony and render best services to the society. These dances play a prominent role in their faithfulness, religious rites, expressing gratitude to God, aesthetic satisfaction in exposing the talents of the dancer and also as a seasonal festival.⁵ Hence, this

paper intends to analyse the folk dances and its impact on Tamil Culture.

List of folk dances of Tamil Nadu

Tamil Nadu has some dance forms relating to various deities and rituals. These celebrated forms of folk dances are still enjoyed by people with great interest and enthusiasm.⁶ The traditional dance forms are many in number and they are authentic in their own way. Most of the folk dances performed today involve number of dancers moving elegantly in circles (Kummi, Sevai Attam), square (arrangements of dais or stage), and line formations (Oyilattam, Thappu Attam, etc).⁷ This research paper discusses the following folk dances which are popular.

Devar Aattam:

There are references to this dance form in Sangam Literature as 'Munther Kuravai'. It was the privilege of the chivalrous men to perform in front of the chariot of the King. The dancers identify themselves as the descendants of the cowherds who were under the protection of Lord Krishna. They dance this to the accompaniment of the musical instrument

Urumi, used exclusively during this dance performance. The legendary belief is that this dance of the Sevass originated to appease the Rudra Tandavam of Lord Shiva. Hence, it is rightly termed as 'Devara Attam'⁸

Karagaattam:

It is a traditional village folk dance in praise of the Mari Amma (Rain Goddess) and the Gangai Amman (River Goddess) performed by men and women with a decorated pot balanced on their heads. It is categorized into two forms- *Aatta Karagam* and *Sakthi Karagam*. While *Aatta karagam* moves from its basic purpose since it is performed to entertain the masses, *Sakthi karagam* is strictly performed to hail the Goddess of rain. Traditionally originated from Tanjavur, it also includes songs and acrobatics like dancing on a rolling block of wood, up and down a ladder etc., balancing the Karagam on their heads.

Kavadi Aattam:

This is a very old dance and is practiced by carrying a Kavadi (a long bamboo stick resembling a bow like structure). This stick is balanced on the shoulders and special lyrics are composed and sung while traversing the entire distance on foot. Supported by *Pambi* and *Naiyandi melam* (two double-reeds Nadaswaram) the Kavadiaattam is performed by worshipers of Lord Muruga. It is often performed during the festival of *Taipusam*.

Kummi:

The term gets its name from the word '*Kummai*' which means to dance with clapping hands to a rhythm, accompanied by songs in popular tunes. It is danced for ten consecutive days, during the Maari Amman and the *Kaanum Pongal* festivals. It also marks the celebration of the initiation of young maidens, a custom that is observed even to this day in the international households. There are varieties of Kummi dances - *Viral thattu* is the striking of fingers, *Ullangai thattu* is the striking with palms and *Muzhankai thattu* is played by striking the elbows.⁹

Oyilattam:

It hails from Madurai, Trichy and Coimbatore and is also famous in Ramanathapuram and Theni region.¹⁰ Initially

performed only by men folk, Oyilaattam gained popularity in the last two decades, which prompted even women folk, to perform with men. Dancers standing in a row wearing ankle bells sway in rhythmic steps in a row to accompanying music. Typically, the musical accompaniment used is the Thavil. The performers tie colourful handkerchiefs to their fingers which add to the overall splendor. Mainly performed at village festivals, Oyilaattam basically describes the great epics of Ramayanam, Mahabaratham and also Lord Muruga's history.¹¹

Poikkal Kudirai Attam:

It is also called as Dummy Horse dance dating its birth about four thousand years before. In the period of 'Silappathikaram', it was named as '*Marrakkal Koothu*', both male and female dancers perform this dance and they convey puranic stories and also some historical events.¹² It is lively performed to please the village deity, Ayyanar.¹³ A dancer gets into the dummy figure of a horse's body. The dummy is made of some lightweight material and the cloth at the side's swings back and front covering the legs of the dancer. The dancer stands on wooden legs, which gives typical sound of hooves of a horse. Holding naked swords or whips, the dancers move rhythmically to the accompanying music.¹⁴

Paampu Aattam:

Other important folk dances of Tamil Nadu include the *Paampu Aattam* of the Southern region where young girls who wear specially designed costumes resembling snake's skin.¹⁵

Since snakes are worshipped in many parts of Tamil Nadu, this dance is considered to be an important dance. The dancers often lie-down on their back and move on the floor emulating the movement of a snake. They also intimidate the viewers by using their hands to shape the hood of a snake.¹⁶

52. Vurumi Komaaliyattam

Impact of folk dances on Tamil culture:

In this busy world bustling with activities, tension and responsibilities, people need to relax themselves. Dance, music and drama are great entertainments which make them enjoy

these performing arts and ease their tension. Tamil Nadu is flooded with various artists performing arts especially folk dances.¹⁷ But in the course of time, these arts have been affected by historical changes. Nationalist Movements at the turn of twentieth century led to cultural revivalism where various dances came to be viewed as national heritage and defined as 'folk' or 'classical'. There have been a lot of changes in Tamil Nadu due to welcoming growth in music, dance and drama. Yet, simultaneously these traditions were being radically altered by new modes of cultural productions.¹⁸ The social stigma attached to the dancers, musicians and dramatists have slowly changed due to various reasons. The lower strata of the society have been continuing on these folk forms.¹⁹

Folk dancing is important for mental illness, especially in gaining new skills, in collaboration with others and in competition, in a wider sense of physical activity, it also builds a healthy social relationship.³⁸ Folk dances have evolved to cleanse the house and village, afford protection from calamities and assure good crops. As entertainment, folk dances were performed for the pleasure of local and visiting dignitaries;²⁰ folk dance also seems to be one of the most influential mediums of communication though the government and educational institutions depend heavily on technology to reach out the masses to spread the message on social and health issues.²¹ In the past, foreign scholars had undertaken study tours from one place to another to do research on folk arts but now, some research scholars in Tamil Nadu are immersed in research on arts.²²

The performing arts and artists attract the urban people and in turn they also get urbanized, their dress and make-up also follow some modern styles. Sadly, some of the children of these folk artists refuse to follow their family profession and instead take up to formal education and vocation.²³ This in turn creates a vacuum in the field, with the arts slowly diminishing away. This impact is felt both by urban and rural people. The elegance, beauty and commonness of folk arts have gone a long way in bringing positive changes in the society. These folk arts have been responsible for sustenance

of ancient tradition, and act as the link between the past and the present.

Conclusion:

Folk dances serve as a form of cultural memory, collective identity formation, and resistance to hegemonic structures of power for subaltern communities. Even in the midst of tragic events such as natural catastrophes, social difficulty and political oppression, folk dances continue to enlighten and uplift the spirits of participants and audience, providing testimony to human resiliency and the transformative power of creative expression. Folk dances are performed in group and also individually for popularity and sheer entertainment. Majority of these dances are still in existence in Tamil Nadu even today. Performance of a folk dance by artistes is a feast for the eyes of its viewers besides the foreign tourists.

The common issue the folk artists face is in putting the crowd to witness their show, for most of the folk arts, women and children form a major part of the audience. But the advent of television and cell phones has kept them occupied in their homes rendering in turn the artists jobless on many occasions. They also felt that the government support for them is very minimal or in some cases non-existent. Certain art forms enjoy the patronage of temples and these artists are occupied on special occasions and festivals. Art forms like Karagattam and Oyillatam seemed to be pretty inclusive in mindset for they are performed by transgenders. The artists do a commendable job in raising awareness on social issues both within the country and abroad. In a nutshell, most of them fear that their art would die a slow death due to lack of support from the government and public alike.

NUANCES OF CULTURAL HERITAGE: THE URBAN SPACE OF HYDERABAD DURING SIXTEENTH CENTURY

K. Fahad

The perception of culture has always been moulded with the question of power. It seems no longer plausible to accept culture as something shared by all members of a society. Rather, it is considered as something constituted through differences of class, gender and ethnicity. In fact, heritage is understood as a product of selection by the society. Cultural heritage is the legacy of physical artefacts and the intangible attributes of a group or society that is inherited from the last generations. Cultural heritages are mainly classified into two — “tangible” and “intangible”. Here the key focus is on tangible cultural heritage of medieval India with special reference to the architecture. The ruling elite of medieval India had opted the urban spaces as their seat of power, transferring a large set of power into these urban spaces by resorting to architectural processes as a language of dominance. The paper aims to see the images and symbols constructed in the realm of the sixteenth century Hyderabad in the minds of the people for the purpose of facilitating and legitimizing the use of these urban spaces and structures for serving multiple political and ideological interest of the Qutb Shahi state. It endeavours to examine some crucial shortcomings of the existing historical research on art and architectural history of medieval India.

“Architecture is the knowledge about how to go about using houses and mansions for cover and shelter. This is because man has the natural dispositions to reflect upon the outcome of things which must protect their community by surrounding it with a wall to guard them. The whole thing thus becomes a single town or a city. Not only this, architecture is also needed when rulers and people of a dynasty build towns and high monuments. They try their utmost effort to make good plans and build tall structures with technical perfection so that architecture can reach its highest development.”¹

The development of the discipline of medieval Indian architectural history have been traced back from the colonial writings of the mid-nineteenth century. The colonial writings were largely employed on methods like classifying people and attributes through

censuses, surveys and ethnographies, the publication of histories and gazetteers, surveys of archaeological sites and monuments, the establishing of routines and standardising of practices etc. The studying of architecture in colonial India with a comprehensive archaeological survey of ancient sites and monument pioneered by Alexander Cunningham, and then by H.H. Cole who extended the map of Cunningham’s explorations.² The establishment of the Asiatic Society in 1784 made institutional advancements in Indian antique research. The earliest studies were basically into two theoretical framework: on the one hand, explores and surveys of Rennell, Buchanan³ and Mackenzie⁴ interested in ‘objective’ reporting and the plotting of sites; on the other, William Jones and others wanted to link the history of India with early centres of civilisation in the light of the biblical theory of creation.⁵ In 1861 with the establishment of Archaeological Survey of India and Alexander Cunningham as Archaeological Surveyor, extended his working career till 1885, witnessed a systematic expansion of field archaeology. Cunningham’s surveys made available the topographic details of a very large number of Indian sites over an expansive territory. He contributed significantly to the growth of a holistic understanding by producing couple of work on theme.⁶

The early examples of indigenous initiative in the field of architectural history comes from the reformist intellectual of Delhi, Sayyid Ahmed Khan. In 1847, he published an extensive description of the monuments of Delhi, *Asar as-Sanadid* (Vesitiges of the Past).⁷ Which was very much in the traditional mould of Indo-Muslim histories, lavishly praised the cultural diversity of Hindustan. Historical and topographical writings of as Ali Akbar Beg’s *Sair al-manzil* (in Persian) a topographical account of the principal buildings of Shajahanabad, or a similar account of Agra (Akbarabad) had influenced him in the second edition published seven years later.⁸

Another important figure in this milieu, James Fergusson made the first systematic and comprehensive historical study of Indian

architecture from a colonial perspective. From the time of his earliest writings, Fergusson demarcated his approach to the subject of architecture from that of archaeologist surveying sites and monuments. Fergusson evolved a systematic typology of structures on the basis of their stylistic component, from which he proposed to study the evolution of styles. He not only compiled the first illustrated history of Indian architecture but also evolved a system of classification of buildings, which remained the only tool for architectural surveys to his successors for many years.⁹

The early nationalist reactions to colonialist architectural history was an attempt to contest the forms of colonial prejudices. Colonial terminologies such as 'barbarity' or the notion of 'backward decline' were now critiqued. Nationalist interpretation adopted different methods like privileging 'Hindu' traditions. These sort of writings began to be linked with the search for myths of origin, which might furnish the credibility of the nation intact. Nationalist writings mainly employed the colonial materials and included the structures relatively neglected in the colonial writings, such as the monuments built during the reign of Aurangzeb and Sher Shah and the late Mughal architecture.¹⁰

Concomitantly, the nationalist scholars often attempt to provide key meaning to a structure by selecting the building single outed, were identified as Hindu, Buddhist, Jain or Muslim. At one level of analysis, the choice of these elements were associated with the personalities of patron: the architecture of Akbar's reign would reflect on his generous, liberal and dynamic personalities. Thereby, the adoption of sandstone as building material during his reign considered as a predominance of Hindu elements in Akbari building constructions. Shajahan's pleasure-loving and more 'effeminate' character has been considered so, because of his passion for marble as a building material and floral forms of décor. Aurangzeb's orthodox character have been explained not only as a decline in patronage but also an 'Islamisation of the Mughal Style'.¹¹

The writings of Ananda K. Coomaraswamy registered a progressive shift on Indian architecture from the investigation of 'influence to that of 'iconography' or 'inner meaning' of architectural form. He argued, to study

architectural forms from a technical or functional perspective alone: the 'significance' of those forms were dissociable from their structural character. A temple was more than a simple place of worship, its forms stood for an image of the cosmos; the enactment of rituals was built into its spatial organisations and structures.¹²

Medieval polity, economy and religious cults became a major theme of many historical writings of 1960s and 1970s. For a long time the destiny of the historical research on medieval India was determined by the historians generally designated as 'Aligarh School'. The collective writings of these scholars made a significant breakthrough in the realm of historical research on medieval India by introducing structural factors and employing the quantitative methods of analysis, which effectively countered the 'communist approaches' to the study of Indian History.¹³ The historians of Aligarh were largely employed within a Marxist framework which approaches cultural practices as 'superstructure' that 'reflected' the ideological programme of the ruling elites, and the study of architecture became cornered in their writings without being paid much attention.¹⁴ In many of their writings, culture was understood as close to the approaches of nationalists, the notion of a 'peaceful synthesis' of the traditions of Hinduism and Islam.

The historiography of Indian architecture made a clear departure from late 1970s onwards along with the new academic establishment in the west. It began to apply the critical strategies for interpreting various artistic genres. Thereby, the historians of medieval Indian architecture in this milieu are explicit about the need to contextualise the form of study, to enable an understanding of the architectural styles within the conceptual framework of the visual traditions and socio-political settings within which they were produced. Most the historical writings in these trend were highly influenced by the Panofskian principles of iconographic and iconological analysis.

Erwin Panofsky was among the earliest art historian who understood art beyond the conventions of formalist aesthetics. He put forward the notion of 'cultural meaning', a meaning which went beyond the details of architectural style or even artistic intension, be it the patron or the artist, to a range of broader

intellectual and cultural configuration. Iconography and iconology were two primary analytical categories which enabled the location of artistic creations within a 'spatial-temporal realm' or context.¹⁵ The iconography of a work implies a set of attributes or signs whose meanings are derived from artistic as well as textual sources; defining and locating the meaning of symbolic form within a particular tradition and tracing the way they evolved over space and time, this is one of the ways of contextualising a work of art. The notion of iconology also needs an equal historical approach that conceives of the visual arts as part of a larger 'universe of culture', a system of meaning connecting artistic creations to a broader correlate of perceptions and the representations, for example taste, conception of space, religious experience, and so on.¹⁶ Panofskian method of rhetoric analysis of architecture has been adopted by many of the scholars to study the mediaeval Indian architecture.

Historians of mediaeval Indian architecture in this realm, such as Ebba Koch, Michael Meister, Wayne Begley and Glenn D. Lowry have employed more or less a systematic reading of building and their visual programme by looking at traditions of representations, and the evolution, borrowing and reworking of forms, motifs and symbols to understand the meaning transmitted by these structures.¹⁷ The study of Wayne Begley's on Taj Mahal is a masterpiece on Mughal architecture in this paradigm. He critiqued the existing literature on Taj which viewed it as stylistic tradition of building of royal mausoleum from Timurid to Mughal architecture. Begley considered it as a narrow approach and insufficient to understand the symbolic meaning of the monument. Employing a wide variety of sources- Sufi treatise, cosmological diagrams, painting, plans and manuscripts scattered around the globe, he interprets the apocalyptic imagery that runs through the Quranic inscriptions on the gateway and the tomb suggesting that the monument was conceived as a vast allegory of the day of Judgement beneath the Divine Throne.¹⁸ This in turn, enabled him to recover Taj as 'an allegorical significance going far beyond its literal funerary function'.¹⁹ Ebba Koch's studies marked the connections between architecture and monarchical ideologies from another vantage

point. She problematized the question of sources and borrowing of motifs and symbols from one tradition and their relocation within another context. She explained the manner in which the European forms were integrated, and in the process transformed in Mughal architecture, primarily during the reign of Shajahan. Koch's studies on baluster column in Mughal architecture, viewed as the changing fortunes of a particular motif of European art which became accessible to the Mughals through engravings by Flemish artist brought by Jesuits to the Mughal court as an aid to evangelisation.²⁰

Begley and Koch underlined the role of Mughal art in ideologies of imperial rule by enterprising the reign of Shajahan as their area of research, a reign considered to be the emperor's own involvement in proliferating the architectural activities in a high degree. Such works are very useful to understand the dynamics of Mughal architecture with the process of state building and consolidation of an imperial system. Especially, the writings of Koch, invites historian's attention to those political and cultural factors within which the aesthetic production is inscribed.

In recent past, some scholarly endeavours made another attempt to look into the medieval cities with a fresh frame of cultural formation and argued that the constitution of urban identity and the cities are a cultural construct. In fact, the urban communities have been examined by the role played by them in the process of cultural formation, their participation in commodity movements, confrontation with alien cultures, the formation of plural societies, exerting dual or multiple loyalties, and exuding multiple affiliations.

In this new academic milieu, the spatial studies got a significant attention from many historians and historical geographers. The writings of Michel Foucault,²¹ Henri Lefebvre,²² and Edward Soja²³ put forward a concept of 'production of space' in which the spatial process is very much involved in the construction of an urban unit. Historical geographers argue that spatial process happens with a definite purpose and logic. According to them, the 'space', particularly urban space, is intentionally constituted to show the ways in which nuance of power and dominations gets inscribed into urban spaces.²⁴ These studies traces the human

thought behind the repeated modification in the landscape. Michel Foucault, who saw power as being inscribed in space, argued that power in society could be achieved through an analysis of control over space.²⁵

Historical geographers and historians have now realized that the spaces are contested over resources which individuals and groups seek to control as demonstrations of their own power. In the case of sixteenth century Hyderabad, a politically charged urban centre, the urban processes grew up around a political seat. In fact the parameters to understand the spatial process in medieval Hyderabad are entirely different. The process was closely associated with ideologies of power and culture. The Qutb Shahi's of Golconada/Hyderabad had utilised their buildings and structures as a major tool to perpetuate and facilitate the various political and commercial interest of their state. It has been employed by analysing the continuous reshaping and redefining of the city following the foundation of Qutb Shahi dynasty.

Hyderabad lies in the Deccan plateau of the Southern Peninsula of India which is considered as one of the oldest rock systems of the world. These gneissic rocks are 2500 million years old. Golconda Fort, the seat of Qutb Shahi dynasty, was once a mere hillock. It was so popular among the graziers that it took the name 'the hillock of the graziers'- *Golla Konda* in the local language of Telugu. The fort was built about thousand years ago, during the Kakatiya rule (1000-1321 CE) which had its capital at Warangal. In the fourteenth Century Golconda fell under the Bahmanis. They divided their territory into *tarafs* or province, each under a governor. Tilang was one among them, with headquarters at the mud fort of Golconda comes under the governorship of Sultan Quli, (hailed from Hamdan, North West Afghanistan) during the reign of the thirteenth Bahmani ruler, Mohammed III (1463-1482 CE). In 1518 when the Bahmani ruler, Mohammed, died Sultan Quli consciously renamed the Golconda fort as Mohammed Nagar and made it as his capital for an obvious reason, to legitimate and facilitate his new rule from Bahmani decentness. It is very visible from the architectural activities organised by Sultan Quli in Golconda, which had more resemblance with that of Bahmani. The finest example can be found in the inscription of *Jami*

Masjid located outside the fort of Golconda which engraved the name of Mahmud Shah of Bahmani dynasty. The expansion of the city and the construction activities were been carried out by his successor Sultan Ibrahim Ali Qutb Shah IV (1543-1550). A major construction commenced by him was the Pul-e-Narve²⁶ (Puran Pul/Old Bridge): on the one hand the construction was made chiefly with a view to afford easy egress and to avoid the risk of life which attended the nocturnal visit of Prince Muhammed Quli to Bhagamathi, a courtesan, who resided in the village of Chichalam, on the other side of Musi river. On the other hand, it was built near to Caravan Sarai where the traders could easily carry the free flow of goods at the both ends and the sultan could extend his imperial edifice to the other end. Another public work of Ibrahim was to excavate big reservoir called Hussain Sagar. Its circumference was 11.6 miles and its dam was one mile long. This was done by Hussain Shah Wali, the son-in law of Ibrahim.

The expansion of the city and the construction activities reached its zenith during the reign of Muhammad Quli Qutb Shah V (1580-1612). In 1591, Muhammed Quli founded a new city named it as Bhagnagar²⁷ and ordered the construction of the Charminar.²⁸ By 1592, the nucleus of the city was ready and the court has moved to the new city. When the foundation of the city was being laid, Sultan Muhammad Quli gave precedence to the building of Char Minar which is a prototype of *Taziya*²⁹ or *Taboot* (representation of the tomb of Imam Hussain). Thereby the Sultan succeeded in incorporating the status groups and power groups of the city into his nucleus of power. Over a period of time, in the process of re-defining the social content of the city, the power groups and the status groups of the city of Bhagnagar also changed. The Shia nobility became powerful groups and eventually became co-sharers of power in urban realm. After the death of Bhagmati, under pressure from the nobility for a quite Islamic name, the name of the city had been changed to Hyderabad. It eventually lead to construct new images and symbols about the city of Hyderabad in the minds of people, which had been used by the Qutb Shahi state for the purpose of legitimizing their state building.

The act of production, of bringing a structure or complex in the monarchical system of

medieval India, itself was a significant act with patronage inscribing a great amount of power exercise in it, not only the economic and political, but also equally in an ideological manner which has the potential to create utopian ideals of monarchy to stimulate the powers of 'God'. The architectural remains of these societies/ Qutb shahi's were a product of patronage, royal and noble with ideologies of power. Plans, design and iconic forms of such structures drew

upon the tradition and languages of high culture and subsequently forming it as a part of culture supported and propagated by the state and powerful institutions. Beyond doubt, to write the history of any medieval Indian architecture or the spatial process, historians will have to pay an equal attention to uses and appropriation of building and forms; the definite meaning of construction, in order to see the connections between practices and representations.

A big route was constructed from north to south cutting the other route into two. The Charminar is located on its junction.
29. Owing to the outbreak of cholera the inhabitants fixed a huge Tazia in the heart of the city on Thursday, 1st Muahrrum, 999 A.H., so that it may serve as a charm to safeguard them from the epidemic, and when it subsided, the huge building of Charminar was constructed of stone and mortar at the same place; 'Tuzuke-Outbshahi'; Sayed Ali Asgar Bilgrami: 17.

A PRELIMINARY STUDY ON SHWEADHA VARAHA PERUMAL TEMPLE AT MAHADEVAPATTINAM IN THIRUVARUR DIST, T.N.

I.Guganesan

Introduction

Vishnu, one of the holy trinity of the brahmanical culture in India and is conceived with to be responsible for the universe protection. The avatars of *Vishnu* are variously given by the various authorities. In the *Varaha-Purana* we have ten incarnations which came to be accepted later, namely 1. *Matsya*, or Fish.- 2. *Kurma*, or Tortoise.- 3. *Varaha*, or Boar.- 4. *Narashimha*, or Man-lion.- 5. *Vamana*, or Dwarf. - 6. *Parasu Rama*. - 7. *Rama*. - 8. *Krishna*. -9. *Buddha*. - 10. *Kalki*, or Horse¹. The *Agni-Purana* gives the same ten. In the *Varaha* avatara, *Vishnu* is generally represented with the head of a boar, on whose tusks rests the earth, associating with the legend of lifting earth out of the cosmic ocean after deluge². With depictions of *Varaha* as the presiding deity is scarcely noted in Tamil Nadu, here an attempt has been made to document one such temple.

Location

The *Shweadha Varaha Perumal* temple is located in the village Mahadevapattinam, a Gram Panchayat in Mannargudi taluk. Its Geographical coordinates are 10°60'3"N Latitude and 79°40'1"E Longitude. It is located at about 11.4 Kilometers from the taluk headquarters Mannargudi and about 39.7 Kilometers from the district headquarters, Thiruvavur. The village derives its name from the one of the oldest temple in the village 'Sambho Mahadevar Temple'³. The temple is located within the Mahadevapattinam fort complex, near to the eastern entrance, at a distance of about 220 meters to the west of the Panchayat Civil Distribution Centre, with geographical

coordinates of 10°36'3"N Latitude and 79°24'1"E Longitude.

Myths of *varaha*

Varaha avatara has more than one occurrence in the Hindu mythologies under various circumstances and variations. According to Hindu mythology, the earth was once submerged under vast oceans by the demon *Hiranyaksha*. In order to rescue the earth, *Vishnu* took the form of a boar and dove into the great waters. Here he killed *Hiranyaksha* and carried the earth above the water once again⁴. The complexion of the *Varaha* has been variously mentioned in various religious texts, namely, *Varaha* avatar of Lord *Vishnu* which lifted the earth from waters was of dark-blue complexion, as mentioned in; *Harivamsa Parva* of *Mahabharata*: "Having a colour, similar to that of a dark blue rain cloud,..."; *Vishnu Purana*: "...dark colour of the lotus leaves,..." and *Srimad Bhagvata Purana*: "...assumed a bluish complexion like that of a *tamala*..."

Another version of this story describes *Hiranyaksha* as having a very favorable reputation in the eyes of Lord *Brahma*, the creator god. As such, *Brahma* granted *Hiranyaksha* a boon that no entity, animal, human or divine, could kill him. Having received this boon, *Hiranyaksha* began to persecute all living beings as well as the gods. He went so far as to steal the *Vedas* from *Brahma* while he slept, and then dragged the earth down into the nether regions of the universe. However, he was ignorant of an oversight that had been made by *Brahma*, who had inadvertently omitted the boar from the list of beings to which *Hiranyaksha* was impervious. When the humans and gods finally

did appeal to *Vishnu* for help in dealing with *Hiranyaksha*, he incarnated upon the earth as a boar and promptly killed the demon, after which point he reclaimed the *Vedas* and brought the earth back to the surface⁵. And again here, he was also in dark blue hue, as inferred from; *Harivamsa Parva* 3.39.14: "The slayer of *asuras* sparkled with the conch and *chakra* (wheel) like a dark blue rain bearing cloud sparkles between the sun and the moon"⁶

But, *Shweadha Varaha* as the name refers White-Boar; is manifested with epoch of the Lingodbhava, refers to that incident when *Vishnu* assumed the form of a boar (*Varaha*) and moved downwards to see Shiva's feet manifested as *Agni Stambha*, to resolve the fight between *Vishnu* and *Brahma* to prove the Supreme Being among one of them. *Varaha* is detailed with a light complexion as mentioned in *Shiva Purana*: 2.7.56-59 "And the soul of the universe, viz. Narayana assumed the form of a white complexioned boar spreading hundred *yojanas*...". The famous tamil hymns compilation Nallayira Dhivya Prabandham also mentions, 865: "...the lord with a boar's face who is radiant as the rays of the sun..." and 795: "...Oh Lord! You assumed white colour in the *Krita Yuga* (as *Matsya*, *Koorma*, *Varaha* & *Narashinga* avaratars)..."⁷

Legends of shweadha varaha Perumal temple

The *Shweadha Varaha Perumal* temple of Mahadevapattinam shares a familiar legend of Sri Bhu Varaha Swamy temple of Srimushnam, Cuddalore. *Hiranyaksha*, the son of *Diti* and *Kashyap* and a younger brother of *Hiranyakashipu*, desired to be a paramount power. To accomplish his desire, the *Asura* rolled over Mother Earth and got hold of it into the underworld, from where he predominated. *Bhooma-Devi* (consort of *Varaha Perumal*) took on penance looking for help from Lord *Vishnu* to protect her from the mighty *Hiranyaksha*. Lord *Vishnu* adopted the form of *Varaha* (wild boar), moved into the *Pataloka* and defeated the demon *Hiranyaksha*. As his final wish, *Hiranyaksha Asura* implored to Lord *Vishnu* to turn his head in a particular direction. Therefore Sri Bhoovaraghaswamy's head is figured turned in the direction of the *Hiranyaksha* to the South⁸. A unique characteristic of the moolavar (presiding deity) in this temple is that the face, in the form of a wild boar, is turned to the South,

while the body assuming the shape of a human is facing the western direction.

The *Maha Mandapa* is entered by a step-less entrance to the left of the *Garuda* shrine. And local legend is that, this step-less entrance is supported directly by *Bhooma Devi*. These step-less steps are referred to as "Mumukshu Steps" and the subtle "Sathya Steps of Truth". The "unseen" steps used by Lord *Varaha Narayana* for transit from earth to *Patala Loka*. After emperor *Mahabali* gets the unimaginable blessing of the touch of Lord *Vamana Maha Vishnu's* Lotus Feet on his head and is sent to reside in "*Patala Loka*". As requested by *Mahabali*, Lord *Maha Vishnu* gives him daily *darshan* in *Patala Loka*. The subtle pathway from planet earth and *Patala Loka*. The "Mumukshu Steps" of *Sveta Varaha Perumal* Temple, this subtle pathway and the subtle connection to the daily *darshan* given by Lord *Narayana* to Emperor *Mahabali*⁹.

Another Local legend revolves around a tunnel in the *Ardha Mandapa* which is said to connect the Fort of Mahadevapattinam to the Tanjore *Maratha* fort; with evidence of several attempts from the locals attempting to scale the actual length of the tunnel, only to fail. Owing to safety it has now been covered with barb wire fence. Some villagers also argue it as an underground safe place to hide the royals and temple treasures on events of invasion. Rumors had also been around on the whitish complexion of the old *varaha* statue as it was highly precious and was sculpted out of a semi-precious stone; which led to vandalism. The statue's snout of broken off to test the rumor's authenticity and turned out not to be true¹⁰.

Architecture and sculptures

The *Shweadha Varaha Perumal* temple complex houses 5 sub shrines apart from the presiding deity main shrine which faces west. The sub shrines are, the *Garuda* Shrine which is in front of the main shrine facing the sanctum, two corresponding shrines for *Bhoo Devi* & *Sridevi* on either side of the main shrine facing east and two structures, both on the two extremes ends of southern rampart wall, with the one on the southeast to the main shrine is identified to be a sub shrine, while the other structure opposite to it seems like a *Madapalli*, or a civil structure. Furthermore the temple has only

one *prahara* to circumlambulate sandwiched between the main shrine and the *Maratha* brick cloistered *mandapa* sitting before a small surrounding rampart.

The presiding *Shweadha Varaha Perumal* shrine has an ornamental styled 16 pillared Vijayanagara-Nayaka period styled *Mukha-Mandapa*, open to its north and west, with pillars depicting images of *Krishna* playing flute, *Sthanaha Vishnu*, *Gandaberundha*, a royal portrait, *Veera Hanuman*, *Bala Krishna* with butterball, Stone Chain imitation, chariot etc. with *Vishnu's* *dwarapalakas*, *Jaya & Vijaya*; both defaced. And outside depicted is a small bas-relief of an *adhigharanandhi* in *anjali hasta*. Further inside, is a four pillared *Ardha Mandapa*, lined with 2 rows of statues, inferred to be the 12 *Azhwars* and 2 *Hanuman* statues in *Anjali Hasta* on the either side of the *antarala*. The *mandapa* is adorned with a couple of beautifully executed *jaladaras*, while the north-western corner has the opening of a tunnel lined with stone slabs. A relief of a fish is sculpted in the center of the ceiling. And on the exterior a beautiful bas-relief of *Krishna* as *Kalinga Narthana* and as *Govardhanari* postures. The *antarala* has 2 statues of *Lakshmi* and *Bhoomadevi*; facing towards the *Varaha Perumal* probably the ones which would have been inside the 2 consort shrines and on the outside is an interesting bas-relief of two dancing women and a rishi holding a *linga* amidst them, and towards a north has an additional *gomuka*.

The *Garbha-Griha* has 2 statues of *Varaha Perumal* statues, the original yellowish hued marble like stone sculpture of the *Varaha*, donated by *Raja Tukkoji* in standing posture with both the hands on its hips raising its snout towards the south. However the image is devoid of *Bhoodevi*. The statue's snout was broken by treasure hunters, since the statue was rumored to be made of semi-precious stone. So decades later the broken sculpture was kept aside inside the sanctum and a new statue was later bought for the temple from *Swamimalai*, with the similar posture of the original, except with the right hand posing *Abhaya*. The original statue can be compared with the statue of *Sri Bhoovarahaswamy* temple at *Srimushnam*.

On the exterior of the sanctum, is adorned with ornamented *Pilasters*, *Kumbha Panjara*, and 5 *Deva Koshtas* with 3 of them depicted with

stucco sculptures, the one facing the north has *Narasimha*, on the east is a an decapitated seated *Vishnu*, with his consort on his lap and facing the south is also an unidentifiable seated male god; all the sculptures being decapitated or damaged. Various reliefs are depicted along the *adhithana* including deer, boar, praying devotee, dancing women, *hanuman* etc. The *Vimana* of the temple, above the sanctum sanctorum, thickly vegetated is typical dravidian in pattern and square in plan and rises up in diminishing proportion. The *Vimana* is two storied and made up of brick & mortar adorned with stucco sculptures. The sculptures are primarily *dasavatara* incarnations as in *Matsya* facing west, *Koorma* towards north, *Rama* facing east and *Vaikunta* towards the south. Minor stories as in churning the ocean, and demigods as in *azhwars* etc are also depicted. Due to the vegetation factor sculptures are not identifiable up to the mark. Majority of the sculptures are defaced, decapitalised or damaged.

Just behind the small *Balipeeda*, and remnants of what looks like a broken base of a *Dwajasthamba*, attached to the main shrine's *upapita* is a small shrine dedicated to *Garuda*, with the corresponding sculpture inside and a well ornamented *vimana* with stucco images of the demigod depicted in standing and seated postures. The *sridevi* and *boodevi* shrines, both located in front of the main shrine, is identified to be of typical Vijayanagara styled architecture, with a very decorative granite *Upapita*, *Adhithana*, *Pilasters*, *Deva-Koshtas* and *Kumbha Panjara* with a Brick and Mortar *Vimana*, with very elaborate representation of both the consorts as stucco sculptures in seated and standing postures accompanied with their attendants, with some sculptures being damaged & decapitated. But currently both the shrines have been deserted and depict a ruined state, while their respective sculptures have been placed inside the *antarala* of the main shrine. The temple's wall is surrounded by a brick cloister with recesses for lamps.

Connected to the temple's cloistered outer *mandapa* is the typical *marathan* wagon vaulted semi-domed arched *mandapa* through which the temple is entered built of fluted brick and mortar. The *Mahadevapattinam Fort* and the *Shweadha Varaha Perumal* temple was built and lived in by *Raja Tukkoji* alias *Tulaja I* (born in 1676 CE), a

Maratha king who ruled from Thanjavur from 1728 to 1736¹¹. The opera, "*Sivakama Sundari Parinayam*", was exclusively written by Raja Tukkoji and staged during the consecration of the temple. The work has beautiful songs with notations but no musician sings it or dancer dances it¹².

Festivals

This temple had pujas on all six times a day before, but now pujas are rarely held, that to only on request. The temple has its own bronze sculpture, which is been kept at Mannargudi Rajagopalaswamy temple. It is brought here only on occasions of special pujas¹³.

Other temples related to Varaha in Tamil Nadu

Mahabalipuram Shore temple complex, one of the finest examples of *Varaha* in Tamilnadu is the *Varaha* panel of the *Varaha* cave temple, with a well delineated snout the incarnation carries *Boodevi* on his folded right leg's lap, which is made to rest on the hood of *Adhishesha*¹⁴, and a similar tall panel found in the sanctum of the *Adhivaraha* Cave temple. Another depiction of *Varaha* is also seen, the avatara sculpted out monolithically to the form of an actual boar is located behind the monolithic shrine next to the shore temple. The pedestal of the *Varaha* carries 3 grantha inscriptions, "*Ranajayahaa, Shreebhaara & Narashimaha*"¹⁵. Just near to the former town is the *Nithiya Kalayana* Perumal temple, depicting a beautiful granite sculpture of a four armed *Varaha*, but carrying *Boomadevi* on his left folded leg's lap rested over *Adhishesha's* hood.

Sri Bhuvahaswami temple, Srimushnam is one of the 8 swambhumoorthi sthalams with the idol sculpted out of salagrama stone; the idol stands with both his hands placed over his hips and the snout facing up without the depiction of *devi*. This sculpture share utmost similarity with the Mahadevapattinam *Shweadha Varaha* sculpture¹⁶. Sri *Aadhi Varaha* Perumal temple, Kallidaikurichi depicts *Varaha* in a seated posture on a *padma peeda*. Gracing the devotees he faces straight while carrying *Bhoomadevi* on his folded left lap, saluting him. *Varaha* Perumal temple, Kumbakonam depicts a similar image of the former, but the four armed lord faces the saluting goddess while she faces the devotees, and is depicted seated on a pedestal carrying *Bhoodevi* on his left lap. The *Varaha* at

Peramandur *Adhivaraha* Perumal temple greatly resembles the *Varaha* panel of Mahabalipuram, bearing the goddess on his left lap, with the leg placed on *Adhishesha's* hood.

Significance of the temple

The *Shweadha Varaha* Perumal temple stands as testimonial evidence for the two attacks faced by the Mahadevapattinam fort. One by the Nizam of Hyderabad against Raja Prathap Singh¹⁷ and second by Hyder Ali against Thulajaji Bhonsle during the Second Mysore war¹⁸. The temple bears the battle scars by means decapitated or defaced sculptures, with such sight being a common enigma to most of the temples of Mahadevapattinam¹⁹.

With *Varaha* temples by itself being a rare occurrence in Tamil Nadu, the one of its kind *Sweatha Varaha* of this temple is a characteristic of its own. And by the reinstatement of the *Varaha* worship we could infer the continual allegiance towards the *Varaha* cult & the efforts of revival of Vaishnavism by *Marathas*, the lined up statues of Azhwars is one such staunch evidence. The *Shweadha Varaha* temple, though currently is in a slightly ruined state, is a splendid example of *Maratha* brick and stucco work.

Present condition

Both the *Bhoodevi* & *Sridevi* shrines on either side of the main shrine facing east are partly dilapidated & devoid of statues. And the two structures, one a shrine and another presumably a mandapalli, on the two extremes ends of southern rampart wall are fully overgrown with vegetation. The *Vimana* of the main shrine is also covered with thick vegetation making it hard to identify the *Vimana devatas*. The northeastern section of the *Mukha Mandapa* is damaged and so is the southeastern corner of the eastern wall of the *Ardha Mandapa*, which is totally dilapidated. The flooring of both the *mandapas* is undulating and slightly damaged²⁰.

Conclusion

Temples of *Maratha* reign are very scarce compared to their predecessor's contributions in the delta region, this temple being one such key evidence of the *Maratha* architectural epoch marks the southward delineation of the temple building art falling from granite back to brick and mortar construction for effective expenditure of

resources. A temple standing the tests of time and men, with such historical and spiritual background lies in tatters crying for recognition

and conservation. Hence the temples of the reign demand much scrutinized research and architectural valuations henceforth.

MOVING AROUND THE MOTION PICTURES: A TRAJECTORY OF CINEMA THEATERS IN KERALA

K.P. Haridasn

The history of Cinema began in India in 1886, when the Limier Brothers showed moving pictures at the Elite Watson hotel Bombay. After that many foreign citizens showcased moving pictures in India, especially Bombay. They made into motion pictures many interesting incidents of Indian life. Following this businessman started producing movies. Haris Chandra.S. Batavedkar, popularly known as Savedada was one among such producer. He started in 1899 by shooting 'Gusthi', which was a common morning sight in North India in those days.¹ The shows were conducted in drama theaters. The show of moving pictures which followed drama was a matter of attraction.

In those days, cities like Bombay and Calcutta showed much interest towards cinema. Heeralal Sen, a Bengali theaterist from Calcutta

showed moving pictures after his drama show.² Later many drama theaters started showing such motion pictures in Calcutta. J. F Madan a director of motion pictures in Calcutta identified the ability of motion picture in attracting the market. He used to give away bioscope and film roles for rent. He also started an exhibition house with name 'Madan theaters.

In May 1913, Dada SahabFalke came up with his 'Raja Harishchandra'. He started a new wave when he used an Indian myth instead of Biblical stories and Shaksperian dramas, which were the usual themes of the imported cinemas. And hence he became popular as the 'Nationalist filmmaker'³. Later he came to be known as the 'Father of Indian cinema'.

The development of cinema started in the industrial city, Bombay. Many parsi theater

owners invested in cinemas. Bombay was a popular port city and this added to the market value of the city. Those who invested in drama theaters started investing in cinemas. The interest and excitement showed by people towards motion pictures as an artform paved way of identify the market and business offered by it. The Bombay theater started in 1776 was purchased by Jamshedji Jijaboi in 1835. He was a parsi businessman. Soon parsi theaters sprang up in cities like Calcutta, Madras and Lahore. It was these theaters which created the necessary cultural atmosphere for exhibiting motion pictures.⁴

The waves of silent cinema which emerged from Dadasaheb Falke, moved South India too. Madras was hub of cinema in South India. Short films were showed in different parts Tamilnadu from right from the early twentieth century. Marutha Mooppanar of Tanjaore had picturised the coronation ceremony of George fifth and it was showed in Madras.⁵ R. Nataraja Muthaliyar's 'Keechakavadham' is the first cinema from Tamilnadu. The first cinema in telugu was R. S Prakash's 'Bheeshma Prathinja', which came out in 1921. In Kerala it was J. C Daniel's 'Vigathakumaran' in 1928.

The history of theater has a special place in the history of cinema in Kerala. Theaters have to be given more importance as they are the public space where cinema is shown. The growth cinema from silent ones to talking was not just coincidence. In early days, when silent cinemas were shown, the conversations were shown written. In some theater were assigned to dictate the story line, they used to talk in beginning of the cinema as well as in between the scenes. But later, when talking cinemas came storytelling, singing, music and all came up in the screen. All these led to the establishment of theater as a public space.

Earlier in Kerala cinema was shown inside tents. These temporarily tents made tents were the old form of theaters. They show films for one or two months at a place and then move to another place. The publicity for the cinema was given by announcements made through megaphones and attracting people by beating drums⁶. Touring cinema talkies like these existed in Kerala in the earlier days. Even before the showcase of the cinema 'Rajaharischandra' on May, 1913, a person called Jose Kattukkaran

had conducted the screening of the bioscope films all over the Kerala. Poul Vincent, a British railway officer from Tiruchirappally was the one who gave a projector to Jose Kattukkaran. With this projector Jose Kattukkaran showed many touring cinemas. He showed many silent English movies. Mananchira ground at Kozhikode was one of the one of the important places in Kerala where he showed his silent movies.⁷

In the later period, when cinema became an industry, the prominence of touring cinema talkies came to an end. When the viewers increased the cinema, producers began to think about the possibilities of permanent film houses. And these instead of the old touring cinema talkies, the idea for permanent theaters came up. Such evolution of cinema theaters was surely the result of these giant increase the in the number of audiences. The popularity acquired by cinema among people. Thus, lead to the formulation of such theaters. Electricity had reached Madras by 1907 itself. Magnesium lamps in theaters were replaced by electricity. Soon in Kerala too, theaters began to use electricity.

The government had a crucial role in the shift from touring talkies to permanent theaters. Earlier, the permanent theaters were given annual license. Similarly, there were a set of rules that the permanent theaters had to follow⁸. Portable fire extinguishers, buckets filled with sand etc. were to be placed in theaters, and the operator had to check them before the shows. He also had to make sure that the auditorium had proper ventilation and there was no smoking.⁹

In 1952, cinema operators were provided uniforms by the Travancore Cochin government, in Kerala. They were provided uniforms under Government coat, so that the officers in the theaters showed up clean before the public.¹⁰ Thus the theaters found a particular place in the Kerala society. Crown theater, started in Kozhikode in 1925 is one of the oldest theaters in Kerala. British companies' like Commonwealth trust, Pierce Lesley, William Gudekar were behind the functioning of this theater. The British people in Malabar saw most of the films from this theater. It was because of the European interest that most of the screening of films were European movies. The ordinary working class including rikshaw pullers and coolies energetically respond to the cinemas culture provided by this theater.

Radha picture palace was yet another theater that came up at Kozhikode in 1925. A British flag was placed in the theatre, leading to the emergence hatred against the British and loyalty towards to the national movement. A fixed portion of the income from the theaters was given for the welfare activities.¹¹ Music concerts and magic shows were conducted in the theater after film shows. A film screened in the Radha picture palace on April 5th 1925 was about a severe earth quake that shook San Francisco, USA in 1906. The posters of the films claimed 'entertainment for u, help for the stick'. It was told that the collection of the day went to the 'Leprosy Eradication Fund'. This incident serves as an example for how cinema theaters become actively interfered in the people life.

Chitra theater established in 1931 in Thiruvananthapuram, Trissur Ramavarma theater, Gouder picture palace started in Palakkad in 1930, Jose theater started at Thrissur in 1931, New theater of

Thiruvananthapuram started in 1930, Karthikatheter started in 1941, Sreekumar theater started in 1942 were some of the early theaters in Kerala.¹²

Every art form especially cinema depicts the matters related to the life of people. The means of lively hood, transformations in life, forms of employment, family and social relations, sex and all part of this. Cinema becomes a political process which determines the values of a society and in the process, theater play very crucial role.

The cinema theaters were a new institution emerged in the public space of Kerala related with modernity and entertainment. These were private institutions and were erected with the object of profit making. These theaters played a significant role bringing people together in spite of caste, gender and religious differences. Therefore, the point of these theaters is important in the study of modern social life of Kerala.

HEALING PATTERNS AND AFFLICTIONS: THANGAL HEALING PRACTICES AMONG MUSLIMS IN NORTHERN KERALA.

P. Hisham & A. Shahin Sultana

Introduction

Religion and spirituality has been considered as inevitable aspects of health and wellbeing. Healing as a term gained its strength since the existence of mankind. As people strive groups and religions have become a part of their life en route to a social animal. In the 21st century we all know that once faith has a major influence on an individual's mind and body every society is profoundly ruled by its own way of life known

as culture which is followed by every individual belonging to that particular culture¹.

Malabar is a region in northern Kerala lying between the Western Ghats and Arabian Sea. Islam is the most common religion majority percentage of people practices in the districts called Malappuram, Kozhikkodu, Kannur, Wayanad, Kasargodu, Palakkad and some parts of Thrissur districts as well. Kerala Muslims are entirely different from the north Indian Muslims

especially by the strong influence of traders from all over the Arabian world. Major sects among Hindus like Paraya, Pulaya, Thiyya and other low class Hindu people were converted to Islam largely from 7th century onwards. Islam said to have come to India during the Prophet's time itself, through exchanges of culture, marriage and trade². Whereas north Indian Muslims are majorly influenced by power and Sufi traditions.

Hadrami link can be found if we are tracing the roots of Muslims in the region. Many of them have a claim to the lineage of Prophet Muhammad, and the knowledge in Arabic language and religious theology has given a sacrosanct status for them, which is afterwards converted into religious leadership and mass movements even it led to the independence struggle against British colonialists in the 18th and 19th century³.

Traditional Healing practices.

According to the World Health Organization (WHO) "Traditional medicine is the sum total knowledge, skills, and practices based on the theories, beliefs and experiences indigenous to different cultures that are used to maintain health as well as to prevent, diagnose, improve or treat physical and mental illness" ⁴.

According to American Psychiatric Association, Mental illness are health conditions involving changes in thinking, emotion, or behaviour (or amalgamation of three) which is associated with distress and/or problems functioning in social, work, family activities, or daily life.⁵ Kerala is considered as a role model than entire other Indian states for good governance, Economy, Health and Development as well. Kerala model of Health care is being discussed as a role model for the country⁶.

People of Kerala even though rely upon several health care providers, predominantly people are approaching two major health care providers. Major health care provider is Allopathic medicine local people of Kerala call it as English medicine and the other health care provider is Ayurveda as it is considered as a culture in the Indian continent, its history traces back to centuries.

Yet Traditional healing practices are continuing to have a strong hold on common people. In the 21st century, traditional healers and

their healing practices constitute a vital component in the Indian health-care system. More than two-thirds of people with mental illness and their family members have a strong belief in the supernatural causation of mental illness, and this belief forces them to consult traditional healers before resorting to modern health care⁷.

Mappila Muslims of Malabar

Trade link was well known in West-Coast of India especially with Arab merchants until the advent of European powers. That linkage was a key determining factor for the origin of several ethnic communities throughout the west-coast India, especially Mappilas of Malabar⁸. As per local texts and some of the historical researchers claim Islam has reached India's western coasts which is parts of Kerala now in the 7th century itself.

Malabar was part of the princely state Madras during the colonial era, now it is a part of Kerala, districts including Malappuram, Kozhikkodu, Palakkad, Wayanad, Kasargodu and some parts of Thrissur district. Most of the Mappilas are religious converts from low caste Hindus namely Paraya and Pulaya, some of them are descendants of the Arab merchants who is been settled there later. The Muslims of Northern Kerala, known as Mappilas, were originally formed when Arab sailors and traders married local women and grew through local conversions to Islam by Arab Missionaries. The Mappilas were spread along the regions including the present districts of Kerala, namely part of Kasargod, Kozhikode, Malappuram, Palakkad and some areas of Thrissur district.⁹

Islam and healing

The history of the relationship between religion and health is as long as the history of humankind. There are many studies, which have examined the relationship between religion and health of the person and how it has influenced one's life. The majority of them showed a positive outcome. In fact, faith healing, divinity in healing or healing in answer to pray has been an element of many religious traditions¹⁰. There are number of studies regarding the influence of religion on health, which has a clear cut opinion regarding the inevitability of religions when it comes especially to mental health.

Islam has a clarity in what is illness and how it should be treated, "*Mankind there has come to you a guidance from your Lord and a healing for (the diseases) in your hearts, and for those who believe a guidance and a mercy*"¹¹. *According to Islamic belief Allah is the one who created illness, and He sent down its remedy as well. Quran directs people to call for god when they are ill "And when I am ill, it is [God] who cures me"*¹²

In our local world praying for a physically or mentally ill person is something we do casually. In Islam certain positions are given to certain people which can be very much seen in the derivatives of Islamic texts. A Waliyy is one who is closer to the god, considering that many people claims that people from the family of prophet Muhammed possessed to have the power to cure or predict the reasons of any illness.

Thangals as Healers

Malabar is a region in northern Kerala, consist of majority of muslims who are having a strong Arabic influence through trade links, and travelling Hadrami saints. (Osella & Osella, 2007, 2008)¹³. People of Malabar were poor especially Muslims comparing to other communities most of them were peasants, uneducated.¹⁴ People started to migrate to gulf countries for jobs from these regions in the recent decades, younger generations are availing the benefits now a days in the form of education, better transportations, Health as well. Health seeking behaviour among the people of this region is really high which can be seen through the mushrooming private hospitals and other health institutions. Even though first resort for their problems including physical or mental problems is local religious healers, a very good percentage of the people from the region are still reluctant to approach modern medicine.

Thangals are a very influential community among Muslims, who came to India firstly at the 7th century with purpose of trade but later settled by marrying local women. In another words thangals are an endogamous community of Yemeni descent who began to arrive in Kerala, in the mid-18th century as Ulamas and Merchants¹⁵. Approximately 30 Thangal families in Kerala directly trace their origin to the prophet Muhammed and written family pedigrees

detailing each and every descendants¹⁶. Other common Muslims considers Thangals as a higher class and gives them a pious status. Similarly people from the Thangal community has been given a sacrosanct status by the people, and they are like godly like figures in the region. People seek help from them in every situation, they have been called for inauguration for their new business, they have been called for laying the foundation stone for their new house, they have been called for being the guardian of their son's or daughter's Marriage.

A personal knowledge of health and illness varies from community to community. They not only believe that the ill health is because of bio-medical causes, but there are some other supernatural causes, which makes the person ill. Additionally, there are other contributing factors such as socio-economic, political, cultural, religious and environmental factors. Similar to Murdock's 'supernatural causation', in this study too, a person in Islam is conceptualized as the combination of four interacting part which are Aqal (mind), Jism (body), Nafs (self), Ruh (spirit). According to them, all four parts should interact each other to maintain balance in the body. When this balance is interrupted, illness and disease occur.

Some of the scholars have shed light upon what type of healing is done in the settings, which can be clearly seen in the works. Mainly most of the Thangals are said to have gotten the power to heal by birth while people from the community or outside the community come to them for refuge, they suggest versus from Islamic texts, and also to recite Quran etc. Most of the treatments are based on Swalath, Dikr and Quran, substance made mainly of honey is often been given to patients. The people are always having that trust in them because they are coming from a very highly respected family. They have the stories in them told to them by their neighbours friends and well-wishers.

Conclusion

This paper was an attempt to trace out how an economically, educationally sound community like Mappilas of Malabar, who are very much aware of health dynamics tends to go for Thangal healing practices while the health seeking behaviour is very much in them. Thangals are an endogamous community who

are having a sacrosanct status among the community because of their lineage to Prophet Muhammad and the status they possess among other larger public. Muslim community in the region have struggled a lot during the arrival of British and before their arrival as well. The entire

region has witnessed the retrieval of the community for the past few decades the community is in their empowering path, by Providing Education, Health care, Power etc. Thangals are or have been in the forefronts of this empowering journey, by leading or guiding them.

THE SUBALTERN ENVIRONMENTAL OF KALLEN POKKUDAN AND MAYILAMMA

Hridhya Sasindran

Environmentalism in India has widely focused on industrialization and modernization and its implications for natural resources and conservation.¹ Men continuously exploit his own surroundings to meet his day-to-day needs. Physical impacts resulting from accumulation such as rising temperature, rising sea levels, extreme events dramatically alter the natural balance of local and global ecosystems and infringe on human settlement.² The pattern of diseases and death exhibited in Indian health data reflect the importance of environmental factors in human health damage.³

Caste and nature are intimately and inextricably interwoven in India, yet their interconnectedness has rarely been a subject of examination.⁴ However, dalit experiences and narratives constantly underline their everyday ecological burdens in a marked hierarchal order.⁵

The main feature of dalit eco-experience is it has its own vibrancy and dynamism. Living with nature, they are constantly negotiating with, and challenging caste domination, while simultaneously articulating their environmental imagination.⁶ We have many things to learn and understand about the environment from the people who are rooted with the nature. The paper 'the subaltern environmentalism of Kallen Pok.kudan and Mayilamma' is an attempt to study the environment protection activities and struggles faced by Kallen Pok.kudan and Mayilamma. Because both of them were illiterates and came from the marginalized section of the society and became the leaders of environment struggles. Kallen Pok.kudan, a dalit farm worker from Kannur district of Kerala, mainly focused on the protection of the mangrove forests of his native place and other parts of Kerala state. And he desired to be known

as Kanda! Pokkudan instead of Kallen Pokkudan, this shows his love to the mangroves. Likewise, Mayilamma, a tribal woman of Plachimada village in Palakkad district of Kerala was the first who fought against the unlimited extraction and subsequent pollution of water by the multinational Coca Cola Company.

Mangrove plants mostly grow within the sheltered intertidal flat deltaic lands, funnel-shaped bays, broad estuarine mouths, shallow or frequently tidal inundated coast lines and the atmospheric temperature between 20 degree and 35 degree are ideal for effective growth and natural regeneration of these mangroves.⁷ The length of Kerala coast is about 560km, extending from North to South with parallel to the Western Ghat.⁸ And the coastal region of Kerala is covered with a long stretch of backwaters and a series of lagoons running parallel to the sea separated by a strip of land varying in width from a few 100 meters to several kilometers. The mixing of tidal waters from the sea and fresh water inflow from 41 west flowing rivers, create a suitable environment for the growth of mangroves in the banks of these water bodies. The mangrove community is almost a microcosm of the socioeconomic complications attend on the human use of a natural resource.⁹ The abundant growth of mangroves in Kerala coastlines has almost disappeared due to the pressure of population and the filling of the water bodies for developmental projects. Most of the industries and factories are located in the coastal regions, this always creates threat to the coastal ecology. Actually the mangrove forests creates an important ecosystem in the land by providing an unique habitat for different species of animals, birds, fishes and insects and also helps in regulating the ecological balance of the nature in many ways.

Recently the mangrove ecosystem attracted the attention of environmentalists and scientists and the government has many proposals to preserve and plant more mangrove saplings in the coastlines of the state. In Kerala, Kallen Pokkudan was the first who had realized the importance of preserving the mangrove forests before the environment activists and scientists. Due to the financial problems in the family, he had drop out of school at an early age and started his journey as a dalit farm worker along with his parents in the land of a janmi and

engaged in the communist party movements of Kannur district.¹⁰ As a member of a Pulaya caste Pokkudan had a connection with the mangroves, because the Pulayas use the mangrove plants as a source of food, fuel and medicine.¹¹

The interaction with the coastlines and the keen observation made him aware of the different functions of the mangrove ecosystem and he started the mangrove conservation activities by around 1989.¹² Even before the scientists, Pokkudan had identified the high productive power of the mangrove ecosystem and its role in protecting the coastal areas. The mangroves are extremely important in maintaining the lives in the coastal region and it stands as a coastal belt against the encroachment of the sea. The present studies proved that mangrove forests have the power to reduce the intensity of the wind but it was observed by Pokkudan much earlier than the academicians. In his autobiography *Kandalkkadukalkkidayil Ente Jeevitham* he stated that "school children walking the side of the Pazhayangadi river used to lose their umbrellas to the heavy winds blowing from the Ezhimala side so I began planting mangrove plants to reduce the intensity of the wind."¹³ Mangrove forests purify the salt water and provide nesting and breeding place to many migratory birds and marine creatures.¹⁴ Its roots protect the small fishes and prawns from the strong waves and have the capacity to prevent soil erosion to a certain extent.¹⁵ The fallen leaves of the mangroves decompose in the water and serve as food to many aquatic organism. The continuous observation and life with the mangrove forests helped Pokkudan to identify all these functions of the mangrove ecosystem much earlier. Planting the saplings and identified 22 varieties of mangroves.¹⁶ In his autobiography, he explains the struggle in finding the mangrove seeds from the mud and the river water. Because these water bodies became a place to throw the poultry wastes and used syringes from hospitals.¹⁷ He planted more than one lakh mangrove saplings in Kerala coastlines and tried to protect the mangroves as much as he can.¹⁸ As a part of the mangrove protection mission he travelled across Kerala to make the people aware about the importance of mangrove conservation. In the initial stages he had fought a long and lonely battle to

preserve the mangrove forests and received criticisms even from his own community.¹⁹ Later on, his activities made the government aware about the significance of the mangrove coastal belt. Scientists and environmentalists recognized the role of mangrove forests in protecting the coastal regions and they visited Pokkudan for collecting the good qualities of mangrove seeds.²⁰ In 2015, he started a mangrove school or kandal school in his own land to train the new generation on the importance of mangrove conservation, with the support of the state government he delivered 500 lectures and workshops mainly to the school students and local people.²¹ With the interference of the environmentalists the High Court of Kerala ordered six month of imprisonment and 2000 rupees fine for whoever destroyed mangrove plants.²² He also involved in the protest against the thermal power plant at Irinavu in Kannur district and raised voice against the quarries and sand mining.²³

The role of women and her relationship with the nature is important and crucial since she is solely responsible for the collection of water, fuel wood, fodder and many other such basic needs of the family.²⁴ A tribal eco-warrior Mayilamma showed the power of women in protecting the environment. Plachito is a small financially disadvantaged agricultural village which belongs the Perumatty panchayat of Palakkad district. And most of the people in the village are illiterate landless tribals who make their living as agricultural labourers. An unusual and unprecedented struggle for water was occurred in Plachimada for more than half a decade.²⁵ As a part of the New Economic Reforms of 1991, a multinational company established a plant in Plachimada for making soft drinks. The plant was commissioned in 2000 March and Coca Cola, Sprite, Fanta, Maaza, Thumps Up, etc were the popular brands produced in the plant. The Kerala Pollution Control Board (KSPCB) provided the permit to produce 561000 liters of soft drinks per day. The Company provided job opportunities to the tribal youth of the colony but due to their illiteracy they did not get any better posts in the Company. Moreover the plant polluted the surface water of the locality, and thereby negatively affected the livelihood of the agricultural tribals.

Mayilamma was the first who raised voice against the plant. "As I said earlier, when the Company came I did not feel that there was anything seriously wrong at first. When the drinking water started tasting increasingly bitter, we were all convinced about one thing. The water that came out of the Company was dirty and black".²⁶ During summer that year, the wells of all the farmers in the neighbourhood went dry.²⁷ Water from the bore pipe which used to flow for two hours was reduced. Because of the scarcity of the water it became necessary for them to go distant places for fresh water. When they went to fetch water it became impossible for them to work. The company distributed the solid wastes as fertilizers to the farmers and it created health problems in many of them. The burden of water insecurity and the consequent drudgery of fetching water for household use are mostly felt by the female members of household.²⁸

Gradually the water pollution and the drought became a serious issue. These all provoked Mayilamma to start protest against the plant and later got support from the mainstream environmentalists and politicians of the society like Vandana Siva, Medha Patkar, Veerendrakumar, etc and the noted environmentalist Sidha Raj Dutta visited Plachimada and refused the Padmavibhushan award as a sign of protest against government attitude to Plachimada people. The tribal population of the locality agitated under the banner of the Coca Cola Virudha Samara Samithi (CVSS) for the closure of a multinational corporate firm,

Hindustan Coca Cola Beverages Private Limited (HCBPL)?⁹ News papers and other media have played a tremendous role in drawing attention of the government into social problems and to pressurize it to take actions.³⁰ Here local newspapers like Mathrubhoomi, Madhyamam and a few TV channels pictured the Plachimada issues almost regularly. The fact that Plachimada agitation is spear-headed by members of the most socio-economically backward community of the state has won the attention and the sympathies of the world.³¹ The World Water Summit was organized at Plachimada on 21-23 January 2004 and Plachimada further shot up to international media attention.³² Finally the authorities took the issue seriously and submitted the report in 2010. On 24 February

2011, it was brought as a bill in the Kerala Legislative Assembly and was unanimously passed.³³ At last the plant was closed permanently and it remained empty with a few security guards. From these we can understand the role played by Mayilamma in making the local environmental issue as a national issue.

By analyzing the environmental protection activities of Kallen Pokkudan and Mayilamma we can understand that these movements were not supported or guided by any rigid political ideologies. But by the lower section of the society for the protection of the environment and the and existence.

PHILANTHROPIC PRACTICES OF RAMNAD ZAMINDARS

Dr. R. Janaki

1.Introduction

Ramnad Zamindars was considered to be one of the most important one in the erstwhile Zamindari System. Many of its Zamindars were by nature, philanthropists. Philanthropy means literally "Love of Mankind". Some people used philanthropy as a way to gain recognition, prestige and power and others saw philanthropy as a way to gain favour of the gods. For maintain the social supremacy, Ramnad Zamindars followed several kinds of activities to prove their

name and fame. The Sethupathy of Ramnad spent lavishly for maintain their honour and prestige and carried out philanthropical and welfare befitting their social status. Therefore, in the present article a sincere effort has been made to highlight the philanthropic practices of Ramnad Zamindars.

2. Topography

The estate of Ramnad included the Hindu holy island city of Rameswaram, from where, legend has it that the Hindu god Rama launched

his invasion of Ravana Lanka. On the conclusion of the war and Rama's success it it.¹ He appointed a Sethupathi or 'Lord of the Sethu'² to guard the way to the island. The bridge referred to here is the legendary Adam's Bridge³ or Rama's bridge which was believed to have been constructed by Rama. This estate was located between 9 degree 6' and 10 degrees 19 east longitudes. It comprised the Southern and Eastern portion of Madura district and included the whole Bay of Bengal coast of the district. The estate covered an area of 2,104 square miles (5,450 kms) and had a population of 7,23,886 in 1901.⁴ The estate was subdivided into five Zamindari Tahsils and the district of Ramnad was constituted on the 1st June 1910. It comprises the two great Zamindars of Ramnad and Sivaganga, which formed part of the old Madura district.⁵

3. History of Ramnad Sethupathis

The Sethupathi's are a Tamil clan of the Maravar Community native to the Ramanathapuram and Sivaganga district of Tamilnadu, India.⁶ The male rulers of Ramnathapuram also bore the title of 'Sethupathi', while female rulers bore the title of 'Nachiyaar'.⁷

During the 14th and 15th centuries, the Nayak ruler Muthukrishnappa Nayak appointed Sadaikkathevar in 1605 as protector and guardian of the pilgrims to Sethsamudram. Sadaikkathevar was a loyal subordinate of the Nayak's. When the power of the Nayak kings of Madurai began to decline in the late 17th century the chieftains of Ramnad asserted their independence in the late 17th century. Raghunatha Kilavan crowned himself king of Ramnad and changed his seat from Pogalur to Ramnad close to the east coast. He erected massive fortifications to protect his capital. The British took control of the administration of Ramanathapuram in 1795.⁸

Rani Mangaleswari Natchiar⁹ (1803-1807) (first Zamindarini of Ramnad) put in possession in February 1803 was confirmed by a *Sunned – I – Milkiyat Istimar* * drawn up in almost the precise terms made use of in Regulation XXV of 1802, executed on the 22nd April 1803 by Lord Clive, the then Governor of Madras. In this year, the Permanent Settlement was made and the Rani Sethupathy bound herself and her

successors to pay to the English Government the Permanent annual peshcush of Rs. 3, 24,404-3-6. She is called the Istimirar Zamindarini in remembrance of the settlement.⁹ Since then, until the India's independence in 1947, Ramnad was ruled by the queen and her descendants.

4. Philanthropic practices of Ramnad Zamindars

Philanthropy, a religious duty, brought virtue and heightened social status to its practitioner. Religious and Cultural forms of patronage activity were especially merit worthy, and incalculable sums of money were poured into movements for the reform and revival of various aspects of indigenous civilisation.¹⁰ In Ramnad, wealth could be translated into Social Status and maximum of social influence only through patronage endeavours. They were involved in the construction and renovation of Temples, construction of Chattirams for Pilgrims, maintenance of the daily rituals in temples, celebration of festivals in the public interest and construction of schools and hostels for students. They were also known for patronising poets, Christian Missionaries establishing Tamil Sangam and other such charitable activities to maintain their social honour or Mariyathai.

A. Construction of temples

A Hindu temple is a symbolic house seat and body of divinity. It is a structure designed to bring human beings and gods together using symbolism to express the ideas and beliefs of Hinduism. In Ramnad, Ramanathaswamy temple is the most notable historic landmark of the town. Ramanathaswamy temple is a famous Hindu temple dedicated to the god Shiva, the temple is one of the 12 Jyotirlinga Shrines, where Shiva is worshipped in the form of Jyotirlinga meaning "Pillar of Light".¹¹ It is also one of the 275 Paadal Petra Sthalam Temples and is glorified in hymns by the three of the most revered Nayanar Saints (7th century Saivita Saints), Appar, Sundarar and Tirugnana Sambandar. The temple in its current structure was built during the 12th by Pandya dynasty. The temple has the longest corridor to the 22 holy theerthams of the temple among all Hindu temples in India. Each pillar is sculpted in Nayak style as in Madurai Meenakshi Amman Temple.¹² The temple is among those offering free meals under the Free Meals Scheme of the Government, which provides meals to devotees of the temple. At the beginning, Ramanatha

swamy Temple was a thatched shed. The present structure was the work of many individuals spread over a number of centuries. The pride of place in the establishment of the Temple goes to the Sethupathis of Ramnad. The contribution of the kings of the Sethupathy Dynasty (17th Century) to the temple was considerable.¹³

The second half of the second Pracaram is said to have been erected between 1647-1672, by Tirumalai Sethupathy, whose statue and that of his son Raghunatha stand by the side of the south entrance into the Amman temple honoured with garlands and offerings of betel nut and flowers. Raghunatha Tirumalai Sethupathy also built the rest of the Second Pracaram.¹⁴ The Eastern tower and Shrine of Nataraja were built by Dalavai Sethupathy.¹⁵ The Second Enclosure is ascribed to Chinna Udayar Sethupathy and his son Raghunatha Thirumalai.¹⁶ The Third enclosure was constructed by Muthu Ramalinga Sethupathi. The Sethupathi's statue and those of his two *Pradhanis* (minister) can be seen at the western entrance to the third corridor.¹⁷

The temple is therefore not the work of one age but extends over a period of 350 years and has been erected and endowed, almost exclusively by one family, the Sethupath chiefs of Ramnad. It is one of the last great works of the Hindus and the latest addition to it is the finest of all. The temple, its ceremonies and its attendant Brahmins are maintained from the revenue of 57 villages yielding an annual income of about Rs. 40,000 granted by former Rajahs of the Ramnad Zamindary.¹⁸ The temple comes under the renovation and consecration of the 630 temples planned by the Hindu Religious and Charitable Endowments Department of the government of Tamil Nadu.

Rani Mangaleswari Natchiar endowed Chockanathaswami Temples at Ramnad and Pallimadam as well as Streenivasa Perumal Kovil at Agastiatheortham near Tirupullani. The temple at Nainarkovil and Tirugnana Sambanda Pundara Sunnidi's Madam at Madura also received the Ranees's attention.¹⁹ Rani Parvata Vardhani who endowed the temple at Nainar Kovil at Madura. Baskara Sethupadhi spent rupees two lakhs for the renovation of the temple of Thiru Uthirakosamangai, Thiruvadana and Thiruchuli.²⁰

There are numerous other temples in the estate under the management of Private persons who built and endowed them. In fact every big village had at least one temple. The largest one at Rameswaram is under the direct management of a Pandaram. The following figure shows the income and expenditure of the temples under the management of the Court of Wards from year 1873 -74.²¹

S. No.	Year	Income			Expenditure		
		Rs.	A.	P.	Rs.	A.	P.
1	1873	1,06,218	4	6	1,12,467	12	5
2	1874	1,02,022	9	11	1,00,354	0	9
3	1875	1,19,071	6	0	1,18,148	14	7
4	1876	76,021	11	7	71,056	14	4
5	1877	76,243	6	7	78,420	2	3
6	1878	85,778	5	3	77,868	9	11
7	1879	1,11,481	3	8	96,032	8	6
8	1880	1,20,669	11	2	84,897	15	6
9	1881	1,00,563	5	5	82,128	15	4
10	1882	1,24,925	8	6	23,586	3	11
11	1883	1,53,569	8	1	1,01,757	15	1
12	1884	1,37,871	2	2	1,04,855	7	6
13	1885	1,43,882	7	6	1,15,037	8	5
14	1886	1,33,527	7	9	1,25,521	12	9
15	1887	1,51,279	3	10	1,37,455	13	8

Source: T. Raja Ram Raw, *Ramnad Manual*, Madurai, 1891, P. 80.

The Court of Wards have expended Rs 41,715-11-4 on temple buildings and 1879 Rs. 94,366 -3 - 2 in improving the irrigation works, the total maramat expenditure being Rs. 1,36,082 -3-6.²²

B. Dharmic gifts of inam lands or chattirams

The term 'Inam' applies to whole villages or small holdings, whether held entirely free of land tax. The origin of Inam tenure is very ancient. It was the tradition of the Hindu rulers to grant beneficial tenures originally known by the Sanskrit term 'Manyam' and later on by the Arabic term 'Inam' after the Muslims conquest.²³ They are assignment of land originally free of tax and later at privileged rates of assessment for the payment of troops and civil officers, for the support of temples and their servants and charitable institutions, for the maintenance of holy and learned men for rewarding public service. Inams held for the purpose of public utility which includes those held for the support of Chattirams, water Pandals, Topes, Nandavanams or Flower Gardens, Wells, Ponds, Tanks, Bridges, Village Schools and Veda Padasalai or for Schools teaching the Vedas.²⁴

During the period of Rani Mangaleswari Nachiar carried on royal aof state formation through Dharmic gift to Chattirams. Mangaleswari founded or rebuilt four Chattirams during her reign. During the following years, only two more would be built.²⁵ Her greatest charity was to return eighty – six villages, which had been taken from mainly Brahmin grantees in the late 18th century. The other Zamindar noted for religious endowments was Rani Parvatha Vardhani who endowed several Chattirams upon assuming her title after her long conflict with Muthu Chella.²⁶

From 1803 to 1889, the years for which there are records, Ramnad Zamindars gave the produce of lands of 13 villages to temples, 62 to Chattirams and two to Maths. Apart from the 86 villages of Manglewari no more lands were granted as Dharmasanams or Inam lands.²⁷ Most of the granting appears to have taken place in the first 40 years of the century, with the greatest incidence occurring in Manglewari Nachiar's reign.²⁸

C. Internal management of C.temple

Every temple has its own local establishment for the proper utilization of money and grain granted to in on account of worship and ceremonies according to the fixed scale of expenditure. The temple expenses in money may be classified under three heads.

- Regarding the preparation of food.
- Regarding the baths and ointment and worship
- Regarding lighting and contingencies etc.

The total sums allowed for temple expenses in grain and money and for temple establishment in the time of the Zamindar was Rs. 60,000. After the estate passed into the hands of the Court of Wards, the amount annually allowed for these purposes was Rs. 57,000 up to 1867. When owing to the famine the amount was cut down to nearly Rs. 30,000. This was the scale in force in year 1871. But in subsequent years the scale has been increased in proportion to the increase in the revenue and the sum spent in 1878 under the item is Rs. 56,200.²⁹

When Ramnad went under the Court of Wards in 1872, it was found that the systems of accounting had not changed. Not only the Chattirams but the entire Devasthanam establishment was characterised by a lack of clarity as to income and expenditure, with no statements of yearly transaction. Some temple accounts were missing.³⁰ to imperial officials this loose accounting and appropriation had only material advantage as its aim.³¹ It must also be seen in the context of the struggle to protect or expand royal authority. The sums mentioned in connection with Zamindari management were relatively insignificant in the context of the financing of major litigation control over temple and Chattiram accounts served as an important expression of continuing royal authority in the context of the Permanent Settlement a time when supervision over the movement of cash, as opposed to land, was acquiring new political significance in the redistributive schemes of such Indian monarchy, Ramnad and Sivaganga Zamindars argued continually that maintenance of their status required such management responsibilities and they struggled to remain managers of the Devasthanam managements when their Zamindars went under the Court of Wards.³²

5. Maintaining the social supremacy

A. Participate of temple rituals

For maintaining the social supremacy Zamindars followed several kinds of activities to prove their name and fame. Zamindars were

always eager to celebrate festivals and spent more for projecting them as superior to others. Zamindars of Ramnad yearly celebrated the Navaratri festival or festival in honour of goddess Durga for Navarathiri or 'Nine Nights'. Before conducting the celebration of Navaratri, Raja of Ramnad used to organise and participate in the celebration of Kali and Ayyarnar temple festivals in Ramnad.³³ Both Navaratri and Pongal a harvesting festival were celebrated in the 'Raja Sabai' or Royal Darbar of Ramalinga Vilasam, Palace of the Sethupathi. During the festivals of Navaratri and Pongal there was a special meeting held by the zamindar with the head of the temple, Zamindars' officials and Brahmins. These official and others were offered fruits, cloths and sheep to Raja of Ramnad based on their economic status. Ramalinga Vilasam was the main palace where Raja of Ramnad announced the royal gifts, information to the public and officials. During the darbar the place was used to offer food, *Prasadam* and coconut.³⁴

B. Flourishment works of Sethupathis

Baskara Sethupathy was an exceptionally enlightened Zamindar and his brother Raja Dinagara Sethupathy were English educated rulers. He was the only person who had western education among other Zamindars. He was to donate the land and money for patronising poets, establishing school and other such charitable activities.³⁵ The Sethupathis of Ramanathapuram were great patrons of Tamil literature. He supported by the cousin of Pandithurai Thevar to form the fourth Tamil Sangam at Madurai in 1901. There is no doubt that during the first quarter of the 20th century. Madurai Tamil Sangam had a very notable record of work to its credit in the field of promotion of Tamil learning and research, a record that has not been beaten by any other organisation till date.³⁶ Baskarasami Sethupathi initiated and built the Sethupathi High School at Madurai.³⁷ The most important was that of financing the visit of Swami Vivekananda reached Ramnathapuram in 1882 and met the then scion, Bhaskara Sethupathi at his palace, and stayed there as the official guest for eight days.³⁸ Initially, it was Bhaskara Sethupathi as the Raja of Ramnad, who had earlier decided to go to US to attend the Parliament of Religions as the representative of Hinduism. But after conversing with Swami

Vivekananda, he decided that Swamiji was the right person to attend the conference. Vivekananda decided to accept the Raja's offer. When Vivekananda returned from USA after his grand success, as he was about to land at Rameshwaram, the overjoyed Raja was waiting with his entourage to give him a royal welcome. Because of the achievement of Swamiji and as well as the regard, the Raja had for him, he bowed his head and offer, by jumping from the boat to the land. Then the Raja unyoked the bullocks from Vivekananda's ceremonial chariot and pulled the conveyance manually with his entourage, till it reached his palace. Later he erected a victory pillar of 40 feet height with Upanishad expression *Satyameva Jayate* to commemorate the success of Swami Vivekananda at Chicaga.³⁹ The rulers of Ramnad were secular minded through they were devoted to the cause of constructing temples and maintaining the existing ones. They were tolerant towards other religions and they expanded strong and solid support to other religion like Christians. Muthuramalinga Sethupathi denoted Tenjiendal village of Ramnad taluk to the Church.⁴⁰ The Sethupathis' lived with a principle of generosity and bravery. They gifted and donated most of their property for the welfare of the people. They actively participated in promoting the Spirituality of the Nation.⁴¹

From centuries back, the Sethupathis have been prominent donators of property to government, trusts and for welfare of people. Some of the buildings such as Collectorate of Ramnad, Ramnad Government Hospital, and Archaeological Research centre/museum and so on...are some on the list.⁴²

6.Conclusion

From the foregoing discussion, it could be concluded that in the field of Philanthropy Process of Ramnad Zamindars many changes had taken place because the Act of Madras Estates (Abolition and Conversion into Ryotwari Act) Act XXVI of 1948 removed all sources of their wealth and today, the former Sethupathis are just well – known prominent magnates of Tamil Nadu. But, the Sethupathis Philanthropy activities by running Sethupathy Mannar Memorial Trust by current generations.

URBANISATION AND MUNICIPAL ADMINISTRATION IN COLONIAL MADRAS CITY

Dr.J. Jeyakumari Gnanadeepam

From the nineteenth century, urbanisation resulted in the development of towns. In order to respond the growing migration of people and urbanisation norm scale to the towns, the Government was faced with the challenging task of maximizing Madras contribution. The British administration created many facilities in and near Madras, much of which depended upon its capacity to mobilize support of the people. To

achieve this end, the Government put into action the entire administrative machinery at its disposal. With the arrival of more company servants in cities different steps were taken to tackle the requirements of accommodation the migrants in their respected places. For this purpose it initiated steps taken by legislative and administrative process. In addition the government took next step for planning by

another agency called municipal administration, which did much concerned work in every town.

The municipal administration of the type of English borough had its origin in the Residence Towns. In the later part of the seventeenth century each of the Company's presidencies had an English town centre with Indian suburbs, and were at first directly governed by a president and council. In 1687 the East India company got a charter from James II giving them power to establish a corporation in Madras. Accordingly a municipal corporation, the first of its kind in India under the British rule, was introduced in Madras in 1688. The Municipal Government of Madras was on the model of Municipal Corporation. When the Company's Charter was renewed in 1793, an attempt was made to introduce municipal institutions for the Presidency towns. This Charter was thus the first act to clauses for the statutory enforcement of municipal administration. This act enabled the Governor-General to appoint Justices of Peace for the towns, who were mainly the senior servants of the Company in the beginning; but gradually they included prominent citizens of the town both Indian and British and they were given power to appoint scavengers and to repair the roads by collecting a tax on houses and lands.

Meanwhile, the Bengal Act X of 1842 provided the first formal measure of municipal organisation in this Presidency. But the Act did not operate properly. Since the act empowered another committee to impose direct taxes, the people did not like it. India Act XXVI of 1850 allowed the establishment of municipalities in mofussil towns. In Tamilnadu the provisions of this Act came to be followed. The Act authorized the government to introduce municipal administration in any town. Yet the inhabitants were desirous of having better provisions for constructing, repairing, cleaning, lighting or watering public streets, roads, drains or tanks or for the prevention of nuisance for improving the town in every manner. In the beginning, the municipal authorities began levying taxes in the municipalities and towns. This Act gave the right to the municipalities for the voluntary levy of roads and cleaning the streets. This Act also failed for the reason of imposed taxes against people. So the government never enforced this Act.

After the Council Act of 1861 the system of municipal government was remodelled by the local legislatures and the history of the municipality in each Presidency town was different. The Report of the Royal Army Sanitary Commission in India in 1863 on the unhealthy condition of the towns led to the passing of a series of acts which authorized provincial governments to establish municipal governments in towns and entrust them with the functions relating to lighting, sanitation and water supply. With the passing of the Town Improvement Act, Madras No. X of 1865 municipal committees with non-officials was introduced.

Further on account of the increased population, economic resources and consequences of industrialization of Madras, the British Government decided to develop municipal government in the Presidency. It has been a model for other municipalities in the State for introducing many welfare and novel schemes in the civic fields.

The migration of people in response to the needs of a rapidly evolving industrial and commercial economy was reflected in the growth of cities. As more people congregated in urban centres, the town evolved into a large city and finally into the metropolitan region. For an ever-increasing number of people, the city determined the way of life⁹ Step by step, as the city developed, life for the urban dweller became increasingly complex. Gradually as the individual found himself incapable of dealing with the problems around him, municipal intervention took place on his behalf and the thrashers of sustained and rapid urban growth was modified by the introduction of many municipal services. Protection of health, facilities for education and provision for the citizen's welfare were assured. So rapidly did these functions develop that today these are regarded largely as common place. Further attention is usually drawn to the physical aspects of the city, its streets and highways its play grounds and green space, its schools, hospitals and other buildings¹⁰ The first attitude of the people towards municipalities was one of dislike and they always pointed out the advantages of increased taxation. It was also a period of great distress caused by the Sepoy Revolt of 1857. The feeling of passive opposition generally felt at first, quickly because of

indifference and there were few indications that the people felt a real interest in the operation of the Council.¹¹ It was found that the Council just collected the taxes arbitrarily fixed by the Government and did not show any enthusiasm for providing lighting and water supply. Further, the Voluntary Education Cess Act IV of 1863 had practically remained a dead letter.¹²

Lord Mayo's Resolution of Provincial Finance in 1870 introduced a scheme of financial decentralization, which was a great step in the evolution of local self-government in India. It passed on to the provincial governments certain civic departments in respect of public expenditure. The principle of the imposition of local taxes for local purposes was also put into practice.¹³

In addition to that major constitutional changes were effected by the Towns Improvement Act III of 1871 which increased the number of municipal activities and extended the elective principle.¹⁴ This Act instructed the municipalities to follow the guidelines of the government.¹⁵ The qualification for the post of the Commissioner was made more elastic because government wanted to appoint even a non-resident as a commissioner subject only to the proportion of officials on each board, for it was thought that "the occasional presence of a European officer as a working member of the commission was essential to the efficient working of the Act"¹⁶

The next phase in the development of local self-government was marked by Lord Ripon's famous "Resolution on local self-government" introduced on 18 May 1882. Its main object was not to improve the administration, but to give political education to the people¹⁷ for, there developed a growing demand among the people for a greater share in the administration of the country. Following Ripon's policy decision, in 1882 the Madras Government established municipalities in all major towns in the Presidency. For the first time the term "municipality" was introduced into the title in the place of "towns" improvement". In these municipalities three fourths of the councillors were to be elected. Since the District Collectors were not able to deal with the work of the municipality as well as his other responsibilities, they ceased to be presidents and were given a

supervisory role. Chairmanship was handed over first to a nominated and then to elected non-officials.¹⁸

The Municipal offices had collector, magistrate, five elected members and councillors. They concentrated and devoted on the welfare of the people. The power to levy and collect taxes was considered one of the chief characteristics of local autonomy.¹⁹ One of the first to be established was allowed to raise its revenue from house tax, profession tax, vehicles tax, tolls and license tax.²⁰ The council spent a major part of income on the maintenance of police and the remainder on the repairs of roads and drains and on sanitation. As a result of these, urbanisation posed new challenges. The municipal council had varied duties to perform for, it was the council's responsibility to provide all civic amenities to its citizens.

Municipal services were classified into three categories - personal services, community services and remunerative services.²¹ Personal services such as education, public health and sanitation were intended to promote not only individual but also social welfare. Water supply, drainage and communication stood at the top of community services, while electricity and transport were considered remunerative services.²² In the early stages provision of education formed an essential work. Elementary education was within the purview of a municipality; but it was optional to give secondary education.²³ However, elementary education did not make much progress until 1882. The Committee on Local Self-Government in Madras suggested that the revenue and expenditure regarding education should be transferred to local management.²⁴ This Method too did not produce the desired effect due to inadequate fund allocation for education of the masses. In the beginning of the twentieth century, the Indian leaders demanded that elementary education should be made free. Accordingly the government of India directed provincial governments proposing the abolition of fees in all the elementary schools. The Government of Madras accepted the suggestion of the central government in 1908.²⁵ In spite of this the standard of education remained low in municipal schools. During this period the council did not start any high school, but there existed some privately ran high schools in the municipal

area. In addition christian missionaries established their educational institutions. The upper middle classes mostly sent their children only to these schools. These directly helped the improvement of the town.

As a large commercial and educational centre, each city in Tamilnadu organised own systems and practice of various kinds of festivals throughout the year. Since thousands of people from far and near visited the cities daily, the Municipal Public Health Department had a vital role in bringing the city into a healthy city. The increasing population of the Madras province posed many health problems and the Health Department of the municipality had to combat epidemics and diseases from its very inception. It took all possible preventive measures to check the spread of communicable diseases and started many hospitals to give medical relief following the Act of 1871²⁶

The government took the expansion of public health activities both at the headquarters of the state and in the districts, including the appointment of public officers of the first and second classes in the municipalities and adequate sanitary inspectors. The health officer went through the scheme for town improvement, approved plans for construction of new buildings and inspected markets, slaughter houses and water supply sources. Although controlled by the provincial government, the other members of the public health department were appointed by the executive authority of Municipal Administration.

In 1834 the Madras Corporation started the Madras Medical School. It trained medical practitioners for the first time in art of surgery. In 1871 the Madras Municipality started a dispensary at Black Town and another at Triplicane.²⁷ Commencing from 1884, the corporation made an annual contribution of Rs.20,000 to the general hospital maintained by the Provincial government with a view to extending free medical service.²⁸ From 1885 onwards every municipality maintained at least one hospital or dispensary for the benefit of the poor and the needy.

The medical aid in respect of maternity and child welfare was awful and inadequate. During 1875-1895, municipal councils were directed to raise at least hut pavilions for lying in cases and to attach them to hospitals and dispensaries

having women's wards.²⁹ The council gave the much needed maternity relief to the women of the city. As early as in 1875 Government directed the Municipal Council to give training to selected villagers in nursing and appointed as mid-wives in their hospitals and dispensaries.

Often epidemics like cholera, plague, dysentery and small pox broke out in Tamilnadu especially during festival times and these were very often brought to the town by the floating population. These deceases were intimately connected with poor water supply. The health department canied on vaccination work vigorously and also erected segregation sheds for the use of ill-housed patients. In 1880 thirty nine Deputy inspectors were appointed for the vaccination works. The vaccine success rate in Madras has always been phenomenal. The number of vaccinated during 1883-1884 was 23644. In this time 15094 inspectors attended the vaccination works. When compared in 1920, it was raised to appointment of one hundred and ten inspectors.³⁰ In spite of these the death-rate per mile of population in 1876-1886 was 21.3 percentage in the Madras Presidency.³¹

Next in importance came sanitation. Sanitation formed one of the oldest and at the same time one of the youngest among municipal enterprises. Sanitary Commissioner was appointed to inspect all 'districts of the Madras Presidency. He appointed district sanitary officers to assist his work. Among his primary duties were to advise the municipal president on all matters connected with medical and sanitary administration of the Presidency. In every six month, the municipal president was instructed to inspect atleast twenty villages compulsorily.³² The same method was effected in sanitary administration in all municipalities. Another major problem of the inhabitants of the towns was lack of public conveniences. The latrines were mostly neglected in all district municipalities. As its main duty the municipalities took efforts to construct public latrines in their vicinities till 1885. Yet, in many towns, streets, open spaces and river banks were used as open toilets. This was the plight even in 1920. As reported: "Until 9 a.m. most of the lanes and the streets in some municipalities constituted unrelieved series of public urinals".³³ Several towns did not have latrines and in some these were inadequate and as a result open spaces and

corners of streets were used as latrines. Even in 1890 in all municipalities there were only 958 latrines. In 1891 there was only one latrine to 1000 inhabitants of the Madras Presidency. In 1982-93 due to the indifference of the authorities the number declined from 1,191 to 1164. According to the annual report in Madurai, the second largest town in Tamilnadu there were only ten public latrines. Infact, until 1947 most of the municipalities experienced erratic sanitation facilities.

Large-scale community services such as water supply, drainage, communication and electrification formed part of welfare services. Municipality spent a major portion of its revenue on these works. Water supply formed another basic requirement of urban centres of Tamil nadu. Besides providing good drainage system, keeping clean the city and the environment also became the duty of the government. Water supply and drainage were the integral parts of the town planning for, protected water and good drainage system and sewage disposal formed the basic needs of the people living in a town. For many years polluted water was responsible for epidemics in the cities. The bacteriological examination conducted in this regard found the water the impurities.³⁴ Responding to the demands of the public the first attempt to supply protected water was made in Madurai during 1886-1908.³⁵

Closely associated with drinking water supply was the provision of an efficient system of drainage for the city; but this had been a

grossly neglected field of activity in all municipalities of Madras State. Adequate water supply and a good drainage system were the two important needs of a city. If the municipal organisation wanted to satisfy the people in these two fields, it had to plan elaborate schemes and that involved adequate funds and governmental involvement. In 1889 the sanitary Board of the Madras Government prepared the drainage schemes for certain towns in the Madras Presidency.

Madras Municipal Council approved the scheme and started executing it immediately. Thus offering toilet facilities, water supply and drainage system became important aspect to fulfil the infrastructural facilities for urbanisation for, urban development communication formed one of the remunerative services of municipalities.

Thus the above facts reveal the significance and importance of the facilities of different varieties for the implementation of urban programmes. They in turn satisfy the needs of the 'urbanisation activities. Administrative measures also helps very much for further development in Madras city. Even though the development of towns became a fascinating phenomenon of the nineteenth century, municipal administration added to the potentiality of an urban character. However the municipal intervention took place on his behalf and the thrashes of sustained and rapid urban growth was modified.

IMPACT OF ANCHAL POSTAL SERVICE IN THE EVERY DAY LIFE OF TRAVANCOREANS: A SCRUTINY

Dr. Jibin Mathew

Introduction

The need to communicate with others is one of the natural impulses of human beings. For speedy and effective communication with others man had endeavoured to find new modes of communication. Even in the dawn of human history, it can be found that human beings had been engaged in innovative means to evolve methods to communicate with people living in distant places. In the history of Travancore the role of communication in the development of the state is extremely important. In the course of the administration of India, the British colonial Government had established new methods of communication. They were interested in introducing such reforms in Travancore also. Travancore was a state, which had its own system of communication such as the Anchal service. It also had the British Postal service. The invention of telegraph could revolutionise the history of the world. It could also add a new chapter of communication in Travancore. Though the telephone arrived only in the 20th century, this new system could achieve an astonishing development here. With the advent of the Radio all modern systems of communication became a part of the lives of people this chapter outlines the growth of all these new systems of communication in Travancore.

As a part of the colonial intervention in the erstwhile Princely State of Travancore, the British colonial masters tried to modernise the existing system of administration. One such attempt was

the reforming of the postal service. Anchal or Unjel¹ was the Indigenous postal service existed in Travancore. The term Anchal was derived from the Latin word 'Angelus' which means messenger. While we trace the history of the Anchal postal system, we find that its development was slow but steady, and to some extent it was the need of the age. Travancore was one of the few states, which had its own postal service. The Anchal department was one of the oldest departments in the state, even before the introduction of the penny postage in England.² Anchal history can be mainly divided into two stages. The early stage started from the beginning of the 19th century and it ended in the 1860's and the later one commenced after 1860's. The former stage was exclusively confined to the service of the government while in the later one, i.e. after 1860's; the department was kept open for the public. Though it was started as mere mail carrier form, later the department developed much and had its roots all over Travancore. The other main services provided by the Anchal service were Savings Bank, Hundi Service³ or Money order System, Transit Anchal service, Anchal Insurance, it even act as public call stations etc. In order to get the services of Anchal in the nook and corner of the state, government of Travancore divided the Anchal service into two types i.e., Departmental and Non-Departmental Anchal office.⁴ The Anchal postal service played a pivotal role in the life of travancoreans and had its lasting impacts in all walks of life.

Impact of Anchal Postal Service

Anchal service one of the most popular and accessible department for common man in Travancore, the *Anchal* service functioned as a stockist and supplier of medicines like quinine, chlorodyne etc. Chlorodyne was a medicine used to treat cholera, Quinine is a medicine used to treat malaria and babesiosis. A sum of Rs.1299 was collected during the financial year 1899-1900 from the sale of both medicines.⁵ All the Anchal offices were distributed quinine and chlorodyne during the year 1897-98.⁶

The Anchal goods were transported from one office to the other by carriers as head loads. After accepting the bag from one office the messenger had to carry it on his head and run towards the next Anchal office. They were called "Anchal Runners", who had to run seven or eight miles carrying the load. When he reaches the next office another runner would be waiting there from the neighbouring office with a similar load. After exchanging the loads the first runner had to run back carrying the load on his head. The time schedule fixed for covering the distance by running was 12 minutes per mile.

The Anchal runner was provided a baton of about two feet length and one inch diameter. On its top there would a bronze bell which had to be rung while he ran. Whoever who came across the path of this Anchal runner had to stop and give way to this man who carried the letters and messages. Nobody, not even the vehicles of the highest police officer had to stop and allow the Anchal to pass. This rule had to be followed very strictly. The violation of this rule would invite heavy punishment. This kind of relay running could cover a maximum distance of about 40 to 50 miles per day. Hence, a letter posted from Thiruvananthapuram could reach the northern border of Cochin State, viz. Kunnankulam after 4 to 5 days. The exchange of Anchal goods between the states took place at Aluva.⁷

The old and the new thus coalesced in the romanticized figure of the runner, whose more extraordinary exploits, which included being exposed to 'mail dacoities', tiger attacks, and cobra bites, provided fascinating source material for the newspaper and periodical press. The runners themselves frequently invoked the hazardous nature of their occupation in their attempts to negotiate better terms of

employment. The hakara, carrying the familiar bamboo stick and mail bag with jingling bells on his shoulder, remained an important figure in the communication landscape even in the twentieth century, despite the introduction of more 'modern' means of communication.⁸

In the early 20th century letters and messages sent through post or Anchal were carried from one post office or Anchal office to the next one and back by Anchal runners of 'Post Runners'. The service of the Anchal post runner from Kumili to Munnar was stopped due to the opening of the motor road from Muvattupuzha. Before that the Anchal runner had to leave the office at 6 in the morning carrying the mail bags, run the distance of 12 miles through difficult routes. The bags would be handed over to the next runner who would carry it, and run the next twelve miles. In this way the mail bags would go forward and would reach the destination exactly at the stipulated time. Each Anchal runner would run back to his office carrying the return mail bags. To cover a distance of 65 miles two days were required.⁹ The average speed of the Anchal runner had to be three miles an hour. The mail bags were carried only in day time because of the dangerous route and the presence of wild animals in the hilly and forest lands. Even after the stopping of the service of the runners officially, for extremely difficult places such as Kumili, Vandanmetu, Devikulam, Oodumbanchola their services were utilized. During the rainy season the work of such Anchal runners would have been extremely difficult in the leach infected forest paths.¹⁰

In literature too, there exist a same experience it shows how How the Advent of modernity had affected Traditional life. Onakkan had received the job of an Anchal Runner very early in life. Being a member of the lowest category social circle, the job was quite helpful to him. He used to carry out his duties running very fast even through dense forests. Then, due to the beginning of transport systems the practice of carrying Anchal goods by buses commenced. One morning Onakkan realizes that he has lost his job. The work done by him all those years had become unattractive and unwanted, due to the arrival of the bus service. His future also becomes uncertain. The story ends symbolically with his death by the same bus running over him.¹¹

Thakazhy Sivasankara Pillai, in his celebrated novel *Kayar* describes the life and work of a village postman in the 19th century. He writes about the times when the postman bringing money orders to the house as a symbol of good fortune and plenty. The Postman performed the duty of not only bringing letters to village houses, but also took the trouble of reading the letters to the villagers who were generally illiterate. The messenger who brought telegram messages was often regarded as an ill-omen, the symbol of the God of Death who came with the warrant of death. The novelist pictures the post man who brought telegrams as receiving the curses of the relatives of the dead man. In Travancore, the Post man had actually involved with the daily lives of the individual in society.¹² Post office junction at Nagercoil, declaring a bus stop.¹³

Due to the effort of Mooloor S Padmanabha paniker's efforts the Anchal office at Mezhuveli was opened to the public on 1st May 1930. Mooloor posted a letter there to Kandathil Varghese Mappila, the editor of the daily Malayala Manorama, and bought stamps and envelopes from the new post office. He recommended a Pulaya Youth named Valayudhan to be appointed as peon, so that untouchability could be removed. He knew that the Savarnas would be forced gradually to accept the services rendered by the lower caste Government employee. Thus he tried to demolish the outdated customs and practices in the life of the people.

The services of Anchal offices were essential to all sections of the people. The employees of the Anchal services could visit and distribute letters to all homes in the villages irrespective of caste difference. The employee of lower castes thus got legal protection to use public roads and mingle with all sections of society. In short, the appointment of the lower caste employee could change the mindset of the people and bring in social transformation gradually.

The Anchal services could tremendously influence the formation of public life in modern Travancore. People could communicate with each other about the well being of others, exchange news and views on life, and also make personal enquiries. In short, a new public consciousness could be moulded through this

medium. Mooloor made use of this opportunity well to the advantage of the society. Living in the small village of Elavum thitta he could spread his ideas far and wide through Anchal services. He sent letters that created similar mind sets in different people living in different areas.¹⁴

Since a sizeable population moved to Ceylon in search of job, sanction was given to start a Post office in Mayyanad. The Anchal Post master after his official duties the Post master used to give lessons in English to the village students. In fact, he was more than an individual, an institution. He was popular and respectable as a Post Master, teacher, and a writer for the people who could write letters and petitions in English and one who wrote a book in English.¹⁵

The Anchal office was at the buildings of the Pozhikkara temple, in Quilon district where the so called Avarnas like Ezhavas etc were not allowed to enter the office. If one shouts aloud waiting outside of a distance for sometime the peon or master would be kind enough to come out and enquire what the need is. Then the officers would tell him to place the money and stand away. The price of a post card was 4 *kasu* and the cover had the cost of 8 *kasu*. After placing the money on a leaf one has to wait at a distance.¹⁶ It was like a game of hide and seek involving movement like a weavers' shuttle. This illustrates that caste rigidity and segregation reigned supreme in Travancore during the 19th century. This kind of incidents was common even in Government offices which were situated near temples.

The activities of the Anchal Savings Bank in Travancore enhanced the people's habit of saving money, which strengthened their economic foundation. The savings Bank in Anchal offices which were only 6 in number in 1912-13 rose upto 166 in 1947-48. The famous dramatist and director N.N Pillai, in his autobiography, Njan, has written how an amount of Rs.80 taken from his investment of Rs.83 in the Anchal savings Bank, had helped him as a capital to go for Malaya.¹⁷ It highlights the importance Anchal Savings Banks had in the lives of the people in those days. Like that money orders, Hundi service etc also together with Anchal service, had a significant role to play in the economic mobility of the state.

The Anchal service which was prevailed in Travancore emphasized more on service sector rather than a profit motive establishment. The following table illustrates the details of Income and Expenditure Statement

Year	No. of Anchal offices	Private and official covers carried.	Receipts Rs.	Expenditure Rs.	Net Revenue Rs.
1900	101	2959541	61284	75994	loss, 14710
1905	150	3787696	78235	102548	loss, 24313
1910	192	8625758	90234	122657	loss, 32423
1915	211	10788171	189954	174489	Profit, 15465
1920	222	13104442	252778	197739	Profit, 55039
1925	241	17736568	325912	266680	Profit, 59232
1930	298	20977618	416925	383068	Profit, 33857
1935	340	21323394	418271	381406	Profit, 36865
1940	368	23,965,419	4,84,000	4,00,000	Profit, 84,000
1941	371	24,387,146	4,88,000	3,96,000	Profit, 92,000
From 1941-48 source materials are not available in Administrative Reports					

The table shows that year 1900, the number of Anchal offices were 101 and the figures show a loss of Rs.14710. At the same time during 1941 the number of Anchal offices were raised to 371 and registered a profit of Rs. 92,000/-. However, it is a fact that Anchal service which prevailed in Travancore was more emphasized in the service sector rather than a profit motive establishment as stated above.¹⁸

Conclusion

The various means of communication prevalent in the princely state of Travancore included the Anchal, the British post and Telegraph, the Telephone and the Radio. The prime position in the communication system was held by the Anchal Postal Service. It provided its service to every nook and corner of the state. The popularity of the Anchal service was due to its variety of business like Savings Bank, Hundi, and Insurance etc. Anchal offices too provided public call offices throughout the state. The Anchal service brought about a revolution in the communication history of Travancore, which led to much larger contacts between the people and the consequent modernisation of the social order through increased social mobility. It facilitated factors for the development towards a Modern state.

End Notes

1. The term ANCHAL is derived from the urdu word UNGEL which means message, narrative or story. Vide, N.S.Mooss, *The Travancore Anchal*, Vidya Sarathy, Kottayam, 1973, p.40.
2. The Penny post is one of the several postal systems in which normal letters could be send for one penny. It started in 1840 during the Victorian Age in England. In 1856 it became compulsory to pre- pay postage in Britian. It was stated that the fee being one D (one penny) for letters or Two D (two pennies) for, if the letter was collected from the writer and delivered. Rowland Hill was believed to be the father of the penny postal service. vide, Rowland Hill, *The Life of Sir Rowland Hill and The History of Penny Postage*, Vol.I, London, 1880.
3. The introduction of 'Hundi' or money order system was introduced in Travancore in the year (1077 M. E) 1901-02. It was an improved forms of the British Indian system of the money order form with the provision for the payee to communicate with the remitter. The Hundi is on order granted by the *Anchal* office for the payment of a sum of money through the agency of the *Anchal* office. A remitter is a person who sends money-using hundi. A payee is a person named in a *hundi* to whom the money is to be paid. The amount for which a single *hundi* was issued must not exceed Rs.500 and no person was allowed to obtain several *hundies* in a single day. Vide, Jibin Mathew, 'Development of Transport and Communication in Travancore (1860-1948): The Socio-Economic Impact' Unpublished PhD thesis, University of Calicut, 2019, p.177.
4. *Anchal* offices were of two types, Departmental Anchal office and Non-Departmental office. Departmental Anchal office was under the direct control of the government. It enjoyed the privilege of direct transactions with the palace and functioned as a savings bank. If an Anchal office was not housed in a government building, the government hired private building on rent. While Non-Department office was started With a view to extend the benefit of the Anchal service to localities where it was not feasible to open regular departmental offices, the darbar had resolved to open non-departmental offices, and place them in charge of person to whom a small remuneration was allowed in view of the work they did. Three such offices were opened in 1092ME (1916-1917). Non –

- Departmental Anchal offices were either experimental or permanent. They were placed in charge of masters who were not full-time officers and did not belong to pensionable service. They were paid a monthly salary of Rs 10, but were not eligible for any leave with allowances. There were 181 non-departmental *Anchal* masters in the state in 1944. *Ibid.*, pp.179-180.

BUILDING POLITICS: A STUDY OF POWER AND ARCHITECTURE IN MAHE WITH RESPECT TO THE ANGLO-FRENCH RELATIONS

M.U. Jidhu

Introduction

Architecture is not an independent entity. It is influenced by multiple elements. Factors like climate, availability of building materials, social and economic conditions of the area, and the existing dominant ideology all play important role in shaping architecture. The built spaces and the political contexts have a complex relationship. The colonial influence in Indian architecture is a totally different genre. Establishment of dominance was an integral part of the architectural policy combined with elements of protection and security, taking in view of the political conditions of the period. During the earlier period of the colonial process, the European powers were conflict with each other and also with many of the local rulers for gaining power. And this is very much reflected in the architecture. French and the British were in constant competition with each other and the present paper tries to look into the relation between the struggles for power and the nature of built spaces in Mahe upto AD 1817.

French East India Company was established in 1664. They were the last European power to reach India. The French had to face stiff competition from the English and had to be content with a few places. The main centers

of the French were Pondicherry, Yanam, Chandernagore, Karaikkal and Mahe.¹ The French were more powerful than the Portuguese and the Dutch and lasted for much more time. Unlike the Portuguese and the Dutch, the French were more settled. The contributions of French to architecture are thus more elaborate. The French architectural style was more planned and complex. The earliest constructions of the French, like any other colonial power, were defensive structures.² Pondicherry was the capital of the French possessions in India and the French architectural style is more evident here.³

The French gave much importance to town planning and this is evident in Pondicherry. The entire town was fortified and was divided by a canal into two sections- French and Tamil. Areas were set aside for residential, administrative and commercial buildings. The white town (*ville blanche*) of Pondicherry developed between 1724 and 1754 and the town had adopted iron grid planning system.⁴

Building structures were not just for defense, protection and convenience but also symbols of ones wealth and power. When two colonial powers are in constant conflict these architectural symbolisms become evident. The French and the British competed for power and

their architecture also reflects this. The French built the Government house at Pondicherry in outmost grandeur and it was supposed to be display of their power. It is said that the Calcutta Government house built by the British was influenced by the Government house at Pondicherry. The building was also the British reply to the French who accused them of having interest solely in mercantile ventures.⁵ Many architectural elements of the French were also copied by the British in their constructions. Another important part of the conflict is the total destruction of the rivals place after its capture. Anything that stands as a reminder of the glory and grandeur of the enemy is to be destroyed. Pondicherry was captured by the English in 1760. The town was completely ransacked. The white town was totally destroyed. Hardly any building was left intact. Forts, churches, government houses and even private houses were demolished by the English.⁶ The French had to rebuild afterwards.

The French in Mahe

Mahe was the only French territory on the Malabar or western coast of India.

The French had a factory at Calicut and a temporary settlement at Tellichery but it was Mahe, which became the stronghold of the French. Mahe or Mayyazhi was a small hamlet in north Malabar and it became the main seat of the French in Kerala by the eighteenth century. Mahe is bounded by the Ghats in the east and by the sea in the west. The name Mahe is said to have been derived from Mayyali or Mayyazhi. It was also referred as Mazhayyikara in a record from 1724. Mahe was part of the territory of the local ruler of Badagara and was given to the French in 1721.⁷ The presence at Mahe ensured the French trade in pepper and other spices. The French had to face constant opposition from the English, who was settled in the near by place Tellicherry.

Much of the constructions in old Mahe were destroyed by the British but the French records have left the plans of the buildings constructed by them.⁸ These plans are elaborate and show the topographical and natural features of the area and are of very much value in reconstructing the history of the period.⁸ Mahe was placed under the control of an administrator answerable to the French governor at

Pondicherry. The various departments like health, transport, ports, and public works were all controlled by the governor. Branches of these departments were established at the subordinate French territories like Mahe.

Building activities and the Anglo-French conflict

Jean Deloche in his work, 'Old Mahe' mentions the various phases of the development of Mahe. It is said that in the earlier phase the French gave importance to defensive works. The tendency to give importance to defense and protection is evident in the constructions of all colonial powers. Here the French were more cautious because they were a tiny group in the midst of the vast English rule and in case of any attack they had to wait for the forced to arrive from Pondicherry. And hence the French gave due importance to fortifications. The French set up a factory, built a fort and magazines at Mahe. The earliest construction of the French was a mud fort which was renovated in 1728 AD.⁹ Inside this fort enclosure was the main buildings of the factory, the chapel, the officers rooms, barracks, guardrooms, storerooms, kitchen, bakery and in the middle, a parade ground.

The period from 1728 to 1761 was a period of peace at Mahe and many building activities took place during this period. The French had a good squad of engineers and they gave considerable importance to military constructions like fortifications, given the nature of tension the French had with the English. The French fortified as many places they could and also made an earthen retrenchment with a thick bamboo plantation along the line from the Mayyazhi river to the sea. Two new forts, fort Conde and fort Dauphin were constructed by the French in 1740. These forts were roughly star shaped with pentagonal bastions and it included barracks, guardrooms, magazine rooms and a jail. The structures were surrounded with a ditch. Another fort called fort Saint Georges was built in 1742.¹⁰ Many other construction activities were taken up. The town developed and the hospital, warehouses and the church of Saint Therese was constructed during this period. The town plans shows the effort and extent of planning to transform the place. The French also received the help of locals in building activities.¹¹

The English captured Mahe and Pondicherry in 1761. Almost all buildings in

Mahe whether it may be the government buildings, private property or structures like church, everything was demolished. The town was plundered.¹² Mahe was totally destroyed and when the French recovered it in 1765, they were left with the great task of reconstructing it. In the days that followed the building activities of the French comprised of the reconstruction of the old buildings from what was left of it and also the undertaking of new defensive works. Government house, warehouses and hospitals were renovated. But by this time the French had to face severe economic constraints and many construction activities had to be stopped.¹³

The French understood the weaknesses in their defensive system and realized the need for more precautions. New fortifications were to be made and they planned a fortification that surrounded the entire town with bastions at regular intervals but the project was not implemented as the English again attacked Mahe in 1779. It is said that this attack was more severe than that of the one in 1761 and that every standing stone was brought down. The entire fortification was destroyed with mines and the recently renovated structures were pulled down. Moreover the wooden structures like roofs made of teak and furniture were carried away to Thalassery¹⁴

In 1785, Mahe again came into the hands of the French. A few renovations and constructions were made but Mahe again fell in to

the hands of the English in 1793. The peace treaty between the French and the English in 1814-15 made the French accept the paramountcy of the British government over all parts of French India and also restricted the French from fortifying their settlements and were restricted to maintain just enough troops to maintain law and order. Mahe was given back to the French in 1817.¹⁵ The English had established themselves as the most powerful of the colonial powers and the French colonies were like just another Indian princely state.¹⁶

The French had built some magnificent buildings at Mahe. The place was a well planned. Like any other colonial city, in its earlier phase importance was given to defensive structures like forts. The given location and political environment of Mahe required them. The period of peace saw more elaborate construction activities like government buildings and churches. The frequent conflicts with the English destroyed the town and even then the French tried to rebuild after every attack. The destruction of the enemy territory to its last standing brick is not new in colonial rivalry. Eventually the French were left with very less resources and this gave a set back to building activities. Prolonged period of peace at Mahe would have left us with beautiful buildings and structures of excellent French architecture.

2. When the French reached Pondicherry, the first thing Francis Martin (French official) did was to visit the native ruler and obtain permission to erect those types of buildings that would provide his people security. Later he obtained permission from Sambaji, son of Sivaji to make a regular fortification in Pondicherry. A Capuchin monk, Father Louis is credited with the planning of these defensive works. G. B. Mallerson, *History of the French in India*, Gian Publishing House, Delhi, 1986, pp. 23-27.
3. The French built many magnificent buildings in Pondicherry. Many of them were elegant and are known for the richness of detail. The architectural style was not merely French and had influences like for example Franco-Italian. Some of the remarkable structures are the French government houses in Pondicherry, which is said to be more magnificent than the residence of the British governor at Calcutta: the Palais de Justice and several other buildings. Sten Nilsson, *European Architecture in India 1750-1850*, Faber and Faber, London, 1968, pp. 94-97.
4. S. Jeyaseela Stephen, *Urban Growth of Pondicherry and the French: A Study of the Town Plans 1702-1798* in Mathew. K. S, Jeyaseela Stephen ed., *Indo-French Relations*, Pragati Publications, Delhi, 1999, pp. 116-119.

7. J. B. P More, *Freedom Movement in French India*, IRISH, Tellicherry, 2001, p.3.
8. The French engineering department took great effort in keeping the plans of the buildings and related maps. These plans and maps were collected and sent to the Depot des Cartes et plans des Colonies (depot where the plans of the buildings constructed in the French colonies) at Versailles. Plans, maps, engineers projects, architects drawings were all preserved. This section was created in

1778. Alexis Rinckenbac, *The French Military Engineers and Geographers in India, 1750-1778*, in K.S. Mathew, S. Jeyaseela Stephen ed., Indo-French Relations, Pragati Publications, Delhi, 1999, pp. 124-131. Several plans of Pondicherry town are also available. One reason for this abundance of these plans is that the commercial companies which were present here wanted to give detailed accounts of their possessions. The second reason is of strategic importance. The colonial towns had to face frequent attacks from rival powers and hence town plans were given to higher officials or military engineers so that they could design the best form of defense. Francoise L. Hernault, Pondicherry in the Eighteenth Century: Town Planning, Streetscapes and Housescapes in K.S. Mathew, S. Jeyaseela Stephen ed., Indo-French Relations, Pragati Publications, Delhi, 1999, p. 178.

THE GLIMPSES OF THE EPIGRAPHS OF BHAKTHAVATSALESVARA TEMPLE AT TIRUKKALUKKUNRAM

Dr. D. Kalyani

Tirukkalukkunram is one of the ancient and sacred places in Chingleput region. Geographically it lies on 79°59'04"E and 12°36'58"N in the present Kancheepuram District. It is located at about 14.48 Km south east of Chingleput and 9.56 Km from Mamallapuram the sea port of the Pallavas of Kancheepuram.¹ The town is midway between Chingleput and Sadras road and is connected by a number of buses plying from Madras to Mamallapuram, Madras to Sadras and Madras to Madhurantakam via Thirupporur.

This place is said to have existed since Iron Age. A cairn circle with cist and urns have been discovered from this village, which is reported by the department of Archaeological survey of India.² Tirukkalukkunram is also known as Pakshithirtham, Dakshina Kailash and Rudrakkottai.

The hill is the embodiment of the vedas and was called as Vedagiri.³ The village is mentioned in Sundramurti's Devaram as Kalukkunram i.e. "*The hill of the Kites*", two rishis worshipped the Lord of the hill, who had been cursed to be kites. The name of the temple was called as *Mulasthanana*. There are two temples, one is rock cut cave, which is called as *orukal mandapa*. This cave temple was created by the Pallava kings Mahendravarman and Narasimhavarman, during 7th C.E. The deity is called as

Mulasthanattapperuman adigal. The other one is structural temple located on top of the hill. The temple is embellished with beautiful sculptures. S.R.Balasubramaniam ascribed the temple to Rajasimha alias Narasimhavarman II i.e. to early 8th C.E, based on the Somaskanda panel and lion pillar of the temple.⁴

At the foot of the hill there is another temple called Bakthavatsalesvara temple with tall gopura at the entrance of the temple.⁵ This temple is assigned to the Pandya period i.e. 13th C.A.D. These three temples bear nearly 98 epigraphs, the earliest one is assigned to Pallava Narasimha I (630 A.D) These epigraphs are assigned to the Pallavas, Cholas, Pandyas and the Telugu Cholas. Most of the records are votive in character. However, some interesting information is also found in the epigraphs. The epigraphs related to land endowments and the crime administration are taken for an in depth analysis.

Gift of land

About 30 epigraphs of Thirukkalukkunram provide information about gift of land and the villages made to the temple. These records reveal the fact that land was endowed for the matha, burning perpetual lamp in the temple, construction of shrine, for conducting festivals. They endowed land as devadana, sold four

villages for 500 panam is also mentioned in the epigraphs. The land measuring scale i.e. 16 cankol, of the region is also engraved on the prakara walls of the temple.

Besides, four epigraphs are related to the Building of Hall, consecration of new image, construction of new Vinayakar temple and the name of the builder is also mentioned in the epigraph.

Two epigraphs are related to crime occurred in the temple and forty seven epigraphs are associated with the endowment of lamp, for which cow, sheep, money, panam, buffaloes and ornaments were given.

The Pallava and renewal of land grant

A Pallava record reported from Thirukkalukunram is related to Narasimhavarman. The epigraph mentions the name of the king as Vatapikonda Narasimha Pottarasar, who endowed land for worship as *Valipattuppuram* to the god Perumanadigal of Mulasthanana of Thirukkalukunram. The territorial division reveals the fact it was a *tankuru* i.e., an independent Village of Kalattur kottam. The record was issued by Narasimhavarman around 630 A.D.⁶

The imprints of the Cholas in Tirukkalukunram

Aditya I, the Chola ruler captured Tondaimandalam and ruled for about 27 years. A record from Tirukkalukunram, dated in his 27th (898A.D) year of his reign, mentions the renewal of the gifts of some lands to the temple at Tirukkalukunram, made by Skandasishya and continued by Padavikonda Narasingappottaraiyar. Both these rulers belong to Pallava dynasty. It reveals the fact that Aditya I conquered the Pallavas and annexed Tondaimandalam. The request to renew the grant was made by Puttan, son of Gunavan of Andurai.⁷

The next record issued by Rajadhiraja I refers to the endowment of land for the services to the deity Brahmisvara, which is located on the hill of Tirukkalukunram, which is mentioned as Ulagalanda Solapuram. The land was sold by Serai Satyapavai by the Nagaram. It is to be noted here that Tirukkalukunram was a mercantile city of the Cholas.⁸

Another interesting fact is that a copper plate grant was engraved on the south wall of the second prakara of the Vedagirisvara temple. The copper plate was preserved at Rajendrasola vinnagaralvar at Vanavamadevi Chaturvedimangalam of Kumili nadu of Amur Kottam. The village Srivanavanmadevi was created by Udaiyar Rajendra Choladeva, the boundary of the endowed village was fixed by the king, which was engraved on the copper plate grant and also on the stone. It fixed the boundary of the village and endowed as Devadana Brahmadeya. The grant was engraved by the order *Puravuvuri Tinaikalattar*. Besides, other officials who supervised the grant were Karambichettu Swamithithan, Muppural Kumarasamy Kramavittan, Uruputtur Govindaputtan, Kranji Toranakramavittan, Kuravi Kumarasami bhattan, Tirukkalukunram Sri Maheswara kankani, Neminandhi Adigal, Nambi Siva Panditar, Sivabrahaman Dakshinamurthibhattar, Panmahesivara bhattan, Palavillakku Pillai Tevar Sundara Pidarar, Vellala Sadaiyur Kizhan Kailayam Ponnambalanum Barasivan kula. These officials followed the elephant which marched through the boundary of the village.

The boundary of the land mentioned in the epigraph, it crossed and encircled various viz., Agil, Iluppai banyan, vila, and the balipitha, the hillock, Naraipakkam, mahadevar temple and finally ended in the Vaiyyarru eri. This inscription was written by Pichchantan.⁹

Kulottunga I

A record of Kulottunga I dated in his 42nd regnal year (1112A.D) mentions, a resident of Rajarajapuram paid 10 kasu to the temple authorities, and they purchased land from the villagers of Vanavanmadevi Chaturvedimangalam. The endowment was made for the maintenance of the Naminatha Adigal matha. According to historian Kanagasabhai, the person whom the matha was named is one of the 63 devotees of Siva, whose lives are described in the Periyapuranam.¹⁰ The matha seems to have been associated either with saiva or the Jains. The village Tirukkalukunram belong to Kalattur nadu of Kalattur Kottam and Vanavanmadevi Chaturvedimangalam belongs to Kumili nadu of Amur Kottam. The boundary of the endowed land was on the east by Urodagam, in the south by Talaivedu, in the west by

Uragambakkam and in the north by Tandurai. The land purchased was situated in Kiraipakkam.¹¹

Vikrama Chola: Sale of forest land

Two inscriptions issued by Vikrama chola during his 3rd and 9th regnal (year 1121 and 1127 A.D). The former record mentions the sale of forest land at Sevur alias Uttamachola Kattalai madapuram, to the temple by Paramesvaramangalam alias Cholakulatilaka Chaturvedimangalam in Sembur nadu of Sembur Kottam in Jayankondasolamandalam. Sevur was a hamlet of Paramesvaramangalam.¹² The latter record mentions that the forest land was sold for 5 kasu, by the Uravar of Amanambakkam, for the offerings to the deity. The Paramesvara mangalam would have been established by the Pallavas and Amanampakkam denotes the settlement of the Jains.¹³

A record of Vikramachola (1128 A.D) registers the gift of land, free of taxes by the assembly of Sembakkam alias Parakesarinallur in Sirukunra nadu to provide for the celebration of festivals in the temple of Subramanya.¹⁴

Kulottunga II

A solitary record of Kulottunga II, issued in his 3rd regnal year (1136 A.D) is engraved on the bund of the tank known as Sankha tirtham in the village. It registers the endowment of 32 veli of land in the village of Kulottunga Cholanallur to meet the expenses of worship and maintaining a flower garden and repairs to the temple. Kulottunga Cholanallur is mentioned as Maraignana Sambandar Sthala.¹⁵

Kulottunga III

An epigraph engraved on the northern Prakara wall of the Bhakthavatsala temple, mentions 550 kuli land was gifted to the deity. The epigraph was issued by Kulottunga III in the year, 1199 A.D¹⁶

Land as Tirupudiyappatti

Kulottunga III, who is mentioned in the epigraph as Tribhuvanaviradeva, who was pleased to take Madurai and crowned head of the Pandya, issued an Inscription in his 24th regnal year (1202 A.D), gifted land as tirupudiyappatti to the temple by a resident Sirukunram alias Viracholanallur, Sirukunra nadu was a sub division of Amur Kottam of

Jayankonda Cholamandalam. Thirupudiyam means the salary or the income, Patti means the land given as kani to the temple.¹⁷

Yet another record of the same ruler, registers the sale of land for 700 kasu at Kilamaiyur, the northern hamlet of Madhurantaka Chaturvedimangalam, by two Brahman brothers of the village, and endowed to the temple by the headman of Nayar in Nayar nadu of Pulal Kottam of Jayangondasolamandalam. The Brahman brothers also endowed 1300 kasu for a perpetual lamp in the temple. The gift was made for the services to the temple.¹⁸

Yet another fragmentary record of the Kulottunga III (1203 A.D) registers a gift of land by purchase, for burning a lamp in the temple of Tirukkalukkunram Udaiyar. The liquid measure is called Selvirajakesarikal and also mentions the alumganattar of the Chaturvedimangalam.¹⁹ In the same regnal year, one Tillaimuvayiranambi and his brother Ramabhata purchased 4 patakam of land for 100 kasu and granted to the God Tirukkalukkunra Nayanar.²⁰

Kulottunga III is mentioned as, Tribhuvana Chakravartin Konerimaikondan, who issued a record in his 34th regnal year and 240 days, refers to the gift of 12 veli of land in Paranarginayur as madappuram Iraiylili to the matha called Uran matha, situated in Ikkattukottam in Jayankondasolamandalam. The endowment was made for the maintenance of the matha. The tax exempted were Antarayam, Pattam and madappuram. The record was attested by vanadhirajan, Sethikularajan, Tondaiman and Singarajan.²¹

Sale of house sites

Kulottunga III issued a record in his 38th regnal year (1216A.D) which registers a sale of house site, belonging to the temple to a native of Vidaiyur at Palaiyanur nadu of Manayir Kottam, the land was sold for 400 kasu for paying the Masons (tachchar) who constructed the mandapa in front of the temple.²²

Similar type of endowment was made for the maintenance of the matha. The land was sold to Sivadavanapperumal Aghoradeva – Ravalar, by a Mahesvara of Vaippakkam in Mondur nadu of sembura kottam.²³

Yet another record of the Chola king registers the gift of land by Madan Kulottunga

Chola Gangareyan to the temple. The record mentions a new tax term called Puravuvuri Kattalai.²⁴

Kopperunjinga and land endowment

An epigraph of Kopperunjinga II dated in his 13th regnal year (1256 A.D), it mentions the tax free gift of land as devadana including gardens and wet land to the temple by Karippillai alias Rajagambhira Kadakkangon (nadan). The taxes exempted were Nilattu Kadamai, Nelayam, Kasayam, Erimpinattam.²⁵

Yet another record of Kopperunjingadeva issued in his 20th regnal year (1263 A.D) refers to the gift of land as devadana to the deity on the hill of Tirukkalukunramudaiyar for the services and worship conducted in the month of Adi. The following taxes were exempted i.e., Kadamai, Sekku kadamai. The endowment was made by Karippillai alias Rajagambhiran Kadakkakondan.²⁶

Pandyas: Gift of land

A record of Sundara Pandya I (1259 A.D) begin with the astronomical details as Ikshava Nayanar, Purvapaksham, Panchami, Tuesday and records the endowment of land entrusted to the temple authorities by Kaman Arasan alias Adiyaman tevar of Pandimandala Madakulakizh Madurai Nayinar, Rajakkal Nayanar. The land was purchased and gifted to the temple for the maintenance of flower garden (Nandavanam) and offerings to the deity. The boundary of the endowed land is mentioned as on the south Tiruvenkadudaiyan garden to its south and west wet land north Tamuladharaiyavadhi and on the east Tiruvidhi Sevvai, the land includes the tress and the well. The land was purchased for 2000 kasu.

Several persons signed in the epigraph as witness viz., Anjeluttan, Vaiyakkiyadevan, Simbul Andar, Isandevan, Aludaiyan, Tondarkal nayanar, Kuttaperuman, Tiruccirambalamudaiyar, Kalakalabhattachan, Panmahesvara bhattachan, Rudrabhattachan, Sivamuttibhattachan, Anganappillai Sadasivabhattachan, Tillai Nayagabhattachan, Devakanmi Ponnambalakuttan, Koil kanakku Ani uradaiyan Narpattenayiravan, Ani uradaiyan kondarkanayaka Vellalar, Nyayattar Vanarayar, Villavadarayar, Irungolan, Kankan Ponnambalakuttan Soliyataraiyan Mullipakkilan

Kalingarayan, Vikrama sola Muvendavelan, Nandi Mangalakizhan, Karaikandadevan. Tiruvaiyaru Poliyermnran, Mappudi Peruman and the list of signatories still extends further in the epigraph.²⁷

Yet another epigraph of the same king mentions the gift of Iraiylil devadana land, by Ennayira Veliparru Nattavar, to the temple of Tirukalukunram, Kalatturnadu of Kalattur Kottam. The land was gifted for the expenses in connection with the festival of Avanitirunal. The land was endowed as Kudininga Devadana and the land was located in Amur kottam.²⁸

Sundara Pandya I's record dated in his 15th regnal year 1267 A.D, mentions the sale of four villages viz., Ulundamangalam Mudavur, Kurumugai and Tattalur as Tirunamattukani to the temple by the assembly of Vanavanmadevi Chaturvedimangalam for 500 panam.²⁹

Jatavarman alias Tribhuvana Virapandyadeva

Virapandyadeva issued a record in his 13th regnal year mentions the gift of a village for the festival called Kalingarayan Sandhi, endowed by the inhabitants of Kalattur Paruru, to the deity called Tirumalai Aludaiya Nayanar.³⁰ During the reign of Kulasekhara deva, a record was issued for the auction of land called Amilapallam by the nattar of Tirukkalukunra paruru.³¹ On the south wall of the central shrine in the Vedagirisvara temple a record is engraved in four lines, which states that the temple was constructed by Arivatpakkilan Sattan Mahipalan. The epigraph did not bear any date or the name of the king.³² Yet another record is engraved on the south wall of the varandha round the central shrine in the same temple, according to the epigraph one Suryadevan of Puvanur setup the image of Vinnayakap pillaiyar and a shrine, and flight of steps to climb up the hill.³³ A fragmentary record mentions the gift of land as Kavalkani for guarding the village, by the assembly of Madhurantaka Chaturvedimangalam.³⁴ Two fragmentary records marked on the upana of the south wall of the first Prakara of the temple, represents the Padinaru Sankol, according to the standard of Tiruvuragam. The measure of this length is equal to six makkani. Similar record refers to the gift of veli of land as devadana irayili to the Subramanya temple. The king seems to have endowed the land to the deity.³⁵

A record which is devoid of the name of the king and date, mentions that a land was purchased and gifted to the deity for its midnight service by a resident of Ilanallur.³⁶

Epigraphs on crime and theft

Crime administration was one of the major administrations of the Cholas. Despite the fact that the king was the head of the judicial administration, yet the village assemblies exercised large powers in this matter. The distinction between civil and criminal offences was less known, there are few instances are noted in the epigraphs.

Two records engraved on the south wall of the first prakara of the Bhaktavatsaleswara temple of Tirukkalukunram, issued by Kulottunga Chola II, in his 12th regnal year, registers the gift of lamp made by Eluvan Vanji Muttaraiyan, a hunter of Kudappakkam, in Mattur nadu, to secure merit for Nakkambi pattala llavaraian alias Selvan, a native of Koduvur, who was killed accidentally in a hunt by an arrow aimed at an animal by the former, and to pacify the father, elder brother and other relations of the victim.

In another instance, during his 6th regnal year one Vikramadityan Kamban alias Vikramasolapperaraiyan of Kunrattur, a hamlet of Madhurantaka Chaturvedimangalam, a taniyur in Kalattur Kottam of Jayankondasolamandalam. Vikramadityan besieged during night the residence of Raman Ambalakuttan Tennattaraiyan of Malaiyanur, who was a general under Edirisola Sambuvaraya stationed at Mukkattappattu in Sembur Kottam, owing to some feud existing between these two persons and killed him. Malaiyanurudaiyan Raman Ambalakkuttan belonged to Panaiyur nadu of Miladu alias Irungolappadi. His wife Vembu committed Sati by entering the fire with her husband. Ramanambi alias Irungolappadi Nadalvan, the elder brother vowed vengeance on the offender for his brother's death.

Edinlichola Sambuvaraya, the chief of these two persons and the elders of the nadu arbitrated that the offender Vikramadittan Kamban should maintain two perpetual lamps for the merit of the two deceased persons and that Irungolappadi Nadalvan should cease his enmity. Hence, he dropped his vow, accepting this arrangement and wanted lamps to be maintained in the

Tirukkalukunram temple, according to the arrangement Vikramadittan Kamban made the present gift of lamps. He also agreed to endow 90 sheep and 31 Cows to the temple. For a cold blooded murder the victim was made to two burn to lamps in the temple.³⁷

Yet another record of the same king dated in his 35th regnal 1213 A.D. refers to one Periyar, son of Naminandi Adigal was caught red handed with the *tiruppattam* of the deity, stolen by him, was ejected from the house in the Western street of Madavilagam, was confiscated and sold to Talaikkaviri Palarvayan Uyyavandan alias Anantadeva of Mayilappur in Puliyur nadu of Kulottungachola valanadu. The amount got in confiscation was utilized for paying the masons and other workmen employed in the construction of the steps to the hundred Pillared mandapa in the third prakara of the temple.³⁸

Gift of lamp

Besides the endowment of land, nearly 47 epigraphs speak about the endowment of lamp, sheep, cows, buffaloes, money and ornaments to the deity of Thirukkalukunram. It is interesting to note that ½ lamps have also been endowed to the temple,³⁹ lamps were repaired⁴⁰ and explains the preparation of panchakavyam.⁴¹

Conclusion

The above analysis reveals the following facts, the land and villages were purchased and endowed as *devadana irayili* for the service of the temple, festivals, for the payment of the masons, creating gardens, mathas, construction of temple, shrines, consecration of images. The land was also endowed as *thiruppudivyappatti*, *Kavalkani*. The land measuring rod, the 16 can kol, was used in this region, which is the standard of Tiruvuragam. The land was also endowed by two Brahmin brothers and the assembly of various nadus. The endowment was also made by the persons of Pandimandalam, Manavil kottam, and Amur kottam.

The instances of murder and theft reveal the fact, even for the heinous crime the culprit was made to burn perpetual lamp in the temple and in the theft case, the property was confiscated and sold, which was utilised for the temple services.

The epigraphs of Thirukkalukunram reveal the fact that it was a nagaram and a strategic place in the Tondaimandalam region.

IMPACT OF FRENCH COLONIALISM ON RELIGION IN PONDICHERRY

Dr. M. Kasthuri

Introduction

Indian culture is basically a religious culture and there are different religious communities in India and each exists with divisions and subdivisions in themselves. People belonging to different religions have their own places of gathering to perform religious activities. The people believed that the religion gives the eternal happiness and the moksha. As there are references to gods and temples in Tamil country during the ancient period, there should have been images or idols for worship.

The Pondicherry region is geographically a part and parcel of ancient Tamilagam. The Ancient name of Pondicherry was called 'Vedapuri'. By the time of French arrival it was known as Puducherry or new settlement. Before the French occupation, Pondicherry was a small fishing village. Its population consisted of Hindus mainly and with a small population to Muslim

community. Jainism and Buddhism had together disappeared from Pondicherry and there were no Christians in Pondicherry. During the period of the French settlement, the French administrators encouraged conversion of native people to Christianity by extending concessions and privileges in administrations.

An attempt has been made in this paper to highlight the French settlement and the attitude of French towards the natives and their religious institutions in Pondicherry.

French Settlement

Vasco da Gama discovered a sea route to India in 1498, since Ottoman Turk captured and sealed Constantinople in 1453 A.D. The Portuguese soon started a trading post at Pondicherry. Due to stiff resistance of Nayak rulers, they abandoned the post. Later the Dutch, the Danes and the English followed them¹.

Finally the French came and obtained permission from Sher Khan Lody to carry on their trade from Pondicherry.

By 1706, Francois Martin obtained the village of Kalapet, Ozhukarai, Murungapakkam, Odiam, Pakkumudayanpet and Karuvadikuppam. In 1708, Herbert, acquired the villages of Ariyankuppam from the Nawab of Carnatic. In 1740 the Nawab also granted the village of Thondamanatham, Abishegappakam, Vazhudavaur, Thirukanchi, Odiampattu and Koodapakkam to the French for their help against the Marathas². During the period of Dupleix, the French settlement was further extended to Villianur. It was in this manner Pondicherry region came under the French control. There frequent battle between French and British and Pondicherry had gone under the control of the British for three times in 1761-1765, 1778-1785 and 1793-1815 respectively. From 1816 onwards Pondicherry remained as French possession permanently up to 1954 when the de facto transfer of power took place³.

Conversion to Christianity

The influence of the French colonial policy in Pondicherry helped the spread of Christianity in the region. In 1674 French Governor François Martin invited Capuchins Missionary from Madras⁴. St. Lazarous church, first chapel of European Christians was built in 1686 in Pondicherry. Francois Martin and his successors gave preference in employment and economic fields to those who embraced Christianity. There were many converts from Mudaliars, Vellalals and Reddiars.

The French Capuchin and the Jesuits missionaries volunteer help also lead to the conversion of many Schedule caste people to Christianity. Generally even after conversion, the converted Schedule caste people were segregated from the higher caste Hindus by the erection of a wall inside the Church by the Jesuit padres at Notre Dame de la Conception Church. This system of segregation was protested by the Schedule cast Christians. On behalf of the high caste Christians, Kanagaraya Mudaliar, Courtier went to see the priest and also the Governor and settled the matter. But instead of the separating wall, a wall of chairs and benches were made. Thus the segregation continued and the change of religion did not bring any change in the

conditions of the Schedule caste Christians. With the help of Christian reddy, 13 years old boy was secretly taken to the Church of St. Paul, new Samba kovil, baptized and kept within the premises without knowledge of his parents⁵. Fr. Tachard's letter stated that 2000 native people were converted to Christianity in 1703. In 1725, there were increased to 3000 Christians⁶. Thus French colonialists followed an active policy in respect of the propagation of Christianity and converted large number of natives to Christianity.

Destruction of Hindu Temple

People in the Pondicherry city were offered great importance to Hindu religions and they follow the concept of peace. Hinduism was at its pinnacle during the Pallava, Chola and Vijayanagar period. During the French colonialism the intolerance of the Christian missionaries particularly the Jesuits to the religion of the Hindus started during the rule of the very first Governor. Francoise Martin obtained the right to coin the Kasu in copper, panam in silver and pagoda in gold. The pagoda had a lilly on one side and the image of Vishnu on the other side. The padres of both the Capuchin and Jesuits appealed to replace the image of Vishnu by that of Louis XIV. But Martin rejected their appeal as without the image of Vishnu the coin would not be legal tender anywhere in India⁷. Thereupon the vindictive padres began obstructing the celebration of Hindu festivals and aimed to the destructions of temples.

The monument of Vedapuriswarar temple was very old and unique in Pondicherry. This temple dedicated to Lord Shiva and also known as the Eashwaran Dharmaraj Koil, located in the Mahatma Gandhi Street. According to the scripts found in the diary of Dubash Sri Ananda Ranga Pillai, a big Siva Temple was existing with suyambu lingam, Vedapuriswarar as the main deity in Pondicherry which was called Vedhapuri during the Chola's period, but now there the Genmarakkini Madha Koil is available⁸.

On 17th March 1746, the priests and servants of Vedapuriswarar temple discovered that the previous night two unknown fellows had gained entry into it and Poured liquid, human excrement on the images of the gods around the altar and into the shrine, that they had broken the pot of filth on the image of Nandi, and that they

had then left through the broken wall of the compound. The Mahanattars were informed and then conducted a meeting of all castes, from Brahmans to Paraiyas, was held in the courtyard of the Perumal temple at 9 a.m. Dupleix heard that news and sent Krimasi Pandit to disperse the gathering. He rushed to the temple, where the people said that they have met together with the view of reporting this to the Governor. When the Pandit went back and reported it to the Governor, Dupleix sent for Chinna Mudali and Ananda Ranga Pillai, and directed them to bring the Mahanattars. When they were taken to his presence at 2 p.m., the Governor asked them to report all they wanted to say to Pillai and not hold meetings. Meanwhile, he had ordered for 100 or 200 Muslim Mahe sepoy for shooting them down. But the force arrived after the Mahanattars had left, and were asked to guard the four gates of the town so that none could go out. Pillai writes that the Governor acted as a 'senseless man'⁹.

On 31st December 1746, again at seven o'clock in the evening, an earthen jar filled with excrement was thrown from within the grounds of the church of St. Paul into the temple. The heads of all castes of Hindus reported the matter to Ananda Ranga Pillai who represented to the Governor. The Governor sent few persons including Tanappa Mudali into the temple. They inspected and reported that the senior priest Father Coeurdoux was responsible for the mischief. Dupleix asked them to give their statement in paper, and he would write to France regarding the affair and take such action. Dupleix summoned and told Father Coeurdoux that because of the "Anti-Hindu mischiefs of you and your colleagues, the town's people are leaving Pondicherry"¹⁰. Yet, Vedapuriswarar temple continued to be an eye-sore to the Jesuit priest Father Coeurdoux and the Christians wanted it to be pulled down¹¹.

On September 7th and 8th 1748, when Pondicherry was under British siege, the condition was very favorable to the priest for the destruction of Vedapuriswarar temple. When some 16 or 17 persons like Mudalis, Chettis, Velalas, one Agamudayan, etc. came and request the intervention of the Ananda Ranga Pillai to stop it, he replied that in a matter in which the Governor and his madam Dupleix and the Jesuit Council had already taken a decision, nothing

would come out of his speaking to the Governor and he direct them to rush and save as much as possible¹². Each man was severely beaten when they were removing the idols, vahanas and temple records. Father Coeurdoux kicked the lingam, broke it with a hammer, and ordered the Coffrees and Europeans to break the images of Vishnu and the other gods and the vahanas. Madame Dupleix went in person and encouraged them. Varlam, madam's agent also kicked the great lingam with his sandals, and Madame Dupleix and the priest spat on it¹³.

When Godeheu replaced Dupleix, the Mahanattars presented a petition to him requesting permission to rebuild the temple. On 19th October 1754, Godeheu observed that the Company could never contribute anything and that their order must be had before it was rebuilt. The Pillai interceded to tell the Governor that his predecessor had unjustly destroyed it because of the temple stood in the middle of the street, that their own church had to be built there, and that a temple would be built elsewhere. He did not agree and he gave up the idea, and wrote to France accordingly¹⁴. On 3rd April 1767, the council granted permission to build Vedapuriswarar temple, Pillaiyar and other few temples and granted neither site nor money by the company¹⁵. Finally in 1777, Diwan Sri Kandhappa Mudaliar took lot of efforts to apprise the Governor Sri Guillaume Leonard de Belcombe about the people's mental agony and also obtained permission to build a new temple, besides donating his land for construction of the temple. The fund collected for the war and donations from the public was utilized for construction of the temple¹⁶. This temple is reported to have been constructed in 1780.

Sri Manakula Vinayagar Temple is situated at the heart of the White town of Pondicherry. The temple is 400 years old. The temple is dedicated to the worship of Lord Ganesha. As per historical notes, the present Sri Manakula Vinayagar Street was called as weaver street during Francois Martin's time and prior to his time. Sri Manakula Vinayagar seated under the Peepul Tree on the bank of the tank and worshiped by the weavers. Sengunda Mudaliars and Devangu Chettiars, the weaving communities raised a wall around it and made an entrance door¹⁷.

The Christians said that, Pillaiyar should not be taken out for procession during Easter and on Sundays. The Governor also issued an order to this effect in 1701. Besides attempt were made to demolish the temple and break the idols by bigoted Jesuits in 1706. This caused unrest among the people, and 15,000 of them gathered to set off towards Chennai. As they were all workers at a textile factory, the authorities revoked their decision fearing that work would be affected¹⁸. However the French man throws Aathi Vinayagar into the sea several time, it said that Aadhi Vinayagar came back and seated himself in the temple. This type of incident kept happening again and again till, strongly, Dupleix the great French leader, himself developed an affection for the idol. Such are the winning ways of Lord Vinayaka. Hence this Devasthanam is also called Vellai Pillaiyar Koil, worshiped by the white people¹⁹. In January 1752 Dupleix also wanted to turn the Villianur temple into a fort. The merchants told him that in that case no weaver would remain there. So he agreed to build a small fort by walling off a portion of the temple²⁰.

The Muslims React

When the establishment of the Muslim power at Gingee, Islam began to spread in Pondicherry. During the period of Dupleix, when Pondicherry was visited by Muzaffar Jung, the Nizam of Hyderabad and Chanda Sahib, the Navab of Arcot, there was a number of Muslims. And thereafter a large number Muslims settled in Pondicherry and they built Mousques²¹.

Kuthbhamosque is believed to be the first mosque built in the White Town of Pondicherry. Governor Dupleix and Madame Dupleix had ordered the ancient Muslim mosque too that stood opposite to and west of the Capuchins' church to be pulled down simultaneously. When

their men were demolishing the walls round the mosque, some Lubbays went and informed Jemadar Abdul Rahman of the Mahe Sepoys. He rushed to the Governor, salaamed and said, "If you pull down the mosque, not a Sepoy will be left, for they will fall upon the workers and perish"²². Dupleix at once revoked his order due to the timely intervention of Abdul Rahman. Later, the French issued an order to vacate the entire region and shift this mosque. Orders were also floated to move the entire Muslim community out there to the southern end of the canal, Present location of Kuthbha Mosque at Mulla Street in Pondicherry.

Conclusion

Before the French arrival, the Hinduism, Jainism, Buddhism and Islam were already existing in Pondicherry, but the Hindu temples of Pondicherry proved the glorious period of Hinduism. During the French colonialism, Hinduism and Islam had to face the onslaught of Christian Missionaries and French administrators. With the interference of Madame Dupleix and father Coeurdoux, Dupleix ordered to destroy the venerable Vedapuriswarar temple, Manakula Vinayagar Temple and Kuthbha mosque and etc. Their intolerant religious policy to the Hindus and Muslims largely irritated their religious sentiments. The effort for propagation of Christianity and conversion of natives did not prevent the differentiation of caste among the natives. With the declaration of republic in France after the French revolution there was a remarkable change in the attitude of the French towards the natives and their religious institutions. However the despicable religious policy of the French administration for more than a century is an ever memorable event in the history of French India.

A HISTORICAL STUDY OF ALAGARKOVIL TEMPLE

P. Kayalvizhi

The lord Alagar temple of Alagarkovil has been undergoing several additions and changes during the centuries. Perhaps at the time it was originally constructed, it must have been a simple structure with a *garbhagrigha* and a *Mukhamandapa* together with an *antarala* and *pradakshina* surrounding it. Alagarkovil is a temple dedicated to Lord Vishnu. This temple located at a distance of 20 km from Madurai, on the foot of Alagarmalai is surrounded by the natural splendors of the forest. This Vaishnavite temple is prominent for its attractive sculptures along with beautiful mandapas. It is said that pilgrims visited Alagarkovil even in the early period of the Sangam times. This place seems to have been a prosperous village once. The temple and the village were surrounded by a high-walled fort, which no doubt was built by some ruler in early times who valued the strategic position of the place.¹

Samantha-Narayana-chaturvedimangalam

Alagarkovil temple is located under the control of Kilraniya-*Muttam*. There are several inscriptions which say it as Kilraniya-*Muttathu* Tirumalirunjolai.² Alagarkovil was a Brahmadeya settlement and hence it is record in Pandya king Konerinmai-kondan 9th regnal year as a Samantha-Narayana-chaturvedimangalam,³ king making over to the shrine of Tirukkottiyur-tanda-perumal, the rent due from the lands in three villages which had been given in the 36th year (of his predecessor) to 32 Brahmanas of the agrahara Samantha-Narayana-chaturvedimangalam founded at Tirumaliruncholai-Tiruppati by Chakrapaninallur Pallavarayar.

The Main Deity

Alagar means an attractive man; His hill abode is called as Alagarmalai. There are references quoted in these anthologies of Sangam literature and post Sangam literature, which mentions Alagarkovil by the name of Tirumalirunkunram,⁴ Irunkunram,⁵ Tirumalirunjolai,⁶ Malirunjolaimalai⁷ and Tiruvarai⁸.

The main deity is called by various names such as Solaimalai⁹ *Arase*,⁹ *Mayar*,¹⁰ *Mayavan*,¹¹ *Tirumal*,¹² *Kannan*,¹³ *Mayon*,¹⁴ *Alagar*,¹⁵ *Govinda*,¹⁶ *Solaimalaipperuman*,¹⁷ *Malirunjolai Ninra Sundaran*,¹⁸ *Malirunjolai Manivanna*,¹⁹ *Tirumalirunjolai Ninra Kovalar Govindan*,²⁰ *Tirumalirunjolai Ninra Nangalbiran*,²¹ *Tirumalirunjolai Ninra Vanavan Kon*,²² *Tirumalirunjolai Ninra Kesava Nambi*,²³ *Tirumalirunjolai Ninra Murti*,²⁴ *Tirumalirunjolai Ninra Nalandigal Naranan*²⁵ and *Tirumalirunjolai Ninra Adar Paravaiyane*.²⁶ Other names include *Tirumalirunjolai Paramasvami*,²⁷ *Tirumalin Paramasvamigal*,²⁸ *Ipparamasvamikalukku*,²⁹ *Alagar*,³⁰ *Tirumalirunjolai ninraruliya*,³¹ *Tirumalirunjolai Ninrarulina Paramasvamigal*,³² *Alagar Tiruvadi nilai*,³³ *Appan Tiruppati Tiruvengadamudaiyan*,³⁴ *Svami Alagar*,³⁵ *Ivviraivan*,³⁶ *Alagarum Nachimarum*,³⁷ *Tirumalirunjolai Ninrarulina Alvar*,³⁸ *Alagar Sirukkar*,³⁹ *Alagar*,⁴⁰ *Ari*,⁴¹ *Paramasamy*,⁴² *Mugundanandan*,⁴³ *Sundararaja Mal*,⁴⁴ *Malaiyalagane*,⁴⁵ *Karuppalagu*,⁴⁶ *Kanna Thensolai Poruppalaga*,⁴⁷ *Malaiyalagar*,⁴⁸ *Sundarattol-Alagar*,⁴⁹ *Madusudana-Mugunda*,⁵⁰ *Alangarar*,⁵¹ *Malirunjolai Malalangan*,⁵² *Mayavan Malalangan*,⁵³ and *Baintulai*

Malaiyalagane.⁵⁴ Above mentioned names revealed from *Paripatal*, *Silappathikaram*, *Nalayira Divya Prabandam*, *Alagar Kalambagam* and *Alagar Pillaitamil* and inscriptions.

Sub-Deities

The *Vaishnava* creed, temples of Vaishnava creed are very few in number in the region. All these temples are in good condition and attractive too for their architectural workmanship. Alagarkovil temple, the parivaradevatas, besides Lakshmi and Garuda are Kshetrapala Sannithi, Murugan sannithi, Valamburi Vinayagar Sannithi, Palliyarai Nachiyar, Srinivasa, Vishvaksena with Jayadevi, Narasimha, Hayagriva, Vishnu, Venugopla and Varaha placed in the niches of main shrine. Sculptures of a few important Alvars are found placed in the prakara of this temple.

Early Pandya Period

During the period of early Pandyas Alagarkovil has grown in name and fame. We know this from Periyalvar Pasurams. He has referred to Tirumalirunjolai, lord Alagar and also Pandya king Kon Nedumaran.⁵⁵ Periyalvar might have been contemporary of Pandya king Nedumaran.

Cholas

Alagarkovil temple has a total of three inscriptions of Chola rulers, which give evidence that the royal patronage extended to the temple by the Chola rulers. The earliest one dates back to the period of the Chola king Rajaraja Chola I. This damaged record begins with the historical introduction of Chola king Rajaraja I.⁵⁶ Another damaged inscription of Rajaraja Chola's 22nd regnal year mentions of a gift of land to the Alagarkovil temple.⁵⁷ This temple has Sundara Chola Pandya's 22nd regnal year inscription. This epigraph speaks of lamp donation made to the temple.⁵⁸

Later Pandyas

This temple has more than sixty inscriptions of the later Pandya rulers. These epigraphs testify the royal patronage extended to the temple by the later Pandya rulers.

Vanadirayas

In the course of the 13th century A.D., when Chola power was declined, the Banas became the feudatories of the Pandyas and settled down in the modern Tiruchi and Madurai districts. The

Banas held various officers under the medieval Pandyas and bore their titles and the names.⁵⁹

God Alagar of Tirumalirunjolai was the tutelary deity of the Vanadirayas. Alagarkovil was most probably their political capital. They made numerous beneficentiations to the temples at Alagarkovil and Srivilliputtur. They had the *Garuda* banner and Alagar *Tiruvullam* was their sign manual. These would indicate that they were ardent Vaishnavas.⁶⁰ Alagarkovil temple having epigraphs of the period there are references to some of the Vanadirayas rulers and their activities.

Vijayanagara Empire

It is important to state here that Tamil country came under the Vijayanagar authority only in CE 1371 Kumara Kampana, son of Bukka who was entrusted with the occupation of the Tamil country gave a devastating under to the Sultanate of Madurai. As a result, the whole South Indian states accepted the paramountcy of the Rayas. Subsequently the ethnicity of the Pandyas and the Cholas, these royals introduced so many innovations in temple architecture as well as in the modus operandi of the temple activities. The *Mahamandalesvaras* (governors) were assigned the work of temple improvements.⁶¹ During the period of Vijayanagara Empire Alagarkovil was well patronized. A ruining Raya gopuram (tower) was constructed by this empire.

Nayaks

The Nayakas of Madurai administrate as the subordinates of Vijayanagar and soon rose to great prominence. Visvanatha Nayaka, the son of Kotiyam Nagama Nayaka, has been credited with the founding of the Nayaka dynasty of Madurai.⁶² Alagarkovil has numerous inscriptions seems to record the gift made by the Madurai Nayak rulers.

Under the Control of the Muslim

Chanda Saheb was sent by the Arcot *Nawab* to take Madurai and Thanjavur. The Nayaka dynasty of Madurai came to an end after having ruled for a period of nearly two centuries.⁶³ During this time Madurai city and Alagapuri Kottai came under the control of Sanda Saheb and this temple condition was in very worsening situation. Alagarkovil wealth was looted by that Muslim invader.

Hyder Ali looted the wealth throughout Madurai region. He spoiled the Alagarkovil *Kalyana Mandapa's* beautiful sculptures. Apart from that he also captured Alagarkovil's wealth. Alagapuri *Kottai* and Tirumalai Nayaka palace were damaged by Hyder Ali. Before Hyder Ali's invasion Malik Kafur damaged Alagapuri *Kottai*. Hyder Ali was driven away from Madurai to Dindugal by a Muslim warrior Yusuf Khan in 1758. Yusuf Khan returned the wealth looted by Hyder Ali to Alagarkovil authority.⁶⁴

Modern Period

When the British established themselves in South India, they took over the management of

all the temples within their territorial jurisdiction in 1801 CE, and credited the income under the general revenues of the state. Later on, during the middle of 19th century, when they desired to relinquish their connection with the religious institutions, they conferred the administration of the temple of lord Alagarkovil. Thus, the epigraphs of Alagarkovil temple constitute the main source of our knowledge of the history of the temple. Coupled with literary evidences up to 9th century CE, the history of the temple could be viewed together from the beginnings of the Christian era up to modern times.

TRIBAL DANCES IN TELANGANA STATE

D.Kishan

The folk dances and the folk-music of tribals in spite of the material advancement in the recent past have preserved and protected the ancient form of dance and music from its total annihilation and have given us ancient legacy in which the country can be proud of this rich heritage. Undeniably the tribal folk dances are a part and a very important part of their cultural heritage. Today tribal folk dances and festivals are a great attraction all over the country than ever before. An unusually emotional nature is the general characteristic of the folk dances. The major folk dances of tribals are Bison-horn (Koya), Gussadi, Demsa, Lambada and Chenchu.

Demsa Dance

Demsa, a folk dance of Raj Gonds is performed by both males and females. Sometimes the young boys attire themselves as females and perform the dance. This dance is performed independently by the male and female members to the accompaniment of music during the festive and marriage occasions. The musical instruments used during Demsa dance are 'Pepre', 'Dhol' and 'Khalikhom'. During the marriage ceremony the dance is performed by both males and females.

The females dance forming an outer circle round the 'lihi', a sacred design drawn on the ground with turmeric, vermillion etc., before the bridal pair in the marriage pandal. On the concluding day of the grand festival in honour of the 'Persa Pen' (Supreme deity) during the month of 'Vaisak' (April-May), the males perform the Demsa dance before the house of the 'Katoda', the clan priest. The Demsa dance is also performed by male members on the occasion of celebrations of the marriage of Chenchu Bhimanna, the God who protects the crops during the month of Chaitra (March-April) before the house of Devari, the village priest.

Gussadi Dance

Gussadi or Dandari is a robust dance performed by only Gond males. This folk dance is performed in the month of Ashada (June-July) on the full moon day (Purnami). The Gussadi dancers wear loin cloth and smear the entire body with ash or white lime. They decorate their bodies with black and red spots. They put on the

head gear known as 'Maljalina Topi'. This is made up of long peacock feathers decorated with mirrors and colorful glasses. Goat/sheep horns are also fixed on the front side of the head gear. Jingle bells of different sizes tied to a string are slung around the shoulders. Big bells which are generally tied to plough bullocks are also worn around the waist. The series of long necklaces made out of wild seeds are worn around the neck. Jingle bells are tied around the anklets also. On left side they put on dried skin of a bear or deer or goat. A small bag across the body is also slung in order to keep the belongings of dancer. The dancers carry a staff called 'Gussadi Rokali' (Rokali is a pestle). All the Gussadi dancers perform rhythmic and robust dance waving their hands systematically to the melodious tunes.

Lambada dances

Lambadi is the semi-nomadic tribe that is spread all over Andhra, but more in Telangana. They are also known as Banjaras or Sugalis. Their dances are inspired by the movements associated with daily tasks like harvesting, planting and sowing. The costumes, embroidered with glass-beads and shining discs are picturesque: matched by the abundance of jewellery worn by them. The jingling brass anklets, the hanging cowry bunches and the ivory bangles from wrists to elbows provide a natural rhythm to their dances. Dussehra, Deepavali and holy are the festive occasions when the Banjaras go from house dancing and receiving alms. Twenty to thirty Banjara women dressed in colourful costumes with shining brass vessels filled with water either on hands or waists present a group dance. The graceful movements of their waving hands and supple waists provide a feast to the onlookers. The dance performed by Lambadas is not vigorous. But when dancing to the beat of the Drums, it gains momentum. The language in which the songs are sung is also derived from the Lambadi dialect. They have very meaningful Folk songs set to senuous. Generally male performance give support of orchestra with Dappu: sometimes they even dance along with the female dancers, while giving rhythmic music to the dance. The duration of the dance is twelve

minutes. This dance is a very common sight in all the places of Telangana.¹

Koya dance

The Koya tribes of Andhra Pradesh are jewelers of forests. Their dances include, Mayura Nat (Peacock Dance). Bison-horn Dance this dance is performed by Koyas inhabiting the scheduled areas of Khammam, Warangal, East Godavari and West Godavari districts. They are numerically predominant tribal group living in Andhra Pradesh. They are also called 'Dorala Sattam'. The 'Sammakka-Saralamma Jathra' which is celebrated at Medaram in Mulug mandal Mulugu district is the festival of Koyas.

Kurru dance is performed by Koyas of Warangal district. Only male members of Koya tribe perform this dance. There will be 25 to 30 participants in this dance. They dance according to the tune played by six musicians i.e. three persons playing flute and three persons playing drums. They perform this dance after harvesting of crops, dibbling of seeds and during festival and marriage occasions. Most importantly, they perform this dance during Sammakka Saralamma Jathara which is an important festival of Koyas. Even during certain inauspicious occasions also, they perform this dance. It is exclusively performed by men, and Harvesting Festival dance is performed in the month of April every year. The dance consists of small steps, forming complex patterns on intricate rhythmical phrases of half-beats and quarter beats. The musical and rhythmical accompaniments mainly consist of the poodi and Mayunga. Poodi is a flute of three bamboo sticks with five holes on the end. Koya dance is performed by males and females and it is approximately 12-minutes.²

Gusadi dance of Gonds

Diwali is the biggest festival for the Raj Gonds of Adilabad district. As the harvest is over and the season is cool and congenial the Gonds dresses in colourful costumes and decorated with ornaments go to neighbouring villagers in troupes, singing and dancing. Such troupes are called Dandari dance troupes. Each troupe consist of twenty to forty members. 'Gusadi' is a part of Dandari and consists of two five members. This starts on the full moon day and goes on till the fourteenth day of the dark fortnight of Deepavali. Each member puts on a of peacock feathers and horns of the deer, artificial beard and

moustaches and goatskin to cover the body. Dappu, tudumu, pipri and kalikom are the accompaniments. The Dandari troupe dance accompanied by beats of gumela reaches its climax with regulated steps and rhythm in a circular form.

The Dandari dance starts with stepping slowly towards the left side and swinging the right foot on the left foot at every step. Every dancer has two small sticks in his hands. First everyone strikes the two sticks in his own hands, then strike at the sticks of the person on the right side then strike his own sticks and then the sticks of the person on the left side. In this way, with steps and striking together of sticks held in hands they play kolattam and come back to the original position. Then they bend down and touch the ground with their sticks and step on to the four sides. This is paying obeisance to the gods. After this they put into order their circular form and lay down the sticks. Then they sing and clap their hands. They sing a group song in duet, one group singing the first line and the second group singing the second line of the song.

While this is going on, the Gusadi troupe intrudes into the circle with peacock feathered turbans, artificial beards and moustaches, goat skins as covers, strings of cowries and beads around the neck, tinkling bells on wrists, white stripes and dots on the bodies, with modesty pieces around the waists and poles in their hands they enter the circle. After the scattering of the Dandaris, the former members raise their hands, and swaying and jerking to the accompanying sounds of the bells and cowries on their bodies. It presents a dreadful scene to the onlookers. They jump hither and thither and they utter war cries and with vehement motions and frenzied laughter they frighten the boys and come up on the spectators. They also touch the waists of the spectators with the poles in their hands and tickle them. After some time they dance rhythmically, stepping forward and backward and hither and thither and also zigzag to the accompaniment of instruments. Lastly, the hosting villagers invite them and wash their feet³.

Chenchu Naatakam (Play)

The play takes place in front of the temple of the village during festival period and at the house of the sponsorer during marriage and religious ceremonies of Chenchus. Before starting of the

play, they invoke goddess 'chenchamma'. During the play, the singer sings while the women dance rhythmically. The hero dances by moving semi-circular from right to left and return in the same direction to his original place. During the play the hero and heroine act as lovers or husband and wife or cinema hero and heroine by singing cinema songs. The clown act as villain and tries to seduce the heroine. Sometimes he acts as male animal such as dog, donkey, monkey or buffalo chasing the female animals by making sounds. He behaves like a joker and tries to make the audience laugh through his actions. He comes quiet frequently during intervals and behaves like joker to relax the audience. The actors perform the play by charging some money on the sponsorer at the end of the play the troupe goes to the house of the sponsorer sing the concluding song and receive their due payment.

Pile Vesham or Tiger Dance

This is a popular one-man dance performed during Dussehra and Muharram festivals throughout Andhra Pradesh. An able bodied man with a narrow strip of cloth around the waist, and the whole body painted with stripes like a tiger and elaborate make-up, sporting a long tail, dances vigorously in tiger like strides and wild jumps. A Dappu or Mridangam provides the rhythm. The dancer lifts a brass pot full of water with his teeth depicting an unruly tiger's devouring nature and strength. This dance is performed during festivals and happy occasions. Even competitions are held for this dance and prizes are given to best dances.

Kolatalu

To entertain the tourists who come from the neighboring villages play this Kolatam. They believed that, if they do that they get God's blessings. The player takes two sticks and makes sound by beating them together rhythmically. In this play eight to twelve members participate. They stand in a circle. After that they make sound with the sticks rhythmically while singing. Producing Melodious music is its speciality. In villages they conduct this programme while celebrating religious functions and festivals. They sing Keerthanas like:

"Shiva Shiva Murthivi Gananadha, Neevu Shivuni Kumarudavau Gananadha, Neevu Bhavani Kumarudavau Gananadha, Bhadrpada

Shudhamanadu Gananadha, Ninnu bhakthi thoda sevithumu Gananadha,

-----"Likewise a person goes on singing; the remaining persons give chorus by saying by chanting Gananadha, Gananadha at the end of each stanza.

In villages the player used to sing the songs from "Sri Krishna Leelalu" to entertain the people⁴. They describe how Lord Sri Kishna became favourite God to those Repalle villagers. There will be one leader-cum-organiser-cum-singer. Some troupes also use ropes, wind and unwind them during performance. This is a popular performance throughout A.P.⁵.

Gavulatalu

Blind beliefs were mostly followed in ancient days. In the villages people believed that if any one of them gets any disease that was the result of the anger of Ganganamma, Maramma, Mahalaxmamma, Maremma, Mahankali, Nancharamma. Hence, they should satisfy those Goddesses. If they satisfy those Goddesses the villagers would be happy. So they used to kill animal in order to propitiate them. In these fairs the more significance is for "Ganacharlu". People believed that Gods and Goddesses would come in the form of 'Ganacharlu'. They used to dance in highly emotional way. 'Loose hair, Neemu boughs and lots of turmeric and Kumkum powder etc are used by those Ganacharlu while dancing. They put a pot on their head while dancing. In some places this pot is called "Ghatukunda". This is called in different ways in different places. Garaga is made of steel in the shape of pot. A snake with hood is around the neck of this pot. This Garaga is decorated as Saree with holdings. It is decorated with turmeric, Kumkum, Neem leaves ⁶. It is the holy pot to the villages.

The persons who keep the pot on their head and dance are called "Aasadhule" in some places. Ganacharlu is another name of these people in some places. They are the devotees and poojarees. Some times sky is the limit to their dance. They can not get away from that strong feeling even though coconuts and Sambrani powder are offered. They become cool after getting tired. They are treated as angles and Gods. Their performance is done in village streets. The dance of these ganacharulu is called Gaane. At this time they sacrifice, hens even killing them

bare teeth with their mouth and pour the blood on their chest. The drums that are used at this moment will produce emotional feelings in the audience³⁶. The whole village people participate in these celebrations without sleep during the night time. After that they leave the angles at the premises of the village.⁷

Chiruthala Ramayana:

Chiruthala Ramayanam is the most popular tradition in Telangana region. Especially this Chiruthala Ramayanam is very ancient artistic tradition in Ranga Reddy district. In the villages 30-40 labour youth will combine together and elect a teacher and this Chiruthala Ramayanam. They do it at the outskirts of the village. They put two flags and start dance along with singing by keeping sound produced by small iron metal bells (Gajelu) tied around their legs. Actually this is similar to out Kolatam but, instead of Kolatam songs, sing songs based on stories from Ramayana and Bharatha and group members themselves will take the roles⁸. Hence, it is called Chiruthala Ramayanam. In selecting roles, at first roles are given to the persons based on their personality. After that, every role will learn the song definitely. Thus the teachers gives training to his students for one month. After practice they

will conduct Rama Pattabishekam. They act Lord Rama and Sita Devi's roles. They gather the clothes and jewelry from rich persons houses and arranges their dressing material. Like Cinema sets, they build settings of places of Ramayana story such as, Ravan's Lanka, Ayodhya, Kishkinda parashala etc in a wide place. Spectators will clap while each character come on to the stage and introduce the role. Thus they sing songs of Ramayana during the whole night and conduct Rama Pattabishekam in the early morning⁹.

All the villagers come to this celebration. They make the persons who act as, Rama and Sita to sit in high place. After them the place will be for Laxmana and Hanuma. While celebration time they decorate beautifully Rama and Sita with colorful dresses and Jewellery with lot of devotion¹⁰. Now-a-day this Chiruthala Ramayanam is disappearing under the domination of movies. Even though it is disappearing in some places, this tradition is followed in some villages.

For example Ambedkar Yuvajana Sangam, Venkateswara sini settings, Vepala singaram village groups are working even mode.

AN ANALYTICAL STUDY OF ARCHITECTURE OF THE ULAGALANTHAPERUMAL TEMPLE AT TIRUKKOYILUR

N. Leelavathy

The Ulagalanthaperumal temple is on the southern bank of the Thenpennaiyaru at Tirukkoyilur. The temple is located as about 8 kms south-east of Tirukkoyilur in Villupuram district. The *tritala vimana*, east-facing Siva temple, has been constructed on a stone basement and the lay-out of the temple is a **square sanctum** and an oblong **Ardhamandapa** (4.50X3.40mts). It highlights

Tribhuvanachakravarthin, Raja raja Deva (Raja raja II or Raja III), who offered a gift of money to a Brahman woman, the shrine of Kshetrapala Pillaiyar. And the myth behind it depicts the transformation of that Brahmin woman into a Devi of the temple (ARE 407 of 1909).¹ Its inscription belongs to Tirukkoyilur, Vijayanagar and Nayak rulers of the fifteenth and sixteenth centuries.

A record of Maravarman alias Tribhuvanachakravartin Vikrama Pandya Deva registered that a merchant of stringer set up a shrine of Alagiya Tiruchchirrambalam Udaiyar in the northern prakara. He offered a gift of land to this deity (ARE 393 of 1909).²

Though S.R. Balasubramanyam passed his consent that the Kailasanatha temple perhaps came into existence during the period of Chola occupation of the Pandya country, he doubted about the originality of the present structures. They have not provided any Chola epigraphy in the temple. According to him the present structures of the temple is of a late fifteenth century. However, this date and style are contrary. Further, architectural and sculptural characteristics of this monument like *Yalivari* of the base *pranala*, water-reservoir, *malasthana* motifs, corbel, *kapota*, *kudu* and the sculptures find in the inner and outer-circumambulations. This architecture apparently indicates the temple foundation probably in the middle of the eleventh century.³

According to M.A.Dhaky, the stylistic evidence and *pranala* of the temple ascribes late eleventh century. A stray fragmentary of Tiruvirattanam temple or Kilur inscription of Rajaraja I is found on the steps of a bathing place, which analyses the chronology, stylistic evolution and architectural traits of the Ulagalanthaperumal temple at Tirukkoyilur in detail.

Basement

The Ulagalanthaperumal temple is founded on *pratibandha* base. Since the basement is buried a little into the modern flooring around the temple, it shows only *tripatta kumuda* and *yali frieze* having gaping mounts of makaras at the corners. The *yali* frieze displays full *yalis* occasionally mounted by warriors holding swords and shields, and miniature relief carvings of opposing *yalis* or pearl strings in the gaping mouths of the *makaras*.⁴

The *pranala* is placed in the *yali* frieze of the plinth, and it exhibits three developments of its Early Pandya counterparts in Tirukkoyilur region. Firstly, it has been increased in length and finally, a square sink is placed below the *pranala* to collect the ablution water. Mouldings of *wall-kanta* and lotus-petalled *vary* run above the base of the Ulagalanthaperumal temple.

While examining the base of the Ulagalanthaperumal temple, one can easily observe and compare the blending of the Chola traits with the native Chola elements. Mounted warriors holding swords and shields in the *yali* frieze and advanced *pranala* with water reservoir are the important Chola features. It has joined the prevailing native Pandya features such as straight *jagati*, *tripatta kumuda* and full *yalis*.⁵

Wall

On each side the sanctum wall of the moderate Ulagalanthaperumal shrine is partitioned into *karna* and *bhadra* section with a deep recess in between them. While the *bhadra* section carry niches, the recesses bear *koshtapanjaras*. Square pilasters are arranged on this of corners of the wall segments.

The pilasters of the Ulagalanthaperumal temple tally with those of other Chola monuments in Tirukkoyilur regions namely the Tiruvirattanam Temple and the Trivikramaperumal shines in many respects, but differ significantly in the treatment of padma moulding which, though carved with petals,⁶ does not project out of the Palaka, instead it is hidden under. Like the pilasters of the Chola temples in Tirukkoyilur regions such as the Tiruvirattanesvarar and the Trivikramaperumal temple, some of the pilasters in the Ulagalanthaperumal shrine also employ some new types of decoration depicting opposing warriors and opposing *yalis* inside the *malasthana* and in some instances, the *malasthana* itself is made as if being released from the open mouths of three simhas. In addition to this, delicately carved floral design is found at the centre and on the corners of the lower section of the palaka.⁷

The niches of the Ulagalanthaperumal temple are shallow and empty which obviously proves the fact that the Chola monuments freely borrowed the native Pandya architectural characteristics. The niches are placed on the *yali* frieze of the base. The niches instead of the usual lintels uphold *kapotas* with *simhamuka kudas* and a row of circular bosses at the bottom. These decorated *kapotas* carry *makaras toranas* on all sides, often depicting riders mounted on the *makaras* and rows of simhas emerging from the mouths of the *makaras* as seen in several Chola country. The circular depressions at the *toranas* contain miniature images of divinities.

The *Koshtapanjaras* that appear in the wall-recesses of sanctum in the Ulagalanthaperumal temple almost duplicate its niches. They slightly differ from the niches because the *salas* are replaced by *simhamuka kudas (panjaras)* at the top.⁸

Entablature

The *vajana* of the **Ulagalanthaperumal** temple is adorned with *bhuta* frieze. The *bhutas* are portrayed in the usual postures of dancing, fighting, merry-making, playing distinctive musical instruments and acrobatics.

The **Ulagalanthaperumal** temple carries slanting *kapota* as seen in many Chola temple in Chola heartland. On each side, the *kapota* of the temple is decorated with three pairs of floriated *simhamuka kudas* in the alignment of the pilasters, and the circular cavities of these *kudas* are blank. The frame of the *kudas* exhibits exuberant scroll work. A row of circular bosses, a surviving example of the *nail-heads* in the wooden architecture, runs along the bottom edge of the *kapota*.⁹

The *yali* frieze of the **Ulagalanthaperumal** shrine depicts full *yalis* running in profile and *makara* busts projecting at the corners.

Superstructure

The superstructure of the **Ulagalanthaperumal** temple holds two stories that of the Tiruvirattanam temple in the Chola region. Consisting of *Karnakutas*, *panjaras* and *Salas* runs around each story of the fine structures. While the *Sala-niches* of the lower story carries fine stone images of the usual deities, those of the upper story possess modern stucco images of gods. Apart from these images, seven more stone sculptures depicting various from these images depicting different Siva, kept in the spaces between the *Salas* and the *Panjaras* of the upper storey. Originally, these sculptures have been placed either in the *Panjaras* or in the *Karnakutas*. It has already accommodated stone icons.¹⁰ A pair of stucco *Nandi's* with a *Buda* in the middle appears on each corner of the *griva-platform*. While the square *griva* contains recent stucco figures of deities in the niches, the square *Sikara* terminates by a metal, has four large *Simhamukanasis* crowning the *griva-niches*.

The architectural analysis of the **Ulagalanthaperumal** temple at Tirukkoyilur

clearly reveals the fact that it belongs to the beginning or in the middle of the eleventh century.¹¹ Certainly, it is a Chola monument displaying several Chola stylistic features mixed with some Pandya architectural elements.

Ardhamandapa

The flat-roofed ardhmandapa adjoining the front part of the garbhagrha with an entrance of 6.56m x 5.32 m height on its western end is found without supporting pillars¹¹. Two dvarapalas are standing one on either side of the entrance of this mandapa. It is intended for keeping the materials immediately required for the Pujas.

Mahamandapa

The rectangular mahamandapa lies next to the ardhmandapa with a flat topped roof supported by twenty pillars with east entrance. These pillars are divided into two types. All these pillars are 2.15 m in height. Four pillars are of brahmakanta type and the remaining sixteen pillars are square-typed and both are carrying the same cushion type capitals. This mandapa has two passages one from the south and the other from the north.¹²

South west corner of the mahamandapa in Periyana Ganapati, Somaskanda, and Varadarajaperumal shrines and in north west corner Valli, Devasena, Arumugar shrine and Gajalakshmi shrines are located. North of mahamandapa is Panjamurti shrine, Nataraja shrine and stone idols of 63 Nayanmars are installed.¹³ A secret room is placed in the interior on the northern side of this mandapa to store the jewels and garments of deities. A big and long wooden door is fixed in the mahamandapa entrance.

This temple has been preserved by the administrators right from the time of the later Cholas, Pandyas Andhakasuravadhamurti shrine. In the southern side of the mahamandapa the, and the Vijayanagara kings down to this day with all its multifarious additions, renovations, repairs, changes and the like. The Tirukkoyilur, **Ulagalanthaperumal** temple, Tiruvirattanesvarar temple even as it remains paramount on the religious side stands equally paramount in the art of its building construction.

GLIMPSE OF ST THOMAS TRADITION IN KERALA CHRISTIAN COMMUNITY

Letitia K Vinoy

St. Thomas

St Thomas a Galilean was one among the twelve disciples of Jesus Christ. The Aramaic word Thoma means 'twin'. Some argues that Thomas is not his name, but an indication that he was born as one among the twins. He is also known as Didymus. It could just be a surname added to his original name. The name Judas Thomas is seen in all the Syriac Thomas literature. Holy Bible gives only few details about him. Only the gospel of St. John mentions about St. Thomas in Jo 11:16(resurrection of Lazar), Jo 14:5(Last Supper) and Jo 20:25-29(resurrection of Christ).When Jesus decided to go to Judea to raise Lazarus to life, his disciples advised him not to go as the Jews were seeking to stone him. But Thomas said to them: "Let us also go, that we may die with him." This shows his courage and love towards his master. At the Last Supper, when Jesus informed his disciples that he is about to leave them, Thomas asked," Lord, we do not know where you are going; how can we know the way?" It is his desire to follow him extols here. Lord replied him: "I am the way, and the truth, and the life; no one comes to the Father, but by me." After the resurrection of Jesus Christ when he appeared in front of St Thomas, he confessed, "My Lord and my God". Nobody confessed the resurrection of Jesus Christ in such a perfection. The parting words of Jesus Christ was, "But you shall receive power when the Holy Spirit has come upon you; and you shall be my witness in Jerusalem and in all Judea and Samaria and to the end of the earth." (Acts 1:8)¹

St. Thomas came to India, beyond the Roman empire to preach the gospel of Jesus. The historical facts and traditions portray the

missionary activities of St. Thomas is so wide and expansive one. It includes parts of Persian empire and China. His mission journey to India has mentioned in Acts of Thomas which is written most probably in third century A.D. in Edessa and in Periplus of Eritrean Sea. It is considered that St. Thomas took the maritime route to reach India. He came to Alexandria from Jerusalem and travelled through Berenike, Myos Hormos, Adulis and Kane. He landed in Bharuch. There he preached gospel and went to Mathura through Vidisa, Ujjain and Taxila. Taxila was the capital of Indo Parthian king Gondopheres. From 44.A.D to 50.A.D. his missionary acts mainly concentrated in the Indo Parthian Empire. Later, by silk route, he returned to Jerusalem. In A.D. 52, on his second voyage, he reached Muziris (Kodungalloor) in Kerala through Socotra. He travelled to many parts of Kerala and established Christian communities. He went to Madras and martyred in 72.A.D. in Mylapore.²

Sevend And A Half Churches

The most important in St. Thomas tradition is the establishment of seven and a half churches. Ramban paattu mentions the place names, number of people who baptized, their caste etc. All of them situated on important trade routes or on coastal areas. St. Thomas tradition is still kept alive through these churches. This doesn't mean Apostle built places of worship here. It implies Apostle erected cross in these places and established Christian communities.

Kodungalloor

In first century A.D., Muziris was the major port of India. When St. Thomas came here it was the capital of Chola empire. Then he went to

Mylapore and China. He spent four months in China and came back to Mylapore. Keppa, son in law of Cheraman Perumal requested St.Thomas to return to Kodungalloor. Thus he came to Malliyankara again and started preaching gospel. He converted many Brahmins into Christianity. One among them was Malliyekkal Thomas Ramban. It is believed that, in all generations of this family there had been priests. The belief is that one of them is the author of Ramban paattu. Some says that Thomas Ramban compose Ramban paatu. St.Thomas baptized forty jewish families of Kodungalloor. A Synagogue turned into Christian church. Marthoma shrine which is near to the Boat Jetty of Azhikode is built in the model of St. Peter's Basilica, Vatican by CMI Congregation in 1953. Cardinal Tisserant brought a part of the arm of the Apostle from Ortona, Italy.³

St. Mary's Church, Sringapuram which belongs to the diocese of Irinjalakuda was established in 1954. The construction of the church has followed the ancient architecture style of Kerala. Wall paintings related to the life of St.Thomas is the main attraction of church. The words near the entrance are written, "Kodungallur church was founded by St. Thomas the Apostle in A.D.52. He came here, proclaimed the Word of God and established the Kodungallur church. It is the first among the seven churches and the cradle of Christian faith in India." The inscription on stone tablet says "St.Thomas, an Apostle of Jesus reached here in A.D. 52. He preached the gospel and erected a cross here.

Maliankara is a small village near Moothakunnam. St. Thomas Chapel, Maliankara which is on the banks of River Periyar belongs to Latin diocese of Kottapuram. We can see a huge statue of St Thomas close to Maliankara bridge. The tradition says that this is the place where the Apostle disembarked in Kerala. The words in three language says, "The Maliankara church built by St.Thomas in A.D.52. Cardinal Tisserant erected another inscription inside the chapel.

Kollam

From Maliankara St.Thomas went to Kollam which is also known as Quilon or Desinganadu. There he baptized several trading class people called chettiars and built a church

for them. Many people from other places like Mannadi, Pattazhi, Kallada, Enaar converted to Christians. Those who were against Apostle shifted to Nanchinadu. During his one year period in Kollam he baptized around 1400 people. Port Kollam Church is built at the place where the Apostle established the first church at Kollam. A church which existed till ninth century got destroyed by sea waves. The marthoma smruthi mandapam is built outside the church. The verses of Ramban paattu are also written down.

Niranam

Nelcynda (presently Nakkida), which is an ancient port at the confluence of rivers Achankovil, Pampa and Manimala is very near to Niranam. It is considered that St.Thomas who came from Kollam, disembarked at Niranam at a place called Thomathukadavu of Kottechal canal which is running through Niranam. St. Thomas ecumenical Art gallery is built here. Four main nambudhiri families, namely, Pattamukku, Thayyil, Manki and Matathilan were baptized by Apostle who erected a cross there. But this cross was later thrown away into the river by enemies. The cross reached the other side of the river and Apostle now erected cross there. A church was built there. St. Mary's Church in Niranam today belongs to Orthodox church. In front of the church, we can see one of the most ancient crosses of India. The relics of Apostle which is brought from Mosul is kept in Smrudimandir. Marthoma Christians who got separated from St.Mary's church in 1906 built Jerusalem Marthoma Church on the other side of the river.

Nilakkal

From Niranam, Apostle reached Nilakkal (Chayal) which is an important trade centre in first century A.D. He baptized many and built a church here. But it's remain now lies in thick reserve forest. Later according to the demand of the Christians, an ecumenical church after St. Thomas was built here in 1983.

Kokkamangalam

Apostle came here and established a Christian community and appointed Thomas Ramban as their head. Apostle baptized about 1600 people here. The cross which Apostle established here was thrown away into the backwaters and a woman came to see blood

coming from the cross which floated to the other side. This cross is now preserved at Pallipuram. A small church was built there (now belong to the Archdiocese of Ernakulam-Angamaly) Main attraction here is the replica of original cross established on the banks of Vembanad lake. and now it is called Mattel Kurisu. Marthomamargam and miraculous picture of St.Thomas are other important things.

Kottakkavu

Kottakkavu (Paravur) which was known as Vanchi, Thiruvanchikulam etc in ancient time once was the capital of Chera kings. About 1770 persons were baptized here. St. Thomas church Kottakkavu belongs to Ernakulam-Angamaly archdiocese. Old church now functions as adoration chapel.⁴

Palayur

According to Hindu tradition among the 32 Brahmin villages of ancient Kerala, one was Palayur. St. Thomas tradition existing here says that: When Apostle came here, Brahmins were doing Prituyanjan and were throwing water into the air while reciting mantras. Apostle by seeing this asked them why the water is coming down. He further added that his offerings will be taken by his God. He then took some water, prayed for a moment and threw to the air. Water stood still in the air. Many people received baptism on that day. They belonged to the Pakalamattom, Madeipuri, Sankarapuri, Kalli, Kalikavu, Koykkam, Muttodal, Nedumpally, Panakamattom and Kattakali illams. The rest of the families left Palayur after cursing the place. That's why it is called shapakadu (now Chavakkad). The deserted Hindu temple was incorporated to the St.Thomas church. On the long pathway from the main gate to the church, granite statues depicting the missionary activities of St.Thomas are erected in 14 stations. It is Marthoma Path. Next to the church there is a cultural and historical museum. The largest statue of St.Thomas is erected on the Western side of Bottukulam.⁵

Thiruvamcodu

St.Thomas church at Thiruvamcode, Tamil Nadu is the half church built by St. Thomas. In Malayalam it is known as 'arappally' (half church). The word 'ara' in Tamil means king. It is believed that the king gave place and stones for

the construction of church. It is said that Hindu sage Thiruvalluvar was impressed in Apostle and informed the king. The king donated three hundred acres of land to the Christians. According to the tradition, the church here is built in A.D.63.⁵

Authenticity of St.Thomas Tradition

The authenticity of this tradition is a controversial topic. There is widespread faith in the apostolic origin of the Kerala church among the Christians of Kerala. The Acts of Thomas and Christian folk song of Kerala like Ramban paattu, Margamkali paatu etc mentions about the mission of St.Thomas. But some historians argues that the Act of Thomas which consists of thirteen acts and written around 200-225 A.D is an apocryphal romantic narrative and not much credence can be given to the version embodied in it. And the folk songs were composed only in the seventeenth century and the statements contained there in cannot be taken as transmitting genuine historical facts. Moffett, in his work 'A History of Christianity in Asia' says that songs of a living community transmitted through generations sometimes offer deeper insights behind the truth of ethnic and religious origins than manuscripts and damaged inscriptions. Some historians upholds the possibilities inherent in the ancient trade contacts between Kerala and West Asian countries and especially so, after the discovery of the seasonal character of the monsoon winds by Hippalus (A.D.45) which facilitated direct oceanic voyage between Kerala and the Persian Gulf area. They believe that St Thomas took this route and landed at Muziris. Early Christian writings talks about the arrival of St. Thomas to India.⁶ The Didascalia Apostolorum (Teaching of the Apostles) which is a Syriac work of 225 to 250 A.D and a compilation of ethical and legal regulations says that India received the Apostles' Hand of the Priesthood from Judas Thomas. St. Gregory of Nazianzus, St. Ambrose of Milan, St. Jerome, St. Paulinus of Nola, Ephrem of Edessa and St. Gregory, Bishop of Tours have mentioned the arrival of St. Thomas to India. In the writings of a Bishop of Caesarea, Fr. Eusebius (314-339 A.D) we can come across a man named Pantaneus, who visited India about 180 A.D and there he found a gospel of Matthew written in Hebrew language. Jerome in his letter LXX talks about some Indian delegates asking

Demetrius, the Bishop of Alexandria, to send Pantaneus to India to preach gospel. The visit of Pantaneus to India informs us of the presence of a Christian community in South India in first century A.D. But some have argued that Pantaneus was in North India and not in Malabar. Marco Polo, the Venetian traveler, on his visit to South India in 1288 and 1299 mentions of a town where St. Thomas was buried. Podipara, a historian of St. Thomas tradition reminds us that some oral tradition become widespread in the form of proverbs. In Palayur when Apostle baptized some Brahmins, the rest of the community left to Vemmanadu, by saying 'next bath at Vemmanadu' which now become a proverb. This legend is shared both by Hindus and Christians in this region.⁷ E.R. Hambye of the Society of Jesus in his article on 'St. Thomas and India' in the Clergy Quarterly of November 1952 states, "We are dealing with a tradition, for there is no written testimony close to the life time of

St. Thomas and it needs to be checked according to the strict principle of historical criticism".⁸

Conclusion

Early Christian writings, travelers' accounts, ancient manuscripts, St. Thomas cross and oral traditions of living communities which portray the missionary activities of Apostle in Kerala have to be proved by analyzing further historical evidences. St. Thomas Christians in Kerala still believes that apostle came to Kerala in A.D. 52 to preach the gospel and baptized many. The relevance and influence of St. Thomas tradition in their life is very high. They are really proud of being known by that name. The seven places where Apostle established churches still have strong presence of Christian communities. Every year, the solemn feast of Apostle is celebrated as Dukrana on July 3 by St. Thomas Christians on a large scale. This testimonies that they preserves the legacy and tradition of St. Thomas' fraternity.

BRONZE IMAGES OF SRI KAYAROHANESWARAR SWAMY TEMPLE AT NAGAPATTINAM

R. Mahalakshmi

The history of art in South India is of great antiquity and the art is practised even today by many craftsmen. The early Tamil Literature speaks of the numerous images that were fashioned in metal, wood, ivory, and stucco. The different forms of images are also shaped as stipulated in the early "Silpa" texts and "Agamas". The "Silpasastras" and "Agamas" deal with the fashioning of iconographic forms and have laid down the data for the size and forms of these icons. In Tamilnadu the end of the sixth century C. E., and the beginning of seventh century C. E., witnessed vigorous activities in temple construction. Mahendravarman I and his son

Narasimhavarman I was mainly responsible for the rock cut temple and bas relief found in Tamil Nadu.

Bronzes

The imperial Chola rulers, Rajaraja I and Rajendra I constituted the golden age of bronzes in South India. The original habitats of most of the image of this period are confined to Kaveri delta region.

In the Chola period the division of the Sivamurtis into "anugraha", "Santa", "nirtta" and "samhara" types reached its zenith. The

Lingodbava Chandrasekhar, Umasahita and Somaskanda are on Santa type. The angora type is Chandikesa are samhara or agora types. While samhara and anugraha murtis types became a common factor for Siva as well as Vishnu.¹

The most popular theme was as Natesa in the Ananda tandava mode. The other form of Siva depicted in bronze were Tripurantaka vinodhara, Vrishabhavahana, Somaskanda and Kalyanasundara, special importance and encouragement etc., since the Cholas were powerful warriors the concept of Subrahmanya was also popular. The largest bronze of Subrahmanya of this period is from Gangaikondacholapuram.²

On the Vaishnava side besides the icons of Vishnu with or without consorts of those of other well known incarnation of Vishnu were also produced. It was interesting note that from the early Chola period, the metal icon of Rama, Sita, Lakshmi and Hanuman in group appeared in the Tamil country.³

The Chola period is considered again to be important for the prolific production of icons of minor deities like Kali, Ayyanar, Chandsesa, Nandi, Adikara Nandi, Surya the Ayudhaprushas of Vaishnava order. Besides Saiva Nayanmars like Appar, Sambandar, his consort Paravai Nachchiyar, Manikkavachakar, Kannappar, Kotpili and Vaishnava images like Tirumangai are notable in this category.

From about the 12th century C.E,⁴ the Chola power began to wane due to the fact that the Pandyas began to be more and powerful and tried to expand their sovereignty over the whole of Tamilnadu. As usual the member of temples and innumerable sculptures and bronze were destroyed. Hence we may conclude that the works of art especially of bronzes images belonging to the period under discussion are found to hail from different parts of Tamilnadu.

The rulers of the Vijayanagar Empire were ardent Hindus. They patronised all kinds of religious and cultural activities and as a consequence a number of temple were built and countless number of sculptures were produced during the time. Nagapattinam temple is also famous for icons that belong to Chola;⁵ the study of icons in this temple is under the following pages.

Nataraja

Nataraja is the King of dancers. The Amusumad Bedagama describes the dances of Nataraja. It states that there are one hundred and eight modes of dance by Nataraja. The agamas mention seven kinds of dances allied Ananda tandava sandhya tandava, Uma tandava, gauri tandava, kalika tandava, Tripura tandava and samhara tandava.

The dance of Siva represents his five activities (pancha kritiya), "sristhi" (creation) "Sthithi" (preservation) "samhara" (destruction), tirobhava illusion, anugraha (salvation grace). These are separately considered as the activities of the deities like Siva, Vishnu, Rudra, Mahaeswarar and Brahma.⁶

The creation arises from drum; production proceeds from the hand of rope, from the fire proceeds destruction, the foot held aloft gives mukthi. Here mukthi is the same as anugraha (release). The lower left points to this lifted foot, the refuge of the soul. His hand holding the drum shows 'si' the one held out is 'va'. The hand in production in 'ya' fire in the hands is 'Na' and foot on the muyalaka in 'ma. So that is called as "SIVAYANAMA".⁷

The essential significance of Siva dance is three fold. First it is the image of his rhythmic activity as the source of all movements within the cosmos, which is represented by the arch. Secondary the purpose of this dance is to release the countless souls of men from illusion thirdly the place of the dance is Chidambaram, the centre of the universe within the heart

The worship of Nataraja can be traced to the Indus Valley civilization. The Vedic literature describes the dance of Siva. The iconographic form of Siva as Nataraja probably first appeared in the days of Guptas. There is inscriptional evidence from Badami and a ten armed Nataraja image was found at Aihole.

In Tamilnadu there is no reference to the Nataraja cult during the Sangam age. The Kurram Nataraja image is dated to 8th century C.E.⁸ the Pallava image of Nataraja both in metal and stone are generally dated to the eighth and ninth centuries on stylistic grounds.

The Pallavas were succeeded by the Cholas of Thanjavur. The art of the Cholas

shows an individuality and vanity of its own which was essentially and definitely an extension of the Pallavas.

The image of Pavalavaloga idol of Nataraja in the name of Chittrambalavan found on the northern side of the first prakara of this Temple. It is fixed on a circular "tiruvasi" which is of an extraordinary beauty. He is seen with his right leg on a Muyalakan, and the left in a dancing posture. His makuda is seen with a skull, the crescent and the goddess Ganga. He wears a tiger skin as his under garment. He holds a drum in his upper right hand. His lower right hand is in abhaya hasta his lower left hand is in gaja hasta.

When compared with Natesa from Adi Kumbeshwarar Temple at Kumbakonam and Kailasanatha Temple at Kanchi the headdress is equally decorated. The ornaments like kanti long hara yajnopavita are very beautiful when compared with the image at Tanjore temple.

Sri Amman

This panchaloka icon is the divine consort of Lord Nataraja. This is in separate pedestal which matches the lord on a separate pedestal matching the Lord this image is tall statured (1.3 mts height) this is dated in 13th of the century by the Archaeology department.

The idol is standing on a padmapeda. A "karanda makuda" adorns her head and curls of hair falling on her shoulder are smoothly and beautifully done. Necklaces adorn her neck. Her breasts are full without breast band. She wears makara kundalas in her left four arm and bangles in her wrist which add further beauty to the idol. Pearl ornament (muthusaram) is engraved round her waist. A fine flower, designed cloth covers her waist and extends up to the ankles.⁹

The image of *Neelayathatchi Amman* is more beautiful as compared with the early image of Tanjore and Melaperumballam (Tanjore district). The ornamentation and workmanship of the earlier period is continued as is seen through this image.¹⁰

Kalyana Sundara Moorthi

According to the Puranas Sakthi, the daughter of Daksha and consort of Siva were dead. She was born to the god Himalaya as Parvathi. The goddess Parvathi herself

underwent austerities to join with her lord once again.

Siva, assuming the form of an old decrepit brahmana approached Parvathi. Finally she dedicated we self to Siva. The regular marriage was celebrated later on generally the scene of marriage of Parvati and with Siva appears along with that of Vishnu and the consort Lakshmi and Bhumi Devi.¹¹

The image of Kalyanasundara is found at Ellora cave temple. In Tamilnadu, the image Kalyanasundara is found at Kanchi Kailasanatha temple in which Siva Tirumal and Ambigai images are also found. The image of Kalyanasundara is an example of later Pallava style. It is in tribhanga posture.

The god Siva stands in a slight tribhanga pose which is at once beautiful and majestic. The "jatamakuda" is high and extremely well finished. Makara kundala and patra kundalas decorated his ears. The face is in an oval shape and the nose is flower decked stands of hair are seen on the shoulder. The pronged keyura simple band like elbow ornaments¹²valayamas.

Siva has four hands the upper right hand is holding the tanka and the lower are holding the right hand of Parvathi. The upper left hand is holding the deer and lower hand in varada pose.

The image of Parvathi is standing on the right side of the god. The pleasing jatamakuda decorates her head. The makara and patra kundalas decorates her ears and the neck is adorned with simple kanti with mangalya sutra. The right hand of Parvathi is held by the right hand of Siva and the left hand is in kataka pose. The modelling of the images is beautiful. The part below the naval has also been referred beautifully. The sari is depicted in a realistic manner and its folds are suggested by widely separating wave patterns. When compared with earlier image of Kalyana Sundara at Tiruvelkudi the image Nagapattinam is more decorated and beautifully ornamented.¹³

Siva

This is not one of the common representations of Siva. The Karomogama describes this type of god. In Nagapattinam temple the image of Siva is found at the northern platform the main temple. The image of Siva is

usually in the sukha asana pose of comfort and ease. He has four hands in one of his upper right hand hold the danka and the lower are in the abhaya pose. The upper left hand holds the "mazhu" and the lower hands this extenuated forward in varatha and face of the lord Siva his damaged contrition.¹⁴ The hand of the god Siva is decorated with karantha makuda the depiction eyes for fine. The left and right ears are without any ornaments. Around the neck he wears the kandigai, sarapalli and harm.

Adhipaktha Nayanar

Adhipaktha Nayanar was a devotee of Lord Shiva and one of the 63 Nayanmars saints. was the chieftain of the fishing village and every day, the first fish that he caught used to bib thrown back into the seen as an offering to lord Shiva "He lived in the area several centuries ago and the Lord, Wanting to test his devotion, had ensured that there was no fish in his net for a few days and his family had to go without any food.

Then, on one day, he caught a golden fish. Despite the villagers telling him not to let it back into the sea, he did so. Then the Lord appeared in front of him and blessed him. That day happened to be the Aayilyam star" the festival in a grand fanner with the idols of Kayarohaneswarar Swamy and His consort Neelayathakshi Amman being fright to the sea shore from the temple. The villagers tied the gold and silver fish to his idol in symbolic manner and they let them into the sea.

"The village had a math in the name of the Nayanar but it was in state of disrepair. That place was repaired and a temple functions from there now. The fishermen bring the items required of Puja from the math," Hence, the gratitude of this Nayanar who was honoured by the government of Tamilnadu constructs the separate mandapa for Adhipaktha Nayanar.¹⁵

DEVELOPMENT OF AMMAN CULT AND TEMPLES IN TAMIL COUNTRY

Dr. A. Mahalingam

The clan based primitive society was revolved around the women who had essential function of rearing the young and of preserving them from the external forces. All cultural traits including habits, norms of behaviors, inherited tradition were formed by and transmitted through the temples. The woman was not only the symbol of generation but the actual producer of life. The identification of earth with women

implies that the functions of the earth and those of women are alike. The same preconditions which fertilize women are also thought to fertilize mother earth.¹ Most of the figurines of the mother goddess from Mohenjadaro are painted over with a red slip or wash. The oldest extent figurines of the mother Goddess such as the venus of willendorf are painted red. Some of the Egyptian, Maltase, Cyproite and Danubian

figurines are also found ruddled. The relation between red ochre or vermilion with the productive aspects of nature has been shown by Briffault. Red being the fertility symbol representing the menstrual blood is appropriate to the temple figurines supposed to represent the earth or mother goddess.²

Mother goddess worship was an important cult during the ancient Tamil society. There were three types of mother goddess worship prevailed i.e, Kottiravai, Kalai, Indo-Aryan, pre-Dravidian tribal goddess.³ The rivers are also considered as mother goddesses. Kaveri, Gangai, Saraswati, Yamunai are worshipped which is one of the cultural traditions of India. Peripules describes caves and ports on the cape of Comerin and he also mentions about virgin mother goddess cult existed in the Comerin during the 1st c C.E. It is a water goddess known as *Kadalkelu Selvi*. Mother goddess also worshipped in Kaveri Poompattinam as *Sampapathi* which was known later as Kadalkelu Selvi in Manimekalai.⁴

Taking in to consideration the Hindu impact, we find in the earlier strata of the Sangam literature, belonging to the first half of the first millennium C.E. references to the Vedic ideas, customs and sacrifices and to the Hindu gods in their new habitations, forms and attributes mixed with much that was indigenous. In the absence of any contemporary iconographic representations, we have to seek information only from the literary sources.

The syncretic forms of Mayon and Valiyon or Nagar, the local forms of Krishna and Balarama, sevvel or Neduvel, the Murugan of the Tamils corresponding to *Karttikeya-Skanda*, *Kottiravai* or *Kadurai Kadavul* also called *Kanamar Selvi*, the aspect *Durga* have been evolved.⁵

The concept of Durga as the deweller in the hilly areas is first indicated in her original role as *Kottiravai* or *Vettrimadantai* (Goddess of Victory) with her abode in the Vagai tree in Paditruppattu (66) and by Kuruntogai (218:1) where she is called *Suli* the *winder* of *sula* (trident) to whom vows are made.

*Vida-Mukai-adukkattu-viral kelu sulikku kadayum punam*⁶

The Lakshmi cult is also mentioned in the Sangam classics, in which occur such goddesses

as *Amari, Kumari, Gauri, Samari, Suli, Nili, Aiyal, Sayyaval Kottiravai, Nallal, Kann, Saikari* etc. Among them, Kumari, the Virgin goddess, Kanyakumari of the Taittiriya Aranyaka who gave her name to the southernmost point of India.

The story of deification of a human being called Kannaki in to Pattiankadavul, the goddess of chastity, is met with in the great Tamil epic *Silappadikaram* (2nd c C.E.). This lady destroyed the city of Madurai by fire to avenge the execution of her husband Kovalan. Kosar, the king of Kangu, Gajabahu, the king of Lanka, Perunkelli, the Chola king, and the Cera king Senguttuvan erected temples and instituted festivals in her honor.⁷

How and when the Kannaki cult was assimilated with and finally absorbed in to the kali or Bhagavati cult cannot be ascertained at our present state of Knowledge. In the *Silapadikaram* we have references to the worship of Kali. On their way to Madurai, Kannaki and Kovalan stopped at a Kali temple where they witnessed a weird dance of the priestess of Kali who, attired like a dread goddess, stood up in the village common, trembling all over as if she was possessed by a devil and dreaded in horrific tones that the goddess Kali was angry as the Maravar had not offered any sacrifice at her temple for sometime past.⁸

The *Kadamarselvi* occurs in the *Manimekalai*. She is designated as goddess of war and again as the ancient goddess (*palaiyo*) in *Tirumurugattruppada*, a much later inclusion forming the invocatory poem of the *Pattupattu* collection. The *Paripadal* collection seems to have had a poem on *Kadukal* according to the later commentaries of *Iraiyanar Ahapporul* and *Tolkoppiam*. *Kadukal* is said to be the corruption of *Kadukilal* which again in the commentary of *Tekkayagapparani* is given as kannadi or Vana Durga.⁹ Even in the Tevaram times she is denoted as kalukal. The *Manimekalai* echoes in another context, the *Vindiyavasini* concept of Durga.

The *Agama* and *Silpa* texts – the *Vaikhasana Agama*, for example assign to the *Durga* figure a place in the *devakostha* outside the northern wall of the *ardhamandapa* of *Saiva* temple as *Vindhyavasini*, a feature that becomes

common from the close of the 8th c onwards, the corresponding southern niche containing Ganapathi. This form of standing Durga, often on the head of buffalo (Mahisha) is described in *Silapadikaram*.

The *Silapadikaram* in the *Vettuvavari* gives a fuller concept of the cult and iconography of *Durga* or *Kottravai* in a elaborate manner. She is described as having a body the colour (dark-blue) of which resembles that of a flower of the *kaya*, with lips red like the coral, teeth white and the neck dark, with a third eye on the cresant like forehead holding the discus and conch, sword and *sula* and the bow which was the *meru* (medumalai) strung with the snake *vasuki* as its nan, wearing the skin of a tiger and belt (*mekalai*) of lion's skin, a *kalal* (hero's calf-band) on one leg and *Silambu* (women's anklet) on the other, with coiffure of jata adorned by serpent and the crescent moon, covering herself with the hide of the elephant as *uttariya* (*ekasam*), wearing snake as her breast band (*kaccu*), carrying a standard of lion she is said to have fought with the asuras and destroyed *Daruka* and *Mahisasura*. She is said to have consumed poison with immunity and described as occupying half the body of the three – eyed Siva as *Mangai* (*Uma*)¹⁰ and as one (*Bhadrakali*) who made the *Iraivan* (*Siva*). Thus she combined in her the concepts of Siva and Vishnu and *Uma* and in her attributes the three *ganas*.¹¹

The attribution of the stag or buck with Durga is the most interesting phenomena in Tamil Country. It is portrayed in the sculptures of the Pallavas and contemporary Pandyas and other dynasties dating between the second half of the 7th to the close of the 10th centuries C.E. The most noteworthy sculptures showing Durga on a deer is from Thanjavur district. It is displayed in the Madras Museum (9th century C.E). The concept of Devi is also called *Vidyasakti* (Supreme knowledge) and *Mayasakti* (nescience).¹²

Saptamatrikas, often interpreted as the seven mother of mankind, cult were significantly absent in the cave temples of the Pallavas. They are found for the first time in the Kailasanatha temple at Kanchipuram built by Rajasimha (700-730 C.E.). In the cave temples of Muttarayas who were occupying the Chola country, and of the Pandyas belonging to the 8th century and later they are found either as a part of the cave temple

or in association with them. The image of *Saptamatrikas* are found in Tirukogarnam, Malayadipatti, Kunnathur and Tirukkalakudi. The *Matrikas*, *Jeyesta* continued till about the close for the 11th century C.E even after the influence of the Bhakti movement of the Nayanmaras and Alvars of whom one has strongly criticized the worship of Sakti by Sankara, in the first half of the 9th century C.E. In the early Chola times, such goddesses were called as Durga under the names of *Kalapidari*, *Durga Paramesvari*, *Durgayaromkara Sundari* etc. The shrine of Durga is referred to as *Muniril* in *Silapadikaram* are called *Tirumuttram* or *Sattimuttram* as distinguished from the *Sri Koil* or *Siva* and *Vishnu*.¹³

Amman worship was developed under different names in Tamil country however separate temple was not constructed. Rajaraja I (1012-1044 C.E.) initiated a tradition of constructing Amman shrine in the Brahadisvara temple complex. The Amman shrine was known as *Brahatiamma* in the name of the main deity. Rituals and ceremonies were regularised in the Amman temples. Subsequently separate the Amman temples were constructed in temples of *Darasuram* and *Tribuvanam*. In the later Pandya period Amman temples also constructed which was portrayed in the northern side facing south side in front of the main deity. Mention may be made of *Vishvanatha* temple at *Pattamadai*. The Amman temple was known as *Tirukamakottamudaya Aludayanachiyar* as called other region in Tamil Nadu. *Vedachalam* describes the development of Amman temple in to four stages in Pandya country.¹⁴ Amman temple is also erected in the northern side of the *Moolanatha swamy* temple at *Tenkarai* which contains *ardhamandapa*, *mahamandapa* and *prakara*. It is a square *vamana* and the *adhithana* contains simple *upana*, *jagadi*, *kumudham*, *kandam*, *patti*, *kandam*, *vedi*. *Kumudham* is a *virudhakumudam*.¹⁵

During the Vijayanagara Nayak period, the Amman temples were constructed and transformed the structure parallel to the main deity. The main deities are called in the name of Amman in instance *Meenakshi Amman*, *Kamakshi Amman*, *Gomathi Amman*. A Goddess shrine was constructed in the *Siva* temple complex at *Viramanallur*. This site is situated some 24 kilometers north of

Kanchipuram in the transitional Telugu-Tamil zone. This building is dependent on earlier structure as is clear from the Chola style of the double capitals and angled corbels of the wall pilasters.

The Venkataraman temple complex inside the Gingee fort is an early Nayak project. Here the Amman shrines occupy the two western corners of the enclosure, each with a small *mandapa* in which piers have multiple colonette.

After the recovery of Madurai by Kumara Kampana, the twin shrines dedicated to Meenakshi, tutelary goddess of Madurai, and her consort Sundareshvara were substantially rebuilt. The Meenakshi temple complex is contained within high enclosure walls, lofty *gopuras* are positioned in the middle of each side. The Meenakshi temple is usually entered from the east through a porch projecting outwards beyond the enclosure wall. This porch

was constructed by Rudrapati and Toli Ammai, consorts of Tirumalai Nayak.¹⁶

Maduravalli Thayar Sannithi in the Kudal Alagar Perumal temple at Madurai, Amman shrine at Melathirumanickam near Madurai, Vedavalli Thayar shrine in the Parthasarathi temple complex at Truvallikeni are constructed during this period. *Mandapas, prakaras* were expanded and celestial marriages were conducted regularly. This was led to arrange many fairs and festivals.¹⁷ The Amman cult was existed from the earlier times in Tamil country. The literature of Sangam period gives references to the worship of mother goddesses which were known different names. The temples for goddess were erected first time by Rajaraja I in Tamil country. This tradition was expanded to other region of Tamil Nadu and it was further elaborated and exalted the Amman temples during the Vijayanagara Nayak period.

TWO INSCRIPTIONS OF JATAVARMANSUNDARA CHOLA PANDYA AT TIRUVALISWARAM – A STUDY

E. Manamaran

In the medieval Tamil Nadu the Cholas established their survey over the vast areas of South India and Sri Lanka. They organized a well knitted administrative machinery in which the revenue department played a vital role. The Chola revenue department had clearly arranged hierarchical order. This was evolved from the old traditions, customs and convention of the medieval age. At the time of Rajaraja-I the administrative machinery of the Cholas became matured. They extended their administrative

system into the conquered regions. In the Pandya concentry especially in Tirunelveli region the Chola system functioned well.

Paranthaka –I conquered the whole of the pandya country and annexed it which was a short lived success. At the time of Paranthaka-II Sundarachola Pandyas were defeated but not their land was conquered. At the reign of Rajanaja again Pandya country was conquered. Rajaraja-I annexed the Pandya country and established his direct rule through officials.

When Rajendra –I came to power he introduced the Chola Pandya viceroy to rule the Pandya country. This viceroy rule was effectively function in the Pandya country especially in the Tirunelveli region. Practically the Chola Pandya Viceroy were acted as independent rulers but the Chola Emperor occasionally interfered in the Viceroy's duties, otherwise the viceroys took over their duties independently.

Two inscriptions of Tiruvaliswaram

Two inscriptions of Tiruvaliswaram of Ambasamutram Taluk of Tirunelveli region are unique in their nature. They are very rare inscriptions and are best specimens for the efficiency of the Chola administration¹.

Jatavarman Sundara Chola Pandya, the Chola viceroy, of the Pandya country, issued an order from his palace at Rajendra Cholapuram in his 16th regional year in which a five veli land was purchased from Rajaraja Chaturvedimangalam of Mullinadu and donated it to Valliswaramudaiyar Temple at Tiruvaliswaram to a festival and feedings to Sivabrahmanas, was mentioned².

The second inscription of the same viceroy which was issued in his 17th regional year tells us that the previous order was repealed and issued a new order. The new order has made some changes in the previous order and gave a new name to the donated land. In the inscription many names of the revenue officers and their designations were clearly mentioned. These two inscriptions supply us many worthwhile information about the functions of the Chola administration.

The first inscription

The first inscription which was issued in the 16th year, speaks about a land donation. The donated land was purchased from the Mahasaba of Rajaraja Chaturvedimangalam. This land donation was initiated by the maternal uncle of Chola Pandya and the order was issued by

inscription mention the boundaries of the donated land, location, purpose, changing of the status of the land, removal of tax, the names of the revenue officers etc.

The donated land was previously a brahmadeya land³. It was purchased and converted into Vellalanvagai land and donated as devadhana land to the Tiruvateswaram temple. This conversion of land from one status to another was clearly mentioned in this record. The designations of officials also mentioned in it. They are Tirumantraolai, Tirumantraolainayagam, vidaiyilathikarikal, puravuvai thinaikalathikkankani, varipothagam, varipothagkanakku, mukavetti.

The second inscription

The second inscription of the same Chola Pandya viceroy was issued from the Madurai palace in which he repealed the previous order. This new order was issued in this 17th regional year. The new order had changed the name of the donated land as Sivasaranasekaranallur. In the previous inscription the name of the devadhana land is damaged. The second inscription completely cancelled the previous order. The cause for this cancellation is not known. All the revenue officers of the previous record along with pattolai and many witness persons were mentioned in this inscription.

The two inscriptions of Tiruvaliswaram temple clearly show the administrative formalities of the Cholas, the officers designations, witness persons, the care of the government. The Chola administration gave utmost care to correct into mistakes. Finally these two inscriptions also emphasise the fact that the Chola Pandya viceroys had exercised independently in their administration. The central government of the Cholas intervened the Chola Pandya administration in rare occasions.

“A HISTORICAL STUDY OF JAINBASADI IN TALAKADU”

V. Manikanta & Dr. N. Shaik Masthan

INTRODUCTION

Talakadu is a desert like town on the left bank of the Kaveri River at a spot where the river makes a sharp bend. It is 45 km from Mysore and 133 km from Bangalore in Karnataka. A historic site, Talakadu once had over 30 temples that today were buried in sand. Several dynasties were ruled Talakadu. In those gangas were for most important where they were ruled nearly 800 years. The western Gangas were great patrons of Saivism and Jainism temples are constructed in Talakad. Archaeological excavations were conducted here and they revealed many brick structures of antiquity and the present Jaina temple is one such structure excavated here. This Jainabasadi constructed by nearly 5 to 7th century. The entire temples were of well-burnt bricks. This is the one of the oldest Jainbasadi in Karnataka.

THE ORIGIN OF TALAKADU NAME

Talakadu on the left bank of the Kaveri River is an ancient place which was also known as Talavanapura, Tarekad or Talaikot or Talkadu¹, in early Gangas records. It was the capital city of the Ganga rulers from the times of Harivarma (247-266 A.D). It has several mounds and standing temples. Many of them engulfed by the sand dunes. The area also called as Gajaranyakshetra in some of records and Rishis were said to be moving there in inform of elephants due to a curse. Two brothers Tala and Kada are said to have given the place the name according to a legend. In Sanskrit the place is called as Dalavanapura. The cholas preferred to call the place after their illustrious ruler as Rajarajapura (in the name of Rajarajachola).²

The Talkadu was ruled by several dynasty as a capital and as provincial city. This city was the main capital city of Western Gangas and it served over thousand years. Later this area was captured by Cholas, after the Cholas it was in the hands of Hoyasala and finally Vijayanagara. According to Tyabird in Talkadu more than 30 temples were engulfed in sand³.

GANGAS IN TALAKADU

Western Ganga was an important ruling dynasty of ancient Karnataka in India which lasted from about 350 to 1000 CE. They are known as 'Western Gangas' to distinguish them from the Eastern Gangas who in later centuries ruled over Kalinga (modern Odisha). The general belief is that the Western Gangas began their rule during a time when multiple native clans asserted their freedom due to the weakening of the Pallava Empire in South India, a geo-political event sometimes attributed to the southern conquests of Samudra Gupta. The Western Ganga sovereignty lasted from about 350 to 550 CE, initially ruling from Kolar and later, moving their capital to Talakadu on the banks of the Kaveri River in modern Mysore district. After the rise of the imperial Chalukyas of Badami, the Gangas accepted Chalukya over lordship and fought for the cause of their overlords against the Pallavas of Kanchi. The Chalukyas were replaced by the Rashtrakutas of Manyakheta in 753 CE as the dominant power in the Deccan.

After a century of struggle for autonomy, the Western Gangas finally accepted Rashtrakuta over lordship and successfully fought alongside them against their foes, the Chola Dynasty of Tanjavur. In the late 10th

century, north of Tungabhadra River, the Rashtrakutas were replaced by the emerging Western Chalukya Empire and the Chola Dynasty saw renewed power south of the Kaveri River. The defeat of the Western Gangas by Cholas around 1000 resulted in the end of the Ganga influence over the region.

JAIN BASADIS OF KARNATAKA

Around 7th century, Jainism became popular in Karnataka when Jain basadis were built in many parts of the state. The patrons of Jainism in Karnataka were mainly the kadambas, the Gangas followed by the Chalukyas and then the Rashtrakutas.

In the 10th century when Buddhism was reigning all over India, the great Mauryan Emperor, Chandragupta surrendered to his Jain teacher Bhadrabahu at Shravanabelogola. In his memory, one of the two hills at shravanabelogola is called Chandragiri and the other Indragiri.

Karnataka is a major Jain belt that has numerous Jain basadis set amidst picturesque scenery. Pillars being the main motif of Jain architecture, intricately carved stone iconography and larger than life statues make for an interesting trip though the major Jain basadis of Karnataka.

JAINA BASADI IN TALAKAD

Jainabasadi is one of the oldest basadi in Karnataka. This Jain basadi is situated in the talakad village. A five 100 yards to the north of the KeerthiNarayana temple. This Jainabasadi constructed nearly 5 to 7th century⁴.

foundation of Jain basadi

Talakad on the Banks of the river Cauvery was famous as the capital of the early Western Gangas and continued as an important cultural centre till the times of the Wadeyars. Now it is famous for its amazing Sand dunes and the panchalingadarshana. Archaeological excavations were conducted here and they

revealed many brick structures of antiquity and the present Jaina temple is one such structure excavated here⁵.

The western Gangas were great patrons of Saivism and Jainism as evidenced by many inscriptions and structures. They are known to have built a VijayaJinalaya at Talavanapura or Talakad itself and perhaps the excavated Jaina temple may be the same as the one referred to in the VijayaJinalaya in Madakeri Thmrpata inscriptions⁶. Unfortunately only the foundation of this temple could be traced but not the superstructure. The entire temple was built of well-burnt bricks.

The brick temple consisted of three garbhagrihas in a row horizontally, an antarala and a mukha manadapa with a provision for pradakshinapatha. All these structures are enclosed within a prakara wall also of bricks. The main garbhagriha is square (3.25 mts) with two rectangular sanctums on on each side (3.25 x 1.80 mts). In front of these sanctums is a small oblong porch (2.8 x 11.0 mts). All the three garbhagrihas have separate doorways in the front opening to the common porch⁷.

burnt bricks

The separate mukha mandapa in front of the sanctums in square with thick foundation walls. The entire structure was built over a basement or a plinth consisting of various types of mouldings. Perhaps some pillars were used at different points. Perhaps these and other wooden pillars supported wooden framework of the roof above⁸. Thus the brick construction was strong as well as elegant. The size of burnt bricks height is 2 inches, 7 inches width and 11 inches breadth.

Tirthankara Parsvanatha

Very close to the garbhagriha was found a stone image of Tirthankara Parsvanatha. It is in high relief. He is standing with a five hooded serpent and an umbrella above. There is a sculpture of Padmavati Yakshi at the left holding an umbrella over the serpent. This is a rare sculpture. This was the image which adorned the main garbhagriha of this temple. Thus this brick temple provides evidence for Ganga patronage to Jainism at Talakad itself⁹.

CONCLUSION

Around 7th century, Jainism became popular in Karnataka when Jain basadis were

built in many parts of the state. Talakad on the Banks of the river Cauvery was famous as the capital of the early Western Gangas and continued as an important cultural centre till the times of the Wadeyars. Now it is famous for its amazing Sand dunes and the panchalingadarshana. Archaeological excavations were conducted here and they revealed many brick structures of antiquity and the present Jaina temple is one such structure excavated here. The western Gangas were great patrons of Saivism and Jainism as evidenced by many inscriptions and structures. These Jainabasadi is one of the oldest basadi in Karnataka. The entire temple was built of well-burnt bricks. Unfortunately only the foundation of this Jain temple could be traced but not superstructure. This temple all buried under heavily accumulated sand-dune. A brickgopura over the sanctum collapsed due to heavy rain.

A READING OF THE EMERGENCE OF MODERN CARTOGRAPHY IN COLONIAL INDIA: CONTINUITIES AND RESISTANCES

Mathew Joseph

The late British colonial records and early histories of map making looked upon the Indian subcontinent as region in which modern map making was an alien concept until it was introduced by the Europeans with the emergence of colonialism. The advances in the history of cartography where the idea of what can be considered as a map was considerably expanded has rendered this notion obsolete. The problematization of the idea of the qualities of a proper map has enabled subsequent enquiries into the history of maps in Indian subcontinent. The presence of practices which are of regional origin within the legends of colonial maps are already visible and points to the fact that mapping in colonies was not exclusively of European methods. Adding to this, the possible influences of regional knowledge

practices including map making methods and institutions, the inclusion of which was made possible by the new developments in map studies has resulted in the development of a complex picture of the evolution of colonial cartography in India. An analysis of such a process also required the essentially unequal nature of relations structured by the realities of colonialism as well as the essentially hierarchical nature of social formations in India. The nature of this change also needs to be understood with reference to the responses such projects received from regional polities as well as inhabitants of the land.

The introduction of 'modern' cartographic practices in the subcontinent is often described in relation to the European (mainly British) state building project during the gradual colonization

of the region. While developing his cultural understanding of colonialism, the survey modality and enumerative modality was described by Bernard Cohn (1996) as one of the major investigative modalities. The European mapping activities that preceded the British projects are treated as part of a general mercantile history. The appointment of James Rennell to survey the newly acquired territories of Bengal is assumed as marking a shift from such traditions. This was to be succeeded by the elaborate project of Great Trigonometric Survey (GTS) where grids of triangulation covered the length and breadth of the peninsula rising strong claims on the production of accurate knowledge of the landscape. This narrations observes a break from pre-existing forms of knowledge which were replaced by regionally redefined European knowledge systems functioning as the basis of the emerging social and political formations of colonialism. However these views have come under increasing criticism due to the inability to properly understand the complex developments that characterize this process.

The colonial maps appears to be drawing considerably from precolonial forms of geography imaginations. While they can be identified as the tools and products of the colonial project of producing knowledge to govern the region, the conception of such a region appears to be formed in a process of active interaction with what can be considered as non-European forms of knowledge. The scales present in the legends of maps of the period provide examples that support this claim. While the commonly used scales are generally based on the ratio of inch to miles and expressed in degrees displayed on Mercator projections, the legends of British maps around the turn of 18th century appears to be including descriptions of certain units such as *common cosses*, *cosses of Hindoostan*, *Mougully coss*, *royal coss*, *Sultany Coss* and *Brammy* or *Punjaby Coss* (Faden 1793). There are references of certain units such as Malabar miles and Marching miles, the later explained by the map as 1/80th of a degree. Distance also appears to be described in terms of time taken to traverse, as the legends seems to explain common coss as 60 Malabar hours of marching. The usage of Indian units of measurements on the maps are first seen in Guillaume de l'Isle's 'Carte des Costes de Malabar et de Coromandel' prepared in 1722.

This was picked up by J.B.B d'Anville in 'Carte de l'Inde' (1752) and later Thomas Jeffry's 'East Indies with roads' (1768). The legend of the later map points to the existence of different coss units being used in the same region based on the equipment used to measure. To cite an example, Susan Gole (1990) explains the difference between *jeribi coss* and *tanab coss* as when the former was measured using a chain, the later was estimated using a rope. Units of estimating area of the land also seems to be varying across the region. The measurement of the cultivated which was conducted by the state for the requirement of revenue administration was often defined by nature of the concerned land. The unit in question, *bigha* varies according to the cultivability of land. While providing much of the details regarding the use above mentioned units in the subcontinent Susan Gole also points out that the concept of a uniform scale as a requirement for a map was absent in pre-colonial India.

A brief discussion of cartographic and survey practices that existed in the region is made by Kapil Raj (2006). Though large maps describing the region are absent, there existed detailed surveys and descriptions often compiled for revenue administration along with institutions that was engaged in this projects as a part of many of the south Asian polities. He draws examples which are spread over a large time frame starting from the Cholas (10th -11th centuries) to the Mughal state. British records identifies maps of non-European origin which functioned as sources for colonial maps. James Rennell in his map memoirs refers to the usage of Malabar maps which he used to construct his maps of *hindoostan* without entering into details regarding their nature and sources apart from one being a map prepared by a person from Carnatic (Rennell, 1792). It has been argued that Colin Makenzie made use of Maratha maps of southern Canara as sources in his surveys of the region. The copies of the said Maratha map, assumed to be used for military requirements, has been found as copied by changing the modi script to English. The original map also bears a Portuguese watermark pointing to a history as a pre-British colonial possession (Gogate and Arunachalam, 1998).

The systematic use of the European survey practices of the period as well as the regional

methods of survey in the compilation of a colonial map can be found in the maps produced by James Rennell. Kapil Raj describes the usage of Rennell's own river and terrestrial surveys, numerous travel accounts, military route march maps along with accounts produced by the Indians in the compilation of his maps (Kapil Raj 75, 76). In the work *Major James Rennell and the rise of modern English geography*, Clement Markham (1895) goes on to indicate that it is possible that he could be versed in the works of Arab cartographers such as Ibn Battuta. Phillimore also points to the usage of works compiled by Arab astronomers by European cartographers of the period. Apart from the said astronomical data, he also claims that Rennell made extensive use of tables (possibly revenue oriented) inserted by Abul Fasl in *Ain-i-Akbari* (Phillimore, 1945). It is probably from the same text that he draws the names that he has used in the maps to describe the regions as most of the regions retains the names of subahs which are Mughal administrative divisions.

The large scale involvement of Indian surveyors in the British survey institutions is quite evident. Since the initial survey ventures essentially used the pre-existing channels of information, the regional structures of data accumulation and the communities that were involved in these processes also came to play an increasingly important role in this process. Kapil Raj lists revenue officials such as *Patwaris* and other groups such as *harcaras* as active participants in the British surveys of the period. In many occasions sepoy of the British army also appears to function as suppliers of such information. The acknowledged status of the British as one of the other to Indians who harboured territorial ambitions possibly demanded this in many occasions. There are also interesting occasions like the survey of Tibet where the boundaries were effectively closed to Europeans and had to be surveyed in secret by indigenous surveyors. Due to the manner in which the said information was collected, Indians who were engaged in the roles spanning from clerical to translator might also have considerably influenced in the manner in which the data was compiled. While looking at this diversity of engagements and channels which influenced to survey and mapping in the period, an aspect that calls for attention is that of the unequal nature of such relations. The narrations

of Francis Buchanan (1807) of his journey in Madras, Mysore and Malabar in the immediate aftermath of Anglo- Mysore wars are part of a pioneering set of attempts made by the British to know the nature of the region. While reading through his accounts it is quite evident that the interaction that he had in the region for the sake of collecting the described details are regulated by the social hierarchies that existed in the region and his own position as a white Christian European. Other than in the cases where he seems to be receiving his information from brahmins, rulers of the regions, British officials who are present in the region, the identity of the source is often found irrelevant and masked using terms identifying them as groups of people. The narrations of the survey also appears to be hardly ever including the Indian sepoy who were part of British survey groups such as Madras Guides or even in grand projects such as GTS. It can't be denied that there are references to records where Indians were involved as crucial players in the research programme. The role played by Boria in the compilation of Collin Mackenzie's collection is one such occasion. Despite this, according to many of the colonial records the role played by such actors remain to be that similar to that of an instrument. The information that came from such channels was subjected constant testing and comparison with other sources, which in many occasions were of European origin (Edney 82). The 'native', according to this narrations while being an acceptable source of information, is not identified as someone capable of processing the said information to required formats.

Most of the late colonial historiography dealing with the survey and mapping projects in India projects the image of a 'native' who is clueless regarding the scientific rigour that is involved these activities (Edney 1997). Since the process of survey and mapping was seen a crucial part of civilizing the landscape, it could be suggested that such a construction of the image of the inhabitant of that landscape was an essential part of the colonial civilizing mission. The construction of this image is identifiably a later development as the earlier colonial narrations themselves provide a much more complex picture.

Across the narrations of colonial surveys there are instances where the survey operations

encountered active resistance. During a survey of the Palk Strait, the surveyor is cautioned to be careful not to agitate the people of the region (Phillimore, 1945). In another incident, Lieutenant John Pringle who was part of the survey establishment of Madras guides was involved in the march of Madras army to Anjengo in 1778 through the country of Travancore in the capacity of quarter master and intelligence officer. He reported that apart from the route that he was allowed to travel, of which he appears to have prepared either a map or a detailed descriptive report, he was prevented from gaining any geographical details of the region. His mobility was limited by the subadar and 20 sepoys assigned by the king of the country who watched him narrowly, preventing him from venturing not more than 200 yards from the sea. Further he also suggest that any further troop marches in the region will restricted to the same route by the Raja (of Travancore) (Phillimore, 1950). The conduct of Nawab of Carnatic when he was informed of the desire of the British to survey the country of Carnatic also appears to be harbouring similar concerns. He questions the need for having the survey of the region since it is already well known. According to him the movement of sepoys and surveyors in the country could result in local disturbances. However, the foremost concern that was raised was the challenge it would pose to his prestige as the ruler of the country. It was claimed that it would result in him falling in the eyes of other regional powers who was bound to conclude that the survey would be succeeded by the

removal of the Nawab from power (Phillimore, 1950).

The responses received by survey operations indicate that geographical knowledge, in the period being discussed possibly was a protected by the concerned state. While it is unclear that whether such measures were taken to regulate Indians, it could be argued that the British acquisition of such information was undesirable to regional powers. The role of geographical knowledge in the production of political power was also well understood and was resisted by the concerned states.

Unlike the composite and hybrid maps produced by Rennell and his contemporaries, later developments in colonial cartography saw the gradual emergence of topographic maps as the desirable norm. The rhetoric of survey projects such as GTS where the shape of earth calculated with higher degrees of accuracy resulted in a gradual removal of perspective from what was henceforth considered as the ideal map. This also happened along with the emergence of policies which regulated the production and circulation of the said sort of maps. Gradually the idea of scientific cartography with the notion of accuracy at its centre took route and came to define the meaning of map. The history of colonial map making, as already described is much more complex. It appears to be non-linear narration where numerous traditions interact within complex hierarchical structured by colonial rule as well as regional power structures.

MODERNITY AND CHANGING CULTURAL PRACTICE: TRANSFORMATION OF KATTUNAICKANS IN WAYANADU

M. Mithra

KATTUNAICKAN are a scheduled tribe inhabiting the Wayanad district from Kerala. They are also distributed in the adjacent district in the states of Karnataka and Tamilnadu. Their synonyms are the Jenu Kuruba, Kattuaiikkan,, Ten Kurumban, Jennukoyyo, Sholanayakas and Naickan. The word derived from Kadu meaning 'forest' and Nayakkan means 'Leader' or Headman. They do not use titles. They were a forest dwelling community till recently. Their knowledge on forest flora and fauna of the area is astounding. In Mysore and Madras states they are included in the generic name Kadu Kurumba. The census report of Madras and Mysore in 1891 and that of Madras in 1901 confirm that there is no difference between Jenu Kurumba the former name is popular in the Telugu and Kanarese speaking areas; the latter and the alternative name Kattunaikkan in the Tamil and Malayalam speaking areas. They are seen in the deep forests of the high mountains of Kidagannad, Purakadi, Pulpally, Noolpuzha, Maruthenkara, Tharuvanna and Nallornadu, Kartikulam, Masalbetta (Begur range), Chempara peak and Nathapuram. Great numbers confine themselves to the high mountains, and only stray individuals, who have left their primitive clans, are seen in the developed areas. They have nothing in common with the Urali and Mulla Kurumans though they are all included in the popular generic name Kuruman in Kerala. Kattunaikkans are physical features have they are tall, long armed and black-skinned tribe with curly or wavy hair.¹

The native Advasis mainly consist of various sects of Paniyas, Kurumas, Adiyas, kurichiyas, ooralis, kattunaikkans...etc. They have their own special life styles, culture, customs, traditions and religious practices. The tribals do not have a written script. Their history can be traced only through their oral traditions and religious practices. As a result of the changes taking place, even their practices are becoming extinct. Now a day many tribals blindly follow the modern culture. As a result they are losing their unique culture, land, language etc. In the past, these tribes were simply hunters and food gatherers. Forest has been their traditional homeland. Each group had its own territory in

which its members produce for exchange. Such a territory was often quite extensive because the survival of such a group mainly depends upon the produce that the nature offers by itself. The forest dwellers found wild growing fruits in trees and edible roots and tubers in the jungle to supplement their food. The forest also collected honey, medical herbs and other minor forest produce which they could sell, or barter in the weekly markets or exchange centres. They hunted in the jungle and finished in the river that flow through their habitat and could supplement their vegetarian diet with meat. Slash and burn cultivation was an integral part of the tribal economy. The tribes that preferred shifting cultivations always lived with the forest alone and found ample time and leisure to get away from the full routine of monotonous farm work through hunting or fishing or the collection of jungle produce. The tribal life was eco-friendly in character. On the other ensures that the forest is protected against depredation by man and nature.

Oor (House, Colony) (Mane - Home)

The Kattunaikkan live in uni-ethnic settlement called oor in government records, now it is called colony. Kattunaikkans have the most disappointing type of huts. They are one lone, but very low, and the floor is level with the ground. The sides are of flattened bamboo, and the roof covered with straw or grass often the Kattunaikkans live under wind-breaks resting against a tree or in the hollows of trees. During a recent survey many were noticed to live in the open all day long, and to sleep round a lighted fire at night. They do not have the community halls that are the popular with the Uruli Kurumbs. They recent anyone, entering their huts with leather which they consider as polluting. Those who use it place it outside the hut before entering. Nuclear family is the common type of family among the Kattunaikkan size of the household varies from small (one to five) to large (nine and above). They follow patrilineal mode of descent and succession, and patrilocal residence pattern. The consists of 10-20 house of a Kattunaikkan is a hut consisting of only one room which is known as veedu.

The walls of the hut are built, with a suitable quantity of paddy husk mixed with clay.²

But now, as a part of the schemes for modernizing tribals, most of them are rehabilitated in the houses of modern types built by the government of Kerala. Most of these houses are electrified and many have the modern amenities like T.V, radio and telephone. A very few live in their traditional caves and houses. Destruction of forest has affected the traditional home construction. Their traditional household articles are replaced by steel, aluminum, and bronze, plastic, and fiber materials

Language

The common language of Kattunaikkan is an own language it is also mixed Kannada, Tamil and also Malayalam language. But they have not a written language it is also related to an oral language but Luiz states that they speak a dialect of their own called 'Nayakan's which is unintelligible dialect of Kannada with a good admixture of Tamil, Malayalam words and phrases and that they have no script of their own. Now they began to use the Malayalam script.³

Food

The Kattunaikkans eat all types of Karalite food now. The Kattunaikkan are non- vegetarian, but do not eat beet (now many have started eating in privacy). They consume gathered food such as wild tubers, roots, leaves, seeds, fruits, meat and fish, rice, vegetables, dry fish, pulses, grains bought from markets also become a part of their diet.⁴ Both men and women chew tobacco, betel and consume alcoholic drinks. Smoking beedis and cigarettees is common among men. The coconut oil is the medium of cooking. The consumption of fruits, wild tubers, roots, leaves and meat is on the decrease as forest clearance has taken place in all parts of Wayanad.⁵ In the past, earthen pots and bamboo were used for storing and cooking food. But today, they rarely use earthen pots. They do not make domestic utensils themselves but buy from markets. The market economy and consumerism have changed their life.

Marriage

Marriage is known as Mude among the Kattunaikkans. In an arranged marriage, the

Mudali (clan chieftain) is informed first and in his presence bride - price (Kana hana) is given to the parents of the bride. Two pieces of cloths a sari (Chela), dothi (Koramundu), rice and cash are also given. The boy sleeps in that house and if he is well after that marriage is fixed. If the boy falls sick marriage is not performed and he chooses another girl. Marriage is not performed and he chooses another girl. Marriage budge (Mudathali) is tied by those who are well to do. In the case of elopement, if any one of them, boy or girl, falls sick, the reason behind the illness is sought through divination (adikkadi) and through oracle (tirpa). In some cases, the girl is sent back to her houses, if decided through divination.⁶ In the present they are imitate hindu model wedding.

Orage Akkadu (Menstruation Function)

The puberty rite of Kattunaikkan is called Thirudukalyunam or Narda or Naidmeevad. Seven days pollution is observed during menstruation by the Kattunaikkan. The girl stays in the seclusion hut (Tindalpara) during menstruation (Orageakkadu). On the seventh day, she takes a bath and brings cow dung water is sprinkled (tuppisalladu) around the house in the settlement (padi) and cowdung paste is smeared (manasarasadu) on the floor of the house. During the seclusion period, she is not supposed to go near their temples, other sacred places, gardens and crops. She can resume her duties on the seventh day after the purificatory bath in the morning (otharahira todalumiavadu) and in the evening (bayinera) puberty ceremony (narda) is celebrated by the kaltunagikau very elaborately. When a girl attains puberty, the clan leader or the settlement, a hut (guda) is erected where the girl is secluded for seven days along with another girl for these days. Turmeric paste (manjal) is smeared on their body every and their dress chela) changed on alternate days. Undergarments are not be used puberty ceremony (nardamude) is arranged usually on the seventh day. An arrow is held seclusion period. The mudali is paid money (Mudehana), and in kind for the duties performed.⁷ During menstruation time the tribal women are use of pieces of clothes. But the modernity the government constructed a bathrooms for tribal hygiene and also that provided a 3 rupees of pad.

Death Occurs

When a death occurs in Kattunaikan house, the Mudali is informed first. He comes and decides other connected activities to be performed close relatives of the deceased person living in other settlements are informed of the death (Saver). The body is given a hot turmeric water bath. A person is sent to bring a crab (nelli), two kinds of tree barks and a leaf. Once these are brought, the body is given bath. The Mudali pours water first and then Mudalis wife, followed by others. Coconut oil is smeared all over the body and new dress is put on (Savu Chela). Body is adorned with bangles, rings and flowers if female, and a ring is put for a male. A cadder bier is made in bamboo poles and the body is kept on it. 25 paise coin (Kalrupa) is kept in the mouth of the deceased. Paddy and ragi in certain quantities are tied in a cloth and kept on the shoulder on the Mudali, who holds a stick in his hand, called Badukka.

The body along with bier is brought to the bewail place. While walking the Mudali throws away the grains (danasallada) from the bundle. Some are thrown on the body too. It is done thrice and each time the Mudali sits on the bier with his stick. Before the body is brought to the burial spot, it has to be kept in the ground at three places. The headman marks the spot of the burial pit using Badakka. The dig a pit of three feet deep and another cavity (alla), of 'L' shaped is made towards the side. The body is pushed into the cavity. It is reported that they have peculiar rite at the graveyard. The soil from inside the grave should not be left unused. It was to be filled over the grave. They call their graveyard Chodalai or Chudumalai and the side cavity as Hoddamannu. Along with the body, all belongings of the deceased like dresses, tools, utensils, betel box etc. are buried, the weapon used for digging pit is also buried. They do so to be relieved from the disturbances of the spirit of the deceased. In the children, breast-milk is placed in a kumbil near the head. If it is women a ring on finger (ungar) and and a chain (Malai) around the neck, nose ring, bangle etc... are buried. In the early days a pandal is built over the grave. A ring is tied on a tag and jenmudeva the chief morner encircle the grave seven times and murmur the reason of the death. It is called Daivomthulal.⁸

Worship

The Kattunaikan worship the sun and moon. They also worship a legion of deities. They propitiate ancestral spirits. The Kattunaikan deities name induce, Thampurati, Karimal Thampuran, Gulikan and Mariamma, and the spirit of the dead ancestors are called Ethachan (Male) and Ethachi (female). Their religious beliefs are to part of their life. Their main deity is Mala Daivam. To obviate a spell of disaster caused by evil spirits they evoke the Malai Daivam. from the very early periods there have been several points of contacts between the Hindus of the area and the tribal community living within it. The nature and extent of contact vary from semi isolation to complete assimilation. Most of the tribes would like to introduce themselves as Hindus. They use Hindu names, visit Hindu temples and make offerings, worship Hindu gods, and celebrate Hindu festivals. Many of the tribals have no shrines of their own.⁹

Dress and Ornaments

The Kattunayikkan used to put on tree leaf as late as early forties. Now they have started wearing cotten clothes. The men use a small bit of white cloth reaching upto the knee. But they have own model dress style. The women also put on a short cloth (selai) covering the lower part of their body and there are also use blouse. We can see that the contemporary period the Tribal people are also changed their culture and practices. Their also imitate the other people means that higher castes.

The tribal group 'Kattunaikka' lives in the tri-junction of Kerala, Karnataka and Tamil Nadu states, belongs to pre agrarian civilization and traditionally they depend on hunting and forest goods gathering for their livelihood. Economic disparity and saving habits are high among non- traditional group. Social interaction is high among non-traditional group. So that, they are able to, make use of educational facilities and other welfare programs. It also leads to active political participation. Traditional group still keep on their culture like dressing, language, rituals etc. But weakening of traditional culture is visible among non-traditional group. Circumstances made them unable to pass on traditional knowledge like folk songs, dance, and language etc. the tribal transformation can be Divided into two: traditional and modern. The traditional process

is characterised by the impact of certain traditions of great communities on the tribals. These processes are explained in the concepts like Sankritization, Hinduisation, Universalization and Parochialization, etc. The modern factors include urbanization and industrialization, tribal development schemes, modern education, modernization of communication and administration, and the like are of recent origin, and the external factors that do not emerge as a result of normal contacts of the tribal people with the non-tribal people of the area.

But now, a general restlessness is taking place among the tribals of the region as they are passing through a period of transition. Their tribal tradition is now losing its purity and originality and is either being dissolved into the mainstream or being swallowed by non-tribals. Their social, economic, religious and cultural aspects are undergoing changes and they face the problem of identity crisis. In the modernity view the urbanization also change to the tribal life situation. Their also imitate a modern life.

Dr.KALAINAR M.KARUNANITHI, THE DRAVIDIAN PIONEER IN WOMEN EMPOWERMENT

K. Nawazbanu

“Not many politicians in India can claim that they have led a great life. But Dravida Munnetra Kazhagam (DMK) president and former Tamilnadu Chief Minister M.Karunanithi could do so”.¹ He was born at Thirukkuvalai village in the then composite Thanjavur district on 03.06.19924As a Chief Minister for five times, M.Karunanithi executed a slew welfare and security schemes to empower Women. The launching of the South Indian Liberal Federation popularly known as Justice party in November 1916 by Sir P.Theagaraya Chetty and others to promote socio-economic and political interests of the non-Brahmins was the nucleus of the Dravidian Movement. In the beginning, its aim was to give importance to the grievances of the non-Brahmin community, which was lagging behind the Brahmin community in all aspects such as employment opportunity and promotions. By the first half the twentieth Century, society of the Madras presidency was divided into two major segments: the Brahmins and the Non-Brahmins. Brahmins formed just 3.2% of the total population, the microscopic

minority, But wielded maximum powers enjoying privileges and prerogatives². Dravidian politics has developed by associating itself to the Dravidian community. The goal of the Dravidian politics was to achieve social equality.

In 1925, when Periyar started the Self Respect movement, it wanted to establish a casteless society by caste discrimination, superstition and Brahmin domination. It also stood for the emancipation of women and gave its support to Inter- caste marriages and widow remarriage. Further, it demanded to provide equal rights to women. Periyar E.V.R. the Dravidian pioneer, vehemently sought for the emancipation of women during his lifetime. He considered that women were in no way inferior to women.³ The objective of the Self-Respect movement was a casteless society and complete equality for the masses. This was to be achieved by the eradication of social evils and freeing society from the shackles of superstitions and blind faith in God and religion. It fought for equality of women in education, employment

and property rights. The Dravidian movement was successful in allowing women to express themselves on a public platform. Women successfully debated on public issues and were involved in social work and were on a par with men in bringing about social reforms. The entire credit for bringing about this change goes to Periyar. It was further carried out by his disciples who formed the government with the Dravidian ideology in 1967.

The persona of Kalaignar is unique but the pattern involved in his making was the inner design born out of the social awakening championed by the self Respect movement of Periyar E.V. Ramasamy, and his assiduous, determined campaign against the brahminical caste hierarchy. Of course, not only C.N. Annadurai and Karunanithi, but any one schooled in the periyarist ideology would have had their agenda cut out to achieve that. Karunanithi never failed to acknowledge Periyar's contributions to society and his influence on him in politics and governance.

Karunanithi and Women Empowerment:

The multitude of transitive identities that the Brahmin could straddle was the basis on which Ramasamy rallied a number of interiorized subaltern identities against him. These identities included those based on gender, occupation, language, and region. For Ramasamy, Sanskrit, treated by Brahmin as a sign of Hinduism and part of their self-making-not only led to the degradation of lower castes but also women.⁴ The Self Respect Movement made special efforts to initiate its women leaders and young cadres into public speech. Periyar emphasize the need for women's right to property, women education, employment, etc.,

Karunanithi, as Tamilnadu Chief Minister for Five terms, Launched several Schemes aimed at building social equality. The empowerment of women ultimately depends upon Employment status literacy status and political status.

Education of Women:

Education to women is the most powerful instrument of changing their position in the society. Education also brings about reduction in inequalities and also acts as a means to improve their status within the family. In order to encourage education of women at all levels and

to dilute gender bias in the provision and acquaintance of education, schools, colleges and even universities were established exclusively for women in the State.

Periyar stressed that compulsory free education should be given to the school children. Congress ministry under K. Kamaraj also gave importance to free education for the age of 6-11 in 1966. Subsequently, the D.M.K. ministry under M. Karunanithi paid much attention to the expansion of primary education by which the enrollment of pupil in age group 6-11 was raised 92%. To attract the girls to school premises, the D.M.K. Government provided the clothes on addition to Mid-Day meal introduced by K. Kamaraj. every year 2 sets of dresses were supplied free of cost to all girl student irrespective of community who were studying either in Adhi Dravidar Welfare Schools or residing as boarder in Govt hostels run by the Department⁵.

To promote the education of girls and to discourage child marriage, the D.M.K. Government introduced Residential Scholarship for unmarried Hindu and Muslim girls. Karunanidhi Government had much concern for the rehabilitation of widows. It provided 21 scholarship to Hindu and Muslim widows Who studied upto XI of secondary schools.

To bring the girls belonging to hill tribes in the Nilgris District in Standard IV and V to school the D.M.K. Government introduced awarding scholarship to those girls in 1968-69.

In his third term (1989-1991) he gave a grant of Rs,5000 for the marriage of girls from poor families who had completed 8th standard and thus tactically ensured minimum education for girls. Free education to Dalit girls up to the graduate level subject to an income ceiling was the another scheme which benefited the marginalized section of society.⁶ Periyar said that the purpose of education was to equip a person either to live independently throughout his life or to have virtuous life in the world⁷. Moovalur Ramaamirtham Ammaiyar Marriage Assistant scheme and E.V.R. Nagamaiyar free under graduate schemes were the another notable features of the D.M.K. Government towards the progress of Women Education.

Rehabilitation of Widows:

Property Rights to the Women

Women's right to property has been recognized as an important development issue. Property rights for women can have an impact on decision making, income pooling, acquisition, and women's overall role and position in the community. Moreover, land is a critical resource for a woman when the household breaks down; for example, in the event of desertion by husband, abandonment, divorce, polygamous relationships, illness or death.

Women's right, to access and control over property, is determined through women's overall living conditions, economic security, and physical safety. Gender discrimination is related to lower per capita income, life expectancy, and literacy. The problem of gender inequity is due to the deep cultural bias against women. Women for long have been subjugated in property inheritance. This has become a major concern in creating a right balance in gender equality.

To fulfill the ideas of periyar on property rights of women, the D.M.K Government introduced the Land Ceiling act in 1970⁸. According to the act the farmer should possess only 15 acres of land as a maximum limit. Both the father and the son could possess only 15 acres of land separately on each, if the son was living in a separate family. At this juncture, the then Chief Minister M.Karunanithi announced a provision that the father may donate or gift his own daughter acres of land in accord with his whim which should not exceed the ceiling and yet, this gift to the daughter would not be taken into the father's account of land he possessed.

Following the footpath of periyar's ideologies K.Karunanithi wanted to empower women by providing them an opportunity to obtain land property from their father, he Amended the Hindu Succession Act, 1956, in order to provide equal property rights for female children on par with male children, to establish Gender Justice. This legislation was an attempt to mend the attitude of male chauvinistic Society and it was a silent and strong revolution.

Welfare Programmes for Women and Children

The well-being of women and health of children are the real index of the progress of a society and the nation. The women and children

together constitute the 15% of the population of a nation. Hence, nation while planning for the future cannot afford to overlook the welfare of the women folk, and children. The progress of the nation largely depends upon the progress of women and well-being of the children. Realising this, the D.M.K. formulated certain policies. Department of Social Welfare was formed in 1972 and the Director was referred to as the Director of Social Welfare Department. This department focusses its activities not only on education and rehabilitative aspects of women's and child welfare but also on Burma and Ceylon Repatriates, beggars and leper

Widow Rehabilitation

Widow remarriage was encouraged by presenting incentives in the form of National Savings Certificates to both husband and wife to the value of Rs.5,000/- to be held in deposit for seven years. The scheme, was restricted to destitute widows in the age group of 18-30 years. This scheme was announced on the 52nd birthday of M. Karunanidhi, the then Chief Minister (1975) of Tamil Nadu. During the year 1975-76, 92 couples were provided with financial assistance amounting to Rs.4,60,000.⁹

Further, under this scheme, one thousand sewing machines were presented to thousand destitute widows in the age group of 18-45 who had been trained in tailoring in the institutions run by the Government or other recognized private institutions

Family Planning

To help women plan their family according to their economic means and to promote the health of women by avoiding unwanted pregnancies and children, the family planning campaign was stepped up by the D.M.K. The propaganda was done by the Gramasevikas, Mukhyasevikas, Women's Welfare organisers, maternity assistants and other technical persons. Family Planning Training was given to Mukhya Sevikas and Grama Sevikas and to all Women's Welfare organisers in their respective district headquarter

Employment Opportunities for Women and Political participation of Women:

During D.M.K. rule (1970-72) there were 5,835 graduates, 27,295 matriculates and 46,052 Non-matriculate women teachers. A sum of Ten lakhs rupees was sanctioned in 1973-74 for providing quarters for women teachers in rural areas. 1,568 quarters were constructed from the commencement of the scheme.¹⁰

It was during the DMK regime in 1973 that women were inducted into the police force. Karunanithi also laid emphasis 30 percent reservation for women in Government jobs and in public sector enterprises, changed the very profile of employment in the state, which in another decade or so would make marked strides in man-women employment ratio in government offices.

Political status of women can be defined as the degree of equality and freedom enjoyed by women in sharing of power and in the value given by society to the women. Women's political background shows that they are far away from equal along with men¹¹ Thirty three percent reservation for women in local bodies has paved

way for 40,000 women became representatives in local bodies

Empowerment of women means uplifting the status of women by increasing their educational and employment opportunities and legal rights .In short ,it is to make women to participate in decision making at all levels viz., in the family, in the economy and in the political process. thus Periyar's wishes of empowering women were translated into action by the one of pioneer of Dravidian movement Dr,Kalaigar M.Karunathi, into action continuously. Karunanithi modeled his welfare policies on Periyar's thought achieving an egalitarian society and he pursued this social agenda methodically and cautiously and in a nuanced manner, like his mentor Annadurai. Rationalism in governance was what Periyar Mooted. But Governance with rationalism was what Annadurai and Karunanithi pursued. The Karunanithi era was successful in empowering the women.

HEGEMONY AND LANGUAGE IN THE LAND LORD-TENANTS RELATIONSHIP: THE NADAPURAM AGITATION OF 1970

E.M. Neethu Chandran

The relation between language and hegemony has for remained subject of enquiry in various field of social science, linguistics and philosophy. The subject has been analyzed from a variety of analytical and philosophical perspectives with in the specific, social, Anthropological, historical, economic cultural and political context. Owing to the complex and dense interlinking between language and power, number of field and subfield have emerged

focusing on this relationship with the never methodological approaches and thematic concern. They have established zone of multi-disciplinary foci to the field. The relationship between language and history, Language and society, Language and philosophy, Anthropology etc have continued to occupy scholarly attention in all major discipline of social science through all the world.¹

It is an important to explore and examine language and power they mutually reproduce and reinforce scale of social hierarchies' of political power, culture, ideology, power economy and politics. The problematic of language questions needs probe into the deep structure of relationship between language, history, culture, ideology, power, economy and politics. The language question should take to the account of ideological power of language and various form of domination and subordination. Ayisha Jalal has rightly point out that the role of language as culture and ideology in the politics of South Asia has remained curiously understudied.² She underline the need to problematic and conceptualize the language question not simply in terms of linguistic loyalties, consciousness, geo-linguistic boundaries and region but it situate historically. Internal dynamics also played out between language and territory, language and caste, language and caste etc. According to Washbrook the new ideology (Modern Linguistic Territory) dictated that territorial space must be culturally or at least linguistically homogenous and thus become a society of language with in their distinctive world view.³ Those habits and potential for creating distinctive socio-cultural formation necessary for the idea of national communities and their identities.

In India territorial location and distribution of castes and language can be considered as significant base for defining the cultural region. Regional identity based on linguistic affiliation can at time marginalize the dominant caste identities and affiliation and thus create "Paracomunities" of those speaking at the same language or a dominant speech of the region, caste distinction and thus create paracomunities of those speaking the same language / dominant speech of the region. Caste distinction are used to dominate sphere of purity and impurity, high and low level of speech.

The development of Malayalam language is not through a popular consent. It is a power language unbreakably connected with the expansion of caste system (According to P.K Balakrishnan) one among the powerful sign of the culture language on a large extend used as a tool to exploit or influence the subaltern or submissive.⁴ We evidently witness these

changes in the form of the entry of National language Hindi and Global language English to our Cultural sphere. Like this a caste language or dialect formed in strongly caste deep rooted Ancient Kerala against subaltern dialects. In Kerala most of the untouchable castes and sub castes used their on local dialects. Eg. Panars, Parayars and Some tribal Groups. There is a vivid spontaneity language like Kuzhalu {Rice}, Kotha, Chitta, Kudil, Maadam {House}, Minipala {Gold}, Meyvu {Face} etc. The mainstream society Hardly tried to eliminate the language traits of Tribal language but still they exist like as before. The language experts and Historians believes that these dialects have diverse versions. "Whose language is Malayalam language? This relevant question was raised by Renowed Historian 'Illam Kulam Kunjan Pillai ' in his famous book 'Bhaashayude vikaasa parinaamanga'.⁵ The standardised malayalam is the language or dialect which is used among the so called Nair community or upper class sudras And due to his casteism he never termed or consider the language of Pulayas and Parayas as Malayalam language He Himself believed that their local dialects are degraded as an extension of his casteism.⁶

Nadapuram is situated with in the geographical extension of Kuttippuram Kovilakam.⁷

Nadapuram developed as major center of trade. It was the land based economic integration which ensured their amicable social relation with the upper caste Hindus in Nadapuram. In this rural interior, Muslims new status as landlord by the 18th century gave them a new socio-economic status along with a sturdy sense of social hierarchy. When the Muslim became a landholding community in the region from the late 18th century, the Thiyya remained as kudiyan {settled tenant cultivators}.⁸ As the caste boundaries were redefined with specific rules of purity and bodily engagements, Nair treated the Mappilas as purer and admissible, while the Thiyyas were kept out. During the period of 1970's there is conflictual times, number of agrarian and land lord struggles happened in those area. A Kanaaran is praised as the leader and organizer of the life struggles of subaltern'.⁹ The life plight of subalterns were really miserable and hardly afraid on the matter that those untouchable subaltern castes will

deteriorates the purity of Malayalam language. The subaltern women and men who were working in the fields of land lords were called as 'chekkan' and 'Pennu ' respectively.¹⁰ Their salutation to the land lords were 'Thambra' (means owner superior or Leader). Porridge which was given in the leaf of palm was their lunch. Drinking water were given in the nut shell. They do their job with meagre wage or wage like and treated like slaves all the comforts were denied to them.¹¹

A Kanaran provided them a greater amount. Self-esteem and the sense of rights which were denied to them. Kanaran make them awarded that job must paid your wage is your right not the mercy of land lord and it must not be denied. when the time getting progressed protests getting started among the Adivaasees at the Hilly Areas and they reminded that they Have their own name and don't call them 'Chekkan and Pennu. They raised a slogan 'Decent wage decent behavior. This resulted to violence .upper class people said that lower caste must follow certain do's and don'ts while they saw an upper class one they were not allowed to the front seat of the tea shop, subaltern women were subjected to molestation

of upper class men. leaders like A Kanaran E.P Kumaran, Kelu Eattan, E.V Kumaran Master, Valayath Pathmanabhan and Manakkal Kunjikkannan etc organized conventions protests unions etc. and the land lords were reacted against this eventually made the Hilly area 'A land of the protest'(vaanime).¹² Detailed deliberations were made under the unions regarding job time wage and the code of conduct between landlords and tenants. The immemorable 'wage proclamation were Happened Vanime by K.S.K .T .U. In this convention A. Kproclaimed wage service provisions. Unions distributed notices against the 'Chekkan 'Pennu' salutation of land lords.¹³ It was reflected when Kunjiraman, a Thiyya Congress sympathizer was killed in 1973 by henchmen of Pramani Muslim of Vanime on the issue of Koolitharkkam issues. This struggles ends with the salvation of upper caste phenomenon of language supremacy. Those enriched new way out look for the salvation from the complicated history of the caste, pattern of economic mobility have been there three most visible agentive and determinants in the making of conflictual times.

LOCATING "NEW" INDIAN WOMEN IN THE MODERN ANDHRA: A CASE STUDY OF DAMERLA RAMA RAO'S PAINTINGS

Neha Gautam

The idea of colonial modernity was not limited to social and political arena but it was taking over the indigenous art and culture too. British colonial regime has a huge impact on the transformation of Indian art in the 19th century. It was not confined to the dissemination of western technology but their ideas and

influences on art played a key role in the transformation of indigenous art and culture. Some scholars have seen the other side of modernity which played a negative role and degraded the whole value system of India along with the art and culture. Popular art historian Ananda Kentish Coomarswamy have

emphasized on the uniqueness of Indian art forms which was depreciating in its values and meaning during colonial time period. Ananda Kentish Coomarswamy therefore, in his work looks at the negative impact of modernization on indigenous art form. He advocated the traditional arts and crafts which led him to contribute in the theory of Indian art and culture which according to his belief was at its best form in the ancient time period and with the imitation of western society and corrupted mindsets of Indian people along with the coming up of modern education and technology has degraded the whole ancient traditions, art, culture and value system.¹ Therefore, he was the pioneer theorist who took the responsibility for introducing ancient Indian art to the West. Art in Andhra region too was developing along with the continuing trend of the development of art in India. The Coastal and Rayalaseema Districts before the formation of the state of Andhra Pradesh were included in the Madras Presidency while the rest of the Andhra was a part of the Hyderabad state which was under the rule of Nizams. Rajahmundry, Machilipatnam and Hyderabad were main cultural centers where the art developed in a dominant way. Rajahmundry was a popular town which gave many valuable artists to India and it has been a center for cultural and traditional activity during the 18th -19th century with the economic and commercial growth due to the construction of Godavari anicut at Dhowleswaram which paved the way for emergence of middle class in Rajahmundry. The new education led the upliftment of society thus opening up for the social reforms too. It came up with the art school too which led the depiction of rural Andhra, its culture, customs and traditions. But the theme with which Rajahmundry caught attention was its ability to depict the society well in the work of art. There was a conscious effort by the artist visible in creating individual distinct work. The themes ranged from portraiture, landscape, folk idiom, still life, tantrism, abstractism and symbolism. Sufficient liberty was given to the artist which enabled them to express themselves and their opinion. It therefore led to experiment them in newer medium class in Rajahmundry. The new education led the upliftment of society thus opening up for the social reforms too. It came up with the art school too which led the depiction of rural Andhra, its culture, customs and traditions. But the theme

with which Rajahmundry caught attention was its ability to depict the society well in the work of art. There was a conscious effort by the artist visible in creating individual distinct work. The themes ranged from portraiture, landscape, folk idiom, still life, tantrism, abstractism and symbolism. Sufficient liberty was given to the artist which enabled them to express themselves and their opinion. It therefore, led to experiment them in newer medium.

One of the specific features of colonial modernity that I will look upon is the use of gender as a mode of self-fashioning, social understanding and public critique by the intellectual class. The late 19th century was the period of emerging nationalism and the imaging of national communities and it is interesting to note that women's status became the main focus of the reforming activities by the colonial state as well as for the educated Indians.² To a large extent, it was the result of a comparative civilizational discourse of the colonial period. It was mainly on the question of women that the Indians were largely attacked by the western observers as well as by the colonial regime. The socio cultural activities with more emphasis on colonial modernity during the 19th century played a crucial role in reshaping the identity of "new" Indian women. Women became the main concern for the social reformers and there was kind of evident change on how women and their identity were perceived. Women for the first time explicitly came out of private space of household to the public space. The whole process of emancipation of women from age old traditions and cultural practices caught attention of many reformers when India was at the peak of reformation due to social consciousness and awareness. There were certain class which got them attached to this whole women movement in redefining and reshaping them and thus giving voice to the women. But this was done by the elite upper section of society who led the movement from the front. There were various methods adopted during the 19th century to raise the women concern and this was primarily done through the movements only. One such popular medium which caught attention of many scholars was through visual art which is through paintings, magazines and print media. Many painters during the late 19th century picked up women as their dominant theme in their main

artwork and there was a kind of change in their piece of work too. So not only political and social reforms were responsible for the change in women identity but emerging new Indian art successfully led the idea of new women from upfront. It is very interesting to see work of many popular painters who had portrayed women on their big canvas in many dimensions. Many a times this art work has been challenged and not accepted in mainstream public domain which led to widespread agitation too and they were being questioned on adopting western ideas. Women therefore, came to be interpreted in work of art according to painter consciousness and his ideas or skill guides the representation of women. For so many centuries, artists have celebrated the feminine curves and appreciated her body language which in turn ensured that the women are appropriately communicated in a work of art. During the 19th century the appropriation of women differed from an artist and sometimes it became conflicting idea when the representation did not gain acceptance among the audience. As the society was changing so the zeal of an artist to represent "new" Indian women urged him to break the shackles of the past and therefore the new concept of representing women in a more open form in terms of expression was evident in their work. Therefore, even sensuous nude women and intimate sexual scenes gained place in the work of many artists. The work of one such artist from Andhra named Damerla Rama Rao and his work of art and how he interpreted women in his paintings in the early 20th century is interesting to look at.

Damerla Rama Rao was only a painter of landscape and nature studies but after admission into the J. J School of Arts, he took to human figures too. He made a rapid progress in understanding art in a way that no one other could. He understood the rhythm of the human body as fast as no other companion in his class could. As a student of O.J. Couldry and J.J School of Arts, Damerla Rama Rao worked profusely on academic oriented art laying emphasis on realism, rather than creativity. But his acquaintance and understanding of the mission of artists in Bengal school foresaw a new change in this artist in the later years that later Damerla began to work on a kind of art which would seem to highlight the society in which he was living. Vital role in this regard

seems to have been played by Andhra society for Indian art which was a common platform for artists to exchange ideas on new art. Along with the excellence in landscape and nature, he came up with the paintings of surroundings too drawing inspiration from the daily lives. With no elaborate ornamentation, the works of Damerla was in the simple form and his knowledge about colours added to the artist's mastery of skill and technique. Rama Rao's more popular art was his work on social themes and what made them distinct from other artist of contemporary time was the simple representation which had the ability to connect to wider non literate masses.³ The murals of Ajanta and sculptures of Ellora seem to have fascinated the artist. A series of works on Ajanta and Ellora highlighting the Indian creativity and beauty were done. His work Ajanta Sundari attracted a number of writers and artists of the time. The work of the series were neither realistic in nature nor they were copies of the murals in totality but seem to be a culmination of creativity and ideology of redefining Indian art. Along with the excellence in landscape and nature, he came up with the paintings of surroundings too drawing inspiration from the daily lives. With no elaborate ornamentation, the works of Damerla was in the simple form and his knowledge about colours added to the artist's mastery of skill and technique. Rama Rao's more popular art was his work on social themes and what made them distinct from other artist of contemporary time was the simple representation which had the ability to connect to wider non-literate masses. Damerla major work in painting as an artist began in 1916 with pencil sketches and water colour paintings in Rajahmundry itself.

Women occupied central place in the work of Damerla Rama Rao's work after certain period of time may be because he felt the need to give voice to the women. The position of women in the 19th century superstitious Hindu society was deplorable and their status remained same for many decades till the need for empowerment was properly understood. Deep rooted evil social practices in Andhra society like child marriage, enforced widowhood, nautch and kanyasulkam along with regressive hook swinging and fire walking made the women even more vulnerable in Andhra society.⁴ She became an object of contempt and ill treatment. The social reform work in Andhra took off in the second half of

the 19th century which was closely linked to the effort of Kandukuri Veeresalingam who is hailed as "Father of renaissance movement in Telugu". He also came from the same place Rajahmundry as that of Damerla Rama Rao. Kandukuri had a strong believe in the youth who extended full cooperation and support to all his reform activities and became his staunch followers. He constantly fearlessly worked hard in creating awareness and social consciousness among women. He relentlessly worked for the emancipation of women in Andhra and engaged himself till the end in a campaign against ignorance, prejudices and superstition in the society. This was the time when Damerla associated himself to the cause of women gaining insight about the miserable condition of women still trapped in the orthodox chains of traditional society in the early 20th century and the medium through which he expressed was his paintings. Therefore we see a transition in the work of women being portrayed by Damerla and the adoption of bold representation of new women. The initial inspiration he drew was from his wife itself. He started painting Satyavani portrait and then came up in 1924 with the work called "Nagna Sundari" which he defined as the innocence in the nudity. He also came up with the work depicting social gathering of women in daily life. One such was "At the well" where women from all caste and class are shown coming up together which was a typical scene in Andhra. His paintings were accepted widely among the masses and he definitely made a difference in the thinking when the progress of the nation was equated with the upliftment of the women. Rajahmundry became the center of social reformers activities where women education was emphasized who eventually became free from the stranglehold of traditions and superstitions. There was a rapid progress and enlightenment among the women with the increase in schools and colleges catering to all sections of society enabling them to enter into the public arena too. There was a welcome change for empowering womenfolk of Andhra and it was done in all way possible.

Damerla Rama Rao aligned his work with the reform movement which was at his peak during the early 20th century and his themes revolved around the women exclusively in the later period of his artistic career. The depiction of women, their dress, ornamentation and reform

movements were all part of the cultural tradition prevalent in the society then with which Damerla started and then there was a visible shift in the depiction of women too in his paintings. In the later period nudity gained prominence in his work which was an attempt to portray women in a different form. Damerla emphasized on the social acceptability of women and therefore his painting went away from the mainstream portrayal of women in the later period. Damerla was conscious enough to bring women from every background into his work ignoring class and caste distinction. Damerla's effort is evident in creating painting reflecting not only Andhra women but the critical condition of entire womanhood in India which needed emancipation from old set traditions and belief is worthy of praise. This also shows that Andhra society was changing and people were accepting reforms. Artist played an immense role in creating awareness among the society as their work had the power to communicate to each section of society. Any work of art had the feature to communicate even to non-literate society.

To conclude Damerla Rama Rao is considered a world renowned artist of yester years who made a significant contribution to the enrichment of art forms during the period of Revivalism of Indian Art. He left behind the rich legacy of 442 sketches, 76 colour paintings and 14 oil paintings based on present records.⁵ The saddest part lies on our part for not being able to preserve his paintings well. Many people, school visits and ardent lover of art are visiting the art gallery frequently to witness the work of the great artist of the Andhra but what is really sad is to see many paintings lying aside due to lack of space. The gallery being located in the heart of the city failed to achieve any development and thus history in this way is gradually getting lost due to our insufficiency to preserve the limited sources well in a best possible way. But looking at the paintings of Damerla in his gallery truly take us to the time back when Damerla had the courage to pick up his brush to vent out his feelings against the social evil openly on the big canvass. His work of art had tremendous effect at an instance in one go on any individual which leave him awestruck with the huge voluminous work he created. Each painting has a story to tell and a strong message to convey. His service to Andhra was immense

and cannot be reciprocated. His distinct contribution made to modern Indian art earned him worldwide recognition and therefore, Damerla Rama Rao was hailed as the founder of Modern Andhra Art who within few years of his short artistic life achieved the connecting link between academic, classical and neo-Bengal styles remaining totally dedicated to Indian

tradition and soul which is quite impressive in its expression. Each paintings of Damerla have the power of persuasion and conviction among the masses. Therefore, Damerla Rama Rao enjoyed great popularity with hero cult back then in the early 20th century and is still considered a celebrated artist of that era.

HISTORICAL SETTINGS OF KOLLI HILLS

Dr. G. Palanivel

Kolli hills captivates the attention of people of different walks of life. Kolli hills is referred to in *Sangam* classics like *Nattrinai* and *Kurunthogai*. In the history of South India, Kolli hills plays an important role. The *Sangam* work *Nattrinai* refers to the plains around Kolli hills as *Kollikkutram* and it served as a border between Kongu and Chola countries. During the early centuries of the Christian era it is felt that this hill was under the control of *Malavar Adhan Ori*, a renowned ruler and one among the last seven philanthropists of *Malavar*. The *Perunchittirarnar's* statement "*Kolli Anda Val Vil Ori*" (Purananur, 158:5) refers that he was an expert archer and as a result he was hailed name as *Val Vil Ori*.

From the references available in the *Sangam* classics, one can understand the fact that the Chera ruler subdued the Kolli hills after his victory over Ori. There are evidences in *Silappadikaram* to prove that Kolli hills became a Chera territory after *Irumparai* and after 9th century due to the victory of Cholas it became a part of the Kongu country. Tamil literature *Padiitru pathu* speaks about the rule of the Kolli hills by the Chera ruler.¹ *Kollimalai copper plates* were discovered from the Kolli hills region. The copper plates mention a king by name *pon madathu anda manimudi* maharaja. The epigraphical source refers to a king

ponneripanma. Both the records cited above can be paleographically assigned to the early tenth century A.D, *Sundara Chola* (975-970 A.D) had the prefix *pon maligai tunjiya* in his name. However it is possible to identify the Maharaja of Kolli hills region with *Sundara chola* due to some difficulties. *Silappathikaram* mentions the word *adahan*. The word literally means gold or golden. A place called *Adahamadan* is cited in the same epic and has been identified with Trivandrum in Kerala. *Silappathikaram* and *Keralolpatti* speak of places like Ponmandapam, Vellimandapam etc. So it is clear that Adahamadam can easily be associated with the Cheras.²

Tamil *Nikantus* describe the Cheras as *Kolli Verpan*, *Kollicchilamban* etc. Ilango Adigal eulogises Chera as *Vil Eluthiya Imayathodu Kolli Anda Kudavar Ko*. *Kulasekara alvar* describes him as *Kongar kon kolli-verpan*. A lithic record from Namakkal (near Kollimalai) mentions a king by name Mani kuttuvan.

In Nerivayil, a place belonged to the Cholas. However, there is no tradition or historical source connecting with them. The Neri hillock belonged to the Cheras and they deemed it a privilege to associate themselves with it. Hence it is obvious that the association of *Pon* with *the Neri hill* is significant. There is also a tradition of giving the prefix Pon to important

places. From the above discussion it can be concluded that *Pon Madathu Anda Manimudi Maharaja* and *Ponneri Panmar* may be identified with the Chera kings of Kolli hills region.

The references such as *Kolliporuna* (Padirruppathru, 73) and *Kolliandakove* (Silappatikaram, 24) etc, refer only to the Cheras.³ Many old Tamil literary pieces like the *Kuruntogai* reveals the contact between Kolli hills and parts of Tamil Nadu. The Arappaleeswarar temple is sung by *Thirunavukkarasar* and *Arunagirinathar*, a Thirthankara sculpture is also found in the Kolli hills.

The Kolli hills reminds one about *Kollipavai*, which had been sung by many *Sangam* poets. The sages and celestials who undertook penance in Kolli hills were disturbed by demons. To destroy the demons, Viswakarma produced a beautiful lady like machine that functioned due to magical chants. It captivated the demons towards it and it killed them all. The one which destroyed evils was given the name *Kollipavai*.⁴ *Kollipavai* was also called *Kolli Kudavarari Deivam*. The reference *Valvil Ori Kolikku Kudavaraippavai* (*Kuruntogai*, 100:5-6) suggests the presence of *Kollipavai* during the period of Ori.⁵

The *Sangam* classics states that Kolli hills comprised of many natural resources, scenic beauty and many plants during the period of Ori. Jackfruit or *Pala* was popular in this region. *Paranar*, had sung about the thick forests, animals and birds like peacock. In *Narrinai*, the heroine is compared with peacock.⁶ It is also told that the fragrance of the beautiful hair was equal to that of the smell of the flower which blossoms at the rainy season. The jasmine and bamboo tress abound in Kolli region.

In the Kolli hills the *Kuumilam* trees used to offer many flowers. The fruits of that tree were food to the deers. The residents of Kolli region sold the tusks of elephants and purchased food. Such facts testify to the wealth and prosperity of the people of that region. Many *Sangam* works mention about the honey of Kolli region. As the area seems to be a rectangular plateau, it is also called as *Chaturagiri*. This hill is also called *Rishyamuha Parvatham*, *Kolechuwaram*, *Kudavarai* etc.⁷ As it was the abode of *Kollipaavai* it was also called so. Even today the hill is called *Kolli Malai*.

The inscriptions available in the Arappaleeswarar temple of the Kolli hills suggest its popularity even from the 8th century A.D. One inscription refers to the grant offered by Sundara Chola to this temple. This hill located in the Kongu region was ruled by hunter rulers. When the Vellalas from the Tondai settled there; the racial strifes commenced. The Pugal Mangalam hero stone attest to this fact. *Vettuvar* (hunters) were the ancient community people of Kongunadu. The Vellalas of Tondainadu⁸ migrated to the Chola country. The Vellalas who settled in the Chola country after leaving Kaveri region settled at Kongu region by moving via Amaravathi, Noyyal and Bhavani river banks. They had fought with the hunters of that region.

The army of hunters which indulged in the war was referred to as *Kunrudayan Kathai*. The work *Sarkarai Gounder Vamasavali* calls the commander of the hunter's army as *Kongu Rayan*. *Cholan Puruvapattayam* informs that Vellalas stayed at *Vellalalar paddy* after Tondaimandalam came under Cholamandalam. *Kongudesa Rajakkal Kathai* also states that after the arrival of the Cholas to the Kongu region, the Kongu ruler started his regime after winning over the hunters.

Hence, it is evident that the Vellalas of Cholas country had endeavored to expand their territory. Only with that aim they reached the Kongu region. There the hunters confronted the Kongu rulers. The Vellalas of Tondaimandalam won the war and became rulers of Kongu under the title Rayas. The Vellalas of Kongu region called themselves as *Kongu Vellalas*. It should be noted that they also called themselves as *Vellalla Gounder*. The term *Vella* is the root word for the word *Vellala*. Those who controlled the flow of water by canals were known as Vellalas.⁵⁶ Kongu Vellalas were *Kaniyalar* and administrative heads even before 1000 years ago. The tribal people were also called as *Malayali Gounder*. The *Gounder* is the nick name of tribal in these hills area.

During the Chera period

The Cheras unable to settle their people in the west instead captured northern and southern areas and settled their people.⁹ The Cheras had many titles and among them the titles *Kolli Verpan* and *Malayaman* were notable. Such names indicate that those who could establish

their sway over Kolli hills were called as *Kolli Verpan* and the victors of other hills were called as *Malayaman*. The Sangam works testify to these facts. *Adhiyaman* waged a war with *Thirudikkari* and defeated him.¹⁰ Then Kari, with the support of Cheraman Perumcheral Irumporai killed Ori, the ruler of Kolli hills and reached the Cheranad. Then Irumporai defeated *Adhiyaman* at the battle of Dharmapuri alias *Tahadu* and the Cheras expanded their territories upto Kolli hills and Dharmapuri. It should also be noted that Kari, who lived first at Kongu country, then shifted to Thirukkoilur and made it as his capital.¹¹

Malayamans

Thirumudikkari hailed from the *Malayaman* clan. Thirumudikkari by including the clannish name *Malayaman* was called Malayaman Thirumudikkari. When the Chola's founded their rule, the south western part of the South Arcot particularly along with Kallakurichi taluk (including Kalrayan hill) was the territory of Malayaman rulers. So it could be inferred that even before the Cholas, the Cheras ruled in this region.

The western side was a sea coast and hence they could not expand in that direction. As a result, few members of the Chera family moved towards east and settled in present Salem, North and South Arcot districts. The areas where they settled were also mountainous regions like the Chera territory and they gradually established chieftaincies there. As per Chera traditions, they were called *Malayar*. At a later date, they became *Malaymans*.¹² The terms *Malayar* and *Malayman* should have corrupted into *Malayalis*. The Malayali tribes at present live in Kolli hills, Pachamalai and Kalrayan hills of Tamil Nadu.

During the Chola period

During the period of the Cholas, *Maladu Nadu* was also known as *Chedi Nadu*. *Periyapuranam* by *Sekkilar* and *Vikrama Cholan Ula* by *Kulothungan* attest to this fact.¹³ *Sekkilar* refers to Malaya (Maladu) as *Chedi Nannattu Nidu Tirukkovaluri manni*. Malayaman Nadu was ruled by minor chieftains. They were under the suzerainty of the Cholas. As they ruled Chedi Nadu, those chieftains were called as *Chedirayar*. The inscriptions reveal that Malayamans of the 11th century also called themselves as *Chedirayar*.

During the time of Kulothunga II (1133-1150 A.D) one member of the Vana clan served as guard of a portion of Magadha Nadu. He was called as *Raja Raja Magadhi Nadalvan*. He donated his income that is *Perumbadi Kaval* to the temple at Thittakudi. An inscription found in that temple testifies to this fact. In the 12th century *Magadha Mandalam* served as the capital of the Vanas. At that time, the Chola country was disintegrating. The minor chieftains utilised that opportunity and began to revolt. The Vanas were the chief among the rebels. They encouraged the internal strifes and gained by that. hills region.¹⁴

During the Vijayanagar Period

An analysis of the history of the tribals of Kalrayan hills indicates the fact that their ancestors were members of the ruling clan, warriors and frontier guards. This hill was familiar even during the history of the Chera, Chola and Pandyas. Then it came under the control of the Pallavas. From the sources it is evident that they were under Vijayanagar Nayak, Muslim and British ruler. During the British rule their *Palayam* territories had been altered. So at that time the Kalrayan hills should have been brought under *Jaghirs*.

Pre-Colonial Situation

During the pre-colonial period, the Kolli hills, were isolated from the mainstreams of Indian culture. The people of these hills were living in simple huts. H.Lefanu, in his *Manual of Salem District* published in 1883 had given an account of their culture, literacy, the native doctors, their avocation and also the house types and dressing pattern. F.R.Hemingway in his *Manual of Trichirapoly District* published in 1907 also endorsed the views of H.Lefanu. Edgar Thurston, in his *Castes and Tribes of South India* published in 1909 has provided traditional account of the tribals of the Kolli hills.¹⁵

Post Colonial Period

After independence, the Government of India legalised their status through articles 341 and 342 of the Indian Constitution. The Directive Principles of State Policy and by implementing various welfare measures such as Large Area Multipurpose Society (LAMPS), Tamil Nadu Adi Dravidar Housing and Development Corporation (THADCO), Integrated Tribal

Development Programme (ITDP) the government tried to promote the socio-economic conditions of the tribals. A separate wing named Tribal Welfare Department was established and it was authorised to take up suitable welfare measures to bring about a qualitative change in the life of the tribals. Other departments such as the Social Welfare and the Forest Department were also instructed to give top priority to tribal development. These initiatives produced positive effects on the tribals.¹⁶

Malayali Tribes

The word *Malai* denotes inhabitant of the hills. The Malayali are a Tamil speaking people who migrated from the plains to the hills in recent times. According to Thurston, the term *Malayali* has been derived from the words *Malai* meaning *hill* and *al-* meaning *person* and is used to denote people who lived on the hills. Etymologically the word is derived from *Malai-Hills* and *ali-* inhabitants. The Government of India accorded the status of scheduled tribes to the *Malayali*.¹⁷ The Malayali people claimed themselves as Malayali Goundans, while members of other communities refer them by different names like *Malayalis*, *Karalar*, *Goundars*, *Malai Jatikar* and *Kanchipuram Gounders*. The Malayali community predominantly lives in the hills of Tamil Nadu. The Malayali settlements are formed in the districts of South Arcot, North Arcot, Salem, Namakkal, Tiruchirappalli and Dharmapuri. In North Arcot district, they are living in the hills of Jawathu, Elagiri and Pudur Nadu. In South Arcot district, they are found in Kalrayans. In Salem district they are living in the hills of Yercaud (Sherveroys), Kolli hills in Namakkal district, Pachamalai in Tiruchirappalli district and in Dharmapuri district they inhabit the Sithori hills.

The Malayali emigrated from Kanchipuram. They took with them, three brothers of whom the eldest came to the Sherveroy hills and Kalrayan hills the second to the Pachamalai and the youngest to the Kolli hills. The Malayalis who live in Sherveroy hills and Kalrayan hills are called Periya (Big) Malayali or the Kanchimandalam Malayalis. The inhabitants of the Kolli hills are known as China (Little) Malayalis. Those from the Pachamalai hills are called Nadu (Middle) Malayali and their population as per the census of 1981 was 209,039.

Origin of the Malayali Tribes

The origin and migration of the Malayalis to the hills are shrouded in mystery. The legends *Nattukattu* say that some warriors belonging to *Karalar* community hailing from Kanchipuram came to Kalrayan hills subjugated the native's and established their settlement.¹⁸

According to another legend, *Nattukattu* the Malayalis originally belonged to the Vellala caste of cultivators and emigrated from the sacred city of Kanchipuram to the hills, when Muhammadan rule was dominant in Southern Indian, they left Kanchipuram. They took with them, three brothers of whom the eldest came to the Sherveroys hills, the second to the Pachamalai and the youngest to the Kolli hills. According to another version, the exhortation by the Malayali deity Kariraman, prompted emigrants from Kanchipuram to shift to the hilly region.¹⁹ Another version states that a priest of Kanchipuram who happened to be the brother of the King, quarreled with the king, left the place and entered the Pachamalai regions with his three sons and daughters. These regions were ruled by Vedans and the Vellalans who resisted the new comers. But the invader defeated the natives and established their settlement.

They gave their sister in marriage to a Tottiyar stranger in exchange for providing food. A curious custom that prevails in this region testifies to this story. Thus, the women of the Pachamalai Malayalis put aside a portion of each meal in honour of their Vedar ancestor before serving their husbands and the same custom is followed in marriages too. During the marriage function, the Malayali women wear a comb, which is said to have been a characteristic ornament of the Vedars. A sword and an arrow placed in the marriage function and remember the hunting habits of the Vedars.²⁰

There is a view that the Mughal ruler Babur's chieftain called Chilla Nayakkan invaded and captured the Kalrayan hills. The deity of the region Kariramman appeared in the form of a *linga* and on seeing this Chilla Nayakkan ran away, Kariramman appeared before the five brothers, who were the sons of Periya Malayalis of Kanchimandalam and presented the hills to them. The name Kalrayans was derived from the names of the fourth and fifth brothers *Chinna Kalvirayan* and *Periya Kalvirayan*. As a result of the appearance of the deity, the Malayalis call this hill as *Kariramman malai*.

An account regarding the origin of the Malayalis of the Jawathu hills in North Arcot furnished here under. In 1332 A.D some Vedars of Kangudi asked the maidens of the Karaikkat Vellalas of Kanchipuram to marry them. They were scornfully refused and the Vedars of Kangudi kidnapped seven young Vellala maidens, whom they carried a way to Kangudi. To recover them, seven Vellala men set out with seven dogs, leaving instruction with their wives that if the dogs returned alone they should consider that they had perished and should cause the funeral ceremonies to be performed. Arriving at the Palar, they found the river in floods and crossed it with great difficulty, but their dogs, after swimming half away, turned back and returned to Kanchipuram.²¹ The men however continued their journey and killed the Vedars and retrieved their maidens. Then they went back home, but found that they had lost their wives who had become widows. As a result there were branded as outcastes. Then they married Vedar women and retired to Jawathu hills. There they took to cultivation and became the ancestors of the *Malayali tribe*.²²

According to Francis, the editor of the *South Arcot District Manual*, that the Jawathu hills were inhabited by Vedans and that the Malayalis killed the men and wedded the women. Even today during marriages function, a gun is fired in the air to represent the death of the Vedan husband. The Malayalis termed themselves as Karaikkat Vellalas. The Malayalis

of South Arcot call themselves as Kongu Vellalas. All the branches of the community living in different places agree that they are Vellalans, who emigrated from Kanchipuram, bringing with them their God Kariramman. Another point should be recorded here. In the wedding of Kalrayan in South Arcot, the priest who performs the marriage utter the word Kanchi as just before the *tali* is tied. It shows that the migration occurred from Kanchipuram. The Malayali of the Shervaroy call them Kanchimandalam Malayalis. Many called themselves as *Vellala* and *Karalan*. *Malakkaran* and *Mala Nayakkan* are also used as synonyms for *Malayali*.

There are some who believe that the Malayalis are the Keralities. Because some of their customs are similar to those of the Keralities. For example, the Kolli hills girls wear clothes of white cotton tied across their breast like the Keralities while few other Malayalis prefer tattooing. The Kolli Malayalis follow the customs and preventing tattooed persons from entering their house.²³

After examining all the views. One can arrive at the logical conclusion that the Malayalis are not natives of these hills and they came from Kanchipuram and became a tribe of cultivators, woodmen and shepherds. Even though they are scatted, they follow similar customs and traditional habits and have common administrative, socio-economic and religious system of life.

BUDDHISM IN KANCHIPURAM

Dr. Palas Kumar Saha

Kanchipuram is the ancient cultural centre, situated in Chingleput district of the northern east coast of Tamil Nadu and is adjacent of Bay of Bengal and Coromandel Coast (12° 50' North Latitude and 79° 42' East Longitude). The town has an average distance from the ground of 275 (83-82 m) mean sea level. Like all ancient major cities, Kanchipuram is also located on the banks of River Vegavathi, a tributary of River Palar. The Kanchi was known as in various names in Ancient times, namely Kacci, Kaccipedu, Kanci, Kanchi nagar, Kancimanagar and Kanchipuram. Beside Kanchipuram is also called as Kancipura, Satyavrataksetra, Maragatanagari and Nagareshukanci.¹ The Kanchipuram is one of the most ancient cities in the Southern part of Peninsular India from the very beginning.

Kanchipuram is as old Buddha and this is considered to be an important place in the history of South Indian Buddhism. The conditions of Buddhism in Kanchi which not only had a large Buddha in habitant but also many places of public worship in the 7th century C.E.²

It will be noted that a variety of schools of Buddhism prevailed in Tamil Nadu, and four of them are well established. They are Yoga, hayani, Sathavira and Theravada. Kanchi became a renounced centre of Pali Buddhism or Theravada.³ This region may be acknowledged with *Alipadaitangi* (a seven walled fort of Kanchipuram), a Buddhist settlement between Jain Kanchi and Arcot. It was demonstrated by one of the documents in the Mackenzie collections which refer to this place.⁴

If we see the History of Buddhism in Tamil Nadu which can be traced to the days of the king Ashoka. As indicated by the Ashokan Edicts II and X III, the Buddhist monks sent by the emperor Ashoka must have reached Kanchipuram in the 3rd century B.C.E. and hence *Sathaviravada* or *Theravada* should have been propagated by these monks in Kanchipuram.⁵

It is important to note that after the third Buddhist council at Pataliputra a number of Buddhist *Bhikkus* were sent to different parts of the World to promulgate Buddha religion. Ashoka sent his son Mahindra to Ceylon and the

last appears to have gone through Kaveripumpattinam, the Chota capital on his approach to Ceylon. The Buddhism was widespread in Kanchipuram at the time of 3rd century B.C.E. South India has been a core region of Pali Buddhism. The Buddhism had sent his deep roots in this region even before the beginning of the present era. Although no Buddhist remnants dating from the time of Ashoka have been found. But from the sixth to sixteenth century C.E. various images of the Buddha have become exposed in Kanchipuram region.⁶

There are number of Buddhist centres in Tamil Nadu such as Kanchipuram, Uraiyur, Nagapattinam, Kaveripumpattinam etc. Among them Kanchipuram was a significant place for both Jainism and Buddhism. The Manimekalai refers to Kanchi as a well-known centre of Buddhist culture in the early centuries of the present era. It is true that no architectural monuments have been discovered still now, but historically, Kanchipuram was a centre of education and was known as the *ghatikasthanam*, or "place of learning". Kanchi has given great Buddhist scholars and also was a great centre for learning for both Hinayana and Mahayana form of Buddhism. The city was also a religious centre of advanced education for Jainism and Buddhism between the 1st and 5th centuries C.E. Kanchipuram gave room to every school of Buddhism and it was the meeting place of the Buddhist leaders not only from the central India, Andhra Pradesh, Southern Tamil Nadu, but also from the foreign countries Sri Lanka, China, Burma, Java and other Eastern countries. It is quite clear that Kanchipuram was the pre-eminent seat of Buddhist Culture, in the early period.

Actually when Buddhism reached its zenith in Andhradesa in the 3rd century C.E., its influence was very much found in Kanchipuram too. The loss of royal patronage of the Pallavas and the Kalabhras dynasty in Tamil Nadu were the major causes that contributed to the peak period of this region between 3rd century C.E. and 7th century C.E., during this period most of the Buddhist shrines and *viharas* would have been built.

Kanchipuram was the first and foremost epicentre of Buddhism in ancient Tamil Nadu. When Buddhism was less popular in Tamil Nadu, most of the Buddhist temples were converted into Hindu temples or pulled down and the material used in constructing the new Hindu temples. Because of this trend of conversion of Buddhist edifices into Hindu temples, the archaeologists have not been able to uncover any significant Buddhist shrine at Kanchi. The solitary discovery of the remains of a Buddhist *stupa* dated 1st century B.C.E. was made during the excavations in 1971 right in the middle of the town near the Kamakshi Amman Temple.⁷ However, Kanchipuram has yielded a large number of Buddha images covering a period of nearly 800 years from 6th century to 14th century C.E.

In post Sangam texts like Manimekalai, Silappatikaram, and Madurai Kanchi we find references to Buddhism. The Tamil epic Manimekalai, mentions that the Buddhist master Aravana Adigal was staying in Kanchi, and he guided, Manimekalai daughter of Mathavi, in the right path of Buddhism. Manimekalai, according to the epic, is a Bodhisattva *Bhikshuni* who spreads her compassionate activities to alleviate the suffering and hunger of many and finally attains *nirvana* at Kanchi.

In the story of Manimekalai, for example we find the heroine advised to study in Kanchi the advanced theoretical systems. A number of Pali texts of the early stage cited that Kanchi as one of the significant Buddhist pilgrimage centres of the South. Many Buddhist luminaries of the South India are known to have had contacts with the important South Indian city. The lives and achievements of such Buddhist stalwarts, with special reference to their contacts with Kanchi, will throw light on the history of Buddhism in Kanchipuram. The Epic Manimekalai describes that Todukalarkilli, a Chela king constructed a *chaitya* at Kanchi in which the symbolic illustration of Buddha, that is the *Buddhapada* was constructed.⁸

Hiuen Tsang also mentions about a 100 ft high *stupa* built by Ashoka in Kanchi. About people of Kanchi, Hiuen Tsang wrote, "People there are courageous, they deeply hold the principles of honesty and truth, and highly respect learning. The monks there are longed to Mahayana and practiced the Vinaya of *Sathavira*

School." He has mentioned Kanchi as a *Kiu-Chi-Pulo* and states that it was the capital of *Ta-lo-picha* that is Dravida. From the 4th century Kanchi was one of the most important Buddhist centres in the Dravida land, Padmasambhava would have blessed Kanchi with his presence and taught there.⁹ Hiuen-Tsang bears witness to the prosperity of Kanchipuram which was at that time the capital of Dravida and also a port of Southern India or Ceylon. Not far from the south of the capital was a large monastery which was a meeting for the most eminent men in the country. It had an Ashoka tope about 100 feet high where the Buddha had once overwhelmed *Tirthikas* by preaching, and had received many into his communion. Near it were traces of a sitting-place and exercise-walk of the four past Buddha.¹⁰

It is to be noted that Amaravati and Gandharan style of standing Buddha statues discovered from Kanchi dated 5th century C.E, almost its height of 80 ft. This Buddha image presently kept in the Chennai Museum. Gopinath Rao mentioned that, this statue was in the inner *prakara* of the Kanchi Kamakshi Temple in Siva Kanchi.¹¹ One more Buddha statue was found in the outer *prakara* in a messed up condition. Gopinath Rao says that Kanchi Kamakshi Temple was initially a temple of Tara.¹² When we compare with other relations that can be seen, a link to Vajrayana Buddhism can be contingent for this temple. The principal deity of this temple is Kamakshi, which means the ardent eyed one. There were additionally two small Buddha carvings (one sitting and one remaining) on a stone mainstay of the temple.

Next to Kanchi Kamakshi Temple, one of the earliest of the Buddha statues found from Kanchi which is kept in Govt. C. M. Subbaraya Mudaliyar Higher Secondary School, dated between 5th- 6th Century C.E. and is of a size of 5'6". According to Gopinath Rao this statue was in a garden adjacent to Kanchi Kamakshi Temple. Further he says that, there are two more Buddha statues under the soil, yet to be excavated.¹³ Still more than 100 years have passed; it is still not excavated yet.

From the excavation report it is noticed that a compound wall of Ekambareswara Temple uses many large stone bricks with carvings of the Buddha. These Buddha carvings

are not in an exacting order, therefore generally this was simply the reclaim of the stone blocks from a ramshackle Buddhist structure. There was a large lie down Buddha statue lying in the temple complex in the late Chola period.¹⁴ Numerous images of Buddha, Bodhi sattuvas and Buddhist Yogis can be seen engraved in the columns of Kachapeshwarar Temple in Kanchi. These columns don't have an exact order, and it would appear that they were balanced in height post-sculpting to fit for the present *mandapa*. From this, it might be gathered that these could be the reclaim of the columns from a previous frail Buddhist structure. Increasingly more Buddha statues are being uncovered all around in Kanchi. Some of them are kept nicely in some small shrines made with the support of people from Thailand and so on. And, a number of statues are misplaced. Since many Buddha statues are on the street-side and unprotected, some are stolen. Except some action is taken by the government to protect the other statues, further of these historic monuments may be lost soon.

From the epigraphical evidences we come to know that, a renowned Buddhist *vihara* donated by people from Kanchi. From that we can say that Kanchi was flourishing with Buddhism even in that period. On the other hand the European traveler Marco Polo in the 13th century C.E, found a number statues which is century saw seven *chaitiyas* on the seashore of Mahabalipuram near Kanchi. Even during the 14th century C.E, a renowned poet of Java mentioned about the presence of thirteen Buddhist monasteries in Kanchi.¹⁵ Another inscription in Korea says that, Dhyana bhadra from Kanchi went to Korea in 1370 C.E and established there a Mahayana monastery.¹⁶ Also we know from this inscription that he received the teaching of Avatamsaka Sutra in Kanchi. All these records give us informations that Buddhism was very much alive in Kanchi even in the 14th century, though in a phase of gradual decline.

Kanchipuram gained importance as the capital of the Pallavas, one of early dynasties of South India. Even from very early times it was predominantly famous as the seat of education attracting scholars from far off places and belonging to different faiths, such as Buddhism,

Jainism, Saivism and Vaishnavism and a number of similar sectarian creeds and castes.¹⁷ The archaeological findings found during excavations also show to the fact that Kanchipuram was a well-built centre for Buddhism. It is reported that a grey ware fragment bearing Brahmi letters "*Putalatisa*" which appears to be a name of a Buddhist monk, a small round arrangement perhaps serving as the basement of a votive *stupa* and some remains of Buddhist *stupas* had been unearthed during the excavation conducted by the University of Madras.¹⁸ The shred bearing the name "*Putalatisa*" is dated in the 1st 2nd century C.E. while the circular structure to the period IT which is covering a period from 4th to 9th century C.E. After having sustained their second season excavation, they have reported that many Buddhist *stupas* had been constructed at Kanchipuram. Hence it is obvious that the survival of Buddhist *stupas* at Kanchipuram has also been proved by reliable archaeological evidences.¹⁹

In recent past the department of Ancient History and Archaeology, Madras University undertook an excavation in Kanchipuram, under the guidance of T.V. Mahalingam, to collect information about the early history of Kanchipuram, to determine its association with Buddhism in the early centuries of the Christian era. The remains of a Buddhist shrine chamber and an inscribed potsherd bearing the name of a Buddhist monk in Brahmi characters were among the objects found.²⁰ One of the dig exposed the remains of a *stupa* like structure in the lowermost layer of black clay soil, just yellowish clay. The foundation of the structure was cut into the natural soil. The structure consisted of four courses of massive rectangular bricks running across the trench in the north-southeast direction? Two courses formed the bottom portion and other two the upper portion. These were separated by a layer of 30 cms. thick black soil. The bricks laid in the lower part from a segment of circle and the upper part more or less running straight cuts the two extremities of the segment at about 40 degrees. Further excavation is planned and this may reveal more about the shape and size of the bricks structure, tentatively dated around the 2nd or 1st century B.C.E. An alignment of holes for posts was also noticed in

the same level, pointing to the existence of a thatched roof near the structure.

A poet of far eastern country Java who lived during 14th century C.E. had referred to about 14 *stupas* at Kanchipuram. He also said that the Vaishnava and the Buddha faiths were inseparably mingled at Kanchipuram. The Buddhist followers who were living at Kanchipuram seemed to have gifted about 17 bronze images of the Buddha to Kukutapathagiri which is believed to have been a Buddhist centre. The images are now displayed in the museum of Patna.²²

Buddhist centres at Kanchipuram in the period of Pallava kingdom must give us a fresh impetus to the spread of Buddhism across the Bay of Bengal.²³ Mahendravarman, the Pallava king wrote his Sanskrit work, *Mattavilasa Prahāsana* in the 6th century C.E. from Kanchipuram. There he refers to many Buddhist *viharas* at Kanchi, the chief of which was *Raja vihara*. The *Mattavilasa Prahāsana* of Mahendravarman gives a vivid picture of the Buddhist presences at Kanchipuram region.²⁴ Tantric Buddhism must have been practised in the 6th century by the Buddhist monks. Pallava Mahendravarman has criticised these monks in his work and in the 7th century. Hiuen Tsang also pictures the declining state of Buddhism in Kanchipuram in particular. Added to this internal condition, the Saivite and the Vaisnavite Bhakti movements of 7th and 8th century C.E. and the predominance of Jain together resulted in the conversion of the Buddhists to these sects. Some of the pious Buddhists and the monks must have left Kanchi for Sri Lanka or any East Asian countries where Buddhism was popular.²⁵

In Kanchipuram, especially in some localities like Kama-Kotamatha near the Kamakshi Amman temple, Vaikuntha Perumal temple, Ekambareswarar temple, Pallavamedu, Jnana Prakasa Svanugalmath, etc., yielded Buddhist remains. Here, the excavation conducted at the site of Kamakshi Amman temple brought to light vestiges of *stupa*, *chaityas* and *vihara* besides few copper coins belonging to Rudra Satakarni, coin moulds and *Buddhapada* slabs, datable from 1st century B.C.E. to 4th century C.E.²⁶ Here several Buddha images of a later date (19th century C.E.) were also unearthed. Among them are the interesting seated images of Buddha in *Virasana* posture in

dhyana mudra, another seated on lotus in *yogamudra* and an image in *bhumisparsa mudra*.²⁷ While one is headless, the other is both without its head and hands. Several images including the *Mahaparinirvana* scene belonging to the later medieval period were found in the niches on the compound wall of the Ekambareswara temple.²⁸ The image measures about 2 feet. The face is lightly scratched.

The *prabha* over the head of the Buddha is rather Hindu workmanship.²⁹ A seated image (3 feet 9 inch) of Buddha (in *dhyana mudra*) was found datable to later Vijayanagara or Nayaka period; suggest the survival of Buddhism even upto the Vijayanagara period. On the southern *prakara* towards the right of the side entrance in the same direction are found sculptured on granite slabs, now built into wall, seven Buddhas all are in seated position. Of these, there are on the similar type of slab while the rest are on different ones.³⁰ From that we can say that all the images of the Buddha found in Ekambareswara temple have initially come from a ruined shrine of the Lord which must have existed in the surrounding area of this great Siva temple.

Two images one in the *dhyana* position and other seated with its right hand held in the *Bhumisparsamudra* are put under the shade of a big tree alongside Hindu images in the premises of the Karukkil Amman temple. They are in a very good state of protection and bear a very inventive *thorana* after the style of the Hindu images.³¹ All of them are set up in seated on *padmasana* and in yoga position, a part from one which is in *Bhumisparsamudra*. The strength of their association proposes the trademark style of the South Indian School of figure.³² Additionally, a little broken leader of a Manikekalai figure is found in a similar temple. The nose and eyes are unmistakable, the lips are profound trimmed, the ears are stretched, and the finished hair is found behind, covering the head divide as it were. It is said that they were initially found close to the Kamakshi Amman temple and later brought to the present spot.³³ A stone slab containing an inscription gives the information of the Pallichandam I and donated to the Buddhist temple at Kanchipuram. The symbol of *Dharmachakra* is engraved on the rear portion of the slab.³⁴

In the conclusion we can say that the paucity of Buddhist centres in Tamil Nadu is

intriguing and Kanchipuram is one of them. The archaeological and literary sources lend reasonable support to the fact that the distribution of Buddhist structures' in the Kanchipuram region, which took place probably after the great distribution. In the light of the above, it is also reasonable to surmise that the Buddhist structures reached the local kings, merchant, householder and the rich persons, who were already patronising and propagating

Buddhism in these regions. Thus the widespread of Buddhism in the regions is well attested by the discovery of range of many *vihara, stupa, chaitya* and the beautiful shrines places from a variety of sites. Here a humble attempt has been made to give an outline of the Buddhism in Kanchipuram with the help of available sources. But it is not possible to explore all the areas related to Buddhism therefore, it needs further investigation.

DONORS OF PARSVANATHA ICONOGRAPHY IN MADURAI REGION

C.Pandeeswaran

The history of Jainism in the Pandya country traced back to a few centuries before the advent of the Christian era. Historical tradition is such that at the close of the 4th century B.C.E. the king Chandragupta Maurya of Magadha and a large gathering of Jain monks under the leadership of Sruktakevina Bhadrabahu migrated to Sravanabeloala in Karnataka and spread the gospel of Jina to the laity. Subsequently, after the demise of Chandragupta and Bhadrabahu, their disciple led by Vishakacharya moved further south into the Tamil country and sowed the seeds of Jainism. It is believed that these mendicants reached the Pandya country first and other areas slightly later. Very likely their arrival to the Pandya country could have taken place in the beginning of the 3rd century B.C.E. and flourished upto 6th century

C.E. It was well attested by the Tamil Brahmi Inscriptions and beds in Pandya country such places are Mangulam, Arittapatti, Anaimalai, Karunkalakudi, Kilavalvu, Kilakuilkudi, Thirupparankundram, Kuppalnatham, Konarpuliyankulam, Pachchipallam, Muttuppatti and so on. Then it came to downfall after the Kalabhras overthrown by the first Pandya ruler Kadungon around 550 C.E. Again it reappeared in Pandya country between 9th and 10th century and followed iconic form of worship. The images of Jain saints were depicted such as Adinatha or Rsabha, Neminatha, Parsvanatha, Mahavira, Bahubali, Yaksas and Yaksis. The donors have made their contribution to the development of the image of Parsvanatha in entire parts of Tamil country. The present paper seeks to trace out the history, iconography of Parsvanatha, Jain

puranic theme and donor through the ample sources such as Vatteluttu inscriptions, Jain Art and other modern works produced by the reputed scholars.

Jainism was established as a separate religion during 600 B.C.E. by Mahavira, some of its relics were identified in Mohanjadaro – Harappan civilization also. The name such as Rishaba deva, Ajithanatha and Aristanemi etc are found in Yajur- Veda. Infusion of Jaina and Buddha philosophical doctrines into Saivism and Vaishnavism was quite natural on those days. According to one scholar T.M. Baskara Thondaiman, Buddha was replaced by Vishnu and Mahavira was replaced by Siva.¹

Jainism was derived for Jina which means the religious conqueror. It was also a popular religion among the merchants communities in India but it was never crossed its frontier. Jainism was called in different names at different periods. *Manimekalai* and Tamil *bhakti* hymns called them *camanar* (Jain) and *Amanar* (the nude). The twin epics like *Silappatikaram* and *Manimekalai* are considered to the Jain. Apart from this, Jainism possesses other names such as *Arukatas*, *Nikantas*, *Anekantavatas*, *Siyatvatas* and *Pindiyars*. Whereas Buddhist called it as *Nirkantavalai* and Brahminism called it as *Sramana Neri*. The Tevaram calls them *Caman*,² *Terar*³ and *Amanar*.⁴

Both Vaisyas and Sutras who were expecting an alternative religion voluntarily supported and adopted the Jainism. The Jain religion rejected the uneven development of society and exploitation of wealth. They propagated simple but sacred ascetic life among the people. That is why the Jain religion enjoyed enormous support from the Vaisyas and Sutras and developed vigorously.

Jainism in Sangam Period

Before 2,200 years Jainism flourished in Pandya country. The Sangam rulers supported and followed Jainism.⁵ Jain beds and inscriptions are found in the hills and caves around Madurai and also some other parts of Pandya country. In Madurai district, Mangulam, Tiruvadavur, Kilavalavu, Karungalakkudi, Arittapatti, Thirupparankundram, Kidaripatti, Muthupatti, Mettupatti, Vikramangalam are important Jain Caves. In Sivaganga district, Kundrakudi and Thirumalai, in Puthukottai

Sittannavasal are belonged to third – second centuries B.C.,

The Pandyas of the Sangam period were liberal in their religious outlook therefore all heterodox and orthodox religions including Jainism flourished during the rule of Sangam Pandya period. There are fourteen Jaina vestiges such as Thirupparankundram, Samanamalai, Kongarpuliyangulam, Vikkramangalam, Anaippatti, Anaimalai, Mangulam, Arittapatti, Alagarmalai, Karungalakkudi, Kilavalavu, Tiruvadavur, Kunnathur and Thirumalai comprise in the rock cut caves or natural caverns with stone beds in and around Madurai district.⁶ These Jaina caverns with beds and Brahmi inscriptions dated back to 3rd – 2nd century B.C.E. are found in and around the Pandya capital and its distant places. The best among them are located at Mangulam, Anaimalai, Alagarmalai, Arittapatti, Kilavalavu, Muthupatti and Kongarpuliyangulam. These ascetics abodes are unquestionable evidence for the flourishing nature of Jainism as early as the 3rd century B.C.E.⁷

The *Madurai Kanchi* is one of the Sangam literary works which refers to a great Jain temple at Madurai. The temple of the *Niggandar* (Jains) at Madurai was built of stone. Its walls were exceedingly high and painted red. Outside the walls were pretty little flower gardens. A large number of the followers of the *Nigganda* faith (Jainism) thronged there to see their monks.

In *Silppadikaram*, there is reference for the existence of Jainia monasteries of Arivan in Madurai.⁹ Karundi Adikal, a female Jain ascetic who accompanied the hero and heroine of the epic, in their journey to Madurai was anxious to visit Madurai in order to worship Arivan in the Madurai Jain temple.¹⁰ In the same epic *Silappadikaram* also mentions a shrine of a Yakshi was worshipped by the cowherds Madurai at Madurai.¹¹ Manimegalai also describe the influence of Jainism on Tamilnadu during its hey – day.¹² The other Sangam anthologies such as *Narrinai* (poem.141), *Agananuru* (poem. 123)¹³ mentions the existence of Jainism.

Moreover *Kalithogai* (Maruthakali. Poem. 28) contains the reference about the Jain ascetics and their abode.¹⁴ In spite of these Sangam literary evidences one more contemporary inscription also confirms the existence of Jainism

during 3rd B.C.E. Kalinga king Karavela constructed a temple for the first Thirthankara Adhinatha during 3rd century B.C.E. and one Pandya king had attended the installation ceremony which is mentioned in an inscription found at Hatikumba in Orissa.¹⁵

Though, during the Sangam period the Pandya rulers and merchants had contributed liberally for the erection of Jain caves and rock beds around Madurai. Such remains are found even today in the hills such as Mangulam, Arittapatti, Thiruvadavur, Kidaripatti, Kilavalav, Karungalakudi, Kunnattur (Varichiyur), Anaimalai, Thirupparankundram, Kilakuyilkudi, Muthupatti, Kongarpuliankulam, Vikkiramangalam, Nadumuthalaikulam, Mettupatti etc., other than Madurai in Pandya country the places like Kunrakudi, Thirumalai in Sivaganga district, Sittannavasal and Kudumyanmalai in Pudukkottai district, Marukalthalai and Ayyanakulam (Mannarkoil) in Tirunelveli district the Sangam Jain records are found datable back to 3rd B.C.E to 2nd century C. E. In allover Tamil Nadu about 90 Tamil Brahmi inscriptions related to Jainism have been found so far. Among them more than 60 records are spread around Madurai along which prove that Jainism was wide spread and enjoyed unchallenging support from then Tamil society.¹⁶ Sequel to that the Tamil Brahmi script with beds belong to 2nd and 3rd century C.E. mentions that the Jainism was well flourished at Madurai during the later Sangam period also. But after the Sangam period there might not be any developments occurred in these respective places for three hundred years.

Post Sangam period in Tamilakam (fourth – sixth centuries C.E. a period of transition in Tamil society and polity) was one great flux, in which the decline of trade and the Tamil politics of the Cheras, the Cholas and the Pandyas is associated with an invasion by the Kalabhras and the subversion of the Tamil socio – political organization. Invariably, this tribal ruling family is believed to have patronized the *Sramanic* sect of Jainism. This assessment is based on later Tamil traditions and Brahmanical records like land grants describing them as evil king and *adharmic* that is, followers of non – Brahminical faiths. It may be noted that the decline of trade assigned to the post third century C.E may be true of the long distance maritime trade but it

does not seem to have affected the role of the Jains in contributing a rich corpus of literary works of the post Sangam era.¹⁷

The *Dravida Sangha* was established by Vajranandi ascetic in 470 C.E. at Madurai. This was a Jain missionary society, whose avowed object was the propagation of Jainism. Thus the Kalabhras rule till about the 6th century C.E. was also favorable for the growth of Jainism.¹⁸ But there was no any evidences regarding the next development occurred in the Jain caverns during this Kalabhra period in Pandya country except the eighteen minor works.

Early Pandya Period

It is remembered that the early form of Jainism was simple and thus, iconic and ritualistic worship of *Tirthankaras* and received little attention. This is borne out by the early bald caves of Jaina ascetic till about the 6th century C.E. However, the transformation state occurred since the 7th century C.E. with the advent of the Bhakti movement.¹⁹ The Jainism recovered and attained the next idolatry and ritualistic development stage between 9th and 10th century C.E. in the hills of Pandya country such as Muthupatti, Kongar Puliyankulam, Alagarmalai,²⁰ Keelakuilkudi, Anaimalai, Arittapatti, Tiruparankundram²¹ Kilavalavu and so on.

These 8 places are given much importance after 7th century. These are called '*Ennperunkundram Periyapuram*' also mentions like as follows, "*Enperunkunrathtil Ennairam*" Jains lived.²²

Silapathikaram deals about the existence of Jainism. But owing to the efforts of Siva Nayanmars in seventh century it received a setback to Jainism continued to survive to some extent in Pandya country and this is borne out by epigraphic evidences.²³

Many Vattelluttu inscriptions of about the eighth, tenth centuries C.E. found in the Madurai region as well as in other parts of Pandya country speaks of several Jaina religious teachers, Jain Pallis, the erection of Jain temple, images and donors. As already light out above that this paper focuses on the image of Parshvanatha, Jain purnaic theme and donors.

Parshvanatha Iconography

Parshvanatha was a prince from Varanasi. He was a twenty third *tirthankara*. His emblem was cobra. He is believed to be a historical Jaina and a predecessor of Mahavira.²⁴ He lived approximately 250 years prior to Mahavira.²⁵ The image Parshvanatha show him being sheltered from downpour by a canopy formed from the expanded snake-hood of Dharanendra, king (Indra) of the nagakumara gods. He attained liberation (*moksa*) on the mount Sammeta.²⁶ Tradition avers the Mahavira's parents were followers of the order of Parshvanatha.²⁷

In Tamil Nadu since eighth century C.E. a large number of Parshvanatha iconographies are made over successive centuries. Among them Chokkampatti in Tirunelveli district, image is said to be the earliest one. In Vaigai basin especially Madurai region his ten images are depicted like Anaimalai, Pechipallam (Samanarmalai), Kilavalavu, Thirupparankundram, Kuppalanatham and Malaiyadiatti.²⁸

Among the ten images, in Kivalavalvu (two images), Pechipallam (three images) and Kupalanatham (one image) found in *kayotsarga* pose with five hooded serpent above his head.²⁹ These types of images are in the 9th century C.E. specimens. Apart from the 9th century C.E. standing positions of Parshvanatha image in Madurai region and exquisite icon seated *ardhapariyankasana* adorns in Malayadiatti as in the rock cut temple as Sittannavasal. Although accompanying images like Kamada and Padmavathi are absent.³⁰

Jain puranic thematic sculptural panel is depicted in the Madurai region during the early Pandya period. This theme is found in Anaimalai, Thirupparankundram and Pechipallam. The story of Parshvanatha, the 23rd *thirthanakara* is sculptured exquisitely as a drama form. At first Parshvanatha is shown as standing straight (*Kayotsarga*) and by his left side one demon Kamadan is shown as trying to pelt a big rock bolder on him. Dharanenthra, the Yaksha of Parshvanatha spreads his canopy a five hooded snake above the head of Parshvanatha to secure him from the attack of Kamada. Padmavathy, the Yakshi as well as the wife of Dharnendra tries to save her husband by holding a vajra umbrella above the head of Dharnendra. The demon Kamada, who failed in his attempt finally surrenders to Parshvanatha and bowed down at

his feet and put his head at the feet of Parshvanatha. This whole scene is depicted in a single panel very neatly in the above mentioned places.³¹

Donors of Parshvanatha Iconography

During the 9th century C.E. onwards the Jain ascetic Achananthi was caused to set back Jainism in Pandya country. He spread and followed idolatry worship of the Jaina religion. The images of Parshvanatha were carved in all parts of the Pandya country except Chitharal, Thirucharanathumalai and Kalugumalai.³² The rest of the places in Pandya country have the image of Parshvanatha with inscriptions of the donors.

In this study area there are seven Vatteluttu inscriptions engraved below and within the panel of the Jain iconography. The inscriptions are found in the places such as Pachipallam, Thirupparankundram and Anaimalai which register the donors of the Parshvanatha iconography in Madurai region during the early Pandya period. The inscriptions and donors are as follow.

In Pachipallam there four Vatteluttu inscriptions are found below the image of Parshvanatha which belongs to 9th and 10th century C.E. The inscriptional record reveals about the donors of the Parshvanatha.³³ The first inscription from the right side of Jain sculptural panels in Pachipallam attest that the mother of Achananthi who was Gunamathiyar made endowment of Parshvanatha image.³⁴ It shows that the woman also had privilege to made donations.

The second inscription from the same place states donor name like Achchan-Sri Palan who was a son-in-law of Gunasadevar Satten Anthalaiyan. He carved the image and endowed.³⁵ Third script of the same place records the donation of Parshvanatha made by Porpattan who was a disciple of Guanasena Devar from Kurandi.³⁶ Fourth inscription also mentions that the image was donated by Jaina ascetic Aristanemi from the Maduraikattampalli.³⁷ It shows that the saint also made donation of Parshvanatha image. In Thirupparankudram, a Vatteluttu script is found under the Parshvanatha panel. This record reveals that this panel is cared by Vanan Baladevan who was a student of Nelan alias Ilan

thammadikai.³⁸ In Anaimalai there are two Vatteluttu inscriptions made which mentions about support and protection of the Parshvanatha image panel. The first script states that this panel of image left under the protection of Thinaikalathat.³⁹ The second inscription belongs to 10th century C.E. in the same place registers that the support was given by Porkottukkarathar to protect the image.⁴⁰

In the light of sources, Jainism was well flourished from the Sangam age to 6th century C.E. It was well attested by Jain beds, Tamil Brahmi inscriptions found in and around Madurai region and eighteen minor works also.

It declined after the Kalabhras were overthrown by the early Pandyas. Again it rejuvenated between 9th and 10th century C.E. as idolatry worship by the saint Achananthi. During that period, the image of Parshvanatha depicted with *puranic* themes and also carved panels at hills in and around Madurai. The images were endowed by the donors of saints and woman nuns, attested by the Vatteluttu inscriptions which engraved below the Parshvanatha iconography. Hence, the period between the 9th and 10th century C.E. is remarkable period for the development of Jainism due to the donor's contribution in Madurai region.

INDIA AND ITS CULTURAL CONTACT WITH EAST ASIA

Dr. S. Pari Parameswaran

Each and every country, nowadays, endeavours to satisfy all its needs of multiple nature and desire to maintain its elite status and strong position on par with others. No country of the modern period can survive without the contact with other nations. The vast Indian sub-

continent's contact with East Asia was not mostly a political oriented one but it is rather a culture oriented one in the absence of the policy of expansion and consolidation from the ancient time onwards to till date. The history of India clearly reveals that the Indian subcontinent, the

conglomeration of states had no opportunity to think an expansion and consolidation of its territories beyond its natural boundaries and borders. India had vast and well developed cultural and religious contacts with the east. India never made even a single attempt to have territorial expansion in the east or in the west. One can understand that the policy of expansion was unknown to India due to the seas encircled in these sides of the peninsular India. In the north the Himalayas arrest it and in south there lies the Indian Ocean. The advent of the Europeans such as the Portuguese, the Dutch and the British enriched the contact between India and Eastern countries more prominent due to economic, commercial and cultural contacts. Hindu style of art and architecture gained veneration among the nations of the east. The Indian Muslims had expanded commercial inter-course with the east under religious backgrounds and supports. It was greatly beneficial for the future colonialist who exchanged their views and ideas with other nations¹.

The religious contacts between India and the eastern countries are remarkable. Buddhism of India is having a strong footing in the countries such as Vietnam, Cambodia, Thailand, Myanmar, Tibet, Bhutan, Nepal etc. Even in the dominant Muslim country Indonesia, Buddhism is acknowledged as a recognised and approved and recognised religious order. The numerous Indian religious missionaries, scholars and merchants took Buddhism to the east. Its helped the spread of India art and architecture. The importance attained by Sanskrit influences and the Indian artistic phases too promoted the cultural expansion and contacts. The kingdom of Sumatra, i.e., the **Srivijaya Kingdom** had its own attachment and affinity to Indian customs, traditions and the Hindu temple architecture. The traces still available there stand testimony to that. Thus the cultural synthesis avoided political and territorial expansion. There emerged a commingling of Indian and east Asian cultures.

Further **Ramayana**, the remarkable Indian epic, is honoured as the National epic of India. As an impact, the first international Ramayana festival was conducted at Jakarta during September 1971. It brought India nearer to the east. The Indian coastal line has 12 major ports and 184 minor ports and all of them assist the promotion of the cultural contacts with the east

Asian countries. The westerners also rendered maritime co-operation with the neighbouring regions in the east⁴. Such aspects were immensely beneficial for all the nations of the world in exchanging their cultural prospects and pursuances. The devotional works of India have been revered by the people of East Asia. They are reflected in their art and architecture.

People of different countries by making regular visits to other countries, by having personal exchange of trainees and interactions with other nations along with the assistance rendered in naval activities also added the cultural and commercial contacts with high frequencies⁵. The east Asian countries have enriched the social, cultural, commercial and economic pursuits of themselves and that paved the way to witness a peaceful and progressive world with the co-operation and co-ordination all. So the people are the real beneficiaries.

The coast guard relations between India and east Asian countries too also led to naval co-operation among them for the maintenance of the safety and security of each nation⁶. Diplomatic relations with the east Asian countries have caused the frequent visits of delegates from Maldives⁷, Sri Lanka⁸ etc. to India and vice versa. They too assist the adoption of friendly and cordial relations and peaceful co-existence with east Asian regions with all co-operation and amity. India is always cautious in maintaining its cordial relations with other nations and is so critical and particular in promoting and developing its socio, cultural and economic prospects⁹. All the contacts were mostly cultural and not at all political or territorial expansion. So the contact is a longstanding one without any intercasteism or regional variations. In general they stand for peace, security and development its solid and successful ways.

The contact among them is also an outcome of the internal and international migration and movement of people from one state to the other due to political as well as economic and commercial considerations. During this materialistic age people of all the nations involve in migration to other countries to satisfy all their needs and requirements of varied nature and to have a developed and comfortable life economically. Under such a pretext, liberalisation, privatisation and globalisation aspects have come up as causes for migration.

So, the migration, occurred due to cultural contacts, have their own indelible, social, economic, cultural and political impacts and changes of cultural traits over the nations. These facts are the outcomes of cultural contacts among nations and India is not at all an exception. The policy of non-alignment and peaceful co-existence adopted by India has its own effects in this aspect. The cultural contacts favour the transfer of skills, techniques, traits and qualities from one set of people to the other. They, in turn are beneficial for the growth and development of human beings of all the countries and nations. In general they form the basis for development of the world and its citizens.

The cultural contacts always assist the adoption of social, economic and political strategies in a compromising way without interfering in the internal or external affairs and culture of the other nations. In the same way such types of contacts centre on the foreign policy of India and other nations. The contacts, further encourage, control and assist the creation of the total infrastructure of the social, political, economic pursuances of any nation. They change the principles and policies of a nation like India along with the transformed attitudes and outlook of the people. On that line the entire humanity is a beneficiary because of the approved policies by that.

The Indian sub-continent co-operates and co-ordinates with other nations for the promotion and development of the undeveloped as well as the underdeveloped countries along with self development. They borrow assistances, supports and helps in the field of economics from India and vice versa. So there emerges the scope and opportunity for both the nations to develop themselves in solid forms. The "**Parcha Sheela**" concept of Nehruji, expressed on cultural basis, stood for the maintenance and upkeep of India's natural individualities unmedeled by any power at any context. On that line, the cultural contacts have brought the nations nearer to each other and have enhanced the cordial relationship among different nations which acknowledge each other. Further, the cultural contacts with East Asian countries by India have introduced the concept of the **citizens of the world** among people of all the nations which have promising cultural contacts. This has revealed and

highlighted India as a super power of cultural highness and superiority in all the aspects. Cultural contact has its own echo over the foreign policy of India with regard to the eastern and western countries. It provides ample scope and opportunities and facilities for India to maintain India as a state without any enmity with any nation. So the concept of non-alignment gained value and popularity with improved cultural contacts. But the nations co-operate with each other for maintaining their status quo.

The regular and strong cultural contact of India with the east Asian countries is a remarkable endeavour for growth and development and it avoids the adoption of the balance of power theory. They in turn leady to the development of the nations positively with co-operative joint endeavour. "Peaceful co-existence" is allowed to survive in India as a solid measure. The lessons learnt from history of the Buddhist, Mauryan, Guptan, periods enabled the free India after 1947 to formulate its own individual co-operation and peace based foreign policy without any influence from the stress of any extraneous power. The causes for the formation of a foreign policy during the modern period were innate and inberent in India. In the world forums like United Nation Organisation and regional forums like South Asian Association of Regional Co-operation (SAARC) India is maintaining its status and prestige and assists the states of East Asia.

It is apt and appropriate to note that the cultural contact with east Asian countries has promoted peace, regional security and guaranteed developed economic activities and concept of modernism as well as economic progress and afflunecy. The cultural contact, by pushing back the other kinds of contacts, has brought the people of all the nations nearer to each other with the adoption of the concept of "each for all and all for each". They assist progress and development. Again all the political and economic rivalries are amicably settled by mutual understanding and co-operation. They assist the concept of war free and peaceful world. In that respect the cultural contacts contribute to peace, progress and development of the nations.

Without giving any room for Communism and Capitalism, in India the concept of **Sarvodaya** and **Socialism** takes up the lead and all people, without any disparity are treated

equally as the creations of god. Along with Christianity and Islam, the east Asian countries are influenced by Hinduism mostly by and the Indian religion Buddhism. On the basis of **Dharma** the contacts between India and east Asian countries are framed and formulated. The cultural contacts of India with other nations of the world have placed India at the highest level of regard and recognition. So the cultural contact among nations should be always an enhanced and developed one.

Further, in this modern age of materialism and improved science and technology, the co-operation among the different nations is an imperative need for progress and development, India possesses such qualities and has assumed a appreciable level. Thus the cultural contact between India and east Asian countries has allowed and enabled the Indian subcontinent to be a pioneering state of peace and non-violence.

INSCRIPTION BASED PLACE NAMES IN BAILAHONGAL TALUK OF BELGAUM DISTRICT

Dr. V.L. Patil

Bailhongal is one of the ten taluks in Belgaum district. Bailhongal which is in the South of Belgaum district has tropical climate, except part of it in dryland. The Kadambas, the Kadambas of Goa, the Chalukyas of Badami, the Chalukyas of Kalyan, the Adilshahs of Bijapur, the kings of Vijayanagar, the Peswas and the princely state of Kittur have ruled the area. The orthography of local names is undertaken in view of the edicts belonging to these dynasties. The local names which, in fact, precede edicts helps us to understand the pre-history of the taluk.

The study of local names first began in the 18th century in the west, and it was started in India. 20th century Scholars like Shamba Joshi began this study in Karnataka. Fortunately studies in local names is a matter for Ph.D programmes in these years.

Usually the village names have two units: the preceding word and the final word. The final words such as pura, vaada, baada, uru, palli,

haala and others are indicative of a village or hamlet. This unit is of categorizing factor. The preceding unit is of importance, useful in recognising a village. In the name 'Nandihalli,' 'Nandi' is a preceding word, and 'halli,' a final word. The word 'Nandi' is important. On the other hand, 'halli' is of categorizing type and a common term still. The final words facilitate the signification of the preceding terms. For example, the final unit 'waad' in 'Doddawad' is a category word meaning 'a castle' or a corruption of baad (a hamlet) is uncertain. The presence of a castle in the village is likely to confuse us. Experts feel that the 'castle' is likely to lead to this signification. But the truth is different. In this regard, 'Doddabaad' (meaning a big village) has become 'Doddavaad'. The existence of the name preceded the existence of a castle there.

The concept of origination of village names may be studied in three ways - the layman's way, the scholar's way and the realist's way. For example, the layman thinks that the village of Kittur is 'a shifted one' from some other place.

The root 'Kittu' means 'shifted' and 'uru' means 'village.' The scholars think 'Kirtipur' (a famous town) turned into Kittur. The reality is that 'Kit'+ 'uru'=Kittur, means a 'small village' ('Kiridu' means small). On the other hand, Dharwad District Gazetteer mentions that Kittur's earlier name was 'Gijaganahalli.' However it lacks evidence for it.

The names of villages erode, change and get corrected in course of centuries and if we study it with the help of inscriptions, we shall realize the value of it culturally and geographically. In this regard, the village names of Bailhongal taluk are studied in the backdrop of the local inscriptions and they are categorized as nature-bound and culture-bound.

I. Nature-Bound Village Names:

Man, living in his pristine biological surroundings, liked to name his places as biological factors dictated. This was the first historical phase for inscription based place names. The common nouns were common then. Basically Bailhongal taluk is covered with hills and valleys as it is tropical geographically. Therefore, the area has many natural names for human habitations. As per the inscriptions of the area, the nature-bound village names are as follows.

The names of villages like Sampagaadi and Kammudavaad remind us the abundance of jasmine (Sampige) and lotus (Kumad) flowers respectively in these two villages. The earliest name of Sampagaon is 'Sampagaadi'.¹ This is sampage (sampige)+ haadi= Sampigehaadi> Sampagaadi> Sampagavi> Sampagaon> Sampagavi. 'Gaon' means 'a village' in Marathi. In the times of the Peswas, Gavi became 'gaon.' The name 'Kummadavaad'² turned into 'Kalabai.' This is Kumud (lotus)+baad= Kumudabaad. Kammu is a pounding object. However, Kummud stems more from the flower 'kumud' than from the object of pounding. Likewise, 'Kadalavalli',³ is the first name of the place 'Kadrolli'. This is 'kadal' (a kind of plant) + palli=Kadalapalli>Kadalavalli>Kadrolli. In a way, it is not a village (palli) where battle took place. Maybe the village name may pertake the meaning of 'Kadal,' meaning a friend. The village Kulavalli was first called 'Koolavalli'.⁴ 'Koola' (Kulya= forest)+halli=Koolahalli>Kulavalli. An inscription has this line 'Kulavalliya

gramadhidevate Kulakabbeya degulada jirnodharakkam.⁵ We have the assumptions whether the village has the name of Kulavalli, because of its goddess Kulakabbe, or Kulakabbe has this name because of the village. scholars assume that the village is named after the goddess.

The earliest name of Basarakod is 'Basarikod'⁶ (Basuri+kod (peak)= Basurikod). The local peak has a look of a pregnant woman, hence the name of the village. Maybe there is a plant called 'Basuri.' Likewise, the village name 'Kurugund'⁷ speaks of its geography. 'Kuru' means a 'swollen place' or a hill. 'Gund' means 'a bigger hill.' The village name describes a hilly hamlet beside a hill. It is therefore Kuru+ gund= Kurugund. 'Turumari' is said to be the old 'Bettad Kurugund'.⁸

The earliest name of Udakeri was 'Udakeere'.⁹ Probably it was called Udakeri, because the hamlet was once infested with the wild animals called Udas in Kannada. There are many village names, all of them nature-bound.

The village Belavadi was first called 'Belvadi' or 'Belvaadi'.¹⁰ Historians Dr.S.J. Ritti and Dr.P.B. Desai think that the village should have known for its lands for bumper harvest or cotton crop. Linguistically the name may be 'Bellavadi.' This is Bela+vala+baad= Belavalabaad>Belavalavaad> Belavalavadi> Belavadi> Belvadi. The village is called 'Belavadi' and as 'Bellodi' in folklore.

II. Culture-Bound Village Names:

The origin of place names provides us our ancestor's way of life, ideas, beliefs, occupations, values and other things. In this regard, the place names of Bailhongal taluk provide us names which emerge from gods, race and history. Inscriptional support is available in this regard.

The village Kittur has got its origin, meaning that Kiridu (small)>Kit+uru = Kitturu."¹¹ *Doddavaad*¹² as it is auto-telic means a big village. That is Dodda+ baad= Doddabaad>Doddavaad> Dodavaad. Likewise, the village with temples – *Degulavalli*¹³ (Degula+ palli= Degulapalli>Degulavalli>Degalolli>Degalolli) has become Degalolli. *Degaon*¹⁴ is Devara + gaon= Degan or it may be from an individual Devanna or Deranna (Deranna+gaon=Derannan gaon> Derannangaon. Degan). *Ornanuru*¹⁵ has become

Orannan+uru=Orannanuru>Ornanuru> Vrnanuru> Vannuru. Likewise, *Kolanooru*¹⁶ has become Koladuru (Kolana + uru = Kolanuru> Koladuru). The names of such individuals as Oranna and Kolana might be the factors behind this orthography. Linguists think that the preceding units in the names of human beings end in the nasal sound 'n' at that.

The village name *Neesaragi*¹⁷ emerges from the ethnic tribe of Nesara. Neesaragi is from Neesara+ kai= Neesarakai> Nesaraki> Nesaragi. Since the Nesara people settled down in the place, the place was called Nesaragi. Today's Bailuru was once *'Mindavalli'*.¹⁸ That is Minda+ palli=Mindavalli. 'Minda' means 'brave'. So the village was full of brave people. Since the name also meant lovers or debauches, the name must be changed to Bailavalli. That's why Bailahalli in the dryland could be called Bailuru. Likewise, Chinchunike turned into Hannikeri (hanni (plant)+keri=Hannikeri). The first name of 'Devara Shigihalli' is *'Magod'*.¹⁹ This is Ma+kod (peak)>goda=Magod. The preceding unit is not clear. It is only the sound 'ma.' Hence we cannot understand its original form. This may be

mahaa+koda=Mahakoda>Magoda or muru+koda=Murukoda> Mukoda>Mugoda. But the village name changed to Devarashigihalli later. In a way, the place had a kind of a wild nuts (shigi) used in washing clothes and hence the name. We may think that such a plant existed beside a temple, and the people called it Devarashigihalli. In the same manner, *Gottigavalli*²⁰ has become Kotabaagi and *Bettada Kurugund*²¹ has become Turumari.

The village 'Budihaal' is called *'Budupalli'*.²² Probably the village was burnt down and re-built. This is Budupalli> Budupaalya> Buduhaal> Budihaal. The first name of the village Avaradi was *'Avaravaadi'*.²³ The equation may be Avara+baad=Avaravaad> Avarabaad> Avaraadi. Probably the names emerge from an ethnic group, or it might be a lesser hamlet. (The equation can be Avara=Kadeya; meaning lower or meaner). In brief, Bailhongal taluk is known for its rugged landscape as it is tropical in its geography. It is yet a land of beauty. The village names in the area tell their own stories of rich cultural and social past.

THE CONTRIBUTION OF VIJAYANAGARA RULERS FOR THE GROWTH OF RITUALS IN THE TEMPLES OF KANCHIPURAM – A STUDY

P. Perumal

Introduction

Kanchipuram is known for its multi – religious faith from the earliest period. It is the only south Indian city which has flourished with a rich heritage in many aspects. A number of researches were done by the eminent scholars in the Socio- cultural and religious life of the people in Kanchipuram. In this paper an attempt is made to highlight the contribution of the Vijayanagara rulers for the growth of the rituals in the temples of Kanchipuram. After the advent of Kumarakampana, the temples of Kanchipuram has underwent many changes. The generous gifts and donations made by the officers and kings of the Vijayanagara Empire. Both primary and secondary sources are utilized for the authentication for the proper understanding of the main theme. In this paper, the historical methodology of descriptive method is followed.

The antiquity of rituals in Kanchi

The Sanskrit term, '*puj*' means worship, which denotes the absoluteness of the rituals, from that receiving the gods grace and divine knowledge. In Tamil term, *pucey* indicates the offering of flowers to the deity. There are two kinds of *pujas*, they are *Atmartha* and *Parartha*. The former denote the performance of this puja in domestic places. But the latter is performed in the temples commonly. Festivals were a ritual practice and unavoidable component of Hindu religion. Perumbanarrupadai has mentioned that Kanchipuram was the busiest city having celebrated many festivals of different faith.¹ Kanchipuram was enriched with the observance of many *utsavas* and the congregation of large number of devotees has mentioned in the work of *Periya Puranam* The derivation of the name of Kanchi is also explained by its ritualistic affiliation to the deities, worship pattern and a city of pilgrimage.² Kanchi was a ritualistic centre for the Saivites, Vaishnavites, Saktas, Jains and Buddhists. Among the Saivites, *Kapalikas* were worshipped lord Siva in the form of Maha Kala in the temple of *Tirukachchi Mayanam*. The *Pasupatas* were worshipped lord Siva in the temples of Piravatesvara and Iravatesvara. The Saiva Siddhantins also worshipped lord Siva in many temples of Kanchipuram. Among the

Vaishnavites, *Tenkalai* and *Vadakalai* friction was very dominant at the times of Vijayagara rulers. The Kamakshi Amman Temple is known as one of the Sakti peetams in India. The word *Kottam* stands for the temple of a deity. The Kanchipuram city is sacred centre of many deities includes of Kamakkottam, Rudrakkottam and Kumarakkottam, which are most sacred for Sakthi, Siva and Subrahmanya³ A part of the ancient Kanchipuram is known as Jina Kanchi for its affiliation with Jainism. The Jain Temple is located in Tirupartuttikunram, a suburb of Kanchipuram. The goddess was worshipped by the devotees for a long time. During the period of Vijayanagara, a number of gifts and donations were made to strengthen the worship patern. Taradevi was worshipped by the Buddhists. Scholars are of opinion that Taradevi was later converted into Kamakshi in the ritualistic worship pattern in Kanchipuram. It is proved by the existence of Buddhist sculptures in different parts of Kanchipuram T.V. Mahalingam views that *Kanchi* as a tamil word, *Ka* means the lord Brahma and *Anchi* to mean worship. It denotes that the place where Brahma worshipped lord Siva.⁴ It is attested by some of the sculptural representations has found in the temples of Kanchipuram

Cultural Legacy of Vijayanagara rule in Kanchipuram

The Sambuvarayas were defeated by Kumara Kampana, son of Bukka I. He reinstated the worship of deities in the temples of Kanchipuram Region.⁵The epigraphical sources have mentioned the active role of the ministers of Kumara kampana in the development of ritualistic pattern in Kanchipuram. Somappa and Kopanna were the eminent officers in the supervision of temple affairs in Kanchipuram. There are sixteen inscriptions belongs to Kumara kampana has found in the temples of Kanchipuram. Almost all the epigraphs are conveyed the message of donating lands and the appointment of officers to supervise the temple affairs and administering the local people. The Srivimana of Kamakshi Amman Temple was gilded with gold by Harihara II. The residential quarters of Brahmanas was established in the

name of the deity Kamakshi and that was called Sri Kamakshipuram. Devaraya was issued an order to his officers for making arrangements to reinstate the properties of the temples, which was misappropriated by the officers and the local people.⁶ another inscription from the Kamakshiamman temple mentions that *Kavalkaniyatchi* right in the temple was given to Mudaliar Vijayingadevar. It was accepted by *tanattar* of this temple. There are Twenty Three inscriptions belongs to Krishnadevaraya has found in the temples of Kanchipuram. They furnished the details of the gifts of Krishnadevaraya and his officers. He built temple cars for Vinayaka and Krishna has mentioned in the temple epigraph of Ekambaranatha temple. He made the arrangements for the procession of temple cars without any hindrance. He gilded the *Punyakoti vimana* of Arulala Perumal Temple.⁷ He celebrated the *Tulabhara* ceremony in the occasion of Temple festivals at Kanchipuram. The epigraph of Achyutaraya gives the details of *tula purusha tana* in the temples of Varadaraja Perumal Temple. Achyutaraya, his queen Varada devi and the prince Kumara Venkatadri was offered pearls and gold through weighing themselves. Krishnadevaray has strengthened the pattern of worship by constructing the tall towers in the temples of Ekambaranatha and Vardaraja Perumal at Kanchipuram. The cult of worshipping Vimana from distant place was very common in Tamil Country.

Festivals played a vital role in the development of worshipping pattern of deities in Kanchipuram. The congregation makes the cordial relation and good inner feelings among the people in society. During the times of Vijayanagara, many festivals were celebrated with great pomp and gaiety. An epigraph datable to 1595 A.D., enumerate a festival as Thiruvural for the celebration of this festival on the river bed in the month of Chitra (April).⁸ The Brahmotsavam festival is celebrated in the month of Vaigasi at Varadaraja perumal temple in Kanchipuram. It became the popularity during the times of Vijayanagara rule in Kanchipuram. A separate hall was utilised for bathing the Utsava bheras and taking into procession. Garuda Mandapa, abisheka mandpa and Vasantha Mandapa were found in the premise of the temples of Kanchipuram. The Pavithrotsavam festival has celebrated in the Vishnu temples of Kanchipuram.⁹ It is a purification ceremony

observed to get rid of sins in the daily worship and other ritualistic practices in every year. The epigraphs of Achyutaraya have referred the Thirupavitra tirunal. The Thiruppuram festival was celebrated in the month of Aippasi in Kamakshi Amman temple has testified by the epigraphs of Devaraya Maharaya. The Tirukarthigai was celebrated in the temple of Arulala perumal during the times of Vijayanagara rule in 1553 A.D.¹⁰ It is held in the month of Thai for three days. The floating of the *utsavar* of Ekambaranathar decked with flowers ornamentation in a *theppam* is noteworthy. This festival was patronized by Krishnadevaraya in 1517A.D, with the grant of two villages for the celebration of this festival

Rituals in the Sculptures of Vijayanagara period

Sculptural specimens are found in the temples of Ekambaranatha and Kachchapesvara. A random survey of sculptural specimens found in these temples would be helpful to bring a clear picture about the influence of temple legends as the mark of symbolism in the temples of Kanchipuram at periodically. Primarily the religious themes displayed in the sculptural panels had taken from the local legends (sthalapurana), mythical stories and puranas. Here the iconographical features are commonly followed in accordance with the prescribed text. A study of many miniature curvings reveals us that the rites and rituals played an important role in the process of evolution of sculptural art in this region. We have ample evidences to prove that the change was occurred during the period of Vijayanagara. In Ekambaranatha temple, a miniature sculpture is found in one of the columns found in the prakara. It portrayed the story of Parvati worshipping a Siva linga with a garland under the Mango tree. Parvati is in standing posture. The sculptural pattern and style belongs to the Vijayanagara period.

A series of miniature sculptures found in the Lower part of the prakara of Ekambaranatha temple indicates the ritual dance of common folk. a man playing drum on the left side, at the centre four womens dancing with sticks on their hands. The portraits of the women is clearly visible and looking very beautiful. They adored with suitable garments and wearing a number of ornaments. On the right side, a woman has portrayed with playing the drum has found.

In a miniature found in the Katchabesvara temple, Vishnu is found in the form of tortoise and worshipping a Siva Linga. Vishnu has four arms; the two front arms are carrying a vessel to pour water for performing abisekha ritual. The rear arms are carrying a Sanku and Chakra.

Another miniature sculpture portrays that Parvathi is embracing a Siva linga under a Mango tree. She tries to safeguard the siva linga made of Sand is the mythical story of the sculpture. She is found in seated on her legs and strongly embraced the siva linga.

Another sculpture found in the Pillar of a mandapa in Ekambaranatha temple, Vishnu is in standing posture. He is performing the abisekha ritual to Siva Linga. He has four arms, in the front arms are carrying a vessel and pouring water on the siva linga. The rear arms are carrying a Chanka and chakra.

RESTRUCTURING THE REGION: LAND, STATE AND CULTURE IN TAMILAKAM (16TH-17TH C CE).

Dr. B. Prabu

Sixteenth and Seventeenth century Tamilakam of its society and culture is broadly discussed through this paper. During that period Tamilakam underwent a number of changes politically, socially, economically and culturally. In defining the boundaries of the territory on the basis of culture of *lingua franca* of the Tamil country is defined between two seas in the East and West and Vengatam hills in the north and Kanniakumari in the south could be seen in the early Tamil grammatical texts such as Tolkappiyam and Nannul. On the basis of various elements appearing in geography, climate, socio-political, and cultural criteria, the regional boundary has been defined.¹

Conclusion

The Vijayanagara rulers were enriched the temple rituals in many aspects. They rendered a memorable service for the growth of temples in Kanchipuram. They have brought in a controlled and well planned temple administration in Kanchipuram. They make provision for the proper administration of the temples including appointment of officers and making committee for the smooth handling of festivals in Kanchipuram. They have gifted many lands, villages and cattle for the maintenance of temple services. Temple was the centre of all Kind of Socio – Economic and Cultural activities during the period of Vijayanagara rule. The ritualistic favours of the Vijayanagara kings are shown in the epigraphs and sculptural specimens of Kanchipuram.

through dominating the old heartland associated with Cholas of Thanjavur was founded by Sevappa Nayaka in 1532 AD, and the other Nayaka lineage established itself at the hilltop of Gingee was by Dupaki Krishnappa Nayaka (AD 1541-1544).²

Among them, Nayakas of Madurai emerged dominant under the Viswanatha Nayaka (1529-1564). He ruled over southern and western districts of Tamilnadu and parts of Travancore. The territory under Viswanatha Nayaka was divided into 72 palayams headed each with a palayakar/poligar for administrative convenience introduced by Dhalavoy Ariyanatha Muthali, minister of Madurai Nayakdom in 1535 AD.³

Earlier to this period there was a unit of agrarian community (*Kutiga*)- called *nadu* which played intermediate role between agrarian village communities and the state. The state derived its revenue by extracting the surplus produce from rural based agrarian-communities through the office holders (*Nattar*) of the Nadu assembly.⁴ During the Vijayanagar period the whole of Tamilakam was brought under the control of Nayakas among whom Nayakas of Madurai, Thajavur and Gingee emerged as powerful.⁵

So, during the sixteenth and the seventeenth centuries the *nadu* set-up began to lose its importance at the wake of *ṅayakkattanam-sermai* and Poligar system. Both were administered by military generals known as Nayakas and Poligars or Palaikars subordinated to Vijayanagar Empire. These systems successfully breached the Nadu set up of Chola and Pandiya regime.⁶ In the beginning, they acted as military generals, revenue collectors, and looked after judiciary. But arbitrary collection of taxes on agriculture by them provoked peasant protests in the lower Kaveri- delta region and in few places helpless peasants left the land. So, they increased the number of land grants and tried to bring more land under cultivation.⁷

They having some sort of authority over the region, the military generals granted vast parts of the lands to either temples (*Devadana land grants*) or subordinated officials (*Umbali village grants*) in lieu of salary. A notable number of inscriptional records consciously mention the prefix *Kudi Neengaa* (without evicting the Peasants)- *kudi neenga kaniyatchi/ devadana*

(land or village granted to temple without evicting the cultivators from the granted land). It means the land rights (*kani*) were being shifted from peasants to either Temples or officials of the state. In the Chola and Pandiya period, the lease holders of the temple lands were under direct cultivators. But, in this period the lease holders were Nayakas and Poligars. Thus, almost all the granted lands came under the office-bearers of the state. So, the deprivation of land made the peasants to remain either as tenants or landless labourers in their own land.⁸

The state also secured its revenue from the surplus produce of the expanding dry-land cultivation. The dry land cultivation was promoted by migrants particularly from Telugu speaking region. Unlike wet-land cultivation, the production in the dry land cultivation supported commercial activities in a wider extent. So, to survive in the region, the migrants continuously engaged in the exploration of black soil and expanded the dry land cultivation. Mostly the black soil is optimum to cultivate cotton plant successfully depending on rain-water alone. This is the only reason for the distribution of Telugu speaking population very densely in the black-cotton soil areas.⁹

These historical developments brought a shift in the existing social structure of the region. Importantly, the caste disparities got sharpened. Naturally, during incessant invasions and large level migrations, any human community cannot lead a peaceful life. There would be a tendency in every community to unify for some common interest. The same thing happened during this time. Various communal groups strengthened their unity on the basis of kin based relations for saving themselves and their assets from other communities. The condition of caste system shows that people from some caste groups emerged as land holders by accumulating the land rights through securing tenancy rights and safeguarded state. These castes, such as Gavundars, Reddis, Kaikolars, Manradis, apart from having better hold over the black-cotton soil also emerged as landed magnets throughout the wet-land regions. Consequently, the wet land cultivating caste of Mallars lost their communally owned land rights and also (*kani*) and became tenant cultivators and land labourers on their own lands. All these developments led to the peasants uprisings against the state suppression in the Kaveri delta region.¹⁰

Women also played a major role in the agrarian set-up. There was a close relation between the women and arable land. These relationships is categorically treated into two. The first one is women who did not engage with agricultural operations but played intermediary roles in the transactions of the landrights; the ruler controlling all the lands in their region as donor of lands; and women being donor becamelandowner/landholder. Second is the women as direct cultivator or a labour-providing groups for cultivation.

From the throne of Nayakas of Madurai, Mangammal and Meenatchi were the acting rulers who contributed to the agrarian society and economy by digging many canals and tanks. But, we have notable information only to draw their political history and not their socio-economic roles. During this period the affinity between the temple and the courts of Nayakas got sharpened. The idols of the gods and goddesses in the temples were erected with the models of the kings and queens (Nayakas and their Nayakis)¹¹. The temple dancers became a part and parcel of courtesan groups. So they enjoyed financial assistance from either coffers of the state or treasuries of the temples. However, in comparison to the Chola period, now they were gradually deprived of becoming land owners who secures land grants.¹²

The women who belonged to the groups of direct cultivators formed two groups on the basis of the nature of the land ie., wet land cultivators and dry land cultivators. The women who were associated with wet land cultivation were mostly from mallar caste. During this time their position was degraded corresponding to the negative shift in the socio-economic position of their caste in the social structure. Comparatively, the living condition of these women were much better than their counterpart in the other strata. But, their position in the family became disreputable due to the emerging tendency of polygamy. Literature of this period registered their voice with rebellious character against the ill-treatment of their husbands, supervisors, and land lords in the respective fields.¹³

The women from this wet land cultivating caste also enjoyed a kind of wisdom. A few prevelant systems among them were the systems of *parisam* and *aruthukkattu*. The

parisam (bride price) as a custom, in contrast to dowry system, required the groom to pay a sum of money to the bride. In case, if the groom failed to pay the price he was not allowed to get the bride for marriage. This custom might have come into existence because of the inevitable demand for the women's labour in the sectors of social production and social reproduction.¹⁴

In contrast to the women in the wet land cultivating communities, the direct sources for the women who belonged to dry land communities were very less in number. The presence of large number of dry land agrarian communities in the region was very recent to this period. Earlier the dry land cultivation had been carried out in a limited extent. Therefore migrants did not settle in a full-fledged manner. Further, during this period the region was not politically stable due to the internal hostilities among the Nayakas, the sultanate invasion and the presence of Nizam's armies in the region. So, the invaders and warriors targeted the women mostly. This resulted in the presence of large number of female *sati* cults/ clan cults (Kula Deiva) in the region from this period onwards.¹⁵

These cults were women who committed self immolation (*sati*) by setting fire on themselves after they were sexually harrassed by either soldiers, local lords, nayakas or any other office-bearers of state administration. The practice of immolation by women was not due to sexual harrassment alone. *Sati* became a popular practice only because of assuming that the women should be bodily pure. Maintaining the so-called purity, the caste based male-dominant societies diverted the possibility of inter-mingling with castes. In general, these women were helpless, even their lives were questioned not only by males from outside the caste(soldiers, local magnet) but also from within their kins, who kept rigid rules on the victimized women to commit suicide(*sati*). During this period the women were under degraded condition. They were simply treated as labour providing tool or force rather than human beings.¹⁶

Since the agrarian technology of the pre-colonial period gradually evolved throughout the period, it had a numbers of positive development. The study views technology from combined aspects of tools and techniques. The agrarian technology is broadly divided into two i.e.,

irrigation technology and the rest. The irrigation technology constitutes dam, channel, canal, tank, bund and wells. These are otherwise called as artificial irrigation arrangements. Though the region does not have any perennial river system the people evolved and adopted those artificial irrigation arrangements to the micro regions wherever the geographical and environmental condition allowed it. These helped the cultivators to get water almost throughout the year for their operation otherwise they could grow only one crop per annum. Further, this technological arrangements made even drier areas partially fertile in the zones around Pudhukkottai, Ramanathapuram, Sivagangai and Viruthunagar. About 40% of the total cultivation of Tamilakam got supported by these artificial irrigation arrangements. Obviously, the wet-land rice paddy cultivation was occupied by the given proportion. History of dam constructions in South India goes back to the beginning of the Christian era and this tradition is continuing till date. By using the canals and sulices, the distribution of water had been done properly. These arrangements were usually followed in the river valleys such as Tanjavur, Thiruchirapalli, Madurai and Thirunelveli. Besides the river zones, the adjacent parts were provided water through the arrangements of canals and larger number of tanks. According to records from colonial period, about 60,000 tanks were maintained in pre-colonial Tamilakam for promoting the cultivation and keeping prosperity in state revenue.¹⁷

Apart from the irrigation techniques, the cultivators used many tools and techniques to reduce the burden of labourers and to harvest the crops successfully. According to the sources, at the first sight of the company officials from the Europe, they mistook the indigenous tools and techniques to be not well-shaped, disciplined and inferior to theirs. Later they understood and corrected their mistakes by noting that whatever the nature of the tools and techniques used in each regions of India were very applicable. They commented that the indigenous techniques were easy to handle and were not even applicable to other regions within India. The indigenous techniques extended even in selecting the seeds and crops. They used variety of seeds for every crop in food grains and practiced mixed crop cultivation. This approach secured atleast foodstuff for their livelihood even during the times of failure of monsoon, low rainfall and crop failure due to diseases. There are very few famines recorded in 16th and 17th century but 18th century marked with series of famines in the region. In this regard the sixteenth and seventeenth century agrarian region of Tamilakam was in a progressive nature in terms of culture and its temporality, could also be included the presence of dominant mode of overseas trade, connecting Europe and converting the culture, widely differs from earlier period in Tamilakam.

ANIMAL WELFARE IN THE COLONIAL PERIOD (1869 to 1949)

Prashanth Krishna

Within the sphere of colonial laws for animals in India, there were two kinds of laws regarding animals: one involving animals and their use, and the other for animals. Examples of the former would include the Calcutta Hackney Carriage Act of 1891 and the Central Provinces Slaughter of Animal Law of 1915. The latter would include the Prevention of Cruelty to Animals Act (PCAA) of 1890¹.

The PCAA of 1890 was based on the Cruelty to Animals Prevention Act of 1849 in English law. A law based on the latter was first enacted in Calcutta in 1869, termed as the Prevention of Cruelty to Animals Act (PCAA) of 1860. In the North-West Provinces (modern Pakistan), there were laws similar to those in Bengal. Other early laws in the various provinces dealt with cases of cruelty towards animals and inhuman behaviour. These included the Special Act (I of 1869) in Bengal and Assam, the Madras Nuisance Act and the Madras Police Act and the District Police Bill in Bombay. The scope of these early laws was limited².

Due to the existence of many instances of cruelty to animals in the public sphere, as well as the need to improve the earlier Act of 1869, the PCAA of 1890 became the first comprehensive Act made explicitly for animals in colonial India. It was an important legal provision, which generated great discussion among the state departments and various other agencies and individuals. Firstly, the difficulties of defining cruelty led to debates over the application of this law, as to whether it should apply to all instances of cruelty, wherever and whenever? There was

also a debate over necessary and unnecessary cruelty. Secondly, questions arose about those practices which should or should not come under the purview of cruel treatment, raising old debates of means and ends. Does killing animals justify for certain specific reasons, whether related to medicine or food; does it justify the act of killing or experimentation? Also, in such cases, who would be responsible? Thirdly, deterrents like fines and punishments were also debated: who is to be fined and who is to be punished, and what is the impact on the animal?³

The 1890 Act was central to ideas of welfare and cruelty as applied to animals. The idea of cruelty was linked to a "somewhat paternalistic idea of welfare, mainly for those who are dependant and need to be looked after or are considered vulnerable and in need of protection". The question was whether animals were to be regarded as individuals as victims of cruelty or and whether the subjectivity of being was to be accorded to the perpetrators of cruelty. Was there change in the understanding and definition of cruelty, violence, abuse and exploitation? Did the term reflect the seriousness of the offence and the issues at hand? Did the debates over the provisions of the acts reflect the seriousness of the offence and the issues at hand?⁴

It appears that the reasons and objectives of the Act and its fines and punishments were regarded from the view of human needs. The demand for scientific approaches, definitions and descriptions, as well as the debates over the provisions of the acts reflected typical

anthropocentricity, even in an act made specifically for animals. Cruelty and welfare are universal ethical concepts to be admired and followed, but legislation and its execution, including the difference in attitudes and the ability to understand, appreciate and learn, become important factors.

One of the respondents to the initial draft of the Act argued that 'neither English law nor abstract morality is a safe index of what might be made penal in this country'⁵. The reasons for the enactment of the Act went beyond ethics. Several aspects had to be kept in mind: the habits of the people, the agency which would enforce the law, the spread and poor connectivity of rural areas and the lack of competent tribunals. It was suggested to proceed with caution and to carry the people along. It was also deemed as desirable to involve and consult local governments regarding the measures to be taken. In case there was a plan for general application of this law, then framing had to be done with moderation. The suggestions regarding moderation became the topic of discussion among various stakeholders, legislators, lawyers, judges, police officials, members of various social communities and members of the select committee. Suggestions were raised that the area of application should be decided by the local government, and that any act of cruelty was to be punished only when occurring in public or within the vision of any person.

This last suggestion concerning the evidence of the punishable act, was widely debated. Those against a hard approach pointed out that to ascertain cruelty within domestic spheres and enclosures required checking and searching, for which police officials would have to enter houses and search warrants would have to be issued. This would be regarded as an infringement of privacy by the native population and could lead to extreme discontent. There was also concern that activities which had religious sanction as acts of cruelty would cause outrage among the natives⁶.

Some of the important definitions formulated through this law indicate what cruelty in the PCAA of 1890 entailed, namely:

'If any person in any street or in any other place, whether open or closed, to which the

public has access, or within sight of any person in any street or

in any such other place, cruelly or unnecessarily beats, overdrives, overloads or otherwise ill-treats any animal, or binds or carries animals in such a manner or position as to subject an animal to unnecessary pain or suffering, or

offers, exposes or has in his possession for sale any live animal which is suffering in pain by any reason of mutilation, starvation or any other ill-treatment, a person found guilty of such cruelty shall be punished with a fine, which may extend to Rs.100/- or with imprisonment up to 3 months, or with both. Other acts of cruelty to animals were subject to similar punishments. Additionally, killing any animal in an unnecessarily cruel manner might result in a fine, which may extend to Rs. 200/- or imprisonment for a term extendable to six months, or with both. However, if people employed in any work or labour any animal which by reason of disease, infirmity, wound, sore or other cause is unfit to be so employed, or permits any such unfit animal in their possession or under their control to be so employed, they shall be punished with a fine which may extend upto Rs. 100/-.'⁷

While cruel actions perpetrated by humans were penalised, no remedy was available for the animal that suffered cruelty. These issues were highlighted in a letter dated 14th February 1890, by Captain R.C. Temple, who was on special duty to the Government of India, Legislative Department. Based on his experience of dealing with cases of animal cruelty, he divided them into two categories: One consisted of 'cases of ordinary cruelty arising from vicious tendencies on the part of the offender, which are best punished by such provisions as contained in the Bill'. A second set of cases are those 'which arise from the necessities of an indigent population, combined with that incapacity for sympathetic feeling which distinguished many uneducated persons. These...required to be dealt with in a different manner.'⁸

Other early Indian Acts dealing with animals included

- The Calcutta Hackney Carriage Act of 1891, which dealt primarily with the procedure for registration, prices, distance

to be covered, behaviour of the driver, rights of the passengers and settlement of disputes. The horse was a mere addition, with the addition of conditions of harness and by-laws to treat cruelty towards the animals⁹

- The Central Provinces Slaughter of Animals Law of 1915, covering the states of Madhya Pradesh, Chhatisgarh and Maharashtra, which defined a slaughter house as “any place where more than 10 animals are slaughtered on any one day. The animals to be slaughtered included bull, bullock, cow, buffalo, goat, sheep and their young ones¹⁰. This Act regulated the growing meat trade. Inhuman methods of slaughter were punishable but not defined.

The Indian Penal Code (45 of 1860) was probably the only early legislation which gave any protection to animals under the following provision¹¹:

47. "Animal". — The word "animal" denotes any living creature, other than a human being.

428. "Mischief by killing or maiming animal of the value of ten rupees". - Whoever commits mischief by killing, poisoning, maiming or rendering useless any animal or animals of the value of ten rupees or upwards, shall be punished with imprisonment of either description for a term which may extend to two years, or with fine, or with both.

429. "Mischief by killing or maiming cattle, etc., of any value or any animal of the value of fifty rupees". —Whoever commits mischief by killing, poisoning, maiming or rendering useless, any elephant, camel, horse, mule, buffalo, bull, cow or ox, whatever may be the value thereof, or any other animal of the value of fifty rupees or upwards, shall be punished with imprisonment of either description for a term which may extend to five years, or with fine, or with both.

Other laws include

The Cattle Trespass Act, 1871, provided pounds for the seizure and maintenance of impounded cattle¹².

The Elephants Preservation Act, 1879, banned the killing of elephants except in self-defense or when permitted by licence¹³.

The Madras Wild Elephants Preservation Act 1 of 1873¹⁴, (now Tamil Nadu Wild Elephants Preservation Act, 1873), aimed to prevent “the indiscriminate destruction of wild elephants”¹⁵, but the Act did “not in any manner prohibit or restrict the owners of forests from capturing, taming and owning wild elephants”¹⁶.

The Madras Livestock Improvement Act, 1940, was made “for the improvement in the state of live stock in Madras”, including bulls, cows and buffaloes.¹⁷

The Tamil Nadu Animal and Bird Sacrifices Prohibition Act, 1950, totally banned sacrifices in the state of Tamilnadu (carved out of the erstwhile Madras State).

Tamil Nadu Animal Preservation Act, 1958, provided for the preservation of certain animals – primarily bulls, bullocks, cows, calves, buffaloes and their calves - by regulating their slaughter before ten years of age¹⁸.

The Madras City Police Act, 1988, empowered the police “to prevent cruelty to animals and penalise the people doing so”¹⁹.

While human cruelty could be fined, no remedy was available for the abused animal that had suffered cruelty, primarily due to lack of infrastructure facilities like shelters, veterinarians and para-veterinarians.

Animals have been an essential part essential to human development. Animals are also sentient beings. Phrases such as ‘Horse Power’ and ‘the dog is man’s best friend’ suggest that animals have been actively associated with human history. While cruelty to animals should be a simple and straightforward concept, its complexities in its cultural context are ambiguous. Is cruelty to be understood by human action, or by the pain and abuse suffered by the animal, or both? Is the context of the perpetrated cruelty important? Is killing an animal an act of cruelty? If yes, then how is slaughter justified, and is there any humane way of killing? These problems are still relevant and debated today, and are reflected in India’s laws preventing cruelty to animals. But in colonial India, framing a law to prevent cruelty to animals, one which had never existed earlier, entailed these critical questions. Framing a definition for legal purposes described those actions that were

to be termed as cruelty, while excluding actions that are not a part of the definition.

However, the laws – then as now – though excellent on paper, were hardly ever implemented. The very low fines that were incorporated into the Acts were no deterrent.

INDIAN SPCA MOVEMENTS

Society for the Prevention of Cruelty to Animals, or SPCA, is a common term used for non-profit organizations for animal welfare around the world. The oldest SPCA is the RSPCA, founded as the London SPCA in England in 1824. Indian SPCAs operate independently of each other; they are supposed to campaign for animal welfare, prosecute cases of cruelty to animals, rehabilitate and find homes for maltreated and unwanted animals that can be rehomed.

The SPCA was the first animal welfare charity in the colonial world. Queen Victoria had granted the British SPCA its royal status in 1840 and it became the Royal Society for the Prevention of Cruelty to Animals (RSPCA) (see above), which is how it has been known ever since. The RSPCA is important because it provided a model for similar societies to come up in India.

On October 4 1861, Mr. Colesworthey Grant founded the Calcutta Society for the Prevention of Cruelty to Animals, the first organisation of its kind in Asia. at a public meeting presided over by the Venerable Archdeacon Pratt and attended among others, by the Rev. Dr. Alexander Duff, Dr. Fredrick John Mouat, Baboo Peary Chand Mittra, Seth Apar, M. Rustomjee, Raja Pratap Chandra Singh Bahadur, Maulavie Abdul Luteef Khan, Colesworthey Grant, and others. Lord Elgin, the then Viceroy of India, lent his powerful support by consenting to become its first patron of the Society, and Colesworthey Grant its Honorary Secretary. The Royal Society of London gave it the benefit of its experience. The Society was supported by the Government of Bengal. Peary Chand Mittra, the life-long friend and biographer of Colesworthey, took the advantage of his position as a member of the Bengal Legislative Council to introduce in the Council two Bills for Prevention of Cruelty to Animals, which was passed into law as Acts I and III of 1969, in spite of opposition from a few Europeans, including

Stuart Hogg, then Commissioner of Police, and later on, Chairman of Calcutta Corporation. The Corporation of Calcutta could not be persuaded to take up the responsibility unless the terms were revised, and finally decided to entrust the Society with its own administration and the Act was put into operation with effect from October, 1926. Till then it was an unregistered body. On the 17th November, 1932, the Govt. appointed a Committee consisting of 9 members under the chairmanship of Mr. Justice H.G. Pearson to examine as to how the working of the Society could be improved. Though the Pearson Committee noted along with its other recommendations that the Society should be registered under the Society's Registration Act (Act XXI of 1860), it was registered much later i.e., on the 5th February, 1954, under the Society's Registration Act (Act XXI of 1860)²⁰.

In the second half of the nineteenth century, the animal welfare movement in India gained momentum and several SPCAs came into existence. In 1874, the Bombay SPCA was established prevent cruelty to animals and provide help and relief to all animals in Bombay (now Mumbai). In 1877, the Madras SPCA was established to prevent cruelty to animals and provide help and relief to all animals in Madras (now Chennai)²¹.

In 1929, the All India SPCA, the first known attempt to create an organization representing the Indian humane movement, was founded at a conference in Delhi and housed in Calcutta by the Calcutta SPCA, and remained active at least until 1935²².

The Indian SPCAs successfully lobbied for anti-cruelty legislation and, in 1890, the Prevention of Cruelty to Animals Act was introduced in India. Versions of this legislation were adopted throughout the British empire, but enforcement was both rare and difficult.

The Lahore SPCA was founded in 1890, while the Kakinada SPCA was formed in 1896²³ and the Amritsar SPCA in 1906. In 1896, the Maharajah of Pithapuram donated 98 acres for the newly incorporated Kakinada SPCA, which was supposed to support itself through judicious use of the land, but instead sold most of it, and by December 2008 had just two acres left when investigated by the Animal Welfare Board of India for alleged mismanagement²⁴.

Indian organizations were represented at the First International Humane Congress held in Washington D.C. in 1910, and in subsequent meets till 1947²⁵.

The National Humane Review (July 1938) reported that a Miss Howard Rice, of Pune, had extensively documented the cruelty of the Indian monkey export trade²⁶.

Meanwhile, in 1908-9, the last remaining Asiatic lion habitat, the Gir Forest in Gujarat state, was protected by order of the Nawab of Junagadh. The Gir Forest lion population was hardly 10 to 12 when the Nawab acted. Human encroachment had shrunk the protected area. 1530 sq.kms. were placed under the Forest Department of which 326 sq. kms. were reserved exclusively for lions. It was the first wildlife sanctuary in British India²⁷.

If there were positive efforts to prevent cruelty to animals, negative voices were not far behind. In 1926, Mahatma Gandhi authorized Ambalal Sarabhai, a wealthy Ahmedabad mill owner, to kill about 60 dogs who were roaming the mill premises. The Ahmedabad Humanitarian League objected. Gandhi responded with a series of eight long articles published in his weekly newspaper *Young India* between October and December 1926, which reflected the then prevailing attitude toward dogs in Britain, and recommended to that India should adopt Britain's Dog Act of 1910, permitting all stray dogs liable to be destroyed date²⁸. This was certainly an unusual attitude from the votary of ahimsa.

On November 19th, 1947, according to the Department of Animal Husbandry and Dairying, the Government of India appointed a 'Cattle Preservation and Development Committee' under the chairmanship of Sardar Datar Singh, Vice President of the Indian Council of

Agricultural Research. Along with other issues, the Committee also studied as to how agencies like Gaushalas and Cattle Protection Societies and Salvage Centres could be utilised for preserving cattle wealth and for promoting its development. The Committee recommended establishment of 'Gosadans' where 'uneconomic' cattle could be housed cheaply and allowed to die a natural death. The Goshalas and Pinjarapoles managed by the community were still running. during the First Five Year Plan, there were nearly 3,000 Gaushalas and Pinjarapoles spread over the whole country. These institutions maintained over six lakh cattle at an annual cost of Rupees seven crores. In 1954, the Gaushala movement was quite strong in Rajasthan, UP, Bihar, Bombay (including present Gujarat and Maharashtra) Madhya Pradesh and Madhya Bharat²⁹.

The terms "gaushala," "gosadan," and "pinjarapole" are often applied interchangeably to cow shelters, and often refer to the same facility, but different legal definitions. "Gaushalas" are officially considered to have an animal welfare role. Unfortunately, Gaushalas often breed cattle, ostensibly to conserve native genetic traits, but many have become commercial dairies. "Gosadans" are hospices for dying cattle. "Pinjarapole" seems to be the most inclusive term for cow shelters – retirement homes - of any type.

In 1949, Article 51-A(g) of the Constitution of India stated that "It shall be the duty of every citizen of India...to protect and improve the natural environment including forests, lakes, rivers and wild life, and to have compassion for living creatures³⁰". Thus the early movements for compassion towards animals, a heritage from the times of the Buddha and Mahavira, were incorporated into the Constitution of the new nation and would lead to further efforts to ameliorate their condition.

FROM THE COURTYARDS TO RATION SHOPS: STORY OF RATIONING IN A MALAYALAM NOVEL

Rahul M Ramesh

A description about the severity of the economic crisis and inflation in Malabar and the adjoining districts during the Second World War was there in the diaries of A.C.Kannan Nair, a Congress leader and member of the Echikanam family, a prominent land owning family in Madikkai village of Kasargod district. Kannan Nair had recorded about the economic problems during the War in his diary on 5 August 1940. He said:

Damodaran (Kannan Nair's son) didn't send to school. His fee not paid because I don't have the money. This is for the first time happening like this. What a pity.¹

This description by A.C.Kannan Nair, a member of the Echikanam Nair family, which owned 16 big granaries in the Thrikaripur Kasargod –region, is revealing the fact that even the landlords, who easily survived famine and inflation had been haunted by the famine broke out in the days of the Second World War.² The famine affected people of all sections irrespective of class, caste and religious differences. Like peasants and workers, middle class people and land owners had been struggled to live.

The famine in Malabar was a reflection in local level of the crisis in world politics, which was a direct outcome of the beginning of the

War. The Japanese invasion of Burma in 1942 had disrupted the import of rice from Burma to Malabar. Burma was the major supplier of rice to Kerala.³ It is usual that when a state involved in any war, prices could always be high, because a war demands more resources from people. In Malabar the prices of all essential commodities including rice, kerosene, sugar and textiles were went up in the War period. Inflation became uncontrollable and it necessitated an intervention by the Government.⁴ As a measure to control inflation rationing in a preliminary level had introduced in Malabar in 1943. But in 1944, rationing had extended further by including more goods.⁵

When the system of rationing came into force, the Government had taken the direct control of the distribution of goods and private sale of commodities banned. Orders were issued prohibiting the export of rice and paddy from Malabar. The government had given the right to fix the amount of food stuffs to be consumed by each person. Food committees and P.Cs had formed to help the government in the process of collecting rice and paddy.⁶ Volunteers of all major political parties including the Congress, the Muslim League and the Communist party had worked together setting aside ideological differences between them for preventing the

landlords from selling goods for higher prices in black market and to ensure the fair distribution of food stuffs among common people.⁷

The famine in Malabar was not an isolated one. The province of Bengal had witnessed for a great famine, which was the biggest in its history in 1943. Janam Mukharjee and Srimanjari made successful attempts to study the social, economic and the cultural aspects of the Great Bengal famine in their works.⁸ M.Raghavan, who studied about the famines in British Malabar under the colonial rule in detail by using the methodology of Economics and Statistics has identified some resemblances between the famines in Malabar and Bengal during the Second World War.⁹

Dilip Menon, when critically examining the role of the communist party in famine relief works in Malabar has put forward some arguments about the changes in the dominant position of matrilineal joint families or *marumakkathaya taravadukal* as the distributor of food stuffs to people.¹⁰ As the biggest land lords of Malabar, the matrilineal joint families had traditionally been the major producers and the distributors of food. But there was a change in this situation, when the distribution of food stuffs came under the direct supervision of the state. Under the new system, even the quota of food stuffs allotted to each member of a matrilineal joint family was fixed by the state. Earlier this right was a monopoly of the *karanavar* (the senior most male member and the head of a matrilineal joint family). It was in this same period the words 'ration' and 'ration shops' found its place in the vocabulary in the daily life of the people of Malabar. When the place of distributing foodstuffs had been shifted from courtyards of matrilineal joint families to ration shops, ration shops were emerged as an integral part of the public sphere. This paper based on the Malayalam novel *Marumakal* (The Niece) by the famous writer Cherukad is an attempt to analyze the impact of the introduction of rationing in the daily life of the people and to explore the way in which the coming of rationing had questioned the dominance of matrilineal joint families as the major distributor of food stuffs to the people of Malabar district.

Fiction and Autobiography

Most of the works by Cherukad are political.¹¹ Being a supporter of the Communist

Party and the leader of the progressive Writers Association in Kerala, he had never hidden his politics in his works. But the nature of the novel *Marumakal* is different and this novel is apolitical. This novel, which set in the background of the Second World War hadn't any direct references to the national movement in Malabar during the World War or to the activities of the Communist Party, which was very active in the District, especially in the region where Cherukadu was living. Even though, the novel had handled many socially relevant issues of this particular period like the famine, rationing and the decline of matrilineal system, for an ordinary reader the political outlook of the novel is too narrow. Most of the characters in the novel belonged to a matrilineal family of temple servants (*Ambalavas*) and the novel kept silence about the contemporary political issues.¹²

Rajat Kanta Ray through a comparative analysis of the novels and the autobiography of the famous Bengali novelist Tarasankar Banarjee (1878-1971) had proved that many of the things presented as fiction in the works of Banarjee are historical facts. Rajat Ray has successfully established his arguments by citing relevant points.¹³ Applying the same methodology adopted by Rajat Ray and comparing some of the incidents in the novel with the real life of Cherukad as told by himself in his autobiography, it is very easy to argue that the novel *Marumakal* is autobiographical.¹⁴

Cherukad begins his famous autobiography with the statement, "I am an *Ambalavasi*."¹⁵ The plot of the novel including the disillusionments of youngsters in an *Ambalavasi* matrilineal joint family under the misrule of their *Karanavar* (uncle) and the conflicts between the *karanavar* and *marumakkal* (nephews). Majority of the important characters in the novel are members of the *pisharody* community, a sub caste among the *ambalavasi* castes. Cherukad too was a member of the *pisharody* community and he had that freedom as a writer, while telling the story. According to the *Keralolpatti* the hereditary profession of the *pisharody* community were making garlands for deity and sweeping temples. Like the Nairs, member of the *pishrody* community had followed the matrilineal system of succession and joint family system with joint ownership of property.¹⁶ It seems that the real life

experiences of Cherukad had influenced the personality of some characters in the novel. For example, Kunhunni Pisharody, the head of the matrilineal joint family in the novel had the same personality of Cherukad's uncle, whom he addresses as *kunjammaman* (younger uncle) in his autobiography. Narayanan, the nephew in the novel and a firebrand was the other of Cherukad. Cherukad had narrated the prolonged confrontation between him and his uncle in his autobiography. Narayanan has once beaten terribly by his uncle for disobeying his word. After that incident Narayanan left his village and has joined in the army. An uncle in a matrilineal joint family always had the fear of the birth of a nephew, who is dare to question his authority. This same fear propelled the uncle in the novel to beat his nephew Narayanan, who took the money without uncle's permission for buying *beedi*. Cherukad also had the habit of smoking *beedi*, when he was young. He in his autobiography describes an incident of plucking coconuts by climbing himself on the coconut tree in the land owned by his family with an intention to earn money from selling the coconuts for purchasing *beedi*.

Like the uncle of Cherukad, Kunjunni Pisharody, uncle in the novel had more allegiance to his wife house than his own house. In the matrilineal system, uncle's wife and children hadn't any right over his husband's or father's property. Kunjunni Pisharody had smuggled money and other things to his wife house from the *taravad* without informing other family members. Cherkad wrote in his autobiography that besides money his uncle had taken away other things like paddy, rice, coconuts, jackfruits and mangos from the *taravad* to help his wife and children, who were residing in his wife house. In one occasion Narayanan obstructs his uncle, when he is trying to smuggle things put in a wooden basket to his wife house. Kunjunni Pisharody, who is always living in his wife house has nicknamed by other members of his family as *Andur kakka* (Andur Crow. Andur was the place, where Kunjunni Pisharody's wife house located). His wife house was regarded by the family members as *Vaikundam* (the residence of Lord Vishnu, where he is living with his wife Lakshmi). Cherukad's mother is using the same term *Vaikundam* to denote the wife house of the uncle in the autobiography. Cherukad's uncle had ordered

the members of his joint family to cut short their cost of living for gaining private property. He had been earned 2,000 Rupees in one and a half year and started to construct a new house for his wife and children.

In the matrilineal system father was always a guest or a visitor, who appears very rarely in the life his children. In the novel there aren't many occurrences, where Narayanan's father's name has mentioned. Likewise, the autobiography of Cherukad in which his uncle had a very strong presence, he limited the description about his father in a few pages. In a matrilineal family the real guardian or parent of children is uncle, not father. An uncle had the unlimited power to punish his nephews. Cherukad has beaten by his uncle occasionally. Narayanan's mother in the novel once said to him very proudly that Narayanan had the face cut of his father.

Though there aren't any direct references about politics in the novel, in some occasions the *karanavar* was compared with British officials and matrilineal with the colonial rule in Malabar. The brave act of the members of the joint family, who had broken the lock of the and took rice and coconuts to eat without consulting their uncle was regarded in the novel as 'something like a colony got independence'. Cherukad in his autobiography, compares a *karanavar*, who is ruling his joint family by residing in his wife house as an imperialist power. At the same time, Cherukad regarded the people, who entrusted with the duty by his uncle to look after his *taravad* as viceroys.

Being a school teacher and a leader of the Teacher's Movement in Malabar, many of the protagonists in Cherukad's works are teachers by profession. Nani, the heroine of the novel *Muthassi* (The Grand Mother) is the best example. The leading female character in the novel, Janakikutti was a school teacher. Teaching profession was one of the main choices opted by the youngsters of middle class matrilineal families. The custom of marrying daughter/son was very common in matrilineal families. In the novel, to control his rebellious nephew Narayanan, his uncle had decided to give his daughter in marriage to Narayanan. In real life Cherukad married his father's niece.

Cherukad was born in a village near Perinthalmanna, the headquarters of Valluvanad *taluk* in the erstwhile Malabar district. This region had a huge Muslim population. Consequently, Cherukad's life and works has influenced by Muslim culture and life style. Unnimammath, who managed the property of Cherukad's family in the absence of his uncle was a Muslim. One of the most attractive thing in the novel for the readers was the love between Janakikutti, an upper caste Hindu girl and Kochuvappu, a Muslim boy.

Story of Ration Shops

Direct control over the process of production and distribution of food stuffs was one of the important factors, which perpetuated the dominance of matrilineal joint families in the society. Peasants and people of other subaltern classes had always been depended upon matrilineal joint families for food and existence. As a fatal blow for the hegemony of the land owning matrilineal joint families, immediately after the introduction of rationing, ration shops took over the duty of distributing food stuffs to people. Cherukad had explained this change in his autobiography as '*pattaparakal poliyukayayirunnu.puthiya alavuthappukal vannu* (The old vessels used for measuring paddy and rice had broken and new weights and measures came in its place).¹⁷ Cherukad had added that, land lords, local rulers and their *karyasthans* (managers) had been frightened like a hog-rat saw fire, when the responsibility of distributing food stuffs had handed over to ration shops and societies.¹⁸

As a writer and a communist, Cherukad was an active participant in the popular resistance against the acute shortage of food during the Second World War. The play *Kanjikalam* (The Rice Gruel Pot) wrote by Cherukad and dealing with the famine and black marketing had been staged all over Valluvanad *taluk*. Under the newly introduced system of rationing the power to measure the area of land under cultivation and to fix the levy from it had given to the official called *Amsom Menon* (The Village Accountant). As said earlier, new weights and measures had introduced in the place of the old volume of measuring out food stuffs used by landlords. Rationing and control was also applicable for textiles. But landlords were permitted to keep food stuffs in a fixed amount

for their private consumption. By using the loop hole of this provision, land lords had collected illegal permits and started attempts to sell rice and paddy in black market without measuring it in stores. The agrarian struggles in North Malabar including the Karivellur agrarian riot were a reaction against these attempts of landlords.¹⁹

The most important thing in the novel, which increases its readability is the love story of Kochu Vappu, a Muslim boy and Janakikutti, an upper caste Hindu girl. In the novel, Janakikutti was an innocent girl with an immature character, who once says herself that 'though, Kochu Vappu is looking good, he is *Mappila* (Muslim). Kochu Vappu had earned huge amount of money from managing the collection and distribution of rice and paddy in the area under the Kottapuram Society. The image of Kochu Vappu in the novel, who goes to his godown in a bicycle with a leather bag in his hand had resemblances with the image of a ration shop owner, whom a Malayali is very familiar with in his daily life. Kochu Vappu born in a rich family of merchants doubled his wealth by the new business.

Cherukad's nephew, Unnikrishnan Master was the grain collecting agent in Chemmalasseri village. The duties of a grain collecting agent including the collection of paddy from peasants, to keep it in godowns and to hand over it to ration shops by receiving money from society according to the instruction of the Civil Supplies Department. Money circulated through a grain purchasing agent was a huge amount of that period. Cherukad wrote in his autobiography that in most of the cases the amount is more than 1,000 Rupees. Cherukad narrates how the job of a grain collecting agent had given a reputed position for his nephew in the society.²⁰ He writes:

When my nephew went to collect paddy with coolies and tools like gunny bag, thread, needles and weights and measures, many dependents followed him like the people behind a *karyasthan* (the manager of land lords).²¹

It is possible that the character of Kochu Vappu had the influence of the real life of Unnikrishnan Master.

Mayan, Kochu Vappu's father was passed away during the Second World War.

Consequently, Kochu Vappu had taken over the responsibility running his father's business. Purchasing and distribution of grains in the area under the Kottapuram Society also came under Kochu Vappu's control. Kochu Vappu bought lorries to replace the old bullock carts owned by his father. Kochu Vappu, who was the owner of two lorries had many employees under him like grain purchasing agents, workers of ration shops, accountants, lorry drivers and head load workers. All the products, to which rationing was applicable including food stuffs, textiles and kerosene had been supplied through Kochu Vappu.

In the meanwhile, Kochu Vappu got married. But in most of the days he was unable to reach home before midnight after settling his workers and agents. Thus, he never permitted his wife to live with him. He visited his wife only once a week. Kochu Vappu's life is proving that how much a grain merchant was busy in his life in those days. This business was very profitable and it enabled Koch Vappu to buy a school paying 3,000 Rupees and starting a bus service in his son's name.

The decision of the Government to implement rationing and control had been touched every aspects of day to day life because, it is applicable to all necessary commodities like rice, kerosene and textiles. Rationing of rice had a particular importance, because Malayali had a routine practice of eating rice. Even though, huge quantities of rice had been imported to Malabar, matrilineal joint families remained as one of the largest producers of rice and paddy in local level. The same factor had forced peasant to depend matrilineal joint families to live and survive. The role of matrilineal joint families was not limited to the production of paddy but they had an equally important role in distributing it. Thus, the self reliance of matrilineal joint families was affected by the introduction of rationing, which brought the process of distribution of paddy under the direct supervision of the Government. There was a change in the loyal attitude of peasant workers depending matrilineal joint families for livelihood.

Peasants started to show sympathy to the Communist Party, who worked hard to collect paddy from landlords and to prevent black marketing. The new circumstances had destroyed the slave mentality of peasants

towards his land lords. Godowns of ration shops as the new storage of paddy replaced the old wooden granaries in matrilineal joint families. Dilip Menon has argued that in the period 1942-45, the Communist Party had adopted a policy of conciliation and collaboration rather than confrontation to land owning matrilineal joint families. He added that as most of the leaders of the Communist Party belonged to land owning matrilineal joint families, it was very easy for them to act as the intermediaries between landlords and peasants.²²

But Menon's arguments are wrong. It was the Communist Party made every effort to solve the food crisis during the World War. They organized food marches and wrote plays and songs as part of the cultural resistance against the famine. Activities of the right wing in the Congress were limited in its extent as a movement solely against British imperialism and not against landlordism. They always adopted a policy of persuasion towards landlords. Use of force was essential to prevent the land lords from black marketing and hoarding. The method based on the principle of Gandhian non-violence was not practical before the black marketers and the Communists always made use force to resist them. Cherukad in the autobiography has shared about an incident of obstructing forcibly a cloth merchant, who attempted to sell cloth in black market.²³ Moreover, the process of collecting paddy was not an easy task as it demanded the involvement and co-operation of people belonged to different sections of society. The Communist Party had a number of committed volunteers and a strong organization. These were the factors, which helped the Communist Party to enhance its popular base and not their work as intermediaries between land lords and landlords and peasants as pointed out by Dilip Menon.

Lorries capable of transporting more loads of paddy had come into common use instead of old bullock carts. The term 'ration' became a common word to denote all essential commodities in daily life. The People, who waited long in the courtyard of a *taravad* bending their head for food shifted their place as members in the long queues in front of ration shops. The Government was failed in controlling black marketing and hoarding, despite they had introduced rationing. The Communist Party

made use of this opportunity and strengthened their popular base. The same period gave birth to a new kind of Malayali, who are running to ration shops with a cloth bag for buying food

stuffs and kerosene and those who shouting slogans against the Government for the unavailability of rice and kerosene.

A VISUAL AND HISTORICAL STUDY OF THE SCROLL NARRATIVE- KALAMKARI ART IN ANDHRA PRADESH

Dr. M. C. Raja & Jyoti Phogat

Introduction

The art and craft of the visual-narratives is not a new phenomenon however the study of historical scroll narratives as visual narratives is a modern phenomenon. The task is undertaken so as to understand the ancient wisdom, decipher and transmit the inner workings of the visual idioms coupled with the processes and the usages of the Kalamkari scroll narrative. Artists and designers have been employing visual imageries to propagate stories for thousands of years. From pre-historic cave paintings to modern-day computer animations, human

beings have been exploring and integrating many visual elements. The eternal pursuit of tailoring techniques aims toward attracting onlookers' attention, to stimulate interest, and to entice into a process of interpretation and story making. Indeed, it is a tradition that has worked its way successfully through time, adapting along the way to meet the advancements of each successive and increasingly visual generation.

The aim of this probe is to explore the historical journey of Kalamkari scroll narrative through the ages. In particular, it will examine how the scroll narrative medium has brought

with it a new treatment of space, and then how this has influenced the broad mythological visual-narratives and the art of story-narratives. The study also critically probes upon the varied applicability and importance in the current times.

The probe embarks on how the traditional art and crafts are very much the need of this hour and looks into this powerful medium as an economic provider and a bearer of positive environmental factor and in being termed as a burgeoning sustainable alternative for fashion. The looks at the origins, the various socio economic factors, the artisan's involved and their contribution towards the posterity of the traditional scroll narrative format of Andhra Pradesh. The visual narratives and the dynamics are also considered with comparisons culled from modern and ancient mural art traditions of the Kalamkari scroll narrative format.

History is seen through the past encoded events, which are decoded and probed through today's modern techniques for creating a better tomorrow. Since antiquity here has always been a societal need for constructing stories, narratives and visual depictions ranging from cave art to modern day's narrative art based multiple player interactive games. The need for communicating with others has been paramount, towards the internal and external improvement, for an individual or a society as a whole. Visual narratives preceded oral narratives as cavemen drew on the various rock shelters much before the written word. These visual narratives and oral transmissions have only gotten more complex and elaborate with the passage of ages. They have accumulated metaphors, determined cultures, identity for civilizations and portrayed social meanings to be transferred, assimilated and registered for societal functioning and norms.

India being a cultural hotspot since ancient times and being a diverse cultural cornucopia the probe borders along the history of hand painted and block printed tradition of the Kalamkari technique which employs mordants and natural dyes. The gradual development of the visual techniques and the artistic employment through the ancient times unto the modern times had been elaborated.

The Origins

The Kalamkari scroll narrative art can be traced back to the Vijayanagara period (1336 AD) in the region of Sri Kalahasti in Andhra Pradesh. The stylistic resemblances and comparisons can be positively culled to be ascertained between the scroll narratives and temple murals of the Vijayanagara period. The South east coast of India, has been a prosperous stretch for the trade of Kalamkari products. Later the scroll narrative art was favoured by the Mughals in the Coramandel coast and the Golconda provinces where the scroll narrative art bifurcated into two stylistic bearings; the block printed and the hand painted styles. The scroll narrative Kalamkari's primary function was serving as a religious tapestry and later transformed into a secular craft under the Muslim rule.

The scroll narratives accumulated broad acknowledgement in numerous junctures of development as a traditional scroll narrative comprising of folk beliefs, which had on a later stage metamorphosed as a secular craft within the Muslim rule and advanced as an amplified cultural component under the British thus achieving a status of being an indigenous art form and also garnering international market's acknowledgement.¹ Gradually with the transition of time Masulipatnam which was under the Golconda province supplied Kalamkari art woks which appealed to the Mughal tastes with Persian influence and entrenched itself as the originator of Kalamkari in its block printed style. Whereas Srikalahasti which was supported through the patronage of Hindu rulers matured a unique style of narrative scroll art as elaborately hand painted temple cloths narrating the various Hindu epics and Mythologies. They are at times worshipped under individual circumstances as they have mythological renderings consisting of deities and are also at times considered to have apotropaic properties.

Kalamkari scrolls are inspired from mythological renderings. It is fascinating that epics like the Mahabharata, the Bhagavata Purana and the Ramayana in their totality are depicted in pictorial format. This obviously means that the scrolls are visually voluminous, and at times reaching up to a staggering 30 ft. in length and 7-ft. in width. Every episode is portrayed in sections featuring illustrations and detailed written briefs, in the south Indian

language of Telugu. The art of Kalamkari has two distinct forms, each with its own unique features. One of these imbibes the original folk form, the other a more evolved version which pays greater attention to the detailing of design and layout.

The essence of the craft is summarised in its name "kalam / qalam", meaning 'pen' and "kari" meaning 'craft' in Urdu. The craft has been exercised in assorted areas in southern India, and has been mentioned to as "chintz" by the English and "pintadoes" by the Portuguese. Srikalahasti, a small pilgrimage town in the Southern Indian state of Andhra Pradesh is home to this narrative art in its natural dye painted format. Kalamkari at Srikalahasti burgeoned in the precincts of the temple and principally prevailed as temple cloths hung on walls to form a colourfully illustrated narrative background. Predominantly utilised to characterise the effervescence of Hindu mythology, these scroll narrative art fabrics have been employed as temple backdrops or as visual aids for the narration of multitudinous mythological Hindu epics.

The Visual Stylistic Features

It is the nature of man to seek and assimilate stylistic features from the nature or the nearest environment. This has been held true when the cavemen tried depicting the animals and scenes related to their daily routine onto the various caves they had sheltered in. It is also the same with Kalamkari scroll narratives as they too had been derived through inspiration from a variety of motifs and art forms which were firmly rooted in the surroundings of Andhra Pradesh. The bold black lines of the Kalamkari adequately resonate with the temple murals from the Vijayanagara period. They stylistic resemblances between the traditional textile art and the temple murals are quite uniquely related (*Plate-1*). The quintessential characteristics of the craft exercised here features predominantly on the religious motifs and figurative traditions which constituted a substantial component in the 17th century and progressed into the modern times at Srikalahasti which materialised as a major centre for figurative scroll narratives based Kalamkari in the latter half of the 19th century. The free style drawing of pictorial depictions called for the skilled usage of kalam where its minimal usage for repeated works was never suited for block printed works.²

The Narrative Stylistic Features

The Kalamkari scroll narratives are unique to the Sri Kalahasti region of Andhra Pradesh. The Kalamkari scroll narratives arrive constitute a 'continuous method', where they depict separate events taking place at very many aspects of time; the protagonists are described frequently and there are repeatedly formal division of frames and at times depictions that split up visual scenes, thus enabling a narrative progression. The Kalamkari scroll narrative has sequence and consequence wherein events are selected, organised, connected, and evaluated as meaningful for a particular audience. Narratives represent storied ways of knowing and communicating.³ The 'cyclic method', represents a story by a succession of images, or a cycle of separate monoscenic scenes and the 'continuous method', in which a story is narrated by a continuous series of scenes arranged in a sequential succession and uninterrupted composition of coherent and orderly placed pictures.⁴ The Kalamkari scroll narratives occasionally have written textual accompaniment along with the illustrated narratives for the convenience of the onlookers to understand the story and its context to the illustration. This can also be considered as an early format of modern day's story book formats, as the textual accompaniment occupies a prominent part in the negative space. The Kalamkari scroll narrative is hugely mono directional and multi directional on the emphasis of visual depiction. The inclination of characters and the temperament as depicted within a single scene is very likely to be controlled or determined on the relative position of the other immediately related scenes. The opening gap that exists between these two modes of narration in the field of western art has been observed by scholars, who witnessed a considerable consequence linking the isolating, monoscenic mode of narration and the elaborated method of continuous narration.⁵ Others consider the excerpted method of monoscenic narrative as a degeneration of prior narrative cycle.⁶ In the Indian context, however these two modes of narration exist side by side, frequently on the same artwork. The restrictions of space may have been partially responsible for the decision made as the artists choose the ideal method fitting for the narrative continuity in the artwork to take advantage on the available visual space.

The Eco-Craft

Indian textiles have collected an exceptional admiration in the immense repertory in textile history of the world and have constituted Indian culture on a global cultural podium. Traditional arts and crafts have frequently been distinguished as historically eco-sensible, which apportioned with changeover of raw materials into finished merchandise, employing principally hand skills with simple tools and employing the local traditional practices and collective wisdom. *Kalamkari* of Srikalahasti in Andhra Pradesh is one such traditional indigenous Indian craft which is an embodiment of the spirit of organic fashion. As a renowned composition of scroll narrative workmanship, *Kalamkari*, was practiced in the form of block prints and as well as manually hand painted versions in organically prepared dyes. They had clearly dominated the European and French markets during the 17th and 18th centuries. The 19th century had seen a steep downward surge in the international and domestic market and currently the practitioners of traditional scroll narrative *Kalamkari* artisans is dwindling. The usage of natural dyes, indigenous tools and soulful rendering of lines make this craft unique to its existence. The craft struggled to keep up to the demands of the changing markets and is found to be slowly adapting itself to the dynamic market orientation. The authentic profile of the craft in its journey and highlights the significance of traditional skills as a powerful medium in the field of alternative and sustainable fashion.

Conclusion

Illustrations - Plate-1

Stylistic resemblances between the traditional textile art and the temple murals:

The Indian scroll narrative, *Kalamkari*, serves as a foremost exemplification of cultural fabric which had been cultivated within the borders of tradition. The knowledge has of creating the scroll narratives had been passed over the generations in a traditional and formalistic manner. The scroll narrative *Kalamkari* had been an assimilation of plurality in practices, bearers of social changes, alleviators in socio economic factors and positive bearers of art on a broad spectrum. Traditional art and craft has been susceptible to various factors ranging from governmental policies to environmental factors, hence this craft too had experienced the various ups and downs as the new generation pursues to rejuvenate and resuscitate on the grounds of historical background.

There are various negative factors ranging from commercial to environmental bearings which solely aim to threaten the very existence of *Kalamkari* narrative art form. However, in the current scenario the craft supposedly is seen to have a broader foot hold on being recognised as vegetable based scroll narrative art medium and also as an organic part of fashion industry with the employment of non polluting natural methods and employment of ancient wisdom. The degree of a positive environmental impacted future can be determined upon how successfully today's generation are able to accredit, acknowledge and successfully implement the available ancient knowledge. The passage and transfer of the ancient knowledge is essential for posterity and for future practices and archival purposes.

CHAVITTUNATAKAM: THE GOTHURUTH TRADITION

I.S. Remya

Chavittunatakam is an art form which reflects the heroism and heroic deeds in its content. It is highly related with martial tradition of Kerala. It had beautifully assembled dance, drama, music, martial traditions, etc. It is a healthy mixture of eastern and western traditions of stage performance. It emerged in the coastal area of Kerala. It is considered as a cultural contribution of Latin Christians of Kerala. It was originated by the inspiration of Portuguese Missionaries. They protected and patronized it from early times. Once, this art form had a wide acceptance in the coastal area of Kerala, but now it is facing some backlashes.

From the available historical sources, Cochin is regarded as the home of Chavittunatakam in Kerala, From Cochin it spread throughout the coastal area of Kerala. As a matter of fact the coastal town from Cranganor to Quilon has a tradition of Chavittunatakam Kalaries and very interesting folk tradition connected with them.

Chavittunatakam suddenly reached Gothuruth because Gothuruth is a coastal area, under the direct control of Portuguese and the population of the Gothuruth were newly converted Latin Catholics and migrated Latin Catholics. This enabled the local population to adopt theatre art form Chavittunatakam as a part of their cultural identity.

Gothuruth people believed that, Chinna thambi Annavi introduced Chavittunatakam in Gothuruth. But there is no sufficient historical evidence for that. We have only legends about ChinnathambiAnnavi. According to one legend, ChinnathambiAnnavi came to Kerala from Tamilnadu ¹. After reaching Kerala he travelled throughout Kerala, especially Kochi, Kodungallur region. He spent 17 years in Kerala and went back to Tamilnadu. It is not a proven fact, but Gothuruth people strongly believed that he introduced Chavittunatakam in Gothuruth.

According to one legend, some rich families of Gothuruth, when they heard about Chavittunatakam, brought Annavi from Cochi in a boat. They had great enthusiasm about Chavittunatakam. They celebrately brought Annavi to Gothuruth. During the journey they sung Chavittunatakam song in boat. After reaching Gothuruth he gave training in chavittunatakam to some people. That was the beginning of the Chavittunatakam in Gothuruth. after that it spread throughout Gothuruth and near places.

In 17th Century, Gothuruth including Chennamangalam region was under the control of Portuguese. Most of the Portuguese controlled regions had practiced and propagated the Chavittunatakam actively. Because Portuguese Missionaries realized that Chavittunatakam was a effective instrument for Latinization. Another reason for the spread of Chavittunatakam in Gothuruth was its procity to Kochi which was the home land of Chavittunatakam.

Another reason is the people of Gothuruth. Early time the inhabitants of Gothuruth were Backward Hindus but later most of them were converted as Latin Catholics and some Latin Christians family also migrated to Gothuruth. The population of gothuruth was dominated by Latin Catholics which made it a fertile ground for the growth of Chavittunatakam.

Chavittunatakam like art form was very essential for Gothuruth Because it helped to unite the newly converted people and convey the new beliefs like Christian beliefs Roman tradition and heritage. This aim was successfully achieved through Chavittunatakam in Gothuruth. The Gothuruth people were familiar about Christian beliefs and Roman tradition before they saw and read the Bible. Chavittunatakam was very helpful to propagate the Latin Catholicism in Gothuruth. In earlier times it was very active in Gothuruth². But slowly it lost it's significance But after some time it regained its strength. For eg. In 1920's Chavittunatakam was very active in Gothuruth. But 1940's it became inactive. The 2nd rise of Chavittunatakam started from 1952.

One important evidence for the early existence of Chavittunatakam in Gothuruth was the second house name of the Gothuruth families. Some families were known as *Rajav*, *Manthri*, *Chekkuthan*, *Malagha*, *Predam*,

Koothadiparambu etc depending on the part played by them in Chavittunatakam. In early times some characters were performed traditionally by some families. This practice resulted in the second house name for that family

After the withdrawal of Portuguese Missionaries from Kerala, Chavittunatakam slowly wiped out from some places. But Gothuruth survived from that wind. But it is true that in Gothuruth Chavittunatakam had some intervals. About this situation, SabeenaRaphi, strong propagator of Chavittunatakam said that in her childhood chavittunatakam was in its full swing but later it slowly disappeared from Gothuruth. After a short break, in the middle of the 1950's Chavittunatakam was revived due to the efforts of Sabeena Raphi.

Sabeena Raphi had contributed greatly to Chavittunatakam in Gothuruth and propagated its significance before the people. Teacher considered the resurrection of Chavittunatakam as her duty. For this purpose she got great support and inspiration from her mother Mariyamma.

Sabeena Raphi realized that, before starting Chavittunatakam activities she needs sufficient knowledge about it. So she firstly tried to collect maximum data about Chavittunatakam from Chavittunatakam Asans, actors and Chavittunatakam related persons. After that she wrote an article named Chavittunatakam and published it in Sahithya Parishath Magazine in 1956 July³. It got a nice response from art lovers, including Vallathol, Narayana Menon. Not only that, it provided Gothuruth chavittunatakam artist a chance to perform in annual assembly of SahithyaParishath in 1957 at Kottayam⁴. They performed *Veerakumaran* story in halfhour. It was a resurrection of Gothuruth Chavittunatakam. Also This was an opportunity to unite the Chavittunatakam artists from various parts of the state. Kottayam performances gave lot of appreciation to the Gothuruth Chavittunatakam artists.

After the show they wanted to systemize the Chavittunatakam activities. They planned a systematic way for performing Chavittunatakam for that they select the Poulouse kattiparambil as Asan, who was the disciple of famous Chavittunatakam asan Varghese Asan.⁵ After some time Chavittunatakam artists of Gothuruth

realized the necessity of a Kalasamithy. So they formed a Kalasamithy named as Yuvajana Kalasamithy Chavittunatakam Sangam Gothuruth in 1957⁶. Ist president of that Kalasamithy was Nesso Manakkal and its Secretary was SabeenaRaphi.

In 1959, Gothuruth team got another opportunity to perform in Tiruvananthapuram. It was a competition program. It was a competition to select the Chavittunatakam team for Republic Parade show in Delhi for next year (1960) Gothuruth team represented the Ernakulam District and they performed in Folklore competition in Trivandrum. Gothuruth team won the competition defeating about 14 teams. Gothuruth team played *Karalsman Charitham* in Trivandrum. It was a wonderful performance on the part of Gothuruth team. In that natakam K.J.Lonakkutty acted *Caralsman*, The emperor of France, K.J.Francis acted as Turk emperor and ManikManakel as *Roldon*. The artists showed an unmemorable performance in Trivandrum.⁷ They got to opportunity to went to Delhi and performed in Republic Parade show.

Gothuruth team considered the invitation for performed in Delhi as a golden chance After one year's hard work and practice they went to Delhi before a month of show. The 25member team included SabeenaRaphi teacher, PoulloseAsan, Anthappan Pulikkathara, Joseph Manakkal, Peter Baghavadar, Varoothuti etc. *Carelamn Charitam* was performed there in 1960 January 26. In the performance Harmonium, Mridangam, Dollek, Fiddle, Chenda were played by Poullose AsanKattiparambil, Peter Bhagavadharm Josephai Manakkal, Kalari Vareeth respectively. Performance was very short but very attractive⁸. After the show, Maneek Manakal, Rolden of the *Chareلمان Charitham* took his crown from his head and put that on Jawaharlal Nehru, the then Prime Minister of India. it was an unforgettable incident for Gothuruth Chavittunatakam artists and people. It was a golden feather for Chavittunatakam.

The performance of Gothuruth team in Delhi is a milestone of the Gothuruth Chavittunatakam. After that performance, some shows were played in different parts of Kerala by Gothuruth team especially in Ernakulum, Thiruvananthapuram, Calicut etc. Beside these, Thiruvananthapuram, Delhi stations of Doordharshan and Akasavanis of all stations

telecasted the Chavittunatakam of Gothuruth team. All these, helped to increase the popularity of Chavittunatakam not only in Kerala but also in India.

After 1960's Chavittunatakam again became actived in Gothuruth, Yuvajna Nataka Kalasamithy gave a good instruction and helped Chavittunatakam artists in various way. In early days of Yuvajana Nataka Kalasamithy was very active in Gothuruth. Two Chavittunatakam Samithy are Yuvajana Chavittunatakam Samithy and Kerala Chavittunatakam Academy.⁹

Yuvajana Chavittunatakam samithy was formed under the leadership of Maneek Manakel, Sabeena Raphi, Poullose Kattiparambil Cheekkamma Gothuruth, Lonakkutty in 1954. This Samithy gave a good organization to the Gothuruth Chavittunatakam from 1954. But later it became martine. In 1983, Yuvajana Chavittunatakam Samithy reorganized under the leadership of Maneek Manakkal. The Ist President was Maneek Manakkal. Present President of this Samithy is M.J.Antony and Secretary is Shajan Attipetti. Famous Chavittunatakam artists like Thampi Payyappilli, Jossy Payyappilly etc. are the member of this Kalasamithy. 56 Chavittunatakam artists in Gothuruth are the members of this Samithy¹⁰. Under this Kalasamithy new artists completed basic training and Arangettam in previous year. About 7 and 8 months weretaken for this training.

Yuvajanakalasamithy got lot of opportunity to perform Chavittunatakam in various places. In 2002, 2008, they got a chance to perform outside Kerala, in Madras. These members got opportunities in Avani Poovarag Nadan Kalamela, POC organized etc¹¹.

Kerala Chavittunatakam Academy was formed in 2005.The leading members of this Samithy are M.P.lalan, A.N.Anirudhan,K.P.Joseph Stalin, Ajith Kumar,P.R.Lorance. In starting President of this Samithy Ajith Kumar Gothuruth, Secretary was M.P.Lalan, Treasurer with Manager was K.P.Joseph Stalin. Now (2010) M.P.Lalan in President and Ajith Kumar is Secretary of the Kerala Chavittunatakam Academy.

In Gothuruth, these Chavittunatakam Samithy played an important role for the development of the Chavittunatakam. It helped

to produce some skillful Chavittunatakam Artists in Gothuruth. And it gives good organization for this art and artist, which was not organized in early times¹². These Samithies tried to widen the scope of Chavittunatakam. It helped to perform outside of Gothuruth, to the artists. For eg: competition undertaken by POC, Tourism related shows, etc. In 2006, POC (Pastoral Oriental Centre) started a Chavittunatakam competition in Ernakulam. Gothuruth teams participated these competition and got two awards to Gothuruth. One for pinpattu, A.N Anirudhan or Anirudhan Asan. These two artists are the members of Kerala Chavittunatakam Academy.

In 2007, Gothuruth also get two award from P.O.C's competition. Best actor of 2007 POC's competition was AN Raju and A N Anirudhan Asan got the award for Pinpattu. In 2008 the member of Yuvajana Chavittunatakam Kalasamithy, Thampi Asan got one award from POC. These awards are the approval of Gothuruth Chavittunatakam¹³.

2010 May 23 is a very significant day of Gothuruth Chavittunatakam History. Because that day A N Aniridhan Asan got the Kerala

Folklore Academy award for Chavittunatakam. This incident was witnessed at kundara in Kollam District. In May 23,2010. 30 Folk artists got award for each folk arts. And there award revised the glory of the Kerala Chavittunatakam Academy of Gothuruth. In the case of Chavittunatakam also had some changes during the time. Its aims and nature changed during the time. The custodianship of Chavittunatakam were changed in Gothuruth during the time.¹⁴ These changes also changed the impact of Chavittunatakam in Gothuruth people. Chavittunatakam had some socio-cultural impact on Gothuruth. Really it had the main reason Chavittunatakam still active in Gothurth.

The study of this art form is very essential to understand the artistic tradition of gothuruth and the interventions of Portugese in kerala society and history. The art form reflected the socio, economic, religious and cultural condition of the society in which it originates and exists.so the study about chavittunadakam not only gives the knowledge about that art form but also the socio, cultural, economic and religious elements of that time.

ROLE OF BASEL EVANGELICAL MISSION IN MOULDING MALABAR PUBLIC SPHERE

A.P. Renjith Kumar

Malabar is a region located in the northern part of present Kerala state, consist of 6 districts. It was one of the densely populated districts in Madras Presidency under the British rule. Before the colonial period itself Malabar became the centre of attraction of foreign traders from Greece, China and Arabia. During the colonial

period Malabar was under the direct administration of British colonial power. The present study is an attempt to trace out how the contributions of Basel Evangelical Mission, A European Missionary played a vital role in the formation of a Literary public sphere and through that a political public sphere in Malabar. The

study concentrates from the last decades of 19th century and upto the first half of the 20th century.

The Charter Act passed by the British Parliament in 1813 allowed English missionaries to come India and to make permanent settlements. Until 1833 the British did not give permission to the non-english missionaries. Several Missionary groups reached in Kerala as per this Act. London Mission Society (LMS), Church Mission Society (CMS) and Ringel Taube etc., worked in Travancore region. Basel Evangelical Mission was the prominent Missionary reached in Malabar. Basel Evangelical Mission (BEM) reached in Malabar in 1833.

BEM was a Christian missionary society originated in Europe, its headquarters was in Germany. Even though the Main objective of BEM was the conversion of the native people to Christianity, but they established many Educational institutions and Industries throughout Malabar. In the beginning this missionary was known as German Missionary Society, but later it was renamed as Basel Evangelical Mission (BEM). It was a Protestant missionary group. BEM had an important role in social and economic transformation of the society of Malabar. They started primary schools and High schools in Malabar, government policies also encouraged these agencies because the colonial rule did not undertake the economic liabilities of Public education.¹

In 1839 Dr. Herman Gundert a Basel Missionary started a primary school at Nettur in Thalassery. Science, Geography, Malayalam, English and Bible were the subjects. These subjects were also taught in another school in Kannur. In 1848 mission started another Primary school at Kallayi, Kozhikode. The reports from Mission station councils gave valuable information about their educational activities. People from all castes had got admission in Mission schools, but majority were Thiyyas.²

BEM was a model for the British in the field of Primary education. Another important contribution of Basel mission was foundation of Malabar Christian College Kozhikode. It was established in 1909. It was a centre of higher learning in Malabar, now also working as a reputed institution in Kozhikode.

Most of the students got admission in BEM schools also got fee concessions. Moorcoth Kumaran later became a journalist was studied at BEM School and passed Matriculation examination says that like him many others got the benefit of fee concession.³ The indigenous people were appointed as teachers in Basel Mission schools, it included Christians, other castes, men and women also. All students in Basel mission schools mingled together and studied without any Caste discrimination. Thus Basel mission was like an umbrella which joined all castes under it. All these changes were occurred in the Malabar society when the lower caste was not allowed to educate.⁴

The Basel mission established their schools in different part of Malabar like Palakkad, Kozhikode, Vatakara, Thalassery and Mangalore, they became the focal point of educational advancement for the whole district. English education was well received by the people of Malabar, who thus came to an early lead in the field. Thus Malabar became an enlightened area in the whole Madras Presidency which practically consisted of the whole of the British South India.⁵ The western education brought by Basel Mission helped the people to read English books. When printing came into being the Sanskrit works and works in different languages were translated, this resulted the people to read Malayalam books. It created renovation of ideas and an enthusiasm in the mind of people.

Western education of Basel mission created an awareness of freedom among people, that became one of the causes of the social reformation and renaissance in Malabar. Its contribution in the growth of the Malayalam language was unforgettable. They contributed many grammar works and dictionary. One of the most important effects of Western education was that the lower caste people were aware about their rights. The basic objective of the Basel mission was in spreading of literacy, that every convent should be able to read the Bible. Another notable contribution of missionaries in the literacy and educational sphere was the publication of Pioneer Journals in Malayalam.

Early industries in Malabar were the result of group activities of Basel mission. In 19th century Mission made experimental activities in agriculture and industries. Industrial activities of the Basel mission were not only a nourishing

activities but also mission activities. The arrival of Basel mission benefitted traditional handicrafts, this resulted in production and distribution, in the case of weaving, these changes were beneficial. Workers were essential for these factories, people from different castes and different religion got employment. The indigenous handloom industry was declined because of the handloom products of Basel mission.⁶ By using modern machines their production became increased. As a result of Industrial revolution invention of new machines such as Flying shuttle helped the large scale production in textile industry.

Another industrial sector started by Basel mission was Tile factories. They started a Tile factory at Feroke near Kozhikode.⁷ Other fields of Basel mission generated the employment opportunities are Printing, Book binding, Mechanical engineering work, carpentry works, Timber industry etc., All these sector needed workers, people from different castes and converts also came to job. Thus Basel mission offered good living condition through basic education, employment opportunities, changes in caste order by the conversion to Christianity from socially backward castes. Basel mission's industrial venture helped to achieve economic development of society. The lower caste people became skilful in the field of basic education, reading and writing, thus talent achieved lower castes could transferred to a new casteless society.⁸

As a result of the literacy developed in Malabar due to the activities of Basel Mission common people started to think against the social evils, people became more aware about thought of freedom. By getting English education the learning attitude increased among the people. Through this people were familiar with books, books helped to understand about the developments in the world. The ideologies like freedom and nationalism were spread among the people. This made the people to turn against English East India Company's administration and their exploitation. Their involvement brought about changes in the educational and socio-economic realms of Malabar society. The spread of educational facilities made the lower caste people's rapid advancement in social scale.

A middle class formed in Malabar society as a result of the Western education provided by

the Basel mission, this middle class who got western education began to question the caste system existed in Kerala. As a part of this awakening some of the social practices such as untouchability, superstition and Brahmin domination were questioned by the educated people. Thus there emerged a new enthusiasm among the people of Malabar from the new situation introduced by Basel Mission.

The basic objective of the mission in spreading literacy was that every convert should be able to read the Bible.⁹ Many Missionaries have contributed the enrichment of the language by compiling lexicons and books on grammar, most important among these were the English – Malayalam lexicon compiled by Dr. Herman Gundert. Apart from the above, the Basel mission press in Mangalore printed and published text books for school.¹⁰ Another notable contribution of the mission in the literacy and Educational sphere was the publication of pioneer journals in Malayalam. The prominent journals were published from Thalassery were "Rajyasamacharam" and "Paschimodayam" in 1847 using a Lithographical press.

As a result of the contributions of Basel Mission in Malabar printing as well as reading culture developed as a site of colonial discourse amongst the Malayalees of Kerala.¹¹ Print, education and salaried job were three main areas of "Primitive accumulation" of class awareness.¹² The following table indicates the number of educated people in Malabar during the second half of the 19th century.¹³

TABLE

Year	University pupils	High school pupils	Middle school pupils
1857- 58	-----	205	580
1862 -63	-----	381	577
1867 - 68	10	753	2012
1872 - 73	32	562	3698

In 1884 Valiya chenkalath Kunhirama Menon started a publication known as "Kerala patrika" from Calicut also accelerated the advent of a new era of transformation in Malabar.¹⁴ The communication between the newspaper and the

reader is not just like a private conversation of two persons, somebody who reads it may sometimes respond or not. Anyhow by this interaction, there develop a communication network and thereby some kind of 'link up' which results in the formation of certain public opinions. In the process many such networks may evolve, which may collectively form into Public sphere.

For Jurgen Habermas, a German Sociologist, the Public sphere is a "network for communicating information and points of view".¹⁵ Thus "Public sphere is a common space, in principle accessible to all, which anyone may enter with views on the common good realised wholly or particularly: a ground, coffee house, an exhibition hall, sweet shops in the locality as also the discursive and representational space available in the Newspapers, Magazines, Journals, Radio, Television and now Internet".¹⁶ In the ancient days Communication transmission was exercised mainly through oral means or spoken voice when the speaker and the receiver were in face to face situation.¹⁷ In this method, people who spread up in the market and festival places were the vehicle of such transmission. But this situation changed with the growth of literacy on one side and that of print media on the other. The invention printing made it possible for a single written message to reach many receivers and thus to increase the potential effectiveness of a few individual communicators.¹⁸ Printing accelerated the spread of literacy.¹⁹

The influence and spread of literacy and medias like Newspaper, often regarded for its role in moulding public opinion in Malabar. By the late 19th century various innovations took place in the field of journalism in Malabar. The telegraph helped the newspapers a lot to publish the hot news, events, before it got cold.²⁰ Newspapers are an essential ingredient of public action, High levels of literacy, dissemination of information by means of the written word goes much deeper in Malabar than elsewhere in Kerala, this has important implications for the quality and depth of public opinion. The early half of the 20th century witnessed a host of people's struggle related to agrarian, the land relations in Malabar. The Morazha, Mattannur, Thalassery struggles of 1940s in Malabar were the struggles that questioned agrarian power and raised livelihood questions.

An important part in the pivotal transformation of the Malabar society was played by Poets and writers. They could see that there was the presence of a fully developed reading public in Malabar born out of the educational institutions started by the Basel Evangelical Mission, Colonial government and Landlords. This reading public was ready to accept those changes in favour of the national modernity launched in a powerful form in other urban spaces in Colonial India. Thus the literature in Malabar is integral to the discussion of the reformation of the Malabar public space during the time of the national movement.

CLAIMING HISTORICAL CONTINUITY AND AUTHENTICITY THROUGH THE TEXTUAL TRADITIONS WITH AN EMPHASIS ON ASHTANGAHRIDAYA

Rennu George

INTRODUCTION

The Brihatrayi or Great Trinity of Ayurveda includes Compendia of Susruta, Caraka and Vagbhata. The verse towards the end of Ashtangasamgraha states "There lived a great physician named Vagbhata who was my grandfather. I was born in Sindhudesha. After learning the science from Avalokita, my teacher, and more from my father, and devoting myself to a large number of books on this science, I have composed this text." Vagbhata's religion is yet another scholarly debate based mainly on internal factors highlighted in Ashtangahridaya. Based on the middle path concept adopted in various regimens, habits and treatments, he has been often called as a Buddhist. But Ashtangahridaya includes hymns ascribed to both Vedic and Buddhist divinities.¹

Ashtangahridaya is believed to be composed approximately in the fifth century CE.

Scholars like Meulenbeld held him to be from Sind or Karachi. I-Tsing Chinese traveller and pilgrim in between AD 672 and 688 has held the work as recently composed. "All physicians in the five parts of India practise according to this book, and any physician who is well versed in it never fails to live by the official pay"². Ashtangahridaya till this date is widely used in the medical recipes and treatment procedures in South India especially Kerala. The translations of Ashtangahridaya appeared in many languages like Tibetan, Arabic etc. and over thirty commentaries are to our knowledge other than in regional languages. 'Sarvangasundara' of Arunadatta is often with highest approbation and critic.³ In Kerala PM Govindan Vaidyan's 'Arunodaya' and Cheppad Achutha Varier's Malayalam commentary is read widely.

I

Ashtavaidya tradition of Kerala and Ashtangahridaya is all highlighting the self-same 'Ashta'. The eight classification of treatments depending upon the body part under treatment and mode of treatment. They include⁴ i) Shalya Tantra ii) Shalakya Tantra iii) Kaya Chikitsa iv) Bhutha Vidya v) Kaumarabhrtya / Bala Chikitsa

vi) Agada Tantra vii) Rasayana viii) Vajikarana Tantra. The Ashtanga Hridaya or the Heart of Medicine is elaborated in six Sthanas or sections and 120 chapters.⁵ The main areas dealt with the broad following topics Svstavrta or Code of healthy living elaborates on the Dosha prakriti, the six savours⁶, on Gunas or qualities of substances⁷, on how to examine the patient and prognosis.⁸ The text in detail discuss on Rucarya or the seasonal regimen, on how to diet and live in various seasons.⁹ It deals with solid and liquid food and food safety and about Panca Bhoothas. It has a chapter dealing with complexities of pregnancy called 'Garbhavyapat' and also about body parts and functions (Angavibhaga). There is a vital discussion on the lethal spots or 'marmans' numbered by the author to be 107. Pacification of Doshas, Svedana, Purgation and Enema therapies, Nasya, Eye care are all intricately put up. Medication for jwara (fever), cough, diarrhoea, Abscess (Vidradhi) are also detailed. Vata induced disorders or presently what is called rheumatism is meticulously arranged in the text. This child-snatcher concept is vividly described as each kind of disease is ascribed to a particular evil spirit usually a female manifestations like Revati, Sakuni, Putana, Skanda, Visakha etc.¹⁰ This might seem to be primitive, still we have to keep in mind the keen observation that has been made on the symptoms of various kinds in paediatrics and the treatments.

Among the desiderata in Ashtangahridaya, lies proper diet as per seasons, exercise, sleep, virtuous life. Vogel¹¹ points out the cruel acts to be denounced with one's body, speech and mind; highlighted by Vagbhata like cruelty, theft, sexual perversion, calumny, abusiveness, mendacity, showing dissension, malevolence, envy and heresy to be almost the similar way in Buddhist Canon 'Mahavyutpatti'. The same conclusion is drawn when Vagbhata poises the 'Middle Way' for life.¹² This is a major argument put up by scholars like Wujastyk, Vogel, Meulenbeld etc. This middle way may be identified even with the instances of medications and treatments in the work itself. For example insanity is treated focusing on purification and especially use of oils. The formulations included

herbs well known for their capacity traditionally for enhancing memory and mental faculties and sometimes bloodletting is also used. The Middle Way or gentleness of therapies is understood when we compare the above with the electro-convulsive therapies¹³ that is presently used to treat insane. In places like Kottakal Arya Vaidya Sala, Kottakal, Kozhikode; Vaidyaratnam Oushadhashala, Ollur, Trissur; Chingolil, Kottayam and many centres in Kerala the tradition is kept alive. Many a times, this is seen as spa treatment or medical tourism, in general. But the records of the Vaidyas and the witness patients shall tell us the accomplishments of Ayurvedic tradition of Ashtangahridaya so often.¹⁴ The medical journals like Dhanwantari in its issues from 1903 to 1925 had several articles on Ashtangahridaya, its efficacy, lineage about various Vaidyas practising medicine sourcing on Ashtangahridaya. Although none of these practises are purely based on a single text there were very few acknowledgment for other regional texts.

II

To be very fundamental Ashtavaidya is a medical tradition in Kerala and as per the social atmosphere of the past, they came from the then superior Brahmin families. The term Ashta as indicated earlier tell us about the expertise in the 'Ashta Anga' or eight divisions of body and treatments specified by the Ashtangahridya. All of them trace their lineage and tradition to Vagbhata school of Ayurveda. The legacy that Ashtavaidyas believe is that Vagbhata was born at the time when Buddhism and Jainism was predominant in medical field¹⁵ and he was born to retrieve the medical tradition to the Hindu religion. And for some reason he was ostracised from the community, his work was unaccepted and under banishment he has moved to Kerala. This is not historical and as per the majority scholar communities, Vagbhata is interpreted as Buddhist. However there may be some historical coincidence in the fact that Buddhist medicine was pushed aside from the main medical stream. We already have seen the deteriorating status that medical practitioners been through over time, with compulsions from the higher castes and communities with instances from Manu Smriti and also Later Vedic literature. As per the legacy of the Ashtavaidya families, Vagbhata

was welcomed so warmly in Kerala and thus he decided to impart the body of knowledge in which he was a doyen to the land and its people. As per the tradition Vagbhata first visited the house of Alathiyur Nambi and then travelled across Kerala and spread the knowledge to the members of higher sections of society.¹⁶ Thus Alathiyur Nambi, Karathol Nambi, Choondal Nambi, Olassa Mooss, Vyaskara Mooss, Kuttancherry Mooss, Elayadathu Thaikkatu Mooss, Pazhenellipurath Thaikkatu Mooss, Parappur Mooss and Vaidyamadham became Ashtavaidyas. The belief is that Vagbhata breathed his last at the residence of Pulamanthol Mooss and till this day they observe the day as 'Vagbhata dinam'.

A possible interpretation is based on the preface of the commentary of Ashtangahridaya by Harishastri Paradhkar in which he says that Buddhist medicine was looked down upon consciously in Northern India.¹⁷ But, Ayurveda in the classical terms has arrived the land of Kerala in the fourth fifth centuries CE and probably from the Buddhist Viharas of Deccan.¹⁸ Of course when we consider the socio-cultural milieu of the times, we have to admit such abody of Sanskrit literature shall be accessible only to restricted numbers who had good command over Sanskrit. This especially becomes significant when we consider the non-classical traditions of Kerala and the martial arts and concept of 'marmans' and treatment provided for fractures and dislocations in the centres other than Brahmin Ashtavaidya centres. The people of the land irrespective of caste had very practical command over various flora of the region. This is what we see in the Introduction for 'Hortus Malabaricus' about Itti Achuthan who introduced larger diversities of flora to Van Rheede¹⁹ that he cited him in his great work. In fact, there were not just eight families of Ashtavaidyas, in the earlier Brahmin congregations assumed as eighteen, there were Vaidyas who were well versed in the eight branches of medicine. Such an authority over the 'Ashta Angas' was called an 'Ashtavaidyan'. The expertise of the Ashtavaidyas over the subject was most fundamentally from the Ashtangahridaya although there are changes in proportions of medical recipes even among these families based on the interaction with other practitioners and experiences. Even one among these families, the Vaidamadham possesses the few

manuscripts of the famous commentary of Ashtangahridaya called 'Shashilekha' by Indu, who is believed to be a disciple of Vagbhata and has given a brilliant commentary on Ashtangahridaya. One among the Pulamanthol Mooss family has presented another commentary on Ashtangahridaya called the 'Kairali'. There are also commentaries like 'Hridaya', 'Lalitha', 'Vakyapradeepika' etc. The commentary on Ashtangahridaya by²⁰ P. M. Govindan Vaidyan called 'Arunodayam' and the commentary by Cheppat K. Achyutha Varier is also famous. The translations of Kaikulangara Rama Varier of Sarartha Darppanam, Bhavaprakasham and 'Ashtanaghridayam Bahsha' by P.M. Govindan Vaidyan is also noteworthy. The gist of the Sanskrit medicinal repertoire given by Vaikom Pachumoothaathu called 'Hridayapriya' is also contributing to this. Paravoor Kesavanasan has produced a complete commentary of Madhavanidana called 'Sarachandrika' and incomplete commentaries on Bhavaprakasham, Bhaishajyaratnavali etc.

Towards the end of first millennium CE, Buddhism began to decline in Kerala but still existed till sixth seventh centuries. Vagbhata or his disciples might have been received by Buddhists still existing in Kerala. Vagbhata might have migrated to Kerala to find patrons there and probably the earliest disciples were Buddhist. Sankaracharya (8th -9th century CE) who was born in Kerala and wrote seminal philosophical works of Advaita Vedanta took on the Buddhists in his writings and considered them as the main enemy of Brahmanical orthodoxy.²¹ Tolkappiyam mentions the same vocations as Manusmriti for Brahmins and do not include Ayurveda or medicine among them. The post Vedic Brahmanical system proposed medicine as not ideal for Brahmins because they had to come into contact with blood, body, corpse etc. and were considered impure. First inscriptional evidence of using the text Ashtangahridaya and Charaka Samhita in an educational institution attached to a Matha is Chola inscription of 1121 CE at Tiruvaduturai, Tanjore, Tamil Nadu.²² The epic of Mezhathole Agnihotri who performed ninety nine Vedic sacrifices to reinstate Vedic Culture in Kerala and subsequent upgradation of a family of Ashtavaidyas, they being the penultimate sub caste among the ten tired Brahman hierarchy. Including them to the Vedic fold because medical aid was inevitable and then

transforming medicine to fit the Vedic system by various epics and claims and weaving Sanskrit s which are even today considered to be relevant. Ashtangahridaya was given much thrust in this classical Vedic framework, which was seminal in producing many translations.

Conclusion

The hoary history of this text that travelled far and wide and got translated and influenced medical traditions in the home country and abroad since ages is difficult to trace because of the discontinuity in the sources and research gaps in the area is plenty. Since, it is a tradition since ages, transformed through ethos, a continuous history of its transformation has never been fulfilled. The paper was a humble attempt to take Ashtangahridaya forward till this day to the land of Kerala, where it is often a subject of legitimacy in Vaidya discourses even today. The Ashtavaidyas, their lineage and history, legacies along with their contributions to the rich materia medica other than Ashtangahridaya and the mode of treatments intermingled with both indigenous tradition and classical tradition is noted. Medicine in Kerala, is highly prominent in the world systems, and the income generated from medical tourism in Kerala is high. The increasing number of spas and foreigners and people from various regions of the country approaching Kerala. A single visit to the institutions like Kottakal Arya Vaidya Sala, Vaidyaratnam, Thaikatu Mooss etc. conveys how within the modern infrastructure and facilities, the mechanisation process in factories, even mobile applications to trace the medicines and their proposed history has marketed the so called Ayurvedic system. There has been even flexibility in various aspects of traditions from the so called classical texts of Ayurveda in discipline, diet, regimens, ambience etc. are observed. The Dhanwantary temple in Kottakal Arya Vaidya Sala, with the entrance arch bearing the symbols of Christian, Muslim and Hindu faith and permitting everyone's entry since eighteenth century, even before temple entry proclamation is an example of the social updating that P. S. Varier has proposed. The system of Ayurveda has been updated suiting the changes in the social, cultural and technical milieu and is sourced from various communities and various texts over time. The Vaidya discourses still owing legitimacy to the so called classical texts has

among them. Food consumption has never been a constant subject in the history of the world. One of the facts, the cooking process never remains static and keep on evolving from centuries and with the amalgamation of several cultures in the gastronomy. Even today, it is growing from one cuisine to another with the help of so many ingredients.

Similarly, cooking is also a kind of alchemy that transform basic ingredients and raw materials into a lavish dish or healthy food. Food history is a wider topic and needs to investigate the cultural and traditional value of our food consumption. Food has always seen as a backbone for a prosperous economy and for the survival of humankind. India for being one of the oldest civilization and with the passage of the time it got amalgamated with so many cultures and tradition that helps in the beauty of Indian food and cuisine. The proper food consumption always got cherish as a sole purpose for a healthy and prosperous life. The Indian food and cuisine can be said as the blend of multiple cultures and available in a one platter. History as a discipline always seen as an incident of the past but the relevance of the past in today's life has not been focused much in the contemporary writing. Moreover, the medieval period of India mostly got attention for its political, socio-economic, architectural changes by the historian and scholars but unfortunately not much have been discussed on food culture in Indian history writing. Hence, here this paper tries to fill that lacuna which exists in the current writings. Food is an ever evolving process, in which culture and tradition also imbibed in our gastronomy of the present society. The varieties in food consumption come with various cultures in society. It is necessary to note that food and cuisine were always dynamic and also varies from region to region in India and very often region, religion and ethnicity attached mostly through the kind of food consumption. Indeed, the food consumption binds the people to connect to their cultural or ethnic tradition through similar food patterns. Immigrants often use food as a means of retaining their cultural identity. Despite all these, the ingredients, methods of preparation, preservation techniques, and types of food eaten at different meals vary among cultures. The food culture in medieval India contributed immensely in the formation and making a diverse nature of the Indian culture

and society. This was the time when the taste of the food and ingredients in the cuisine got preference along with the European influence in the culinary culture of India. The various existing cultures represent different signs of prosperity and prestige, and food consumption is also one of the parameters used for defining the socio-economic culture of society. The northern foodways in medieval India were very much vibrant not only in cuisine or food varieties, but also it was open for all various types of food or technique coming from outside. For instance, one of the contemporary traveler in medieval India states that at the time of Shah Jahan, European style of pastries, cakes and other sweet dishes prepared by some of the slaves who had been with the Portuguese at Ugulim.¹ This was also the time when cultural boundaries were not restricted to any place or region for the consumption of food. For instance, one of the British ambassador to the court of Jahangir records that in his royal kitchen he had both Indian and English cook.² Thus this lavishness and splendour indicate the elaborate system of food consumption marks legitimacy and power in the society. This can be considered as a symbolic way of showing power or supremacy among the masses. One of the traveler account of that time, Father Monserrate says that the emperor table is very splendid and it was filled with more than forty courses of dishes. The foods were always taken care off to avoid the unforeseen tragedy for which every food were covered with the linen cloths and tied up having sealed by the cook. However one more aspect of royalty can also be traced when foods were carried by youths to the dining hall along with the master of kitchen and from there it further passed to eunuchs who passed it to the serving girls who were part of the royal table. Generally emperor prefer to take his meal in private except certain occasion where he had to dine in public banquet³.

On certain occasion the banquet filled with all kind of luxuries items. For instance, the emperor Shah Jahan was invited for the feast by Asaf khan, the hall was decorated with the luxurious carpets, fine white muslin table cloth with cushions, and perfume holders were present around the room. This feast continued for around four hours with music.⁴ This was also the time of the political strengthening, Emperor Jahangir in his time declared not to kill animals on Thursday

and Sunday in the remembrance of his father.⁵ Despite the fact, he was very fond of chased meat. The fresh fruits like apples, pears, grapes and melons which comes from different parts of the country like Samarkand, Bali, Bocara and Persia as these items were very much dear to the higher class of people.⁶ The lavishness and splendor always indicate that the elaborate system of food creates a legitimacy and power in the society. For cooling of water, saltpeter is used mostly for the elite section and Akbar was the first emperor who introduces it in India.⁷ That indicates it was used for the elite section of the society. Apart from this, a kind of ice cream (kulfi) was also prepared which was part of the royal kitchen by freezing a mixture of khoa, pistachio nuts and kesar in conical shape of metal device.⁸ This introduction added to the royal feast and enhance their lavish banquet. Traveler Francisco Pelsaert also confirmed that rich people were having all kind of lavish food some of which were not known to his own country as well. The lavish feast consists of many dishes like Brinj (dressed rice), Aeshelia (spiced meat), Pollaeb (pulao), Zueyla (spiced wheaten cakes), Dupiyaza (meat with onions), roast meat and other items but before having food they washed their hands and table clothes would be put before them on floor. The head servant served everyone but from dishes spoon, napkins and knives were absent.⁹ He further gives the table manner as well in that it consider bad behavior to lick the fingers and food should not go beyond knuckles.¹⁰ The description that he provides clearly indicate the food consumption was not only confined to splendor but etiquette regarding food and the manner of its consumption also become important and this distinguished the nobility from the other section of the society. A drink called Falooda, a favorite drink of Jahangir was also a rich drink only consumed by a higher section of the society and the other sections of society could not afford this as it was a mixture of fruit juices, creams and jelly.¹¹

So far as the southern Indian foodways is concerned in the medieval India, it was interesting to see the changes and the variation in the food culture, it was as dynamic as it was in the Northern india. Interestingly, today the common classification in modern life for food like south indian thali, Gujrati *thali*, and North Indian *thali* only on the basis of regional or local cuisine respectively, does not justify its diversity

of the food culture. In the beginning itself, 'Manasollasa' one of the finest work done by the king Somesvara III of chalukya dynasty. He was of the opinion that the king needs to maintain a good life style to keep himself good looking for that purposes he needs to eat sufficiently and healthy food. He discussed that there were eight types of rice available before the king.¹² Apart from these, this work extensively talks about the various types the meats, seven types of lentils, *dosa*, *idli*, and methods for drinking water for a good life.¹³ Interestingly in the medieval times, the southern region were also enrich in their tradition and culture, one of the important book on food '*Supa Shastra*' written by mangarasa were well documented the culinary tradition of sothern India. Though most of the description available in this book is more about vegetarian food and among them Rice is one of the principle food.¹⁴ This was also the time when the varieties of cooked rice were available, rice-ghee combination flavored with garlic and salt popularly called as *katttogara*, crushed *papad* for yield, crisp fried sandiges made of the ash gourd and varies cooked greens gave rise to another cuisine in the southern region.¹⁵ These all shows the people of southern region were having appetite for good food and at the same time were also interested in various cuisine.

However, the southern foodways was not only popular in the varieties of available food but also in the technique for the preparation of the food. Gurulinga Desika, one of the prominent figure in the medieval south India, who wrote 'Lingapurana' a kannada text, mentioned about the preparation of various types of vegetables. One among them is brinjal which can be prepared several ways in the sixteenth century like seasoned with ghee, salt, methi, urad, and cream before boiled.¹⁶ The balaka was made by soaking large chillies in salt water, drying them, frying them in oil when needed as a crisp and spicy. Twenty kinds of balaka were prepared as per the lingapurana using various vegetables and their peels. This work of sixteenth century also mentions about the five kinds of happala or pappad and fifty kinds of pickle or uppinkayi were available before the people.¹⁷ The dishes with the help of curd, relishes of greens and raw vegetables were popularly called as *pacchadi*, *kachhadi*, *karsara kachhadi*, *palidya*, *thambuli*, and *rayatha*. Indeed, the sweet dishes were very much part of the gastronomy of the people.

Interestingly, jaggery was one the source for making sweet dishes like, rava grits, wheat vermicelli, sweet wheat rotis, stuffed with a mash of boiled chana, termed as hurige.¹⁸ Thus this all indicate medieval south india was very much vivacious and attached with the gluttony of the southern people for the consumption of varieties of dishes.

Hence we see a very vibrant picture of foodways of northern and southern medieval India. Food consumption has always treated as a necessity for human being's survival and growth but in the medieval period, we see the role of food and cuisine in the two different culture and

continuity of the past in the present society as well. With the passage of time, the food system got elaborated and attracted the more people and which leads to the formation of identity in the respective region. The Indian cuisine can be said as the blend of multiple culture and available in a one platter in a nation with diverse identity. As the present paper highlights the food culture of the two specific region and continuity of historical things in the present society. This can also be seen as a cultural heritage of India is very wide and vibrant in nature not only on the basis of language, appearance and tradition but also on the basis of food consumption.

FROM AMERICA TO INDIA: THE ASSIMILATION OF NEW WORLD CROPS INTO INDIAN FOODWAYS

Dr. Sandip Kumar

The European discovery of the Americas initiated an era of exchange of people, flora and fauna between the old and the new world. This process, called the Columbian Exchange, led to the introduction of many American food plants like potato, sweet potato, maize, tomato, chilli or capsicum, cacao, etc to Europe. From Europe many of the plants were disseminated to other parts of the world by traders and others. In India, the Portuguese were responsible for the introduction of many American crops like maize, chilli, potato, sweet potato, tobacco and fruits like pineapple, papaya, guava and cashew-nut.

Another plant of American origin, the tomato was introduced later by the British.

This paper examines the assimilation of three important new World crops- potato, chilli and tomato into Indian foodways. Introduced into India at different points of time by Europeans, all the three food crops were incorporated into local cuisines in most regions of India. What were the factor and conditions responsible for the acceptance of these new food items? Research on the culinary impact of the Columbian Exchange on European food ways has shown that crops like potato and tomato

were accepted very slowly.¹ The apprehension that they might be poisonous combined with what Brian Cowan has called 'stubborn conservatism of early modern culture' lay behind reluctance of people in consuming the two new crops.² The potato became a European dietary staple in the eighteenth century while the tomato became popular in the nineteenth century. The gradual assimilation of the New World food crops in Europe forms the backdrop against which I analyse the reception of the three food crops in India from the sixteenth century onwards.

The Chilli was introduced to India by the Portuguese in the sixteenth century from the Perambuco region of Brazil. Portuguese ships carried the chilli to Lisbon from where they were transferred to the ships going to Goa. The Botanist Crolus Clusius wrote that capsicum was called Perambuco pepper in Goa in the mid sixteenth century.³ How fast the chillies spread from Portuguese territories on the West coast to other regions is not very clear. The botanist and historian B.G.L. Swamy mentions a reference to chilli in the writings of the sixteenth century Kannada poet and musician Purandaradasa.⁴ If the identification is correct, then the chilli had reached Karnataka in a fairly short period. Some historians have argued for a rapid diffusion of chillies consumption all over the sub-continent.⁵ But the evidence indicates that the process of dissemination of chillies was gradual in many areas. The chilli was well known in Western India in the eighteenth century. James Forbes, an employee of the English East India Company noted

"The Chili pepper (capsicum), of various sorts, is planted throughout Hindustan, and forms a principal ingredient in curries, and other savory dishes, which the natives are all fond of, whether they eat animal food or not: to the capsicum they generally add the cardamom (*amomum-repens*, Linn.), a pleasant spice from the Malabar coast; which, with salt, pepper, and ginger, season their viands, mingle in small quantities with the rice, which is the chief article of food among all the higher classes of Indians: the poor live principally upon *juarree* (*holcus sorghum*), *bajaree* (*holcus spicatus*), and other inferior grains."⁶ Another observer, Dr Hove found the chilli being used to season the Kebabs in Gujarat in the 1780s.⁷

In the southern part of India, chilli was cultivated in many regions of Karnataka in the late eighteenth century and it had become included in the diet of the poor.⁸ In Bengal, the chilli was introduced by the Portuguese. Ghulam Husain, a historian of Bengal noted that the people of the region consumed large quantities of red chillies.⁹ In North India, the chilli was introduced in the middle of the century by the Marathas for whom it had become a dietary staple. North Indians were said to have started using the new spice which had been unknown to them previously.¹⁰ Chilli consumption however, had not spread to all sections of North Indian society even by the early nineteenth century. A collection of recipes for making *kawabs* from 1820s shows that while the kebabs sold in the market were flavoured with chilli, those made in the kitchens of the wealthy Muslim residents did not use it.¹¹

While the use of chilli was becoming more widespread in many areas, there were regions where it was not known as late as the 1830s. The Telugu scholar Enugula Veeraswamy recorded that the servants accompanying him on his journey from Madras to Benaras in 1830-31 were disappointed at not being able to find chillies and tamarind in the markets of Central India. They believed that the absence of these ingredients from their food in the last few days had affected their health. Veeraswamy advised future pilgrims from the South to buy chilli and tamarind in Nagpur to avoid any inconvenience.¹² When Veeraswamy reached Orissa, he noted that the people of the region consumed chilli in lesser quantities than those living in the south but the spice was available in the markets for travellers.¹³

Published recipe books from various parts of India show that the chilli had been incorporated into local food ways. The Gujarati *Pak Shastra* (1878) suggests adding red chillies along with cumin, coriander powder to most vegetable dishes.¹⁴ The *Ath Rasvyanjan Prakash*, a Hindi work on dietics written in 1903 recommends adding red chillies to various types of dishes like vegetables, lentils and pickles. Interestingly, it suggests using black pepper in some recipes while in others, the red chilly is recommended. Chilly was meant to be used as a spice that could substitute black pepper and provide a hot taste to foods.¹⁵

What accounts for the assimilation of the chilli into Indian food culture? Before the introduction of chillies, black pepper and long pepper were used to impart a hot taste to Indian food. But these spices were expensive and were therefore used by the wealthy. The chilli provided a cheaper alternative by which the poor could season their food.¹⁶

Unlike the chilli, the potato was not introduced directly from America to India. The potato arrived in India from Europe although the date of its introduction remains unknown. Some English sources from the seventeenth century mention the presence of the potato in India. Thus, the chaplain Edward Terry, who accompanied Sir Thomas Roe to India, noted that the potato was once served to them on one occasion in 1617.¹⁷ The doctor John Fryer, present in India during the 1670s noted the consumption of potatoes in Kanara. He also records potatoes being grown in the gardens of Surat.¹⁸ It has been suggested that the Englishmen could have confused a local variety of yams for the potatoes.¹⁹ But the potato had become a familiar crop in England and is mentioned in several recipe books from the latter half of the century.²⁰ It seems unlikely that Fryer would have failed to identify the potato. The potato was probably being cultivated in Western India in the seventeenth century.

The Englishmen did promote potato cultivation in their settlements from the Eighteenth century onwards. James Forbes noted that potatoes, lettuce and cabbages had been introduced from England and the Cape of Good Hope region to Bombay. He also recorded their presence in Surat²¹. Another observer recorded that peasants of Surat grew bajra in fertile soils while yams and potatoes were chosen for poorer quality soils.²² Twining observed potatoes of an "indifferent" sort being cultivated in an Englishman's garden in Madras during the late eighteenth century.²³ In Hyderabad, potatoes were unavailable in the same period, much to the dismay of James Kirkpatrick, the English resident at the Nawab's court. He once ordered a variety of potato named after the city of Patna, proving that the potato was then being cultivated there.²⁴

Consumption of potatoes became common in Bengal and North India from the early nineteenth century. In 1820s, Bishop Heber

noted that the potato had become a favoured item of consumption in Bengal. The tuber had not been popular earlier but the local people had started liking it.²⁵ Heber observed that in North India too, the potatoes "were becoming great favourites, particularly with the Mussulmans, who find them very useful as absorbents in their greasy messes."²⁶ Around the same time, an English lady had noted that while the Europeans had introduced the potato in Muradabad district, "the natives are all fond of it and eat it without scruple"²⁷ The inhabitants of the Himalayan region of Almorah had also started cultivating the tuber.²⁸

Going by the evidence of published Hindi recipe books, potatoes were being consumed in greater quantities in the early decades of the twentieth century. The *Ath RasVyanjan Prakash* (1903) and the *Pak Shastra* (1913) contain very few references to potatoes. The *Pak Chandrika* (1926) has several recipes featuring the tuber crop. It calls the potato 'the king of vegetables' and notes that its taste and nutritional qualities have made it popular among people.²⁹ Praising the potato for its versatility, it mentions a long list of items that can be made with it. Both the poor and the rich can enjoy the potato according to their abilities.³⁰

The tomato arrived in India much later than the potato and chilli. It was not the Portuguese but the British who introduced the fruit to the country in the nineteenth century for their own consumption.³¹ Anglo Indian cook books from the latter half of the century contain several European style recipes for the tomato like soups, sauces, soufflés and custards.³² It was also used to make 'Indian' items like chutney and mash where its sourness was complemented with chillies.³³

The tomato was gradually incorporated into regional cuisines. People of Bengal and Burma had started adding it to their curries in the late nineteenth century.³⁴ The tomato had become a familiar food item in Calcutta by the early part of the twentieth century. Peasants in Bengal had also begun to cultivate it using seeds imported from America.³⁵ The tomato was unknown in Gujarat and North India till the early decades of the twentieth century since it is not mentioned in any of the recipe books. A Hindi recipe book called the *Pak Chandrika* published in 1926 refers to the tomato as the 'vilayati

baingan' or imported aubergines. It contains only two recipes where the tomato is used-a mash and and a chutney.³⁶ Another recipe book, the *Vrahad Pak Vigyan* published in 1939 includes tomatoes in the list of vegetables that are to be eaten raw. It recommends that the tomato be eaten after mixing it with black pepper, ginger, green chillies and lemon juice. No recipe in the book includes the tomato in any cooked form.³⁷ Thus the early use of the tomato in North India was confined to making dishes like chutneys that accompanied the main food items. It was not added to the main components of food like

vegetables and lentils as is seen today in most parts of North India.

The tomato appears to have consumed more frequently in the Tamil speaking region. S Meenakshi Ammal's recipe book *Samaithu Paar*, published in 1951 mentions the tomato in a few recipes where the tomato is cooked along with spices and other vegetables.³⁸ The book advises its readers to reduce the quantity of tamarind in *Sambhar* and *rasam* in case they want to add tomatoes.³⁹

CULTURAL CONTEXT OF INTOXICATION: A STUDY OF PERCOLATION OF TODDY IN KERALA

Saritha P.V

Palm toddy, coconut toddy, wine are commonly used intoxicant drinks in Kerala. The present paper is an attempt to find out the context of spreading the consumption of intoxicant drinks in Kerala society and its impact in culture. The emergence of new community based on hereditary occupation of toddy tapping is also an interesting aspect with regard to it. Toddy also percolated gradually in to the religious practice of the indigenous people. There are not many studies on intoxicant drinks in Kerala. Few works such as K.Sadanandan Vaidyar's *Eezhavacharithram*; *Ariyappedattha Edukal* gives details about toddy tapping community in Kerala. The early Tamil literature, oral sources like *thottampattukal*, *manipravalam* literature, traveler accounts, accounts of missionaries and various myth related to toddy are made use of in this study.

The earliest evidence of intoxicant drinks can be traced from the Rigveda. In the Rigveda a distinction made between *soma* and *sura* (liquor), the former being an intoxicating drink, but reserved for being offered (as a sacred beverage) to the gods and to be drunk by the priests, while the latter seems to have been meant as a beverage for common men and not usually offered to gods.¹ How *sura* (liquor) was prepared is described in the *Satapata Brahmana*.² In *Aitareya Brahmana* (37.4) it is stated that when a king has undergone a solemn coronation ceremony, the purohita places in his hand a vessel of *sura*.³ The *Grihyasutra* referred that a rite on *Anvastaka* day during that time offering of

liquor to ancestor.⁴ *Manusmriti* forbid all kind of intoxicants to Brahmanas at all stages of life.⁵ Intoxicants are not forbidden to sudras. Megasthenese and Strabo noted that Indians did not drink wine except at sacrifices (in the 4th century B.C).⁶

Toddy in Early historic period

In early historic period Kerala was part of *Tamizhakam*. The early Tamil literature shows different geographical area known as *tinai*, they are *kurinchi* (hill area), *mullai* (pastoral tract), *palai* (dry land), *marutham* (wetland), and *naithal* (coastal area).⁷ In these area there had certain peculiarities in their life style. These different area produced variety flavour of toddy that made with available items in that place. The early Tamil literature that referred toddy extracted from different flavour palm, coconut, *takathi* flowers, rice, bamboo, etc. In early historic period toddy played important role in the society. It became inseparable part during special occasion like conducting feast, festival and for love making etc. Most of the songs of *Purananuru*, *Pathupattu*, *Pathittipathu* deals with the feast conducted by the king after the war victory or before the war, toddy was the essential item of the feast. The feast is mentioned in the song as *undattu* (feast). In *Kurinchi* region, Kuravas consumed the toddy extracted from honey.⁸ In the *marutham* the *Uzhavar* consumed toddy that extracted from ragi and rice known as *Ariyaal*.⁹ The *Maravar* and fisherman also consumed toddy that extracted from rice.¹⁰ *Naravu* and *Thoppikallu* were other intoxicant drinks used in early historic

period. *Munnir*, a special kind of intoxicant was popular with the women folk. It was prepared from juice of tender palmyra nut, the tender coconut and sugarcane.

Toddy were commonly used in early historic time.¹¹ Toddy consumed by all strata of society without caste distinction in that time.¹² Drinking is not considered as bad habit. The toddy tappers and *Uzhavar* (cultivators) they occupied high status in the society. The toddy tappers mentioned as *chandhor* in the early tamil literature which means gentle person (*manyar*).¹³ Poets considered the king as a protector of *chandhor* (toddy tappers). King consumed toddy along with his subject like warrior, poets, bards etc. In *Purananuru* the poet Kapilar memorise on king Pari and fabulous wealth of his reign. He also deal with toddy considered as part of wealth that buried in the house it distributed among the subject during Pari's reign.¹⁴ Another song of *Purananuru* deal with importance of *maruthanilam* (wet land) that was demanded by warrior. Toddy extracted from flower was one of the peculiarity of *Marutham*.¹⁵ The *Naithal* region specialized in coconut cultivation and toddy extracted from the coconut tree.¹⁶ In the *Marutham* region toddy extracted from bamboo.¹⁷ Toddy was the special item in the royal feast. King consumed toddy in golden vessel.

Toddy was one of the trading item during early historic period. *Purananuru* give a clear picture of toddy sale centres, where a particular flag indicate toddy selling.¹⁸ Women also engaged in toddy selling.¹⁹ *Manimeghala* refers city of *Vanchi*, inhabited by goldsmith, courtesans, astrologer, architects, dancers, and toddy sellers. Wine was one of the importing item mentioned in the *periplus*.²⁰ Early Tamil literature refers that king consumed drinks brought by *Yavanas*, which was corroborated by the finding of amphora jars used for preserving wine by *Yavanas* in Pattanam excavation. According to Rajan Gurukkal " it is reasonable to presume that the item such as grains, olive oil, dry fruits and wine were imported obviously not for exchange but for self consumption of merchants and organizers of trade who were primarily, Greeks, Arabs, Egyptians, Jews and Philistines".²¹ According to Rajan Gurukkal and Raghava Varier, there is a type of exchange system that existed among the *Aintinai*s (five

ecozone) instead of trade. The value of product never considered because they gave prime importance to utility only. For example the *Maravan* handed over ivory for toddy. There is no price value.²² *Marutham* and *naithal* region were important centres of exchange system.

Toddy in Pre-modern Kerala

In the period of later tamil literature we can see the arrival of Budhhist, Jains and Brahmins. During that time the status of toddy degraded. Toddy consumption restricted among upper strata of society. *Manimeghala* deals with five great sin one of the great sin is toddy consumption.²³ *Thirukkural* also refer toddy consumption as one of the great five sins. Thiruvalluvar says that those who pay the drink and lose consciousness as the most ignorant. All good men's esteem is lost by drinking.²⁴ It continued as a practice among lower strata. Brahmanical text and law books that prohibited drinking. The consumption of toddy is a major sin among Brahmins. If the Brahmin consume toddy, he will be punished by out casting.²⁵ The Nambutiri observe 65 *anacharam* or irregular customs which are said to have been promulgated by the great reformer Sankaracharya, drinking liquor include in 48th *anacharam* (irregular customs). *Unnicchirudevicharitam* depict *Chittangadi* (a town during that time) which provide clear picture of toddy consumption among the lower strata of society.²⁶ The *Mushakavamshakavya* (1100 A.D) refers drinking of intoxicating liquor in the company of gay and youthful damsels and indulgence in amorous dalliance as means of enjoyment resorted to by the king.²⁷

The Syrian Copper plate deals with the revenue tax imposed on toddy tappers ,that is *kudanazhi* (land lords share of toddy tapper's produce).²⁸ In the first set of Syrian Copper Plates the different *iraikal* (taxes) previously realized by the governor from the *Ilavar* and *Vannan* families and now transferd to the church along with these families are enumerated, *talaikkanam* (fetter fee). Even now *talai* in Malayalam generally denotes a ring around the leg and it is used in technical sense to denote the ring made of palmyra fibre which is applied by *Ilavar* or tree climbers round the ankle and with whose grip they are able to climb the trees. Both *tala* and *eni* are tools of toddy tappers. The term *talaikkanam* and *enikkanam* suggest professional taxes.²⁹

Emergence of new Community based on Toddy distillation

The hereditary occupation of toddy tapping led to emergence of separate caste in Kerala. In southern Kerala toddy tapping community known as *Channar*, in the central Travancore as *Ilavars*; in Quilon to Paravoor, *Chogans*, whereas in the Malabar region they are known as *Thiyya*. And still further north *Billavars*, which appears to be a slightly altered form of *Ilavar*.³⁰ We can see that some differences of customs between them. The traveler accounts and accounts of missionaries also provide a detailed account of toddy tapping community. One of their caste name (*Tiyan*) denotes that they came originally from an island, while the other caste name *Ilavan* denotes that island was Ceylon. *Tiyan* is a corruption of the Sanskrit *Duipan* passing through *Tivan*, a name which is even now sometimes applied to the caste. In the records of the Tellicherry factory the caste is generally alluded to as '*Tivee*'. *Simhala* was the ancient name for Ceylon, and the other caste name of the planters must have passed through *Simhalam* to *Sihalan* and *Ihalan* and finally to *Ilavan*.³¹ L.K. Krishna Iyer, C.A. Innes, Nagam Aiya, T.K. Velupillai, C.A. Achutha Menon subscribed to this view. But according to Elamkualam Kunjan Pillai, Brahmin alone came from outside Kerala and all other communities of Kerala are indigeneous.³² The early time the dominant community in Kerala was known as *Villavar*. They are later known as *Ezhava*, *Thiyya* and *Chokons*.³³

Extraction of wine from grape was unknown to Malabar (whole Kerala).³⁴ Ludovico Di Varthema describes in his work about the coconut trees and making toddy from this tree. In the morning and evening toddy tappers make an opening with knife and collect the fluid through the fixed under neath pots. This they place over the fire and boil it once, twice and thrice, so that it appears like a brandy. This is the wine which is drunk in these countries.³⁵ Varthema also deals about the apes they do immense damage to those poor men who make wine. These apes climb on the top of those nuts and drink same liquor and then they overturn the vessel and throw away all the liquor they cannot drink.³⁶

The scientific cultivation of coconut on a large scale in the coastal area of Kerala at the instance of the Portuguese and the Dutch gave

an impetus to the toddy tapping operations.³⁷ The rulers they used *Arak* for welcoming guest, welcoming of Gama, the Portuguese traveler by the ruler of Calicut describes that 'one of the king's attendants offered his majesty a golden vessel with *arak* and betel'.³⁸ The coco tree furnish them with drink, which if not used to excess is tolerably whole same. Out of this liquor they distil their *Arak*, much courted by the common soldiers and seamen, to their great detriment.³⁹

Assimilation of Non-Brahmanical God in to Brahmanical Cult

Toddy percolated into the religious practice of the indigeneous people. During the early historic period onwards toddy used as one of the important offering item for worship. If any hero died the people installed '*nedukkal*' (hero stone) for his memory and in the special occasion they gave toddy as an offering to it.⁴⁰ Toddy was used in ancestral worship like *muttappan* which is continued even today by *Thiyya* community. Another worship of the deity is *Kuttichathan* which exist in different part of Kerala. According to traditional belief *chathans* are the son of God Shiva and Vishnumaya.⁴¹ The Ayyappan or Sasta is believed to be the supreme God and the highest ruler among the non- Aryan aborigines in south india. Some of the minor demons whom the caste men worship are *Kuttichathan*, *Parakutty*, *Karinkutty*, *Mundian* etc. These are believed to be either the debased aspect of Sasta or subordinate demons under him. The unbridled malignity of these demons ever excites the fear of the people of the lower castes to a such degree that they, the descendants of the non-Aryan aborigines always seek their protection by doing pious worship and by making offering to them.⁴² According to traditional belief, the Nambuthiri of *kalakattu illam* who had no successor. So they got child with the blessing of God Siva and Parvathi in their incarnation as *valluvan* and *valluvathi*. This child is known as *Kuttichathan*. *Kuttichathan* never followed the Brahmanical way of life and custom. He always neglected their advice and began to drink liquor and animal blood. At last the Nambuthiri tried to kill the *Chathan* by cutting as 390 pieces. It placed in 21 fire altars. But *Chathan* never died and in fact multiplied as *Chathans*. The *Chathan* burned the *Kalakattu Illam* after that the people and Nambuthiris

began to worship *Chathan* in the form of *theyyam*.⁴³ *Kuttichathan*, *Bhairavan*, *Pottan*, *Karuval* were belonged to Brahmin's *theyyam*. The *Kuttichathan theyyam* indicate the assimilation of non-Brahmanical cult in the brahmanical fold of worship. Some caste men offer toddy to *Kuttichathan* for his blessings. The famous Nambuthiris like Panchanelur Bhattathiri and Avanagattu Panikkar they practiced witchcraft to getting control over *chathan* as per their will.⁴⁴

Coconut toddy used as major offering of *Parasinikadavu Muthappan* temple.⁴⁵ We can see that the assimilation of indigeneous Gods like *Muthappan* and *Kuttichathan* in Brahmanical fold of worship. Various myths that existed in Kerala relate with toddy include *Parasinikadavu Muthappan* myth and myth related to *Malanada Duriodhanan* temple. *Parasinikadavu Muthappan* myth is that the *naduvazhi* (landlord) Ayyankara Illath Vazhunnar had no son. His wife Paadikutty Antharjanam was a devotee of God Siva. They gave birth to a child by the blessing of Siva. The child never obey their advice and always keep relationship with lower caste people. Began to eat nonveg items and toddy. After that the boy revealed his divine form to his parents. Then he went to *Kunnathoor*. He was also attracted by the toddy of palm tree. The toddy tapper Chandan know that his toddy was being stolen from his palm tree. So he decided to guard them. He caught the old man stealing toddy from his palm. He got very angry and tried to shoot the man using his bow and arrow but he fell unconscious. Chandan's wife find him unconscious at the base of tree. She noticed the old man and asked to pardon Chandan. She offered boiled grams, slice of coconut, burnt fish, and toddy to *muthappan*.

The myth related with *Malanada Duriodhanan* temple is when the exile of Pandavas, Duryodhanan tried to trace Pandavas. Duryodhanan reached the forests in the Malanada hill. By that time he was much tired and went to a nearby house and asked for drinking water. It was Kaduthamsserry Kottaram where *Malanada Appoppan*, the priest and ruler of land was staying. An elderly women gave him toddy which was customary at that time as mark of respect. The toddy that extracted from the rice was peculiarity of temple during the festival season. Among the tribal community toddy is

one of the important offering item like *kurichiyas*, *paniyas* etc. *Kumbham vettal* (cutting of vessel) is the one of the important religious ceremony among the *kurichiyas*. The *Muppan* (headman) cut the bamboo piece containing toddy.⁴⁶ Then all similar bamboo pieces with toddy are emptied and the content consumed. The offering known as *Koll* contain beaten rice, plantain and jaggery placed on the plantain leaf at the shrine and the *Muppan*, after prayers, distribute it. *Muthappan* is their main God. Women and children are not allowed to the worshiping place of *Muthappan*. No animal sacrifices are performed, but each family celebrate annually a ceremony of offering toddy, for which the *pittan* (head of family) fixes an auspicious day. *Pullikurathi thottam* songs deal with toddy consumed by Pullikurathi (incarnation of Goddess Parvathi). *Thottam* songs of *Pulaya* also deal with worship of *Kuttichathan*.⁴⁷ *Kalladi Muthappan* a demon God conjured for odi (agreement to destroy something).⁴⁸

Among the Christian community intoxicant drinks especially wine is inseparable part of their religious ceremony. After the arrival of Portuguese they forced Syrian Christian to use strong wine in religious practice.⁴⁹ In Muslim community intoxicant drinks considered as *haram* (prohibited item).

In early historic time toddy consumed by all strata of society without caste distinction. Several early tamil literature reveals that king consumed toddy along with his subjects during the feast and war victory celebration. That time toddy tappers enjoyed highest status. But in later time toddy became degraded status after the arrival of Jainist, Budhhist and Brahmins, after that there emerged caste distinction in the society. Higher caste like Brahmins and others prohibited toddy consumption and it considered as bad thing. But lower strata of society continued toddy consumption. We can see that the hereditary occupation of toddy tapping led to emergence of separate caste, *Ezhava* in southern Kerala and *Thiyya* in Malabar region. We can see that assimilation of non Brahmanical God in the Brahmanical fold of worship like *Muthappan* and *Kuttichathan*. Intoxicant drinks prevalent in the tribal community and Christians but it was prohibited among the Muslims.

SCULPTURAL ART OF THANJAVUR MARATHAS

Dr. B. Sheela & Dr. R. Udaichandran

Thanjavur, the headquarter of the district of that name, lies about 322 km to the south-west of Madras in Tamil Nadu. It is a grand old town as a royal capital for over 1000 years from the 9th to the 19th centuries. It has claimed to fame as a cradle of art and culture. Thanjavur was ruled by Marathas from C.E.1676 to 1855 nearly 180 years by 13 kings. They were builders and patrons of art and culture. They made the most imperishable contributions in music, literature and art. Maratha Kings were saivites, but they patronized the vaishnavite sect and were tolerant to other religions. They were not only adopted their customs and culture but also fostered their growth and development. They continued the art tradition of the Nayaks, and influenced by the European style.

Thanjavur Marathas constructed temples, palaces, choultries, churches, mandapas, administrative buildings, forts etc. They also renovated a number of temples.¹ As per the records of Modi script, there were sixty four temples under the control of them;² now eighty eight temples under the Thanjavur Palace Devasthanam.³ A number of monuments survives from the 18th century many in a fine state of preservation and still in use. Their temples and buildings are studded with sculptures and painted panels. They provide ample information about the political, social, economic, religious and cultural life of the people during the 18th and 19th centuries of Tamil Nadu. However, it has not received scholarly attention of the art historians that they deserve. Scholars concerned with the Indian art and architecture generally goes a preference for early iconic motifs and tends to ignore the later centuries. Hence, an attempt has been made to provide the significance of sculptural art under the Thanjavur Marathas.

The sculptures of Thanjavur Marathas are beautiful and ornamental. They are engraved on single stone and placed on the walls of the buildings. They can be broadly classified into four kinds as stone, bronze, stucco and wood corresponding to the materials. Another classification of images is divine, natural, imaginary and portraits. They consist of themes on Hindu gods and goddesses. The themes are

mostly mythological with figures of Lord Krishna in various poses and depicting various stages of his life being the most favorite. The portrait sculptures and the images of royal personalities are also received, their attention in this period. Generally, in the Thanjavur Maratha style, sculpture is massive strong, squat and muscular physique. The stucco and wooden sculptures were beautified with attractive paintings.⁴

Divine Sculpture

The Maratha rulers built many temples in Thanjavur region. Tukkoji alias Tuljaji I (1729-1735) built the famous temple of goddess Mariamman in Punnainallur near Thanjavur as desired by his guru Sadasiva Brahmdendra. Pratapsirinha (1739-1765) constructed the Sri Bangaru Kamakshiamman temple at Thanjavur. The remarkable specimens of Maratha art and architecture are found in these temples.

Marathas brought the cult of Ellamma as their tutelary deity or family goddess with them from Maharashtra to Thanjavur.⁵ Ellamma alias Renugadevi has been known as the village goddess in the Modi script.⁶ The temple of Ellamma in Thanjavur was built by Serfoji II in the year 1803. Kundaladeviamman holding a child in her right hand,⁷ has carved on the stone slab and erected next to the balipita of this temple. Madangi⁸ the goddess of wisdom, supernatural powers and music, enshrined in the southern prakara of this temple. She is considered as the Tantic form of Saraswati. The dancing Vinayaga of Orathanadu Muthammal chaultry and Thumbikkaialvar of Kaliyuga Venkatesa Perumal temple are notable specimens of Marathas. The ten avatar sculpture of Lord Vishnu are found in the latter temple. They have uniformly four hands and different types of head dresses.

Shakambari the Bearer of the Greens, is one of the aspects of Parvathi. It is said that during the famine, the goddess Adishakti appeared as Shakambhari to provide vegan food for hungry people. Her Sculpture is found in the car of Thiruvaidaimarudur temple. She has also placed in Navarathri festival and decorated with vegetables. She holds an axe, vegetables and pasa.

The sculpture of Ranu Bai, Amangala devi and chattu Bai, Sumangala devi in the Rajagopalasamy temple in Thanjavur are remarkable in the cultural history of the Marathas. They are worshipped considered as the angels who protected the children of Maratha family. Actually, it insists the ancestor worship.⁹ The drapery of the over coat of the guardian deities symbolize the influence of western style.

Anuman or Anjaneya worship became popular during the Maratha period. The sculpture of Anjaneya is depicted as Yoga Narasiraha with four hands holds conch and wheel. It is found in the Virapratapa Anumar temple at Thanjavur. The Ramayana Scenes found in the Nageswara temple, Kumbakonam, the scene of Rama story at Kaliyuga Venkatesa Perumal temple, the sculptures engraved on the walls of Ramasamy temple, Mannargudi are of religious importance and artistic note worthy.

The idols of Hanuman, Vinayaga, Dhandapani, Vittooba, Navagraha, Naga Devatha, Pandurangam and five faces of lord siva were found in the Thanjavur Rajagopalasamy temple and prove their sculptural talent.¹⁰ The Thanjavur Marathas introduced a sculpture in their own style called Sivendirar. It contains the figures of eight angels in round panel along with jvalakesa and chakra and trisul. They made the sculpture of Chakrapani with sixteen hands at Mannarkudi, Kumbakonam and Thanjavur.

The Marathas established the sculpture on the unplastered brick walls like the wedding scenes of Siva, Tirumal and Muruga of Darbar hall of Thanjavur palace. Sixteen handed Rama, five headed Tirumal, Anuman and Garuda are the typical Maratha style of sculpture. In the Tirumal Sculpture, human head at the center, kurma and Varaha sculpture on either side, lion head on the head, on the back uncleared head are also found. These sculpture of Hindu gods and goddesses coated with paintings are decorated buildings of the Thanjavur Marathas.

The Vaishnavite sculptures found at Thiruvedi, Orathanadu, Rajamadam, Needamangalarn, Saluvanayakan Pattinam, Mayuram and Thanjavur, express the artistic skill of the Thanjavur Marathas. The divine sculptures of the car of Thiruvaidamarudur,¹¹ the silver plated bull vahana and Palanquins of

Saptasthana temples exhibit the excellence of intricate carving of minute sculpture of the period. The pillars of the Savukandi mandapa of Orathanadu choultry are decorated with artistic spears.

Natural Sculpture

The buildings of the temples of the Marathas are decorated with flora and fauna. Naga worship is very popular in the Ellamma temple at Thanjavur. Naga Kanni is enshrined and flanked by female attenders in the prakara of this temple. Hunting scene, war scene, procession of elephants, Monkey fight are richly carved on the walls of the choultry at Orathanadu.

Imaginary Sculpture

Yali sculpture, the hybrid species like human head and animal body, Goat head and animal body sculpture are also carved on the walls of the buildings as panel sculpture.

Thirumbala Chakra is carved in the ceiling of the front mandapa of Saptarishvarar temple. The numbers from 1 to 9 mentioned in Tamil letters, have placed in nine boxes horizontally and vertically. By adding the numbers in all directions, the total number 45 would be come. It is called Vedikkai kanakku, a fun game by the local people. Thirumular, the author of Thirumanthiram the tenth Saiva canon speaks about this chakra as Thiruambala Chakram. (The Circle of Chidambaram). Thirumanthiram was written under 9 tantras based on 9 agamas taught to Thirumular by his Guru. The fourth tantra is highly esoteric work on mantras and tantra. In this tantra, he describes about the yantras including Thiruambalachakram

Portrait Sculpture

The Sages of Saptarishvarar temple of Sakvarambalpuram near Kumbakonam are shown with downward moustache, Beard, Rudrakshamala, Jatabandha¹² and Virisadai. Rasakumarabai Ammani sculpture is found in the Surakottai Rajagopalasamy temple. She has folding hands in anjali pose. Her costumes and ornaments are shown the figure as a royal woman. The sculptures of Yasuvantrao Mohiteh and Sulotchana Bai are worshipping posture in the Maratha style. The Scenes depicting the princesses riding on the horse with sword on their hands, warriors carrying weapons,

musicians playing musical instruments like cymbol, ekkalam, drum, flute, magudi, etc., kolattam, dancers, warriors, apsaras, illustrate the life style of the Marathas. It is notable that magudi is accompanying with dance. The Marble sculpture of Serfoji II (1798-1832) by Flaxman¹³ is an excellent piece of art for Maratha portrait. It is a life style statue costing Rs. 1200 in 1803, during his lifetime. It is erected on high pedestal with his hands clasped in a gesture of reverence creating an imposing image.¹⁴

Sculpture of the Schwartz, the Danish Rev. Friedrich Christian in death bed and Serfoji II is made by Flaxman in 1807, is placed in the church of Sivaganga tank, Thanjavur. It has engraved with the dying missionaty, blessing king Serfoji II surrounded by his ministers and students. These two marble sculpture are the best workmanship for the western influence in the sculptural art of the Marathas. The sculptures of kings, queens and chieftains are found in their construction with the Maratha royal dress and a

mark worn on the forehead. Their images are also placed in the Navaratri festival.¹⁵

The bronze idols of Serfoji I and his Queen found in Thanjavur Art Gallery, Thiruvudaimarudur Paavai Vilakku and Deepambal sculpture are the masterpieces of the Maratha style. The base of the lamp has an inscription datable to 1853 indicating the gift of Marathas to the temple. Bronzes are rare during this period. Meanwhile brass is high in alloy ratio in these bronzes. In the female figure, the nose ring holds a cultural significance. Though the custom of wearing began in very earlier, it became a part of life after the 16th century.

Thus, the sculptural art has admired and patronized by the Marathas of Thanjavur during the 18th & 19th centuries. The development of both religious and secular sculpture marks a new style called Maratha style of sculpture in Thanjavur.

ANKAM: ARBITRATION METHOD OF MEDIEVAL KERALA

K.P. Shiji

Heroism and chivalry played an important role in the history of Kerala from early historic period onwards. The heroes got an aristocratic status in ancient and medieval society. They were promoted by the existing political authorities of that period. During the medieval period *Ankachecons* were the real heroes of society. This paper is an attempt to analyse the socio political circumstances behind the practice of *Ankam* in medieval Kerala. Why the state

promotes this duel as an arbitration method of medieval period is also discussed here.

ANKAM

Ankam was a custom of settling disputes, both of public and private character, through a fight between two men of higher valour from each party concerned, as common in Kerala.¹ *Ankam* was fought between two persons directly for settling disputes among persons, who rival

each other in connection with any issue.² According to Herman Gundert, *Ankam* was the ordeal for Nayars, a royal privilege for which each combatant had to pay, sometimes fought by hired champions.³ Logan remarks that, when a physical offence was done by one person to another, solemn contract used to be entered before the *Naduvazhi* of the locality to fight *Ankam*, the chief himself being umpire.⁴ The *Naduvazhi* was the ultimate authority to the settlement of disputes, the latter adjudicated as to what disputes should be referred to decision by *Ankam* and asked rival parties to choose their own champions who fought the battle for them.⁵ In fact *Ankam* was a very strange institution practiced for arbitration of issues. In which sometimes two rival persons themselves fight each other for victory. But in most of the cases *Ankam* experts called *Chekor* were hired by parties, and the *Naduvazhi* supervised the fight.⁶ The subject matter of the famous folk song of Aromal Chekavan in Malayalam is the tragic story of an *Ankam* fighter called Aromal Chekavar had lost his life while fighting for settling dispute over management of the property between two members of family.⁷ Most of this type of stories related to *Ankam* was included in Northern Ballads. These songs had been composed mostly in between the 16th and 19th centuries, particularly in Kadathanadu region.⁸ They depict the chivalry and heroism of several heroes and heroines of medieval and late medieval periods.

CHEKON

Chekon means a hired champion, who belongs to Ezhava or Nayar community. He was ready to submit his life for others. They had got an honorable place in society. According to custom, a real *Chekon* one must fight in a duel. In fact they were the slaves of the customs, which tempted them to fight the *Ankam* just to increase their family prestige even if they did not want to fight.⁹ It is the duty of a *Chekon* to wage *Ankam*. To retreat from the *Ankam* was considered as a humiliation and such disrepute even affected his family for generations. So a *Chekon* was always ready to accept the request from anyone.¹⁰ The defeat was also considered to be a matter of disgrace not only to the *Chekon*, but also to the members of the family.¹¹

According to custom, to uphold Dharma is the duty of a *Chekon* in a society.¹² Through this

social custom, the society enables to ensure the availability of *Chekons* in medieval social condition. A *chekon* was really acted as a member of Suicide Squad. The families of the *Chaver* were given the land on service tenure known as *Chavettuviruthi*.¹³ This system practiced to protect the heirs of suicide squad from insecurity. On fixing the *Ankam*, the *Chekon* had a free hand to claim his dues. The fighters were very well paid for their services, as one of the two was bound to be killed or defeated. The loss of the life of a *Chekon* was to be compensated by separate gifts to the family by the part for which he took part in the fight.¹⁴ The *Veettukizhi*, *Nattukizhi*, and *Ankakizhi* were the three forms of money related to *Ankam*.¹⁵ In which *Veettukizhi* was given to the *Tarawad* of *Chekon*, it may be taken by his son or nephew in accordance to their inheritance pattern.¹⁶ The *Ankakizhi* was given to the particular *Chekon*, who fought duel. If he dies that goes to his heirs.¹⁷ The third one called *Nattukizhi* was the money, the *Naduvazhi* received as umpire between two combatants and for the arrangements of *Ankam*.¹⁸ The consent of *Naduvazhi* was necessary for conducting *Ankam* in a particular *Nadu*.

Apart from heroic aspect of the *Ankam* there was a sentimental aspect also. As the slaves of the customs, *Chekors* were tempted to fight the *Ankams* just to enhance their family prestige. The song of Aromal Chekavar shows that his wife, sister, brother, and parents persuaded him to withdraw from *Ankam*. He was not accepting their request because he feared the humiliation of retreat.¹⁹ The *Chekor* bade farewell to all his relatives in a formal way and gives the domestic obligations to his nearest successor, as he was not sure whether he would return alive.²⁰ In fact this insecure nature of the institution was compelled the *Chekavan* to demand high amount of money as *Ankakizhi*. The best example is found in the song of Othenan where he demanded more and more money from Unnikonor.²¹ The *Ankapanam* was changed in accordance to the power and prestige of *Chekon*.

Kalari was the prominent institution existed during the medieval period as mainly for imparting military training. Duarte Barbosa refers the custom of sending boys to *Kalaris* at the age of seven. Boys and girls have undergone the

military training.²² Unniyarcha, Kudumala Kunki and others were examples of women learned fighting techniques.²³ The main weapon of *Chekon* was sword and shield. Most of the Nayars and *Chekons* regularly practiced in Kalari. Most of the Chekon families had possessed a *kalari* to practice *payattu*. Panikkar or Kurup was the teacher who practiced *kalari*.²⁴ The *Naduvazhis* gave all facilities to promote *kalari*. *Keralolpathi* tradition mentions about *kalaris* and *kalari paradevathas*.²⁵

The unique feature of *Ankam* was that they followed fair method to a great extent. Shiek Zainudin says that the people of Malabar are never treacherous in their wars. When fight was unavoidable, they fixed a date for it in advance. Nobody acts against the terms of this mutual agreement.²⁶ Whenever a *Chekon* starts a non technical feat he proclaims it to the opponent and asks him to be cautious. Each soldier believes that the strict principles of war were against his own Dharma.²⁷ But rare instances of treachery and malpractices in the *Ankams* were showed in Ballads. For example in the duel between Aromal Chekavar and Arnigodar, we can see the treachery of Arnigotar.²⁸ *Chekons* were accompanied by a person called *Mattachekon*, to support him in *Angathattu*, by giving weapon and so on. If the *Chekon* need to take rest, the duty of *Mattachekon* is to wage *Ankam* for that time.²⁹ The story of Aromal Chekon shows that Thacholi Chandu was the *Mattachekon* of Othenan.³⁰

The place of duel called as *Ankathattu* or *Ankakarali*, which is constructed under the supervision of *Naduvazhi*. That made out of wood for combat. The *Chekons* assembled in *Ankathattu*, at the specific time declared by the *Naduvazhi*.³¹ The ballad shows that the duel was performed in the centre of the town where the local chieftains and other important personalities and the people of that locality met for deciding local matters.³² In most of the cases the fight between different groups and *Naduvazhis* rather than those found between Kingdoms.³³ When *Ankam* started, the two rival parties come in to the *Ankathattu* with their combatants. They explain the reason of *Ankam* in front of the audience. The *Kozhiankam* was conducted to understand the decision of God. The winning party had got a psychological domination in the *Ankam*. During that time there is a chance to two

parties to retreat from the *Ankam* by settling their issues.³⁴

Nayars and Thiyyar or *Chekon* were the dominating group of population of medieval Kerala. Nayars were regarded as aristocratic community and they enjoyed high status in society. Most of the *Desavazhis* and *Naduvazhis* were from the Nayars and most of the soldiers of the territory were also belongs to the Nayar caste. Thacholi Othenan and Thacholi Chandu belong to the Kaitheri Nayar family. Other caste group engaged as soldiers was from Thiyya community. Aromal Chekavar and Unniyarcha belong to this caste group.³⁵ The *Chekon* were always ready to uphold Dharma of their own *Nadu* for the ruler.³⁶ The society and state were always tried to ensure the availability of suicide squads by giving sufficient support to them.

POLITICAL BACKGROUND OF ANKAM

After the disintegration of Chera Kingdom, there was no centralized political power in Kerala. This condition exploited by the ambitious chieftains who consolidated their authority in their territorial divisions.³⁷ The lack of centralized political power and continuous hostility between kingdoms gave much stress on personal bravery rather than on collective military heroism. The various petty principalities under the governance of the local chieftains always engaged in feuds and disputes. Medieval principalities and chiefly families maintained military groups of their own. The practice of maintaining local militia can be traced back to the period of *Nadu* formation in Kerala during the Perumal rule.³⁸ The fighters function was not to solve the rivalry between political authorities only. But they were invited for settling disputes between ordinary people. This practice of using fighters for judicial purposes resulted in the emergence of a peculiar institution of *Ankam*.³⁹ They had their own ways of solving internal problems and maintaining justice and order.

During the medieval period, the relations between individuals were controlled by *Nattumaryada*. The local assemblies like *Kuttams-Nattukuttam, Tharakuttam* etc. were committed with administration of justice in medieval society.⁴⁰ Most of the disputes in the *Tarawad* were settled by the *Karanavan*. The *Tarakuttam* is considered as the lowest body of judicial administration. In the institutions of crisis,

the members of *Tara, Desam* or *Nadu* met in an assembly and took decisions regarding the issue.⁴¹ The local institutions check the royal deficiency and protecting the rights and privileges of the people of the locality may be upheld. In most of the cases the *Naduvazhi* or *Desavazhi* solved the problems. But some cases remained as unsettled, and later that were settled through *Ankam, Poithu* and *Kudipaka*.⁴² The disputes on inheritance were solved by certain trials in the temples, and only if all those met with failure, direct *Ankam* was conducted for deciding the person. The rivalry between Unnichandror and Unnikonar was at last solved by an *Ankam*, even though the trials based on divine justice employed.⁴³

The institution of *Kalari* is generally traced to the period immediately after the disintegration of the Perumals in the first quarter of the twelfth century A.D.⁴⁴ The scattered nature of land into a number of principalities and minor chieftains promotes the escalation of quarrels. They tried to encourage military training to large groups of people through *Kalaris*. The primitive aspect of military system and warfare compelled the *Naduvazhis* to promote these heroes. There was no shortage of individual heroes, but no efficient military organization during that time. This compelled the *Naduvazhis* to promote *Ankam*.

The evidences show that the *Naduvazhis* gave special power and privileges to *Ankachecons*. On many occasions Thacholi Othenan was appointed by the Rajas to punish their unruly feudatory chieftains. In return for these services they granted some privileges to this *Ankachecons*. One of the songs shows that Thacholi Othenan killed a woman, who did injustice to husband and relatives.⁴⁵ The *Ankachecons* were regarded as the lords of their

community rather than mere fighters. The *Chekons* of medieval Kerala belong to different communities and regarded as companions of honour and bodyguards of the local authorities. Later these bands of soldiers developed into a landed aristocracy supporting the established order with military power.

During the medieval period the state promoted *Ankam* as an arbitration mechanism to solve disputes. The various procedures of *Ankam* show that this mechanism is independent of the Brahmanic tradition. The shift of the importance from the early medieval *Salai* to the medieval *Kalaris* implies a transfer of emphasis from the temple-oriented Brahmin settlements to newly developed agrarian settlements. This newly emerged localization enhanced the role of Nayars and Ezhavas in society.⁴⁶ They played the prominent status in military system also. There was no permanent legal system and no well organized army as a regulatory mechanism. The military system of Kerala of the medieval period was a continuation of the ancient military institutions. The traditional *payattu* or military training given in *Kalaris* was suitable only for *Ankam*.⁴⁷ *Ankam* considered as one of the main source of revenue of state. State accumulated large amount of money through *Ankam* in the name of *Nattukizhi*. The presence of *Nattukizhi* in *Ankams* ensured the sanction of royal power.⁴⁸ During that time the state identified law with physical force. The practice of *Ankam* implies that the whole legal system itself is maintained by physical force. Tradition directed citizens accept law simply because it was a part of their tradition. So *Ankam, Poithu*, and *Kudipaka* were practices of by the society as part of their tradition.

TRIBAL ART AND SOCIAL LIFE: A SPECIAL REFERENCE TO THE GADHIKA OF ADIYAS IN WAYANAD

E. Shika

The study of the human life and culture help us to understand the different faces of culture. Each and every culture has its own importance and the tribes of Kerala also had its own features who are the part and parcel of our culture. They have a unique tribal heritage and cultural identity. Ethnic tribal group keep their identity in their ritual, worship, art, games and ceremonies. They are alienated mentally and emotionally from the mainstream and they have created their own world.¹ Tribes are broadly considered to be isolated, closely knit and having kinship based on common dialect, cultural homogeneity and unifying social structure, each with a well-organized socio-political setup and mode of living and settled in forest even in adverse condition.² Most of them lived in the harmony with nature without causing any imbalance in the ecosystem. The archaic form of life had helped them to their identity in the social, political, economic and religious spheres life.³ The tribes differ from one another in radical traits, language, social

organizations, economy, religion culture etc. The tribes are isolated in ecology, demography, politics and other social behavior from other ethnical groups.⁴

Kerala is one of the smaller states in the Indian union and holds unique position in the tribal map of India. Generally tribes are found in all districts of Kerala and it needs the tribes for its survival, especially for the geographical survival.⁵ Wayanad, the panoramic hill of Malabar in north Kerala, is a home land for various tribal communities. They are Paniyas, Kurichiyas, Kurumbas, Irulars, kattunaikers and kanikkarans and Adiyas. Our tribesmen are the true descendants of aboriginal people in India. The tribal people who depending on forest and live according its ecosystem are belonged to different groups. Most of the tribes are live in hilly areas and showing their own behavior. They have a unique identity which distinguish one tribal class from other and this difference is evident in ritual and cultural matters.

Adiyas are considered as the one of the prominent tribes in Wayanad. The word 'Adiya' means that one who stood six meters away from the higher caste people.⁶ So they were known as Adiyas in the history of Wayanad. They settled in Mananthavady, Anjukkunnu, Kuppathode, Vemam, Payampalli, Thrissilery, Tirunelly and the frontier region of Karnataka.⁷ It is believed that the Adiyas were migrated from Mysore to Wayanad because the Gods worshiped by Adiyas and worship centers were totally related to the areas of Mysore. Another opinion is that Adiyas were peasants who migrated to Wayanad in different periods with landlords and Chettiyar Gaundas from Karnataka. Now they are considered as the slaves of landlords and Adiyas have mentioned about them in their songs. In the early morning Adiyas will go to field for cultivation and returned to huts with their wage. The settlements of Adiyas known as 'kuntu' which existed near by the side of the field.⁸ The man who looked after the administration of each kuntu known as 'kuntukaran' and each kuntu has its tribal chief without 'kuntukaran'.⁹

The tribal huts which occupy in the woods, hills, slopes and lush green valleys are the centers of ethnic arts. The tribal communities are danced, sang and play the musical instruments thus, life was transformed into a group movement. As in the case of ceremonial rituals, the art that exists in different tribes are diverse.¹⁰ Evidence shows that various kind of ritual and cultural practices were existed among the tribes of Wayanad. The dance forms of tribal folks are not mere performing arts form; they are the wholesome articulation of their simple joys, life movements and rituals. They depict the essential winks of their daily life through steps so closely knitted with their surroundings. They are often performed to cast away evil spirits and at times exercise the magical ceremonies. Each tribe has their own ritual art forms, life style, customs and traditions. They have peculiar musical instruments made of bamboo and wood. Variety of tribal arts belonging to various groups which important among them were Vattakkali and Koodiyattam by Paniyas using Thudi and Kuzhal, Kolkali by Kurumas, Nellukuthupattu by Kurichiyar and Gaddhika by Adiyas. There are many rituals among the Adiyas like Arakemeetunekal,

Charaduketal, Kuliya and Gaddhika. The first one is performed that when evil spirit entered into the body of pregnant woman and avoid all problems during the time of delivery and Kuliya is conducted to find solution for the sickness of women.¹¹

Tribal art forms are closely related to tribal life and culture. Gaddhika is a traditional ritual art form of Adiyas in Wayanad which performed by Adiya community when they are suffer from epidemics and diseases. This ritual art form originated from the assumption that diseases have supernatural causes. It also reflected in many aspects of family and social life of the Adiyas. It is a ritual dance to cure many diseases as well as the safe delivery of children. Adiyas believed that they can alienate worse conditions in their life, illness and diseases through the performance of Gaddhika. All the tribal arts forms are important and intrinsic parts of socio-cultural life of the all tribes. The most significant features of the Gaddhika are following. It express socio-cultural identity, excited mental state and refined feelings. It helped the Adiyas to join together and protect from the misfortunes, diseases, sickness and natural calamities. Its aim was the propitiation of God, natural powers and the spirits. It is performed in the house of disease affect person at night. Flowers, coconut, rice, betel leaves and nuts were offered to God in a copper plate in front of Nilavilaku and dance performed in order to invoke the God. The Adiyas believed that due to the wrath and curse of God and Goddess which created many problems and all diseases in their life. So when they performed Gaddhika the God become very happy and they can get cure and recover from all problems. The main characteristic of this dance is neither feminine nor masculine and the style is actually connected to third gender.¹²

The tribes have different type of food, life styles, traditions, rituals, ceremonies, customs, dress patterns and practices compared to other people and they had their own contribution in the field of art and handicraft. The ritual arts of tribes were divided in to three groups based on its aim and situation of the performance. The first one is hunt dance, which contained various types of dances like bow and arrow dance (rugala of garo), sword dance and war dance. The most important among them is the kolkali

of Urali. The second one is social dance which is performed at the time of marriage as a part of their pleasure and enjoyment. Mangalamkali of Mavilas tribe is the best example of this type of dance. The third one is religious dance which means to adopt appeasement policy and render favorable attitude towards God and ancestral spirits. It includes Ghost dance of Koragas, Attam of Paniyas and Kuliya and Gaddhika of Adiyas. There is a strong relation between the social life of Adiyas and Gaddhika.¹³

Tribal chief is also known as kaneladi who is also acted as the chief priest who becomes a noble person and taught about the customs and traditions of the society, then only he will be selected by the people. All old aged people cannot attain that position. A tribal chief could lead the society towards a specific goal and would become an efficient and strong person. When the 'Nattumooppan' of Kunt becomes older who find out his successor and would appoint the next chief. With the permission of 'Nattumooppan', Gaddhika would performed by 'Thamadi' who helped the 'Nattumooppan'. In many circumstances the priest that is 'Nattumooppan' also performed the dance named Gaddhika¹⁴ Gaddhika is performed in order to get protection and relief from the evil powers and the diseases. If any disease affected to any members of Adiyas society they would inform to the Nattumooppan who organized the Gaddhika. Usually, the ceremony begins in front of the Nilavilakku with Siva chants. It helps to solve the problems like epidemics, sickness and delivery matters. This ceremony will be decided at the request of the parents of the patient. Adiyas strongly believed that the reason of cold and fever was due to the wrath of the Goddess named 'Chammundi' and chicken pox and smallpox caused due to the wrath of Goddess known as 'Mari'. So Adiyas chant prayer by remembering their Goddesses. When 'Nattumooppan' finds the reasons of diseases and put forward the cure methods then patient gives the offerings as bronze bangles.

Gaddhika is the combination of different cultural features. It is a consolidated form of various languages like Malayalam, Tamil and Kannada. The most significant feature is that its relation with 'Yellamma' culture as regards to the dress style, faith and performance.¹⁵ The

Mari Goddess of the Adiya tribe may be 'Yellamma' Goddess in Karnataka which obvious that the Adiyas come from that place. Gaddhika song has mentioned about many Goddesses named 'Jogamma' and 'Yellammadevi' who were worshiped by the third gender of Karnataka. According to the legend 'Yellammadevi' was the wife of sage Jamadagni and mother of Parasurama.¹⁶ There is an old belief that Parasurama, the youngest son of Jamadagni, who killed his mother according to the will of his father. The other four children did not obey were subjected to curse of father and they became as third gender. Later the mother was known as Goddess Yellamma or Jogamma who was worshiped by these sons. The male devotees of 'Jogamma' came to be known as 'Jogappans' and female devotees called 'Jogathees'. The beliefs connected with the method of dress style expressed in Gaddhika. Male appeared in the form of female and they expressed their movements and actions like women in the performance of dance. It is regarded that Jogiyachan, who mentioned in Gaddhika songs was the son of sage Jamadagni. Adiyas considered that, the castle of Jogiyachan is situated near Vishnu temple at Thirunelli.¹⁷ The God in the Gaddhika dance are 'Suvani' and 'Sidhappan' worshiped by Adiyas and other Gods 'Malakkari', 'Karichathan' and 'Malappan' from Dravida culture also worshiped by Adiyas. During the Sangam Period the important Gods of Adiyas were 'Mayon' (Vishnu), 'Choyon' (Murugan) 'Karunan', and 'Indra' and it is believed the Siva cult also prevailed among them.¹⁸ Adiyas believed that Siva incarnated as kirath is also known as Malakari and the installation of karichathan like Sivalinga. The center of karichathan is situated in Allathur near Tholpetti in Wayanad and Chettis carried the poojamatters.¹⁹

There are three types of Gaddhika - Cheriya Gaddhika, Pooja Gaddhika, and Nattu Gaddhika. Cheriya Gaddhika is conducted to find out the diseases and the methods by which it can be cured. It is conducted by 'Thamady' who performed witchcraft and treatment with the permission of the 'Nattumooppan' and Adiyas considered that it will set free from the all illness. When any

member of the Adiya community affected by any diseases, the elder man informed tribal chief Kanaladi who was assisted by Thamady to perform Cheriya Gaddhika.²⁰

Pooja Gaddhika is also performed by Thamady who chanting the song and hymns being repeatedly one after another. It is organized when there is positive result got from the Cheriya Gaddhikka and the chief aim was removal of all diseases of Adiyas. During the time of Pooja Gaddhikka everybody can showing the gratefulness towards god for curing the diseases. It should be performed in the summer seasons and it is a prayer programme which performed to get cure from the all sickness through the prayer. Thamady, performed it by praising the Goddesses Shivani, Malakkari, Malapadevan, Pookari, Makadaivam, Siddappan, Valooramma, Chekkamma and Kariyathan. The necessary things for the prayer function are flower, milk, coconut, rice, silk cloth, candle and spear. Minimum twelve members are to be present during this art form. The tribal chief will reveal all secretes through the revelation while performing the programme. He would ordered that to perform it in order to please the God on that manner and accompanied by melodious drum beats. A box was drawn and the patient is asked to sit outside the box and the face of the patient was covered by a cloth. The priest sit on the one side of the box by singing songs by inviting the Goddess to their midst. Along with the song some of the dialogue was heard which will be questions and the priest will answered these questions. The chief priest increased the tone of the song and drum beat and also issued certain unnatural sounds.²¹ This programme will continue until noon as its aim was to delight the Goddesses and brought them to their midst. Finally he started the dance and takes the many steps and while dancing he roars laughs and throws flower over the body of the patient. While performing the programme he began to ask question towards the patient that is whether he can able to see any Goddess or has God appeared in front of him. Then the priest started to dance seriously by asking the same question. He takes a long stick and rotates in the air and also cover himself with red silk cloth. After some time the patient replied that the Goddess has appeared and the chief priest ensure the name of the Goddess. After that tribal headman and relatives

is join together in prayer and request for healing the illness. When the drum beat become very fast, the headman would start to dance and declared that he is very happy with in the programme and the patient will be cured immediately. After that the tribal headman asked the physician to provide medicine for the patient.²²

Nattu Gaddhikka is another function organized on more social importance which is performed that any epidemics took place in the Adiyas settlements and villages. Cheriya Gaddhika and Pooja Gaddhika held on the homes of common people and Nattu Gaddhika is conducted on the home of Jenmi or public place and there is a prayer for Jenmis also. It is conducted in order to check the epidemics which affected the tribal group in different times, prosperity and well being of the village and to eradicate evil spirits like Mali and this ceremony is known as Naduneekal. They sung the song loudly by praising Siva, Malakari, and Kariyathan and remembered the ancestors who were compared with God.²³

Nattu Gaddhika performed to solve the problems of the society and for the progress of the whole community. They actually have a good collection of song to serve this purpose. Their language is mixed and has the influence of all three languages, Malayalam, Tamil and Kannada. Nattu Gaddhika is attended by others and conducted only once in a year. Aim of the Nattu Gaddhika is to protect the village from evil deities and to establish peace and prosperity in the community. It is performed by beating drum with music at the home of tribal chief on Friday or Tuesday and everybody visited Mariyamans temple. They go from one place to another by singing song and praising Bhagavathi with the use of instruments like pipe and hand dram. Each family was ready to contribute coconuts, rice and money. So Adiyas dedicated their life for saving the whole tribal group. All of them believed that all sickness could be removed through Gaddhika. The chief headman and local leaders actively participated in Nattu Gaddhika and in the last day they got to river and after bath started their journey and visited all houses for pray to out the evil powers. While performing Gaddhika, Adiyas praised and glorify each of the Gods by singing songs and used instruments like Thudi and Cheenum made of bamboo helped to set the tunes.²⁴

It is a fact that the temples had great influence in the social and cultural life of a region and the ritual systems and beliefs helped to reconstruct the history also. From this point of view, the temples have a major impact in the cultural life of Adiyas. The famous temples in Wayanad were Mahavishnu temple in Thirunelli and Valliyurkavu Bhagavathi temple. Gaddhika songs mention about the Gods related to these temples which were situated near the important settlements of Adiyas and these temples became a part of the life of Adiyas. There was a legend existed among the people regarding the origin of these temples. Yet there was no clear evidence about the period of construction and who was responsible it.²⁵ The pooja matters carried by Namboothiri Brahmins who dominated the temples and the Adiyas have no rights and privileges here. Jenmi system and peasant slavery existed in the society as a result Adiyas continued as agricultural slaves. So on the basis of the socio-economic background we can see the relationship of Adiyas with Valliyurkavu temple.²⁶

It is noted that the opinion of C.Gopalan Nair who explain about the Dravida tradition of this temple. The Jenmis give 'Thalapattam' and selected the slaves for agriculture land near by the area of Valliyurkavu temple. They encouraged the Adiyas to develop the feelings of bhakti towards Valliyuramma. The slaves take an oath in the name of Goddess that is they will work for one year under Jenmi. If they violated, Bhagavati would become angry and curse them. So they did not violate their oath who was honest people. Gaddhika song of Adiyas expressed their relation with Valliyuramma.

In Kerala PK Kalan the famous Adiya leader conducted and popularized Gaddhika. Adiya community stands in very backward among the tribal groups in Wayanad and they were the most exploited people. It was from

this tribal group PK Kalan emerged as a great and efficient leader. He devoted his life for the Adiyas and acted against the opinion that Adiyas considered as Slaves. PK Kalan played a role in order to brought all tribal arts from interior of thick forest and performed in front of the people of town. He was arranged many stages for the presentation of Gaddhika even outside Kerala. He worked for the improvement of Adiyas and transforms Gaddhika from the status of ceremonial rite. He acted against the meaningless customs of the society and worked hard to eradicate all unnecessary practice of the tribe. He brought this art form among the midst of the people and did not want to constrain it in the walls of tribal groups.²⁷

All ritual art forms are the backbone of the life style of all tribal people and inseparable part of their life. The introduction of divine ideas through the dazzling art form is the main feature of the traditional rituals of all tribes. Many changes were took place in the ritual art named Gaddhika which reflected the social and cultural life of Adiyas. It is a combination of vibrant rhythms of Thudi, vehement footsteps and ritualistic art form laden with esoteric meanings that symbolically manifests the intense moments of the unending sufferings and survival of the Adiyas in their material life.²⁸ In short, Gaddhika organized to get deliverance from the turmoils of illness and evil powers has a social use beyond its proposed mission, that is, the socio-cultural relations can be seen with in the ritualistic dance called Gaddhika which reflects the ordinary life of Adiyas.²⁹ At present, the government passed many laws and taken sincere efforts for the improvement of Adiyas and also to protect their ritual arts. The tribal socio-cultural life is intimately associated with forest ecology which is an inseparable part of the tribal life and they are regarded as the children of the forest.³⁰

A HISTORICAL STUDY OF THE SOCIAL TRANSFORMATION OF MOTHER GODDESS YELLAMMA TRADITION AND THE EMERGENT IDENTITIES IN SOUTH INDIA

K.Shyamala

The study of the Indian Mother Goddess tradition is difficult to understand. In their earliest forms, they are aniconic and unco-ordinated, and literary evidence of the more primitive Dravidian cults is, of course, wanting. When they have been taken over by the Brahmans they have been so worked over and metamorphosed that many of their original features are now unintelligible. When these deities influence fertility the cultus is to a large extent magical, and as magic necessarily involves secrecy, enquirers of different faith are unable to investigate it. In the case of Saktism, the latest development, these difficulties are increased, because the worship of the female productive energies offends the nobler and more sober instincts of Hindus, and the rites are necessarily conducted with precautions against the intrusion of outsiders in the mysteries. When we compare the Aryan and Dravidian pantheons in India an important difference at once attracts attention.

In Vedic belief and ritual, goddesses occupy a very subordinate position, and they play hardly any part as rulers of the world, and only two-Ushas, the spirit of the dawn, and Sarasvati, originally the impersonation of a sacred river- acquired special importance. In the

same way, in Babylonia, except Ishtar, the goddesses are not very imposing figures, their characteristics are not sharply defined or differentiated, and their position conforms to the low conceptions of women in that civilization. The oriental tendency towards anthropomorphism rapidly begins to affect it, and the representation of the goddess develops into the iconic stage. The southern Mother, Yellamma, is depicted rising from the earth as in the Buddhist sculptures the Earth Goddess emerges from the earth to support the horse on which Gautama rides when he leaves his wife and home and makes the Great Renunciation, and in Greek art, the Anadosis or up-rising of the Earth Goddess, Pandora, is a favorite subject. In the Indian context, the mother goddesses are either accepted as a part of sakta tradition and tantric tradition in Hindu pantheon or as folk deities at village level.

This paper makes an insight into the transformation of *Yellamma*, a pre-Aryan Dravidian deity and the emergent identities in south india.

The social milieu of south indian village typifies complex relationship between the belief system and society. Each village has its own

tutelary deity i.e gramadevata usually venerated by a jatara or annual ceremony to mark its auspicious time. The mother goddess usually reigns the village. The village deities are quintessential to the village and are found common at regional level. While studying Indian Popular religion, it is difficult to ascertain the personality of these deities known. This is due to the fact that there is a lack of textual description of these deities and a standard iconography. So also these divinities have not occupied an exalted position in the Hindu pantheon and also they have not formed the subject of detailed studies. *Lajja Gauri* is one such divinity who is depicted nude with legs stretched apart in such a way to show the pudenda prominently. The head is never depicted and we see only the lotus in its place. The stone images and even terracotta figures of these goddesses are reported from different parts of the country. They begin to occur between 2nd century B.C and 6-5th century A.D. These representations are common in Karnataka, Maharashtra and in western parts of Andhra Pradesh. Many scholars have tried to explain the significance of these deities but they were not satisfactory.

Dr. R. C. Dhere has convincingly explained the true significance of the form of the goddess with a masterly analysis of literary evidences corroborated by archaeological evidences. evidence.¹ But far more interesting is his examination of traditions and folklore which alone can lead us to comprehend the proper significance of such folk divinities. Taking a cue from his studies I would like to present the fact that the folklore of a region has a considerable validity as the religion of the aboriginal races of both hunters and pastoralists is the basis for the study of the significance of these deities. Being written in Marathi, this work could not reach much of the academic circles. Dhere points out that the worship of the mother goddess was universal in the history of mankind and she was represented by both iconic and aniconic forms. Regarding the nude torso at Mahakuta near Badami, the *Sakhambhari Mahatmya*, a section of *Skanda Purana*, describes the sanctity of the place due to the presence of crores of Sivalingas at the place and among these one has been referred to as *Lajjagouriswara*. According to local folklore, this nude torso represented as *Lajja Gauri* is worshipped by barren women for procuring an offspring. This practice is followed

in the Jogulamba temple of Alampur. Stella Kramrisch has identified them as the representations of Vedic Aditi whereas Dr. H. D. Sankalia called her a 'shameless woman' and compared her with Baubo in Egypt.² He suggested that the worship of the goddess came to India during the early centuries of the Christian era through our contact with the Roman world.³

Dhere states that *Lanji* or *Lanjika* in old Kannada means an 'adulteress' or 'harlot'. According to a legend, once Parvati was once in an amorous position with Siva when a devotee came there. Parvati felt ashamed and ran away from that place. Hence she was called *Lajjagouri*. At Alampur, the goddess is represented as the nude torso and the head is represented with a wheel and not as a lotus. This image is worshipped by women for an offspring. A very interesting story regarding the goddess is narrated in the local *māhātmya* which is supposed to be a part of *Skanda Purāna*. It is the story of *Renukā*, the wife of sage *Jamadagni*. She would daily fetch water for her husband's morning rituals in an unbaked day jar which was prepared daily afresh by her. Though unbaked, it did not break because of her chastity. She once saw a king engaged in amorous pranks with his consorts in the river Tungabhadra and she became engrossed in the sport in her imagination. As a result of this lapse on her part the clay jar broke that day and her husband- the sage- could know this all because of his supreme powers. He then ordered that she should be beheaded at once, but the first three sons refused to do so and only *Parasurama* agreed. The sage was pleased with him and asked him for a boon, upon which the sage said that the head of Renuka will be worshipped as *Yellamma* and the torso as Bhudevi. This Renuka is identified as Jogulamba. The most important centers associated with Renuka are *Mahurjari* in Maharashtra, where the goddess is worshipped as *Mahuramma*.

Renukā is also known as Prithvi and therefore Prithvipura, the grant village in the Mahur jhari plates of Vakataka Prithuvisena II has to be identified with *Mahurjhari* only.⁴ In the late medieval literature, *Mahur* is also referred to as the sacred place of Mātangi, a goddess that is worshipped by the Gopals, a *Mahar* community of Maharashtra. Sometimes she is- also said to

have been the goddess of the Māngs, who along with Mahars, form the Harijans of Maharashtra. It is interesting to note in this connection that at *Mahur, Tuljapur, Saundatti*, etc., which are associated with the goddess, the pujaris in charge of worship are *Mahars* and *Māngs*. The *Madigas* of Andhra Pradesh, the folk singers referred to above, are also called the *Matangas* or *Māngs*. *Matangi* is also considered as Mother goddess. There is a tradition that Sage *Matanga* was practicing strict penance for a very long time. Due to his penance, a goddess appeared before him and later she became known as *Matangi*. Prayers to *Matangi* are popular in tantric works. According to R.C.Dhare, *Matangi* represents the mother earth signifying creative energy.⁵ The goddess *Māntangi* of the *Mantangas* is, according to a folk song, the same as *Renuka*. It is the same *Parasurama* story but slightly different, according to which the head of *Renuka*, when chopped off, was not found. *Parasurama*, therefore, met a *mangin*, a woman of Māng community, whose head he cut and brought back. His father, *Jamadagni*, could know this and did not allow *Parasurama* to join it to the body. The sage, by his supernatural powers, recovered the head and brought her to life. But then *Parashurama* was repenting for having killed a mang woman. He, therefore, established her worship at *Mahur* and ordained that she will be worshipped first by the devotees and then worship *Renuka*. In the folk songs, the torso is described as that of *Matangi* and the head as *Yellamma*. This therefore clearly establishes the identity of *Matangi*, a folk goddess of Maharashtra, with *Renuka*. *Matangiputta*, a sect of the devotees of *Matangi*, still survives in Maharashtra as is evident from the late medieval literature. It is to mention that the sixth avatara of Lord Vishnu is that of *Parasurama*, the hero whose characteristic feature was the axe (*parasu*) with which he is reported which he is reported to have slain innumerable Kshatriya warriors in 21 combats. In the *Markandeya Purana*, the goddess herself says: "I shall support the whole world with the life-sustaining vegetables that shall grow out of my own body. I shall gain fame on the earth as *Sakambhari*-herb bearing." The same Purana tells us that the goddess nourished the drought-affected people with vegetation produced from her body. This recalls to the mind the representation of the Harappan sealing from Mohenjodaro showing a female in an upside-

down posture with legs apart and a plant issuing from her womb. The excavator identified the goddess as Mother Earth but she can better be taken as the proto-type of *Sakambhari*. *The spread of the cult of Yellamma is linked with Aryan Colonisation of South India*. *Sukthankar's theory of the Bruguisation of the Original Bharata and the light it throws on the Dravidian Problem* is worth discussing in the present context. According to Sukthankar, Brugus or Bhargavas formed one of the mighty races in South India. They are represented as Bhargavas in the Mahabharata and they are irascible sages, domineering, arrogant, unbending and revengeful, owing to their occult powers, they were described as Gods walking on the earth. Bhrugu Maharshi, the eponymous ancestor of the Bhargavas, was one of the Prajapathis, and is represented as having sprung from Brahma's heart. Unlike the Artris who were spreading the Aryan cult, the Bhrugus were considered as Reformist Aryans. The Activities of Atri towards spreading the Aryan cult is evident from vedic literature. The Asuras opposed the imperialistic tendency of conquest of the Aryans and found Bhrugus as their friends, who possessed Reformist tendencies and who were always ready to side with them. The Bhrugus also wanted to maintain their supremacy amongst the Aryans on the one hand and at the same time they wanted to mix with the indigenous races of India, either by means of fusion of races or by imbibing their customs and manners. In an attempt to over shadow the deeds of Bhrugu, his name was not included in the list of the seven sages and Manu's name was foisted in the place of Original Bhrugu in the case of Bhrugu samhita. Sukthankar tried to give a direct clue for the rejuvenation of Dravidian Civilisation in ancient India. He states that Parasurama is still worshipped in the Elnad or the province of the Saptadravida Konkans of the Puranas for example: the western parts of South India by the Heggades, Nambudris, Konkansasthas etc. *Renuka* or the Dravidian Deity *Yellamma* is still worshipped by thousands of people in the province. The important event of the legend as it occurs in the Mahabharata (111.116, XII.49.27 60, cf. also XIII.153) and in the Puranas: Harivamsa (1.33), Vayu (Adhy.94), Matsya (Adhya 43), Vishnu (IV.11.9 20), Bhagavata (IX.15, 16), Markandeya (Adhya.17), Brahmanda (111.26-47,) and Vishnudharmottara (I.Adhy.25-7 ff): is

about the Renuka and Jamadagni. The conflict of Parasurama with the Haihaya king Kartyavirarjuna is evident from the Puranic sources. The New Catalogus Catalogorum of Professor Raghavan enumerates almost 100 manuscripts on the worship of Kartavilya which are found mostly in the royal libraries of the Hindu Rajas. The states in which the manuscripts are still available are: Udaipur, Jodhpur, Kota, Bikaner, Bharatpur, and Alwar of Rajasthan, and further in Mysore. Of the book *Kartavilyavidhiratna* we have the knowledge that it was written by one Sivananda Goswami, a Brahmin, for the use of Anup Singh (1674-1709), the then Raja of Bikaner.⁶

Sage Jamadagni's marriage with Renuka, the daughter of king Renu also give clue in regard to the origin of the Kshatriyas, who in the opinion of A.P. Karmarkar, were the direct recruits from the mighty Dravidian races. In the Maheswara Khanda of Skanda purana, Sukra and Parasurama were mentioned as the worshippers of Mahadeva, the original god of the Minas.

Enthoven states that *Yellamma* is the universal goddess and is a pre-Aryan Dravidian goddess. In Maharashtra, Goddess *Yellamma* and *Khandoba* are worshipped for begetting children. The child born is dedicated to the deity. When the boy comes of age, he will be allowed to get married. But a girl named as *Jogatin* is dedicated to the deity and is not allowed to get married. A male child offered to the goddess *Yellamma* or to *Mayaka* is called *Jogati*, and a female, *jogatin*.⁷

Yellamma temples in Kurnool district are endowed with inscriptions dating between the 12th and 15th centuries. *Yellamma* is also considered as the protector of places within boundaries. In Kurnool district, in the village of *Karimaddala*, an inscription is found on a stone near the *Yellamma* pagoda.⁸ It records that Nandyala Timmarajayya gave one turn and nine mutts of land to the Goddess in S. 1490 in the reign of Sadasivaraya. In the local *Yellamma* temple, a grant in S. 1485 (A.D. 1563) was given to the temple. At *Ganapuram*, lying 11 miles northeast of Nandikotkur, at the shrine of the village goddess *Yellamma* is an inscription dated 9.9. 1207 (A.D. 1285), of which only the date can be made out.⁹ There is a ruined temple here,

deserted. At Manchala, -20 miles north of Adoni, there is an old temple of Mantrala *Yellamma* having sthalapuranas both in Sanskrit and Kannada.¹⁰

In many places, the goddess is at once maid and mother, in the spring, she renews her virginity, only to lose it again when she performs a ritual marriage at the sowing or harvest festival. In India, the personification of mother and virgin is based on the periodical renewal and loss of virginity after a ritual marriage. At any rate, the cult of the Virgins side by side with that of the Mothers is not uncommon. In southern India, seven Virgins are worshipped. It is believed that the Mother gets exhausted by her labors and she needs periodical rest to renew her strengths. Hence two traditions have emerged to enhance her strengths viz. sacred marriage with a male deity and blood sacrifice.¹¹

In India, many of the mother goddesses have been absorbed into Hindu pantheon by considering them as the consorts of the prevailing male deity and this is done through a ritualistic marriage. The Brahmanical craze for uniformity usually leads them to class the divine pair as a wife and her consort. Among the Dravidians, are less exposed to Brahman influence, we have many cases of the sacred marriage. The Malayali tribe marry their god Sevarayan to the goddess who is the presiding deity of the Kaveri river during the annual festival. In many parts of south India, Poturazu is at once husband, brother. When these aboriginal cults are taken over by the Brahmans, the rite of the sacred marriage becomes rapidly developed. Mr. F. J. Richards, who has made a special study of Dravidian religious beliefs, states that most cases of the sacred marriage in Southern India are due to Brahman influence denoting the Aryan colonization of South India¹².

Goddess *Yellamma* is also known as *Maata Mahuramma*, *Akkili Devi*, *Renuka Devi*, *Eka Veera* etc. In the historical work of *Kreedabhiramam*, there are references to *Renuka*, *Mahuramma* and *Eka Veera*.¹³ The performing caste of Baidla, sing the stories of *Yellamma* and her son *Parasurama* by playing the musical instrument known as *Jamidika*. Another major cultural center of *Yellamma* is located at Mahur, a village in the border region of Maharashtra. Here *Yellamma* is a nude Goddess. This suggests that the regional version

of the myth carries the Jain ideological universe within it. Although a tale or plot might be almost identical from one version to the next, different texts emphasize different scenes and characters. It is perhaps due to the fact that Jaina ideology has used the epic tradition and the Sanskrit religion to promulgate its own views. Hence the popular characters such as *Renuka* were made to fit the Jaina religious fold.

In the Chandra gutti village of the district of Shimoga in Karnataka state, the ritual of *Yellamma* is performed. The women devotees take bath in the River Varada near the temple of *Yellamma* and reach the temple by walking a distance of 2 km from the river with bare bodies. This act of the devotees makes the goddess shower blessings on them. It is believed that those who condemn this barbarous tradition are punished by the deity. But this practice makes us understand that the women belonging to marginal communities are exploited for the sexual pleasures of other castes and it was made a tradition to worship the deity by the women devotees in nude.

Textual Tradition and Local Mythology in Constructing Folk Religion

Goddess *yellamma* shared the name or epithet with the Sanskrit deity *renuka*. There are various versions of the story of *yellamma* whose plot is identical with the story of *renuka*.

The myth of Renuka in Mahabharata

Renuka is famous as the wife of *Jamadagni* and the mother of *Parasurama*. The earliest references to *Renuka* occur in *Mahabharata* at two places. One is in *Anusasanaparva*, where the origin of sandals and umbrella and another is in *Vanaparva* where *Renuka's* death and her rejuvenation is explained. According to the second episode, *Jamadagni* had five sons named *Rumanvan*, *Susena*, *Vasu*, *Visvasu*, and *Parasurama*. When all these went outside, *Renuka* after getting the permission of *Jamadagni* went to bath in a river. While returning, she saw *Citraratha*, the king of *Martikavarta* sporting in the water along with his wife. This made her go into a mood for sport. She became pale and ashamed after seeing this. In this condition, she reached the hermitage. *Jamadagni* after noticing her and her situation knew what happened to her and came to the conclusion that she had done a sin. As the sons returned to the

hermitage, he ordered the sons one by one to kill *Renuka* by beheading her. The first four disobeyed. When *Parasurama* was ordered, he obeyed it and beheaded his mother. *Jamadagni* was satisfied. Pleased with *Parasurama*, *Jamadagni* asked him to demand boons he desired. *Parasurama* asked six boons. 1) Mother should come back to life, 2) his brothers should be again made into human beings, 3) all should forget this incident happened, 4) he should be free from the sin of matricide, 5) no one should defeat him and 6) a long life. All this was granted by *Jamadagni*.

The same incident is narrated in various *Puranas* too like in *Brahmandapurana*, *Visnupurana*, *Skandapurana*, etc but with some slight variations. *Mariamman* is a goddess worshipped primarily in northern Tamilnadu. She is popular in Tamilnadu and Karnataka. The best known story about *Mariamman* is the tale of '*Renuka*', in which *Parasurama* kills his mother *Renuka*. The exact story is linked to the goddess *Yellamma*, to whom a large temple was dedicated to *Saundatti* and *Chandragutti* in Karnataka.

In the corpus of Hindu myths, a man splits a high caste woman against her will, dividing her into a head and a body, each endowed with life, which may then join with the supplementary parts of her "shadow" "double" to form two other women (or goddesses), each consisting of two vividly contrasting halves. This story was retold in many versions in India, has a great deal to teach us about the dichotomising of women and of goddesses. It juggles the different aspects of a human woman in two levels: on the literal level, there is an interaction between a goddess and a woman, on the symbolic level, an implicit parallelism and contrast between the structure of a goddess and the structure of a woman. The myth tells us first about the split between aspects of a goddess and then about the correlated split between classes of human society and finally about the split between aspects of a human woman. The split or union of a woman, dark and light, low and high caste, are recruited in a totally integrated form each with half of the other. This recruiting motif appears to mean that there was an assimilation of non-Aryans by the various sections of the Aryan society. In a passage of *Rigveda*, *Vasistha* who replaced *Visvamitra*, as the chief priest of *Sudas* and later came to be

treated as the founder of a major *Brahmana gotra*, is said to have been born of the seed of two Vedic gods, *Mitra* and *Varuna*; and his mother is not mentioned. But in the one and the same account, he is said to have been "born of the mind of *Urvashi*", born also of a jar which received the combined semen of two gods and discovered 'clad in the lightning' in a *Pushkara*. Modern racists may painlessly swallow the garbled version of the birth of the sages, which was evidently invented to gloss over the non-Aryan origin.

Similarly, the process of assimilation of the pre-Aryan or Non-Aryan commoners into the Aryan fold was the basis for the myth of *Yellamma*. The Aryans laid stress on purity of blood and feared that their assimilation with dark-skinned local inhabitants would lead to the loss of their local identity, though the blood has already flowed in their veins. The myth of *Yellamma* in which a Brahmin woman and a sudra or dalit woman are rejuvenated with their heads exchanged, signifies the assimilation which was welcomed by the lower castes thus legitimising their social position in the hierarchical society.

From the story mentioned above and myth narrated in many Puranas, it is clear that *Renuka* was just considered as a woman who became entirely submissive to her husband and as the mother of *Parasurama*. But now *Renuka* is worshipped as goddesses in many places especially in and around the part of Maharashtra, Andhra, Karnataka, and Tamilnadu. The reason behind this is clearly mentioned in the myth. The epic of *Yellamma* is sung by *Asadi*, a subsect of *Madiga* caste in the *Rayalaseema* region and some parts of Northern and eastern Karnataka and by *Bavaneelu* in Telangana region. The story of *Yellamma* Thalli is sung in different contexts such as during agricultural operations and also during different social and religious ceremonies. In the agricultural fields, village women transcend the boundaries of caste, family, and social and mental restrictions. They narrate the pathetic situation in which *Yellamma* was suspected and slain by her son. This mental text is transmitted by adding color in the form of female aspirations. The female consciousness inherent in the genre and the participation of women in performance is very important in understanding the overall cultural setup. The

high caste head of *Renuka* is attached to the rim of a basket or a pot and worshipped in Rural Maharashtra, Karnataka and Andhra Pradesh. The Pot and the Basket, like the low caste woman, accepts everything that is placed in it. It represents the Earth that accepts any seed. Such belief inspired the custom of making prostitutes out of the priestesses of *Renuka-Yellamma*. These priestesses belonging to low caste communities, are forbidden to marry or settle down, and are trained from childhood to accept the carnal attention of any man and survive on offerings given to the Goddess.

Mariamman is a Goddess worshipped in Tamilnadu and Karnataka. The best known story about '*Mariamman*' is the tale of *Renuka* in which *Parasurama* kills his mother *Renuka*. *Mariamman* is worshipped in Northern Tamilnadu whose story is identical to *Renuka*'s. *Mariamman* is worshipped in different parts of south India as *Yellamma*, *Ekaveera*, *Yamai*, etc. The manifestation of the mother goddess in various forms indicates that *Renuka* is more popular in ancient civilizations as the aboriginal races like Dalits still worship the goddess. *Yellamma* or *Renuka* is a pre-Aryan mother goddess. The story of *Renuka-Yellamma* can be found in Sanskrit texts, in the *Mahabharata*, the *Vishnudhramottara Purana*, the *Bhagavatpurana* and in *Renuka mahatmya*. In the first three texts, the tale of *Renuka* is a part of a larger story whose main character is *Parashurama* rather than *Renuka*. The *Parasurama* legends fall outside the scope of the study. In the *Renukamahatmya*, that constitutes a part of *Skanda Purana*, *Renuka* is the main character and she is identified with *Parvati*.

R.C.Dhare states that *Renuka* or *Yellamma* is one of the *Akkagarlu* popularly known as *Saptamatrikas*, worshipped as a village goddess in South India. She is the mother of Earth and symbolized as an ant-hill. A thorny shrub (*Naga phani*) and Sceptre(*Rajadanda*) are worshipped in the *Yellamma* cult as her guards.¹⁴ The ant-hill is composed of small and tiny particles of earth and so she is named as *Renuka*. In the process of Aryan colonization and Sanskritisation in South India, *Yellamma*, the goddess of Dravidian Pantheon is absorbed into Hindu Pantheon by linking her with the story of *Jamadagni*, and *Parasurama*. In the book "*Leela Charitra*" the biography of *Chakradhar Swami*, the guru of

the *Mahanubhava* sect, written in the late 13th century by his follower *Mhaimbhat*, it is mentioned that Dravidians worshipped *Renuka* with Meat and liquor.¹⁵ The form of worshipping *Yellamma*, the location of the temples, the Marginal castes association of *Yellamma*-Divine prostitution, etc. show that *Yellamma* must have been a pre-Aryan Goddess. She is worshipped in various forms such as *Yallamma*, *Ekaveera*, *Jogulamba*, *Yamai*, *Maremma*, *Guttamma* and *Vyaghreswari*. The main cult centers of *Yellamma* are *Saundatti* in Karnataka built in 13th century A.D, *Jogulamaba* temple of *Mahboob Nagar* district in Telangana, *Yamai* in *Satara* district of Maharashtra, *Vyaghreswari* otherwise known as *Parasurama maatha* near *Hospet*, in *Tungabhadra* region of Karnataka, and *Guttamma* i.e local form of *Yellamma* in *Chandra Gutti* in *Shimoga* district of Karnataka.¹⁶ This shows that this is a cultural zone where the cult is highly prevalent. Many nude female stone sculptures or images are found in different places in central and southern India. All these images are headless. Thus, the headlessness of these figurines at *Siddhanikote*, *Ter* and *Mahurjari* in Maharashtra, *Alampuram* and *Nagarjuna Konda* in Andhra Pradesh and *Bhita* in Uttar Pradesh are significant to contextualize the myth of *Renuka Yellamma* who was beheaded by her son *Parasurama* at the behest of his father *Jamadagni*.¹⁷ The antiquity of the headless goddess goes back to the pre-Aryan and pre-historic period. As *Whitehead* states, "the story describes the fusion of the Aryan and Dravidian cults in the days when Aryans first found their way into South India".¹⁸

Jogulamba is another name for Goddess *Renuka* worshipped by *Madiga* community in Andhra Pradesh. The system of *Devadasi* i.e Divine prostitution was institutionalized during Western Chalukyas in 10-11th centuries A.D. '*Shukasapthati*', the telugu work written during the Vijayanagara period describes the *Jogaralu*, the female worshipper of *Jogulamba*, belonging to *Madiga* caste used to beg alms in the name of Goddess *Jogulamba*.¹⁹

The origin and growth of the tantric cult are still obscure. However, this cult gained popularity during the 10th century A.D. *Matsyendranatha*, the author of *Kalagnananirnaya*, the earliest treatise of Tantric school, is said to be its founder.²⁰ Though he was placed in the 10th

century, scholars have opined that he lived a century earlier. This is due to the fact that the famous *Bherghat* temple of 64 *yoginis* with sculptures has been assigned to the early 10th century. One of the sculptures of a deity bears the name *Gahani* who according to the Marathi work *Jnaneswari*, is a grand disciple of *Matsyendranatha*. *Somadeva's Yasatilaka* composed in 959 A.D supports the fact that the tantric cult prior to the 10th century.²¹ This cult appears to have spread in many parts of Karnataka, Maharashtra and Andhra Pradesh. This is largely attested by Epigraphical evidences and temple sculptures. The *Ankalgi* inscription dated 1179 A.D refers to the village *Ankulage* as the abode of *Mahayogeswari Ugrachamunde*, the presiding deity of the 64 *Yogapithas*. In the *Halagondi* inscription dated A.D 1093, *Mahasamanta Chamundarasa*, a subordinate of the Western Chalukyan King *VikramadityaVI*, is referred to as "one who had obtained the gracious boon of the 64 *Yoginis*". The expression "64 *yogapithas* " is frequently mentioned in the *prasasti* of the great mercantile corporation *Ayyavale 500* figuring in the inscriptions of Karnataka. Numerous inscriptions are found in the cultural zone of Telangana, Andhra Pradesh, Karnataka and Maharashtra referring to the tantric tradition and their growth and popularity of the Tantric cult and its worship. *Ambe Jogai* in the *Usmanabad* district of Telangana was a stronghold of the tantric school in the period 11th-13th century A.D. This is revealed from a scrutiny of the antiquities of the locality including inscriptions of which contains references to the shrine dedicated to the deity *Yogeswari*. *Ankalgi* and *Ambe Jogi* as important tantric cult centers are not shown in the list of *Sakthi pithas*. As mentioned in *Kalagnananirnaya*, *Karavira* or *Kolhapur*, reigned by *Kolhapuramma*, is another yoga pitha known as an ancient and important seat of Tantric devotion.

In the list of 18 *Sakthi pithas*, ascribed to the authorship of *Sankaracharya*, contains a reference to the deity *Yugala* of *Alampur*. *Yugala* is identified with *Jogulamba* of local fame, who is said to be the consort of the god *Bala Brahmeswara*. *Alampur* also does not occur in the enumeration of *Sakthi Pithas* by any other source. *Alampur* is known as one of the *Yogapithas* that has a long history impacting on the culture of the region. The *Nava brahma*

temple has been a riddle and the location of the temple itself has a mystique antiquity. The names of the *Nava Brahmas* are not mentioned in any of the puranas. As stated by Sanjeev Rao, the Nava Brahmas viz. *Bala Brahma*, *Kumara Brahma*, *Arka Brahma*, *Veera Brahma*, *Garuda Brahma*, *Viswa Brahma*, *Swarga Brahma*, *Taraka Brahma*, and *Padma Brahma* have no parallels any where in India. These *Nava Brahmas* are not found in the Puranas. The *Rasa Linga* at *Balabrahmeswara* temple, the *Sakti peetha* of *Jogulamba*, the presiding deity of the place. The earlier part of the history could be gathered from the *Sthala purana* as contained in *Skanda purana* and the references made to the place in the literary work-Panditharadhya Charitra of *Palkuriki Somanatha* and in *Rasatantra* works such as *Rasa Ratnakaram* and *Ananda Kandam*.

The *Rasatantra* texts state that *Rasa Vidya* has its origin in Saiva cult. Mercury is considered to be the very semen of Shiva. This thought is reiterated in *Rasa Shastra* literature as a part of tantrica Philosophy and in literary works like *Kumara Sambhava*. The worship of Phallu, Linga and Yoni are tantric in character. According to this literature, sulphur is considered to be the menstrual blood of Parvathi. Some of the sculptures such as Lingodhbhava Murthy and Nagnakabandha are meant for tantric cult practices. According to Tantric tradition, the Rasa undergoes 18 Samskaras and during this period, continuous chanting of *Aghoramantra* is considered to bestow the requisite power to mercury. From such mercury, Rasalinga is made and placed on a pedestal in a Rasa Mandapa facing east in the eastern part of *Rasashala*. *Rasasadhakas* conceive this *Rasalingam* as Shiva having 18 arms, white complexioned, five faced, three-eyed, mounted on ghost and blue-throated.²² For the establishment of a *rasa shala*, the place must be proper with a beautiful garden with medicinal plants where *Eswara* and *Gouri* are worshipped and with laboratories having a sufficient number of doors and windows. The metallurgical operations should be carried on in seclusion. The Temple complex of *Jogulamba* is to be visualized in such ambiance. In the place surrounded by the waters of river Tungabhadra and the fertile soils with rich vegetation, the *Rasa Linga* was established on the eastern part facing east and the deity was known as *Bala Brahmeswara*. The word '*Bala*' is synonymous with '*Kumari*'; the other name for *Parvathi*. The

remaining eight temples may be the places for eight other metallurgical operations in *rasa shala*. It is said that *Nagnakabandha* or Sakhambari was used for *yonipuja* and *Jogulamba* was *Yogeswari* mentioned in scriptures and was subsequently called *Jogeswari* and *Jogulamba*.

In Karnataka and the bordering states of Andhra Pradesh and Telangana, two models of femininity exist among the out caste women in the names of *Mathamma* and *Jogini*. *Mathamma* and *Jogini* are the ritual identities where women were deified and are dedicated to the presiding male deity. The *Mathamma* is the priestess and is worshipped as the clan goddess of the '*Madigas*' she is fused with the 'spouse goddess' *Renuka* leading to the corrosion of her terrifying nature in other traditions. Hence it is inferred that *Jogulamaba* or *Yogulamba* is the pre-Aryan deity who is venerated by the outcastes and who has been transformed into *Yakshini* in the subsequent period.

Ziegenbalg's '*Genealogy of the South Indian deities*' contains interesting information about six goddesses, of whom an embodiment of *Śakti* similar to *Yellamma* is significant. Here the goddess illustrates the religious assimilation and social relationships of the people, who enact her legend. The greater traditions with vegetarian deities could not fully assimilate the ancient goddess *Yellamma* but, at the same time, they could not completely ignore her also.²³ *Yellamma* is portrayed as being closer to the helpful Pariahs than to the ruthless ritualists of the great traditions. Even the accusation of losing conjugal fidelity does not hinder the Pariahs from giving her protection because she has come to them for refuge. They rather chose to die with her than to deliver her to the executioner.²⁴ The legend of *Yellamma* illustrates the relationship between conjugal fidelity, ritualism, hospitality, and worship. While the legend of *Renuka Yellamma* links her with Vaishnavism, Ziegenbalg's Genealogy associates her with Saivism, adorned with *Damarukam*, *Shula*, and *Paasa* and with sacrificial rituals. Whenever the inhabitants desired a special favor from her, they celebrate a special festival in her honor involving the votive rite of hook swinging. Thus, she combines various elements of Saivism, Vaishnavism and popular religions of the villagers.

GROWTH AND DEVELOPMENT OF MUNICIPAL ADMINISTRATION IN MADRAS PRESIDENCY

Dr. G. Somasekhara

The first statutory enactment relating to municipal administration in India was the Charter Act of 1793, which established Municipal Corporations in the three Presidency towns of Madras, Bombay and Calcutta. This Act empowered the Governor-General to appoint Justices of peace in the Presidency towns. They were empowered to provide for scavenging, watching and repairing of the streets and to levy a rate on houses and land to defray these expenses in the Presidency towns.¹ For urban areas, outside the Presidency towns, no legislation was attempted till the forties of the last century. The year 1850 is a land mark in the evolution of municipalities in India. It was in that year that first attempts were made by the Central Government to grant municipal status to the towns. The Act of 1850, determined the composition, powers and functions of Municipal Councils. It was consisted of the Magistrate and such number of commissioners as was necessary. It would be autonomous and the

Government would exercise limited control over it. It permitted the levy of taxes, but it was left to the people themselves to decide.² In Madras Presidency, there existed at this time a number of voluntary associations in some of the more important towns such as Vizagapatam (Visakhapatnam), Bhimunipatnam and Guntur which raised subscriptions for improvements in conservancy and sanitation. The Government gave them a grant-in-aid equal to the sum raised by subscriptions. The Government was convinced that as long as the introduction of the Act of 1850 depended upon the general consent of the people, all attempts for its implementation would meet with failure.

The continued existence of official control at all stages and in all matters was a significant characteristic of this period. The Municipal Council consisted of the Magistrate and such number of Commissioners (now called Councilors) as was appointed by the Government. The commissioners, however, had

full power to make necessary contracts. Out of the amount realized from taxes necessary works could be undertaken and part of the amount be utilized to pay the officers and servants. The Governor or Governor-in-council was empowered to suspend the operation of the Act and the Government also had the power of enquiry into the behavior of the Commissioners.

The immediate stimulus to the development of local institutions in the 1860s arose out of the post-mutiny financial embarrassment of the Indian Government.³ By the direction issued by Lord Lawrance's Government in August 1864 all towns had to bear the new burden of raising the cost of town police reserves by themselves, and were permitted to run municipal institutions. This redirection was more effective in stimulating municipal activities than the earlier actions of the Government of India.

This stage of development reflected characteristics peculiar to the period. In the first place, statutory status was granted to the municipalities. Four years after passing the Resolution, legislation was enacted for almost every major province and in Madras, the Act of 1865 was the result of such legislation. Under the Act of 1865 the Municipal Council consisted of the Magistrate, the (public works department) officer and five other inhabitants of the town appointed by the Governor-in-council. Although the term of the council was one year, the Commissioners could be removed from office by the Governor-in-council.

The District Magistrate was the ex-officio President of the Council, and he was further empowered to nominate, from among the Commissioners, a vice-president. The power of appointing the staff needed for the execution of municipal functions was also vested in the President. The Act made a departure from the Act of 1850, in so far as an element of compulsion was introduced in the levy of taxes. The Commissioners were empowered to impose additional taxes with prior sanctions of the Government for other municipal purposes, such as lighting the town, preventing and extinctions of fire and supply of water, in addition to those required for police functions. The Act also provided for the payment of a grant of twenty five percent of municipal expenditure to the Municipal

Councils to provide help to them to maintain the police and carry on a conservancy functions.

The Act, implemented in 1866, was gradually extended to more important towns and in 1869-70 was successful in forty four cases.⁴ The general attitude on the part of the people had been one of indifference. Soon it was felt necessary to introduce certain changes into the Act of 1865. It was found that the optional provision for raising money for purposes like lighting, sanitary inspection, vaccination and medical relief, was practically inoperative and therefore such services were totally neglected. Moreover it seemed necessary to include education as an essential service to be undertaken by Municipalities. It was to meet these needs that an Act was passed in 1871, which, besides introducing other changes, relieved them of the charge of the Town Police so that funds might be available for municipal services.

Mayo's Resolution and the Act of 1871:

The idea of local taxation as a means of relief to the Central Government reached its culmination in the Government of India Resolution of 1870 (popularly known as Mayo's decentralization scheme). The scheme was basically regarded as being advantageous to the imperial Budget of British India. The proposed remedy was to endow the Provinces with share of revenues, and to make them responsible for education, roads and medical services. In pursuance of this policy, Municipal Acts were passed in many provinces which introduced election system in local bodies for the first time. It was however the scheme of financial decentralization introduced by Lord Mayo's resolution of 1870 that led to the first great step in local-self government not only in urban but also in rural areas.⁵ His resolution had no doubt given an impetus to local self-government but the extension of elective system and devolution was only an administration policy and lacked that ideology which is the life blood of Ripon's resolution of 1882. In Madras Presidency the new Towns improvement Act was passed in 1871. Under the Act of 1871 the composition of the Council was dominated by the official element. Under the Act there was no provision for the continuance of the twenty five per cent grant-in-aid which, under the Act of 1865, the Government made to municipalities. It meant

relief to imperial finances. In pursuance of this policy, the municipalities were empowered to impose the following taxes and fees; rate on houses, buildings, the tax on carts, professions, trades and callings, tax on carriages and animals and fees for the use of markets and slaughterhouses. This Act made an important departure from the Act of 1865, in stipulating that education, roads and medical services would be a charge on local and municipal funds.⁶

The principle of election was first contemplated in 1871. The Legislative Council of Madras, composed entirely of Government nominees at first, was reluctant to recommend the adoption of election. But by 1874, they changed their attitude and accepted the experimental adoption of election in suitable towns. Before 1864 the office of the Vice-President was of considerable importance because many duties of Collector, President were performed by him. Only a few councils availed themselves of the right of electing Vice-President though it was permitted by the Act 1871. However, up to 1884 the Collector – President played a dominant role in conducting the entire activity of the municipality. Practically the Collector or Revenue Divisional Officer, whoever presided, carried the Council with him. This arrangement where the District Collector continued as ex-officio President was far from satisfactory. In the first instance, with heavy work-load the Collector could not pay sufficient attention to municipal administration. Secondly, the Collectors were invariably Englishmen. Even when he was an Indian, there was little contact with the masses. They were hardly accessible. The so-called local self-government of the early period was a huge farce.

Ripon – Father of Local Self-Government in India:

An important step in the progress of the local self-government was taken by Lord Ripon, the then Governor-General of India. On account of his reforms in this field he has been rightly called “the Father of Local Self Government”. Such was his enthusiasm that he even threatened the Secretary of state with resignation if his proposals were not treated sympathetically. With him it was not the administrative convenience, but the desire to make these local institutions “an instrument of political and

popular education” that led to the extension of local self-government in India.⁷

Ripon’s Resolution and the Act of 1884:

Ripon’s Resolution of 1882 resulted in the enactment of Municipal Acts by the various Provincial Legislatures all over the country. In 1882, the Government of Madras appointed a Local Self-Government Committee of the officials and non-officials to examine the condition of local self-government in provinces and to suggest methods for effecting reforms. The committee suggested that without disassociating the Collector altogether from the municipality, the executive powers of the Vice-President be increased and an extension of elective system in the choice of commissioners and Vice-Presidents be made.⁸ The recommendations of the committee were given effect to in the subsequent enactments. The Government of Madras enacted the District Municipalities Act of 1884, keeping in view the above recommendations in the broad context of Lord Ripon’s Resolution. An advance was made over the existing position because the Act of 1884 permitted the election of three fourths of Municipal Councilors by the rate-payer, and minimum number of members of each Municipal Council was fixed at twelve. The number of ex-officio members was reduced to one and that was the revenue Divisional officer. However the Governor-in-Council could permit the election of chairman. The office of the President of the Council, which under the previous Act, was always held by the District Collector, ceased to exist and the executive authority now vested with a single person styled the Chairman.⁹

The Chairman did enjoy some authority under the Act because he was conferred with necessary powers, such as presiding over the meetings, ordering all payments to be made, the powers of appointment, the power of punishing and dismissing employees and preparing a list of persons liable to pay several taxes. Moreover, it was very clearly stated that the Chairman was responsible for carrying out the resolutions of the Council. The Municipal Council enjoyed the power of fixing the scales of pay of municipal employees. The Council was authorized to levy taxes permitted under the Act. Further, the Council was also empowered to exempt any person, wholly or partly, from any tax liability.

The funds raised by the Municipality could be legally utilized for such purposes, as the construction of hospitals and dispensaries, markets, drains, water works, diffusion and other works of public utility. During the major part of the period under review, the proportion of the elected members was always less than fifty percent but in 1918-19 it reached nearly fifty six percent and in 1919-20, it was nearly sixty two percent.

Although election was introduced, towns were not divided into wards and the entire town was treated as one electoral unit until 1884. This election at large ended with the Act of 1884 which authorized the municipalities to organize elections on the basis of wards. Previously, there was no hard and fast rule regarding number of meetings to be held each year. The Act of 1884 for the first time, laid down that each Municipal Council should meet at least twelve times a year.¹⁰ The Madras Government was not very much influenced by Ripon's resolution. This is evident from a number of factors. Prominent among these are: First, the system of electing the Chairman was not in force in all the municipalities. Secondly the elected members did not evince much interest in municipal affairs as evident from the number of adjourned meetings. The commencement of the year 1919 marked the beginning of new development in Municipal administration in Madras State. The recommendations of the Royal Commission on decentralisation were incorporated in the Municipalities Bill 1919 prepared by the Government of Madras which became the Madras District Municipalities Act, 1920.

Madras District Municipalities Act of 1920:

The Madras District Municipalities Act of 1920 brought about remarkable changes in the pattern of municipal administration and it provided not only for a larger portion of elected members but also for an increase in powers and resources of the municipalities. Under this Act, the strength of the municipality was to be fixed, on the basis of the population of a municipality, subject to a minimum of 16 and a maximum of 36, and not less than three-fourths of the members of the municipal Council were to be elected. It also provided for adequate representation of minority communities on the Council by means of nomination. Every rate-payer was given a vote and he was made eligible

for election to the Council. Women could also vote at Municipal elections but were not eligible to contest election as candidates. They could, however, serve on special committees of the Council. The rest of the members were appointed by the Government. The Revenue Divisional Officer was no longer an ex-officio member of the Council. The Councils were empowered to elect their own Chairman and frame their own budgets and the external control by the Government was reduced to the minimum.

The property tax livable on buildings and land was to comprise a tax for general purpose, and it could include water and drainage tax, lighting tax and railway tax. The rate of the tax was to be fixed by each Council independently. Other sources of municipal income were to be profession tax, and in some cases pilgrim tax. In hill stations in addition to the above mentioned taxes, tax on private menials and domestic servants could be levied. Unless a Municipal Council was indebted, it was to have a free hand to levy taxes and collect them.

Though the Act contained several democratically progressive provisions, its operation in practice, did not yield the desired results. This may primarily be attributed to the improper role of the Council or the misuse of power by the Chairman, in whom all the executive authority was concentrated. When the situation went out of control the Government had to resort to either the supersession of the Councils or the removal of Chairmen from their offices.

Finally the working of the Act exposed the evil effects of the excesses of democracy at work. As the Law Commission noted "Party politics became rampant efficiency was sacrificed for personal or for communal interest, parties were not based on political leanings but founded on individual and caste feelings. The persons who had the seal to promote public good were ousted by personal interest. Arrears of tax began to accumulate, revisions of taxes became frequent, assessments were unsatisfactory, collections were poor and supervision became lax".¹² The Simon Commission which was appointed in 1927, by the British Parliament to review the working of Dyarchy in the Provinces examined thoroughly the progress made by local self-government in the provinces. It pointed out

several obstacles to the progress of local government, rural and urban in India.

Amendment Act of 1930:

The constitution of the urban local bodies has been made completely democratic in the Madras Presidency by the Amending Act of 1930. It provided for the election of all municipal councilors dispensing with nomination. It granted for the reservation of seats for women and minority communities such as Muslims, Indian Christians, Scheduled Castes, Scheduled Tribes, Europeans and Anglo-Indians. It made the offices of the Chairmen and the Vice-Chairmen elective and brought about the provincialisation of municipal administration.

Amendment Act of 1933:

In 1933, by amending the Act of 1920, the office of the commissioner was introduced for the first time. From 1933 the centre of gravity of municipal administration shifted from the political chief executive to the government appointed commissioner. The Government and the people looked to the office of commissioner for sound administration which the Chairman failed to maintain consequent on the amendment of the Act of 1920, a few changes of far-reaching significance resulted. In the first instance, instead of the executive authority being vested in a single person, i.e., the Chairman, it was shared by two other authorities, namely the Council and the Commissioner.

The Commissioner held office for a period of three years and was removable from Government if a resolution was passed to that effect by two thirds strength of the Council.¹⁵ He was empowered to attend the meetings of the Municipal Council or any committee of the Council and was permitted to take part in the discussions but was not entitled to vote. He was under an obligation to attend any meeting of the Council or of any committee, if required to do so by the Chairman. The Commissioner emerged as the head of municipal administration. He was made responsible for implementing the resolution of the Council, for submitting

periodical reports to the Council regarding the progress made in implementing the resolution and for the due fulfillment of the provisions of the Act.

Finally, in the case of municipalities mentioned under schedule IX, the Chairman was given full access to all the records of the Municipal Council, and all official correspondence between the Council and government conducted only through the Chairman but the Chairman was bound to transmit communications addressed through him by the Commissioner to the Government and vice versa. The Government of India Act of 1935 introduced provincial autonomy. Naturally local self-government received further encouragement and a number of changes were affected in the organization of local bodies in India.

Conclusion

Municipal government is a territorially restricted political institution having a population for whose exclusive welfare it is intended and instituted. It exclusively concerns itself with the services and amenities which are enjoyed by the inhabitants of its own area. Municipal Government is non-sovereign because it is a creature of the state or central legislature as the case may be. As such, it has no inherent powers of its own except those granted by a superior government. Thus, its powers are derivative not original. Municipal Government is self-government because it is the government of the people of the locality represented by the locality for their own common welfare. It is a democratic government on the spot. Municipal Government is an autonomous body enjoying freedom of action in matters of internal administration though subject to the overall control of the state or central government. Municipal Government is based on the philosophy that it is a government of the locality and as such it shall be supported financially by the people of the locality. Municipal Government is said to be the foundation stone over which can be built a strong and stable edifice of national democracy.

REVISITING THE STORY OF SACRED GROVES AND FORESTS BY TRACING THE VEDIC LOVE FOR NATURE

Sonal V Manoj

INTRODUCTION

Taking a step back and looking at the thoughts and belief systems of humans one would find its earliest base in an element of fear and fertility, where it was both a factor of amusement and wonder. As Comte put in his Positivism¹, the first stage of knowledge-theological or fictitious, consists of human beings relying on supernatural agencies to explain what they can't explain otherwise. In that sense the two main things that were beyond their capabilities to understand were those that caused them fright and the aspect of fertility which soon became objects of worship. While the worship of fire, sky, sun and so on demonstrates the origin of faith from fear, instances of mother goddesses and Venus figurines provides evidence of worshipping fertility and both remained fictitious to the early man. It is to be noted at this juncture that there is a further base for this element of fear and fertility and that was the idea of 'me and mine'. Take for instance, it is true that they worshipped fire out of fear, but we must also look at the reason behind that fright. That was simply because fire can cause destruction harming his or her life. So the origin of worship can be traced in this idea of 'me and mine' or to protect my wants. Monier Williams writes 'every worshipper praised the gods because he liked to be praised himself. He honoured them with offerings because he liked to receive presents himself. He pretended to feed them because he required food himself. This appears to have been the simple origin of the sacrificial system'.

This belief system developed out of fear and fertility traversing slowly came out of these constitutional factors and found its existence on

their own, meaning to say worship moved out of necessity finding its existence in divinity and this sort of transformation in the manners of worship was a Vedic gift during the period after the Harappan's (as with Vedas it emerged sacred) where all of nature attained varying degrees of veneration.

VEDIC NATURE CULTURE

Vedic nature culture was first exposed through the earliest literary work, Rig Veda and they can be treated as being historically fairly authentic since their composition was contemporary with the period described². However it was when Veda that for long transmitted as 'shruthi' evolved as 'smriti', that it got glossed with a veneer of sanctity, becoming 'apaurasheya' and so did everything inside as a corollary. So when the Veda was put in writing, they emerged simply divine in their origin³ thereby attaching authenticity to everything mentioned in it and eternity to those practices which were to be carried on for posterity to cherish.

Vedic nature culture is the inextricable intimacy held by the Vedic people with the nature evident from the Rig Vedic hymns. Nature (Prakriti) means 'making or placing before or at first, the original or natural form or condition of anything original or primary substance'⁴ and the Samkhya school of thought mentions the three innate qualities of nature- Rajas (creative activity), Sattva (calmness of preservation) and Tamas (destruction). Vedic people found this three qualities in all elements of nature and began worshipping them, expounded in the anthropomorphic representation of various

forces of nature in Rig Veda. For instance, the asura, Vridra or Ahi is considered the personification of drought, who restrain the clouds from showering rain and block rivers. With the assistance of Vishnu the sun god, Indra the god of rain and thunder succeeds in killing Vridra and liberates all imprisoned rivers. In a similar way there are legends about other nature gods as well. Agni the god of fire is called 'son of waters' and water is personified, deified and honoured as goddesses celebrating their purifying and healing power. They cleanse their worshippers from sin and untruthfulness and they gave birth to fire (the idea arose from the apparent production of lightening from rain clouds). The rivers Sarasvati, Sindhu and the latter's tributaries (Shutudri, Parushni, Ashkini, Vitasta, Vipasa) were all thus regarded sacred. Vedic nature culture can be identified at its fullest by looking at Soma, a creeper dark in colour, sour, leafless, milky and fleshy⁵ on the surface from which was made the intoxicating juice that was considered most reverend.

A second phase of the Nature culture begins with the later Vedic period. If it was the nature in its purest form that had been worshipped in the early period, later period witnessed the emergence of new deities who retained their connection to nature in implied manners. When Indra, Agni, Ushas and so on gave way to Brahma, Vishnu and Rudra the innate qualities in nature were shared among them, being the creator, preserver and destroyer respectively. The analogy of Brahman as a tree with its roots above and its branches below (branches being earth, water, air, fire, space) in Maitrayani Upanishad is again an indication of the Vedic love to associate everything divine to nature. As Nanditha Krishna⁶ relates these five branches to the human body, this is likened to be the five senses: space is sound, air is touch, fire is colour, water is taste and earth is smell. She thus concludes nature as an indivisible part of the existence of all beings, exposing a triangular relationship between god, humans and nature.

Culture involves ideas, customs and social behaviour of a society. The nature centric belief system and the customs in association with it was pivotal in shaping the social behaviour of the Vedic society and there lies the prodigy of Vedic nature culture.

ROLE OF SACRED GROVES AND FORESTS IN NATURE CULTURE

Keeping aside all the implied meanings through which one could relate the present day practices to nature, sacred groves and forests might appear to be the most naked instances of tradition inherited from the Vedic nature culture. While it is an attempt to establish a relationship with nature that we see in all the other aspects of nature culture, it is a well established relationship that one would find in case of sacred groves and forests.

The term 'Aranya' is used in Vedas to denote forest and the Rig Vedic hymn dedicated to Aranyani, the goddess of forest extrapolate the relevance and eternity attributed to it. The poet looks upon the wander of Aranyani from civilization to civilization without fear with wonder. To quote Rigveda to show the magnificent representation of Aranyani, it says 'when the chichchika (bird) replies to the crying grasshopper, Aranyani is exalted, resonant, as with cymbals' (Rig Veda, X.146.2). Further the tree was considered the lord of forest, Vanaspati who is evoked to taste the ritual offering and take it to the gods. The hymn says, 'may vanaspati never desert us nor do us harm' (Rig Veda, 111 53.20). There are three categories of forests found in Vedas- Tapovana, Mahavana and Shreevana. Tapovana was related with Tapas or meditation where the sages lived and the kings and people came there seeking their assistance. Mahavana or the great forest was open to the entire flora and fauna. Shreevana or the forest of prosperity was from where the people collected the forest products for their needs.

Though one could differentiate between sacred groves and forests, the terms are often used interchangeably by scholars.⁷ This is more or less correct because when reading it with the Vedic nature culture, they revered the sanctity of entire forest and the concept of groves emerging sacred within forests was in a sense the result of impediment caused to the concept of sacred forests as they began to serve humans in their various needs vividly in the later periods. In simple words, Tapovanas in forests retained their spiritual character and evolved as sacred groves while Mahavanas and Shreevana were made open to worldly needs.

So it is true to some extent that sacred forests gave way to sacred groves in course of time, with a strong base inherited from the Vedas and as per their belief all trees and plants are conscious and sentient beings who are able to hear, move, see and feel with distinct personalities. These trees become holy from their association with gods and Asvattha or Pipal is considered the most noteworthy. It is occupied by the essence of the god Brahma and is sometimes invested with the sacred thread with all the ceremonies of investiture (upanayana) being performed over it. Other trees of importance in later periods were Bilva (Bael) whose leaf is of a triple form, Vata (Banyan) with powers of immortality and so on. While the above mentioned trees were considered holy with their medicinal values obtained in their relation to god, there were some plants which was not merely abode of divinity, but itself a god like the Soma plant and Tulasi (identified as a metamorphosis of Sita, wife of Vishnu's incarnation).⁸

Although trees are said to have the spirit of gods, they were also liable to be occupied by demons as per their belief. A mound or sacred edifice makes holy the tree upon it and in every village one auspicious tree began to be revered that way. An unholy tree for instance was Vibhitaka as Kali (demon) leaving Nala entered it.⁹ This way the early humans found the existence of a god supreme in trees and plants and worshipped them as a mark of gratitude for abundance that nature provided them.

NATURE CULTURE TODAY

As already mentioned though the elements of nature culture are visible in present day world through the implied meanings of concepts and practices, there won't be anything like sacred groves and forests which are simply the blind perpetuation of nature culture cherished to date.

An estimate between 1,00,000 and 1,50,000 is made regarding the number of sacred groves existing in India.¹⁰ There are differences in what they are called, the deities worshipped and the culture practiced from region to region across India, but it all owes their veracity to the Vedic nature culture. Sacred groves in Kashmir is called 'Dev Bani' where some of the deities are Baba Roachi Ram, Mata Vaishno Devi, Peer Baba and so on. You would

find Dev Van or devta ka jungle in Himachal Pradesh where Bhaku Nag Devta, Ringarishi Devta are the main deities. Deo Bhoomi and Bugyal is how you would call a sacred grove in Uttarakhand dedicated to Chandrabadni Devi, Hariyali Devi and so on. It is just called Dev Van in Uttar Pradesh where the main deities are Samaythan, Vansatti Devi, Vrinda Devi and others. The most famous among all the Vana's here are Vraj (associated with Krishna) and Vrindavana. The local name for groves in Bihar and Jharkhand is Sarnas dedicated to Darha, Marang, Dharti, Jahera and so on. However the vitality of Sal trees with groves and the Sarhul festival associated with it makes Jharkhand different. Gram than, Hari than, Sabitri than, Shitala than are the various names in which the sacred groves are known in Bengal where Sitala, Manasa, Kali ma are the main deities. In Sikkim and Arunachal Pradesh the sacred groves are associated with Buddhist monasteries and are maintained either by the monasteries or by various tribes. Tribes in Assam use terms like Than, Madaico to denote sacred forests. Umanglai is the term used by Manipuris to denote worship of forests albeit there exists other local names as well. When it is called Ngawpui in Mizoram, it is known by different names like law lyngdoh, law niam and law kyntang in Meghalaya. Khasi hills in Meghalaya is home to a number of sacred groves, the most famous being the Mawphlang.

Vani, Oran, Kenkri are the names used for sacred groves in various regions of Rajasthan. A similar usage exist in Gujarat as well where the main deities are Khodiyar mata, Oran mata, Jhalai mata and others. Matagudi, Devgudi and Gaondevi are the various names in which the sacred groves are known in Chattisgarh. Jahera and Thakurnam is how it is called in Odisha. In Maharashtra, Devrai, Devgudi are some of the names used where the deities include Maruti, Vaghoba, Khandoba and others. Devrai, Devran and Pann are the names in which the groves are known in Goa.

Pavitra Vana is how people in Andhra and Telangana call the sacred groves. Dedicated to deities like Hulideva, Naga, Jatakappa and so on, the groves in Karnataka include smaller ones called Kans and larger ones named Devarakadu. While it is generally called Kaavu in Kerala, there exists variants like Sarpa kaavu, Ayyappan

kaavu, Amman kaavu and so on. Known by various names such as Kovil kaadu, Swami thopu, Vanakovil and so on, every village in Tamil Nadu has got a sacred grove.¹¹

Despite the several ways in which each of these stands different the one unifying factor that holds all these together is its affinity towards the nature culture and it is something to be celebrated not only acknowledging this cultural transmission, but also taking into account the ways in which they contribute to the maintenance of ecological balance.

CONCLUSION

Vedic nature culture is a term derived from Vedic love for nature guided by their tendency to

relate everything to aspects of nature. Focussing on sacred groves and forests as the most direct tradition inherited from nature culture doesn't owe its origin to it. Worship of trees and plants existed even before the Vedic period. But it was only in the Vedic period that this sort of a devotion to nature was put into writing in Vedas and with the Vedas attaining sanctity the same was meant for everything written in it. Vedas thus made the nature worship authentic and many institutions of Indian life- especially the Hindu- trace their origin to an Aryan beginning¹². So if the worship of sacred groves is being continued today in various forms in almost all parts of the country with in an institution of Hinduism, the Vedic nature culture takes credit for it.

KODUNGALLUR GURUKULAM

T.D. Soumya

Kodungallur is situated on the south west coast of modern Thrissur, a district of Kerala, India. It is a place of great and varied historical interest. Kodungallur has occupied a unique place in the social, religious, cultural and economic history of Kerala from ancient period onwards. In the ancient period it was an important port town. The Jews, Phoenicians, Romans and the Arabs came successively with their merchant fleets to the port of kodungallur. Italian traveller Nicolo conti called it as 'Colunguria' and then Barbosa changed it as 'Cranganore'¹. The place had extensive trade relations with the outside world. The Kulasekhara empire otherwise called the second Chera empire ruled over kerala from 800 to 1102 AD with their capital at

Thiruvanchikkulam or Mahodayapuram² was Kodungallur. M.G.S Narayanan identifies these rulers as Perumals, since *Perumal* was the honorific title inherited by them³. The Perumals lived in royal houses known as *Kovilakams*. And later these kovilakams acted as the centres of traditional education.

Apart from its political and commercial importance Kodungallur had been famous as a centre of cultural and educational activities. The great literary works like *Silappatikaram* of Ilangoadikal, *Manimekhalai* of Chittalai Chattanar, *Mukundamala* of Kulasekhara Alwar etc were born here⁴. Cheraman Perumal was a king of Makotai (mahodayapuram) is clear from Cekkilar's *Periyapuramam* which gives an

elaborate account of his capital city at kodungallur⁵. In modern times Kodungallur was an important centre of learning and maintains an unbroken chain of tradition in the field of culture and education.

Kodungallur *Gurukulam* otherwise known as Kodungallur *Kalari* was a nerve centre of cultural activities in south India from 1790 to 1920. It was Godavarma Thampuran, popularly known as Ilaya Thampuran founded kodungallur gurukulam. He was well versed in various fields of knowledge such as grammar, smriti, music, astronomy, acting, sculpture etc. He was a poet also. His works like *Ramachritam mahakavyam*, *Rasasadanam bhashanam* were very popular works of those days. He had several disciples from different parts of India, who came to Kodungallur to learn arts, literature, and smritis from him. Younger generations admired him and considered him as the first guru of Kodungallur Kovilakam⁶. The gurukkals of kovilakams provided traditional education for everyone without any distinction on the basis of caste or religion.

The four kovilakams in kodungallur during this period were Valiya Thampuran kovilakam, Ilaya Thampuran kovilakam, Chirakkal kovilakam and Puthan kovilakam. Among these Puthan kovilakam played an important role as an educational institution with its great Gurukulam. The Kovilakam provided free and Gurukula style of education. The subjects were taught in the Gurukulam were Law (nyaya), philosophy, (Vedanta), science of rhetoric (alankara), ayurveda, astrology, sculpture, music and acting. Several important scholars (gurukkals) and poets were took active part in the educational and literary activities in these kovilakams. Where a curriculum enabling the students to study the temple art forms like koodiyattom, kathakali, koothu etc. Astrology and Medicine were treated as an essential part of knowledge. Kodungallur gurukulam gave a lot of contribution to the development of art and culture and for the growth of malayalm language. The importance of Gurukulam lies in the fact that the Thampurakkals (rulers) had no hesitation to accept and teach the so-called avarna (untouchables) students as their disciples and taught them all branches of knowledge. In spite of the staunch feeling of castism, the order of the day, the Gurukkals of Kovilakam

were not refused to taught the avarnas. Kundani Govindanasan, Panikkasseril Kannappan, Easwaramangalath Shankaran Krishnan etc were some examples of 'avarna' students⁷

Kodungallur gurukulam had produced a number of scholars after Ilaya thampuran. His renowned disciple, Kumbakonam Krishna sastrikal became the prominent guru of the Gurukulam. The members of kovilakam learned literature especially under sastrikal and this period is considered as the golden age of kodungallur gurukulam. Arts and literature developed through these scholars for a long period. The members of the kovilakam such as Kunjiramavarmathampuran Chakram thampuran, Kochunni thampuran, Valiya kunjunni thampuran, and Kunjan thampuran were the disciples of Sastrikal. Poet Cheriya kochunni thampuran, Godavarma thampuran, Kathulli Achutha menon, kunjikuttan thampuran, cheriya kunjunni thampuran, Marumakan thampuran etc were responsible for raising Kodungallur Gurukulam as an important cultural and educational centre. Their contribution also helped to enrich the cultural heritage of Kerala⁸. Mahamahopadhyaya Rama Pisharadi has told that even the pillars of kodungallur kovilakam possesses the fragrance of literature. This royal family was following such a great tradition in literature.

The greatest fame in kodungallur kovilakam goes to 'Mahakavi' Kunjikuttan thampuran. He was renowned as '*Kerala Vyasani*' (Vyasani of Kerala) because of his Malayalam translation of Mahabharatha. He was also known as '*Sarasadrutha Kavikireetamani*' (one who has been known as composing beautiful poems very fastly) was regarded and respected as the incarnation of poetry by his contemporary scholars. His skill in versifications was so astonishing. He lived only up to the age of 48. Within this short span of life, he composed 60 many works representing various movements and promoted many poets enabling them to be experts in the field⁹.

The translation of Mahabharatha (*Bhashabharataham*) also proves that Kunjikuttan Thampuran was a wonderful phenomenon in Malayalam literature and this translation considered to be a miracle especially in the circumstances that no other person in any of the Indian languages could do so single

handedly. Prof. Joseph Mundassery has remarked much about the miraculous success of this translation and called him 'Gandharvan'¹⁰ (celestial musician). Kunjikuttan Thampuran did the translation word by word within a period of 874 days. For this herculean task of hand written translation he depended only copy writers. Such an attempt is certainly considered to be a miracle. The greatness of Thampuran lies in the fact that the entire work was done without any expectation of money or fame. He gave valuable contributions for the development of Malayalam language. He maintained good reading habit and mastered the content of topic.

After learning poetry, drama, rhetorics and grammar from his scholarly ancestors, he has turned to astrology and logic. From his childhood days, Thampuran was mainly interested in versification. It is stated that he started composing poems at the age of 7. His initial works were in Sanskrit. It was his father Venmani Achan, co-brothers Kochunni Thampuran, Venmani Mahan Orvankara Rajan were persuaded him for wrote in Malayalam. His most notable ability was swift versification¹¹ (*DrudhakaVanam*) his co-brother Kochunni Thampuran also possessed the above talent.

Thampuran also took an active interest in the study of the history of Kerala. His work '*Keralam*' occupies an important place among the historical writings of Kerala. He was in search of the history of ancient Kerala and had wrote informative articles like '*Thrikkanamathilakam*', '*Thirunavayogam*' etc. He even translated Shakespeare's 'Hamlet'. His object was to compensate the shortage of books in Malayalam. He had no delicacy to take up difficult task. The most remarkable achievement of Kunjikuttan Thampuran was that he could make the translation as an artistic practice.

Kunjikuttan Thampuran had done independent poems and works. But some critics argued that they are not up to the standard. However Sri Balakrishna Varier observed that the above arguments were incorrect. Because, unlike his contemporaries he had given a new dimension to subjects without repeating the old. His works like '*Kamsan*' stands as a proof and example for that. He dealt poetry with great ease. He wrote letters in the form of poems which latter became a movment in Malayalam literature. It is evident, that he desired to make a

difference in his style of versification perhaps he might have hoped to provide a romantic touch for his style. Apart from poems, he had written books on '*Sabdalankaram*' (rhetorics), '*Karappan*' (Atreatment of infants) and numerous works on prose.

Another devoted literary acts of the poets of Kodungallur Gurukulam was *Bhashanadaka Nirmanam* (Making plays in Malayalam). The translation of *Sakunthala* by Kalidasa in Manipravalam done by Valiyakoyithampuran tempted the poets of Kodungallur Gurukulam for the above attempt. The first independent play was *Kalyaninadakam* written by Kochunni Thampuran. His skill in translation can be ascertained from the play. He has translated the *Vikramorvaseevya* by Kalidasa and few other plays. It was during the period of Kunjikuttan Thampuran and his contemporaries that the fame of Kodungallur royal family reached to its pinnacle. The *Kavisadsu* (assembly of poets) held here proved to be a chance for various literary activities¹². *Aksharaslokapareeksha*, conducted under the supervision of *Kavisadasu* was another literary entertainment during those days.

Beginning of the writing of travelogue also arose from the Kodungallur *Kavisadasu*. The first among them was *Rameswarayatra* by Venmani Achan¹³. Movement of Sandeshakavya also had received contribution from the *Kavisadasu*. The works like *Sukasandesham*, and *Kokilasandesham* had been translated by Kunjikuttan Thampuran into Malayalam. For this he also started a system of versification in pure Malayalam words and his *Nalla basha* (good language) is an example for it. Another important system that developed in Kodungallur Kalari was Pachamalayalam or pure Malayalam. This was a system of composition emerged in Kodungallur Kalari aimed for the versification of Malayalam words without using Sanskrit diction. Kunjikuttan Thampuran proved this style in his work *Nallabhasha* and all the 52 verses in the work are done in pure Malayalam words. It is regarded as the first piece of Malayalam literature.

Another notable system that evolved in Kodungallur kovilakam was Venmani movement¹⁴. The Venmani school of poets were involved in amovement of Malayalam literature also known as the Venmani movement. The style of poetry was pioneered by members of the Venmani kovilakam of kodungallur in the 19th

century. Mahakavi Ulloor has recorded that Poonthothathu Achan Namboothirippad, a disciple of Vidwan Ilayaraja was the first teacher connected with the Venmani movement. Venmani Achan Naboothirippad, who was another disciple of Vidwan Ilaya raja later became the pioneer of the Venmani movement. The style of these poets became quite popular for a while and influenced even others. The venmani style of poetry associated with common day themes, and the use of pure Malayalam rather than Sanskrit. The poetry was therefore easily understood by the common man. The works were known for its humour, wit, and lyrical meter. Venmani style which evoked humour and lust was acceptable to all. Members of Kodungallur kovilakam labelled as Venmanikkavikal¹⁵ made their own contribution to our language and literature.

The Thampurakkals of kodungallur kovilakam and Kalari were noted for their generous behaviour. They imparted education to the students without any fee. Those students who were economically low and backward were given free food, dress and accommodation. According to Attur Krishnapisharadi, one of the students of Kodungallur Gurukulam and a writer, there are three hundred students in Gurukulam during his time¹⁶. Gurukulam provided equal opportunities for developing the inherent abilities of the students. The students had the freedom to

choose their Gurus (teachers), which in turn offered academic freedom. The Guru permitted rational thinking and gave full freedom to students to communicate with their fellows. The duration of class about one and half hours¹⁷.

From the above facts it is clear that Kodungallur Kalari and the members of Kovilakam gave meritorious contribution to our language and literature. The efforts of those Gurukkals of Kovilakam contributed for the growth of traditional as well as literary education. Thus, Kodungallur Gurukulam enriched the horizon of our Malayalam literature. Since 1915 Kodungallur Gurukulam began to decline because of the people's interest and craze for western education. So there was a tremendous decline in the number of students in Gurukulam. However, Manthitta Kunjunamboothiri, Kochikkavu Thampuratti, Kunjuni Thampuram, Koonezhathu Parameswara menon etc. were taught students till 1939. They were considered as the last gurukkals of Kodungallur Gurukulam. This cultural legacy is still maintained by the members of Kovilakam. The educational institutions like Kunjikuttan Thampuram Memorial Govt. College, Sanskrit Vidyulpeedam etc. uphold this cultural legacy. The academic perspective of Kovilakam is echoed in its motto '*vidyasmath paradaivatham*'.

NEOLITHIC CULTURE IN KRISHNAGIRI DISTRICT – A STUDY

Dr. J. Soundararajan

Introduction

Neolithic cultural evidence is limited in Krishnagiri region, although this culture is better represented in Vellore, Salem and Dharmapuri districts of Tamil Nadu. However, numerous polished stone axes often called “Neolithic celts” have been reported from Krishnagiri region extensively. These sites have been conventionally described as “Neolithic” sites. However, no clear evidence for Neolithic association has been found at these sites, and hence they cannot be categorized under the Neolithic Culture, without detailed investigations. Hence, these sites are described separately in this chapter, which also provides a brief account of the Neolithic culture of South India and Tamil Nadu.

Previous Work

Bruce Foote also discovered a factory site of the Neolithic culture near Bargur in Krishnagiri taluk. Among the weapons and tools discovered, there are twelve types of celts, six types of chisels, three types of hammers, two adzes, anvils, corn crushers, cylinders, discs and hammer stones. In his book, he has carefully noted the changing scenes of human activity from open air stations to rock shelters and then to thatched houses and solid structures. In the long march of human development, he recognized that it was the Neolithic period that great advances in civilization, not only in the improved arms and tools but also in the discovery of the art of firing vessels and domestication of animals took place (Foote 1916:14).

S.R.Rao of the Archaeological Survey of India discovered a Neolithic habitation site at Paiyampalli in Vellore district and he excavated it during the years 1964–65 and 1967-68 (*JAR*, 1964-65: 22-23; 1967-68: 26-30). But the full results of the excavations are yet to be published. However, this excavation gave fresh impetus to further research in Tamil Nadu. The districts of Chengalpattu (Krishnasamy 1947), Pudukottai (Srinivasan 1944 and 1944-45), Madurai (Raman 1969), Coimbatore (Desikan 1962-63), Dharmapuri (Narasimhaiah 1972), North Arcot (Present Vellore and Tiruvannamalai), Coimbatore, Erode, Dharmapuri, Krishnagiri (Rajan 1996–1997) and Kanchipuram

(Thirumoorthy 2009 and Kumar 2011) have been systematically explored to trace out the Neolithic habitation sites.

B. Narasimhaiah has undertaken systematic explorations for the Neolithic remains in the Dharmapuri district, Shervaroy and Kalvarayan hill ranges, western and northern taluks of Vellore district and the area south of Shervaroy hills in Salem district. As a result of the intensive field work and sporadic explorations in Tamil Nadu, it was found out that the remains of the Neolithic culture are concentrated in the taluks of Krishnagiri in Krishnagiri district, Harur in Dharmapuri district and in the taluk of Tirupattur in Vellore district. He has discovered five Neolithic habitation sites and one factory site of the pecked and ground stone industry (Narasimhaiah 1980:28-31)

‘Neolithic’ implements are found in and around the Kalvarayan hills. Finely worked polished tools, hammer stones, stone discs, slick stones and ring stones were discovered by Robert Bruce Foote on the Shervaroy hills (Foote 1916: 57-58). Polished stone tools were collected on the mountains of Bodhai Malai, Kalvarayan Malai, Kollimalai, Javadumalai and Vattalmalai (Rajannan 1992:204). Much of these tools were found in association with present day ritual practices. Irrespective of collection of several Neolithic implements, the present exploration could not yield any appreciable other Neolithic artifacts like handmade pottery or Neolithic habitation. The contexts of these polished stone axes are uncertain. However, the succeeding Iron Age culture is clearer in context.

Though the tradition is of recent years, the locational aspects of these tools and the landscape suggest that these tools could belong to Neolithic Age but this aspect is yet to be confirmed with concrete Neolithic habitation sites.

In this connection, the work done by the great scholar B.Narasimhaiah deserves special mention here. He explored the north western part of Tamil Nadu and discovered many Neolithic habitation sites. Many Scholars like S.R. Rao 1963-64:19-20, 1964-65:22-23 and 1967-68:26-30) V.D.Krishnawamy (Krishnaswamy 1947:38-40 and 1962:25-64) K.R. Srinivasan

(Srinivasan 1953:103-115) K.V. Raman (Raman 1969:499-509 and 1978-79:73) V.N.S. Desikan (Desikan 1962-63:57-58) K.V.Soundara Rajan (Soundara Rajan 1964:107-117) K.Rajan (Rajan 1997:1-334 and 2004:74-89) G.Thirumoorthy (Thirumoorthy 2009:42-43) V.Selvakumar (Selvakumar 1996) and others have contributed much in tracing the origin and growth of Neolithic culture in Tamil Nadu.

Neolithic Sites in Krishnagiri District

The locations occupied by the Neolithic cultures of Krishnagiri Region are distributed across varied geo-eco settings. Proximity to water sources and the availability of favourable ecological niches prompted the Neolithic cultures to anchor their settlements at some of these localities as shown below.

The identification of Neolithic cultural sites is relatively easy than those of the preceding cultures on the account of the permanent settlements which are popularly known as mounds. The permanent settlements became a trait feature in the former. Generally in Tamil Nadu some of these mounds are identified by the means of village names which often bring out their ancient nature. The Neolithic sites appear amidst heaps of ashy grey surface soil and sometimes rise to a few meters high above the surrounding areas.

These ashy grey soils of the ancient mounds stand out distinct from the surrounding natural soil stretches. The local people are well conversant with such mounds because they scoop them either to spread across their fields as manure or use it as building material. This scooping by the local peoples many a time exposes the cultural materials. Not only this, the nature itself has got a deep incisor to cut across the mounds, gully out the areas and dislocate the artefacts through the fluvial agencies.

In Krishnagiri region, there are, in all, 22 sites yielding the remains of this culture. Of these, 6 are habitation or settlement sites, 13 are findspots and 3 re factory sites of the Neolithic tools and stone objects.

Factory Sites

Bargur (12°32'9.39"N 78°21'21.94"E)

The factory site of Bargur is situated about 4 km north-west of Bargur in Krishnagiri district. Robert Bruce Foote (1916) had noticed this

factory site earlier. As in the case of the above site, this tool has not yielded any tools showing the final stage of manufacturing (Narasimhaiah 1980:30).

It is noteworthy that all the sites mentioned above are situated either at the foot of the hills or on their terraces. No habitation site has so far been discovered either on the bank of a river or in the plains. As the hillocks around the site as most suitable for terrace cultivation, the Neolithic folk of Tamil Nadu would have preferred the hill ranges rather than river banks. The explorations on the top of the hill ranges; the Shervroy, the Javadi, the Elagiris, the Vattalamalai, that there were no traces of habitation of the Neolithic people. In spite of that a large number of polished stone axes were collected. Further, it is said that even now, while ploughing the lands these implements turn up occasionally.

Kappalavadi (78°22'01"E; 12°29'22"N)

Kappalavadi is situated about 8 km south-east of Bargur, which is on the Bangalore – Chennai National Highway and 12 km east of Krishnagiri. The hillocks located on the western side of the Kappalavadi have yielded polished stone axes in different stages of manufacture and also by product flakes in plenty (Narasimhaiah 1980:30). However, no specimen showing final stage of manufacture i.e. grinding has been encountered.

Kundalakunda

The small village Kundalakunda is located 6km south of Bargur and 14km north of Jagadevi on the Jagadevi main road. The hillock located on the south west of the Kundalakunda village. The village yielded stone axe in different stages of manufacture and also by product flaks in plenty.

Neolithic Traits of Krishnagiri Region

The present and previous excavation and explorations conducted at archaeological sites of Krishnagiri region has brought to light several artefacts such as pottery, ground stone tools, mullers, querns, pounders of early farming cultures. Notwithstanding to the geographical locations of the area, these materials have shown distinct variations in shape size dimensions and technique of preparation etc. On the basis of the differences in the makeup of these artefacts, the identification of the cultural affects can be attempted. The handmade pottery with slip and

burnishing techniques can be assumed to have belonged to Neolithic period. One significant feature in the cultural material recovered from a couple sites is the presence of handmade burnished black and red ware shreds with thick sections, which might provide evidence for the transition phase between neolithic and megalithic periods. The Neolithic and megalithic periods show marked variation in the technique of pot preparation the former with handmade, burnished grey, brown and buff ware, in the latter inverted firing technique/double firing technique.

The other artifactual materials such as ground stone tools, mullers, querns, pounders are usually associated with Neolithic period as it is held that the metallic tools are absent during this period under consideration. Hence, it is assumed that the Neolithic man was totally dependent on ground and polished stone tools use for the preparation of carpentry and agricultural implements. Hence, it is assumed that the disuse of stone implements during megalithic and early historic periods is an important feature. Hence, a clear-cut distinction is identified in the economy of early farming cultural make up of Krishnagiri region i.e., the preparation of handmade pottery and stone implements such as hand axes, adzes, chisels and non-edge tools such as querns, mullers and pounders during the Neolithic period. Thus, the explorations conducted at the Krishnagiri region from the 22 sites brought to light.

Food and Economy

The Neolithic people's economy was a mixed one ranging from collecting, gathering, hunting, fishing to animal husbandry and primitive agriculture. Several terrace like structures presents on hill summits and slopes were used for habitation but also for farming, which is still a surviving practice among the rural as well as tribal folk in certain interior parts of the southern states. Direct evidence for the practice of agriculture is provided by the discovery of charred grains of horse-gram (*Dolichos biflorus*) along with green-gram (*Phaseolus radiatus*) and ragi (*Eleusine coracana*) from Paiyampalli (Rao 1967-68:27). The horse-gram also discovered at Tekkalakota and ragi from Hallur both in Karnataka (Rami Reddy and Iswar 2001: 175-180). Similar cereals and pulses were grown by the Neolithic people elsewhere in the Southern India. Querns and rubbing stones, a common

scene at all sites, must have served the purpose of pounding and grinding grains.

Pottery

The Neolithic ceramic industry of Tamil Nadu is represented by five major wares: Red ware, Tan ware, Grey ware, brown ware and black ware with their variants. On the whole, the plain pottery dominates the ceramic industry. However, the pottery with incised and combed decorations is not wanting and is represented in small quantity. Only one sherd painted in violet on pale red surface was collected from Mullikkadu (Narasimhaiah 1980:32).

The bulk of the pottery is handmade. Use of turn-table technique and slow-wheel employed in manufacturing the pottery are evident on some of the pottery. However, the latter method of manufacturing seems to have been employed more frequently at Mullikkadu. In manufacturing huge and thick jars, it seems that the beater and anvil technique is employed. Luting is a common technique employed in manufacturing spouted vessels, channel spouted vessels, etc. It is noteworthy that the Neolithic ceramic industry in Tamil Nadu has yielded about eighteen major types and about sixty seven variants including process incised and painted pottery.

Pecked and Ground Stone Industry

The explorations conducted by Narasimhaiah, at the factory sites near Kappalavadi and Bargur prove that the Neolithic people had a pecked and ground stone industry of their own. Large amount of artifacts were collected at the Neolithic factory sites and all of them were made on dolerite. So far 9 axes, 2 adzes, 2 hammer stones, 7 pointed tools, 8 chopping tools, 2 blade flakes, 2 fabricators and 48 waste flakes were collected at the above sites. It has also been observed that they generally used the tabular or cylindrical pieces of natural stones for manufacturing the implements in the case of blade, flakes and chopping tools. All the specimens are either unfinished or more or less finished and broken. No specimen shows pecking or grinding. Hence, it seems that only the first two phases of manufacturing i.e. rough flaking and finer flaking are employed (Narasimhaiah 1980:60-61).

It seems that the microlithic industry played a major part along with the pecked and ground

stone industry in the life of the Neolithic people in Tamil Nadu. Several microlithic tools like arrow heads, points, borers, burins, lunates, side scrapers, end scrapers, hallow scrapers, blades, blade flakes, asymmetrical cores and fluted cores were collected at Mullikkadu, Togarapalli, Dailamalai, Vattamalai and Mayiladumparai sites (Narasimhaiah 1980:69-75; Rajan 2004:74-88). A major portion of the tools mentioned above were made of silicious material such as quartz chalcedony and crystal.

Technique

Flaking, pecking and grinding are the three basic techniques employed in the making of Neolithic tools. To these, it may also be added the technique of polishing. It differs from grinding. Allchin suggests that the manufacture of edge-tools involved five process, viz rough flaking, finer flaking, pecking, edge grinding and overall grinding. Flaking is the only technique employed in the chopping tools and wedges (Allchin 1957:323).

Settlement Pattern

The Neolithic people generally lived on the tops and occasionally on the slopes and foot of castellated granite hills with natural rock shelters

or caves, plateaus, open spaces, perennial water cisterns, availability of land for agriculture, wild fauna for hunting and other life activities, and above all the rocks in the form of natural trap dykes occurring as crests and ridges for the manufacture of the ground stone tools, the main technological complex-all of which provided a suitable background for living. The hill-tops or sides are leveled by removing stone boulders and filling their hollows with rubble and silt. Occasionally river banks away from hills were also frequented.

The Neolithic people of this region preferred granitoid hills like Togarapalli, Gollapalli and Kappalavadi hills for their settlement. This is very significant. These granitoid hills provide ample scope for terrace cultivation. They preferred to settle at the foot or on the terrace of the hills with natural caverns. But that they did not live in the rock shelters or caverns is evident because there is no cultural debris in them. This is evident from the excavations at Paiyampalli. However, one can infer from the evidence of the pottery and some tools collected from caverns that they used them as temporary resorts. Even today terrace cultivation is practiced in this region.

THERUKOOTHU AND CHHAU: A COMPARATIVE STUDY OF FOLK PERFORMING ARTS THROUGH THE EYE OF SOCIO-CULTURAL PERSPECTIVE

Sourav Sen

In Tamil Nadu, folk performances such as *Kummi*, *Therukoothu*, *Karagāṭṭam*, *Kōlāṭṭam*, *Mayilāṭṭam*, *Oyilāṭṭam*, *D^ovarāṭṭam*, etc. are used to see everywhere throughout the state. Likewise, in West Bengal, *Gambhirā*, *Ālkāp*, *Chhau*, *Nāṭuyā*, *Kīrtan*, *Putul nāch*, Santhali dance, *Bāul* are famous as folk performing arts. Even though there are various folk performing arts in Tamil Nadu and West Bengal, this paper specifically intended to focus on a comparative study between *Therukoothu* of Tamil Nadu and *Chhau* dance of Purulia (West Bengal).

II

The different forms of folk or regional performing arts in India mainly performed for entertaining people with traditional mythological stories. The artists those who perform the art used those mediums to communicate and spread various social messages with the intention of knowledge and providing information, especially to the rural people. In this way the *Koothu* is an important folk tradition of Tamil Nadu. We find references to in Tamil literatures of different types of *Koothu*. In *Saṅgam* texts and other Tamil literatures there are a lot of references to Tamil dance and drama performed at open spaces. In *Tholkāppiyam*, the most ancient grammar book of Tamil language, the *Koothu* performance has been mentioned in five places. In *Eṭṭutogai*, eight anthologies of *Saṅgam* literatures have references of *koothu* in 106 places. According to the literary evidences the *Koothu* had different names such as *kuravai*, *thunangai*, *veriyattu*. Adiyarkunallar, the commentator of *Śilappatikāram* has given the names and details of different types of *koothu* based on their nature and also identified them in different literary works in Tamil, such as *Varichandhikoothu* (avoiding the bad and praising the good), *Sandhikoothu* (classical), *Vinodakoothu* (entertainment), *Tamilkoothu* (dance of the south), *Kaniyankoothu* (dance of Kaniyan tribe), *Therukoothu* (street dance), etc. Among them *Theru koothu* is an interesting form of performing arts in Tamil culture.

The *Therukoothu* means street dance/performance (*Theru* = Street, *Koothu* = Dance/Performance). Yet, according to Ramasamy, all the dramas which are performed in theatres are called *Nāṭaka* and when they are acted in the open air is known as *Koothu*. In *Saṅgam* anthologies this term is most widely used to refer the dramatic performance.³ It is a native traditional folk dance and drama usually conducted during temple festivals in months of *Paṅguni* (March 15 – April 16) and *Aadi* (July 17 – August 16).⁴ *Theru koothu* is performed during the agriculture season. It is a blend of music, movements and dialogue embellished with glittering costumes. It is being performed mainly by the *Thuluva Vallala* community of Tamil Nadu, for the last three centuries. These performers are generally from poor families of lower strata of the society. The troupe of artists carried out the actors, dancers, musicians, make-up artists, decorators, cooks and sometimes their family members. They are always travelling from one village to another. In *Therukoothu* performance the artists used to narrate basically indigenous mythological stories, epics, etc. during the day time as well as night also. During the performance time, the artists gestured with colorful costumes and heavy ornaments because maximum stories adorned from the *Purāṇa* and the epics. The headgear and the wing ornaments known as *bujakīrti* along with the chest shield which is made from wood and its weight around 40 kilograms. This performing arts has some principles, these are, it exists within a ritual milieu, it is not only an entertainment but also it has religious connotations, it follows philosophical literatures, it conforms to general Western theatre conventions, such as the use of suspense, conflicts, climax and so on. In this performing arts men played the role of women, it is operated in first and third person narrative, it is maintained to the principles of *Nāṭya Śāstra* and lastly it is a folk art form of Tamil Nadu, the land of Tamils.⁵

III

The culture of any society reveals through the social behavior of a community. From the literary point of view, culture can be understood

through literatures, songs, dances, dramas, paintings, etc. West Bengal has a wide range of different subjects of diverse nature to identify its folk cultural tradition in India, i.e., *Gambhīrā*, *Chhau*, *Rāibenśe*, *Raṅpā*, *Bāul*, *Fakiri*, *Jhumur*, *Bhādu*, *Ṭusu*, *Nāṭuā*, *Ālkāp*, *Ālponā*, *Paṭachitra*, etc. A number of folk dances exist in India and particularly in West Bengal. These vary from each other in terms of styles, moods, themes and in many other aspects.⁶ Among the folk performing arts in Bengal, *Chhau* considered to be a folk dance and drama of Purulia district of West Bengal. In eastern India there are three forms of *Chhau* performance, which known by the generic term Purulia *Chhau* in West Bengal, Mayurbhanj *Chhau* in Orissa, Seraikāl *Chhau* in Jharkhand.⁷

This folk performing art mainly performed in the time of fertility, harvest and animistic worship with Hindu gods and mythology.⁸ Mask and music are integral part of this dance form.⁹ The name '*Chhau*' of Purulia was originated from the Sanskrit word '*Chhayi*'. In Bengali '*Chhāyā*' means shadow, image or illusion, because of the use of masks in some forms of *Chhau*, performed at Seraikala and Purulia regions.¹⁰ According to Swapan Kumar Mahato¹¹, the name '*Chhau*' derives from the combined choreography of six local dance forms namely, i) *Gājan nāch*, ii) *Nāṭuā*, iii) *Kīrtan nāch*, iv) *Nāchnī nāch*, v) *Kāṭhī nāch*, vi) *Karam* or *Karma nāch*, combination of six rhythm and music namely, i) *Gājan jhumur*, ii) *Kīrtan*, iii) *Ṭusu/Karam*, iv) *Jhumur vadoria*, v) *Nāchnī salia*, vi) *Pāntā salia jhumur*, and finally the combination of six 'gymnastics' (stances) namely, i) *Deg*, ii) *Chālī*, iii) *Ḍigbāji*, iv) *Urā*, v) *Ghurā*, vi) *Raṅgbāji*.¹²

Many *Chhau* artists are dependent for their lives through this folk performing art. The Purulia *Chhau* is purely instrumental¹³ and vocal. This performing art form has been performed in village streets, fields especially in open air spaces and the whole night this program is usually performed in night and sometimes in daytime also. The region is known for a vast variety of ethnic groups normally identified as the Mahatos, Kurmis, Mundas, Oraons, Santhals, etc. Mainly ethnic social groups are engaged with the *Chhau* dance of Purulia. Apart from that some other social groups like, food-gatherers, wanderers, fishermen, bucket makers. These communities also joined in this folk performing art of Purulia

region. The *Chhau* dance is practiced in every village of Purulia but maximum numbers of this dance troupes (25-30) belong to Baghmundi and Jhalda- ICD Blocks which are situated at the forested uplands. Preliminary form of *Chhau* dance i.e., *Kāpjhānp* had originated in the Baghmundi area and then diffused to Seraikala and Mayurbhanj districts of Jharkhand and Orissa.¹⁴

Like the *Therukoothu* of Tamil Nadu, Purulia *Chhau* has also its own principles, these are, from the beginning this is related with the *Purāṇa*, epics (*Rāmāyaṇa* and *Mahābhārata*), indigenous mythologies, philosophy, etc. In the dance form the role of female characters are actually performed by the male artists; dance, music, gymnastics or martial arts or stances are the key features of the *Chhau* performance. Mostly the village people are associated with this performance. The economically deprived classes and socially backward groups of villages are the main creators and makers of a form of theatre which contains within itself all the elements of evolved, structured Indian theatre. In artistic terminology it would be called as the *deśī* theatre.¹⁵ Because of deteriorative geographical location of Purulia, it has to face with low rainfall, hilly region, barren land are not support of enough production of crops for sustaining livelihood. It is important to note that, this dance is performed at the time of *Chaitra parva* or during the Sun festival for the purpose of marriage ceremony of lord Siva with the pray for a good agricultural production in the next Bengali calendar year.¹⁶

IV

Between these two folk performing arts there are some similarities not only in cultural perspective but also in socio-economic aspects too and some features are opposites of each other. In both the performing arts of Tamil Nadu and West Bengal the artists of these performances are from the economically deprived and socially backward groups. On the other hand these are performed in the rural side and local people are the main audience of these performing arts. In general, the artists did not receive any royal patronage or some gifts from the privileged section, but sometimes they received gifts from the local landlords of the villages, for instances Mayurbhanj *Chhau* of Orissa it was patronized by the regional prince of

Orissa. These are not the 'court' dance and drama performances, though these are purely folk performances. Like *Therukoothu* of Tamil Nadu, Purulia's *Chhau* also expressed about the situation of real society and economic status of the people. They are delivering their voice through the satires on political incidents but Swapan Kumar Mahato said that, they are very aware and sincere when narrating the political scenario. In *Therukoothu* there is a story-teller, whose main activity is try to involve audiences with the effective performance, same as in *Chhau*, there is a narrator who is narrate the story or myth or epic at the same time he try to preach to the audiences through their performance, it is like audio-visual learning process.¹⁷ In both these folk performances the body language of artists and their heavy dresses are almost same. The artists of both the performances are not getting enough financial support but now they use to go foreign trip for their performance and earn money.

The important dissimilations between these folk performances are; in *Chhau* performance the artists mostly use mask while they perform, but in *Therukoothu* the artists apply colour/paint on their faces. From their facial make up we can see their facial expressions like the performers of *Yakshagāna* of Karnataka and *Kathākali* of Kerala.¹⁸ Another one difference between these two folk performing arts is the language. In *Therukoothu* artists used to speak and sing in Tamil, perhaps some regional influence will be in the Tamil language of Tamil Nadu while they performed in the street. Same in *Chhau* artists used *Rārī* Bengali dialect, which is used by the large number of people from *Rārī* Bengal.¹⁹

EPILOGUE

The *Therukoothu* is a folk street dance/performance of Tamil Nadu which is a popular performance in deep southern India and *Chhau* of Purulia is a folk dance from West Bengal which is in eastern side of India. All states of India have its own climate, culture and

customs and these cultural traditions have been preserved by the local villagers. From the outside every states gestured with some different ideas and rituals but from the inner side of every culture in every states of India is preaching about the same responsibilities and duties with the help of indigenous sources through the songs, dances, dramas, paintings overall through the performing arts. *Gurudev* Rabindranath Tagore wrote,

"*Tapashyābale eker anale*

Bahure āhuti diyā

Bibhed bhulila, jāgāy tulila

Ekṭi birāṭ hiyā."

(*Gītāñjalī*)²⁰

So, the present paper tried to highlight the impact of *Therukoothu* of Tamil Nadu and *Chhau* of Purulia from West Bengal in the society and culture. The assimilation of people who belongs from different tribes in the society and performed together for social harmony is the most important aspect in both of these folk performing arts. But in recent times both in *Therukoothu* and *Chhau* the artists added recent issues in the society for involving more number of people with these performances. Moreover, *Chhau* dance of Purulia is facing various problems like, lack of interest in new generation; increase the price of expenditure than earning, exploitation by the middlemen from different mass-media agencies, etc. Almost *Therukoothu* has also been faced the same obstacles. Therefore, it is important to note that the society has to encourage these two performances by creating awareness about our traditional cultures through the new education system and through the promotion of folk tourism. The government also has to take initiative to create the awareness about these rural folk performances on the contemporary issues for maintaining the cultural heritage of Tamil Nadu and West Bengal as well as cultural tradition of India.

 17. Perhaps that is why, Mr. T. M. Krishna published an article entitled with 'A Crisis of Culture' in The Hindu (7th May, 2006). In his writing he mentioned that, we are in modern world, do not we need to modernize everything? What is modernization? Have the arts not always moved with the times? Do we sing or dance the way it was done 200 years ago? Do not we experiment with all our artistic traditions? Do not we address the contemporary issues through the performing arts? Do not we arrange our music in different way?

 19. The region between the Chota Nagpur Plateau on the west and the Ganges Delta on the East.
 20. It has been taken from 106th number of poem in *Gītāñjali* (in Bengali): a collection of poems was written by Gurudev Rabindranath Tagore. The inner meaning of those lines is equal assimilation of different ideas of the world where humanity is the soul foundation is Indian culture. (See, *Gītāñjali* by Rabindranath Tagore (in Bengali), Visva Bharati Granthan Bibhag, Kolkata, 1355 *Baṅgābda*, p.120).

CONSUMING MYTHS : STUDY ON THE MYTH OF *DĀRIKAVADHAM* IN KERALA TRADITION

Sreelakshmi Radhakrishnan

Myth making has never been an easy task and what is even more difficult is to understand them. Myths are formed mostly from the threads given in the Purāṇas but most of the time it would be completely different. Sometimes combinations of stories from the purāṇas are used to create a myth that forms the basis of specific ritualistic performances at a later point of time. The fascinating aspect of these myths is that though the general story outline might be the same, the versions are altogether different. Different characters or incidents are included in them to make a platform for a particular ritual. One such merging, additions and subtractions can be seen to have shaped the myth of *Dārikavadham*, a popular myth in Kerala forming the base of many ritualistic performance traditions. It is near to impossible to identify the actual story as most of them have been transmitted orally over the decades.

Kerala is a land of classical, folk, and ritualistic performances. It is defined by its

antiquity and the organic continuity by the *Malayali* people. The oldest level of culture for which one can find literary records is that of the *Cankam* period, which is identified by scholars as the period extending from 1st until the 4th century CE. This amusing literary tradition in ancient Tamil language gives a picture of what we now as a Dravidian culture, a linguistically and culturally different tradition from the Sanskrit North Indian tradition.

Most of the folk traditions of Kerala revolve around *Kāli*, a Dravidian goddess, who draws identity from *Koṭṭavai*, a warrior goddess who delights in the blood of battle.¹ Her cult appeases to syncretize autochthonous tribal² and Dravidian, as well as later Sanskrit beliefs and practices. *Dārikavadham*, a story that forms the base for all the rituals related to the *Kāli* cult in Kerala, has an entirely different narration. It is interesting to note that though the story of *Dārikavadham* is present in Purāṇic tradition, it has a Kerala version which includes many

additional characters and plots according to the need of the society. This paper hence tries to find out the significance of the indigenous narration of the myth which is different from the purāṇas in all its interpolations. It is essential to understand the tales as it unfolds the uniqueness of the tradition. There is no better way to understand a culture deeply that to know and appreciate its myths, and its stories. A culture's myths are the storied foundation of the beliefs.

Purāṇic version of *Dārikavadham*

There are numerous myths and ritualistic traditions that draw from the myth of *Dārikavadham* (The Killing of *Dārika*), an oral tale that is well known in Kerala and other places. The significance of this myth is that many of the folk performances in Kerala draw its origin from this myth. In the Puranic sources, one finds the reference of *Dārikavadham* in chapter 106 of *Liṅga Mahāpurāṇa*³, which describes *Tāṇḍava* dance of *Śiva*. The story as given in the *Liṅga Mahāpurāṇa* is as follow:

Dārika was born in the *asura* family and achieved great prowess by performing his *tapas* and secures a boon from *Brahmā* that he would be invincible and could not be killed by any man. On attaining this boon, he began to harass both Devas and Brāhmaṇas to the extent that they went to *trimurti* to take refugees. Knowing that a male cannot defeat *Dārika*, *Brahmā*, *Īśāna*, *Kumāra*, *Viṣṇu*, *Yama* and *Indra* created their female counterparts. In the subsequent battle, they were defeated by *Dārika*. Finally, all the gods along with *Viṣṇu* and *Brahmā*, went to *Śiva*. They prayed to *Śiva* for protecting them against the wrath of *Dārika*. *Śiva* then created *Kālī* from his third eye. *Śiva* informed *Kālī* that the purpose of her birth was to save the world from the demon *Dārika*.

Along with the Goddess were born lords of *Siddhas* as well *Pīśācas* who also wore divine garments and adorned in ornaments. The great goddess at the decree of *Pārvaṭī* slew demon *Dārika* who used to attack and kill the chiefs among Devas. To pacify goddess, *Śiva* and other Devas along with the ghosts and goblins performed *tāṇḍava* dance. Apart from this myth, another myth which forms an integral part in the making of the legend of *Dārikavadham* is that of the story of *Raktābija* which is described in Chapter 85 of *Devi mahātmyam*.

Story of the slaying of *Raktābija*

This story marks its presence in the *Devī-mahātmya* section of *Mārkaṇḍeya Purāṇam*. The stage that is set for the story is that describing the fight between *Devī* and *Mahīśasura*. Before having a combat with him, goddess fights with his army consisting of many *asuras* like *Śumbha*, *Niśumbha*, *Dhūmrālocana*, *Caṇḍa*, *Muṇḍa*, and *Raktavija*. Here the encounter between goddess and *Raktavija* is vital as this myth draws a considerable similarity with the legend of *Dārikavadham* in the Kerala context. According to chapter 85 of *Devī-mahātmya*, the story of the slaying of *Raktābija* is as follows :

Raktābija was a great *Asura* who has received a boon that from each drop of his blood that falls on the ground, hundreds of men like him in courage and bravery will rise. The *devas* try to defeat him but were not successful. The *asuras* who sprang from the drop of blood pervaded the whole world creating a threat to gods. Seeing this situation, goddess *Caṇḍikā* asked *Kālī* to stretch out her mouth wide and take in the blood of *Asura* before falling on to the ground to prevent the rise of new *asuras*. Goddess *Caṇḍikā* also asked *Kālī* to roam in the battlefield and to devour the great *asuras* who sprang from *Raktābija*. It would prevent any further production of *asuras* in the course of the battle. With this instruction, the goddess goes to fight *Raktābija*. This time *Kālī* swallowed *Raktābija's* blood with her mouth whatever direction the blood came. The excessive *asuras*, who sprang up from the flow of blood in her mouth, *Kālī* both devoured them and guzzled his blood. After a fierce battle *Raktābija*, became bloodless and was slain by the goddess. After drinking a great deal of blood, *Kālī* became intoxicated and broke into dance⁴.

Kerala Versions Of *Dārikavadham*

One can find numerous oral versions of the story of *Dārikavadham* as it is considered the basis of many folk performances like *teyyam*, *thirā*, *tūkkam*, *paḍayāṇi*, *muṭiyōṭṭu*, *kaliyōṭ*, and so on. It is fascinating to know that the general outline of the story revolves around the mythic battle between the demonic king *Dārūka* and the warrior goddess *Kālī*. The Kerala version of the myth is a blend of the story of *Tāṇḍava* dance of *Śiva* from the *Liṅga Mahāpurāṇa* and the account of the slaying of *Raktābija* from *Devī Mahātmya*.

The characters and plots of the story are modified according to the culture. For example, in the story of *Liṅga Mahāpurāṇa*, we find that it is at the decree of *Pārvalī* that *Kālī* slays *Dārika* thus subordinating the fierce form of the goddess.

Similarly in the *Devī Māhātmya* also we find that it is the goddess who is fighting the demon and *Kālī* portrayed in subordination to the goddess. The plot is entirely different in the Kerala version as *Kālī* herself takes the lead, assisted by the army of ghost and bloodthirsty spirits like *vethali*⁵ from *Māhakāla* forest. *Vethali* agrees to drink every drop of bloodshed from *Dārika*'s body before it touches the ground⁶. It is interesting to note that *Raktabīja* does not come up anywhere in the myth; instead, the characteristic of *Raktabīja* is assumed by *Dārika*, making both the *asuras* the same.

The Kerala version of the *Dārikavadham* finds reference in the text called as *Bhādroḷpatti*, written by Kāvisārvabhauman Kodungallor Cheriya Kochunni Thampuram in 1961. This text gives a detail description of the story of *Dārikavadham*, which is different from the Purāṇic sources but is very much similar to the myth prevalent in Kerala. The beginning portion of the legend is identical to the purāṇic sources; the point of deviation is that this book mentions about the boon of *Dārika* that with each drop of blood from *Dārika* thousand more *Dārika* will be born⁷. From this point, the story of *Devī Māhātmyam* (slaying of *Raktavīja*) becomes the story of *Dārika*, with the goddess *Kālī* as the center of the story. To kill *Dārika*, like in the Purāṇic sources all the Devas including *Brahmā* and *Viṣṇu* approaches *Śiva*. Then as the myth goes *Śiva* from his third eye creates *Kālī*, who then fights with *Dārika*. *Śiva* also tells her about the need to get an army ready for which she goes to the jungle where she finds her army of spirits and ghosts. In some native narrations and also in the performance of *Muṭiyāṭṭu*⁸ it is *Vethali* and *Kooli*⁹ who assist goddess. Despite the presence of similar motifs in these sources, the full Kerala form of *Dārikavadham* does not seem to have been present in any of the Sanskrit purāṇas and appears to have its origin in oral transmission along with some lesser-known native literature¹⁰.

Significance of the Kerala myth.

The mythic battle between the demonic king *Dārika* and *Kālī* can be interpreted in many

ways. Some consider this struggle as the rivalry between the Aryans and Dravidians some as the fight between good and evil, yet others as the conquest of Kerala by the Assyrians invaders¹¹. Through these entire arguments, one can find a larger image of inevitable social tensions. It could be the reason for different versions. The idea of conquest is evident from all these narrations. In the Kerala context, this could possibly have the one between the tribal¹² cult and non-tribal cult. *Kālī* is the fierce, bloodthirsty goddess attest to this fact. In the purāṇic sources, what one can find is the reverence of a less aggressive form of the goddess. It can be seen from the myths that *Kālī* finds reference in purāṇic sources only in subordination whereas in Kerala context it is *Kālī* who takes the lead along with her army. The *vethali* does the role assigned to *Kālī* in the *Devī māhātmya* in the Kerala version. It might be because blood sacrifice is common to goddess worship in South India. It is remarkable to note that unlike in the purāṇic sources, the characters involved in the story mostly belong to the primitive religion like *Śiva*, *Garuḍa*, *Indra* so on unlike in the Purāṇic sources where it is *Viṣṇu*, *Brahma* and devas. *Śiva* takes centre stage as he is the one from whom the goddess is born and also as the one who tries to calm the wrath of goddess by dancing naked in front of her. It reflects the idea of *tanḍavā* dance of *Śiva* as mentioned in *Liṅga Purāṇa*.

As an addition to the myth, *Garuḍa* also plays a vital role. In the Purāṇas also one finds reference to *Garuḍa*, but merely as a *vāhana* of *Viṣṇu*.¹³ In the Kerala version, *Garuḍa* plays an essential role in reducing the wrath of *Kālī*. There are two versions of the story in this regard: one is that misunderstanding *Garuḍa* as an ally of *Dārika*, the goddess attacks him and he gets wounded. Later on, it is after seeing the injured *Garuḍa*, the wrath of *Kālī* reduces. In another version, *vethali* after drinking blood gets intoxicated and asks for more blood from the *Kālī*. She then sends *vethali* to *Garuḍa*, by drinking drops of blood from *Garuḍa* the thirst of *vethali* is quenched¹⁴. The ritual of *Garuḍa tūkkam*¹⁵ is conducted in the *Kālī* temple as a signifier of this event. *Garuḍa* and *Nāgas* being the part of primitive religion in South India, it projects the indigenous version elements in the myth.

Unlike in the purāṇic myth, it is *Nārada* who goes and informs *Śiva* about the misdeeds of *Dārika*, who then out of anger produces *Kālī* and assigns her the duty of killing *Dārika*. The inclusion of *Nārada* instead of *Viṣṇu* is also significant as it gives a much innate nature to the myth. *Śivabuthas* also tries to calm the wrath of *Kālī*; by dancing and singing, this took the form of *Padayaṇi*¹⁶ in some parts of Kerala. It is the spirits and ghosts who form the army of *Kālī* unlike the goddesses in case of purāṇic tradition. It is also a signifier of a tribal element in the myth.

The legend of *Dārikavadham* appears to have a pan Indian origin, but on closer analysis, it becomes quite visible that it is altogether different. The general idea was that the Kerala version of the myth is mostly similar to the texts

given in *Devī Māhātmya* and *Linga purāṇa* and that the *Linga purāṇa* version is the closest one.¹⁷ From the above analysis, it is quite clear it is entirely different. The Kerala version of the myth is instead an amalgamation of the legends from both the texts along with native interpolations. It is available in the native book rather than in any purāṇas. Through this analysis, it is understood that myths reflect a broader socio-cultural arena. The outline of the legend may be the same, but the context and its representations would be different. The changes in the myth might seem to be little, but the idea conveyed through that minor change has a more significant implication. Hence understanding myths and its closer analysis become essential to understand the tradition in its entirety.

THE MODERNIZATION OF COMMUNICATIONS IN HYDERABAD STATE – POSTS, TELEGRAPHS AND TELEPHONES

Dr. Srinivas Rao Vaddanam

Introduction

The erstwhile Hyderabad State owned his postal system which symbolizes the insignia of sovereignty. Till mid nineteenth century, different modes of postal communication were prevalent. The Mughal postal system which was in vogue in the Deccan during the times of Nizam-ul-Mulk was continued by his successors. But, as time passed, an improvement was introduced in the system and modifications were made from time to time. Both official and private posts of the public were conveyed during the early period by licensed carriers or postal contractors. A foreign mail service also existed. Further the Nizam co-operated with the Europeans in the Deccan in postal communication. The present paper intends to explore the modernization of Posts, Telegraphs and Telephones in Hyderabad State.

Posts

A new era in the history of Hyderabad State's postal system dawned in the eventful year 1857, with the birth of Hyderabad State's Postal Department on a regular footing. Salar Jung, the first Diwan created a new postal organization under the direct control of Government and abolished the postal contract system. At this time, ordinary and express letter (Ghungru or Bell post) and parcels of both the Government and public were conveyed by collecting a nominal fee¹.

Under reformation scheme of Salar Jung, the postal department received significant attention. Post offices were opened in important towns and cities of the State. Ghongro or express post service was abolished in 1802². Since 1869 onwards different types of stamps of different denominations were introduced which were continued till 1909. Book post, parcel and money order system in 1873, half Anna envelope in 1877, and signing of an agreement³ for mutual exchange of correspondence between the British and the Nizam's Government in 1882 were the main features during Salar Jung's Premiership.

In A.D.1869, the State Government took over the control of the postal department and reorganized it on proper lines by establishing

post-offices at the district and taluk headquarters as well as at some other important centers. With a view to affording the utmost convenience to the public and also to facilitate the smooth flow of trade and commerce, the Nizam's Postal Department not only carried but also transferred to the nearest British Indian post-office or railway mail service station all articles emanating from the State intended for delivery in British India. Similarly, it also delivered within the State postal or any other extra charges.

A postal Agreement was entered between the Government of India and Nizam Government in the year 1882. As per this agreement both Governments were given equal rights. In the year 1903, Director General of Postal India proposed to amalgamate with Imperial Postal Departments in the pretext of deficit in postal revenue. To consider this, a committee was appointed and submitted its report. However, indicating amalgamation, the Prime Minister of Hyderabad state gave a reply to Resident that the Amalgamation proposal of Government of India would not only mean a loss to the state financially and politically but it would also effect the prestige, sovereign rights and cause public discontent and hence not agreeable. Later British Indian Government dropped this idea of united postal services. In order to popularize the postal services in the State, the Nizam's Postal Department introduced many improvements. Money Orders were introduced in 1910, the Value Payable Post (V.P.P) in 1914, unregistered parcels in 1921, savings bank facilities in 1923 and the system of express delivery of letters in 1943⁴.

During second half of 19th century, the Postal system extended to every nook and corner of the State with Head Post Office in districts and Sub Post Offices in Taluq headquarters besides all the important towns and business centers. The office of Railway Mail was established and the Inspector Railway Mail was appointed. In 1888, the proposal by the Nizam's Government for the closure of certain Imperial Post Offices was rejected by the British who asserted it as their Paramount right. Nizam to uphold his dignity and sovereignty by having an

independent postal system refused to accede to the proposal of accepting British currency⁵ from the public at the Imperial Post Offices and the amalgamation of Postal System⁶.

However, Hyderabad state strongly pleaded for retaining the Native postal services, Akbar Hydari, the then Prime Minister in the memorandum submitted to Round Table Conferences made it quite clear that in no circumstances would Hyderabad ever agree to give up its separate Postal Department or its Currency. This was a matter of sentiment rather than of finance. In the matter of Post-offices, Hyderabad wanted a fuller measure of reciprocity with regard to further exchange of facilities between the British and Hyderabad postal services. In his opinion, letters bearing Hyderabad stamps should circulate and be delivered free of charge in British India by the British Postal Department⁷.

Akbar Hydari said it was probable that Hyderabad would agree to an arrangement under which its Postal Department would act as sole agents for the carrying of letters in the state and under which letters bearing Hyderabad stamps would be delivered in other parts of India by British Post-offices without extra charge, the resulting postal revenue from the purchase of Hyderabad stamps being divided on some equitable basis between the British and Hyderabad Governments.

During 1911, summary of discussions between the Sub-Committee on "Privileges and Immunities" and the representatives of the Nizam's Government held at 11-30 a.m. on Monday, 1st February, 1932⁸. Important improvement and changes were brought in the then existing postal system when Mir Osman Ali Khan, Nizam VII assumed the reign of the Asafia Dynasty. Experienced officers from British India were appointed on deputation for fixed tenure in the past. Following the practice of his predecessors' Osman Ali Khan, availed the services of three British Post Master Generals on deputation during 1896-1921. Official registered articles and parcels bearing the service stamps of the British Government when made over to the State Post Office for delivery, parcel post, registration, postal order, post cards and reply post card, money order, value payable, post office saving and cash certificates were introduced. The practice of obtaining the services of the

British India Postal Officers on deputation was discontinued in 1921. Hence, under their supervision, the Postal Department progressed well.

There were 417 post offices and the number of letter boxes were 396 with an annual postal revenue of Rs.3,78,777. During 1911-1912, the number of postal articles carried totalled 13,333,618, the mileage over which mails were carried by rail was during that time 1,195 and the mileage by road was 4,976. The number of post offices in the State during 1921 was 667 which rose to 711 during the closing decade 1929-30. The number of letter boxes increased from 564 to 721 which worked out one post office for every 108 square mile or 16,345 persons in the State. The State authorized all the post offices to transact money order work. During the same period, 4,000 money orders worth Rs. 86,64,662 were issued⁹. The Saving Bank balance during 1931-1932 was Rs.1,05,85,903. But the rate of interest payable on such accounts was reduced from 3 to 2 ½ percent per annum¹⁰. The number of saving banks was 83,000 during 1940's. The year 1939-1940, the number of insured letters and parcels issued rose to 14,452. The insurance fees increased to Rs.6,57,812/-. Similarly, the number of money orders increased and the value amounted to Rs.1,18,34,179 in 1939-1940¹¹.
